**DRAFT GENERAL BUDGET**  
**of the European Union**  
for the financial year 2022

Working Document  
**Part I**

**Draft General Budget  
of the European Union  
for the Financial Year 2022**

**Working Document Part I  
Programme Statements of operational expenditure**

The 2022 Draft Budget is accompanied by thirteen ‘Working Documents’, as follows:

#### **Part I: Programme Statements of operational expenditure**

Working Document I contains, pursuant to Article 41(3)(h) of the Financial Regulation, Programme Statements, which are presenting the 2021-2027 programmes and their performance framework, and provide details on the resources dedicated to each spending Programme for the period 2014-2020.

#### **Part II: Human Resources of the EU institutions and executive agencies**

Working Document II presents information on the human resources of the EU institutions and executive agencies, and in particular for the Commission, both for the establishment plans and for external personnel and across all headings of the multiannual financial framework. Moreover, pursuant to Article 41(3)(b) of the Financial Regulation, it provides a summary table for the period 2019 – 2022 which shows the number of full-time equivalents for each category of staff and the related appropriations for all institutions and bodies referred to in Article 70 of the Financial Regulation.

#### **Part III: Bodies set up by the European Union having legal personality**

Working Document III presents detailed information relating to all decentralised agencies and Joint Undertakings, with a transparent presentation of revenue, expenditure and staff levels of various Union bodies, pursuant to Article 41(3)(c) of the Financial Regulation.

#### **Part IV: Pilot projects and preparatory actions**

Working Document IV presents information on all pilot projects and preparatory actions which have budget appropriations (commitments and/or payments) in the 2022 Draft Budget, pursuant to Article 41(3)(f) of the Financial Regulation.

#### **Part V: Budget implementation and assigned revenue**

Working Document V presents the budget implementation forecast for 2021, information on assigned revenue (implementation in 2020 and estimation for 2022), and a progress report on outstanding commitments (RAL) and managing potentially abnormal RAL (PAR) for 2020, pursuant to Article 41(3)(d) of the Financial Regulation.

#### **Part VI: Commission expenditure under the administrative heading of the multiannual financial framework**

Working Document VI encompasses administrative expenditure to be implemented by the Commission under the administrative heading of the multiannual financial framework (heading 7) in accordance with Article 317 of the Treaty on the Functioning of the European Union, as well as the budgets of the Offices (OP, OLAF, EPSO, OIB, OIL and PMO), pursuant to Article 41(3)(e) of the Financial Regulation.

#### **Part VII: Commission buildings**

Working Document VII presents information on buildings under Section III - Commission, pursuant to Article 266(1) of the Financial Regulation.

#### **Part VIII: Expenditure related to the external action of the European Union**

Working Document VIII presents information on human resources and expenditure related to the external action of the European Union, pursuant to Article 41(10) and (11) of the Financial Regulation.

#### **Part IX: Funding to international organisations**

Working Document IX presents funding provided to international organisations, across all MFF headings, pursuant to Article 41(3)(g) of the Financial Regulation.

#### **Part X: Financial Instruments**

Working Document X presents the use made of financial instruments, pursuant to Article 41(4) of the Financial Regulation.

#### **Part XI: Budgetary Guarantees, Common Provisioning Fund and Contingent Liabilities**

Working Document XII presents the implementation of Budgetary Guarantees, the Common Provisioning Fund and the assessment of the sustainability of the contingent liabilities arising from budgetary guarantees and financial assistance pursuant to Article 41(5) of the Financial Regulation.

#### **Part XII: EU Trust funds**

Working Document XII presents the activities supported by EU Trust Funds, their implementation and performance, pursuant to Article 41(6) of the Financial Regulation.

#### **Part XIII: Payment schedules**

Working Document XIII presents summary statements of the schedule of payments due in subsequent years to meet budgetary commitments entered into in previous years, pursuant to Article 41(3)(i) of the Financial Regulation.

PROGRAMME STATEMENTS – TABLE OF CONTENTS .....	23

## INTRODUCTION

### 1. Purpose and structure

#### Purpose

The Financial Regulation (Art. 41(3)(h)) requires the Commission to prepare the Programme Statements to justify funding requested for each of the EU spending programmes. They report on the indicators defined in the legal basis of each of the programmes. The Programme Statements are the first working document accompanying the draft budget proposal and has the aim of supporting the Commission's requests for the annual budget allocations for operational expenditure. They allow to draw lessons from the past and answer the following questions:

- Is the EU budget achieving its goals?
- Is it on track to reach its expected impact?
- What are the important factors impacting on the performance and what is the Commission doing to work in that context?

The Programme Statements present the most comprehensive and up-to-date performance information for the operational programmes of the EU budget. They were first introduced to support the draft budget 2014 and are updated each year in the context of the preparation of the Commission's draft budget proposal. They are discussed in the annual budget hearings with the Commission services responsible for the spending programmes and revised based on the outcomes of these hearings.

The Programme Statements are also the main source of information for the the Programmes Performance Overview, Annex 3 of the Annual Management and Performance Report.

#### Structure

In this year's Programme Statements, the report follows the structure of the 2021-2027 Multiannual Financial Framework (MFF). The reader will find first an introduction to the 2021-2027 programmes, including an explanation of how the programme is designed to work, the financial programming, the link to the 2014-2020 programmes, the key indicators to monitor the performance of the programmes, and the projected contribution to horizontal priorities. NGEU top-ups are included inside the programmes benefitting from the additional funds.

The Programme Statements report on the effective implementation of the EU budget operational expenditure. This year, the report presents the results achieved by the end of 2020, the last year of the 2014-2020 multiannual financial framework. The reader will be able to find the performance results of the 2014-2020 programmes as part of the corresponding 2021-2027 programmes statements. Indeed, there is a continuity in many areas of the EU budget intervention by policy: under both multiannual financial frameworks the EU budget invests in research, cohesion, agriculture, students mobility etc. At the same time, each new MFF is an opportunity to improve the design of the EU budget interventions, their objectives, and the way they deliver results. This year's Programme Statements show on the one hand the continuity of the EU budget intervention in the same policy areas and, on the other hand, highlight what has been improved from one 7-year period to another.

It is also important to highlight that not only is there a continuation of the EU budget intervention across MFF by policy but also many EU programmes have a life-cycle that is longer than the 7-year MFF period. That means that the budgetary implementation of these programmes will continue, sometimes for a number of years into the 2021-2027 MFF. Examples of this are programmes that finance infrastructure projects or other investments from which the results take time to appear. This document also strives to keep the focus on these long-term investment programmes as they have important lessons learned to give for future decisions in their field.

The reader will find below the mapping of the 2021-2027 programmes and their corresponding predecessor programmes from the 2014-2020 multiannual financial framework:

<b>Correspondence between the 2021-2027 and the 2014-2020 multiannual financial framework</b>	
<b>2021-2027</b>	<b>2014-2020</b>

Overseas Countries and Territories (including Greenland)	Cooperation with Greenland
Macro-Financial Assistance	Macro-Financial Assistance
Instrument for Pre-Accession Assistance III	Instrument for Pre-Accession Assistance II
European Globalisation Adjustment Fund for Displaced Workers	European Globalisation Adjustment Fund
European Union Solidarity Fund	European Union Solidarity Fund
Innovation Fund	New

## Content

Compared to previous years, the Programme Statements content has been reorganised, enriched and clarified.

Part 1 “**Overview**”, contains the presentation of the 2021-2027 programmes, how the programme is designed to work with notably its objectives and delivery mode, link with the 2014-2020 Multiannual Financial Framework, and its financial programming.

Part 2 “**Where are we in the implementation?**” explains the use of appropriations, both backward and forward looking. In particular, in a new subsection “Cumulative implementation rate”, the reader will find the implementation rate in commitments and in payments of the 2014-2020 programme compared to its total envelop and the state of play justification. This section is meant to be read in relation to part 3 “how is the programme performing?”: the cumulative implementation rate shows that for a number of important 2014-2020 programme, a relevant share of the 2014-2020 envelop has not yet been spent due to long investment period. Performance results for these programmes should be assessed in this light.

Part 3 “**How is the programme performing?**” contains an assessment of the performance of the 2014-2020 programmes. This performance assessment draws from multiple sources: evaluations, studies and reports, key achievements, and indicators. The reader will find a clear, balanced and robust analysis about to what extent the 2014-2020 programmes are reaching their objectives, as well as lessons learned applied in the design of the 2021-2027 programmes.

Part 4 “**Programme 2021-2027 – Key monitoring indicators**” presents the indicators from the legal bases (adopted, agreed at political level, or proposed by the the Commission) of the programmes for the 2021-2027 period along with a selection of the methodological information (the complete methodological framework will be published on the Commission’s website<sup>1</sup>). The methodological framework provides transparency about how and when the indicators will be reported, and ensures that the results will be reported from the start based on a solid pre-defined methodology.

Part 5 “**Programme 2014-2020 – Key monitoring indicators**” reports on the results of the complete set of indicators for the 2014-2020 Multiannual Financial Framework. This year, for the first time, each indicator is presented with an assessment of whether it is on track to achieve its final target, including a justification of this assessment in the field “justification of the trend”. This addition will allow the reader to get a better understanding of how to interpret the indicator results and, ultimately, of how well the programme is performing.

Part 6 “**programme contribution to horizontal policies**” presents the quantitative and qualitative contribution of each programme (for both the 2014-2020 and 2021-2027 periods), to climate mitigation and adaptation, the fight against biodiversity loss, clean air, gender equality, and the sustainable development goals. The content of this part is used to produce the report that provides an overview of the EU budget contribution towards these horizontal priorities, agreed by the European Parliament, the Council and the in the inter-institutional agreement accompanying the MFF.

## Link to other performance reports

The Programme Statements are the main source of information for the Commission’s Annual Management and Performance Report<sup>2</sup> (AMPR), and its Annex 3: the Programme Performance Overview. The AMPR is part of the Integrated Financial Accountability Reporting Package, an essential input for the annual ‘discharge procedure’ through which the European Parliament and the Council hold the Commission accountable for the way it manages the EU budget.

This year’s Programme Statements should also be read together with the Commission’s Communication on the performance framework for the EU budget under the 2021-2027 MFF, and the annexed staff working document containing the Programme & Performance fiches<sup>3</sup>. In particular parts 1 and 4 of the Programme Statements are closely aligned with the content of these fiches.

## 2. The EU budget performance framework

Strengthening the effective implementation of the budget – its performance – is an overarching goal for the Commission. The performance of the EU budget not only means that EU programmes are well managed, but also that they deliver results. The European Commission is fully committed to ensuring that the EU budget is implemented in full accordance with the highest standards of financial management, is as effective as possible in achieving its key objectives, and delivers value for all EU citizens. In other words, the Commission puts performance of the EU budget front and centre. For that, a sound performance framework is crucial. The performance framework for the EU spending programmes is defined in each of the relevant legislative acts and consists of objectives, indicators to measure and monitor progress, as well as annual reporting and multi-annual evaluations.

The work already done and the Commission’s commitment to budgetary performance in the future are outlined in the Communication on the performance framework for the EU budget under the 2021-2027 MFF.

### The system of performance indicators for the EU budget under the 2014-2020 MFF

The EU budget has an advanced framework for measuring and reporting on performance. The OECD concluded that the system of performance budgeting under the 2014-2020 MFF<sup>4</sup> was best in class among OECD countries. The leading principles of this system are set out in the Financial Regulation, which requires the provision of information on the progress of specific, measurable, achievable, relevant and timed objectives measured by indicators. The Better Regulation Guidelines provide instructions on setting

<sup>1</sup> [https://ec.europa.eu/info/strategy/eu-budget/performance-and-reporting/programmes-performance\\_en](https://ec.europa.eu/info/strategy/eu-budget/performance-and-reporting/programmes-performance_en)

<sup>2</sup> [https://ec.europa.eu/info/publications/annual-management-and-performance-report-eu-budget-0\\_en](https://ec.europa.eu/info/publications/annual-management-and-performance-report-eu-budget-0_en)

<sup>3</sup> [LINK](#)

<sup>4</sup> [www.oecd.org/gov/budgeting/budgeting-and-performance-in-the-eu-oecd-review.pdf](http://www.oecd.org/gov/budgeting/budgeting-and-performance-in-the-eu-oecd-review.pdf)

indicators, their link with objectives and stage of implementation of a programme or policy area. These principles are implemented in a set of indicators set out in the legal basis of the respective spending programmes.

Indicators perform several functions: measure progress towards the programme objectives; monitor the implementation and performance of the programme providing an early warning on potential deviations; and allow to communicate and inform about the performance of the EU budget.

The performance framework of the 2014-2020 MFF includes more than **700 indicators** (more than **1 100** taking into account sub-indicators) measuring the performance against more than 60 general and 220 specific objectives. However, not all indicators measure EU budget performance directly. Some provide either high-level contextual information (e.g. "the Europe R&D target of 3% GDP" or "share of researchers in the EU active population") or process-related information (e.g. "quality of project applications", or "number of participants"). Additionally, not all indicators are available immediately after the start of the programme. The reporting on performance indicators varies from one programme and type of indicator to another and is influenced mainly by the following factors:

- The type of performance indicators<sup>5</sup> chosen determines when the performance information starts to be available. Input indicators, used rarely in the PS, and output indicators are available much sooner than result and impact indicators, which require an intervention to be finalised – sometimes large-scale investments.
- For some interventions the outcomes take place in a relatively short time (e.g. the grants allocated for students under Erasmus+), while for other interventions (e.g. infrastructure investment programmes like CEF) the results will only be known when the projects reach the necessary maturity.
- The mode of implementation (i.e. shared, direct, or indirect management) influences the way performance information is collected, aggregated and transmitted to the decision makers. Around three quarters of the EU budget is implemented by Member States under shared management. The rest is implemented by the Commission directly or via the executive agencies (direct management), or via agreements with third parties such as the European Investment Bank or international financial institutions (indirect management). The results from shared management programmes are more complex to aggregate and validate, and their results are usually reported with at least a one year lag.
- Cost of collection: some indicators for which the collection of data is expensive or complex are collected at a lower frequency (every 2 or 3 years for example). As a result, for some objectives the performance indicators allow progress to be tracked on an annual basis while for others only the mid-term interim evaluations deliver tangible indications on performance.

## Indicators in the DB 2022 Programme Statements

In budgetary terms, 2020 was the seventh and last year of implementation of the 2014-2020 financial framework. However, many EU programmes have a life-cycle that is longer than the 7-year MFF period, extending its budgetary implementation for a number of years into the 2021-2027 MFF, and setting targets to be achieved later than in 2020 (e.g. 2023).

As the implementation of the programmes is more advanced, there are more indicator data available than in previous years, allowing for a better assessment of the performance of the indicators and the programmes. The most recent data are available for the programmes directly managed by the Commission (reporting results as at the end of 2020 in most cases). The programmes under shared management present values recorded and reported by the Member States as at the end of 2019. The programmes under indirect management present a mixed picture; some have results reported up to 2020, while others depend on the reports or surveys carried out by the international organisations.

## Practical limitations of performance indicators

Indicators should, to the extent possible, provide the most direct evidence of the effects they are measuring. However, it is important to stress that the indicators alone are not sufficient to draw conclusions on whether a policy or programme is successful, or on track to achieve its objectives. For this type of assessment, the indicators should be analysed in conjunction with other quantitative and qualitative information, such as budget implementation data, external factors impacting the programme, key achievements, project pipeline, etc. This comprehensive assessment is done in the context of the programme evaluations.

The set of indicators presented in the Programme Statements is a robust data source to help understand, monitor and inform of the progress of spending programmes. However they are not meant to be used independently from the rest of quantitative and qualitative information provided in the Programme Statements.

## The EU Budget Performance Framework under the 2021-2027 MFF

The 2021-2027 multiannual financial framework is at the heart of the EU's economic policy framework, more so today than ever before. The EU budget will power the EU's response to the COVID-19 pandemic. It will help to address the ongoing health

---

<sup>5</sup> The type of performance indicators is defined in the 'Guidelines on monitoring' from the Better Regulation Guidelines: <https://ec.europa.eu/info/sites/default/files/better-regulation-guidelines-monitoring.pdf>

emergency, kick-start the recovery, steer our economies and societies towards a more sustainable, digital and resilient future, and strengthen the EU's geopolitical role.

Over the next seven years, unprecedented amounts of funding will be channelled through the EU budget to address these challenges. Together with NextGenerationEU – the EUR 750 billion recovery instrument – the 2021-2027 MFF amounts to more than EUR 1.8 trillion. This is close to double the size of the budget for 2014-2020 and is the largest investment package ever financed through the EU budget.

The European Commission is fully committed to ensuring that the 2021-2027 MFF is implemented in full accordance with the highest standards of financial management, is as effective as possible in achieving its key objectives, and delivers value for all EU citizens. For that, a sound performance framework is crucial.

The preparation of the 2021-2027 multiannual financial framework has provided the opportunity to further improve the performance framework, taking into account lessons learnt from the past in order to construct a fully-fledged performance framework for the EU budget. The Commission has made a major effort to identify a high-quality set of indicators for the new programmes. The overall number of indicators has been reduced from over 1 100 in the 2014-2020 period to around 700 for 2021-2027. The indicators have been carefully selected to provide a representative indication of performance on an annual basis throughout the cycle and have been included in the basic legal texts for each programme. The Commission has worked closely with the European Parliament and the Council to make sure that these improvements were reflected in the final programmes that were adopted.

Part 4 “**Programme 2021-2027 – Key monitoring indicators**” of the Programme Statements, presents the performance indicators, included in the legal bases of the programmes, and which will be used to monitor the performance of the programmes during the 2021-2027 period.

To make sure the indicators provide data that are reliable, trustworthy and comparable, the Commission is also clarifying, for each indicator, the source of information, what exactly the indicator measures, and when data will be available, together with other supplementary information. This way, all interested parties will have at their disposal all the necessary information to check the robustness of the results. The Programmes Statements include a selection of this technical information, while the Programme and Performance fiches, annexed to the Communication on the performance framework, present the complete set of technical information.

The indicators set out in the legal bases will, in most cases, be complemented with a more comprehensive set of indicators as part of the monitoring and evaluation framework for each programme. This reflects the importance of robust data measuring the impacts of EU spending programmes, which the recent Commission Communication on Better Regulation highlighted again. These indicators will allow for deeper analysis of performance in the interim and ex post evaluations of the programmes, the results of which are an essential input to the design of future programmes. When available, the Commission will report on the results of the multi-annual evaluations of budgetary spending programmes also in the Programme Statements.

## FINANCING OF HORIZONTAL POLICY PRIORITIES IN THE EU BUDGET

This section presents key information on the financing of horizontal policy priorities in the EU budget, covering climate, biodiversity, gender and Sustainable Development Goals, as foreseen in point 16(d,e,f,g) of the Interinstitutional Agreement (IIA)<sup>6</sup>.

Climate and environmental policy are at the core of the EU policy making. While the Treaty<sup>7</sup> already defines the environmental challenge as a core element of the Union's action, the Commission has been striving to do more.

The Paris Agreement, formally ratified by the EU in 2016, sets out a global framework to avoid dangerous climate change by limiting global warming to well below 2°C, and pursuing efforts to limit it to 1.5°C above pre-industrial levels. It also aims to strengthen the ability of countries to deal with the impact of climate change and support them in their efforts. The United Nations' Agenda 2030 also provides the EU policy a direction, which integrates the Sustainable Development Goals.

In March 2018, the Commission put forward the action plan on [sustainable finance](#). Action 1 of the action plan calls for the establishment of an EU classification system for sustainable activities, i.e. an EU taxonomy. With this in mind, in May 2018 the European Commission proposed a Regulation on the establishment of a framework to facilitate sustainable investment (Taxonomy Regulation), which was adopted in June 2020<sup>8</sup>. The scope of the taxonomy is to define a voluntary standard framework to steer private investment towards environmentally sustainable projects.

The Commission made the green transition its first priority in the 2019 – 2024 period, as declared by the President in her political guidelines<sup>9</sup>. The Communication on the European Green Deal confirms this ambition. The plan puts the climate and environmental challenges into the centre of the EU activity, aiming to make Europe the first climate-neutral continent by 2050, while boosting the competitiveness of European industry and ensuring a just transition for the regions and most affected workers. The [European Green Deal Investment Plan](#), presented in January 2020, announced that the Commission will enhance the climate methodology and explore ways to use the taxonomy in the framework of public expenditures. The Commission will also reinforce the link between climate and biodiversity expenditures, exploiting the existing synergies in nature-based solutions. Furthermore, the [European Green Deal](#) underlined the need for long-term signals to direct financial and capital flows to green investments. On this basis, the Commission presented a renewed sustainable finance strategy in the third quarter of 2020, focusing on a number of actions, including making it easier for investors to identify sustainable investments and ensuring that they are credible. A “farm-to-fork” Strategy for sustainable food, a “Biodiversity Strategy, a new circular economy action plan and the proposal for the first “European Climate Law”<sup>10</sup> are other key elements.

In 2020, the EU provided an unprecedented response to the coronavirus crisis that hit Europe and the world. At its heart is a stimulus package worth EUR 2.018 trillion in current prices (EUR 1.8 trillion in 2018 prices). It consists of the EU's long-term budget for 2021 to 2027 of EUR 1.211 trillion (EUR 1.074 trillion in 2018 prices), topped up by EUR 806.9 billion (EUR 750 billion in 2018 prices) through NextGenerationEU, a temporary instrument to power the recovery. The EU sets the limits of its spending in the multiannual financial framework, the EU's long-term budget for the next 7 years. In this way, the EU secures the resources for its political priorities, like digitalisation and green deal. The package includes a 30% target for climate expenditures for the overall MFF and a biodiversity ambition of 7,5% of the 2024 annual budget and 10% of the annual budgets 2026 and 2027.

### Climate mainstreaming

The fight against climate change is, by its very nature, a fight that transcends national boundaries. In order to achieve our climate goals, develop new clean technology, deploy the best solutions and drive our economies towards a more sustainable path, action at EU level is needed. EU action can exploit significant economies of scale, pull together resources to reach critical mass, and contribute to strengthening the EU in the international arena.

The EU budget makes a crucial contribution towards the fight against climate change. Over the course of the 2014-2020 multiannual financial framework, the EU delivered on its ambition of spending 20% of available funds on climate-related measures.

### What do we do?

In the 2014-2020 multiannual financial framework, the Commission implemented an innovative approach to dedicate resources to the fight against climate change: ‘climate mainstreaming’. This requires programmes in all policy areas to consider climate

<sup>9</sup> [https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission\\_en.pdf](https://ec.europa.eu/commission/sites/beta-political/files/political-guidelines-next-commission_en.pdf)

<sup>10</sup> COM(2020) 80.

priorities in their design, implementation and evaluation phases. With a target of contributing 20% of the EU budget expenditure to climate goals, all the programmes are designed to implement two types of measures.

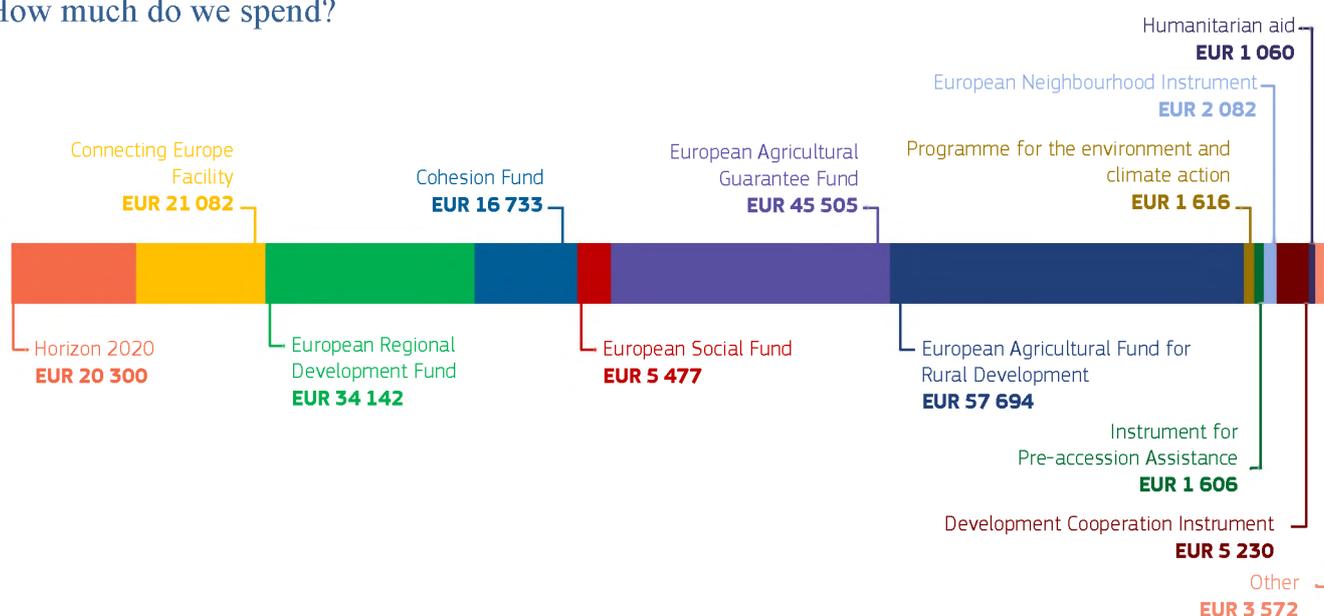

- **Adaptation.** This involves finding solutions to and ensuring preparedness for adverse effects of climate change, enhancing resilience, taking appropriate action to prevent or minimise the damage such effects can cause, and taking advantage of any opportunities that may arise.
- **Mitigation.** This refers to actions that limit the magnitude of long-term climate change. Climate change mitigation generally involves reductions in emissions of greenhouse gases.

In this context, **'climate proofing'** is the practice of making sure that buildings and infrastructure are adapted to cope with the changes in the environment. This is applied across the EU budget in the programmes supporting infrastructure. In addition, to guarantee that the EU budget financing does not have a harmful effect on the environment, an **'exclusion list'** of projects that cannot be financed is also included in the common provisions regulation.

In the context of the **2021 - 2027 multiannual financial framework**, the Commission has improved its approach to climate mainstreaming, including through:

- increasing the **overall target** to 30% for the contribution to climate mainstreaming and including sectorial targets in the relevant legislation;
- embedding the EU budget action in the **European Green Deal policy framework**, through the adoption of the biodiversity strategy and the farm-to-fork strategy;
- enhancing the climate responsiveness of the budget for programmes that do not directly tackle the climate challenge, through reinforced **climate proofing** and the application of the **'do no significant harm'** principle;
- A strong shift from the Organisation for Economic Co-operation and Development's 'Rio markers', which are intent-based, to the **EU 'climate coefficients'**, which are instead result-based. A comprehensive overview of the climate methodology will be presented by the Commission once finalized;
- In accordance with the inter-institutional agreement, a **'climate adjustment mechanism'** will enable the Commission to take remedial action to address possible gaps in the achievement of targets of individual programmes, either by ensuring that the gap is filled by the same programme in the following years of implementation, or by other programmes in the following years, so that the overall target can be achieved as planned;
- The Commission will fund 30 % of the NGEU programme through **green bonds issuance**. This could amount to up to EUR 250 billion, establishing the EU as one of the largest issuers of green bonds globally;
- Finally, the Commission is working on proposals for new own resources, which may include the introduction of **new green own resources**.

## How much do we spend?

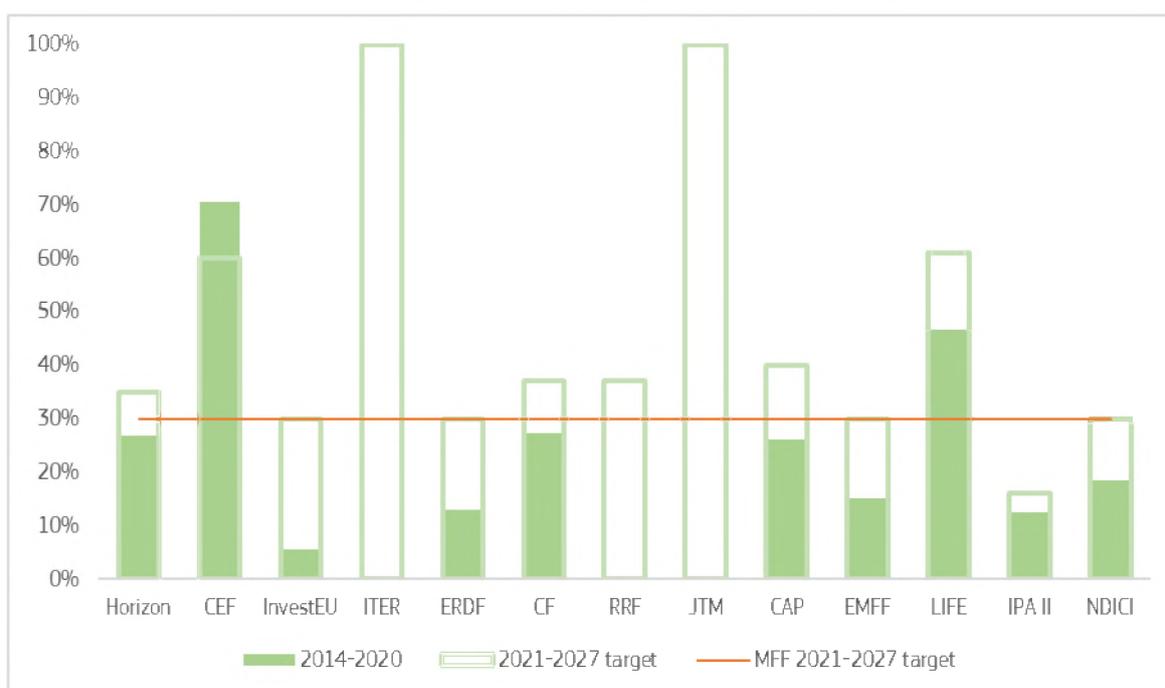

### Climate contribution in 2014 to 2020, in million EUR

Source: European Commission.

In 2021, the Commission is continuing to revise and update all the data available, including further consolidating existing data and applying a more granular methodology where possible.

## For the 2014-2020 period, EUR 216 billion of the EU budget was dedicated to the fight against climate change, i.e. 20.15%.

In the period 2021-2027 the EU budget will deliver at least 30% of climate expenditures, of the MFF and NGEU budget. To achieve this, the relevant basic acts include a set of targets that underpins the overarching target. The chart below compares the climate expenditures in 2014-2020 period and ex-ante target in 2021-2027. The white section shows the increased ambition of the programmes in terms of climate expenditures, achieved through the inclusion of the European Green Deal policy framework into the design of the programmes. A complete overview of the climate expenditures is available at the end of this document and in each Programme Statement. For the CEF programme, a recalculation of the 2014-2020 period expenditures done in 2021 has shown that the expenditures related to climate are actually higher than what anticipated when the new target was set.

Comparison of climate expenditures in 2014-2020 period and ex-ante target in 2021-2027

Source: European Commission.

### Climate Methodology

In the 2014- 2020 period, to track the EU budget expenditure, the Commission uses the EU markers, based on the internationally recognised methodology of the Organisation for Economic Co-operation and Development's Rio markers. The methodology consists of assigning a coefficient of 0%, 40% or 100% to each intervention to reflect the extent to which climate considerations have been integrated into its design. These markers are assigned at the lowest level of granularity possible by the design of the programme.

Given the risk that the same action would be categorised differently depending on why it was financed<sup>6</sup>, the Commission started moving already in the 2014-2020 MFF towards a system of classification by type of action. For the 2021 – 2027 MFF, the European Commission is further developing that tracking system to use **EU climate coefficients**. These retain the three-tier system from the OECD Rio markers but further reinforce a classification of types of action by their expected effects on climate that is consistent across the EU budget.

An important first step was taken in the climate tracking methodology for the new Recovery and Resilience Facility where substantive conditions have been included in the categories to reflect considerations of effect to the extent possible. The Commission is working on extending this system across the EU budget, reflecting new policy developments, in particular the European Green Deal and the new "Taxonomy of Sustainable Finance

### Climate Adjustment Mechanism

The Climate Adjustment Mechanism provision is structured so to guarantee that the different targets will be reached. This will be ensured through:

- Sectorial targets, underlying the overall 30% target. These targets have been included in articles of the legislation for the programmes where strong pre-programming is present, to limit the risk of deviation (e.g. RRF, CPR);

- Enhanced monitoring and reporting, through a more granular tracking in the financial system of the Commission and a specific section in the Programme Statement of operational expenditures that monitors the target;
- A mechanism whereby the Commission will propose corrective actions in line with the specific basic act provisions in case of deviations in the programming that could endanger the 30% target;

As evident in annex I of this report, currently the EU Budget fulfills both the overall 30% target and each sectorial target. This section will be updated yearly according to the most updated data and will explain any deviation of the performance, as needed.

## Some examples of what we achieved

### Under Horizon 2020

- **Sustainable and resilient production of food, wine and oil.** This project designed a climate services prototype to build more resilient, efficient and sustainable agriculture and food systems. Although it focused on three key crops in the Mediterranean area (grapes, olives and durum wheat), the prototype can be used in other sectors. **The co-production of climate services for East Africa project** co-developed dedicated climate services for the water, energy and food security sectors with stakeholders and end users, to enhance their ability to plan for and adapt to seasonal climate fluctuations in East Africa. The services will potentially reach 365 million people in 11 countries.
- **Urban climate resilience.** **GrowGreen** supported nature-based solutions for urban climate resilience, from co-design to co-management, with contributions to climate strategies in city case studies, such as the city of Manchester in the United Kingdom.
- **Climate impacts beyond Europe.** This project identifies how the risks of climate change to countries, economies and peoples beyond Europe might cascade into Europe. It also looks into possible mitigation and adaptation efforts.
- **Too much or too little water.** **The ‘bridging the gap for innovations in disaster resilience’ project** supported innovations in climate change adaptation, bridging the gap between innovators and end users in resilience to floods, droughts and extreme weather.

### Under the space programme

- The **Copernicus Climate Change Service** works together with businesses across the globe to turn raw climate data into sector-specific information aimed at users within the field, such as businesses, researchers and policymakers. One of these projects is the global biodiversity service, which aims to support those working to preserve species, to protect the areas that are most climate sensitive, to increase the resilience of ecosystems and to reduce biodiversity loss around the world by providing the information needed to create plans to sustain ecosystems in present and future climate conditions.

### Under cohesion policy

- By 2019, an increase of over 2 000 MWh in additional capacity of renewable energy production had been achieved.
- Over 285 000 additional households were able to achieve an improved energy consumption classification with the help of regional funding.
- A decrease of over 1.2 billion kWh in annual primary energy consumption by public buildings was achieved.
- By 2019, a reduction of over 2.9 million tonnes of CO<sub>2</sub> equivalent per year had been achieved.

### Under Erasmus+

The **‘Green living in the rural area’ training course** was designed, to empower youth workers and their organisations to support social and environmental responsibility, saving and optimising resources. The project trains youth workers to reuse and recycle materials and equips them with the skills to act as multipliers in their own organisations. The main objectives are to raise participants’ awareness of sustainable development in rural areas and of ways of reusing and recycling materials; to provide participants with the knowledge, skills and competence to reuse wood and other materials to build a tree house; to encourage the participants’ entrepreneurial spirit; and to foster creativity, leadership skills, innovative attitudes and environmental responsibility in participants, so that they can act as multipliers of the knowledge acquired in the training course.

### In relation to the external dimension

The EU fulfilled its pledge to provide a EUR 10 million financial **contribution to the Adaptation Fund** – one of the international climate funds established under the United Nations Framework Convention on Climate Change, thus contributing to the global efforts to address climate change in the most vulnerable countries of the world. Furthermore, the EU continued to provide support for climate action to developing countries through its flagship initiative, the global climate change alliance+.

**Climate-related administrative expenditure** is not accounted for in the mainstreaming estimates. The European Commission is committed to sustainability. Thus, through the eco-management and audit scheme system, the Commission implements a monitoring programme to assess, measure, monitor and reduce the environmental impact of its daily activities. The Commission has achieved significant results, for example the following (results refer to the Brussels site during the 2005-2019 period) (11):

- energy for buildings = – 65% (MWh/person),
- CO<sub>2</sub> emissions for buildings = – 86% (tonnes/person),
- office paper = – 71% (sheets/person/day),
- water use = – 58% (m<sup>3</sup>/person),
- non-hazardous waste = – 38% (tonnes/person).

## Biodiversity Mainstreaming

Preservation of biodiversity ensures the long-term stability of ecosystems and enables the sustainable preservation of natural resources for future generations. Tackling biodiversity loss and restoring ecosystems require significant investments, including to ensure a more resilient society and combat the emergence of diseases linked to ecosystem degradation and wildlife trade.

### What do we do?

To halt and reverse the decline of biodiversity in the EU is a major objective of the EU, as confirmed in the political guidelines from Commission President von der Leyen. Protecting biodiversity is a global issue that requires transnational intervention and coordination. This important strategic political ambition is reflected in the European Green Deal and its 2020 investment plan.

In line with the **European Green Deal**, the Commission, the European Parliament and the Council of the European Union decided in an interinstitutional agreement that biodiversity should be mainstreamed in the EU programmes, to achieve a level of **‘7.5% in 2024 and 10% in 2026 and in 2027 of annual spending under the MFF [multiannual financial framework] to biodiversity objectives**, while considering the existing overlaps between climate and biodiversity goals’ (12). This is in line with the statement in the biodiversity strategy for 2030 that biodiversity action requires at least EUR 20 billion per year stemming from ‘private and public funding at national and EU level’ (13), of which the EU budget will be a key enabler. The Biodiversity Strategy also sets out that, as nature restoration will make a major contribution to climate objectives, a significant proportion of the EU budget dedicated to climate action will be invested on biodiversity and nature-based solutions

### How much do we spend?

**For the 2014-2020 period, the EU budget dedicated EUR 85 billion, or 8% of the multiannual financial framework, to the fight against biodiversity loss.**

### Biodiversity Methodology

To track the EU budget expenditure for biodiversity, an internationally recognised methodology (the Rio markers) is used. The methodology involves applying a coefficient of 0%, 40% or 100% to each project/objective/strand/programme, reflecting the

<sup>11</sup> For more details, please see the Commission’s environmental statement ([https://ec.europa.eu/environment/emas/pdf/other/ES\\_2020\\_Results\\_2019\\_Corporate\\_summary.pdf](https://ec.europa.eu/environment/emas/pdf/other/ES_2020_Results_2019_Corporate_summary.pdf) and [https://ec.europa.eu/environment/emas/pdf/other/EMAS\\_brochure.pdf](https://ec.europa.eu/environment/emas/pdf/other/EMAS_brochure.pdf)).

<sup>12</sup> Interinstitutional Agreement between the European Parliament, the Council of the European Union and the European Commission on budgetary discipline, on cooperation in budgetary matters and on sound financial management, as well as on new own resources, including a roadmap towards the introduction of new own resources (OJ L 433I, 22.12.2020, p. 28) (<https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv:OJ.LI.2020.433.01.0028.01.ENG>).

<sup>13</sup> Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions – EU biodiversity strategy for 2030 – Bringing nature back into our lives (COM(2020) 380) (<https://eur-lex.europa.eu/legal-content/EN/TXT/?qid=1590574123338&uri=CELEX%3A52020DC0380>).

degree to which biodiversity considerations have been integrated. The Commission is currently working to update the Biodiversity methodology for the 2021-2027 period, to properly implement an enhanced EU Coefficient system for biodiversity expenditures.

## Some examples of what we achieved

The **Horizon 2020 project on the biosystematics, informatics and genomics of the big four insect groups** studied the four largest insect groups, to investigate hotspots of largely unknown insect diversity to better comprehend its potential for helping tackle economic and societal needs. The project employed a wide spectrum of modern, innovative approaches to uncover the evolutionary history of several insect lineages.

Through **cohesion funding**, by 2019:

- nearly 3 million additional people were being served by improved waste water treatment with the help of regional funds;
- nearly 6 million hectares of habitats had achieved better conservation status with support from regional funds.

The **Development Cooperation Instrument** helped improve the conditions of 186 different species.

Under the **European Neighbourhood Instrument**, bilateral and regional projects have been targeting biodiversity. For example, the **integrated monitoring and assessment programme–marine protected areas project** aims at achieving a good environmental status for the Mediterranean Sea and coast through an ecologically representative and efficiently managed and monitored network of marine protected areas. The project has a total budget of EUR 4 million and its implementation period runs from 2019 to 2022.

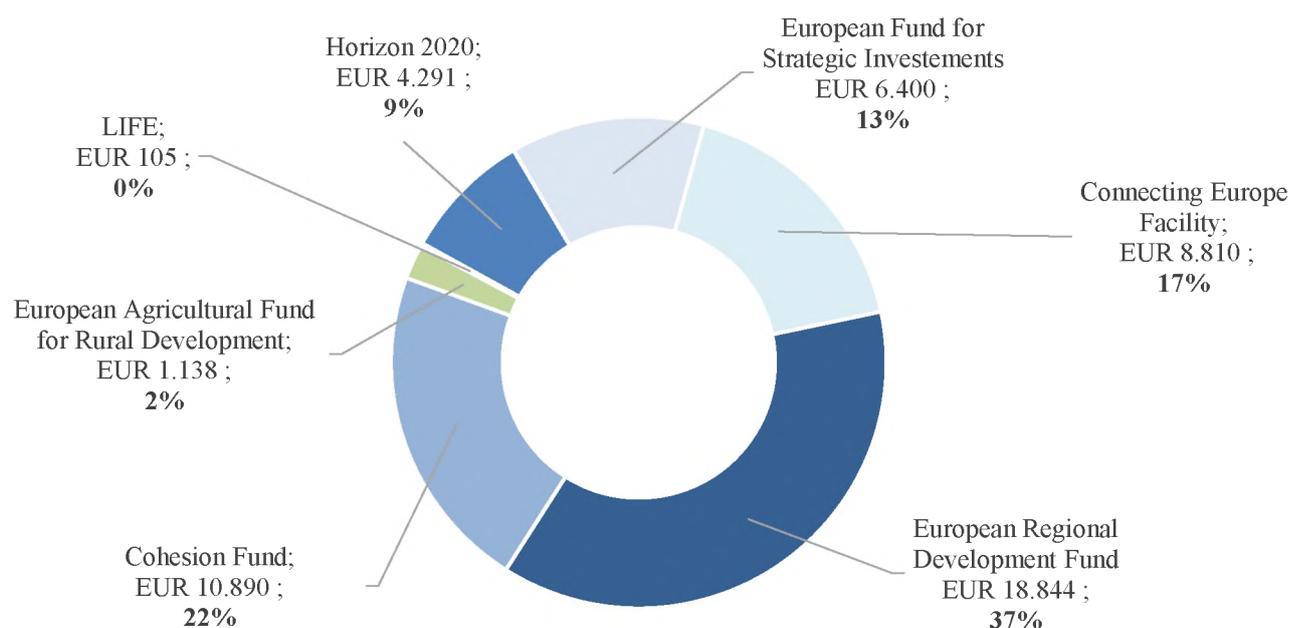

Another example is the **EU4Environment project** within the Eastern Partnership. This project helps partner countries to preserve their natural capital and to increase people's environmental well-being, by supporting environment-related action, demonstrating and unlocking opportunities for greener growth and establishing mechanisms to better manage environmental risks and impacts.

## Clean Air tracking

The EU has been working for decades to reduce air pollution to levels that do not give rise to negative impacts on, and risks to, human health and the environment. Air quality has improved in the European Union over time and emissions of several air pollutants have decreased. This has been possible thanks to EU clean air legislation and efforts to integrate environmental protection requirements in general and clean air priorities in particular into sectoral policies, including stricter control of harmful substances emissions into the atmosphere. Joint efforts at EU, national, regional and local level, including thanks to the provision of resources from the EU budget to actions contributing to clean air objectives, have played an important role in delivering progress. However, efforts must continue and intensify as, in most Member States, quality of life remains hampered by the adverse impacts of air pollution. EU air quality standards need to be met across the EU.

To address remaining clean air challenges, EU funding has been made available and successfully used by Member States under various financial streams, by either directly supporting clean air projects or effectively mainstreaming clean air objectives in other investments (e.g. infrastructure, rural and regional development). To monitor progress in the Member States' uptake of EU funds for clean air objective, the Commission tracks EU funding contributing to clean air, by assessing the extent to which each funding stream contributes to this objective. This monitoring will contribute to better implementation of clean air policies in Member States. This tracking also responds to the Commission obligation to report on Member States' uptake of Union funds in support of the achievement of the objectives of Directive (EU) 2016/2284 on the reduction of national emissions of certain atmospheric pollutants (the NEC Directive, for National Emission reduction Commitments Directive) in its Article 11(1)(c).

In order to comply with the Directive's obligation of reporting, the programme statements for relevant programmes include the individual programmes' contribution to clean air throughout the 2014-2020 multiannual financial framework. The precise methodology for tracking the contribution towards clean air objectives will be published along with the implementation report that is mandated by the NEC Directive (Article 11 of the NEC Directive). While for the 2014-2020 MFF ex-post reporting can be done, values for the 2021-2027 MFF rely on estimates. Data for the 2021-2027 MFF is therefore unavailable for InvestEU and LIFE as projects have not been chosen yet.

## Gender equality mainstreaming

The Council of Europe defined gender mainstreaming as "the (re)organisation, improvement, development and evaluation of policy processes, so that a gender equality perspective is incorporated in all policies at all levels and at all stages, by the actors normally involved in policymaking<sup>14</sup>". According to the European Institute for Gender Equality (EIGE), gender mainstreaming involves the

<sup>14</sup> For further information, please consult: <https://www.coe.int/en/web/genderequality/what-is-gender-mainstreaming>

integration of a gender perspective into the preparation, design, implementation, monitoring and evaluation of policies, regulatory measures and spending programmes, with a view to promoting equality between women and men, and combating discrimination<sup>15</sup>.

The Commission has embedded gender mainstreaming in its strategy for the promotion of gender equality and has established gender equality as a cross-cutting objective for all policy areas, including fundamental rights and citizenship, employment and social inclusion, cohesion policy, education, research and innovation, external cooperation and humanitarian aid.

The Commission's long-standing commitment to gender equality gained new momentum with the adoption of the Gender Equality Strategy 2020-2025<sup>16</sup>, which delivers on the Commission's commitment to achieving a Union of Equality. It sets out policy objectives and actions to achieve significant progress towards a gender-equal Europe by 2025. The goal is a Union where everybody, in all their diversity, is free to pursue their chosen path in life, have equal opportunities to thrive, and can equally participate in and lead our European society. The key objectives of the Strategy are ending gender-based violence; challenging gender stereotypes; closing gender gaps in the labour market; achieving equal participation across different sectors of the economy; addressing the gender pay and pension gaps; closing the gender care gap and achieving gender balance in decision-making and in politics. The Strategy pursues a dual approach of gender mainstreaming combined with targeted actions, and intersectionality is a horizontal principle for its implementation. While the Strategy focuses on actions within the EU, it is coherent with the EU's external policy on gender equality and women's empowerment.

Since the fallout of the Covid-19 pandemic, the Commission has moved decisively to develop a comprehensive set of initiatives, comprising both first-response measures and more structural measures, in the context of the Next Generation EU and the reinforced Multiannual Financial Framework. The resulting policy response focusses on fair and inclusive recovery. It ensures that equality is at the heart of recovery, and it is designed to mitigate the disproportionate impact that the crisis has on many vulnerable groups in society, irrespective of sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation.

As concerns funding in particular, in line with the Gender Equality Strategy 2020-2025, Next Generation EU and the 2021-2027 MFF provide a wide range of EU funding and budgetary guarantee instruments to support actions promoting women's labour market participation and work-life balance, invest in care facilities, support female entrepreneurship, combat gender segregation in certain professions and address the imbalanced representation of girls and boys in some sectors of education and training. Furthermore, dedicated funding is provided for projects benefiting civil society organisations and public institutions that implement specific actions, including preventing and combating gender-based violence. For instance, through the future Citizen, Rights, Equality and Values programme, the Commission continues to support civil society organisations and other stakeholders active at local, regional, national and transnational levels across Europe in tackling gender-based violence and promoting gender equality. Violence, and in particular gender-based violence, are covered by a dedicated strand and specific objective ("Daphne"). Furthermore, the Commission acted to directly support the healthcare systems of EU Member States, where the vast majority of health workers are women (78%)<sup>17</sup>, in their fights against the coronavirus pandemic. Notably, in 2020 the Commission mobilised EUR 3 billion from the EU budget through the RescEU medical equipment capacity and the Emergency Support Instrument for the healthcare sector<sup>18</sup>.

The overview of the information reported on in the programme statements reflects the continuous efforts to reinforce the integration of gender mainstreaming, and is as follows:

- 61% of the draft budget 2022 spending programmes (or 28 out of 46 programmes) contain some qualitative or quantitative information related to their contribution to gender mainstreaming, compared to 58% (or 35 out of 60 spending programmes) under the EU budget 2021. This marks the fourth consecutive year where an increase in the number of reporting programme statements is observed.
- 26% of the draft budget 2022 spending programmes (or 12 out of 46 programmes) provide some financial data on the EU budget contribution to gender mainstreaming, compared to 16% (or 10 out of 60 programmes) under the EU budget 2021.
- 26% of the of the draft budget 2022 spending programmes include actions to tackle violence against women and girls, compared to 10% (or 6 out of 46 programmes) under the EU budget 2021.
- 20% of the draft budget 2022 spending programmes (or 9 out of 46 programmes) present specific actions aiming at ensuring gender balance.

The Commission has been working on the development of a methodology to measure expenditure related to gender equality at programme level in the 2021-2027 MFF, with a view to further reinforcing gender mainstreaming in the post-2020 programming period, and in line with the commitment undertaken in its Gender Equality Strategy. The Commission is engaged in exchanges with the European Institute for Gender Equality as well as with the European Court of Auditors in the context of the audit launched by the former on gender mainstreaming in the EU. Both of these exchanges are contributing to this process.

<sup>15</sup> For further information, please consult: <https://europa.eu/!kg64Cb>

<sup>16</sup> For further information, please consult: <https://europa.eu/!QR69qN>

<sup>17</sup> For further information, please consult: <https://europa.eu/!kX87Uu>

<sup>18</sup> For further information, please consult: <https://europa.eu/!BU83CV>

The methodology aims at improving gender mainstreaming in the Commission's budget process, through tracking the contribution made by policy design and resource allocation to gender equality objectives. The methodology expands on the general criteria proposed by the OECD for the Rio markers and uses a similar, albeit somewhat adjusted approach as used in climate tracking. With a view to a strengthened reporting, the Commission will analyse the strengths and weaknesses of the proposed methodology and will consider how to report meaningfully on annual expected gender equality expenditure of the programmes in the respective annual programme statements and in other corporate reports. The methodology will be tested in 2022, with a view to using it as of 2023 and expanding it to other programmes once its applicability is proven.

## The EU budget and Sustainable Development Goals (SDGs)

The United Nations' 2030 Agenda for Sustainable Development, with its 17 Sustainable Development Goals (SDGs) and 169 targets, has given a new impetus to global efforts to achieve sustainable development. The EU has played an important role in shaping the 2030 Agenda, through public consultations, dialogue with partners and in-depth research. The EU is committed to playing an active role to maximise progress towards the SDGs, as outlined, among others, in its Communication 'Next steps for a sustainable European future'<sup>19</sup> and in the Commission Staff Working Document 'Delivering on the UN's Sustainable Development Goals – A comprehensive approach'<sup>20</sup>.

This lasting commitment to SDGs constitutes an overriding political priority for the von der Leyen Commission. The SDGs are an intrinsic part of the President's political programme<sup>21</sup> and an array of deeply transformative policies has already been presented in 2020, such as the European Green Deal, the climate law, a new Industrial Strategy for Europe, the Annual Sustainable Growth Strategy 2020 and 2021, and the new European Skills Agenda amongst others.

This commitment has even greater relevance in light of the global COVID-19 pandemic by providing an impetus to 'building back better' towards a more inclusive, sustainable, just and resilient future for all, leaving no one behind. Notably, the Commission's Annual Sustainable Growth Strategy 2021<sup>22</sup> reaffirmed that sustainability, productivity, fairness and stability, meaning the four pillars on which the EU's economic policy must rely to implement reforms and investments in the European Union<sup>23</sup>, should remain the guiding principles underpinning Member States' recovery and resilience plans under the Recovery and Resilience Facility.

These priorities lie at the heart of the European Semester and ensure that the new growth agenda does the best for people and the planet. To this end, a holistic and balanced approach where the Union works better together with the Member States and across policy fields is required. Given the division of competences between Member States and the EU, a close coordination is crucial for the achievement of the SDGs, as far as the contribution of Member States is concerned.

At Union level, sustainable development challenges are addressed through EU policies and regulatory instruments. As far as the former are concerned, the EU budget, through its spending programmes, provides a significant contribution to sustainable development by complementing the national budgets, in line with the principle of subsidiarity. In doing so, the design and implementation of the EU spending programmes aim at delivering on the objectives in each policy field whilst promoting sustainability through the actions and interventions of the relevant programmes, in a joint and coherent way. In particular, almost 45 out of 61 of the EU spending programmes corresponding to 96% of the EU budget contributed towards at least one SDG in 2020.

The number of programmes contributing to individual SDGs is presented in the graph below:

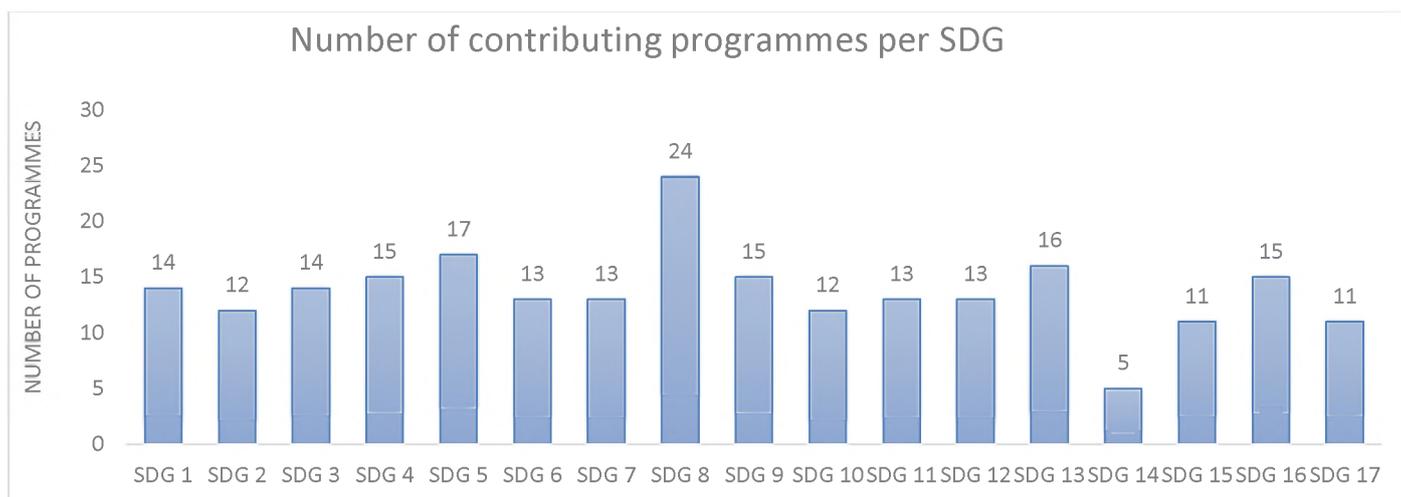

<sup>19</sup> For further information, please consult: <https://euroDa.eu/iPv74QX>

<sup>20</sup> SWD(2020) 400 final, 18.11.2020. For further information, please consult: <https://europa.eu/!dp39gq>

<sup>21</sup> President von der Leyen's [Political Guidelines](#): A Union that strives for more- My agenda for Europe.

<sup>22</sup> COM(2020) 575 final. For further information, please consult: <https://europa.eu/!dM47rj>

<sup>23</sup> Annual Sustainable Growth Strategy 2020, SWD(2019) 444 final. For further information, please consult: <https://europa.eu/!Rv84jt>

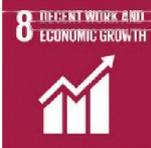

In the light of the cross-cutting nature of SDGs, and in order to ensure a holistic approach in addressing sustainable development, 87% of the spending programmes contributing to SDGs are designed to address multiple SDGs through their policy actions. As last year, the Commission presents the SDGs to which each EU programme contributes along with examples of its contribution. This is with a view to further enhancing the reporting on the performance of its programmes and providing a deeper understanding of the EU policy coherence.

The following infographic illustrates in a non-exhaustive manner the many examples of the contribution of EU programmes to SDGs. It serves to capture the EU's coherent approach with which it supports a variety of initiatives in a wide range of policy fields across the globe with the aim to promote sustainable development for all.

	<p>The <b>Asylum, Migration and Integration Fund</b> contributed EUR 7.5 million in 2020 to a call under Greece's national programme to subsidise the operation of semi-independent-living apartments for unaccompanied minors above 16 years old. The current call covers 500 accommodation places.</p> <p>The EU and its 27 Member States significantly increased their official development assistance for partner countries to almost EUR 67 billion <sup>(24)</sup> in 2020. The EU and its Member States thereby consolidate their position as the world's leading donor, and have taken a major leap forward towards meeting the target they have committed to for 2030.</p>		<p>Under the implementation of the <b>European Globalisation Adjustment Fund</b>'s 'Microsoft 2' case in Finland between 2017 and 2019, EUR 3.5 million in funding from the European Globalisation Adjustment Fund was mobilised to finance measures offered to 883 dismissed workers in support of labour mobility and in cooperation with the European Job Mobility Portal services (i.e. foreign job advertisements and the exchange of experience in online meetings).</p>
	<p>Approximately EUR 4.9 million was invested between 2014 and 2020 to support the testing and eradication of animal diseases such as brucellosis in local sheep, goat and cattle herds and the training of local veterinarians through the <b>Instrument of Financial Support for Encouraging the Economic Development of the Turkish Cypriot Community</b>.</p>		<p>The <b>Cohesion Fund</b> contributed approximately EUR 39.7 million to Poland's largest project for developing smart electricity distribution networks in seven Polish provinces. The project offers fewer network failures, increased security of supply and better quality of life for nearly 3 million inhabitants, and it is expected to reduce primary energy consumption by 1 054 gigajoules/year, resulting in savings of 98 megawatt hours/year.</p>
	<p>The <b>LIFE</b> programme has contributed EUR 10 million to the Polish integrated project Małopolska, which was launched in 2013 and aims to reduce fine particle pollution <sup>(25)</sup>.</p> <p>EU interventions for improved diets and breastfeeding, household resilience, food security, healthcare and the reduction of stunting reached almost 20 million women, adolescent girls and children in 2013-2019 under the <b>Development Cooperation Instrument</b>.</p>		<p>The LIFE material match making platform enabled waste reduction amounting to about 60 000 tonnes (a 10% reduction within the context of the project) from October 2016 to December 2019, through the systematic application of eco-design techniques to facilitate the recovery and reuse of parts that would previously have become waste.</p>
	<p>In Belgium, thanks to <b>European Social Fund</b> support in the amount of approximately EUR 3.3 million, since 2015 the TechnocITé Competence Centre has helped more than 9 000 people develop new skills in the fields of information and communications technology through qualifying and continuous training in one of the 20 courses organised in these fields. The project will run until the end of 2021.</p>		<p>Under the <b>Connecting Europe Facility action</b>, a maximum contribution of approximately EUR 14 million was allocated to the 'AMBRA-Electrify Europe' action to support the deployment between 2018 and 2022 of 6 458 electrical supply points at 3 169 electric charging stations for electric vehicles on six trans-European transport network core network corridors in Spain, Italy and Romania.</p>
	<p>The <b>Erasmus Mundus</b> master's degree in women's and gender studies was funded in 2019 with a total budget of EUR 4.5 million for the following 5 years. Its mission is to produce gender experts able to contribute to greater equality between men and women, and the consortium consists of six universities in four Member States and the United Kingdom.</p>		<p>To date, the <b>European Maritime and Fisheries Fund</b> has funded nearly 15 000 projects on preserving the marine environment and ensuring better resource efficiency.</p>

<sup>(24)</sup> [This is a 15% increase in nominal terms and equivalent to 0.5% of the collective gross national income, up from 0.4% in 2019, according to preliminary figures published by the Organisation for Economic Co-operation and Development's Development Assistance Committee. The commitment for 2030 is 0.7%.](#)

<sup>(25)</sup> [The reduction in fine particle emissions targeted by 2023 is about 25 000 kilograms per day for particles smaller than 2½ microns and 21 000 kilograms per day for particles smaller than 10 microns.](#)

 <p><b>6</b> CLEAN WATER AND SANITATION</p>	<p>In 2020, the <b>Copernicus</b> Land Monitoring Service systematically provided near-real-time information on global inland water bodies and their seasonal replenishment, lake and river water levels, temperature, turbidity and trophic state, including potential water availability from snow and ice cover.</p>	 <p><b>15</b> LIFE ON LAND</p>	<p>In the 2014-2020 period, the <b>common agricultural policy</b>'s rural development support planned for organic farming amounted to EUR 11.2 billion. Furthermore, the share of the EU's agricultural area used for organic farming increased from 5.9% in 2012 to 8.5% in 2019, corresponding to an increase from 9.46 to 13.79 million hectares.</p>
 <p><b>7</b> AFFORDABLE AND CLEAN ENERGY</p>	<p>The <b>European Fund for Strategic Investments</b> helped provide renewable energy to approximately 14.5 million households and save over 7 150 gigawatt hours of energy per year.</p>	 <p><b>16</b> PEACE, JUSTICE AND STRONG INSTITUTIONS</p>	<p>At the end of 2020, actions worth EUR 501 million to counter terrorism and prevent and counter violent extremism outside of the EU were ongoing. This represents an 8% increase compared to the previous year.</p>
 <p><b>8</b> DECENT WORK AND ECONOMIC GROWTH</p>	<p>The <b>European Regional Development Fund</b> contributed EUR 1.2 million to the 'house of digitalisation' project in Lower Austria. The project supported regional companies in strengthening their online trading opportunities in the midst of the COVID-19 crisis through the development of a mobile application allowing small enterprises to quickly and easily become involved in online retailing.</p>	 <p><b>17</b> PARTNERSHIPS FOR THE GOALS</p>	<p>In 2014-2020, <b>creative Europe – MEDIA</b> supported 114 co-productions and 83 distribution deals between EU and developing-country partners.</p>
 <p><b>9</b> INDUSTRY, INNOVATION AND INFRASTRUCTURE</p>	<p><b>Galileo</b>'s search-and-rescue service allows the time required to detect emergency distress beacons to be reduced to less than 10 minutes. As from 2020, a response is sent to the distress beacon in less than 15 minutes, acknowledging that the request has been received and that help is on the way, a unique new feature offered only by Galileo.</p>

2.1. Programme 2021-2027 .....	29
2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations .....	30
3. How is the programme performing ? .....	30
3.1. Performance .....	30
3.2. Key achievements .....	34
3.3. Evaluations, studies and reports .....	38
4. Programme 2021-2027 - Key monitoring indicators .....	38
Specific Objective 1 :Scientific impact by creating high-quality new knowledge, strengthening human capital in research and innovation, and fostering diffusion of knowledge and Open Science .....	38
Specific Objective 2 :Technological/economic impact especially within the Union by influencing the creation and growth of companies, especially SMEs including start-ups, creating direct and indirect jobs especially within the Union, and by leveraging investments for R&I .....	42
Specific Objective 3 :Societal impact by addressing the EU policy priorities and global challenges, including UN SDGs, following the principles of the Agenda 2030 and the goals of the Paris Agreement, through R&I, delivering benefits and impact through R&I missions and European Partnerships and strengthening the uptake of innovation in society ultimately contributing to people's well-being .....	46
5. Programme 2014-2020 - Key monitoring indicators .....	50
Previous Program 1 : The Framework Programme for Research and Innovation (Horizon 2020) .....	50
General Objective 1 :to build a society and an economy based on knowledge and innovation across the whole Union, while contributing to sustainable development .....	50
Specific Objective 1 :Excellent science - European Research Council (ERC) - strengthening frontier research .....	51
Specific Objective 2 :Excellent science - Future and Emerging Technologies - strengthening research in future and emerging technologies .....	51
Specific Objective 3 :Excellent science - Marie Skłodowska-Curie actions - strengthening skills, training and career development .....	52
Specific Objective 4 :Excellent science - Research infrastructures - strengthening European research infrastructures, including e-infrastructures .....	53
Specific Objective 5 :Industrial leadership – boosting Europe's industrial leadership through research, technological development, demonstration and innovation in the following enabling and industrial technologies (information and communication technologies; nanotechnologies; advanced materials; biotechnology; advanced manufacturing and processing; space) .....	53

Specific Objective 6 :Industrial leadership - enhancing access to risk finance for investing in research and innovation.....	55
Specific Objective 7 :Industrial leadership - increasing innovation in SMEs .....	56
Specific Objective 8 :Societal challenges - improving the lifelong health and wellbeing of all .....	56
Specific Objective 9 :Societal challenges - securing sufficient supplies of safe, healthy and high quality food and other bio-based products, by developing productive, sustainable and resource-efficient primary production systems, fostering related ecosystem services and the recovery of biological diversity, alongside competitive and low-carbon supply, processing and marketing chains .....	58
Specific Objective 10 :Societal challenges - making the transition to a reliable, affordable, publicly accepted, sustainable and competitive energy system, aiming at reducing fossil fuel dependency, in the face of increasingly scarce resources, increasing energy needs and climate change .....	60
Specific Objective 11 :Societal challenges - achieving a European transport system that is resource-efficient, climate- and environmentally-friendly, safe and seamless for the benefit of all citizens, the economy and society .....	62
Specific Objective 12 :Societal challenges - achieving a resource - and water - efficient and climate change resilient economy and society, protection and sustainable management of natural resources and ecosystems and a sustainable supply and use of raw materials, in order to meet the needs of a growing global population within the sustainable limits of the planet's natural resources and ecosystems.....	64
Specific Objective 13 :Societal challenges - fostering a greater understanding of Europe, provide solutions and support inclusive, innovative and reflective European societies in a context of unprecedented transformations and growing global interdependencies.....	66
Specific Objective 14 :Societal challenges - fostering secure European societies in a context of unprecedented transformations and growing global interdependencies and threats, while strengthening the European culture of freedom and justice.....	66
Specific Objective 15 :Spreading excellence and widening participation - fully exploiting the potential of Europe's talent pool and to ensure that the benefits of an innovation-led economy are both maximised and widely distributed across the Union in accordance with the principle of excellence.....	68
Specific Objective 16 :Science with and for society - building effective cooperation between science and society, to recruit new talent for science and to pair scientific excellence with social awareness and responsibility.....	68
Specific Objective 17 :Non-Nuclear Direct Actions of the Joint Research Centre - providing customer-driven scientific and technical support to Union policies, while flexibly responding to new policy demands .....	69
Specific Objective 18 :The European Institute of Innovation and Technology - integrating the knowledge triangle of higher education, research and innovation and thus to reinforce the Union's innovation capacity and address societal challenges.....	70
6. The programme contribution to horizontal policies .....	70
6.1. Contribution to climate mainstreaming.....	70
6.2. Contribution to biodiversity mainstreaming.....	72
6.3. Contribution to clean air financing.....	73
6.4. Contribution to gender equality .....	75
6.5. Contribution to the sustainable development goals.....	77

## **1. Overview**

### **1.1. Challenges**

Research and Innovation are essential to shape the future of Europe: they contribute to making Europe a better place in which to live and work and are crucial for providing solutions to the challenges we face today, and will face tomorrow. They help make people's lives better by improving healthcare, environment, climate and digital services. At the same time, by delivering countless new products and services, Research and Innovation improve Europe's competitiveness, boost growth and create jobs. Horizon Europe helps Europe deliver on citizens' priorities, as embodied in the Sustainable Development Goals and in the Paris Agreement on fighting climate change, to bring about sustainable growth and high-quality jobs, and to solve global challenges. It responds to the need to:

- Further improve the creation and diffusion of high-quality new knowledge and innovation in Europe
- Reinforce the impact of R&I in addressing EU priorities
- Ensure a more rapid uptake of innovative solutions

- Strengthen the European Research Area.

## 1.2. Mission (general objectives)

Horizon Europe promotes scientific excellence, generate new knowledge and technologies, and provide the appropriate environment to turn great ideas into products and services that will bring sustainable growth to our economy and create jobs. This will have positive effects on growth, trade and investments flow. Horizon Europe aims to:

- deliver scientific, technological, economic and societal impact from the Union's investments in research and innovation so as to strengthen the scientific and technological bases of the Union and foster its competitiveness in all Member States including in its industry, deliver on the Union strategic priorities and contribute to the realisation of EU objectives and policies,
- contribute to tackling global challenges, including the Sustainable Development Goals by following the principles of the Agenda 2030 and the Paris Agreement, and
- to strengthen the European Research Area. The Programme shall thus maximise Union added value by focusing on objectives and activities that cannot be effectively realised by Member States acting alone, but in cooperation.

## 1.3. Specific objectives

- Horizon Europe develops, promotes and advances scientific excellence, supports the creation and diffusion of high-quality new fundamental and applied knowledge, skills, technologies and solutions, training and mobility of researchers, attracts talent at all levels and contributes to full engagement of Union's talent pool in actions supported under this Programme.
- Horizon Europe generates knowledge, strengthens the impact of research and innovation in developing, supporting and implementing Union policies and supports the access to and uptake of innovative solutions in European industry, notably in SMEs, and society to address global challenges, including climate change and the Sustainable Development Goals.
- Horizon Europe fosters all forms of innovation, facilitates technological development, demonstration and knowledge and technology transfer, strengthens deployment and exploitation of innovative solutions.
- Horizon Europe optimises the Programme's delivery for strengthening and increasing the impact and attractiveness of the European Research Area, fosters the excellence-based participations from all Member States, including low R&I performing Member States, in Horizon Europe and facilitates collaborative links in European research and innovation

## 1.4. Public intervention context

In accordance with the Treaty on the Functioning of the European Union (TFEU), in particular Article 173(3), 182(1), 183 and the second paragraph of Article 188, it is the Union's objective to strengthen its scientific and technological bases by reinforcing the European Research Area in which researchers, scientific knowledge and technology circulate freely and encouraging it to become more competitive, including in its industry, while promoting all research and innovation activities to deliver on the Union's strategic priorities and commitments, which ultimately aim at promoting peace, the Union's values and the wellbeing of its people. The Union invests in research and innovation through the framework programme Horizon Europe to deliver scientific, technological, economic, environmental and societal impact in pursuit of this general objective and to maximise the Union's added value of its R&I investments.

In addition, Horizon Europe will contribute to tackling global challenges, including the sustainable development goals, such as for example are laid down in the 2030 Agenda and the Paris Agreement. The program focuses on objectives and activities that cannot be effectively achieved by Member States acting alone, but in cooperation.

## 1.5. Actions

Horizon Europe is implemented through three pillars interconnected leading to mutual reinforcement of activities. The Excellent Science pillar supports frontier research projects designed and driven by researchers through the European Research Council. It also funds fellowships and mobility of researchers through Marie Skłodowska-Curie actions, and invests in world-class research infrastructures. The Global Challenges and European Industrial Competitiveness pillar supports research into societal challenges, reinforces technological and industrial capacities, and sets EU-wide missions with ambitious goals tackling some of our biggest problems -health, climate change, clean energy, mobility, security, digital, materials, etc. It will also support partnerships with Member States, industry and other stakeholders to work jointly on research and innovation. It includes action by the Joint Research Centre supporting policy making with independent scientific evidence and technical support.

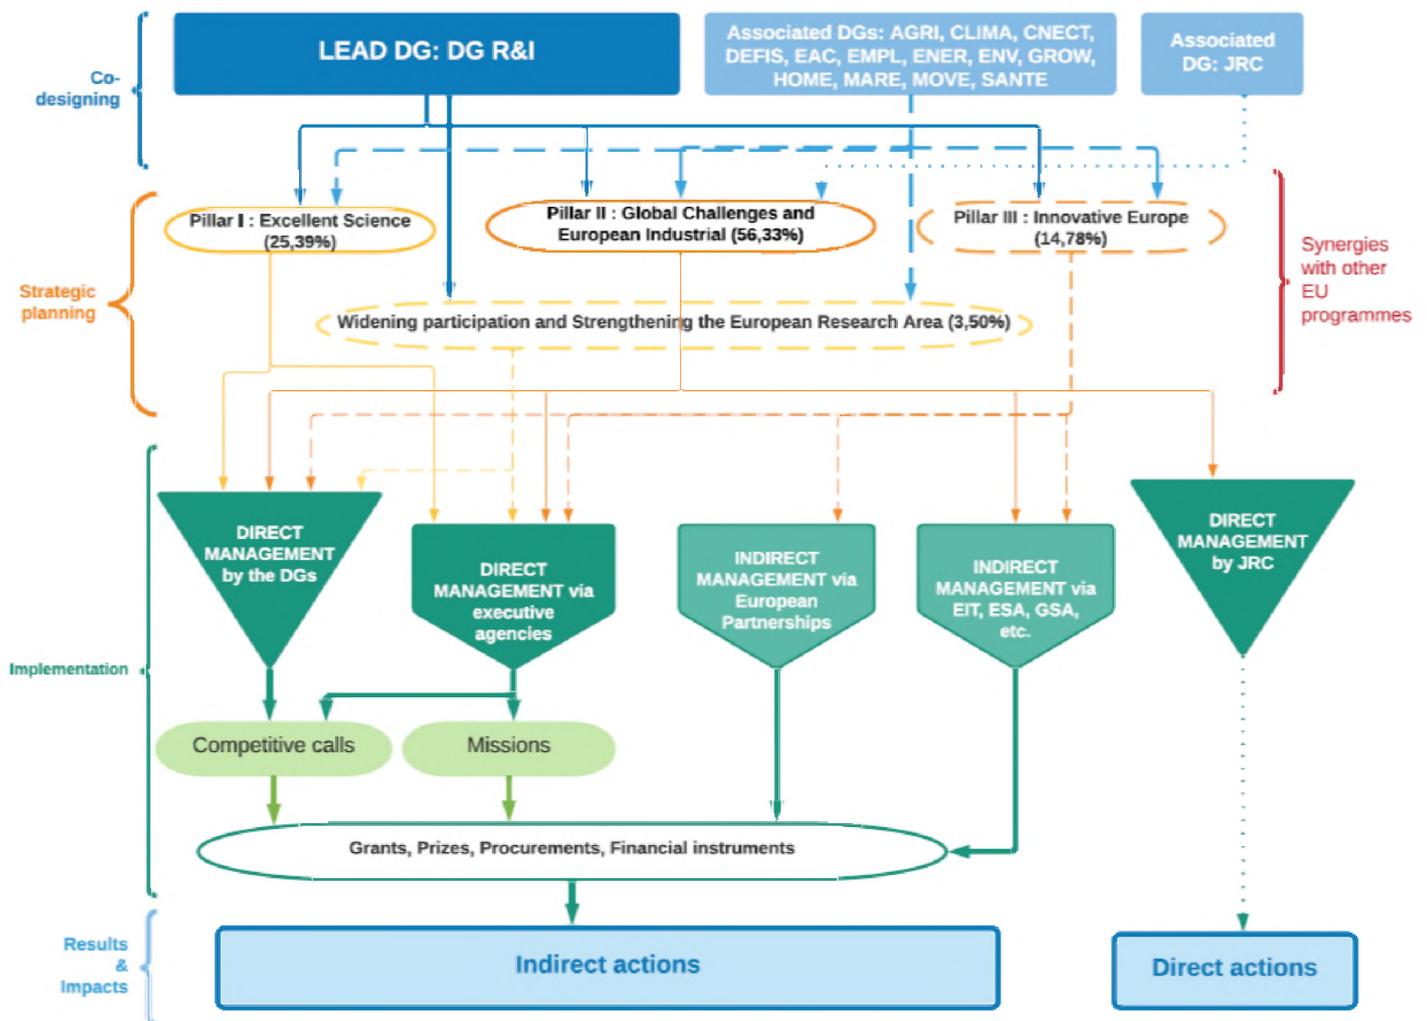

The Innovative Europe pillar aims to make Europe a frontrunner in market-creating innovation and SME growth through the European Innovation Council. It will help develop the overall European innovation landscape. The European Institute of Innovation and Technology (EIT) will continue to foster the integration of business, research, higher education and entrepreneurship. A fourth component on Widening participation and Strengthening the European Research Area underpins the whole of Horizon Europe. It

will support EU Member States in their efforts to unlock their national research and innovation potential and it will especially help low R&I performing Member States to increase their participation in Horizon Europe.

### 1.6. Delivery mode

The Programme is implemented directly by the Commission or through funding bodies designated by it. The Programme may provide funding to indirect actions in any of the forms laid down in the Financial Regulation, in particular grants (including operating grants), prizes and procurements. All EU access to (risk) finance instruments will be implemented under a single Invest EU Fund. DG Research & Innovation is involved in two windows of InvestEU: the R&I Window and the SME Window. The only exceptions are the European Innovation Council’s specific financial instruments. The crosscutting nature of R&I Horizon Europe will promote synergies with other EU programmes.

### 1.7. Graphic overview of the programme structure

### 1.8. Legal basis and financial programming

#### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
-------------	-----------------------	--------------------------------

COM (2018) 435: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing Horizon Europe – the Framework Programme for Research and Innovation, laying down its rules for participation and dissemination COM (2018) 436: Proposal for a DECISION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on establishing the specific programme implementing Horizon Europe – the Framework Programme for Research and Innovation	2021 - 2027	86 123,0
---	-------------	----------

### 1.8.2. Legal basis explanation

The Horizon Europe regulation, establishes the EU framework programme for research and innovation for the years 2021–2027. It lays down the objectives, the budget, the forms of EU funding and the rules for participation and dissemination. It is implemented through the specific programme established by the decision XX that set out detailed rules for the framework's implementation, as per Article 182 of the TFEU, the operational objectives and activities, especially for missions, the European Research Council and the European Innovation Council. The financial contribution to the EIT is established by Regulation (EC) No 294/2008. While defense research falls under the scope of the Horizon Europe programme, the specific provisions for defense research such as objectives, rules for participation, delivery mechanisms are specified in the Regulation establishing the European Defence Fund.

As regards the European Partnerships, the Horizon Europe regulation lays down the conditions and principles for establishing three types of European Partnerships: Co-programmed European Partnerships; Co-funded European Partnerships using a programme co-fund action and Institutionalised European Partnerships. These partnerships are based on a Council Regulation ([Article 187](#)) or a Decision by the European Parliament and Council ([Article 185](#)). They are implemented by dedicated structures created for that purpose. Institutionalised partnerships will only be implemented where other parts of the Horizon Europe programme, including other types of partnership, would not achieve the desired objectives or expected impacts.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total (including Next Generation EU)</b>	<b>13 278.5</b>	<b>13 956.0</b>	<b>13 800.6</b>	<b>12 364.4</b>	<b>12 608.0</b>	<b>12 857.7</b>	<b>13 112.4</b>	<b>91 977.5</b>

## 1.9. Link with the 2014-2020 MFF

*Horizon Europe* has been built on the positive results of its predecessor, Horizon 2020, of which it maintains many features. As a result of the interim evaluation of the Horizon 2020 programme, some changes were made that are continued under Horizon Europe for example the European Innovation Council pilot launched in 2017 to support breakthrough innovation. In addition, novelties have been introduced in Horizon Europe, notably:

- Deliver targeted solutions to societal challenges together with citizens > EU missions
- Rationalise the funding landscape > Streamlined approach to European Partnerships
- Strengthen international cooperation > extended association possibilities
- Reinforce openness > Open Science policy
- Encourage participation and decrease the R&I gap in Europe > widening participation and spreading excellence
- Increase the R&I impact > synergies with other EU programmes and policies

### 1.10. Relevant websites providing more information

To learn more about the Horizon Europe Programme, you are invited to visit the relevant website that contain information about:

- The structure of the programme, the strategic planning process, the implementation, news: [https://ec.europa.eu/info/horizon-europe\\_en](https://ec.europa.eu/info/horizon-europe_en).
- Information on all EU-supported R&D activities including projects, results, publications: <https://cordis.europa.eu>. The Community Research and Development Information Service (CORDIS) is the European Commission's primary source of results from the projects funded by the EU's framework programmes for research and innovation.

## 2. Where are we in the implementation ?

## 2.1. Programme 2021-2027

The year 2021 is the first year of implementation of Horizon Europe programme. The late adoption of the legal base will postpone the adoption of the work programmes 2021-2022 and the launching of calls for proposals. The first deadlines are foreseen in end May or June for very few calls while usually some call deadlines are planned from January to April each year. This late adoption has an impact on the implementation of the programme, delaying the starting of projects to the first semester 2022. Only a limited number of research projects will be able to start in 2021, therefore the level of payment needs will be very low for 2021. The payments of pre-financings is therefore postponed to year 2022.

In 2022, the Commission will implement the second year of the bi-annual work programmes for Horizon Europe, and the work programmes 2022 for ERC and EIC. The work programmes will foresee call deadlines the first quarter of 2022 that allows the start of the research projects and the payment of the pre-financings related to these calls for proposals already in 2022.

Building on the investments of 2020, the Commission remains committed to boosting spending on coronavirus research and innovation, as well as in other emerging infectious health threats. The new programme for research and innovation, Horizon Europe (2021-2027) will provide a wide range of funding and financing opportunities. However, the pandemic might affect the implementation of Horizon Europe. The starting of some research projects might be postponed due to crisis.

## 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	6 917 047	5 074 186
Implementation carry-overs		
Implementation total	6 917 047	5 074 186
total envelop*	7 103 046	
cumulative implementation rate	97%	71%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The Horizon 2020 total budget for the whole period 2014-2020 has been fully implemented in commitment appropriations. On the payment side 71.7% of the programme was paid to beneficiaries at the end of 2020 the RAL for the next period amounts to EUR 21.4 billion.

In 2020 the Commission implemented the last year of the tri-annual work programme 2018-2020 as well as the last annual work programme for ERC.

In 2021 the Commission plan to pay EUR 8 billion consisting of payments for the pre-financing of research projects starting in 2021 as well as intermediate and final payments related to the on-going research projects. The RAL will therefore be around EUR 13.4 billion.

The pandemic has impacted the implementation of research and innovation projects. During 2020 beneficiaries requested to postpone the starting of the projects have submitted lower cost claims and requested extensions of projects.

Due to the flexibility of the Horizon 2020 it was possible an immediate redeployment of significant resources for COVID19 actions while taking the goals and the level of ambition of the programme into consideration. The EU has pledged over €1 billion from Horizon 2020 to tackle the pandemic of which €780.8 million has already been mobilised. So far €602.3 million has been awarded to support research and innovation projects to tackle many aspects of the pandemic including at least €350 million to support coronavirus vaccine development. These projects address the development of diagnostics treatments vaccines epidemiology preparedness and response to outbreaks socioeconomics mental health production and digital technologies as well as the infrastructures and data resources that enable this research. A further €21.4m in grants will be awarded in the coming months. It also mobilised €400 million in financing from the Horizon 2020 InnovFin including InnovFin EFSI and Infectious Diseases Finance Facility (IDFF) of which €178.5 million has been allocated to accelerate the development of vaccines (e.g. the Covid-19 champion BioNTech and CureVac) and other interventions drugs medical and diagnostic devices or novel critical research and innovation infrastructures including production facilities. A further €221.6 million in IDFF financing will be awarded in the remaining months of the programme.

## 3. How is the programme performing ?

### 3.1. Performance

#### 3.1.1. Introduction

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### 3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### 3.1.3. Previous programme performance

By coupling research and innovation, Horizon 2020 is helping to achieve smart, sustainable and inclusive economic growth with its emphasis on excellent science, industrial leadership and tackling societal challenges. The goal is to ensure Europe produces world-class science, removes barriers to innovation and makes it easier for the public and private sectors to work together in delivering innovation.

To strengthen and facilitate knowledge sharing and evidence-based policy making, the DG RTD Joint Support Center has developed a dashboard that provides reports on most of the key performance indicators. The result of 18 of the 23 KPIs is displayed on the Horizon dashboard. For example, the dashboard makes it possible to know for a specific objective given the number of "high impact peer reviewed" publications and to visualize its evolution compared to the target throughout the implementation of the programme. It thus makes it possible to gauge exactly the performance of Horizon 2020. It responds to the need for more transparency in the expenditure of the European budget for research and innovation. The dashboard is open to everyone, on: [<https://ec.europa.eu/info/funding-tenders/opportunities/portal/screen/opportunities/horizon-dashboard>].

Adding a target to a KPI helps to measure success against that KPI. Therefore, where possible, a target was set. The method for setting the target depends on the maturity of the KPIs. Where possible, historical data from previous R&I programs have been used to establish the baseline and thus estimate the target. For the new KPIs, i.e. those which were not measured in the previous framework programs, it was not possible to estimate a target. For these indicators, "new approach" is indicated in the performance tables.

Moreover, in the context of the analysis of the performance of the program an important point which must be taken into account is the rate of implementation of the program. As indicated above in 2020, 71.7% of the programme was paid to beneficiaries at the end of 2020. This is why the target of some KPIs is not 2020 but the year when the last actions financed under Horizon 2020 will be finished. The final figures will be collected after all of the projects are closed and results reported i.e. several years after the formal end of the programme in 2020.

Based on results obtained so far, traffic light rating has been assigned to each specific objective based on the degree to which performance targets were met, (i.e. on track, moderate progress, deserves attention or no data) as indicated in the following table. No data is assigned to KPIs where a target was impossible to set.

Table: Performance Reporting Traffic Light Indicators

			
<b>On track</b>	<b>Moderate progress</b>	<b>Deserves attention</b>	<b>No data (or no target)</b>

#### Performance results

The actions of the programme as far as the pillar 'Excellence Science' is concerned are satisfactory. The performance results show that Horizon 2020 has succeeded in attracting and involving the EU's and world's best research institutions and researchers.

-  - From 2014, 6517 high quality research projects have been funded by the ERC via Horizon 2020. The share of publications from ERC-funded projects which are among the top 1 % highly cited remains high, about 7 %, considerably exceeding the target of 1.8 %.
-  - Over 30 years the EU has invested more and more in future technologies, whether for economic, social or environmental reasons, including through the Future and Emerging Technologies programme with a budget under Horizon 2020 over EUR 2.5 billion. Although the FET have already generated more than 3760 publications and more than 137 patents. Since its creation, the EIC Pathfinder programme, described below, includes the two actions FET open and the FET Proactive.

-  - From 2014, the Marie Skłodowska-Curie Actions (MSCA) has supported the mobility and training of around 69 000 researchers at all stages of their careers, including around 27 000 PhD candidates. It has funded more than 1 000 excellent international doctoral programmes involving universities, research centres, enterprises including SMEs. By the end of all the projects selected until 2020, the programme has exceeded its target of 65 000 researchers, including 25 000 PhD.
-  - From 2014, 115053 researchers have had access to research infrastructures (102949 researchers to research e-infrastructure and 12104 physically). This number exceeded by far the number targeted.

The actions of the programme as far as the pillar ‘**Industrial leadership**’ is concerned are progressing well.

-  - LEIT projects already produced numerous results, more than 5 700 public-private publication and 15 434 firms have introduced innovations with the potential to generate scientific breakthroughs. As regards the patents (556 applications and 217 awarded) 0,7 patent application per 10 Million euro is progressing slightly to the target of 3. Since patents are generally filed at the end of projects, we can expect to be close to the target at the end of all funded projects.
-  - Under the access to risk finance programme, more than 32000 organisations have been funded – which is above the target of 5 000; with EUR 41 billion amount of private funds leveraged. Total investments mobilised via debt financing and Venture Capital investments is of EUR 71 billion, which is above the target of EUR 15 billion. The data provided are based on the last available figures on the first march 2021 reported by the entrusted entities implementing Horizon 2020 financial instruments.
-  - The SME instrument is producing more close-to-market outputs compared to other types of action, followed by innovation actions. So far, 2676 innovations have been introduced to the market and 3797 innovations to the companies. 88% of participating SMEs introducing innovations new to the company or the market, exceeding the target of 50%. The SMEs instruments have generated around 1100 jobs and a growth of EUR 9610 million.

**Measure taken:** Horizon 2020 is succeeding in boosting Europe’s industrial leadership and competitiveness through stimulating leadership in enabling and industrial technologies, improving access to risk finance, and stimulating innovation in SMEs. However, the interim evaluation report [[http://ec.europa.eu/research/evaluations/pdf/book\\_interim\\_evaluation\\_horizon\\_2020.pdf](http://ec.europa.eu/research/evaluations/pdf/book_interim_evaluation_horizon_2020.pdf)] stated that closing the innovation gap and boosting industrial leadership is still a valid key objective for the EU and Horizon 2020, although the importance of supporting breakthrough, market-creating innovation is now more clearly recognised than when designing Horizon 2020. Following the advice from the high level group of innovators, a pilot European Innovation Council (EIC) was created within Horizon 2020. That is why the European Commission has launched the European Innovation Council (EIC) pilot, a flagship initiative that supports the most talented European innovators in scaling-up their breakthrough innovations fast and efficiently. The European Innovation Council (EIC) Pilot aims at identifying, supporting and accelerating the scale up of breakthrough technologies and game-changing innovations. The EIC Pilot supports those individual research teams and entrepreneurs with visionary ideas and the ambition to grow in Europe. The latest report “Deep Tech Europe Report” highlights strong positive impact of the EIC on the innovation community (see: [https://ec.europa.eu/info/news/report-highlights-strong-positive-impact-eic-innovation-community-2020-sep-22\\_it](https://ec.europa.eu/info/news/report-highlights-strong-positive-impact-eic-innovation-community-2020-sep-22_it)). The EIC Pilot showed that the ‘equity component’ to support SMEs in their innovation scaling-up phase is crucial for emergence of new innovation in Europe.

The high-exponential number of applications and requests for funding during evaluation process have confirmed such need. The amount of private investments raised by companies having received EIC funding is an important indicator of their market validation potential. Until May 2020, EIC Accelerator portfolio companies had attracted over € 5.3 billion in private funding. The pilot scheme has gone from strength to strength and under the EIC Accelerator a total of 293 companies have been selected for funding worth over €1 billion since December 2019.

The pilot has also confirmed:

- 1- Importance of the funding coverage of the entire innovation cycle, from technological idea (Pathfinder) to scaling up phase of the deployment (Accelerator).
- 2- A business plan preliminary phase (SME Instrument phase 1) is not necessary to target innovation; therefore the EIC Pilot has focused on more impactful support schemes.

The pillar “societal challenges” reflects the EU policy priorities and addresses major concerns shared by citizens in Europe and elsewhere. Funding focussed on the following challenges:

- Health, demographic change and wellbeing;
- Food security, sustainable agriculture and forestry, marine and maritime and inland water research, and the Bioeconomy;
- Secure, clean and efficient energy;
- Smart, green and integrated transport;
- Climate action, environment, resource efficiency and raw materials;
- Europe in a changing world - inclusive, innovative and reflective societies;
- Secure societies - protecting freedom and security of Europe and its citizens.

Four KPI have defined to measure the performance of the pillar. Two of them were not measured in the previous R&I programmes therefore it was not possible to estimate a target for them. However, a target has been set for the KPI related to the publication and to the patent. The targets are for whole Societal challenges pillar (Specific objectives: 8-14) and not per each individual specific objective.

The pillar ‘**Societal Challenges**’ shows moderate progress according to the KPIs. So far, the societal challenges pillar have already generated more than 8800 peer-reviewed publications in high impact journals; about 7340 public-private publications; 742 patent applications (not yet awarded) and 370 patents awarded and already 44 000 innovations that include prototypes and testing activities.

- From the information available, it is reported for whole societal challenges pillar: 4 peer-reviewed publications in high impact journals per 10 Meuro that is lower than the target of 20 and 0,5 patent application per 10 Meuro lower than the target of 2. Since publications and patents are generally produced at the end of projects, we can expect to be closer to the target at the end of all projects. Moreover, the targets having been established in 2011 from the first results of FP7, this have made difficult to correctly estimate the target for the Horizon 2020. This difficulty was taken into account in the design of Horizon Europe's performance framework. More precise estimation of the targets are carried out. The KPIs “Share of the overall Energy challenge funds allocated to the following research activities: renewable energy, end-user energy-efficiency, smart grids and energy storage activities” linked to the specific objective 10 whose value is of 90% has exceeded its target of 85 %.

**Measure taken:** To address some of the great societal challenges the world is facing like fighting cancer, adapting to climate change, protecting our oceans, living in greener cities and ensuring soil health and food, the “Mission” has been introduced in Horizon Europe. This novelty, an integral part of the Horizon Europe, will increase the effectiveness of funding by pursuing clearly defined targets within a given time frame. Each mission will operate as a portfolio of actions – such as research projects, policy measures or even legislative initiatives - to achieve a measurable goal that could not be achieved through individual actions.

Five mission areas have been proposed, each with a dedicated mission board and assembly.

- Adaptation to climate change including societal transformation
- Cancer
- Climate-neutral and smart cities
- Healthy oceans, seas, coastal and inland waters
- Soil health and food

The final choice of mission will be taken after an assessment phase. The board and assembly will assist the Commission in specifying, designing and implementing the specific missions. .

EU missions will contribute to the goals of the European Green Deal, Europe’s Beating Cancer Plan as well as the Sustainable Development Goals.

**Measure taken:** In order to deal with the challenges from amongst other things, demographic change, globalisation and technological change, a new intervention areas through a dedicated cluster on "Culture, creativity and inclusive society" has been introduced in Horizon Europe. The challenges are interconnected and have been chosen because they respond to the most pressing social, political, economic and cultural concerns and expectations of European citizens. They will provide a clear picture of what benefits citizens and different stakeholders can expect from R&I actions supported under this cluster.

**Measures taken:** As regards the Joint Undertakings set up under Horizon 2020 (SESAR, IMI2, CS2, FCH2, ECSEL, S2R, BBI), in general their performance is considered positive as reported by the ECA, even various matters need improvement. Therefore, measures have been taken to ensure the involvement of the Member States at an early stage in the definition of the next generation of the partnerships. The Commission has consulted the Member States on possible candidates for European Partnerships as part of the Strategic Coordinating Process. The feedback provided by 30 countries (all Member States plus Iceland and Norway) is summarised in the report available on [https://www.era-learn.eu/documents/results\\_structured\\_consultation\\_ms](https://www.era-learn.eu/documents/results_structured_consultation_ms). The next generation of Partnerships has been designed to be simpler and more impactful in addressing the challenges of today’s society. They will have to set up their ambition, for example their contribution to the EGD or the Digital transition with clear targets by 2030. Moreover, before there was more than 100 Partnerships organised in many ways, now there will be only 49 organised into three groups: Co-programmed; Co-funded and Institutionalised.

- “**Spreading excellence and widening participation**” aims at fully exploiting the potential of Europe's talent pool and to ensure that the benefits of an innovation-led economy are both maximised and widely distributed across the Union in

accordance with the principle of excellence. 17 evolutions of the publications in high impact journals in the relevant research fields have been recorded so far.

- As regards, the specific objective **Science with and for society (SwafS)**: The institutional change measured by its KPI is a change with meaningful impact in terms of how a beneficiary governs or structures itself in relation to any of the Responsible Research and Innovation dimensions public engagement, open access, gender, ethics (including research integrity), science education, and lasts beyond the lifetime of project funding. The results of a small sample of RRI and Gender Equality Plans (GEPs) projects revealed that SwafS will well and truly surpass its target of 100 institutional changes in beneficiaries by the end of Horizon 2020.

**But still a way to go** :We need science education for all, gender equality and inclusiveness in our organizations, ethics and integrity built into research, communication we can trust, open science and, ultimately, to put citizens at the heart to ensure excellent research and innovation to meet today's challenges for a better future. Europe can only prosper by matching the immense potential of science with the values, needs and aspirations of society. Horizon Europe will further strengthen its efforts to harness the vast potential that citizens have to offer and ensure effective cooperation between science and society.

- In 2020, 513 tangible specific impacts on European policies resulting from technical and scientific support have been provided by the Joint Research Centre and 548 peer reviewed publications in high impact journals have been generated by the JRC. These results show that during the Horizon 2020 period the JRC has exceeded its targets of 330 and 500 respectively.
- As far as the **European Institute of Technology** is concerned, 2153 organisations from universities, business and research are integrated in the Knowledge and Innovation Communities (KICs), above the target of 1 200. The performance results show also that the collaboration inside the knowledge triangle, leading to the development of innovative products, services and processes, is slightly behind to achieve its innovation target and in meeting the 'start-up and spin-off' target.

Table: Performance Reporting Traffic Light Indicators

				Total
14 KPIs on track	3 KPIs Moderate progress	0 KPIs Deserves attention	6 KPIs with no target	23 KPIs

*As shown in the table, Horizon 2020 is making good progress towards delivering scientific impacts through the reinforcement of R&I capabilities, scientific excellence and reputation, and through the integration of R&I efforts. 14 indicators are on track, 3 indicators show moderate progress. None indicator deserves attention. For the 6 new indicators, it was not possible to set a target. However, all KPIs were measured and recorded. Where it was necessary, appropriate measures were taken to ensure that the objectives are met, such as the creation of the EIC, or the design of missions..*

### 3.2. Key achievements

58 328	31 339	3 089	69 000	186 510
Publications <i>in high impact, peer reviewed Journal</i>	Joined public-private publication <i>in peer reviewed Journal</i>	Patent applications	Researchers, inc. Ph.D, having international or sector mobility	Innovations

The Research and Innovation projects funded by Horizon 2020 have already produced many results. Due to the large volume of results, it is impossible to present all 2020 key achievements. Therefore, only a few of them with limited information are presented in this section. In addition, some key achievements of the projects supporting the implementation of the Paris agreement and EU strategy on Adaptation to climate change, the EU's biodiversity strategy for 2030, the Clean air and the SDGs are shown in the section 6.

The results of all funded projects including all the European Commission's information such as the grant, the funding and participants, the projects' summaries, and links to specific publications and other documents are available on [http://cordis.europa.eu/projects/home\\_en.html](http://cordis.europa.eu/projects/home_en.html).

The ERC approach allows researchers to identify new opportunities and directions in any field of research. It aims at ensuring that funds are channelled into new and promising areas of research with a greater degree of flexibility. Various domains are covered such as, "What is the role of women in post-war times?" "Will climate change strengthen tsunami-like floods in Europe?", "What makes us Europeans?", "Supporting emotional wellbeing of mums boosts health of newborns", "The online world of food sharing, "why our world is green?". More details are available on <https://erc.europa.eu/projects-figures/stories>. ERC-funded projects have also contributed to the evidence-base on tackling the new coronavirus. The ERC has funded over 185 projects researching various facets of pandemics – from epidemiology and virology to socio-economic consequences of pandemics. Moreover, two ERC-funded researchers – Prof. Uğur Şahin (CEO of BioNTech) and Prof. Adrian Hill (Oxford University) have made significant advances in developing and *bringing to the market two different Covid-19 vaccines*.

The Marie Skłodowska-Curie Actions (MSCA) has created an extensive network of researchers and institutions from all scientific fields, and intersectoral partnerships, which are able to contribute to the implementation of different EU policies. This is notably the case for the *European Green Deal*, as MSCA has been funding about 600 research projects related to climate-change for a total budget of EUR 310 million since 2014. MSCA is also greatly contributing to the implementation of the EU strategy for international cooperation in research and innovation, accounting alone for more than half of the total third countries' participations to Horizon 2020, while 37% of the MSCA fellows are nationals from non-EU countries.

Since 2014, the programme has supported over 11 780 projects with an associated budget of around 6.16€ billion, including 1 021 International Training Networks (ie doctoral networks with an associated budget of 3 415€ million), 9 768 Individual Fellowships to experienced researchers (1 868€ million), 216 Co-funding of regional, national and international programmes (COFUND) (599€ million), 582 Research and innovation Staff Exchange projects (544€ million) and 196 NIGHT projects (36€ million). Under Horizon 2020, MSCA-funded projects have involved over 65 000 researchers, including 25 000 PhDs.

The *2020 Nobel Prize in Chemistry* has been awarded to the MSCA alumna and principal investigator Dr Emmanuelle Charpentier together with Jennifer A. Doudna "for the development of a method for genome editing". Dr Charpentier is the 10<sup>th</sup> MSCA-funded researcher, supervisor or principal investigator to be awarded a Nobel Prize to date.

Each year on the last Friday in September, *the European Researchers' Night* brings research and researchers closer to the public at large, to boost public recognition of science and research education and show the impact of research on daily life. In 2020, due to the COVID-19 pandemic the event was celebrated in November, and was implemented in more than 400 cities across 29 countries of Europe and beyond. Every year, the events involve more than 35 000 researchers and attract over 1.5 million visitors.

*Artificial Intelligence (AI) and advanced robotics* are opening new horizons in all sectors of industry, in terms of both developing novel manufacturing techniques, as well as overhauling the interaction between human workers and automated tools. However, there is still much work to be done to completely overhaul and adapt European industry to these new technologies and, by extension, these new opportunities. This is regardless of the fact that Europe is already one of the world's major leaders in the development of AI. Therefore, Horizon 2020 supported projects that have been *pioneering the way forward with AI technologies geared towards industry and manufacturing*. Some of the featured projects, such as COROMA and MONSOON look into the ways in which the use of AI tools and advanced manufacturing robots, equipped with sensors and capable of adapting to the manufacturing environment, can increase the productivity of production, whilst others including Factory2Fit, MANUWORK and THOMAS, look into the complementarity and interaction potential of human-robot and robot-machine collaboration. Meanwhile, some projects, such as GOOD MAN and SERENA, also explore the potential of using AI-based tools for optimising the production process in terms of more efficient maintenance and zero-defect manufacturing. Finally, others, such as ResiBots have focused their work on customised production and even making robots capable of recovery.

Several **Research infrastructures ongoing projects were refocused to address COVID-19 public health emergency crisis** and for the setting up of a Population Health Information Research Infrastructure to collect and make available population health and relevant non-health data in Member States and at EU level.

Observing *the environment from space*, from the ground and from mobile platforms allows a constant and consistent flow of information on the health of the planet, climate change and human activities and their impacts. The funding related research activities in Horizon 2020 associated to the GEO initiative and the Copernicus program actively contribute to global efforts to create a global observing network. Environmental observations help to inform citizens and support policy making through innovative applications. [Climateurope](#) identified gaps, new challenges and emerging *needs to enable better management of climate-related risks and opportunities for creating greater social and economic value*. [H2020 Insurance](#) created a standardised risk assessment model that can evaluate potential losses and areas at most risk and quantify financial losses of modelled scenarios. To help energy sector become more climate-resilient, [S2S4E](#) developed an online climate service that gives more reliable and usable forecasts for weather-dependent hydropower, solar and wind energy production. In the agricultural sector, [VISCA](#) designed

and demonstrated a decision-support system (VISCA DSS) to improve the resilience of wine grape farms to increasing climate-related challenges.

*By supporting the development and integration of advanced nanomaterials, Horizon 2020 contributes to building the next European industrial revolution.* A set of Horizon 2020 funded projects have addressed the upscaling of laboratory-proven nano-based technologies for reaching industrial-scale production and application, providing exciting new opportunities for European industrial production. They have made clear and distinguished progress towards overcoming these barriers and demonstrating how nano-enhanced advanced materials can be safely, sustainably and competitively launched into the industrial mainstream. One group of featured projects, including the [NANOTUN3D](#) and [FAST](#) projects, has showcased how nanomaterials can positively contribute to the growing revolution in 3D printing which will be keenly felt in the medical, automotive, space and construction sectors. The [PEPTICAPS](#) project has pioneered nano-capsules as carriers of medicine able to treat common conditions, such as allergic and irritant dermatitis and sunburn, whilst the [NanoPilot](#) project has constructed a pilot plant to produce small batches of polymer-based nanopharmaceuticals. Meanwhile, the [NANOFACTURING](#) project has finalised a manufacturing platform for solid core nanopharmaceuticals. Finally, many of the selected projects have been engaged in scale-up activities that will embed enhanced nanomaterials into a range of traditional industrial sectors, for example, the [ProDIA](#) project, the [IZADI-NANO2INDUSTRY](#) and [NANOLEAP](#).

The main results and impacts of SME Instrument and Future Emerging Technologies (FET) are presented in the Deep Tech Europe Report (<https://ec.europa.eu/easme/en/news/deep-tech-europe-report-key-numbers-eic-performance>) published in 2020. It focuses on and reveals the ins and outs of the EIC Accelerator and EIC Pathfinder funding schemes. The pilot European Innovation Council (EIC) was created within Horizon 2020 following the ‘call for ideas’ in 2016 and advice from the high level group of innovators. It is reported that the amount of private investments raised by companies having received EIC funding is an important indicator of their market validation potential. Until May 2020, EIC Accelerator portfolio companies had attracted **over € 5.3 billion in private funding** (equity, debt, M&A, IPOs). As regards, the number of job created, EIC-supported companies have doubled their number of employees in the last two years. Considering the data available, around **66% of companies had their teams grow in size**. The average increase was 108% over 2.2 years (24 employees per company). **76% of Pathfinder innovations concern new or emerging markets**. More than just funding The European Innovation Council support goes far beyond funding and offers to innovators access to the best, tailor-made Business Acceleration Services. The Fund aims also to support equality and gender balance. Since May 2020, the EIC is guaranteeing that the pool of the best applicants that are passing all the quality thresholds and being invited to interviews will be composed of at least 25% of companies led by women CEOs (or equivalent positions). As very concrete results, out of 64 companies selected in May, **34% are led by women!** As the EIC Accelerator is a continuously open call with regular cut-offs, this allowed to launch quickly dedicated calls in 2020. For instance, the **EIC Accelerator call dedicated to Corona virus** launched in June 2020, has awarded nearly €166 million, to 36 companies set to combat the coronavirus pandemic. In addition, over €148 million has been granted to another 36 companies set to contribute to the recovery plan for Europe, bringing the total investment from Horizon 2020, the EU’s research and innovation programme, to €314 million in this round. Another example is the **EIC Green Deal** call launched in May 2020 awarded over €307 million to 64 start-ups and SMEs contributing to the objectives of the European Green Deal Strategy and the Recovery Plan for Europe.

Europe has always supported **robust virology research**. This is already helping in the **fight against the Ebola pandemic as well as COVID-19 pandemic**. Supporting Research and Innovation in virology is essential if we want to tackle other current viral challenges and potential new ones in the future. A number of innovative EU-funded projects are making contributions not only to the battle against SARS-CoV-2 but also to the wider virology field that will improve our overall understanding of viruses, as well as our ability to create even more effective antiviral treatments and vaccines. **Ebola**. The European Medicines Agency (EMA) recommended granting the marketing authorisation to Janssen Pharmaceutical Company for a new Ebola vaccine, co-developed with IMI2 Joint Undertaking funded by Horizon 2020 funding under the Ebola+ programme. The Ebola vaccine regimen is indicated for active immunization for the prevention of Ebola Virus Disease caused by the Zaire ebolavirus species in individuals aged one year and above 26. The HG nCoV19 test project, led by Irish SME HiberGene, developed and marketed a new CE marked and clinically evaluated diagnostic test for the coronavirus that detects **COVID-19** directly from a swab sample in approximately 1 hour, which can now be combined with a flu test from the same swab. EU-funded Prevent-nCoV researchers from Belgium, Denmark and Germany, led by the University of Copenhagen announced that a candidate vaccine against COVID-19 shows promising results. The Excalate4Cov project involving 18 partners used an EU-backed supercomputing platform will begin a clinical trial in Italy for an osteoporosis drug in patients with mild COVID-19 symptoms. The clinical trial has been launched a clinical trial in October 2020 to verify its efficacy.

Water is key for society and for the economy. Projects funded under the Horizon 2020 programme showcase their **solution to address the pressing water challenges**, to adapt water resource management to mitigate the effects of **climate change, to combat resource pollution** and depletion, and to prevent degradation of ecosystems. The [SWAMP](#) project showcased Internet of Things

<sup>26</sup> [https://ec.europa.eu/commission/presscorner/detail/en/IP\\_20\\_1248](https://ec.europa.eu/commission/presscorner/detail/en/IP_20_1248)

(IoT) methods and approaches for smart water management. Another project, [SIM4NEXUS](#), applied model-based analysis to predict society-wide impacts of resource use and relevant policies on sectors such as agriculture, water, biodiversity and ecosystem services. [INNOQUA](#) developed a modular system to treat wastewater in both urban and rural environments. [Smart-PLANT](#) explored how technologies for recovering valuable materials from wastewater can be applied to existing sewage treatment plants to form marketable products. Meanwhile, [INTCATCH](#) built ‘smart’ boats equipped with multi-parameter sensors to monitor water pollution. The [Ground Truth 2.0](#) project co-designed and implemented citizen observatories that help local stakeholders achieve sustainable natural resource management through the collection of data by citizens. [POWER](#) investigated new ways of raising awareness and transferring knowledge among citizens to enable effective exchange between stakeholders. Then we have [INCOVER](#) that developed innovative and sustainable technologies for resource recovery-based treatment of waste-water. [INTEGROIL](#) created a smart platform for producing fit-for-purpose water that will reduce the oil and gas industries’ water demand. [AquaNES](#) demonstrated innovative water and wastewater treatment processes and management based on improved, combined natural and engineered systems. Finally, [CENTAUR](#) developed a new approach to the real-time control of sewer networks to reduce local flood risk in urban areas. These projects support the digital transformation as a critical enabler for attaining the sustainability goals of the European Green Deal by contributing to the EU’s climate ambition and the zero-pollution ambition, as well as mobilising industry for a clean and circular economy.

Horizon 2020 projects working *to re-use waste heat from process industry found innovative solutions to improve energy efficiency in process industries*. Improved energy efficiency in industrial processes can lead to substantial primary energy savings, decarbonisation of the energy supply and subsequent reduction of CO<sub>2</sub> emissions. The reduction in energy cost will also enable greater competitiveness. For example, [TASIO](#) created a new generation of direct heat exchange technology for commercial ORC (Organic Rankine Cycle) systems in the cement, glass, steelmaking and petrochemical industries, but equally useful elsewhere. [SUSPIRE](#) developed novel highly efficient heat exchangers and thermal energy storage technology for reuse or commercialisation of waste heat, including the use of the ground itself for storage. Meanwhile [VULKANO](#) focused on thermal energy storage technology based on phase change materials that can recover and store high-temperature heat. [I-ThERM](#) designed innovative plug-and-play heat recovery and conversion to power solutions with potential across a wide temperature spectrum, including the novel supercritical CO<sub>2</sub> cycle. In some processes, waste energy is of low quality and it is not practical or economical to recover it with current technologies, so [Indus3Es](#) developed an innovative Absorption Heat Transformer that focused on low temperature heat recovery (below 130°C). Also, [LOWUP](#) demonstrated innovative heat pump technology that captures and re-uses low-grade energy. [DREAM](#) pioneered the design of heat pipe heat exchangers to recapture the energy lost from kilns and transfer it to another point in the production chain. Finally, [Smartrec](#) designed a modular system for recovery and management of heat from corrosive, contaminated and intermittent exhaust streams, also based on heat pipe heat exchanger technology and dual media thermozone storage.

The *EU Biodiversity Strategy for 2030* aims to secure healthy, resilient, biodiversity-rich ecosystems that deliver the range of services essential to the prosperity and well-being of citizens. Nature-based Solutions (NBS) – with healthy and biodiverse ecosystems at their core - are central to achieving the objectives of this strategy and sustainably tackling wider societal, economic and environmental challenges. Six independent experts have carried out a review of over 30 EU-funded projects in the area of NBS in order to assess their impact and valorise their results. Their work highlights the benefit and policy relevance of Horizon 2020-funded NBS projects to EU biodiversity, climate and other policy objectives as well as to sustainable transition processes. The report further highlights new approaches to support the development and management of biodiverse NBS and provides insights into governance models to deliver biodiversity benefits. (<https://op.europa.eu/en/publication-detail/-/publication/d7e8f4d4-c577-11ea-b3a4-01aa75ed71a1/language-en/format-PDF/source-139695433>)

Through the Horizon 2020 programme, the Commission supports Member States’ cultural policy, with a special emphasis on digitisation and online access to cultural material and digital preservation and curation. From 2014-2020, funds through Horizon 2020 towards *digital cultural heritage* have been around EUR 70 million in total. Many projects are making important contributions to digital cultural heritage efforts. In particular, the [ARCHES](#), [iMareculture](#) and [EU-LAC-MUSEUMS](#) projects have been harnessing technologies such as 3D modelling, virtual and augmented reality to increase the accessibility and enjoyment of museums as a key institution of cultural curation and preservation. Other projects have focused on using technology to increase social awareness and interest in cultural heritage and preservation. For example, [PLUGGY](#) developed the first-ever social network dedicated to promoting European cultural heritage, whilst the [I-Media-Cities](#) project has launched a revolutionary platform that uses audiovisual material to allow anyone to discover the rich cultural heritage of nine European cities. The digitisation of cultural heritage is important for the protection, conservation, restoration, research, dissemination and promotion of tangible and intangible cultural assets, coming from all types of cultural institutions (museums, galleries, libraries and archives, monuments and sites). It is important to bear in mind that the digitalization of the culture makes also culture accessible during the pandemic period.

Since 2014, projects funded under “Science with and for society” (SwafS) have contributed *to effectively strengthening cooperation between science and society*, recruiting new talents for science and combining scientific excellence with awareness and social responsibility. One of the main ways to work towards these three SwafS objectives and ensure their impact is through the implementation of institutional changes among beneficiaries reflected in the SwafS Key Performance Indicator. For example, the results of a sample of twelve RRI projects revealed that almost 250 individual institutional change actions are implemented or are

being implemented. In addition, 130 institutions implemented or are in the process of implementing a gender equality plan (GEP), the pioneer example of an institutional change. Many other concrete examples of institutional changes in funded beneficiaries are presented in the “Swafs achievements report” available on <https://dx.publications.europa.eu/10.2777/32018>. The report concludes that inclusiveness at all levels underpins SwafS and that its stakeholders are in an excellent position to play a leading role in supporting other entities considering institutional transformation under Horizon Europe.

As regards the gender, GenBUDGET one of Horizon 2020 SwafS project is developing a Community of Practice of academic and research organisations across Europe enhancing knowledge and developing shared practices *on how to challenge gender biases in decision-making by the means of gender budgeting* (see: <https://genbudget.act-on-gender.eu/>)

JRC played an important role during the Covid-crisis. It was able to rapidly *build a COVID-19 epidemiological model* in the early days of the outbreak. JRC was the *first in the world to develop “positive reference material”* that laboratories can use to check the correct functioning of their coronavirus tests and to avoid false negatives. Further reference materials are being developed for serums and antibody concentrations, which would lead to a breakthrough in the performance control of serological assays and the global comparability of SARS-CoV-2 antibody measurement results. JRC is also *establishing a EU Reference Laboratory for Epidemiological Testing and Control* to provide common protocols and testing strategies. Moreover, the JRC provided early analysis of impact of COVID on sectors, including travel, tourism and transport. With specific regard to tourism, the JRC published a report assessing impact of COVID on tourist arrivals and employment and pointing out that the recovery path is likely to be both local and European, calling for efficient multi-level governance

Another example of achievement of the JRC is related to the EU Biodiversity Strategy for 2030. JRC together with DG ENV set up a Knowledge Centre for Biodiversity to support the EC’s needs for knowledge on biodiversity. It should greatly help streamline the latest knowledge about biodiversity into all EU policies to strengthen policy coherence, and will be key for monitoring of the implementation of the strategy. It will support the implementation of the strategy in Europe but also engage with our international partners to tackle as well the global dimension and help reduce our ecological footprint outside EU borders. The Knowledge Centre was launched on the 21 October 2020, during the Green Week 2020.

### 3.3. Evaluations, studies and reports

The Horizon 2020 interim evaluation was completed and published in May 2017 – see: [https://ec.europa.eu/info/research-and-innovation/strategy/support-policy-making/support-eu-research-and-innovation-policy-making/evaluation-impact-assessment-and-monitoring/horizon-2020\\_en](https://ec.europa.eu/info/research-and-innovation/strategy/support-policy-making/support-eu-research-and-innovation-policy-making/evaluation-impact-assessment-and-monitoring/horizon-2020_en).

A series of evaluation studies are being launched in the context of the ex-post evaluation of Horizon 2020. The on-going and planned studies are listed in the [inter-institutional studies database](#). The SWD on the ex-post evaluation of Horizon 2020 is expected to be published in the 2nd quarter of 2023.

## 4. Programme 2021-2027 - Key monitoring indicators

### Specific Objective 1 :Scientific impact by creating high-quality new knowledge, strengthening human capital in research and innovation, and fostering diffusion of knowledge and Open Science

#### Indicator 1:HE peer reviewed scientific publications

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Total Number of peer-reviewed publications [TBC]
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	The dimension measured of the Specific Objective is the High quality New knowledge created. In the short-term, the number of peer-reviewed publications is an established metric of scientific performance.
Link MFF 14-20 / MFF 21-27	This indicator is the continuation of an indicator of Horizon 2020 (Publications in peer-reviewed high impact journals), but includes external verification of the publications.
Other methodological comments	Publications are first verified in an external database and then counted. First data are expected no

	sooner than late 2022, as it takes time for beneficiaries to produce papers and report them. The overall number of publications in the EU will be reported as a reference point. Possibly, the percentage of Horizon Europe publications out of all publications will be used as the indicator. [TBC]
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

### Indicator 2: Field-Weighted Citation Index of HE peer reviewed publications

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Field Weighted Citation Index
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	The dimension measured of the S.O is the High quality New knowledge created. In the mid-term, the Field Weighted Citation Index is an established metric of scientific performance
Link MFF 14-20 / MFF 21-27	This indicator is the linked to an indicator of Horizon 2020 (Share of publications from ERC-funded projects which are among the top 1 % highly cited per field of science), but includes external verification of the publications and incorporates a baseline.
Other methodological comments	The Field Weighted Citation Index is the ratio of the observed citation rate (MOCR) with the expected citation rate (MECR) in a given Research Field. The MECR is calculated as an average citation rate in a given Research Field. If FWCI = 1, the set of FP funded publications has generated the same amount of citations as any other average publication in the given Research Field. A 3-year citation window is applied to ensure that all publications have the same time lag, and as such the same chance to get cited. First data are expected no sooner than 2024, as it takes time for beneficiaries to produce papers and report them, and there needs to be a 3 year window for citations.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

### Indicator 3: Peer reviewed publications from HE projects that are core contribution to scientific fields

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Number of top 1 % most cited publications produced, field-weighted [TBC]
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	The dimension measured of the S.O is the High quality New knowledge created. In the long-term, the share of 1 % most cited publications is an established metric of scientific performance
Link MFF 14-20 / MFF 21-27	This indicator is the continuation of an indicator of Horizon 2020 (Share of publications from ERC-funded projects which are among the top 1 % highly cited per field of science), but includes external verification of the publications.
Other methodological comments	First data are expected no sooner than 2024, as it takes time for beneficiaries to produce papers and report them, and there needs to be a 3 year window for citations.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

### Indicator 4: Researchers involved in upskilling (training, mentoring/coaching, mobility and access to R&I infrastructures) activities in FP projects

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
----------	------	------	------	------	------	------	------	------	------	--------

	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of researchers involved in upskilling activities in projects by category [TBC]
Cut-Off Date	
Data source	Project reporting
Link to the objective	The dimension measured of the S.O is the Strengthening human capital in R&I In the short-term, the number of upskilled researchers is the best available indicator of strengthening human capital in research and innovation
Link MFF 14-20 / MFF 21-27	No – new indicator introduced
Other methodological comments	First data are expected no sooner than early 2022.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

### Indicator 5:Upskilled FP researchers with increased individual impact in their R&I field

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Average increase of H-index of funded researchers
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	In the medium-term, the H-index is the best available indicator of strengthening human capital in research and innovation
Link MFF 14-20 / MFF 21-27	No – new indicator introduced
Other methodological comments	The dimension measured of the S.O is the Strengthening human capital in R&I. The H-index is based on the comparison of the number of articles written by an author to the number of citations. The H-index offers a way to compare researchers which are in a similar phase of their career, and most importantly, it is at present the only metric that combines research productivity (output volume) and impact (citation volume). An increase in the H-index is an indicator of a positive effect of the Programme on researcher's impact in their field.First data are expected no sooner than 2023, as there needs to be a time slot to observe increases in H-indexes.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

### Indicator 6:Upskilled FP researchers with improved working conditions, including researchers' salaries

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	TBC
Cut-Off Date	
Data source	Project reporting, survey
Link to the objective	The dimension measured of the S.O is the Strengthening human capital in R&I. If Horizon Europe funding has a positive long-term effect on researchers' skills and careers (and therefore the human capital in research and innovation) then there should be an observable effect on the researchers working conditions.
Link MFF 14-20 / MFF 21-27	No – new indicator introduced

Other methodological comments	MORE survey data is used to collect data on researchers salaries (net salaries) and contract type. Regarding data on job security, collected data includes several relevant questions which provide data on contract type, satisfaction with pensions/social security provisions, and other aspects of working conditions. Under the MORE survey, the same data is collected for a random stratified sample of researchers who were based in European research performing organizations but did not receive EU funding. The salaries and working conditions of HE researchers are then benchmarked against this representative sample of researchers. The availability of data depends on the planning of the MORE survey, which is expected to happen no sooner than 2023.
Full metadata available at this address	Methodological handbook will be published in 2021. The results of the survey will be described in a study, which will be referenced on the Horizon Dashboard.
Justification of the trend	

### Indicator 7: Research outputs (open data/publication/ software etc.) shared through open knowledge infrastructures

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Share of Open Access research outputs in Horizon 2020
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	The dimension measured of the S.O is the diffusion of knowledge and Open Science. Open Access and Open Science are modus operandi in Horizon Europe. Open access to publications, datasets, software, other research products (e.g., services, tools) allows researchers to build on existing work and speed science, industry to access scientific knowledge to innovate, public sector to use for evidence based policy making, public to be engaged and involved in the research process. Therefore, detecting and isolating outputs related to Open Science is an appropriate measure of the short-term progress towards the objective.
Link MFF 14-20 / MFF 21-27	No – new indicator introduced
Other methodological comments	All relevant FP research outputs (by type: publications, datasets and software) reported by all Horizon Europe projects (incl. DOI) are matched in an external database. The single extended list of all relevant outputs, removing the duplicates, is used to count numbers and shares. First data are expected no sooner than in late 2021.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

### Indicator 8: Open access FP research outputs actively used/cited

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Citations of open access publications [TBC]
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	The dimension measured of the S.O is the diffusion of knowledge and Open Science. This indicator captures the effect that open access brings to fostering diffusion of knowledge by tracking the use of research outputs. The key question addressed is whether the open access research results are cited more than the closed/embargoed ones.
Link MFF 14-20 / MFF 21-27	No – new indicator introduced
Other methodological comments	See indicator 2 for details on citations. First data are expected no sooner than 2024, as it takes time for beneficiaries to produce papers and report them, and there needs to be a 3 year window for citations.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

**Indicator 9:FP beneficiaries having developed new transdisciplinary/ trans-sectoral collaborations with users of their open FP R&I outputs**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	TBC
Cut-Off Date	
Data source	Project reporting, external study
Link to the objective	Research collaboration is a key in fostering diffusion of knowledge. The purpose of having open science as the modus-operandi is to further enhance collaboration across disciplines, between academia and industry, as well as within Europe and beyond.
Link MFF 14-20 / MFF 21-27	No – new indicator introduced
Other methodological comments	The dimension measured of the S.O is the diffusion of knowledge and Open Science. This indicator will be calculated as part of a separate study. The following methods might be used: the starting point is the authors and their affiliations who have produced open access results, and build their co-authorship network, maintaining time stamps to trace these over the years. As a second step, we extract overall insights on degree of collaboration, including the collaborative index, the degree of collaboration, and the collaborative coefficient and provide data by programme, and country of authors' institutions. New Collaborations are estimated by counting the authors' dyads that appear in the context of a project, not observed before. The study will likely be part of the interim evaluation of the programme.
Full metadata available at this address	Methodological handbook will be published in 2021. The study will be referenced on the Horizon Dashboard.
Justification of the trend	

**Specific Objective 2 :Technological/economic impact especially within the Union by influencing the creation and growth of companies, especially SMEs including start-ups, creating direct and indirect jobs especially within the Union, and by leveraging investments for R&I****Indicator 1:Innovative products, processes or methods from FP (by type of innovation) & Intellectual Property Rights (IPR) applications**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of innovative products, processes or methods resulting from the Programme (by type of innovation) & Intellectual Property Rights (IPR) applications
Cut-Off Date	
Data source	Project reporting, external patent database [TBC]
Link to the objective	The dimension measured of the S.O is the innovation-based growth generated. In the short-term, the number of innovative products, processes or methods and IPR (esp. patents) is a good indicator of progress to technological/economic impact
Link MFF 14-20 / MFF 21-27	This indicator links to and indicator of Horizon 2020 ('Patent applications and patents awarded in Future and Emerging Technologies'), but is broader and includes links to an external database [TBC]
Other methodological comments	Calculated as a simple count of number of innovative products, processes and methods & Intellectual Property Rights (IPR) applications reported in all ongoing and finished Horizon Europe projects. First data are expected no sooner than late 2022.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

**Indicator 2: Innovations from FP projects (by type of innovation) including from awarded IPRs**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Patent citations, family size, scope [TBC]
Cut-Off Date	
Data source	Project reporting, external patent database
Link to the objective	The dimension measured of the S.O is the innovation-based growth generated. In the medium-term, the patent indicators are a good indicator of progress to technological/economic impact
Link MFF 14-20 / MFF 21-27	This indicator links to and indicator of Horizon 2020 (Patent applications and patents awarded in Future and Emerging Technologies), but includes verification with an external database, distinction between patent family members, and deeper analytical insight.
Other methodological comments	One of the most robust findings of IPR-related research is the skewness of patent value distribution – few patents are valuable, while most others are worth little, if anything at all. This indicator will use external data sources to estimate the impact potential of the patents. First data are expected no sooner than late 2023, as there needs to be time for patents to be granted and reported.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

**Indicator 3: Creation, growth & market shares of companies having developed FP innovations**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Growth of funded companies [TBC]
Cut-Off Date	
Data source	Project reporting, external database of companies
Link to the objective	The dimension measured of the S.O is the innovation-based growth generated. Horizon Europe helps create reciprocal relationships between research-performing organisations and high-tech SMEs. This reciprocity then leads to an improved transfer of knowledge and exploitation of research results by the companies. If this is the case, there must be a clear and quantifiable effect on the financial performance of beneficiary SMEs, measurable in the long-term.
Link MFF 14-20 / MFF 21-27	This indicator is linked to indicator of Horizon 2020 on Growth
Other methodological comments	In the first step, the Horizon Europe companies are matched to an external company database. The next step is to obtain relevant data on the firms' turnover and relevant metadata. This will be reported for funded companies. In addition, as part of a study, a control sample of firms is created, which consists of non-funded SMEs that were part of consortia, or applied themselves, for the same grants (i.e. same call, same year) as the beneficiaries, but did not receive funding due to budgetary constraints. Once both samples of companies are matched, a sharp discontinuity design with a difference-in-difference method are applied to analyse firm performance across the selected time window. [TBC] First data are expected no sooner than late 2024, as it takes time for the programme to make an effect and data to be reported. The studies are planned to be part of interim evaluation.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard, which will also include links to the studies.
Justification of the trend	

**Indicator 4: FTE jobs created, and jobs maintained in beneficiary entities for the FP project (by type of job)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									

	Actual Progress								Final

Are we on track	
Indicator type	Output
Unit of measurement	Count of FTE jobs created and maintained in all ongoing and finished Horizon Europe projects
Cut-Off Date	
Data source	Project reporting
Link to the objective	The dimension measured of the S.O is the creation of more and better jobs. A significant share of Horizon Europe investment goes to personnel costs, which directly supports existing jobs or creates new positions at beneficiary organisations. Horizon Europe funding also supports and maintains existing jobs that would otherwise be lost if no funding was attracted. This contributes to economic impact of the programme, and can be used as a short-term indicator.
Link MFF 14-20 / MFF 21-27	The indicator is linked to Horizon 2020 indicator ('Growth and job creation in participating SMEs').
Other methodological comments	First data are expected no sooner than early 2022.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

### Indicator 5:FTE jobs in beneficiary entities following FP project (by type of job)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Growth of employment in funded companies [TBC]
Cut-Off Date	
Data source	Project reporting, external database of companies
Link to the objective	The dimension measured of the S.O is the creation of more and better jobs. Horizon Europe helps create reciprocal relationships between research-performing organisations and high-tech SMEs. This reciprocity then leads to an improved transfer of knowledge and exploitation of research results by the firms. If this is the case, there must be a clear and quantifiable effect on the employment in beneficiary SMEs, measurable in the medium-term.
Link MFF 14-20 / MFF 21-27	The indicator is linked to Horizon 2020 indicator ('Growth and job creation in participating SMEs')
Other methodological comments	In the first step, the Horizon Europe companies are matched to an external company database. The next step is to obtain relevant data on the firms' employment and relevant metadata. This will be reported for funded companies. In addition, as part of a study, a control sample of firms is created, which consists of non-funded SMEs that were part of consortia, or applied themselves, for the same grants (i.e. same call, same year) as the beneficiaries, but did not receive funding due to budgetary constraints. Once both samples of companies are matched, a sharp discontinuity design with a difference-in-difference method are applied to analyse firm performance across the selected time window. [TBC] First data are expected no sooner than late 2024, as it takes time for the programme to make an effect and data to be reported. The studies are planned to be part of interim evaluation.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard, which will also include links to the studies.
Justification of the trend	

### Indicator 6:Direct & indirect job created or maintained due to diffusion of FP results (by type of job)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Number of direct & indirect jobs created or maintained
Cut-Off Date	
Data source	Project reporting, studies

Link to the objective	Horizon Europe funding will induce technological change and job markets and skills requirement are being deeply transformed due to technological change. This can be estimated as a long-term indicator.
Link MFF 14-20 / MFF 21-27	This indicator is linked to indicator of Horizon 2020 on Jobs
Other methodological comments	The dimension measured of the S.O is the creation of more and better jobs. A macroeconomic model will be used to estimate the total employment induced by Horizon Europe funding. It has been used in several previous assignments to measure the economic impact of previous programmes, including for the ex-ante impact assessment of Horizon Europe. It will be used to produce aggregate job creation effects of FP funding for different time windows (3 year; 5+ year) and for different skill levels, including low, medium, high skill jobs. We expect to run studies as part of the interim and ex-post evaluations of the programme.
Full metadata available at this address	Methodological handbook will be published in 2021. The Horizon Europe Dashboard will include links to studies.
Justification of the trend	

### Indicator 7: Public & private investment mobilised with the initial FP investment

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Amount of public & private investment mobilised with the initial investment of the Programme
Cut-Off Date	
Data source	Project reporting
Link to the objective	The dimension measured of the S.O is the leverage on investments in R&I. Depending on the funding instrument applied, beneficiaries in Horizon Europe are required to contribute at least a certain share of their own funds to the projects. This represents a significant co-investment of public and private investment towards achieving the programme objectives, and can be used as a short-term indicator.
Link MFF 14-20 / MFF 21-27	This indicator is linked to indicator of Horizon 2020 on investment
Other methodological comments	Calculated as the amounts (in EUR) of public & private investment mobilised in all ongoing and finished Horizon Europe projects. Data on public & private co-invested amounts are derived from the EC monitoring system. Specifically, each project participant has their EU and total contributions listed for each project application. The difference between the total and EU funding is equal to the co-investment made. First data are expected no sooner than late 2021.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

### Indicator 8: Public & private investment mobilised to exploit or scale-up FP results (including foreign direct investments)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Amount of public & private investment
Cut-Off Date	
Data source	Project reporting, external databases [TBC]
Link to the objective	The dimension measured of the S.O is the leverage on investments in R&I. Leverage represents the additional investment mobilised by the project beyond the initial project total cost. This includes notably venture capital investment or additional private/public investment attracted by SMEs thanks to the innovations developed in their FP projects.
Link MFF 14-20 / MFF 21-27	This indicator is linked to indicator of Horizon 2020 on investment
Other methodological comments	Initial data is declared by the beneficiary entities themselves as part of their final reports. Further, at firm level, amount of public & private investment mobilised by SMEs are estimated using external databases. [TBC] First data are expected no sooner than late 2021.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.

Justification of the trend	
----------------------------	--

**Indicator 9:EU progress towards 3% GDP target due to FP**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	EU progress towards the 3% GDP target due to Horizon Europe
Cut-Off Date	
Data source	Project reporting, studies
Link to the objective	The dimension measured of the S.O is the leverage on investments in R&I Horizon Europe funding will stimulate further R&D funding, and particularly funding attracted by industry, SMEs and start-ups. In the long-term, this indicator estimates the aggregate effect of Horizon Europe.
Link MFF 14-20 / MFF 21-27	This indicator is linked to the indicator of Horizon 2020 (cf. the H2020 General Objective)
Other methodological comments	A macroeconomic model will used to estimate the total leverage induced by Horizon Europe funding. It has been used in several previous assignments to measure the economic impact of previous programmes, including for the ex-ante impact assessment of Horizon Europe. It will be used to estimate amount of additional leverage (direct and indirect) attracted to R&D per each euro spent in Horizon Europe. We expect to run studies as part of the interim and ex-post evaluations of the programme.
Full metadata available at this address	Methodological handbook will be published in 2021. The Horizon Europe Dashboard will include links to studies.
Justification of the trend	

**Specific Objective 3 :Societal impact by addressing the EU policy priorities and global challenges, including UN SDGs, following the principles of the Agenda 2030 and the goals of the Paris Agreement, through R&I, delivering benefits and impact through R&I missions and European Partnerships and strengthening the uptake of innovation in society ultimately contributing to people’s well-being**

**Indicator 1:Outputs aimed at addressing identified EU policy priorities and global challenges (including SDGs) (multidimensional: for each identified priority)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Share of outputs aimed at addressing specific EU policy priorities, including meeting the Sustainable Development Goals (SDGs)
Cut-Off Date	
Data source	Project reporting
Link to the objective	The dimension measured of the s.O is the EU policy priorities and global challenges addressed through R&. In the short-term, shares of outputs indicate the societal impact of Horizon Europe.
Link MFF 14-20 / MFF 21-27	No – New indicator
Other methodological comments	Horizon Europe funded projects produce variety of products, tracked and reported under scientific and economic outputs. Most of them are also likely to have a societal impact; to trace and estimate it, the produced output needs to be accurately measured and then classified according to the specific EU policy priorities, including the SDGs. The classification of projects and their deliverables/outputs is based on SDGs, and subsequently attributed to the more precise EU policy priorities. Where attribution of a specific innovation or scientific result is not possible, the assumption is that it contributes to the same specific EU policy priorities, including the SDGs, as the project producing it or the outputs preceding it. First data are expected no sooner than early 2022.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.

Justification of the trend	
----------------------------	--

**Indicator 2: Number and share of innovations and research results addressing identified EU policy priorities and global challenges (including SDGs) (multidimensional: for each identified priority)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Result
Unit of measurement	Share of outputs aimed at addressing specific EU policy priorities, including meeting the Sustainable Development Goals (SDGs) [TBC]
Cut-Off Date	
Data source	Project reporting, external databases [TBC]
Link to the objective	The dimension measured of the s.O is the EU policy priorities and global challenges addressed through R&. In the medium-term, shares of verified outputs and their performance indicate the societal impact of Horizon Europe.
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	Calculated as a simple count of innovations (new or significantly improved: methods, technologies and instruments / commercial goods / commercial services / scientific or industrial processes / business models) reported in all ongoing and finished Horizon Europe projects and classified by their contribution to the specific SDGs and subsequently – EU policy priorities. Additionally, where possible, the scientific results tracked by medium-term indicators under scientific and economic indicators, but also awarded patents, are also classified by their contribution to the specific SDGs and subsequently – EU policy priorities. The classification by the SGDs is based on automatic classification algorithms. Where automatic classification is not available, the whole project and its results are assigned to the SGDs based on the indication provided by the participating organisation in the grant application. [TBC]First data are expected no sooner than 2022.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

**Indicator 3: Aggregated estimated effects from use/exploitation of FP-funded results, on tackling identified EU policy priorities and global challenges (including SDGs), including contribution to the policy and lawmaking cycle (such as norms and standards) (multidimensional: for each identified priority)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Impact
Unit of measurement	Aggregated estimated effects from use of FP-funded results on tackling specific EU policy priorities, including contribution to policymaking and legislation [TBC]
Cut-Off Date	
Data source	Project reporting, studies
Link to the objective	The dimension measured of the s.O is the EU policy priorities and global challenges addressed through R&. In the long-term, specific studies are needed to analyse the societal impact of Horizon Europe in specific areas.
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	The indicator focuses on estimated and detected effects from use of Horizon Europe funded results on tackling specific EU policy priorities. [TBC]We expect to run studies as part of the interim and ex-post evaluations of the programme.
Full metadata available at this address	Methodological handbook will be published in 2021. The Horizon Europe Dashboard will include links to studies.
Justification of the trend	

**Indicator 4: Outputs in specific R&I Missions (multidimensional: for each identified mission)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of outputs aimed at addressing specific Missions [TBC]
Cut-Off Date	
Data source	Project reporting [TBC]
Link to the objective	The dimension measured of the S.O is the benefits and impact through R&I missions. Horizon Europe incorporates EU missions to increase the effectiveness of funding by pursuing clearly defined targets and delivering solutions to some of the greatest challenges facing our world. In the short-term, number of outputs indicate the societal impact of Horizon Europe in the missions.
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	Horizon Europe funded projects produce variety of products, tracked and reported under scientific and economic outputs. Most of them are also likely to have a societal impact; to trace and estimate it, the produced output needs to be counted and then classified by specific Horizon Europe missions. First data are expected no sooner than early 2022.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

#### Indicator 5: Results in specific R&I missions (multidimensional: for each identified mission)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of outputs aimed at addressing specific missions [TBC]
Cut-Off Date	
Data source	Project reporting, external databases [TBC]
Link to the objective	The dimension measured of the s.O is the benefits and impact through R&I missions. Horizon Europe incorporates EU missions to increase the effectiveness of funding by pursuing clearly defined targets and delivering solutions to some of the greatest challenges facing our world. In the medium-term, shares of verified outputs and their performance indicate the societal impact of Horizon Europe.
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	Calculated as a simple count of innovations (new or significantly improved: methods, technologies and instruments / commercial goods / commercial services / scientific or industrial processes / business models) reported in all ongoing and finished Horizon Europe projects and classified by their contribution to the specific missions. [TBC] First data are expected no sooner than 2022.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

#### Indicator 6: Targets achieved in specific R&I missions (multidimensional: for each identified mission)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	TBC
Cut-Off Date	
Data source	
Link to the objective	The dimension measured of the s.O is the benefits and impact through R&I missions. Horizon Europe

	incorporates EU missions to increase the effectiveness of funding by pursuing clearly defined targets and delivering solutions to some of the greatest challenges facing our world. The EU mission targets serve as a benchmark to estimate the likely progress and their achievement; their monitoring focuses on estimating the potential effects towards the defined R&I targets.
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	Depending on the type of mission target, the estimates might be mostly qualitative (focusing on general assessment but also providing the most evident stories of influence), but also quantitative (e.g., using econometric modelling to estimate the potential environmental impacts, such as reduction of CO <sub>2</sub> , based on the emerging evidence acquired during monitoring of outputs and results). [TBC]
Full metadata available at this address	Methodological handbook will be published in 2021. Further information will be available on the Horizon Dashboard.
Justification of the trend	

### Indicator 7:FP projects where EU citizens and end-users contribute to the cocreation of R&I content

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number and share of FP projects where EU citizens and end-users contribute to the co-creation of R&I content [TBC]
Cut-Off Date	
Data source	Project reporting
Link to the objective	The dimension measured of the s.O is the uptake of research and innovation in society To measure the involvement of citizens and civil society in the research process funded by the programme, this indicator tracks the number and share of Horizon Europe projects where EU citizens and end-users contribute to the co-creation of R&I content, additionally estimating the role of such contribution (such as consultation/dissemination, co-creation, co-ownership/joint decision-making).
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	Calculated based on a simple count of all ongoing and finished Horizon Europe projects where EU citizens and end-users contribute to the co-creation of R&I content.First data are expected no sooner than 2022.
Full metadata available at this address	Methodological handbook will be published in 2021. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

### Indicator 8:FP beneficiary entities with citizen and end-users engagement mechanisms after FP project

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number and share of FP beneficiaries with citizen and end-user engagement mechanisms after FP project [TBC]
Cut-Off Date	
Data source	Project reporting
Link to the objective	The dimension measured of the s.O is the uptake of research and innovation in society The medium-term indicator measures the effects of the heightened attention to and demand for co-creation in Horizon Europe through the development of citizen engagement mechanisms in beneficiary entities (such as citizen fora, participatory research, co-creation facilities, experimental sites and similar).
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	In the medium-term, the identification of presence of citizen engagement mechanisms allows estimation of number (and share) of Horizon Europe beneficiary entities that possess and utilise them.
Full metadata available at this address	Calculated based on a simple count of all ongoing and finished Horizon Europe projects where EU citizens and end-users contribute to the co-creation of R&I content.First data are expected no sooner than 2023.

Justification of the trend	
----------------------------	--

**Indicator 9:FP co-created scientific results and innovative solutions**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	TBC
Cut-Off Date	
Data source	Project reporting, studies
Link to the objective	The dimension measured of the S.O is the uptake of research and innovation in society. The long-term indicator focuses on uptake and outreach of framework programme co-created scientific results and innovative solutions. The aim is to assess the extent of the uptake and outreach of the scientific results (e.g. in the fields of science, innovation, the economy and society) and innovative solutions originating from the programme.
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	A study will be launched for the assessment of the extent of the uptake and outreach of scientific results and innovative solutions co-created in the FP necessitates a composite indicator. The study is planned as part of the interim evaluation of Horizon Europe.
Full metadata available at this address	Methodological handbook will be published in 2021. The Horizon Europe Dashboard will include links to studies.
Justification of the trend	

**5. Programme 2014-2020 - Key monitoring indicators***Previous Program 1 : The Framework Programme for Research and Innovation (Horizon 2020)***General Objective 1 :to build a society and an economy based on knowledge and innovation across the whole Union, while contributing to sustainable development****Indicator 1:The Europe 2020 R&D target (3% of GDP)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	ERCEA/Scopus
Narrative	
Methodology	This calculated by ERC as the share of publications self-reported by ERC funded projects among the top 1% field-weighted highly cited articles, as flagged by SCOPUS.

Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	surpass the target

## Specific Objective 2 :Excellent science - Future and Emerging Technologies - strengthening research in future and emerging technologies

### Indicator 1:Publications in peer-reviewed high impact journals

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Publications in peer-reviewed high impact journals per EUR 10 million funding										
	Milestones									2020
none	Actual Progress									Final
				2			25			
Number of Publications in peer-reviewed high impact journals										
	Milestones									2020
none	Actual Progress									Final
				7	9,8	14,1	15,4			

Are we on track	On track
Indicator type	Result
Unit of measurement	Publications per 10 million EUR
Cut-Off Date	31/12/2020
Data source	CORDA, SCOPUS
Narrative	
Methodology	KPI Dashboard: Select "FET" as thematic priority, and read the value from the pre-calculated KPI. The years of reference can be chosen via the deadline date year dimension, selecting relevant years from 2014
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The list of High-Impact Journals by Scopus is used to flag the self-reported peer-reviewed publications, and the total number of flagged publications is divided by the Total EU Contrib/10 million. The specific dashboard view is called "Publications in Peer-Reviewed (PR) and High Impact (HI) Peer Reviewed Journals"
Full metadata available at this address	<a href="https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis">https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis</a>
Justification of the trend	for many indicators such as the indicators measuring the number of publications, the target is set for the year when the last actions financed under Horizon 2020 will be finished. The final figures will be collected after all of the projects are closed and results reported i.e. several years after the formal end of the programme in 2020.

### Indicator 2:Patent applications and patents awarded in Future and Emerging Technologies

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Patent applications and patents awarded in Future and Emerging Technologies per EUR 10 million funding

Unit of measurement	Number of researchers
Cut-Off Date	31/12/2020
Data source	Corda
Narrative	
Methodology	KPI dashboard : the KPI is pre-calculated. Years of reference can be selected from 2014 via the deadline date year dimension

Link MFF 14-20 / MFF 21-27	
Other methodological comments	The data comes from self-reporting by beneficiaries. The specific dashboard view is called “Research Infrastructures”
Full metadata available at this address	<a href="https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis">https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis</a>
Justification of the trend	Above the target

**Specific Objective 5 :Industrial leadership – boosting Europe’s industrial leadership through research, technological development, demonstration and innovation in the following enabling and industrial technologies (information and communication technologies; nanotechnologies; advanced materials; biotechnology; advanced manufacturing and processing; space)**

**Indicator 1:Patent applications and patents awarded in the different enabling and industrial technologies**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Patent applications in the different enabling and industrial technologies per EUR 10 million funding										
2013	Milestones									2020
ICT (FP7: 0.9) NMBP (FP7: 2.0) Space (FP7 Cooperation projects: 0.3)						3	3			3
	Actual Progress									Final
				0,3	0,3	0,49	0,66			
Number of patent applications										
	Milestones									2020
	Actual Progress									Final
				136	210	308	556			
Number of patent awarded										
	Milestones									2020
	Actual Progress									Final
				52	55	212				

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Number of patents per 10 million EUR
Cut-Off Date	31/12/2020
Data source	Corda
Narrative	KPI Dashboard IPRs view : Select the “LEIT-” parts among the thematic priorities, read the value for the KPI. Years of reference can be selected from 2014 via the deadline date year dimension
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	556 patents application and 217 patents awarded
Full metadata available at this address	<a href="https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis">https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis</a>
Justification of the trend	The target is set for the year when the last actions financed under Horizon 2020 will be finished. The final figures will be collected after all of the projects are closed and results reported i.e. several years after the formal end of the programme in 2020.

**Indicator 2:Share of participating firms introducing innovations new to the company or the market (covering the period of the project plus three years)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
none	Actual Progress									Final
					11 609	15 434	18165			

Are we on track	No data
Indicator type	Result

Unit of measurement	Number of firms introducing innovations new to the company or the market
Cut-Off Date	31/12/2020
Data source	Cordea
Narrative	
Methodology	KPI dashboard : pre-calculated share of companies declaring innovations at project reporting vs all legal entities participating in the FP. Years of reference can be selected from 2014 via the deadline date year dimension
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Self-reporting from the beneficiaries. The specific dashboard view is called “Innovative Companies”
Full metadata available at this address	<a href="https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis">https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis</a>
Justification of the trend	For the new indicators it was not possible to set a target. The new indicators have been introduced after the adoption of the Commission Proposal for a regulation establishing Horizon 2020

### Indicator 3: Number of joint public-private publications

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
none	Actual Progress									Final
				620	3 340	5 747	7260			

Are we on track	No data
Indicator type	Result
Unit of measurement	number of publications
Cut-Off Date	31/12/2020
Data source	Cordea
Narrative	
Methodology	KPI dashboard – the indicator is pre-calculated
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Based on a flag assigned by projects’ beneficiaries per any publication self-reported.
Full metadata available at this address	<a href="https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis">https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis</a>
Justification of the trend	New indicator

## Specific Objective 6 :Industrial leadership - enhancing access to risk finance for investing in research and innovation

### Indicator 1: Total investments mobilised via debt financing and Venture Capital investments

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
				8			15			15
	Actual Progress									Final
		17	22	32	47	54	70			

Are we on track	On track
Indicator type	Result
Unit of measurement	For number: number ; For amount: EUR billion
Cut-Off Date	31/12/2020
Data source	Entrusted entities implementing Horizon 2020 financial instruments
Narrative	The indicator 1 measures the additional volume of investments in research and innovation made possible by the implementation of Horizon 2020 financial instruments in view of reaching the specific objective.
Methodology	EFSD multiplier used when mobilized investment not directly reported by the entrusted entity.
Link MFF 14-20 / MFF 21-27	We will continue to report on this indicator as such SO2. Indicator 8 Public & private investment mobilised with the initial FP investment
Other methodological comments	No Baseline, because of new approach.
Full metadata available at this address	Computation based on annual operational reports provided by entrusted entities implementing Horizon 2020 financial instruments
Justification of the trend	Surpass the target

**Indicator 2: Number of organisations funded and amount of private funds leveraged**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of organisations										
	Milestones									2020
				2000			5000			5000
	Actual Progress									Final
		793	4051	10484	19107	23774	32021			
Amount of private funds leveraged										
	Milestones									2020
				15			35			35
	Actual Progress									Final
		7,2	10,5	15,5	24,4	29	41			

Are we on track	On track
Indicator type	Result
Unit of measurement	For number: number ; For amount: EUR billion
Cut-Off Date	31/12/2020
Data source	The data provided are based on the last available figures on 1st march 2021 reported by the entrusted entities implementing Horizon 2020 financial instruments
Narrative	The indicator 2 measures how many additional organisations have received funding for their research and innovation activities and how much financing has been leveraged by the crowding-in effect of Horizon 2020 financial instrument in view of reaching the specific objective.
Methodology	Leverage reported according to its definition for each instrument in the InnovFin Delegation Agreement
Link MFF 14-20 / MFF 21-27	We will not continue to report on this indicator in the Programme Statement. However, it may be reported in the mid-term evaluation of the Programme
Other methodological comments	
Full metadata available at this address	Computation based on annual operational reports provided by entrusted entities implementing Horizon 2020 financial instruments
Justification of the trend	Above the targets

**Specific Objective 7 :Industrial leadership - increasing innovation in SMEs****Indicator 1: Share of participating SMEs introducing innovations new to the company or the market (covering the period of the project plus three years)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
none				20%			50%			50%
	Actual Progress									Final
							88%			

Are we on track	On track
Indicator type	Output
Unit of measurement	%
Cut-Off Date	31/12/2020
Data source	Cordea
Narrative	
Methodology	KPI dashboard : the indicator is pre-calculated. The years of reference can be selected from 2014 via the deadline date year dimension
Link MFF 14-20 / MFF 21-27	We will continue to report on this indicator as such S.O2 Indicator 2: innovations from FP projects (by type of innovation) including from awarded IPRs
Other methodological comments	No Baseline, because of new approach.
Full metadata available at this address	<a href="https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis">https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis</a>
Justification of the trend	Above the target

**Indicator 2: Growth and job creation in participating SMEs**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020

none											
	Actual Progress										Final
							431	1108			

Are we on track	No data
Indicator type	Result
Unit of measurement	Growth is given in EUR Million and job creation in FTE
Cut-Off Date	31/12/2020
Data source	Corda
Narrative	New indicator
Methodology	KPI dashboard : the indicators are pre-calculated. The years of reference can be selected from 2014 via the deadline date year dimension
Link MFF 14-20 / MFF 21-27	We will continue to report on this indicator. "S.O.2 Indicator 3: Creation, growth & market shares of companies having developed FP innovations" or /and Indicator 6: Direct & indirect job created or maintained due to diffusion of FP results (by type of job)
Other methodological comments	The values are based on projects self-reporting by beneficiaries, and amounts might appear in the dashboard as expressed in BEUR according to their size. Pay attention to their magnitude. The specific dashboard view is called "SME – Growth and Job Creation"
Full metadata available at this address	<a href="https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis">https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis</a>
Justification of the trend	

## Specific Objective 8 :Societal challenges - improving the lifelong health and wellbeing of all

### Indicator 1:Publications in peer-reviewed high impact journals in the area of health and wellbeing

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target	
Publications in peer-reviewed high impact journals in the area of health and wellbeing per EUR 10 million funding											
2013	Milestones									2020	
42						20	20			20	
	Actual Progress										Final
				2,8	3,87	6	7,7				
Number of publication in peer-reviewed in the area of health and wellbeing											
	Milestones									2020	
	Actual Progress										Final
			130	722	1 331	2 854	4208				

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Number of publications by 10MEUR and total number of publications
Cut-Off Date	31/12/2020
Data source	CORDA, SCOPUS
Narrative	New approach
Methodology	KPI dashboard : select the relevant SC programme part from the thematic priorities and read the value from the pre-calculated indicator. Use the deadline date Year dimension to select the reference years from 2014. The targets are for whole Societal challenges pillar (Specific objectives: 8-14) and not per each individual specific objective.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Number of publication in peer-reviewed in the area is given for information. The list of High-Impact Journals by Scopus is used to flag the self-reported peer-reviewed publications, and the total number of flagged publications is divided by the Total EU Contrib/10 million. The specific dashboard view is called "Publications in Peer-Reviewed (PR) and High Impact (HI) Peer Reviewed Journals"Targets are for whole Societal challenges pillar (Specific objectives: 8-14) and not per each individual specific objective.
Full metadata available at this address	<a href="https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis">https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis</a>
Justification of the trend	The reference for this target is the year when the last actions financed under Horizon 2020 will be finished, i.e. several years after the formal end of the programme in 2020.

### Indicator 2:Patent applications and patents awarded in the area of health and wellbeing

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
----------	------	------	------	------	------	------	------	------	------	--------

Patent applications and patents awarded in the area of health and wellbeing per EUR 10 million funding									
	Milestones								2020
						2	2		2
	Actual Progress								Final
					0,13	0,24	0,34		
Number of patent applications in the area of health and wellbeing									
	Milestones								2020
2									
	Actual Progress								Final
			14	28	42	56	61

Justification of the trend	Above the target

### Specific Objective 17 :Non-Nuclear Direct Actions of the Joint Research Centre - providing customer-driven scientific and technical support to Union policies, while flexibly responding to new policy demands

#### Indicator 1: Number of occurrences of tangible specific impacts on European policies resulting from technical and scientific support provided by the Joint Research Centre

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
248	215±5			330±10			> 330±15			> 330±15
	Actual Progress									Final
	275	305	376	339	338	303	513			

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of impact cases
Cut-Off Date	31/12/2020

Data source	JRC internal evaluation
Narrative	The indicator 1 counts cases where JRC's work has policy-impact by incorporation of scientific and technical knowledge into policy proposals or by supporting the implementation and monitoring of EU policies. In accordance with its mission, the JRC has steadily supported EU policymaking during the Horizon 2020 programme, producing tangible outcomes as expected and in particular in 2020 when its work helped the European Commission in managing the Covid-19 crisis.
Methodology	JRC's annual evaluation exercise performed by an internal peer group of experts on the basis of an established evaluation methodology
Link MFF 14-20 / MFF 21-27	This indicator can feed into Horizon Europe medium/long-term key impact pathways
Other methodological comments	The evaluation methodology is documented and established within an integrated management system applying ISO standards.
Full metadata available at this address	JRC internal database
Justification of the trend	Overall, across the period 2014-2020, the indicator shows a steady trend reflecting the variations in available resources and steering of research towards immediate needs of the Commission. In 2020, the higher value results from JRC's direct support to managing the Covid-19 crisis and maturing of new activities.

### Indicator 2: Number of peer reviewed publications in high impact journals

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
460	460			500			500			500
	Actual Progress									Final
	465	518	553	515	538	522	548			

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of publications
Cut-Off Date	31/01/2021
Data source	JRC publication management system
Narrative	The indicator shows that the JRC has consistently contributed to scientific knowledge by exceeding its publication targets every year of the Horizon 2020 framework programme. The average scientific impact of JRC publications as measured by other bibliometric indicators puts it on par with prestigious universities and research organisations
Methodology	The indicator counts the peer-reviewed articles published within a given year in journals, the titles of which are listed in the Thomson-Reuters Science Citation Index Expanded (SCI-e) and/or Social Science Citation Index (SSCI).
Link MFF 14-20 / MFF 21-27	No – Under MFF the indicator will be based on a different data source
Other methodological comments	
Full metadata available at this address	JRC publications database
Justification of the trend	A slightly upward trend over the duration of the Horizon 2020 programme, coherent with the JRC's mission and development as Commission's science and knowledge service.

### Specific Objective 18 :The European Institute of Innovation and Technology - integrating the knowledge triangle of higher education, research and innovation and thus to reinforce the Union's innovation capacity and address societal challenges

#### Indicator 1: organisations from universities, business and research integrated in the Knowledge and Innovation Communities (KICs)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Justification of the trend	

## 6. The programme contribution to horizontal policies

### 6.1. Contribution to climate mainstreaming

#### 6.1.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
5 000,0	5 526,0	5 637,0	5 703,0	5 637,0	5 637,0	5 637,0	38 777,0

(\*Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.1.2. Explanation and justification on the financial contribution

##### 2014- 2020 Multiannual Financial Framework

As for the 2019 exercise, please note that the figures for 2020 are estimations based on the history of the previous expenditures in the period 2014-2019. For the latter, we have only taken the operational expenditure into account (Joint Undertakings included, but all administrative expenditure excluded).

It should also be noted that the 'tracking percentages' mentioned above – as well as all calculations of climate contributions in past years – have been calculated exclusively on the basis of the climate contributions in grant agreements signed. This approach provides a better reflection of the contributions of the research projects that are being implemented.

The Regulation establishing Horizon 2020 states that climate-related expenditure should exceed 35 % of the overall Horizon 2020 budget. Despite a considerable increase compared to FP7, investment for climate action has not yet reached that target yet. Therefore, targeted action is being taken to address this challenge.

In order to meet the expectations of 35% budgetary contribution to climate action in Horizon Europe, a new strategy for climate tracking climate action expenditure under Horizon Europe has been implemented that includes the following changes compared to Horizon 2020:

- Setting clear top-down expectations for achieving the target throughout the different parts of Horizon Europe
- Reviewing the planned contributions of some parts of the Framework Programme in light of new evidence emerging in the implementation of Horizon 2020

#### 2021 – 2027 Multiannual Financial Framework

Learning from the experience of the 2014 – 2020 period, Horizon Europe will improve his performance related to climate expenditures. The sub-targets for the three Horizon Pillars will take into consideration the specificities of each Pillar and the current baseline performance under Horizon 2020. The proposed solution described hereunder will ensure that the targets are met, while respecting the specific character of the bottom-up programmes.

For programmable activities, the climate markers have been allocated at the level of activity by considering the envisaged expenditure in accordance with the topics included in the Work Programme 2021/22. Research family DGs and executive agencies will implement a project level tracking to refine estimates so as to give an accurate picture of climate-related expenditure. A similar procedure applies to the part “Widening participation and strengthening area”, major budgets are made available for underrepresented countries to join supported projects. We assume that this will happen in a way that mirrors the portfolio and expenditure in the programmed parts.

Activities in the excellent science part (Pillar 1) are not programmed thematically. The estimate is based on the agreement to assign markers to domains of scientific activity (like for example ‘Life sciences’ 40%)

Activities in the European Innovation Council & European Institute of Innovation and Technology (Pillar 3) are in an intermediate position: The EIT is active only in the defined large topics (like the ‘Climate Knowledge and Innovation Community (KIC)’ or the EIT Digital). For an estimate of climate expenditure these eight large areas have been assigned climate markers. The European Innovation Council has committed itself to a 30% target and has put in place specific instruments that aim at supporting climate relevant innovative developments. The estimate builds on the agreed target; refinement of estimates will be made by tracking projects and other activities.

Revised estimates providing more accurate figures will therefore be provided from next year onwards when the tracking will be implemented for both programmable and bottom-up parts as described above and a more precise allocation to budgetary years is possible.

The following table shows the details of the calculation at the level of the specific objective of the programme.

Specific objective	Budget 2021/22 – Estimate in MEur (% of operational budget; 92,9% of total)
Pillar 1 Excellent science	2.306 (37,3%)
Pillar 2 Global challenges and European Industrial	6.760 (46,9%)
Pillar 3 Innovative Europe	1.231 (30,9%)
Widening participation and Strengthening the ERA	238 (25,5%)
<b>TOTAL</b>	10.535 (41,3% of operational budget equal to 38,4% of total budget)*

*\*the baseline of budgets and calculations include a share of 3548MEur contributed by NGEU to Horizon Europe for 2021 and 2022. Operational budget from NGEU is 3427MEUR in equal fourths allocated to Pillar 2 clusters ‘Health’; ‘Industry’ and ‘Climate, energy, mobility’ and the EIC (pillar 3). Estimated climate expenditure in NGEU’s budget part is 39,2% of operational budget (36,4% total budgets) equal to 1291MEur.*

#### 6.1.3. Key achievements

Climate Action research is tackled by a series of actions within the framework of the Societal Challenge "Climate action, environment, resource efficiency and raw materials". Moreover, as a horizontal approach fully integrated in all Horizon 2020 priorities, climate action research activities are encouraged and supported in order to exploit Europe's leadership in the race to develop new processes and technologies promoting sustainable development, in a broad sense, and for combating climate change. Such approach helps to provide effective solutions in many areas of climate action such as high-end climate change, the economics of climate adaptation, disaster risk reduction, nature-based solutions, climate services and climate-resilient agriculture and forestry. Some of the key achievements are shown hereafter.

**Sustainable and resilient production of food, wine and oil:** designed a climate services prototype to build more resilient, efficient and sustainable agriculture and food systems. Although focusing on three key crops of the Mediterranean area (grapes, olives and durum wheat), the prototype can be used in other sectors. CONFER co-developed dedicated climate services for the water, energy and food security sectors with stakeholders and end-users, to enhance their ability to plan for and adapt to seasonal climate fluctuations in East Africa. It will potentially reach 365 million people in 11 countries.

**Clean and resilient energy system:** S2S4E developed a decision-support tool combining sub-seasonal to seasonal climate forecasts and key energy indicators, with the objective to make the energy sector more resilient to climate variability and change. The tool is supporting energy operators to optimize energy production from renewable sources and favour larger integration of renewable energy in the grid, contributing as well to decarbonising the energy system.

**Urban climate resilience:** GrowGreen supported nature-based solutions for urban climate resilience through co-design to co-management, with contribution to climate strategies in city case studies, like in the city of Manchester.

**Climate impacts beyond Europe:** identifies how the risks of climate change to countries, economies and peoples beyond Europe might cascade into Europe. It also looks into possible mitigation and adaptation efforts.

**Too much or too little water:** BRIGAD supported climate adaptation innovations, bridging the gap between innovators and end-users in resilience to floods, droughts and extreme weather.

#### 6.1.4. Performance

The Regulation establishing Horizon 2020 states that climate-related expenditure should exceed 35 % of the overall Horizon 2020 budget. According to our tracking methodology, Horizon 2020 has so far invested EUR 20,3 billion on climate change; about 31 % of the amount committed to the specific objectives. This does not include expenditure outside of these specific objectives, such as administrative expenditure. Despite a considerable increase compared to FP7, investment for climate action has not yet reached its target. Targeted action was taken to address this challenge, including a new Green Deal call launched in 2020, which has brought the yearly climate expenditure for 2020 above the 35% threshold (36%) for the first time since the launching of the Framework Programme.

## 6.2. Contribution to biodiversity mainstreaming

### 6.2.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
807,0	823,0	839,0	867,0	884,0	902,0	920,0	6 042,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.2.2. Explanation and justification on the financial contribution

No target for biodiversity has been set in the legal base of Horizon Europe. However, the method applied for the estimation and the future tracking follows the one described for climate, with the exception of pillar 1 for which estimates are made based on share of recorded projects in MSCA and ERC. As for biodiversity tagging of relevant actions in Pillar 2 is currently underway. It is clearly understood that the methodology for biodiversity tracking within the research framework programmes needs to be further re-fined, linked to systematic tagging of project calls and project implementation, and quality checked in order to achieve robust figures for biodiversity spending.

Based on that, preliminary estimates for biodiversity related expenditure are as follow:

- €1.228M (6,9%) across all clusters of which €1.002M from cluster 6 (Agriculture, Environment, Oceans);
- €418M by Pillar 1 assuming a 7% share in ERC & MSCA;
- €312M in the context of missions (notably Oceans, Soils, climate adaptation) equal to 23% of mission budgets;
- No significant contribution for biodiversity is ex-ante expected from pillar 3.

The impact of the co-funded Biodiversity Partnership on the overall figures has an additional leverage effect on national investments (x2) which is not accounted here and may increase through the years

Biodiversity' ex-ante estimate of 2021/22 spending is approximately 7% equal to €1.957M with some correction potential, and possibilities to increase with enhanced ex-ante mainstreaming processes in the following work programme periods.

### 6.2.3. Key achievements

**Protecting natural areas:** ECO-POTENTIAL developed tools to connect Earth observation techniques with field measurements to study ecosystems and better manage protected areas such as National Parks, UNESCO World Heritage and Natura2000 sites, and marine ecosystems.

**Insects and pollinators:** BIG4 studied the four largest insect groups to tackle hotspots of the largely unknown insect diversity to better comprehend its potential for economic and societal needs. BIG4 employed a wide spectrum of modern, innovative approaches to unveil the tree of life for several insect lineages.

**Nature-based solution:** NATURVATION Nature-Based Solutions Atlas and Navigator prototype will assist decisionmakers in the path towards a more effective implementation of nature-based solutions.

**Restoring freshwater ecosystems:** AMBER develops tools, models, and toolkits that allow hydropower companies and river managers to maximize benefits and minimize ecological impacts. The aim is to achieve a more effective and efficient restoration of stream connectivity.

**Marine ecosystems** SponGES is assessing the biodiversity contained within sponge grounds ecosystems of the North Atlantic, and developing an integrated ecosystem-based approach to preserve and sustainably use marine resources.

**Valuing nature:** MAIA and WE VALUE NATURE are mainstreaming the use of natural capital accounting among Member States and businesses.

**Building the European partnership on biodiversity:** BIODIVERSA3 is the EU network of research ministries and funding agencies promoting a common, forward-looking vision for overcoming fragmentation in biodiversity research. Along with environmental ministries, they prepare the future European Partnership on Biodiversity and its Strategic R&I Agenda under Horizon Europe.

#### 6.2.4. Performance

Horizon 2020 contributed significant financial resources to the conservation of biodiversity. EU investments in biodiversity-related research during Horizon 2020 are up to EUR. €3,5 billion EU that represents 5% of the programme.

### 6.3. Contribution to clean air financing

#### 6.3.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
838,0	1 068,0	858,0	872,0	848,0	860,0	848,0	6 192,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.3.2. Explanation and justification on the financial contribution

The Clean air expenditure indicated in the table has been estimated annually for the full 2021-2027 period building on a high-level tracking methodology, originally developed and convened in the OECD. The tracking system for clean air was further developed by the Commission to comply with the reporting obligation on the uptake of EU funding in Article 11 of the National Emission Ceilings Directive (EU)2016/2284 and is included in Annex 4 of the implementation report COM/2020/266 final. It is based on the “EU Marker” system. This means that the clean air related expenditure has been calculated in accordance with the three following categories:

- A 100% contribution to clean air is assumed when clean air is clearly the primary objective, e.g. when vehicles, ships and aircraft (and their components) with zero emissions of air pollutants are concerned, or when activities directly deal with pollution reduction, measurement, assessment or impact.
- If a contribution to clean air is a significant, but not predominant objective, the contribution is counted as 40% For instance, in the case of urban activities where there is no mission work-program or precise budget and the impact is partial, we assumed a 40% contribution on the expected budgets. Similarly, in the case of hydrogen and energy, activities dealing with zero emissions energy and fuels are accounted at 40%, while activities dealing with replacement fuels and technologies are not considered to contribute to clean air.
- Expenditure not targeted at clean air objectives, nor contributing to such objectives is to be counted as 0%.

At this stage, it has been considered that only cluster 'Climate, Energy and Mobility'; and cluster 'Food, Bioeconomy, Natural Resources, Agriculture and Environment' contribute to financing “clean air”. However, a number of projects funded through the mission “Climate neutral cities” or the Pillar 1 or Pillar 3 will contribute to “clean air”, e.g. EIT Climate-KIC “climate” EITs “Inno Energy” and “Urban Mobility”. As it is impossible to estimate their contribution ex-ante, in particular for the bottom-up activities, a scoring of “0” has been applied for the pillar 1 and pillar 3. Therefore, according to the methodology used, the financial

contribution to “Clean air” given in the table for the Horizon Europe programme is likely underestimated. Consequently, a tracking at a lower –level, for instance at the level of the topics identified in the work programmes, is foreseen to be implemented for Horizon Europe. This will allow a more accurate estimation ex-post of the contribution of Horizon Europe to clear air financing.

#### **Key Achievements – Horizon 2020 (2014-2020)**

In the transport area, a large part of the Horizon 2020 budget is dedicated to zero and low emissions technologies, and all future Horizon Europe activities in the 2Zero, rail, hydrogen and batteries Horizon Europe partnerships will concentrate on zero emissions solutions and therefore are assumed to deliver air quality improvements, while all demonstrations of the CCAM partnership will be performed on zero emissions vehicles but, having little specific work on emissions, it’s for the moment conservatively assumed to give a zero contribution.

European Green Vehicles Initiative research projects such as 1000kmplus and EVC1000 (13,6 million EUR in total) are taking a holistic approach to deliver fully electric vehicles capable of running long holiday trips with minimal delay in comparison to the same trip with a conventional car, thus helping to improve the perception of electric vehicles as full replacements for today’s cars, convincing customers to switch to zero pollution vehicles. For the same reason, many other projects contribute to making these vehicles affordable and more efficient.

In a similar way, projects in the Hydrogen and Fuel Cell JU, such as H2Haul project (Hydrogen fuel cell trucks for heavy-duty, zero emission logistics) will contribute to delivering zero emissions heavy duty transport by deploying 16 fuel cell trucks in four demonstration sites in Belgium, France, Germany and Switzerland.

Apart from all the zero-emission related projects that constitute the bulk of the EGVI partnership, there are a few projects dealing with the emissions of conventional vehicles as well. GVI (3 million EUR), aims at orienting consumer choice towards clean vehicles, delivering the first global rating of environmental performance of all types of vehicles based on independent measurements of both pollutants and climate affecting emissions and including many emissions which are not yet regulated.

CARES (3.4 million EUR) aims instead at monitoring the emissions of the existing fleet, discovering high emitting vehicles that have been tampered (for instance removing the particle filter, which leads to one vehicle emitting like thousands of untampered ones), vehicles needing maintenance or new defeat devices.

Among the running projects contributing to clean air the projects dealing with nanoparticulate measurement in vehicles (PEMS4NANO, SUREAL23 and DOWNTOTEN for a total of around 15 million EUR) have delivered methodologies and instrument which should allow stricter regulation of emissions, while projects SCIPPER and AVIATOR respectively study emissions around ports and airports for a total of 10 million EUR.

In addition, several activities in the shipping (both inland and maritime) and aviation sectors will address zero emissions technologies or technologies that will partially reduce polluting emissions.

AVIATOR in particular is developing and deploying across multiple airports, a proof-of-concept low cost sensor network for the monitoring of UFP, PM and gaseous species such as NO<sub>x</sub> and SO<sub>x</sub>, across airport and surrounding communities. Transport and impact of emissions from aircraft engines and Auxiliary Power Units (APU) will be monitored in this more complex environment through high fidelity and sensor measurements. AVIATOR will provide airports and regulators with tools and guidance to improve the assessment of air quality in and around airports.

PROMINENT is addressing the key needs for technological development, as well as the barriers to innovation and greening in the European inland navigation sector, in close cooperation with the project CLINSH (Clean Inland Shipping) under the LIFE programme. One of the objectives is to reduce emissions of air pollutants from inland shipping to make the sector as competitive as road transport in terms of air pollutant emissions by 2020 and beyond.

Innovation in urban areas is needed for climate reasons and for the energy transition, but often projects with such objectives can also benefit air quality.

IRIS supports seven cities in delivering cheaper, better accessible and reliable energy and mobility services for a better and more sustainable urban quality of life. The project focuses on i.e. energy efficiency and grid flexibility, including measures such as second life battery, vehicle-to-grid storage, dynamic balance of demand and supply, increase of renewable energy production and roll-out of e-cars and e-buses, thus contributing to more stable, secure and affordable energy and mobility services for citizens, with improved air quality.

Air quality is not just an outdoor concern, it is equally important in indoor environments – when staying at home, driving in cars or flying in aeroplanes. EU-funded researchers developed new tools to address the burgeoning air pollution problem in aircraft cabins. H2020-MACAO develops new tools improve cabin air quality and protect against organic pollutants and ozone levels. VOCs and ozone can also find their way into the cabin, but especially ozone, when the aircraft is flying high near the ozone layer. Unwanted by-products of engine combustion, such as nitrogen oxides, can also pollute the cabin, while other pollutants emanate from within the cabin – ethanol in alcoholic beverages can evaporate and interior furnishings can release formaldehyde. All these pollutant

gases present concerns for the health and comfort of passengers and crew. Prolonged exposure to elevated ozone and VOC levels are linked to headaches and respiratory and cardiovascular issues.

The first two-year WP of Horizon Europe pays particular attention to local air quality (LAQ) and deliver transformative technologies that will allow a step change in the reduction of LAQ from NO<sub>x</sub>, SO<sub>x</sub>, volatile organic compounds (VOCs) and particulate matter (PM) that occur below 900m above ground level around airports.

A specific area in the transport sector of the workprogramme is dedicated to assessing and reducing the health impact of transport emissions, targeting for instance the reduction of brake emissions through pilot programs to test emerging technologies.

## 6.4. Contribution to gender equality

### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
37,5	16,9						54,4

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.4.2. Key achievements and performance

#### Horizon Europe (2021-2027) – Contribution

Under Horizon Europe, a strengthened approach for gender equality is introduced, with foreseen increase of the overall expenditure contributing to gender equality objectives. In particular, the Horizon Europe legal basis sets the strengthening of the gender dimension in research and innovation content, across the whole programme, as an operational objective. At implementation level, this will entail that the integration of sex and gender analysis will become mandatory by default in all topics of calls-for-proposals (for research and innovation actions and innovation actions), and thus in all funded projects – unless the non-relevance of the gender dimension is duly justified.

The figures given in the table are only the amount planned to be allocated to the dedicated support for gender equality

- Under a programme part dedicated to “Strengthening the European Research Area”, for policy-related supporting activities for inclusive gender equality in research and innovation organisations. Foreseen budget for 2021: EUR 8.2 Million for 3 actions. Foreseen budget for 2022: EUR 7.9 Million for 5 actions.
- Under Cluster 2 on “Culture, Creativity and Inclusive Society”, for gender studies and intersectional research. Foreseen budget for 2021: EUR 9.9 Million for a dedicated topic. Foreseen budget for 2022: EUR 9 Million for a dedicated topic.
- Under Cluster 4 on “Digital, Industry and Space”, for tackling gender, race and other biases in Artificial Intelligence. Foreseen budget for 2021: EUR 10 Million for one specific topic.
- Under the European Innovation Council and European Innovation Ecosystems work programmes: several activities promoting gender equality are also planned, including a new initiative to support women-led deep-tech start-ups, combining dedicated funding with mentoring and coaching activities (foreseen budget for 2021: EUR 3.75 Million), as well as monitoring of gender balance in the EIC portfolio through a specific key performing indicator.

No specific gender expenditure tracking mechanism is envisaged at this stage. However, the upgraded Horizon Dashboard will include the new approach allowing to better identify the gender composition of researchers applying or benefiting from the EU R&I support, success rates of female researchers, their networks as well as career progression. It will also allow to identify female led companies supported by the Horizon Europe Framework Programme and better understand the impact of the programme on their company growth.

#### Key achievements and performance

##### Gender as a cross-cutting issue in Horizon 2020

Horizon 2020 was the first Framework Programme for Research and Innovation (R&I) to include specific articles relating to gender equality in its Regulation, setting gender as a cross-cutting issue with three distinct objectives:

- gender balance in research teams at all levels, in order to close the gaps in the participation of women;

- gender balance in decision-making bodies, in order to reach the target of 40% of the under-represented sex in panels and groups and of 50% in advisory groups;
- integration of the gender dimension into R&I content, i.e. taking into account as relevant biological characteristics as well as social and cultural features of both women and men in the design and content of R&I (sex and gender analysis).

These objectives are implemented through a series of Commission provisions which are integrated, as relevant, at various stages of the Research and Innovation cycle.

#### Gender balance in research teams

- In Work Programmes, applicants are encouraged to promote equal opportunities in the implementation of the funded action and to ensure a balanced participation of women and men at all levels in teams. Up to January 2021, the share of women participants in Horizon 2020 projects was 41% of the total workforce, including non-researchers, while women represented 27% of projects coordinators.
- In Marie Skłodowska-Curie Actions (MSCA) specifically, women represent an overall share of 41% of the entire MSCA fellow population under Horizon 2020, 43% of Individual Fellowships, and 44% ITNs (i.e. for doctoral candidates). From the budget spent so far on the four main Marie Skłodowska-Curie Actions under Horizon 2020, EUR 2.4 billion have been dedicated to women researchers.

#### Gender balance in decision making

Targets have been fully reached: the share of contracts with women experts participating in evaluation panels is 42%, while women's participation in Horizon 2020 advisory groups was 55%.

#### Gender dimension in research and innovation content

The integration of the gender dimension in R&I content has been increasingly mentioned in topics for calls for proposals across the different Horizon 2020 Work Programme parts, and applicants' attention is drawn to the relevance of sex and gender analysis in the content of their planned actions, which is evaluated under the 'Excellence' criterion. Across the 2020 Work Programmes, 125 out of 343 topics (36.4%) for calls for proposals (including the emergency Coronavirus calls for Expression of Interest) integrate an explicit gender dimension in their content. Moreover, an increasing number of bottom-up projects funded under the "Excellent Science" pillar of Horizon 2020, through the European Research Council (ERC) and the MSCA programme, have been integrating sex and gender analysis in their research designs, and in some cases, have been fully dedicated to gender-equality related themes.

#### Funding to projects dedicated to gender equality issues

- Gender equality projects are funded under the [Science-with-and-for-Society \(SwafS\) Work Programme](#), which has specific calls on supporting gender equality in R&I. Among these, support is offered to implement gender equality plans (GEPs) in research performing and funding organisations.
- We also fund under SwafS policy-related projects to support a coherent framework of activities, including: trans-national policy networks, communities of practice on GEP implementation, a gender equality training academy to support the implementation of GEPs, addressing gender bias in allocation of funds, integrating a gender perspective in international cooperation, addressing gender-based violence including sexual harassment in academia.
- For the whole of the Horizon 2020 SwafS work programme, over EUR 83 Million will have been allocated to over 40 collaborative projects and other actions on gender equality in R&I, benefitting to around 300 organisations.
- In addition, other SwafS-funded projects, e.g. on responsible research and innovation as well as science education, have also been addressing gender equality issues specifically.

As a result of these provisions, R&I is already considered to be among the 'best in class' with respect to EU policies for the promotion of gender equality.

## **6.5. Contribution to the sustainable development goals**

### **6.5.1. Goals**

#### ***SDG 1 End poverty in all its forms everywhere***

SDG 1 is one of the least addressed Goals by the EU R&I Framework Programme. The highest share of potential No Poverty related investment is identified in the 'top-down' parts of Horizon 2020, the Societal Challenges (up to 21% of Horizon 2020 investment in this pillar potentially relates to SDG 1). Significantly lower share of investment is observed in the bottom-up pillars (Excellent Science and Industrial Leadership). Based on the most frequent key words analysis, the projects seem diverse. A group of them mentions energy poverty and disaster risk reduction. Four out of five projects are also relevant for Climate Action (SDG 13), Sustainable Cities and Communities (SDG 11) and Reduced Inequalities (SDG 10). Based on the latest Global Sustainable

Development Report 2019<sup>11</sup> the main known trade-offs lie with the SDG 06 on Clean Water and Sanitation and SDG 15 Life on Land.

### ***SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture***

SDG 2 Zero Hunger is moderately addressed by the EU R&I Framework Programme. The highest share of potential zero hunger related investment is identified in the ‘top-down’ parts of Horizon 2020, the Societal Challenges (up to 27% of Horizon 2020 investment in this pillar potentially relates to SDG 2). Based on the most frequent key words analysis, projects seem to focus on nutrition security and food systems. Four out of five projects are also relevant to Climate Action (SDG 13). Based on the latest Global Sustainable Development Report 2019<sup>12</sup> the main currently known trade-offs lie with the SDG 11 Sustainable Cities and Communities, SDG 14 Life Below Water, SDG 15 Life On Land and SDG 6 Clean Water and Sanitation – every other Zero Hunger related project in Horizon 2020 potentially tackles these interlinkages.

### ***SDG 3 Ensure healthy lives and promote well-being for all at all ages***

SDG 3 Good Health and Well-Being is one of the most well addressed Goals by the EU R&I Framework Programme. Almost one out of two Horizon 2020 projects is potentially related to Good health and well-being, both in top-down and bottom-up parts of the programme. Based on the most frequent key words analysis, projects seem to focus on middle and low income countries and infectious diseases in particular the Zika virus. Every second Good health and well-being project is potentially related also to Climate Action goals (SDG 13). Based on the latest Global Sustainable Development Report 2019<sup>13</sup> there are almost no currently known trade-offs when tackling this Goal apart from the Affordable and Clean Energy (SDG 7). However, major co-benefits are observed with SDG 8 Decent Work and Economic Growth.

### ***SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all***

SDG 4 Quality Education is moderately addressed by the EU R&I Framework Programme. The highest share of potential Quality Education related investment is identified in the top-down parts of the Horizon 2020 Programme related to Societal Challenges and Other priorities such as widening and including society. Based on the most frequent key words analysis projects seem to focus on early childhood education, science education and teachers. More than half of the projects interlink with the SDG 3 on Good Health and Well-Being. Based on the latest Global Sustainable Development Report 2019<sup>14</sup> tackling Quality Education targets have no currently known trade-offs with other SDGs and co-benefits are observed across all the other Goals.

### ***SDG 5 Achieve gender equality and empower all women and girls***

SDG 5 Gender Equality Goal is one of the least addressed Goals by the EU R&I Framework Programme. The highest share of gender equality related investment is identified in the ‘other’ parts of the Horizon 2020 including society and widening (up to 12% of Horizon 2020 investment in this programme part potentially relates to SDG 5). Based on the most frequent key words analysis projects seem to focus on feminism and gender violence. Every three out of five gender equality related projects also interlink with Peace, Justice and Strong Institutions. Based on the latest Global Sustainable Development Report 2019<sup>15</sup> tackling Gender Equality targets has almost no currently known trade-offs with other SDGs and co-benefits have been observed across all the other Goals.

### ***SDG 6 Ensure availability and sustainable management of water and sanitation for all***

SDG 6 Clean Water and Sanitation is moderately addressed by the EU R&I Framework Programme. The highest share of clean water and sanitation projects is identified in the ‘top-down’ and ‘other’ parts of the Horizon 2020 Programme. Based on the most frequent key words analysis, projects relate to wastewater treatment and water reuse. Every four out of five projects seem to interlink with the Climate Action (SDG 13). Linkages with Good Health and Well-Being Goal are also frequent. Clean Water and Sanitation Goal is one of the most commonly assessed Goals for potential trade-offs and cobenefits. Based on the latest Global Sustainable Development Report 2019<sup>16</sup> trade-offs were found with the Zero Hunger Goal (SDG 2) and Affordable and Clean Energy (SDG 07). Co-benefits are observed with all the other SDGs.

### ***SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all***

SDG 7 Affordable and Clean Energy is one of the most well addressed Goals by the EU R&I Framework Programme. The highest share of affordable and clean energy related projects is identified in Pillar 2 Industrial Leadership (up to 60% of Horizon 2020 investment in this pillar potentially relates to SDG 7). Based on the most frequent key words analysis, projects often refer to renewable energy systems and storage solutions. Every four out of five projects interlink with Climate Action (SDG 13). Links with the Sustainable Cities and Communities are also frequent. Based on the latest Global Sustainable Development Report 2019<sup>17</sup> affordable and clean energy has many trade-offs across the SDGs namely SDG 6 Clean Water and Sanitation, SDG 2 Zero Hunger, SDG 10 Reduced Inequalities and SDG 15 Life on Land. Co-benefits were identified with SDG 12 Responsible Consumption and Production, SDG 4 Quality Education and SDG 5 Gender Equality.

### ***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

SDG 8 Decent Work and Economic Growth is moderately addressed by the EU R&I Framework Programme. All parts of the Horizon 2020 Programme, with the exception of the Excellent Science pillar, seem to equally support decent work and economic growth (between 25% to 27% of investment in Pillar 2, 3 and ‘Other’ parts of Horizon 2020 potentially relates to SDG 8). Based on

the most frequent key words analysis, several projects relate to labour market and youth unemployment. Many projects interlink with SDG 11 Sustainable Cities and Communities and SDG 12 Climate Action. Based on the latest Global Sustainable Development Report 201918 the main trade-offs have been so far identified with the SDG 12 Responsible Consumption and Production, SDG 13 Climate Actions and SDG 14 Life Below Water.

#### ***SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation***

SDG 9 Industry, Innovation and Infrastructure is moderately addressed by the EU R&I Framework Programme. The highest share of industry, innovation and infrastructure related projects is identified in the Industrial Leadership and Societal Challenges part of the Horizon 2020 Programme (around 40% of Horizon 2020 investment in this pillar potentially relates to SDG 9). Based on the most frequent key words analysis many projects seem related to transport. The majority of projects also interlink with Climate Action (80%), Sustainable Cities and Communities (72%) and Affordable and Clean Energy (70%). Based on the latest Global Sustainable Development Report 201919 the main trade-offs have been so far identified with Reduced Inequalities (SDG 10), Life on Land (SDG 15) and Life Below Water (SDG 14).

#### ***SDG 10 Reduce inequality within and among countries***

SDG 10 Reduced Inequalities is moderately addressed by the EU R&I Framework Programme. The highest share of projects potentially related to reducing inequalities is identified in the ‘top-down’ parts of the Horizon 2020 Programme related to Societal Challenges (up to 36% of Horizon 2020 investment in this pillar potentially relates to SDG 10). Based on the most frequent key words analysis, this portfolio of projects seems to have a particular focus on migrants and refugees, political and institutional governance and social innovation. Reduced inequality labelled projects commonly link with the Goals of the Climate Action, Good Health and Well-Being and Peace, Justice and Strong Institutions. Based on the latest Global Sustainable Development Report 201920 the main trade-offs were so far identified with the Affordable and Clean Energy (SDG 7), Decent Work and Economic Growth (SDG 8) and Industry, Innovation and Infrastructure (SDG 9).

TOP

#### ***SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable***

SDG 11 Sustainable Cities and Communities is well addressed by the EU R&I Framework Programme. A relatively high share (from 48% to 58%) of investment is potentially related to Sustainable Cities and Communities in all parts of Horizon 2020, with exception of Pillar 1 Excellence Science where the share is much lower (19%). Based on the most frequent key words analysis, these projects often refer to nature based solutions and follower cities. The majority of projects interlink with Climate Action Goal (78%). Based on the latest Global Sustainable Development Report 201921 the main trade-offs have been so far identified with SDG 14 Life Below Water and SDG 15 Life on Land.

#### ***SDG 12 Ensure sustainable consumption and production patterns***

SDG 12 Responsible Consumption and Production is moderately addressed by the EU R&I Framework Programme. From 31% to 42% of investment is potentially related to Responsible Consumption and Production in all parts of Horizon 2020, with exception of Pillar 1 Excellence Science where the share is much lower (10%). Based on the most frequent key words analysis, project reports often mention circular economy, food waste and waste management in general. The majority of projects (88%) interlink with the Climate Action Goal. Based on the latest Global Sustainable Development Report 201922 acting on Responsible Consumption and Production brings co-benefits across the other SDGs, with the exception of SDG 8 on Decent Work on Economic Growth, where some trade-offs are evidenced.

#### ***SDG 13 Take urgent action to combat climate change and its impacts***

SDG 13 Climate Action is the most well addressed Goal by the EU R&I Framework Programme. The highest share of climate action related projects is identified in the ‘top-down’ parts of the Horizon 2020 Programme related to Societal Challenges (up to 67% of Horizon 2020 investment in this pillar potentially relates to SDG 13). Based on the most frequent key words analysis, projects relate to climate science including climate projections, earth and system observations and assessment. Almost half of the Climate Action projects interlink with affordable and clean energy (SDG 07), sustainable cities and communities (SDG 11) and good health and well-being (SDG 03). Based on the latest Global Sustainable Development Report 201923 these four SDGs have a potential to harness co-benefits (i.e. by tackling one SDG positive effects are expected on the other). The trade-offs, however lie especially with the SDG 08 on decent work and economic growth and SDG 02 on zero poverty. A much lower share of current Horizon 2020 investment seems to be addressing these trade-offs.

#### ***SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development***

SDG 14 Life Below Water is moderately addressed by the EU R&I Framework Programme. The highest share of Life Below Water related projects is identified in the ‘top-down’ parts of the Horizon 2020 Programme related to Societal Challenges (up to 42% of Horizon 2020 investment in this pillar potentially relates to SDG 14). Based on the most frequent key words analysis, these projects frequently reference marine ecosystems, coral reefs, fisheries and the overall Blue growth strategy. The majority of projects (78%) interlink with the Climate Action or Life on Land (66%). Based on the latest Global Sustainable Development Report 201924 the trade-offs lie especially with 01 No Poverty, 02 Zero Hunger, 13 Climate Action and 09 Industry, Innovation and Infrastructure.

***SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss***

SDG 15 Life on Land is moderately addressed by the EU R&I Framework Programme. An important share of Life on Land related investment is estimated across the different parts of the Horizon 2020 Programme (from 23% of investment in Pillar 1 Excellent Science to up to 42% in Pillar 3 Societal Challenges). Based on the most frequent key words analysis, these projects frequently mention ecosystem services, forest and land management as well as biodiversity. The majority of projects (75%) interlink with SDG 13 on Climate Action. Based on the latest Global Sustainable Development Report 2019<sup>25</sup> trade-offs lie in particular with the SDG 7 Affordable and Clean Energy and SDG 1 No Poverty and SDG 2 Zero Hunger.

***SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels***

SDG 16 Peace, Justice and Strong Institutions is moderately addressed by the EU R&I Framework Programme. The highest share of Peace, Justice and Strong Institutions related projects is identified in the ‘top-down’ parts of the Horizon 2020 Programme related to Societal Challenges (up to 42% of Horizon 2020 investment in this pillar potentially relates to SDG 16). Based on the most frequent key words analysis, these projects mention Law Enforcement Agencies (LEAs), radicalisation and organised crime. More than half of the projects interlink with the Good Health and Well-Being (SDG 03), Climate Action (SDG 13) and Sustainable Cities and Communities (SDG 11). Based on the latest Global Sustainable Development Report 2019<sup>26</sup> there is little knowledge about the co-benefits and trade-offs - trade-offs were so far identified with Good Health and Well-Being (SDG 03) and Affordable and Clean Energy (SDG 07).

***SDG 17 Strengthen the means of implementation and revitalize the global partnership***

SDG 17 Partnerships for the Goals is the least addressed Goal by the EU R&I Framework Programme. A small share of Horizon 2020 investment (2%) potentially relates to revitalising the global partnership for sustainable development which focuses on enhancing the North-South and South-South cooperation, promoting international trade and helping developing countries to increase their exports. Based on the latest Global Sustainable Development Report 2019<sup>27</sup> trade-offs are limited and were so far identified only with SDG 4 Quality Education and SDG 16 Peace, Justice and Strong Institutions.

## 6.5.2. Key achievements and performance

### Performance:

The EU is committed to development that meets the needs of the present without compromising the ability of future generations to meet their own needs. A life of dignity for all within the planet’s limits that reconciles economic prosperity and efficiency, peaceful societies, social inclusion and environmental responsibility is at the essence of sustainable development. To create from these challenges opportunities for new businesses and new jobs, a strong engagement in research and innovation is necessary. Research and innovation policy sets the direction of travel, creates knowledge and solutions for the transformation towards sustainability, while improving our well-being and ensuring long-term prosperity. It also promotes systemic approaches beyond disciplines, sectors, conversations and policy areas.

The EU Framework Programme for Research and Innovation, Horizon 2020, addresses several of the Sustainable Development Goals (SDGs). Potentially up to 84% of the Horizon 2020 investment relates to at least one of the SDGs and all pillars of Horizon 2020 appear to contribute to the SDGs to a similar degree (‘top-down’ and ‘bottom-up’ investment). The largest share of the investment relates to Climate action (SDG 13) and Good health and well-being (SDG 3). The focus of the EU R&I investment on Responsible production and Consumption is low especially when compared to the current EU performance gap to SDG targets in this area.

- A typical project in Horizon 2020 relates to three different SDGs indicating that the investments are highly interconnected across the SDG spectrum.
- Future policy choices should consider the systemic nature and interdependence of SDGs. Key opportunities lay in leveraging the synergies and minimising the potential trade-offs among the different SDGs (e.g. in Horizon 2020 some interlinkages such as climate, energy and water are expected, and others such as climate action and good health are more surprising).

### Examples of projects addressing the SDGs in Horizon 2020:

***‘SDG 1: SAVING ON HEATING ENERGY: AirEx*** is a smart ventilation control developed by a UK-based start-up focusing on the development and rapid scale-up of fabric efficiency technologies in homes to tackle energy poverty. Their solution enables significant savings on heating energy bills for residents, without compromising air quality.

***SDG 2: NEW ROBOTS TRANSFORMING FARMING: Flourish*** developed adaptable ground and aerial robots that can increase agricultural yield, reduce pesticide use and mitigate food security risks.

**SDG 3: RESEARCH TO SHIELD AGAINST ZIKA-RELATED BIRTH DEFECTS:** **ZIKAlliance** project research found out that dengue virus infection in fact offers protection against the development of Zika-related birth defects rather than enhance its development.

**SDG 4: GAMES PLATFORM TO MAKE LEARNING FUN:** The **BEACONING** worked with schools and universities from Bulgaria, France, Greece, Italy, Poland, Romania, the United Kingdom, Turkey, Israel and South Africa, to create an innovative games platform to make learning science, technology, engineering and maths (STEM) fun. Their platform lets teachers pick a narrative and choose from a series of mini games.

**SDG 5: THE GENDER EFFECTS OF CHANGES IN TAX BASES:** The Swedish **FairTax** project carried out in-depth comparative, interdisciplinary research using constitutional, legal, technical, institutional, qualitative, and quantitative methods to address more sustainable and fair tax and social policies including microsimulation results for personal income tax systems in six countries of the European Union.

**SDG 6: SCALABLE SOLUTION FOR CLEANING WASTE WATER** **iMETland** is a solution to clean polluted waste water being low-cost, eco-friendly, and scalable to an individual, a municipal, or an industrial use setting. The Spanish project is currently being commercialized by iMETfilter SL.

**SDG 7: FACILITATING SYNERGIES FOR SUSTAINABLE CONSTRUCTION:** **STORM** project developed an innovative district heating and cooling network controller, based on self-learning algorithms, deployed and tested in two demo sites. The STORM controller reduces peaks in district heating networks and interacts with the electricity market reducing operational and investment costs for network operators.

**SDG 8: WIN-WIN STRATEGIES FOR GREEN GROWTH:** The **GREEN-WIN** project applied a solution-oriented research approach to understand the links between climate action, sustainability, and overcoming implementation barriers through win-win strategies. The project critically assessed where and when win-win and green growth strategies work in practice and where fundamental trade-offs must be faced. It also produced a booklet of green-win narratives concerning sustainability finance and policies contributions for overcoming economic challenges to de-carbonization.

**SDG 9: BIOMETRIC ONE-TIME PASSWORD CARD ENABLING SECURE E-TRANSACTIONS:** **QuardCard** developed a smart card solution for encrypted communication that enables secure e-banking, e-commerce and e-government using biometric one-time passwords.

**SDG 10: INTERNATIONAL NETWORK FOR COMPARING SOCIAL INEQUALITIES:** The aim of the **INCASI** project is to create an International Network for Comparative Analysis of Social Inequalities (INCASI) with 19 universities, 10 from Europe and 9 from Latin America and impact academic and policy debates on the subject.

**SDG 11: URBAN NATURE LABS:** **UNaLab**, Urban Nature Labs, is developing a European framework of replicable, locally attuned nature-based solutions to enhance the climate and water resilience of cities together with stakeholders and citizens. In 10 cities around the world, the UNaLab project implements local solutions such as urban ecological water management, accompanied with greening measures and innovative, inclusive urban design.

**SDG 12: DISCARDED TEXTILES AS RAW MATERIAL** **RESYNTEX** project established a pilot textile recycling plant in Slovenia to create a new circular economy model for the textile and chemical industries. Recovering secondary raw materials from unwearable textile waste, the installation covers the whole value chain.

**SDG 13: REDUCING THE CARBON FOOTPRINT OF SHIPPING:** The German project **AtlantOS** is computing optimal shipping tracks in the Atlantic Ocean to achieve reduction of carbon intensity through ship route optimization.

**SDG 14: INCREASING OCEAN LITERACY:** **Respon-SEA-ble** co-designed, created, tested and assessed a range of Ocean Literacy tools and products. The project made specific suggestions to maximise opportunities in existing policies (such as the Marine Strategy Framework Directive) to strengthen Ocean Literacy of different groups.

**SDG 15: ALGAE-BASED FERTILISER:** **VegaAlga** developed a microalgae-based fertiliser to establish a sustainable agricultural ecosystem to meet the growing demand for 'green' vegetables. The team developed a smaller microalgae-fertiliser production system to allow farmers to produce fertiliser on their own land in a cost-effective and eco-friendly way.

**SDG 16: POLICIES FOR PEACE:** **POLICIES\_FOR\_PEACE** project aims to study which key institutions and policies are best suited to reduce incentives for engaging in appropriation and armed conflict.

**SDG 17: ACCELERATING OPEN IOT AND BIG DATA INNOVATION IN AFRICA:** **WAZIHUB** (in Swahili for Open-Hub) is an innovation project for Africa aiming to create an OpenHUB of IoT and Big data cutting-edge African-grade solutions, co-designed in Africa to match local service needs.

## **1. Overview**

### **1.1. Challenges**

Nuclear research contributes to social well-being and economic prosperity by improving nuclear safety, security and radiation protection. Research and innovation in the nuclear field play a key role in maintaining the highest safety standards and Europe's competences in the nuclear domain. Radiation protection research leads to improvements in medical technologies as well as in other sectors such as industry, agriculture, environment from which many citizens benefit. Nuclear research also supports the Union's efforts in the transition to a climate-neutral energy system in a safe, efficient and secure way.

### **1.2. Mission (general objectives)**

The general objective of the Euratom Research and Training Programme is to pursue nuclear research and training activities, with an emphasis on the continuous improvement of nuclear safety, security and radiation protection, as well as to complement the achievement of Horizon Europe's objectives, inter alia in the context of the energy transition.

The Euratom Programme address the following research challenges:

- Reinforcement of reactor systems' safety and of spent fuel and radioactive waste management
- Radiation protection and the safe application of ionising radiation
- Safe decommissioning of and environmental remediation of nuclear installations
- Improvement of nuclear security and safeguards
- Maintaining nuclear competences and knowledge management
- A significantly expanded knowledge base for fusion energy

The Euratom Research and Training Programme will complement Horizon Europe, the EU's Framework Programme for Research and Innovation for 2021-2027. It supports nuclear research and training in areas defined by the Regulation establishing the Programme and in accordance with the Euratom Treaty, complementing Member States' actions in this field.

### **1.3. Specific objectives**

- a) (improve and support nuclear safety, security, safeguards, radiation protection, safe spent fuel and radioactive waste management and decommissioning, including the safe and secure use of nuclear power and of non-power applications of ionizing radiation;
- b) maintain and further develop expertise and competence in the nuclear field within the Community;
- c) foster the development of fusion energy as a potential future energy source for electricity production and contribute to the implementation of the European fusion roadmap;
- d) support the policy of the Union and its Member States on continuous improvement of nuclear safety, safeguards and security.

#### 1.4. Public intervention context

In accordance with the Euratom Treaty, in particular Articles 4(1) and 7, the Commission should complement nuclear research in Member States by carrying out a Community research and training programme as agreed by the Council. In 2021-2025 Euratom will support, in the interest of all Member States, joint research efforts and actions for maintaining strong competences in nuclear research and innovation in both fission and fusion.

All Member States stand to benefit from the development of a sound scientific and technical basis for the safe operation of reactors, secure management of radioactive waste, robust systems of human and environmental protection against the effects of ionising radiation and progress in fusion science and technologies. In support of all objectives, the Programme reinforces the European Research Area in the nuclear field, supports the coordination of Member States' research efforts to avoid duplication, helps retain critical mass in key areas and ensures European added value to expenditure of public funds.

In full respect of Member States' right to decide on their energy mix, the Programme's research results in fission and fusion could also contribute towards a climate-neutral energy system in a safe, efficient and secure way, in particular for those Member States using or planning to use nuclear power as part of their energy mix.

#### 1.5. Actions

In 2021-25 research for nuclear safety will remain a top priority of the Euratom Programme for direct and indirect actions, with particular emphasis on ageing, long-term operation strategies and accident management. The additional safety requirements introduced by the Nuclear Safety Directive require increased efforts in developing an understanding of degradation mechanisms of safety-relevant components and the impact on safety overall. This would support a science-based assessment of the safety margins and allow for timely implementation of safety improvements. The predictive tools and assessment methods developed by the Programme would benefit the periodic safety reviews of existing nuclear installations. They would also help the regulators in assessing new designs.

Direct actions, implemented by the Joint Research Centre (JRC), will focus on nuclear security and nuclear safeguards by developing techniques and methods aiming at reducing nuclear security risks and supporting nuclear non-proliferation efforts. In addition, the JRC will develop nuclear standards and support the implementation of Euratom policies in these areas.

Fusion energy represents a possible long-term option for large-scale, low-carbon electricity production which could help address a growing energy demand beyond 2050. During 2021-2025, the co-funded European Partnership in fusion research will build on the progress made by the EUROfusion consortium (2014-2020), focusing on the further support required for the efficient commencement of ITER's operations and, working hand-in-hand with industry, to increase the efforts on the conceptual design of a fusion power plant.

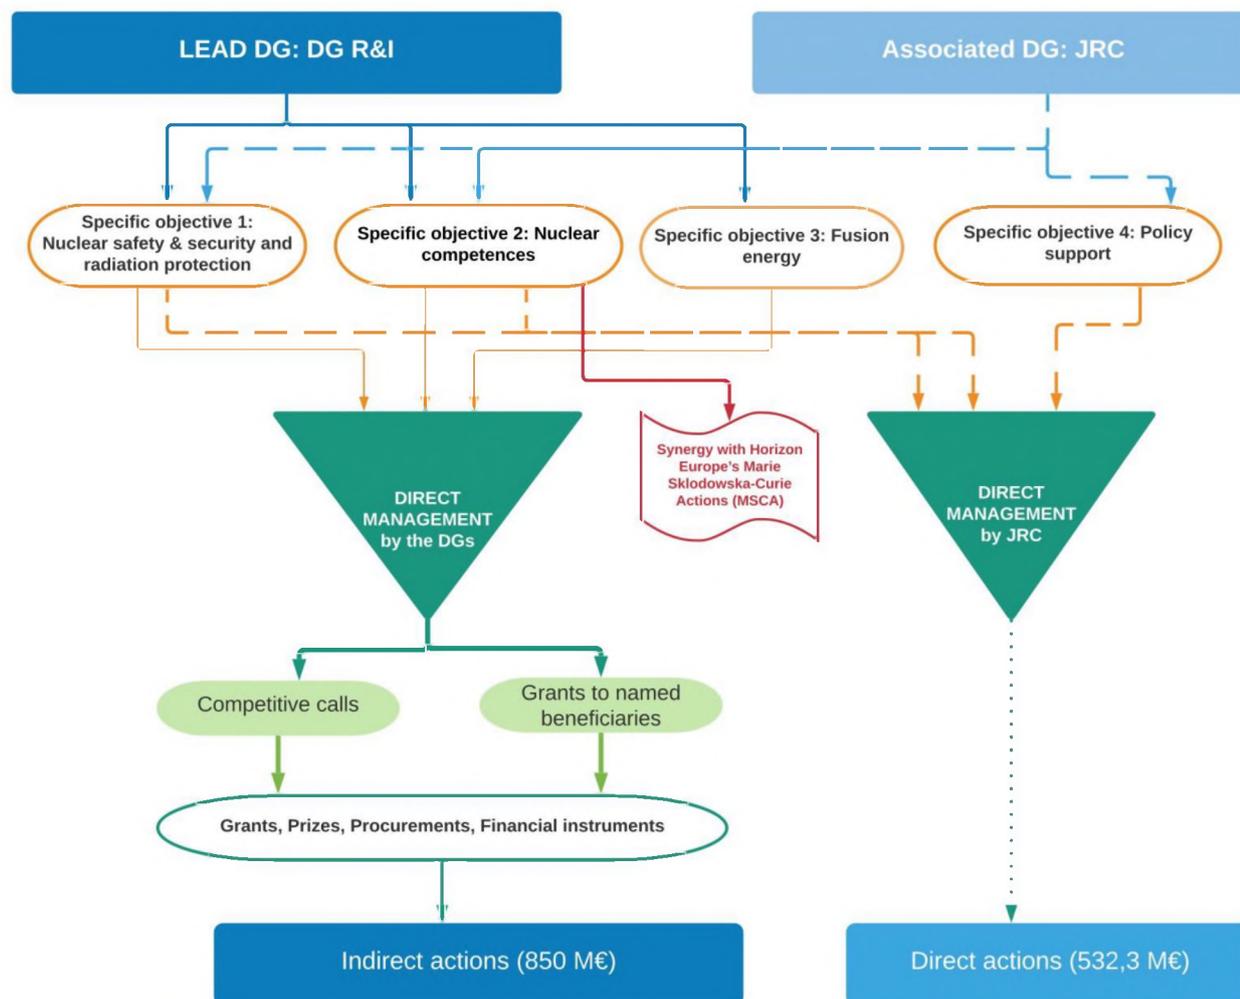

Before deployment of fusion power plants, fusion research will bring to Europe high technology innovations and, thus, a more competitive high-tech industry. Fusion research pushes many of the cutting-edge technologies to new limits and, in many cases, to innovative solutions to challenging problems beyond the bounds of fusion research. Education and training will remain an important element of the Partnership which will set ambitious targets for the training of scientists and engineers while addressing issues of excellence. To enhance the added value that fusion research provides to the economy and society, the current technology transfer programme will be continued and expanded to complement similar national activities and to link to technology transfer networks in the framework of the EIROforum initiative<sup>1</sup>.

#### 1.6. Delivery mode

The Programme is implemented in direct management or in indirect management. It may provide funding in any of the forms laid down in the Financial Regulation, in particular grants which shall be the main form of support for indirect actions in the programme. It may also provide financing in the form of prizes, procurement and financial instruments within blending operations. The Programme also supports direct actions undertaken by the JRC. Parts of the Programme may be implemented through European Partnerships.

#### 1.7. Graphic overview of the programme structure

<sup>1</sup> <https://www.eiroforum.org/wp-content/uploads/brochure-eiroforum-imktt.pdf>

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM (2018) 437: Proposal for a COUNCIL REGULATION establishing the Research and Training Programme of the European Atomic Energy Community for the period 2021-2025 complementing Horizon Europe – the Framework Programme for Research and Innovation	2021 - 2027	1 382,0

### 1.8.2. Legal basis explanation

A Council Regulation establishes the Euratom Research and Training Programme for the years 2021–2025. It lays down the objectives, the budget and the forms of Euratom funding. For the rules for participation and dissemination, the Programme applies relevant provisions of the Regulation establishing the Horizon Europe Framework Programme.

In order to achieve the objectives of the Euratom Programme and to address challenges common to the Euratom Programme and to Horizon Europe, the Euratom Programme shall be implemented in synergy with Horizon Europe and other Union funding programmes in line with Annex IV of the Horizon Europe Framework Programme and specific provisions of the Euratom Regulation. It may provide a financial contribution to the Marie Skłodowska-Curie Actions (MSCAs) in order to support activities relevant for nuclear research.

Parts of the Euratom Programme shall be implemented through co-funded European Partnerships. For this purpose, it makes direct reference to Annex III of the Horizon Europe Regulation laying down the conditions and principles for establishing European Partnerships.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>265,7</b>	<b>270,7</b>	<b>276,5</b>	<b>281,2</b>	<b>287,8</b>	<b>293,8</b>	<b>304,5</b>	<b>1 980,3</b>

### 1.9. Link with the 2014-2020 MFF

Evaluations of successive Euratom programmes have shown how European support is vital for nuclear research to continuously enhance the safety and security of nuclear technologies. The interim evaluation of the 2014-2018 Euratom programme concluded that the Programme is highly relevant across all activities. For this reason, the 2021-2025 Euratom programme will continue along the main lines established by its predecessors.

In addition, the Euratom Programme 2021-2025 will further:

- improve, together with beneficiaries, the organisation and management of the European Joint Programmes in the nuclear field as European Partnerships
- reinforce Euratom education and training actions to develop competencies in the nuclear field which underpin all aspects of nuclear safety, security and radiation protection, in particular in a new generation of engineers
- exploit synergies between the Euratom Programme and thematic areas of the EU Framework Programme
- exploit synergies between direct and indirect actions of the Euratom Programme helping to ensure consistency and effectiveness throughout the Programme.

### 1.10. Relevant websites providing more information

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

The Programme is limited by the Treaty to five years. For this reason, it will cover the years 2021-2025, to be extended in 2025 by two additional years in order to be aligned with the MFF 2021-2027. Fission research will be implemented through direct actions implemented by the JRC and indirect actions implemented in direct management (i.e. via competitive calls for proposals) by the Directorate-General for Research & Innovation. Fusion research will be implemented through direct actions in indirect management as a co-fund action by a named beneficiary.

The requested commitment and payment appropriations will allow for a call for proposals with 15 topics, addressing the key issues in nuclear safety, radioactive waste management, radiation protection and medical applications of ionising radiation in the Euratom Work Programme 2021-2022 for indirect actions (under preparation). In parallel, the European Partnership in fusion research will be launched on the basis of a co-fund grant to a named beneficiary.

A separate JRC Work Programme will fund key direct actions covering main specific objectives of the Programme, including nuclear security, non-proliferation and policy support. The programme is organised in five portfolios of projects aligned with the relevant Commission priorities.

The year 2021 will be the first year of implementation of the Euratom Programme. The late adoption of the legal base will delay the launch of calls for proposals and the co-fund grant to the named beneficiary. For this reason, only a very limited number of research projects are expected to be able to start in 2021. This limited number should include the co-funded European Partnership in fusion research. Therefore, the level of payments is expected to be low for 2021 except for fusion research. Payments for pre-financing should be postponed to 2022.

In 2022, the Commission will implement the second year of the biennial work programmes for Euratom Programme.

The pandemic might have a limited impact on the implementation of Euratom Programme.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	2 354 166 857	1 940 869 223
Implementation carry-overs	2 800 000	113 207 842
Implementation total	2 356 966 857	2 054 077 065
total envelop*	2 368 904 754	
cumulative implementation rate	99%	87%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

Five calls in nuclear research closed in 2020 with 254 eligible proposals having been submitted, requesting a total Euratom financial contribution of EUR 726 million. Of these, 98 were selected for funding, with a Euratom contribution of EUR 416 million. For fusion research, following an independent evaluation, the Commission awarded a 5-year grant to the EUROfusion consortium<sup>2</sup> of national fusion laboratories and institutes<sup>3</sup> in 2014 to implement a European Joint Programme based on the fusion roadmap<sup>4</sup>. In 2019 the EUROfusion grant was prolonged until the end of 2022 following adoption by the Council of the Regulation on the Euratom Research and Training Programme 2019-2020. The total budget contribution from Euratom to the Joint Programme was EUR 678 million, representing 55% of the total budget of the consortium. The extension of the duration beyond 2020 provides for a smooth transition to a co-funded European Partnership in fusion research.

During the 2014-2020 period, direct actions of the Programmes were implemented according to the evolution of Euratom's needs. By the end of the period, the importance of activities on knowledge management, training and education and non-energy applications of ionising radiations had increased. The sharing of direct action's resources in the different fields was about 38% for nuclear safety research (including safety of nuclear fuels and materials, nuclear waste management and decommissioning, emergency preparedness and radioprotection), 33% for research on nuclear safeguards, non-proliferation and security, 10% for research in nuclear base science for standardisation and non-energy applications of ionising radiations, 11% for knowledge management, education and training activities and 8% for support provided to Euratom policies.

### 3. How is the programme performing ?

#### 3.1. Performance

##### 3.1.1. Introduction

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### 3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### 3.1.3. Previous programme performance

This section reports on the Programme's performance against planned performance based on the key performance indicators of the Euratom Programmes for the 2014-2020 period.

The key performance indicators set in the Euratom Regulation are based on quantitative performance measures. Appropriate measures have been put in place to measure and report annually the result of each indicator.

Based on cumulative results obtained during the implementation period of the programme, traffic light rating has been assigned to each expected accomplishment, (i.e. on track, moderate progress, deserves attention or no data) as follow.

Table: Performance Reporting Traffic Light Indicators

			
<b>On track</b>	<b>Moderate progress</b>	<b>Deserves attention</b>	<b>No data (or no target)</b>

<sup>2</sup> Euratom programme contributes 55% of the EUROfusion consortium funding.

<sup>3</sup> EUROfusion consortium, for more information see <https://www.euro-fusion.org/>

<sup>4</sup> 'Fusion Electricity – A roadmap to the realisation of fusion energy', <https://www.euro-fusion.org/eurofusion/the-road-to-fusion-electricity/>

It was planned to achieve 13 accomplishments (specific objectives) for the 2014-2020 measured against a total of 20 key performance indicators, including 10 and 10 under indirect and direct actions respectively.

Table: Performance Reporting against target– direct actions

				Total
<b>8 KPIS on track</b>	<b>1 KPIS Moderate progress</b>	<b>0 KPIS Deserves attention</b>	<b>1 KPIS No data (or no target)</b>	<b>10 KPIS</b>

*As shown in the table above, the results achieved for the indirect actions of the Euratom Programme, in accordance with the objectives, are very good. Eight indicators out of 10 were recorded on track, one indicator show a moderate progress, no indicator deserves attention. The result of one indicator was not recorded.*

The results detailed in section 5 show that the Euratom Programme has achieved its specific objectives as regards to support nuclear safety, to contribution to the radiation protection and the management of nuclear waste as well as to support the development of the nuclear fusion.

Data available for the ongoing nuclear safety projects launched since 2014 indicate that progress is as expected. Output from projects in other technical areas also indicates that the Euratom Programme is delivering even though delays were encountered in the case of a few projects. These delays were due to the nature and unpredictability of cutting-edge scientific research, in particular the unavailability of key and often unique research infrastructures.

In 2014-2020 the Euratom Programmes made substantial scientific and technological progress in all roadmap missions aimed at demonstrating the feasibility of fusion as a future energy source. The first priority of the Programme in this area was to provide scientific support for ITER construction and its future exploitation. This progress has been achieved thanks to the new organisational structure established in 2014 involving all national fusion labs in Europe. The joint programme is implemented in line with the European fusion roadmap, based on shared planning and exploitation of research infrastructures, mobility of researchers and competitive allocation of funds. This is a Europe-wide endeavour with strong international cooperation links, especially in view of the importance of the global ITER project. Since commercialisation of fusion energy is not expected until the second half of the century, most of the financial support today currently comes from public funds.

One of the two indicators measuring development and sustainability of nuclear expertise indicates that the number of fellows and trainees in the Euratom fusion programme was 50 in 2019 while the target is of 50 in 2020. As regards, the number of PhD students and post-doctoral researchers supported by the nuclear fission activities, the results have not yet been reported. In order to address the needs in education and training, the next Euratom Programme (2021-2025) has facilitating synergies with other EU programmes in the field such as with the Marie Skłodowska-Curie Actions (MSCA).

Performance of the five specific objectives linked to direct actions is measured through a set of two type of indicators:

- The number of occurrences of tangible specific impacts on Union policies resulting from technical and scientific policy support provided by the JRC
- The number of peer-reviewed publications

Table: Performance Reporting against target– direct actions

				Total
<b>9 KPIS on track</b>	<b>1 KPIS Moderate progress</b>	<b>0 KPIS Deserves attention</b>	<b>0 KPIS No data (or no target)</b>	<b>10 KPIS</b>

*As shown in the table above, the results achieved for the direct actions of the Euratom Programme, in accordance with the objectives, are very good. Nine indicators out of 10 were recorded as on track and only one indicator shows moderate progress. No indicator deserves attention. All KPIS were measured or recorded.*

The results detailed in the section 5 show that the Euratom Programme has achieved its specific objectives as regards to improve nuclear safety, to improve nuclear security as well as to support the policy of the Union on nuclear safety and security.

The number of scientific publications in relation to the objective “nuclear science for standardisation” exceeded the target. This is especially the case when related to medical applications such as targeted immunotherapy against cancer. The indicator measuring the JRC’s policy support in standardisation was partially achieved. This field is mainly scientific and the impact in the policy cycle is difficult to measure or is measurable only after a very long period. Therefore, it is difficult to set a target and the underperformance may be explained by a too ambitious a target.

Moreover, to fulfil the specific objective 12, fostering knowledge management, education and training in the nuclear field in the EU and enhancing the impact of the activities carried out, an agreement was reached to combine resources from direct and indirect

actions. An arrangement was signed to make possible the financial support to the external users of the JRC's open access project. This agreement couldn't be implemented because of COVID restrictions, nevertheless work carried out to develop new training tools and its planned integration in future training programmes are encouraging. In this context, synergies between the Euratom Programme and the MSCA in Horizon Europe are being planned. Another example is the agreement to improve the management of knowledge gained through the Programme's actions; the JRC will use existing tools and will develop new ones with support of the RTD indirect actions, to optimise the use of the results of both direct and indirect actions of the programme.

To increase the synergies between direct and indirect actions as well as between nuclear and non-nuclear, several working groups have been working to deliver results that can be used in the implementation of Euratom Programme 2021-2025.

In 2020, because of the restrictions on the access to the laboratories and on missions imposed by the pandemic, the results obtained have been lower than planned, more evident in some fields, as the impact in the support to policies, or planned experiments and new developments. Despite the situation, the scientific productivity in fields as science base for standardisation or targeted cancer therapy were kept at a good level.

### 3.2. Key achievements

98 Projects	95% of deliverables	3273 scientific publications	774 PhDs
funded by the Programme to support research in nuclear safety, radioactive waste management and radiation protection, medical applications.	achieved by the EUROfusion consortium in 2019, including setting of parameters for the successful start-up and safe operation of ITER	in peer-reviewed journals	including 750 PhDs in fusion physics and technology.

#### Indirect actions (grants for collaborative projects)

All Euratom Member States generate radioactive waste, with national inventories ranging from single sources or small inventories, to large- and high-activity inventories from those Member States with extensive nuclear programmes, some of them including spent nuclear fuel or large stockpiles of nuclear material from reprocessing activities. Regardless of size, they all have to manage radioactive waste safely in the long-term. While the greater part of radioactive waste comes from nuclear power plants, nuclear medicine, agriculture and industrial activities produce also nuclear wastes.

The European Joint Programme on Radioactive Waste Management (EURAD) supported with EUR 32.5 million of Euratom funding (54 % of total costs, 5 years duration) represents a step forward in European collaboration towards safe radioactive waste management, including disposal. The EURAD consortium, gathering waste management and technical support organisations and Research Entities (REs) from 21 Member States and Ukraine and Switzerland, addresses key challenges in radioactive waste management.

EURAD will support the implementation of the Nuclear Waste Directive in Euratom Member States, taking into account the various stages of advancement of national programmes. It aims at supporting Member States in developing and implementing their national R&D programmes for the safe, long-term management of their full range of different types of radioactive waste through participation in the Joint Programme. It also develops and consolidates existing knowledge for the safe start of operation of the first geological disposal facilities for spent fuel, high-level waste and other long-lived radioactive waste and supporting optimisation linked with the stepwise implementation of geological disposal. Therefore, knowledge management and transfer between organisations, Member States and generations will be enhanced.

Euratom Member States, associated countries and the European Commission are implementing the European Basic Safety Standards Directive for radiation protection. The RadoNorm project (with EUR 18 million of Euratom funding covering 82% of total costs, 5 years duration) will focus on all radiation risk management cycle levels for radon exposure, as well as situations of exposure to naturally occurring radioactive materials (NORM). The project intends to reduce scientific, technical and societal concerns by introducing research and technical developments, integrating education and training (E&T) and disseminating the results of the project through targeted actions to the public, stakeholders and related institutions. RadoNorm will direct research and development at all levels of the management cycle, combine biomedical and ecological research with mitigation development and social science research and bring together researchers from national radiation protection entities, universities and SMEs.

In fusion research, the EUROfusion consortium had achieved 95 % of deliverables pending in 2019 and 83% of its project milestones foreseen in the work plan by 2019. Examples of progress include: operation of the shattered pellet injector (SPI) in JET, theoretical studies (computer simulations) complemented by experiments on TCV which provided the first systematic assessment of possible power exhaust options for a fusion demonstration power plant (DEMO) and tests of ITER-type mono-blocks in EUROfusion devices dedicated to studying plasma wall interaction (PWI).

Operation of the SPI on JET has yielded crucial information for ITER, which has SPI as its baseline tool for mitigation of plasma disruptions. Unless mitigated, disruptions could induce harmful vessel forces and so-called runaway electrons in ITER (runaway electrons can be accelerated to the multi MeV range and can cause serious damage to plasma-facing components when they eventually impact on material surfaces). The new data from JET is important for the finalisation of the design of the ITER SPI system. In addition, the SPI experiments on JET have yielded unexpected positive results regarding mitigation of runaway electrons.

A key issue identified in the fusion roadmap is the power exhaust of DEMO. It is possible that an alternative divertor geometry to that used for ITER is needed for DEMO. A number of possibilities exist. A comprehensive assessment of the main alternatives was carried out by computer simulations and with input from the experiments carried out on the TCV tokamak. The picture is now clearer and the obtained results should be valuable for a future gate review aimed at narrowing down the options for a DEMO design.

ITER type mono-blocks, which will make up the components of the ITER divertor, were successfully tested in the linear MAGNUM-PSI facility in conditions mimicking those during planned full power operation in ITER. Furthermore, testing of such mono-blocks also took place in the WEST device under real tokamak plasma conditions. The obtained results are highly relevant for ITER.

In the area of fusion technology development, the focus of activity has been in the DEMO department, which has been preparing for a design gate review to narrow down select technologies that will pass to the Conceptual Design Activity in Euratom Programme 2021-2025. As input to the gate review, many design reviews have been carried out using external experts. This has been a very important exercise at this stage of the project as it gives a very clear state-of-play of the work and provides input and steering for the design teams. These reviews have culminated in a gate review carried out by a high-level expert panel chaired by a former CERN DG, which has identified the main priorities for the next programme, mainly, the definition of the plasma scenario for DEMO, remote handling capabilities addressing machine availability and the breeder blanket programme. Another major achievement has been the completion of the preliminary safety report for the Early Neutron Source (DONES) for which a coordination and support action is progressing for preparatory activities to inform on a construction decision in the first period of the Euratom Programme 2021-2025. The DONES materials test facility is an important milestone in the fusion roadmap and has been included in the European Strategy Forum on the Research Infrastructures (ESFRI) roadmap.

Through EUROfusion more than 1 456 researchers have had access to advanced research infrastructures. Support from the Euratom programme has led to the publication of more than 1300 articles in peer-reviewed, high impact journals and over 750 PhDs in fusion physics and technology.

### **Direct actions (research carried out by JRC)**

The direct actions of the Programme contribute to the development of codes, standards and test methods for the safety analysis of nuclear reactors and provides reference data, software tools and knowledge on the behaviour of nuclear fuel in normal and accidental conditions. An example is the operation of the Clearinghouse website and database and the issue of periodic reports to disseminate the operating experience of nuclear power plants to nuclear safety authorities. In the period 2019-2020, 32 selected events were analysed and studies on ageing-related events were issued. Using the experience gained, the JRC participated in drafting several IAEA nuclear safety technical documents.

In the context of the COVID-19 pandemic, nuclear power plants and regulatory bodies have taken measures to mitigate its consequences. Already in March, the JRC prepared a report on preparedness and response actions to ensure the continued safe operation of the nuclear power plants. This report contributed to several initiatives undertaken by Commission and OECD-NEA.

The JRC develops and produces reference materials, it is a major European provider of certified materials for the determination of radioactivity in environmental samples or for de-termination of uranium and plutonium in support of Euratom safeguards. In implementing the Programme, it provides nuclear data for nuclear energy applications and to the OECD and IAEA nuclear data libraries. It also provided certified reference materials for determination of radioactivity in metals and spikes for determination of uranium and plutonium, delivered to Euratom safeguards.

The JRC contributed to the Euratom project “Modernisation and Optimisation of the European Nuclear Supply Chain” studying the current challenges of the nuclear supply chain, in particular in relation to structures, systems and components. In 2019-2020, a post-Fukushima Stress Test Peer Review took place in Armenia and the Euratom report of the Armenian Action Plan released.

The direct actions in the nuclear safeguards area support Euratom’s strategic objective to reduce the risk of nuclear proliferation. To support the implementation of Euratom safeguards system in an effective and efficient way, the JRC provides new safeguard methods for containment and surveillance. To support the safeguards system in Europe, the JRC develops analytical techniques and operated the Euratom safeguards laboratories and supported the yearly Physical Inventory Verifications in European fuel fabrication plants. Analytical support is provided to Euratom and IAEA safeguard authorities, analysing about 600 nuclear and 100 environmental samples annually. Training courses for Euratom inspectors to ensure an effective implementation of Euratom safeguard systems are also organised. Similar support is provided to the IAEA through the Commission’s safeguard support programme. The operation of the Euratom safeguards laboratories located in reprocessing plants (France and the UK) continued nearly uninterrupted to ensure safeguarding of large flows of nuclear materials even under the demanding conditions caused by the COVID pandemic.

Despite the pandemic, in 2020 two courses were given, concentrating the efforts in developing interactive remote e-training as substitute of physical courses and to complement the physical course in post-pandemic times. The JRC has a leading role in nuclear forensics, it co-chairs the Nuclear Forensics International Technical Working Group, participating in collective exercises and sharing best practices.

The direct actions of the Programme performed research for new radioisotope applications and on alternative methods of production and allowed the assessment of challenges to the supply of medical radioisotopes to the European public. A study on the sustainable and resilient supply of medical radioisotopes for imaging in the European market (SMER1 in 2017-2018 and SMER2 in 2019-2020) was completed. These activities support other Euratom initiatives including the European Observatory on the Supply of Medical Radioisotopes, the strategic agenda for medical ionising radiation applications (SAMIRA), and the EU's Beating Cancer Plan.

In 2014-2020 JRC scientists published 1 226 articles and conference contributions in peer-reviewed periodicals, 340 articles in monographs or other periodicals, 31 books with JRC editorship and 24 PhD theses. The JRC organised 221 training courses for professionals and students from Member States and Commission services. In addition, the JRC delivered reference methods and measurements, technical systems and scientific databases. Moreover, the JRC opened access to its nuclear research infrastructures and offers complementary research possibilities to external users from Euratom Member States.

In addition, during the period 2014-2020 the JRC participated in 39 projects on nuclear fission, supported by the Euratom indirect actions of the Programme. The projects cover nuclear safety, waste management, decommissioning and environmental remediation, nuclear data, education and training and infrastructures availability. The knowledge and results provided by the related direct actions are obtaining synergies in benefit of the programme.

### 3.3. Evaluations, studies and reports

The key findings of the latest evaluation (Commission Report COM(2017) 697, (SWD (2017) 426 and 427) were presented in the Programme Statement for 2020.

The interim evaluation of the Euratom Programme concluded that the Programme is highly relevant and it is achieving its results and avoiding duplication, while providing added-value and coordination. The possible areas of improvement for indirect actions include: increasing synergies between direct and indirect actions and between the Euratom Programme and other thematic areas of the EU Framework Programme in order to address cross-cutting aspects such as medical applications of radiation, climate change, security and emergency preparedness, reinforcing Euratom education and training actions for developing competencies in the nuclear field which underpin all aspects of nuclear safety, security and radiation protection. The evaluation recommendations are already being addressed: the JRC continues providing training courses (243) and opening the access to its research facilities to EU Institutions. Other actions have been taken, as briefly described in the section 'Programme Performance'. Ex-post evaluation of the Programme is planned for 2022/2023 in accordance with the Regulation.

## 4. Programme 2021-2027 - Key monitoring indicators

**Specific Objective 1 :Improve and support nuclear safety, security, safeguards, radiation protection, safe spent fuel and radioactive waste management and decommissioning, including the safe and secure use of nuclear power and of non-power applications of ionizing radiation.**

**Indicator 1: Number of Euratom funded peer reviewed scientific publications**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Total Number of peer-reviewed publications [TBC]
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	In the short term, the number of peer-reviewed publications is an established metric of scientific performance and production of new knowledge in nuclear science and technology for improving nuclear safety, security, waste management and radiation protection and for development of fusion energy and non-power applications of ionising radiation (first and third specific objective of the Programme)
Link MFF 14-20 / MFF 21-27	This indicator is the continuation of an indicator of Euratom Programme 2014-2020 (Publications in peer-reviewed high impact journals), but includes external verification of the publications.

Other methodological comments	Publications are first verified in an external database and then counted. First data are expected no sooner than late 2022, as it takes time for beneficiaries to produce papers and report them.
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard (tbc)
Justification of the trend	

**Indicator 2:Field-Weighted Citation Index of Euratom funded peer reviewed publications**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Field Weighted Citation Index
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	In the mid-term, the Field Weighted Citation Index is an established metric of scientific performance and production of new knowledge in nuclear science and technology for improving nuclear safety, security, waste management, radiation protection and for development of fusion energy and non-power applications of ionising radiation (first and third specific objective of the Programme).
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The Field Weighted Citation Index (FWCI) is the ratio of the observed citation rate (MOCR) with the expected citation rate (MECR) in a given research field. The MECR is calculated as an average citation rate in a given research field. If FWCI = 1, the set of Euratom funded publications has generated the same amount of citations as any other average publication in the given research field. A 3-year citation window is applied to ensure that all publications have the same time lag, and as such the same chance to get cited. First data are expected no sooner than 2024, as it takes time for beneficiaries to produce papers and report them, and there needs to be a 3 year window for citations
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard. (tbc)
Justification of the trend	

**Indicator 3:Number and share of peer reviewed publications from Euratom Programme that are core contribution to scientific fields**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Number of top 1 % most cited publications produced, field-weighted [TBC]
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	In the long-term, the share of 1 % most cited publications is an established metric of scientific performance and production of new knowledge in nuclear science and technology for improving nuclear safety, security, waste management, radiation protection and for development of fusion energy and non-power applications of ionising radiation (first and third specific objective of the Programme).
Link MFF 14-20 / MFF 21-27	new indicator
Other methodological comments	First data are expected no sooner than 2024, as it takes time for beneficiaries to produce papers and report them, and there needs to be a 3 year window for citations.
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard (tbc)
Justification of the trend	

**Indicator 4:Share of research outputs (open data/ publication/ software etc.) shared through open knowledge infrastructure**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Share of Open Access research outputs in the Euratom Programme
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	Open access to publications, datasets, software, other research products (e.g., services, tools) allows researchers to build on existing work, industry to access scientific knowledge to innovate, public sector to use research results for evidence based policy making, public to be engaged and involved in the research process. Measurement of outputs related to Open Science is an appropriate measure of the short-term progress towards Euratom Programme's objective to improve nuclear safety, security, waste management, radiation protection and for development of fusion energy and non-power applications of ionising radiation (first and third specific objective of the Programme).
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	All relevant research outputs (by type: publications, datasets and software) reported by all Euratom projects (incl. DOI) are matched in an external database. The single extended list of all relevant outputs, removing the duplicates, is used to count numbers and shares. First data are expected no sooner than in 2022.
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard (tbc).
Justification of the trend	

#### Indicator 5: Euratom direct actions additional indicator: Reference materials delivered and reference data incorporated to a library

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Cumulative
Cut-Off Date	
Data source	PUBSY (JRC publications database cat 3.3 and 3.4)
Link to the objective	Reference materials and reference data are essential for the measurements accuracy and therefore for the safe and secure use of nuclear energy and other radiation applications
Link MFF 14-20 / MFF 21-27	The activity is the continuation of the one in previous MFF
Other methodological comments	The yearly milestone is the number of items delivered since the MFF's beginning, the target is accumulated
Full metadata available at this address	<a href="https://pubsy.jrc.cec.eu.int/">https://pubsy.jrc.cec.eu.int/</a>
Justification of the trend	

#### Indicator 6: Share of open access research outputs actively used/cited

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Share of Open Access research outputs in the Euratom Programme
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	Open access to publications, datasets, software, other research products (e.g., services, tools) allows researchers to build on existing work, industry to access scientific knowledge to innovate, public sector to use research results for evidence based policy making, public to be engaged and involved in the research process. Measurement of outputs related to Open Science is an appropriate measure of the short-term progress towards Euratom Programme's objective to improve nuclear safety, security, waste management, radiation protection and for development of fusion energy and non-power applications of ionising radiation (first and third specific objective of the Programme).
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	All relevant research outputs (by type: publications, datasets and software) reported by all Euratom projects (incl. DOI) are matched in an external database. The single extended list of all relevant

	outputs, removing the duplicates, is used to count numbers and shares. First data are expected no sooner than in 2022
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard. (tbc)
Justification of the trend	

**Indicator 7: Euratom direct actions additional indicator: Number of outputs contributing to modification of international standards**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Cumulative
Cut-Off Date	
Data source	PUBSY (JRC publications database cat 3.2)
Link to the objective	International standards are a reference for the use of best practices, measurements, etc.
Link MFF 14-20 / MFF 21-27	The activity is the continuation of the one in previous MFF
Other methodological comments	The yearly milestone is the number of items delivered since the MFF's beginning, the target is accumulated
Full metadata available at this address	<a href="https://pubsy.jrc.cec.eu.int/">https://pubsy.jrc.cec.eu.int/</a>
Justification of the trend	

**Indicator 8: Share of Euratom beneficiaries having developed new transdisciplinary/ trans-sectoral collaborations with users of their open Euratom R&I outputs**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Citations of open access publications [TBC]
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	This indicator captures the effect that open access brings to fostering diffusion of knowledge by tracking the use of research outputs from the Euratom Programme. The key question addressed is whether the open access research results are cited more than the closed/embargoed ones.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	See indicator 2 for details on citations. First data are expected no sooner than 2024, as it takes time for beneficiaries to produce papers and report them, and there needs to be a 3 year window for citations.
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard. (tbc)
Justification of the trend	

**Indicator 9: Number and share of outputs aimed at addressing specific EU policy priorities**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Share of outputs aimed at addressing specific EU policy priorities
Cut-Off Date	
Data source	Project reporting
Link to the objective	In the short-term, shares of outputs indicate the societal impact of Euratom Programme
Link MFF 14-20 / MFF 21-27	no

Other methodological comments	Euratom funded projects produce variety of research results, tracked and reported under scientific and economic outputs. Most of them are also likely to have a societal impact; to trace and estimate it, the produced output needs to be measured and then classified according to the specific EU policy priorities. Where attribution of a specific innovation or scientific result is not possible, the assumption is that it contributes to the same specific EU policy priorities, as the project producing it or the outputs preceding it.
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard. (tbc)
Justification of the trend	

**Indicator 10: Euratom direct actions additional indicator: Number of service agreements in support of EU safeguards**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Yearly results
Cut-Off Date	
Data source	(JRC agreements database)
Link to the objective	Scientific and technical support is essential to strengthen the Euratom and international safeguards
Link MFF 14-20 / MFF 21-27	The activity is the continuation of the one in previous MFF
Other methodological comments	The yearly milestone is the number of service agreements in force
Full metadata available at this address	<a href="https://apps.jrc.cec.eu.int/jpbma">https://apps.jrc.cec.eu.int/jpbma</a>
Justification of the trend	

**Indicator 11: Number and share of innovations and scientific results addressing specific EU policy priorities**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Share of outputs aimed at addressing specific EU policy priorities [TBC]
Cut-Off Date	
Data source	Project reporting, external databases [TBC]
Link to the objective	In the medium-term, shares of verified outputs and their performance indicate the societal impact of Euratom Programme.
Link MFF 14-20 / MFF 21-27	no
Other methodological comments	Calculated as a simple count of innovations (new or significantly improved: methods, technologies and instruments / commercial goods / commercial services / scientific or industrial processes / business models) reported in all ongoing and finished Euratom projects and classified by their contribution to the specific EU policy priorities. First data are expected no sooner than 2022
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard. (tbc)
Justification of the trend	

**Indicator 12: Euratom direct actions additional indicator: Number of technical systems provided and in use)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Cumulative
Cut-Off Date	
Data source	PUBSY (JRC publications database cat 3.5)

Link to the objective	Technical systems provided in support of the improvement of nuclear safety, security and radiation protection
Link MFF 14-20 / MFF 21-27	The activity is the continuation of the one in previous MFF
Other methodological comments	The yearly milestone is the number of items delivered since the MFF's beginning, the target is accumulated
Full metadata available at this address	<a href="https://pubsy.jrc.cec.eu.int/">https://pubsy.jrc.cec.eu.int/</a>
Justification of the trend	

**Indicator 13: Aggregated estimated effects from use of Euratom-funded results, on tackling specific EU policy priorities, including contribution to the policy and law-making cycle**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Aggregated estimated effects from use of Euratom-funded results on tackling specific EU policy priorities, including contribution to policymaking and legislation [TBC]
Cut-Off Date	
Data source	Project reporting
Link to the objective	In the long-term, specific studies are needed to analyse the societal impact of Euratom Programme in specific areas.
Link MFF 14-20 / MFF 21-27	no
Other methodological comments	The indicator focuses on estimated and detected effects from use of Euratom-funded results on tackling specific EU policy priorities [TBC]. We expect to run studies as part of the ex-post evaluations of the Programme.
Full metadata available at this address	Methodological handbook will be published in 2021/2022. The Horizon Europe Dashboard will include links to studies. (tbc)
Justification of the trend	

**Indicator 14: Euratom direct actions additional indicator: Number of training sessions delivered to nuclear inspectors and front-line officers**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Cumulative
Cut-Off Date	
Data source	EUSECTRA reporting
Link to the objective	The training delivered to nuclear inspectors and front-line officers builds-up the capacity of the nuclear safeguards and security systems in the EU
Link MFF 14-20 / MFF 21-27	The activity is the continuation of the one in previous MFF
Other methodological comments	The yearly milestone is the number of training sessions delivered since the MFF's beginning, the target is accumulated
Full metadata available at this address	
Justification of the trend	

**Indicator 15: Number and share of Euratom projects where EU citizens and end-users contribute to the co-creation of R&I content.**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output

Unit of measurement	umber and share of Euratom projects where EU citizens and end-users contribute to the co-creation of R&I content [TBC]
Cut-Off Date	
Data source	Project reporting
Link to the objective	To measure the involvement of end-users and civil society in the research funded by the Euratom Programme, this indicator tracks the number and share of Euratom projects, where civil society and end-users contribute to the co-creation of R&I content, additionally estimating the role of such contribution (such as consultation/dissemination, co-creation, co-ownership/joint decision-making).
Link MFF 14-20 / MFF 21-27	no
Other methodological comments	Calculated based on a simple count of all ongoing and finished Euratom projects where civil society and end-users contribute to the co-creation of R&I content. First data are expected no sooner than 2023.
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard. (tbc)
Justification of the trend	

### Indicator 16: Number and share of beneficiary entities with citizen and end-users engagement mechanisms after Euratom project

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number and share of Euratom beneficiaries with citizen and end-user engagement mechanisms after Euratom project [TBC]
Cut-Off Date	
Data source	Project reporting
Link to the objective	The medium-term indicator measures the effects of emphasis for co-creation in Euratom Programme through the development of end-user engagement mechanisms in beneficiary entities
Link MFF 14-20 / MFF 21-27	no
Other methodological comments	In the medium-term, the identification of presence of end-users engagement mechanisms allows estimation of number (and share) of Euratom Programme beneficiaries that possess and utilise them.
Full metadata available at this address	Calculated based on a simple count of all ongoing and finished Euratom projects where EU citizens and end-users contribute to the co-creation of R&I content. First data are expected no sooner than 2023.
Justification of the trend	

### Indicator 17: Uptake and outreach of Euratom co-created scientific results and innovative solutions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	tbc
Cut-Off Date	
Data source	Project reporting, studies
Link to the objective	The long-term indicator focuses on uptake and outreach of Euratom Programme co-created scientific results and innovative solutions. The aim is to assess the extent of the uptake and outreach of the scientific results (e.g. in the fields of science, innovation, the economy and society) and innovative solutions originating from the programme.
Link MFF 14-20 / MFF 21-27	no
Other methodological comments	tbc
Full metadata available at this address	Methodological handbook will be published in 2021/2022. The Horizon Europe Dashboard will include links to studies. tbc
Justification of the trend	

## Specific Objective 2 :Maintain and further develop expertise and competence in nuclear field within the Community.

**Indicator 1: Number of persons having benefitted from upskilling activities of the Euratom programme (through training, mobility and access to infrastructure)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of researchers involved in upskilling activities in projects by category [TBC
Cut-Off Date	
Data source	Project reporting
Link to the objective	In the short-term, the number of upskilled researchers is the best available indicator of strengthening human capital in nuclear research and innovation
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	First data are expected no sooner than 2022.
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard. (tbc)
Justification of the trend	

**Indicator 2: Number and share of upskilled researchers (and other persons) with more influence in their field**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Average increase of H-index of funded researchers
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	In the medium-term, the H-index is the best available indicator of strengthening human capital in research and innovation
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	The H index is based on the comparison of the number of articles written by an author to the number of citations. The H-index offers a way to compare researchers which are in a similar phase of their career, and most importantly, it is at present the only metric that combines research productivity (output volume) and impact (citation volume). First data are expected no sooner than 2023, as there needs to be a time slot to observe increases in H-indexes.
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard. (tbc)
Justification of the trend	

**Indicator 3: Number and share of upskilled researchers with improved working conditions**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	tbc
Cut-Off Date	
Data source	Project reporting, survey
Link to the objective	If Euratom funding has a positive long-term effect on researchers' skills and careers (and therefore the human capital in research and innovation) then there should be an observable effect on the researchers working conditions.

Link MFF 14-20 / MFF 21-27	no
Other methodological comments	MORE survey data is used to collect data on researchers salaries (net salaries) and contract type. Regarding data on job security, collected data includes several relevant questions, which provide data on contract type, satisfaction with pensions/social security provisions, and other aspects of working conditions. Under the MORE survey, the same data is collected for a random stratified sample of researchers who were based in European research performing organizations but did not receive EU funding. The salaries and working conditions of HE/Euratom researchers are then benchmarked against this representative sample of researchers. The availability of data depends on the planning of the MORE survey, which is expected to happen no sooner than 2023.
Full metadata available at this address	Methodological handbook will be published in 2021/2022. The results of the survey will be described in a study, which will be referenced on the Horizon Dashboard. (tbc)
Justification of the trend	

#### Indicator 4: Number of innovative products, processes or methods from Euratom Programme (by type of innovation) & Intellectual Property Rights (IPR) applications

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of innovative products, processes or methods resulting from the Euratom (by type of innovation) & Intellectual Property Rights (IPR) applications
Cut-Off Date	
Data source	Project reporting, external patent database [TBC]
Link to the objective	In the short-term, the number of innovative products, processes or methods and IPR (esp. patents) in nuclear field is a good indicator of progress in developing expertise and competencies in nuclear field within the Community.
Link MFF 14-20 / MFF 21-27	This indicator links to Euratom Programme 2014-2020's indicator on patent applications and patents awarded, but is broader and includes links to an external database [TBC]
Other methodological comments	Calculated as a simple count of number of innovative products, processes and methods & Intellectual Property Rights (IPR) applications reported in all ongoing and finished Euratom projects. First data are expected no sooner than late 2022.
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard. (tbc)
Justification of the trend	

#### Indicator 5: Number of innovations from Euratom projects (by type of innovation) including from awarded IPRs

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Patent citations, family size, scope [TBC]
Cut-Off Date	
Data source	Project reporting, external patent database
Link to the objective	In the medium-term, the patent indicators are a good indicator of progress in developing expertise and competencies in nuclear field within the Community.
Link MFF 14-20 / MFF 21-27	This indicator links to Euratom Programme 2014-2020's indicator on patent applications and patents awarded, but includes verification with an external database, distinction between patent family members, and deeper analytical insight.
Other methodological comments	One of the most robust findings of IPR-related research is the skewness of patent value distribution – few patents are valuable, while most others are worth little, if anything at all. This indicator will use external data sources to estimate the impact potential of the patents. First data are expected no sooner than late 2023, as there needs to be time for patents to be granted and reported
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard. (tbc)
Justification of the trend	

#### Indicator 6: Creation, growth & market shares of companies having developed Euratom innovations

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Growth of funded companies [TBC]
Cut-Off Date	
Data source	Project reporting, external database of companies
Link to the objective	Euratom Programme helps create reciprocal relationships between research-performing organisations and industry and SMEs. This reciprocity then leads to transfer of knowledge and exploitation of research results by the companies. If this is the case, there must be a clear and quantifiable effect on the financial performance of beneficiary companies, measurable in the long-term.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	In the first step, the companies involved in Euratom Programme are matched to an external company database. The next step is to obtain relevant data on the firms' turnover and relevant metadata. This will be reported for funded companies [TBC]. First data are expected no sooner than late 2024, as it takes time for the programme to make an effect and data to be reported
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard, which will also include links to the studies.
Justification of the trend	

#### Indicator 7: Number of FTE jobs created, and jobs maintained in beneficiary entities for the Euratom project (by type of job)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Count of FTE jobs created and maintained in all ongoing and finished Euratom-funded projects
Cut-Off Date	
Data source	Project reporting
Link to the objective	A significant share of Euratom Programme funding goes to personnel costs, which directly supports existing jobs or creates new positions at beneficiary organisations. Euratom Programme funding also supports and maintains existing jobs that would otherwise be lost if no funding was attracted. This contributes to economic impact of the Programme, and can be used as a short-term indicator
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	First data are expected no sooner than 2022.
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard.
Justification of the trend	

#### Indicator 8: Increase of FTE jobs in beneficiary entities following Euratom project (by type of job)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Growth of employment in funded companies [TBC]
Cut-Off Date	
Data source	Project reporting, external database of companies
Link to the objective	Euratom Programme helps create reciprocal relationships between research-performing organisations and industry and high-tech SMEs. This reciprocity then leads to an improved transfer of knowledge and exploitation of research results by the firms. If this is the case, there must be a clear and quantifiable effect on the employment in beneficiary companies, measurable in the medium-term.

Link MFF 14-20 / MFF 21-27	No
Other methodological comments	In the first step, the Euratom funded companies are matched to an external company database. The next step is to obtain relevant data on the firms' employment and relevant metadata. This will be reported for funded companies [TBC]. First data are expected no sooner than late 2024, as it takes time for the programme to make an effect and data to be reported.
Full metadata available at this address	
Justification of the trend	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard, which will also include links to the studies.

**Indicator 9: Number of direct & indirect jobs created or maintained due to diffusion of Euratom results (by type of job)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Number of direct & indirect jobs created or maintained
Cut-Off Date	
Data source	Project reporting, studies
Link to the objective	Euratom Programme funding will induce technological change transforming different sectors in nuclear field. This can be estimated as a long-term indicator
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	
Full metadata available at this address	Methodological handbook will be published in 2021. The Horizon Europe Dashboard will include links to studies (tbc)
Justification of the trend	

**Indicator 10: Amount of public & private investment mobilised with the initial Euratom investment**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Amount of public & private investment mobilised with the initial investment of the Euratom Programme
Cut-Off Date	
Data source	Project reporting
Link to the objective	Beneficiaries in Euratom Programme contribute their own funds to the projects. This represents a significant co-investment of public and private investment towards achieving the Programme objectives, and can be used as a short-term indicator.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	Calculated as the amounts (in EUR) of public & private investment mobilised in all ongoing and finished Euratom projects. Data on public & private co-invested amounts are derived from the EC monitoring system. Specifically, each project participant has their EU and total contributions listed for each project application. The difference between the total and EU funding is equals to the co-investment made. First data are expected no sooner than 2022
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard. (tbc)
Justification of the trend	

**Indicator 11: Amount of public & private investment mobilised to exploit or scale-up Euratom results**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
-----------------	--

Indicator type	Output
Unit of measurement	Amount of public & private investment mobilised with the initial investment of the Euratom Programme
Cut-Off Date	
Data source	Project reporting
Link to the objective	Beneficiaries in Euratom Programme contribute their own funds to the projects. This represents a significant co-investment of public and private investment towards achieving the Programme objectives, and can be used as a short-term indicator.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	Calculated as the amounts (in EUR) of public & private investment mobilised in all ongoing and finished Euratom projects. Data on public & private co-invested amounts are derived from the EC monitoring system. Specifically, each project participant has their EU and total contributions listed for each project application. The difference between the total and EU funding is equals to the co-investment made. First data are expected no sooner than 2022.
Full metadata available at this address	Methodological handbook will be published in 2021/2022. Indicator values will be available on the Horizon Dashboard. (tbc)
Justification of the trend	

### Indicator 12:EU progress towards 3% GDP target due to Euratom Programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	EU progress towards the 3% GDP target due to Euratom Programme
Cut-Off Date	
Data source	Project reporting, studies
Link to the objective	Euratom Programme funding will stimulate further R&D funding, and particularly funding attracted by industry. In the long-term, this indicator estimates the aggregate effect of Euratom Programme.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	
Full metadata available at this address	Methodological handbook will be published in 2021/2022. The Horizon Europe Dashboard will include links to studies. (tbc)
Justification of the trend	

### Specific Objective 3 :Foster the development of fusion energy as a potential future energy source for electricity production and contribute to the implementation of the European fusion roadmap.

#### Indicator 1:Progress in the implementation of the fusion roadmap – Percentage of the fusion roadmap’s milestones established for the period 2021-2025 reached by the Euratom Programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Percentage of the Fusion Roadmap's milestones established for a period 2021-2025 reached by the Euratom Programme
Cut-Off Date	
Data source	project reporting
Link to the objective	The EUROfusion roadmap forms the basis for the research actions of EUROfusion and provides a clear and structured way forward to commercial electricity from fusion.
Link MFF 14-20 / MFF 21-27	Yes, same indicator was measured in 2014-2020 Euratom Programme
Other methodological comments	Indicator shows cumulative percentage of the EUROfusion high level milestones prepared on the basis of the European Research Roadmap to the realisation of Fusion Energy ( <a href="https://www.eurofusion.org/eurofusion/roadmap/">https://www.eurofusion.org/eurofusion/roadmap/</a> ).
Full metadata available at this address	
Justification of the trend	

**Specific Objective 4 :Support the policy of the Union on nuclear safety, safeguards and security.****Indicator 1: Number and share of Euratom projects producing policy-relevant findings**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Yearly results
Cut-Off Date	
Data source	PRIME (internal JRC evaluation exercise carried out yearly)
Link to the objective	Part of the projects carried out will be oriented to provide support to related EU policy items. Other part is more oriented to develop the necessary scientific background for a sound policy support
Link MFF 14-20 / MFF 21-27	Continuation
Other methodological comments	The yearly milestone is the share of projects providing direct support to EU DGs
Full metadata available at this address	
Justification of the trend	

**Indicator 2: Number of outputs having a demonstrable impact on the EU policy**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Cumulated
Cut-Off Date	
Data source	PRIME (internal JRC evaluation exercise carried out yearly)
Link to the objective	Support provided with evidence of impact
Link MFF 14-20 / MFF 21-27	Continuation
Other methodological comments	Evaluation and validation of tangible impacts in the policy cycle, resulting from technical and scientific policy support provided by the JRC throughout the year
Full metadata available at this address	<a href="https://webgate.ec.europa.eu/connected/community/jrc/strategic-planning-and-programming/jrc-evaluation">https://webgate.ec.europa.eu/connected/community/jrc/strategic-planning-and-programming/jrc-evaluation</a>
Justification of the trend	

**Indicator 3: Number of policy items (Directives, Instruments, actions on the basis of Euratom Treaty articles) to which JRC provided effective and essential support in any part of the policy cycle)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Cumulated
Cut-Off Date	
Data source	PRIME (internal JRC evaluation exercise carried out yearly)
Link to the objective	Support to related EU policies provided
Link MFF 14-20 / MFF 21-27	Continuation of support
Other methodological comments	Number of EU related policy items supported with the outputs delivered
Full metadata available at this address	<a href="https://webgate.ec.europa.eu/connected/community/jrc/strategic-planning-and-programming/jrc-evaluation">https://webgate.ec.europa.eu/connected/community/jrc/strategic-planning-and-programming/jrc-evaluation</a>
Justification of the trend	

## 5. Programme 2014-2020 - Key monitoring indicators

### Previous Program 1 : Euratom Research and Training Programme

**General Objective 1 :To pursue nuclear research and training activities with an emphasis on continuous improvement of nuclear safety, security and radiation protection, notably to potentially contribute to the long-term decarbonisation of the energy system in a safe, efficient and secure way.**

#### Indicator 1:Reduction of greenhouse gas emissions at EU level compared to 1990

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									
			20%							21%
	Actual Progress									Final
	23%	22%	22%	22%	23%	24%	Data not yet available			

Are we on track	On track
Indicator type	Impact
Unit of measurement	Reduction of Green House Gases emissions (in percentage) in the EU-27 countries in given year compared to 1990
Cut-Off Date	
Data source	<a href="https://www.eea.europa.eu/data-and-maps/indicators/greenhouse-gas-emission-trends-6/assessment-3">https://www.eea.europa.eu/data-and-maps/indicators/greenhouse-gas-emission-trends-6/assessment-3</a>
Narrative	The emission decrease between 2018 and 2019 was 4 % - the steepest annual reduction seen in the last decade.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Greenhouse gas emissions in the EU-27 decreased by 24 % between 1990 and 2019, exceeding the target of a 20 % reduction from 1990 levels by 2020.

**Specific Objective 1 :Supporting the safety of nuclear systems (societal challenges, excellent science, industrial leadership).**

#### Indicator 1:The number of projects (joint research and/or coordinated actions) likely to lead to a demonstrable improvement in nuclear safety practice in Europe

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
		7				29	44			44
41	Actual Progress									Final
		9		23	28		47			

Are we on track	On track
Indicator type	Input
Unit of measurement	cumulative
Cut-Off Date	31/12/2020
Data source	Results of call for proposals
Narrative	Selected by independent experts, Euratom-funded research projects redefine state of the art in safety of nuclear installations and provide knowledge and tools
Methodology	Indicator shows number of Euratom-funded projects resulting from safety related call topics of the Euratom Work Programmes.
Link MFF 14-20 / MFF 21-27	n.a.
Other methodological comments	Target increased from 14 projects planned for 2018 due to extension of the Euratom programme (from 2014-2018 to 2014-2020) and an increased focus on the improvement of nuclear safety.
Full metadata available at this address	Cordis database ( <a href="https://cordis.europa.eu/">https://cordis.europa.eu/</a> )
Justification of the trend	Surpass the target

**Specific Objective 2 :Contributing to the development of safe, longer-term solutions for the management of ultimate nuclear waste, including final geological disposal, partitioning and transmutation.**

**Indicator 1: The number of projects contributing to the development of safe long term solutions for the management of ultimate nuclear waste**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
15		5				12	14			14
	Actual Progress									Final
		5		10	11		12			

Are we on track	On track
Indicator type	Input
Unit of measurement	cumulative
Cut-Off Date	31/12/2019
Data source	Results of call for proposals
Narrative	Set by independent experts, Euratom-funded research projects provide solutions for safe management and disposal of radioactive waste
Methodology	Total number of Euratom-funded projects resulting from call topics concerning radioactive waste management, launched by the subsequent Euratom Work Programmes
Link MFF 14-20 / MFF 21-27	n.a.
Other methodological comments	Target increased from 8 planned for 2018 due to the extension of the programme from 2014-2018 to 2014-2020.
Full metadata available at this address	Cordis database ( <a href="https://cordis.europa.eu/">https://cordis.europa.eu/</a> )
Justification of the trend	Since establishment of a European Joint Programme in Radioactive Waste Management (EURAD <a href="https://www.ejp-urad.eu/">https://www.ejp-urad.eu/</a> ) in 2019, encompassing most of stakeholders in Europe and providing funding for a comprehensive research in this field, there is no need to launch medium-size projects addressing specific issues in this field. Consequently, due to the joint programming the target of 14 cannot be reached.

**Specific Objective 3 :Supporting the development and sustainability of nuclear expertise and excellence in the Union.****Indicator 1: Training through research - the number of PhD students and postdoctoral researchers supported through the Euratom fission projects**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2007-2013	Milestones									2020
200		500					1 000			1 000
	Actual Progress									Final

Are we on track	No data
Indicator type	Input
Unit of measurement	cumulative
Cut-Off Date	30/06/2021
Data source	Training of PhD students and post-doctoral researchers is essential for maintaining nuclear competences and expertise in Europe underlying the EU's high safety standards in all nuclear activities
Narrative	Set by independent experts, Euratom-funded research projects provide solutions for safe management and disposal of radioactive waste
Methodology	Total of PhD students and post-doctoral researchers reported by projects.
Link MFF 14-20 / MFF 21-27	n.a.
Other methodological comments	Data will be available after release of final reports from all fission projects, expected after 2020.
Full metadata available at this address	not yet available
Justification of the trend	n.a.

**Indicator 2: The number of fellows and trainees in the Euratom fusion programme**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
27		30					50			50
	Actual Progress									Final
	17	28	31	33	32	32				

Are we on track	Moderate progress
Indicator type	Output

Unit of measurement	annual
Cut-Off Date	31/12/2019
Data source	EUROfusion consortium annual reporting
Narrative	Fusion energy development requires staff with skills going beyond PhD level. EUROfusion supports education and training of scientists and engineers to operate and exploit ITER, and to ensure the right balance and competences of physicists and engineers for the fusion technology development
Methodology	Indicator calculated on the basis of results of EUROfusion calls for applications
Link MFF 14-20 / MFF 21-27	n.a.
Other methodological comments	Fellows (at post-doc level) and trainees (engineers) are selected on the basis of applications submitted following a call for proposals. Number and suitability of candidates varies from year to year.
Full metadata available at this address	EUROfusion consortium annual reporting available to the Commission services
Justification of the trend	Fellows (at post-doc level) and trainees (engineers) are selected on the basis of applications submitted following a call for proposals. Number and suitability of candidates varies from year to year. The 2020 COVID restrictions on the access to laboratories, delayed or even stopped the scientific experiments planned.

### Specific Objective 4 :Supporting radiation protection and the development of medical applications of radiation, including, inter alia, the secure and safe supply and use of radioisotopes.

**Indicator 1: The number of projects likely to have a demonstrable impact on regulatory practice regarding radiation protection and on development of medical applications of radiation**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2007-2013	Milestones									2020
33		1				4	6			6
	Actual Progress									Final
		1		2	3		6			

Are we on track	On track
Indicator type	Output
Unit of measurement	Cumulative
Cut-Off Date	31/12/2020
Data source	Results of call for proposals
Narrative	Using the power and non-power applications of ionising radiation to benefit the general public in Europe requires an optimal radiation protection. Research into radiation protection reduce risks from low-dose exposure through the use of these technologies and provides novel solutions for new applications in medical and other sectors.
Methodology	Indicator shows number of Euratom-funded projects resulting from call topics concerning radiation protection and medical applications of ionising radiation, launched by the subsequent Euratom Work Programmes.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	Target reduced from 25 planned for 2018, due to the establishment in 2015 of the European Joint Programme (EJP) in radiation protection research ( <a href="http://www.concert-h2020.eu/">http://www.concert-h2020.eu/</a> ) with a Euratom contribution of EUR 20 million. Research projects launched within the framework of the EJP programme are not included in the statistics for this indicator, but only projects launched directly by the Commission are counted.
Full metadata available at this address	Cordis database ( <a href="https://cordis.europa.eu/">https://cordis.europa.eu/</a> )
Justification of the trend	Achieve the target

### Specific Objective 5 :Moving towards demonstrating the feasibility of fusion as a power source by exploiting existing and future fusion facilities.

**Indicator 1: The number of publications in peer-reviewed high impact journals**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010	Milestones									2020

	Actual Progress									Final
	200	450	325	700	680	822				

Are we on track	On track
Indicator type	Result
Unit of measurement	Cumulative
Cut-Off Date	19/08/2022

Data source	EUROfusion consortium reporting
Narrative	The number of papers published by Euratom-funded scientists in high quality peer-reviewed journals demonstrates Programme's research excellence. It remains consistent with the level showed during the previous European Programme, once allowance is made for the new programme structure.
Methodology	Number of publications in peer-reviewed high impact journals from Euratom funded fusion research (journals with impact factor equal or higher than 'Fusion Science and Technology' journal <a href="https://www.ans.org/pubs/journals/fst/">https://www.ans.org/pubs/journals/fst/</a> )
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	The baseline figure for the fusion peer reviewed articles published under 2007-2013 Euratom Programme cannot be directly compared to the 2020 target, nor can it be compared to the actual figures produced by the EUROfusion consortium. The 2014-2020 indicator shows only the peer reviewed articles resulting directly from the implementation of the fusion roadmap, while the old indicator (the baseline) covered all peer-reviewed articles published by fusion associations.
Full metadata available at this address	EUROfusion consortium annual reporting available to the Commission services
Justification of the trend	Surpass the target in 2019

### Specific Objective 6 :Laying the foundations for future fusion power plants by developing materials, technologies and conceptual design.

#### Indicator 1: The percentage of the Fusion Roadmap's milestones established for a period 2014-2018 reached by the Euratom Programme

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
	0,13	0,31	0,54	0,75			0,90			0,90
	Actual Progress									Final
	0,10	0,28	0,47	0,66	0,82	0,82				

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage of the Fusion Roadmap's milestones established for a period 2014-2020 reached by the Euratom Programme
Cut-Off Date	19/08/2022
Data source	EUROfusion consortium reporting
Narrative	The EUROfusion roadmap forms the basis for the programmes of EUROfusion and Fusion for Energy and provides a clear and structured way forward to commercial electricity from fusion.
Methodology	Indicator showing cumulative percentage of the EUROfusion high level milestones prepared on the basis of the European Research Roadmap to the realisation of Fusion Energy ( <a href="https://www.euro-fusion.org/eurofusion/roadmap/">https://www.euro-fusion.org/eurofusion/roadmap/</a> ). Please note that the 2020 COVID restrictions on the access to laboratories, delayed or even stopped the scientific experiments planned.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	The Fusion roadmap was adopted by the members of the European Fusion Development Agreement (EFDA, predecessor of EUROfusion) in 2012. 2020 results will be available in 2021
Full metadata available at this address	EUROfusion consortium annual reporting available to the Commission services
Justification of the trend	Please explain why there were not progresses in 2019 (waiting for answer from Tomek)

### Specific Objective 7 :Promoting innovation and industry competitiveness.

#### Indicator 1: The number of spin-offs from the fusion research under Euratom Programme

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2007-2013	Milestones									2020
4			5				6			6
	Actual Progress									Final
	1	2	2	2	3	5				

Are we on track	On track
Indicator type	Result
Unit of measurement	Cumulative
Cut-Off Date	31/12/2019
Data source	Cumulative number of spin offs reporting
Narrative	Euratom Programme supports specific actions on technology transfer from fusion research labs to industry. This provides the short-term return on investment in fusion R&D by using, in other areas, the knowledge generated by fusion research, so-called spin offs. Examples include cooled high heat flux components in space applications, improvement of Magnetic Resonance Imaging (MRI).

	applications in brakes and clutches.
Methodology	Cumulative number of spin offs reported by EUROfusion
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	The target has been reduced from 10 planned for 2018. The 2020 target is based on updated data on actual spin-offs from fusion research during 2014-2016. All figures are cumulative.
Full metadata available at this address	EUROfusion consortium annual reporting available to the Commission services
Justification of the trend	Close to the target in 2019. The target is expected to be met in 2020.

**Indicator 2: The patents applications generated and patents awarded on the basis of research activities supported by the Euratom Programme (average number per year)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2007-2013	Milestones									2020
3		3	4				4			4
	Actual Progress									Final
	1	2	1	3	2	4				

Are we on track	On track
Indicator type	Result
Unit of measurement	Average number per year
Cut-Off Date	31/12/2019
Data source	EUROfusion consortium reporting
Narrative	Euratom Programme supports the transfer of fusion-related technology and know-how to non-fusion applications where there is a strong commercial or societal benefit. New patents may lead to the development and deployment of new hardware/software and protect European intellectual property.
Methodology	Number of patent applications emerging from EUROfusion consortium
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	No sufficient amount of meaningful data is expected for "patents awarded" before 2020, because of the time necessary for a patent to be awarded.
Full metadata available at this address	EUROfusion consortium annual reporting available to the Commission services
Justification of the trend	Target achieved in 2019 and should be surpassed by the end of the Euratom Programme 2014-2020.

**Specific Objective 8 :Ensuring the availability and use of research infrastructures of pan-European relevance.**

**Indicator 1: The number of researchers having access to research infrastructures through Euratom Programme support**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2008	Milestones									2020
800		500					1 200			1 200
	Actual Progress									Final
	872	958	1 039	909	1 350	1456				

Are we on track	On track
Indicator type	Input
Unit of measurement	Per year
Cut-Off Date	31/12/2019
Data source	EUROfusion consortium annual report
Narrative	Success of the Euratom-funded fusion research relies on joint programming and exploitation of research infrastructure in Europe, which would be impossible without support for mobility of researchers.
Methodology	Total Number of researchers who have access to fusion research infrastructures through Euratom support
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	
Full metadata available at this address	EUROfusion consortium annual reporting available to the Commission services
Justification of the trend	surpass the target – the activity attracted more students than expected.

**Specific Objective 9 :Improving nuclear safety including: nuclear reactor and fuel safety, waste management including final geological disposal as well as partitioning and transmutation; decommissioning, and emergency preparedness. The JRC will contribute to the development of tools and methods to achieve high safety standards for nuclear installations and fuel cycles relevant to Europe.**

**Indicator 1: JRC policy support indicator - The number of occurrences of tangible specific impacts on Union policies resulting from technical and scientific policy support provided by the JRC**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
13	12±1	12±1	12±1	12±2	14±2	15±3				15±3
	Actual Progress									Final
	14	16	15	9	10	8	9			

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of tangible impacts on the EU policies
Cut-Off Date	31/12/2020
Data source	PRIME (internal JRC evaluation exercise carried out yearly)
Narrative	In the Commission proposal for a regulation establishing EURATOM
Methodology	Evaluation and validation of tangible impacts in the policy cycle, resulting from technical and scientific policy support provided by the JRC on the n-1 year
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	The milestones are yearly results, therefore, the target at the end of the period is the addition of the previous ones. To evaluate the progress of the indicator, the target has been updated accordingly
Full metadata available at this address	<a href="https://webgate.ec.europa.eu/connected/community/jrc/strategic-planning-and-programming/jrc-evaluation">https://webgate.ec.europa.eu/connected/community/jrc/strategic-planning-and-programming/jrc-evaluation</a> Although the programme target was achieved, the overall trend is downwards.
Justification of the trend	Although the programme target was achieved, the overall trend is downwards. The staff reduction along the whole period, lead to a need to build again capacity and expertise. For the last two years of the programme, it was planned to increase the policy support provided, but the staff reorganisation have had an impact in the performance of the direct actions of the programme bigger than expected. Moreover the 2020 COVID restrictions on the access to laboratories, delayed or even stopped the scientific experiments planned.

**Indicator 2: The number of peer reviewed publications**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Average 2010-2013	Milestones									2020
72		72±4	72±4	72±4	72±8	60±8	50±8			50±8
	Actual Progress									Final
	90	80	45	62	72	36	43			

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of publications in peer reviewed journals
Cut-Off Date	31/12/2020
Data source	PUBSY (JRC publications database)
Narrative	In the Commission proposal for a regulation establishing EURATOM
Methodology	Number of articles published in recognised peer reviewed journals with JRC authorship
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	The milestones are yearly results, therefore, the target at the end of the period is the addition of the previous ones. To evaluate the progress of the indicator, the target has been updated accordingly.
Full metadata available at this address	<a href="https://pubsy.jrc.cec.eu.int/">https://pubsy.jrc.cec.eu.int/</a>
Justification of the trend	The programme evolved to address innovative fields, these areas need to build new and reinforce existing competences and skills, therefore the target for the last two years of the programme was reduced. It resulted, indeed, a temporary reduction of the achieved number of publications, as the scientific publications have a longer time cycle. Moreover the 2020 COVID restrictions on the access to laboratories, delayed or even stopped the scientific experiments planned for the last year of the programme.

**Specific Objective 10 :Improving nuclear security including: nuclear safeguards, non-proliferation, combating illicit trafficking, and nuclear forensics.**
**Indicator 1: JRC policy support indicator - The number of occurrences of tangible specific impacts on Union policies resulting from technical and scientific policy support provided by the JRC**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
15		14±1	14±1	14±1	14±2	18±3	22±4			22±4

	Actual Progress								Final
	16	22	19	11	12	11	11		

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of tangible impacts on the EU policies
Cut-Off Date	31/12/2020

Justification of the trend	Although the programme target was achieved, the second half of the programme was less satisfactory. The staff reduction along the whole period, lead to a need to build again capacity and expertise. For the last two years of the programme, it was planned to increase the policy support provided, but the staff reorganisation have had an impact in the performance of the direct actions of the programme bigger than expected. The 2020 COVID restrictions on the access to laboratories and on missions, delayed or even stopped the support provided.

### Indicator 2: The number of peer reviewed publications

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Average 2010-2013	Milestones									2020
16		16±1	16±1	16±1	16±2	19±3	22±4			22±4
	Actual Progress									Final

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of publications in peer reviewed journals
Cut-Off Date	31/12/2020
Data source	PUBSY (JRC publications database)
Narrative	In the Commission proposal for a regulation establishing EURATOM
Methodology	Number of articles published in recognised peer reviewed journals with JRC authorship
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	The milestones are yearly results, therefore, the target at the end of the period is the addition of the previous ones. To evaluate the progress of the indicator, the target has been updated accordingly.
Full metadata available at this address	<a href="https://pubsy.jrc.cec.eu.int/">https://pubsy.jrc.cec.eu.int/</a>
Justification of the trend	Although the final target was achieved, a trend downwards is observed. The reason for the trend is the same than in the previous indicator plus the need to focus the resources in providing the necessary policy support, in spite of reducing the number of publications

### Specific Objective 11 :Increasing excellence in the nuclear science base for standardisation.

#### Indicator 1:JRC policy support indicator - The number of occurrences of tangible specific impacts on Union policies resulting from technical and scientific policy support provided by the JRC

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
15		13	13	13	12	11	10			10
	Actual Progress									Final
	10	9	6	12	11	7	7			

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Number of tangible impacts on the EU policies
Cut-Off Date	31/12/2020
Data source	PRIME (internal JRC evaluation exercise carried out yearly)
Narrative	In the Commission proposal for a regulation establishing EURATOM
Methodology	Evaluation and validation of tangible impacts in the policy cycle, resulting from technical and scientific policy support provided by the JRC on the n-1 year

Link MFF 14-20 / MFF 21-27	No
Other methodological comments	The milestones are yearly results, therefore, the target at the end of the period is the addition of the previous ones. To evaluate the progress of the indicator, the target has been updated accordingly.
Full metadata available at this address	<a href="https://webgate.ec.europa.eu/connected/community/jrc/strategic-planning-and-programming/jrc-evaluation">https://webgate.ec.europa.eu/connected/community/jrc/strategic-planning-and-programming/jrc-evaluation</a>
Justification of the trend	The number of outputs delivered having an impact on the policies are mainly related to the provision of standards, which have a longer period to be accepted. It is expected that the number of standard measurements delivered and accepted will increase, as the process is based on the scientific results obtained, which are quite high.

### Indicator 2: The number of peer reviewed publications

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020

Full metadata available at this address	<a href="https://pubsy.jrc.ec.eu.int/">https://pubsy.jrc.ec.eu.int/</a>
Justification of the trend	Even though the 2020 COVID restrictions on the access to laboratories, online ways of managing data and visualisation of experiments have been developed. A lot of desk analysis has been also done. It is worthy to highlight the high record related to targeted immunotherapy against cancer.

### Specific Objective 12 :Fostering knowledge management, education and training.

#### Indicator 1: JRC policy support indicator - The number of occurrences of tangible specific impacts on Union policies resulting from technical and scientific policy support provided by the JRC

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
13		12±1	12±1	12±1	12±2	12±2	10±2			10±2
	Actual Progress									Final
	12	13	9	9	6	6	7			

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of tangible impacts on the EU policies
Cut-Off Date	31/12/2020
Data source	PRIME (internal JRC evaluation exercise carried out yearly)
Narrative	In the Commission proposal for a regulation establishing EURATOM
Methodology	Evaluation and validation of tangible impacts in the policy cycle, resulting from technical and scientific policy support provided by the JRC on the n-1 year
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	The milestones are yearly results, therefore, the target at the end of the period is the addition of the previous ones. To evaluate the progress of the indicator, the target has been updated accordingly.
Full metadata available at this address	<a href="https://webgate.ec.europa.eu/connected/community/jrc/strategic-planning-and-programming/jrc-evaluation">https://webgate.ec.europa.eu/connected/community/jrc/strategic-planning-and-programming/jrc-evaluation</a>
Justification of the trend	The impacts on the EU policies are obtained, mainly, delivering knowledge management products and training to Commission services, IAEA or MS professionals, depending on the stakeholders needs. It is expected that the last technical developments as virtual training will allow higher impact in the future

#### Indicator 2: JRC scientific productivity indicator - The number of peer reviewed publications

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
----------	------	------	------	------	------	------	------	------	------	--------

Average 2010-2013	Milestones								2020
35		34±2	10±2	10±2	10±4	14±4	18±4		18±4
	Actual Progress								Final
	20	7	15	16	19	10	27		

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of publications in peer reviewed journals
Cut-Off Date	31/12/2020
Data source	PUBSY (JRC publications database)

Methodology	Number of articles published in recognised peer reviewed journals with JRC authorship
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	The milestones are yearly results, therefore, the target at the end of the period is the addition of the previous ones. To evaluate the progress of the indicator, the target has been updated accordingly.
Full metadata available at this address	<a href="https://pubsy.jrc.ec.eu.int/">https://pubsy.jrc.ec.eu.int/</a>
Justification of the trend	The programme is providing training to EU students and professionals. The expected results of the collaboration between direct and indirect actions of the programme to allow open access to JRC nuclear research infrastructures, weren't materialised in 2020 because of the COVID restrictions on the access to laboratories. Virtual training courses, online access, and open data bases were developed and will be integrated to complement presential trainings in the future.

### Specific Objective 13 :Supporting the policy of the Union on nuclear safety and security.

#### Indicator 1:JRC policy support indicator - The number of occurrences of tangible specific impacts on Union policies resulting from technical and scientific policy support provided by the JRC

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones								2020	
7		6±1	6±1	6±1	6±1	12±2	18±2			18±2

Full metadata available at this address	<a href="https://pubsy.jrc.cec.eu.int/">https://pubsy.jrc.cec.eu.int/</a>
Justification of the trend	The JRC's expertise obtained through the research programme allows providing support to the related EU policies. Notwithstanding the 2020 COVID restrictions the level of achievement is satisfactory

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

#### **6.1.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
124,6	129,5	134,2	137,9	143,1			669,3

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.1.2. Explanation and justification on the financial contribution**

Euratom Research and Training Programme 2021-2025 contributes to climate mainstreaming as the Programme general objective provides for complementing the achievement of Horizon Europe's objectives, inter alia, in the context of the energy transition. Research results of the Euratom Programme could be used by some Member States, exercising the right to decide on their energy mix, towards establishment of climate neutral energy system in a safe, efficient and secure way.

In this context, the Commission considers that 100% of the expenditure for fusion energy research contributes to the climate effort of the EU budget. Fusion energy represents a possible long-term option for large-scale low-carbon electricity production, which could help address a growing electricity demand towards the end of this century. To prepare Europe for fusion deployment, the research and technology development funded by the Euratom Programme today must demonstrate the scientific and technical feasibility of fusion energy, and then demonstrate its commercial and economic viability.

In view of the importance given by the Euratom Programme to non-power applications, radiation protection and waste management, the Commission considers that not all of the expenditure on fission research contributes to the climate effort of the EU budget. In this context it should be underlined that safety is a concern for all European citizens and a prime focus crosscutting all Euratom funded research activities.

According to the OECD DAC Rio Markers for Climate, an international recognized methodology to account for Climate expenditures, any activities which "contributes to the objective of stabilization of greenhouse gas (GHG) concentrations in the atmosphere" should be accounted as 100% related to climate expenditures.

The Commission considers that 100% of the Fusion Research related expenditure and 40% of the Fission Research related expenditure contribute to the climate effort of the EU budget.

### **6.2. Contribution to biodiversity mainstreaming**

Not applicable

### **6.3. Contribution to clean air financing**

Not applicable

### **6.4. Contribution to gender equality**

#### **6.4.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.4.2. Key achievements and performance**

Gender equality is a cross-cutting priority in Horizon Europe and concerns also Euratom Programme as stated in the recital 2 of the Council Regulation. The integration of the gender dimension into research and innovation content will be a requirement by default. Furthermore, Euratom Programme is promoting gender equality through sustainable institutional change by requesting that applicants (public bodies, research organisations and higher education establishments) have in place a gender equality plan as an eligibility criterion (requirement shared with Horizon Europe).

JRC manages the European Human Resources Observatory for the Nuclear Energy Sector (EHRO-N) in order to ensure the availability of data on human resources, including gender balance. In its Strategy 2030, the JRC declares itself as an equal opportunities employer committed to the objective of being fully gender balanced; this has been further developed by issuing a gender balance strategy. The JRC has set-up a talent management programme developed taking into consideration the specificities of JRC and the female colleagues needs.

## **6.5. Contribution to the sustainable development goals**

Not applicable

**1. Overview****1.1. Challenges**

ITER aims to demonstrate fusion as a viable and sustainable source of energy. It is being built in Saint Paul-Léz-Durance (France) with the support of seven international partners that represent half of the world's population (Euratom, Russia, Japan, China, India, South Korea and the United States). The key challenges for ITER for the MFF 2021-2027 will be to:

i.) Sustain the positive momentum in the project's performance and management achieved through recent improvements in management, governance and supervision/monitoring;

ii.) Ensure finalisation of the construction and assembly enabling the achievement of First Plasma and subsequent complementary construction and advancement of the post-First Plasma components; and

iii.) Retain the commitment of all ITER Parties to meeting in full their obligations thus enabling the timely and cost-efficient completion of the project.

Meeting these challenges will require sustained EU leadership in the project, which needs to be underpinned by excellent performance of F4E and full compliance of the EU with its share of funding obligations and in-kind contributions (i.e. components under European responsibility, procured and delivered by F4E).

## 1.2. Mission (general objectives)

The general objective of the ITER-related EU action in 2021-2027 is to fully support the continuation of ITER construction and to reach the operation of ITER with First Plasma to be followed by first experimental operations as well as further installations and upgrades until 2027 and beyond, laying grounds for successful full power operation (so called Deuterium-Tritium stage) by 2035.

These achievements are considered as a necessary step in the development of fusion in order for it to become a possible source of sustainable energy fostering the job, growth and innovation potential of the energy sector in the later part of the century, in accordance with the European Fusion Roadmap.

## 1.3. Specific objectives

To achieve the general objectives, the ITER five specific objectives for the MFF 2021-2027 will be as follows:

- i.) provide sufficient performance-based funding to IO for its operations, particularly the assembly of the installation from the components arriving from individual ITER members;
- ii.) ensure delivery of EU components by F4E in line with the project schedule, in particular its construction and assembly strategies, and in close adherence with performance monitoring;
- iii.) offer European high-tech industries and SMEs a valuable opportunity to innovate and develop “spin off” products for exploitation outside fusion, thereby further reinforcing the EU added value of the ITER project activities;
- iv.) secure continued EU leadership in the ITER project by ensuring timely delivery of EU components and active participation in ITER governance processes; and
- v.) continue activities with Japan (BA) on the operation of the satellite tokamak JT60SA and on the development of a full scale material testing facility (IFMIF/DONES) to ensure that together with ITER's results, all technical and scientific elements needed for the design of a fusion-based power generation device for demonstration are in place, thereby anchoring the synergetic contribution of ITER to the coherence of fusion development and fostering the common benefits of fusion research under the Fusion Roadmap.

## 1.4. Public intervention context

The ITER project aims at building and operating an experimental fusion device, a major step towards the demonstration of fusion as a sustainable energy source. Due to its important advantages, such as the availability of large fuel reserves and the lack of CO<sub>2</sub> emissions, fusion could greatly contribute to the long-term EU strategy of decarbonisation of the energy system in a safe, efficient and secure way. Europe's support to ITER and to other activities related to ITER contributes to the strategic agenda of the European Union for clean and secure energy.

The risk, costs, and long-term nature of a large research projects such as ITER puts it beyond the reach of individual EU Member States and even of the EU as such. Thus, the establishment of a global framework through an international agreement between Euratom and six other Parties: China, India, Japan, South Korea, Russia and the USA was essential to undertake this large-scale scientific experiment. ITER construction started in 2007 and Euratom provides about 45% of all components through F4E.

## 1.5. Actions

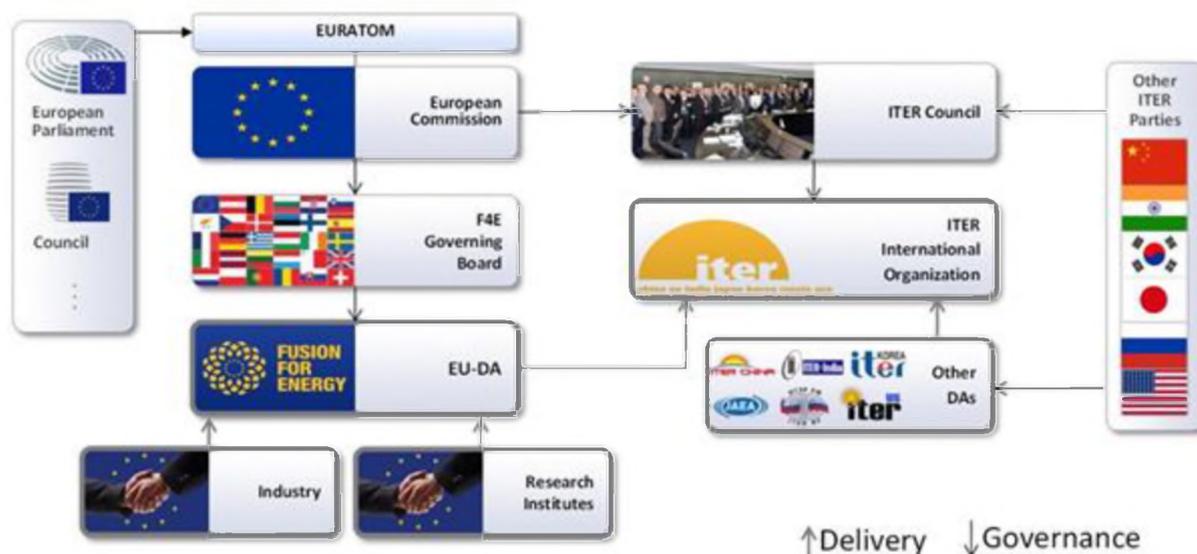

The programme covers the European contribution to the ITER International Organization (IO) for the construction of the ITER facility, which includes the procurement of equipment, installation, general technical and administrative support for the construction phase as well as the participation in commissioning and operations.

The programme also covers other ITER related activities, such as the Broader Approach activities with Japan. These contributions are channelled through a Procurement Agency, the Joint Undertaking Fusion for Energy (F4E) located in Barcelona (Spain).

## 1.6. Delivery mode

Indirect management entrusted to the Joint Undertaking Fusion for Energy (F4E). The lead Directorate General (DG) of the European Commission is DG Energy..

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM (2018) 445: Proposal for a COUNCIL DECISION amending Decision 2007/198/Euratom establishing the European Joint Undertaking for ITER and the Development of Fusion Energy and conferring advantages upon it	2021 - 2027	5 614,0

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							
	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
<b>Total</b>	<b>864,0</b>	<b>710,1</b>	<b>1 019,8</b>	<b>806,3</b>	<b>690,1</b>	<b>856,3</b>	<b>667,3</b>	<b>5 614,0</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The construction and assembly of the ITER project continues in the MFF 2021-2027.

## 1.10. Relevant websites providing more information

The Europa site on Fusion Energy and ITER ([https://ec.europa.eu/energy/topics/technology-and-innovation/fusion-energy-and-iter\\_en](https://ec.europa.eu/energy/topics/technology-and-innovation/fusion-energy-and-iter_en)) is a valuable source of information of the ITER project and fusion energy in general.

The site of the Joint Undertaking Fusion for Energy (<https://fusionforenergy.europa.eu/>) presents the activities of the European Union organisation (Domestic Agency) managing Europe's contribution to ITER.

The website of the ITER Organization (<https://www.iter.org/>) provides updated information on the project addressing the needs of the public, the press, scientists and the industry.

The EUROfusion roadmap (<https://www.euro-fusion.org/eurofusion/roadmap/>) forms the basis for the programmes of EUROfusion and Fusion for Energy and provides a structured way forward to commercial electricity from fusion.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

The **work programme 2021** is mostly focused on the following activities (First Plasma (FP) relevant activities are indicated):

**Magnets (FP):** All major contracts have been signed and manufacturing activities are fully underway. Major deliveries planned for 2021 include four TF Coils, one PF Coil (PFC #02) and some final components of the newly signed IO Task Agreement for the Pre-Compression Rings. The evolution of these activities is highly dependent on the impacts generated by the covid-19 outbreak. Extensions, modifications or amendments to existing contracts, some of them being triggered by IO (Project Change Requests, Non-Conformities on free issue items, etc.), may be signed. Contracts contingencies, framework contracts and/or task orders may also be signed to support the production (i.e. inspectors, other external resources, workshop materials, tests, etc.).

**Main Vacuum Vessel (FP):** All major contracts have been signed and manufacturing activities are underway. The first Sector deliveries are currently planned in 2021. Contracts for the transportation to Cadarache of the five sectors will be signed. Extensions, modifications or amendments to existing contracts, some of them being triggered by PCRs, may have to be signed to meet the schedule. Also, Specific Contracts for support activities, like Inspectors, Documentation Support, Engineering and Analysis etc. will continue to be issued depending on the project needs.

#### **In-Vessel [Blanket System and Divertor]:**

**Blanket System (non-FP):** For the Blanket First Wall project, the most important activity in 2021 is the start of the First Wall Panels production lines preparation, including the award of two contracts for the procurement of CuCrZr and beryllium raw materials respectively. In parallel, functional testing of full-scale prototypes (e.g. High Heat Flux testing) will be carried out and a contract will be awarded for the performance of Hot Helium Leak testing.

For the Blanket Cooling Manifold project, negotiations with tenderers will be completed and framework contracts will be awarded to start the first stage of the series production.

**Divertor Systems (non-FP):** For the divertor inner vertical target (IVT) project, the main activities will be devoted to the follow-up of the on-going manufacturing of the full-scale prototypes, including the delivery of the first full-scale prototype to IO for assembly trials and the high heat flux testing of second full-scale prototype. Furthermore, F4E will launch the call for tender for the IVT series production. For the divertor cassette project, the main activities will be devoted to the follow-up of the on-going manufacturing and the reopening of competition for the signature of Stage 2 of the series fabrication. For the Divertor Rails project, the Procurement Arrangement will be signed.

**Remote Handling (partly FP):** The procurement of the Remote Handling Systems (RHS) will focus mainly on the final design activities and some areas of non-first plasma component on the preliminary design. Complementary RH technology-related design activities, prototyping and qualification will be performed together with engineering support related activities and expert contracts to complement the main procurement contracts.

**Cryoplant and Fuel Cycle Vacuum Pumping (Partly FP):** The contract for Helium Leak Localization systems will be signed and design activities for Leak Detection will start. Contracts of Torus and Cryostat Cryopumping System, Front-end Cryopump Distribution system, Mitica cryopump will focus on manufacturing and assembly.

**Tritium Plant and REMS (Partly FP):** First pre-PA activities will start in support of the Hydrogen Isotope Separation system and Water Detritions System PAs. As for REMS (Radiation and Environmental Monitoring Systems), the contract for 1st plasma activities will be signed and PA activities for the signature of the PA amendment for Tokamak complex will be carried out.

**Cryoplant (FP):** End of installation and start of commissioning for LN2 Plant and Auxiliary Systems components will take place. The contract of cryogenic quench line header will be focused on installation and testing. The contract for MITICA Cryoplant will be closed.

**Antennas and Plasma Engineering (partly FP):** RF Heating & Current-Drive (FP): The tendering phase for the Electron Cyclotron (EC) system (Upper Launchers and ex-vessel waveguide systems) is planned in 2021. The output of a deep-dive, which runs in 2020, will determine the commercial strategy for the Antennas in detail. The tender will include the finalization of the design activities, manufacturing preparation and the manufacturing of the fully qualified Antennas.

**Neutral Beam Heating and EC Power Supplies and Sources (non-FP):** Electron Cyclotron (EC) Gyrotrons, Power Sources and Power Supplies (PS): The manufacturing, testing and deliveries of the Main and Body HV Power Supplies will continue, and the installation and commissioning of the first units will start. After signature of the EU Gyrotrons PA, the Call for Tender will be published and evaluation of bids will be in progress.

**Neutral Beam Test Facility (NBTF) at RFX-Padua:** For MITICA, the activities in the test bed will continue with commissioning of MITICA power supplies assembling of MITICA auxiliaries (Gas injection and Vacuum system, CODAS, Interlock, and Safety). The contracts for MITICA diagnostics, MITICA Beam Source, MITICA Beam line components will proceed with the manufacturing.

**HNB at ITER-Cadarache:** F4E will finalize the detailed and manufacturing design of the Neutral Beam power supplies systems for the ITER units, subject to the negotiations with the industrial suppliers to adapt the contractual schedule to the schedule of ITER buildings construction.

**Diagnostics** (partly FP): Manufacturing activities for several Diagnostic components and systems will continue, most of them being essential for First Plasma. Design of all remaining Diagnostics systems will progress, as well as the design of ITER port structures and the integration of Diagnostics into the ports. Several Diagnostics systems or sub-systems will complete their design activities, with approval of the final design review. Procurement activities will focus mainly on the placement of contracts (including framework contracts and task orders under framework contracts) for manufacture of remaining First Plasma components and of both contracts (including framework contracts and task orders under framework contracts) and grants for the completion of the design of less mature Diagnostics systems or sub-systems.

**Test Blanket Systems** (non-FP, non-in-kind contribution): The activities will mainly focus on the continuation of the preliminary design for TBM Sets and Ancillary Systems and of the related Safety Analysis. In parallel the ANB consultancy activities will continue. In addition, the activities concerning the proof of the TBM-sets fabrication and assembly processes feasibility will commence. If requested and approved by the TBM-PT Steering Committee, cash contribution to IO will be transferred to execute TBM activities common to several ITER Members. The collaboration with EUROfusion and the EFLs will continue. A contract for an Engineering Technical Support Service, currently under evaluation, might be put in place. If negotiations in 2020 are successful, a co-operation with the Korean DA will start in 2021.

**Site, Buildings and Power Supplies:** The focus of the buildings programme will be on the civil works to complete the Tritium Building (B14) above L2, the construction of Neutral Beam Power Supplies Buildings, Control Building and Fast Discharge Resistor Building and commencement of manufacture of the Cargo Lift. The construction design for the Tokamak Complex services (TB04) will complete with IO approval of all buildings levels. The Cryoplant Coldbox Building services installation will be completed. The design of the Emergency Power Supplies Buildings and equipment, and of the Plant Bridges, will advance.

**Technical Support Activities** including the signature of task orders for experts, Quality control inspectors for manufacturing activities, all Engineering unit domains: System Design-Mechanical Engineering, CAD Data Management, Material-Manufacturing Technologies and Processes, Analysis and Codes, Metrology, I&C-CODAC, other Domestic Agencies' components Transportation and project management activities (on QA, system engineering, PM tools, planning, risk and cost) are foreseen. F4E also plans renewal of existing Frameworks contracts and signature of new ones.

In addition, amendments, indexation and release of options of existing contracts in all areas will need to take place. Quality control inspection services will be necessary for the majority of the areas through available framework contracts.

Concerning the **Broader Approach** (BA), the EU activities are carried out in the frame of the Agreement, concluded between Euratom and Japan, consisting of activities which complement the ITER project and accelerate the realisation of fusion energy towards DEMO.

The main activities **envisaged in 2022** are outlined as follows indicating whether they are required for the ITER First Plasma (FP) or not (non-FP):

**Magnets** (FP): All major contracts have been signed and manufacturing activities are underway for the two remaining main components (i.e. TF Coils and PF Coils). In 2022, it is expected to complete the production of all 10 TF Coils. In the PF Coils Workshop, the last two Coils (PF#3 & #4) will be in full production to be delivered in the following years.

**Vacuum Vessel** (FP): All major contracts have been signed and manufacturing activities are underway. All five sectors are planned to be delivered before the end of 2022. Contracts for the transportation to Cadarache of the remaining sectors will be signed.

**In-Vessel** (non-FP) [Blanket System and Divertor]:

**Blanket System:** the series production of the Blanket First Wall panels will proceed. F4E will award task orders for the procurement of Beryllium and CuCrZr materials for the first wall panels series production, as well as a contract for the procurement of Standard Parts, scope of the Work Package 07 of the First Wall PA. Regarding the Blanket Cooling Manifold project, F4E will award the contract for the first 30 degree sector pipe bundles. F4E will use support from external resources to follow-up activities.

**Divertor Systems:** F4E will sign framework contracts for Stage 1 of the series production. Regarding the Divertor Rails project, F4E will advance in the final Technical Specifications for the procurement. Regarding the Divertor Cassettes project, F4E will continue manufacturing Cassette Bodies and will continue to deliver.

**Remote Handling** (partly FP): Design activities will continue in preliminary and final design phases depending on the system. Divertor Remote Handling systems (DRHS) will further develop the final design by already running task orders and new contracts, supported in some areas by laboratory tests. Cask & Plug RH systems (CPRHS) will continue final design development and moving towards manufacturing of FP components. Non-FP cask systems gradually moving from preliminary design to final design with existing and new contracts. Neutral Beam Remote Handling systems (NBRHS) FP components will continue final design development including prototyping and moving towards manufacturing of FP components. For the remaining items of NBRHS, the transition from preliminary design to final design will be the main area of activities through new and existing contracts, supported in some areas by laboratory tests. In-Vessel Viewing systems (IVVS) will focus on final design activities, validated by prototyping, by continuing and signing new task orders. Complementary RH technology activities will be implemented (design and tests) aiming at manufacturing of first components (e.g. rad hard cameras and electronics) to be integrated in the RH systems.

**Cryoplant** (FP) and **Fuel Cycle** (Partly FP): For Vacuum Pumping (Partly FP), contracts of Torus and Cryostat Cryopumping System, Front-end Cryopump Distribution system, Leak Detection and Localization systems will focus on manufacturing and assembly. First contract for Neutral Beam Front-end Cryopump distribution will be signed. PA signature of the Procurement for

manufacture for Heating Neutral Beam and Diagnostic Neutral Beam Cryopumps is planned. In the area of Tritium Plant and REMS (Partly FP), tendering activities for Water Detritiation system will start, PA signature for Hydrogen Isotope Separation system is planned, contract for first plasma activities of REMS (Radiation and Environmental Monitoring Systems ) will continue and contract for final Design and procurement of REMS Tokamak complex will be signed. In the area of Cryoplant (FP), commissioning for LN2 Plant and Auxiliary Systems components will take place.

**Antennas and Plasma Engineering** (partly FP): In the area of Electron Cyclotron Upper Launchers (ECUL), task order 2 for Integrator Framework including the scope for the manufacturing and assembly of ex-vessel systems will be signed in 2022. Task order for the manufacturing of the isolation valves will also be signed in 2022. In addition, contracts and task orders for support to manufacturing and industrial inspection will be signed. Regarding the EC Control scope, the EC plant Control System (ECPC) will start operation for the integrated commissioning of the ITER gyrotrons and Task orders to support ECPC operation and to design the EC Launcher local controller will be signed.

**Neutral Beam Heating and EC Power Supplies and Sources** (non-FP): F4E plans to sign contracts for NBI-1&2 tooling phase II, Vessels, Passive Magnetic Shield, and Absolute Valve. In the area of the Neutral Beam Test Facility (NBTF), F4E will sign specific contracts for PRIMA assembly as well as for MITICA CODAS and safety. To meet the schedule, F4E may need to sign extensions, modifications or amendments to existing contracts, some of them being triggered by Project Change Requests (PCRs). Sets of HV power supplies for the EC system will be delivered during the year and installation and commissioning on ITER site completed for the first sets.

**Diagnostics** (partly FP): Manufacturing activities for several Diagnostic components and systems, most of them essential for first plasma will continue and some first plasma components of the Magnetics diagnostic and the Tokamak electrical services will be delivered in 2022. F4E will launch or sign additional contracts for the manufacturing of the remaining first plasma subsystems, including supporting platforms for the in-vessel bolometer cameras, different components (in-port and ex-port) for the wide-angle viewing system, bolometer platforms and front-end components (waveguides, mirrors and horns) for the collective Thomson scattering system. The launch of a framework contract for the manufacturing of components required for subsequent plasma phases is also foreseen in 2022, as well as a framework contract for the manufacture of port structures, and the integration of the different diagnostics in the ports, assembly and testing. Design for less mature Diagnostics systems will progress mainly under ongoing design framework contracts or grants. Signature of specific contracts for the finalization of design of the core-plasma Thomson scattering and the bolometers are also foreseen in 2022.

**Test Blanket Modules** (non-FP, non-in-kind contribution): The activities for the preliminary designs of the two TBM Sets, Ancillary Systems, Safety Studies and Accidental Analyses will continue in view of the Preliminary Design Review. Analogously the activities aimed to prove the feasibility of the fabrication and assembly processes of the TBM-sets will continue. As in the previous years, support and transversal activities such as the consultancy of an Agreed Notified Body, the storage, handling and, when needed, transportation of steel materials will proceed. When needed, Task Orders will be signed to guarantee the continuity of the progress of the preliminary design of the projects. Some activities might be executed under the ITER TBM Project Team Funding scheme. The collaboration with EUROfusion is expected to continue. The need to procure additional EUROFER will be evaluated at the beginning of the year and, eventually, to this end, a supply contract will be put in place.

**Site, Buildings and Power Supplies:** The focus of the Buildings works will be to complete the last finishing works in the Diagnostic building (B74), to advance the construction of the Tritium Building civil works (B14) up to the roof and to deliver it painted until level L3, to deliver the Control building (B71 Non PIC part), the Fast Discharge Resistor building (B75), and to complete the installation of HVAC, Electrical & Handling Equipment in the Heating building (B15). Load centers LC01, LC04, LC08, LC09, LC15, LC16, MV04 and MV06 will be operational. The preliminary design for the Hot Cell Complex will be progressed. Task orders for Completion and Final Fitting works contracts, and for engineering consultancy services are also planned as well as commitments for the ITER site security services, Site Cooperation Agreement, ITER Host agreement and Health & Safety joint contract with ITER Organization. Changes and exercise of options to the ongoing services and construction contracts in relation with PCRs, input data delays, and re-allocation of scope between contracts will be implemented through amendments to the ongoing contracts.

**Cash contributions** to the ITER organization will be made.

**Technical Support Activities** include all Engineering unit domains: System Design-Mechanical Engineering, CAD Data Management, Material-Manufacturing Technologies and Processes, Analysis and Codes, Metrology, I&C-CODAC, other Domestic Agencies' components Transportation and Engineering activities. Technical Support Activities also includes Project Management (Quality Assurance and Quality Control inspectors for manufacturing activities), System Engineering, Nuclear Safety, CE Marking Assessment, PM tools, Planning, Risk and Cost), Office of the Chief Engineer, Procurement and Commercial support services activities as well provisions for processes definition and documentation management support, policy insurance and ICT, logistic, missions, and legal support to operational activities. F4E also plans renewal of existing and new Framework contracts.

In addition, amendments, indexation and release of options of existing contracts in all areas will need to take place. Quality control inspection services will be necessary for the majority of the areas through available framework contracts.

Concerning the **Broader Approach** (BA), the EU activities are carried out in the frame of the Agreement, concluded between Euratom and Japan, consisting of activities which complement the ITER project and accelerate the realisation of fusion energy towards DEMO. Activities in 2022 will be based on the Project Plans to be agreed by the BA Steering Committee.

It is still early to assess the full **impact of the covid-19 pandemic** to ITER. F4E presented to the December 2020 Governing Board an estimation of the impact as known at the cut-off date of end September. It considered a schedule delay of up to 4 months, depending on the component.

## 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	75 616 286 638	53 821 246 280
Implementation carry-overs	0	377 284 123
Implementation total	75 616 286 638	54 198 530 403
total envelop*	75 623 564 572	
cumulative implementation rate	100%	72%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

In 2015 the ITER Council approved an action plan prepared by the ITER Organization (IO) to address the challenges faced by the project related to schedule cost and governance. One of the main actions was the revision of the baseline (long-term schedule cost and scope) in 2016. The updated schedule follows the “staged approach” which first prioritises the construction of the components essential to achieving First Plasma (FP the beginning of operation) in 2025 followed by a series of installation and testing phases before starting the full performance phase (Deuterium-Tritium operation) in 2035.

ITER continues to move towards its assembly phase. To reach the First Plasma milestone all components from the ITER members need to be available and delivered on time to the ITER Organization (IO) and assembled and installed in the Tokamak Complex.

Although the machine will begin preliminary operations in 2025 ITER construction will nevertheless continue until 2035 when testing will end and experimental operation will begin. The European in-kind contribution to the ITER project has progressed over the course of 2020 from ca. 42.90% (December 2019) to almost 49 82% (December 2020) against a planned target of 58.66%.

The budget for the period 2014-2020 has been fully implemented. The 2020 budget has been fully implemented in commitment and payment according to the revised 2020 work programme adopted by the Governing Board in December 2020. The 2020 commitment budget includes EUR 28.13 million assigned revenues perceived from Switzerland in the frame of the fusion research programme. The 2021 budget includes EUR 349.7 million payment appropriation for the payment of commitments made during the previous MFF. It is foreseen to use them fully during the year.

## 3. How is the programme performing ?

### 3.1. Performance

#### 3.1.1. Introduction

The programme’s performance must be assessed combined – the performance of the European Domestic agency Fusion for Energy (F4E) which delivers the components for ITER and the performance of ITER Organization itself, which receives the cash contributions from the programme to organise and perform assembly and installation works together with the Domestic Agencies. The Programme started back in 2007 and had rather slow pick-up during the 2007-2013 MFF period. The deficiencies (immaturity of the design and the manufacturing challenges, management deficiencies and a lack of cooperation between the Domestic Agencies and the ITER Organization, schedule and cost estimate thus perceived to be unreliable) were identified in the beginning of the 2014-2020 MFF period. They have been addressed, which improved the overall effectiveness of the project. During the 2014-2020 programming period, the ITER project has seen significant progress. The manufacturing of the main components has been launched and is progressing well, the construction of the main buildings was completed and the assembly of the experimental device has commenced. In July 2020 the ITER Organization officially launched (the launch event under the patronage of President Macron took place on 28 July) the device’s assembly phase.

#### 3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### 3.1.3. Previous programme performance

The ITER Organization and the Domestic Agencies have continued implementing the Revised Construction Strategy. Significant progress in installation activities on the ITER site is noticeable. Uncertainties of the project have been reduced as the manufacturing of the important and technically complex first-of-a-kind (FOAK) components (VV Sector, and TF and PF Coils) proved to be feasible. On the other hand, it became clear that due to the technical complexity of the components, the design, prototyping and final manufacturing takes longer than expected. The management and administration of this multi-national project also poses significant challenges.

In 2015, the ITER Parties launched a major overhaul of the project, which included the appointment of a new senior management in the ITER Organization (IO) with an Action Plan under the leadership of a new Director-General. The action plan envisaged a complete re-organisation of the ITER Organization, a close cooperation with the Domestic Agencies the freezing of the design to allow the construction of buildings and other components and the establishment of a Reserve Fund as incentive for the ITER Organization to minimize changes as much as possible. A new reliable baseline was approved in November 2016, achieved a stabilization of the project and provides a realistic basis for its completion.

Changes in the management and organization of Fusion for Energy (F4E), that acts as EU's Domestic Agency delivering the European contribution to IO, took place in parallel to those in IO and entailed the change of the Director (in early 2016) and the majority of the top management and its organization (in 2016 and 2017).

Against this background and due to the stringent supervision and proactive management by the Commission in line with the adopted supervision strategy as of the end of December 2020, work continues to advance with the project execution to achieve First Plasma milestone of 2025 at 72.7% albeit below the planned rate of 77.3%. To reach the First Plasma milestone, all components from the ITER members need to be available and delivered on time to the ITER Organization (IO), and assembled and installed in the Tokamak Complex.

### 3.2. Key achievements

29 500	614	EUR 4 824 billion
is the total number of jobs per year directly or indirectly created by ITER between 2007 and 2019.	is the total number of the procurement contracts signed by F4E between 2007 and 2020.	is the amount paid to European companies involved in ITER between 2007 and 2019

The impact of ITER's investment in technologies and discoveries for the future ripple throughout the economy by supporting cutting-edge technologies in critical industries, creating new business and jobs, and attracting more students to science while laying the foundation for the commercial electricity generation from fusion energy.

A recent study confirmed that the economic impact of ITER on the EU economy has been positive. Incremental gross value added generated due to ITER's activities equalled EUR 1.739 billion for the period 2008 to 2019. Cumulatively, the total number of jobs per year directly or indirectly created by ITER reached nearly 29 500, with a preliminary peak being reached in the years 2018 and 2019. The same study estimated the net impact of the ITER plant on the European economy at EUR 104 million for 2008 to 2019. This net impact represents the difference of the economic impact described above relative to a hypothetical investment that reflects an identical amount of spending per year on EU member countries' economies.

An online survey was carried out in autumn 2020 to understand the repercussions of the covid-19 crisis on the companies involved in the ITER project. One third of respondents declared that their company is more resilient to the consequences of the crisis thanks to its involvement in ITER.

### 3.3. Evaluations, studies and reports

The mid-term progress report in accordance with Article 5b of the Council Decision establishing the European Joint Undertaking for ITER and the Development of Fusion Energy and conferring advantages upon it has been adopted on 21 March 2019 (COM(2019)147 final (1)). The evaluation stated that following the overhaul in management, the project was on track within its 2016 baseline, and early indicators showed positive effects of the change. However, ITER's construction and management are still under improvement; in such a long-term project, it will be important to monitor whether these positive effects continue and grow over the next few years. At present (2021), the project's expected cost and schedule remain within the contingencies specified in 2019.

(1) <https://ec.europa.eu/transparency/regdoc/rep/1/2019/EN/COM-2019-147-F1-EN-MAIN-PART-1.PDF>

Regarding ITER's place in energy policy and decarbonisation, the project remains an important part of EU energy and innovation policy, and although it does not contribute directly to energy and climate targets in the short- to medium-term, its potential role in the decarbonisation of the energy landscape post-2050 is very significant.

An ex-ante evaluation of ITER (SWD(2018)325) accompanied the MFF proposal 2021-2027. Three external studies were conducted in 2018 and 2019. The key findings of these studies were presented in the Programme Statements 2020.

#### **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :to fully support the continuation of ITER construction and to reach the operation of ITER with First Plasma by 2025, to be followed by first experimental operations as well as further installations and upgrades until 2027 and beyond, laying grounds for successful full power operation (so called Deuterium-Tritium stage) by 2035**

##### **Indicator 1:Percentage of completion of ITER construction**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Cumulative percentage of credits completed by all Domestic Agencies.
Cut-Off Date	
Data source	Data reported by the ITER Organization in the ITER Document Management (IDM) system.
Link to the objective	ITER is a first-of-a-kind project being built with the contribution of the seven ITER Parties. The construction of the ITER facilities is carried out according to the recent 2016 baseline defining budget, scope, and schedule. This indicator demonstrates how the project execution is in line with the project baseline at the level of all ITER Members.

Justification of the trend	

## Specific Objective 2 :Support to European industry and research through the ITER construction and ITER related activities

### Indicator 1:Percentage of budget committed by F4E in procurements and grants to industry and laboratories until 2020

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
	0,22	0,33	0,47	0,64	0,79	0,81	1			1
	Actual Progress									Final
	0,20	0,29	0,34	0,47	0,64	0,78	1			

Are we on track	On track
Indicator type	
Unit of measurement	Percentage of budget committed by F4E in procurements and grants to industry and laboratories until 2020.
Cut-Off Date	
Data source	Budgetary execution of the Joint Undertaking Fusion for Energy (F4E).
Narrative	The whole budget of the MFF 2014-2020 has been committed for the project even if the project is experiencing delays in deliveries. The project fully benefits to the industry and laboratories.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The milestones foreseen in this table are based on the 2010 baseline, which was revised in 2016. This revision is explained in the Commission's Communication COM(2017)319) and Staff Working Document (SWD(2017)232) of June 2017. The target is currently the achievement of First Plasma in 2025. Compared to last year information, the "Actual result" figures for years 2014, 2015 and 2016 have been updated to neutralise an error in the original calculation. The difference between the budget foreseen and the actual results is due to the revision of the ITER baseline (scope, schedule and estimated costs) in 2016.
Full metadata available at this address	
Justification of the trend	

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

#### **6.1.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
864,0	710,1	1 019,8	806,3	690,1	856,3	667,3	5 613,9

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.1.2. Explanation and justification on the financial contribution**

At the time of the preparation of the MFF 2014-2020, the ITER project was facing significant delays in implementation and was lagging far behind the initial project schedule. The general reputation and status of the project did not encourage the Commission at that time to propose including the ITER budget as a potential contributor to the climate target. However, and as reported in the mid-term progress report setting out the results of the European contribution to ITER in the period 2014-2020 (COM(2019)147, 31.3.2019), the progress of the project is evident on the ITER site; in 2025, the operations are planned to be launched, which means that the fusion device will be able to generate successfully plasma (a gas of electrically-charged particles) inside its core and the experimental phase will begin.

Due to its important advantages, such as the availability of large fuel reserves and the lack of CO<sub>2</sub> emissions, fusion could greatly contribute to the long-term EU strategy of decarbonisation of the energy system in a safe, efficient and secure way. While fusion may become available for commercial power generation only in the second half of the century, its availability can help to sustain a decarbonised energy mix after 2050 on economically competitive terms and without security of supply concerns. Fusion can be a clean and virtually limitless energy source. The general potential of fusion is nowadays more widely recognised thanks to the strong advancement of fusion science in recent years.

Furthermore, the Paris Agreement binds the Union to pursue clear decarbonisation objectives both until 2050 and beyond and such an objective will require very strong commitments and substantial investments. ITER is one of these such long-term solutions. The ITER project, which is part of the Strategic Energy Technology (SET) Plan, aims at building and operating an experimental fusion device, a major step towards the demonstration of fusion as a sustainable energy source. The Commission considers that 100% of the ITER related expenditure contributes to the climate effort of the EU budget.

#### **6.1.3. Key achievements**

Not applicable. In the period 2014-2020, the ITER expenditure was not earmarked for climate objectives

#### **6.1.4. Performance**

Not applicable

### **6.2. Contribution to biodiversity mainstreaming**

Not applicable

### 6.3. Contribution to clean air financing

Not applicable

### 6.4. Contribution to gender equality

Not applicable

### 6.5. Contribution to the sustainable development goals

#### 6.5.1. Goals

##### *SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all*

The United Nations' Sustainable Development Goals are targets to be achieved by 2030. ITER and fusion development in general are on a longer timescale than this framework, but already contribute to several of these Goals at a later stage. For example, they will contribute to a clean energy transition while boosting jobs and growth in the area of energy and climate under **Sustainable Development Goal 7 ('Ensure access to affordable, reliable, sustainable and modern energy for all')** and Sustainable Development Goal 13 ('Take urgent action to combat climate change and its impacts').

ITER also falls under the category of Research and Innovation, both of which underpin the implementation of virtually all Sustainable Development Goals and in particular Sustainable Development Goal 9 ('Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation')

Finally, ITER is also an example of a global partnership for Sustainable Development Goal 17 ('Strengthen Means of Implementation and revitalise the global partnership for sustainable development').

##### *SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation*

The United Nations' Sustainable Development Goals are targets to be achieved by 2030. ITER and fusion development in general are on a longer timescale than this framework, but already contribute to several of these Goals at a later stage. For example, they will contribute to a clean energy transition while boosting jobs and growth in the area of energy and climate under Sustainable Development Goal 7 ('Ensure access to affordable, reliable, sustainable and modern energy for all') and Sustainable Development Goal 13 ('Take urgent action to combat climate change and its impacts').

ITER also falls under the category of Research and Innovation, both of which underpin the implementation of virtually all Sustainable Development Goals and in particular **Sustainable Development Goal 9 ('Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation')**.

Finally, ITER is also an example of a global partnership for Sustainable Development Goal 17 ('Strengthen Means of Implementation and revitalise the global partnership for sustainable development').

##### *SDG 13 Take urgent action to combat climate change and its impacts*

The United Nations' Sustainable Development Goals are targets to be achieved by 2030. ITER and fusion development in general are on a longer timescale than this framework, but already contribute to several of these Goals at a later stage. For example, they will contribute to a clean energy transition while boosting jobs and growth in the area of energy and climate under Sustainable Development Goal 7 ('Ensure access to affordable, reliable, sustainable and modern energy for all') and **Sustainable Development Goal 13 ('Take urgent action to combat climate change and its impacts')**.

ITER also falls under the category of Research and Innovation, both of which underpin the implementation of virtually all Sustainable Development Goals and in particular Sustainable Development Goal 9 ('Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation')

Finally, ITER is also an example of a global partnership for Sustainable Development Goal 17 ('Strengthen Means of Implementation and revitalise the global partnership for sustainable development').

##### *SDG 17 Strengthen the means of implementation and revitalize the global partnership*

The United Nations' Sustainable Development Goals are targets to be achieved by 2030. ITER and fusion development in general are on a longer timescale than this framework, but already contribute to several of these Goals at a later stage. For example, they will contribute to a clean energy transition while boosting jobs and growth in the area of energy and climate under Sustainable Development Goal 7 ('Ensure access to affordable, reliable, sustainable and modern energy for all') and Sustainable Development Goal 13 ('Take urgent action to combat climate change and its impacts').

ITER also falls under the category of Research and Innovation, both of which underpin the implementation of virtually all Sustainable Development Goals and in particular Sustainable Development Goal 9 ('Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation')

Finally, ITER is also an example of a global partnership for Sustainable Development Goal 17 ('Strengthen Means of Implementation and revitalise the global partnership for sustainable development').

## **1. Overview**

### **1.1. Challenges**

The Covid-19 pandemic is a major shock to the global and Union economy. Due to the necessary containment measures, economic activity in the EU dropped significantly. Industries of strategic importance for the EU countries lost strength due to vulnerabilities such as the over-reliance on non-diversified external supply sources and other factors. In the view of enhancing the resilience of the EU economy and supporting its strategic value chains, these weaknesses need to be addressed at EU level.

Furthermore, the current investment levels and forecasts do not cover the Union's needs for structural investment to restart and sustain long-term growth in the face of technological change and global competitiveness, including needs for innovation, digital skills, infrastructure, small and medium-sized enterprises (SMEs) and the need to address key societal challenges such as sustainability or population ageing.

An intervention at EU level ensures that a critical mass of resources can be leveraged in order to maximise the impact of investment on the ground. The proposal does not replace Member State investment but, on the contrary, it is complementary to such investments, by focusing in particular on support for projects that provide EU added value. In addition, the EU level provides for economies of scale in the use of innovative financial products by catalysing private investment in the whole EU and making best use of the European institutions and their expertise for that purpose. The EU intervention also provides access to a diversified portfolio of European projects, thereby catalysing private investment, and allows for the development of innovative financing solutions, which can be scaled up or replicated, as appropriate, in all Member States.

Intervention at EU level is the only tool capable of effectively addressing investment needs linked to EU-wide policy objectives. In addition, structural reforms and an improved regulatory environment will continue to be necessary to address the remaining investment gaps in the period 2021-2027.

InvestEU will contribute to improving the competitiveness and socio-economic convergence and cohesion of the Union, including in the fields of innovation and digitisation, to the efficient use of resources in accordance with the circular economy, to the sustainability and inclusiveness of the Union's economic growth and to the social resilience and integration of the Union capital markets.

The InvestEU Fund shall provide an EU budget guarantee that will back the financing provided by implementing partners to financial intermediaries and final recipients. The InvestEU Advisory Hub shall provide support for the development of investable projects and access to financing and the InvestEU Portal shall grant visibility to EU projects seeking financing and provide investment opportunities to investors.

### **1.2. Mission (general objectives)**

In order to achieve the Union's policy objectives and to support a swift, inclusive and healthy economic recovery, support is necessary to address market failures and sub-optimal investment situations and to reduce the investment gap in targeted sectors.

The general objective of the InvestEU Programme (Article 3(1)) is to support the policy objectives of the Union by means of financing and investment operations that contribute to:

- (a) the competitiveness of the Union, including research, innovation and digitisation;
- (b) growth and employment in the Union economy, its sustainability and its environmental and climate dimension contributing to the achievement of the SDGs and the objectives of the Paris climate agreement and to the creation of high-quality jobs;
- (c) the social resilience, inclusiveness and innovativeness of the Union;
- (d) the promotion of scientific and technological advance, of culture, education and training;

- (e) the integration of the Union capital markets and the strengthening of the Single Market, including solutions addressing the fragmentation of the Union capital markets, diversifying sources of financing for Union enterprises and promoting sustainable finance;
- (f) the promotion of economic, social and territorial cohesion; or
- (g) the sustainable and inclusive recovery of the Union economy after the crisis caused by the Covid-19 pandemic, including by providing capital support for SMEs that were negatively affected by the Covid-19 crisis and were not already in difficulty in state aid terms at the end of 2019, upholding and strengthening existing its strategic value chains of tangible or intangible assets, developing new ones, and maintaining and reinforcing activities of strategic importance to the Union, including Important Projects of Common European Interest, in relation to critical infrastructure, whether physical or virtual, transformative technologies, game-changing innovations and inputs to businesses and consumers and supporting a sustainable transition.

### 1.3. Specific objectives

The InvestEU Programme has the following specific objectives:

- (a) supporting financing and investment operations related to sustainable infrastructure;
- (b) supporting financing and investment operations related to research, innovation and digitisation, including support for the scaling up of innovative companies and the rolling out of technologies to market;
- (c) increasing the access to and the availability of finance for SMEs and for small midcap companies and to enhance the global competitiveness of such SMEs;
- (d) increasing access to and the availability of microfinance and finance for social enterprises, to support financing and investment operations related to social investment, competences and skills, and to develop and consolidate social investment markets.

### 1.4. Public intervention context

The InvestEU programme aims at contributing to the necessary conditions for the competitiveness of the Union's economy and industry (in accordance with article 173 of the Treaty on the Functioning of the European Union). This is done by providing financial products designed to address Union-wide and Member State specific market failures and suboptimal investment situations and systems to spread such products, which cannot be sufficiently achieved by the Member States, but can rather be better achieved at Union level.

Furthermore, the need for public intervention addressing market failures and sub-optimal investment situations has been amplified with the significant social and economic impact of the current Covid-19 pandemic across Member States and regions. Due to the necessary containment measures, economic activity in the EU dropped significantly. The contraction in EU GDP in 2020 is expected to be around 7.4%, far deeper than during the financial crisis in 2009.

But, even before the pandemic, while a recovery in investment-to-GDP ratios in the Union could be observed, the investment levels remained below what could be expected in a strong recovery and was insufficient to compensate for years of underinvestment following the 2009 crisis. More importantly, the current investment levels and forecasts do not cover the Union's needs for structural investment to restart and sustain long-term growth in the face of technological change and global competitiveness, including for innovation, skills, infrastructure, small and medium-sized enterprises (SMEs) and the need to address key societal challenges such as sustainability or population ageing. Consequently, in order to achieve the Union's policy objectives and to support a swift, sustainable, inclusive, lasting, and healthy economic recovery, support is necessary to address market failures and sub-optimal investment situations and to reduce the investment gap in targeted sectors.

### 1.5. Actions

The InvestEU Fund shall provide for an EU guarantee to support financing and investment operations carried out by the implementing partners that contribute to objectives of the Union's internal policies. The InvestEU Advisory Hub shall provide advisory support for the development of investable projects and access to financing and related capacity building assistance. The InvestEU Portal shall boost project's visibility to a large network of international investors.

### 1.6. Delivery mode

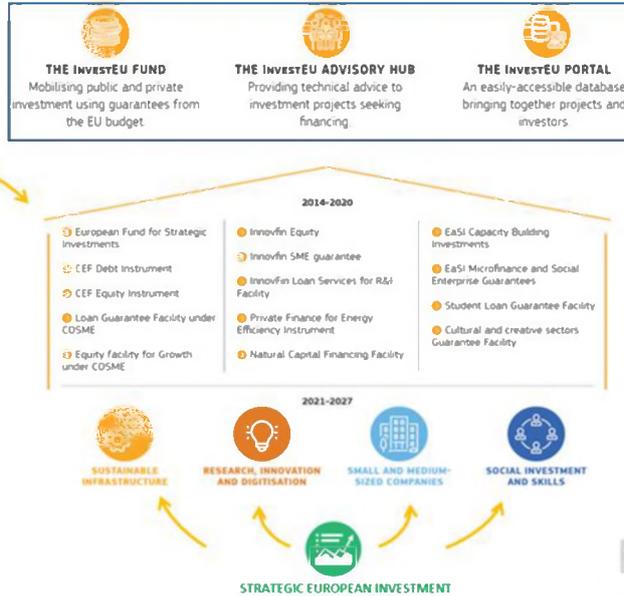

Indirect management through the EIB Group and other implementing and advisory partners. At Commission level, cross-DG cooperation under ECFIN lead.

1.7. Graphic overview of the programme structure

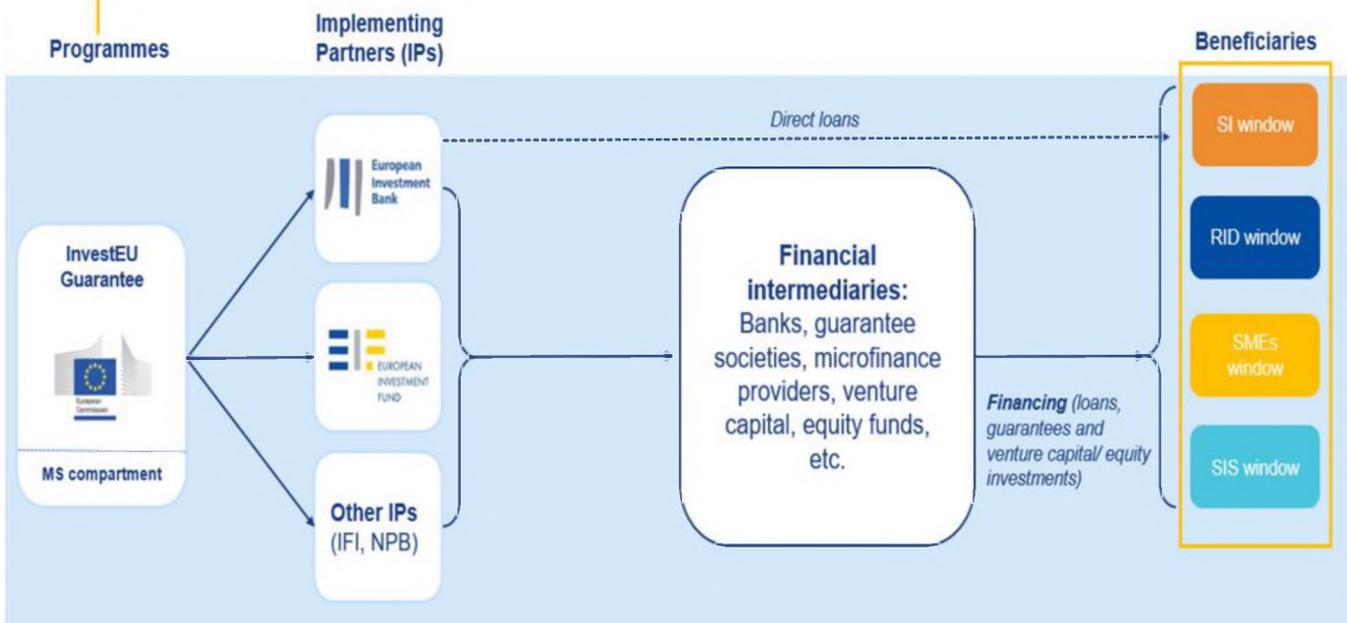

# InvestEU Programme: an overview

**InvestEU Fund:**

- Single fund bringing together the many different EU-level financial instruments
- **EUR 26 bn** EU budgetary guarantee
- Mobilise **EUR 370 billion** in additional investment across Europe, of which 30% to contribute to climate objectives
- Strategic Investments and capital support incorporated across policy windows

# General scheme

1.8. Legal basis and financial programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM (2018) 439: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the InvestEU Programme	2021 - 2027	3 067,7

### 1.8.2. Legal basis explanation

The legal basis: Regulation (EU) 2021/523 of the European Parliament and of the Council of 24 March 2021 establishing the InvestEU Programme and amending Regulation (EU) 2015/1017.

The InvestEU Programme consists of:

- (a) the InvestEU Fund (the successor of the EFSI and other 13 centrally-managed financial instruments),
- (b) the InvestEU Advisory Hub (the successor of the European Investment Advisory Hub (EIAH) and other 12 centrally managed advisory programmes/initiatives) and
- (c) the InvestEU Portal (the successor of the European Investment Project Portal (EIPP)).

The InvestEU Programme will therefore bring together under one roof the multitude of EU financial instruments and advisory services currently available to support investment in the EU. It will make EU funding for investment projects in Europe simpler, more efficient and more flexible.

The InvestEU Fund shall focus on addressing the large investment gaps in key areas of the future through an EU budget guarantee of EUR 26 billion. It will thus further boost job creation and support investment and innovation in the EU. It is expected to mobilise around EUR 370 billion of private and public investment across the EU by end-2027. At least 30% of the InvestEU Fund is expected to contribute to fighting climate change.

A percentage of 75 % of the EU guarantee under the EU compartment, amounting to EUR 19,6 billion, will be granted to the EIB Group. The remaining 25 % of the EU guarantee under the EU compartment shall be granted to other implementing partners.

The InvestEU Fund shall operate through the following four policy windows that shall address market failures or sub-optimal investment situations within their specific scope:

- (a) a sustainable infrastructure policy window which comprises sustainable investment in the areas of transport, including multimodal transport, road safety, including in accordance with the Union objective of eliminating fatal road accidents and serious injuries by 2050, the renewal and maintenance of rail and road infrastructure, energy, in particular renewable energy, energy efficiency in accordance with the 2030 energy framework, buildings renovation projects focused on energy savings and the integration of buildings into a connected energy, storage, digital and transport systems, improving interconnection levels, digital connectivity and access, including in rural areas, supply and processing of raw materials, space, oceans, water, including inland waterways, waste management in accordance with the waste hierarchy and the circular economy, nature and other environment infrastructure, cultural heritage, tourism, equipment, mobile assets and the deployment of innovative technologies that contribute to the environmental or climate resilience or social sustainability objectives of the Union and that meet the environmental or social sustainability standards of the Union;
- (b) a research, innovation and digitisation policy window which comprises research, product development and innovation activities, the transfer of technologies and research results to the market to support market enablers and cooperation between enterprises, the demonstration and deployment of innovative solutions and support for the scaling up of innovative companies, as well as digitisation of Union industry;
- (c) an SME policy window which comprises access to and the availability of finance primarily for SMEs, including for innovative SMEs and SMEs operating in the cultural and creative sectors, as well as for small mid-cap companies;
- (d) a social investment and skills policy window, which comprises microfinance, social enterprise finance, social economy and measures to promote gender equality, skills, education, training and related services, social infrastructure, including health and educational infrastructure and social and student housing, social innovation, health and long-term care, inclusion and accessibility, cultural and creative activities with a social goal, and the integration of vulnerable people, including third country nationals;

A just transition scheme shall be established horizontally across all policy windows. This scheme shall comprise investments which address social, economic and environmental challenges deriving from the transition process towards the achievement of the Union's 2030 climate target and its target of achieving climate neutrality by 2050, as well as benefit territories identified in a just transition plan prepared by a Member State in accordance with the Commission Proposal for a Regulation establishing the Just Transition Fund<sup>1</sup>.

<sup>1</sup> COM (2020) 22 final of 14.01.2020.

All policy windows may include strategic investments including Important Projects of Common European Interest to support final recipients whose activities are of strategic importance to the Union, in particular in view of the green and digital transitions, of enhanced resilience and of strengthening strategic value chains.

Each policy window should be composed of two compartments, that is to say an EU compartment and a Member State compartment. The EU compartment should address Union-wide or Member State specific market failures or sub-optimal investment situations in a proportionate manner.

The Member State compartment should give Member States as well as regional authorities via their Member State the possibility of contributing, on a voluntary basis, a share of their resources from the funds under shared management to the provisioning for the EU guarantee and of using the EU guarantee for financing or investment operations in order to address specific market failures or sub-optimal investment situations in their own territories.

The Member State compartment should also give Member States the possibility of contributing other additional amounts, including those supported by Regulation 2021/241 of 12 February 2021 establishing the Recovery and Resilience Facility (the RRF Regulation), to the provisioning for the EU guarantee and of using the EU guarantee. The provisioning for an EU guarantee relating to a Member State compartment underpinned by other additional amounts contributed by Member States, including those supported by the RRF Regulation, should constitute external assigned revenue.

The InvestEU Advisory Hub will provide project development advisory support and capacity building throughout the investment cycle to foster the origination and development of investment projects and access to financing. The assistance will be provided in the InvestEU Programme's policy areas and will also ensure a central point of access for project promoters and authorities.

The InvestEU Portal will continue the current EIPP, a database providing visibility to investment projects for which EU-based project promoters seek financing and providing investors with information about investment opportunities available in Europe, but with a better linkage between the projects and a possible financing by the InvestEU Fund implementing partners.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total (including NGEU)</b>	<b>2 436,6</b>	<b>3 014,6</b>	<b>2 661,2</b>	<b>194,5</b>	<b>198,4</b>	<b>202,4</b>	<b>206,4</b>	<b>8 914,2</b>

### 1.8.4. Financial programming explanation

The total InvestEU appropriations amount to EUR 11.274,4 million, which includes:

- EUR 10.460,9 million of EU Guarantee provisioning (the EU Guarantee, which is provisioned at the rate of 40%, amounts to EUR 26.152,3 million),
- EUR 8,5 million for support expenditure,
- EUR 430 million for the Advisory Hub and the Portal,
- EUR 375 million for the participation to the capital increase of the European Investment Fund (EIF).

### 1.9. Link with the 2014-2020 MFF

The InvestEU Programme is the successor of the 2014-2020 Investment Plan for Europe. It consolidates the EFSI budgetary guarantee and other 13 EU financial instruments under the 2014-2020 MFF as well as the EIAH and 12 advisory programmes in various policy areas such as sustainable infrastructure, research, innovation and digitalisation, SMEs and social investment and skills. InvestEU brings simplification, flexibility and fewer potential overlaps between EU support instruments.

### 1.10. Relevant websites providing more information

There is a dedicated InvestEU website, which provides information about InvestEU ([www.europa.eu/investeu](http://www.europa.eu/investeu)).

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

The Programme implementation will start in 2021 after entry into force of the InvestEU Regulation.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Implementation Voted budget	8 548 413 795	7 600 862 863
Implementation carry-overs		
Implementation total	8 548 413 795	7 600 862 863
total envelop*	8 548 500 367	
cumulative implementation rate	100%	89%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The legal basis: Regulation (EU) 2015/1017 of the European Parliament and of the Council of 25 June 2015 on the European Fund for Strategic Investments (EFSI), the European Investment Advisory Hub (EIAH) and the European Investment Project Portal (EIPP) – The European Fund for Strategic Investments (EU L 169, 1.7.2015, p. 1) was adopted on 25 June 2015. The Commission and the EIB signed the EFSI and the EIAH Agreements with the EIB on 22 July 2015. Moreover, the Commission Implementing Decision for the EIPP was adopted on the same date.

On 30 December 2017, the Regulation to extend and enhance the European Fund for Strategic Investments (EFSI 2.0) entered into force - Regulation (EU) 2017/2396 of the European Parliament and of the Council of 13 December 2017 amending Regulations (EU) No 1316/2013 and (EU) 2015/1017. It extends the duration of the European Fund for Strategic Investments and introduces technical enhancements for the EFSI and the EIAH.

The EFSI 2.0 Regulation reinforced the definition of "additionality" by specifying the cases where EFSI operations can be considered additional to the private sources and to existing support from other public sources, as referred to in Article 209(2) of the Financial Regulation.

At present, the scoreboard of indicators and the rationale of the Investment Committee's decisions for granting the use of the EU guarantee are made publicly available. The EFSI 2.0 also introduced that at least 40% of projects under the Infrastructure and Innovation Window shall contribute to climate action, in line with the commitments made at the COP21. Moreover, in The EFSI 2.0, the work of the EIAH was enhanced by providing more tailor-made assistance on the ground and working in close cooperation with national promotional banks and institutions. The EFSI support is provided through an EU guarantee of EUR 26 billion. A guarantee fund constitutes a liquidity cushion from which the EIB is to be paid in the event of a call on the EU guarantee. Thus, the liquidity cushion is intended to provide an appropriate safety margin avoiding exposing the Union budget to sudden guarantee calls, which could entail spending cuts or budget amendments. The EFSI Guarantee Fund is financed mainly from payments from the Union general budget and revenues originating from operations under the EU Guarantee. Total EU budget allocated for the Guarantee Fund provisioning amounts to EUR 8 425 million. It is complemented by EUR 675 million as assigned revenues from EFSI, CEF Debt instrument and Marguerite Fund, to reach EUR 9 100 million (until the end of 2022) total provisioning of the EFSI Guarantee Fund.

In 2020, EFSI continued making progress towards the objectives set by the EFSI 2.0 Regulation, in particular on the new climate target of 40% under the Infrastructure and Innovation Window, on the investment mobilised as well as the impact on jobs and growth. By end 2020, EFSI triggered EUR 545.3 billion in cumulative investment across all Member States, thus exceeding the €500 billion end-2020 target while alleviating the impact of COVID-19 on Europe's economy.

EFSI came to the end of its investment period for approvals of operations on 31 December 2020. After 2020, the focus will be on signing approved operations before the deadline for signatures of 31 December 2022. Given the long-term nature of support under the EFSI, operational monitoring will continue until repayment of all underlying financing and investment operations (until 2080). Besides, in 2021 the focus will be also on a smooth transition towards the InvestEU Fund, the proposed new investment support instrument for the next MFF.

In terms of guarantee calls, a total of EUR 217 million was called from the EU guarantee as at the end of 2020. However, due to the current economic situation caused by the COVID-19 pandemic, an increase in the number and volume of future guarantee calls can be expected.

For the EIAH implementation, annual specific grants agreements (SGAs) are concluded between the EU and the EIB for the latter to provide technical assistance to final beneficiaries aiming at developing a pipeline of investment projects. The 2020 SGA was signed in December 2020 and has an N+2 implementation period.

As to the EU's online matchmaking platform, in 2020 the EIPP continued to provide more visibility to EU-based projects enabling investors to easily find investment opportunities in Europe.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

### 3.1.2. Active programme performance

The implementation of the InvestEU Programme will be monitored through more than 30 key performance and monitoring indicators referring to the InvestEU Fund, the Advisory Hub and the Portal and Pillars as well as to the four policy windows of the Programme (see section 4 for further details).

### 3.1.3. Previous programme performance

#### EFSI

The European Fund for Strategic Investments (EFSI) is achieving its objectives, as set in the Regulation. It has supported investments by providing risk-bearing capacity to the EIB and has increased access to financing for SMEs and small-midcaps. The EFSI exceeded the target of unlocking additional investment of at least EUR 500 billion while alleviating the impact of COVID-19 on Europe's economy.

The EFSI has significantly increased the volume of European Investment Bank (EIB) Group financing and investment operations in priority areas. As of end-2020, the EFSI enabled the EIB Group to approve EUR 103 billion of riskier financing and investment operations, of which EUR 83 billion already signed. As of 31 December 2020, 1 549 EFSI projects have been approved by the EIB Group for a total investment value of EUR 545.3 billion: EUR 312.0 billion for Infrastructure and Innovation Window (IIW) investments (733 approved projects) and EUR 233.3 billion (816 approved projects) under the SME Window (SMEW).

The EFSI has also enabled the EIB Group to support unserved markets and clients, for example for the IIW more than three quarters of the clients are new EIB counterparts.

The EFSI is also implemented in strong cooperation with national promotional banks and institutions (NPBIs). As of 31 December 2020, cumulative EFSI investment mobilised in cooperation with NPBIs amounted to EUR 156.3 billion or 28.6 % of the EFSI total. Moreover, 63 investment platforms were approved under the EFSI to help support smaller projects in 22 Member States with sectoral focus on environment, SMEs and social infrastructure projects.

All EU Member States have received financing supported by the EFSI. At the end of 2020, the top beneficiary countries, in terms of the EFSI investments mobilised relative to GDP, were Estonia, Greece, Bulgaria, Portugal and Spain.

While the EFSI is a demand driven instrument, further efforts were ongoing with an aim to improve the geographical balance among the MS by end-2020 (see section on 'Evaluations/studies conducted'). The EFSI Strategic orientation provided that the share of investment under IIW in any three Member States together (measured by signed loans/investment amounts) should not exceed the indicative limit of 45 % of the total EFSI portfolio. As of 31 December 2020, the share of top three Member States (France, Spain and Italy) accounts for 48.5 % of signed EFSI financing and for 45.4 % of investment mobilised by signatures under the IIW. Both metrics are slightly above the indicative limit of 45 % set out in the Strategic Orientation. However, it is expected that at end of the signature period, on 31 December 2022, the actual concentration limit will be close to 45%.

Although the EFSI is neither geographically nor sector-specifically earmarked, but demand driven, it has backed projects across all eligible sectors under the programme.

Support to different sectors under EFSI is considered balanced. The three largest sectors in terms of investment mobilised are access to finance for SMEs and Mid-Caps (33 %), RDI (25 %) and Energy (16 %). As far as IIW is concerned, all the sectors are within the 30 % limit with largest share of the Energy sector (28 %).

On climate objectives, EFSI has slightly surpassed the 40 % objective for climate action under Infrastructure and Innovation Window. In fact, as of end-2020 43 % of signed operations under the Infrastructure and Innovation Window (IIW) in 2020 contributed to climate action. This was achieved through more focused support of climate related projects like renewable energy and energy efficiency.

On job creation and growth, the EIB estimated that as at 31 December 2020, the EFSI IIW operations contributed to creation of more than 1.2 million jobs. As regards intermediated operations under IIW and SMEW, the EFSI helped sustain and support about 11.6 million jobs. EIB also estimated that, by 2019, EFSI investments had increased EU GDP by 0.9 %.

#### Addressing the COVID-19 pandemic

Following the outbreak of the COVID-19 pandemic the EFSI, the available EFSI resources were redirected to existing guarantee instruments. Based on the resources unlocked from EFSI, the EIF provided guarantees worth EUR 2.2 billion to financial intermediaries, making available EUR 8 billion in available financing for businesses, including micro and social enterprises as well as SMEs in the cultural and creative sectors.

Furthermore, in order to provide support to final beneficiaries within the fastest timeframes, the EFSI Steering Board also decided in April 2020 to simplify the approval process for specific underlying operations within Covid-19 Envelopes of financing under the IIW.

Finally, EFSI supported the German BioNTech SE with EUR 100 million in debt financing for the development and manufacturing of COVID-19 vaccine. This allowed the company to expand its manufacturing capacity in order to supply the vaccine worldwide as fast as possible in response to the pandemic.

### Lessons learned

Based on the implementation of EFSI, EIAH and EIPP, some key lessons have been taken for InvestEU:

- first of all, the InvestEU Fund and InvestEU Advisory Hub will not be implemented only by EIB and EIF, but will be open to many other entities, such as international financial institutions and national promotional banks.
- secondly, InvestEU brings-in more simplification by pulling together the EFSI budgetary guarantee, 13 financial instruments and 12 advisory initiatives.
- InvestEU will be more targeted to specific policy objectives, through its 4 policy windows. It will remain a market/demand driven instrument but with a stronger policy focus.
- there will be a clearer definition of additionality, as set out in Annex V of the InvestEU Regulation, and of mobilised investment.
- finally, InvestEU includes a very comprehensive list of performance and monitoring indicators, as set out in Annex III of the InvestEU Regulation.

### European Investment Advisory Hub (EIAH)

Since its launch in September 2015 and until end-2022, the EIAH offers project promoters a single point of entry for technical assistance, guidance and advice covering the entire project lifecycle.

The EIAH is now a well-established and recognised advisory support tool for project promoters and an influential networking partner for the NPBI (national promotional banks and institutions). Thus, after a ramp-up phase that took longer than originally expected, the EIAH became a performing programme that continued to perform well in 2020, since, as of the end of 2020, 611 requests were allocated for EIAH support, and 71 of the EIAH assignments entered the EIB lending appraisal system and could potentially benefit from the EFSI guarantee (representing an estimate of investment of EUR 11,9 billion under EFSI).

The cooperation with NPBI is one of the EIAH's main tools to ensure local outreach. As of end of 2020, the EIAH concluded 29 Memoranda of Understanding (MoUs) with NPBI from 22 Member States and 4 MoUs with other institutions in order to stimulate local demand for advice.

In addition, a call for proposals to develop local advisory capacity within NPBI was launched by the EIAH in December 2017. The call offered co-funding support (EUR 7 million) in the form of grants for a wide range of programmes to support development of investable projects by participating NPBI. The types of eligible activities include: (a) delivery of investment advisory services on behalf of the EIAH, (b) establishment or developing organisational capacity and (c) knowledge transfer for the development of a local advisory capacity. As of the end of 2020, 21 NPBI have submitted their proposals under the Call and 11 funding agreements were signed.

As of end of 2020, the 'Environment and resource efficiency' EIAH sector (which includes Climate Action and Circular Economy) represented almost 20 % of the requests reaching the EIAH. 23 % of EIAH assignments (requests receiving detailed advisory support) have a climate dimension whereas 2 % of the requests have a circular economy dimension. EIAH assignments with a climate action dimension represent an envelope of EUR 16.5 million (25 % of the total EIAH assignments estimated budget) and corresponds to estimated investment costs of EUR 15.3bn.

Finally, the EIB signed an initial agreement with the EBRD on 20 March 2017 to deliver the EBRD Advice for Small Businesses (ASB) Programme in Bulgaria, Greece, Romania and Croatia under the European Investment Advisory Hub umbrella. It includes delivery of more than 390 advisory projects during the funding agreement lifetime (until end-2021), across Bulgaria, Greece, Romania and Croatia, of which at least 10 % will be carried out with international advisers, depending on market needs. As of the end of 2020, 291 requests under this programme were receiving detailed advisory support.

### European Investment Project Portal (EIPP)

The EIPP is the EU's online matchmaking platform which brings together investors and project promoters by providing an easily-accessible and user-friendly database, giving projects more visibility and helping them secure the financing they need to grow and enabling investors to find investment opportunities.

As of end of 2020, the EIPP enabled more than 80 successful matches between project promoters and investors and provided visibility to 1 163 investment opportunities with a total proposed investment of EUR 66.6 billion.

In 2020, the EIPP effectively collaborated with its partners and co-organised several events and participated at numerous events, which due to the pandemic were organised online.

The Changing Worlds Online Webinar took place on in May 2020 and was organised together with the EIPP partner the European Business Angels Network (EBAN). Four EIPP start-ups were selected to pitch to investors.

The European Angel Investment Summit took place in October 2020 and was co-organised together with EBAN, DG GROW and Enterprise Europe Network (EEN) with almost 350 attendees. During the two-day summit, 13 EIPP companies were pitching and 25 start-ups exhibiting.

A joint virtual e-pitching event co-organised with the EIPP partner EuroQuity (Bpifrance) & Blueinvest where 5 EIPP projects in the field of Blue Economy and Renewable Energy participated.

The EIPP was also promoted at various other occasions throughout the year. Nonetheless, the challenges of continuously receiving new good projects for publication as well as new quality investors' registrations remain. Therefore, further communication and promotional activities (e.g. participations to conferences and events, social media campaigns) are envisaged to achieve further visibility of the EIPP.

### 3.2. Key achievements

1.5 million	11.6 million	0.5 million	14.5 million	20 million	22 million	39 million	95 million
SMEs supported	jobs sustained and supported by help from the EFSI	affordable flats built or renovated through EFSI investments	additional households being powered by renewable energy through investments in energy generation	additional households with high-speed internet	people covered by improved health care services	people benefitting from better waste treatment	passengers benefitting from improved transport through infrastructure investments

The EFSI triggered additional investment of EUR 545.3 billion, thereby exceeding the target of EUR 500 billion.

Few examples of EFSI projects:

- EFSI supported a EUR 25 million loan to Apeiron Biologics, a private Austrian clinical stage biotech company. Apeiron has been working in the field of immune-oncology to develop new cancer treatments.
- EFSI supported a company called Azimo based in Poland with a mission to make international payments affordable to all. With its fast, simple and low-cost international payment solutions around the world, Azimo furthers the UN Sustainable Development Goals of financial inclusion and inequality reduction.
- EFSI supported a company called Olmix in France with a EUR 30 million loan. The company uses algae and clay to create better food and fertiliser that can improve the nutrition, hygiene and health of plants, animals and humans.
- EFSI supported the German BioNTech SE with EUR 100 million in debt financing for the development and manufacturing of COVID-19 vaccine. This aims to allow the company to expand its manufacturing capacity in order to supply the vaccine worldwide as fast as possible in response to the pandemic.

#### European Investment Advisory Hub (EIAH)

As of end-2020:

- the EIAH received a total of 1 837 requests of which 81 % were received directly by EIAH, whilst the remaining were sourced through partnership arrangements.
- 1 544 Requests were project-related and of those 874 came from the private sector.
- 611 Requests have been allocated to receive more detailed technical assistance from the EIAH, of which 253 are completed.

#### European Investment Project Portal (EIPP)

In 2020, more than 300 projects were received and 233 projects were published on the EIPP. In total as of end of 2020, the EIPP provided 1163 investment opportunities. In total, more than 80 projects have received financing after being published on the Portal.

### 3.3. Evaluations, studies and reports

#### Evaluations

In 2018, two EFSI evaluations were completed: an independent external evaluation contracted by the Commission and an evaluation by the Operations Evaluation Division (EV) of the EIB.

The independent evaluation assessed the extent to which the EFSI, the EIAH, and the EIPP are achieving their objectives. The EIB evaluation assessed the rationale and design of EFSI, results achieved with emphasis on additionality as well as complementarity and coordination of EFSI with other EU programmes. Both evaluations assessed operations under EFSI 1.0.

The evaluations found that that the EFSI has been relevant both in addressing investment gaps and market needs in terms of size, sector and geographical coverage. They also noted that coherence of the EFSI with other centralised financial instruments has been

ensured over time and that initial overlaps between the EFSI with other EU-level financial instruments offering similar financial products has been addressed promptly by re-focusing existing instruments on new market needs and segments.

The independent external evaluation also found that through its scale, the EFSI has contributed to the reduction of the overall investment gap.

However, the evaluations underlined that the variety of financial instruments delivered under the 2014-2020 Multiannual Financial Framework period has led to some overlaps in their scope. That variety has also produced complexity for intermediaries and final recipients who were confronted with different eligibility and reporting rules. The absence of compatible rules also hampered the combination of several Union funds, although such combinations would have been beneficial in order to support projects in need of different types of funding. Therefore, a single fund, the InvestEU Fund, which builds on the experience of the European Fund for Strategic Investments (EFSI) under the Investment Plan for Europe, should be set up in order to provide more efficiently functioning support to final recipients by integrating and simplifying the financing offered under a single budgetary guarantee scheme, thereby improving the impact of Union support while reducing the cost to the Union payable from the budget.

The evaluations also highlighted some other areas for improvement, notably on the clarification of the concepts of sub-optimal investment situations, of additionality as well as on the definition of key performance indicators. The EFSI 2.0 Regulation already addressed some of these recommendations.

The independent evaluation found that the services offered by the EIAH were highly relevant and critical in securing project development. It also confirmed the importance of the EIPP in increasing transparency of investment opportunities in the EU and render these opportunities known to a high number of stakeholders. The evaluation also highlighted some areas for improvement, in particular, to further improve the EIAH awareness and to increase cooperation between the EIAH and the EIPP.

### Audits

In January 2019, the European Court of Auditors (ECA) published a Performance Audit on the implementation of the EFSI titled '[European Fund for Strategic Investments: Action needed to make EFSI a full success](#)'. The ECA audit looked at operations under the EFSI 1.0. The ECA concluded that the EFSI has been effective in raising finance to support substantial additional investment in the EU. The report also made some recommendations for areas of improvement, which were addressed to the EIB Group, to the Commission or both. Most recommendations were already addressed by the EFSI 2.0 Regulation. The ECA main recommendations include:

- Promoting the justified use of higher-risk EIB products under the EFSI;
- Encouraging complementarity between EU financial instruments: the Commission considers this recommendation as being implemented through the legislative proposals for the post-2020 MFF. The Commission proposal is to establish a single investment programme (InvestEU Programme) in order to enhance consistency and complementarity and to avoid possible duplications and overlaps between different instruments.
- Improving the assessment of whether potential EFSI projects could have been financed from other sources: based on the EFSI 2.0 Regulation, EIB has already included qualitative assessment of additionality, including the availability of complementary and alternative sources of finance.
- Estimating better the investment mobilised: the EFSI multiplier calculation methodologies were updated by January 2019. Those methodologies are applied at approval stage ensuring that only incremental investment mobilised is accounted for towards the EFSI target.
- Improving the geographical spread of EFSI supported investment: the Commission and the EIB, through the EFSI Steering Board, conducted a study assessing the root causes of the observed geographical spread. The EFSI Steering Board also provided recommendations for actions to be taken in the remaining EFSI implementation period until end of 2020.

In 2019, the European Court of Auditors initiated a Performance Audit on the implementation of the EIAH. The final report was adopted in October 2020.

In 2020, the European Court of Auditors published a report on the performance of the EU Budget, which included a chapter on EFSI<sup>2</sup>. The Court concluded that:

- the programme was on track to reach its targets, in particular to mobilise 500 billion euros of investment;
- in a few cases EFSI has supported projects that could have been financed from other sources, although under different financing conditions and that multiplier calculations in some cases have been overstated; but that the Commission and the EIB have taken action to correct the overstatement of the multiplier calculations;
- the EFSI indicators did not fully capture the notion of the specific objective that EIB investments should increase overall, and also that important aspects such as risk level and penetration of key areas were not covered;
- financing had, to an important degree been directed towards Member States harder hit by the crisis;
- the management of the programme showed flexibility to adapt and improve over time;

<sup>2</sup> [https://www.eca.europa.eu/Lists/ECADocuments/annualreport-Performance-2019/annualreport-Performance-2019\\_EN.pdf](https://www.eca.europa.eu/Lists/ECADocuments/annualreport-Performance-2019/annualreport-Performance-2019_EN.pdf)

- a liquidity cushion has been built up progressively as the financial exposure increased, which gives room for a response when a call on the guarantee occurs without affecting the EU budget.

#### **4. Programme 2021-2027 - Key monitoring indicators**

##### **Specific Objective 1 :Support financing and investment operations that contribute to the general objectives of the InvestEU Programme**

###### **Indicator 1:Volume of operations signed**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

Justification of the trend	

### Indicator 8: Number of jobs created or supported

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to sustaining and creating jobs.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 9: Investment supporting climate objectives and, where applicable, broken down by policy window

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Investment supporting climate objectives - 30% overall target										
Milestones										
Actual Progress										Final
Investment supporting climate objectives - 60% climate and environment target for the Sustainable Infrastructure Window										
Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Result
Unit of measurement	EUR million
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to the objective of at least 30% of InvestEU operations contributing to mainstream climate objectives; This indicator is directly linked to the objective of at least 60% of Sustainable Infrastructure window operations contributing to mainstream climate objectives.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 10: Investment supporting digitalisation

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	EUR million
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to boosting digitalisation.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments

Justification of the trend	

### Indicator 11: Investment supporting industrial transition

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	EUR million
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to promoting industrial transition.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 12: Investment supporting just transition

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	EUR million
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to generate investment to the benefit of just transition regions.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 13: Number and volume of operations contributing to the provision of critical infrastructure

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Number of operations contributing to the provision of critical infrastructure										
	Milestones									
	Actual Progress									Final
Volume of operations contributing to the provision of critical infrastructure										

Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Output
Unit of measurement	Number, EUR million
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to uphold and strengthen existing strategic value chains of tangible or intangible assets, to develop new ones, and to maintain and reinforce activities of strategic importance to the Union, including Important Projects of Common European Interest, in relation to critical infrastructure, whether physical or virtual.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

#### Indicator 14: Number and volume of operations contributing to investment in cybersecurity, space and defence

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Number of operations contributing to investment in cybersecurity, space and defence										
Milestones										
Actual Progress										Final
Volume of operations contributing to investment in cybersecurity, space and defence										
Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Output
Unit of measurement	Number, EUR million
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to supporting investment in order to uphold and strengthen existing strategic value chains of tangible or intangible assets, to develop new ones, and to maintain and reinforce activities of strategic importance to the Union, including Important Projects of Common European Interest, in relation to critical infrastructure, whether physical or virtual, in the areas of cybersecurity, space and defence.

Other methodological comments	
Full metadata available at this address	
Justification of the trend	

#### Specific Objective 2 :Support financing and investment operations in sustainable infrastructure

##### Indicator 1: Additional renewable and other safe and sustainable zero and low-emission energy generation capacity installed (in megawatts (MW))

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Impact
Unit of measurement	Megawatts (MW)
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to supported InvestEU operations which contribute to expanding the

	generation, supply or use of clean and sustainable renewable and safe and sustainable other zero and low-emission energy sources and solutions.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 2: Number of households, number of public and commercial premises with improved energy consumption classification

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to supported InvestEU operations which contribute to promote energy efficiency and energy savings (with a focus on reducing demand through demand side management and the refurbishment of buildings).
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 3: Estimated energy savings generated by the projects (in kilowatt-hours (kWh))

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Kilowatt-hours (kWh)
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to promote energy savings.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 4: Annual green-house gas emissions reduced/avoided in tonnes of CO2 equivalent

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Tonnes
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to the decarbonisation of: a) Energy-intensive industries and the substantial reduction of emissions in such industries and b) Energy production and distribution chain by phasing out the use of coal and oil.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	

Full metadata available at this address	
Justification of the trend	

**Indicator 5: Volume of investment in the development, smartening and modernisation of sustainable energy infrastructure**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	EUR million
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to the development, smartening and modernisation of sustainable energy infrastructure, in particular, but not only transmission and distribution level, storage technologies, electricity interconnection between Member States and smart grids.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 6: Additional households, enterprises or public buildings with broadband access of at least 100 Mbps upgradable to gigabit speed, or number of WIFI-hotspots created**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to the development of digital connectivity infrastructure, whether physical or virtual, in particular through projects that support the deployment of very high capacity digital networks, 5G connectivity or that improve digital connectivity and access, particularly in rural areas and peripheral regions.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 7: Number of cross-border and missing links projects (including projects relating to urban nodes, regional cross-border rail connections, multimodal platforms, maritime ports, inland ports, connections to airports and rail-road terminals of the TEN-T core and comprehensive network)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of projects
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to the development of the trans-European transport network (TEN-T) infrastructure, including infrastructure maintenance and safety, the urban nodes of TEN-T, maritime and inland ports, airports, multimodal terminals and the

	connection of such multimodal terminals to the TEN-T networks, and telematics applications.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 8: Number of projects contributing to the digitalisation of transport, in particular through the deployment of European Rail Traffic Management System (ERTMS), River Information System (RIS), Intelligent Transportation System (ITS), vessel traffic monitoring and information system (VTMIS)/e-maritime services and Single European Sky ATM Research (SESAR)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to the digitalisation of transport, in accordance with Union transport priorities and the commitments taken under the Paris Agreement on Climate Change.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 9: Number of alternative fuel supply points built or upgraded**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to alternative fuel infrastructure for all modes of transport, including electric charging infrastructure.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 10: Number of projects contributing to the safety of transport**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to designing and applying technologies that help to improve the safety of vehicles and road infrastructure.
Link MFF 14-20 / MFF 21-27	MFF 21/27

Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 11: Investment contributing to the implementation of plans and programmes required by the Union environmental acquis relating to air quality, water, waste and nature**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	EUR million
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to improving air quality, water, waste and nature, as required by the Union environmental acquis.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Specific Objective 3 :Support financing and investment operations in research, innovation and digitisation, including support for the upscaling of innovative companies and the rolling out of technologies to market.**

**Indicator 1: Contribution to the objective of 3 % of the Union's gross domestic product (GDP) invested in research, development and innovation**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	EUR million
Cut-Off Date	
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to investing 3% of the Union's GDP in research and innovation, as per the Lisbon strategy.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments

Justification of the trend	

## **5. Programme 2014-2020 - Key monitoring indicators**

*Previous Program 1 : European Fund for Strategic Investments (EFSI)*

**Specific Objective 1 :Increasing the number and volume of European Investment Bank (EIB) financing and investment operations in priority areas**

**Indicator 1:The cumulative volume of investment mobilised**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
			125	245	340	420	500			500
	Actual Progress									Final
		60	164,1	256,3	375,5	458,4	545,3			

Are we on track	On track
Indicator type	
Unit of measurement	Estimated volume of funding raised (EUR billion, approved operations).
Cut-Off Date	31/12/2020
Data source	EIB operational reporting
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The EFSI 1.0 target is to mobilise by July 2018 at least EUR 315 billion of additional investment. The EFSI 2.0 target is to mobilise at least EUR 500 billion of additional investment by 2020.
Full metadata available at this address	
Justification of the trend	The indicator is on track and it even exceeded its target.

**Indicator 2:The number of projects to receive support under the EFSI initiative**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
			400	600	750	900	1000			1000

	Actual Progress								Final
	172	421	717	1031	1269	1549			

Are we on track	On track
Indicator type	
Unit of measurement	Number of approved projects
Cut-Off Date	31/12/2020
Data source	EIB operational reporting
Narrative	
Methodology	Cumulative figures
Link MFF 14-20 / MFF 21-27	
Other methodological comments	IIW and SMEW
Full metadata available at this address	
Justification of the trend	The indicator is on track and it even exceeded its target.

### Indicator 3: The cumulative number of countries having received EIB financing (signed operations) under EFSI

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2018
			20	26	28	28	28			28
	Actual Progress									Final
		18	28	28	28	28	28			

Are we on track	On track
Indicator type	
Unit of measurement	Number of countries covered
Cut-Off Date	31/12/2020
Data source	EIB operational reporting
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The indicator is on track as it reached its target.

### Indicator 4: The aggregated multiplier effect

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
		15	15	15	15	15	15			15
	Actual Progress									Final
		13,3	15,18	13,53	15,6	15,66	15,46			

Are we on track	On track
Indicator type	
Unit of measurement	Multiple in number of times of the EU guarantee amount.
Cut-Off Date	31/12/2020
Data source	EIB operational reporting
Narrative	
Methodology	Multiplier effect
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The expected effective EFSI multiplier, which can only be calculated at the end of the EFSI investment period, is around 15 in terms of the use of the EU guarantee compared to the total investment raised for the projects supported under the initiative and the terms of the transactions. As at end-2020, the IIW multiplier related to operations signed was estimated at 13,55x and the multiplier related to SMEW operations signed was assessed at 20,51x. This means that a multiplier effect should be generated by means of the provision of an EU guarantee to the EIB, so that EUR 1 of the EU guarantee under this initiative could generate approximately EUR 15 investment in projects.

## 6. The programme contribution to horizontal policies

### 6.1. Contribution to climate mainstreaming

#### 6.1.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
843,5	904,4	859,2	119,6	122,0	124,5	109,1	3 082,3

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.1.2. Explanation and justification on the financial contribution

Actions under the InvestEU Programme are expected to contribute at least 30 % of the overall financial envelope of the InvestEU Programme to climate objectives. This will be calculated according to the Commission guidance on the InvestEU Programme climate and environmental tracking for implementing partners.

The EFSI 2.0 Regulation, while recognising the demand-driven nature of the EFSI, introduced a target of at least 40 % of the EFSI financing under the Infrastructure and Innovation Window to support projects with components that contribute to climate action, in line with the COP21 commitments. The EIB uses its internationally agreed methodology, as part of its rules and procedures, to identify climate action components or cost shares of supported operations. A Key Monitoring Indicator (KMI) referring specifically to the contribution of EFSI financing under the IIW to climate action was introduced in 2018.

Under InvestEU, implementing partners will report on a key performance indicator on investment supporting climate objectives, per policy window. The methodology for this indicator should be agreed with the implementing partners during 2021.

#### 6.1.3. Key achievements

As of December 2020, the cumulative share of climate action components under IIW was 43% for signed amounts.

Examples of achievements that were financed by the programme are:

- EFSI supported a EUR 70 million loan to Talasol Solar energy power plant based in Spain. The plant is expected to be operational in 2020 and create 500 jobs during the implementation phase.
- EFSI supported a EUR 7.5 million loan to GreenFiber International SA based in Romania to finance a recycling and circular economy project. The project will contribute to the creation of 280 full-time jobs and will increase the amount of waste collected and processed by over 50 000 tonnes per year.

#### 6.1.4. Performance

As of December 2020, the cumulative share of climate action components under IIW was 43% for signed amounts.

## 6.2. Contribution to biodiversity mainstreaming

#### 6.2.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.2.2. Explanation and justification on the financial contribution

Actions under the InvestEU Programme are expected to contribute at least to the ambition of 7.5% of the EU budget reflecting biodiversity expenditures in 2024 and 10% in 2026 and 2027, while considering the existing overlaps between climate and biodiversity goals.

Under InvestEU, implementing partners will report on operations contributing to biodiversity.

#### 6.2.3. Key achievements

Not applicable

#### 6.2.4. Performance

Not applicable

## 6.3. Contribution to clean air financing

Not applicable

### 6.3.3. Key Achievements and Performance (2014-2020)

The EFSI investments in non-combustible renewable energy sources have a secondary positive impact on clean air when this replaces energy production from more polluting sources (see information on SDG 7). It is estimated that approximately EUR 6.4 billion of financing approved under EFSI as of 31 December 2020 contributed principally to clean air objectives. This is expected to help mobilise approximately EUR 31 billion of public and private investments.

### 6.4. Contribution to gender equality

#### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.4.2. Key achievements and performance

Under InvestEU, implementing partners will report on operations contributing to gender equality.

### 6.4.3. Key Achievements and Performance (2014-2020)

Not applicable

### 6.5. Contribution to the sustainable development goals

#### 6.5.1. Goals

##### *SDG 1 End poverty in all its forms everywhere*

The EFSI investment support for empowerment and economic advancement through micro-entrepreneurship, can further contribute to combatting poverty, reducing inequality and promoting peaceful and inclusive societies for sustainable development. Moreover, numerous important social housing projects have been undertaken, as for example in France, Spain, Poland, and Portugal. Over 540 000 social or affordable housing units were built or renovated with the EFSI support.

##### *SDG 3 Ensure healthy lives and promote well-being for all at all ages*

The EFSI investments is estimated to have ensured better healthcare for 22 million people, through contribution to the rehabilitation and expansion of health facilities and the support given to medical research.

##### *SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all*

The EFSI support for social entrepreneurship and social infrastructure contributes strongly to health and wellbeing and inclusive and quality education. As of 31 December 2020, approx. EUR 325.33 million of signed amounts were dedicated to education. This mainly related to social infrastructure investment for the purposes of education like schools or university campuses as well as support for SMEs active in the education sector.

##### *SDG 6 Ensure availability and sustainable management of water and sanitation for all*

The EFSI investment support has significantly contributed to sustainable water management, wastewater treatment and sanitation. As of 31 December 2020, EIB signed around EUR 2.5bn of total EFSI lending volume for projects related to water supply, sewerage and waste management. It is estimated that through EFSI support over 21 million people are benefitting from safer drinking water and 4.2 million m<sup>3</sup> of water per day capacity is ensured from constructed or rehabilitated water treatment plants.

##### *SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all*

It is estimated that the EFSI has facilitated the provision of renewable energy to approx. 14.5 million households. The EFSI investments are estimated to have helped saving over 7 150 GWh of energy per year through the energy efficiency measures of supported projects. As of 31 December 2020, the EFSI signed amounts for energy and environment and resource efficiency reached approx. EUR 18.2 billion and have mobilised an estimated EUR 93.8 billion of investment for energy capacity building from renewable energy sources, improving energy efficiency and supporting electricity network projects. It is worth noticing the promotion of major cross-border projects to increase interconnection and security of supply.

##### *SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all*

EFSI investments can support meaningful advancements towards promoting sustained, inclusive and sustainable economic growth, and full and productive employment and decent work for all. EFSI investment support for empowerment and economic advancement through micro-entrepreneurship and SME support, can further contribute to combatting poverty, reducing inequality and promoting peaceful and inclusive societies for sustainable development. Due to the COVID-19 pandemic, many SMEs have faced a sharply reduced access to liquidity, which dramatically increased the threat of insolvencies. Based on the EUR 1 billion unlocked from the EFSI, the EIF provided guarantees worth EUR 2.2 billion to financial intermediaries, unlocking EUR 8 billion in available financing for businesses, including micro- and social enterprises as well as SMEs in the cultural and creative sectors.

Several employment and start-up programmes have been signed contributing to the creation of a well-qualified workforce as needed by modern economies, as well as generating employment opportunities for young people.

For IIW, EFSI operations are expected to have both temporary and permanent employment effects, related to the implementation and respective the operational phase of the EFSI projects. In addition to the direct impact of EFSI, there is also an indirect or induced employment impact to be considered (for example, a project to develop new transport infrastructure might contribute to new job opportunities in the local economy). By 31 December 2020, EFSI helped sustain and support 11.6 million jobs.

#### ***SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation***

The EFSI's strong support for transport, social and digital infrastructure contributes to inclusive and sustainable growth. In addition, the EFSI's strong support for research, development and innovation projects helps foster innovation and contributes to sustainable industrialisation. As of 31 December 2020, investment in transport infrastructure materialised in signed amounts of approx. EUR 9.3 billion, unlocking some EUR 31.1 billion to promote transport networks, cleaner fleets, to reduce congestions and bottlenecks. These investments provided improved transport for over 95 million passengers.

The EFSI financing targeted also the development of the broadband infrastructure needed to keep different actors connected, as well as development of new technologies needed to promote Europe's long-term competitiveness. The EFSI helped deliver high speed internet for 20 million additional households.

#### ***SDG 10 Reduce inequality within and among countries***

The EIAH is providing advisory support for investment project especially in countries where the financing via the capital market is the less developed. In terms of geographical coverage, 65 % of the advisory support assignments are targeting cohesion countries.

#### ***SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable***

The EFSI's dedicated investments in economic and social infrastructure projects supports advancement towards promoting resilient and inclusive infrastructure, and further efforts to support service-rich integrated infrastructure projects would contribute to inclusive and sustainable cities. The EFSI supported projects about water supply and sanitation, wastewater and solid waste treatment and recycling as well as sustainable urban and rural development. For example, as of end-2020, better waste treatment was made available for over 39 million people through the EFSI supported investments.

#### ***SDG 12 Ensure sustainable consumption and production patterns***

The EFSI investment support to inclusive business practices and SME growth and development could also contribute to promoting sustainable production and consumption practices. This is the case of dedicated support to SMEs active in circular economy, those using recyclable materials, and those deploying energy efficiency measures.

#### ***SDG 13 Take urgent action to combat climate change and its impacts***

EFSI 2.0 sets out a climate action target of 40% for IIW (excluding EFSI financing to SMEs and small Mid-Caps). For achieving this goal, projects such as energy efficiency and clean transport strongly contribute to combatting climate change and its impact, at the same time ensuring access to affordable, reliable and sustainable energy. As of 31 December 2020 this target was exceeded, with 43% of the financing under the IIW<sup>3</sup> dedicated to climate action. In addition, dedicated efforts are made to ensure uptake of broader sustainable growth projects beyond the climate target, and to place a stronger focus on sustainable investments across sectors.

#### ***SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development***

EFSI is providing support to activities related to the sustainable use of marine resources, aquaculture and other elements of the wider bioeconomy. As of 31 December, EFSI has mobilised over EUR 1.0bn of signed financing in the bio-economy sectors.

#### ***SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss***

EFSI investments have contributed to sustainable forest management. It is estimated that 4,500 hectares of new forestry area is planted and 13 m<sup>3</sup> per hectare of yearly forest growth is ensured as a result of EFSI supported projects in this sector.

<sup>3</sup> Excluding EFSI financing to SMEs and small Mid-Caps.

## **1. Overview**

### **1.1. Challenges**

In order to achieve smart, sustainable and inclusive growth, to stimulate job creation and to respect the long-term decarbonisation commitments, the Union needs an up-to-date, multimodal high performance infrastructure to help connect and integrate the Union and all its regions in the transport, energy and digital sectors. Through the Trans-European networks, those connections should help to improve the free movement of persons, goods, capital and services. In particular, they should facilitate cross-border connections, help combating climate change, foster greater economic, social and territorial cohesion and contribute to a more competitive and sustainable social market economy, as well as to accelerate post-coronavirus recovery.

### **1.2. Mission (general objectives)**

The aim of the Connecting Europe Facility (CEF) is to accelerate investment in the field of trans-European networks and to leverage funding from both the public and the private sectors, while increasing legal certainty and respecting the principle of technological neutrality. The CEF should also enable synergies between the transport, energy and digital sectors, thus enhancing the effectiveness of the Union action and optimising implementing costs. Moreover, the programme should also contribute to the EU action against climate change, support environmentally and socially sustainable projects and, where appropriate, climate change mitigation and adaptation actions.

### **1.3. Specific objectives**

In pursuing its mission, the CEF targets the following specific objectives, which correspond to action strands:

1. In the transport sector, the CEF specific objectives aim at:
  - contributing to the development of projects of common interest relating to efficient, interconnected and multimodal trans-European transport network (TEN-T) and infrastructure for smart, interoperable, sustainable, inclusive, accessible, safe and secure mobility;
  - adapting parts of the TEN-T for a dual use of the transport infrastructure in view of improving both civilian and military mobility
2. In the energy sector, the CEF aims at:
  - developing projects of common interest relating to further integration of an efficient and competitive internal energy market, supporting interoperability of networks across border and sectors, facilitating decarbonisation of the economy, promoting energy efficiency and ensuring security of supply. Moreover, it facilitates cross-border cooperation in the area of energy, including renewable energies.
3. In the digital sector, the CEF aims at:

- contributing to the development of projects of common interest relating to the deployment of safe and secure very high capacity digital networks and 5G systems, supporting an increased resilience and capacity of the digital backbone networks on EU territories by linking them to neighbouring territories, as well as fostering the digitalisation of transport and energy networks.

#### 1.4. Public intervention context

##### CEF TRANSPORT

For the transport sector, the CEF represents one of the main spending programmes supporting the Trans European Transport Network policy and reflects the priorities included in the Sustainable and Smart Mobility Strategy<sup>1</sup>.

The policy aims at strengthening the social, economic and territorial cohesion of the Union and contribute to the creation of a single European transport area, which is efficient and sustainable, increases the benefits for its users and supports inclusive growth. The main objective is the completion of a dual layer trans-European transport network structure, developed along Europe through the Core network, including the Core Network Corridors and representing the backbone of the structure to be completed by 2030 and Comprehensive network, completing the connectivity and ensuring cohesion, to be completed by 2050. In this context, the programme will contribute to the EU goal of climate-related spending and decarbonising transport. In accordance with the European Green Deal, CEF 2021-2027 will target a contribution of 60% of its overall financial envelope to co-finance Actions supporting climate objectives and moving fast towards zero-emission mobility.

In line with articles 171 and 172 of the TFEU, Member States are responsible for implementing projects in the transport network. The EU is contributing to the development of the trans-European network by identifying and supporting projects of common interest as per article 7 of the TEN-T Guidelines<sup>2</sup>. The CEF Transport aims at supporting these key projects through grants (direct management) awarded following open competition among applicants having received the support of the concerned Member States. The Union also supports TEN-t transport infrastructure through the Cohesions Funds (Cohesion and ERDF in shared management), through the newly established Recovery and Resilience Facility part of the Next Generation EU Budget (direct management) and through the InvestEU programme (financial products within the sustainable infrastructure window).

##### CEF ENERGY

CEF Energy is an integral part of the Trans-European Networks for Energy (TEN-E) strategy. The TEN-E policy framework is focused on linking the energy infrastructure of EU countries. The TEN-E policy identifies nine priority corridors and three thematic areas in the field of cross-border energy infrastructure and establishes a biennial list of Projects of Common Interest (PCIs) that helps the EU meet its short and long-term energy and climate objectives. PCIs are chosen for their significant expected impact on energy markets and market integration (covering at least two EU countries), and expected contribution to the EU's energy security. They aim at diversifying sources, increasing competition in energy markets by offering alternatives to consumers, and contributing to the EU's climate and energy goals by integrating renewables. The European Green Deal has further emphasized the key enabling role of energy infrastructure in the transition to a climate neutral economy.

The TEN-E Regulation is based on Article 172 of the Treaty on the Functioning of the European Union which provides for the legal base to adopt guidelines covering the objectives, priorities and broad lines of measures envisaged in the sphere of trans-European networks as set out in Article 171. The guidelines also set the conditions under which the EU may financially support the PCIs. CEF Energy is one of the instruments to help reaching the policy objectives of the TEN-E strategy by providing financial support to some projects of common interest. Most PCIs are expected to be commercially viable and financed through regulated network tariffs. In December 2020, the Commission adopted a proposal to revise the TEN-E Regulation and ensure full alignment with the European Green Deal objectives.

CEF Energy includes also a new window for cross-border cooperation in the field of renewables. The new window complements the already existing support for transmission grid infrastructure and storage under the TEN-E framework. This window contributes directly to the enabling framework for cooperation on renewables as called for under Article 3 (d) of Directive 2018/2001/EC which is based on the four cooperation mechanisms: statistical transfers, joint projects between Member States, joint projects with third countries and joint support schemes.

##### CEF DIGITAL

<sup>1</sup> COM(2020) 789 final - Sustainable and Smart Mobility Strategy – putting European transport on track for the future.

<sup>2</sup> Regulation (EU) No 1315/2013 of the European Parliament and of the Council of 11 December 2013 on Union guidelines for the development of the trans-European transport Network and repealing Decision No 661/2010/EU.

Consistent deployment of fixed gigabit/terabit and mobile 5G infrastructures is needed to meet the increasing demand for the secure transfer and processing of massive amounts of geographically distributed data. By their nature, trans-European, gigabit and terabit networks enable data to flow and people to collaborate wherever they are. They connect digital capacities such as cloud and high-performance computing as well as millions of objects and data able to transform vertical sectors such as health, education, tourism, manufacturing, transport and logistics. The COVID-19 pandemic has reconfirmed the importance of very high speed, reliable, secure and affordable internet connections for all: businesses, public services, citizens. Digital connectivity infrastructures are supported at European, national, regional and local levels. By addressing projects of common interest and focusing on cross-border interconnections, CEF Digital will contribute to cross-fertilise these investments and act as a catalyst for the EU-wide digital connectivity ecosystem. The underlying goal is to bring together, in an effective manner, public support and private investment. CEF Digital will thus contribute to bridging the investment gap in the area, accelerate the achievement of EU's connectivity targets, contribute to EU's strategic autonomy and support an EU-wide digital ecosystem.

Alternative sources of public support, such as the Recovery and Resilience Facility, as well as the cohesion policy funds can complement and ensure synergies with the financing offered by CEF Digital, as well as complement the cross-border infrastructure developed under CEF Digital.

### **1.5. Actions**

The programme will provide financial support primarily in the form of grants and procurement. Moreover, it may contribute to blending operations in accordance with the InvestEU Regulation.

In principle, only actions contributing to the achievement of the above specific objectives, taking into account long-term decarbonisation commitments, are eligible for funding.

Such actions include studies, works and other accompanying measures necessary for the management and implementation of the programme and the sector-specific guidelines.

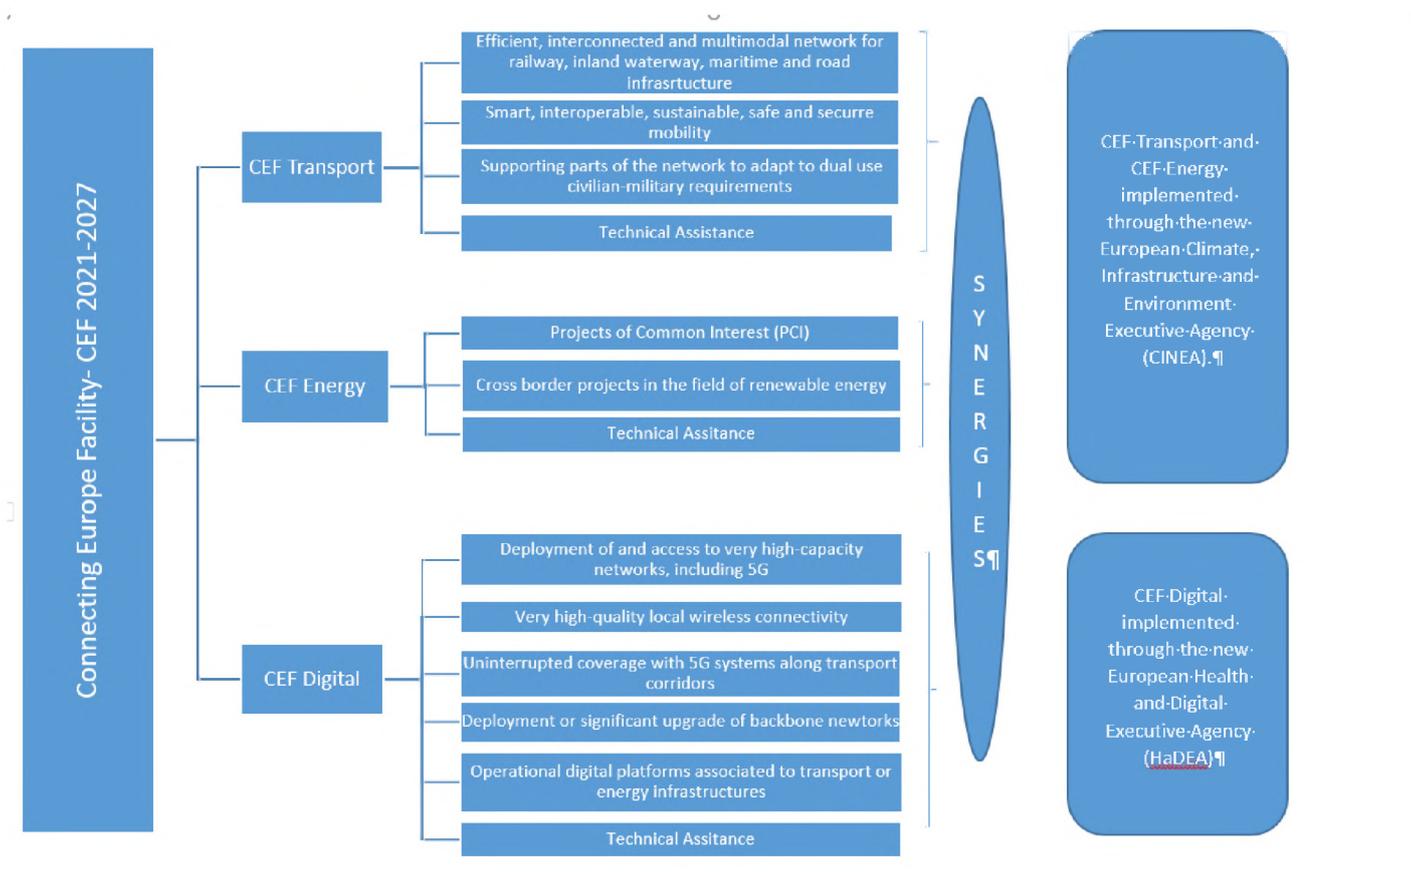

### **1.6. Delivery mode**

The programme will be implemented through direct management. On an ad-hoc basis and if justified, specific actions may be implemented in indirect management.

Three Directorates General are identified as CEF parent DGs, namely the Directorate General for Mobility and Transport (DG MOVE), the Directorate General for Energy (DG ENER) and the Directorate General for Communications Networks, Content and Technology (DG CNECT).

The programme will be implemented through Executive Agencies. The transport and energy strands shall continue to be implemented by the Innovation and Network Executive Agency (INEA), European Climate, Infrastructure and Environment Executive Agency (CINEA) as of 01 April 2021. The CEF digital programme has been delegated to the European Health and Digital Executive Agency (HaDEA)

### **1.7. Graphic overview of the programme structure**

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM(2018)438	2021 - 2027	20 733,5

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
Transport*	3 441,8	3 476,7	3 570,1	3 669,9	3 773,8	3 878,7	3 986,9	25 797,9
Energy	783,2	795,7	811,8	828,6	845,4	862,2	879,7	5 806,5
Digital	273,0	277,2	283,3	288,7	294,8	300,2	307,6	2 024,7
<b>Total *</b>	<b>4 497,9</b>	<b>4 549,6</b>	<b>4 665,2</b>	<b>4 787,2</b>	<b>4 914,0</b>	<b>5 041,1</b>	<b>5 174,1</b>	<b>33 629,1</b>

\* These amounts include Military mobility and the contribution of the Cohesion fund

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

For the transport sector, the CEF programme will continue contributing to the achievement of the TEN-T policy objectives, in particular focusing on the completion of the core network by 2030, through the support to projects of common interest. Moreover, and differently from the CEF 2014-2020 programme, a stronger focus will be put on the modernisation of the TEN-T network, with a dedicated share of investments on telematic application systems, new technologies and innovation (including alternative fuels), interoperability, road safety, infrastructure resilience, accessibility and security of transport. Moreover, the programme will reflect the priorities set in the Sustainable and Smart Mobility Strategy.

The CEF transport strand will continue contributing to the EU goal of climate-related spending and decarbonising transport. In accordance with the European Green Deal, CEF 2021-2027 will target a contribution of 60% of its overall financial envelope to co-financing Actions supporting climate objectives and moving fast towards zero-emission mobility.

For the energy sector, CEF programme will continue contributing to the implementation of projects of common interest and in turn to the achievement of the TEN-E policy objectives including the further integration of an efficient and competitive internal energy market, interoperability of networks across borders and sectors, facilitating the decarbonisation of the economy, and promoting energy efficiency and ensuring security of supply. The European Green Deal has further emphasized the key enabling role of energy infrastructure in the transition to a climate neutral economy. Hence, more focus will be put on contributing to the achievement of the goals and objectives of the Paris Agreement as well as the 2030 climate and energy targets and long-term decarbonisation objective. In addition, the CEF programme aims to enable cross-border projects in the field of renewable energy.

CEF2 digital will depart from the past CEF Telecom 2014-2020 by being fully dedicated to support, through grants or financial instruments, the deployment of high performance digital communication infrastructures. While building on the experience gained with the previous CEF, CEF2 Digital 2021-2027 will represent a step change as regards the scope, volume and intensity of the proposed EU support.

### 1.10. Relevant websites providing more information

For the Transport sector:

[https://ec.europa.eu/transport/themes/infrastructure\\_en](https://ec.europa.eu/transport/themes/infrastructure_en)

[https://ec.europa.eu/transport/themes/infrastructure/ten-t\\_en](https://ec.europa.eu/transport/themes/infrastructure/ten-t_en)

[https://ec.europa.eu/transport/themes/infrastructure/cef\\_en](https://ec.europa.eu/transport/themes/infrastructure/cef_en)

<https://ec.europa.eu/inea/connecting-europe-facility/cef-transport>

All information related to CEF Energy can be found by accessing the following link:

<https://ec.europa.eu/inea/en/connecting-europe-facility/cef-energy>

CEF Digital entails a new programme content. For this reason, information will be provided through dedicated websites to be developed.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

The CEF programme 2021-2027 will start its implementation as soon as there will be an adopted basic act. It is expected that the first call for proposals under the CEF programme will be launched during second quarter of 2021.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	29 888 940 234	12 164 380 131
Implementation carry-overs	0	16 489 584
Implementation total	29 888 940 234	12 180 869 715
total envelop*	29 904 296 366	
cumulative implementation rate	100%	41%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020. These amounts take into account the Cohesion Fund contribution to CEF Transport.

The CEF 2014-2020 cumulative implementation rate reflects the progress of the projects selected for co-funding during the past 7 years of implementation of the programme. The cumulative implementation rate (41%) mirrors the specificity of the programme, where investments are mainly channelled to complex infrastructure projects implemented over a considerably long time span (e.g. CEF Transport projects are expected to be completed by end of 2024). Moreover, specific sectoral issues further delayed the implementation of the programme.

In the 2014-2020 period, CEF Transport co-funding amounting to EUR 23.03 billion was allocated to 959 actions. While addressing infrastructures along both core and comprehensive network of the Trans-European Network for Transport the Programme focuses its support on the Core network, with more than 170 sections concerned.

CEF Transport actions are usually characterised by long implementation periods as they refer to works for large and technically complex transport infrastructure projects, often entailing a risk component. In this framework, payments are disbursed during the entire project life cycle and upon request for payment by the beneficiaries of the CEF Transport Actions. As indicated in the CEF Transport model Grant Agreement, request for payments must be submitted at least every two years and must refer to eligible costs incurred during the project's reporting period.

As per assessment of the yearly reporting of 2020 (covering implementation up to end of 2019), CEF transport projects experienced some delays and their implementation rate is slower than the one indicated in the indicative spending profile within the ongoing Grant Agreements.

#### Specify objective 1- Removing bottlenecks, enhancing rail interoperability, bridging missing links and improving cross-border sections.

Actions supported under this specific objective represent the vast majority of the CEF co-funding for the transport sector. The 463 actions include main cross-border infrastructure projects (e.g. Rail Baltica, Fehmarn Belt fixed link, Brenner Base tunnel, Lyon-Turin, Seine-Scheldt and others) and are mainly implemented by public stakeholders. They represent around 83% of the total CEF co-financing. For this reason, the trends of CEF actions under this specific objective set the pace of the overall CEF Transport implementation.

According to the latest data available on the spending profile of these actions (typically as per ASR 2020), the reported financial progress by the end of 2019 corresponded to around 40%, against an expected progress (as included in the Grant Agreements) of 46%. Actions contributing to this specific objective are characterised by their very complex technical nature. They refer to technically challenging interventions (e.g. alpine crossing- Lyon-Turin and Brenner Base tunnel) often covering two or more Member States (e.g. Rail Baltica covering Estonia, Latvia, Lithuania and Poland) and important investment needs. Often, for these key projects the CEF supports both the study and the works phases.

As underlined in the Commission replies to the ECA special report 10/2010: “[...] The Commission recognises that such major infrastructure projects take a long time [to be implemented]. This is true for all transport infrastructure investments of such size, but even more understandable for the cross-border projects assessed in this audit (involvement of several Member States, budgetary discussions, technical complexity of realisation of tunnels or green-field projects, administrative complexity of permit granting procedures, etc.). As projects mature during the preparatory steps, it is normal that they evolve in terms of scope, alignment, technical parameters, etc., based also on the valuable input received during the public consultations [...]”.

As per assessment of the ongoing Grant Agreements under this specific objective, it has been observed that the main issues affecting their implementation refer to public procurement issues (e.g. complaints/appeals during tender procedures) as well as legal and environmental issues (e.g. permitting, spatial planning, other authorizations and land acquisition). Moreover, technical issues related to unforeseen events (such as landslides), issues related to the projects coordination, political support or to the securing of sufficient co-funding (national or other sources) have also occur during the implementation of these CEF Actions. Furthermore, based on the exchanges with the project promoters during 2020, the outbreak of the COVID19 pandemic has further delayed the implementation of some CEF supported actions.

#### Specific objective 2- Ensuring sustainable and efficient transport systems in the long run, with a view to preparing for expected future transport flows, as well as enabling the decarbonisation of all modes of transport through transition to innovative, low-carbon and energy-efficient transport technologies, while optimising safety.

The 194 actions supported under this specific objective, while responding to a key policy priority, represent the minor part of the CEF co-funding, accounting for around 4%. The majority of Actions relate to the deployment of alternative fuels infrastructures along the TEN-t Network and are often implemented by private stakeholders. According to the latest data available on the spending profile of these actions (typically as per ASR 2020), the reported financial progress by the end of 2019 corresponded to around 28%, against an expected financial progress (as included in the Grant Agreements) of 35%. For many of these actions delays have been accumulated during their initial phase due to the difficulty to secure appropriate locations or due to extra capital expenditure needed for electricity grid connections. In addition, in a number of cases, changes in market conditions have influenced company strategies. As an example, in the hydrogen sector, projects have evolved towards an increased attention for “green H2”. Projects have therefore been re-designed to lower H2 production cost, by installing less electrolyzers of smaller capacity and having more centralized large-scale electrolyzers serving several Hydrogen Refuelling Stations. Furthermore, in many cases, ownership of beneficiary companies has changed generating recast of projects, which delayed and/or affected the scope of the CEF Actions. Based on the exchanges with the project promoters during 2020, the outbreak of the COVID19 pandemic has further delayed the implementation of some CEF supported actions

Specific objective 3- Optimising the integration and interconnection of transport modes and enhancing interoperability of transport services, while ensuring accessibility of transport infrastructures.

The 286 actions reported under this specific objective refer to telematics applications for transport (with the exclusion of ERTMS), Motorways of the Sea, multimodal logistic platforms and actions addressing urban nodes. They represent around 13% of the overall CEF co-funding. The currently reported financial progress by the end of 2019 corresponded to around 59%, against an expected financial progress (as included in the Grant Agreements) of 65%. For the actions related to telematics applications, the delays that have been underlined relate mainly to public procurement issues and the complexity of the consortia/cooperation structures, which often involve high numbers of beneficiaries and several Member States in a single Action. Furthermore, a peculiar issue for these actions refers to the dependency of CEF actions to the deployment of projects/technologies that might in turn be delayed for external reasons. With reference to the other type of actions supported under this specific objective, it has been observed that delays mostly refer to issues comparable to those observed for actions supported under specific objective one (procurement, environmental procedures and permits and technical issues). In particular, actions under the urban nodes priority often take place in dense and complex urban environments and require additional coordination efforts from the beneficiary involving a variety of stakeholders (such as local authorities, infrastructure managers, utilities' providers, passengers and users, etc.). Furthermore, based on the exchanges with the project promoters during 2020, the outbreak of the COVID19 pandemic has further delayed the implementation of some CEF supported actions. Specifically, the aviation sector (ATM functionalities under SESAR) is one of the sectors most hit by the COVID-19 pandemic. Therefore, many beneficiaries have already reported that investments priority and human and financial resources had to be reallocated in order to fight the consequences of the crisis. These issues are likely to result in additional delays.

The overall reported financial progress by the end of 2019 for the transport sector is around 42% (compared with the expected 48% as included in the Grant Agreements) and is the result of delays experienced during the projects' implementation.. The delays described above affect the spending profiles of the Actions, shifting the expenditures to later years, in particular to year 2021 onwards. This situation is further impacted by the COVID crisis.

In this framework, the Commission, in strong cooperation with the INEA, has undertaken a series of actions to mitigate the impact of the above reported issues on the overall spending performance of the programme. These include a close monitoring of CEF Actions, providing for an optimal use of EU-funding. In particular, the agreement reached with beneficiaries for the inclusion of specific monitoring milestones for the Grant Agreements that still include tasks within the critical path of the project, will allow to possibly re-allocate unused funds to other mature projects as result of the last CEF Transport call for proposal during 2021. Furthermore, the Agency continues to implement its monitoring tools, through the assessment of reports, site visits and follow-up meetings with CEF beneficiaries, ensuring a thorough assessment and identifying the actions for which amendments are needed (use it or lose it principle).

As a reaction to the COVID-19 crisis, greater flexibility has also been demonstrated when implementing the CEF Transport programme. This allowed accommodating the needs of project promoters and national authorities to account for the delays caused by the hit of the pandemic on the transport sector. In particular, it has been agreed to extend the maximum duration of the CEF funded actions (and the related eligibility of costs) to the end of 2024, allowing 12 additional months to absorb possible delays related to the COVID-19 crisis. Other immediate administrative and financial measures have also been agreed and put into place by the INEA to cater for the needs of grants' beneficiaries experiencing difficulties (e.g. greater flexibility for reporting deadlines).

Moreover, learning from the experience of the first CEF Transport calls for proposals, the Commission has focused its attention on the careful assessment and inclusion of expected key improvements under the CEF 2021-2027 programme.

The publication of a multi-annual work programme covering the first three years of implementation and more stringent conditions for the assessment of the maturity of the works proposals, will allow to receive funding applications triggered by the readiness status of the projects and to award the CEF support to actions that are ready to deliver and less exposed to risks. These measures will also be accompanied by the future adoption of the directive on streamlining measures for advancing the completion of the Trans-European transport network, aiming at simplifying permitting and granting procedures for cross-border transport infrastructures.

Furthermore, a better integration of the Core Network Corridor Coordinators advice and specific sectoral measures, such as the identification of specific sections of the network where alternative fuels infrastructures need to be implemented, will further enhance the contribution of the programme for the achievement of the TEN-T objective and strengthen the network impact of the programme.

#### CEF Debt Instrument (Financial Instruments)

Further to the amendment of the Delegation Agreement with the EIB in mid-2019, the roll-out of the CEF debt Instrument to support green mobility projects continued and the pipeline of operations kept on growing. The CEF-DI budgetary envelope was paid in full to the EIB to cover operations signed in 2020 and others to follow in 2021. In parallel, other operations were supported by NER300 resources, thereby confirming the effectiveness of channelling these resources through CEF-DI. During 2020, and despite the delays in investment decisions due to COVID19, four new operations were signed under the high-risk "Future Mobility" product, leveraging total investments of EUR 266 million. These operations covered various sectors contributing to the transition to green and sustainable mobility, which highlights the capacity of the Future Mobility instrument to address the transition to green

mobility in an integrated manner. The operations consist of large-scale deployment of Electric Vehicles (EV) charging stations; the implementation of hydrogen refuelling stations and buses; the development of a platform for car-sharing services; and the installation of innovative facilities for modal shift from road to rail.

### **CEF ENERGY**

In the period 2014-2020, CEF Energy co-funding of a total of EUR 4.835 billion was allocated to 149 actions contributing to 102 PCIs. CEF Energy has helped to kick-off and implement key energy infrastructure investments in Europe. In 2020, in the 10th and last call for the period 2014-2020 was completed allocating a total of EUR €997 million in CEF Energy co-funding to 10 actions (see below for more details). By the end of 2020, in total 79 actions which received CEF support have been completed, i.e. 41 electricity and storage, 37 gas and 1 CO<sub>2</sub>, of which 75 studies and 4 works.

The success in awarding CEF Energy co-funding to numerous actions of the PCIs and its contribution to policy objectives of the TEN-E strategy may not be fully reflected yet in the indicators and results reported below due to the long implementation time of the grants for works for large and technically complex energy infrastructure projects. In addition to the long lead-time it takes time before actual results will be reported. Delays may occur for various reasons including securing sufficient co-funding (national or other sources), public procurement issues (e.g. complaints/appeals during tender procedures) as well as legal and environmental issues (e.g. permitting, spatial planning, other authorisations and land acquisition). The Covid19 sanitary crisis has also led to additional delays for some actions, e.g. the need to reschedule public consultations resulting in longer than expected permitting procedures. Moreover, the reporting and monitoring on actual results will only be done with some delay once the project is closed after the final report has been received and assessed, the outputs verified and the final payment (if need be) performed.

The implementation rate of 26% for CEF Energy is lower compared to the overall CEF implementation. This is due to several large multi-annual actions with long lead times due to their very complex nature and possible delays for reasons explained in the previous paragraph. Some of these projects may only be completed by 2025. CEF financial assistance for works has been critical to advance their implementation. These projects include the Baltic Synchronisation Project (PCI 4.8) which will synchronise the three Baltic States' electricity grids with the continental European network and allow the three Baltic States to gain full control of their electricity networks and to strengthen energy security, the Biscay Bay electricity interconnector (PCI 2.7) between Spain and France which will further integrate the Iberian Peninsula into the European electricity market, and the Celtic electricity interconnector (PCI 1.6) that will establish the first electricity link between Ireland continental Europe and end Ireland's energy isolation after Brexit. In addition, the Baltic Pipe project (PCI 8.3) which will establish a new, bi-directional offshore gas pipeline connecting PL and DK through the Baltic Sea as well as the Poland – Slovakia gas interconnection (PCI 6.2.1) are expected to be completed in 2022 with an important contribution to energy security and diversification of supply sources.

A provision in the grant agreements requires project promoters to submit regularly an Action Status Report (ASR) to INEA. ASRs provide an overview on the technical and financial progress of the Action. In addition, PCIs are subject to yearly monitoring by national competent authorities and the Agency for the Cooperation of Energy Regulators (ACER) pursuant to Art. 5 of the TEN-E Regulation. This allows the Commission to monitor the PCIs progress and the implementation of the PCIs.

In the energy sector, the first CEF Debt Instrument was expected to be concluded by the EIB in 2018. However, the financial closing of this operation was eventually cancelled by the project promoter. Therefore, the amount initially committed under CEF Debt Instrument for this operation (EUR 89 million) is available for other energy projects. Possible PCIs that may receive financing under the CEF Debt Instrument are currently under appraisal by the EIB.

### **CEF TELECOM**

The overall investment of almost EUR 200 million in the core service platform enables the EU-wide interoperability of specific digital services such as eHealth, Public Open Data, eID and Cybersecurity. Thanks to CEF support, by the end of 2019 the uptake of these services reached a portfolio of 500 projects in the Member States and participating countries in the European Economic Area, most of which are still being implemented. With an EU contribution of almost EUR 300 million in generic services and an overall leveraged amount of more than EUR 400 million, CEF digital services support EU citizens, businesses and public administrations in interconnecting and adapting their systems to become interoperable across borders.

The **Connecting Europe Broadband Fund**, established under the CEF Equity Instrument with EFSI support, was launched in June 2018, raising EUR 420 million at first closing, through commitments from the European Commission (EUR 100 million) as well as the EIB, three national promotional banks, and one private investor. A second closing took place in July 2020, with two new private investors joining in for EUR 50 million additional commitments. To date, the CEBF has invested into 7 companies across Europe and is on track to raise targeted funds from private investors to reach EUR 550-600 million on final close<sup>3</sup>, which is to be held before June 2021.

<sup>3</sup> terminology used in financial markets referring to closing out, or completing, a deal or transaction. The final close comes at the end of the “due diligence” process applied to the assessment of new investors or project companies

Regarding the **CEF Debt Instrument** (CEF DI), the EIB signed a loan agreement with a project promoter for fibre rollout for a total amount of EUR 100 million, of which EUR 70 million guaranteed by the Commission's commitment to the CEF DI. Total project costs are estimated at EUR 241 million. The EIB has estimated that, upon completion of the project in Slovenia in 2023, an additional 225,000 households (about 25% of the country) will have access to very high-capacity networks.

Regarding WiFi4EU for the period of 2018-2020, more than 8.800 vouchers have been awarded through the programme, with a budget of €130 million spread over four calls. A voucher of €15,000 is granted to municipalities to install free public Wi-Fi in parks, squares, public buildings, libraries, health centres, and museums throughout Europe. Despite the pandemic environment, the network installations are steadily increasing, reaching almost 4.000 in the first quarter of 2021, exceeding expectations.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.2. Active programme performance**

The performance of the CEF 2021-2027 programme will be assessed as soon as the programme will start its implementation period. As indicated above, the first calls for proposals are expected to be launched during second quarter of 2021.

##### **3.1.3. Previous programme performance**

In general, the approach of the Connecting Europe Facility 2014-2020 is good and will be kept in the next multiannual financial framework. In particular, CEF is an effective and targeted instrument for investment in trans-European infrastructure (TEN) in transport, energy and the digital sector, it is expected to strongly contribute to the Commission's priorities on jobs, growth and investment, the internal market, Energy Union and climate and the Digital Single Market. The direct management of CEF grants has proven very efficient, with a strong project pipeline and a competitive selection process, a focus on EU policy objectives, coordinated implementation and the full involvement of Member States.

It is currently too early to conclude whether the programme's goals will be achieved as the nature of large-scale infrastructure projects makes it difficult to already present results. Nevertheless, the close monitoring of the projects provided by the Innovation and Networks Executive Agency (INEA) ensures the identification of actions for which amendments are needed, making the instrument very reactive to new needs and constraints, and allowing, when possible, for swift re-allocations of the funds in case of need.

Furthermore, the CEF parent DGs and the INEA have worked and will continue working to improve the programme's performance. In particular, following the mid-term evaluation of CEF and in line with the recommendations of some ECA special reports, areas for improvement were identified. Notably, due to differences in the sectoral legal frameworks, the programme faced the limitations for cross-sectoral synergies. In addition, it was found that the programme would benefit from more transparency and predictability (see point 2.2 above).

#### ***CEF TRANSPORT***

Projects co-funded under the CEF Transport aim at supporting the completion of the Core and Comprehensive Transport Networks, with a specific focus on the nine Core Network Corridors (CNC). Moreover, the CEF co-financed projects back the achievement of a decarbonised and digitalised transport sector in Europe. In this framework, the CEF actions foster the completion of a smart, high-performance and sustainable transport network, allowing seamless mobility for passengers and freight around Europe. This contributes to the overall EU policy goals of a complete single market, boosting jobs and supporting a smart, sustainable and inclusive growth in the EU

Up to now, the 943 Actions signed within the CEF transport, support more than EUR 23 billion CEF contribution and trigger almost EUR 50 billion of private and public investments. These have strongly contributed to pave the way for the achievement of the key policy objectives for the CEF transport sector. In particular, the CEF is one of the front running EU spending programmes supporting sustainable and digital transition. In line with the European Green Deal, transport investments for infrastructures strongly contributed to climate objectives, feeding the EU long-term decarbonisation commitments. Around 80% of the CEF support has been allocated to the rail and inland waterways sectors and to the support to the acceleration of the deployment of alternative fuels facilities, fostering a new mobility paradigm (please see point 6.1.3 below). Moreover, data and digital infrastructure backing the ecological transition for all sectors, including for transport; have received targeted support, enhancing the deployment of digital solutions for all transport modes.

Over the years the selection of CEF Transport projects has always contributed to the achievement of the TEN-T objectives, ensuring the selection of relevant projects of common interest having an important impact when addressing the removal of

bottlenecks and enhancing interoperability, ensuring sustainable and efficient transport systems and optimising the integration and interconnection of transport modes.

Moreover, the efficient management of CEF funds and the mitigating measures adopted by the Commission services and its Executive Agency (as described under point 2.2), allowed to channel additional re-allocated funds to mature projects that responded to the same key goals, feeding the TEN-t policy objectives.

In detail, as a result, additional calls for proposals could be launched in order to allow for mature projects to benefit from CEF support. In particular, in 2020, the 2019 Multi Annual Call for proposals was successfully completed, selecting 125 projects with an overall contribution of more than EUR 2 billion. More than 90% of the CEF contribution has been allocated to projects expected to address climate related objectives and in particular railway, inland waterways (IWW) and maritime ports infrastructures. More in detail, for these latter, the 19 selected actions foresee the deployment of alternative fuels infrastructures in Core ports of the TEN-T Network. They received more than EUR 105 million of CEF co-funding, triggering investments for more than EUR 380 million. An illustrative project refers to the provisioning of the Baltic seaports of Aarhus, Copenhagen/Malmö, Stockholm and Helsinki with Onshore Power Supply (OPS) to vessels.

Several actions supported as result of the 2019 MAP call concern digitalisation, especially for road and railway transport. In particular, for road, two selected actions relate to the C-roads initiative, contributing to the development of sustainable digital data-infrastructures enabling the roll-out of Day1 and Day1.5 C-ITS applications. Such projects aim at improving road safety and traffic efficiency through applications and dedicated hardware, such as [Intelligent Traffic Light Controllers \(iTLC\)](#) and [the interaction and information exchange between road operators' infrastructure and vehicles](#). These infrastructures also paves the way for the introduction of autonomous vehicles.

In the railway sector, 12 actions related to European Rail Traffic Management System (ERTMS) have been supported through 2020, both under the 2019 MAP call and the CEF Transport Blending Facility. A total CEF support of more than EUR 100 million has been allocated to the development of [on-board prototypes](#) with most technological advanced standard (ECTS Baseline 3) and the consequent [retrofitting](#) of on-board equipment or upgrade of the existing on-board devices (implemented through Blending Facility). These projects will actively contribute to the deployment of the ERTMS technology along the TEN-T network, improving interoperability, sustainability, safety and security of railway operations. Moreover, elements of digitalisation are present in some other actions supported through the 2019 MAP call for proposals, such as for the Inland Waterway sector, for example through projects supporting automation and remote lock operations.

In addition, as per result of the 2019 MAP call for proposal, studies and works for key infrastructural projects expecting to contribute to bridging missing links and cross border sections along the Core Network Corridors have been further secured, such as [Rail Baltica](#), the [northern access to the Brenner Base tunnel](#) and to the [Fehmarn Belt fixed link](#). Furthermore, projects with an awaited focus on the improvement of railway cross border sections have been allocated important CEF co-funding. These projects encompass works to improve interoperability between Czech Republic and Slovakia, Germany and the Netherlands, Hungary and Austria and studies to enhance cross-border connections between Germany and the Czech Republic and between France and Luxembourg. Overall, 53 actions have been selected for the railway sector, with a comprehensive CEF contribution of more than EUR 1.5 billion and triggering an investments of more than EUR 2.7 billion.

For the Inland waterways sector, the 2019 MAP call resulted in 21 selected projects and a CEF support of more than EUR 100 million. The projects mainly concern planned interventions to improve navigability, with works at locks and gates and improvement of Inland waterway ports to enhance the capacity of this transport mode. The CEF contribution is expected to trigger investments to the level of EUR 350 million. An illustrative action relates to the [upgraded infrastructure for waterborne operations along the Meuse and Albert canal](#), contributing to improvement of IWW network in the south of the Netherlands and the Belgian province of Limburg, playing an important role in connecting the European hinterland with maritime ports.

Leveraging on the last remaining budget of the CEF 2014-2020 programme, a final Multi-Annual work programme has been adopted, leading to the publication of the [2020 CEF Transport MAP call for proposals](#) in December 2020. The call, to be awarded in 2021, will keep the focus on the completion of the TEN-T Core Network, through the support of study actions along the Core Network Corridors paving the way to mature infrastructural works to be implemented during the next programming period.

Furthermore, also benefitting from additional available funds, the CEF Transport Blending Facility has achieved important progress. While contributing to the sustainable and digital challenges, the facility has boosted the participation of private sector investors and financial institutions. As of today, four cut-off dates of the facility have been completed. As a result, grants worth EUR 266 million have been awarded and complemented with the Implementing partners support (public financial institutions) will allow an overall investment of more than EUR 1.6 billion. These projects address the uptake of alternative fuels (around 70% of the grants disbursed) and the deployment of European Rail Traffic Management Systems (ERTMS). In continuation with the Blending Facility experience and implementing important lessons learned, a dedicated Alternative Fuels Facility is expected to be implemented within the CEF II framework.

To interpret CEF transport indicator results, it is important to have in mind that their targets are based on the on-going actions selected, and therefore increase every time a new action is selected. In addition, there is a time lag of approximately one year and a half between the actual completion of a project and its registration as a result: this delay corresponds to the administrative closure of the projects.

At the same time, as underlined under section 2.2 above, the implementation pace of the programme and the performance against its related indicators has been delayed by issues not always under the direct control of the Commission. Moreover, the COVID pandemic has further jeopardised the achievement of the expected results during year 2020, delaying the projects implementation and triggering the decision to further extend the programme's duration until the end of 2024<sup>4</sup>.

At this day and for the above-mentioned reasons, around 42% of Actions within the CEF Transport portfolio have undergone an amendment to extend their duration, with an average extension request of 18 months. This led to the postponement of the actual end date of many projects and generated a situation by which 75% of the Actions within the CEF Transport portfolio are expected to be completed between 2021 and 2024.

In the light of above, it can be confirmed that the long-term success and performance of the CEF Transport programme cannot be currently reflected in the indicators reported below. In fact, the majority of the CEF Transport actions signed as outcome of past calls for proposals are still ongoing and their results (outputs) will be achieved up to end of 2024.

## CEF ENERGY

CEF Energy funded actions have significantly contributed to a better integrated EU energy market through strengthening cross-border connections aiming to end energy isolation and eliminate bottlenecks. CEF Energy also supports projects increasing security of supply in Member States where this issue is most pressing. Examples include the Estonia-Latvia third electricity interconnection that will increase the security of supply in the Baltic region by reinforcing north-south electricity connections (see also below), the Gas Interconnector Poland-Lithuania, the first gas interconnector between the eastern Baltic Sea region and continental Europe, and Balticconnector, the first gas interconnector between Finland and Estonia.

In 2020, the 10<sup>th</sup> and last call for the period 2014-2020 was completed and the European Commission allocated a total of EUR 997 million in CEF grants to 10 actions (relating to 9 PCIs), 6 for CO<sub>2</sub>, 2 in the electricity sector, 1 smart electricity grid, and 1 action in the gas sector. Four of these actions relate to construction works and 6 to studies. Key actions that were funded include:

- **Baltic Synchronisation Project, Phase II** (€720 million): Following a previous investment, this new funding will go to the construction of Harmony Link – an electricity cable connecting Poland and Lithuania through the Baltic Sea. The cable will become a building block for the future offshore grid in the Baltic Sea. This funding will also cover investments such as synchronous condensers in Estonia, Latvia and Lithuania.
- **Danube Ingrid** (€102 million): This smart electricity grid project in Hungary and the Slovak Republic will improve network management and increase the quality and security of supply for all market participants. It will also support the efficient integration of renewables.
- **The Porthos CO<sub>2</sub> transport network project** (€102 million): This project between the Netherlands and Belgium will develop an open access CO<sub>2</sub> transport network in three of Europe's main ports (Rotterdam, Antwerp and North Sea Port) leading to an offshore storage site in the North Sea.

The Transparency Platform provides for an interactive map with up-to-date information for each PCI: [http://ec.europa.eu/energy/infrastructure/transparency\\_platform/map-viewer/main.html](http://ec.europa.eu/energy/infrastructure/transparency_platform/map-viewer/main.html).

An indicator screening exercise was carried out in 2017 and showed that some indicators initially proposed for CEF Energy were too difficult and/or lacked sufficient clarity. Therefore, it was proposed already in previous Programme Statements to discontinue these few indicators. Building on this experience, improved and better tailored indicators for CEF Energy have been developed for the Connecting Europe Facility 2021-2027.

For **specific objectives 4 to 6**<sup>5</sup>, it is to be noted that the initial list of 248 energy infrastructure projects that are Projects of Common Interest (PCIs) is updated every two years. The selection of PCIs is an on-going process in order to cater for emerging projects geared to fulfil future needs. It is therefore of prime importance to indicate to which edition of the list indicator values refer to. On 31 October 2019, the Commission published its fourth Union list of PCIs<sup>6</sup>, which contains 149 projects (of which 85 received CEF support), i.e. 100 electricity transmission and storage, 6 smart grid deployment, 32 gas, 6 oil and 5 cross-border carbon dioxide networks. Electricity and smart grids account for more than 70% of the projects, mirroring the increasing role of renewable electricity in the energy system and the need for network reinforcements enabling the integration of renewables and more cross-border trade.

The Actions supported by CEF Energy are overall progressing well with several actions/PCIs completed in 2020 for which CEF Energy provided co-funding for works and/or studies (see below for further details). Only 5 Actions have been terminated since the beginning of the programme. The majority of the closed Actions demonstrated full technical completion and made an important

<sup>4</sup> Information note to the CEF Transport Committee of 11 June 2020- Ares (2020) 3101743-  
[https://ec.europa.eu/inea/sites/inea/files/cefpub/new\\_info\\_note\\_to\\_the\\_cef\\_committee\\_on\\_extension\\_policy.pdf](https://ec.europa.eu/inea/sites/inea/files/cefpub/new_info_note_to_the_cef_committee_on_extension_policy.pdf)

<sup>5</sup> **Specific Objective 4:** Increasing competitiveness by promoting the further integration of the internal energy market and the interoperability of electricity and gas networks across borders;

**Specific Objective 5:** Enhancing Union security of energy supply;

**Specific Objective 6:** Contributing to sustainable development and protection of the environment, by the integration of energy from renewable sources into the transmission network and by the development of smart energy networks and carbon dioxide networks.

<sup>6</sup> Commission Delegated Regulation (EU) 2020/389 of 31 October 2019 amending Regulation (EU) No 347/2013 of the European Parliament and of the Council as regards the Union list of projects of common interest, OJ L 74, 11.3.2020, p. 1 [http://data.europa.eu/eli/reg\\_del/2020/389/oj](http://data.europa.eu/eli/reg_del/2020/389/oj)

contribution to the PCI implementation. In some cases, delays affecting the end date of the Action are however observed. Main reasons for the delays relate to procurement, permitting, public acceptance, regulatory and political issues (see also above). Despite many key projects still on-going, as explained above, some important PCIs could be completed in 2020 and previous years contributing to the specific objectives. A recent study supporting the evaluation of the TEN-E Regulation concluded that commissioned PCIs have increased market integration, security of supply and supported the integration of renewable energy sources into the energy system.<sup>7</sup>

Concerning the specific objective 4 Increasing competitiveness by promoting the further integration of the internal energy market and the interoperability of electricity and gas networks across borders, the completion of the Estonia-Latvia third electricity interconnection will increase the market integration in the Baltic region by reinforcing north-south electricity connections and alleviate the congested Estonian-Latvian border. The additional 600 MW in transmission capacity at the border between Estonia and Latvia will further facilitate the integration of renewable energy sources into the grid. In addition, the completion of BRUA (Bulgaria-Romania-Hungary-Austria pipeline corridor), 1st phase, will enable 1.75 bcm/a firm capacity at the RO-HU border and 1.5 bcm/a at the RO-BG border (Giurgiu-Ruse IP).

Indicators 1<sup>8</sup> and 2<sup>9</sup> are based on the number of PCIs effectively contributing to the specific objectives. These have been monitored during the Programme implementation based on formal monitoring requirements for PCIs set out in the TEN-E Regulation (Art. 5, monitoring and implementation). Although their evolution is only partly related to the CEF budget, these two indicators are kept until the end of the Programme and can be used ex-post.

Indicator 3<sup>10</sup> lists the Member States that are above the 10% interconnectivity target as mentioned in Recital 2 of the TEN-E Regulation. Although its evolution is only partly related to the CEF budget, this indicator has been monitored during the programme implementation. It measures the ratio of the cross-border transmission capacity and the installed generation capacity in a Member State. It can also be used ex-post. In 2020, 19 Member states are at or above the 10% electricity interconnection.

PCIs contributing to this specific objective are progressing, but some face significant delays. Mostly external factors outside CEF Energy are the reasons for these delays. In particular, delays in the permitting phase, often due to public opposition, prevent timely completion. In addition, in some cases it was not possible to implement the projects with the originally envisaged route which required the identification of alternative routes making additional studies and assessments necessary.

In the indicator screening exercise carried out in 2017, indicator 4<sup>11</sup> has been ranked low by DG ENER in terms of relevance to the budget, relevance to the programme, results and data accessibility. For example, price convergence in the electricity or gas sector is not only determined by the level of cross-border capacity changes but also by market design issues for electricity whereas for gas it depends on diversification and access to liquid markets as well as on third-party access to major pipelines. Moreover, the contribution of each specific project cannot be singled out without in-depth network modelling analysis. DG ENER has also expressed that indicator 5<sup>12</sup> relates more to security of supply and in addition is extremely difficult to measure. Notably the indicator in its current definition is not smart enough, as it lacks precision, is severely affected by seasonal changes in gas demand and would need to be applied to more than one pair of Member States, thereby resulting in many different values. Therefore, it is proposed to discontinue indicator 4 and 5.

By the early 2020s, when the gas PCIs currently under implementation will be in operation, Europe should achieve a well-interconnected and shock-resilient gas grid and all Member States will have access to at least three gas sources or the global liquefied natural gas (LNG) market. 23 Member States will have access to the global LNG market with increasing liquidity which is a key element to improve the Union's energy security through the diversification of gas sources. With the completion of the LNG terminal in Krk (Croatia) which comprises a Floating Storage and Regasification Unit (FSRU), a jetty and a connecting high-pressure pipeline, for an approximate send-out capacity of 2 bcm/year, an important milestone was achieved to enhance the diversification and security of natural gas supply for the region. Moreover, the completion of the gas pipeline from Greece to Italy via Albania and the Adriatic Sea [currently known as "Trans-Adriatic Pipeline" (TAP)] project contributes significantly to diversification of supply sources with an additional gas supply capacity of 10 bcm/a to the south east European region.

Concerning the specific objective 5 Enhancing Union security of energy supply, it is important to note, that with the adoption of the third and fourth PCI lists, the number of gas PCIs has changed. On the current PCI list the number of gas PCIs has considerably decreased.

Indicator 1<sup>13</sup> refers to the number of PCIs still to be commissioned supporting the objectives. The indicator has been monitored during the Programme implementation and it can also be used ex-post.

Indicator 2<sup>14</sup> refers to natural gas storage only. Although its evolution is only partly related to the CEF budget, the indicator has been monitored during the programme implementation on the basis of the formal monitoring requirements for PCIs set out in the TEN-E Regulation (Art. 5, monitoring and implementation). The indicator can be also used ex-post.

<sup>7</sup> Ecorys et al. (2021): Support to the evaluation of Regulation (EU) No 347/2013 on guidelines for trans-European energy infrastructure. Final report, <https://op.europa.eu/en/publication-detail/-/publication/19bec11f-5f86-11eb-b487-01aa75ed71a1>

<sup>8</sup> The number of projects effectively interconnecting Member States' networks and removing internal constraints

<sup>9</sup> The reduction or elimination of Member States' energy isolation

<sup>10</sup> The percentage of electricity cross-border transmission power in relation to installed electricity generation capacity in the relevant Member States

<sup>11</sup> Price convergence in the gas and/or electricity markets of the Member States concerned

<sup>12</sup> The percentage of the highest peak demand of the two Member States concerned covered by reversible flow interconnections for gas

<sup>13</sup> The number of projects allowing diversification of supply sources, supplying counterparts and routes

Indicator 3<sup>15</sup> is based on monitoring requirements set out in Regulation No (EU) 2017/1938 on the security of supply for gas, under which Member States have to report every two years to the Commission. The progress of the indicator is based on PCIs which are implemented. Although its evolution is only partly related to the CEF budget, it has been monitored during the Programme implementation. It can also be used ex-post.

Indicator 4<sup>16</sup> contribute to the specific objective 6 only, not relevant for specific objective 5. The indicator is discontinued under the specific objective 5, but kept under the specific objective 6.

The progress of the indicator 5<sup>17</sup> is related to the number of PCIs actually being implemented which allow diversification of supply sources. Although its evolution is only partly related to the CEF budget, the indicator 5 is monitored during the Programme implementation and was kept until the end of the Programme. It can also be used ex-post.

Indicator 6<sup>18</sup> is a “meta-level” indicator and it is not smartly defined to refer to the policy objectives of the TEN-E Regulation, as it is being affected mainly by market design issues. Additionally, there is no definition of what is “optimal use”, which anyway will be seen differently for electricity and gas infrastructure. It is therefore proposed to be discontinued.

Regarding the specific objective 6 Contributing to sustainable development and protection of the environment, by the integration of energy from renewable sources into the transmission network and by the development of smart energy networks and carbon dioxide networks, indicator 1<sup>19</sup> is based on network modelling analysis rather than on actual progress of PCIs for which no intermediate data over the years are available (only 2020). It can only be measured ex-post.

Indicator 2<sup>20</sup> is based on network modelling analysis rather than on actual progress of PCIs for which no intermediate data over the years are available. It can only be measured ex-post.

Indicator 3<sup>21</sup> was changed during the implementation of the programme. The demand response enabled by smart grid projects can be measured only ex- post and should not be mixed up with the number of PCIs supported by CEF. This part of the indicator has been discontinued. The number of smart grid projects supported by CEF, and that will be commissioned by 2020 was monitored during the Programme implementation.

Indicator 4<sup>22</sup> is based on network modelling analysis rather than on actual progress of PCIs for which no intermediate data over the years are available (only 2020). It can only be measured ex-post.

Overall, it is important to note that CEF Energy is a strong catalyst in bringing together project promoters, National Regulatory Authorities and government representatives to solve issues so that cross-border infrastructure projects can be realised. Its grants component is making the difference in promoting cooperation between countries to develop and implement energy interconnection PCIs that otherwise would not happen. This is especially the case for cross-border projects located in countries with smaller population sizes or in a more remote location, where energy tariffs would need to be increased substantially to cover the investment needs. The Celtic electricity Interconnector between Ireland and France and the Gas Interconnector Poland-Lithuania are examples of projects that could not have been funded in a purely national context.

In addition to CEF financial assistance, four High-Level Groups set-up by the Commission in different regions of the EU with a scope of providing high-level political support and direction to assist infrastructure development in these regions, have made an important contribution to the successful completion of action/PCIs. These four groups are the Central and South-Eastern European Connectivity (CESEC) Initiative, the North Sea Energy Cooperation (NSEC), the Baltic Energy Market Interconnection Plan (BEMIP) and the High-Level Group on Interconnections for South-West Europe (HLG SWE). For instance, CESEC has been important to advance the completion of BRUA phase 1, TAP, and the Krk LNG terminal, whereas BEMIP plays an important role in ensuring good progress with the Baltic Synchronisation project.

## **CEF TELECOM**

For the objective of contributing to the efficient flow of private and public investments to stimulate the deployment and modernisation of broadband networks, CEF Telecom invested into two complementary actions: WiFi4EU and the Connecting Europe Broadband Fund (CEBF).

Extensive, but small, ground-level, schemes like WiFi4EU bring significant impact in terms of raising awareness of the importance of connectivity and supporting digital inclusion, especially in rural areas. However, in order to efficiently manage the thousands of beneficiaries it was essential to put in place an adequate IT infrastructure to support the execution of the programme from the

<sup>14</sup> The number of projects increasing storage capacity

<sup>15</sup> System resilience, taking into account the number of supply disruptions and their duration

<sup>16</sup> The amount of avoided curtailment of renewable energy

<sup>17</sup> The connection of isolated markets to more diversified supply sources

<sup>18</sup> The optimal use of energy infrastructure assets

<sup>19</sup> The amount of renewable electricity transmitted from generation to major consumption centres and storage sites

<sup>20</sup> The amount of avoided curtailment of renewable energy

<sup>21</sup> The number of deployed smart grid projects which benefited from the CEF and the demand response enabled by them

<sup>22</sup> The amount of CO<sub>2</sub> emissions prevented by the projects which benefited from the CEF

outset. The experience gained in WiFi4EU is a precious start point for any future similar scheme. In the future CEF Digital, WiFi4EU will evolve to support 5G deployment and take up by local communities.

The CEBF is the first investment platform ever created in Europe to boost investments in broadband infrastructures. The investors are the European Commission, the European Investment Bank (EIB), and three National Promotional Banks and Institutions (NPBIs). The mandate is to finance broadband infrastructure “greenfield” projects, in order to contribute achieving the objectives set forth in the Digital Agenda for Europe (DAE) and the European Gigabit Society (EGS) communication.

The CEBF is supporting deployment projects focusing mostly in remote or rural areas, where population density is low and there is a strong risk of a 'digital divide'. It is contributing to closing the funding gap in the market via direct financing to private sector (focusing on mid-caps and SMEs), publicly owned companies, public and private partnerships, and via financial intermediaries.

The private sector is involved at two levels: 1) at Fund level, to facilitate private investments, by using public funds (first loss piece contributed by CEF Telecom) to absorb part of the risks; 2) at investment level (project promoters), CEBF financing complements private sector funding, as well as public sector support, to cover the financial needs of broadband deployment projects.

At Fund level, CEBF has raised €470 million of financial commitments, including three private investors for a total of €75 million. At project level, CEBF has funded 7 projects, with contributions totalling €195 million and expected private investments of €501 million.

Due to the nature of the projects (“greenfield”, rural areas, market-failure), the CEBF is de-facto acting as a “business angel” for most of those projects. This allows projects to go beyond the stage after which it will be able to raise additional funding from private banks. The role of the Commission’s first loss piece is therefore essential to lower the risk exposure of projects and closing the deal with private investors.

One lesson learnt is that future financial vehicles should have a broader and more flexible scope for strategic investments so as to address policy needs as they emerge. This flexibility is needed to support a sector like digital, which is evolving very rapidly in terms of technologies and markets.

### 3.2. Key achievements

#### **TRANSPORT achievements in 2020<sup>23</sup>**

In 2020, despite the difficulties related to the COVID pandemic, few projects selected under previous calls for proposals (between 2014 and 2017) were opportunely completed, contributing to the achievement of climate and digitalisation objectives for the transport sector:

307	3	2
Pilot multi-standards fast chargers deployed across <a href="#">Belgium</a> , <a href="#">Germany</a> , the <a href="#">Czech Republic</a> and <a href="#">Slovakia</a> in view of future roll-out..	<a href="#">Remote tower services</a> deployed for low traffic airports in Sweden paving the way for future EU deployment	Sections of the German Inland Waterway network improved along the <a href="#">Lower-Havel Waterway</a> and the <a href="#">Elbe-Havel Canal</a> enabling the passage of fully loaded, large self-propelled barges and push barges with double-layered container loads

#### **ENERGY achievements in 2020**

In 2020, the following PCIs were completed and supported by CEF grants for works in previous years include:

- PCI 4.2.1: The Estonia-Latvia third electricity interconnection will increase the security of supply in the Baltic region by reinforcing north-south electricity connections and alleviate the congested Estonian-Latvian border. The additional 600 MW in transmission capacity at the border between Estonia and Latvia will further facilitate the integration of renewable energy sources into the grid. At the same time, the connection is an important prerequisite for the synchronisation of the three Baltic States with the continental European network (CEN).

<sup>23</sup> The achievements mentioned in this section refer to projects closed during 2020. It is anyhow to be noted that the achievements in term of KPIs have been attributed to the year of the CEF supported Action end date.

- PCI 6.24.1: the first phase of the BRUA (Bulgaria-Romania-Hungary-Austria) gas pipeline corridor has been achieved in 2020. It corresponds to the Romanian section, which is the main part of the project, enabling 1.75 billion cubic metres of natural gas capacity at the border Romania-Hungary, and 1.5 at the border Romania-Bulgaria. (Giurgiu-Ruse IP).
- PCI 6.5.1: in 2020, the LNG terminal in Krk (Croatia) has been achieved. It comprises a Floating Storage and Regasification Unit (FSRU), a jetty and a connecting high-pressure pipeline, for an approximate send-out capacity of 2 bcm/year. The terminal will enhance the diversification and security of natural gas supply for the region.

In addition, other PCIs, which received the CEF support for studies on earlier implementation stages, were completed in 2020 include:

- PCI 3.11.2: Internal line between Vitkov and Prestice (CZ): building of a new 400 kV AC double-circuit OHL.
- PCI 5.10: Reverse flow interconnection on TENP pipeline in Germany: construction of the first industrial-scale deodorisation plant in Europe, the new plant will allow the import of gas from France via Switzerland into Germany.
- PCI 7.1.3: Gas pipeline from Greece to Italy via Albania and the Adriatic Sea [currently known as “Trans-Adriatic Pipeline” (TAP)] project completed in November 2020 and gas flows started at the end of December 2020. The pipeline links Turkey to Italy passing through Greece and Albania and, including through connections to neighbouring countries, it can supply 10 bcm/a gas to the south east European region.

## TELECOM

CEBF has proved to be a successful pilot instrument which, based on a Commission’s contribution of EUR 100 million from CEF, has so far raised €470 million capital through other public and private financial commitments.

WiFi4EU delivered on the political promise to attribute connectivity vouchers (of EUR 15.000 each) to about 8.800 municipalities. In March 2021, more than 4.200 networks have been installed by the municipalities and are currently used by European citizens. The initiative also succeeded to establish a direct link with local entities (municipalities, local and regional administrations, etc.), create an active and dedicated community, and raise awareness of connectivity policies.

### 3.3. Evaluations, studies and reports

The key findings of the latest evaluations have been presented in the Programme Statement 2019 <sup>(24)</sup>.

Transport:

At the end of 2019, the Commission has also started the process for the review of the TEN-T Regulation (EU) N° 1315/2013. The evaluation of the existing regulation has been assessed by the Regulatory Scrutiny Board (RSB) on 18 November 2020 and 2 March 2021. The Staff Working Document on the evaluation shall be published by April 2021. In the meanwhile, the impact assessment exercise supporting the revision has been launched with a view to allowing for the preparation of a proposal for the revision of the TEN-T Guidelines by September 2021. An open public consultation for the impact assessment has been launched on 10 February and remains open until 5 May 2021. **Specific studies:**

- **TEN-T Core Network Corridor studies:** Corridor studies for 2018-2019 (4<sup>th</sup> version) have been finalised and published during 2020. The studies provide an updated overview of the TEN-T completion along the 9 Core Network Corridors and for the 2 horizontal priorities of European Railway Traffic Management System (ERTMS) and Motorways of the Sea (MoS).

Energy:

The Commission reported on the latest performance of the TEN-E framework in the Commission Staff Working Document (SWD(2019)395) accompanying the Commission Delegated Regulation amending TEN-E Regulation <sup>(25)</sup> (i.e. 4th PCI list; C(2019)7772). In June 2019 the Commission launched an evaluation of the TEN-E Regulation <sup>(26)</sup>.

In 2020, the Commission carried out an evaluation of the TEN-E Regulation back-to-back with an impact assessment for the revision of the TEN-E Regulation. The evaluation concluded that the TEN-E Regulation has effectively improved integration of Member States’ networks, stimulated energy trade and hence contributed to EU competitiveness, as shown in the evidence on interconnection targets and energy prices and their convergence across the EU. More specifically, PCIs in electricity and in particular in gas have strongly contributed to security of supply as a main contextual driver to the design of the TEN-E Regulation. For gas, the infrastructure is now well connected and supply resilience has improved substantially since 2013. Regional cooperation in Regional Groups and through cross-border cost allocation is an important enabler for project implementation. While permitting procedures have been shortened, long permitting procedures persist in some cases. While the underlying reasons are mainly related to national implementation and outside the scope of the TEN-E Regulation and need to be addressed through an increased focus on implementation and enforcement, there are elements that can be improved also at Union level. CEF financial assistance was an

<sup>(24)</sup> <https://ec.europa.eu/transport/sites/transport/files/legislation/swd-2018-0044-mid-term-evaluation-cef-ia-part2.pdf>

<sup>(25)</sup> [https://ec.europa.eu/energy/sites/ener/files/c\\_2019\\_7772\\_1\\_commission\\_delegated\\_regulation.pdf](https://ec.europa.eu/energy/sites/ener/files/c_2019_7772_1_commission_delegated_regulation.pdf)

<sup>(26)</sup> [https://ec.europa.eu/info/law/better-regulation/initiatives/ares-2019-3443380\\_en](https://ec.europa.eu/info/law/better-regulation/initiatives/ares-2019-3443380_en)

important factor, grants for studies helped projects to reduce risks in the early stages of development while grants for works supported projects addressing key bottlenecks that market finance could not sufficiently address. While the objectives of the current Regulation remain largely valid, it was concluded that their focus on 2020/30 targets must be upgraded to reflect the new political context and the 2050 climate neutrality objective under the European Green Deal<sup>27</sup>

In December 2020, the Commission published a proposal for a revised TEN-E Regulation to fully align the regulatory framework with the European Green Deal contributing to the Union's 2030 climate and energy targets and the climate neutrality objective by 2050<sup>28</sup>

#### **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :To contribute to the development of projects of common interest relating to efficient and interconnected networks and infrastructure for smart, sustainable, inclusive, safe and secure mobility (Transport strand)**

**Indicator 1: Number of cross-border and missing links addressed with the support of CEF**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Output
Unit of measurement	Units
Cut-Off Date	
Data source	CINEA
Link to the objective	The indicator aims at monitoring and measuring the CEF programme, fulfilling the specific objective of contributing to the development of projects of common interest related to efficient interconnected and multimodal networks and infrastructure for smart, interoperable, sustainable, inclusive, accessible, safe and secure mobility (art. 3.2. a. i) of CEF II draft Regulation) In particular, it refers to eligible actions relating to efficient, interconnected, interoperable and multimodal networks for the development of railway, road, inland waterway and maritime infrastructure (art. 9.2.a) of the CEF II draft Regulation).

Justification of the trend	

**Indicator 2: Number of CEF actions contributing to the smartening and digitalisation of grids and increasing energy storage capacity**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
-----------------	--

Indicator type	Output
Unit of measurement	Unit
Cut-Off Date	
Data source	The data will be collected after grant agreement signature and will be available as of that moment. The first grant agreements are expected to be signed in 2022.
Link to the objective	Developing a smart and efficient energy system including storage and demand response solutions that help balance the grid significantly contributes to the ambitious EU long-term decarbonisation objectives, ensures efficiency and security of energy supply. Smart grid projects play key role in energy transition by integrating electricity generation, distribution or consumption using real time system management and influencing cross-border energy flows. The indicator shows the contribution of the CEF funded actions to achievement of these specific objectives.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Specific Objective 5 :To contribute to sustainable development through enabling decarbonisation (Energy strand)

#### Indicator 1: Number of CEF actions contributing to projects enabling increased penetration of renewable energy in the energy systems

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Units
Cut-Off Date	
Data source	The data will be collected after grant agreement signature and will be available as of that moment. The first grant agreements are expected to be signed in 2022.
Link to the objective	The focus of the TEN-E policy is shifting towards the accelerated integration of increasing amounts of renewable energy in line with the ambitious energy and climate targets, related energy security and the completion of the internal energy market by addressing remaining bottlenecks. Deployment of electricity interconnectors and storage facilities, development of the smart grids is crucial for integrating energy markets and enabling more renewables in the system. At the same time, biogas and renewable hydrogen are expected to play an important role in the future EU energy mix. The indicator will show the number of the CEF supported actions contributing to the projects of common interest enabling the increased penetration of renewable energy in the energy systems.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

#### Indicator 2: Number of CEF actions contributing to cost efficient reaching of the EU shared RES target on the basis of cross-border cooperation in the area of renewables

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Units
Cut-Off Date	
Data source	The data will be collected after grant agreement signature and will be available as of that moment. The first grant agreements are expected to be signed in 2021.
Link to the objective	The RED II Directive establishes a share EU target for RES by 2030. To create opportunities for reducing the cost of meeting the EU target and to give flexibility to Member States to comply with their obligation not to fall below their 2020 national targets after 2020, it is allowed the consumption in Member States of energy produced from renewable sources in other Member States and Member

	States are allowed to count energy from renewable sources consumed in other Member States towards their own renewable energy share. Bilateral or multilateral cooperation agreements (statistical transfers, joint projects between Member States or joint support schemes) and the voluntary opening of support schemes to projects located in other Member States are supported under CEF actions.
Link MFF 14-20 / MFF 21-27

Total										
	Milestones									2023
							35140,1	46553	55761,3	63078,6
	Actual Progress									Final
	876,9	2453,6	5880,1	10799,3	17034,5	24162,6	35140,1			

Are we on track	Moderate progress
Indicator type	Input
Unit of measurement	EUR million
Cut-Off Date	17/02/2021
Data source	INEA - Costs correspond to the latest available information (grant agreements and Action Status Reports) for CEF Transport/Energy actions. Costs are attributed to the year in which they have been, or are expected to be, incurred. For CEF Telecom no yearly split is available, costs have been assigned to the year of signature of the grant agreement. For CEF Telecom lump sum actions, the EU contribution was considered as costs. For CEF Synergy the costs have been allocated under Transport and Energy sector based on the activity sectors. The costs are indicated in EUR million and cumulated over the years.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Transport: The data measure total investment (i.e. eligible costs) for all signed CEF grant agreements (i.e. data do not measure overall investments in the entire TEN-T network, to which various other actors - including Member States, structural funds and private sector – contribute).
Full metadata available at this address	
Justification of the trend	The Indicator simply describes the CEF portfolio of projects. It follows a good trend as majority of the CEF funds have been already allocated to Grant Agreements and triggered additional private and/or public investments contributing to the CEF objectives.

## Indicator 2: Volume of private investments in projects of common interest achieved through the financial instruments under the CEF Regulation

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Transport										
2013	Milestones									2022

Data source	
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	CEF Transport: the data on the actual progress correspond to the payments made to the EIB in the framework of the CEF DI instrument. It is to be noted that total investment generated for operations signed since 2014 amount to around EUR 5.900 million. Detailed reporting DG BUDG will be provided in working document X, in line with the provisions of article 41 (4) of the Financial Regulation. CEF Energy: This includes the projected CEF Debt operation in the energy sector and TEN-E projects completed with the financing mobilised under EFSI to which CEF contributed financially [e.g. BRUA project, TAP]. It is to be noted that for the CEF 2021-2027 all financial

Instruments will be managed through the InvestEU programme.
---

**Indicator 3: Volume of private investment in fast and ultra-fast broadband internet**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
										At least a third of the expected 1 000-1 700
	Actual Progress									Final
						26	501

Are we on track	Deserves attention**
Indicator type	Impact
Unit of measurement	Transport: Million tonnes CO2 equivalent Energy: percentage of greenhouse gas emission reduction compared to 2008
Cut-Off Date	31/12/2019
Data source	Transport: European Environment Agency. <a href="https://www.eea.europa.eu/data-and-maps/indicators/transport-emissions-of-greenhouse-gases-7/assessment">https://www.eea.europa.eu/data-and-maps/indicators/transport-emissions-of-greenhouse-gases-7/assessment</a> Energy: European Environment Agency. <a href="https://www.eea.europa.eu/data-and-maps/indicators/greenhouse-gas-emission-trends-7/assessment">https://www.eea.europa.eu/data-and-maps/indicators/greenhouse-gas-emission-trends-7/assessment</a>
Narrative	Transport: Target: 881 Mt of CO2 eq (level in 2030) (20% reduction by 2030 compared to 2008). For year 2019 value is a preliminary estimate based on approximated GHG inventories reported by Member States under the MMR Regulation (EU) No 525/2013. This does not include shipping (assumed unchanged) and it refers for the first time to EU-27.Energy: Milestones Commission's Report on Member States' progress towards their indicative targets for 2020 (COM(2017) 687) published in November 2017; In 2014 the EU was already 2.2% below the final energy consumption target of 1 086 Mtoe for 2020, but still 1.6% above the 2020 target for primary energy consumption of 1 483 Mtoe.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Transport: the indicator shows that CO2 emissions in the transport sector are increasing and that a particular attention should be paid to this issue. Despite the efforts towards green transport solutions, including through the support of infrastructure for sustainable transport modes (e.g. more than 70% of CEF investments into railway infrastructure), the main transport operations still impact on the level of greenhouse gas emissions. The European Green Deal aims at addressing this issues, including for the transport sector. In the period 2021-2027 CEF will continue contributing to sustainable and digital infrastructure supporting the green transition. Trends show that if important and consequent measures are taken, the level of CO2 equivalent emissions could drop to the level of 970 Mt by 2030. Transport: <a href="https://www.eea.europa.eu/data-and-maps/indicators/transport-emissions-of-greenhouse-gases-7/assessment">https://www.eea.europa.eu/data-and-maps/indicators/transport-emissions-of-greenhouse-gases-7/assessment</a> Energy: According to recent estimates, GHG emissions in the EU-27 countries were 24 % lower in 2019 than in 1990. The emission decrease between 2018 and 2019 was 4 % - the steepest

annual reduction seen in the last decade.
---

**Indicator 2: Increase in energy efficiency**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

		3.1% above the 2020 target for the primary energy consumption of 1 483 Mtoe	4% above the target for the primary energy consumption of 1483 Mtoe	5.3% above the target for the primary energy consumption of 1 483 Mtoe	5% above the target for the primary energy consumption of 1 483 Mtoe	3% above the target for the primary energy consumption of 1 483 Mtoe				

Are we on track	Deserves attention**
Indicator type	Impact
Unit of measurement	Transport and Energy: Million of tonnes oil equivalent Mtoe
Cut-Off Date	31/12/2018
Data source	Transport: <a href="https://appsso.eurostat.ec.europa.eu/nui/submitViewTableAction.do">https://appsso.eurostat.ec.europa.eu/nui/submitViewTableAction.do</a> Energy : <a href="https://ec.europa.eu/eurostat/statistics-explained/index.php/Energy_saving_statistics">https://ec.europa.eu/eurostat/statistics-explained/index.php/Energy_saving_statistics</a>
Narrative	Transport: Please note that both target and achievement refer to EU 28. Figures for 2019 are based on EEA estimates. There is no specific target for transport sector in the EU Regulation. Energy: The European Union (EU) has committed itself to a 20 % reduction of energy consumption by the year 2020 compared to baseline projections. This objective is also known as the 20 % energy efficiency target. In other words, the EU has committed itself to have a primary energy consumption of no more than 1 483 Mtoe and a final energy consumption of no more than 1 086 Mtoe in 2020
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Transport: as indicated by the European Environment Agency (EEA): Final energy consumption (FEC) in the 27 EU Member States remained largely stable between 2018 and 2019, according to early EEA estimates (EEA, 2020). The FEC value reached in 2019 (990 million tonnes of oil equivalent (Mtoe)) was the highest in almost a decade, and far from the minimum achieved in 2014. T Increasing energy consumption in the transport sector is slowing down overall progress. In this framework the CEF related investments in sustainable transport infrastructure are not sufficient to trigger a change in the trend and additional measures, especially with reference to operations should be adopted. Energy: In 2019, primary energy consumption in the European Union (EU) of 27 Member States reached 1 352 million tonnes of oil equivalent (Mtoe), which is 3.0% above the efficiency target for 2020 and 19.9% away from the 2030 target. Final energy consumption reached 984 Mtoe: 2.6% above the efficiency target for 2020 and 16.3% away from the 2030 target. Compared with 2018, primary energy consumption decreased by 2% at EU level and final energy consumption by 1%.

**Indicator 3: Share of renewable energy**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Transport

	Actual Progress								Final
		16,40%	17,04%	17,50%	18,0%	19,7%			

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Transport: Shares of energy from renewable sources used in transport in Europe.
Cut-Off Date	31/12/2019
Data source	Transport: European Environment Agency (EEA). <a href="https://www.eea.europa.eu/data-and-maps/daviz/share-of-renewable-energy-7#tab-googlechartid_chart_71">https://www.eea.europa.eu/data-and-maps/daviz/share-of-renewable-energy-7#tab-googlechartid_chart_71</a> Energy: <a href="https://ec.europa.eu/eurostat/statistics-explained/index.php/Renewable_energy_statistics">https://ec.europa.eu/eurostat/statistics-explained/index.php/Renewable_energy_statistics</a>
Narrative	The use of renewable energy sources is seen as a key element in energy policy, reducing the dependence on fuel imported from non-EU countries, reducing emissions from fossil fuel sources, and decoupling energy costs from oil prices. Directive 2009/28/EC on promotion of the use of energy from renewable sources established accounting criteria for the 2020 targets on renewable energy sources. To be noted that figures for years 2016,2017 and 2018 have been updated in line with the information provided by the EEA. Data for 2019 are based on estimates by the EEA.

Justification of the trend	Transport: the figures clearly indicate a positive trend for the use of renewable energy for the transport sector. Investments in clean transport infrastructure and in particular the deployment of alternative fuels infrastructure along the transport network, actively contribute to this trend. Energy: The 2020 indicator will be clear next year. The milestone for 2020 is 20%.

### Specific Objective 1 :Removing bottlenecks, enhancing rail interoperability, bridging missing links, and improving cross-border sections

#### Indicator 1:The number of new or improved cross-border connections

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of bottlenecks on cross-border connections (new or improved) which are expected to be addressed by the actions for which CEF grants were awarded										
2013	Milestones								End of programme	
0				1	2	6	24	37	62	93
	Actual Progress								Final	
	0	0	0	1	2	3	3			
Estimated total private, public or public-private partnership investment (i.e. eligible costs) triggered by CEF funding in a given year for achieving this indicator										
2013	Milestones								End of programme	
							10 081,49	11282,6	14385,3	15697,8
	Actual Progress								Final	
	228,7	413,8	1159,5	2373,1	3805,1	5411,6	7953,2			

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	Number of bottleneck and in EUR million respectively.
Cut-Off Date	31/12/2020
Data source	
Narrative	The bottleneck is considered to have been addressed in the year during which the action was/is expected to be completed.
Methodology	Data shown cumulative. The target 2024 is the cumulative outputs for projects signed until 2020. Other projects are expected to be signed in 2021 and the final target will only be known after. The milestones are expected results by actions still ongoing while actual results correspond to outputs achieved by closed CEF Transport actions. To be also noted that CEF supported actions contribute to the reporting only once assessed by the INEA and closed. In this framework, beneficiaries have 12 months after the final end date of implementation of the Action to submit their final report. To this, the additional time for INEA to assess the report and close the Action shall be considered
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	In 2020, the “real” milestone (i.e. considering a 15 months gap to administratively closed the action,

	ultimate end date of the actions considered is hence September 2019) is estimated to be 3. The indicator is hence on track if the additional administrative time-frame is considered. It is to be noted that the COVID pandemic has further delayed the submission of reports and hence the achievement of the expected results for year 2020. Milestones and target reflect the current programme portfolio, following amendments and terminations due to implementation issues (use it or lose it principle). Cross-border projects are exposed to greater risks in terms of issues related to the projects coordination and political support. DG MOVE mitigates these risks also through soft policy means outside the framework of the CEF Regulation. In particular, the Core Network Corridor Coordinators play a key role in anticipating and addressing project coordination and political issues related to cross-border projects.

Justification of the trend	In 2020, the “real” milestone (i.e. considering a 15 months gap to administratively closed the action, ultimate end date of the actions considered is hence September 2019) is estimated to be 31. The indicator is hence on track if the additional administrative time-frame is considered. It is to be noted that the COVID pandemic has further delayed the submission of reports and hence the achievement of the expected results for year 2020. Milestones and target reflect the current programme portfolio, following amendments and terminations due to implementation issues (use it or lose it principle). Changes of the national deployment plans, long procurement procedures, dependence on other rail projects conditioning its deployment and technical difficulties are the main delay factors observed. These factors are not under the direct control of the Commission.

### Indicator 3: The number of removed bottlenecks and sections of increased capacity for all modes on core network corridors which have received funding from the CEF

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of bottlenecks addressed/to be addressed by CEF grants

Justification of the trend	In 2020, the “real” milestone (i.e. considering a 15 months gap to administratively closed the action, ultimate end date of the actions considered is hence September 2019) is estimated to be 22. The indicator is hence on track if the additional administrative time-frame is considered. It is to be noted that the COVID pandemic has further delayed the submission of reports and hence the achievement of the expected results for year 2020. Milestones and target reflect the current programme portfolio, following amendments and terminations due to implementation issues (use it or lose it principle). The implementation pace of the programme and the performance against this indicator has been delayed by issues not always under the direct control of the Commission. Moreover, the COVID pandemic has further jeopardised the achievement of the expected results during year 2020, delaying the projects implementation, allowing for more flexible reporting deadlines and triggering the decision to further extend the programme’s duration until the end of 2024.								

**Indicator 4: The length of the inland waterway network by class in the Union**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Km by Inland Waterway (IWW) class to be upgraded by CEF grants										
2013	Milestones									End of programme

Justification of the trend	In 2020, the “real” milestone (i.e. considering a 15 months gap to administratively closed the action, ultimate end date of the actions considered is hence September 2019) is estimated to be 86. The indicator is hence on track if the additional administrative time-frame is considered. It is to be noted that the COVID pandemic has further delayed the submission of reports and hence the achievement of								

	the expected results for year 2020. Milestones and target reflect the current programme portfolio, following amendments and terminations due to implementation issues (use it or lose it principle). For IWW sector, the achievement for year 2019 (closed in 2020) demonstrate a good trend for the finalisation of projects. The COVID pandemic has slightly jeopardised the achievement of the expected results for 2020.

Justification of the trend	In 2020, the “real” milestones (i.e. considering a 15 months gap to administratively closed the action, ultimate end date of the actions considered is hence September 2019) are estimated to be 48 km for the gauge, 74 km for the electrification and 53 km for freight . The indicator is hence moderately on track if the additional administrative time-frame is considered. It is to be noted that the COVID pandemic has further delayed the submission of reports and hence the achievement of the expected results for year 2020. Milestones and target reflect the current programme portfolio, following amendments and terminations due to implementation issues (use it or lose it principle). In particular, railway actions feeding to this indicator have been mainly affected by refer to public procurement issues (e.g. complaints/appeals during tender procedures) as well as legal and environmental issues (e.g. permitting, spatial planning, other authorizations and land acquisition). Moreover, technical issues related to unforeseen events (such as landslides) and COVID affected timely completion.

**Indicator 6: Setting up of the core network corridors structures with designation of Coordinators, creation of Corridor Forums and approval of work plans**

Indicator type	Output
Unit of measurement	Number of supply points and EUR million respectively.
Cut-Off Date	31/12/2020
Data source	INEA
Narrative	Foreseen milestones are expected results by still ongoing CEF actions. Each supply point is assumed to be operational in the year in which the CEF funded action has been completed. A CEF-funded action can include several supply points. The number of supply points is attributed to the year when the full action defined in the grant agreement has been completed (e.g. if a grant stipulates the creation of 100 supply points, the action is only considered as completed in the year when all 100 supply points have been set up. All the 100 supply points are then attributed to that year, even if most of them had already been set up in previous years).
Methodology	Data shown cumulative. The target 2024 is the cumulative outputs for projects signed until 2020. Other projects are expected to be signed in 2021 and the final target will only be known after. The milestones are expected results by actions still ongoing while actual results correspond to outputs achieved by closed CEF Transport actions. To be also noted that CEF supported actions contribute to the reporting only once assessed by the INEA and closed. In this framework, beneficiaries have 12 months after the final end date of implementation of the Action to submit their final report. To this, the additional time for INEA to assess the report and close the Action shall be considered.

Full metadata available at this address	
Justification of the trend	In 2020, the “real” milestone (i.e. considering a 15 months gap to administratively closed the action, ultimate end date of the actions considered is hence September 2019) is estimated to be 982 supply points. The indicator is hence moderately on track if the additional administrative time-frame is considered. It is to be noted that the COVID pandemic has further delayed the submission of reports and hence the achievement of the expected results for year 2020. Milestones and target reflect the current programme portfolio, following amendments and terminations due to implementation issues (use it or lose it principle). In particular, for alternative fuels infrastructures, issues related to securing appropriate locations and changing market conditions have had important impacts. During the implementation period it also appeared clear that more efforts will be needed to ensure the network effect of these Actions. For this reason, a new Alternative Fuels Facility has been developed for the CEF II programme to boost the use of financial instruments. The facility will also contribute to better allocate the investments according to the needs along the network through the update of a dedicated deployment map.

**Indicator 2: The number of inland and maritime ports of the TEN-T core network equipped with supply points for alternative fuels in the EU-28**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

	Actual Progress									Final
	26 000	26 100	25 600	25 300	25 100	22800				

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Number of road fatalities in the EU.
Cut-Off Date	31/12/2019
Data source	EC DATA <a href="https://ec.europa.eu/commission/presscorner/detail/en/QANDA_20_1004">https://ec.europa.eu/commission/presscorner/detail/en/QANDA_20_1004</a>
Narrative	Data for 2019 refer to EU 27, while for previous years the reference is EU 28. While this inevitably leads to a smaller total number of fatalities in the Union, the rate per million inhabitants has increased due to the fact that the UK has a comparatively good road safety record, e.g., the EU figure of 51 deaths per million inhabitants in 2019 would be 48 if the UK were included. Data for 2020 will be available in 2022.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	CEF is not directly contributing to this target.
Full metadata available at this address	
Justification of the trend	The trend shows that there is a slow but continuous progress for the indicator with fewer fatalities along the EU road network.

### Specific Objective 3 :Optimising the integration and interconnection of transport modes and enhancing interoperability of transport services, while ensuring the accessibility of transport infrastructures

#### Indicator 1:The number of multimodal logistic platforms, including inland and maritime ports and airports, connected to the railway network

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Entire TEN-T network: Maritime ports connections										
2012	Milestones									End of programme
	Actual Progress									Final
CEF grants: Airports connections										
2012	Milestones									End of programme
0	0	0	0	3	5	7	9	10	11	13
	Actual Progress									Final
	0	0	0	3	5	7	7			
CEF grants: inland port

0	0	0	0	0	1	1	1	3	3	3
	Actual Progress									Final
	0	0	0	0	1	1	1			
CEF grants: maritime port										
2012	Milestones									End of programme
0	0	0	0	0	2	4	4	11	16	19
	Actual Progress									Final
	0	0	0	0	2	3	3			
Total of currently estimated costs										
	Milestones									End of programme
							654,1	979,8	1240,1	1369,2
	Actual Progress									Final
	13,8	42,2	138,5	270,3	426	522,4	675,2			

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	Number of inland and maritime ports and airports connected to the railway network and EUR million respectively.
Cut-Off Date	31/12/2020
Data source	INEA
Narrative	Number of inland and maritime ports and airports connected to the railway network is reported for the year during which the action was/is expected to be completed.
Methodology	Data shown cumulative. The target 2024 is the cumulative outputs for projects signed until 2020. Other projects are expected to be signed in 2021 and the final target will only be known after. The

	milestones are expected results by actions still ongoing while actual results correspond to outputs achieved by closed CEF Transport actions. To be also noted that CEF supported actions contribute to the reporting only once assessed by the INEA and closed. In this framework, beneficiaries have 12 months after the final end date of implementation of the Action to submit their final report. To this, the additional time for INEA to assess the report and close the Action shall be considered.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The part of the indicator referring to Maritime ports connections of the entire TEN-t network is to be discontinued. Data can be provided only for CEF not for the entire TEN-T network.
Full metadata available at this address	
Justification of the trend	In 2020, the “real” achievement (i.e. expected administratively closed actions) is estimated to be 9 airport connections, 1 inland port and 4 maritime ports connected to the railway network. The indicator is hence on track if the additional administrative time-frame is considered. It is to be noted that the COVID pandemic has further delayed the submission of reports and hence the achievement of the expected results for year 2020. Milestones and target reflect the current programme portfolio, following amendments and terminations due to implementation issues (use it or lose it principle). For the connection of inland and maritime ports and airports to the railway network, the achievement for year 2019 (closed in 2020) demonstrate a good trend for the finalisation of projects.

**Indicator 2: The number of new or improved rail-road terminals**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Improved rail-road terminals										
	Milestones									End of programme
	0	0	0	0	0	2	5	7	7	10
	Actual Progress									Final
	0	0	0	0	0	1	2

	0	0	0	0	0	1	3	5	6	6
	Actual Progress									Final
	0	0	0	0	0	0	0			
Estimated total private, public or public-private partnership investment (i.e. eligible costs) triggered by CEF funding in a given year for actions achieving this indicator										
	Milestones									End of programme
							241,9	401,4	609	725,1
	Actual Progress									Final
	0,3	1,1	21,5	79,9	114,2	148,6	224,4			

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	Number of rail road terminals and EUR million respectively.
Cut-Off Date	31/12/2020
Data source	INEA
Narrative	Rail road terminals to be connected to the rail network (new or improved) by CEF grants. The terminals are considered to have been realised in the year in which the CEF funded action is expected to be completed.
Methodology	Data shown cumulative. The target 2024 is the cumulative outputs for projects signed until 2020. Other projects are expected to be signed in 2021 and the final target will only be known after. The milestones are expected results by actions still ongoing while actual results correspond to outputs achieved by closed CEF Transport actions. To be also noted that CEF supported actions contribute to the reporting only once assessed by the INEA and closed. In this framework, beneficiaries have 12 months after the final end date of implementation of the Action to submit their final report. To this, the additional time for INEA to assess the report and close the Action shall be considered.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	In 2020, the “real” milestones (i.e. considering a 15 months gap to administratively closed the action, ultimate end date of the actions considered is hence September 2019) are estimated to be 1 new rail road terminal and 2 improved terminals. The indicator is hence on track if the additional administrative time-frame is considered. It is to be noted that the COVID pandemic has further delayed the submission of reports and hence the achievement of the expected results for year 2020. Milestones and target reflect the current programme portfolio, following amendments and terminations due to implementation issues (use it or lose it principle). For rail-road terminals, issues mainly related to public procurement and coordination of the planned intervention with the operations in the terminals.

**Indicator 3: Number of improved or new connections between ports through motorways of the sea**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of connections to be improved or newly created by CEF grants										
	Milestones									2024
	0	0	4	11	13	14	20	26	27	31
	Actual Progress									Final
	0	0	4	11	13	13	13			
Estimated total private, public or public-private partnership investment (i.e. eligible costs) triggered by CEF funding in a given year for actions achieving this indicator										
	Milestones									2024
							798,2	824,7	865,2	886
	Actual Progress									Final
	35,3	129,6	238,1	379,7	469,9	592,2	748,8			

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	Number of connection between ports through MoS and EUR million respectively.
Cut-Off Date	31/12/2020
Data source	INEA
Narrative	Number of of connections between ports is reported for the year during which the action was/is expected to be completed.
Methodology	Data shown cumulative. The target 2024 is the cumulative outputs for projects signed until 2020. Other projects are expected to be signed in 2021 and the final target will only be known after. The milestones are expected results by actions still ongoing while actual results correspond to outputs achieved by closed CEF Transport actions. To be also noted that CEF supported actions contribute to the reporting only once assessed by the INEA and closed. In this framework, beneficiaries have 12 months after the final end date of implementation of the Action to submit their final report. To this, the additional time for INEA to assess the report and close the Action shall be considered.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	In 2020, the “real” milestone (i.e. considering a 15 months gap to administratively closed the action, ultimate end date of the actions considered is hence September 2019) is estimated to be 13 MoS connections. The indicator is hence on track if the additional administrative time-frame is considered. It is to be noted that the COVID pandemic has further delayed the submission of reports and hence the achievement of the expected results for year 2020. Milestones and target reflect the current programme portfolio, following amendments and terminations due to implementation issues (use it or lose it principle). For Motorways of the Sea, the portfolio has considerably progressed in 2019. Most actions get implemented as planned or with only minor delays.

**Indicator 4: The number of kilometres of inland waterways fitted with RIS**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Milestones									End of programme
							19		20,1
Actual Progress									Final
0	0,5	6,1	15,3	18,7	20,1	20,1			20,1

Are we on track	On track
Indicator type	Output
Unit of measurement	Km and EUR million respectively.
Cut-Off Date	17/02/2021
Data source	
Narrative	KM of IWW fitted with RIS by CEF grants. Results are attributed to the year in which the CEF funding action is due to be completed.
Methodology	Data shown cumulative. The target 2024 is the cumulative outputs for projects signed until 2020. Other projects are expected to be signed in 2021 and the final target will only be known after. The milestones are expected results by actions still ongoing while actual results correspond to outputs achieved by closed CEF Transport actions. To be also noted that CEF supported actions contribute to the reporting only once assessed by the INEA and closed. In this framework, beneficiaries have 12 months after the final end date of implementation of the Action to submit their final report. To this, the additional time for INEA to assess the report and close the Action shall be considered.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Subindicators: Coverage with ENC for Class Va+ waterways, Coverage of class Va+ waterways equipped with shore based inland AIS infrastructure, Commercial vessels equipped with inland AIS, Electronic reporting for BtA and AtA Communication are discontinued as CEF did not support such investments
Full metadata available at this address	
Justification of the trend	All actions including a contribution to River Information Services (RIS) have been completed and have contributed to the digitalisation of Inland Waterway Navigation along the TEN-t network. No additional actions are expected to be supported under the last CEF Transport call for proposals.

### Indicator 5: Synchronisation of the deployment process of SESAR related technology

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									End of programme
Adoption of the first common project	Awarding of grants to 1st batch SESAR implementation projects	Awarding of grants to 2nd batch of SESAR implementation projects	Approval of revised Deploy. Programme - Awarding of grants to SESAR implementation projects.	Approval of revised Deployment programme - Awarding of grants to of SESAR implementation projects	Finalisation of the Commission's assessment	Deployment of SESAR ATM solutions included in the Pilot Common Project				Deployment of SESAR ATM solutions included in the Pilot Common Project
Actual Progress										Final
Pilot common project adopted	DM coordinates proposals under 2014 CEF call - EUR 318 million awarded	DM coordinates proposals under 2015 CEF call	proposal for an update of the Deployment Programme. CEF grants awarded to SESAR	2018 Edition of the SESAR Deployment Programme approved	finalised the review of the pilot common project	The Deployment of SESAR ATM solutions has continued during 2020				

		from CEF to SESAR		implementat ion						
Are we on track	No data									
Indicator type	Input									
Unit of measurement										
Cut-Off Date	31/12/2020									
Data source										
Narrative	The SESAR development phase is delivering essential ATM solutions that require a synchronised deployment in the European ATM network. A SESAR deployment framework was established in 2013 (Reg. (EU)409/2013) to ensure the timely and synchronised deployment of SESAR Solutions. The framework and its instruments shall be set up and activated throughout the 2014-2020 timeframe.									
Methodology										
Link MFF 14-20 / MFF 21-27										
Other methodological comments	A SESAR deployment framework was established in 2013 (Reg. (EU)409/2013) to ensure the timely and synchronised deployment of SESAR Solutions. The framework and its instruments shall be set up and activated throughout the 2014-2020 timeframe. Indicator number 5 as foreseen by article 4.2 (c) (iv) of the CEF Regulation has been divided in three table to facilitate reading by sector. Work is undertaken to complement by 2017 this indicator with a numerical indicator corresponding to the percentage of "SESAR ATM solutions (included in the Pilot Common Project) deployed", based on the reported progress by the implementing stakeholders of the SESAR Deployment Programme.									
Full metadata available at this address										
Justification of the trend	It will be possible to assess the deployment of ATM functionalities during the 2014-2020 period as soon as the related Grant Agreements will be completed and the expected outputs assessed.									

**Indicator 6: Kilometres of roads covered by (real-time) Traffic Information Services or equipped for (dynamic) Traffic Management, including speed related ITS services (Variable Message Signs or equivalent means)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									End of programme
	Actual Progress									Final

Are we on track	No data									
Indicator type	Output									
Unit of measurement										
Cut-Off Date	31/12/2020									
Data source	DG MOVE									
Narrative	DG MOVE has been working with Member States over the past two year to identify new KPIs for ITS. An external study was conducted to identify the most promising KPIs, followed by consultations with Member States' experts and discussion in the ITS Committee in 2016, to finalise a list of deployment and benefit KPIs, as well as financial indicators. A list of KPIs has been drawn up, which Member States have been asked to use in their reporting exercise under the ITS Directive. The first national ITS reports including these KPIs, on a voluntary basis, were delivered in 2017-2018. Only part of the Member States (40% of MS + Norway) provided figures for KPIs, at least partially. Although not optimal, this allows to draw some conclusions for the contributing countries, at least regarding deployment.									
Methodology										
Link MFF 14-20 / MFF 21-27										
Other methodological comments	The Commission published on 8th October 2019 the analysis of the Member States' reports, including a detailed analysis of the KPIs provided (see pp. 34-39 as well as individual figures in Annex I, of the report <a href="https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:52019SC0373&amp;from=EN">https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:52019SC0373&amp;from=EN</a> ). Next national ITS reports are due by end of August 2020.									
Full metadata available at this address										
Justification of the trend	It is not possible to judge if the indicator is on track as the reporting of the Member States on the different ITS functionalities is not homogeneous. While a common set of KPIs has been identified, Member States reports include different methodologies that cannot be compared. The information on the number of Km concerned is hence not solid.									

**Indicator 7: The level of deployment of VTMISS**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									End of programme
100 000 000		Nearly all		VTMISS			VTMISS			VTMISS:

		commercial vessels equipped with inland AIS (app. 11.750 vessels)		Increase by 10%			Increase by 20%			Increase by 20%
Actual Progress										Final

Are we on track	No data
Indicator type	Output
Unit of measurement	AIS (Automatic Identification System) positions recorded per month
Cut-Off Date	31/12/2020
Data source	PLATINA 7RFP research project.
Narrative	This indicator is no longer relevant. It confuses AIS and VTMS. AIS is stipulated in the VTMS Directive in two main ways – Carrier requirement (implementing the IMO requirements) and receiver requirements. The latter has been fulfilled for years as all MS with a coast have set up receivers and hence coverage along the EU coasts. The carrier requirements of AIS is based on the level of new vessels entering the market and sailing on EU ports. This in turn depends on overall economic factors and the world economy (imports/exports). For the moment there is a stagnation in new vessels entering the market due to the economic downturn. VTMS use, meaning the use of the Integrated Maritime Services and the 2 new reporting messages into the system, Security and Waste, apart from the already required Port plus message, has brought about an increase in the use of the reporting going into the system, probably exceeding 10%.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Indicator discontinued.

#### Specific Objective 4 :Increasing competitiveness by promoting the further integration of the internal energy market and the interoperability of electricity and gas networks across borders

##### Indicator 1:The number of projects effectively interconnecting Member States' networks and removing internal constraints

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2019	Milestones									2020
149					30	38	40			40
	Actual Progress									Final
				12	30	38	40			

Are we on track	On track
Indicator type	
Unit of measurement	PCIs
Cut-Off Date	
Data source	
Narrative	Under the 4th PCI list there are 149 projects (102 electricity transmission and storage, 6 smart grid deployment, 32 gas, 6 oil and 5 cross-border carbon dioxide networks).
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	PCIs completed
Full metadata available at this address	
Justification of the trend	In 2020, two PCIs were completed. Until the end of 2021, when the 5th PCI list is scheduled to be adopted, 8 PCIs are expected to be completed in the Electricity sector and 6 gas PCIs are expected to be completed by the end of 2021

##### Indicator 2:The reduction or elimination of Member States' energy isolation

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
9					9	8	6			6
	Actual Progress									Final
					9	8	6			

Are we on track	On track
-----------------	----------

Indicator type	
Unit of measurement	PCIs
Cut-Off Date	
Data source	
Narrative	While the challenge remain important for peripheral or isolated Member States, by implementation of several projects of common interest the isolation is reduced in several parts of the EU (The Commission Staff working Document (C(2019)7772))
Methodology	The indicator is related to the number of PCIs to be commissioned to reduce or eliminate energy isolation.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Number of PCIs contributing to the reduction or elimination of Member States' energy isolation to be commissioned.
Full metadata available at this address	
Justification of the trend	Despite the completion of PCIs which received CEF financial assistance in the form of grants for works and/or studies, there are still 6 PCIs to be commissioned, also as a consequence of Brexit and the implications for Ireland.

### Indicator 3: The percentage of electricity cross-border transmission power in relation to installed electricity generation capacity in the relevant Member States

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
16					17		24			24
	Actual Progress									Final
	17			17	17	17	19			

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Member States
Cut-Off Date	
Data source	ENTSO-E
Narrative	The Member States that are above the 10% interconnectivity target as mentioned in Recital 2 of the TEN-E Regulation.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	PCIs contributing to this specific objective have been completed and are progressing. However, some PCIs that contribute to the achievement of this indicator face significant delays in particular at the permitting phase.

### Indicator 4: Price convergence in the gas and/or electricity markets of the Member States concerned

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									
	Actual Progress									Final

Justification of the trend	

### Indicator 5: The percentage of the highest peak demand of the two Member States concerned covered by reversible flow interconnections for gas

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									

Are we on track	On track
Indicator type	
Unit of measurement	Number of Member States
Cut-Off Date	
Data source	
Narrative	Baseline: Gas: 3 MS do not meet the N-1 formula (as defined in Regulation (EU) No 994/2010) – Bulgaria, Greece and Portugal Target: Gas: N-1 is met by 22 MS (all except Cyprus, Malta as long as they do not have gas system and Luxemburg, Slovenia, Sweden which have a derogation). For consistency over time, the milestones were not changed to take account of new provisions in the Regulation No (EU) 2017/1938 and the end of the derogation for Malta and Slovenia in 2019.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The indicator is based on monitoring requirements set out in Regulation No (EU) 2017/1938 on the security of supply for gas, under which Member States have to report every two years to the Commission (last report: 2019). The progress of the indicator is based on PCIs which are implemented. Although its evolution is only partly related to the CEF budget, it can be monitored during the Programme implementation and can be kept until the end of the Programme. It can also be used ex-post.
Full metadata available at this address	
Justification of the trend	Under the new criteria under Regulation No (EU) 2017/1938 which take also into account demand side measures, only one Member State does not meet the new target of 24 Member States.

**Indicator 4: The amount of avoided curtailment of renewable energy**

Justification of the trend	

**Indicator 5: The connection of isolated markets to more diversified supply sources**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
19				22	23		26			26
	Actual Progress									Final
				23	23	26	25			

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of Member States
Cut-Off Date	
Data source	ENTSO-G
Narrative	The number of Member States having access to at least two sources of gas
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The indicator measures the number of Member States which have market and/or physical access to at least two sources of gas. Although progress is only partly related to the CEF budget, the indicator can be monitored during the Programme implementation and it can be kept until the end of the Programme. It can also be used ex-post.
Full metadata available at this address	
Justification of the trend	The progress of the indicator is related to the number of PCIs actually being implemented which allow diversification of supply sources. Some PCIs contributing to the progress made received CEF financial assistance in the form of grants for works and/or studies. As a consequence of Brexit, Ireland

has not longer direct access to the European gas network.
---

**Indicator 6: The optimal use of energy infrastructure assets**

	Milestones									
	Actual Progress									Final

Are we on track	No data
Indicator type	Result
Unit of measurement	Units
Cut-Off Date	
Data source	Implementing Fund Manager (CUBE) of the Connecting Europe Broadband Fund
Narrative	
Methodology	Data on entities actually connected to a very high capacity network (i.e. having a subscription) still to be received from the project promoters (not to be confused with specific indicator 1, referring to entities having access to (passed by) a VHC network).
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data on subscriptions will be available as projects progress (networks become operational). First figures expected by mid-2021.
Full metadata available at this address	
Justification of the trend	

**Specific Objective 9 : Encourage and support entities with a public mission, such as local public authorities, to offer free Wi-Fi connectivity in the centres of community life (e.g. in and around public buildings, health centres, parks or town squares)****Indicator 1: The number of operational free Wi-Fi access points supported by CEF**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2023
	Actual Progress									Final
							32000	48000	55000	60000

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of access points
Cut-Off Date	31/12/2022
Data source	WiFi4EU portal
Narrative	
Methodology	The municipalities report the Access Points created in the WiFi4EU networks.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The KPIs are being validated and in the process of implementation by the implementing executive Agency (INEA). The proposed numbers are indicative only.
Full metadata available at this address	
Justification of the trend	Network installations are increasing steadily and the trend observed in 2020, if confirmed, will lead to at least 85% of projects completed by end of 2022. The trend could decrease as of 2022 due to the expected completion of most of Call 2 and 3 rollouts.

**Indicator 2: The number of daily connections generated on free Wi-Fi access points supported by CEF in a given year**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									
	Actual Progress									Final
							50000-100000	TBD	TBD	

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Units
Cut-Off Date	31/12/2025
Data source	WiFi4EU portal
Narrative	
Methodology	Number of users connecting to a WiFi4EU network, on a daily average of one calendar year. Unique user per day (one user might have multiple connection per day, but only counts once)
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The KPIs are being validated and in the process of implementation by the executive Agency (INEA). The proposed numbers are indicative only. The cut-off date is end of 2025 as there will be a three year monitoring after implementation.
Full metadata available at this address	
Justification of the trend	The use of the network was at an average rate of 60.000 daily connections. With the end of the lockdown, it is expected that the trend will grow significantly.

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

#### **6.1.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
4 284,0	4 323,0	4 340,0	4 358,0	1 225,0	1 242,0	1 262,0	21 034,0

(\*) Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.1.2. Explanation and justification on the financial contribution**

CEF II common understanding, under recital 4, includes clear references of climate tracking per sector. Reflecting the importance of tackling climate change in line with Union's commitments to implement the Paris Agreement, and the commitment to the United Nations Sustainable Development Goals, the Regulation should therefore mainstream climate action and lead to the achievement of an overall target of at least 30% of the EU budget expenditures supporting climate objectives. Actions under this Programme should contribute 60% of the overall financial envelope of the Programme to climate objectives, based inter alia on the following coefficients:

- i) 100% for the expenditures relating to railway infrastructure, charging infrastructure alternative and sustainable fuels, clean urban transport, electricity transmission, electricity storage, smart grids, CO<sub>2</sub> transportation and renewable energy;
- ii) 40% for inland waterways and multimodal transport, and gas infrastructure - if enabling increased use of renewable hydrogen or bio-methane.

As indicated under recital 4 of the CEF II draft regulation, “[...] the detailed climate expenditure tracking coefficients applied are consistent with those set at Annex 1 of Regulation EU 2021/XXX [CPR Regulation] where applicable. Relevant actions will be identified during the Programme's preparation and implementation, and reassessed in the context of the relevant evaluations and review processes. In order to prevent that infrastructure is vulnerable to potential long term climate change impacts and to ensure that the cost of greenhouse gas emissions arising from the project is included in the project's economic evaluation, projects supported by the Programme should be subject to climate proofing in accordance with guidance that should be developed by the Commission coherently with the guidance developed for other programmes of the Union where relevant [...]”.

For the Transport sector, the estimation follows a conservative approach and is based on the indicative draft call planning and include the contribution from the Cohesion Fund. Under CEF Transport it is expected that an important part of the budget will be front-loaded (almost 70% of the budget is expected to be allocated under the first CEF Transport Multi-Annual programme covering the period 2021-2023).

For years from 2021 to 2024 the estimation it is based on the assumption that:

- 70% of the funding attributed to the support to projects on the Core and Comprehensive network will be focused to sustainable modes (e.g. rail or inland waterway), hence contributing at 100%. The remaining 30% will be at 0 %.
- For projects co-financed under smart and interoperable mobility, the average climate tracking will be at 40%
- All projects supported under the Alternative Fuels Infrastructure Facility (AFIF) will contribute at 100%
- Co-financing provided under the safe and secure mobility and the military mobility will have a 0% tracking.

For years from 2025 to 2027 the estimation is based on the assumption that all remaining budget will be allocated to actions supporting the deployment of alternative fuels infrastructures along the TEN-T, hence contributing at 100% to climate objectives.

For CEF Energy it is expected that the climate mainstreaming contribution will increase significantly in the period 2021-2027 due to a higher share of electricity projects, the on-going revision of the TEN-E Regulation, and the new window for cross-border renewable projects. However, the estimate is based on a conservative approach building on the climate mainstreaming contribution under CEF I taking into account the new window for cross-border renewable projects.

For both the Transport and the Energy sectors, an accurate calculation of the contribution to climate objectives can only be presented ex-post. The outcome is dependent to the nature, the number and the final co-financing amount of projects awarded as result of CEF calls for proposals and their successful completion.

### 6.1.3. Key achievements

Using as a reference the above listed tracking methodology and considering that the CEF II programme set itself in continuation with the 2014-2020 implementation (at least for the transport and energy strands), it has been possible to develop the below methodology assessing the climate target contribution of the CEF I programme. The below table also includes the amounts of the Cohesion Fund managed through CEF (Transport).

OVERVIEW PER CEF SECTOR						
CEF SECTOR	CLIMATE TRACKING %	NUMBER OF ACTION	ACTUAL CEF FUNDING	Sum of Climate tracking and CEF funding	% OF TOTAL	
Energy	0%	66	1.506.972.240	-		
Energy	100%	83	3.193.960.995	3.193.960.995		
<b>Energy Total</b>		<b>149</b>	<b>4.700.933.235</b>	<b>3.193.960.995</b>		<b>68%</b>
Synergy	40%	4	8.510.072	3.404.029		
Synergy	100%	3	12.291.140	12.291.140		
<b>Synergy Total</b>		<b>7</b>	<b>20.801.212</b>	<b>15.695.169</b>		<b>75%</b>
Telecom	0%	650	335.647.214	-		
<b>Telecom Total</b>		<b>650</b>	<b>335.647.214</b>	<b>-</b>		<b>-</b>
Transport	0%	200	3.054.570.472	-		
Transport	40%	310	3.496.159.415	1.398.463.766		
Transport	100%	433	16.474.215.537	16.474.215.537		
<b>Transport Total</b>		<b>943</b>	<b>23.024.945.424</b>	<b>17.872.679.303</b>		<b>78%</b>
<b>Grand Total</b>		<b>1.749</b>	<b>28.082.327.086</b>	<b>21.082.335.466</b>		<b>75%</b>

### 6.1.4. Performance

It is expected that the CEF programme will strongly contribute to the climate performance of the EU spending programmes. As an example, in the transport sector, for Rail Baltica it is estimated that the project will create CO<sub>2</sub> emission reduction benefits worth 3.0 billion EUR – contributing greatly to the EU's global leadership in environmental sustainability.<sup>29</sup>

## 6.2. Contribution to biodiversity mainstreaming

### 6.2.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.2.2. Explanation and justification on the financial contribution

The programme will contribute to the ambition of 7.5% of annual spending under the MFF to biodiversity objectives in the year 2024 and 10% of annual spending under the MFF to biodiversity objectives in 2026 and 2027 while considering the existing overlaps between climate and biodiversity objectives.<sup>30</sup>

## 6.3. Contribution to clean air financing

### 6.3.1. Tracking and estimates

<sup>29</sup> <https://www.railbaltica.org/rail-baltica-global-cost-benefit-analysis/>

<sup>30</sup> Recital 4 of the Proposal for a Regulation of the European Parliament and of the Council establishing the Connecting Europe Facility and repealing Regulations (EU) No 1316/2013 and (EU) No 283/2014

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
1 628,0	1 631,0	1 636,0	1 641,0	494,0	499,0	505,0	8 034,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.3.2. Explanation and justification on the financial contribution

For the Transport sector, the estimation follows a conservative approach and is based on the indicative draft call planning and includes the contribution from the Cohesion Fund. Under CEF Transport it is expected that an important part of the budget will be front-loaded (almost 70% of the budget is expected to be allocated under the first CEF Transport Multi-Annual programme covering the period 2021-2023).

For years from 2021 to 2024 the estimation it is based on the assumption that:

- 70% of the funding attributed to the support to projects on the Core and Comprehensive network will be focused to sustainable modes (e.g. rail or inland waterway), hence contributing at 40%. The remaining 30% will be at 0%.
- For projects co-financed under smart and interoperable mobility, the average climate tracking will be at 0%
- All projects supported under the Alternative Fuels Infrastructure Facility (AFIF) will contribute at 40%
- Co-financing provided under the safe and secure mobility and the military mobility will have a 0% tracking.

For years from 2025 to 2027 the estimation is based on the assumption that all remaining budget will be allocated to actions supporting the deployment of alternative fuels infrastructures along the TEN-T, hence contributing at 40% to climate objectives.

For CEF Energy the estimate is based on a conservative approach building on the climate mainstreaming contribution under CEF I.

For both the Transport and the Energy sectors, an accurate calculation of the contribution to climate objectives can only be presented ex-post. The outcome is dependent to the nature, the number and the final co-financing amount of projects awarded as result of CEF calls for proposals and their successful completion.

During the period 2014-2020 the CEF programme has contributed to clean air objectives through investments in the transport and energy sectors. In particular:

#### CEF Transport

TRANSPORT SECTOR	Actual Funding	%	Result
Inland Waterways	1.174.431.984	40%	469.772.794
Maritime	1.226.954.404	40%	490.781.761
Rail	14.519.607.439	40%	5.807.842.975
Alternative fuel infrastructure	932.382.444	40%	372.952.978
Nodes of the Core Network Priority	177.107.330	100%	177.107.330
<b>TOTAL CEF TRANSPORT</b>	<b>18.030.483.601,10</b>		<b>7.318.457.838,48</b>

#### CEF Energy

ENERGY SECTOR	Actual Funding	%	Result
CO2	9.696.215	0%	-
Electricity	2.083.019.906	40%	833.207.962,32
Gas	1.513.149.948	40%	605.259.979
Smart Grid	134.543.582	40%	53.817.433
<b>TOTAL CEF ENERGY</b>	<b>3.740.409.650,67</b>		<b>1.492.285.374,27</b>

The amounts in the above tables refer to signed Grant Agreements. Additional grant agreements contributing to clean air objectives are expected to be signed during year 2020 and 2021. The above table (Transport) also includes the amounts of the Cohesion Fund managed through CEF.

## 6.4. Contribution to gender equality

### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

## 6.4.2. Key achievements and performance

The CEF programme supports the deployment of infrastructures, which per se are gender neutral. Nevertheless, during the implementation of the programme, the Commission will constantly strive to ensure gender equality, for instance when selecting the experts that support the dedicated services during the evaluation of the call for proposals launched in the framework of the CEF programme.

In this sense, a new recital on gender has been included in the legal base of the CEF II: “According to Article 8 of the Treaty on the Functioning of the European Union, in all its activities, the Union shall aim to eliminate inequalities and to promote equality between men and women. Gender equality, as well as rights and equal opportunities for all, and the mainstreaming of those objectives should be taken into account and promoted throughout the assessment, preparation, implementation and monitoring of the programme”.

## 6.5. Contribution to the sustainable development goals

### 6.5.1. Goals

#### *SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all*

CEF Energy supports SDG7 by promoting investments contributing to further integration of the internal energy market and to sustainable development, in particular, by the integration of energy from renewable sources into the transmission network and by the development of smart energy networks. In particular, CEF Energy shall contribute to supporting energy infrastructure projects of common interest that have significant socio-economic benefits and ensure greater solidarity among Member States, but which do not receive adequate financing from the market. For instance, the Baltic Synchronisation Project (PCI 4.8) will synchronise the three Baltic States’ electricity grids with the continental European network and allow the three Baltic States to gain full control of their electricity networks and to strengthen energy security (CEF financial assistance: €1 052 million).

#### *SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation*

The CEF transport programme aims at contributing to the Sustainable Development Goals (SDG). In particular, CEF Transport supports SDG 9 through investments for building transport infrastructures that are resilient, including the necessary technology to ensure a proper monitoring of the newly built infrastructures in case of natural catastrophes.

Under CEF I programme, the support to this goal has been ensured through dedicated activities within co-funded projects. As an example, as part of the modernisation of the railway infrastructure between Athens and Thessaloniki, in a highly seismic and flood interested region, the monitoring of newly constructed and upgraded bridges has been supported, as well as hydraulic works to protect the railway from floods<sup>31</sup>.

In this context, the CEF II programme will include a dedicated topic related to actions improving transport infrastructure resilience, in particular to climate change and natural disasters, through infrastructure upgrades.

As regards the energy strand, CEF Energy supports SDG 9 through the investments aiming to increase the interoperability of electricity and gas networks across borders. For example, the Baltic Pipe project (PCI 8.3, CEF financial assistance: 753 M EUR) will establish a new, bi-directional offshore gas pipeline connecting PL and DK through the Baltic Sea with an important contribution to energy security and diversification of supply sources.

Actions that receive CEF grants for works need to provide evidence concerning the existence of significant positive externalities such as security of supply, solidarity or innovation.

#### *SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable*

CEF Transport programme will continue promoting infrastructural investments for road safety, notably by allowing an optimal use of public transport, with special attention to the needs of those in vulnerable situations and co-funding the improvement of multimodal passenger hubs, improving accessibility for all users, especially for passengers with reduced mobility, allowing for the connection with available long-distance transport modes including safe connection with cycle infrastructure and allowing safe connections with shared mobility solutions.

Under the CEF I programme, CEF has supported such infrastructure projects, for instance through studies contributing to the 'Grand Paris Express' Global Project (new high capacity metro network, linking up the main centres of the metropolitan area of Paris and Ile de France), contributing to improved connectivity, reduced travel time and sustainability<sup>32</sup>.

<sup>31</sup> <https://ec.europa.eu/inea/en/connecting-europe-facility/cef-transport/2014-el-tmc-0651-w> and [https://www.ergose.gr/project/tithorea\\_domokos/?lang=en](https://www.ergose.gr/project/tithorea_domokos/?lang=en)

<sup>32</sup> <https://ec.europa.eu/inea/en/connecting-europe-facility/cef-transport/2014-fr-tm-0266-s>

***SDG 13 Take urgent action to combat climate change and its impacts***

CEF Transport aims at promoting the de-carbonisation of transport with a specific focus on alternative fuels infrastructures. The programme aims at contributing to the EU goal of climate-related spending and decarbonising transport. In accordance with the European Green Deal, CEF 2021-2027 will target a contribution of 60% of its overall financial envelope to co-financing Actions supporting climate objectives and moving fast towards zero-emission mobility. In particular, the programme will contribute to this SDG supporting infrastructures related to sustainable transport modes (in particular railways and inland waterways) data and digitalisation backing the ecological transition for transport and accelerating the take-up of alternative fuels solutions for all transport modes. Under the CEF I programme, the support to sustainable transport modes has been wide. In this framework, the allocation CEF funds to alternative fuels infrastructures represents one of the most direct investments for to tackle climate related challenges. As an example, through one single Action, the programme allocated its support to the deployment of 6458 electrical supply points in 3169 electric charging stations on 6 TEN-T Core Network Corridors. The Action aims to deploy and operate a network of Normal, Fast and Ultra-Fast Charging Stations (up to 350 kW) for electric vehicles in Europe, providing linked coverage for long-distance travels and enabling cross-border trips towards Italy, Spain and Romania in order to support these Member States to speed up in terms of electric vehicle infrastructure<sup>33</sup>.

CEF Energy support SDG 13 by financing actions that contribute to the decarbonisation of the energy system, inter alia through the integration of renewable energy into the grid and the transmission of renewable generation to major consumption centres and storage site. For example, the Celtic electricity interconnector (PCI 1.6, CEF financial assistance: €530.7 million EUR) will establish the first electricity link between Ireland continental Europe, end Ireland's energy isolation after Brexit, and help the integration of variable renewable energy sources. The European Green Deal has further emphasized the key enabling role of energy infrastructure in the transition to a climate neutral economy. The Commission proposal for a revised TEN-E Regulation of December 2020 aims to fully align the TEN-E Regulation to the European Green Deal objectives.

**6.5.2. Key achievements and performance**

CEF I and CEF II contribute to the SDGs 7, 9, 11, 13.

<sup>33</sup> <https://ec.europa.eu/inea/en/connecting-europe-facility/cef-transport/2017-it-tm-0110-w>

## **1. Overview**

### **1.1. Challenges**

Europe faces many challenges in the digital arena.

To begin with, there is the increasingly fierce global competition to control the digital technologies, which will shape the world of tomorrow. Today, businesses, the public sector and researchers often have to look outside the Union to access the computing, data or artificial intelligence resources they need. At the same time, hundreds of thousands of jobs in crucial digital areas go unfilled, hampering investment and innovation. Unless Europe can step up its efforts to develop key digital infrastructures, industries and skills, it risks losing out this race, which could threaten Europe's strategic autonomy and competitiveness.

Relatedly, cyberattacks become increasingly more frequent, complex, and disruptive. Europe's vital infrastructure and data are at risk unless it improves its cybersecurity.

Finally, the take-up of digital technologies by businesses - in particular SMEs - and public administrations remains very uneven, requiring determined action at the Union's level to ensure that no region or sector is left behind by the digital transformation. Given the network effects in the digital area (e.g., the need to promote interoperability at the EU level and/or reaching critical mass to build state-of-the-art capacities) the EU is uniquely placed to act decisively on these challenges. The Digital Europe programme and together with co-investments with Member States and the private sector will achieve a real impact and generate a virtuous circle.

### **1.2. Mission (general objectives)**

The Digital Europe Programme will ensure that Europe drives the digital transformation of the economy and society and brings its benefits to all citizens and businesses. It will focus on:

- Building essential capacities and advanced skills in key digital technology areas, contributing to Europe's technological sovereignty;
- Accelerating their deployment and best use in areas of public interest and the private sector.

### **1.3. Specific objectives**

[The text inserted here below might still be changed in when the Legal-linguistic checks are finished.]

#### **Specific Objective 1 - High Performance Computing (HPC)**

The financial contribution from the Union under this Specific Objective shall pursue the following operational objectives:

- (a) deploy, coordinate at Union level and operate an integrated demand-oriented and application-driven world-class exascale supercomputing and data infrastructure that shall be easily accessible to public and private users, in particular SMEs, irrespective of the Member State in which they are located, and easily accessible for research purposes, in accordance with Regulation (EU) 2018/1488;
- (b) deploy ready to use operational technology resulting from research and innovation in order to build an integrated Union HPC ecosystem, covering various aspects in the scientific and industrial value chain segments, including hardware, software, applications, services, interconnections and digital skills, with a high level of security and data protection;
- (c) deploy and operate post-exascale infrastructure, including integration with quantum computing technologies and research infrastructures for computing science and encourage the development within the Union of the hardware and software necessary for such deployment.

#### **Specific Objective 2 - Artificial Intelligence**

The financial contribution from the Union under this Specific Objective shall pursue the following operational objectives:

- (a) build up and strengthen core AI capacities and knowledge in the Union, including building up and strengthening quality data resources and corresponding exchange mechanisms, and libraries of algorithms, while guaranteeing a human-centric and inclusive approach that respects Union values.
- (b) make the capacities referred to in point (a) accessible to businesses, especially SMEs and start-ups, as well as civil society, not-for-profit organisations, research institutions, universities and public administrations, in order to maximise their benefit to the European society and economy;

- (c) reinforce and network AI testing and experimentation facilities in Member States; (d) develop and reinforce commercial application and production systems in order to facilitate the integration of technologies in value chains and the development of innovative business models and to shorten the time required to pass from innovation to industrial production and foster the uptake of AI-based solutions in areas of public interest and in society.
- (d) AI-based solutions and data made available shall respect the principle of privacy and security by design and shall fully comply with data protection legislation.

#### Specific Objective 3 - Cybersecurity and Trust

The financial contribution from the Union under this Specific Objective shall pursue the following operational objectives:

- (a) support the building-up and procurement of advanced cybersecurity equipment, tools and data infrastructures, together with Member States, in order to achieve a high common level of cybersecurity at European level, in full compliance with data protection legislation and fundamental rights, while ensuring the strategic autonomy of the Union;
- (b) support the building-up and best use of European knowledge, capacity and skills related to cybersecurity and the sharing and mainstreaming of best practices;
- (c) ensure a wide deployment of effective state-of-the-art cybersecurity solutions across the European economy, paying special attention to public authorities and SMEs;
- (d) reinforce capabilities within Member States and private sector to help them comply with Directive (EU) 2016/1148 of the European Parliament and of the Council<sup>1</sup> including through measures supporting the uptake of cybersecurity best practices;
- (e) improve resilience against cyberattacks, contribute towards increasing risk-awareness and knowledge of cybersecurity processes, support public and private organisations in achieving basics levels of cyber security, for example by deploying end-to-end encryption of data and software updates;
- (f) enhance cooperation between the civil and defence spheres with regard to dual-use projects, services, competences and applications in cybersecurity, in accordance with a Regulation establishing the European Cybersecurity Industrial, Technology and Research Competence Centre and the Network of National Coordination Centres (the 'Cybersecurity Competence Centre Regulation').

#### Specific Objective 4 - Advanced Digital Skills

The financial contribution from the Union under this Specific Objective shall support the development of advanced digital skills in areas covered by the Programme in order to contribute to increasing Europe's talent pool, bridge the digital divide and foster greater professionalism, especially with regard to high performance and cloud computing, big data analytics, cybersecurity, distributed ledger technologies (e.g. blockchain), quantum technologies, robotics, AI, while taking gender balance into account. In order to tackle skills mismatches and to encourage specialisation in digital technologies and applications, the financial contribution shall pursue the following operational objectives:

- (a) support the design and delivery of high-quality, long-term training and courses, including blended learning, for students and for the workforce;
- (b) support the design and delivery of high-quality, short-term training and courses for the workforce, in particular in SMEs and in the public sector;
- (c) support high-quality on-the-job training and work placements for students, including traineeships, and the workforce, in particular in SMEs and in the public sector.

#### Specific Objective 5 - Deployment and Best Use of Digital Capacities and Interoperability

The financial contribution from the Union under this Specific Objective shall pursue the following operational objectives:

- (a) support the public sector and areas of public interest, such as health and care, education, judiciary, customs, transport, mobility, energy, environment, cultural and creative sectors, including relevant businesses established within the Union, to effectively deploy and access state-of-the-art digital technologies, such as HPC, AI and cybersecurity;
- (b) deploy, operate and maintain trans-European interoperable state-of-the-art digital service infrastructures across the Union, including related services, in complementarity with national and regional actions;

---

<sup>1</sup> Directive (EU) 2016/1148 of the European Parliament and of the Council of 6 July 2016 concerning measures for a high common level of security of network and information systems across the Union (OJ L 194, 19.7.2016, p. 1).

- (c) support the integration and use of trans-European digital service infrastructures and of agreed European digital standards in the public sector and in areas of public interest to facilitate cost-efficient implementation and interoperability;
- (d) facilitate the development, update and use of solutions and frameworks by citizens, public administrations and businesses, including of open-source solutions and the re-use of interoperability solutions and frameworks;
- (e) offer the public sector and Union industry, in particular SMEs, easy access to testing and piloting of digital technologies and increase the use thereof, including their cross-border use;
- (f) support the uptake by the public sector and the Union industry, in particular SMEs and start-ups, of advanced digital and related technologies, including in particular HPC, AI, cybersecurity, other leading edge and future technologies, such as distributed ledger technologies (e.g. blockchain);
- (g) support the design, testing, implementation, and deployment and maintenance of interoperable digital solutions, including digital government solutions, for public services at Union level which are delivered through a data-driven reusable solutions platform aiming to foster innovation and establish common frameworks in order to unleash the full potential of the public administrations' services for citizens and businesses;
- (h) ensure the continuous capacity at Union level to lead digital development, in addition to observing, analysing and adapting to fast-evolving digital trends, and share and mainstream best practices;
- (i) support cooperation towards achieving a European ecosystem for trusted data sharing and digital infrastructures using, inter alia, distributed ledger services and applications, including support for interoperability and standardisation and by fostering the deployment of Union cross-border applications based on security and privacy by design, while complying with consumer and data protection legislation;
- (j) build up and strengthen the European Digital Innovation Hubs and their network.

#### 1.4. Public intervention context

The Digital Europe programme, is based on the following provisions of the Treaty on the Functioning of the European Union (TFEU): Article 173(3) TFEU, focused on the EU's industrial competitiveness, with regard to most of activities undertaken under this Programme; Article 172 TFEU, notably with regard to the digital transformation of areas of public interest. The COVID-19 crisis has highlighted the critical role of digital technologies and infrastructures. In light of the exponential development of digital technologies, the constant geopolitical shifts and the large public investments of global competitors in key digital technologies, such as artificial intelligence, supercomputing and cybersecurity, and in digital skills, no Member State acting alone can make critical investments in digital capacities at the scale required. Given the challenges ahead and the level of investments needed, the intervention at EU level is necessary in order to improve the competitiveness of Europe in the digital economy and reinforce its strategic autonomy.

The Digital Europe programme's actions are complemented by an array of regulatory measures aiming to eliminate barriers in several critical technological areas, with regard, for instance, to the incentivise business to business and business to government (B2B and B2G) data sharing in across the EU (Data Governance Act, Data Act), the creation of a safer and fairer online environment for users and businesses (Digital Services Act, Digital Markets Act) and the improvement of the level of security of network and information systems across the Union (NIS2 Directive).

#### 1.5. Actions

**High-performance computing:** DEP will deploy world-class exascale and post-exascale supercomputing capacities and ensure the widest access to and use of these capacities;

**Artificial intelligence:** DEP will unleash the potential of data with EU-wide common data spaces based on a cloud-to-edge federated infrastructure and promote the testing and adoption of AI technologies with a European AI platform and world-class testing and experimentation facilities;

**Cybersecurity and trust:** DEP will build up advanced cybersecurity equipment, tools and data infrastructures. It will support the development and best use of European knowledge, capacity and skills related to cybersecurity, promote the sharing of best practices and ensure a wide deployment of the state of the art cybersecurity solutions across the European economy (including a quantum secure communication infrastructure for Europe- EuroQCI).

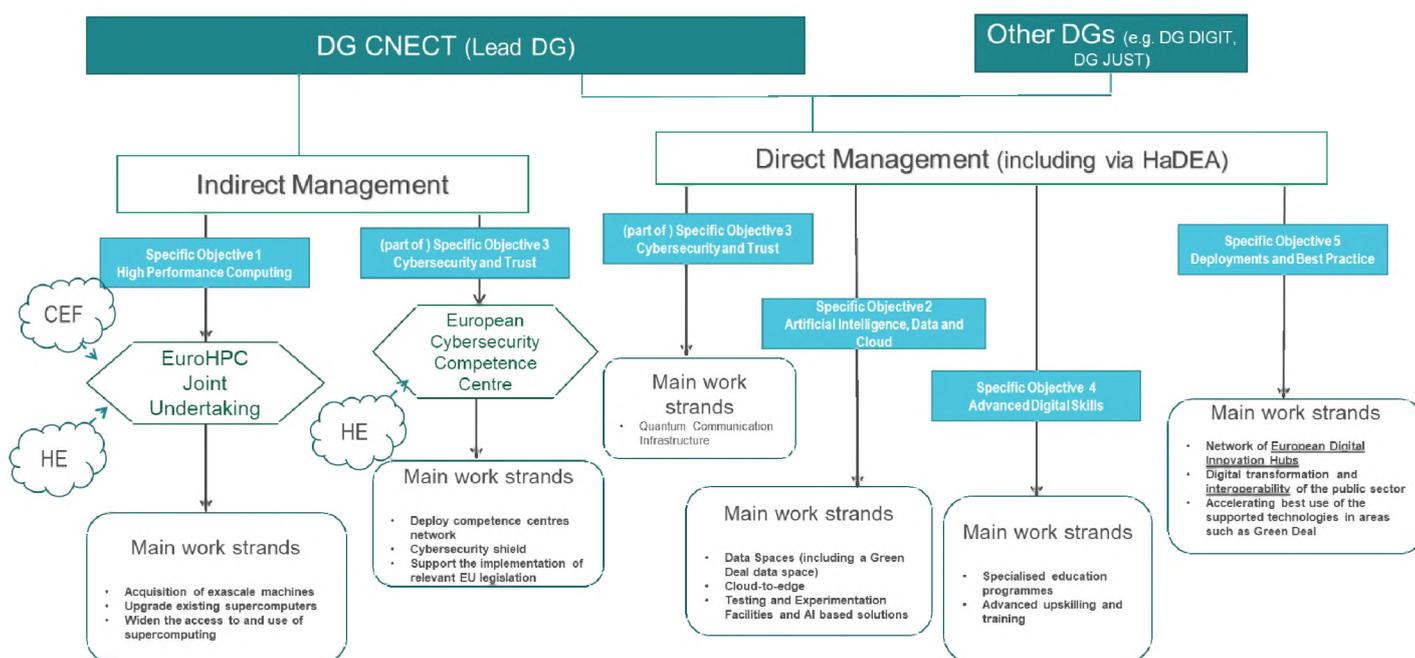

**Advanced digital skills:** DEP will boost academic excellence in digital, by increasing the education offer in technologies, such as HPC, cybersecurity and AI. Training in these areas will be implemented through cooperation among tertiary education institutions, world-class research centres and innovative businesses.

**Adoption and best use:** DEP will deploy a network of European Digital Innovation Hubs offering public and private organisations all across Europe access to technology testing and support in their digital transformation. It will contribute to address challenges such as protecting the environment and fighting climate change through high impact deployments, for example, the Destination Earth initiative and the digital twins for smart communities. It will build capacities to reinforce the European blockchain ecosystem through the European Blockchain Services Infrastructure (EBSI). It will enable cross border interoperable digital public services centred on users, facilitating the sharing of data in areas like, justice and promote an inclusive and trustworthy digital space.

### 1.6. Delivery mode

For the ‘artificial intelligence’, ‘advanced digital skills’ and ‘widening the best use of digital technologies’ specific objectives, the Commission directly manages the programme. The high-performance computing specific objective is implemented primarily through the EuroHPC joint undertaking and the cybersecurity specific objective will be implemented primarily through the European Cybersecurity Industrial, Technology and Research Competence Centre and the Cybersecurity Competence Network. The lead DG is CNECT, with other DGs also involved, in particular DG DIGIT for the actions focused on the interoperability of the public administrations.

### 1.7. Graphic overview of the programme structure

### 1.8. Legal basis and financial programming

#### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM (2018) 434: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the Digital Europe programme for the period 2021-2027	2021 - 2027	7 588,0

#### 1.8.2. Legal basis explanation

#### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>1 129,6</b>	<b>1 247,8</b>	<b>1 268,4</b>	<b>962,3</b>	<b>981,4</b>	<b>1 000,4</b>	<b>1 020,2</b>	<b>7 610,1</b>

#### 1.8.4. Financial programming explanation

#### 1.9. Link with the 2014-2020 MFF

Although DEP is a new programme, some of its activities target the sustainability and continuation of actions deployed under the previous MFF. The Digital Europe programme clearly builds on the successes of the H2020 programme making it possible to move technologies such as high performance computing and artificial intelligence into large-scale deployments. The European High Performance Computing strategy was implemented using funding from both Horizon 2020 and CEF programmes. Horizon 2020 supported artificial intelligence but focused on research and innovation and not on large-scale deployments. The deployment of Digital Service Infrastructures facilitating cross-border interoperability between public administrations, businesses and citizens was funded under the CEF Telecom programme, while the actions in the ISA<sup>2</sup> programme focussed on interoperability in public administration applications.

#### 1.10. Relevant websites providing more information

<https://ec.europa.eu/digital-single-market/en/europe-investing-digital-digital-europe-programme>

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

The implementation of Digital Europe Programme can only start after the adoption by the co-legislator of the Digital Europe Programme Regulation. Following the adoption of the legal basis, the Commission will adopt the first multi-annual Work Programmes, and subsequently will launch the first calls. Following the corresponding evaluations, the first contracts will be signed, and the implementation of the programme will start.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

#### CEF

With an overall investment of almost EUR 280 million in the core service platforms, the Commission is enabling the EU-wide interoperability of specific digital services such as eHealth, Public Open Data, eID and Cybersecurity. The uptake of these services with CEF support reached a portfolio of 571 projects in the Member States and participating countries in the European Economic Area by the end of 2020, most of which are still being implemented. The last set of calls will expand the portfolio of projects with additional 88 projects approximately. With an EU contribution of almost EUR 350 million in generic services and an overall leveraged amount of more than EUR 450 million, CEF digital services support EU citizens, businesses and public administrations in interconnecting and adapting their systems to become interoperable across borders.

#### ISA2

	Commitments	Payments
Implementation Voted budget	532 403 385	431 421 057
Implementation Carry-overs	87 078	343 511
Implementation total	532 490 464	431 764 568
total envelop*	532 501 555	
cumulative implementation rate	100%	81%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The implementation of ISA<sup>2</sup> has been efficient. The 2020 work programme has been performed as envisaged and Covid-19 crisis has not impacted the delivery on programme's objectives. ISA<sup>2</sup> funding was mainly channelled to development of key and generic

interoperability enablers (4,7 millions), the support of instruments for public administrations (EUR 4 million) and EU Policies (EUR 7,5 million). The final payments under the ISA<sup>2</sup> are planned to be processed by the end of 2023.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.3. Previous programme performance**

#### **Performance of ISA<sup>2</sup> - Interoperability solutions for public administrations, businesses and citizens 2014-2020**

The programme's key performance indicators confirm that it has performed well. Some key interoperability enablers have shown even better performance than expected, which is explained by better-than-anticipated government interoperability acceptance and by faster-than-expected technological progress. Member States' positions have evolved from hesitant to very actively involved and requesting intensified common investment in interoperability enablers. In 2020, the programme was able to adapt to the Covid-19 crisis with no major negative impact on the programme implementation. In fact, the outreach of the programme increased due to larger stakeholder participation in online meetings and events, which may potentially boost the [ISA<sup>2</sup> solutions](#)' uptake.

The Commission report on the 'results of the interim evaluation of the ISA<sup>2</sup> programme' – [COM\(2019\) 615 final](#) – confirmed that ISA<sup>2</sup> performed well in all evaluation criteria, that the objectives pursued by ISA<sup>2</sup> remained pertinent, and that the programme results achieved so far are in line with its objectives. ISA<sup>2</sup> has played a central role in improving the interoperability landscape in the EU and discontinuing its activities would have jeopardised the efforts of European public administrations to improve interoperability and to foster the ICT-based modernisation of the public sector in Europe. Possible improvements had been suggested in the areas of raising awareness, user-centricity and sustainability. All these points have been addressed while preparing and implementing the last ISA<sup>2</sup> work programme. They have also been duly taken into account for the transition from ISA<sup>2</sup> to the Digital Europe Programme.

**Raising awareness:** ISA<sup>2</sup> has increased its outreach to all levels of public administrations and businesses, focusing on SMEs and start-ups. Its involvement in the [Join, Boost, Sustain initiative](#) is a great example of interlinking with related initiatives reaching stakeholders in cities and communities. Also, to expand the role of interoperability a draft of European Interoperability Framework for Smart Cities and Communities (EIF4SCC) has been developed together with DG CNECT in the framework of Living-in.eu movement. In 2020, the Interoperability Academy went online as part of the EU Academy (the corporate e-learning platform) reaching multiplayers directly and opening new cooperation avenues. So far, over 100 students have completed the online training modules on the European Interoperability Framework and Access to Base Registries; more online training courses are being prepared. Furthermore, various online webinars have been organised via the platform. The action on European Interoperability Architecture has closely cooperated with DGs REFORM, SANTE and TAXUD to support Member States, especially those lagging behind in digitalisation. This cooperation also included on Reform and Resilience Plans to make them "interoperable by design", and developing national taxation and health digital public services.

The ISA<sup>2</sup> programme has also intensified its cooperation with other EU programmes and projects such as Connecting Europe Facility (CEF), Structural Reforms Programme (SRSP), and Horizon 2020. This included organising joint events, sharing results and content, providing advice and support as well as identifying synergies between Member States' requests under the SRSP 2020 work programme and ISA<sup>2</sup> actions. ISA<sup>2</sup> solutions have provided direct support to several EU initiatives, i.e. the Single Digital Gateway, the EU Business Registers Interconnection System (BRIS), or the TOOP project. . For example, the Core Vocabularies have provided the basis for the data models which will be made available in the semantic repository of the Single Digital Gateway and the repository of links. Also, synergies have been identified both with the TOOP and the Digital Europe for All (DE4A) projects, for example in the context of the revision of the Core Criterion and Core Evidence Vocabulary (CCCEV) and the development of application profiles.

**User-centricity:** It was a key aspect for the 2020 ISA<sup>2</sup> Work Programme with dedicated workshops for EU regions or work on the central interoperability user platform Joinup. Potential users of future solutions have increasingly participated in their design phase (e.g. the Legal Interoperability ISA<sup>2</sup> action on better legislation).

**Sustainability:** The Digital Europe programme builds on achievements and lessons learnt from the ISA<sup>2</sup> programme (including the importance of continuous awareness raising and the need for user-driven approach) integrating CEF building blocks and ISA<sup>2</sup> solutions under the same Programme, and strengthening dedicated interoperability expertise and support.

## Performance of CEF Telecom - 2014-2020

CEF Telecom supported from 2014 to 2020, the deployment of an ecosystem of trusted cross-border digital service infrastructures (DSIs)<sup>2</sup> essential to trigger the digital transformation of public sector services in the Member States all for the benefits of citizens and businesses.

In 2020, the programme was able to adapt to the Covid-19 crisis with no major negative impact other than an extension of the call deadline for the first set of calls. In order to mitigate potential risks of a lower participation in the first call for grants, the deadline for submission of the applications was delayed with 2 months. In essence this measure enabled a successful oversubscription despite the difficult conditions.

The CEF mid-term evaluation<sup>3</sup> concluded that in the Telecom sector, the dual focus of CEF on digital cross-border services of public interest has an important impact on achieving the EU digital single market goals, enabling citizens and businesses to access high quality digital services across Europe. As such, it was acknowledged already in 2018 that by that time it had helped develop and implement common policies to address societal challenges including the digital transformation of healthcare, cybersecurity and digitisation of governments. These good results are proportionate to the level of funding that the programme counted on, by supporting the very first steps towards a full cross border digital infrastructure in areas of public interest. The mid-term evaluation also concluded that the programme proved to be an effective and targeted instrument for investment in trans-European infrastructure (TEN) in the digital sector, it strongly contributes to the Commission's priorities on jobs, growth and investment, and the Digital Single Market. The direct management of CEF grants has proven very efficient, with a strong project pipeline and a competitive selection process, a focus on EU policy objectives, coordinated implementation and the full involvement of Member States.

The CEF mid-term evaluation also highlighted that in the case of some DSIs, like Electronic Exchange of Social Security Information or Online Dispute Resolution (where EU Regulations and Directives require their deployment), CEF Telecommunications is providing an essential incentive for speeding up this process and important financial support for the Member States to become compliant. Other DSIs, like Cybersecurity, enable mechanisms to be used by Member States on a voluntary basis, by promoting actions that most likely would have not been carried out at EU scale without CEF support.

Concretely, what does that mean? If we take Cybersecurity as an example, the DSI contributes to EU preparedness to deal with cyber threats and incidents by supporting the implementation of the [Directive on security of network and information systems \(NIS Directive, 2016/1148\)](#) and the cybersecurity certification framework through the Cybersecurity Act (Regulation (EU) 2019/881). The Directive provides legal measures to boost the overall level of cybersecurity in the EU, encompassing the need for well-resourced Member State computer security incident response teams (CSIRTs) and swift and effective operational cooperation between them. CSIRTs have received funding to create, maintain or expand national capacities to run cybersecurity services and to co-operate across borders. Their operational cooperation is facilitated by interacting with the Core Service Platform co-operation mechanism of the Cybersecurity DSI, MeliCERTes, which supports information sharing and maturity development for CSIRTs. MeliCERTes provides CSIRTs under the NIS Directive with a common baseline set of tools so as to facilitate a shared understanding of artefacts, threats and incidents, provide secure communications and enhance data exchange between them. As from 2019, an additional cooperation mechanism to facilitate the creation of European-level Information Sharing and Analysis Centers (ISACs) has been created.

The deployment of DSIs has been marked by a considerable expansion of the ecosystem, passing from 8 to 20 DSIs supported in the last Work Programme. In effect, the programme started supporting the interoperability in a limited set of areas such as e-government, Cybersecurity and cultural sector. Over the years, the programme started enabling through various solutions the interoperability also in other areas such as health, justice, social security, education and skills to name a few. In practice this meant that CEF has supported and enabled the interoperability of EU businesses, citizens and public administrations in more and more sectors.

An overview of the performance of the actions deployed with the support of the CEF Telecommunications Programme is available [here](#). This data will feed into the ex-post evaluation of the programme.

## 3.2. Key achievements

---

<sup>2</sup> Europeana, eIdentification, eSignature, eDelivery, eInvoicing, eArchiving, Public Open Data, Automated Translation, Cybersecurity, eProcurement, Business Registers Interconnection System (BRIS), eHealth, Electronic Exchange of Social Security Information (EESSI), the European e-Justice portal, European Digital Media Observatory, European Platform on Digital Skills and Jobs, Online Dispute Resolution (ODR), Safer Internet, EU Student eCard and Blockchain.

<sup>3</sup> See the Report from the European Commission to the European Parliament, The Council, the European economic and social Committee and the Committee of the regions on the mid Term evaluation of the Connecting Europe Facility (CEF ) and annexed Staff Working Documents COM(2018) 66 final

**ISA<sup>2</sup> - Interoperability solutions for public administrations, businesses and citizens 2014-2020**

54	955	2	4
actions have been supported that focus on developing digital solutions in the interoperability area.	EU initiatives have been screened since 2016 for potential information and communications technology and interoperability impact using the legal interoperability screening methodology.	EU-wide initiatives (European Interoperability Framework & Digital Public Administration) have been supported by ISA <sup>2</sup> aiming at a holistic interoperability approach in the EU.	pillars of 'location interoperability solutions for e-government' action (studies, frameworks and solutions, reports and events) benefit the EU through effective and usable public digital services, improved spatial awareness and analytical skills, and better support for the policy life cycle.
430	4	28	4
events in which ISA <sup>2</sup> have participated in or organised to increase its outreach.	core vocabularies have been developed by ISA <sup>2</sup> to facilitate efficient and effective electronic cross-border or cross-sector interaction between (a) EU public administrations and (b) public administrations and businesses and citizens.	interoperable digital solution have been developed under ISA <sup>2</sup> ; they are operational and can be reused free of charge.	observatories have been run under ISA <sup>2</sup> to: 1) help foster the interoperability, capacity building policy and modernisation of public administrations; 2) support the adoption of open source and 3) foster one domain-specific interoperability (location); 4) support innovation and interoperability in the public sector

By systematically supporting Member States in implementing the European Interoperability Framework (EIF) along with monitoring such undertake, ISA<sup>2</sup> has effectively delivered on its objective to develop, maintain, and promote a holistic approach to interoperability in the Union and reduce fragmentation in the Union's interoperability landscape. The primary and secondary indicators of the updated National Interoperability Framework Observatory (NIFO) methodology are used to check fundamental areas where member states need to pursue in their efforts such as openness, transparency, reusability, technological neutrality and data portability, user-centricity, inclusion and accessibility, data semantics or integrated public service delivery through the EIF conceptual model. The aggregated view of all NIFO indicators will also be included as one of the Digital Europe Programme (DEP) indicators, showing in a holistic manner the extent of implementation of the Member State's interoperability frameworks or strategies with the EIF.

There has been a very active engagement with stakeholders from all levels of public administrations, businesses, SMEs and start-ups with increased awareness of and demand for reinforced EU interoperability support. Cooperation on interoperability with Member States CIOs has intensified, with increased demand for continued engagement around DEP and the future interoperability policy. North Macedonia joining ISA<sup>2</sup> has demonstrated that the interoperability policy and related support are attractive to close EU partners. The country is part of the digital and interoperability hub of NIFO participating in the annual reporting and monitoring activities on the state-of-play of digitalisation and interoperability (including the EIF implementation).

ISA<sup>2</sup> piloted experimenting with and supporting emerging EU GovTech cooperation between public sector actors at national regional and local levels and between them and innovative (small) tech companies, in particular as part of the action on Innovative Public Services IPS. Market studies and a nascent observatory of IPS across Europe pave the way to the GovTech incubator funded by DEP and also support drafting and assessing Member States projects to be funded under the Resilience and Recovery Fund and the Technical Support Instrument.

Developing common vocabularies and data models (semantic interoperability) is essential for efficient and effective electronic cross-border and cross-sector interaction between European public administrations and between them and businesses and citizens. It also contributes to the emergence of a more effective, simplified, and user-friendly e-administration at the national, regional, and local levels of public administration – exemplified by the Once-Only Principle that reuses ISA<sup>2</sup> semantic assets. Members States use solutions such as Interoperability Maturity Assessment of a Public Service, European Interoperability Reference Architecture, and European Legislation Identifier in digitalising their public administrations and ensuring interoperability.

Core vocabularies provided by ISA<sup>2</sup> programme support many EU policies and their implementation in the Member States. The EU Open Data Portal and National Portals benefit from Asset Description Metadata Schema (ADMS) in uniformly describing their assets (i.e., their name, their status, theme, version, etc.) and their location on the Web. ISA<sup>2</sup> also supports major policy domains, such as the Single Digital Gateway Regulation, as well as technical solutions and frameworks to the Member States to meet the legal and technical requirements, and foster the interoperability of the IT systems to be rolled-out by the Commission and Member States.

In addition, the impact of ISA<sup>2</sup> can be illustrated by intensive cooperation with other EU programmes and projects such as Connecting Europe Facility (CEF), Structural Reforms Programme (SRSP), and Horizon 2020. Some ISA<sup>2</sup> actions and pilot solutions have evolved into CEF Telecom-funded building blocks (e.g. Big Data test infrastructure), which has led to designing a development pipeline from experimental interoperability action (under the Interoperability Knowledge and Support Centre) to mature, reusable interoperability solutions (under the Common Support Platform) in the DEP (chapter EDGES under strategic objective 5).

By systematically screening upcoming EU legislative initiatives for possible ICT and interoperability impacts, ISA<sup>2</sup> effectively delivers on its objective 'to identify, create and operate interoperability solutions supporting the implementation of Union policies and activities.' Such "digital-ready legislation" checking is amongst the EU government CIOs' most requested functions of a future EU interoperability policy. The programme's legal interoperability team has continued fine tuning its 'legal interoperability screening methodology' and helped redesign Tool #27 of the Commission's Better Regulation Toolbox, with support sources available for policymakers and ICT specialists such as the 'ICT Impact Assessment Guidelines'. These guidelines stress the importance of timely assessment of ICT impacts in order to identify and deploy reusable components, thus saving the efforts linked to new developments, and to ensure thorough planning of IT implementation.

#### CEF Telecom - 2014-2020

20 <sup>4</sup>	80	571
Trusted cross-border digital service infrastructures (DSIs) have been deployed. Together with the Member States, they have been identified as essential to trigger the digital transformation of public sector services in the Member States all for the benefits of citizens and businesses.	Calls for grants have been launched, mobilising stakeholders in all Member States and EFTA associated countries for the deployment of Digital service infrastructures	Actions have been funded to promote the uptake of an ecosystem of 20 Digital Services Infrastructures fully interoperable cross-border across the EU for citizens, businesses and public administrations.

The Connecting Europe Facility – Telecommunications (2014-2020) supported the deployment and promotion of 20 interoperable Digital Service Infrastructures (DSIs). DSIs are based on mature technical and organisational solutions to support exchanges and collaboration between citizens, businesses and public administrations. The vision is to create a European ecosystem of interoperable digital services that will allow all citizens, businesses and administrations across the EU to fully benefit from living in a Digital Single Market.

Two examples of achievements are reported below:

The **Cybersecurity Digital Service** Infrastructure (DSI) contributes to the EU preparedness to deal with cyber threats by facilitating the implementation of the EU Cybersecurity strategy. The funding increases the cybersecurity capabilities and the cooperation of key European cybersecurity players, in particular, but not only, those addressed by the Directive on security of network and information systems (NIS Directive, 2016/1148) and the Cybersecurity Act (Regulation (EU) 2019/881). These are operators of essential services (OESs), single points of contact (SPOCs), national competent authorities (NCAs), as well as National Cybersecurity Certification Authorities (NCCAs) and national Computer Security Incident Response Teams (CSIRTs). As a result of the funding received, OESs are boosting their own internal cybersecurity capabilities and engage with relevant Information Sharing and Analysis Centres (ISAC) involving industry peers and public authorities. National bodies mainly focus on the take-up of the obligations deriving by European legislation. For example, they exchange best practices, train their staff and set-up incident reporting mechanisms. CSIRTs are expanding their capacities to run cybersecurity services and to co-operate across borders. Such cooperation is further facilitated by MeliCERTes, a platform set up by the European Commission with a common set

<sup>4</sup> Europeana, eIdentification, eSignature, eDelivery, eInvoicing, eArchiving, Public Open Data, Automated Translation, Cybersecurity, eProcurement, Business Registers Interconnection System (BRIS), eHealth, Electronic Exchange of Social Security Information (EESSI), the European e-Justice portal, European Digital Media Observatory, European Platform on Digital Skills and Jobs, Online Dispute Resolution (ODR), Safer Internet, EU Student eCard and Blockchain.

of tools for information sharing and maturity development for CSIRTs. Through the projects concluded so far, governmental/national CSIRTs in 9 Member States received funding to increase their capacities, for example through training and acquisition of specialised tools. To date, 78 projects for Cybersecurity are being deployed in 25 Member States with an overall funding of 36,5 million EUR.

The **eHealth Digital Service** Infrastructure facilitates the movement of health data across national borders, ensuring the continuity of care and the safety of citizens seeking healthcare outside their home country, and enabling the pooling of EU-wide medical expertise to treat rare diseases. The actions supported by the eHDSI aim at setting up the necessary Member State infrastructure for such data exchange. They also support infrastructures enabling sustainable patient access to highly specialised care. Moreover, they ultimately contribute to the Digital Single Market through the provision of EU-wide interoperable eHealth services, thus boosting competitiveness and supporting an inclusive e-society. The DSI covers 3 services. Firstly, the cross-border ePrescription/eDispensation (eP) service allows a patient who is abroad to receive the equivalent medication that he/she would receive in his/her home country. Secondly, the Patient Summary (PS) services provides a health professional access to the verified key health data of a patient needing unplanned cross-border healthcare. Finally, the European Reference Networks (ERN) are virtual networks bringing together healthcare providers and centres of expertise across Europe to tackle complex or rare medical conditions that require specialised treatment and a concentration of knowledge and resources. To the moment, 93 projects for eHealth are being deployed in 26 Member States with an overall funding of 27 million EUR.

### 3.3. Evaluations, studies and reports

The key findings of the latest evaluation - interim evaluation of the ISA<sup>2</sup> programme - [[SWD\(2019\) 1615 final](#)] were presented in the Programme Statement for the financial year 2019. The final evaluation of the ISA<sup>2</sup> programme (PLAN/2020/7027) is ongoing and will bring results by end 2021.

There is also an evaluation of the implementation of the European Interoperability Framework (EIF) ongoing (PLAN/2020/7507). It will evaluate the current EIF and assess its support in setting up interoperable digital public services. It will also elaborate the proposal on the EU governments interoperability strategy, announced in the Commission's Communication 'Shaping Europe's digital future'. The aim is to ensure coordination and common standards for secure and borderless innovative public sector data flows and services.

The key findings of the mid-term evaluation of the CEF Telecom programme - (see SWD(2018) 44 final) were presented in the Programme Statement for the financial year 2019.

## 4. Programme 2021-2027 - Key monitoring indicators

### **Specific Objective 1 :Make Europe a world-leading region in high-performance computing, improving our scientific potential and industrial competitiveness**

#### **Indicator 1:HPC infrastructures jointly procured**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
										Final
	Actual Progress									

Are we on track	
Indicator type	Output
Unit of measurement	Absolute number
Cut-Off Date	
Data source	EC monitoring
Link to the objective	Acquire and deploy advanced supercomputing capabilities to upraise Europe's scientific capabilities and industrial competitiveness
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 2: Usage of the exascale and post-exascale computers in total and by various stakeholder groups (universities, SMEs etc.)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	% of totally available computing time in minutes (expressed as fraction)
Cut-Off Date	
Data source	Measured by the machines themselves
Link to the objective	Ensure the widest access to high-performance computing infrastructures
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Specific Objective 2 : Boost the development of artificial intelligence and use it to respond to critical issues of our time****Indicator 1: Co-investment in sites for experimentation and testing**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones

Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

#### Indicator 3:People reporting improved employment situation after the end of the training supported by the Programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Absolute number
Cut-Off Date	
Data source	Survey data (self-assessment by the participants in the Master's programmes supported by the DEP)
Link to the objective	Contribution of the DEP to bridge the gap of experts needed to operate key digital technologies and tackle skills mismatches (art. 7.1 of the proposed Regulation)
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

## Specific Objective 5 :Widen the adoption and best use of digital technologies in all regions and sectors to make Europe more competitive and address major societal challenges

### Indicator 1:Take-up of digital public services

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Normalised 0-1 progress scale
Cut-Off Date	
Data source	EC monitoring
Link to the objective	Modernise public services through the use of interoperable, citizen-centric digital solutions in order to increase citizen welfare and EU competitiveness.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 2:Enterprises with high digital intensity score

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	% of EU enterprises (expressed as a fraction)
Cut-Off Date	
Data source	Eurostat
Link to the objective	Support the integration of digital technologies by European businesses, notably SMEs
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 3:Extent of alignment of the National Interoperability Framework with the European Interoperability Framework

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	1-4 continuous scale
Cut-Off Date	
Data source	The indicator is calculated from the current European Interoperability Framework (EIF) monitoring mechanism. The data is collected via an online survey covering the 27 Member States, combined with existing measurements from existing EC secondary data sources such as DESI indicators.
Link to the objective	Modernise public services through the use of interoperable, citizen-centric digital solutions in order to increase citizen welfare and EU competitiveness.
Link MFF 14-20 / MFF 21-27	This indicator is part of the monitoring of specific objective 5 of DEP: Widen the adoption and best use of digital technologies in all regions and sectors to make Europe more competitive and address major societal challenges
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 4: Businesses and public sector entities which have used the European Digital Innovation Hubs' services**

Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Result
Unit of measurement	Unique entities
Cut-Off Date	
Data source	EC monitoring
Link to the objective	Ensure wide access to European Digital Innovation hubs by businesses and public administrations
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**5. Programme 2014-2020 - Key monitoring indicators***Previous Program 1 : Connecting Europe Facility (CEF)***Specific Objective 7 :To contribute to the interoperability, connectivity, sustainable deployment, operation and upgrading of trans-European digital service infrastructures and coordination at European level****Indicator 1:Facilitating digital interaction between public administration and citizens/ businesses**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Citizens using public services on-line										
2014	Milestones									2020
0,549						0,60	0,673			0,673
	Actual Progress									Final
	0,549	0,548	0,574	0,56	0,614	0,641	0,673			
Businesses using public services on-line										
2011	Milestones									2020
							1			1
	Actual Progress									Final
	0,466	0,73								

Are we on track	On track
Indicator type	Impact
Unit of measurement	Percentage of internet users needing to submit forms to the public administrations who chose the online channel
Cut-Off Date	26/01/2021
Data source	Eurostat - Community survey on ICT usage in Households and by Individuals- Digital Agenda scoreboard
Narrative	The KPI measures the percentage of citizens who sent filled forms to public authorities, over the internet in the previous 12 months
Methodology	Eurostat - Community survey on ICT usage in Households and by Individuals The data collected on the household, is reported by 'the household'. In general, one individual in the household will answer the household related questions having the household perspective in mind. The survey is performed annually and the individuals consulted are between 16 to 74 years old.
Link MFF 14-20 / MFF 21-27	The Digital Agenda scoreboard and the Community survey on ICT usage in Households and by Individuals will continue to be monitored in the following years. However, the Commission will not continue to report on this indicator in the MFF 2021-2027 for the purpose of the Digital Europe Programme Statement. This is due to the fact that new indicators created in the context of the Digital Europe programme will give a more accurate measurement of the programme implementation than this indicator.
Other methodological comments	As of 2020, the data reported covers EU27 instead of EU28. As a consequence the target was also adjusted (from 70% to 67%) as compared to the previous Programme Statement in view of the transition from EU28 to EU27.

Full metadata available at this address	
Justification of the trend	Until 2019 the data reported was applicable to EU 28. 2020 marks a break in the trend due to this change in the data collection.

**Indicator 2: Availability of cross-border public services**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2020
0,662					0,8		1			1
	Actual Progress									Final
	0,662	0,65	0,695	0,72	0,733	0,777	0,796			

Are we on track	On track
Indicator type	Impact
Unit of measurement	Score on a scale from 0-100 reflecting the average of the national and cross-border online availability for basic and extended services. Services provided through a portal receive a higher score, services which provide only information (but have to be completed offline) receive a lower score. More details on methodology available through the e-government Benchmark
Cut-Off Date	26/01/2021
Data source	e-government Benchmark report
Narrative	Digital technologies increasingly place new demands and expectations on the public sector. Realising the full potential of these technologies is a key challenge for governmental organisations. Effective e-government can provide a wide variety of benefits including more efficiency and savings for both governments and businesses. It can also increase transparency and openness. This dimension measures both the demand and supply sides of digital public services as well as open data. The indicator measures the degree to which public services for citizens and businesses are interoperable and work cross-border. It is calculated as the average of the national and cross-border online availability for basic and extended services.
Methodology	2020 marked an improvement in the methodology, where both basic and extended services are taken into account for both citizens and businesses. The average of two sub-indicators provides the final score. The change affects the sub-indicators that until 2019 were e-government Services for Businesses (DESI indicator) and Citizens mobility – online availability (Digital scoreboard). As of 2020, the basis for its calculation are instead 2 DESI indicators: Digital public services for citizens and Digital public services for businesses. The first one reflects the share of public services needed for services related to family, career and studying life events that are available online for domestic as well as for foreign users. The second one reflects the share of public services needed for starting a business and for conducting regular business operations that are available online for domestic and foreign users. More details on methodology available through the e-government Benchmark.
Link MFF 14-20 / MFF 21-27	The e-government Benchmark report will continue to be updated. However, the Commission will not continue to report on this indicator in the MFF 2021-2027 for the purpose of the Digital Europe Programme Statement. This is due to the fact that new indicators created in the context of the Digital Europe programme will give a more accurate measurement of the programme implementation than this indicator.
Other methodological comments	It is a composite indicator that comprises: eGovernment Services for Businesses (DESI indicator) and Citizens mobility – online availability (Digital scoreboard). The data presents a break in the series that seems to point to a regression. However this is due to the change in the methodology as well as the shift from EU28 to EU27.
Full metadata available at this address	
Justification of the trend	Until 2019 the data reported was applicable to EU 28. 2020 marks a break in the trend due to this change in the data collection, as well as some minor changes in the methodology as reported above.

**Previous Program 2 : Interoperability Solutions and common frameworks for European public administrations, businesses and citizens (ISA2)****Specific Objective 1 :to facilitate efficient and effective electronic cross-border or cross-sector interaction between European public administrations and between them and citizens and businesses, in order to enable the delivery of electronic public services supporting the implementation of Union policies and activities****Indicator 1:the number of key interoperability enablers**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
3			9	9	9	10	10			10
	Actual Progress									Final
			9	9	11	11	11			11

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of “key interoperability enablers” produced
Cut-Off Date	31/12/2020
Data source	European Commission, DIGIT D2
Narrative	“Key interoperability enablers” are actions that develop key generic interoperability solutions to help public administrations provide services. This type of solution is essential to facilitate efficient and effective electronic cross-border or cross-sector interaction between European public administrations as well as between them and citizens and businesses in order to enable the delivery of interoperable electronic public services, which is one of the ISA2 programme objectives.
Methodology	The value of the indicator reflects the number of the ISA2 programme actions that identify, develop and implement interoperability solutions that are considered essential to facilitating interoperability in Member States. The quantity of such solutions depends on the number and type of proposals submitted by the Member States and Commission services and accepted for implementation in each annual work programme following the positive opinion of the comitology committee.
Link MFF 14-20 / MFF 21-27	Reporting on this indicator will discontinue in the MFF 2021-2027
Other methodological comments	The number mentioned in the baseline for the indicator corresponds to the major actions that were carried over from the previous programme ISA to the new programme ISA2 and should not be confused with the amount of outputs created by the previous programme (ISA)The indicator value for the years 2017-2020 could only be estimated at the beginning of the programme. This is because the number and type of the solutions produced by the ISA2 actions depends on the number and the type of proposals submitted by the Member States and Commission services, and then accepted for implementation in each annual work programme. As a result of proposals received in 2017 for the WP2018, the number of key interoperability enablers produced in 2018 was already higher than estimated in 2015.
Full metadata available at this address	
Justification of the trend	For most of the monitored period, the indicator has been on track except when it over-performed in 2018 and as a result exceeded the target value. This is explained by rates of government interoperability acceptance and technological progress exceeding initial expectations. There has been an increasing demand in Member States for intensified common investment in interoperability enablers.

### Indicator 2: the number of supporting instruments for public administrations delivered to and used by European public administrations

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
4			9	9	11	13	13			13
	Actual Progress									Final
			9	9	12	13	13			13

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of supporting instruments used by EU public administrations
Cut-Off Date	31/12/2020
Data source	European Commission, DIGIT D2
Narrative	“Supporting instruments for public administrations” are actions to develop support solutions that can help public administrations build interoperable services and that contribute to the development of more effective, simplified, and user-friendly e-administration at all levels. Delivering such supporting instruments to EU public administrations has been prerequisite to meeting main objectives of the ISA2 programme.
Methodology	The value of the indicator reflects the number of the ISA2 programme actions that identify, develop, and implement support solutions that can help EU public administrations build interoperable state-of-the-art services. The number of such solutions depends on the number and type of proposals submitted by the Member States and Commission services and accepted for implementation in each annual work programme following the positive opinion of the comitology committee.
Link MFF 14-20 / MFF 21-27	Reporting on this indicator will discontinue in the MFF 2021-2027
Other methodological comments	The number mentioned in the baseline for the indicator corresponds to the major actions that were carried over from the previous programme ISA to the new programme ISA2 and should not be confused with the amount of outputs created by the previous programme (ISA).The value of the indicator for the years 2017-2020 could only be estimated at the beginning of the programme. This is because the number and type of the solutions produced by the ISA2 actions depends on the number and the type of proposals submitted by the Member States and Commission services, and then accepted for implementation in each annual work programme. As a result of proposals received in 2017 for the WP 2018, the number of supporting instruments for public administrations delivered in 2018 was already higher than estimated in 2015.
Full metadata available at this address	

Justification of the trend	In general, the indicator has been on track except when it over-performed in 2018, which is explained by the increased need of Member States to modernise their public services and to improve electronic interaction among Member States as well as between Member States public administrations, individuals and companies. The target value has been reached as planned.
----------------------------	---

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

#### **6.1.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.1.2. Explanation and justification on the financial contribution**

By bringing European human centred AI-solutions as set out in white paper on AI and by unleashing the powers of digital, the Digital Europe Programme is expected to contribute to Europe's common goal of being climate neutral in 2050 as set out in the European Green Deal.

Several actions in the first Work Programme are expected to contribute directly to this target. Such is the case of selected actions contributing to the creation of a European Green Deal data space, the Urban Digital twins or the Destination Earth initiative.

Other actions might also marginally contribute with positive externalities although the climate action is not their main objective. Such is the case of the requirements of energy efficiency in the build-up of the cloud-to-edge capacities.

The tracking will be performed ex –post based on the financial system of the Commission.

### **6.2. Contribution to biodiversity mainstreaming**

Not applicable

### **6.3. Contribution to clean air financing**

Not applicable

### **6.4. Contribution to gender equality**

Not applicable

### **6.5. Contribution to the sustainable development goals**

#### **6.5.1. Goals**

##### ***SDG 3 Ensure healthy lives and promote well-being for all at all ages***

The Digital Europe programme is expected to contribute to this SDG through the support provided for the digitalisation of the health sector in particular through the uptake of digital health solutions and services.

Several actions in the first Work Programme are expected to contribute directly to this goal. Such is the case of selected actions such as the deployment of the Data spaces for Health or the Testing and Experimentation facility for Health.

Other topics might also marginally contribute with positive externalities although healthcare is not their main objective. Such is the case of support to specialised education programmes in key digital technologies for professionals in various areas, including the health sector.

##### ***SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all***

The Digital Europe programme will promote learning opportunities in advanced digital skills in key capacity areas like data and AI, cybersecurity, quantum and HPC. The support will target training opportunities for the future experts as well as upskilling of the existing workforce through short trainings reflecting the latest developments in the above mentioned key capacity areas.

***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

The Digital Europe programme is expected to contribute in bridging the investment gap in Europe and to generate jobs and economic growth. It will support the deployment of innovative technologies in key capacity areas and boost their market uptake through high impact deployments. The programme aims also to support the promotion of the advanced digital skills needed for the deployment of the technologies deployed by the programme. The Digital Europe Programme and the legacy actions (i.e. ISA2 and CEF Telecommunications) are expected to contribute also to the economic productivity through technological upgrading and innovation. The public sector contributes 20 % to the EU GDP through procurement, making it a key factor of the European and global economy. A modernised digital public sector means better public services, less bureaucracy and consequently more time for citizens and businesses to be productive in their core professional activities.

***SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation***

The Digital Europe programme will contribute to the broader digital transformation of areas of public interest and of industry. The acquisition and deployment of advanced supercomputing capabilities aim to enhance Europe's industrial competitiveness. Moreover, the reinforced network of European Digital Innovation Hubs will contribute to the digitisation of industry and address issues of technological accessibility, ensuring that businesses, including SMEs, have access to cutting-edge technologies and finance for adapting to digital change. The deployment of cross border interoperable digital solutions, will enhance collaboration between European Public administration.

***SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels***

Selected actions under the Digital Europe Programme as well as the legacy solutions deployed in the context of the ISA2 and CEF Telecommunications Programmes aim to enlarge and maximise the benefits of the digital transformation for citizens and businesses. Contribution to this SDG is expected from selected topics that aim to support the digitalization and interoperability of public administrations, piloting of AI applications in law enforcement domain, as well as the digital transformation of Justice and consumer protection. The digital transformation of public administrations shall foster trust in online services, improve the service delivery and the convenience of services for European businesses and citizens, and reduce digital administrative barriers.

***SDG 17 Strengthen the means of implementation and revitalize the global partnership***

Selected legacy actions in the framework of ISA<sup>2</sup> contribute to SDG 17.6 by promoting collaboration with third countries, international organisations or bodies, and pursuing public reuse of interoperability solutions. International cooperation with Uruguay, Ukraine, the Western Balkans, Japan, Australia, Vietnam, etc. in the areas of semantic interoperability and solutions' reuse allows improving frameworks and specifications.

Specific Objective 1 : Making the internal market more effective, facilitating the prevention and removal of obstacles, supporting the development, implementation and enforcement of the Union law .....	261
Specific Objective 2 : Market Surveillance .....	262
Specific Objective 3 : Improving the competitiveness of enterprises with special emphasis on SMEs .....	263
Specific Objective 4 : Ensuring the effective functioning of the internal market through standardisation processes .....	264
Specific Objective 5 : Promoting the interests of consumers and ensuring a high level of consumer protection and product safety .....	265
Specific Objective 6 : Contributing to a high level of health for humans, animals and plants along the food chain and in related areas .....	266
Specific Objective 7 : Producing and communicating high quality statistics on Europe .....	267
5. Programme 2014-2020 - Key monitoring indicators .....	267
Previous Program 1 : Programme for the Competitiveness of Enterprises and small and medium-sized enterprises (COSME) .....	267
General Objective 1 : to strengthen the competitiveness and sustainability of the Union's enterprises, particularly SMEs .....	267
General Objective 2 : to encourage entrepreneurial culture and to promote the creation and growth of SMEs .....	268
Specific Objective 1 : to improve framework conditions for the competitiveness and sustainability of Union enterprises, particularly SMEs, including in the tourism sector .....	270
Specific Objective 2 : to promote entrepreneurship and entrepreneurial culture .....	273
Specific Objective 3 : to improve access to finance for SMEs in the form of equity and debt .....	274
Specific Objective 4 : to improve access to markets, particularly inside the Union but also at global level .....	276
Previous Program 2 : European statistical programme (ESP) .....	279
General Objective 1 : The European Statistical System to be the leading provider of high-quality statistics on Europe. ....	279

Specific Objective 1 :To provide statistical information, in a timely manner, to support the development, monitoring and evaluation of the policies of the Union properly reflecting priorities, while keeping a balance between economic, social and environmental fields and serving the needs of the wide range of users of European statistics, including other decision-makers, researchers, businesses and European citizens in general, in a cost-effective manner without unnecessary duplication of effort.	279
Specific Objective 2 :To implement new methods of production of European statistics aiming at efficiency gains and quality improvements.	281
Specific Objective 3 :To strengthen the partnership within the European Statistical System and beyond in order to further enhance its productivity and its leading role in official statistics worldwide	282
Specific Objective 4 :To ensure that delivery of statistics is kept consistent throughout the whole duration of the programme, provided that this does not interfere with the priority-setting mechanisms of the ESS.	283
Previous Program 3 : Specific activities in the field of financial reporting and auditing	284
Specific Objective 1 :to improve the conditions for the efficient functioning of the internal market by supporting the transparent and independent development of international financial reporting and auditing standards	284
Previous Program 4 : Food and Feed	284
General Objective 1 :contributing to a high level of health for humans, animals and plants along the food chain and in related areas, by preventing and eradicating diseases and pests and by ensuring a high level of protection for consumers and the environment, while enhancing the competitiveness of the Union food and feed industry and favouring the creation of jobs	284
Specific Objective 1 :to contribute to a high level of safety of food and food production systems and of other products which may affect the safety of food, while improving the sustainability of food production	285
Specific Objective 2 :to contribute to achieving a higher animal health status for the Union and to support the improvement of the welfare of animals	286
Specific Objective 3 :to contribute to the timely detection of pests and their eradication where those pests have entered the Union	288
Specific Objective 4 :to contribute to improving the effectiveness, efficiency and reliability of official controls and other activities carried out with a view to the effective implementation of and compliance with the Union rules	289
Previous Program 5 : Consumer Programme	289
General Objective 1 :To ensure a high level of consumer protection, to empower consumers and to place the consumer at the heart of the internal market, within the framework of an overall strategy for smart, sustainable and inclusive growth	289
Specific Objective 1 :Safety: to consolidate and enhance product safety through effective market surveillance throughout the Union	290
Specific Objective 2 :Consumer information and education, and support to consumer organisations: to improve consumers' education, information and awareness of their rights, to develop the evidence base for consumer policy and to provide support to consumer organisations, including taking into account the specific needs of vulnerable consumers	291
Specific Objective 3 :Rights and redress: to develop and reinforce consumer rights in particular through smart regulatory action and improving access to simple, efficient, expedient and low-cost redress including alternative dispute resolution	292
Specific Objective 4 :Enforcement: to support enforcement of consumer rights by strengthening cooperation between national enforcement bodies and by supporting consumers with advice	293
Previous Program 6 : Enhancing consumers involvement in EU policy making in the field of financial services	295
Specific Objective 1 :To further enhance the participation and involvement of consumers and other financial services end-users in Union and relevant multi-lateral policy-making in the area of financial services	295
Specific Objective 2 :To contribute to the information of consumers and other financial services end-users about issues at stake in the financial sector	296
6. The programme contribution to horizontal policies	296
6.1. Contribution to climate mainstreaming	296
6.2. Contribution to biodiversity mainstreaming	297
6.3. Contribution to clean air financing	297
6.4. Contribution to gender equality	297
6.5. Contribution to the sustainable development goals	298

## **1. Overview**

### **1.1. Challenges**

The single market programme will improve the functioning of the internal market and help protect and empower citizens, consumers and businesses, including small and medium-sized enterprises (SMEs). The programme will support the design, implementation and enforcement of Union legislation underpinning the proper functioning of the single market for goods and services. It will also assist the digitalisation of services and business operations, facilitate market access and international co-operation especially in the areas of company law and contract and extra-contractual law, anti-money laundering, free movement of capital, financial services and competition, for the area of plants, animals, food and feed. Overarching and contributing to all areas, the programme will support the development, production and dissemination of European statistics on all EU policies.

The programme will contribute to a range of Commission priorities including a European Green Deal, a Europe fit for the digital age and an economy that works for people, as well as a stronger Europe in the world. Further improvements to the functioning of the internal market can help develop the competitiveness of the European economy and thereby support the effective recovery following the COVID-19 pandemic. The Commission's Industrial Strategy for Europe announced a focus on industrial "ecosystems" to lead the transition towards a green and digital economy. A well-functioning Single Market, as Europe's competitiveness driver, should be the basis of effective economic recovery of each ecosystem after the crisis.

The Single Market Programme should moreover provide a more flexible and agile financing framework to support the functioning of the internal market in the most cost-efficient way through. It will facilitate synergies, help prevent duplication and fragmentation, and help to focus action on priorities essential for the recovery.

### **1.2. Mission (general objectives)**

The programme brings together six predecessor programmes from different policy areas: the grants and contracts part of COSME (support to SMEs); the programme on consumer protection; the programme for enhancing the involvement of consumers and other financial services end-users in Union policymaking in the area of financial services; the programme to support specific activities in the field of financial reporting and auditing; the programme for a high level of health for human, animals and plants along the food chain and in related areas; and European statistics. It includes several previously independent budgetary lines connected to the functioning of the internal market, concerning, market surveillance, company law, contract and extra-contractual law, standardisation and support for competition policy, customs and taxation and financial services, financial stability and the Capital Markets Union. These previous programmes and budget lines are now brought under the SMP banner.

The impact assessment of the SMP showed that one programme could create synergies for a more agile and efficient budgetary spending. The activities are united by shared objectives to regulate, implement, facilitate, enforce and protect various activities and actors within the internal market; and to preserve an internal market that continues to function without interruption. All these activities have shared objectives of implementing, facilitating and regulating activities within the internal market and thereby empowering and protecting stakeholders.

### **1.3. Specific objectives**

The Programme-specific objectives concern:

- making the internal market more effective, especially in the light of the digital transformation by supporting:
  - the development, implementation and enforcement of Union law covering the internal market in goods and services, including the free movement of capital and financial services; and
  - effective market surveillance throughout the Union;
- Improving the competitiveness of businesses, especially SMEs;
- Ensuring the effective functioning of the internal market through standardisation and supporting the development of high-quality financial and non-financial reporting and auditing standards;
- Promoting the interests of consumers and ensuring a high-level of product safety and consumer protection, including by enhancing the participation of consumers and other end users of financial services in financial services policy making, promoting a better understanding of the financial sector and the different forms of commercialised financial products;
- Contributing to a high level of health for humans, animals and plants throughout the food chain; and
- Producing and communicating high-quality statistics on Europe.

### **1.4. Public intervention context**

The SMP will help facilitate a well-functioning Single Market as the basis of an effective economic recovery after the crisis.

**“The Internal Market”** pillar aims at making the internal market more effective, especially in the light of the digital transformation, by supporting the development, implementation and enforcement of Union law covering the internal market in

goods and services, including the free movement of capital and financial services; and effective market surveillance throughout the Union. This should ensure that citizens and businesses enjoy the benefits of the internal market and, through a range of tools, ensure they are aware of and can exercise their rights. Through this pillar, the SMP will implement, enforce and develop rules in areas including company and contract law, anti-money laundering, the free movement of capital and financial services. This pillar will support effective market surveillance, to ensure only safe and compliant products are made available. The SMP will ensure financial services meet the needs of consumers, civil society and end-users and enhance tools and expertise of the Commission to enforce effectively competition rules in the digital economy.

**Competitiveness (particularly of SMEs):** The SME Strand of the SMP will provide various forms of support to businesses in particular SMEs in order to foster a favourable business environment and entrepreneurial culture, facilitate access to markets, reduce administrative burden, support uptake of innovation and address global and societal challenges.

**Effective standards:** The SMP will provide financial support to organisations that develop European wide standards to ensure that products and services meet an agreed level of quality and safety.

**Financial Reporting and Auditing Standards:** The SMP will also provide financial support for the development of international financial reporting and auditing standards. Those international standards underpin the EU's own legal framework on financial reporting (accounting and auditing) and are an essential element of the legislation regulating EU capital markets and the strengthening of the Capital Markets Union. The SMP will also contribute to the development of European and, thereby, global standards on sustainability reporting standards, which will be fundamental for the achievement of the Commission's priorities set out in the European Green Deal. Co-financing will be provided to:

- the IFRS Foundation, which develops international financial reporting standards (IFRSs) via its International Accounting Standards Board (IASB),
- the European Financial Reporting and Advisory Group (EFRAG) which provides the European Commission with endorsement advice on new or modified standards and monitors the standard setting activities undertaken by the IASB to ensure that European interests are safeguarded,
- the Public Interest Oversight Board (PIOB) which oversees three Standard Setting Boards supported by the International Federation of Accountants (IFAC) in the areas of audit and assurance, education, and ethics.

**Protect consumers:** The SMP helps make sure products on the market are safe, consumers know the rules, and national authorities can work efficiently together and communicate swiftly. The Consumer strand 2021-27 is conceived under a reinforced synergy with EU consumer policy. The new Consumer Agenda adopted on the 13 November 2020 presents a vision for EU consumer policy from 2020-2025, addressing consumers' immediate needs in the face of the on-going pandemic and increasing their resilience in the longer term. The Agenda covers five key priority areas: 1) green transition; 2) digital transformation; 3) redress and enforcement of consumer rights; 4) specific needs of certain consumer groups; and 5) International cooperation. Each area will be prominently reflected in the SMP Consumer pillar's activities. The Agenda will act as a guide for the implementation of the consumer pillar, instrumental in promoting a greener, more digital and fairer single market. By boosting trust among consumers (consumer spending represents 54% of the EU's GDP), the programme will stimulate demand side economic growth.

***Enhancing consumers involvement in the EU policy making in the field of financial services:***

The SMP will provide continued financial support for enhancing the participation of consumers, other financial services end-users and civil society in financial services policy-making as well as for promoting a better understanding of the financial sector. By doing so the SMP will contribute a main Commission priority for 2019-2024, i.e. "An economy that works for people" and shall help the Commission in its efforts to shape an economy that can fully respond to the needs of the EU's citizens.

The programme identifies two not-for-profit organisations that may be awarded grants to undertake activities to these ends. As well as together reinforcing the voice of consumers in relation to financial services policymaking, the organisations also have complementary strengths and expertise:

- Finance Watch<sup>[1]</sup> strives to address also the bigger societal challenges related to finance, focusing on financial inclusion and sustainable finance;
- Better Finance<sup>[2]</sup> grew into a centre of financial expertise, advocating for an open, transparent and efficient financing of the real economy, served by financial institutions that keep in mind the interests of customers and the public.

An evaluation of the predecessor programme conducted in 2020 found that "there are currently no alternative organisations at EU level covering a similar range of topics in financial services and in the same depth." However, were other potential beneficiaries to emerge, having as among their primary objectives representing the interests of consumers and end-users at Union level and that have, through their membership a broad geographical coverage and range of interests, then a call for applicants should be open to them.

<sup>[1]</sup> <http://www.finance-watch.org/>

[2] <http://www.betterfinance.eu/>

**Food Safety:** Through the Food Strand, the SMP will prevent, control and eradicate animal diseases and plant pests, support sustainable food production and consumption, and the improvement of animal welfare, and improve the effectiveness, efficiency and reliability of official controls.

The SMP will cover veterinary and phyto-sanitary programmes, emergency measures and official controls related activities. From 2021 on, under the new MFF and the SMP, the EU will be able to financially support measures and actions related to animal welfare, to the prevention of food waste and fraudulent practices, the fight against antimicrobial-resistance (AMR) and to promote a sustainable food production and consumption.

The Single Market programme includes a food chain strand with a total budget of EUR 1.68 billion for the MFF 2021-2027 period, showing that food safety remains very high on the EU's agenda and representing 41% of the overall SMP allocation.

**European statistics:** The SMP will provide funding to national statistics institutes for the development, production and dissemination of high-quality statistics to monitor the economic, social, environmental and territorial situation, thereby providing for evidence-based decision making in the EU and measuring the impact of EU initiatives. This will be done in a timely, impartial and cost-efficient manner, through a strengthened European Statistical System (ESS) and enhanced partnerships within that system and with all relevant external parties. Multiple data sources, advanced data analytics methods, smart systems and digital technologies will be used and a national breakdown, and where possible, a regional one, will be provided.

Eurostat will continue to provide statistics and data to support the recovery from the COVID-19 crisis. The **European Statistical Recovery Dashboard**, containing monthly and quarterly indicators from a broad range of statistical areas that are highly relevant for monitoring economic and social recovery from the COVID-19 pandemic, was launched in December 2020 and will be published monthly in the course of 2021. Furthermore, under the **Trusted Smart Statistics** initiative, Eurostat will continue seizing the opportunities provided by new technologies and new data sources, especially those originating from the digitalisation of society and the economy. This will result in improving official statistics portfolio along key quality dimensions: better timeliness, finer granularity, improved cost-effectiveness, and more transparency. This initiative is gradually providing European Statistical System with capabilities that are essential for adapting the official statistics to the digital era. Eurostat will also better communicate and better promote European statistics and facilitate their use by different stakeholders by **increasing its presence across different dissemination channels** (Eurostat website, social media), by **disseminating flagship publications** (Key figures on Europe, SDGs, Regional Yearbook) and also by **producing new interactive digital publications**. Moreover, it will **expand the range and reach of the statistical products**, such as Statistics Explained articles and new Statistics 4 beginners articles.

In 2021, **actions in the competition policy area** are guided by twin green and digital transformation needs of the economy, to contribute to a resilient EU recovery and a well-functioning Internal Market. Actions will contribute particularly to the Commission policy priorities set out in “A European Green Deal”, “A Europe fit for the digital age” and “An economy that works for people”. Actions under this part of the SMP foster enforcement of competition rules and ensure that regulation takes competition duly into account. An unprecedented review of competition policy continues, encompassing many key block exemption regulations, guidelines and notices, alongside progress on initiatives to ensure fair competition in the Single Market. Moreover, engagement with stakeholders will intensify to ensure, for example, that competition rules support the green transformation. Competition policy actions will also play a key role in stabilising the economy. State aid decisions under a Temporary Framework for State aid will continue to help Member States alleviate the economic effects of the COVID-19 pandemic, while limiting negative effects on the internal market. Competition policy will also support efforts to implement the first pillar of the Next Generation EU, the Recovery and Resilience Facility (RRF), assisting Member States in the preparation of the Recovery and Resilience Plans (RRPs) in compliance with competition rules, especially with the State aid rules.

## 1.5. Actions

The main activities include:

- Support for the effective enforcement and modernisation of the Union legal framework through data-gathering and analyses;
- Studies, assessments, analyses and evaluations;
- Capacity-building activities and facilitation of joint actions between Member States and between their competent authorities and the Commission and the decentralised Union agencies;
- Financing of mechanisms allowing individuals, consumers and business representatives to contribute to decision-making processes;
- Support for bodies involved in developing high-quality international financial and non-financial reporting and auditing standards, facilitating their integration into the Union law, and promoting the innovation and development of best practices in corporate reporting;
- Support for actions enhancing the participation of consumers and other end-users of financial services in financial services policy making, promoting a better understanding of the financial sector and of the different categories of commercialised

financial products and ensuring that the interests of consumers in the area of retail financial services are protected; Strengthening the exchange and dissemination of expertise and knowledge.

This is complemented by very specific and targeted types of actions in a number of areas including: improvement of competitiveness, notably of SMEs; standardisation and emergency measures along the food chain and protection of human, animal and plant health, as well as animal welfare.

The SMP also includes specific activities for implementing the framework for financing the development, production and dissemination of European statistics within the meaning of Article 13 of Regulation (EC) No 223/2009.

### **1.6. Delivery mode**

The Programme will mainly be implemented through direct management using in particular (but not exclusively) grants and procurement. The participating DGs are COMP, ESTAT, FISMA, GROW, JUST, SANTE, TAXUD.

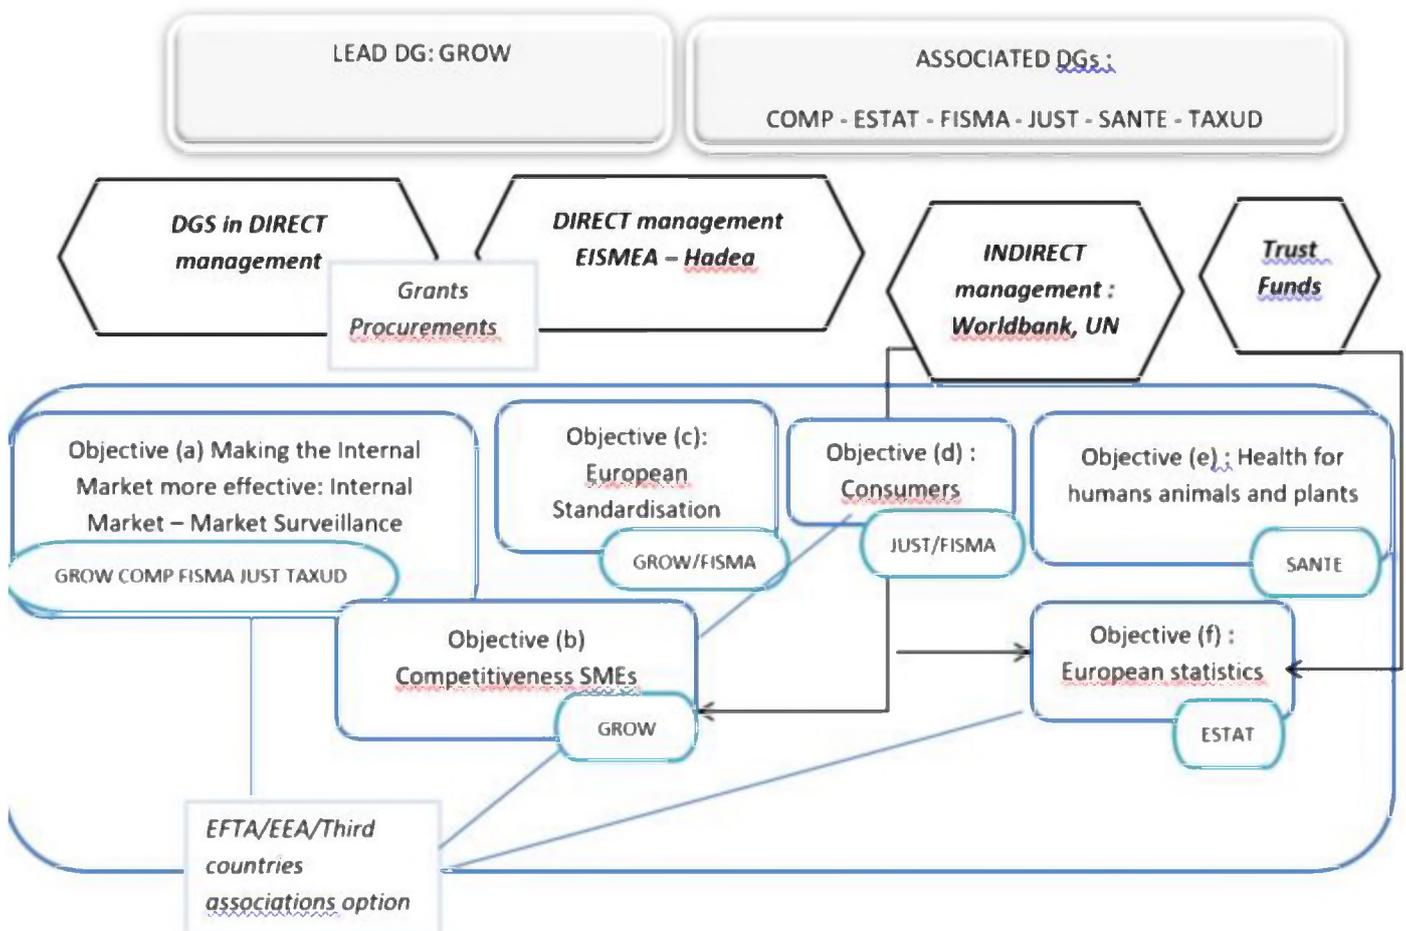

Parts of the Programme are expected to be implemented by two executive agencies. These concern in particular activities with regard to the competitiveness of businesses and SMEs, promoting the interests of consumers, activities relating to the protection of the health of humans, animals and plants along the food chain, and to the support of the welfare of animals. The majority of the actions under the Food strand of the SMP will be delegated for implementation to the newly established Health and Digital Executive Agency (HaDEA). The programme is coordinated along the lines set out in a Memorandum of Understanding signed by the seven participating Directorate-Generals, with the provision of a coordination secretariat provided by DG GROW.

### **1.7. Graphic overview of the programme structure**

# THE SMP STRUCTURE AND OBJECTIVES

GENERAL OBJECTIVES	SPECIFIC OBJECTIVES
Improve the functioning of the Internal Market	Improving the Internal Market and market surveillance
	Support to SMEs
	Standardisation
	Promoting the interests of Consumers
	High level of health and safety for humans, animals and plants
High quality Statistics	European Statistics (covering all EU policies)

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM (2018) 441: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the Programme for single market, competitiveness of enterprises, including small and medium-sized enterprises, and European statistics and repealing Regulations (EU) No 99/2013, (EU) No 1287/2013, (EU) No 254/2014, (EU) No 258/2014, (EU) No 652/2014 and (EU) 2017/826	2021 - 2027	4 208,0

### 1.8.2. Legal basis explanation

Regulation of the European Parliament and of the Council, establishing the Programme for single market, competitiveness of enterprises, including small and medium-sized enterprises, and European statistics and repealing Regulations (EU) No 99/2013, (EU) No 1287/2013, (EU) No 254/2014, (EU) No 258/2014, (EU) No 652/2014 and (EU) 2017/826 (COM (2018) 441).

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							
	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
<b>Total</b>	<b>575,0</b>	<b>583,5</b>	<b>592,2</b>	<b>601,1</b>	<b>610,2</b>	<b>619,6</b>	<b>626,3</b>	<b>4 208,0</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The programme brings together six predecessor programmes from different policy areas. It also includes several previously independent budgetary lines connected to the functioning of the internal market.

The Commission proposal for the Multiannual Financial Framework (MFF) for 2021-2027 (the MFF proposal) sets the budgetary framework and main orientations for the Single Market Programme (SMP) for the period 2021-2027.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

The SMP reached political agreement in Trilogue between Commission, Council and Parliament in December 2020. Legal revision in the Council came to an end by early March. The Council aims for an adoption through its first-reading position in April. Adoption by the European Parliament will follow in plenary at end April. Work Programmes for the full SMP, alongside the draft 2021 Financing Decision was under inter-service consultation within the Commission until 9 March.

**Competitiveness of enterprises (SME) strand:** The SME strand has a voted budget of EUR 117.4 million in 2021. The first work programme provides for continuity of proven concepts such as the Enterprise Europe Network (EEN), Erasmus for Young Entrepreneurs, IPR SME helpdesks, EU-Japan Business Centre, SME Envoy Network, SME Performance Review, Single Digital Gateway, & Public Procurement for Innovation. It also supports the new Joint Cluster Initiative (Euroclusters), the tourism sector and backs the implementation of the SME strategy, and ensures the rollout of new tasks in EEN such as those linked to sustainability and digitalisation.

### Financial Reporting and Auditing Standards:

Across the new multiannual financial framework (MFF) period 2021-2027, the SMP will continue Union support for high-quality international financial and auditing standards, facilitating their integration into the Union law. Building on the success of support during the period 2014-2020, over the course of the new MFF increased support will be provided for the development of

companies' non-financial reporting. The development, monitoring and oversight of financial and non-financial reporting and auditing standards will promote efficient European capital markets, help ensure the stability of financial markets and facilitate investment decisions that better account for environmental, social and governance concerns. It will help protect the interests not only of investors and other providers of funding to companies, but also of those with a stake in the success of companies: employees, consumers, local populations and society at large.

In particular, the IASB's work plan lists many projects focused on improving the content and delivery of financial information to investors. It contains numerous technical projects in the different phases of the development of a standard such as research, standard setting, and maintenance. In 2021, the IASB will launch its next agenda consultation, which will help to determine the IASB's standard setting priorities from 2022 to 2026. In early 2021, the IASB envisages to publish a request for information.

EFRAG's work in relation to financial reporting standards will remain largely driven by the IASB's standard setting agenda. In 2021, EFRAG will provide its final endorsement advice and a comprehensive impact analysis to the European Commission on the revised IFRS 17, as well as on endorsement advice on several non-major amendments. Outreach with stakeholders will be part of the EFRAG due process. Over the course of the coming years it is expected that, in light of the new Commission's priorities set out in the European Green Deal and in particular the review of the Non-Financial Reporting Directive, EFRAG will significantly increase its activities in the area of non-financial reporting including in supporting the development of non-financial reporting standards. Building on work already started, EFRAG's Corporate Reporting Laboratory will continue a project about reporting of non-financial risks and opportunities and links to the business models. A review of the future governance and finance of EFRAG may also be undertaken in the second half of 2021 to take into account development in EFRAG's role in non-financial reporting.

It is expected that throughout the period, the core task of the PIOB will continue to be the oversight of the International Auditing and Assurance Standards Board (IAASB) and the International Ethics Standards Boards for Accountants (IESBA) so that audit-related standards are responsive to the public interest.

**Consumer strand:** The Consumer objective Work Programme under SMP is foreseen as biennial work programme, and will therefore cover 2021 and 2022. It will have a total budget of 46,3 million EUR, with the following types of actions:

1. Grants
  - Support to Member States' authorities (CPCs, Presidency grants,...)
  - Support to Consumer organizations and other bodies at Member States' and EU level (ADR, debt advice,...)
  - Joint actions with European Consumer Centres (ECCs)
2. Procurement actions
  - Market surveillance and enforcement actions
  - Capacity building and education actions
  - Studies, analyses and surveys
  - IT systems and information support structures
  - Events and external communication actions

**Enhancing consumers involvement in the EU policy making in the field of financial services:** Across the new MFF, the SMP will continue Union support to enhance the participation of financial services end-users in the financial policy making and ensuring that the interest of consumers in the area of retail financial services are protected. In addition, for the period 2021-2027, the SMP will support promoting a better understanding of the financial sector and of the different categories of commercialised financial products. In the first instance, the focus will be on a number of key topics such as sustainable finance (the Renewed Sustainable Finance Strategy), financial inclusion, Capital Markets Union, digitalisation (the Digital Finance Package), financial stability, the impact and consequences of the Covid-19 pandemics, and other emerging priorities. As the world of finance is subject to rapid change, these priorities may be subject to adjustment over the course of the seven-year period 2021 to 2027. The beneficiaries of the programme would be encouraged to engage in activities that not only lead to substantive achievements in relation to the objectives of the SMP but also to broaden the outreach and impact on EU policy-making in the area of financial services of organisations representing the interests of consumers and end-users of financial services. In general terms, such activities include:

- publication of research and policy papers;
- contribution to public consultations;
- communication and outreach activities, including organisation of high-level conferences, participation in hearings, good press coverage and social media activities, and financial education and training;
- increasing the representation of consumer and end-user interests in the Union policy-making through regular meetings with EU policymakers and participation in expert or stakeholder groups and European Supervisory Authorities (ESAs);
- increasing and diversifying the membership of organisations representing the interests of consumers and end-users of financial services, in particular covering more Union Member States.

Attention will be paid to continuously developing methodology and best practices on how to increase the engagement of consumers and financial services end-users in order to identify issues relevant for Union policy-making and ensure that the interests of consumers in the area of financial services are protected.

## Food strand

Under the SMP umbrella, a common single Financing Decision and Work Programme will be adopted. All Food chain related activities will be included in an Annex to the Financing Decision (i.e. veterinary programmes, phyto-sanitary programmes, EURLs and Food and Feed activities that include the new activities: animal welfare, AMR, food sustainability, food fraud, food waste, etc.). The formal adoption of the Financing Decision is likely to take place by April/May 2021. Member States will then submit their veterinary and phyto-sanitary programmes, up to one month later. The timing for grants preparation and finalisation could then go to September/October 2021.

Transitional provisions under the current SMP Regulation will allow the measures implemented from 1/1/2021 to be eligible for financing, even if the grants are signed later, in order to avoid disruption on the fight against animal diseases and pests.

By letters sent to contracting authorities end of December 2020, beneficiaries (MS and EURL/EURCs) have been informed of the above timing and on the step to be taken to insure continuity of the actions to be implemented.

In its first year of implementation, of a total budget in commitment appropriations of around EUR 220 million, the initial approximate allocation designated to the different food chain programmes within the SMP will be as follows:

- Veterinary programmes – 49,5 %
- Phyto-sanitary programmes – 9%
- Veterinary and phyto-sanitary emergency measures – 9 %
- Official controls : European Reference Laboratories/European Reference Centres – 9,5 %
- Better Training for Safer Food – 4,5%
- Animal welfare, food waste and fraud, AMR, sustainable food production and consumption – 6,4%
- Other expenses (communication, IT, contingency, ...) – 10%

## 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

### *Programme for the Competitiveness of Enterprises and Small and Medium-Sized Enterprises (COSME)*

	Commitments	Payments
Implementation Voted budget	2 358 709 993	1 556 916 061
Implementation Carry-overs	0	14 118 483
Implementation total	2 358 709 993	1 571 034 544
total envelop*	2 358 951 395	
cumulative implementation rate	100%	67%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

**COSME Financial Instruments:** At the end of 2020, all commitment appropriations as authorised by the European Parliament and the Council of the EU for the period 2014-2020 were used in line with the planned operational implementation. The implementation rate of payment appropriations vis-à-vis commitment appropriations varies between the two COSME financial instruments.

Whereas, the Loan Guarantee Facility has a rather accelerated budgetary implementation ratio (e.g. 74% budgetary execution rate of payments vis-à-vis commitments as of 31 December 2020), the respective ratio for the Equity Facility for Growth is lower (i.e. 32% budgetary execution rate of payments vis-à-vis commitments as of 31 December 2020) due the implementation specificities.

In the case of the Loan Guarantee Facility, payment appropriations are needed to allow the implementation partner (the European Investment Fund) to honour guarantee calls from financial intermediaries for defaulting loans, to hedge currency exposures (as a large number of financing is made available to SMEs in countries which are not part of the EUR zone) and to pay implementation fees. Furthermore, the Loan Guarantee Facility was additionally reinforced by the SME window of the European Fund for Strategic Investments. Since 2015, it has enhanced the Loan Guarantee Facility by adding additional risk-taking capacity and doubling the available resources in terms of commitment appropriations. It is expected that already by the end of 2022 the budgetary implementation ratio would reach 100%, i.e. payment appropriations would match almost in full commitment appropriations.

In the case of the Equity Facility for Growth, payment appropriations are needed to allow the implementation partner (the European Investment Fund) to honour cash-calls from fund managers, who will use the cash to invest into portfolio companies. Since it is industry standard that venture capital fund managers have up to 5 years to make the first initial investments into SMEs following the creation of the venture fund, there is a significant delay between the time of signature of a fund agreement by the EIF and the respective cash calls by the fund managers. And following the initial investment by the fund manager, funds can hold on to

their portfolio companies for up to 10-years during which they can undertake follow-on investments to grow the companies. This pattern of activity explains why there is a significant time delay between commitment and payment appropriations in the case of venture capital investments.

In any case both COSME financial instruments are planned to last until 31 December 2034 when the last guarantee and equity operations are wound down by the EIF. All details are available in Working Document Part X dedicated to the financial instruments.

#### **Financial Reporting and Auditing Standards**

	<b>Commitments</b>	<b>Payments</b>
Implementation Voted budget	<b>55 307 969</b>	<b>48 819 949</b>
Implementation carry-overs	<b>0</b>	<b>0</b>
Implementation total	<b>55 307 969</b>	<b>48 819 949</b>
total envelop*	<b>55 307 970</b>	
cumulative implementation rate	<b>100%</b>	<b>88%</b>

\*\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

Over the period 2014-2020 commitment appropriations of EUR 55 307 969 had been used for the programme's operational implementation.

However, a total decommitment of budget appropriations amounting to EUR 2.9 million took place over the same period. This represents 5.4% of the total budget appropriations initially committed. The decommitment was mainly due to a beneficiary underspending the awarded Union funds for particular reasons. Arrangements have been put in place to mitigate the likelihood and impact of recurrence and the most information available to Commission services indicate that these measures have been successful in alleviating the problem whilst allowing the objectives of the programme to be achieved.

The payments executed over the period 2014-2020 amount to EUR 48 819 949 and represent 88% of the total commitment appropriations for the same period. The operating grants implementation period runs from 1 January to 31 December and balance payments are due to the beneficiaries the following year. Therefore, the difference between the cumulative commitment appropriations (taking into account the aforementioned decommitment) and the cumulative payment appropriations represents the potentially outstanding payments for 2020 that are only due in 2021.

#### **Consumer Programme :**

The implementation rate is based on the total financial programming 2014-2020 (cumulative total of annual last adopted budgets 2014-2020).

	<b>Commitments</b>	<b>Payments</b>
Implementation Voted budget	<b>187 809 925</b>	<b>140 806 441</b>
Implementation Carry-overs	<b>0</b>	<b>2 248 812</b>
Implementation total	<b>187 809 925</b>	<b>143 055 253</b>
total envelop*	<b>188 432 000</b>	
cumulative implementation rate	<b>100%</b>	<b>76%</b>

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The 100% implementation of Commitment appropriations rate concerns the commitments made at a more general level (commitment Level 1 or otherwise called "global commitment"), which are made for part of the Programme's actions, to be implemented in the following year (year N+1). It slightly differs with the commitments rates for operational budget mentioned here below due to the fact that it can sometimes happen that a small proportion of the global commitment is not translated into legal (level 2) commitments by the end of the year N+1.

The payment appropriations will continue to be executed in the coming years (estimated until 2023) to allow for finalisation of on-going projects both regarding grants and procurement activities. They concern activities that are still on-going, that are in the finalisation stage (the final payment is pending) and some that have not yet started. For instance, information and awareness raising campaigns have a duration of 2-3 years.

**Implementation Status**

The implementation of the Consumer Programme 2014 – 2020 is well on track to meet its multiannual objectives. Most of the related performance indicators expected have been achieved.

The annual work programmes (commitments) related to operational budget:

- 2014 (EUR 21.9 million) executed at 98.3 %
- 2015 (EUR 22.5 million) executed at 99 %
- 2016 (EUR 23.7 million) executed at 99 %
- 2017 (EUR 24.7 million) executed at 94,5%
- 2018 (EUR 25.7 million) executed at 100 %
- 2019 (EUR 27.2 million) executed at 99,28%
- 2020 (EUR 27.6 million) executed at 55,91% (data from December 2020). Global commitments for the remaining already defined actions (legal commitments to be concluded during the first half of 2021) were done at the end of 2020.

In 2020, following the impact of the Covid-19 crisis on some of the procurement activities (cancellation of meetings, conferences and study visits), the budget allocated to grants was slightly increased (within the 20% flexibility foreseen in the Financing Decision), which helped to improve the overall implementation rate and limit the need to conclude global commitments.

**Enhancing consumers involvement in the EU policy making in the field of financial services:**

	Commitments	Payments
Implementation Voted budget	5 532 382	4 828 690
Implementation Carry-overs	0	0
Implementation total	5 532 382	4 828 690
total envelop*	5 532 382	
cumulative implementation rate	100%	87%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

Over the period 2017-2020 commitment appropriations of EUR 5 532 382 had been used for the programme's operational implementation.

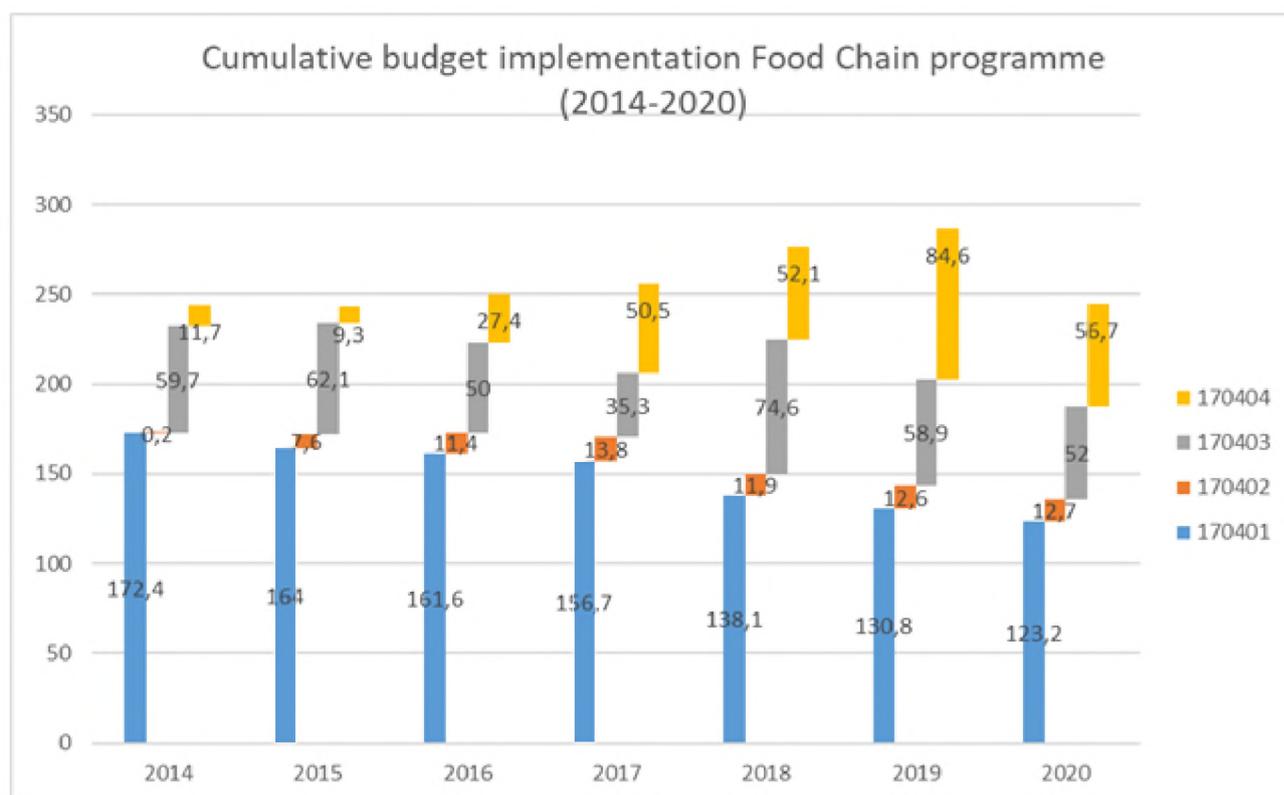

However, a total decommitment of budget appropriations amounting to EUR 0.3 million took place over the same period. This represents 5.4% of the total budget appropriations initially committed. The decommitment was mainly due to a beneficiary underspending the awarded Union funds for particular reasons. Arrangements have been put in place to mitigate the likelihood and impact of recurrence and the most information available to Commission services indicate that these measures have been successful in alleviating the problem whilst allowing the objectives of the programme to be achieved.

The payments executed over the period 2017-2020 amount to EUR 4 828 690 and represent 87% of the total commitment appropriations for the same period. The action grants implementation period runs from 1 January to 31 December and balance payments are due to the beneficiaries the following year. Therefore, the difference between the cumulative commitment appropriations (taking into account the aforementioned decommitment) and the cumulative payment appropriations represents the potentially outstanding payments for 2020 that are only due in 2021.

**Food and Feed**

	Commitments	Payments
Implementation Voted budget	1 820 388 942	1 379 342 745
Implementation Carry-overs	6 836 700	5 496 962
Implementation total	1 827 225 642	1 384 839 707
total envelop*	1 827 335 200	
cumulative implementation rate	100%	76%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The above graphic shows the gradual increase of budget implementation of the Food Chain programme since 2014 which follows the increase of the budget allocated under the MFF (2014-2020). In 2020 the trend was bended and the total budget consumed in 2020 (EUR 244.6 million) was considerably lower than in 2019 (EUR 287 million).

Within the Food Chain budget, the significant reduction of the budget used for veterinary programmes (budget line 17.0401) is mainly due to the phasing-out of the funding of bovine tuberculosis eradication programmes since 2018, with a progressive reduction in the cofinancing rate applied (from 50% in 2017 to 35% in 2020) together with an overall capping of the budget allocated to this disease in order to reallocate additional budget to higher priority diseases (ASF, LSD, etc). This reduction is compensated by the increase in budget consumed for emergency measures for which the severe outbreaks of avian Influenza (2016-2017-2018 and 2020) and African swine fever (2018-2019-2020) necessitated the use of the flexibility clause to raise the maximum EU contribution.

Since 2016, annual work programmes have been implemented as foreseen. These work programmes include national programmes for the eradication, control, and surveillance of animal diseases and zoonoses (veterinary programmes); national survey programmes for pests; training in the field of food and feed safety, animal health, animal welfare and plant health; IT tools in the field of food safety, animal health, animal welfare, and plant health; the European Union Reference Laboratories. Co-funding for emergency measures related to outbreaks of animal diseases and pests was covered through the adoption of one common financing decision.

The **national veterinary programmes** target transmissible, often epidemic animal diseases. They have a direct impact on public health because of food safety issues and because some animal borne diseases are transmissible to humans. Furthermore, animal disease outbreaks can trigger significant economic costs through loss of internal EU and export markets and the direct cost of disease control on the EU and Member States' budgets. In 2020, 146 national veterinary programmes covering the monitoring and eradication of 11 diseases and implemented by 28 Member States, have been approved and implemented in accordance with pre-defined priorities; their final report is due at the end of April 2021. Around EUR 117,2 million was allocated to co-fund them which accounts for the largest proportion of spending under the Food and Feed budget.

The **national survey programs for organisms harmful to plants** ensure early detection and eradication of pest outbreaks. The programme covered 62 different plant pests of which *Xylella fastidiosa*, *Bursaphelenchus xylophilus*, *Ralstonia solanacearum* and *Clavibacter michiganensis*, consume the major budget share (50% of the total budget of EUR 13,73 million). In 2020, 24 programmes were implemented for which the final report is due at the end of April 2021. Whereas the programme started in 2015 with 17 MS participating, the number of MS implementing these programmes is since 2017 stabilised at 24. Over the full period of implementation (2015-2020) the increase is indicative of the growing importance of this relatively new activity. As regards plant health, phytosanitary emergency measures aim to timely cope with emergency situations related to plant health to eradicate or to

contain pest outbreaks and have been implemented by several years. To be effective, phytosanitary eradication measures need to be implemented at the very initial stage of the outbreak, which requires a rapid and proper response at EU level, especially for some devastating pest such as *Xylella fastidiosa*, *Anoplophora glabripennis* & Pine wood nematode. Early and decisive intervention can prevent devastating costs that would arise if such diseases are only contained and/or become established. Results achieved in the last years and the emergence of new pest such as *Xylella fastidiosa* or Pine wood nematode have had an impact on the increasing EU budget allocated to plant health measures from EUR 5 million in 2017 to EUR 20 million in 2018 and 2019.

As far as **emergency measures** are concerned, a system was put in action in 2016 to contain the outbreaks of lumpy skin disease in Greece, Bulgaria, and the Balkan countries through coordinated vaccination campaigns shielding the Union from further disease spread. In addition, preventive vaccination has also taken place in Croatia. These EU co-funded emergency measures have continued in 2020, with vaccination gradually replaced by surveillance as the disease has been successfully eradicated, thanks to the EU co-funded vaccination campaigns. The implementation of the measures led to the containment of the disease in Bulgaria, Greece, Croatia, and a number of third countries, which also benefitted from EU financial aid (Serbia, Bosnia & Herzegovina, Kosovo, Montenegro, North Macedonia and Albania).

The large scale Avian Influenza outbreak which started in 2016 requested extensive efforts through 2017 and 2018 to limit its spread across the European territory. As a consequence of the measures implemented, such as the slaughter of the affected animals and the disinfection of holdings, the disease did not spread across vast territories and serious damages to the farming community and the export capacity of the Union were thus avoided. The avian influenza virus is propagated by movement of wild birds; its spread, therefore, needs quick reaction. In 2018, the Union signed grant decisions, on top of the EUR 100 million already agreed in 2017, to co-fund the further immediate implementation of emergency measures against avian influenza for an additional amount of EUR 29 million. Also in 2020 several new outbreaks occurred across the EU and grants were awarded for a total budget of EUR 58,76 million. In the framework of ex-ante on the spot audits, for some Member States the financial settlement of the crisis of 2017-2018 is continuing in 2021, which in combination with payments for the 2020 grants will result in further substantial payments in 2021 and 2022.

African swine fever (ASF) is a devastating viral disease which in Europe affects both domestic pigs and European wild boar. The disease is not a zoonosis but represents a serious economic threat due to the mortality in pig holdings and to export restrictions imposed by third countries. It presents also challenges for animal welfare. Since its introduction into four Member States in the Eastern part of the EU in 2014, ASF has spread and is currently present in eleven Member States (in Italy the disease has been present since 1978 but only in Sardinia and this is not related to other Member States). The disease can be transmitted in various ways: directly through contact between sick and healthy animals (most prominently through the wild boar population and subsequent transmission of the disease to domestic pigs), and indirectly. The latter occurs through infected material (vehicles, clothes, boots etc.), contaminated food (e.g. feeding with garbage/swill containing infected meat) and biologic vectors (soft ticks). The virus is very resistant to inactivation even under harsh environmental conditions, and currently there is no vaccine available. The “human factor” is closely related to long distance “jumps” of the disease. These issues, coupled with wildlife involvement, contribute to difficulties in ASF control and eradication.

Since 2014, the EU has allocated a total of EUR 221,94 million for the prevention and eradication of the disease, which includes EUR 74,88 million for eradication programmes and EUR 147,06 million for emergency measures. In 2020, nineteen Member States had EU-approved national programmes in place for control and eradication of ASF with a total allocation of EUR 12,87 million while for co-funding of emergency measures EUR 38,5 million were allocated in total. In addition, EUR 5,24 million have been awarded for agreements for EU co-financing of measures against ASF with seven neighbouring non-EU countries (Albania, Moldova, Montenegro, North Macedonia, Serbia and Ukraine) and Kosovo. Payments for ASF emergency dossiers will continue to have an important impact on the 2021 and 2022 budget.

Over the past years, credits were transferred to the emergency measures budget line through internal re-deployment of funds (in 2017, 2018, 2019 and 2020) and a transfer of credits. In 2020 the total credits initially allocated for emergency measures under the EU budget were EUR 20 million whereby the total budget committed by the end of 2020 to cover the EU’s payment obligations exceeded EUR 55 million. As from 2021, if necessary, additional credits may be requested on the basis of Article 11 of the MFF (2021-2027) concerning the Crisis Reserve.

In 2019, the Food and Feed programme also co-funded emergency measures to fight against plant pest outbreaks. The combat against the Asian long horn beetles (*Anoplophora glabripennis*), pinewood nematode and *Xylella fastidiosa* took up the largest portion.

Better training for safer food (BTSF) activities with the objective to improve the effectiveness, efficiency, and reliability of **official controls** could not be implemented as planned in 2020 due to the COVID 19 pandemic, as the vast majority of the planned courses involved face-to-face training in small breakout groups from multiple origins. There were 43 contracts to provide training in January 2020, operating until March 2020 when face-to-face training (F2F) was suspended until September 2021. A number of contracts were amended to allow training by virtual classrooms (VC) starting January 2021. However, as there was no contractual obligation to provide virtual classrooms, many contractors chose to extend contracts by a year and suspended their services. Eight new calls for tender (EUR 7 million) were published in 2020 requiring VCs alongside face-to-face courses. SANTE provided nine e-learning courses used by more than 5000 officials worldwide during 2020. It is currently updating these nine courses, developing a further six courses, and has ten more planned for 2021 in line with the Commission priority “A Europe fit for the digital age”.

An EU dimension to training plays an important role in spreading knowledge and awareness of EU legislation in sanitary and phytosanitary fields within and outside the EU. BTSF training contributes to ensure high level of competence amongst control staff, improve the ability to detect fraud and non-compliance on the EU market and at its borders, make official controls more uniform, objective and efficient throughout the EU, maintain high levels of consumer protection, animal health and plant health, provide economic benefits by creating a level playing field for food businesses and facilitating fair cross-border trade within the EU, reduce the number of rejections at the EU borders and ease controls at import leading to reduced burdens on EU importers, ensure a greater uniformity of control procedures between EU and non-EU partners in order to guarantee a parallel competitive position of EU businesses with their non-EU counterparts, build confidence in the EU regulatory model with competent authorities of other international trade partners and pave the way for new food market opportunities and increased competitiveness for EU operators.

There were 44 EU funded European Reference Laboratories (EURLs) in 2019; the laboratories helped ensuring the proper functioning of the internal market, the protection of human health, and the maintenance of consumers' confidence. Furthermore, two European Reference Centres were funded, respectively for animal welfare and zootechnics. The Centres provide technical support and coordinated assistance to the EU countries in carrying out official controls in their respective fields.

Activities of the EURLs provide high EU added value, ensuring high quality and uniform testing in the EU, and providing trainings to hundreds of National Reference Laboratories (NRL) in a number of food safety priority areas. This ensures a consistent and uniform work of all Member States. The activities performed by the EURLs have contributed, inter-alia, to the continuous update of diagnostic tools for the timely identification of pathogens.

In 2020, COVID-19 had a significant impact on the implementation of programme of audits carried out by the Health and Food audits and analysis Directorate of DG SANTE. Planned controls had to be postponed to later in the year or cancelled. Of the 167 audits and similar controls initially planned in the food and feed area, 97 were eventually carried out with the participation of 8 national experts. Out of these, 61 were carried out remotely. Audit reports are public and available on the dedicated Commission website: [http://ec.europa.eu/food/audits-analysis/audit\\_reports/index.cfm](http://ec.europa.eu/food/audits-analysis/audit_reports/index.cfm).

#### **3.1.3. Previous programme performance**

### ***Programme for the Competitiveness of Enterprises and Small and Medium-Sized Enterprises (COSME)***

The COSME programme addresses the challenges of SMEs in their entirety. Access to finance does not just provide financial support to numerous SMEs that have difficulties in finding such support. The implementation of this objective related to access to finance is found to positively affect also the SMEs' assets, share of intangible assets, sales, employment rates and even to lower SMEs' probability of default. This is empirically demonstrated by the econometric work carried out from various studies on the COSME predecessor activities related to access to finance<sup>[1]</sup>.

Under the general objective of 'strengthening the competitiveness and sustainability of the Union's enterprises, particularly SMEs' several activities of the COSME programme indirectly contribute. Looking at the time and cost to establish a business, the updated methodology<sup>[2]</sup> shows a reduction from 2014 of 15 days to 12 days in 2020, while the cost (expressed in % of income per

capita) has reduced from 4.8% to 3.2% in 2020 (EU-28). While this is a positive trend, it shows there is still work to do in improving the business environment.

The work of the SME envoys and SME Performance Review ensure a flow of information for businesses and policy-makers, contributing indirectly to improve the business framework and the competitiveness of SMEs. The SME Performance Review reports contributed to the Commission's analyses of SME relevant issues at European and national level in the context of the European Semester, and in 2020 in the context of the Recovery and Resilience Facility.

The second general objective is to encourage entrepreneurial culture and to promote the creation and growth of SMEs. EU-28 SMEs in the 'non-financial business economy' followed a solid growth path up to 2019. In 2014-2018, SME value added increased by 16.2%, and SME employment increased by 8.2%. The main drivers of growth in SME value added were micro firms, generating value-added growth of 18.3% in this period. Nevertheless, the growth in value added of large firms was even higher, at 19.5%. More recently, in 2019, all enterprise size classes recorded growth in the number of enterprises, value added and employment, and EU-27 SMEs posted stronger growth than in large enterprises, especially in terms of growth in value added. Moreover, within the EU-27 SME population, micro-SMEs outperformed by far small and medium-sized SMEs in 2019.

In 2019, SMEs accounted for over 60% of the increase in EU-27 value added, and 70% of the increase in EU-27 employment. In both cases, SMEs' contribution was driven by micro-SMEs, which accounted for 31% and 56% of the total growth in value added and employment respectively.

However, in 2020, the COVID-19 crisis brought to an abrupt halt or even reversed the gains made by the EU SME sector over the past decade. Many industries, especially in the SME-intensive services sector, experienced large declines in sales as result of the various lockdowns and other measures introduced by Member States, while some other industries saw their sales increase. The various business support measures implemented by Member States during the pandemic limited the employment impact of the decline in economic activity. Preliminary estimates from the SME Performance Review suggest that across the EU, the number of SMEs has fallen by -1.3% in 2020. Employment in SMEs is estimated to have fallen by -1.7% in 2020 (representing 1.4 million jobs lost in SMEs) and SME value added by -7.6%. SME value added is unlikely to reach 2019 levels even by the end of 2021.

Specific projects showed continued success and growth although some adjustments were necessary in 2020. The Erasmus for Young Entrepreneurs mobility scheme (active since 2009 as a pilot action and continued under COSME) demonstrates the need for entrepreneurial exchange whereby would-be or newly established entrepreneurs receive practical support from experienced entrepreneurs. Experienced entrepreneurs in return increase their knowledge and access to other markets as well as gain new ideas and techniques for their business. The programme was strongly hit by COVID19 and the number of matched entrepreneurs has reduced significantly. Measures to react to the situation were taken and remote exchanges to start with were offered. However, the programme has maintained its broad geographical spread, implemented by a network of 194 local intermediary organisations in 37 countries (out of 39 participating), including in Kosovo\* and in Martinique (EU outermost region).

Around 225 000 SMEs receive support from the Enterprise Europe Network services on a yearly basis (up to end 2019), with specific actions initiated in 2020 to help SMEs overcome the COVID crisis, helping them for example finding alternative business partners and access to finance. According to a survey by the Enterprise Europe Network, about 74% of the responding companies were strongly or moderately affected by the crisis, forcing them to deal with supply chain disruptions, employee absences and temporary shutdowns among others. The most obvious reasons were delays due to transport and logistics problems, border closings and national lockdown measures.

Financial Instruments: until September 2020, the Loan Guarantee Facility under the COSME Financial Instruments allowed more than 600 000 SMEs to receive more than EUR 35 billion financial support in 2014-2020. In reaction to the 2020 COVID crisis, EUR 714 million from the European Fund for Strategic Investments (EFSI) were redirected to the COSME Loan Guarantee Facility to allow the European Investment Fund (EIF) to incentivise banks to provide liquidity to SMEs affected by the COVID crisis. More flexibility was given to users of the Facility, and the guarantee rate was increased from 50 to 80%. Until September 2020, this helped more than 38 000 European SMEs to access around EUR 1.9 billion of liquidity finance under the COSME COVID measure.

Until September 2020, the funds supported by the Equity Facility for Growth had invested more than EUR 1.2 billion into more than 140 companies. Out of this amount, more than EUR 0.4 billion were invested into more than 50 SMEs in their growth and expansion stage. The latter two indicators (EUR 0.4 billion and 50 SMEs) were below the initially foreseen long-term targets for 2020. Some of the drivers behind that performance were:

- Signing agreements for the Equity Facility for Growth continued to take longer, as equity entails more complex due diligence and fund-raising processes.
- The Equity Facility for Growth prioritised funds focused on investments in COSME third countries participating in the programme, whereas these third countries cannot be supported under the SME window of the European Fund for Strategic Investments, however, demand from these jurisdictions continues to be limited.
- The COVID crisis in 2020-2021 impacted the equity markets.

Based on lessons learned from audits and also other assessments highlighted in the Programme Statements of operational expenditure for the previous financial years, the Commission proposed to set up one single programme (InvestEU Programme

2021-2027) establishing one single fund (InvestEU Fund). It builds on the successful model of the European Fund for Strategic Investments. The InvestEU will ensure a streamlined approach towards the management and reporting on financial instruments/budgetary guarantees. Under the InvestEU fund, financial products catering towards the Commission's policy priorities, including the financing of SMEs, will be established.

All details are available in Working Document Part X dedicated on the financial instruments.

**Challenges and conclusion:** The most recent evaluation<sup>1</sup> found that COSME actions are highly relevant in addressing the challenges related to fostering economic growth and jobs. The Programme has a good proximity to SMEs thanks to an extended network of intermediaries, a high multiplier effect and shows EU added-value. It supports all types of SMEs (e.g. Loan Guarantee Facility and Enterprise Europe Network). The programme is small but has shown flexibility in adapting quickly to new priorities.

However, 20 % of the budget is fragmented in a number of small actions with a low potential for effectiveness and cost-efficiency. In relation to monitoring, the evaluation points out to a lack of centralised data about implementation and indicators are mostly based on outputs rather than on long-term effects. Some efforts are still needed to centralise the data that at present is dispersed between the coordinating team, the units managing individual actions and the delegated entities. The programme delivers in terms of jobs and growth creation but it does not address directly global and societal challenges. The programme is coherent and works without big overlaps with other EU programmes and national/regional SMEs' support schemes, however there is scope for improving synergies, mainly at national and regional level.

The fragmentation into smaller actions has been gradually addressed in the last two years of the work programme, ensuring that the larger actions have been reinforced where appropriate, and the amount of smaller supporting actions reduced. This has also fed into the preparation of actions under the Single Market Programme where the most impactful actions are being reinforced. However the programme should retain its ability to launch smaller pilot actions to meet the changing landscape of SMEs.

### *European statistical programme*

The implementation of the European statistical programme progressed well, producing significant results under the programme's different objectives.

The general objective of the programme was for the European Statistical System to be the leading provider of high-quality statistics on Europe. Its performance indicator, measuring the Eurostat impact on Internet, shows the general good performance of the programme. The number of times that Eurostat is mentioned on the Internet is slightly lower compared to the previous year, which can be explained by the fact that an increased number of websites are blocking the access to paid content by automated tools. The percentage of negative opinion is extremely low, showing trust in and satisfaction with the data produced.

The programme has four specific objectives.

The first one is to provide statistical information, in a timely manner, to support the development, monitoring and evaluation of the policies of the Union properly reflecting priorities, while keeping a balance between economic, social and environmental fields and serving the needs of the wide range of users of European statistics, including other decision-makers, researchers, businesses and European citizens in general, in a cost-effective manner without unnecessary duplication of effort. The very good performance of Eurostat for such indicator is shown by the three related performance indicators. The statistical coverage, measured as the number of different statistics published on the Eurostat website, has increased by around 5%. This demonstrates that demands for new statistics are being satisfied, thanks also to improvements in the production processes, as the available resources are not increasing. The second indicator shows that the statistics keep being relevant and used, as indicated by the increase of the number of data extractions made by external users from the Eurostat reference databases, which has reached 21.48 million, representing an increase by 17%. Finally, the effectiveness of the work made under the objective is also on track, reaching a share of 94 % of all planned outputs, which were achieved or are on target.

The second specific objective is to implement new methods of production of European statistics aiming at efficiency gains and quality improvements. The first related performance indicator shows the improvements in quality. The timeliness of the main quarterly and monthly statistics shows a very slight increase (half a day). The effectiveness of the work made under the objective slightly increased, reaching a share of 97% of all planned outputs, which were achieved or are on target.

The third specific objective is to strengthen the partnership within the European Statistical System and beyond in order to further enhance its productivity and its leading role in official statistics worldwide. It is thanks to such partnership that the production of complex statistics like the Principle European Economic Indicators (PEEIs) is possible. The related indicator shows that the publication of the PEEIs slightly went down, probably due to the outbreak of COVID-19 pandemic at the beginning of the year. The production of the statistics on foreign trade with countries outside the EU is constantly in advance compared to the legal target.

The fourth specific objective is to ensure that delivery of statistics is kept consistent throughout the whole duration of the programme, provided that this does not interfere with the priority-setting mechanisms of the ESS. The consistency is shown by the indicator measuring the percentage of the statistics, for which time series that cover 10 or more consecutive years are available. The indicator has increased compared to the baseline in 2017, but not compared to the last two years. However, the absolute number (which should be the correct indicator, used for the next MFF) has increased.

### ***Specific Activities in the Field of Financial Reporting and Auditing***

As previously noted for these activities included in Working Document No.1 for the draft 2021 Union budget, in 2019 the Commission assessed<sup>[1]</sup> the achievements resulting from the funding programme established by Regulation (EU) 258/2014, an assessment which confirmed the relevance and the benefit of the EU funding programme. The same conclusion can be drawn for 2020, the last year of the funding programme. In particular, Union support strengthens the legitimacy of the three beneficiaries (the International Financial Reporting Standards (IFRS) Foundation, the European Financial Reporting Advisory Group (EFRAG) and the Public Interest Oversight Board (PIOB)) to serve the European public interest by developing and promoting European views in the field of financial reporting and auditing and ensuring these views are properly considered in the IASB and IFAC standard-setting processes. In terms of achievements, the funding programme has enabled the three beneficiaries to develop standards, which enhance the transparency and comparability of financial information about financial instruments, revenue recognition, and lease contracts.

Over 2017-2020 the progress made by IFRS Foundation was in line with its work programme. Four major standards were issued: IFRS 9 - *Financial Instruments*, IFRS 15 - *Revenue from Contracts with Customers*, IFRS 16 - *Leases* and IFRS 17 - *Insurance Contracts*. The IASB also published its updated *Conceptual Framework for Financial Reporting* to describe the objective of and concepts for general purpose financial reporting. In 2018, the focus of the IASB agenda evolved from major standard-setting projects towards research projects, maintenance-type activity and initiatives aimed at improving the communication through financial statements. In 2019, the IASB also started to revise its new standard IFRS 17 at the request of major stakeholders including the EU, as well as starting to work on a project to enhance the presentation of *Primary Financial Statements*.

Over 2017-2020 EFRAG fulfilled its work programme in a satisfactory manner, and in line with the recommendations from the Maystadt Report (October 2013). On financial reporting EFRAG's work was largely driven by the IASB work programme, the IFRS Interpretations Committee, and the IFRS Foundation. Throughout the period, EFRAG provided substantial comment letters to all new draft standards issued by the IASB at an early stage of the IFRS Foundation's due process. To support decision making on endorsement, EFRAG issued timely advice on whether the final IFRS standards issued by the IASB complied with the technical criteria of the IAS Regulation, including the true and fair view principle, and were conducive to the EU public good. In 2020, EFRAG worked on research projects that will be continued in 2021: Discounting with low interest rates; Better information on Intangibles; Crypto Assets; and Variable and Contingent Considerations. EFRAG also published a Discussion Paper on the Accounting for crypto-assets (liabilities) with a deadline of 31 July 2021, on which the outreach will be undertaken in 2021.

EFRAG has also widened the scope of its work in recent years and established a European Corporate Reporting Laboratory ("the Lab"), which became operational in February 2019, when the Lab's Task Force on climate-related reporting started its work, the report on which was published in February 2020. A second project about reporting of non-financial risks and opportunities, and linkage to the business model started in September 2020.

The PIOB continued to carry out its oversight function of the International Auditing and Assurance Standards Board (IAASB) and the International Ethics Standards Boards for Accountants (IESBA), whereas the International Accounting Education Standards Board (IAESB) ceased to exist in 2019 with the completion of its work plan.

Since March 2020 the global COVID-19 pandemic has influenced the work of the IFRS Foundation, EFRAG and PIOB in several ways. The three entities not only adapted by changing the way they worked (crisis meetings were conducted as on-line meetings, outreaches have been cancelled, postponed or turned into webinars) but also deadlines were extended to recognise the circumstances of stakeholders and to allow them to provide input and where applicable seek input from their constituents. The IASB supported stakeholders with some COVID-19 related amendments that provide targeted accounting relief, and by adjusting the Board's work plan including postponing less critical consultations. One example of this is the amendment to IFRS 16 to facilitate the accounting by entities for COVID-19-related lease concessions such as rental holidays and temporary rent reductions. On the other hand, the IASB prioritised time-sensitive projects such as those related to IBOR reform and the IFRS 17.

In March 2020, EFRAG called on the IASB to extend their consultation periods of non-time critical projects and the IASB extend the consultation periods of several of its projects. EFRAG also revisited the timelines of its projects in light of the IASB decisions and the particular circumstances of the pandemic recognising the priorities of its stakeholders. Although the COVID-19 crisis had an impact on EFRAG's working methods in 2020, it does not seem to have influenced the implementation of their work programme. For example, EFRAG has been able to meet fully the deadlines, including the extensive preparation process of the endorsement advice of IFRS 17 and the outreach and field test of the IASB Exposure Draft General Presentation and Disclosures and the IASB Discussion Paper Business Combinations and Disclosures, Goodwill and Impairment.

Overall, the funding programme supported reliable corporate reporting by companies. This in turn facilitates the allocation of savings and the reduction of the cost of capital for companies in the EU. As regards the financial independence of the beneficiaries,

<sup>1</sup> Single Market Programme, including COSME, ISA2, ESP, consumer involvement in fin. Services, financial reporting, Food and Feed, consumer programme 245/134

their funding diversification has increased their credibility and technical capacity. The EU financing of the PIOB has helped to attract other public sponsors and to ensure a minimum level of independency from IFAC and the auditing profession. The implementation of the Maystadt reform has also broadened the constituency of EFRAG and contributed to better coordination between European stakeholders in the field of financial reporting. The objective of having national financing of the IFRS Foundation that is proportionate to a country's gross domestic product has, however, not been achieved. Further diversification of the funding of PIOB is also needed.

[1] See COM(2019) 549 final - <https://eur-lex.europa.eu/legal-content/EN/TXT/?qid=1572432361115&uri=COM:2019:549:FIN>

### ***Enhancing consumers involvement in the EU policy making in the field of financial services***

Since the launch of the programme in 2017, Better Finance and Finance Watch, have been successfully working towards the achievement of the programme's objectives. They have further developed the knowledge and expertise needed to participate in EU and other relevant multilateral policy-making in the area of financial services, in line with the objectives of Regulation (EU) 2017/826. In parallel, the two organisations built up a network and implemented a number of dissemination activities that enabled them to inform consumers and other financial services end-users as well as stakeholders representing their interests, about issues at stake in the regulation of the financial sector.

The 2019 evaluation<sup>[1]</sup> of the programme's implementation and its achievements concluded that the objective of further enhancing the involvement of consumers and financial services end-users in Union policy-making in the area of financial services was achieved. The two organisations also largely achieved the objective of informing consumers and other financial-services end-users on issues at stake in the regulation of the financial sector.

The study further confirmed that the two organisations have provided important input to the financial policymaking process, in particular through their contributions to public consultations, participation in important Commission and European Supervisory Authorities expert groups, and various publications. Based on their research activities, the beneficiaries helped fill gaps in the overall understanding of certain financial phenomena.

While the two beneficiaries have worked on most of the consumer- or user-related topics in the EU policy debate on financial services each of them prioritised some policy aspects and pursued them in line with the objective of Regulation 2017/826. The study showed that the activities implemented by both organisations in relation to the programme are largely appreciated by stakeholders, and considered to be of high quality. However, some stakeholders argued that the beneficiaries could have covered certain topics in greater depth, e.g. the review of the European Supervisory Authorities Regulations and credit assessment.

The study also concluded that advocacy at EU level on behalf of non-industry stakeholders continues to be necessary to ensure that the perspective of consumers and end-users is taken into consideration. The Union programme allows these organisations to maintain the necessary expertise and independence to effectively represent the interests of consumers and end-users in financial policy-making.

Since March 2020 the global COVID-19 pandemic has hampered the beneficiaries' physical participation (including as speakers) in a number of events as many have been cancelled or postponed. Instead, both organisations organised 13 virtual events, provided speakers to 66 online conferences and webinars and attended another 105 on-line events. Thus ensured that the voice of financial service users was heard.

### ***Consumer programme***

The Consumer Programme 2014 – 2020 achieved progress towards meeting the programme's specific objectives in the areas of safety, consumer information and education, rights and redress and enforcement, with a high EU added value in particular in a highly inter-connected economy.

#### **Product safety**

In the field of product safety, the Commission has promoted and facilitate cooperation among enforcement authorities by financing joint sampling and testing activities on specific products, which eventually feed the Safety Gate: the rapid alert system for dangerous non-food products, as well as knowledge sharing activities on a variety of market surveillance issues.

Cooperation between national authorities through the Safety Gate: the rapid alert system for dangerous non-food products has significantly increased over time, since the system's creation in 2003. The feedback ratio of reports of other authorities to 'serious risk' notifications increased from 0.90 in 2013 to 2.69 in 2020 (these very good statistics can also be explained by the fact that a notification can trigger several reactions from authorities of other Member States). The number of notifications has now stabilised at a regular rate with around 2 000 per year.

To ensure a much closer cooperation between the European Commission and Member States market surveillance authorities, in 2019 the Commission switched from a grant to a tender procedure. The CASP (Coordinated Activities on the Safety of Products) objective is to foster cooperation by implementing a package of product specific and horizontal activities with flexibility and

efficiency. The current CASP 2020 reached its final phase where the testing activities finished and market surveillance authorities work on the risk assessment and follow-up measures according to the test results. To further support Member States during the pandemic, a project for ad-hoc testing activity of COVID19 related products was also financed. In parallel, the CASP 2021 started, focusing on product categories and horizontal activities like online market surveillance and crisis management based on lessons learnt from COVID-19.

Since 2019, the exchanges of product safety enforcement officials have also been integrated within CASP activities, with the name 'VisitUs'. During an initial period of 6 months (October 2019 – March 2020), 26 officials participated to the exchange in this new form. The scheme had to be suspended after March 2020 due to Covid-19 restrictions.

The exchanges of Consumer Protection Cooperation (CPC) officials (55 in 2019; 7 in 2020 – they also had to be suspended after March 2020) continue under the previous scheme (special indemnities).

### **Consumer information and education**

The Consumer Programme has funded several communication and information campaigns, to promote consumer rights while travelling and shopping (including online shopping), to promote and inform about the Online Dispute Resolution (ODR) platform.

Thanks to an annual operating grant of EUR 2 million, awarded in 2020 in the framework of the Framework Partnership Agreement 20018-2021, the European Consumer Organisation BEUC could carry out various activities in favour of defending the interests of all Europe's consumers.

### **Rights and redress and enforcement**

The programme has supported the National Consumer protection cooperation. In 2020 intense work took place to ensure that national authorities are ready to implement efficiently the new CPC Regulation (Regulation 2017/2394, entering into force on 17 January 2020) and have a modern IT system to support their cooperation. In 2020 the Consumer Programme supported a digital communication for the consumer protection co-operation.

Thanks to the support provided from the Consumer Programme, the second phase of the e-enforcement academy, set up to boost the CPC network and the ability of product safety networks to conduct online investigations, started in March 2021.

The Consumer Programme has provided funding for the European Consumer Centres Network (ECC Net). The 15th anniversary of the ECC Net was marked by a virtual event held in November 2020. The ECC-Net helps consumers with cross-border purchases, explaining their rights when shopping internationally and, where necessary, helping them seek redress against a trader in another EU country, Iceland or Norway. In 2020 the amount of grants for the Network was increased by 450.000 EUR (to almost 7 million EUR) to better respond to increased needs related to some aspects of the Covid-19 crisis and its impact on consumers in the EU. During 2020, the ECCs answered consumer queries on travel disruptions due to COVID-19 and published FAQs on the cancellation of some travel services. In order to boost tourism from third countries and to regain consumer confidence in travelling to the EU, the ECCs are working on developing shared tools covering various forms of help offered to tourists from third countries (e.g. setting up a helpline, translating relevant information into languages spoken in third countries).

In the same spirit, the amount of grants for the co-operation between national authorities responsible for the enforcement of the consumer protection laws (CPC grants) was also slightly increased (by 100.000 EUR). These additional amounts came from unspent procurement funds (due to cancellation or delay in implementation of some actions such as expert meetings and conferences), and were transferred within the flexibility provided in the Financing Decision. The Online Dispute Resolution (ODR) platform, launched in 2016, is today also a modern way to register consumer complaints, replacing other systems such as the European Consumer Complaints Registration system (ECCRS). In 2020, the number of cases dealt with by a Union-wide online dispute resolution system reached almost 147.000 and overpassed the target set. On the basis of the available data, it is estimated that about 40 % complaints are resolved, either bilaterally between the consumer and the trader following the contact from the ODR platform, or by ADR bodies accessible via ODR platform.

### **Rights, Equality and Citizenship: Consumer rights strand**

*Specific objective 9: to enable individuals in their capacity as consumers or entrepreneurs in the internal market to enforce their rights deriving from Union law, having regard to the projects funded under the Consumer Programme.*

The REC Programme contributed to the design of the legislative proposals in the context of the New Deal for Consumers package, adopted in April 2018, aiming at better consumer redress, enforcement and modernisation of EU consumer protection rules so that all European consumers fully benefit from their rights under Union law.

The Programme also contributes to raise awareness of EU consumer law, including by SMEs through a dedicated training project ConsumerLawReady2. Thanks to this training scheme, the developed lessons (including on-line), have been carefully tailored to consumer legislation in the countries of origin and made available in 28 EU languages.

The Programme makes compliance easier and enhances enforcement by financing the content update of the Consumer Law database (part of the e-Justice Portal)<sup>3</sup>. The tool concretely helps lawyers, judges, as well as businesses and consumers, to quickly check rights and obligations arising from consumer law, including for instance past legal rulings from Member States and from the

<sup>3</sup> Single Market Programme, including COSME, ISA2, ESP, consumer involvement in fin. Services, financial reporting, Food and Feed, consumer programme 247/134

European Court of Justice, alongside and relevant national administrative practice. The Consumer Law database regroups 9 key EU directives in the field of consumer law and provides information on enforcement systems for each of these Directives.

The Programme supported an expert group which helped the Commission to analyse the safety and liability implications of AI, Internet of Things, robotics and other emerging digital technologies. The Programme funded a second group of governmental experts on digital contracts directives in 2019. The group assists the Commission in the coordination and support of the preparatory work by Member States in view of the transposition of the digital content directive and sales of goods directive in national law by July 2021.

### Food and Feed

The Commission (DG SANTE) considers that the Food and Feed programme is performing well and has been effectively implemented, contributing to a high level of health for humans, animals and plants by preventing and eradicating diseases and pests. The programme ensures a high level of protection for consumers and the environment, while enhancing the competitiveness of the Union food and feed industry and favouring the creation of jobs. It focuses on national programmes for the eradication, control, and surveillance of animal diseases and zoonoses; national survey programmes for pests; training in the field of food and feed safety, animal health, animal welfare and plant health; IT tools in the field of food safety, animal health, animal welfare, and plant health; the European Union Reference Laboratories. In 2019, the Food and Feed programme also co-funded emergency measures to fight against plant pest outbreaks. The combat against the Asian long horn beetles (*Anoplophora glabripennis*), pinewood nematode and *Xylella fastidiosa* took up the largest portion.

The performance indicators linked to the programme's specific objectives are relevant, measurable and realistic. Since 20 March 2019 the entire Union is declared free of swine vesicular disease, therefore the corresponding indicator is not relevant anymore because the disease has been eradicated.

In the period 2014-2020, the Court of Auditors published several reports assessing the implementation of the Food and Feed Programme. In the SR 2019/02 of the Court of Auditors on Food Safety, it is emphasized that the EU's food safety model in respect of chemicals is considered a point of reference and it is soundly based and respected. On 26 April 2016, the Court published its Special Report (SR 28/2016) on a performance audit on animal disease eradication programmes and drew positive conclusions on DG SANTE's management of the programmes. All recommendations of the Court referred to actions that were already ongoing and all of them have been already finalised. The Food and Feed programme has contributed to the improvement of animal welfare through the financial support for BTSF trainings in this area in several countries. This has led to improvements in this sector as stated by ECA that emphasized in its report SR 2018/31 that the EU actions on animal welfare have improved compliance with the EU requirements and supported higher standards with a clear positive impact on animal welfare. DG SANTE proposes to launch an external study to prepare the evaluation of the 2012-2015 animal welfare strategy and based on the results of the study will elaborate the evaluation on the strategy through a Commission staff working document. A contract for the one-year study was signed on 10 October 2019.

In 2019 the Internal Audit Services have requested DG SANTE to further improve and simplify the financial management of the veterinary and phytosanitary programmes. In the light of this process DG SANTE signed an Administrative Arrangement with the Joint Research Centre of the Commission to develop new methodologies for the calculation of unit costs in both areas. In line with the IAS recommendations this exercise is conducted in collaboration with DG BUDG and the Legal Service in view of the formal adoption of a decision by the AOSD authorizing the use of such unit costs or even lump sums on the basis of these unit costs. The work has suffered slight delays because of the COVID-19 situation but the final report for the review of the methodology for unit costs in the veterinary area was submitted by JRC to SANTE in March 2021. At the same time the report for phase 1 concerning a new methodology for the calculation of unit costs for sampling activities in the phytosanitary area (where no such approach existed) was also submitted by the JRC. SANTE intends to apply both methodologies for its 2021 programmes.

The challenges of the programme:

- The Commission agrees on the existence of backlogs especially in the area of regulated food ingredients and is working to enhance its procedures for the monitoring and enforcement of all food and health legislation which will cover the follow up to recommendations arising from Commission audits.
- See mid-term evaluation report <sup>(1)</sup>.

Following the evaluation of Regulation (EU) No 652/2014 (Common Financial Framework - CFF) and in order to follow up on a Court's recommendation, the JRC was asked to carry out a study to establish the cost-effectiveness methodology in the food chain area. The report published in 2018 provides a methodological guidance on cost-effectiveness analysis in the view of future evaluations of the EU interventions currently funded under the CFF of the food chain area. In addition, a methodology was proposed to develop a set of indicators in order to evaluate the different levels of intervention in the spending areas covered by the CFF. As a follow up, a set of indicators for monitoring and evaluation purposes are under identification in the framework of the Single Market Programme, food strand part, covering the financial period 2021-2027 (MFF).

<sup>(1)</sup> [https://ec.europa.eu/food/sites/food/files/safety/docs/cff\\_food-chain\\_mid-term-eval\\_reg-2014-652.pdf](https://ec.europa.eu/food/sites/food/files/safety/docs/cff_food-chain_mid-term-eval_reg-2014-652.pdf)

### 3.2. Key achievements

#### *Programme for the Competitiveness of Enterprises and Small and Medium-Sized Enterprises (COSME)*

70 000	600 000	8.2 million	16 500	118
SMEs availed of EEN advisory services on access to finance, IP rights and single market	SMEs in 32 countries have received financing from the Loan Guarantee Facility	visits to the business section of the Your Europe portal	entrepreneurs have been involved in the Erasmus for Young Entrepreneurs mobility scheme	Transnational public-private Tourism partnerships covering 31 countries

Thanks to the reinforcement of the COSME Loan Guarantee Facility resources from the SME window of the European Fund for Strategic Investments <sup>(1)</sup> (doubling the available resources), it was possible to achieve the targets set for the overall programming period (2014-2020) already in the course of 2018. In 2020<sup>19</sup>, the high performance continued to benefit SMEs in need of finance. As of September 2020, more than 600,000 SMEs in 32 countries already received financing for more than EUR 35 billion <sup>(2)</sup>. Especially start-ups and smaller SMEs which find it hardest to access finance due to their perceived higher risk or lack of sufficient collateral, continued to benefit from the enhanced Loan Guarantee Facility. It continues making financial support available to SMEs with more than 88 % of SMEs having less than 10 employees. All details are available in Working Document Part X dedicated to the financial instruments.

The Enterprise Europe Network's services range from information on EU matters and awareness-raising campaigns to specialised advisory services, company missions and matchmaking and technology brokerage events. Some 3,000 network staff have been active in organising local events and providing specialised advisory services to 70,000 SMEs on access to finance, intellectual property rights and Single Market issues. They provided business and technology reviews, resource efficiency services and individual partnering and internationalisation support. About 80,000 meetings between SMEs were organized in matchmaking events on a yearly basis (final numbers for 2020 not available yet). Since its renewal in 2015, the Network reached 19,450 partnership agreements between SMEs thanks to Network partnering services. The recently started Network advisory support services gave 9,641 clients a significant impetus to improve their competitiveness and innovation at European level. In addition, Enterprise Europe Network put Scale-Up Advisors in place to help start-ups overcome the barriers to growth and to fully support their ambition to scale, and started building up capacities for their Sustainability Advisors to be put in place in the next MFF. Enterprise Europe Network helped SMEs find business opportunities in 41 countries outside the EU with a focus on neighbouring countries and third countries with whom free trade or economic partnership agreements were signed (including 11 COSME associated countries).

At the end of 2019 about 8,300 matches have taken place under the Erasmus for Young Entrepreneurs mobility scheme, involving over 16,500 entrepreneurs. 95 % of host entrepreneurs consider their exchange successful, while the satisfactory rate of new entrepreneurs reaches 97 %. New entrepreneurs participating in the programme between 2014 and 2016 have created 251 new companies so far, and over 1 000 new jobs. Host entrepreneurs also confirmed the positive effects – as well as over 1 100 new jobs created on their side, 58 % of experienced entrepreneurs have seen an increase in turnover and 41 % in increased employment <sup>(3)</sup>.

The business section of the **Your Europe portal (YEB)** continued its growth in 2020, reaching a record high number of visits (8.2 million, +6.5% compared to 2019). Although growth was slower than expected, it was still remarkable in a difficult year, in which for the first time the Your Europe portal as a whole saw less visits than in the previous year. Demand for information on doing business across borders stayed stable, and new content added on Your Europe Business (esp. on product requirements) contributed to growth in visits. It should be noted that the record high number of visits in 2020 was reached with less investment in paid promotion; more organic visits are a sign the work done on search engine optimisation is paying off.

From 2014 to 2020, the three international (China, Southeast Asia and Latin America) Intellectual Property SME Helpdesks have achieved most of their objectives, in particular exceeding their targets for the Enquiry helpline (+ 7600 questions from EU SMEs were answered within the contractual three-day period). In 2020, they have implemented adequately the training task despite the challenges posed by the COVID-19 pandemic but had to convert many onsite trainings into e-learning. They have launched a new website on Europa in December 2020 and a new Intellectual Property SME Helpdesk started in India in November 2020.

COSME has also contributed successfully to strengthening the competitiveness of the European tourism sector and its enterprises. It covered a wide range of actions to support tourism e.g. transnational cooperation projects, capacity building of tourism SMEs, improving socio-economic knowledge, awarding sustainable and smart tourism destinations, events, studies, evaluations etc. Direct results include, amongst others, the creation of new strategic partnerships across borders and an increased visibility in international markets. (118 transnational public-private tourism partnerships involving over 150 SMEs and 200 tourism stakeholders from 31

European countries - ca €17m). New tourism products and services have been developed and there are high expectations among the participants on the possibilities to enter new markets.

To improve the direct support to tourism SMEs through the tourism actions under the COSME programme from 2019 the focus was shifted from co-financing transnational tourism products into co-financing capacity building of tourism SMEs in sustainable tourism (call for proposals 2019) or in digitalisation uptake (call for proposals 2020). Under those recent calls for proposals, each co-financed project implemented by a transnational consortium needs to support at least 60 tourism SMEs. As result, we expect to support directly at least around 425 tourism SMEs in 25 countries, following the 2019 COSME call for proposals on boosting tourism sustainability.

Tourism is among the most affected ecosystems by the COVID-19 pandemic. Tourism enterprises will need a targeted support though Single Market Programme, amongst others, for their recovery and green and digital transition.

### European statistical programme

<a href="https://ec.europa.eu/eurostat/cache/recovery-dashboard/">https://ec.europa.eu/eurostat/cache/recovery-dashboard/</a>	Beta release of the Web Intelligence Hub Platform
Publication of the new statistical information tool the European Statistical Recovery Dashboard	Implementation of the Trusted Smart Statistics initiative

Providing the European Union with statistics at European level that enable comparisons between countries and regions is a key task. Democratic societies do not function properly without a solid basis of reliable and objective statistics. On the one hand, decisionmakers at EU level, in Member States, in local government and in businesses need statistics to make those decisions. On the other hand, the public and media need statistics for an accurate picture of contemporary society and to evaluate the performance of politicians and others. National statistics are important for national purposes in Member States, but European statistics are essential for decisions and evaluation at both national and European level. Statistics can answer many questions: Is society heading in the direction promised by politicians? Is unemployment up or down? Are there more CO2 emissions compared to ten years ago? How many women go to work? How is your country's economy performing compared to other EU Member States? Furthermore, international statistics are a way of getting to know your neighbours in Member States and countries outside the EU. They are an important, objective and down-to-earth way of measuring how we all live.

The performance indicators are mostly well on track, although some of them do not follow the positive trend that was expected, probably as a consequence of COVID-19 pandemic and the need to face unexpected problems, as well as some methodological issues not related to the pandemic.

The statistical coverage, measured as the number of different statistics published on the Eurostat website, has increased by around 5%, while the human resources available to produce them have not increased. This shows a rise in efficiency in the production processes, which is necessary to cover new demands for statistics, especially during the COVID-19 pandemic. The statistics published by Eurostat are used more – the number of data extractions made by external users from Eurostat reference databases (EuroBase and Comext) via the Eurostat website increased by more than 3 million and reached 21,48 million. The percentage of negative opinion concerning Eurostat continued to be extremely low, showing trust in and satisfaction with the data.

Examples of the programme success stories:

- The year 2020 was exceptional, with Covid-19 pandemic causing emergency in European countries and throughout the world and putting the European Statistical System (ESS) and its production processes under significant pressure. Eurostat and the NSIs have turned to **innovative methods and new data sources** in order to respond to the emerging new demands for information and overcome the difficulties related to limited availability or even missing primary data. In this period, Eurostat not only continued to be the trusted reference point of statistics for policy-making and published all statistics with deadlines and required quality, but it also **expanded the production of statistics into newly emerging fields as a response to the Covid-19 pandemic** (e.g. monitoring the health conditions; weekly deaths statistics; monthly excess mortality indicators).
- At the end of April 2020, Eurostat introduced a **dedicated section on Covid-19 on its website**, containing all relevant information and providing easy access in one place. The information presented covered a range of topics related to the economy, society and work, population and health as well as agriculture, energy, transport and tourism. The section also included **guidance for official statisticians on how to address methodological issues** triggered by the crisis.
- A **new statistical information tool** has been developed and disseminated in a very short amount of time. The **European Statistical Recovery Dashboard** responds to the needs of policy-makers at national and European

levels in the Covid-19 context. It brings together 23 monthly and quarterly indicators and covers all statistics areas, which are relevant for tracking the economic and social recovery from the Covid-19 pandemic. The Dashboard is built around an **interactive visual tool**, linked to the Eurostat database, from which data can be downloaded. It was designed by Eurostat in collaboration with the Federal Statistical Office of Germany and was launched in December 2020.

- In response to emerging needs in the analysis of the **labour market effects of the Covid-19** crisis, Eurostat focused on **innovation in statistical products**. The lockdown measures for business and population affected the traditional measurement of employment. In response, Eurostat developed a **new approach to adapt to the evolution of the labour market**. Eurostat used the information available from the EU Labour Force Survey (LFS) and provided additional seasonally adjusted indicators (labour market slack, absence from work by reasons, working time) as well as better information on the transitions between different labour market conditions. The data were published faster than in the past, and Eurostat is currently working with Member States in order to improve even further its timeliness. In the longer run, it is planned to collect robust labour data on a monthly basis.
- The adoption of the Commission Implementing Regulation 2020/1197, laying down the technical specifications of the **European Business Statistics (EBS) Regulation**, was a key milestone for its implementation process. **Additional data** will become available in this statistical domain, particularly information on the services sector, international trade and globalisation.
- Eurostat also provided high quality and timely business and trade statistics, in particular, the **Principal European Economic Indicators (PEEIs)**. The PEEIs provide detailed insights into the **impact of the Covid-19 crisis on the European Union’s industry, construction, retail trade and services activities, as well as international trade in goods**. In the autumn 2020, the dissemination of **experimental statistics** on quarterly registrations of businesses and declarations of bankruptcies further completed the data provided to users on the impact of the crisis on European businesses.
- Within the Commission priority ‘European Green Deal’, there were a number of important achievements. Concerning the **Sustainable Development Goals (SDG)**, the Eurostat **SDG monitoring report** and the accompanying communication package (including a digital publication and a summary brochure) are key sources of information for a wide range of users. Furthermore, reducing the risk and dependency on pesticides is one of the headline 2030 targets of the European Commission’s Farm-to-Fork and Biodiversity 2030 strategies. The harmonised indicator based on **European statistics on pesticides** sales was adapted to suit the monitoring needs linked to the Farm-to-Fork strategy and was published for the first time. Finally, in relation to the new **EU budgetary own resource on nonrecycled plastic packaging waste**, which was confirmed to apply from January 2021, Eurostat launched a new data collection on packaging and packaging waste.
- The **Trusted Smart Statistics** initiative is a major development that Eurostat initiated together with its partners in the ESS. It aims at providing the ESS with capabilities to embrace the opportunities provided by new technologies and data originating from the digitalisation of society and the economy. Eurostat, together with DG DIGIT and the European centre for vocational training (Cedefop), laid down the foundations of **Web Intelligence Hub** to collect and process Internet data to better assess labour market developments on a timely basis, using advanced technologies.
- Eurostat also made significant progress in the modernisation of its data and metadata platform (**EDAMIS**) used as a single entry point for all data exchanges between Eurostat and data providers at both national and international level. The new EDAMIS 4 application offers functionalities to enable the secure exchange of sensitive data within the ESS and to provide better upfront validation of data transmitted to Eurostat.
- Finally, the Commission's **Demography Report** was prepared and published **based almost exclusively on Eurostat data** and presents the main drivers of demographic change and the impact they are having across Europe.

The achievements listed above demonstrate the value added that Eurostat brings to public debate and to the design, monitoring and evaluation of Union policies, by providing comparable and high-quality data and statistics on Europe. **The Member States alone could not achieve a similar level of harmonisation, comparability and quality.**

#### *Specific Activities in the Field of Financial Reporting and Auditing*

166	98%
countries using International Financial Reporting Standards (IFRS) in 2020	of the IFRS standards are endorsed in the EU in 2020

In terms of progress, the international application and acceptance of IFRS in individual countries has increased. The analysis of 166 jurisdictions shows that IFRS Standards are required for all or most domestic publicly accountable entities (listed companies and financial institutions) in 144 jurisdictions, whilst a further 12 jurisdictions permit its use. In addition, 87 of the 166 jurisdictions either require or permit the *IFRS for SMEs* Standard. The European Union's commitment to IFRS has provided an impetus to the international acceptance of IFRS, which ultimately fosters the ability of European companies to trade, raise capital and expand internationally while benefiting from administrative savings.

For 2020, the IFRS Foundation's main achievements include: (i) the publication of targeted amendments to IFRS 17; (ii) the publication of the amendments to IFRS 4 *Insurance Contracts* - Extension of the Temporary Exemption from Applying IFRS 9 until 2023; and (iii) the publication of the revised *Due Process Handbook*. Other work priorities included amendments to various IFRSs to address undesirable consequences of the reform of interest rate benchmarks such as interbank offered rate (IBOR).

In 2020, EFRAG completed its work on the consequences of IFRS 9 on long-term investment and delivered its final advice to the Commission about the accounting treatment of equity instruments in January 2020. EFRAG continued to carry out important technical analyses on the amendments to IFRS 17 and on the IBOR reform (Phase 2) and on their effects on financial reporting. In addition, EFRAG provided endorsement advices on Accounting Policies and Accounting Estimates (Amendments to IAS 8); Disclosure Initiative-Accounting Policies (amendments to IAS 1 and IFRIC 2); and Lease Liability in a Sale and Leaseback Amendments to IFRS 16). Following the 2018 Action Plan on Financing Sustainable Growth, EFRAG has also developed its capacity in relation to wider corporate reporting. It established a project task force on climate-related reporting, which published its report in February 2020 and has appointed a new project task force on reporting of non-financial risks and opportunities and linkage to the business model.

During 2019, the PIOB actively supported the Monitoring Group – of which the European Commission is a member – which is developing a comprehensive reform package in the field of standard setting in audit and ethics for accountants. In order to increase transparency, the PIOB is now consistently publishing its recommendations and has launched a new website on 13 December 2019.

#### *Enhancing consumers involvement in the EU policy making in the field of financial services*

12 477	177
Total number of Twitter followers	Total number of position papers and responses to public consultations in the field of financial services for the period 2017-2020

This small but important programme received a modest budget of EUR 1.5 million per annum. The beneficiaries raised the profile of the interests of consumers and other financial services end-users in EU policy-making through intensified advocacy actions with increased influence on policy-making and a better outreach to users of financial services (including a wider geographical coverage in the EU).

In the period 2017 – 2020 Better Finance has established itself as a specialised EU non-industry association with a primary focus on retail investments. Better Finance researched, published and advocated on its main topics, e.g.9 Pan-European Pension Product (PEPP), Sustainable Finance, Packaged retail and insurance-based investment products, Key Information Document (PRIIPS KID), and Collective Redress. Amongst their numerous publications since 2017 are the flagship research studies “The Pension Savings: Real Returns (annual report) and “Robo-advice study 2020” as well as reports on sustainable investment funds, securities lending and European long-term investment funds. In the period 2017 – 2020 they have provided 69 responses to public consultations/feedbacks, as well as many own-initiative publications and open letters on the above mentioned topics.

Finance Watch continued to develop and utilise its comprehensive expertise in financial services policy. It was particularly active in the area of financial stability, sustainable finance and financial inclusion / retail. In this context, in the period 2017 – 2020, Finance Watch published 35 papers and reports and responded to 40 public consultations. Amongst their numerous publications since 2017 are the reports “Nature's Return” on integrating economic and environmental governance, “Breaking the climate-finance doom loop”, and “Financial Exclusion: Making the invisible visible”.

Both beneficiaries actively engaged in discussions, consultations and research in the area of sustainable finance.

Better Finance published a report on sustainable investment funds & sustainability ratings, and co-organised an online seminar on “Sustainable Finance & Consumer Protection”. Other achievements in the area included multiple recommendations and position papers, as well as responses to the Consultation on the Development of EU Ecolabel criteria for Retail Financial Products, to the joint ESAs Consultation Paper on Environmental Social and Governance (ESG) disclosures, to the Consultation Review of the Non-Financial Reporting Directive (NFRD), to the EC Consultation on EU Green Bond Standards, and to the consultation to on Sustainable Corporate Governance.

In 2020, Finance Watch created a new long-term working group on sustainable finance involving their members' organisations. Finance Watch responded to the consultations on the Non-Financial Reporting Directive, on the implementation of Basel 3 at European level (including the need to integrate climate risk), and on the Renewed Sustainable Finance Strategy. Regarding the latter, Finance Watch contributed, through cooperation with the Change Finance Coalition, to the increased number of citizens' responses. Other achievements included publications on the impact of the short-term bias of the financial system on its ability to allocate capital to a sustainable economy, and to manage climate and environmental risks, and on the EU action plan on sustainable finance.

### Consumer programme

Over 2 000	9%	1/3	7 million EUR	147 000
Number of notifications of dangerous products that are received every year through the Rapid Alert System for dangerous non-food products (RAPEX) / 'Safety Gate'	% of all Rapex alerts in 2020 that concerned products related to COVID-19	Consumer scams (dubious offers and advertisements) related to the COVID-19 pandemic were found in almost one third (1/3) of the checked online platforms	Annual funding for the European Consumer Centres Network (ECC Net) / since 15 years	Number of consumers who since the launch of the ODR platform in 2016 decided to lodge a complaint

#### I. Safety: to consolidate and enhance product safety

Product safety in single market is a key concern of the EU and it is one of the main focus of the activities funded by the programme in particular through a EU-wide alert system to notify dangerous product and awareness-raising activities.

##### *Rapid Alert System (RAPEX) becomes Safety Gate*

The Rapid Alert System for dangerous non-food products (RAPEX) underwent in 2019 a revamping of its website, renamed 'Safety Gate'. It has become more user friendly and is available in all EU official languages. The system has continued during the last years to support the exchange of information between Member States and the Commission on measures taken against dangerous products. In 2020<sup>49</sup> Member States' authorities communicated through the system more than 2.000 notifications of dangerous products. 9% of all alerts raised in 2020 concerned products related to COVID-19, mostly masks meant to protect but failing to do so. Other examples for dangerous COVID-19 related products notified in the Safety Gate are disinfectants containing toxic chemicals, such as methanol that can lead to blindness or even death if swallowed, or UV sanitizers that exposed users to strong radiation causing skin irritations.

##### *EU Product Safety Award*

In 2019 the Commission launched a new initiative: the EU Product Safety Award to showcase best business practices in consumer protection that can serve as an inspiration for other companies. The winners of the first edition were announced in September 2019. In 2020, the second edition of the Award was prepared; it will be launched at the beginning of 2021.

#### II. Consumer information and education and support to consumer organisations

Informed consumers, aware of their rights, are at the centre of EU consumer policy: the programme pursues this objective through targeted information and education campaigns.

The Consumer Programme has funded several communication and information campaigns, to promote consumer rights while travelling and shopping (including online shopping), to promote and inform about the Online Dispute Resolution (ODR) platform.

Thanks to an annual operating grant of EUR 2 million, awarded in 2020 in the framework of the Framework Partnership Agreement 20018-2021, the European Consumer Organisation BEUC could carry out various activities in favour of defending the interests of all Europe's consumers. In 2020 BEUC included in its work programme a new activity: Consumer organisations reaction and work to support consumers in the Covid-19 pandemic. Together with its members, BEUC analysed the consequences of the pandemic for consumers in the EU such as increase of unfair commercial practices, especially artificially high prices for high-demand essential products and aggressive selling, misleading information and unsubstantiated claims regarding the medicinal or healing properties of certain products, problems with travel cancellations and tourism services, difficulties linked to the economic situation of households. BEUC then shared these findings with the Commission. In 2021 seminars, networking with the objective to increase the use of representative actions for infringements with cross-border implications are also foreseen.

##### *Consumer Classroom*

This project is a multilingual pan-European community website for teachers. It brought together an extensive library on consumer education from across the EU and provided interactive and collaborative tools to help prepare and share lessons with students as well as with other teachers (2014 – 2018).

### **Consumer PRO**

This capacity-building project started in July 2019 (budget: 5 million EUR) with the objective to make consumer organisations and other actors in consumer policy stronger and better equipped to protect consumers in their country. The “Consumer PRO” project, which will run until July 2021, will include training and other capacity building activities in all EU member states as well as Iceland and Norway. In 2021, the project might be renewed for a further 2 years.

Some data on the outputs until now:

- Train the trainer: 30 (national) trainers have been trained (on the topics: 1. General Consumer Law, 2. Digital Rights and Data Protection, 3. Finance, Food, Housing, Mobility and Product Sustainability & Enforcement),
- Around 30 national (mostly online) training sessions in all EU member states as well as Iceland and Norway with each 20-30 participants on the topics: 1. General Consumer Law, 2. Digital Rights and Data Protection, 3. Finance, Food, Housing, Mobility and Product Sustainability & Enforcement
- 6 European Workshops (with each around 30 participants) on the topics: strategic planning, consumer advice, fundraising and grant management, consumer education
- 1 online best practice seminar (with around 100 participants)

As regards Consumer PRO, the COVID-19 crisis had even a positive impact: all capacity building activities (train the trainer, national training sessions, European workshops, best practice seminar) had to go online. As a result an important amount of budget savings were realised (no travel, no subsistence costs) which were used to improve the quality of online sessions (with graphic animators, more external experts, co-facilitators animating and following up the chat, etc.) and a higher number of participants/people trained (some sessions were repeated and the virtual format allowed for a participation of maximum 30 people per session whereas the original classroom format allowed for maximum 20 participants per session).

**Educational videos:** in 2021, the Consumer programme will support, via a service contract, the production and promotion of four educational videos on consumer topics. The overall objective of the project is to raise awareness of specific consumer rights among both young consumers and general public and empower them to become more informed buyers. This will be done through the production and the promotion of four short videos on the following topics: financial literacy, data protection, sustainability, internet safety. Currently the videos are under production (all EU languages) and the dissemination will start on 15 March 2021 at the occasion of the European Consumer Summit.

**Green Consumption:** work on a legislative initiative aimed at empowering consumers for the green transition intensified in 2020. Initially foreseen to be adopted mid-2020, the proposal was subsequently postponed to 2021 to account for the COVID-19 crisis. To feed into the development of the proposal, the Consumer programme supported an external study and a public consultation which took place between July and October 2020. The proposal is expected to be adopted by the Commission in 2021.

**Debt Advice:** on debt-advice, a project formed of three different tasks is being carried out and will be finalised by the end of the year. The tasks are: 1 – a study on funding of debt-advice, 2 – the organisation of two sets of events for the exchange of best practices on debt-advice, and 3 – a set of capacity building events with possible future debt-advisors, selected in 6 countries where debt-advice is not adequately developed. The project will be finalised by the end of 2021.

### **III. Rights and redress: to develop and reinforce consumer rights**

#### **Online Dispute Resolution platform**

The Online Dispute Resolution platform became more efficient and user friendly by adding new functionalities, including – a self-assessment for the consumers, a useful tool to help people to find the most appropriate means of redress.

### **IV. Enforcement: to support enforcement of consumer rights**

*Having good EU consumer legislation in place is alone not enough: its enforcement remains a key aspect to which the programme devotes part of the funding each year.*

#### **Support for the Consumer Protection Cooperation- EU-wide screening**

In 2020 the Consumer programme supported the implementation of 2 EU-wide screenings (“sweep” 4):

- sweep on misleading sustainability claims

CPC authorities from 27 countries (24 EU Member States, 2 EEA countries and the United Kingdom) took part in the sweep during November 2020. They assessed 344 sustainability claims, primarily made by EU traders, aimed at consumers mainly on web

stores, but also on traders' websites. The sweep looked at various business sectors (textiles/garments/shoes were the most common, followed by cosmetics/personal care goods and household equipment).

- sweeps on consumer scams related to the COVID-19 pandemic

With the spread of the new virus across the EU, rogue traders advertise and sell products, such as protective masks, caps and hand sanitizers to consumers, which allegedly prevent or cure an infection, it is in the general interest to guarantee a safe online environment where consumers, in particular in the context of distress caused by the sanitary crisis, feel well protected against illegal practices that potentially put their health at risk.

On 30 April 2020, the CPC network, under the coordination of the Commission, launched a broad screening ("sweep") of coronavirus related products advertised on websites and online platforms. The main findings show that rogue traders continue to mislead consumers with a variety of illegal practices but online platforms are taking measures to address this.

Consumer protection authorities from 17 countries participated in this high-level screening of online platforms and concluded their assessment in 73 cases. In almost one third of these cases, CPC authorities found that the checked platforms contained a significant number of dubious offers and advertisements.

The high-level sweep of online platforms was repeated by the CPC network in June 2020 and its latest results show that CPC authorities, in a number of instances, still found a significant number of potentially misleading offers and advertisements related to COVID-19 on platforms. While reports from the major platform operators suggest that the number of such offers has declined, CPC authorities continue the close dialogue with these online platforms and remain on guard.

#### ***Rights, Equality and Citizenship: Consumer rights strand***

28
Within Consumer Law Ready project - EU-wide consumer law training programme for SMEs, lessons have been developed in 28 languages and carefully tailored to consumer legislation in the countries of origin

*Specific objective: to enable individuals in their capacity as consumers or entrepreneurs in the internal market to enforce their rights deriving from Union law, having regard to the projects funded under the Consumer Programme.*

The Programme contributed to awareness-raising about the EU consumer law. In particular, a dedicated to SMEs training project ConsumerLawReady4 developed lessons (including on-line), which have been carefully tailored to consumer legislation in the countries of origin and made available in 28 EU languages.

#### ***Food and Feed***

	0	97
Rabies almost eradicated in the EU in wildlife with the number of cases falling from 1602 in 2009 to only 8 in 2018 (in 3 MS), 5 in 2019 (in 2 MS) and 12 in 2020 (in the same 2 MS);	Since 20 March 2019 the entire Union is declared free of swine vesicular disease, therefore the disease has been eradicated.	97 audits in the food and feed area carried out in 2020 with participation of 8 national experts (despite the COVID situation)

Main key achievements of the Food and Feed programme:

- Rabies has been almost eradicated in the EU in wildlife and the number of cases has fallen from 1602 in 2009 to only 8 in 2018 (in 3 MS), 5 in 2019 (in 2 MS) and 12 in 2020 (in the same 2 MS);

- Programmes implemented on poultry flocks to decrease the incidence of *Salmonella* infections proved successful as the number of human cases decreased (more than 100,000 confirmed human cases of salmonellosis in 2010 to 92,000 in 2019).
- Thanks to the measures implemented at EU level to fight against bovine spongiform encephalopathy, from more than 2000 classical BSE case detected in 2001, only one was detected in 2018, and in 2019, only atypical cases were found (7 in three member states).
- Positive trend in bovine tuberculosis and brucellosis eradication: from 16 MS officially free from bovine brucellosis in 2013 to 20 MS in 2018 and 2019. For bovine tuberculosis, in 2013, 15 MS were officially free, and 17 in 2018 and 2019;
- Concerning the African swine fever, the number of Member States with EU co-financed ASF programmes has increased from nine in 2018 to 13 and 19 in 2019 and 2020, respectively, and the situation is closely monitored.
- Efficient controls were implemented: Even though, COVID-19 had a significant impact on the implementation of the work programme of the Health and Food audits and analysis Directorate of DG SANTE, the Directorate managed to carry out 97 audits in the food and feed area in 2020 with participation of 8 national experts.

Emergencies were in general addressed timely and effectively by MS and EU financial support was allocated in order to achieve the objectives. A good example of successful emergency measures put in place is the way the Union dealt with the Lumpy Skin Disease crisis in Greece and Bulgaria through the creation of an EU vaccine bank and co-financing of vaccines purchased by the Member States. The disease was contained and effectively controlled in the EU (last outbreak in the EU was in 2017).

For all veterinary programmes, including the few examples given below, the EC provides a major contribution to the success achieved by Member States through the technical advice given to each Member States by the experts from the Commission and supported by national experts assessing each programme, asking for modifications and improvements when needed and checking its full compliance with EU rules. In addition, the financial support given through these programmes is a key incentive for the Member States, as explained above in Part I ('EU added value'). The external factors that can have an impact on the achievements of these programmes, such as increased epidemiological risks linked to globalisation, climate change, neighbouring third countries, or wildlife, are taken into account in the initial assessment of each specific programme before approval, and during the final report evaluation before payment.

### Rabies

A significant achievement has been gained by the EU Programmes addressing rabies: this disease has been almost eradicated in the EU in wildlife and the number of cases has fallen from 1602 in 2009 to only 8 in 2018 (in 3 MS), 5 in 2019 (in 2 MS) and 12 in 2020 (in the same 2 MS), hugely reducing a significant risk to **public** health and enabling free movement of cats and dogs within the EU. This result has been achieved through Union targeted technical and financial support for the implementation of vaccination against rabies in the Member States and certain neighbouring non-EU countries. The success of the EU co-financed rabies programmes is also illustrated by the fact that no indigenous cases of rabies in humans have been reported in the EU since 2016 (reported cases are imported cases).

### Bovine tuberculosis and brucellosis

Diseases such as bovine tuberculosis and brucellosis require medium-to-long term eradication actions so that Member States and regions are granted an officially free status. Thanks to MSs efforts implementing EU co-financed programmes, in the last few years, the progression of eradication of these diseases shows a positive trend: in 2013 16 MS were officially free from bovine brucellosis, 18 in 2015, 19 in 2016, 20 in 2017, 20 in 2018 and 2019. For bovine tuberculosis, 15 MS were officially free in 2013, 17 in 2015, 18 in 2016 and 2017 and 17 in 2018 and 2019 (Malta suspended). In addition, the implementation of EU co-financed bovine brucellosis and tuberculosis eradication programmes has protected human health as these diseases are zoonoses. It should also be noted that the progress in the number of officially-free Member States or regions does not fully reflect the actual progress achieved in that area because there is currently no formal obligation for the Member States to request official freedom status. This will be corrected as from 2021 with the new rules stemming from the animal health law, which should lead to an increase in those numbers in the coming years.

### African swine fever (ASF)

African swine fever (ASF) was introduced in the Eastern part of the EU by wild boar movement from Belarus and Ukraine – into the four Member States initially affected (Estonia, Latvia, Lithuania and Poland). In 2017, there have been new incursions of the disease in new areas of Poland and in two newly infected Member States (Czechia and Romania). The long-distance spread has been mainly linked to human activities and not to the natural way of disease spread by wild boar movement. In 2018, there was a dramatic increase in ASF outbreaks in domestic pigs, mostly in Romania and three Member States became newly infected (Hungary, Bulgaria and Belgium); the occurrence of ASF in wild boar in Belgium demonstrated a possible range for long-distance transmission of the disease (from the East of the EU) related to human activity. In 2019, Czechia became ASF-free while another Member State (Slovakia) became newly infected and the disease further spread in Bulgaria and Poland, coming very close to Germany. In 2020, Greece became newly infected so the disease is currently present in eleven Member States (including Italy where ASF is present since 1978 but this is not epidemiologically related to the rest of the EU). In 2020 the disease was confirmed

for the first time in wild boar in Germany, while Belgium became the second affected MS to restore disease freedom. Most of these Member States had EU co-financed ASF programmes in place for several years, and Bulgaria, Belgium and Greece submitted their first programmes in 2019 (for 2020). In addition, they have received or will receive substantial EU financial support for outbreaks/cases-related emergency measures such as slaughtering or culling of pigs and compensations to owners for the value of their animals. Overall, the number of Member States with EU co-financed ASF programmes has increased from nine in 2018 to 13 and 19 in 2019 and 2020, respectively, and the situation is closely monitored.

The EU well-targeted and multifaceted response to ASF outbreaks continued to keep the negative effects limited while the epidemics could have had devastating effects on animal health and on the sustainability of the sector (e.g. €34.3 million were allocated to Romania in 2018 for co-financing of emergency measures). The extension of the geographic area affected by ASF in the EU has been mostly geographically limited to the Eastern part of the EU.

### **Lumpy Skin Disease**

This exotic disease, transmitted by insect vectors, is endemic in Turkey and entered the EU for the first time ever in 2015 in Greece. From there it spread quickly to Bulgaria and an additional 5, non-EU countries in the Balkan region in 2016. Through the technical and financial support provided by the EU, including the swift setting up of an EU LSD vaccine bank, an efficient coordination was immediately put in action to contain the outbreaks of Lumpy skin disease in the EU and in the Balkan countries in South East Europe, including EU and non-EU Member States, through coordinated vaccination campaigns, shielding the Union from further disease spread. The implementation of the measures led to the containment of the disease in the EU and the Balkans as from end of 2017, with no new case of Lumpy Skin disease in South East Balkans since 2018. Vaccination and/or surveillance of the disease is continuing in 2020 to restore the free status of the EU towards this disease in the affected region and the EU in general. The containment and eradication of this very contagious exotic disease is a clear success in protecting the health status of the EU and neighbouring countries and illustrates the EU added value in the field of contagious diseases

### **Classical Swine Fever**

Last report of Classical Swine Fever (CSF) in the EU, in wild boar or domestic pigs, was in 2015. The EU continues to support systematic surveillance of CSF in MS along the northern EU border, to address the possible risk of disease introduction in neighboring TC. Thanks to this surveillance CSF restrictions were lifted from Latvia in 2020.

### **Avian Influenza**

The large scale Avian Influenza epidemic which started in 2016 requested extensive efforts through 2017 and 2018 to limit its spread across the European territory. Eighteen Member States were infected by the Avian Influenza virus propagated by the migration movements of infected wild birds. As a consequence of the measures implemented, such as the slaughter of the affected animals and the disinfection of holdings, the disease was eradicated swiftly in the affected areas and did not spread across vast territories and serious damages to the farming community and the export capacity of the Union were thus avoided. The technical and financial support from the EU enabled the Member States to implement those measures as quickly as possible.

### **Salmonella programmes on poultry flocks**

Programmes implemented on poultry flocks to decrease the incidence of Salmonella infections proved successful as the number of human cases decreased (more than 100,000 confirmed human cases of salmonellosis in 2010 to 92,000 in 2019).

### **Bovine spongiform encephalopathy**

Thanks to the measures implemented at EU level to fight against bovine spongiform encephalopathy, from more than 2000 classical BSE case detected in 2001, only one was detected in 2018, and in 2019, only atypical cases were found (7 in three member states).

## **3.3. Evaluations, studies and reports**

### ***Programme for the Competitiveness of Enterprises and Small and Medium-Sized Enterprises (COSME)***

The latest programme evaluation was presented in the previous Programme Statement.

An evaluation of the COSME cluster support actions was launched in early 2021 to identify the best practices, but also synergies with other upcoming programmes, with a view to the scaling-up of the best performing actions in the future Joint Cluster initiatives, especially to support the sustainable green transition of European SMEs. An assessment will be carried out of the overall EU Open for Business communication campaign and the final report is expected by mid-2021.

The quality and efficiency of Enterprise Europe Network services was reflected in the analysis of surveyed<sup>[1]</sup> SMEs on the expected outcomes of EEN delivered services; nearly 90% of SME served expect their market situation to improve thanks to Network support and 92 % would recommend its services to others. Earlier findings on the impact evaluation of the Network (2008-2014)<sup>[2]</sup> concluded that the average net of effect for SMEs participating in the Network was approximately three percentage points increased annual growth (compared to SMEs not receiving EEN services).

<sup>[1]</sup> monitoring and reporting data surveyed from the Executive Agency

<sup>[2]</sup> <https://publications.europa.eu/en/publication-detail/-/publication/d4cf03ed-972c-11e5-983e-01aa75ed71a1>

### ***European statistical programme***

Two mid-term evaluations of the ESP were performed<sup>5</sup>, covering the years 2013-2014 and 2015-2017. Furthermore, a progress report on the implementation of the ESP, covering 2018 and the first half of 2019, was produced in 2019. The two evaluations and the progress report demonstrated that: (i) the delivery mechanism worked effectively; (ii) the programme run efficiently; and (iii) the programme reached its objectives. The ESP provided clear EU added value thanks to the harmonised provision of comparable and high-quality data for the EU. However, the evaluations also show the need to ensure adequate resources in the future for the modernisation of the statistical production processes. In addition, Eurostat needs to be able to respond to users' growing needs, especially concerning timeliness and coverage of new data for emerging policy needs, while becoming more agile and taking advantage of new technologies.

The key findings of the latest evaluation<sup>6</sup> have been presented in the Programme Statement 2020.

The final evaluation started in 2020 to be concluded by end of 2021, as requested in Article 15 of the amended ESP Regulation.

### ***Specific Activities in the Field of Financial Reporting and Auditing***

The key findings of the European Commission report on the Evaluation<sup>[1]</sup> of the IAS Regulation N°1606/2002 of 18 June 2015 and on the assessment of the achievement of the funding Programme in accordance with Regulation (EU) No 258/2014 in October 2019<sup>[2]</sup> were presented in the Programme Statement for these activities included in Working Document No.1 for the draft 2021 Union budget.

The European Commission reports to the European Parliament and the Council of 23 November 2017, 19 October 2018, 29 October 2019 and 14 December 2020<sup>[3]</sup> on the activities of the IFRS Foundation, EFRAG and PIOB in respectively 2016, 2017, 2018 and 2019, confirmed: 1) the overall pertinence and coherence of the Programme, 2) the effectiveness of its execution, and 3) the overall and individual effectiveness of the beneficiaries' work programmes. All reports concluded the Union funding programme remains fully justified in the context of the EU's efforts to establish a Capital Markets Union and to safeguard financial stability.

<sup>[1]</sup> COM (2015) 301 final - <https://eur-lex.europa.eu/legal-content/EN/TXT/?qid=1584716393734&uri=CELEX:52015DC0301>

### ***Enhancing consumers involvement in the EU policy making in the field of financial services***

A thorough evaluation of the programme took place in 2019-2020. The Commission's evaluation report<sup>[4]</sup> of the Union programme to support specific activities enhancing the involvement of consumers and other financial services end-users in Union policy-making in the area of financial services for the period of 2017-2020 pursuant to Regulation (EU) 2017/826 of the European Parliament and of the Council concluded that the objectives of the programme had generally been met.

The objective of further enhancing the involvement of consumers and financial-services end-users in Union policy-making in the area of financial services was achieved. The work of Finance Watch and Better Finance has enriched the policy debates and both organisations offered an alternative point of view that policy-makers might have otherwise missed or neglected. The two organisations delivered important expertise through their contributions to public consultations and their participation in many important Commission and European Supervisory Authorities (ESAs) expert groups. They also presented their views to policy-makers in other ways, including hearings, meetings, papers, workshops, roundtables and conferences, etc.

The objective of informing consumers and other financial-services end-users about issues at stake in the regulation of the financial sector was also generally achieved. Both Finance Watch and Better Finance have informed consumers through campaigns, press releases, etc. Some stakeholders did indicate that the beneficiaries could have covered certain topics in greater depth, e.g. the Review of the European Supervisory Authorities Regulations and the credit assessment.

The evaluation report concluded that Finance Watch and Better Finance would be unable to provide the same level of support for the interests of users of financial services without EU funding, and would thus be unable to represent consumer interests in the same way. EU funding therefore continues to be necessary to increase the participation of consumers in EU policy-making in the area of financial services.

### **Consumer programme**

#### **Supporting sustainable consumption:**

In 2020 a study to evaluate fitness of EU and national consumer law and policies for supporting sustainable consumption, including durability and reparability of products and fight against premature obsolescence, and envisage options to overcome identified needs, was carried out.

#### **Behavioural studies:**

The behavioural study on product recalls carried out in 2020 led to the following conclusions:

- A significant minority of EU consumers are not aware that manufacturers are obliged to recall dangerous products and that this obligation applies to all sectors. The levels of awareness are considerably lower in some Member States.
- Consumer awareness of the responsibilities that different actors, sellers in particular, have in the recall of dangerous products can be improved.

Therefore, in countries with low awareness of product recall obligations, national authorities should consider targeted awareness campaigns. Exchanges between national authorities to gain a better understanding of the reasons behind these differences and help close the awareness gap should thus be encouraged. Finally, consumers should be made more aware of the product recall process, particularly what the responsibilities of manufacturers are and how they differ from those of sellers.

The objective of the second behavioural study, conducted at the end of 2020, was to illustrate the impact the COVID-19 crisis on consumption patterns, with consumers shopping closer to home or supporting local businesses. The findings of the study also shown that, at the same time, the consumers made 'greener' choices: they were willing to pay more for a product that is more durable.

Some of the main findings:

- 71% of consumers shopped online in 2020.
- On average 38% of Europeans were concerned about paying their bills the following month. The difference between Member States was significant: Citizens' financial concerns ranged from 7% to 71%. More information is available [here](#).
- 42% of consumers considered postponing a major purchase and 80% would not make any travel plans until the situation was back to normal in their country.
- 56% of consumers said environmental concerns influenced their purchasing decisions and 67% said that they bought products that were better for the environment, even if such products were more expensive. Another 81% shopped closer to home and supported local businesses.
- Other variables were not impacted by the crisis compared to previous surveys. For example, the level of consumer trust in retailers remained high (at 80%), extensive knowledge of consumer rights remained low (at 27%) and the share of consumers confronted with a purchasing problem for which they felt they could legitimately complain remained low (at 23%).

#### **Consumer Credit Directive Evaluation:**

The study supporting the Consumer Credit Directive Evaluation was published in November 2020, together with a Staff Working Document and a Report to the co-legislators outlining the results of the Evaluation<sup>6</sup>. Due to the COVID-19 disruption and the need to focus on tasks related to the crisis (e.g. mapping of measures to help borrowers to the crisis), the publication was delayed of some months.

This evaluation provided evidence on whether the current legal framework of Directive 2008/48/EC (Consumer Credit Directive - CCD) is still fit for purpose, via an assessment of its effectiveness, efficiency, relevance, coherence, EU added value and potential for simplification and burden reduction. The evaluation assessed the overall functioning and practical application of the CCD and continued relevance of the original objectives, and established the extent to which the CCD is still relevant in view of new developments. For the evaluation relevant stakeholders were consulted (ministries, enforcement authorities, consumer associations and industry representatives), both consumers and creditors were surveyed and results from the Open Public Consultation were incorporated. The evaluation has also made use of quantification approaches, a mystery shopping exercise and extensive literature review. It finds that the CCD has been partially effective in ensuring high standards of consumer protection and fostering the development of a single market for credit in the context of a regulatory landscape showing significant fragmentation across the EU-

28. While the CCD has a number of possible shortcomings, a number of important obstacles are due to the application, implementation and enforcement of the Directive as well as wider market developments not foreseen at the time it was drawn up in 2008.

### *Evaluation of the Programme*

In November 2019 the Commission published its report on the mid-term evaluation of the Consumer Programme 2014-2020<sup>8</sup>. It was prepared following an external study on Ex-post evaluation of the Consumer Programme 2007-13 and mid-term evaluation of the Consumer Programme 2014-2020 launched in October 2017. The report showed that the Consumer Programme 2014 – 2020 achieved progress towards meeting the programme’s specific objectives in the areas of safety, consumer information and education, rights and redress and enforcement. The costs are assessed as being proportional to the benefits achieved and the EU added value is considered high. The results of this study show a general satisfaction of the stakeholders in terms of relevance and effectiveness of the activities.

Overall, the objectives and priorities of the Consumer Programme were so far assessed as being still very relevant. The evaluation concludes that in the future, the programme’s ability to react to new challenges related to market developments, digitalisation and new policy demands should be strengthened. Additional priorities could be given to sustainable consumption, to activities that contribute to a uniform and high level of consumer protection throughout the EU, and to support to consumer organisations at the Member State level (e.g. jointly with the Member States in their role as consumer watchdogs).

In terms of coherence, there seems to be little overlaps with other programmes, but quite a significant potential for increasing synergies with activities in other areas, for example, it was suggested to involve national consumer organisations into consumer information and education campaigns, to increase synergies between the actions, and at the same time strengthen the capacity of these organisations. Representatives of ECCs suggested increasing the synergy with the CPC Network by increasing the number and scope of joint activities.

In terms of efficiency, there seems to be significant room for improvement regarding administrative burdens related to the programme delivery and scope for simplification as regards grants for joint actions and exchange of officials.

In the future, the programme’s ability to react to new challenges related to market developments, digitalisation and new policy demands should be strengthened. Additional priorities could be given to sustainable consumption, to activities that contribute to a uniform and high level of consumer protection throughout the EU, and to support to consumer organisations at the Member State level (e.g. jointly with the Member States in their role as consumer watchdogs).

### ***Rights, Equality and Citizenship: Consumer rights strand***

In 2020 a study to support the analysis of the Package Travel Directive transposition was carried out. The results were published in a report<sup>8</sup>. It takes stock of the application of the Directive since it has entered into force in July 2018. The report looks into how Member States transposed the Directive into national law and assesses it in the context of the 2019 Thomas Cook bankruptcy and the challenges that have emerged during the COVID-19 crisis given that the coronavirus pandemic has led to massive travel disruptions worldwide, demonstrating how important it is to have rules in place that protect travellers in all circumstances. In such circumstances it is particularly important to ensure that our rules remain protective, effectively enforced, and fit for the times we live in. As announced in its New Consumer Agenda, and building on the findings of the report, the Commission will carry out a deeper analysis by 2022.

### ***Food and Feed***

The key findings of the latest evaluation are published on DG SANTE’s webpages<sup>(6)</sup>. On 26 April 2016, the European Court of Auditors published its Special Report on a performance audit on animal disease eradication programmes. The Court examined whether the national veterinary programmes adequately contained animal diseases by assessing the approach taken by the Commission (DG SANTE) and the Member States’ programmes’ design and implementation. The special report entitled ‘Eradication, control and monitoring programmes to contain animal diseases’ concluded that the approach taken by the Commission was sound and was supported by good technical advice, risk analysis, and a mechanism for prioritising resources. The Court acknowledged that there have been some notable successes, for example, decrease in the cases of bovine spongiform encephalopathy (BSE) in cattle, salmonella in poultry, and rabies in wildlife. Overall, the Court concluded that the audited animal disease programmes adequately contained animal diseases. However, the Court stressed that, as disease outbreaks can always occur, the Commission and the Member States should continue the efforts.

Four recommendations issued by the Court are taken forward by the Commission:

- facilitate the exchange of epidemiological information between Member States;
- examine whether the existing set of indicators should be updated to provide better information on veterinary control activities and the cost-effectiveness of programmes;
- systematically include, when relevant, the wildlife aspect in the veterinary programmes;
- support the availability of vaccines for use by the Member States when epidemically justified.

Three out of the four recommendations (b,c and d) have already been implemented and the recommendation a is expected to be implemented in 2021. The Commission is working together with the OIE on the merging of different notification systems (ADNS and WAHIS into ADIS).

ADIS will be launched on 21 April 2021 in conjunction with the AHL using the new legal basis recently adopted by the Commission (Commission Implementing Regulation (EU) 2020/2002). This will centre the notification process on priority diseases which went through the risk assessment and categorisation exercise carried in the framework of the AHL (Regulation (EU) 2016/429 of the European Parliament and of the Council). The work on interoperability with the OIE-WAHIS continues and the two systems already performed connection tests in 2020; the actual exchange of data between ADIS and OIE-WAHIS will occur between the second and third quarter of 2021.

In the second half of 2016, DG SANTE launched an external evaluation exercise in support to the Commission's effort to conduct the interim evaluation of Regulation (EU) No 652/2014, which lays down provisions for the management of the food chain expenditure under the Multiannual Financial Framework 2014-2020. The final report of the external evaluation was delivered by the selected contractor in July 2017, while the Commission mid-term evaluation report was established and presented to the European Parliament and to the Council in September 2017.

Overall, the mid-term evaluation revealed that the CFF Regulation is functioning well within its policy context. All activities receiving EU financial support in this area have proven to serve the CFF objectives, namely the improvement of human, animal and plant health, as well as the overall Commission's priorities, including the functioning of an effective internal market and the support to trade with non-EU countries. The EU financial provisions on food safety, animal and plant health have been recognised as uniform and consistent in their application and enforcement in all EU Member States. This ensures in turn that both citizens and businesses are confident that this financial framework is fair and effective in promoting high safety standards in a key sector of the EU economy. The activities funded under the CFF Regulation contribute to an EU which is safe and secure, prosperous and sustainable, social, and stronger on the global scene. These findings were used as a basis for the proposal for the food chain programme incorporated in the SMP.

To further complement the evaluation of Regulation (EU) No 652/2014, and to follow up on a Court's recommendation, a targeted study to perform cost-effectiveness analysis in the food chain area is being carried out by the JRC. The study was published in 2019 (<https://ec.europa.eu/jrc/en/publication/cost-effectiveness-analysis-methodology-food-chain-area>). This report provides a methodological guidance on cost-effectiveness analysis in the view of future evaluations of the EU interventions currently funded under the Common Financial Framework of the food chain area.

Concurrently, an external study focused on data gathering and analysis in the food chain area was launched in October 2017. The report was published in 2019 (<https://publications.europa.eu/s/k19k>). It covers all policy areas under the food chain funding, consisting of two assignments: the first one on gathering and analysing data on the cost-efficiency, benefits and EU added-value of the actions performed under the Food Chain Programme, including the projection of those elements under different budgetary scenarios; the second one, based on relevant budgetary and policy indications made available, on designing detailed programme indicators for future monitoring and evaluation purposes, in relation to the actions that will be retained for the Food Chain Programme post-2020. Its intermediate and final findings were feed into the preparatory works towards the presentation of a Commission's proposal for a post-2020 Food Chain Programme.

#### **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :Making the internal market more effective, facilitating the prevention and removal of obstacles, supporting the development, implementation and enforcement of the Union law**

**Indicator 1:No. of new complaints and cases of non-compliance in the area of free movement of goods and services, as well as Union legislation on public procurement**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Composite indicator 0 to 1
Cut-Off Date	
Data source	Data extraction from CHAP, ICSMS and Rapex systems
Link to the objective	Functioning of the internal market: Striving to avoid unfair competition induced by unfair products
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Indicator yet to be fully defined and likely developed with the help of the JRC. It could be a weighted or composite indicator from components extracted from the sources below. Number of complaints (>

	CHAP). Complaints registered in CHAP can be searched by: - Status: open cases AND/OR closed cases - Origin: DG/Directorate/unit - Time: cases registered as from a specific date or within specific dates Number of cases Number of infringement cases (> NIF). Cases registered in NIF can be search by: - Status: open cases AND/OR closed cases - Origin: DG/Directorate/unit - Legal basis - 4 types of infringement: non-communication of directives, incorrect transposition of directives, incorrect application of directives, incorrect application of Treaty articles, Regulations & Decisions - Time: cases registered as from a specific date or within specific dates AND/OR by type of decision (ex. from the sending of LFN 258 to the sending to the Court or the closure). Number of cases of non-compliance
Full metadata available at this address	
Justification of the trend	

**Indicator 2: Services Trade Restrictiveness Index.**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
										1
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Composite indicator: indice with value from 0 to 1. Complete openness to trade and investment = zero, completely closed to foreign services providers = one.
Cut-Off Date	
Data source	OECD National legislation from public websites
Link to the objective	Free movement of services
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The OECD STRI is a unique, evidence-based tool that collects information on services trade restrictions across 19 major services sectors. The project has two distinct but complementary instruments: a services trade regulatory database and a services trade restrictiveness index. These instruments provide a rich source of information for trade policy makers, trade negotiators and researchers, and an instrument for impact assessment of trade liberalisation. The STRI further allows individual countries to benchmark their services market regulations against the global best practice, identify outlier restrictions and current bottlenecks.

Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Specific Objective 3 :Improving the competitiveness of enterprises with special emphasis on SMEs

#### Indicator 1: Number of SMEs, clusters and business network organisations, and business support organisations receiving support from the programme, in particular for internationalisation, digitalisation and sustainability.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
280.000 SMEs and other beneficiaries receiving direct and indirect support yearly*	Milestones									
	Actual Progress									320,000 at mid-term
										Final

Are we on track	
Indicator type	Result
Unit of measurement	Gross numbers: an SME that benefitted from concrete support from a COSME funded action.

Cut-Off Date	
Data source	EASME partnership agreement database
Link to the objective	Increasing SME competitiveness
Link MFF 14-20 / MFF 21-27	continuation of COSME indicator.
Other methodological comments	The definition of the support received by SMEs can be wide. Some intermediaries have the potential to reach a great number of SMEs. The indicator should measure concrete direct support and should not measure the potential number.
Full metadata available at this address	
Justification of the trend	

**Indicator 2:N. of companies supported having concluded business partnerships.**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	2500 business partnerships per year (EEN)			EEN: 2700 partnership agreements per year in 2024						18,500 agreements over the 7 year period
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	an SME that signed a partnership agreement thanks to the EEN partnership services
Cut-Off Date	
Data source	EASME
Link to the objective	stimulate and provide support to SMEs to increase their competitiveness in the Single Market and beyond, , supporting them in addressing global and societal challenges and business internationalisation, and strengthening Union industrial leadership in global value chains
Link MFF 14-20 / MFF 21-27	
Other methodological comments	EASME provides clear guidelines on partnership agreements, in addition, they are verified and validated by EASME as part of the monitoring and evaluation process.
Full metadata available at this address	
Justification of the trend	

**Indicator 3: Number of entrepreneurs benefitting from mentoring and mobility schemes, including young, new and female entrepreneurs, as well as other specific target groups.**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
3.000 entrepreneur s matched per year	Milestones

Justification of the trend	

## Specific Objective 4 :Ensuring the effective functioning of the internal market through standardisation processes

**Indicator 1:Share of implementation of European standards as national standards by Member States in total amount of active European standards.**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	90%									95%
	Actual Progress									Final

Are we on track	
Indicator type	
Unit of measurement	Measure how many of the European standards are available in all Member States. Percentage of numbers of standards
Cut-Off Date	
Data source	European standardisation organisations (CEN, CENELEC and ETSI)
Link to the objective	European standards should be transposed without delay at national level to allow for the smooth and harmonised functioning of the Single market
Link MFF 14-20 / MFF 21-27	
Other methodological comments	After the adoption of a EU standard, the members of CEN and CENELEC are invited to fill in electronically in the common IT system a Form declaring the date that the standard has been transposed at national level (implementation). CEN and CENELEC actively monitor the number of transposed standards compared to the catalogue of active standards and report the ratio in percentage per national member to the Commission. ETSI has a very limited number of European standards -its core business is technical IT specifications. Therefore ETSI has a limited number of cases to report e.g. radio equipment directive 2014/53/EU , which can be handled manually and reported to the Commission. All other ETSI publications do not need for trasposition at national level.
Full metadata available at this address	
Justification of the trend	

**Indicator 2:Percentage of international financial reporting and auditing standards endorsed by the Union.**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	96% (2018)									100%
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Percentage indicating the endorsement level each year.
Cut-Off Date	
Data source	Data provided by grant beneficiaries
Link to the objective	The indicator is relevant to the policy objectives as it provides a snapshot of the endorsement level of the IFRS by the EU per year, allows comparison with its baseline value, ensures continuous monitoring of its trend and helps assessing the progress towards a single set of high quality global accounting standards.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The Programme should also aim to support the development of high-quality international standards that underpin the implementation of Union legislation. This includes standard setting in the field of financial reporting and audit, thereby contributing to the transparency and well-functioning of the Union's capital markets and to enhancing investor protection.
Full metadata available at this address	
Justification of the trend	

## Specific Objective 5 :Promoting the interests of consumers and ensuring a high level of consumer protection and product safety

**Indicator 1:Consumer condition index.**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									

	63.2% (2018)									
Actual Progress										Final

Are we on track	
Indicator type	Result
Unit of measurement	The 17 CCI indicators are broken down into 3 pillars; each having an equal weight (33.3%) as follows: Pillar I - Knowledge and Trust, measuring the consumers and retailers knowledge of consumer rights and trust in organisations (including public authorities) and in redress mechanisms; Pillar II - Compliance and Enforcement, measuring retailers' compliance (through the reported incidence of specific unfair commercial practices) and the effectiveness of public enforcement of consumer and product safety legislation; and Pillar III - Complaints and Dispute Resolution measuring problems faced by consumers, their complaints and satisfaction with complaint handling, as well as the participation of the retailers in alternative dispute resolution mechanisms. For further information on the CCI and its components and the weightings see pp. 16-18 of the 2019 Consumer Conditions Scoreboard available here: <a href="https://ec.europa.eu/info/sites/info/files/consumers-conditions-scoreboard-2019_en_1.pdf">https://ec.europa.eu/info/sites/info/files/consumers-conditions-scoreboard-2019_en_1.pdf</a>
Cut-Off Date	19/08/2022
Data source	survey of consumers and retailers.
Link to the objective	As the EU cooperation and the regulatory efforts for consumer protection evolve, so do the tools used for monitoring these policies. The two main measuring tools employed by the European Commission for the monitoring of consumer outcomes across the Single Market over the past decade have been the Consumer Conditions Scoreboard and the Consumer Market Scoreboard (the latter has been discontinued). The Consumer Conditions Scoreboard monitors the quality of the consumer environment at EU and national level. It also tracks progress in the development of e-commerce by looking at attitudes and experiences of consumers and businesses in the digital single market. The indicator relates to the specific objective "promoting the interests of consumers and ensuring a high level of consumer protection and product safety"
Link MFF 14-20 / MFF 21-27	The Consumer Conditions Scoreboard has been published every 2 years since 2013 (annually in 2011 and 2012) and offers a comparison with the state of play in the previous years.
Other methodological comments	The CCI shows how the single market is performing for EU consumers. The index attempts at gauging: 1) the sentiment of consumers' trust toward several market agents (i.e. public authorities, retailers, consumer organisations, and existing consumer protection measures); 2) the presence of illicit commercial practices (i.e. as experienced by survey respondents); 3) the consumers' propensity to complain; 4) the perceived ease of redress; and 5) the perceived safety of non-food products on the market.
Full metadata available at this address	
Justification of the trend	

### Indicator 2:N. of position papers and responses to public consultations in the field of financial services from beneficiaries.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	47 (2019)									maintain positive trend
Actual Progress										Final

Are we on track	
Indicator type	Result
Unit of measurement	The indicator is measured annually at absolute value. This allows comparison with its baseline value and enables monitoring trends.
Cut-Off Date	
Data source	Data provided by grant beneficiaries
Link to the objective	The SMP should support the creation of the right conditions to empower all participants in the internal market: businesses, citizens including consumers, civil society and public authorities. To that end, the Programme should aim to ensure the competitiveness of businesses, notably SMEs, but also support the enforcement of consumer protection and safety rules and raise the awareness of businesses and individuals by providing them with the right tools, knowledge and competence to make informed decisions and strengthen their participation in Union's policy-making.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The data mainly draws from the activity reports provided by the beneficiaries of the Programme - organisations active in the field of strengthening the position of consumers and end-users of financial services and defending their interests in the financial sector; and advocating for an open, transparent and efficient financing of the real economy, in the interest of investors, shareholders and financial

	services users who are independent from the financial industry.
Full metadata available at this address	
Justification of the trend	

### Specific Objective 6 :Contributing to a high level of health for humans, animals and plants along the food chain and in related areas

**Indicator 1:N. of successfully implemented national veterinary and phytosanitary programmes.**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Percentage of national programmes successfully implemented (%) = Number of national programmes successfully implemented / Total number of programmes approved
Cut-Off Date	
Data source	Information provided by the MSs through the online IT Tools used for data collection (MSs cofinancing applications, intermediate and final reports).
Link to the objective	a high level of health and welfare for humans, animals and plants along the food chain will ensure a high level of protection for consumers, enhance the competitiveness of the EU food and feed industry and favour the creation of jobs, improve the effectiveness, efficiency and reliability of official controls related activities along the food supply chain, carried out with a view to implement and enforce EU rules in this area and the free movement of goods
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The indicator measures the success of the activities carried out in different policy areas (e.g. plant health: prevention, detection, eradication and containment). The results confirm the presence/status of those pests and diseases in the Union territory, allowing to take quick actions in the interest of the EU agriculture and forestry. For veterinary programmes, MS present one programme per disease whereas for plant health, each MS presents one consolidated programme.
Full metadata available at this address	"All the public information concerning the national veterinary and phytosanitary programmes are published on the dedicated DG SANTE webpages:vet programmes: <a href="https://ec.europa.eu/food/funding/animal-health_enphyto">https://ec.europa.eu/food/funding/animal-health_enphyto</a> phyto programmes: <a href="https://ec.europa.eu/food/funding/plant-health_en">https://ec.europa.eu/food/funding/plant-health_en</a> "
Justification of the trend	

### Specific Objective 7 :Producing and communicating high quality statistics on Europe

**Indicator 1:N. of web mentions and positive/negative opinions.**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Number (of mentions) and percentage (of negative mentions)
Cut-Off Date	
Data source	Eurostat Digital Dissemination Unit
Link to the objective	The message given by the indicator is how much the statistics published by Eurostat are relevant for the users and used, expressed by the number of mentions, and how satisfied the users are with the quality of the statistics, which is inversely proportional to the share of negative comments.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	A 'mention' is an online text referring to Eurostat. It may be an article written by a journalist of the Financial Times, a post by a blogger, or a tweet by a news agency. An online tool, called Brandwatch, analyzes mentions in seven languages (English, German, French, Italian, Spanish, Portuguese and Swedish).

Justification of the trend	

## 5. Programme 2014-2020 - Key monitoring indicators

*Previous Program 1 : Programme for the Competitiveness of Enterprises and small and medium-sized enterprises (COSME)*

**General Objective 1 :to strengthen the competitiveness and sustainability of the Union's enterprises, particularly SMEs**

**Indicator 1:Performance of SMEs as regards sustainability**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
26%							Increase			Increase
	Actual Progress									Final
		26%		24%			30%			

Are we on track	On track
Indicator type	Output
Unit of measurement	Share of Union SME producing green products
Cut-Off Date	
Data source	
Narrative	Share of EU SMEs producing green products (goods and services): 2013 = 20.5%
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data up to 2017 from the Flash Eurobarometer 456 on SMEs, Resource Efficiency and Green Markets, December 2017. Next Eurobarometer scheduled for Q32/20210. Data for 2020 has been taken from Flash Eurobarometer 486 on SMEs, start-ups, scale-ups and entrepreneurship, Q24: the share of SMEs developing sustainable products or services. This figure is EU-27 share.
Full metadata available at this address	
Justification of the trend	

**Indicator 2:Changes in unnecessary administrative and regulatory burdens on both new and existing SMEs**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
days										
2012	Milestones									2020
5,4	4			4			Marked reduction of number of days to set-up a new SME			Marked reduction of number of days to set-up a new SME
	Actual Progress									Final
	15.63	14.05	12.93	12.43	12.07	12.96				
EUR										
2012	Milestones									2020
372	313			300			Marked reduction of number of days to set-up a new SME			Marked reduction of number of days to set-up a new SME
	Actual Progress									Final
	4.84%	4.43%	4.1%	4.05%	3.55%	3.42%	3.09%			
within EU										
	Milestones									
	Actual Progress									Final
outside EU										
	Milestones									
	Actual Progress									Final

Are we on track	On track
Indicator type	
Unit of measurement	Days and EUR respectively (baseline). This has now been revised. As from 2019 data is calculated using World Bank Doing Business- the data for cost to set up a new SME is expressed in % of income per capita.
Cut-Off Date	
Data source	World Bank Doing Business
Narrative	
Methodology	New methodology from 2019 (looks not only at the legal “perfect” case but talks to experts about how long it takes in practice). Absolute numbers are therefore larger and cannot be directly compared to the previous figures given.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In some countries there is a possibility to have a simplified or on-line registration to set up an SME under certain conditions. Taking electronic/simplified registration into account, the results are 2.7 days, EUR 271. Original baseline of 5.4 days had reduced to 3.1 in 2017. Original baseline of EUR 372 for cost had reduced to EUR 300 in 2018. However, as from 2019, data comes from “World Bank Doing Business” with a different methodology. Data for Cost to set up a new SME is expressed in % of income per capita. Up to 2018 only the EU-28 value is available. Table shows EU-28. For 2019 and 2020, data for EU-27 days are 13.28 and 12.17 respectively. For cost EU-27 is 3.54% for 2019 and 3.20% for 2020.
Full metadata available at this address	<a href="https://www.doingbusiness.org/en/doingbusiness">https://www.doingbusiness.org/en/doingbusiness</a>
Justification of the trend	

## General Objective 2 :to encourage entrepreneurial culture and to promote the creation and growth of SMEs

### Indicator 1:Changes in SME growth: Total EU turnover (Gross Value Added)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010	Milestones									2020
5,8%	4%	4%	4%	4%	4%	4%	Increase of SME output (value added)			Increase of SME output (value added)
	Actual Progress									Final
	4%	5%	2%	4%	4%	3.84% <sup>b</sup> (updated)	-7.6			

Are we on track	Deserves attention**
Indicator type	Result
Unit of measurement	percentage of value added
Cut-Off Date	31/12/2020
Data source	Up to 2018, these are Eurostat figures. For 2019 and 2020, these are estimates from the SME Performance Review produced by DIW Econ, based on 2008-2018 figures from the Eurostat Structural Business Statistics Database as well as provisional data for 2019-2020 from the National Accounts database and the Short-Term Business Statistics Database (EUROSTAT).
Narrative	
Methodology	Data is based on forecasts, figures updated according to current data.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data up to 2018/2019 concerns EU-28, data for 2020 (and updated figure for 2019) concerns EU-27. In 2018, there was a break in methodology for Eurostat on the number of SMEs (switch from legal unit to statistical unit) so the timeline is not directly comparable on absolute numbers.
Full metadata available at this address	
Justification of the trend	Many industries, especially in the SME-intensive services sector, experienced large declines in sales as result of the various lockdowns linked to the COVID 19 pandemic.

### Indicator 2:Changes in SME growth: Employees

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Total number of employees in SMEs										
2010	Milestones									2020
87,50							96			96
	Actual Progress									Final
	90	91	94	96	98	99 EU-27	83.40			

						(updated 84.88)				
The annual growth of employees in SMEs										
2010	Milestones									2020
	1%	1%	1%	1%	1%	1%	0%			
-0,40%	Actual Progress									Final
	2,10%	0,54%	2,30%	1,97%	1,50%	1,39% (updated)	-1.7%			

Are we on track	Deserves attention**
Indicator type	
Unit of measurement	see other methodological comments.
Cut-Off Date	
Data source	Figures from the SME performance review 2015: <a href="http://ec.europa.eu/growth/smes/business-friendly-environment/performance-review/index_en.htm">http://ec.europa.eu/growth/smes/business-friendly-environment/performance-review/index_en.htm</a>
Narrative	The annual growth of employees in SMEs: 2011: 0.2%
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data from the SME Performance Review 2019 <sup>2118</sup> based on figures for up to 2018 <sup>16/17</sup> . SME's value added grew in 2015 by 5.5% and employment by 0.54%. Data up to 2018/2019 concerns EU-28, data for 2020 (and updated figure for 2019) concerns EU-27. NB: data has been revised back in time by Eurostat, and in 2018 Eurostat introduced a methodological break to collect enterprises as statistical units instead of legal units; this has revised the numbers of SMEs downwards.
Full metadata available at this address	
Justification of the trend	Downward trend in line with the difficulties associated with the COVID-19 pandemic.

### Indicator 3: Changes in the proportion of Union citizens who wish to be self-employed

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
37%							Increase in share of EU citizens			Increase in share of EU citizens
	Actual Progress									Final

Are we on track	Deserves attention**
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	<a href="http://www.gemconsortium.org/report">http://www.gemconsortium.org/report</a> - please note that no aggregated results for the EU as a whole are available.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	No Eurobarometer on Entrepreneurship has been performed since 2012. To note that the Global Entrepreneurship Monitor measures every year the percentage of the adult population between the ages of 18 and 64 years who believe that entrepreneurship is a good career choice. According to the GEM report (2018) EU countries have in general a low belief in entrepreneurship as a good career with a few exceptions such as Cyprus, Poland and the Netherlands where more than 70% of adults interviewed considered entrepreneurship as a good choice.
Full metadata available at this address	
Justification of the trend	Without a specific Eurobarometer to measure the trend we cannot say that the indicator is on track. The Global Entrepreneurship Monitor shows that there is no upward trend apart from the exceptions mentioned.

### Specific Objective 1 :to improve framework conditions for the competitiveness and sustainability of Union enterprises, particularly SMEs, including in the tourism sector

#### Indicator 1: Activities to improve competitiveness - Number of simplification measures adopted

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020

Are we on track	On track
Indicator type	
Unit of measurement	Number of countries
Cut-Off Date	
Data source	
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	All EU Member States have specific measures in place to increase the number of entrepreneurs and new companies, with most also having a strong focus on entrepreneurial education for both teachers and students. During 2018-Q1/2019, over 60 policy measures were adopted/implemented under the entrepreneurship principle. This is a lower level of policy activity compared with the previous reference period (2017-Q1/2018). As in previous years, most of the measures aimed to promote an entrepreneurial mind-set.
Full metadata available at this address	
Justification of the trend	

### Indicator 2: Number of Member States implementing entrepreneurship solutions targeting potential, young, new and female entrepreneurs, as well as other specific target groups

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020

2013	Milestones									2020
312000							220000			220000
	Actual Progress									Final
		53433	143344	274964	414739	553925	645988			

Are we on track	On track
Indicator type	Result
Unit of measurement	EUR billion / number of SMEs
Cut-Off Date	
Data source	The European Investment Fund
Narrative	The Loan Guarantee Facility – as supported by the European Fund for Strategic Investments – continues its high performance for the benefit of SMEs in need of finance.
Methodology	The European Investment Fund collects the data from the financial intermediaries and transmits it in aggregated format to the Commission.
Link MFF 14-20 / MFF 21-27	Invest EU
Other methodological comments	The data for the baseline is based on the latest EIF quarterly report as of 31 December 2013 for the High Growth and Innovative SME Facility (GIF) under the 2007-2013 Competitiveness and Innovation Programme (CIP). No results were available for 2014 and 2015 because the COSME Delegation Agreement was signed on 22/07/2014, the call for expression of interest was published on 04/08/2014 and the first fund agreements were signed end of 2015. The result data for 2015-2019 is based on the latest European Investment Fund (EIF) quarterly operational report for the COSME Equity Facility for Growth as of 31 December of the respective reporting year, whereas the data for 2020 have a cut-off date of September 2020.
Full metadata available at this address	n/a
Justification of the trend	Thanks to the reinforcement of the COSME Loan Guarantee Facility resources from the SME window of the European Fund for Strategic Investments (doubling the available resources), it was possible to achieve the targets set for the overall programming period (2014-2020) already in the course of 2018.

#### Indicator 2: Number of venture capital investments from the COSME programme and overall volume invested

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Indicator type	Result

Unit of measurement	EUR Billion/number of SMEs finance
Cut-Off Date	
Data source	The European Investment Fund
Narrative	The Equity Facility for Growth continues its performance continued for the benefit of SMEs in need of alternative finance despite all factors challenging its implementation.
Methodology	The European Investment Fund collects the data from the financial intermediaries and transmits it in aggregated format to the Commission.
Link MFF 14-20 / MFF 21-27	InvestEU
Other methodological comments	The data for the baseline is based on the latest EIF quarterly report as of 31 December 2013 for the High Growth and Innovative SME Facility (GIF) under the 2007-2013 Competitiveness and Innovation Programme (CIP). No results were available for 2014 and 2015 because the COSME Delegation Agreement was signed on 22/07/2014, the call for expression of interest was published on 04/08/2014 and the first fund agreements were signed end of 2015. The result data for 2016-2019 is based on the latest European Investment Fund (EIF) quarterly operational report for the Equity Facility for Growth of 31 December of the respective reporting year, whereas the data for 2020 are with cut-off date September 2020.
Full metadata available at this address	N/A
Justification of the trend	Complex due diligence and fund-raising processes, accompanied by prioritisation in jurisdictions with limited demand and challenged by the impact of the 2020-2021 COVID crisis confirms the initial trend for this indicator of the Equity Facility for Growth. All details are available in Working Document Part X dedicated to the financial instruments.

**Indicator 3: Leverage ratio**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Leverage COSME Loan Guarantee Facility										
2012	Milestones									2020
1:32							1:20 - 1:30			1:20 - 1:30
	Actual Progress									Final
			1:9	1:15	1:18	1:20	1:18			
Leverage COSME Equity Facility for Growth										
2012	Milestones									2020
1:6.7							1:4 -1:6			1:4 -1:6
	Actual Progress									Final
			1:0.4	1:0.5	1:1	1:1.1	1:1.2			

Are we on track	On track
Indicator type	Result
Unit of measurement	Natural numbers
Cut-Off Date	
Data source	The European Investment Fund
Narrative	The fluctuation in 2020 for the Loan Guarantee Facility is mainly due to the significant increase in the total amount of guarantee agreements signed with increased guarantee rates as a mitigation measure for the COVID impact.
Methodology	The European Investment Fund collects the data from the financial intermediaries and transmits it in aggregated format to the Commission.
Link MFF 14-20 / MFF 21-27	InvestEU
Other methodological comments	Loan Guarantee Facility: No results were available for 2014 and 2015, because the COSME Delegation Agreement was signed on 22/07/2014 and the call for expression of interest was published on 04/08/2014. The result data for 2016-2019 is based on the latest European Investment Fund (EIF) quarterly operational report for the COSME Loan Guarantee Facility as of 31 December of the respective reporting year; whereas the data for 2020 are with cut-off date September 2020. The result data is the expected actual leverage. It is the actual amount of financing made available to SMEs divided by the total amount of guarantee agreements signed. However, the total amount of guarantee agreements signed is higher than the total EU Contribution Committed, because the latter is increased by the actual European Fund for Strategic Investments exposure (the enhancement of the COSME Loan Guarantee Facility backed by the European Fund for Strategic Investments).
Full metadata available at this address	N/A
Justification of the trend	The trend follows naturally the implementation cycle of the E ntervention as designed.

**Indicator 4: Additionality of the EFG and LGF**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Justification of the trend	

### Specific Objective 4 :to improve access to markets, particularly inside the Union but also at global level

#### Indicator 1:International Industrial Cooperation - Number of cases of improved alignment between Union and third countries' regulations for industrial products

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
2			Regulatory co-operation with 3 of our main trading partners(China, Japan and USA)	3 relevant areas	More than 4 relevant areas		4			4
	Actual Progress									Final

Are we on track	No data
Indicator type	
Unit of measurement	Relevant areas of significant alignment of technical regulations
Cut-Off Date	
Data source	
Narrative	Baseline: It is estimated that in regulatory cooperation with main trading partners (US, Japan, China, Brazil, Russia, Canada, India) there is an average of 2 relevant areas of significant alignment of technical regulations
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The indicator "Number of cases of improved alignment between Union and third countries" regulations for industrial products" should be measured with caution as we cannot require a third country - US, Japan, China, Canada - to align with our EU technical regulations. Actually, neither party can impose its system on the other. What we do with some of these countries is to have a regulatory cooperation/dialogue in view of seeking more convergence or compatibility in technical regulations and conformity assessment procedures. With respect to standards we promote greater acceptance of international standards.Thus when it comes to specific results requested by the indicator there are not any specific achievements. Regulatory co-operation with trade partners have been more relevant with China, Taiwan, Japan.In the case of Japan, our regulatory dialogues have contributed, in addition to previous sectors such as automotive, medical devices, cosmetics and chemicals to further alignment of techni

Justification of the trend	

**Previous Program 2 : European statistical programme (ESP)**

## General Objective 1 :The European Statistical System to be the leading provider of high-quality statistics on Europe.

### Indicator 1:Eurostat impact on Internet

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of mentions										
2017	Milestones									2020
					increase	increase	increase			increase
264 932	Actual Progress									Final
				264 932	390 207	388 662	365 340			
Percentage of negative opinions										
2017	Milestones									2020
				< 2%	< 2%	< 2%	< 2%			< 2%
0%	Actual Progress									Final
				0%	0%	0%	0%			

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Number of mentions and percentage of negative opinions
Cut-Off Date	31/12/2020
Data source	Monthly report on Eurostat's impact on the web.
Narrative	The indicator measures the impact on the internet of the statistics published by Eurostat, as the number of mentions and the percentage of those mentions which are negative. An increase shows that there is growing interest in the statistics published by Eurostat. A very low share of negative opinion shows that the statistics are appreciated by the users.
Methodology	A 'mention' is an online text referring to Eurostat. It may be an article written by a journalist of the Financial Times, a post by a blogger, or a tweet by a news agency. An online tool , called Brandwatch, analyses mentions in seven languages (English, German, French, Italian, Spanish, Portuguese and Swedish). Number of mentions and share of negative ones are calculated each month. The indicator uses the total over the year.
Link MFF 14-20 / MFF 21-27	Yes, it is defined as a core performance indicator for the MFF 21/27.
Other methodological comments	New indicator as identified in ESTAT's Strategic Plan 2018-2020.
Full metadata available at this address	They are available in the section on the new MFF.
Justification of the trend	An increased number of web sites are blocking the access to paid content by automated tools, which causes a decrease in the measured total number of mentions. The system used may be changed in future because of the evolution of technology during the life cycle of the new programme and for possible privacy concerns. For those reasons, Eurostat is assessing if alternative tools available at Commission level give useful alternative results.

## Specific Objective 1 :To provide statistical information, in a timely manner, to support the development, monitoring and evaluation of the policies of the Union properly reflecting priorities, while keeping a balance between economic, social and environmental fields and serving the needs of the wide range of users of European statistics, including other decision-makers, researchers, businesses and European citizens in general, in a cost-effective manner without unnecessary duplication of effort.

### Indicator 1:Statistical coverage (measured as number of indicators, sub-indicators and all their breakdowns)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2017	Milestones									2020
					increase	increase	increase			increase
328 489 272	Actual Progress									Final
				328 489 272	366 260 359	423 110 043	446 063 473			446 063 473

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of statistical indicators
Cut-Off Date	31/12/2020
Data source	Report on the content of Eurostat's public databases.
Narrative	It measures the number of indicators, sub-indicators and all their breakdowns included in Eurostat's reference database (Eurobase). Indicators differing only by the time dimension are not counted. An increase shows that Eurostat is enlarging its offer by producing more statistics to meet increasing users' demands.
Methodology	A programme goes through the entire database and counts the number of different statistical

	indicators.
Link MFF 14-20 / MFF 21-27	Yes, it will be used also in the MFF 21/27 as a monitoring indicator.
Other methodological comments	New indicator as identified in ESTAT's Strategic Plan 2018-2020.
Full metadata available at this address	
Justification of the trend	

**Indicator 2: Number of data extractions made by external users from Eurostat reference databases (EuroBase and Comext) via the Eurostat website (using the Data Explorer or Easy Comext) - Millions**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
7,87	8,1	8,3	8,5	8,7			8,7			8,7
	Actual Progress									Final
	7,79	8,3	11,34	13,33	16,49	18,34	21,48			21,48

Are we on track	On track
Indicator type	Result
Unit of measurement	Million extractions
Cut-Off Date	31/12/2020
Data source	Monitoring reports on Eurostat electronic dissemination.
Narrative	It counts the number of data extractions made by external users from Eurostat reference databases (EuroBase and Comext) via the Eurostat website. An increase shows that the statistics published by Eurostat are used more.
Methodology	It is the count of the extractions made by all users from the Eurostat reference databases. It is made automatically in the databases.
Link MFF 14-20 / MFF 21-27	Yes, it will be used also in the MFF 21/27 as a monitoring indicator.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 3: Degree of achievement of the Specific Objective 1 measured as percentage of the achievement of the Outputs related to it**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
	1	1	1	1	1	1	1			1
	Actual Progress									Final
	0,92	0,94	0,93	0,95	0,96	0,974	0,94			0,94

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	ESTAT end of year monitoring reports.
Narrative	The indicator shows the percentage of planned outputs for the year, which are "On target" or "Achieved". A high percentage shows a high degree of effectiveness. However, it does not imply that the outputs, which are not declared in the two categories, have not been achieved. Outputs may be revised as being incorporated in other activities or showing limited difficulties but being substantially done. The importance of the outputs is also not taken into account in the counting. The 100% target is ideal but actually unreachable. Therefore, the indicator gives a rough indicator but needs to be complemented by qualitative information.
Methodology	It is the percentage of activities, related to Specific Objective 1, for which the status at the end of the year is marked as "On target" or "Achieved" in the planning and monitoring tool of Eurostat.
Link MFF 14-20 / MFF 21-27	No.
Other methodological comments	Twice a year, DG ESTAT's units give a mark to each of the outputs under their responsibility. The marks are the following: "Achieved", "On target", "Difficulties", "Revised", "Cancelled". The percentages given in the table include "Achieved" and "On target" at the end of the year. The "ideal" target is 100% every year.
Full metadata available at this address	
Justification of the trend	The minor decrease is due to very few activities which were slightly delayed, due to COVID-19 and to the difficulty to recruit people with some specific skills in Luxembourg.

**Specific Objective 2 :To implement new methods of production of European statistics aiming at efficiency gains and quality improvements.**

**Indicator 2: Timeliness of a sub-set of the statistics provided by Eurostat measured as number of days between the last day of the statistics' reference period and the release day of the related news release**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Quarterly										
2017	Milestones									2020
85,7	decrease									decrease
	Actual Progress									Final
				85,7	85,4	83,3	83,8			83,8
Monthly										
2017	Milestones									2020
35,9	decrease									decrease
	Actual Progress									Final
				35,9	36,0	35,6	35,8			35,8

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of days
Cut-Off Date	31/12/2020
Data source	Eurostat's news releases.
Narrative	It shows the timeliness of the statistics published by Eurostat, based on the releases of monthly and quarterly statistics. A decrease shows that the timeliness is improving.
Methodology	It is calculated as the average number of days between the last day of the statistics' reference period and the release day of the related news release, for monthly and quarterly statistics.
Link MFF 14-20 / MFF 21-27	Yes, it will be used also in the MFF 21/27 as a monitoring indicator.
Other methodological comments	New indicator as identified in ESTAT's Strategic Plan 2018-2020.
Full metadata available at this address	
Justification of the trend	The very limited increase in 2020 was due to the outbreak of the Covid-19 pandemic in the first quarter 2020, when NSIs had to face unexpected problems, which were solved in the following months.

**Indicator 3: Degree of achievement of the Specific Objective 2 measured as percentage of the achievement of the Outputs related to it**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
	1	1	1	1	1	1	1			1
	Actual Progress									Final
	0,86	0,89	0,91	0,89	0,954	0,958	0,97			0,97

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	ESTAT end of year monitoring reports.
Narrative	The indicator shows the percentage of planned outputs for the year, which are "On target" or "Achieved". A high percentage shows a high degree of effectiveness. However, it does not imply that the outputs, which are not declared in the two categories, have not been achieved. Outputs may be revised as being incorporated in other activities or showing limited difficulties but being substantially done. The importance of the outputs is also not taken into account in the counting. The 100% target is ideal but actually unreachable. Therefore, the indicator gives a rough indicator but needs to be complemented by qualitative information.
Methodology	It is the percentage of activities, related to Specific Objective 2, for which the status at the end of the year is marked as "On target" or "Achieved" in the planning and monitoring tool of Eurostat.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	Twice a year, DG ESTAT's units give a mark to each of the outputs under their responsibility. The marks are the following: "Achieved", "On target", "Difficulties", "Revised", "Cancelled". The percentages given in the table include "Achieved" and "On target" at the end of the year. The "ideal" target is 100% every year.
Full metadata available at this address	
Justification of the trend	The trend is positive and approaches the 100% target, which is ideal and not realistic.

**Specific Objective 3 :To strengthen the partnership within the European Statistical System and beyond in order to further enhance its productivity and its leading role in official statistics worldwide**

**Indicator 2:Punctuality of statistics: average number of days in advance (positive) or delay (negative), in comparison to the legal target**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Principle European Economic Indicators (PEEIs): Euro Area – monthly series										
2012	Milestones									2020
-0,1	> 0	> 0	> 0	> 0	> 0	> 0	> 0			> 0
	Actual Progress									Final
	-1,2	-1,8	-0,7	0,0	-1,1	-0,4	-1,0			-1,0
Principle European Economic Indicators (PEEIs): Euro Area – quarterly series										
2012	Milestones									2020
-10,2	> 0	> 0	> 0	> 0	> 0	> 0	> 0			> 0
	Actual Progress									Final
	-10,5	-10,3	-10,3	-11,2	-8,5	-5,0	-5,9			-5,9
Foreign trade with countries outside the EU: Comext-Extra: data sent by MS to Eurostat										
2012	Milestones									2020
3	> 0	> 0	> 0	> 0	> 0	> 0	> 0			> 0
	Actual Progress									Final
	2	3	2	3	2	2	3			3

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	Number of days
Cut-Off Date	31/12/2020
Data source	PEEIs: annual Status report on information requirements in EMU to the Economic and Financial Committee. The list of PEEIs is defined in the Communication of the Commission to the European Parliament and the Council on Eurozone statistics COM/2002/661. Source for Comext-Extra: Eurostat internal report on Comext database: More detailed information is available on demand.
Narrative	It shows if the legal targets fixed for the production of the monthly and quarterly series of the PEEIs and for data sent for external trade statistics by MSs to Eurostat are respected. A positive number shows that statistics are available in advance of the targets, a negative number a delay.
Methodology	It is calculated as the average number of days in advance (positive) or delay (negative), in comparison to the legal target, for the PEEIs and statistics on external trade.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	New indicator as identified in ESTAT's Strategic Plan 2018-2020. The worsening of the average delay in the monthly statistics in 2018 was due to delays in March 2018 of two indicators related to short term business statistics, which were caused by the implementation of the change of the base year from 2010 to 2015. The value has improved in 2019.
Full metadata available at this address	
Justification of the trend	The slight worsening for the PEEIs in 2020 is probably due to the outbreak of the COVID-19 pandemic at the beginning of 2020, similar to what registered in the indicator 1 of specific objective 2. The value for Comext Extra is above the target and at the highest level in the series.

**Indicator 3:Degree of achievement of the Specific Objective 3 measured as percentage of the achievement of the Outputs related to it**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
	1	1	1	1	1	1	1			1
	Actual Progress									Final
	0,93	0,94	0,93	1	0,86	0,96	0,85			0,85

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	ESTAT end of year monitoring reports
Narrative	The indicator shows the percentage of planned outputs for the year, which are “On target” or “Achieved”. A high percentage shows a high degree of effectiveness. However, it does not imply that the outputs, which are not declared in the two categories, have not been achieved. Outputs may be revised as being incorporated in other activities or showing limited difficulties but being substantially done. The importance of the outputs is also not taken into account in the counting. The 100% target is ideal but actually unreachable. Therefore, the indicator gives a rough indicator but needs to be complemented by qualitative information.
Methodology	It is the percentage of activities, related to Specific Objective 3, for which the status at the end of the year is marked as “On target” or “Achieved” in the planning and monitoring tool of Eurostat.

Link MFF 14-20 / MFF 21-27	No
Other methodological comments	Twice a year, DG ESTAT's units give a mark to each of the outputs under their responsibility. The marks are the following: "Achieved", "On target", "Difficulties", "Revised", "Cancelled". The percentages given in the table include "Achieved" and "On target" at the end of the year. The "ideal" target is 100% every year.
Full metadata available at this address	
Justification of the trend	The value of the indicator in 2020 has been impacted by problems caused by the Covid-19 pandemic.

**Specific Objective 4 :To ensure that delivery of statistics is kept consistent throughout the whole duration of the programme, provided that this does not interfere with the priority-setting mechanisms of the ESS.**

**Indicator 1:Percentage of the time series that cover 10 or more consecutive years**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
4.1a										
	Milestones									2020
	Actual Progress									Final
4.1b										
2017	Milestones									2020
37,35%				do not decrease	do not decrease	do not decrease	do not decrease			do not decrease
	Actual Progress									Final
				37,35%	48,5%	51,8%	47,6%			47,6%

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	Report on the content of Eurostat's public databases
Narrative	The indicator should show if the delivery of statistics is maintained over the time by an increase in the percentage of long time series (>10 years) in the reference database. However, in years when there is a sudden need to produce new statistics, as in 2020 for those linked to the Covid-19 crisis, there may be a big increase in new time series and so a decrease in the percentage of long ones.
Methodology	It calculates the percentage of time series longer than 10 years on the total number of time series in the Eurostat reference database (Eurobase).
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	New indicator as identified in ESTAT's Strategic Plan 2018-2020. It can present an issue in years in which a big number of new statistics and so new time series is produced, which is why it has been replaced by a similar one, based on the number of long time series instead of their percentage.
Full metadata available at this address	
Justification of the trend	The indicator has increased compared to the baseline in 2017 but not compared to the last two years. It has appeared that this indicator presents a methodological issue, which is why it has been modified for the next MFF. The absolute number (which should be the correct indicator, used for the next MFF) has increased even if not the percentage.

**Previous Program 3 : Specific activities in the field of financial reporting and auditing**

**Specific Objective 1 :to improve the conditions for the efficient functioning of the internal market by supporting the transparent and independent development of international financial reporting and auditing standards**

**Indicator 1:number of countries using International Financial Reporting Standards (IFRS)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
128	130		130	140	150	155	159			159
	Actual Progress									Final
	130	130	133	140	159	159	166			

Are we on track	On track
-----------------	----------

Indicator type	Result
Unit of measurement	Absolute number of countries using International Financial Reporting Standards (IFRS)
Cut-Off Date	31/12/2020
Data source	Data provided by grant beneficiaries
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	The indicator has been monitored since 2014 and we will continue monitoring it over the 2021-2027 programming period
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 2:percentage of standards endorsed in the EU compared to the number of standards issued by the IASB

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0,89	0,96		0,96	0,96	0,96	0,96	0,96			1
	Actual Progress									Final
	0,96	0,95	0,96	0,97	0,96	0,96	0,98			

Are we on track	On track
Indicator type	Output
Unit of measurement	Ratio between the standards endorsed in the EU and the total number of standards issued by the IASB
Cut-Off Date	31/12/2020
Data source	Data provided by grant beneficiaries
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	The indicator has been monitored since 2014 and will be monitored over the 2021-2027 programming period. No change of methodology is foreseen.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The percentage of standards endorsed in the EU compared to the number of standards issued by the IASB could not reach 100% target because of the constant updates and developments of the standards and the time necessary for their endorsement by the EU.

### Previous Program 4 : Food and Feed

**General Objective 1 :contributing to a high level of health for humans, animals and plants along the food chain and in related areas, by preventing and eradicating diseases and pests and by ensuring a high level of protection for consumers and the environment, while enhancing the competitiveness of the Union food and feed industry and favouring the creation of jobs**

### Indicator 1:Incidence of main food-borne disease in the EU (BSE and Salmonella)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Classical BSE cases										
2012	Milestones									2020
11	less than 5									0
	Actual Progress									Final
	3	2	1	0	1	0				
Salmonella										
2012	Milestones									2020
90 000	67 000									60 000
	Actual Progress									Final
	92 012	94 477	94 425	91 590	91 857	87923				

Are we on track	Deserves attention**
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	
Narrative	Total BSE Cases (classical and atypical): 2015: 3, 2016: 5, 2017: 6, 2018: 4, 2019: 7
Methodology	

Link MFF 14-20 / MFF 21-27	
Other methodological comments	The final reports of the Member States for 2020 programmes will be submitted by 30/04/2021. See Specific Objective 1 – Indicator 1 for explanation on the trend. 2020 EFSA-ECDC report for zoonoses is not yet available (the latest available report is the 2019 one, published on 19 Jan 2021: EFSA Journal 2021;19(2):6406 )
Full metadata available at this address	
Justification of the trend	We are on track for BSE; for Salmonella, improvements are stagnating, indicating that measures currently implemented, drafted years ago, may be reviewed and updated.

### Specific Objective 1 :to contribute to a high level of safety of food and food production systems and of other products which may affect the safety of food, while improving the sustainability of food production

**Indicator 1:the reduction in the number of cases of diseases in humans in the Union which are linked to food safety or zoonoses**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
90 883					67 000		60 000			60 000 cases, continuous reduction of 3 to 5% per year/no eradication possible
	Actual Progress									Final
	92012	94477	94425	91590	91857	87923				

Are we on track	Deserves attention**
Indicator type	
Unit of measurement	Confirmed cases of human salmonellosis
Cut-Off Date	
Data source	2020 EFSA-ECDC report for zoonoses is not yet available (the latest available report is the 2019 one, published on 19 Jan 2021: EFSA Journal 2021;19(2):6406 )
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The baseline is data from the year 2012, source 2013 report. The reduction of the number of human cases is not as good as expected mainly because of the multi country outbreak caused by Polish eggs. In order to improve the current set of legal measures related to Salmonella in certain poultry populations, the Commission also requested EFSA to provide a scientific opinion on Salmonella control in poultry flocks and its public health impact. The outcome of this EFSA work is currently considered by the relevant Commission services
Full metadata available at this address	
Justification of the trend	For Salmonella, improvements are stagnating, indicating that measures currently implemented, drafted years ago, may be reviewed and updated. It should be noted that the reduction of salmonellosis case in human is not only linked to satisfactory implementation of control programmes in poultry but other sources of infection should be taken into account (food cold chain broken ect).

### Specific Objective 2 :to contribute to achieving a higher animal health status for the Union and to support the improvement of the welfare of animals

**Indicator 1:the increase in the number of Member States or their regions which are free from animal diseases in respect of which a financial contribution is granted**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Bovine Brucellosis: MS and regions officially free										
2013	Milestones									2020
16		19			25					25
	Actual Progress									Final
	19	20	20	20	20	20	20			
Bovine Brucellosis: MS and regions Eradication										

2013	Milestones								2020
									27
	Actual Progress								Final
Bovine tuberculosis: MS and regions officially free									
2013	Milestones								2020

2013	Milestones									2020
	Actual Progress									Final
	0	6	312	1145	81	2	815			

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Numbers of outbreaks / MS affected
Cut-Off Date	
Data source	ADNS reports – MS reports
Narrative	Rabies is closing eradication at EU level (only 2 EU MS affected in 2020), however risk remains due to neighboring third countries. CSF is practically eradicated in the EU. Surveillance needs to remain in place due to the risk posed by neighboring 3rd countries. Official freedom status pending for a few MS. Target for ASF is to reduce outbreaks in domestic pigs and prevent spread to non-affected MS (no specific target can be set at this stage for wild boar). Similarly, a target for HPAI in wildlife cannot be set.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Given the positive results in 2014 and 2015, the milestone for 2016 has been reduced from 200 to 80 outbreaks, and the target for 2020 from 100 to 0 outbreaks.
Full metadata available at this address	
Justification of the trend	Even if MS implement the programmes effectively it is not always possible to control/eradicate animal diseases when these involve wildlife (ASF, HPAI, Rabies) or insect vectors (BT, ASF). In the case of ASF in particular, the absence of an effective vaccine, combined with wild boar involvement and possible human induced spread, makes disease control in wildlife even more challenging. Similar challenges are present for ASF control in domestic pigs, in countries with large numbers of backyard pigs (e.g. RO, BG). Nevertheless, there are already 2 MS that have managed to eradicate the disease

	(CZ, BE) and without the programmes implemented the impact of the disease would be even more dramatic, even if this not reflected in the numbers of outbreaks reported.
--	---

### Specific Objective 3 :to contribute to the timely detection of pests and their eradication where those pests have entered the Union

#### Indicator 1:the coverage of the Union territory by surveys for pests, in particular for pests not known to occur in the Union territory and pests considered to be most dangerous for the Union territory

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Percentage of EU territory covered by surveys for pests, in particular known to occur in the Union territory

	58,97		60,34		59,45		58,26			

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage (%)
Cut-Off Date	31/12/2020
Data source	Consumer and retailer surveys for the Consumer Conditions Scoreboard (biennial frequency).
Narrative	A possible explanation for a decrease in figures in 2018 is linked to a combination of factors and

	different hypotheses are quoted. The decline in the UK has been particularly marked, but even the EU27 aggregate (without the UK) shows a sizeable decrease. The decline is mostly due to decreases in some large Western EU Member States (our EU aggregates are weighted by population). As the methodology for the computation of the indicators related to the CCI and its components has been revised in 2016, the 2014 values for the indicators are not directly computable (data between 2014 and 2016 are not directly comparable). Therefore, the values for 2014 have been back-estimated by applying to the 2016 values the changes in percentage points observed between 2016 and 2014 (computed on indicators based on the same methodology). By doing that, the values for 2014 have been slightly revised with respect to the initial baseline.
Methodology	Measurement out of 100. The methodology for the Consumer Conditions Index is being revised. For the purpose of this report, the comparison of the 2020 result with the previous value (2018) is done only based on the fully comparable indicators.
Link MFF 14-20 / MFF 21-27	DG JUST is currently working on a new Consumer Agenda and is considering revamping the Consumer Conditions Index to update it in line with policy priorities and with the latest market and regulatory developments. Therefore the baseline is 2018 data. This data is for EU27 (without the UK). The baseline may be revised and the milestones and target will be defined once the framework has been updated, depending on how the new indicator will shape up and when it will be measured.
Other methodological comments	Result indicator: “pillars” of the consumer conditions index (data available every two years). This indicator is related to the Specific objective 4.1 “Consolidate and improve the rights of consumers when purchasing in the Single Market”, within the General objective “A Deeper and Fairer Internal Market with a Strengthened Industrial Base” as adopted in the Strategic Plan 2016-2020 of DG Justice and Consumers. The Consumer Condition Index provides an overview of the key indicators describing the consumer environment at national level, as measured through surveys of perceptions, attitudes and experiences of consumers and of retailers.
Full metadata available at this address	<a href="https://ec.europa.eu/info/policies/consumers/consumer-protection/evidence-based-consumer-policy_en">https://ec.europa.eu/info/policies/consumers/consumer-protection/evidence-based-consumer-policy_en</a>
Justification of the trend	The pandemic has created a large number of consumer issues and this has impacted on indicators. In these circumstances, one could argue that this result is already an achievement. Due to the pandemic in 2020, consumers have been subjected to a lot of issues: no reimbursement of travel and leisure activities, drastic increase of on-line scams, increase of product safety issues (masks, disinfectant liquid for hands, etc.). The European Commission has coordinated response of Member States to the pandemic and has integrated this dimension in the New Consumer Agenda.

### Specific Objective 1 :Safety: to consolidate and enhance product safety through effective market surveillance throughout the Union

#### Indicator 1: % of RAPEX (rapid alert system for dangerous consumers products) notifications entailing at least one reaction (by other Member States)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010	Milestones									2020

	Actual Progress									Final
	0,42	0,40	0,46	0,46	0,56	0,49	0,72			0,72

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage (%)
Cut-Off Date	31/12/2020
Data source	Rapex / Safety Gate: the EU rapid alert system for dangerous non-food products
Narrative	Target: Increase of 10% (to 47.5%), compared to the 2010 value.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	<a href="https://ec.europa.eu/safety-gate-alerts/screen/search?resetSearch=true">https://ec.europa.eu/safety-gate-alerts/screen/search?resetSearch=true</a>
Justification of the trend	

#### Indicator 2: Ratio number of reactions / number of notifications (serious risks)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010	Milestones									2020
1,07										1,23
	Actual Progress									Final
	1,28	1,56	1,8	1,66	1,97	2,16	2,69			2,69

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage (%)
Cut-Off Date	31/12/2020
Data source	Rapex / Safety Gate: the EU rapid alert system for dangerous non-food products
Narrative	Target: Increase of 15% compared to 2010 (to 1.23)
Methodology	This indicator indicates the ratio number of reactions divided by the number of RAPEX notifications received under Art. 12 of the General Product Safety Directive 2001/95/EC, serious risks.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The ratio should be 1% to be good, if it is > 1%, it means that Member States carry out market surveillance also when they do not have the legal obligation. A notification can trigger several reactions from authorities of other Member States.
Full metadata available at this address	<a href="https://ec.europa.eu/safety-gate-alerts/screen/search?resetSearch=true">https://ec.europa.eu/safety-gate-alerts/screen/search?resetSearch=true</a>
Justification of the trend	

**Specific Objective 2 :Consumer information and education, and support to consumer organisations: to improve consumers' education, information and awareness of their rights, to develop the evidence base for consumer policy and to provide support to consumer organisations, including taking into account the specific needs of vulnerable consumers**

**Indicator 1: Number of complaint bodies and number of countries submitting complaints to the European Consumer Complaints Registration system (ECCRS).**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Complaint bodies										
2012	Milestones									2020

Are we on track	No data
Indicator type	Result
Unit of measurement	
Cut-Off Date	
Data source	
Narrative	*After a consultation with the Member States' representatives, a decision to discontinue the maintenance of the ECCRS system was taken in 2018, due to competing priorities and resource limitations. Complaint data are in any case already gathered through various tools owned by the Consumer enforcement and redress unit (newly launched ECC-Net compliant platform, ODR and the legally binding IT tool of the Committee on Consumer Protection Cooperation (CPCS), covering all relevant data except national off-line complaints).
Methodology	This indicator is not suited for assessing the performance of ECCs. The proportion of referrals of unresolved cases to ADR depends on the performance of ADR/ODR and the traders' engagement in the alternative dispute resolution system. The choice to refer the cases to ADR by consumer centres depends on their experience with traders being ready to submit to ADR and the efficiency of the ADR bodies in any particular jurisdiction. Consequently, ECCs will decrease the number of cases referred to ADR if they perceive that other means of redress (courts, EPO, ESCP, enforcement bodies or the police) are more likely to help the consumer. Moreover, with the launch of ODR the consumers can attempt alternative dispute resolution entirely online.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Since the launch of the ODR platform, 147 000 consumers decided to lodge a complaint. On the basis of the available data, it is estimated that about 40% complaints are resolved, either bilaterally between the consumer and the trader following the contact from the ODR platform, or by ADR bodies accessible via ODR platform. It is therefore necessary to re-evaluate the target setting methodology to

	adapt it for monitoring the performance of ADR/ODR and develop new indicators which would be better suited for assessing the performance of ECCs.

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Percentages for data up to 2018. Difference between 2020 and 2018 in pp (percentage points) for the figure on 2020.
Cut-Off Date	31/12/2020
Data source	Consumer Conditions Scoreboard (Survey on consumer attitudes towards cross border trade and consumer protection).
Narrative	Survey based indicator. Consumers who took action in response to a problem encountered in the past 12 months (as % of those who experienced the problem).
Methodology	Telephone survey covering all the EU MS, plus IS, No and UK.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The methodology was slightly revised as of 2016. Data until 2018 are on the EU28 (including the UK). Conversely, the difference 2020-2018 (in percentage points) is on the EU27 (without the UK).
Full metadata available at this address	The 2020 edition of the consumer conditions scoreboard has not been published yet. The final report for the 2018 edition of the survey on consumers is available here: <a href="https://ec.europa.eu/info/policies/consumers/consumer-protection/evidence-based-consumer-policy/consumer-and-retailer-surveys_en">https://ec.europa.eu/info/policies/consumers/consumer-protection/evidence-based-consumer-policy/consumer-and-retailer-surveys_en</a>
Justification of the trend	

### Specific Objective 4 :Enforcement: to support enforcement of consumer rights by strengthening cooperation between national enforcement bodies and by supporting consumers with advice

#### Indicator 1:Level of information flow and cooperation within the Consumer Protection Cooperation (CPC) Network

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of requests to exchange information between CPC authorities										
2007-2010	Milestones									2020
129				156						167
	Actual Progress									Final
	132	122	68	80	44	39	25			
Number of requests for enforcement measures between CPC authorities										
2007-2010	Milestones									2020
142				172						185
	Actual Progress									Final
	130	138	194	198	109	127	113			
Number of alerts within the CPC network										
2007-2010	Milestones									2020
63				76						82
	Actual Progress									Final
	35	45	57	78	53	25	78*			

Are we on track	
Indicator type	Result
Unit of measurement	Number of requests / alerts within the CPC network
Cut-Off Date	31/12/2020
Data source	CPC IT tool
Narrative	Target: a - Increase of 30% (to 167) b - Increase of 30% (to 185) c – Increase to 82
Methodology	The issue of decreasing trend has been addressed through the adoption of the new CPC Regulation (Regulation 2017/2394), based on which the Commission has a stronger monitoring role on all CPC activities, and especially in order to ensure the respect of deadlines by CPC authorities (Article 14(5)). Moreover, under the new CPC Regulation, the Commission is currently developing a new electronic database replacing the current CPCs IT tool, which will serve the cooperation needs better.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Previously, mutual assistance requests were predominant means to address cross-border consumer issues, while now we have a list of other cooperation tools (various types of alerts, external alerts and also coordinated actions) put at disposal of CPC authorities. Therefore, CPC authorities might opt more a more convenient solution if the infringement is suspected to concern more than 2 MS which is often the case considering that the trend of cross-border trade in goods and services is increasing. Furthermore, in 2020 a few MS were delayed with the technical implementation of the

	CPC Regulation and their CPC authorities were either registered late, or only completed the registration early 2021. In addition, the UK authority is no longer a member of the CPC network as of 1 January 2021 and their activity was rather limited throughout 2020 due to obvious reasons related to Brexit.
Full metadata available at this address	
Justification of the trend	* The result for Number of alerts within the CPC network for 2020 includes 17 alerts sent by the Commission and 27 external alerts sent by entities pursuant to Article 27 of the CPC Regulation – new elements under the CPC Reg. 2017/2394.

**Indicator 2: % of enforcement requests handled within 12 months within the CPC Network**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Justification of the trend	Significant increase in the number of the social media followers in 2020

## 6. The programme contribution to horizontal policies

### 6.1. Contribution to climate mainstreaming

#### 6.1.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.1.2. Explanation and justification on the financial contribution

#### 6.1.3. Key achievements

##### *Programme for the Competitiveness of Enterprises and Small and Medium-Sized Enterprises (COSME)*

The programme has contributed around EUR 130 million during the period 2014-20. Of this, EUR 25,7 million is via the Equity Facility for Growth. In addition, climate related activities have contributed up to EUR 15 million annually principally via the Enterprise Europe Network, but also through some smaller sector specific actions such as those linked to sustainable construction. For example, the COSME Equity Facility for Growth has invested EUR 6.7 million as of 31 December 2020 in a Venture Capital fund focusing its activities on clean technologies. Details available at

[https://www.eif.org/what\\_we\\_do/equity/single\\_eu\\_equity\\_instrument/cosme\\_efg/intermediaries.pdf](https://www.eif.org/what_we_do/equity/single_eu_equity_instrument/cosme_efg/intermediaries.pdf).

Overall, the COSME Equity Facility for Growth has facilitated EUR 19 million of investments in SMEs operating in the 'Energy and Environment' sector. Details available at

[https://www.eif.org/what\\_we\\_do/equity/single\\_eu\\_equity\\_instrument/cosme\\_efg/cosme-efg-implementation-update.pdf](https://www.eif.org/what_we_do/equity/single_eu_equity_instrument/cosme_efg/cosme-efg-implementation-update.pdf).

Other examples that demonstrate how COSME financial instruments contribute to green activities are:

- Scale-up of intelligent energy efficiency services: [https://www.eif.org/what\\_we\\_do/guarantees/case-studies/efsi-cosme-energis-lithuania.htm](https://www.eif.org/what_we_do/guarantees/case-studies/efsi-cosme-energis-lithuania.htm)
- Energy-efficiency: [https://www.eif.org/what\\_we\\_do/guarantees/case-studies/efsi-cosme-bul-greece.htm](https://www.eif.org/what_we_do/guarantees/case-studies/efsi-cosme-bul-greece.htm)

- Energy efficiency sustainability: [https://www.eif.org/what\\_we\\_do/guarantees/case-studies/cosme\\_sonnen\\_germany.htm](https://www.eif.org/what_we_do/guarantees/case-studies/cosme_sonnen_germany.htm)

## 6.2. Contribution to biodiversity mainstreaming

Not applicable

## 6.3. Contribution to clean air financing

Not applicable

## 6.4. Contribution to gender equality

### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming					Total
	2022	2023	2024	2025	2026	
0,0	0,0					0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.4.2. Key achievements and performance

#### *Programme for the Competitiveness of Enterprises and Small and Medium-Sized Enterprises (COSME)*

While no specific objective/target is available in the COSME legal basis, COSME actions take the gender dimension into account. For example, this dimension was tracked for the last time in 2020. It demonstrates that as of 2019 (i) almost every 4 out of 10 SMEs – that have received a debt financial support thanks to the COSME Loan Guarantee Facility – have either female Chief Executive Officer, General Manager or Company Director and (ii) almost 1 out of 10 SMEs – that received an equity investment thanks to the COSME Equity Facility for Growth – has at least one female in an executive position.

Concerning Erasmus for Young Entrepreneurs, the programme is open equally to men and women. The statistics for applicants shows that since the beginning of the programme:

- New entrepreneurs – 50.49 % of applied NEs are women (49.51 % men)
- Host Entrepreneurs – 27.22 % of applied HEs are women (72.78 men).

Out of 175 active Intermediary organisations (IO), 4 IOs have specific focus on support of women Entrepreneurs.

COSME also supports women entrepreneurs with specific entrepreneurship activities, for example via the WeGate project:- the platform WEgate creates a network where women entrepreneurs and would-be entrepreneurs can do business together and also benefit from services that can help their businesses grow, such as access to finance, mentoring and coaching, including on financial literacy. At the moment, WEgate has more than 2000 members.

#### *European statistical programme*

Eurostat is giving special attention to the gender perspective in its programme by systematic collection, provision and dissemination of gender and discrimination statistics as well as analysis on gender related aspects. Gender and discrimination statistics do not necessarily entail the collection of additional statistics from existing surveys but rather make full use of existing data to illustrate possible gaps e.g. between men and women. The main purpose of the activity is to extend the visibility of equality statistics available in the European Statistical System. In 2020 Eurostat disseminated gender pay gap data for 2018 and many detailed gender disaggregations and discrimination statistics.

#### *Consumer programme*

In the market monitoring surveys, consumer condition surveys, retailers surveys, consumer market studies and behavioural studies, the data is structured based on the socio demographic characteristics including gender. The structure of the population by socio-demographic characteristics is based on official statistics (EUROSTAT). Therefore, all the final results of these studies take into consideration the gender distribution and all the data is analyzed from the gender perspective.

The European Consumer Centres also analyse the results of surveys among the users of their services from the gender perspective. For example, in 2020 the Portuguese ECC made a survey among its consumers about the effective - successful or not - closure of their cases (questions and complaints).

The number of total “cases resolved” in 2020 was 1.927 and the total number of responses to the satisfaction survey received was 200, representing a 10% response rate. The respondents were 65% male and 33% female (2% didn’t answer).

### ***Rights, Equality and Citizenship: Consumer rights strand***

As gender mainstreaming is enshrined in EU-level funded actions, the REC Programme envisaged specific actions to advance gender equality and was committed to promoting a gender mainstreaming approach.

In the period 2014-2020 the Programme’s total contribution to the specific objective of gender equality has been of EUR 50 million, including grants and procurement activities (training seminars, studies and evaluations). It includes operating grants provided to the European Women’s Lobby (€ 1 million per year).

The principles of gender mainstreaming were consistently referred to in the Annual Work Programmes, calling for all activities funded to support gender mainstreaming. In the description of the calls for proposals, the gender dimension was mentioned primarily in relation to the specific objective on gender equality as well as the specific objectives on non-discrimination and combatting violence against women. All the applicants had to demonstrate how they would mainstream gender equality perspective in the design, implementation, monitoring and evaluation of projects’ activities. Similarly, gender mainstreaming was considered amongst the sub-criteria leading to the award of the grants. Finally yet importantly, during the process of evaluating proposals, the gender dimension was also considered to the extent of having an equal representation of women and men as evaluators.

### ***Food and Feed***

## **6.5. Contribution to the sustainable development goals**

### **6.5.1. Goals**

#### ***SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture***

##### **Food strand:**

The proposed activities related to Food Contact Materials will contribute to a higher level of safety, especially regarding the recycled materials used in their production. They will also help to a better enforcement of the applicable safety rules.

The proposed activities related to sustainable consumption and production (including food waste prevention) will contribute to improved resource efficiency, thereby helping to close the gap between supply and growing demand for food. In particular, the recovery and redistribution of surplus food from the supply chain to help feed those in need contributes to addressing hunger in our communities.

#### ***SDG 3 Ensure healthy lives and promote well-being for all at all ages***

##### **Food strand:**

The proposed activities related to sustainable consumption also aim to facilitate the shift of dietary patterns towards healthy diets, thereby helping to reduce the negative impact of low quality diets on obesity and non-communicable diseases (NCDs).

#### ***SDG 12 Ensure sustainable consumption and production patterns***

##### **Food strand:**

The proposed activities related to Food Contact Materials will contribute to their more sustainable production and use, ensuring in particular a better recyclability of these materials, and the use of more natural and sustainable materials.

This proposed activities related to pesticides and biocides will ensure the timely removal of unsafe products and that all products on the market are safe, and that consumers are fully protected from residues in food.

As part of the European Green Deal, the ‘Farm to Fork’ strategy will design a fair, healthy and environmentally friendly food system. This includes the fight against animal diseases and pests in order to prevent, contain and eradicate animal diseases (especially zoonosis such salmonellosis) and pests in EU to provide safer foods for more people. These activities will support the scaling up of food waste prevention efforts by Member States and stakeholders in order to accelerate the EU’s progress towards Sustainable Development Goal Target 12.3 calling for halving food waste by 2030 and reducing food losses along the production and supply chain.

### 6.5.2. Key achievements and performance

#### *Programme for the Competitiveness of Enterprises and Small and Medium-Sized Enterprises (COSME)*

##### ***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

Continuing work to encourage entrepreneurship, provide mentoring and best practice review. Support to the Single Market Strategy and the Single Digital Gateway. Social economy projects work to strengthen the links between traditional and social economy enterprises.

##### ***SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation***

Examples of projects include those improving digital skills, facilitating public procurement of innovation and the co-financing by innovation consortia. Other projects aim to accelerate the take up of sustainable and innovative applications in industry (in 2019 the focus will be on the fashion industry), and results of the previous WORTH partnership projects continue to provide impetus to new applicants <sup>(1)</sup>. The programme also continues to provide targeting financing for SMEs, and work on Cluster partnerships.

The Enterprise Europe Network advisors have long and rich history in helping SMEs increase their competitiveness and create growth and jobs in a wide range of sectors of activities. As an example, the EEN runs 17 sector groups that organize business matchmaking and R&I partnering events. This is in particular the case for the sector groups on sustainable construction, intelligent energy and environmental technologies. EEN advisors provide innovation management capacity assessments and guidance for about 4.000 SMEs per year. In addition, EEN helps SMEs obtain financing and bring them in contact with potential investors. In 2020, as announced in the SME Strategy, the EEN started with the capacity building and training for sustainability advisors to be put in place in all regions of the EU in the next MFF. EEN also started preparing its cooperation with the European Digital Innovation Hubs to help SMEs with their digital transformation and adaptation to more resilient business processes.

#### *European statistical programme*

##### ***SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels***

Eurostat is called to regularly monitor progress towards the UN Sustainable Development Goals (SDGs) in an EU context. For this purpose, it coordinated the development of the EU SDG indicator set, which consists of around 100 indicators. The indicator set is reviewed every year to ensure the highest quality and that the most policy relevant indicators are included. About two thirds of these indicators are produced by the European Statistical System (ESS). Against this background, it is of key importance to train the National Statistical Institutes (NSIs) in order to produce harmonised and comparable statistics in various fields (social statistics, environmental statistics, national accounts etc.). The ESP programme also offers courses to further the understanding of indicator frameworks and the monitoring of the UN Agenda 2030 for Sustainable development.

Based on the EU SDG indicator set, Eurostat produces an annual monitoring report (<https://ec.europa.eu/eurostat/web/sdi>) assessing the progress of the EU towards the UN SDGs. The report is complemented by various communication products (website, data tables, digital publication, brochure) to target different user groups.

#### *Specific Activities in the Field of Financial Reporting and Auditing*

##### ***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

The funding programme contributes to improving the conditions for the efficient functioning of the Single Market by supporting the transparent and independent development of international financial reporting (including in relation to the interaction between and interdependencies of financial reporting and broader corporate reporting requirements) and auditing standards. This in turn facilitates the optimal allocation of funds by investors and the reduction of the cost of capital for EU companies. EFRAG endorsement advices to the Commission assess whether IFRSs are conducive of the European public good. EFRAG's work programme has also been increasingly shaped by the most recent Commission's Action Plan on *Financing Sustainable Growth* (2018). Recognising the importance of ensuring that accounting standards do not discourage sustainable and long-term investments, the Commission requested, as part of the 2018 Action Plan, that EFRAG explored potential alternative accounting treatments to fair value measurement for long-term investment portfolios of equity and equity-type instruments. On 30 January 2020 EFRAG issued its advice to the Commission. EFRAG recommended the Commission to follow-up with the IASB to consider the re-introduction of re-cycling through the Profit or loss statement of profits or losses realised upon the disposal of equity instruments measured at fair value through other comprehensive income (FVOCI)<sup>(15)</sup>. On 13 March 2020, EVP Dombrovkis requested the IASB to consider the issue<sup>(16)</sup>. This is an example that the funding programme is in line with SDG 8, as it directly helps to promote sustained inclusive and sustainable economic growth, full and productive employment and decent work for all.

<sup>(1)</sup> <https://www.worthproject.eu/zero-waste-productsnew-copy/>

**Consumer programme*****SDG7 Ensure access to affordable, reliable, sustainable and modern energy for all***

The Consumer Programme contributed via its dedicated energy efficiency awareness raising actions.

***SDG 12 Ensure sustainable consumption and production patterns***

The Consumer Programme contributed via awareness raising actions targeting consumers promoting green transitions and circular economy.

It also financed a study to evaluate fitness of EU and national consumer law and policies for supporting sustainable consumption, including durability and reparability of products and fight against premature obsolescence, and envisage options to overcome identified needs.

**Food and Feed*****SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture***

The proposed activities related to Food Contact Materials will contribute to a higher level of safety, especially regarding the recycled materials used in their production. They will also help to a better enforcement of the applicable safety rules.

The proposed activities related to sustainable consumption and production (including food waste prevention) will contribute to improved resource efficiency, thereby helping to close the gap between supply and growing demand for food. In particular, the recovery and redistribution of surplus food from the supply chain to help feed those in need contributes to addressing hunger in our communities.

***SDG 3 Ensure healthy lives and promote well-being for all, at all ages***

The proposed activities related to sustainable consumption also aim to facilitate the shift of dietary patterns towards healthy diets, thereby helping to reduce the negative impact of low quality diets on obesity and non-communicable diseases (NCDs).

***SDG 12 Ensure sustainable consumption and production patterns***

The proposed activities related to Food Contact Materials will contribute to their more sustainable production and use, ensuring in particular a better recyclability of these materials, and the use of more natural and sustainable materials.

This proposed activities related to pesticides and biocides will ensure the timely removal of unsafe products and that all products on the market are safe, and that consumers are fully protected from residues in food.

The proposed activities related to sustainable consumption and production will contribute to improved resource efficiency, and reducing the environmental and climate pressure of food systems. Activities related to food waste prevention specifically aim to accelerate the EU's progress towards SDG Target 12.3 to halve food waste by 2030 and reduce food losses along the production and supply chains.

**1. Overview**

## 1.1. Challenges

The Union's financial interests are impacted by both fraudulent activities and financial irregularities, both on the side of EU revenues and EU expenditure. Every year, the Commission's annual report on the protection of the EU's financial interest demonstrates that the level of such irregularities and fraudulent behaviour requires continuous and enhanced action on the part of the Union. The aim of the programme is therefore to provide the necessary coordination of antifraud activities and financial, technical and information support to Member States in their efforts and actions to protect the Union's financial interests. This coordination and support role is particularly obvious when the fraud or the irregularity has a cross border dimension or is impacting several Member States.

## 1.2. Mission (general objectives)

Article 325 of the Treaty on the Functioning of the European Union (TFEU) provides for a shared obligation of the Member States and the EU to protect the latter's financial interests. Irregularities and fraud are by definition a Union-wide phenomenon which is not limited to an individual Member State. The intervention at Union level on the protection of the Union financial interests is justified in terms of subsidiarity where it facilitates cooperation between the Union and the Member States or between Member States, without impinging on Member States' responsibilities. The new Anti-Fraud Programme (PAF) is designed to support and complement Member States in preventing and fighting fraud affecting the financial interests of the EU, and supporting mutual assistance in customs and agricultural matters. The single Programme merges three different instruments, which so far were implemented separately (the "Hercule" spending programme, and the financing basis of two anti-fraud activities, namely the Anti-Fraud Information System (AFIS) supporting Member States in mutual assistance in customs and agricultural matters, and the Irregularity Management System (IMS) put at the disposal of Member States and candidate countries by the Commission for the reporting of irregularities, including fraud, in cases related to the shared management and pre-accession assistance funds). All the three strands will contribute to the achievement of the political objective to support Member States in countering fraud and other illegal activities, ensuring that no taxpayer's money is being diverted from its intended goal.

## 1.3. Specific objectives

The general objective described above is spelled out in three specific objectives, one for each strand of the Programme:

- a) Preventing and combating fraud, corruption and any other illegal activities affecting the financial interest of the Union;
- b) Supporting the reporting of irregularities, including fraud, with regard to the shared management and pre-accession funds of the Union Budget; and,
- c) Providing tools for information exchange and support for operational activities in the field of mutual administrative assistance in customs and agricultural matters.

## 1.4. Public intervention context

Article 325 of the Treaty on the Functioning of the European Union (TFEU) provides for a shared obligation of the Member States and the EU to protect the latter's financial interests. Article 33 TFEU provides for strengthening of customs cooperation between Member States and between the latter and the Commission. The implementation of the past Union multi-annual budgets has been accompanied by a set of measures to support the Member States and the Union as a whole in preventing and fighting fraud affecting the Union's financial interests, and supporting mutual administrative assistance and cooperation in customs and agriculture matters. These measures included: (i) the Hercule III spending programme which supports activities against fraud, corruption and any other illegal activities affecting the financial interests of the Union, (ii) the Anti-Fraud Information System (AFIS) which is an operational activity consisting essentially in a set of customs IT applications operated under a common information system managed by the Commission, set up to perform the tasks entrusted to the Commission by Regulation 515/97, and (iii) the Irregularity Management System (IMS) which is a secure electronic communications tool which facilitates the Member States' obligation to report detected irregularities, including fraud, and which supports the management and analysis of these.

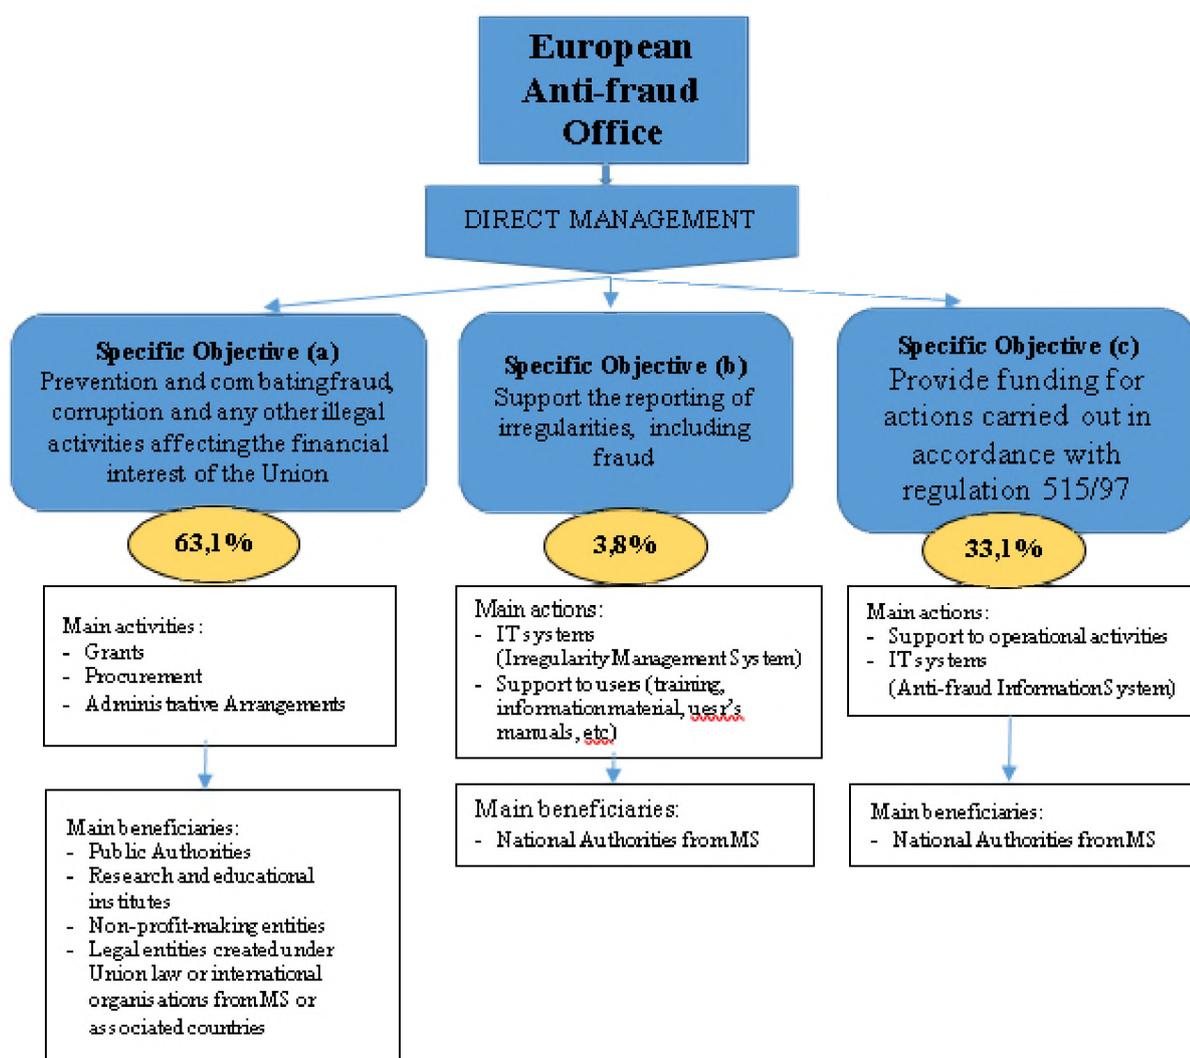

## 1.5. Actions

The first component of the programme provides the Member States with targeted assistance in achieving their obligations to protect the Union's financial interests. This will be carried out by means of support for the purchase of specific antifraud equipment, specific trainings, targeted conferences and studies. Concerning the second component, the Commission puts at disposal and maintains the Irregularity Management System (IMS) to facilitate the compliance of Member States with the obligation (laid down in various sectorial pieces of legislation) to report detected irregularities. Concerning the third component, the activity will consist on the one hand of the operation and maintenance of the AFIS platform for the exchange of Mutual Assistance Information, and on the other hand of supported activities, such as Joint Customs Operations, training courses, preparatory or evaluation meetings for operational actions.

## 1.6. Delivery mode

The programme is implemented through direct management. The European Anti-Fraud Office (OLAF) is the lead service for the programme implementation.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM (2018) 386: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the EU Anti-Fraud Programme	2021 - 2027	181,2

### 1.8.2. Legal basis explanation

In the context of the Multiannual Financial Framework 2021-2027, the Commission proposed the establishment of a Programme to continue the support for the protection of the EU's financial interests as well as for the mutual administrative assistance between customs authorities.

The Union Anti-Fraud Programme will ensure the continuity of EU support for activities carried out by the Member States and the Commission in the defence of the Union's financial interests and in support of mutual administrative assistance between Member States and cooperation between the latter and the Commission in customs and agricultural matters.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>24,1</b>	<b>24,4</b>	<b>24,9</b>	<b>25,5</b>	<b>26,4</b>	<b>27,4</b>	<b>28,7</b>	<b>181,2</b>

### 1.8.4. Financial programming explanation

### 1.9. Link with the 2014-2020 MFF

The Union Anti-Fraud Programme is a threefold programme: it is, on one hand, a successor of the Hercule III spending programme, supporting activities preventing and combating fraud, corruption and any other illegal activities affecting the financial interests of the Union, and includes also the financing basis for the IMS (Irregularity Management System) and for AFIS (Anti-Fraud Information System), which are operational activities performed by the Commission. AFIS is a set of customs IT applications operated under a common information system managed by the Commission, set up to perform the tasks entrusted to the Commission by Regulation 515/97 on mutual administrative assistance in customs and agriculture matters. IMS is a secure electronic communications tool which facilitates the Member States' obligation to report detected irregularities, including fraud, and which supports their management and analysis.

### 1.10. Relevant websites providing more information

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

The programme is implemented on the basis of bi-annual work programmes, through Calls for proposals, public procurement and administrative arrangements.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Hercule III

	Commitments	Payments
Implementation Voted budget	104 182 459	68 935 732
Implementation Carry-overs	0	1 984 696
Implementation total	104 182 459	70 920 428
total envelop*	104 918 900	
cumulative implementation rate	99%	68%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The Hercule III commitment appropriations were implemented with high rate of 99%. The available appropriations were closely monitored and the unused amounts under any specific sub-category of activities were shifted towards the other ones.

For the payment appropriations, the rate of implementation of 68% is explained by:

- The majority of grant contracts awarded in 2018 and 2019 were extended at the request of the beneficiaries. The exceptional pandemic situation led to important delays in the implementation of projects (especially in relation to the training and conferences activities planned for 2020); therefore, the final reports, and the final payments, are still pending (expected for 2021);
- The lower actual costs declared by grant beneficiaries in the submitted final reports, compared to the foreseen costs at the moment of the application submission; this is mainly related to the training and conferences grants, where the beneficiaries encounter some cost savings (such as participant travel and subsistence costs); in technical assistance grants, there were instances where the beneficiary manages to obtain a better price for the specific equipment, following the public tendering, compared to the budgeted amounts;
- Some costs savings were registered for the procured activities, mainly on the organised conferences.

## AFIS

	Commitments	Payments
Implementation Voted budget	49 097 785	42 500 787
Implementation Carry-overs		
Implementation total	49 097 785	42 500 787
total envelop*	49 437 500	
cumulative implementation rate	99%	86%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The AFIS programme had consistently over the last years a very high usage of available commitments, and the cumulative implementation rate is well above 99%. For payment appropriations, the cumulative implementation rate is 99%.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.3. Previous programme performance**

#### **Provide funding for actions carried out in accordance with regulation 515/97**

The programme has achieved all but one of the targets of its indicators.

The specific objective 'to support Mutual Assistance in Customs Matters through the provision of secure information exchange tools for Joint Operations and specific Customs anti-fraud information exchange modules and databases such as the Customs Information System' has three indicators:

1. The number of active customs fraud cases for which information is available in the Mutual Assistance databases,
2. The number of Joint Customs Operations (JCOs) (including EU wide and regional operations) supported/year, and
3. The coverage of the Anti-Fraud Transit Information System (A-TIS).

The first indicator has not met its 2020 target of 24 000 cases. At the end of 2020, the Mutual Assistance databases contained 19 125 active customs fraud cases.

The target was based on the main assumption that relevant IPR infringements, which are reported via DG TAXUD's anti-counterfeit and piracy system (COPIS), would significantly contribute to the number of cases. However, at the end of 2020 only 971 cases (5%) were IPR infringements reported via COPIS. This had two reasons:

- The main reason is that the Member States' customs services are not publishing the majority of these draft cases of IPR infringements available to them in the Customs Information System (CIS+), one of AFIS' main Mutual Assistance databases.
- The interface with DG TAXUD's COPIS only went live in 2019, with five years of delay. The start of the development of this interface, which was originally foreseen for 2014, was delayed to 2017, due to the late go-live of COPIS itself and the

need for a following stabilisation phase for this system. Due to this delay, relevant IPR infringements, which are reported in COPIS, are only available since 2019 as draft fraud cases in CIS+ for completion and publication by Member States' customs services.

2. However, thanks to the efforts made by the Commission services, such as the on-going development of additional web services for CIS+ allowing the connection of national customs systems, it is envisaged that the 2020 target will be achieved in 2024.

The evaluation reports of the participants to these JCOs show that this physical structure and AFIS application strongly facilitate the coordination tasks associated to JCOs with a large number of participants. The use of these facilities is frequently recommended during the evaluation of these operations by the participants. The fact that these facilities are also frequently used for operational activities in the area of law enforcement cooperation (free of charge for the participants), even though other institutions and organisations, like Europol or the World Customs Organisation, offer alternative solutions, is an additional proof of Member States' appreciation.

Following Member States' recommendations in previous years, OLAF has strengthened in the reporting period the involvement of Member States during all stages of development of new or updated AFIS applications, aiming at improving their usage and user satisfaction. Special workshops were organised for the new versions of AFIS Mail, CIS+ and IMS, which involved a large number of participants from the Member States. As a result, Member States acceptance and usage of the mentioned applications has significantly improved, along with the enlargement of their user base, as usage statistics and satisfaction reports demonstrate.

The last satisfaction survey from 2019 demonstrates that the majority of the users is satisfied with the AFIS applications. 84 % of the respondents agreed or slightly agreed that the AFIS applications they use most frequently, respond to their professional needs. Only less than 5 % of the respondents disagree to a certain extent (disagree: 1.5 % and slightly disagree: 3.3 %). 10 % of the users remain neutral.

## **Preventing and combatting fraud, corruption and any other illegal activities affecting the financial interests of the EU**

The fulfilment of its specific objective to “prevent and combat fraud, corruption and any other illegal activities affecting the Union's financial interest” is measured through two performance indicators:

1. The added value and effective use of co-financed technical equipment, expressed by the direct users of the equipment in their final technical reports submitted – for the final reports received in 2020, the beneficiaries assessed that the use of Hercule funded equipment added a high value to their activities, expressing an overall satisfaction rate of 93%. The rate is significantly higher than the 75% target set for 2020.
2. The number and type of trainings activities funded under the programme, including the amount of specialised training, and the satisfaction rate as expressed by the participants. In 2020, the programme awarded 24 grants for training-related activities. Due to the global sanitary situation, most of the trainings and conferences planned for 2020 (both grant and procurement contracts) were postponed and few of them were organised in a virtual mode.

Regarding the grant contracts finalised during 2020, the participants and trainees considered the events financed by the Programme very well suited to their needs– more than 800 participants that replied to the surveys expressed a satisfaction rate of more than 93%.

Each of the programme's five operational objectives have been addressed through specific forms of funding and relevant co-financed activities.

The exceptional pandemic circumstances of 2020 had an important impact on the general implementation of the Programme in its last year, especially in terms of training and conferences activities. The granting cycle was impacted by the prolongation of the 2020 Calls for proposals' deadlines, by the virtual nature of the evaluation procedure and by the numerous requests for amendments and extensions received from the grant beneficiaries. The beneficiaries of the previous years' grants were, in most cases, not able to continue with the implementation of their projects as foreseen (both the purchase of technical equipment and the training, conferences and staff exchanges were in many cases delayed). OLAF offered its support in postponing the project's implementation and amending the contracts.

Most of the training activities (funded via both grants and procurement instruments) foreseen for taking place in 2020 were either postponed to 2021, or delivered virtually, where feasible. Following a successful publication and evaluation of the 2020 Calls for proposals, unused amounts earmarked for procured activities in the 2020 budget were transferred grants (EUR 2 million were transferred from procured activities to grants, representing approximately 12% of the total budget for the year), ensuring an efficient implementation of available operational funds and allowing a grant award to the best-ranked applications across the three Calls.

The access to commercial databases and analytical IT tools continued to be provided to the Member States authorities, by signing specific contracts under the existing framework contracts with suppliers.

### 3.2. Key achievements

10 000	1 340	45	285	8
Participants attended specialised training and conference activities co-financed by the Programme between 2014 and 2020, via grants	Law enforcement officials from all Member States participated in the specialised digital forensic and analyst training, procured by OLAF (2014-2020)	High-level events focused on the protection of the Union's financial interests were organised by OLAF during the duration of the Hercule III Programme	Grants were awarded, mainly to competent authorities in the Member States, strengthening their operational and technical capacity to carry out investigations into activities detrimental to the Union's financial interests	Commercial databases and specific IT tools were made available each year to Member States authorities, enabling substantial economies of scale

#### *Provide funding for actions carried out in accordance with regulation 515/97*

1 000	100	8	84%	
Tons of dangerous counterfeit pesticides were seized in 2020	Tons of illicit refrigerant gases were seized in 2020	Joint Customs Operations were supported in 2020	of users agree that AFIS respond to their needs	

AFIS was always fully operational and accessible during the COVID-19 pandemic and the related lockdown. In the past, all AFIS-related activities – be it infrastructure management, end-user support, or application development and testing – were always performed on-site, and the AFIS infrastructure was not designed and prepared to be administrated and supported remotely. However, just before the first COVID-19 related lockdown mid-March 2020, the AFIS set-up was changed to ensure that the aforementioned services could be provided remotely.

This allowed the programme to deliver the following key achievements in 2020:

- Implementation of a web service connecting CIS+ with the Customs Enforcement Network (CEN) system of the World Customs Organisation (WCO) to facilitate the automated transfer of tobacco anti-fraud cases.<sup>1</sup>
- Creation of a Data Warehouse for the Container Status Message directory (CSM). This will enable the determination of a complete trip of a container from the physical movements reported in CSM, using a machine learning algorithm. A new version of CSM, which will provide this trip information, will go live at the beginning of 2021.
- Performing a training and pilot with Member States' users for the new Mutual Assistance System (MAS) application, which will go live in 2021.
- Changing various AFIS applications, such as AFIS Mail, the Anti-Fraud Transit Information System (ATIS), CIS as well as the Import Export and Transit (IET) directory to perform the necessary amendments for the Brexit and the implementation of the Protocol on Ireland/Northern Ireland.
- Despite the COVID-19 pandemic, 8 JCO were performed by Member States and OLAF with the support of AFIS applications in 2020. During one of the operations, which was coordinated by Europol with the support of OLAF, over a thousand tons of dangerous counterfeit pesticides were seized<sup>2</sup>.
- Furthermore, information from AFIS enabled the seizures of about 100 tons of illicit refrigerant gases, with a potential global warming impact.<sup>3,4,5</sup>

#### *Preventing and combatting fraud, corruption and any other illegal activities affecting the financial interests of the EU*

--	--	--	--	--

- Several key achievements of the Programme can be highlighted:
- Improved operational efficiency and effectiveness reported by the beneficiaries of technical assistance grants:
- Technical Assistance beneficiaries are requested to submit a final implementation report one year after the closing date of the grant contract. This report contains information on the results achieved following the usage of the equipment as well as the organisation's assessment of the contributions made towards the achievement of the Programme's objectives. The results reported illustrate how the purchased technical equipment, such as detection tools, enabled the grant beneficiaries to seize substantial amounts of smuggled cigarettes, counterfeit goods and tobacco products. In addition, the national authorities reported that investigation support equipment, such as communication equipment, cameras, IT-tools and forensic soft- and hardware, facilitated the lawful gathering of evidence during operations in support of investigations aimed at protecting the Union's revenues, expenditures and assets. Examples of results reported during 2020:
- The mobile intelligence center purchased by the Polish Police has significantly improved the technical and operational capacity of its investigations, by a faster collection and transfer of data, improved quality of obtained evidence and a timely detection of criminal activities. The beneficiary reported that the equipment (operating since August 2018) was used in operations that led to seizures of 20 million pieces of illegal cigarettes, 4 500 kg of tobacco and an illegal cigarette-making machinery, while 62 persons were charged following the operations.
- The Latvian State Forensic Science Bureau (SFBSB) set up, with financial support from the Programme, advanced forensic examination tools and methods, facilitating the handling and analysis of collected evidence. The enhanced capacity of SFBSB allows the provision of a better forensic examination services to many other law enforcement institutions – Police, Courts, Corruption Prevention and Combating Bureau, Prosecutors office, Border-guard, State Revenue Service, etc. The beneficiary reported that the examined pieces of evidence were related to around 1.5 million illegally produced goods (mainly cigarettes) as well as fraudulent documents.
- The Romanian Directorate for Investigating Organised Crime and Terrorism has acquired special investigation tools and methods in tackling the high-profile organised-crime smuggling at the EU Eastern border. The purchased technology, including audio-video covert equipment and a mobile workshop van, led, among others, to the successful investigation of 15 cases of cigarette smuggling with seizures in value of more than EUR 250 000. The mobile workshop van helped building the cases that lead to the dismantling of complex organised criminal groups involved in smuggling of cigarettes and drugs, as well as corruption, money laundering and documents forgery activities.
- Increased cross-border cooperation and exchange of information:
- The beneficiaries reported that the Programme enabled long-lasting cooperation across borders. The training activities and staff exchanges contributed to the creation of networks and exchange of best practices:
- During 2018 and 2019, the German General Directorate of Customs organised a series of events on the topic of "International fight against water pipe tobacco smuggling". The workshops gathered more than 50 officials from several Member States (Germany, Austria, Belgium, Czech Republic, Denmark, France, Italy, Netherlands, Poland and Sweden) and offered the platform for the strengthening of the networking at EU level and the exchanging of national experiences and best practices. The activities created a new basis for an effective fight against water pipe tobacco smuggling at the international level.
- The National Revenue Agency from Bulgaria implemented in 2019 a project aimed at enhancing the cooperation and the control models in the field of prevention of fraud, related to specific customs regimes, affecting the EU system of own resources. Six workshops were organised in Sofia between representatives of the National Revenue Agency and the revenue administrations of Romania, Greece and Turkey (194 participants over the six workshops). The participants proposed and discussed optimised anti-fraud measures related to the customs regimes, by ensuring a rapid and high-quality exchange of information. The events promoted the exchange of experiences in relation to good practices and national legislative frameworks of the participating revenue administrations.
- The events of the Anti-corruption National Directorate of Romania (November 2019) gathered around 120 participants from 18 Member States as well as representatives from Ukraine and Republic of Moldova. The project led to sharing experiences concerning current fraud systems and trends identified in the approval and implementation of activities financed from European funds. Several case studies presented the opportunity to the participants to debate on modern techniques and tactics for investigating corruption and fraud in projects funded by European funds. The events highlighted the importance of a strong inter-institutional and multi-national cooperation and enabled the networking among the institutions with responsibilities in combating frauds that affect the financial interests of the European Union, where the cross-border nature of the phenomenon is constantly expanding.
- Efficient use of resources generating cost savings and economies of scale:

- The programme provides funds for the procurement of subscriptions to commercial databases, on behalf of law enforcement authorities in Member States, to support operations and investigations. The Commission manages this access, enabling substantial economies of scale. Training is also ensured for an optimal usage by the relevant staff. During 2017-2020, the Programme has ensured Member States with access to commercial databases, such as worldwide trade statistics, company information and maritime and vessel movements. The databases were highly used by customs authorities in supporting both investigations and risk analysis activities, identifying potentially suspicious trade, etc.
- The trade statistics database made available through the Programme has been used to assist identification of traffic diversions or transshipment of goods, which are being moved via an intermediate third country to disguise the real origin of goods imported into the EU, usually to avoid anti-dumping duty or to evade a prohibition/restriction. In addition, it provides the basis to cross-check information on exports from third countries with information on imports into a Member State from other sources.
- The database with information on companies has contributed to investigations led by Member States' customs authorities related to fraud affecting the Union's financial interests. In one instance, a Member State customs service was able to perform a mapping analysis, formulating new profiles to target fraud-related controls. In another instance, searches were run on a company's shareholders to determine whether company's imports were the result of an intra-group sale and to analyse risks of undervaluation.
- Specific IT and operational tools have been developed in collaboration with the Joint Research Centre, widely used by the Member States' authorities, such as: Automated Monitoring Tool – used for risk analysis by customs authorities, a tobacco analysis laboratory and a data analysis project facilitating transnational cooperation and the sharing of best practices (INTEL4CUSTAF).
- The use of the AMT tool has considerably increased in recent years: for example, in 2019, the tool received more than 80 000 data queries from almost 600 customs officers.
- Five pilot workshops of INTEL4CUSTAF project in 2019 brought together 44 experts from 18 Member States and colleagues from JRC and OLAF.
- High level of participants' and beneficiaries' satisfaction related to the projects co-financed by the Programme:
- The mandatory surveys filled in by the participants to conferences, trainings or seminars in order to assess the relevance of the project and to measure their satisfaction levels reveal that a very large majority of users (more than 93 %) express a satisfactory or very satisfactory opinion on the event. The results of the surveys are included by the beneficiary in the project's final report and show that the networking opportunities and the sharing of skills and best practices are particularly highly valued by the trainees and participants.
- The beneficiaries of technical assistance grants must indicate, as part of their final reporting, their assessment of the added-value of the purchased equipment/tools and related training. The feedback received for implemented projects is very positive – for example, the beneficiaries of grants finalised during 2020 evaluated that the equipment responds to the organisation's operational and professional needs with a rate of 4.7 on 5 (93% satisfaction rate).

### 3.3. Evaluations, studies and reports

#### *Provide funding for actions carried out in accordance with regulation 515/97*

The underlying legal base for AFIS, Council Regulation (EC) No 515/97 of 13 March 1997 on mutual assistance between the administrative authorities of the Member States and cooperation between the latter and the Commission to ensure the correct application of the law on customs and agricultural matters <sup>(6)</sup>, as lastly amended by Regulation (EU) No 2015/1525 of the European Parliament and of the Council of 9 September 2015 <sup>(7)</sup> has been evaluated in 2020 and the results will be available in 2021.

#### *Preventing and combatting fraud, corruption and any other illegal activities affecting the financial interests of the EU*

The key findings of the latest evaluation <sup>(8)</sup> have been presented in the Programme Statements 2020.

The Commission will present to the European Parliament and to the Council, by 31 December 2021, a report on the programme's final evaluation.

## **4. Programme 2021-2027 - Key monitoring indicators**

<sup>(6)</sup> OJ L 82, 22.3.1997, p. 1.

<sup>(7)</sup> OJ L 243, 18.9.2015, p. 1.

Justification of the trend	

## 5. Programme 2014-2020 - Key monitoring indicators

*Previous Program 1 : Programme to promote activities in the field of the protection of the financial interests of the European Union (Hercule III)*

### Specific Objective 1 :To prevent and combat fraud, corruption and any other illegal activities affecting the Union's financial interest

**Indicator 1: The added value and effective use of co-financed technical equipment, expressed by the users of the equipment in their final technical report and final implementation report of the action (percentage of users that considered the use of Hercule funded equipment added value to their activities**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
				0,70	0,75	0,75	0,75			0,75
	Actual Progress									Final
						0,96	0,93			

Are we on track	On track
Indicator type	
Unit of measurement	Percentage
Cut-Off Date	
Data source	The information for this indicator is submitted by the beneficiaries in their final technical report as well as in the implementation report (one year after the closing date of the action for which the grant was awarded, where the added-value is detailed with concrete examples).
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The beneficiaries of Hercule co-financed equipment and tools continued to be highly satisfied with the added-value of the purchased technology in relation to their activities.

**Indicator 2: The number and type of trainings activities funded under the Hercule III programme, including the amount of specialised training, and the satisfaction rate as expressed by the participants**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Training activities (with specialised trainings)										
	Milestones									2020
25	25	25	25	25	25	25	25			25
	Actual Progress									Final

	0,90	0,90	0,90	0,90	0,90	0,90	0,94			

Are we on track	On track
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	
Narrative	
Methodology	Values in Baseline, Target in Milestones include 2 specialised trainings (except in 2014: only 1 specialised training)
Link MFF 14-20 / MFF 21-27	
Other methodological comments	This indicator has been elaborated for OLAF's Annual Management Plan 2014 in the light of the operational objectives in the Hercule III Regulation.
Full metadata available at this address	
Justification of the trend	Most of the trainings and conferences planned for 2020 were postponed, due to the sanitary circumstances. Few of them (organised by grant beneficiaries) took place in a virtual mode, the actual number will be known at the moment of the submission of final reports from grant beneficiaries. The nature of the targeted participants (mainly law enforcement officials), together with the sensitivity of the topics to be discussed and the hope that the sanitary situation would improve, made the virtual option not fully pursued by the event organisers

**Previous Program 2 : Anti-Fraud Information System (AFIS)**

**Specific Objective 1 : To support Mutual Assistance in Customs Matters through the provision of secure information exchange tools for Joint Operations and specific Customs anti-fraud information exchange modules and databases such as the Customs Information System**

**Indicator 1: Number of active customs fraud cases for which information is available in the Mutual Assistance databases**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
8000		12000		17000		21500	24000			24000
	Actual Progress									Final
	10000	12000	13800	16324	18340	18639	19125			

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	Cases
Cut-Off Date	31/12/2020
Data source	AFIS Mutual Assistance database
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Milestone for 2017 reduced from 20 000 to 17 000 in 2016. New Milestone for 2019 added in 2016. Target reduced to 24 000 in 2016 (cfr. the programme performance update section).
Full metadata available at this address	
Justification of the trend	The indicator has not fully achieved its target, as Member States' customs services publish only a small percentage of IPR infringements. However a moderate positive evolution is expected for the coming years.

**Indicator 2: Number of Joint Customs Operations (JCOs) (including EU wide and regional operations) supported/year**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
3	4			5			5			5
	Actual Progress									Final
	6	7	11	11	5	13	8			

Are we on track	On track
Indicator type	Output
Unit of measurement	Joint Customs Operations
Cut-Off Date	31/12/2020
Data source	AFIS applications
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In 2016, 4 JCOs were co-organised by OLAF and a Member State and in total 12 JCOs were supported by OLAF. The Virtual Operations Coordination Unit (VOCU) module of AFIS was used in 11 of these JCOs. (One JCO was organised by the World Customs Organisation with intelligence support of OLAF, but without VOCU usage.) In 2017, 3 JCOs were co-organised by OLAF and a Member State and in total 11 JCOs were supported by OLAF. In 2018, 2 JCOs were co-organised by OLAF and a MS and in total 5 JCOs were supported by OLAF. The VOCU module of AFIS was used in 4 of these JCOs. (One JCO was coordinated by Europol with support of OLAF using AFIS applications, but without VOCU usage.) In 2019, 2 JCOs were led and additional 11 supported by OLAF.
Full metadata available at this address	
Justification of the trend	

### Indicator 3: Coverage of A-TIS (Anti-fraud transit information system)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
A-TIS holds 16.5 million transit declarations (600 000/month) covering 70% of the transit regime.		Entry into force of the reform of Regulation 515/97.	A-TIS to cover 100% of transit declarations. New repository of export declarations developed.	New repository of import declarations developed.	New repository of Container Status Messages (CSMs) developed.	Statistical analysis tools for operational coveting all repositories.	A-TIS to cover 100% of transit declarations.			A-TIS to cover 100% of transit declarations.
	Actual Progress									Final
		Regulation 2015/1525 amending Council Regulation 515/97 entered into force on 8 October 2015	Repository of export declarations available 1 Sept. 2016. Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	IMS5 replaced IMS4, the previous operational system. IMS4 was used to fulfil the reporting obligations of MFF2014-2020. The alpha-release of IMS5 was made accessible to all IMS-users in February 2016. The extended online reporting system IMS5 facilitates the reporting of irregularities for the following competences: agriculture, cohesion, fisheries, pre-accession, asylum and most deprived. The IMS online analysis tool has been ready for testing in production in 2018 but a recent release of the underlying software, on which the tool is based, made it necessary to perform additional checks before testing the tool in production. Therefore the launch of the online analysis tool had to be rescheduled by one year to 2019. The tool was further upgraded in 2020 and put at the disposal of users on 3 February 2021. By 2020, the system was fully operational in all Member States, with all the necessary reporting and analysis tools foreseen.
Full metadata available at this address	
Justification of the trend	

**Indicator 2: Number of Member States complying with obligations for reporting of fraudulent irregularities**

**1. Overview****1.1. Challenges**

The Union and the national tax authorities still suffer from insufficient capacity and insufficient cooperation – both within the EU and with third countries – to carry out effectively and efficiently their missions. They need to provide quick and joint responses to emerging problems such as tax fraud, tax evasion and tax avoidance, digitalisation and new business models, while at the same time preventing unnecessary administrative burden for citizens and businesses in cross-border transactions. These trends raise continuously new challenges for the functioning and performance of national tax authorities. They call for better and innovative

ways to carry out their core task i.e. collecting taxes that directly feed the national and indirectly the Union budget. The vast majority of the programme's budget will continue to focus on the development and operation of the European electronic systems.

In the coming years, emphasis will continue to be put on further improving the administrative capacity of Member States, be it through IT capacity building, traditional and innovative forms of cooperation or human competency building initiatives. The capacity of tax administrations is indeed instrumental to ensure they run efficiently their tax systems within the internal market and to address cross-border tax fraud and evasion. In the medium-term, the implementation of the following programme's main outcomes will be pursued to achieve the EU tax policy objectives and ensure business continuity of existing European IT systems and development of new ones.

In the field of Indirect Taxation, the major activities will include the launch of the VAT e-Commerce package on 1 July 2021, consisting of the Extension of MOSS (OSS), the Distributed Registry of IOSS VAT IDs (IOSS-DR), as well as updates of the electronic Forms Central Application and the Tax on Europa Database. Also in the area of VAT, major updates are foreseen for the Transaction Network Analysis tool (TNA) that provides Member States tax administrations with a platform enabling them to develop and run algorithms to detect VAT carousel fraud networks: in fact, Member States have recently decided to rely entirely on TNA for this exchange of information.

On February 2020, the Council approved new measures to transmit and exchange payment data, to fight e-commerce VAT fraud by launching the Central Electronic System of Payment information (CESOP). As of 2024, CESOP will keep records of cross-border payment information within the EU, as well as payments to third countries or territories, for a period of five years. This will reinforce the capacity of Member States to fight against e-commerce VAT fraud, by allowing them to properly control the correct fulfilment of VAT obligations on cross-border Business to Consumer supplies of goods and services.

Different forms of IT collaboration, such as expert teams or project groups in the area of IT systems, increase the number of shared IT activities and reusable components among Member States. This approach should reduce the costs for deploying EU wide tax IT systems, both at EU and national level while responding in a more agile way to EU tax policy needs. Strengthening operational cooperation through the use of expert teams further allows for pooling expertise to perform tasks in specific domains, mainly for the European electronic systems.

## **1.2. Mission (general objectives)**

The Fiscalis programme has the general objectives of supporting tax authorities and taxation to enhance the functioning of the single market, of fostering Union competitiveness and fair competition in the Union, of protecting the financial and economic interests of the Union and its Member States, including protecting those interests from tax fraud, tax evasion and tax avoidance, and of improving tax collection.

## **1.3. Specific objectives**

The Programme has the specific objective to support tax policy and the implementation of Union law relating to the field of taxation; to foster tax cooperation, including exchange of tax information; and to support administrative capacity building, including human competency and the development and operation of the European electronic systems.

## **1.4. Public intervention context**

The legal base of the Fiscalis Programme is defined in the Treaty on the Functioning of the European Union, and in particular its rules on the approximation of laws (Articles 114) and administrative cooperation (Article 197). Both collecting taxes and combating tax fraud and evasion are competences of EU Member States. However, in an increasingly globalised world, the EU provides a framework and offers instruments to effectively handle cross-border tax issues. Through IT and other means, the EU allows for co-operation and exchange of information among its Member States on all sorts of taxes. EU legislation enables collaboration between national tax authorities in various ways.

The Fiscalis Programme supports European electronic systems and related applications in operation for taxation. These systems allow information to be exchanged rapidly and in a common format that can be recognized by all Member States. The Fiscalis Programme also funds activities to support the automatic exchanges of information. Further, the Fiscalis Programme supports meetings, trainings and other events and capacity building actions for tax officials to fight against tax fraud, tax evasion and aggressive tax planning.

## **1.5. Actions**

The Fiscalis programme offers Member States a Union framework to develop activities through IT cooperation and capacity building, on the one hand, and cooperation amongst national taxation officials, on the other hand. In this regard, it provides financial sustainability of the interoperable and interconnected European electronic systems, which allow the electronic exchange of tax-related information between Member States. Additionally, the collaborative actions give the administrations unequalled opportunities for cooperation, communication and networking, ultimately building trust and leading to greater convergence of

approaches and practices. The Fiscalis programme also funds human competency and capacity building actions, including training and exchange of best practices.

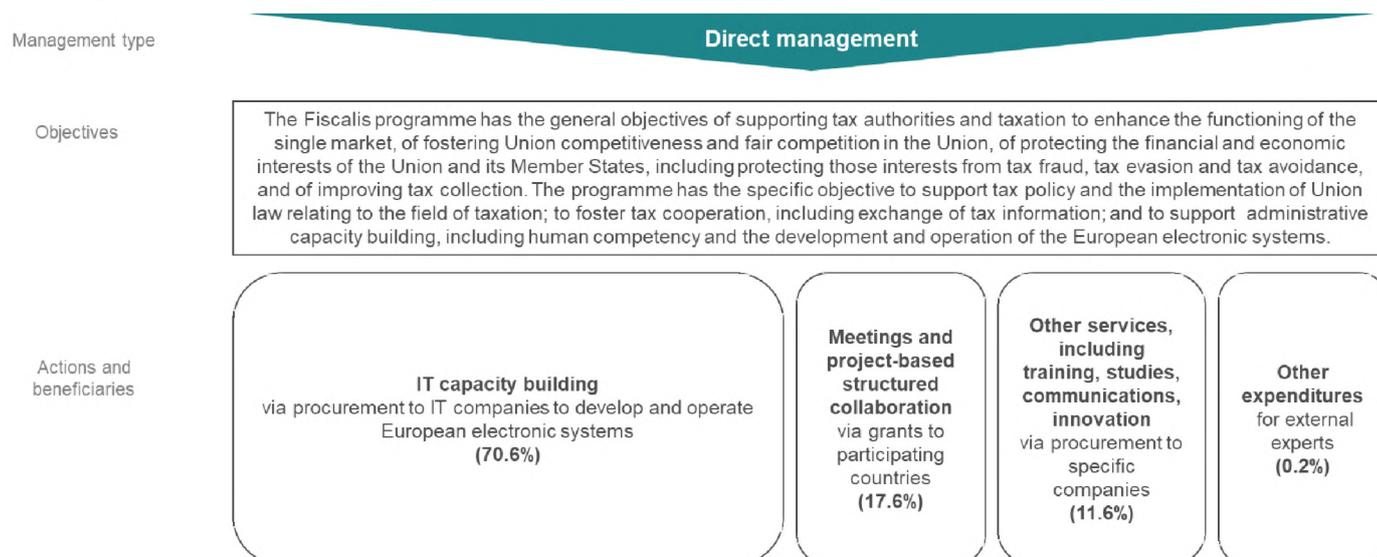

## 1.6. Delivery mode

The Fiscalis programme will be implemented in direct management by DG TAXUD through:

- Procurement contracts: for the European Information Systems expenditure, training activities and studies.
- Grant agreements with the participating countries: for collaborative actions and expert teams.

Work programmes will be established – together with the stakeholders – stipulating the priorities for a specific period.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM (2018) 443: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the 'Fiscalis' programme for cooperation in the field of taxation	2021 - 2027	269,2

### 1.8.2. Legal basis explanation

The legal base of the Fiscalis programme is the Regulation (EU) 2021/XXX of the European Parliament and of the Council establishing the 'Fiscalis' programme for cooperation in the field of taxation and repealing Regulation (EU) No 1286/2013. Further, the Multiannual Work Programme constitutes the framework for the implementation of the programme. At the time of writing, the Fiscalis programme Regulation has not yet been adopted.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme

<b>Total</b>	<b>36,2</b>	<b>36,9</b>	<b>37,7</b>	<b>38,4</b>	<b>39,2</b>	<b>40,0</b>	<b>40,8</b>	<b>269,2</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The Fiscalis Programme is a continuation of the current programme, but it will entail greater intensity in the way cooperation will take place and as regards the number of electronic systems.

## 1.10. Relevant websites providing more information

[https://ec.europa.eu/taxation\\_customs/fiscalis-2021-2027\\_en](https://ec.europa.eu/taxation_customs/fiscalis-2021-2027_en)

## **2. Where are we in the implementation ?**

### **2.1. Programme 2021-2027**

NB: at the time of writing, the Fiscalis programme Regulation has not been adopted and so the new programme has not started yet.

2021-2027 programme	2021	2022
Commitment appropriations	35.915.550	36.639.861
Payment appropriations	8.545.655	28.387.974

The budget for the new Fiscalis programme is in line with its predecessor programme (EUR 267.136.664 vs 223.683.213). Approximately 25% of expenditure committed in 2021 will be paid in 2021, 45% will be paid in 2022.

COVID-19 pandemic has affected programme grant activities in the absence of travels and therefore of costs related to them as activities have been held virtually. Nevertheless, grants only represent approximately 17,6% of the Fiscalis programme and not all eligible costs are linked to travels. As a result, we may conclude that the impact on the programme is relatively low.

In 2021, we foresee a gradual increase of the consumption by the end of the year due to the rollout of the vaccines, and a better scenario for 2022.

### **2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations**

	Commitments	Payments
Implementation Voted budget	223 622 528	183 863 111
Implementation Carry-overs	58 052	404 671
Implementation total	223 680 580	184 267 781
total envelop*	223 683 213	
cumulative implementation rate	100%	82%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

As can be seen from the above financial performance table, 100% of the programme's total commitment appropriations (EUR 223 683 213) have been consumed. To date, 82% has been paid. The remaining payments will be finalised in the 2021-2023 period.

2014-2020 programme	2020	2021	2022
Commitment appropriations	32.993.000	NA	NA
Payment appropriations	30.843.095	24.000.000	8.200.530

COVID-19 pandemic has affected programme grant activities in the absence of travels and therefore of costs related to them as activities have been held virtually. Nevertheless, grants only represent approximately 17,6% of the Fiscalis programme and not all eligible costs are linked to travels. As a result, we may conclude that for 2020 the impact of covid-19 on the programme is relatively low.

## **3. How is the programme performing ?**

### **3.1. Performance**

#### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

### 3.1.3. Previous programme performance

The data collected in the performance measurement of the programme from 2014 (first year of the programme's implementation) until 2019 (latest complete measurement of performance indicators), together with the results of the Mid-Term Evaluation, shows that the Fiscalis 2020 programme progressed towards obtaining its objectives and towards achieving the expected results of the projects planned in the Annual Work Programmes for this period. The results measured within the programme's performance measurement framework in the last five years indicate that the overall implementation of the programme is on track, without delays. The programme is a successful and firmly established programme that regularly takes stock of its performance and improves over time. It provides invaluable support to national tax administrations and economic operators, in turn supporting the fight against tax evasion, tax fraud and aggressive tax planning.

Fiscalis 2020 generates benefits over and above what would have resulted from interventions at local, regional or national level, especially in terms of contributions to policy objectives and reduced administrative costs and burdens, complementing the activities and policies of the Member States and making achievements that are sustainable. By supporting, in the service of EU law and policy, fora for all kinds of exchange between administrations, the programme identifies potential solutions for problems with a clear EU dimension. These lead to benefits from economies of scale and improving coordination that would be difficult or impossible to achieve without the programme. The benefits were also found to be long-lasting, though to a large extent dependent on future funding, especially regarding maintenance of the IT systems that administrations rely on every day.

The main conclusions of the Mid-Term Evaluation can be found below:

- **RELEVANCE:** the evaluators identified clear needs for secure and rapid exchanges of information, cooperation between tax administrations and enhancement of administrative capacity. These needs stem from the growing scope of EU law and initiatives, cross-border nature of problems and persistent need for convergence between countries. There has been universal agreement among the stakeholders consulted that the programme is needed to facilitate this exchange and cooperation, and that ambitious EU policies would not be possible without such support. Thus, the programme's role in fostering convergence of approaches, administrative procedures and rules is highly relevant.
- **EFFECTIVENESS:** the programme has been effective in reinforcing cooperation between tax authorities in the EU Member States and other participating countries. The programme has provided the framework and technological means necessary to work together and share information in the service of implementing EU tax law and fighting tax evasion, fraud and aggressive tax planning in an increasingly mobile Europe. Evidence of this was most compelling in the field of indirect taxation (particularly VAT and excise) where the EU competence is strongest, and the level of programme activity is correspondingly high.
- **EFFICIENCY:** the programme's overall structure and processes for taking decisions and setting priorities are time-tested and broadly appropriate in the eyes of stakeholders both in the European Commission and in participating countries' administrations. While the programme's benefits cannot be monetised, holding up the findings on effectiveness alongside spending data and the positive findings on operational efficiency makes a strong case that the programme overall is cost effective. The joint actions, IT systems and training activities clearly generate value for the EU and national tax administrations, by helping them to pool resources (and thereby generate economies of scale), increase revenue collection and compliance and function more effectively.
- **EU ADDED VALUE:** the programme has been effective in providing solutions for problems with a clear EU dimension. In particular, the programme adds value by providing a forum for discussion, exchange of experiences and networking between Member States that would not be possible without Commission support. Fiscalis 2020 also supported the creation of a framework for the exchange of information through a variety of IT systems and activities. These lead to both tangible and intangible benefits of scale and coordination. The clear EU component, and the fact that the same results would be difficult or impossible to achieve without the programme to support them, in particular in terms of necessary maintenance of the IT tax systems, also leads the evaluation to conclude that continued support through funding of the programme is relevant and advantageous.

The COVID-19 pandemic largely affected the numbers of collaborative actions and events since March 2020: almost all the face-to-face meetings after April 2020 were cancelled, and many of them have been replaced by online meetings. The total numbers of meetings however dropped, in particular during the Q2 2020, when the physical meetings, cancelled due to the pandemic, were not automatically replaced by virtual ones, due to late notice, technical difficulties, or uncertainty of the confinement. After the summer 2020, however, the number of virtual meetings increased, allowing business owners and national administrations to perform the planned and new programme activities: the total number of events for 2020 is 278, with 73 face-to-face meetings and 205 virtual meetings.

The core outcomes of the Fiscalis 2020 programme are the European Information Systems (EIS), which allow the electronic exchange of tax-related information between Member States. Ensuring the business and IT systems' continuity is a major responsibility under the programme since disruptions in the operation of the EIS would affect national administrations, citizens and businesses across the entire EU and hamper the functioning of the internal market. The underlying infrastructure (Common Communications Network/Common Systems Interface CCN/CSI) developed, managed and maintained by the Commission was available during the period 2014-2020 more than 99 % of the time during working hours. In particular during 2020, the availability of this platform was 99.97 %, which represents 0.5 percentage points more than in 2019 and in line with the target (99.9 %). All the main centralised IT tax systems– developed, managed and maintained by the Commission – were available in the 2014-2020 period as scheduled, with more than 99 % of the time meeting the expected targets.

The feedback from participants in joint actions collected under the Performance Measurement Framework of the programme shows that the collaboration robustness between programme stakeholders is overall progressing in the desired direction. Over the last three years, an average of 96 % of the responding participants declared that the programme provided them with a good opportunity to expand their network of (and contacts with) officials abroad, well above the target (90 %). However, in 2020, the rate has dropped to 85 %, most likely due to the COVID pandemic. Additionally, in the same period, the number of respondents who declared that they have been in contact for work purposes with the officials they met during programme activities (lasting networking effect) has reached 56 % in 2020, again due to the COVID pandemic. It has to be highlighted that the figures on network opportunity and lasting networking effect show some fluctuations over the years, but overall the rates are above/close the baseline and there is a progress towards the targets (already achieved in relation to network opportunity). In order to improve the lasting networking effect, work continues on improvements in the area of communication and to facilitate online collaboration and sharing between the participants of programme activities after the events end. In addition, the decrease in the long-lasting network effect rate may be the result of an unclear understanding of the different possibilities to ‘be in contact’, which more often includes collaborative tools beyond the traditional contacts (such as physical meetings or direct phone calls). Additional explanations have been included in the form requesting feedback from participants where this information is extracted from.

### 3.2. Key achievements

8 373 000 000	14 193	27	5	99.96%
messages were exchanged in 2020 on the Common Communication Network / Common Systems Interface (CCN/CSI, shared with Customs), i.e. close to 1 million messages exchanged every hour on average.	officials were trained by using EU common training material in 2020.	European Information Systems were in operations at the end of 2020.	operational expert teams in the taxation area.	of the time on average, the Vies-on-the-Web system was available.

Throughout 2020, DG TAXUD worked intensively on managing the UK’s withdrawal from the EU and on the negotiations for a future relationship. This work spanned the entire DG, covering customs, preferential access, VAT, excise duties, direct taxation and IT systems. DG TAXUD was central to the work on the implementation of the Withdrawal Agreement and Ireland/Northern Ireland Protocol, notably the establishment of a strong Union Presence in Northern Ireland. To ensure that EU businesses were informed and prepared for the end of the transition period, DG TAXUD carried out a successful communications campaign, while also working closely with Member States, traders, businesses and other stakeholders to explain and clarify the upcoming changes in tax and customs due to Brexit.

DG TAXUD delivered rapid, well-targeted actions in response to the health crisis due to Covid-19 pandemic. Tax initiatives were swiftly implemented to facilitate smooth supply chains of vital medical and protective equipment, while new proposals were put forward to support crisis-struck businesses. These included the temporary suspension of VAT and customs duties payable on imports of vital goods, such as PPE and other medical equipment, needed to combat Covid-19; temporary measures that allowed Member States to grant VAT relief on Covid-19 vaccines and testing kits; guidance to ensure the harmonised interpretation of EU legislation on VAT in COVID times; a postponement of the entry into force of the VAT e-commerce package, to enable businesses and Member States to focus their resources on fighting the crisis.

At EU level, the fight against tax fraud, tax evasion and aggressive tax planning is materialised by setting-up IT systems and other mechanisms of cooperation such as joint audits. The European Information Systems (EIS) allow tax administrations to exchange information by secure electronic means. The information exchange is enabled by a closed and secure Common Communication Network/Common Systems Interface (CCN/CSI) – one of the main outcomes of the programme. This platform has performed, since the launch of the programme, with high availability and reliability. The CCN/CSI network registered over 8 373 million messages exchanged during the period January 2020 – December 2020, compared to 6 902 million messages exchanged during 2019. This represents a 21.3 % growth of the number of messages. In terms of traffic, the CCN Network registered around 42.21 TB during the period January 2020 – December 2020, compared to around 32.23 TB during 2019. This represents an increase of 31 % of traffic volume. At the end of 2020, there were a total of 27 European Information Systems and related applications in operation for taxation. In the observed period, they allowed information to be exchanged rapidly and in a common format that can be recognized by all Member States. The high volume of information channelled via CCN/CSI and the other tax related IT systems (e.g. VAT Information Exchange System-VIES, Excise Movement Control System-EMCS) shows that the programme is a solid and robust enabler for the information exchange amongst tax (and customs) authorities.

The use of IT systems, such as the CCN/CSI platform, EMCS, VAT Refund, SEED-on-Europa, VIES-on-the-web and e-forms builds towards the development of an e-administration. They limit the resource-extensive paper-based procedures. For example, due to VIES-on-the-web, economic operators no longer have to use the intermediary national administration to validate the VAT

numbers of their trading partners, directly reducing the lead-time and the administrative burden and compliance costs for traders and national administrations. In 2020 the availability of VIES-on-the-Web has been 99.96 % of time on average.

Taxes in Europe Database (TEDB), which provides access to harmonised and comparable information on legal basis, assessment base, main exemptions, applicable rates, economic and statistical classification as well as revenue generated by the main taxes in the European Member States, was updated to cope with some new business requests, especially for e-Commerce directive.

Mini One Stop Shop (MOSS), which contributes to reducing the administrative burden on tax administrations and compliance costs for those taxpayers active in the telecommunications, broadcasting and electronic services, was updated to comply with the Withdrawal Agreement and Northern Ireland Protocol (WA/NI).

One Stop Shop (OSS), an extension of MOSS to all types of services as well as to distance sales of goods, both intra-EU and from third territories or third countries to the EU, entered conformance testing in preparation for the postponed launch date of the VAT eCommerce Package on 1 July 2021. Distributed Registry of IOSS VAT IDs (IOSS-DR), a high-performance/high-availability solution allowing national customs import systems to validate IOSS VAT IDs, entered conformance testing in preparation for the postponed launch date of the VAT eCommerce Package on 1 July 2021.

The Excise Movement and Control System (EMCS) is a computerised system for monitoring and controlling in real-time the movement of excise goods (alcohol, tobacco and energy products) under excise duty suspension. It consists of EMCS Core business and EMCS Administrative cooperation and has a lifecycle in Phases. In particular Phase 3.4 was successfully deployed in operations on February 2020. EMCS Converter was developed by DG TAXUD and provided to late runner MSs to ensure the business contingency of EMCS. Implementation of WA/NI Protocol took place during 2020, activities included coordination, specifications, development, Conformance Testing with MSAs and national and central deployment.

The electronic Form Central Application (eFCA) is the key system for the administrative cooperation among MSs as it enables and fully supports the spontaneous exchange of information. In 2020, 20 new types of electronic forms have been implemented, along with a statistical module aimed to support MSs in producing yearly statistics on exchanges, and many enhancements and improvements of the application. Moreover, work was done and a Fiscalis Project Group was created leading to the requirements for the extension of the system in order to support e-commerce, call-off stock and implement the new implementing regulation on VAT e-forms, to be implemented in 2021.

The VIES-on-the-Web (VoW) allows persons involved in the intra-Community supply of goods or of services to obtain confirmation of the validity of the VAT identification number of any specified person, in accordance to article 31 of Council Regulation (EC) No. 904/2010 of 7 October 2010. VoW is a key system (approx. 5 millions of requests per day) allowing economic operators to validate the VAT numbers of their trading partners, directly reducing the lead-time and the administrative burden and compliance costs for traders and national administrations. The most important activity in 2020 was related to implement EU/UK Withdrawal Agreement and IE/NI Protocol, for which a specific version 5.8 was implemented and put in production at the end of the transition period.

The “EU/UK Withdrawal Agreement and IE/NI Protocol” implied a detailed impact assessment on all systems involved: VIES, VIES-on-the-Web, VAT Refund, MOSS, e-Commerce, TSS, TIC, TEDB, SURV-RECAPP. Based on it, the artefacts of those systems, along with the infrastructure, have been modified/adapted. Moreover, conformance testing campaigns were launched and executed by MSs for VIES, VAT Refund and MOSS, while the campaign for United Kingdom in respect of Northern Ireland was set up for VIES and VAT Refund only

During 2020, in the taxation area, three expert teams were continuously operational, one group renewed its activities and one team started to cooperate. The Managed IT Collaboration (MANITC 4) continued to promote, support and coordinate Member States’ collaborative initiatives in IT taxation area. Two expert teams constantly developed IT applications amongst Member States in parallel: the expert team for Excise Duty Calculator (EDC), and the expert team for Mobile Application on Excise Movement and Control System (m-EMCS). The objective of the m-EMCS is to build a mobile app for helping the Member States to check the duty-suspended excise goods (tobacco, petrol, alcohol, etc.) during road controls. The EDC objective is to create an Excise Duty Calculator at EU level to help the citizens, traders and administrations to calculate the excise duty in each individual Member State. The tool is using data from the Taxes on Europa Database, managed by the Commission. The Transaction Network Analysis expert team (TNA), renewed its activities under the second phase, TNA 2, in order to group Member States’ resources to assist the Commission in the development of the Transaction Network Analysis software. This is a custom built tool to facilitate information exchange and data analysis within the Eurofisc network, for enhance capability to use VIES and Eurofisc data to build networks around known risky traders and detect fraudsters. Finally, at the end of 2020, a new group started to operate to leverage EU Member States’ expertise and resources to assist the Commission in the implementation and operation of the Central Electronic System of Payment information (CESOP) and the relevant national components that are needed for the successful implementation of the specific legal package.

The tax officials exchange views and best practices to fight against tax fraud, tax evasion and aggressive tax planning in the joint actions organised under the programme. For example, in 2020, DG TAXUD continued to support the informal network of the Tax Administration EU Summit of the Heads of Tax Administration (TADEUS), through which heads of EU tax administrations cooperate on strategic tax matters. TADEUS-driven projects last year included setting up a new governance structure and strategy for Eurofisc and developing a human resources management (HRM) maturity model.

Accelerated exchange of information between VAT anti-fraud units continued to be supported via Eurofisc <sup>(1)</sup>. The programme also finances multilateral controls actions (MLC), coordinated controls of the tax liability of one or more related taxable persons, organised by two or more Member States with common or complementary interests. Approximately EUR 3,26 billion of tax amount due was identified through multilateral controls under Fiscalis 2013. This amount is very significant compared with the programme investment (EUR 2,41 million actually spent on MLCs under Fiscalis 2013). Due to COVID-19 pandemic only 70 multilateral controls actions (MLC) have been registered during 2020, a huge drop compared to 180 MLCs in 2019. Activities under the programme were also organised to secure an effective methodological, financial and organisational set-up for the presences in the administrative offices and participation in administrative enquiries (PAOE): in 2020, 19 of such activities were registered.

Fiscalis 2020 continued to support throughout 2020 a coherent implementation and application of tax policies (tax compliance/tax competency building). This happened specifically through the realisation of a major technical up-grading and content-updating project of the EU Excise Movement Control system (EMCS), that resulted by end 2020 in the availability of a multi-modulated eLearning programme composed of 6 process-specific eLearning modules, the majority of them targeting advanced skills building of tax professionals – public and private sector - on EMCS. By end 2020, this further enlarged EU eLearning portfolio was available in a content-updated, technically innovated format (also allowing for use on mobile devices) as well as fully compliant with BREXIT. In 2020 – and based on the findings provided through an EU-wide survey on Human Capacity Building Maturity in national tax administrations in 2019 – part 1 of the first common EU TAX Competency Framework (TaxCompEU) was further complemented by a Common Tax Training Curricula (part 2 of TaxCompEU) and the full package got translated into all EU languages and released for MS use by end November 2020. It will provide national tax administrations with a common reference standard for optimal staff performance, based on identified common tax values, operational tax competencies, professional and management competencies and tax career paths and further provide optimal tax training reference standards. The TaxCompEU's further implementation in national tax administrations' HR structures will be further accompanied and supported in the coming years, mainly through a series of common and/or country-specific implementation training events as of 2021 (e.g. Common Learning events, Communication support) as well as through the further developed tax-specific Competency Assessment Tool (CAT), available for national use in all EU languages since end 2020.

### 3.3. Evaluations, studies and reports

In the framework of the Commission Action Plan of April 2016 'Towards a single EU VAT area', the studies under Fiscalis 2020 mainly focus on VAT and cross-border issues such as studies on VAT aspects of cross-border e-commerce, the provision of effective tax rates and the measurement of aggressive tax planning. Two important evaluations have been adopted by the College in 2017: Evaluation of VAT administrative cooperation and fight against fraud (Nov-2017) and Evaluation of Directive 2011/16/EU on the administrative cooperation in the field of taxation (Dec-2017).

The evaluation of the taxation of tobacco in the EU (published in February 2020) assessed the performance of the Directive against the evaluation criteria set out in the Better Regulation Guidelines. The report highlights that while the current rules work well in terms of predictability and stability for Member State fiscal revenue, it is no longer as effective in deterring consumption. The evaluation also highlights that the emergence of new products, such as e-cigarettes, heated tobacco products and new addictive products reveal the limits of the current legal framework. The evaluation notes that a more comprehensive approach, taking on board all aspects of tobacco control including public health, taxation, the fight against illicit trade and environmental concerns, is needed.

The Performance Measurement Framework (PMF) study was finalised (in December 2020) by an external contractor for both Customs 2020 and Fiscalis 2020 programmes. The study confirmed the Mid-Term Evaluation conclusions on the current PMF by the criteria of its effectiveness, efficiency, coherence, relevance and alignment with the Better Regulation Guidelines' principles. The study team identified the PMF strengths (i.e. elements to retain) and weaknesses (i.e. areas for improvement): in particular, it identified weaknesses with the quality of indicators to meaningfully assess the performance of the programmes across the activities supported, but also its limited utility and visibility among stakeholders. Most importantly, the report presented a proposal for a new PMF and new tools for its implementation. These include updated intervention logics, lists and definitions for proposed indicators, suggested roles and responsibilities for stakeholders within DG TAXUD, data collection tools, and PMF management and reporting tools. The new framework is currently a work in progress.

In addition to technical studies and evaluations, the mid-term evaluation of Fiscalis 2020 was published in 2019 ([SWD\(2019\)59 final](#))<sup>2</sup>. The key findings of that evaluation have been presented in the Programme Statement DB2020. The final evaluation of Fiscalis 2020 was launched in the second half of 2020, with a report to be prepared by the end of 2021.

The studies and evaluations financed under the programme Fiscalis 2020 can be found on the TAXUD EUROPA website: [https://ec.europa.eu/taxation\\_customs/calls-tenders-grants-calls-expression-interest\\_en](https://ec.europa.eu/taxation_customs/calls-tenders-grants-calls-expression-interest_en) and on the EU Bookshop on <https://bookshop.europa.eu/en/home/> (author: Directorate-General for Taxation and Customs Union).

<sup>(1)</sup> Network for the swift exchange of targeted information between Member States to enhance multilateral administrative cooperation in combating organised VAT fraud and especially VAT carousel fraud. Eurofisc legal base is under Chapter X of Council Regulation EU No.904/2010 on administrative cooperation and combating fraud in the field of VAT.

<sup>2</sup> Evaluations of Fiscalis 2020 are conducted in accordance with Ar. 18.1 of Regulation 1286/2013.

#### 4. Programme 2021-2027 - Key monitoring indicators

**Specific Objective 1 :To support tax policy and the implementation of Union law relating to the field of taxation; to foster tax cooperation, including exchange of tax information; and to support administrative capacity building, including human competency and the development and operation of the European electronic systems.**

**Indicator 1:Union Law and Policy application and implementation index. - Number of actions under the programme organised in this area**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									Stable value or increase compared to the first two years of measurement
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of actions
Cut-Off Date	
Data source	Activity Reporting Tool (ART) managed by DG TAXUD
Link to the objective	
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF
Other methodological comments	Timeliness: Yearly as from the first year.
Full metadata available at this address	
Justification of the trend	

**Indicator 2:Union Law and Policy application and implementation index. – Number of recommendations/guidelines issued following those actions**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									Stable value or increase compared to the first two years of measurement
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of recommendations/guidelines
Cut-Off Date	
Data source	Surveys managed by DG TAXUD
Link to the objective	
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF
Other methodological comments	Timeliness: Yearly as from the first year
Full metadata available at this address	
Justification of the trend	

**Indicator 3:Learning index - Number of tax officials trained by using common training material**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									Annual value equal or superior

											to 13,300
	Actual Progress										Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of tax officials trained
Cut-Off Date	
Data source	Data provided by national administrations and Activity Reporting Tool (ART) (managed by DG TAXUD)
Link to the objective	
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: Average of 2014-2020, without 2019 figures as they strongly diverged from other years due to exceptional circumstances.
Full metadata available at this address	
Justification of the trend	

#### Indicator 4: Learning index – Number of times eLearning tax modules were downloaded

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									Stable value or increase compared to the 2014-2020 average (130 per year)
	Actual Progress									
										Final

Are we on track	
Indicator type	Output
Unit of measurement	Unit of measurement Number of e-learning modules used
Cut-Off Date	
Data source	Data provided by national administrations
Link to the objective	
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF, but we count the number of eLearning Customs modules used and not only downloaded
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: Average of 2014-2020. We count the number of eLearning Customs modules used and not only downloaded
Full metadata available at this address	
Justification of the trend	

#### Indicator 5: Learning index – Quality scored by participants in training activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									>70%
	Actual Progress									
										Final

Are we on track	
Indicator type	Output
Unit of measurement	Percentage %
Cut-Off Date	
Data source	DG TAXUD
Link to the objective	
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF.
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: Average of 2018-2020. Target: Corresponds to a 'very good' score using the applied methodology (Kirk Patrick quality score)
Full metadata available at this address	
Justification of the trend	

#### Indicator 6: Availability of European electronic systems

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									Will correspond to a value close to 100%, taking into account historical data
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Percentage of time
Cut-Off Date	
Data source	DG TAXUD
Link to the objective	
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: To be confirmed. Target: TBC, it will correspond to a value close to 100%, taking into account data from previous years
Full metadata available at this address	
Justification of the trend	

#### Indicator 7: Availability of the Common Communication Network

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Percentage of time
Cut-Off Date	
Data source	DG TAXUD

	Actual Progress									Final
	0,9989	0,9995	0,9998	0,99984	0,99976	0,9947	0,9997			

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage terms of the availability (time) of the Common Communication Network and Common System Interface (CCN/CSI)
Cut-Off Date	
Data source	IT statistics produced by TAXUD.
Narrative	The Common Communication Network and Common System Interface (CCN/CSI), are indispensable for the running of the taxation related European Information Systems (EIS). The taxation EIS constitute interoperable and cost-effective IT solutions to support tax authorities in implementing EU legislation. The uniform implementation of tax policy is a key element to enhance the functioning of the single market, foster Union competitiveness and protect the financial and economic interests of the Union and its Member States. This indicator provides a measurement of the programme's results on the effective operation of the CCN/CSI.
Methodology	Timeliness: for the purpose of monitoring programme's objectives, the frequency is annual. However, availability can be also measured on weekly, monthly or quarterly basis, if needed for specific IT monitoring.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 2:the feedback from participating countries on the results of actions under the programme (collaboration robustness)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Network opportunity										
2012	Milestones									2020
	0,95	0,90	0,90	0,90	0,90	0,90	0,90			0,90
	Actual Progress									Final
	0,9515	0,9666	0,9700	0,9700	0,95	0,96	0,85

	Actual Progress								Final
	247	632	586	563	556	590	73		
Number of online groups (taxation and joint groups)									
2012	Milestones								2020
30									
	Actual Progress								Final
	109	126	174	152	177	227	270		

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Relevant for each sub indicator (top to bottom of the table):a) Degree of networking expressed in percentage terms of positive replies.b) Degree of networking expressed in percentage terms of positive replies.c) Number of face-to-face meetings held under the programme.d) Number of ongoing on-line collaboration groups on the Programme Information and Collaboration Space (PICS).
Cut-Off Date	
Data source	Relevant for each sub indicator (top to bottom of the table):a) Relevant question on the Event Assessment Form (EAF).b) Relevant question on the Event Assessment Form (EAF).c) Activity Reporting Tool (ART). ART is an IT tool used to manage activities carried out under the Customs and Fiscalis programmes.d) Programmes Information and Collaboration Space (PICS). PICS is DG TAXUD's online collaboration tool for tax and customs professionals working in administrations across Europe.
Narrative	
Methodology	Relevant for each sub indicator (top to bottom of the table):a) EAFs are filled in online via EUSurvey by participants to an event. Timeliness: annual frequency; data collection for year X takes place between March X and March X+1.b) EAFs are filled in online via EUSurvey by participants to an event. Timeliness: annual frequency; data collection for year X takes place between March X and March X+1.c) Query in ART: total number of meetings, minus virtual meetings. Timeliness: annual query.d) Query in PICS: on-line groups (total); filter results by programme.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data on networking effect can be obtained from the EAF and from the programme's poll. The networking data for 2020 are not available yet, as the collection of data is performed during the month of February 2021. The data will be analysed on the first week of March and available by mid of March. Next year, the collection of data will be anticipated in January, in order to have them available for the programme statements exercise.
Full metadata available at this address	
Justification of the trend	The network indicators and number of face-to-face meetings in 2020 have been hugely impacted by the Covid-19 pandemic due to travel restrictions.

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

Not applicable

### **6.2. Contribution to biodiversity mainstreaming**

Not applicable

### **6.3. Contribution to clean air financing**

Not applicable

### **6.4. Contribution to gender equality**

Not applicable

### **6.5. Contribution to the sustainable development goals**

### 6.5.1. Goals

#### *SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all*

The Commission's general objective is to ensure that tax policy supports wider EU policy objectives for smart, sustainable and inclusive growth in the EU. The Fiscalis 2020 programme through its activities contributes to the achievement of the following Sustainable Development Goals: Goal 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all, Goal 10 Reduce inequality within and among countries, Goal 12 Ensure sustainable consumption and production patterns (one of the targets includes restructuring of taxation).

Example: the One Stop Shop (OSS), an extension of the 'Mini One Stop Shop' (MOSS) to all types of services as well as to distance sales of goods, both intra-EU and from third territories or third countries to the EU, entered conformance testing in preparation for the postponed launch date of the VAT eCommerce Package on 1 July 2021. OSS will allow companies that sell goods online to their customers to deal with their VAT obligations in the EU through one easy-to-use online portal in their own Member State and their own language. Without the portal, VAT registration would be required in each EU Member State into which they want to sell – a situation cited by companies as one of the biggest barriers for small businesses trading cross-border.

**1. Overview****1.1. Challenges**

Customs help safeguarding the financial interests of the Union and of the Member States and, in their role as guardians of the external EU border for goods, also protect the public against terrorist, health, environmental and other threats. The implementation of the digitalisation supported by different electronic systems touching upon all customs procedures can only be achieved through intense operational cooperation between customs administrations of the Member States, between them and other authorities, with trade and other third parties. The proposed programme supports information technology (IT) capacity building actions and human

networking and competency building actions. The digitalisation will enhance the competitiveness of European businesses and rebalance the important equilibrium between customs controls and facilitation of the legitimate flow of goods transiting or moving in and out of the Union.

For EU customs to be fit for the future, it needs to exploit the advantages of digitalisation, data and new technologies to a much greater extent. This will allow for faster, better and more streamlined controls and procedures at the EU border. DG TAXUD is focussed on developing a digitalised and data-rich EU customs through a series of complementary projects over the coming years. In 2020, DG TAXUD commenced work on EU Joint Analytics Capabilities. This is essentially an EU hub for the collection and analysis of data from a vast number of customs and non-customs sources. The Joint Analytics Capabilities is intended to complement Member States' own information capabilities, allowing them to undertake more focused, efficient and cost effective risk management and customs controls and to rationalise the use of scarce resources. These improvements will ensure better protection of the financial interests of the Union and greater security and safety of the Single Market. They will also contribute to the fight against fraud, management of prohibitions and restrictions, control of illicit cash movements, drug precursors or intellectual property rights, customs policy formulation and crisis responses.

The vast majority of the programme's budget will continue to focus on the development and operation of the European electronic systems. The IT related expenditure is projected to rise further in the future, as the new systems connected to the Union Customs Code (UCC) continue to be developed. A number of projects are planned to deliver new IT systems/applications or evolutions in the period of 2021-22, including: NCTS Phase 5, AES, CS/MIS2, ieCA, ICS2, CRMS2, REX Specific Trader Portal (REX3), COPIS eAFA implementation, evolution of SURV-RECAPP and Surveillance3 for the implementation of VAT eCommerce project, first iterations of CUP-MIS, evolutions of Single Window and the phase 1 of UCC Centralised Clearance for import (CCI).

## **1.2. Mission (general objectives)**

Many of the activities in the customs area are of a cross-border nature, involving and affecting all 27 Member States, and therefore cannot be effectively and efficiently delivered by individual national administrations. The Programme has the general objective to support the customs union and customs authorities working together and acting as one to protect the financial and economic interests of the Union and its Member States, to ensure security and safety within the Union and to protect the Union from unfair and illegal trade, while facilitating legitimate business activity.

## **1.3. Specific objectives**

The Programme has the specific objective to support: the preparation and uniform implementation of customs legislation and policy; customs cooperation; administrative and IT capacity building, including human competency and training, as well as the development and operation of European electronic systems; innovation in the area of customs policy.

## **1.4. Public intervention context**

The legal base of the Customs Programme is defined in the Treaty on the Functioning of the European Union, and in particular its rules on customs cooperation (Article 33), the approximation of laws (Articles 114) and the common commercial policy (Article 207). The basis for managing the customs union is the Union Customs Code, which is agreed by the European Parliament and the Council of the European Union. As new processes are implemented and new challenges arise, the Commission and national customs authorities work together to revise the various implementing procedures of the code.

Responsibility for customs policy is at the level of the European Union. However, implementing the customs union relies on close partnerships with and between Member States. The European Commission proposes EU customs legislation and monitors its implementation. It also works to ensure that the customs union is fully equipped with modern, effective and interconnected customs administrations to face both current and future challenges.

The Customs Programme enables national customs administrations to create and exchange information and expertise. The Customs Programme allows joint development and operating major trans-European IT systems together, as well as establishing networks by bringing together national officials from across Europe.

## **1.5. Actions**

The Customs programme offers Member States a Union framework to develop activities through cooperation amongst national customs officials, on the one hand, and IT cooperation and capacity building, on the other hand. In this regard, it provides financial sustainability of the interoperable and interconnected European Information Systems, which implement with greater economies of scale and efficiency inter alia the requirements behind the Union Customs Code (UCC). Additionally, the joint actions give the administrations unequalled opportunities for cooperation, communication and networking, ultimately building trust and leading to greater convergence of approaches and practices. The Customs programme also funds human competency building initiatives.

## **1.6. Delivery mode**

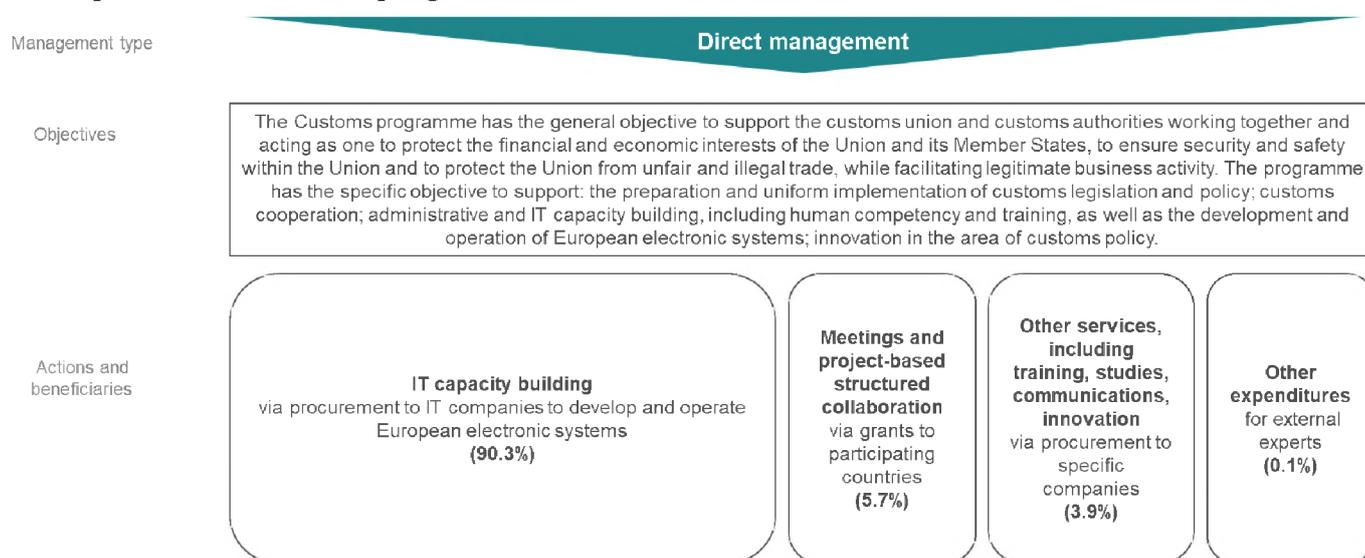

The Customs programme will be implemented in direct management by DG TAXUD through:

- Procurement contracts: for the European Information Systems expenditure, training activities and studies.

- Grant agreements with the participating countries: for collaborative actions and expert teams.

Work programmes will be established – together with the stakeholders – stipulating the priorities for a specific period.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM (2018) 442: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the 'Customs' programme for cooperation in the field of customs	2021 - 2027	950,0

### 1.8.2. Legal basis explanation

The legal base of the Customs programme is the Regulation (EU) 2021/444 of the European Parliament and of the Council establishing the 'Customs' programme for cooperation in the field of customs and repealing Regulation (EU) No 1294/2013. Further, the Multiannual Work Programme constitutes the framework for the implementation of the programme.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>126,9</b>	<b>130,4</b>	<b>133,1</b>	<b>135,7</b>	<b>138,4</b>	<b>141,2</b>	<b>144,3</b>	<b>950,0</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The Customs programme is a continuation of the Customs 2020 programme, but it will entail greater intensity in the way cooperation will take place and as regards the number of electronic systems, as well as the possibility to take on board a certain level of innovation.

## 1.10. Relevant websites providing more information

[https://ec.europa.eu/taxation\\_customs/customs-2021-2027\\_en](https://ec.europa.eu/taxation_customs/customs-2021-2027_en)

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

The plan is to start the new Customs programme in Q2 2021.

2021-2027 programme	2021	2022
Commitment appropriations	126.587.000	130.144.000
Payment appropriations	25.000.000	87.528.568

The new Customs programme represents a significant increase (78%) in budget compared to the predecessor programme, mainly due to the increased needs for trans-European Customs IT systems. Approximately 20% of expenditure committed in 2021 will be paid in 2021, 45% will be paid in 2022.

COVID-19 pandemic has affected programme grant activities in the absence of travels and therefore of costs related to them as activities have been held virtually. Nevertheless, grants only represent approximately 5,7% of the Customs programme and not all eligible costs are linked to travels. As a result, we may conclude that the impact on the programme is relatively low. In 2021, we foresee a gradual increase of the consumption by the end of the year due to the rollout of the vaccines, and a better scenario for 2022.

## 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	532,403,385	431,421,057
Implementation Carry-overs	87,078	343,511
Implementation total	532,490,464	431,764,568
total envelop*	532,501,555	
cumulative implementation rate	100%	81%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

As can be seen from the above financial performance table, 100% of the programme's total commitment appropriations (EUR 532 501 555) have been consumed. To date, 81% has been paid. The remaining payments will be finalised in the 2021-2023 period.

2014-2020 programme	2020	2021	2022
Commitment appropriations	75.164.000	NA	NA
Payment appropriations	93.498.094	61.000.000	25.841.760

COVID-19 pandemic has affected programme grant activities in the absence of travels and therefore of costs related to them as activities have been held virtually. Nevertheless, grants only represent approximately 5,7% of the Customs programme and not all eligible costs are linked to travels. As a result, we may conclude that the impact on the programme is relatively low. In 2021, we foresee a gradual increase of the consumption by the end of the year due to the rollout of the vaccines, and a better scenario for 2022.

## 3. How is the programme performing ?

### 3.1. Performance

#### 3.1.1. Introduction

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### 3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### 3.1.3. Previous programme performance

The data collected in the performance measurement of the programme from 2014 (first year of implementation) until 2019 (latest complete measurement of performance indicators), together with the results of the Mid-Term Evaluation show that Customs 2020 is on course to fulfilling its objectives and that it plays an important role in facilitating the implementation and development of Union customs policy. The programme has been effective in providing solutions for problems with a clear EU dimension. This is anchored in its role as facilitator of cooperation between participating countries, including their national administrations and economic operators. Many of the joint actions were directly supporting implementation of a policy or a plan. By providing

mechanisms for discussions, exchange of information, networking between participating countries, Customs European Information Systems and common training, the programme ensures a harmonised approach to the implementation of customs legislation, procedures and rules. Efficiency gains and costs savings are among the key elements of EU added value when it comes to the IT systems. They help the national administrations save time and resources, particularly for participating countries with smaller customs administrations and fewer resources. The interoperability and interconnectivity provided through the central systems would be highly impractical and costly to produce through other means. Thanks to the programme, these results have been achieved more effectively and efficiently, saving significant resources for national administrations. The same is true for the common training activities, which provide access to standardised and comprehensive information on the various aspects of the functioning of the Customs Union. The functioning of the customs union and the further integration of the national customs authorities that run it remain entirely dependent on Customs 2020. In view of the rapid changes and challenges ahead the EU customs union, the programme's continuous support is considered essential.

The main conclusions of the Mid-Term Evaluation can be found below:

- **RELEVANCE:** the programme has been highly relevant to meet the needs of the customs administrations, the economic operators, the citizens and ultimately the customs union as a whole. Throughout the years, it has engrained in the national and European customs landscape, policies, processes and procedures, providing interoperable, interconnected and reliant European Information Systems. As the Member States are dependent on each other in pursuing their customs functions well, they need effective and efficient tools for communication, exchange of information and overall cooperation, all of which are the programme's objectives.
- **EFFECTIVENESS:** the programme was effective in the achievement of its objectives and contributing significantly to the good functioning of the customs union and its modernisation. It fostered cooperation and exchange of information, ranging from facilitating convergence at the strategic level to approximating approaches, interpretation of law, administrative procedures, best practice and rules at the operation level. The secured platform for information exchange helped Member States and economic operators to overcome their reluctance of sharing sensitive data and built trust. Further exchanges of best practices and learning were possible thanks to the programme's joint actions. The value of human networks and personal contacts were amongst the programme's most appreciated benefits.
- **EFFICIENCY:** the most resource-intensive component – the European Information Systems – were also the most useful, bringing an array of benefits in all areas of customs activities including harmonisation of customs procedures, uniform implementation of the customs law, sharing of information and generating economies of scale, particularly through the centralised systems. Different benefits stem from the joint actions and training activities, which provide framework for broad and inclusive continuous collaboration, increasing understanding, knowledge and capacity, creating professional bonds and acting as catalysts.
- **EU ADDED VALUE:** the programme's greatest EU added value lies in supporting all the aspects of the implementation of the UCC, which demand EU solutions for EU problems, and close cooperation of the Member States, which need to apply the same rules and assist each other in pursuing the customs union's objectives.
- **COHERENCE:** Customs 2020 has become an integral part of the EU's broader policies and coherent with the EU's goal of creating a modern, paperless environment for customs and trade, while preserving the EU's financial, economic and societal interests and wellbeing. By supporting the implementation of the UCC, the programme contributes to facilitation of trade and reduction of costs for businesses, increasing their productivity and competitiveness.

The COVID-19 pandemic largely affected the numbers of collaborative actions and events since March 2020: almost all the face-to-face meetings after April 2020 were cancelled, and many of them have been replaced by online meetings. The total numbers of meetings however dropped, in particular during Q2 2020, when the physical meetings, cancelled due to the pandemic, were not automatically replaced by virtual ones, due to late notice, technical difficulties, or uncertainty of the confinement. After the summer 2020, however, the number of virtual meetings increased, allowing business owners and national administrations to perform the planned and new programme activities: the total number of events for 2020 is 282, with 85 face-to-face meetings and 197 virtual meetings. In 2014, a score of 3.2 was achieved on the extent to which programme activities achieved their expected results, on a scale from 0 to 4 (fully). Over the last three years, this value has remained above 3.3 (to be confirmed as the data for 2020 are still in the process of collection at the time of writing), which shows the consolidation in the achievement of results over the course of the programme's implementation.

Ensuring the business and IT systems' continuity is a major responsibility under the programme since disruptions in the operation of the European Information Systems would affect customs national administrations, citizens and businesses across the entire EU, and hamper the functioning of the internal market. The underlying infrastructure (Common Communications Network/Common Systems Interface CCN/CSI) developed, managed and maintained by the Commission was available during the period 2014-2020 more than 99 % of the time during working hours. In particular during 2020, the availability of this platform was 99.97 %, which represents 0.5 percentage points more than in 2019 and in line with the target (99.9 %). All the centralised IT customs applications remained available 99.82 % of the time, which represents an increase of 3.55 percentage points more than in 2019 and well above the target (97 %).

The collaboration between customs officials is a key sustainable success factor for the customs policy in Europe. This collaboration improves the understanding and the implementation of the customs law. The feedback from participants in joint actions financed from the Customs programme shows that the collaboration robustness between programme stakeholders (customs national administrations) is progressing in the desired direction. In 2014, more than 95 % of the responding participants declared that the

programme provided a good opportunity for them to expand their network of customs officials abroad; similar outcome has been maintained in the following years, well above the target of 90 %. However, in 2020, the rate has dropped to 81 %, most likely due to the COVID pandemic. Additionally, in the same period, the number of respondents who declared that they have been in contact for work purposes with the officials they met during programme activities (lasting networking effect) has reached 55 % in 2020, again due to the COVID pandemic. The figures on network opportunity and lasting networking effect show some fluctuations over the years, but overall the rates are above/close the baseline and there is a progress towards the targets (already achieved in relation to network opportunity). In order to improve the lasting networking effect, work continues on improvements in the area of communication and to facilitate online collaboration and sharing between the participants of programme activities after the events end. In addition, the decrease in the long-lasting network effect rate may be the result of an unclear understanding of the different possibilities to 'be in contact', which more often includes collaborative tools beyond the traditional contacts, such as physical meetings or direct phone calls. Additional explanations have been included in the form requesting feedback from participants, where this information is extracted from.

In relation to training activities, we can observe a very positive trend overall throughout the period. In particular for 2016, there was a high number of releases of training modules dedicated to the Union Customs Code (UCC), which resulted in exceptionally large increases in both the number of officials trained by using common training material of the Union and the number of times Programme eLearning modules were downloaded. Figures in 2017, 2018 and 2019 remained at very high levels in comparison with the baseline given the EU-wide relevance of the topics on which EU eLearning materials are currently developed, e.g. supporting the UCC-based IT systems roll-out (like the REX system, CDS system, trader portal for AEO and for EBTI and similar). A similar positive use tendency has been confirmed also in 2020 where 34 347 eLearning modules have been downloaded with 125 436 reported traders trained on them. The number of officials trained in 2020 reached more than 18 000, which represents a result aligned with previous years.

### 3.2. Key achievements

8 373 000 000	18 109	56	99.51%	39
messages were exchanged in 2020 on the Common Communication Network / Common Systems Interface, i.e. close to 1 million messages exchanged every hour on average.	officials were trained by using EU common training material in 2020.	European Information Systems were in operations at the end of 2020.	of the time, the main Customs systems (NCTS, ICS and ECS) were available.	e-learning courses on customs topics were available by the end of 2020 in multiple EU languages, resulting in 355 language versions.

Throughout 2020, DG TAXUD worked intensively on managing the UK's withdrawal from the EU and on the negotiations for a future relationship. This work spanned the entire DG, covering customs, preferential access, VAT, excise duties, direct taxation and IT systems. DG TAXUD was central to the work on the implementation of the Withdrawal Agreement and Ireland/Northern Ireland Protocol, notably the establishment of a strong Union Presence in Northern Ireland. To ensure that EU businesses were informed and prepared for the end of the transition period, DG TAXUD carried out a successful communications campaign, while also working closely with Member States, traders, businesses and other stakeholders to explain and clarify the upcoming changes in tax and customs due to Brexit. DG TAXUD also ensured the necessary adaptations to the electronic customs and taxation systems impacted by Brexit. This work was prepared and performed in collaboration with EU Member States and the UK. The smooth operation of the trans-European systems as of 1 January 2021 is proof of the success of this work.

DG TAXUD delivered rapid, well-targeted actions in response to the health crisis due to Covid-19 pandemic. Customs initiatives were swiftly implemented to facilitate smooth supply chains of vital medical and protective equipment, while new proposals were put forward to support crisis-struck businesses. These included the temporary suspension of customs duties payable on imports of vital goods, such as PPE and other medical equipment, needed to combat Covid-19; the creation of specific nomenclature codes, in order to monitor the trade flows of certain Covid-19 related goods (such as vaccines, masks, test kits, etc.); a recommendation to facilitate the import of personal protection equipment and medical devices; information sharing with all national customs authorities on dangerous, counterfeit or substandard medical devices and medical supplies, to ensure that those goods were stopped at the border; guidance to ensure the harmonised interpretation of EU legislation on customs in pandemic times.

Strengthening security and protection of citizens while facilitating legitimate international trade, pursuing customs modernisation as well as developing and managing an effective and efficient EU customs union have been part of the Union's priorities for Customs Policy. Those priorities are implemented largely through the Customs 2020 programme.

The achievement of these priorities is enabled under the programme, mainly through setting-up of a paper-less customs environment. This environment improves both the trade facilitation and the effective enforcement of rules for protection of EU financial, safety and security interests. Mainly, the European Information Systems supported by Customs 2020 play a vital role in interconnecting customs authorities. The functioning of these IT systems is enabled by the closed and secure Common

Communication Network/Common Systems Interface (CCN/CSI) infrastructure, which since the launch of the programme in 2014 has performed with high availability and reliability (see Indicator 3). The CCN/CSI network registered over 8 373 million messages exchanged during the period January 2020 – December 2020, compared to 6 902 million messages exchanged during 2019. This represents a 21.3 % growth of the number of messages. In terms of traffic, the CCN Network registered around 42.21 TB during the period January 2020 – December 2020, compared to around 32.23 TB during 2019. This represents an increase of 31 % of traffic volume. The high volume of information channelled during the year via CCN/CSI and EIS, shows that the programme is a solid and robust enabler for the paper-less environment and information exchange amongst customs and tax authorities.

The correct calculation of tariffs and the fight against fraud are crucial to the protection of EU's financial interests. In this sense, TAXUD continued to ensure during 2020 the daily update of the TARIC system (Integrated Tariff of the EU), that provides the required data for the customs clearance systems of the Member States and gives economic operators a comprehensive view of all the measures applicable when importing or exporting goods into/from the EU. Other EIS such as NCTS (New Computerised Transit System) allow to monitor the movement of goods within the EU territory and to identify cases of fraud or non-payment of customs duties. NCTS has created traceable records for each transit transaction reducing the deviation from standard procedures. The Import Control (ICS) and the Export Control (ECS) systems are two of the main systems that contribute to increased interconnectivity among Member States and with economic operators. In 2020, the systems (NCTS, ICS and ECS) have maintained the highest availability rate over the last 3 years (99.51 %).

Since the launch of the programme, IT developments and adaptations of the IT environment to the UCC have been carried out, bringing the total number of EIS in operations to 56. These developments were essential for a well-functioning and modern customs union. During 2020, the Customs 2020 programme continued to finance the development of new EIS projects, in close cooperation with national customs authorities and in line with the deadlines agreed with the Member States and trade. DG TAXUD progressed in 2020 in the development of the Import Control System 2 (ICS2) and of the reshaped Customs Risk Management System (CRMS2). The two systems are core Union customs instruments aimed to protecting the external borders of the EU internal market from risks linked to the international movement of goods, including those associated to terrorism and crime. ICS2 is a large-scale system and underpins customs pre-arrival safety and security programme. It provides a new platform for collection of advance electronic data on all goods and shipments prior to their arrival to the Union customs territory and from different trade sources.

In 2020 DG TAXUD completed the deployment of all central components of ICS2 and got ready for the conformance testing activities with Member States with a view to rendering the first phase of the system into operation on 15 March 2021 as per the revised UCC Work Programme. Under this programme, the UCC Automated Export System (AES) project and the UCC NCTS Phase 5 have made significant progress during 2020 and will be starting the operations in 2021. The AES aims to develop the existing trans-European Export Control System to enable full automation of export procedures and exit formalities in accordance with the business requirements for processes and data brought about by the UCC. NCTS Phase 5 aims to align the NCTS system with the new UCC requirements except in safety and security data elements in transit customs declarations of goods brought into the customs territory of the Union.

On 1 June 2020, the European Commission launched the electronic system for INF (replacing the previously paper-based Information sheets for special procedures), a new trans-European system required by the UCC to support the standardised electronic handling of INF data in the domain of Special Procedures. The INF system is integrated in the EU Customs Trader Portal, which enables traders to submit electronically the information from their inward and/or outward processing activities to the customs authorities for the processing of the data in relation to the associated import and export modalities.

In 2020, customs officials continued to exchange views and best practices in the joint actions organised under the programme. Working practices, administrative procedures and guidelines were developed and shared among the national administrations following the joint actions. These outcomes assist countries to increase the performance, effectiveness and efficiency of the customs administration. Guidelines and recommendations were also produced to support the implementation of Union law in the national administrations. They identify and address outstanding technical issues and constitute background information for Union law preparation and review. The number of guidelines and recommendations issued in 2020 further to a programme joint action (indicator 4) and in the national administrations following participation in programme activities (indicator 2) are still unknown at the time of publication. More than 74 % of the responding participants in these joint actions declared that from a professional point of view, the activities were very useful or useful for them. In the coming years, it is intended to maintain a similar high level of relevance perception.

In 2020, the expert teams remained the flagships of the programme toolkit helping to reach the goals of the Customs 2020 programme. The expert team approach allows customs experts of Member States to have in depth cooperation on operational issues which go beyond the traditional means of cooperation to realise the pre-identified objectives of a common long term project (expert teams are active between 12 and 36 months). This approach gives the chance to involve more the participants and make their administration more committed to the projects. In the customs domain, all the ongoing expert teams continued their activities or renewed their committed work under a new grant agreement. Customs Laboratories (CLET), Binding Tariff Information (BTI) and the Customs IT Collaboration (ETCIT) continued their work throughout 2020; meanwhile the EU Eastern and South-Eastern Land Border Expert Team (CELBET) started the next phase for 3 years. This latter expert team, the CELBET 3, constantly improve the collaboration at the level of the customs experts at the Eastern and South-Eastern EU land frontier by producing analysis on Border Crossing Points, scanners, tactical and strategical methodology, and risk management. The CLET 2 also further maintained their targeted analysis by continuing to pool expertise and equipment in a network (meta-laboratory) to analyse samples and share analytical results. The BTI 2 expert team also managed to go on with supporting all Member States in the analysis of the complex

cases of divergent classification of goods and in proposing an expert opinion on the result. The ETCIT 2 expert team continued to explore and identify new approaches for customs IT systems development and operation, including the realisation of a pilot project among Member States.

The Customs 2020 programme finances also the development of eLearning courses on topics of common interest in collaboration with customs administrations and representatives of trade. Such courses support the implementation of EU legislation and ensure the dissemination of good customs practices throughout the European Union. As in the previous year, in 2020, TAXUD continued to support in particular the implementation of the UCC, by supporting its related IT systems for public and private customs users with eLearning modules, namely through producing new EU eLearning modules for MS supporting the release of new UCC IT system, such as on UCC Information Sheets for Special Procedures (UCC INF) and on the Classification Information System (UCC CLASS). Two further technically very enhanced EU eLearning modules were produced in 2020 on Customs Radiation and Nuclear detection (EUSECTRA).

In 2020, multiple further language versions of the recent UCC IT systems were produced, such as for the EBTI-3 IT system (for public sector), the EU Trader Portals on EBTI and on AEO (for private sector and economic operators) and the UCC Customs Decision Systems (CDS IT System). In total, by end 2020 the EU eLearning portfolio contains 39 eLearning courses in the customs area (compared to 30 by end 2019), each available in a multitude of national languages, all of which support customs professionals from both public and private sector with the application of the UCC and related common customs legal, operational and technical requirements. By end 2020, this further enlarged EU eLearning portfolio was available in a content-updated, technically innovated format (also allowing for use on mobile devices) as well as fully compliant with BREXIT.

Furthermore, Customs 2020 continued to support national customs administrations with the national implementation and/or introduction of competency-based staff development and training, based on the EU Customs Competency Framework (CustCompEU), through a series of common and/or country-specific implementation training events in 2020 (e.g. Common Learning events, Communication support) as well as through the further development of a customs-specific Competency Assessment Tool (CAT), available for national use in all EU languages since end 2020.

In 2020 the European Commission further awarded 5 more Universities for their high quality academic customs study programmes (MA/BA level), acknowledging their leading role in raising Customs performance and professionalism. As in the previous year, cross-country expertise sharing/-building was provided throughout 2020, e.g. in form of multiple CLEP events (Common Learning Events Programme), held predominantly virtual in 2020, in adaptation to the COVID-19 situation. Similarly, innovative common knowledge building and/or – sharing formats were further explored throughout 2020, such as targeted training delivery in form of nano-learning (EU nano-learning concept developed and first pilot nano-module developments started). This provides the foundation for a further enhanced structured EU Customs Training cooperation strand for the years to come.

Regarding economic operators, the aims and activities of the programme are consistent with needs to minimise administrative burdens and maximise legal certainty. Most of the programme activities allow the national customs administrations to work and share information in a better way resulting in indirect benefits for the economic operators in the form of more efficient customs processes. Similarly, the eLearning modules support a harmonised application of EU law. More directly, economic operators can use certain Customs Information Systems as part of simplified and standardised customs procedures, take part in some joint actions and participate in certain eLearning modules. Although the programme does not involve European citizens directly, it addresses issues related to safety, security and trade facilitation that are important to them, such as fighting smuggling and fraud and protecting citizens from security threats.

### 3.3. Evaluations, studies and reports

The Customs programme finances the procurement of studies, evaluations and comparative analysis in the customs area by external contractors, covering mainly technical issues as the ones mentioned below as examples:

- 2018: evaluation of the European Customs Inventory of Chemical Substances (ECICS) to assess the effectiveness, efficiency, relevance, EU added value and sustainability of the ECICS database. The ECICS database allows economic operators and national customs authorities to clearly and easily identify chemicals; classify them correctly and easily in the Combined Nomenclature and name them in all EU languages for regulation purposes.
- 2019: study to provide scientific and technical assistance in the field of scientific customs, in particular expertise in pharmaceutical science and botany. The study analysed scientific literature, databases and regulations, on plants and the alike (parts and extracts of plants, vitamins, minerals, traditional medicine and pharmaceuticals) in order to support the work of DG TAXUD and the Customs Code Committee when facing difficulties in the classification or naming of these products.

The evaluation of the drug precursors regulations was published in November 2020. Drug precursors have primarily large and varied legitimate uses, for example in the production of pharmaceuticals, cosmetics, plastics and perfumes – but they are also used for the production of illicit drugs such as heroin, cocaine and most importantly amphetamines. The evaluation found that implementation of the regulations varies substantially between Member States. Diversion from licit trade continues to occur and that the real scale of diversion and smuggling far outmatches the volume of seizures, indicating that the prevention of diversion has not been effective. Also, it appears that the current control and monitoring regime is not able anymore to address the overall needs. The evaluation also provided recommendations to improve efficiency, and in terms of coherence the need to keep the EU drug precursor policy fully aligned with the EU Drugs Agenda and Action Plan.

The Performance Measurement Framework (PMF) study was finalised (in December 2020) by an external contractor for both Customs 2020 and Fiscalis 2020 programmes. The study confirmed the Mid-Term Evaluation conclusions on the current PMF by the criteria of its effectiveness, efficiency, coherence, relevance and alignment with the Better Regulation Guidelines' principles. The study team identified the PMF strengths (i.e. elements to retain) and weaknesses (i.e. areas for improvement): in particular, it identified weaknesses with the quality of indicators to meaningfully assess the performance of the programmes across the activities supported, but also its limited utility and visibility among stakeholders. Most importantly, the report presented a proposal for a new PMF and new tools for its implementation. These include updated intervention logics, lists and definitions for proposed indicators, suggested roles and responsibilities for stakeholders within DG TAXUD, data collection tools, and PMF management and reporting tools. The new framework is currently a work in progress to be finalised in Q2 2021.

In addition to technical studies and evaluations, the mid-term evaluation of Customs 2020 was published in 2019 ([SWD\(2019\)14 final](#))<sup>1</sup>. The key findings of that evaluation have been presented in the Programme Statement DB2020. The final evaluation of Customs 2020 was launched in the second half of 2020, with a report to be prepared by the end of 2021.

The studies and evaluations financed under the programme Customs 2020 can be found on the TAXUD EUROPA website: [https://ec.europa.eu/taxation\\_customs/calls-tenders-grants-calls-expression-interest\\_en](https://ec.europa.eu/taxation_customs/calls-tenders-grants-calls-expression-interest_en) and on the EU Bookshop on <https://bookshop.europa.eu/en/home/> (author: Directorate-General for Taxation and Customs Union).

#### **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :Support the preparation and uniform implementation of customs legislation and policy as well as customs cooperation and administrative capacity building, including human competency and the development and operation of European electronic systems.**

**Indicator 1:Union Law and Policy application and implementation index - Number of actions under the programme organised in this area**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									Stable value or increase compared to the first two years of measurement
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of actions
Cut-Off Date	
Data source	Activity Reporting Tool (ART) managed by DG TAXUD
Link to the objective	
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF
Other methodological comments	Timeliness: Yearly as from the first year.
Full metadata available at this address	
Justification of the trend	

**Indicator 2:Union Law and Policy application and implementation index – Number of recommendations/guidelines issued following those actions**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									Stable value or increase compared to the first two years of measurement
	Actual Progress									Final

<sup>1</sup> Evaluations of Customs 2020 are conducted in accordance with Art. 18.1 of Regulation 1294/2013

Are we on track	
Indicator type	Output
Unit of measurement	Number of recommendations/guidelines
Cut-Off Date	
Data source	Surveys managed by DG TAXUD

Indicator type	Impact
Unit of measurement	Number of countries
Cut-Off Date	
Data source	<a href="https://lpi.worldbank.org/">https://lpi.worldbank.org/</a>
Narrative	The LPI is an interactive benchmarking tool created to help countries identify the challenges and opportunities they face in their performance on trade logistics and what they can do to improve their performance. The composite elements of this indicator are not exclusively related to the performance of the customs administrations. There are equally subjective elements in it, namely the opinions of traders and economic operators. For these reasons, it is difficult to rely solely on this indicator when assessing the impacts of the customs performance and, in particular, of the Customs programme.
Methodology	World Bank own methodology
Link MFF 14-20 / MFF 21-27	TBD
Other methodological comments	No data available, the LPI is measured once every 2 years
Full metadata available at this address	
Justification of the trend	

**Specific Objective 1 :to support customs authorities in protecting the financial and economic interests of the Union and of the Member States, including the fight against fraud and the protection of intellectual property rights, to increase safety and security, to protect citizens and the environment, to improve the administrative capacity of the customs authorities and to strengthen the competitiveness of European businesses**

**Indicator 1:the feedback from participants in actions under the Programme and users of the Programme index (Collaboration robustness)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Network opportunity										
2013	Milestones									2020

Cooperation: Number of face to face meetings										
2013	Milestones									2020
	380	380	380	380	380	380	380			380
	Actual Progress									Final
	265	547	552	448	473	570	85			
Number of online group (taxation and joint groups)										
2013	Milestones									2020
	Actual Progress									Final
	117	124	465	147	186	237	326			

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Relevant for each sub indicator (top to bottom of the table):a) Degree of networking expressed in percentage terms of positive replies. b) Degree of networking expressed in percentage terms of positive replies.c) Number of face-to-face meetings held under the programme.d) Number of ongoing on-line collaboration groups on the Programme Information and Collaboration Space (PICS).
Cut-Off Date	
Data source	Relevant for each sub indicator (top to bottom of the table):a) Relevant question on the Event Assessment Form (EAF) and programme polls.b) Relevant question on the Event Assessment Form (EAF) and programme polls.c) Activity Reporting Tool (ART). ART is an IT tool used to manage activities carried out under the Customs and Fiscalis programmes.d) Programmes Information and Collaboration Space (PICS). PICS is DG TAXUD's online collaboration tool for tax and customs professionals working in administrations across Europe
Narrative	
Methodology	Relevant for each sub indicator (top to bottom of the table):a) EAFs are filled in online via EUSurvey by participants to an event. Timeliness: annual frequency; data collection for year X takes place between March X and March X+1. Programme polls are done via EUSurvey every 18 months. b) EAFs are filled in online via EUSurvey by participants to an event. Timeliness: annual frequency; data collection for year X takes place between March X and March X+1. Programme polls are done via EUSurvey every 18 months. c) Query in ART: total number of meetings, minus virtual meetings. Timeliness: annual query.d) Query in PICS: on-line groups (total); filter results by programme.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data on networking effect can be obtained from the EAF and from the programme's poll. In order to ensure comparability of results across years and consistency with figures reported in the AAR, the results for 2017 and 2018 have been modified to those obtained from the EAF. The data on networking for 2020 are not available yet, as the collection of data is performed during the month of February 2021. The data will be analysed on the first week of March and available by mid of March. Next year, the collection of data will be anticipated in January, in order to have them available for the programme statements exercise.
Full metadata available at this address	
Justification of the trend	The drop on above network indicators and number of face-to-face meetings in 2020 is due to the Covid-19 pandemic.

**Indicator 2: number of guidelines and recommendations issued by MS in their national administrations following activities under the Programme relating to modern and harmonised approaches to customs procedures**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0	94%	Improve the level of 2014			Improve the level of 2014					
	Actual Progress									Final
	108	151	82	186	66	236				

Are we on track	On track
Indicator type	
Unit of measurement	Recommendations and guidelines are counted individually, rather than by the number of documents containing them.
Cut-Off Date	
Data source	Relevant questions on the Event Assessment Form (EAF) and Action Follow up Forms (AFF).
Narrative	This indicator measures the extent to which participation in a programme's activity relating to modern and harmonized approaches to customs procedures led national administrations to develop their own guidelines and recommendations.
Methodology	EAFs and AFFS are filled in online via EUSurvey by participants to an event. Timeliness: annual frequency; definitive data for year X available in March year X+1.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The recommendations and guidelines are counted here individually, rather than by the number of documents containing them. Fluctuations in this indicator, however, need to be interpreted carefully, as not every recommendation or guideline is equally important and is dependent on its actual business value. Typically the collection of data is performed during the month of February / March and analysed on the month of March. The data for 2020 are not available yet, due to a technical issue with the survey, so a new survey needs to be relaunched and the data will be possibly available in May 2021. Next year, the collection of data will be anticipated in January, in order to have them available for the programme statements exercise.
Full metadata available at this address	
Justification of the trend	

### Indicator 3: the Common Communication Network for the European Information Systems

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
	0,999	0,999	0,999	0,999	0,999	0,999	0,999			0,999
	Actual Progress									Final
	0,9989	0,9995	0,9998	0,9998	0,99976	0,9947	0,9997			

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage terms of the availability (time) of the Common Communication Network and Common System Interface (CCN/CSI).
Cut-Off Date	
Data source	IT statistics produced by TAXUD.
Narrative	The Common Communication Network and Common System Interface (CCN/CSI), are indispensable for the running of the customs related European Information Systems (EIS). In accordance with the Union Customs Code and the e-Customs Decision, the customs EIS lie at the heart of the Customs Union, which is one of the elements supporting the smooth running of the Single Market by allowing the free circulation of goods. This indicator provides a measurement of the programme's results on the effective operation of the CCN/CSI.
Methodology	Timeliness: for the purpose of monitoring programme's objectives, the frequency is annual. However, availability can be also measured on weekly, monthly or quarterly basis, if needed for specific IT monitoring.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 4: the Union Law and Policy Application and Implementation Index

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of actions under the Programme organised in this area										
2013	Milestones									2020
	67	Improve the level of 2014	Improve or stable	Improve or stable	Improve or stable	Improve or stable	Improve in the average score			Improve in the average score
	Actual Progress									Final
	67	65	123	122	114	132	88			
Number of recommendations issued following those actions										
2013	Milestones									2020
0		Improve or stable	Improve or stable	Improve or stable	Improve or stable	Improve or stable	Improve in the average score			Improve in the average score
	Actual Progress									Final

	312	290	225	267	133	163				
Are we on track	Moderate progress									
Indicator type										
Unit of measurement										
Cut-Off Date										
Data source										
Narrative	The Union Law and Policy application and implementation index measures the progress in the preparation, application and uniform implementation of customs legislation and policy inter alia on the basis of: number of actions under the programme organised in this area and number of recommendations/guidelines issued following those actions. The uniform implementation of customs legislation and policy is the pillar of the Customs Union, which is one of the elements supporting the smooth running of the Single Market by allowing the free circulation of goods.									
Methodology										
Link MFF 14-20 / MFF 21-27										
Other methodological comments	When counting the number of actions that are operational in a year under a specific objective, it should be taken into account that the indicator only counts the actions for which the objective in question was chosen as primary objective. This is done so to avoid counting twice the same action under different objectives. However, it should be noticed that there are many actions having "Support the preparation, coherent application and effective implementation of Union law/policy" as secondary objective that are not counted under this indicator. Content-wise, the projects are usually multi-annual rather than annual. The nr of recommendations for 2020 are not available yet, as the collection of data is performed during the month of February/March 2021. The data will be analysed available by end of March. In the following years, the collection of data will be possibly anticipated in January, in order to have them available for the programme statements exercise.									
Full metadata available at this address										
Justification of the trend	We should also take into account that, while earlier years had more actions in total, and more actions specifically addressing concrete issues, in the last years many actions were to a greater extent organised in broader projects covering themes rather than specific interventions. Content-wise, the projects are usually multi-annual rather than annual, as the actions and processes they cover stretch over more than one year. This may lead to less new initiatives and in a decrease in the total number. COVI-19 pandemic may have impacted the figures for 2020.									

### Indicator 5: the European Information System Availability

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Centralised IT customs applications (including tariff systems): business hours										
	Milestones									2020
	0,99	0,97	0,97	0,97	0,97	0,97	0,97			0,97
	Actual Progress									Final
	0,99	0,99	0,98	0,987	0,9944	0,9627	0,9982			
Centralised IT customs applications (including tariff systems): otherwise										
	Milestones									2020
	0,95	0,95	0,95	0,95	0,95	0,95	0,95			0,95
	Actual Progress									Final
	0,99	0,99	0,98	0,987	0,9944	0,9627	0,9982			

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage terms of the availability (time) of specific Union components of the European Information Systems during business hours or outside business hours respectively.
Cut-Off Date	
Data source	IT statistics produced by TAXUD.
Narrative	In accordance with the Union Customs Code and the e-Customs Decision, the customs European Information Systems (EIS) lie at the heart of the Customs Union, which is one of the elements supporting the smooth running of the Single Market by allowing the free circulation of goods. This indicator provides a measurement of the availability of specific Union components of the EIS that are in operation, namely centralised IT customs applications (including tariff systems).
Methodology	Timeliness: for the purpose of monitoring programme's objectives, the frequency is annual. However, availability can be also measured on weekly, monthly or quarterly basis, if needed for specific IT monitoring.

## 6.3. Contribution to clean air financing

Not applicable

## 6.4. Contribution to gender equality

Not applicable

## 6.5. Contribution to the sustainable development goals

### 6.5.1. Goals

#### *SDG 3 Ensure healthy lives and promote well-being for all at all ages*

The pandemic has highlighted the importance of customs in assisting Member States in times of crisis. From the start of the covid-19 crisis, EU customs ensured that imports of important medical and protective equipment could flow freely, while keeping unsafe products off our markets. Moreover, the Commission took immediate measures to temporarily suspend customs duties payable upon importation on vital goods needed to combat the effects of the COVID-19 outbreak.

#### *SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all*

The Customs Union is a foundation of the European Union and an essential element in the functioning of the single market. The single market can only function properly when there is a common application of common rules at its external borders. To achieve that, the 27 national customs administrations of the EU act as though they were one. These common rules they apply go beyond the Customs Union as such with its common tariff and extend to all aspects of trade policy, such as preferential trade, health and environmental controls, the common agricultural and fisheries policies, the protection of our economic interests by non-tariff instruments and external relations policy measures.

For this reason, one can establish a link between the Customs 2020 programme's activities and several Sustainable Development Goals, such as Goal 8 (Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all) and Goal 15 (Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss).

DG TAXUD's long term objective is to ensure the full implementation of the Union Customs Code legal package while adapting customs rules to modern trade realities and communication tools. The envisaged end result is a paperless and fully automated customs environment. In autumn 2020, DG TAXUD presented specific actions for the next five years, in an Action Plan to take the Customs Union to the Next Level, which will focus on four areas of intervention: risk management, e-commerce, compliance, and the Customs Union acting as one.

Example: Export and external demand are among the main sources of growth in the EU. Therefore, the fast release of goods upon entry and the facilitation of the use of simplifications and special procedures are key to fostering trade and increasing competitiveness. In an important step towards a smarter and paperless customs environment, in June 2020 DG TAXUD launched the electronic system for traders for the Standardised Exchange of Information (INF, Special Procedures). This is a new trans-European system, required by the UCC to support the standardised electronic handling of traders' information from their inward and/or outward processing activities. The INF system is integrated in the EU Customs Trader Portal, which enables traders to electronically submit the relevant information to the customs authorities

## **1. Overview**

### **1.1. Challenges**

In order to establish a coherent space policy and effective governance to support the EU's political priorities, the Commission's proposal brings all existing and new space activities under the umbrella of a single EU Space Programme.

The EU Space Programme enables solutions to tackle global challenges such as sustainability and climate change, safety and security, natural disasters and mobility and strengthens the EU's role on the international scene as a global space power. The EU's space flagships foster innovative services that can meet the needs of users whilst guaranteeing European competitiveness. It will support security and defence capabilities relying on space-based services, and enhance safety, the security of the Union and its Member States, and reinforce autonomy in areas of strategic importance.

The EU Space Programme, by reason of scale, exceeds the financial and technical capacities of a single Member State and encompasses a pan-European capacity. Furthermore, it depends on the provision of data and services throughout all the Member States, requiring coordination at Union level. In addition, given the requirements in terms of security, all Member States must be involved. Taking the above into account, and given that the programme components fully fall within EU competence, action at EU level is necessary.

### **1.2. Mission (general objectives)**

The mission of the EU Space Programme (Galileo/EGNOS, Copernicus, SSA and GOVSATCOM) is to develop, maintain and operate the necessary infrastructure to support the policies of the Union and the Member States. In particular, it contributes to Union's strategic autonomy and its space industry and ensures the delivery of high quality services to users in a continuous and reliable manner (Copernicus and Galileo/EGNOS). The EU Space Programme comprises the following components: Galileo and EGNOS (European Geostationary Navigation Overlay Service) for satellite navigation, Copernicus for Earth Observation, the Space Surveillance and Tracking (SST) capacity and in the near future the reinforced Space Situational Awareness (SSA), and GOVSATCOM to provide the critical means of communication, even in times of crisis.

### **1.3. Specific objectives**

The EU Space Programme pursues the following objectives:

1. to provide long-term, of state-of-the-art and, where appropriate, secure positioning, navigation and timing services whilst ensuring service continuity and robustness;

2. to deliver accurate and reliable Earth Observation data, information and services integrating other data sources, supplied on a long term sustainable basis, to support the formulation, implementation and monitoring of the Union and its Member States' policies, and actions based on user requirements;
3. to enhance Space Surveillance and Tracking (SST) capabilities to monitor, track and identify space objects and space debris, with the aim to further increase the performance and autonomy of SST capabilities at Union level, to provide space weather services and to map and network Member States Near-Earth Objects (NEO) capacities;
4. to ensure the long-term availability of reliable, secure and cost effective satellite communications services for GOVSATCOM users;
5. to support an autonomous, secure and cost-efficient capability to access space, taking into account the essential security interests of the Union;
6. to foster the development of strong Union, space economy including by supporting space ecosystem and by reinforcing the competitiveness, innovation, entrepreneurship, skills and capacity building in all Member States and Union with particular regard to small and medium-sized enterprises and start-ups or legal and natural persons from the Union active or wishing to become active in that sector.

#### 1.4. Public intervention context

The EU's action is based on Article 189 of the Treaty on the Functioning of the European Union. The EU Space Programme can support and transform many areas of EU legislation in the fields of environment, civil protection, security, climate change, internal market, transport, energy, agriculture, cooperation with third countries and humanitarian aid and many more.

Under the same Article, EU action for space research under Horizon Europe, the EU research and innovation framework programme, is supporting technological development and the competitiveness of European upstream and downstream space sectors, including support to space entrepreneurship.

#### 1.5. Actions

The EU Space Programme is implemented through each of its components. In addition to maintaining continuity of the existing infrastructure and services from its flagship components (Copernicus and Galileo/EGNOS), the EU Space Programme introduces a number of new features, such as the Copernicus security and emergency services, and the Galileo Public Regulated Service that can be used for emergency services, peacekeeping operations, crisis and border management, or military operations. New initiatives include secure satellite communications and Space Situational Awareness to preserve assets of the EU Space Programme to reinforce links between space, security and defence. GOVSATCOM will provide reliable, secured, and cost-effective satellite communication services for EU and national public authorities managing security critical missions and infrastructures. The underlying secure satellite communication capacity and services will be provided by Member States and by security-accredited commercial private companies, while future space assets could be developed after 2024.

#### 1.6. Delivery mode

Directorate-General for Defence Industry and Space (DG DEFIS) is the lead DG for the programme implementation. The EU space components are implemented mainly through indirect management with the European GNSS Agency (EU SPA), the European Space Agency (ESA), EUMETSAT, whereas, a part of the budget is implemented through direct management by the Commission (grants and procurement).

The EU Space Programme enables a wide range of EU policies, including climate, environment, security, and mobility. As a consequence, extensive collaborations exist between DG DEFIS and other services such as DG HOME, DG AGRI, EEAS, EAC, DG CLIMA, DG CNECT, DG GROW, DG ENVI, DG INTPA, DG ECHO, DG JRC, DG MARE, DG TAXUD and DG MOVE.

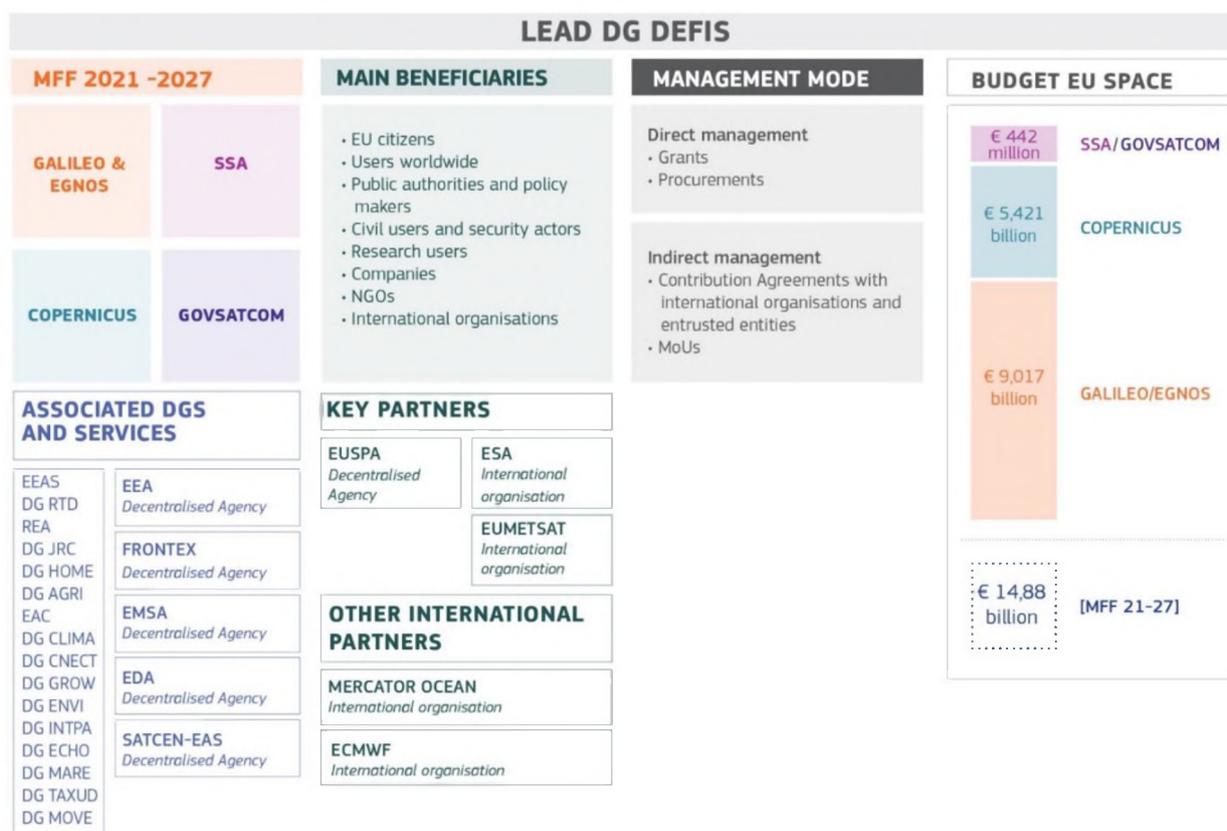

For the research actions, DG DEFIS closely collaborates with DG RTD which is in lead for Horizon 2020 and Horizon Europe. A special and long-term relation exists with DG JRC, active in operational research for Galileo/ EGNOS and Copernicus, and potentially for other space and defence industry aspects in the future.

DG DEFIS coordinates the EU efforts on countering hybrid threats and Military Mobility, and in that capacity, co-operates with services in the Security Union family as well as with the European External Action Service.

The EU Space Programme and its partners, within their respective roles and responsibilities, support Europe to remain a leading international actor, in addressing various societal challenges and in strengthening the competitiveness of the European space industry through the whole value chain. In particular, by mapping critical technologies dependence and supply chains of the defence, aeronautics and space ecosystem in fast evolving markets, informed policy actions will result, to enhance strategic autonomy and technological sovereignty in Europe, whilst promoting investments and reinforcing support to SME's.

#### 1.7. Graphic overview of the programme structure

## EU SPACE PROGRAMME

### 1.8. Legal basis and financial programming

#### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM (2018) 447: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the space programme of the Union and the European Union Agency for the Space Programme and repealing Regulations (EU) No 912/2010, (EU) No 1285/2013, (EU) No 377/2014 and Decision 541/2014/EU	2021 - 2027	14 880,0

#### 1.8.2. Legal basis explanation

The European Parliament and the Council reached a political agreement on the Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the space programme of the Union and the European Union Agency for the Space Programme and repealing Regulations (EU) No 912/2010, (EU) No 1285/2013, (EU) No 377/2014 and Decision 541/2014/EU in December 2020. The Regulation will bring together the existing EU activities in this domain (Galileo, Copernicus and EGNOS) and will provide the basis for the new initiatives on GOVSATCOM and SSA. The entry into force of the Regulation is foreseen for spring this year.

#### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>1 997,4</b>	<b>2 008,2</b>	<b>2 045,4</b>	<b>2 088,5</b>	<b>2 131,4</b>	<b>2 175,3</b>	<b>2 221,8</b>	<b>14 668,0</b>

#### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The EU Space Programme is building on the success of its predecessor components that will be continued with more focus on synergies with other EU policy areas. For the next programming period, the Commission proposed to maintain and further enhance the EU's leadership in space. The proposal brings all existing and new space activities under the umbrella of a single EU Space Programme. The latter maintains existing infrastructure and services and introduces a number of new features, e.g. fostering a strong and innovative space industry in Europe, maintaining Europe's autonomous access to space and a unified system of governance.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

For the EU Satellite Navigation programmes (Galileo and EGNOS), the new contribution agreements with ESA and EUSPA (European Union Agency for the Space Programme) are expected to be signed by the end of Q2 2021, after the formal adoption of the [draft] EU Space Regulation. Most of implementation is delegated to these entrusted entities and it is expected to consume fully the total of commitment appropriations of the year 2021.

For the EU Earth Observation programme (Copernicus), the new contribution agreements with nine entities (EUMETSAT, MERCATOR OCEAN, ECMWF, EEA, FRONTEX, EMSA, EDA, SATCEN-EAS and ESA) are expected to be signed by the end of Q2 2021, after the formal adoption of the [draft] EU Space Regulation. Most of the implementation is delegated to these entrusted entities and it is expected to consume fully the total of commitment appropriations of the year 2021.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Galileo and EGNOS

	Commitments	Payments
Implementation Voted budget	6 841 411 042.13	5 827 451 513.17
Implementation Carry-overs	0.00	13 267 941.51
Implementation total	6 841 411 042.13	5 840 719 454.68
total envelop*	6 841 418 300.00	
cumulative implementation rate	100%	85%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

During the MFF 2014-2020, the EU Satellite Navigation programmes (Galileo and EGNOS) committed EUR 6.841 million, making full use of the appropriations made available and reaching 100% execution in terms of commitment appropriations. In terms of payment appropriations, payments made during that same period amounted to EUR 5.841M, which represented 85% rate of payment execution. The COVID-19 crisis-related restrictions led to delays of several months in achieving key milestones of the Galileo and EGNOS programme but also by other issues resulting from the lessons learned exercise following a Galileo service incident (in particular the July 2019 service incident). The milestones affected were the following:

- The Open Service Full Operational Capability (OS FOC) milestone was delayed due to delays in the ground segment development and deployment activities stemming from the implementation of the July 2019 incident recommendations in terms of robustness improvements on the systems, and slowed down by the COVID-19 crisis which has led to travel restrictions, constraints in accessing the sites of the control centres, etc. Delays in the satellites development activities resulted due to the COVID-19 crisis but also due to issues on satellites clocks. The initial schedule for OS FOC was end of 2020. The new milestone is now planned for end of 2022 with a high level of confidence. The delay in the OS FOC is not to be considered as a major issue for the Programme, as Galileo is already delivering services and very accurate signals to two billion users through signals sent by 22 operational satellites in orbit. The coming satellite launch (in 2021) is expected to improve and reinforce the OS service (i.e. improve commitment in terms of service availability).

- The Public Regulated Service (PRS) milestones, in particular Service Initial Operational Capability milestone has been delayed for similar reasons as the OS FOC, as it relies on the deployment of appropriate ground infrastructure and satellites. The COVID-19 crisis has had an important impact and amplified due to the classified nature of activities linked to PRS which require physical meetings to a large extent. This milestone was initially planned for end-2021 and is now planned for end-2023. This delay is more of a concern than OS FOC delays, as Member States need to plan defence investments associated to the use of PRS. The Commission is working with Member States to inform them continuously on risks associated to this calendar.

The main improvements for Galileo and EGNOS which are introduced through the [draft] EU Space Regulation can be summarised as follows:

- streamline the overall programme governance with the introduction of a linear governance between Commission that will oversee the overall responsibility and oversight of the programme, the EUSPA that will be in charge of managing the exploitation of EGNOS and Galileo, and ESA with the responsibility of the system design and procurement of long term evolutions of the EGNOS and Galileo systems. This linear governance is expected to allow for a more efficient decision-making and a clarified chain of command.
- transfer of responsibility to GSA for all aspects related to service delivery and maintenance of the system in operation. Compared to the current situation where maintenance and minor improvement of the system are delegated to ESA, this should ensure better reactivity in case of anomaly to be fixed by changes to the design to secure service continuity.
- Contracting authority retained on the side of EU. This is the target scenario for the implementation of the Financial Framework Partnership Agreement (FFPA) which is currently under negotiation. This should enable a good control of contract tendering and execution for all elements of the programme compared to the current situation where ESA is procuring in its own name all activities related to the ground segment of Galileo and to EGNOS.

#### Copernicus

	Commitments	Payments
Implementation Voted budget	4 251 388 081	3 647 651 454
Implementation Carry-overs	0	10 077 040
Implementation total	4 251 388 081	3 657 728 494
total envelop*	4 251 510 000	
cumulative implementation rate	100%	86%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

During the MFF 2014-2020 the EU Earth Observation programme (Copernicus) committed EUR 4.251 million, making full use of the appropriations made available and reaching 100% execution in terms of commitment appropriations. In terms of payment appropriations, payments made during that same period amounted to EUR 3.657M, which represent 86% rate of payment execution. There were no disruption in the Copernicus programme implementation thanks to excellent cooperations with the entrusted entities and overall business continuity the could be ensured.

Concrete improvements have been introduced to the design of the Copernicus programme in order to address areas for improvement and challenges identified but also to transpose lessons learnt from the 2014-2020 implementation of the Copernicus programme. These can be summarised as follows:

- Data distribution and access issues, as also highlighted in the mid-term evaluation which led to the launch of (5) Data and Information Access Services;
- Integration of Earth Observation data into European Data Spaces, such as the Green Data Space;
- the Copernicus programme has anticipated the digital transition and will partner with Destination Earth and the Digital Twin Earth driven by Commission and ESA;
- Copernicus is preparing to be ready for the Cloud Paradigms: cloudification of the ground segment (ESA), integrated data management task force to deal with the ground segment evolution (ESA, EUMETSAT) and dissemination infrastructure including the DIAS;
- User uptake strategy and market uptake to be improved and facilitate further the coordination with national user uptake and downstream activities: coordination at programme level (EUSPA, KCEO);

In order to support the space industry during the COVID-19 crisis, DG DEFIS decided to agree with measures implemented by ESA and GSA to increase the cash flow of industry when possible within the legal boundaries of the contracts. The COVID-19 crisis lead to some delays in the implementation of the industrial contracts but overall had no impact on the budgetary implementation of the space programmes.

## **3. How is the programme performing ?**

### **3.1. Performance**

#### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### **3.1.3. Previous programme performance**

##### ***EGNOS and Galileo***

Over the past years, the key priority has been ensuring the continuity of Galileo and EGNOS services, continuing preparations for full operational capability of Galileo services and promotion of market uptake of Galileo and EGNOS services.

##### ***Galileo programme***

Galileo is Europe's state-of-the-art global navigation satellite system, providing a highly accurate global positioning service under civilian control. Galileo consists of a satellite constellation and the necessary ground infrastructure to control the satellites and enable the provision of positioning, navigation and timing services. Galileo offers autonomous navigation and positioning services, but is also compatible with the US GPS satellite navigation system. Galileo is one of the European large infrastructure projects and is entirely financed by the EU budget. Galileo ensures Europe's autonomy in an area that is of strategic importance to both its economy and security. Galileo is already used, among others, in mobile phones and car navigation. Galileo could be used for a large number of purposes, including critical business processes that require uninterrupted navigation, and timing services needed for example for critical applications such as the synchronisation of electricity grids and telecommunication networks.

Galileo Initial Services were declared operational on 15 December 2016. Since then, the performance has gradually improved due to enhancements both in the space segment (number of satellites in orbit) as well as the ground segment. The positioning and timing performance is better than for any other Global Navigation Satellite System (GNSS) system. Galileo Initial Services are fully interoperable with GPS, and their combined use is bringing more accurate and reliable positioning for end users. Navigation in cities, where tall buildings can often block satellite signals, particularly benefits from the increased positioning accuracy of Galileo and GPS combined. In addition, Galileo's accurate timing contributes to enabling more resilient synchronisation of banking and financial transactions, telecommunication and energy distribution networks to help them operate more efficiently.

With regard to the Galileo services, several important developments have taken place in 2020. The new Search and Rescue (SAR) functionality called the Return Link Service (RLS) was declared operational in January 2020 and has delivered excellent service since then as reported in the Galileo SAR Quarterly Performance Reports<sup>1</sup>. Galileo's Search and Rescue service reduces drastically the time to detect emergency distress beacons from up to three hours to less than ten minutes. As the location of the distress beacon is determined more accurately, people lost at sea or in the mountains can be rescued more quickly. It takes less than 10 minutes with the Galileo's Search and Rescue service to detect emergency distress beacons and locate people in distress when compared to up to 3 hours previously required. With the new functionality, the Galileo SAR RLS service, an automatic acknowledgement message is provided back to the user informing them that their request for help has been received. Further SAR functionality is being defined, in particular Remote Beacon Activation (RBA) and 2-Way Communication. RBA will allow to remotely activate the alert beacons in case the beacon user cannot do so (main use case for aviation is the aircraft disappearance Malaysian airline MH370 and for maritime, it can be a sailor in distress who could not switch on the alert beacon). This service will be uniquely provided by Galileo (no other RLS provider is working on this). The service declaration is scheduled at the beginning of 2023. The 2-Way Communication service will allow collection of information from the distress area using the RLS. It will allow exchanging messages between the Rescue Coordination Centre and the people in distress. The service declaration will not happen before 2024 and is targeting second generation beacons only.

In addition, a new version of the Open Service Signal In Space Interface Control Document, (SIS ICD) was prepared and approved for publication early in 2021. This issue incorporates improved signal features for increasing robustness and improving the acquisition time, especially in difficult environments. All modifications are backwards compatible, so legacy receivers are not impacted. These improvements will be implemented in the Signal in Space by end of 2023, in the meantime publication of the SIS ICD allows manufacturers to adapt their products accordingly.

Significant steps were made with the development and testing of a number of new services – the OSNMA (Open Service Navigation Message Authentication) test phase started live in November 2020, and on for the High Accuracy Service (HAS), which will provide 20cm positioning accuracy over Europe, the service concept was consolidated and the first phase of testing has begun. The Commercial Authentication Service (CAS) concept has been further developed and the roadmap for implementation has been defined. Requirements and concept for an Emergency Warning Service are being finalised in collaboration with civil protection authorities of EU Member States.

<sup>1</sup> Available on <https://www.gsc-europa.eu/>

However, service disruptions have occurred. To recall, in July 2019, the entire system was unavailable for use for 6 days before recovery. This led to a major review of many elements including the operational procedures, and the lessons learned in turn led to technical and operational improvements to increase the robustness of the system, with improvements to the ground segment to ensure that this type of incident will not happen again. On 14 December 2020, a service outage of a few hours occurred, which was due to an anomaly on the ground segment and was quickly recovered. Overall service commitment was not impacted and the root cause of the incident has been found and fixed. The Galileo Open Service has been delivered with excellent quality and availability, and performance of the Galileo Search and Rescue (SAR) service, including the Return Link Service has also been excellent during 2020. For the longer term, these incidents improve and ensure the resilience of the Galileo system. An operational Galileo gives the Union a strong position on the world stage of satellite navigation where the US and Russian systems are being modernised and the Chinese system is rapidly being developed.

The space segment has been stable with 22 operational satellites providing full services. There are also two additional satellites in space, which were originally injected into a wrong orbit due to a launcher failure in 2014. These satellites have been to a large extent recovered and although they are still occupying a non-nominal orbit, their Search and Rescue (SAR) payloads have been operational and contributing to Galileo SAR service, helping to save lives since early 2016. In addition, the navigation payloads have been tested extensively for their use in positioning and timing applications. These two satellites were introduced formally into the operational Galileo constellation on November 30 2020, for a further observation period of 2 months, with no commitments on their availability.

The manufacturing of additional satellites to complete the constellation and provide sufficient spares for ensuring its continuity has continued, but with delays in the schedule due to the COVID situation. The first satellites shall become available by the first quarter of 2021 for a launch date planned in Q4 2021, as soon as all conditions are met including on ground segment and operations side. The target of 30 satellites (24 operational satellites plus 6 in-orbit spares) requires the launch of an additional 8 satellites, and is now planned for Q4 2024. In the meantime, the system is already providing full service with the performance as expected once the full constellation is deployed. As the programme intends to use the Ariane-6 launcher in the near future, development of a specific dispenser to carry the Galileo satellites on-board Ariane-6 was initiated in 2019 and will be completed by end 2021.

With regard to the ground infrastructure, despite delays incurred due to the COVID-19 crisis, significant progress was made on the new system release SB1.7 which will be deployed in advance of the next satellite launch in 2021 and will meet all requirements related to the deployment and operation of those and the other 6 “so called Batch 3” satellites. Work has also continued in parallel on the next System Builds, which will support advanced features and improved resilience of the system.

The overall performance of the Galileo programme to develop and provide global satellite-based radio navigation infrastructures and services progressed during 2020 but was impacted in terms of delays by two major factors: i) implementation of recommendations stemming from the Galileo service incident of July 2019 aiming to improve the resilience of the Galileo services by means of contracting new system evolutions (these include technical improvements to the system as well as management and governance improvements) and ii) severe restrictions on travel and working procedures imposed by the ongoing COVID-19 crisis.

While the programme has focused on ensuring the continuity of service provision and related operations, these restrictions have led to delays of several months in achieving key milestones of the programme, such as the next Galileo Launch (L11) and the deployment of ground infrastructure. Taking these constraints into account and despite the COVID-19 situation, the programme remains on track and in particular, the key services are already being delivered according to expectations.

The Programme has also made major progress on the preparation of the Galileo Second Generation (G2G). A Commission implementing Act was adopted in December 2020<sup>2</sup> and the overall schedule for G2G including the procurement of the first G2G satellites has been accelerated to allow for a first launch of second generation satellites will take place in 2024. The technical requirements have been consolidated and the first of two industrial contracts was signed in Q1 2021.

### ***EGNOS programme***

EGNOS, the European Geostationary Navigation Overlay Service, is a fully operational regional satellite navigation system, monitoring and correcting open signals emitted by the US GPS and in the future Galileo. It consists of several transponders installed on geostationary satellites and a network of ground stations. By improving the accuracy and reliability of the US GPS signal over the territory of Europe, EGNOS allows users in Europe to use GPS signals, for instance, for safety-critical applications such as operating aircraft. It allows users in Europe and beyond to determine their position to around 1 metre.

The performance of the EGNOS programme to provide satellite-based services improving the performance of GPS to gradually cover all EU Member States, has steadily improved and just a few territories remain uncovered. The coverage of these territories is envisaged to be achieved with the launch of the EGNOS V3 technology around 2025.

The continuous delivery of EGNOS services was successfully achieved by efficient implementation of recurrent activities and preparation of system updates. To guarantee the continuity of services beyond 2020, work has continued on the development of two major EGNOS evolutions, V2.4.2-A and V2.4.2-B, which will solve obsolescence issues and improve the coverage of European Member States' territories respectively. The former evolution will be in operations in 2021 while the latter in 2023.

---

<sup>2</sup> Commission Implementing Act C(2020)8969 of 17 December 2020

The update of the EGNOS Safety of Life Service Definition Document improving the coverage over Cyprus, was finally not published in 2020 and is planned for end-2021.

EGNOS has successfully managed the transition to supporting a new generation of GPS satellites<sup>3</sup> and activities for the development of a new generation of EGNOS, the EGNOS version 3, continued.

Finally, a new EGNOS GEO transponder was procured in 2020 (so-called GEO-4) which is planned to be launched in orbit in 2022.

### *Market uptake*

Since the declaration of Galileo Initial Services in 2016, the market uptake of Galileo-enabled smartphones has been very rapid. **In 2020, the estimated number of Galileo-enabled smartphones in use worldwide has reached almost two billion.** In 2020, there were 608 Galileo-enabled smartphone and tablet models available on the market. The full overview of Galileo-enabled devices is available online: <https://www.usegalileo.eu/> Other activities supporting the market uptake of Galileo included Galileo acceleration and hackathon initiatives to foster the developments of applications that use Galileo signals and standardisation activities to ensure that Galileo is properly considered in standardisation bodies. When it comes to European GNSS downstream standardisation, the Commission aims to facilitate the development and promote the inclusion of Galileo and EGNOS in the ongoing relevant work of the standardisation organisations, in particular with voluntary measures.

A major achievement is the adoption in November 2020 of ICAO (International Civil Aviation Organization) standards by the **ICAO Navigation System Panel for Galileo and EGNOS v3**, allowing to use Galileo signals in aviation by enabling the development and certification of Galileo-compatible receivers. This means that the aviation industry will be able to build and equip with avionics compatible with Galileo, bringing additional benefits to air navigation. The outcome reflects the many years of effort of the Commission and GSA teams, as well as excellent cooperation with DG MOVE, EASA and Eurocontrol

**Another key achievement is the use of satellite signals for locating people during emergency communication from their smartphones.** Location information based on Galileo provides an accuracy of only a few meters in contrast to the network-based location (Cell ID) where the accuracy varies from 2 km to 10 km. In December 2018, the Commission adopted Delegated Regulation 2019/320 which requires that from March 2022 onwards all new smartphones sold in the EU internal market will need to be Galileo-enabled. In parallel, the Commission supported the Member States through the Help 112 II project, completed in July 2020, which enabled the successful deployment of the Advanced Mobile Location technology that uses Galileo-based information to establish the location of the emergency caller in seven Member States: Denmark, Sweden, France, Germany, Portugal, Hungary, and Croatia.

The key market segment for EGNOS is civil aviation. **Today, EGNOS is used at more than 370 airports in Europe and its usage is increasing.** This is also thanks to the requirements of Regulation 2018/1048 mandating the publication of Localizer Performance with Vertical guidance (LPV procedures) delivered by EGNOS in all instrument runway ends before January 2024. Beyond the aviation sector, EGNOS improves and extends the scope of such GNSS applications as precision farming, on-road vehicle management and navigating ships through narrow channels.

With regard to the Key Monitoring Indicators (2014-2020), the general objective of supporting European presence in space and the development of satellite-based positioning, navigation and timing services has been measured by the number of **Galileo and EGNOS receivers in the total number of receiver models worldwide.** The receiver's database was improved in 2020, when new companies were added to the baseline (in 2020 there were 40+ companies) in order to reflect the changes on the market, but also to include new segments (such as drones) and to reflect some significant changes in manufacturer's product offerings.

There is a **positive trend of the increasing production of Galileo-enabled receivers** that Galileo enabled and the actual progress is going towards the milestones set. In 2020, the presence of Galileo in receiver models was at 62 % of the total number of receiver models worldwide. There has been a tremendous uptake of Galileo-enabled smartphones. However, in other market segments such as rail, maritime or internet of things the market penetration of Galileo is slower. This is due to various reasons: long lifetime of receivers in the market (5-10 years models still on market), missing certification or standardisation, constraint in energy consumption of the chips on the connected objects, cost of optimisation (still many GPS-only models available) and receiver models serving only regional markets (e.g. Chinese or US manufacturers). In the coming years, the market share shall increase mainly due to phasing out of old models, increasing use of Galileo in the US and use of Galileo signals in safety-critical applications in aviation or rail segments.

With regard to the **EGNOS enabled receiver models, the actual progress stabilised at 68%** of the total number of receiver models worldwide. This is lower than the milestone of 85% set in 2014, when a steady growth was predicted and the milestones were set, the market penetration of EGNOS is lower than expected, in particular in the location based services or timing and synchronization devices. This is mainly because the early uptake of dual frequency in receiver models provided similar accuracy benefits as EGNOS. The first dual-frequency GNSS devices hit the mass market by the end of 2018. Dual-frequency capability means that the GNSS receivers are able to receive two GNSS signals at different frequencies from a satellite. This enables the receiver to compensate for errors introduced due to ionospheric effects, resulting in more accurate position calculation when compared to signal frequency GNSS receivers (e.g. GPS receivers). While the current version of EGNOS v2 augments only one frequency L1 of GPS, the new EGNOS v3 will be able to provide messages for two frequencies, L1 and L5, and will furthermore

<sup>3</sup> See the EGNOS Service Provider website: [https://egnos-user-support.essp-sas.eu/new\\_egnos\\_ops/egnos\\_ops/?q=egnos\\_system\\_realtime](https://egnos-user-support.essp-sas.eu/new_egnos_ops/egnos_ops/?q=egnos_system_realtime)

augment Galileo signals (both E1 and E5 frequencies) in addition to GPS. It should be noted that the rapid development of global navigation satellite systems (GNSS) constellations as well as the methods used for augmentation of GNSS signals i.e. with commercial augmentations of the signals, increased the performance of the GNSS to the level where the EGNOS benefits are less competitive than assumed in 2014, and it is probable that it will not change in the upcoming years. With regard to the 2020 target and beyond, it can be assumed that the number of EGNOS enabled receivers will not grow beyond 70 % of receiver models worldwide.

### *Environment and climate change*

Global navigation satellite systems Galileo and EGNOS contribute towards tackling climate change by supporting environmentally friendly transport solutions, sustainable agriculture and meteorological monitoring. For example:

- Reduced fuel consumption: satellite navigation enables optimal routes for cars, buses, boats and airplanes by providing accurate positions. This allows significant reduction of the fuel required to go from A to B and thus contributes to the reduction of CO2 emissions.
- Sustainable agriculture: As the centrepiece of precision farming, use of satellite navigation reduces the need for fertilisers. In turn, this means a reduction of greenhouse gases such as CO2, nitrous oxide and ammonia in the atmosphere.

### *Copernicus*

The programme has continued to meet the criteria established in its general and specific objectives (Article 4 in the Copernicus Regulation (EU) No 377/2014<sup>4</sup>). The monitoring capacities, intended as operating satellites in orbit, ground infrastructure and in-situ network, have been successfully deployed. This has guaranteed the achievement of a European autonomous access to environmental knowledge and a major role of the EU at international level.

Copernicus relies on a wide range and number of in-situ data to produce quality-assured information. The Copernicus cross-cutting in situ component continued its work in 2020 on the maintenance of the Copernicus In Situ Information System (CIS) and CORDA<sup>5</sup>, thus facilitating access to in situ data for service providers active in the core service production. Furthermore, access to hydrological and climatological data was facilitated by creating license agreement templates in close cooperation with CMEMS and C3S. Finally, the provision of air quality observations from EIONET<sup>6</sup> members to the Copernicus atmosphere monitoring service was continued.

The six core Copernicus services (land, atmosphere, marine, climate change, emergency, security) are all operational and provide the expected level of geo-information which is accurate and reliable based on regular data quality assessment reporting both by the space component and Copernicus services. The quality of outputs is furthermore confirmed by the consistent increase of registered users, benefiting from the programme products and information. To ease the distribution of (access and processing) services, capabilities were enlarged through the provision of the Copernicus DIAS service since 2018.

The six Copernicus services continued providing full, free and open information products in 2020 and business continuity was ensured despite COVID19 and there were no interruptions

**The Copernicus Emergency Management Service (CEMS)** continued providing information for emergency response in relation to different types of disasters, including meteorological hazards, geophysical hazards, deliberate and accidental man-made disasters and other humanitarian disasters, as well as prevention, preparedness, response and recovery activities. In 2020, the Rapid Mapping and the Risk and Recovery Mapping on-demand services of Copernicus Emergency Management Service were activated 74 and 21 times, respectively. Notable activations under the **Copernicus Emergency Management Service (CEMS)** are:

- On 8 April 2020, when a fire broke out in a Ukrainian forest within the exclusion zone surrounding the abandoned nuclear power plant at Chernobyl. The Rapid Mapping service produced reference, first estimate, delineation and grading maps to support efforts that could contain the fire.
- On 5 April, the Rapid Mapping service was activated by the Italian Civil Protection Department for the city of Turin. This activation coincided with the deployment of European medical doctors to the region by the EU Civil Protection Mechanism. The scope of this activation was to map and observe over time public gathering places such as street markets and parks, as well as temporary health facilities such as tents and triage facilities next to hospitals. The objective was to provide the Civil Protection with evidence to support the decision-making process in relation to the COVID-19 emergency.
- On 4 August 2020, when both the Rapid Mapping and Risk and the Recovery services were activated following a large explosion that rocked the city's port area in Beirut (Lebanon) when several people died in the explosion.

Synergies between the 'Rapid Mapping' and the 'European Flood Awareness System' were achieved, with nine EEAS pre-tasking requests for image acquisition in view of a potential 'Rapid Mapping activation'. A new feature was implemented with the addition

<sup>4</sup> <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A32014R0377>

of the 'European Forest Fire Information System Fire Polygons' in place to help delineate the area of interest for Rapid Mapping. Furthermore, the European/Global drought observatory continued its systematic reporting on severe drought events.

**The Copernicus Security Service**, covering three areas is proving its value with:

- 1) **The Copernicus Border Surveillance service (CBS):** The 'Copernicus/Eurosur Fusion Services' supported Member States, EU Agencies and EU institutions in tackling cross-border criminality and irregular migration. Apart from having contributed to saving lives at sea, the Earth Observation tools have contributed significantly to increasing the efficiency of Frontex surveillance operations.
- 2) **Copernicus Maritime Surveillance service (CMS):** 50 user organisations registered for this service in 2020, representing a 22% growth in comparison to 2019. A total of 5,497 EO services (i.e. satellite image product and additional data) were delivered during the year - all at the direct request of users - representing a 40% increase on the previous year. Customs and law enforcement authorities reported that Copernicus was useful operationally, contributing to several successful drug seizures and arrests. Demand also remained high for other activities such as fisheries control, pollution monitoring, and safety and security. Ten requests were made for emergency support, including: searching for missing vessels; monitoring debris and pollution following vessel groundings, fires on board, and sinking; monitoring oil pollution; and, locating containers washed overboard.
- 3) **Copernicus Service in Support to EU External Action (SEA):** In 2020, SEA received 71 User Requests and delivered 184 products, over more than 20 countries. By December 2020, almost 40 users from the EEAS, EU CSDP Missions and Operations, Member States, European Commission and the United Nations accessed the SEA service. Successful service evolution projects demonstrated added-value in the areas of law enforcement (Illegal smuggling, Illegal mining), environmental crime (Illegal waste) and transportation safety and security.

On the **Copernicus Marine Environment Monitoring Service (CMEMS):** the uptake of users is still exponential with more than 28.000 users registered and 200 use cases published thanks to public and private sectors partners. CMEMS contributes to the official EU reporting on SDG14 ocean acidification. Promotion at the international scene is entrusted to Mercator Océan International which is operating the CMEMS. In 2020, a contribution agreement was awarded by the DG FPI on behalf of DG DEFIS and RTD to this entity for running the EU4OceanObs project. The aim is to reach out to partners worldwide, including towards US and Australian partners in the frame of G7 and GEO initiatives on oceans. The design and future of CMEMS for the period 2021-2027 has been in focus, maintaining an ambitious science roadmap for service evolution that match the green deal priorities related to coastal, biodiversity, arctic, pollution and regional climate. The CMEMS issued two new releases of the service portfolio in 2020, being a major achievement for two sectors: 1) a new service for iceberg detection developed with the international ice chart services working group and 2) new high resolution coastal water quality products (based on Sentinel-2). By end 2020, all global and regional centres are equipped with wave and biogeochemistry forecasting. The 4<sup>th</sup> ocean state report was published end 2020 with nearly 120 ocean monitoring indicators refreshed monthly.

**The Copernicus Land Monitoring Service (CLMS)** provided an update of the Corine land cover product which is pan-European and cover most of the complementary high-resolution layers on specific land cover characteristics for the reference year 2018. The service continued the processing of the remaining High Resolution Layer Small Woody Features<sup>7</sup> and the implementation for next generation Corine Land Cover product (CLC+) that will support the LULUCF (Land Use, Land-Use Change and Forestry) reporting obligations. Other achievements of the CLMS in 2020 are the start of the production of a federated European Ground Motion Service (EGMS), based on Sentinel 1 in SAR interferometric technique, as well as the production of a first Near Real Time (NRT) service, i.e. the High Resolution Snow & Ice monitoring, soon to be followed by the High Resolution Vegetation Phenology & Productivity. A series of 2018 updates of the local hotspot monitoring products (Urban Atlas, Riparian Zones, Natura2000, Coastal Zones monitoring information with the CMEMS) were finalised in 2020, and further enriched, such as the building block height included in Urban Atlas. At global level, the service continued its production of yearly mid-resolution land cover maps of the Earth's surface. It also delivered on a ten daily basis over 20 variables supporting the monitoring of vegetation, agriculture, energy, cryosphere and water cycle.

**The Copernicus Atmosphere Monitoring Service (CAMS)** continually monitored air quality, in Europe and worldwide, using satellite and ground-based observations and advanced models. For this reason, the service was able to observe the impacts of lockdowns due to the COVID-19 pandemic on local and regional air quality; as less pollutants were emitted, air quality improved.

2020 was a year of extremes when it comes to wildfires and CAMS monitored global wildfire activity as well as the resulting emission of pollutants. The Arctic and western US saw record high levels of activity during the summer, whilst Canada and tropical Africa saw below average activity. With wildfires receiving ever more media and public attention around the world, CAMS recently released a dedicated [global fire monitoring page](#). The page is regularly updated with information on the location and intensity of fires, as well as the transport of the smoke pollution that they emit.

Regarding the ozone layer, CAMS provides continuous quality-assured information about its state, including the size of the Antarctic ozone hole; this work is important of course because the ozone layer protects us from potentially harmful ultraviolet

<sup>7</sup> For example :in support of providing data to monitor biodiversity and landscapes as part of utilised agricultural area

radiation, which can damage skin and eyes. The familiar Antarctic ozone hole typically opens in August and lasts until late November; this year, CAMS monitored a particularly large and long-lived Antarctic ozone hole that reached its maximum extent in [early October](https://atmosphere.copernicus.eu/monitoring-ozone-layer). In addition to all this, CAMS continues to use partnerships to increase outreach and its visibility. CAMS sponsors and provides air quality forecasts to TV broadcasters Euronews and CNN which is seen by around 9.5 million people per quarter across the TV network of Euronews and, combined with C3S climate content, around 268.7 million people on the CNN global network: <https://www.euronews.com/embed/weather/air-quality>. CAMS contributed significantly to the debate between air quality and COVID-19-symptoms: air quality is an indicator of human activity and poor air quality affects respiratory health – which may exacerbate COVID-19 symptoms. This has led to an increased interest in air quality information throughout the pandemic. CAMS supports research into this debate by providing information on the distribution and evolution of fine particulate matter close to Earth's surface. To make relevant air quality information easier to access, CAMS has built the web-based [CAMS COVID resource](https://atmosphere.copernicus.eu/european-air-quality-information-support-covid-19-crisis), which includes graphs and animations to support researchers, policymakers and the public; subsequently CAMS data has also been included in the joint Commission/ESA Rapid Action on Coronavirus platform: <https://atmosphere.copernicus.eu/european-air-quality-information-support-covid-19-crisis>

The **Copernicus Climate Change Service (C3S)**, operational since June 2018, has reached over 60.000 registered users to whom it delivers more than 70TB of quality-controlled climate data per day. The latest data from C3S shows that 2020 was the joint warmest year on record, together with 2016. Global temperatures were 0.63 degrees Celsius above the 1981-2010 average and 1.25 degrees C above the pre-industrial level defined by the IPCC<sup>8</sup>. The C3S developed an application that maps mortalities against temperature and humidity data, allowing health authorities and epidemiology centres to explore the claims that temperature and humidity could affect the spread of coronavirus. <https://climate.copernicus.eu/providing-climate-information-support-covid-19-research>. In April 2020, the third annual European State of the Climate (ESOTC) was released, looking at key climate indicators in 2019. The report showed that 2019 was the warmest year on record for Europe. Record-breaking levels of rainfall in autumn 2019 resulted in the wettest November on record for some countries, and flooding in parts of western and southern Europe: <https://climate.copernicus.eu/c3s-releases-european-state-climate-reveal-how-2019-compares-previous-years>. C3S regularly receives coverage in top-tier media outlets, in Europe and beyond, across TV, radio, print and online thanks to its proactive outreach to the press regarding the Service's climate intelligence products such as its monthly climate bulletin. Through its TV media partnership with Euronews (<https://www.euronews.com/programs/climate-now>), where C3S sponsors and provides content for the programme Climate Now, C3S reaches around 7.7 million viewers per quarter. Furthermore, the partnership with global broadcaster CNN means that data driven content from the service, along with that of CAMS, reaches around 268.7 million people across the world each quarter. At the end of the year, a significant back extension to ERA5, C3S most popular dataset, was released. User can now look at the hourly time-series for any meteorological parameter from 1950 to near real time (5 days before present). The new C3S quality assurance framework was launched in October 2020. This is an important component of the service, assuring quality of data and tools and enables traceability and reproducibility of these outputs.

A highlight in 2020 was the **successful Copernicus Sentinel 6A satellite launch on 21 November**, making further service reinforcements possible and the provision of improved and high-precision measurements of the sea level, with evident relevance for climate change observations. With eight satellites in orbit, Copernicus is now producing high quality, free, and open observation data every day, reaching more than 400 000 registered users on the European data access points and with a high level of satisfaction from users. The ground segment operations and the services faced some difficulties to operate remotely due to the COVID-19 crisis but managed to continue operational activities. Most of the teams involved in the operations of the Copernicus Space Component across Europe, both within ESA and in industry, are tele-working and access to the operational centres was minimised, impacting the contingency management and the capability to timely react to potential anomalies. Special non-essential operations have been temporary suspended to focus on the continuity of the routine operations. More than 35 million data products have been published and the user' download volume has reached more than 330 million Gigabytes.

**Evolution plans** and the preparations for Copernicus 2.0 requires the renewal of the existing Delegation Agreements with entrusted entities. During 2020, the Contribution Agreements and technical annexes were prepared, intensively discussed and negotiated and will be finalised early 2021.

When it comes to **user uptake activities**, Copernicus has successfully embraced the big data revolution in various ways. Most notable is the achievement of the set-up of the **Data Access and Information Services (DIAS)** collocating Copernicus data and information procured with European Earth Observation and cloud providers and making it available on line and near-line ready to be processed on demand. The progress in the quality of the services and the completeness of the data on offer have been steady. The next step will be the development of data analytics tools to be made available to the users on top of data lakes.

To further facilitate the uptake, a 'cloudification' of data is currently being assessed, enabling also the European digital Big Data projects implementation. The socio-economic benefits have been consistently monitored and measured: the last Copernicus market report published in February 2019<sup>9</sup> (referred to ten selected value chains) states that the benefits in 2018 in the downstream market

<sup>8</sup> IPCC, 2018: Global Warming of 1.5°C. An IPCC Special Report on the impacts of global warming of 1.5°C above pre-industrial levels and related global greenhouse gas emission pathways, in the context of strengthening the global response to the threat of climate change, sustainable development, and efforts to eradicate poverty [Masson-Delmotte, V., P. Zhai, H.-O. Pörtner, D. Roberts, J. Skea, P.R. Shukla, A. Pirani, W. Moufouma-Okia, C. Péan, R. Pidcock, S. Connors, J.B.R. Matthews, Y. Chen, X. Zhou, M.I. Gomis, E. Lonnoy, T. Maycock, M. Tignor, and T. Waterfield (eds.)].

<sup>9</sup> [https://www.copernicus.eu/sites/default/files/2018-10/Copernicus\\_Market\\_Report\\_11\\_2016\\_1.pdf](https://www.copernicus.eu/sites/default/files/2018-10/Copernicus_Market_Report_11_2016_1.pdf);  
[https://www.copernicus.eu/sites/default/files/PwC\\_Copernicus\\_Market\\_Report\\_2019.pdf](https://www.copernicus.eu/sites/default/files/PwC_Copernicus_Market_Report_2019.pdf)

are estimated to be between EUR 125 and 150 million, up from EUR 54 million in 2015<sup>10</sup>. This significant value increase had two main drivers. Firstly, a high growth of the ocean and coastal monitoring value chain. With the entry into service of the Sentinel 3 satellites, the downstream revenues for this value chain increased from EUR 5-8 million to EUR 33 – 59 million between 2015 and 2018. Secondly, the inclusion of two additional value chains in the 2019 Market Report update (when compared to the 2016 Market Report): Civil protection (natural disasters) with an estimated value of around EUR 9 million and security with an estimated value of around EUR 25 million. The benefits are expected to grow by an average annual growth rate of 15 % up to the end of 2020, with a progressive adoption of Earth Observation-based solutions in some industries such as renewable energies.

The downstream Earth observation (EO) sector includes all enterprises whose main business is to provide services based on EO data. The Copernicus Market Report 2019 also confirmed that 72 % of these companies use Copernicus data (an additional 6 percentage points compared to 2016) thanks to the full, free and open data policy. The European downstream EO sector had 6 000 full-time jobs in 2012 and 7 877 in 2016. The average growth rate of 10 % (observed between 2012 and 2016) was applied to produce estimates for 2017, 2018, and 2020 (conservative approach).

The objective to foster the development of a competitive European space and services industry, maximising opportunities for European enterprises to develop and provide innovative Earth observation systems and services, has shown positive results. The original baseline scenario assumed a 5 % annual growth rate between 2013 and 2020 in the European EO sector, thanks to the availability of Copernicus data and services' information. The annual growth rate estimated for 2015 is 10%, based on 8 value chains and 20% for 2018, based on 10 value chains, demonstrating a positive effect of the Copernicus<sup>11</sup> full, free and open data and information policy.

Over the course of 2020, DG DEFIS worked closely with other Commission services to maximise the user uptake. Discussions with DG CNECT on possible future projects have taken place and close cooperation was established on the **DestinationEarth** project, the Digital Twins related to climate adaptation and weather-induced extreme events. Copernicus is a major building block to start the development of DestinationEarth, providing massive amounts of Earth Observation and monitoring data and information and outputs from modelling services<sup>12</sup>. The key value for Copernicus is to own an operational service framework fully connected to beneficiaries and demonstrating its high quality of standards. In addition, Copernicus proposes an integrated data management concept to foster the reuse of the former Copernicus DIAS investment to contribute to the future CONECT digital platform (cloud+High Performance Computing).

DG DEFIS also worked closely with JRC to set up the **Knowledge Centre for Earth Observation (KCEO)** to ensure the uptake of Copernicus within/by user-DGs. The KCEO can become an important tool to boost the uptake of Copernicus services' information products within cross-sectoral policy areas. The KCEO will involve some 17 user DGs across the Commission, closely coordinated with DG R&I and CNECT. In 2020, two Commission-wide consultations with the user-DGs were conducted in June and December, in preparation for the official launch event planned for April 2021.

The first Phase of the action deploying a Farm Sustainability tool and platform jointly supported by DG DEFIS, DG Agriculture and Rural Development (DG AGRI), and by the ISA<sup>2</sup> Programme (DG DIGIT) was carried out in three initial Member States: Italy, Spain and Estonia. The **FaST** digital service platform will make available capabilities for agriculture, environment and sustainability to EU farmers, Member State Paying Agencies, farm advisors and developers of digital solutions. The vision of this project is for the FaST to become a common platform for the generation and re-use of solutions for sustainable and competitive agriculture based on space data (Copernicus and Galileo) and other public and private datasets. Several other Member States already expressed their interest to join the project in a potential Phase 2.

A Copernicus MOOC (massive online course) was delivered in 2020 attracting almost 10,000 people that registered for the two editions of the course, significantly more than the initial forecasts. The registered participants originated from 169 countries, 53% of them from the EU-27. Registered participants were active in a wide variety of sectors, in particular education and research, environmental services, agriculture, forestry and fishery, government and public services, and scientific and technical activities.

The international dimension has been enlarged through specific agreements signed with several countries, adding to the role of the EU in international fora and conferences, including various UN agencies. With the conventional data access infrastructure (e.g. ESA Open hub) and the setting up of the Copernicus Data and Information Access Services (DIAS), the entire Copernicus database is available on a **free, full and open data policy**, including to GEOSS<sup>13</sup> members. This means that users (public authorities,

<sup>10</sup> The benefits were assessed for 10 selected value chains (agriculture, forestry, urban monitoring, ocean monitoring, oil and gas, renewable energies, air quality, insurance for natural disasters, response to natural disasters, security). The 15% is the compound annual growth rate Copernicus between 2015 and 2020, restricting the comparison to the 8 VC analysed in the 2016 market report so excluding civil protection and security. On these 8 VC the revenues grew from 54 M€ in 2015 to 101 M€ in 2020. The 15% is a compound annual growth rate Copernicus. The benefits vary between the value chains, depending on the contribution of Earth Observation (EO) in the industry activities (driving the revenues for downstream players) and the penetration rate of Copernicus within this EO data. Although some value chains remain rather challenging as potential growth segments for Copernicus, such as insurance, overall the industries considered all foresee a positive evolution of Copernicus uptake and hence of its economic impacts.

<sup>11</sup> [https://www.copernicus.eu/sites/default/files/PwC\\_Copernicus\\_Market\\_Report\\_2019.pdf](https://www.copernicus.eu/sites/default/files/PwC_Copernicus_Market_Report_2019.pdf)

<sup>12</sup> the Climate Change service, the Atmosphere Monitoring Service, the Marine Environment Monitoring Service, the Land Monitoring Service and the Emergency Management Service

<sup>13</sup> Global Earth Observation System of Systems

companies, researchers, NGOs...) have the possibility to choose from which platform they prefer to access the data and information. The target of 100 % excludes the restricted products from the Emergency and Security Services.

Cooperation arrangements have been concluded with the United States, Australia, Brazil, Chile, Colombia, the African Union Commission, India, Serbia and Ukraine. Whereas the timeline of discussions with Japan, Canada, New Zealand, Singapore, Thailand, Vietnam, Argentina, Indonesia, the United Nations Environment Programme (UNEP) as well as the Food and Agriculture Organisation (FAO) and the World Meteorology Organisation (WMO) had to be postponed due to the COVID-19 crisis. In 2018, the European Commission took over the chair of the Committee for Earth Observation Satellites (CEOS) and is now recognised as a major space player. Copernicus is regarded as the global benchmark for Earth Observation. At the 34th Plenary CEOS, the Greenhouse Gas Roadmap for CO<sub>2</sub> (carbon dioxide) and CH<sub>4</sub> (methane) was endorsed. Thanks to European leadership, space agencies operating Earth Observation satellites worldwide are coordinating on relevant observations from space to support the implementation of the Paris Agreement, as well as, other policies of international or global nature such as the UN 2030 Agenda for Sustainable Development, and the European Development Policy.

### 3.2. Key achievements

#### EGNOS and Galileo

Less than 10 minutes	Approximately 2 billion	7- metre	7	Less than 15 minutes	2
is the amount of time required by Galileo's Search and Rescue service to detect emergency distress beacons, compared to up to 3 hours previously required.	Galileo-enabled devices in use	accuracy of Galileo's E112 location information, compared to 2-10 km accuracy displayed by the Global System's for Mobile Communications Cell ID-based technology	Member States have had support from the Help 112 II project	is the amount of time required by Galileo's Search and Rescue service to send an acknowledgement message to the beacon in distress. This is a unique feature of Galileo.	unique new Galileo services are under development and close to deployment; the Galileo Open Service Navigation Message Authentication (OSNMA) and Galileo High Accuracy Service (HAS)

#### Copernicus

8	460 0000	174	95	185	60	38 million	35 million	Over 330 million GB	20 000
Copernicus satellites are in orbit, first one was launched in 2014.	400.000 registered users are accessing the European data access points and 60.000 registered users on the Copernicus Climate Change service have access to more than	full, free and open information products are available in the Copernicus Marine Environment Service catalogue.	activations of the Rapid Mapping and the Risk and Recovery Mapping on-demand services were reported in 2020.	Rapid Action Coronavirus Earth observation dashboard economic indicators monitor the consequences of the Covid19 pandemic.	full, free and open information products are provided under the Copernicus Land Monitoring service.	television viewers watched daily on different platforms air quality bulletins from around Europe based on the Copernicus Atmosphere Monitoring Service.	data products have been published in 2020 coming from 8 Copernicus satellites	of data has been downloaded by 400 000 registered users of the Copernicus data access portals.	international readers read the the 2020 Ocean State report.

70TB of quality-controlled climate data per day (status December 2020).

### 3.3. Evaluations, studies and reports

#### *EGNOS and Galileo*

In 2017, an interim evaluation of the European GNSS programmes (EGNOS and Galileo) and evaluation of the European GNSS Agency <sup>(14)</sup> was carried out. Since then no further evaluations or studies were conducted.

In 2018, the Commission adopted an Impact Assessment accompanying the Proposal for a Regulation of the European Parliament and of the Council **establishing the space programme of the Union and the European Union Agency for Space Programme** <sup>(15)</sup>.

In 2020, the Commission has undertaken an impact assessment study on an initiative to foster the use of Galileo in critical infrastructure that depends on space services for timing and synchronisation (in energy, telecommunications and bank/finance transaction networks). The initiative considers awareness actions on Galileo and EGNOS's features, specific industrial or R & D support, or the preparation of specific legislation. An open public consultation is a part of the input to the impact assessment.

#### *Copernicus*

The key findings of the Impact Assessment accompanying the Proposal for a Regulation of the European Parliament and of the Council **establishing the space programme of the Union and the European Union Agency for Space Programme** <sup>(16)</sup>, and of the study on **ex-ante evaluation of the socioeconomic benefits of Copernicus** <sup>(17)</sup> have been presented in the Programme Statement 2019. Key challenges for the future relate to global and political developments (such as climate change, security, competitiveness of European industry) as well as to lessons learned from the implementation of the programme in the past (such as governance, data distribution and linking space data with other policy areas). The priorities are (1) continuity of services (2) new missions and evolution of services, (3) development of new activities in support of answers to societal challenges, for example help in implementation of the European Green Deal. The governance model proposed for the next financial period builds on the current framework, whilst taking advantage, where appropriate, of synergies, notably as regards security.

The **Copernicus market report 2019** <sup>(18)</sup> looked at the current uptake of Copernicus in Europe. The second edition of the Copernicus Market Report details how Copernicus free and open data and information is used to tackle more and more societal, environmental and economic challenges – ranging from floods and wildfires to insect infestation and forest regrowth. The report was commissioned by the European Commission and is an update to the previous Market Report from 2016. It contains numerous new analyses, comparisons and deep dives into new benefit areas. With over 200,000 users, Copernicus is expanding fast. It has doubled its footprint on the Earth Observation (EO) scene and now supplies 20 % of the world's EO data. The volume of downloads grew by 133 % since the first Market Report was released in 2016. On top of that, the report found that 72 % of EO companies in Europe use Copernicus (+ 11 percentage points since 2016). In a single year (2018), Copernicus generated EUR 2.9 billion of benefits to its European users, nearly half the cost of the programme. Copernicus represented about 20 % of the data used in Earth observation applications. The market for Copernicus-based applications is growing at 15 % per year.

## 4. Programme 2021-2027 - Key monitoring indicators

**Specific Objective 1 :To provide long term, state-of-the-art and, secure positioning, navigation and timing services whilst ensuring service continuity and robustness**

**Indicator 1:Accuracy of navigation and timing services provided by Galileo and EGNOS separately**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

<sup>(14)</sup> SWD (2017) 346

<sup>(15)</sup> SWD(2018) 327 final

<sup>(16)</sup> SWD(2018) 327 final

<sup>(17)</sup> <https://www.copernicus.eu/en/study-estimates-copernicus-benefits-be-10-times-its-costs>

<sup>(18)</sup> [https://www.copernicus.eu/sites/default/files/PwC\\_Copernicus\\_Market\\_Report\\_2019.pdf](https://www.copernicus.eu/sites/default/files/PwC_Copernicus_Market_Report_2019.pdf)

Link to the objective	To provide long-term, state-of-the-art and secure positioning, navigation and timing services whilst ensuring service continuity and robustness
Link MFF 14-20 / MFF 21-27	Indicator replacing the former General Objective 1 - indicator 1. This indicator will be continued in the MFF 2021-2027.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Specific Objective 2 :To deliver accurate and reliable Earth Observation data, information and services integrating other data sources, supplied on a long-term sustainable basis, to support the formulation, implementation and monitoring of the Union and its Member States' policies, and actions based on user requirements**

#### Indicator 1: Number of EU users of Copernicus Services, Copernicus data, and Data and Information Access Systems (DIAS) providing, where possible, information such as the type of user, geographical distribution and sector of activity

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Number of users (registered)
Cut-Off Date	30/01/2028
Data source	Quarterly and Semester reports and data dissemination dashboards
Link to the objective	- to provide, or contribute to the provision of, high-quality and up-to-date and, where appropriate, secure space-related data, information and services without interruption and wherever possible at global level, meeting existing and future needs and able to support the Union's political priorities and related evidence-based and independent decision making, inter alia for climate change and, transport, security - to enhance safety, the security of the Union and its Member States, and reinforce its autonomy, in particular in terms of technologies
Link MFF 14-20 / MFF 21-27	Indicator replacing the former Objective 1 - indicator 1 of last MFF "Number of engaged users showing sustained uptake through registered data download"
Other methodological comments	EU users (27) for this indicator are considered to be users from EU Member States (and their overseas territories), and include EFTA users and users from other participating states, EU agencies and institutions.
Full metadata available at this address	
Justification of the trend	

### Indicator 2: Where applicable, number of activations of Copernicus Services requested and/or served

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of requests for services
Cut-Off Date	31/01/2028
Data source	Quarterly and Semester reports of the Copernicus Services
Link to the objective	- to provide, or contribute to the provision of, high-quality and up-to-date and, where appropriate, secure space-related data, information and services without interruption and wherever possible at global level, meeting existing and future needs and able to support the Union's political priorities and related evidence-based and independent decision making, inter alia for climate change and, transport, security; - to "enhance safety, the security of the Union and its Member States, and reinforce its autonomy, in particular in terms of technologies
Link MFF 14-20 / MFF 21-27	New indicator under MFF 21/27
Other methodological comments	The indicator is the number of on-demand services for EMS service (not limited to rapid mapping) and security services, all types included. In the future, this indicator may also possibly include other services in case they develop on-demand services.
Full metadata available at this address	
Justification of the trend	

### Indicator 3: EU User satisfaction with respect to Copernicus Services and DIAS

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Index value satisfaction survey
Cut-Off Date	31/01/2028
Data source	Based upon a yearly user survey
Link to the objective	To maximise the socio-economic benefits, in particular by fostering the development of an innovative and competitive European upstream and downstream sectors, including small and medium-sized enterprises and start-ups, thereby enabling growth and job creation in the Union and promoting the widest possible uptake and use of the data, information and services provided by the Programme's components both within and outside the Union; while ensuring synergies and complementarity with the Union's research and technological development activities carried out under the Horizon Europe Regulation

Link MFF 14-20 / MFF 21-27	Replacing the former objective 1- indicator 2: "Progression in number of satisfied users expressed by the percentage of returning and engaged users"
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 4: Reliability, availability and continuity of the Copernicus Services and Copernicus data stream**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/01/2028
Data source	Copernicus Data dashboards, Quarterly Implementation Reports and Semestrial reports
Link to the objective	- to provide, or contribute to the provision of, high-quality and up-to-date and, where appropriate, secure space-related data, information and services without interruption and wherever possible at global level, meeting existing and future needs and able to support the Union's political priorities and related evidence-based and independent decision making, inter alia for climate change and, transport, security; - to "enhance safety, the security of the Union and its Member States, and reinforce its autonomy, in particular in terms of technologies
Link MFF 14-20 / MFF 21-27	Replacing the former objective 2 - Indicator 1: "The accomplishment of the space infrastructure in terms of satellites deployed and data it produces for integration into geo-information services" and Objective 3- Indicator 1: "Sustained availability of in-situ data for supporting Copernicus services"
Other methodological comments	
Full metadata available at this address	For ESA: <a href="https://scihub.copernicus.eu/reportsandstats/">https://scihub.copernicus.eu/reportsandstats/</a>
Justification of the trend	

**Indicator 5: Number of information products delivered in the portfolio of each Copernicus Service**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/01/2028
Data source	Copernicus Services Data/information products' dashboards
Link to the objective	- to provide, or contribute to the provision of, high-quality and up-to-date and, where appropriate, secure space-related data, information and services without interruption and wherever possible at global level, meeting existing and future needs and able to support the Union's political priorities and related evidence-based and independent decision making, inter alia for climate change and, transport, security; - to "enhance safety, the security of the Union and its Member States, and reinforce its autonomy, in particular in terms of technologies
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The indicator will be a combined/composed indicator because each of the 6 Copernicus services produces information products.
Full metadata available at this address	
Justification of the trend	

**Indicator 6: Amount of data generated by the Sentinels**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
-----------------	--

Indicator type	Result
Unit of measurement	IT data amount (volume of data in Pbytes per year, number of data products generated per year)
Cut-Off Date	31/01/2028
Data source	Quarterly reports and data dissemination dashboards
Link to the objective	- to provide, or contribute to the provision of, high-quality and up-to-date and, where appropriate, secure space-related data, information and services without interruption and wherever possible at global level, meeting existing and future needs and able to support the Union's political priorities and related evidence-based and independent decision making, inter alia for climate change and, transport, security; - to "enhance safety, the security of the Union and its Member States, and reinforce its autonomy, in particular in terms of technologies
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The calculation is based on ESA dashboard. Increase is due to the launch of Sentinel4, Sentinel5 and CO2 expansion mission. Other candidate missions are not taken into account since their launch is expected after 2028. The possible launch of C/D units do not affect the calculation since they will replace A or B units at end of lifetime.
Full metadata available at this address	
Justification of the trend	

**Specific Objective 3 :To enhance Space Surveillance and Tracking (SST) capabilities to monitor, track and identify space objects and space debris, with the aim to further increase the performance and autonomy of SST capabilities at Union level, to provide space weather services and to map and network Member States Near-Earth Objects (NEO) capacities**

**Indicator 1: Number of EU users of SSA components providing, where possible, information such as the type of user, geographical distribution and sector of activity.**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Number of users
Cut-Off Date	
Data source	EU SST Consortium, EU SST Front Desk
Link to the objective	Enhance safety, security and sustainability of all outer space activities pertaining to space objects and debris proliferation, as well as space environment, by implementing appropriate measures, including development and deployment of technologies for spacecraft disposal at the end of operational lifetime and for space debris disposal.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 2: Availability of services**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Justification of the trend	

## 5. Programme 2014-2020 - Key monitoring indicators

*Previous Program 1 : Implementation and exploitation of European satellite navigation systems (EGNOS and Galileo)*

**General Objective 1 :Supporting European presence in space and the development of satellite-based positioning, navigation and timing services**

**Indicator 1:Market share of EU GNSS industry in worldwide GNSS downstream market**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
EGNOS present in number of receiver models										
2012	Milestones									2020
0,63	0,63	0,63	0,75	0,75	0,78	0,82	0,85			0,85
	Actual Progress									Final
	0,63	0,63	0,68	0,68	0,68	0,68	0,63			
Galileo present in number of receiver models										
2012	Milestones									2020
0,35	0,35	0,35	0,45	0,4	0,42	0,44	0,7			0,7
	Actual Progress									Final
	0,35	0,35	0,38	0,41	0,42	0,42	0,62			

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage (cumulative)
Cut-Off Date	31/12/2020
Data source	European GNSS Agency, GNSS Market Report
Narrative	The market share indicator is based on the percentage of Galileo and EGNOS receivers in the total number of receiver models worldwide. This indicator was required in the Regulation (EU) No 1285/2013.
Methodology	The baseline for this indicator was established in 2014 and the data is included in the GNSS user technology report of the European GNSS Agency published once in two years, but is measured annually.
Link MFF 14-20 / MFF 21-27	The indicator will be continued in MFF 2021-2027 under Specific Objective 1, Indicator 6.
Other methodological comments	The trend of the production of Galileo and EGNOS enabled receiver models suggests that receiver manufacturers are gradually integrating Galileo and EGNOS into their products and the milestone target for this indicator is likely to be reached. The receiver's database was improved in 2020, when new companies were added to the baseline (in 2020 there were 40+ companies) in order to reflect the changes on the market, but also to include new segments and to reflect some significant changes in manufacturer's product offerings. The GSA's independent analysis assesses the capabilities of around 500+ receivers, chipsets and modules currently available on the market. For the analysis, each device is weighted equally, regardless of whether it is a chipset or receiver and no matter what its sales volume is. The results should therefore be interpreted as the split of constellation support in manufacturers' offerings, rather than what is in use by end users.
Full metadata available at this address	
Justification of the trend	There is a positive trend of the increasing production of receivers that Galileo enabled. The actual progress is going towards the milestones set. The Galileo enabled receiver models are listed on: <a href="https://www.usegalileo.eu/">https://www.usegalileo.eu/</a> . With regard to the EGNOS enabled receiver models, the actual progress stabilised at 68% of the total number of receiver models worldwide. This is lower than the milestone of 85% set in 2014, when a steady growth was predicted. This is due to the fact that some markets are making more use of the Galileo dual frequency receiver models rather than EGNOS.

**Specific Objective 1 :To develop and provide global satellite-based radio navigation infrastructures and services (Galileo) by 2020**

**Indicator 1:Galileo infrastructure Cumulative number of operational satellites**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
4		12					30			30
	Actual Progress									Final
	3	9	18	22	26	26	26			

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Number of satellites
Cut-Off Date	31/12/2020
Data source	European Space Agency and European GNSS Agency
Narrative	This indicator was chosen as it impacts the quality and coverage of the GNSS services provided. The 30 satellite target includes allowance for in-orbit spares that ensure service continuity in case of unexpected events. Users are already experiencing excellent performance levels with the number of satellites that are currently in orbit.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	No Galileo satellites were launched in 2020. Therefore the number of satellites in orbit remains at 26. Of these, one satellite is unavailable for operational use, an additional satellite is available as in-orbit spare but not participating in the operational constellation. There are also 2 satellites that due to a launch anomaly in 2014 were placed into non-nominal eccentric orbits. These satellites have been contributing to the Search and Rescue service for several years, and have been validated for use in providing navigation and timing services, on a non-committed availability basis. The committed performance targets are achieved without taking into account the contributions of these satellites, although they do contribute to the performance, particularly in difficult urban scenarios. Therefore, there continue to be 22 satellites that are fully operational and in the nominal constellation slots. The next launch of 2 satellites will take place in Q4 2021.

### Indicator 2:Galileo infrastructure New terrestrial infrastructure deployed version

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
June 2011	Milestones									2020
In orbit validation (IOV) initial configuration	IOV final configuration	Ground Segment Version 2.0	System Build 1.5.0	System Build 1.5.0	System build 1.5.1	System build 1.5.1	System build 1.5.1	SB1.5.1 then SB1.7	SB1.7	System Build 2.0
	Actual Progress									Final
		GSM Version 2.1/GCS 2.0	SystemB 1.5.0	SB 1.5.0	SB 1.5.0	Migration ongoing to system build 1.5.1	Migration ongoing to system build 1.5.1			

Are we on track	Moderate progress
Indicator type	
Unit of measurement	System build validation
Cut-Off Date	
Data source	European Space Agency and European GNSS Agency
Narrative	This indicator was chosen as it impacts the quality and coverage of the GNSS services provided
Methodology	Once the System Build are deployed and validated, this ongoing metric monitors the status of the Galileo ground segment. Performance commitments are associated with System build validation
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The system upgrade System Build 1.5.1 which will improve the operability, robustness and security of the system was delayed in 2018 due to changes in the composition of the industry consortium due to BREXIT. The System Build 1.5.1 was expected be implemented in 2019 but the migration was further prolonged due to the impact of the technical incident of July 2019. The complete System Build 1.5.1 is now expected to be fully in operations by April 2021. The more recently defined System Build SB1.7, which provides all functionality necessary to support the upcoming satellite launches, will be deployed by September 2021. System Build 2.0, which is the baseline for Galileo Full Operational Capability (FOC) will be deployed in Q4 2023, which is in line with the current roadmap to FOC.
Full metadata available at this address	
Justification of the trend	The system upgrade System Build 1.5.1 which will improve the operability, robustness and security of the system was delayed in 2018 due to changes in the composition of the industry consortium due to BREXIT. The System Build 1.5.1 was expected be implemented in 2019 but the migration was prolonged due to the impact of the technical incident of July 2019. The complete System Build 1.5.1 is now expected to be fully in operations by April 2021. System Build 1.7 is well on its way to deployment and will support the requirements associated with the next launch and increased number of satellites. The System Build 2.0, which is the baseline for Galileo Full Operational Capability will be deployed in Q1 2023 instead of end of 2020, due to reasons that are directly linked to the incident in July 2019.

### Indicator 3:Galileo services provision Number of services implemented

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
			3	3	3	3	5			5
	Actual Progress									Final
		0	3	3	3	3	4			

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Number of services provided
Cut-Off Date	
Data source	European Commission and GSA
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Originally 5 services were foreseen: Open Service (OS), Search and Rescue (SAR), Public Regulated Service (PRS), Commercial Service (CS) and Safety of Life (SoL). Of these, the 3 first services are well on track, and the Commercial Service has evolved into High Accuracy Service (HAS) and Commercial Authentication Service (CAS), which are both well consolidated and under testing. The Galileo SoL service as such has been reprofiled, nevertheless Galileo will provide an important contribution to SoL services, in particular in the aeronautical context. In addition, with the Galileo SAR, the unique additional Return Link Service is already operational since January 2020. Open Service Navigation Message Authentication (OSNMA) is an important new service that is under testing and will be available as a full service in 2023. The Emergency Warning Service is also a new service that is well defined and under development.
Full metadata available at this address	
Justification of the trend	Galileo initial services were declared operational on 15 December 2016. These include the Galileo Initial Open Service, the Galileo Initial Public Regulated Service, the Galileo Initial Search and Rescue Service. Development and testing of a number of new services is continuous and gradual improvements are being introduced. The new unique functionality to Galileo's Search and Rescue service, the Return Link Service, has been operational since January 2020. Phase 1 of the High Accuracy Service with 20 cm positioning accuracy will be provided for Europe by the end of 2021, with full service expected in 2022. Open Service Navigation Message Authentication is under testing and will be available as a full service in 2023. The operational services have been delivered with excellent quality and availability, and performance has been excellent during 2020.

## Specific Objective 2 :To provide satellite-based services improving the performance of GPS to gradually cover the whole ECAC (European Civil Aviation Conference) region by 2020 (EGNOS) and European neighbouring countries

### Indicator 1:Progress of the EGNOS coverage extension versus agreed coverage extension

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2015	Milestones									2020
EGNOS Service Evolution Plan v2.0 established		Establish EGNOS service Evolution plan v2.0	Advancement in coverage	Advancement in coverage	Advancement in coverage	Advancement in coverage	Coverage of EU -28 with EGNOS in line with the EGNOS Service - Evolution plan			Coverage of EU-28 with EGNOS in line with the EGNOS Service Evolution Plan
	Actual Progress									Final
		EGNOS Service Evolution Plan v2.0 was established	98.98% coverage of EU28-NO-SW land masses for APV-I	98.9% coverage of EU28-NO-SW land masses for APV-I	98.7% coverage of EU28-NO-SW land masses for APV-I	99.1% coverage of EU 28-NO-SW land masses for APV-I	98.2% coverage of EU28-NO-SW land masses for APV-I			98.2% coverage of EU28-NO-SW land masses for APV-I

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage of Geographical coverage
Cut-Off Date	31/12/2020
Data source	GSA Quarterly Implementation Reports
Narrative	The geographical area is where EGNOS services meet the accuracy, availability, continuity and integrity levels. The current EGNOS Service Evolution Plan (SEP) sets out the baseline for the

	implementation of the EGNOS mission and security requirements. It defines the extension of EGNOS services over the European territory in terms of their availability, which is depicted in a form of 'availability maps'.
Methodology	The progress of EGNOS APV-I coverage extension versus the Programme objective to cover EU28 states (plus Norway and Switzerland) is reported through the percentage of EU28-NO-CH land masses that effectively achieve APV-I 99% availability coverage (i.e. observed EGNOS performance). APV-I = Approach procedure with vertical guidance, category 1.
Link MFF 14-20 / MFF 21-27	A similar indicator will be reported in MFF 21/27 under Indicator 3: EGNOS services geographical coverage
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Trend is stable with a yearly variation depending on yearly circumstances. The 1-2% of EU land-masses not covered are known (Azores, north east part of Finland and eastern part of Cyprus) and will only be covered when the new generation EGNOS V3 will become operational.

**Indicator 2:EGNOS service availability index based on the number of airports with EGNOS-based approach procedures with an operational status versus the total number of airports with EGNOS - based approach procedures**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Service availability index										
	Milestones									2020
1	Actual Progress									Final
	0.98	0.99	0.99	0.99	0.99	0.99	0.99			0.99
Total number of airports with EGNOS procedures										
2013	Milestones									2020
93	Actual Progress									Final
	132	174	230	251	315	342	373			373
Total number of airports with an operational status										
2014	Milestones									2020
93	Actual Progress									Final
	129	173	230	251	315	342	373			373

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	GSA Quarterly Implementation Reports
Narrative	The current EGNOS Service Evolution Plan (SEP) sets out the baseline for the implementation of the EGNOS mission and security requirements. It defines the extension of EGNOS services over the European territory in terms of their availability, which is depicted in a form of 'availability maps'
Methodology	The indicator is computed by counting the number of airports that have implemented EGNOS procedures by the end of the corresponding year (this information is publically available at national level).
Link MFF 14-20 / MFF 21-27	A similar indicator will be reported in MFF 21/27 under Indicator 1: Accuracy of navigation and timing services provided by Galileo and EGNOS separately.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Trend is positive (increase in the number of airports with EGNOS procedures) due to increase EGNOS adoption to which Regulation 2018/1048 mandating the publication of EGNOS procedures in all instrument runway ends, will greatly contribute.

**Previous Program 2 : European Earth Observation Programme (Copernicus)**

## General Objective 1 :Monitoring the Earth to support the protection of the environment and the efforts of civil protection and civil security

**Indicator 1: Number of specific service components corresponding to users' service-level requirements to realise that Copernicus data and Copernicus information is made available for the environment, civil protection and civil security**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Service components put into operations during year										
2013	Milestones									2020
6		6	5	2		1	0			6
	Actual Progress									Final
	2	2	6	3	1		1			6
Total number of Operational service components										
2013	Milestones									2020
6		6	11	13	13	14	14			14
	Actual Progress									Final
	2	4	10	13	14		15			15

Are we on track	On track
Indicator type	Result
Unit of measurement	Number
Cut-Off Date	31/12/2020
Data source	Annual implementation report and user requirements
Narrative	Copernicus is a user-based programme and the information products developed by the Copernicus services aim to answer to the user needs and specific requirements and for this, tailored components within the services exist or can be set up.
Methodology	A component is the result of a user-based need following consultation and interaction with the Copernicus members, users and the entrusted entities.
Link MFF 14-20 / MFF 21-27	For the MFF 21/27, this Indicator will be continued and reported under the new indicator 5 - Number of new information products delivered in the portfolio of each Copernicus Service.
Other methodological comments	The 6 thematic Copernicus services include different service components : operational at end of 2020 are Emergency Mapping, Early Warning System of Floods, Early Warning System of Forest Fires, Drought Observatory, Pan-European land service, Local Land service, Ground Motion Service, Global land service including Global hot spot service, Atmosphere and Marine services, the three security service components (border surveillance, maritime surveillance, support to external action) and provision of access to reference data access (in situ component) = responding to Copernicus Regulation Art 5(1). The Climate Change Service is operational since June 2018 (earlier than the milestone initial plan which was set in 2019). The milestone was initially foreseen in 2019 and the actual result was advanced to 2018.
Full metadata available at this address	
Justification of the trend	In line with Copernicus work programme

## General Objective 2 :Maximising socio-economic benefits, thus supporting of the Europe 2020 strategy and its objectives of smart, sustainable and inclusive growth by promoting the use of Earth observation in applications and services

**Indicator 1: Expected growth in downstream Earth Observation sector directly benefiting from Copernicus**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
				140			180			180
	Actual Progress									Final
			131	144	159	175	192			

Are we on track	On track
Indicator type	Result
Unit of measurement	Employment index
Cut-Off Date	31/12/2018
Data source	Copernicus Market report
Narrative	The growth of downstream EO sector is measured in terms of employment figures on the sector, with baseline as measured in 2012. The downstream Earth observation (EO) sector includes all enterprises whose main business is to provide services based on EO data. The Copernicus Market Report 2019 confirmed that 72% of these companies use Copernicus data (an additional 6 percentage points compared to 2016).
Methodology	Employment index

Link MFF 14-20 / MFF 21-27	
Other methodological comments	The European downstream Earth Observation sector had 6 000 full-time jobs in 2012 and 7 877 in 2016. The average growth rate of 10% (observed between 2012 and 2016 for 8 value chains) was applied to produce estimates for 2017, 2018 and 2020 (17 260 jobs based on 10 value chains).
Full metadata available at this address	
Justification of the trend	Increase: total investments in the Copernicus programme generates economic benefits through the added-value created in the upstream space industry, the sales of Copernicus-based applications by downstream service suppliers and the exploitation of Copernicus-enabled products by end users in various economic sectors.

### General Objective 3 :Fostering the development of a competitive European space and services industry and maximising opportunities for European enterprises to develop and provide innovative Earth observation systems and services

#### Indicator 1:Market penetration, including expansion of the existing markets and creation of new markets and competitiveness of the European downstream operators

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
100		105		116		128	140			140
	Actual Progress									Final
			149	170	195	224	258			

Are we on track	On track
Indicator type	Impact
Unit of measurement	Added value (base 2013=100)
Cut-Off Date	31/12/2018
Data source	Copernicus Market report 2019
Narrative	The benefits were assessed for 10 selected value chains (agriculture, forestry, urban monitoring, ocean monitoring, oil and gas, renewable energies, air quality, insurance for natural disasters, response to natural disasters, security). The benefits vary between the value chains, depending on the contribution of Earth Observation (EO) in the industry activities (driving the revenues for downstream players) and the penetration rate of Copernicus data with regards to this EO data.
Methodology	GDP and catalytic impacts: GDP impact assessment (transactional impacts of investment in space assets) + value chain assessment (indirect industrial effects)
Link MFF 14-20 / MFF 21-27	EU Space regulation: Development of the downstream sector measured, when available, by the number of new companies using EU space data, information and services, jobs created and turnover, by Member State, using Eurostat surveys when available
Other methodological comments	The original baseline scenario assumed a 15% annual growth rate between 2013 and 2020 in the European EO sector, thanks to the availability of Copernicus data and services. The annual growth rate estimated for 2015 is 10%, based on 8 value chains and 20% for 2018 based on 10 value chains, demonstrating a positive effect of Copernicus thanks to the a full, free and open data and information policy.
Full metadata available at this address	
Justification of the trend	The main drivers for the growth of the markets are the remaining gap between end users' specific needs for tailored products and their current offer, and the progressive adoption of EO-based solutions in industries such as renewable energies.

### General Objective 4 :Ensuring autonomous access to environmental knowledge and key technologies for Earth observation and geoinformation services, thereby enabling Europe with independent decision-making and action

#### Indicator 1:Number of directives and decisions directly invoking the use of Copernicus data and Copernicus information by Union institutions and bodies for autonomous decision-making

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
5				15			12			12
	Actual Progress									Final
			7	8	10		12			

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of EU Directives, EU strategies, Action programmes, Decisions, Communications.

Cut-Off Date	31/12/2020
Data source	Official Journal, European CommissionOL L 444, 31.12.2020, COM/2020/855 final/3, SWD/2020/345 final, SWD/2020/336 final, SWD/2020/331 final, COM/2020/788 final, COM/2020/741 final, COM/2020/725 final, Ares(2020)6081753, COM/2020/663 final, COM/2020/652 final, SWD/2020/0221 final, Ares(2020)5040558, SWD/2020/179 final, COM/2020/562 final, COM/2020/474 final, COM/2020/605 final, COM/2020/329 final, SWD/2020/140 final, OJ L 227, 31.7.2014, COM/2020/266 final, SWD/2020/62 final, SWD/2020/61 final, SWD/2020/60 final, COM/2020/259 final, COM/2020/220 final, COM/2020/381 final, SWD/2020/87 final, C/2020/2841 - OJ L 230 17.7.2020, C/2020/2405 - OJ L 119, 17.4.2020, COM/2020/104 final, JOIN/2020/7 final, COM/2020/98 final, COM/2020/80 final, COM/2020/66 final
Narrative	Mapping of Copernicus uptake across the different European Commission DGs and services:• Kucera, J., Janssens-Maenhout, G., Brink, A., Greidanus, H., Roggeri, P., Strobl, P., Tartaglia, G., Belward A. (ed.), Copernicus Uptake in the European Commission, JRC115133 report, 2019
Methodology	“Review of DG uptake of Copernicus in preparation for Knowledge Center for Earth Observation launch” García-Álvarez, D, Review of DG uptake of Copernicus in preparation for KCEO launch. February 2021, internal document;Each DG or service is classified according to its relation with Copernicus as: investor, champion user, known user, potential user and cross cutting interest. The type of use or relation that each DG or service has with Copernicus. Direct use means that the DG or service makes direct use of Copernicus data or other products that are derived from Copernicus and EO data. Indirect use means that the DG or service does not work with Copernicus or Copernicus-derived products, but is interested in promoting its use among agencies or Member States for the implementation of its policies. Support refers to an interest in Copernicus that goes away from the use of the products, like the inclusion of references of Copernicus in legislation.
Link MFF 14-20 / MFF 21-27	Indicator 1: Number of EU users of Copernicus Services, Copernicus data, and Data and Information Access Systems (DIAS) providing, where possible, information such as the type of user, geographical distribution and sector of activity
Other methodological comments	Reference to the EU Earth Observation programme are included in several cross-sectoral policies of the EU. In 2020, this included the Strategy for Sustainable and Smart Mobility, strategy for a decarbonised and circular economy , Farm to Fork strategy , EU General Union Environment Action Programme to 2030 ,EU Biodiversity Strategy for 2030, EU 2030 Climate and Energy targets new EU Forest Strategy , EU strategy to reduce methane emissions, Common EU approach for Ocean Observation, new EU Arctic Policy, EU Strategy on Adaptation to Climate Change
Full metadata available at this address	
Justification of the trend	In 2019, the Commission carried out a survey and assessment on the use of Earth Observation and Copernicus data and information in different EU policies. The recommendations are documented in a public report: Kucera, J., Janssens-Maenhout, G., Brink, A., Greidanus, H., Roggeri, P., Strobl, P., Tartaglia, G., Belward A., M. Dowell, Copernicus and Earth observation in support of EU policies - Part I: Copernicus uptake in the European Commission, EUR 30030 EN, Publications Office of the European Union, Luxembourg, 2020, ISBN 978-92-76-14559-2, doi:10.2760/024084, JRC118879. One concrete follow-up to this discussion has been the setting up of a Knowledge Centre on Earth Observation (KCEO) to be officially launched in 2021 to boost the use of Copernicus within the Commission and other EU institutions/bodies and so the inclusion of Copernicus data and services information in the preparation, implementation and monitoring of EU policies is foreseen to increase.

## General Objective 5 :Supporting and contributing to European policies and fostering global initiatives, such as GEOSS

### Indicator 1:Percentage of Copernicus global Earth Observation data available through Global Earth Observation System of Systems (GEOSS)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0%	10%	20%	40%		75%		100%			100%
	Actual Progress									Final
				40%	100%	100%	100%			100%

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage of available datasets
Cut-Off Date	28/02/2021
Data source	ESA hub
Narrative	The entire Copernicus database is made available in the GEOSS geoportal (Earth observation catalogue).
Methodology	<a href="https://www.geoportal.org/">https://www.geoportal.org/</a>
Link MFF 14-20 / MFF 21-27	indicator continued under MFF 21/27 with new Indicator 4 - Reliability, availability and continuity of the Copernicus Services and Copernicus data stream

Other methodological comments	With the conventional data access infrastructure (e.g. ESA Open hub) and the setting up of the Copernicus Data and Information Access Services (DIAS), the entire Copernicus database is available on a free, full and open data policy, including to GEOSS members. The target of 100% excludes the restricted products from the Emergency and Security Services. The data for this indicator is from the yearly report provided by the European Environment Agency (EEA), the European Centre for Medium-range Weather Forecasts (ECMWF), Mercator Ocean, Frontex and the European Maritime Safety Agency (EMSA).
Full metadata available at this address	<a href="https://scihub.copernicus.eu/reportsandstats/">https://scihub.copernicus.eu/reportsandstats/</a>
Justification of the trend	The entire Copernicus database is available through GEOSS

**Specific Objective 1 :Delivering accurate and reliable data and information to Copernicus users, supplied on a long term and sustainable basis enabling the services referred to in Article 4(1) and responding to the requirements of Copernicus Core Users**

**Indicator 1: Number of engaged users showing sustained uptake through registered data download**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
1				1,5			2			2
	Actual Progress									Final
				13,8	30		40,1			

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of users, the figures are in 10 000
Cut-Off Date	28/02/2021
Data source	ESA dashboard
Narrative	The 2013 baseline is 10 000 registered users, milestone of 2017 means a 50% increase from the baseline, the target value means a doubling of engaged users. At the end of 2019, there were more than 300 000 users registered, demonstrating a steady increase in the number of users.
Methodology	The Copernicus Open Access Hub (the Open Hub) is the hub which offers to all users free, full and open access to Copernicus Sentinel data on the basis of self-registration. Accordingly, there are no restrictions on who can register to download products. The Open Hub is composed of two nodes: the SciHub – accessed by graphical user interface – and the APIHub – accessed via user-defined scripts. The registration phase includes the collection of user information (e.g. user country, thematic domain and usage type) selected by the user from a set of predefined lists. An ‘active user’ is defined strictly on the basis of downloads.
Link MFF 14-20 / MFF 21-27	indicator replaced under MFF 21/27 with new Indicator 4 - Reliability, availability and continuity of the Copernicus Services and Copernicus data stream
Other methodological comments	2020 figures were extracted from the ESA dashboard in February 2021.
Full metadata available at this address	
Justification of the trend	About 20% of the registered users are active users (downloading a product at least once in the last quarter). The number of active users has been growing as quickly as the number of registered user, keeping the ratio stable. An ‘active user’ is defined as a user who is both registered and who has performed at least one complete download within the reporting period. However, users who did not perform a complete download were not necessarily ‘inactive’: if a user chooses to extract only a specific granule or tile from a product, this is not counted by the system as a complete download and hence users who only made partial downloads would not be classed as active users.

**Indicator 2: Progression in number of satisfied users expressed by the percentage of returning and engaged users**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0%		20%		0%			65%			65%
	Actual Progress									Final
				20%	20%	22%				

Are we on track	On track
Indicator type	Result
Unit of measurement	Progression in number of active users (weighted average active users open access hub, international hub, collaborative hub, Copernicus services hub)
Cut-Off Date	28/02/2021
Data source	ESA dashboard (DIAS users are excluded)
Narrative	Feedback from users is monitored in order to determine if the data access service is in line with user expectations and to identify issues as they arise. Feedback and requests received from users of the Open Hub are tracked via a “Ticketing” system. The largest proportion of tickets are usually for ‘User

	Accounts' and 'Service Interface'. A returning user is traced as active user.
Methodology	The Copernicus Open Access Hub (the Open Hub) is the hub which offers to all users free, full and open access to Copernicus Sentinel data on the basis of self-registration. Accordingly, there are no restrictions on who can register to download products. The Open Hub is composed of two nodes: the SciHub – accessed by graphical user interface – and the APIHub – accessed via user-defined scripts. The registration phase includes the collection of user information (e.g. user country, thematic domain and usage type) selected by the user from a set of predefined lists. An 'active user' is defined strictly on the basis of downloads.
Link MFF 14-20 / MFF 21-27	indicator replaced under MFF 21/27 with new Indicator 4 - Reliability, availability and continuity of the Copernicus Services and Copernicus data stream
Other methodological comments	Users' satisfaction is expressed as percentage of Copernicus users which integrate the service products regularly into their workflows (active users). About 20% of the registered users are active users (downloading a product at least once in the last quarter). The number of active users has been growing as quickly as the number of registered user, keeping the ratio stable. It is not possible to identify the number of returning/engaged users but instead it is possible to calculate the number of active users. The target of 65% satisfaction is a good target but the return rate as a single way of measuring satisfaction is not adequate. The satisfaction rate will be measured through user satisfaction surveys in the future.
Full metadata available at this address	<a href="https://scihub.copernicus.eu/reportsandstats/">https://scihub.copernicus.eu/reportsandstats/</a>
Justification of the trend	The trend is bound to increase as more users are integrating Copernicus data and information into their workflows. However, the way the indicator is being calculated (namely active users) does not allow to reach the foreseen target. The number of active users is assumed to be higher: an 'active user' is defined as a user who is both registered and who has performed at least one complete download within the reporting period. However, users who did not perform a complete download were not necessarily 'inactive': if a user chooses to extract only a specific granule or tile from a product, this is not counted by the system as a complete download and hence users who only made partial downloads would not be classed as active users. In addition, users may have downloaded only product metadata from the Sentinel archive, for instance to create an independent catalogue for future use. An 'active user' is defined strictly on the basis of downloads and does not include users who log into their accounts or perform searches via the GUI.

## Specific Objective 2 :Providing sustainable and reliable access to spaceborne data and information from an autonomous European Earth observation capacity

### Indicator 1:The accomplishment of the space infrastructure in terms of satellites deployed and data it produces for integration into geo-information services

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020

Justification of the trend	Following the planned activities.								

## 6. The programme contribution to horizontal policies

### 6.1. Contribution to climate mainstreaming

#### 6.1.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
357,0	357,0	357,0	357,0	357,0	382,5	382,5	2 550,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.1.2. Explanation and justification on the financial contribution

The entire Copernicus programme (and its budget) is set up to provide the necessary data and information services based on satellite and in situ data to observe and monitor our planet and its (changing) environment. The different Copernicus services provide consistent and quality-controlled information to closely monitor the climate crisis.

Part of the investment on the Copernicus component of the EU Space programme support the implementation of climate-related policies. This share is estimated to be approximately **EUR 2550 million for the period 2021-2027**.

The mission of the Copernicus Climate Change is to support adaptation and mitigation policies of the European Union by providing consistent and authoritative information about climate change. Climate Data Store (CDS) provides a wealth of information about the past, present and future climate, on global, continental and regional scales. CC3S provides access to several climate indicators (e.g. temperature increase, sea level rise, ice sheet melting, warming up of the ocean) and climate indices (e.g. based on records of temperature, precipitation, drought event) for both the identified climate drivers and the expected climate change impacts<sup>19</sup>. These activities come up to approximately **EUR 200 million in the MFF 2021-2027**

More than 50% of the Copernicus Atmosphere Monitoring Service activities are linked directly or indirectly to climate change monitoring. CAMS provides information related to air pollution and health, solar energy, greenhouse gases and climate forcing, everywhere in the world. CAMS will develop a new portfolio for the assessment of the anthropogenic emissions, based on existing third-party data and on the new CO2 candidate mission which is scheduled end 2025.

The climate-related activities come up to approximately **EUR 100 million in the MFF 2021-2027**

More than 50% of the The Copernicus Marine Environment Monitoring service activities are climate mainstreamed: CMEMS operates an Ocean Climate Service and will develop with other services a knowledge hub dedicated to Arctic changes mainly due to climate change. These activities come up to approximately **EUR 100 million in the MFF 2021-2027**

More than 50% of the The Copernicus Land Monitoring service activities are linked directly or indirectly to climate change monitoring. CLMS supports the requests for land-related information to monitor (changes in the) biodiversity and ecosystems, relevant aspects of the circular economy (e.g. a sustainably built environment), land degradation. These activities come up to approximately **EUR 100 million in the MFF 2021-2027**

<sup>19</sup> The European Commission signed a Delegation Agreement with ECMWF (European Centre for Medium-Range Weather Forecasts) for the implementation of the Copernicus Climate Change service. It is operational since June 2018.

About 50% of the The Copernicus Emergency Management system activities are linked directly or indirectly to climate change monitoring. The CEMS provides critical information and early warnings regarding floods, droughts and forest fires. These activities come up to approximately **EUR 50 million in the MFF 2021-2027**

All these services rely heavily on space-borne observation data. We assume that the related investment is about 50% of the space component dedicated to these observations (e.g. Sentinels 1, 3, 5P, 6 and CO<sub>2</sub> mission). The corresponding share of the space component funding is expected to be about **EUR 2000 million in the MFF 2021-2027**.

### 6.1.3. Key achievements

Thanks to the near real time production of the reanalysis, the Copernicus Climate Change Service (C3S) was the first to call 2020 as the joint warmest year on record (on a par with 2016). C3S contributed with temperature data and graphics, as well as an “Arctic side-bar” section to the preliminary WMO statement on the State of the Climate in 2020. C3S is represented at international climate fora and events such as the Partner Advisory Committee of the Global Framework for Climate Services and the Climate Coordination Panel of WMO. C3S was also approached by WMO to explore the possibility for the service to become a GCOS endorsed global data repository of for upper air humidity data for GNSS.

The Copernicus Climate Change Service (C3S) works together with businesses across the globe to turn raw climate data into sector-specific information aimed at users within the field, such as businesses, researchers and policymakers. One of these projects is the Global Biodiversity service which aims to support those working to preserve species, to protect the areas that are most climate sensitive, to increase the resilience of ecosystems, to reduce biodiversity loss around the world by providing the information needed to create plans to sustain ecosystems in present and future climate conditions.

### 6.1.4. Performance

The Copernicus programme contributed EUR 1408 million in the 2014-2020 period to support the implementation of climate-related policies.

The mission of the Copernicus Climate Change Service (C3S) is to support adaptation and mitigation policies of the European Union by providing consistent and authoritative information about climate change. Climate Data Store (CDS) provides a wealth of information about the past, present and future climate, on global, continental and regional scales. C3S provides access to several climate indicators (e.g. temperature increase, sea level rise, ice sheet melting, warming up of the ocean) and climate indices (e.g. based on records of temperature, precipitation, drought event) for both the identified climate drivers and the expected climate change impacts<sup>[1]</sup>. These activities came up to approximately EUR 218 million in the MFF 2014-2020.

Around 50% of the Copernicus Atmosphere Monitoring Service (CAMS) activities are linked directly or indirectly to climate change monitoring. CAMS provides information related to air pollution and health, solar energy, greenhouse gases and climate forcing, everywhere in the world. The climate-related activities came up to approximately EUR 30 million in the MFF 2014-2020.

Around 50% of the Copernicus Marine Environment Monitoring service activities are climate mainstreamed. The activities came up to approximately EUR 70 million in the MFF 2014-2020.

About 50% of the the Copernicus Land Monitoring service activities are linked directly or indirectly to climate change monitoring. CLMS supports the requests for land-related information to monitor (changes in the) biodiversity and ecosystems, relevant aspects of the circular economy (e.g. a sustainably built environment), land degradation. These activities came up to approximately EUR 60 million in the MFF 2014-2020.

About 50% of the Copernicus Emergency Management system (CEMS) activities are linked directly or indirectly to climate change monitoring. The CEMS provides critical information and early warnings regarding floods, droughts and forest fires. These activities came up to approximately EUR 30 million in the MFF 2014-2020.

All these services rely heavily on space-borne observation data. We assume that the related investment is about 50% of the space component dedicated to these observations. The corresponding share of the space component funding was about EUR 1000 million in the MFF 2014-2020.

In the near future, the high-priority satellite mission “Copernicus Carbon Dioxide Monitoring” is foreseen to be launched in 2025.

Under the Paris climate accord, countries must compile CO<sub>2</sub> inventories. The Copernicus CO<sub>2</sub> mission will provide supporting data.

## 6.2. Contribution to biodiversity mainstreaming

### 6.2.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
2021							

<sup>[1]</sup> The European Commission signed a Delegation Agreement with ECMWF (European Centre for Medium-Range Weather Forecasts) for the implementation of the Copernicus Climate Change service. It is operational since June 2018.

120,0	120,0	120,0	120,0	120,0	165,0	165,0	930,0
-------	-------	-------	-------	-------	-------	-------	-------

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.2.2. Explanation and justification on the financial contribution

Part of the investments into the Copernicus component of the EU Space programme support the implementation of biodiversity-related policies. This share is estimated to be approximately **EUR 930 - 1130 million for the period 2021-2027**.

- More than 70 % of the Copernicus Land Service activities are linked directly or indirectly to biodiversity monitoring and maintenance.<sup>20</sup>
- Some products are directly linked to Biodiversity/eco-system scale patterns, such as the monitoring of green infrastructure, the riparian areas and the Natura 2000 sites in Europe for DG ENV, and the monitoring of key ecological landscapes and protected areas in Africa for DG INTPA.
- Others are indirectly supporting the biodiversity policies and strategy such as the monitoring of woody feature for the CAP or the provision of biophysical variables for the UN SDG 15 assessment.
- Overall the land cover mapping and land cover change mapping at European and Global scale carried out by the land service is an essential element for monitoring the evolution of biodiversity and for supporting its conservation and sustainable use. These activities come up to approximately **EUR 130 million in the MFF 2021-2027**.
- In addition, there are smaller activities indirectly related to marine biodiversity in the Copernicus Marine Environment Service and the Copernicus Climate Change Service is providing specific sectoral indices for biodiversity. The latter two are less important in budget and difficult to disentangle and to quantify.
- All these services rely heavily on space-borne observation data. Similar to the approach taken for the last exercise to estimate biodiversity related spending in the MFF 2014-2020, we assume that the related investment is about 30-40% of the space component dedicated to optical observations (Sentinels 1, 2 and 3 to monitor ecosystem-scale patterns). The corresponding share of the space component funding is expected to be about **EUR 800 – 1000 million**.

### 6.2.3. Key achievements

Copernicus products and services in the Copernicus land monitoring service support Biodiversity policies in EU. Land cover products and specific products related to Natura2000 sites, land degradation, monitoring of riparian and coastal zones, forest change are amongst those that are supporting to protect biodiversity in Europe. The Copernicus land monitoring service provides the High Resolution Layer Small and Woody features: small woody landscape features are important for a number of ecosystem services, among others related to biodiversity and habitat connectivity. They also improve air quality, water quality, water quantity, reduction of greenhouse gas emissions, carbon sequestration, climate change adaptation, regulation of soil erosion and soil quality, support biodiversity and pollination, and are important for cultural and recreational reasons. This CLMS information product helps to monitor the green infrastructure strategy of the EU the effectiveness of the Common Agricultural Policy (CAP). Furthermore, the CLMS continued to provide contributions to conservation efforts at global level with the Copernicus Hot Spot Monitoring component.

### 6.2.4. Performance

Part of the investments of the Copernicus programme has supported the implementation of biodiversity-related policies. This share amounted to approximately **EUR 700 million for the period 2014-2020**.

2014-2020 programming							Total
2014	2015	2016	2017	2018	2019	2020	
63	91	98	98	105	140	105	700

- More than 70 % of the Copernicus Land Service activities are linked directly or indirectly to biodiversity monitoring and maintenance.<sup>21</sup>
- Some products are directly linked to Biodiversity/ecosystem scale patterns, such as the monitoring of green infrastructure, the riparian areas and the Natura 2000 sites in Europe for DG ENV, and the monitoring of key ecological landscapes and protected areas in Africa for DG INTPA.
- Others are indirectly supporting the biodiversity policies and strategy such as the monitoring of woody feature for the CAP or the provision of biophysical variables for the UN SDG 15 assessment.
- Overall the land cover mapping and land cover change mapping at European and Global scale carried out by the land service is an essential element for monitoring the evolution of biodiversity and for supporting its conservation and sustainable use. These activities came up to approximately **EUR 100 million M€ in the MFF 2021-2027**.

<sup>20</sup> There are currently two principal paradigms for mapping biodiversity patterns with EO. First is to directly measure species, community or ecosystem-scale patterns. Second is to model biodiversity patterns indirectly using EO as predictive environmental features. Source: <https://onlinelibrary.wiley.com/doi/10.1111/ele.13106> - see figures featuring Sentinel 1A and 2A.

<sup>21</sup> <https://onlinelibrary.wiley.com/doi/10.1111/ele.13106> - see figures featuring Sentinel 1A and 2A.

- In addition, there are smaller activities indirectly related to marine biodiversity in the Copernicus Marine Environment Service and the Copernicus Climate Change Service is providing specific sectoral indices for biodiversity. The latter two are less important in budget and difficult to disentangle and to quantify.
- All these services rely heavily on space-borne observation data. We assume that the related investment is about 30-40% of the space component dedicated to optical observations (Sentinels 1, 2 and 3 to monitor ecosystem-scale patterns). The corresponding share of the space component funding is expected to be about **EUR 600 – 700 million**.

### 6.3. Contribution to clean air financing

Not applicable

### 6.4. Contribution to gender equality

Not applicable

### 6.5. Contribution to the sustainable development goals

#### 6.5.1. Goals

#### *SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture*

‘The integration of statistics, geospatial information, Earth observations, and other sources of Big Data, combined with new emerging technologies, analytics and processes, are becoming a fundamental requirement for countries to measure and monitor local to global sustainable development policies and programs (United Nations Committee of Experts on Global Geospatial Information Management (*UN-GGIM*) co-chair)’. In this framework Copernicus supplies crucial information (indicators/sub-indicators) for monitoring the progress of the following SDGs <sup>(22)</sup>:

SDG 2.4 By 2030, ensure sustainable food production systems and implement resilient agricultural practices that increase productivity and production, that help maintain ecosystems, that strengthen capacity for adaptation to climate change, extreme weather, drought, flooding and other disasters and that progressively improve land and soil quality.

Copernicus Land Monitoring Service helps with data and products on crop indices, dry Matter Productivity and Soil Moisture.

#### *SDG 3 Ensure healthy lives and promote well-being for all at all ages*

SDG 3.d Strengthen the capacity of all countries, in particular developing countries, for early warning, risk reduction and management of national and global health risks.

Copernicus Atmosphere Monitoring Service (CAMS) supplies air quality forecasts on pollutants, CO<sub>2</sub>, NO<sub>2</sub> levels, pollens levels

#### *SDG 6 Ensure availability and sustainable management of water and sanitation for all*

SDG 6.6 By 2020, protect and restore water-related ecosystems, including mountains, forests, wetlands, rivers, aquifers and lakes Copernicus Land Monitoring Service (CLMS) systematically provides in near real time information on global inland water bodies and their seasonal replenishment, lake and river water levels, temperature, turbidity and trophic state, including potential water availability from snow and ice cover.

#### *SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all*

Copernicus Atmosphere Monitoring Service (CAMS) provides global 5-day forecasts of desert dust and the other main aerosols (sulphates, sea salts, black and organic carbon).; Copernicus Climate Change Service (C3S) provides climate indicators of electricity consumption, alongside estimates of the combined production from all renewable sources

#### *SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable*

SDG 11.4 Strengthen efforts to protect and safeguard the world’s cultural and natural heritage.

The Copernicus Emergency Service can contribute to safeguarding cultural heritage by monitoring and documenting the impact of earthquakes through interferograms, which depict where the earthquake impact is most severe along with information for emergency response to different types of disasters, including floods, as well as related prevention, preparedness, response and recovery activities.

<sup>(22)</sup> [https://www.copernicus.eu/sites/default/files/2018-10/Copernicus\\_SDG\\_Report\\_July2018pdf.pdf](https://www.copernicus.eu/sites/default/files/2018-10/Copernicus_SDG_Report_July2018pdf.pdf)

***SDG 13 Take urgent action to combat climate change and its impacts***

SDG 13.3 Improve education, awareness-raising and human and institutional capacity on climate change mitigation, adaptation, impact reduction and early warning.

Copernicus Climate Change Service provides routine access to key indicators on a number of Essential Climate Variables (mean temperatures and anomalies, sea-ice extension, CO<sub>2</sub>, etc.)

***SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development***

SDG 14.4 By 2020, effectively regulate harvesting and end overfishing, illegal, unreported and unregulated fishing and destructive fishing practices and implement science-based management plans, in order to restore fish stocks in the shortest time feasible, at least to levels that can produce maximum sustainable yield as determined by their biological characteristics.

Copernicus Marine Monitoring Service offers monitoring of the oceanic carbon cycle, ocean PH and acidity, monitoring of fishing grounds. Effective maritime surveillance can help combat illegal, unreported and unregulated fishing, thereby contributing to sustainable fisheries goals. Copernicus Maritime Surveillance Service, can supply satellite data to ensure that fishing is carried out safely and sustainably

***SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss***

SDG 15.1 By 2020, ensure the conservation, restoration and sustainable use of terrestrial and inland freshwater ecosystems and their services, in particular forests, wetlands, mountains and drylands, in line with obligations under international agreements

Copernicus Land Monitoring Service delivers products for the protection of Natura 2000 areas for instance their grassland status and information on vegetation index, land degradation, deforestation and loss of biodiversity.

DG ESTAT is assessing the possibility to introduce in the future new Copernicus based sub-indicators for various SDGs.

***SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels******SDG 17 Strengthen the means of implementation and revitalize the global partnership*****6.5.2. Key achievements and performance****SDG 2 – Zero hunger**

Agriculture is a crucial economic activity worldwide, providing livelihoods and employment for many. Rising populations, changing demands and diets as well as environmental changes (e.g. extreme weather, climate change) put increasing stress on the world's food supply. In many countries affected by hunger, there are already significant efforts to address these challenges, such as closing yield gaps (difference between current yields and what might be possible under optimum conditions) and implementing sustainable land management practices.

To monitor and respond to such needs, governments and aid workers need accurate, timely, systematic and comprehensive information. Dedicated products derived from Earth Observation satellites fulfil this requirement more and more.

Copernicus data like the one provided by the Copernicus Land Monitoring Service (CLMS), help national institutions in monitoring crop conditions, providing early warnings on failing crops and predicting crop yields. Crop indices, Dry Matter Productivity and Soil Moisture information are provided every ten days on a global scale. The NGO, Action Against Hunger, and the Centre de Suivi Ecologique de Dakar are using COPERNICUS indices such as the Dry Matter Productivity for pastoral Early Warning System in West Africa informing pastoral communities and Governments on biomass conditions.

**SDG 6 : Clean water and sanitation**

The Copernicus Land Monitoring Service (CLMS) systematically provides in near real time information on global inland water bodies and their seasonal replenishment, lake and river water levels, temperature, turbidity and trophic state, including potential water availability from snow and ice cover. The product supports a wide range of applications in the field of food security, sanitation, energy, health, transport, preservation of biodiversity and natural risk management.

**SDG3 – Good health and well-being**

The Copernicus Atmosphere Monitoring Service (CAMS) provides daily air quality forecasts at global scale and, with higher resolution, over Europe. These forecasts, derived from satellite observations, account for routine pollutants' emissions but also for those related to exceptional events such as large wildfires or volcanic eruptions. The forecasts are used daily by a wide range of public and commercial entities for decision-making, smartphone applications and websites, or for downscaling to local areas in order to inform the public or assess health impacts

A company located in Cambridge, UK - provides free air pollution, UV, pollen and temperature forecasts for Greater London and South-East England. Their service, known as AirText, is provided to more than 15,000 subscribers, who can customise the alerts they receive from the service by email, text, voicemail or Twitter. AirText provides local forecasts based on detailed modelling of emissions and atmospheric dispersion over the area, but it relies on CAMS to take into account how much pollution flows into and out of the area. It is essential indeed to include background pollutants concentrations, as provided by CAMS, in order to deliver an accurate service at the local scale: the quality of air which is breathed locally is generally determined by the combination of local pollution sources with distant ones, which can be hundreds or even thousands of kilometers upwind.

#### SDG7 Affordable and clean energy

A serious issue for the productivity of solar power plants and their operators is desert dust. Deposition of dust blocks solar radiation, and this can effect the mirrors or photovoltaic panels, thus significantly reducing their efficiency. Airborne particles, also called aerosols, directly affect the amount of solar radiation reaching the Earth's surface: together with clouds, aerosols are one of the main variables determining the solar energy yield that can be obtained from a solar energy production facility.

To prevent power efficiency losses and improve the design and management of solar power plants, the Copernicus Atmosphere Monitoring Service (CAMS) provides global 5-day forecasts of desert dust and the other main aerosols (sulfates, sea salts, black and organic carbon). CAMS aerosol information products are routinely used by GeoModel Solar, a Slovak company specialised in providing data for site qualification, planning, financing and operation of solar energy systems.

Balancing the societal demand for energy with the energy production from renewable sources is one of the main challenges Europe will have to tackle in the next two decades. Such a challenge is likely to require significant infrastructure investments. The Copernicus Climate Change Service (C3S) provides climate indicators of electricity consumption, alongside estimates of the combined production from all renewable sources at national and sub-national level in Europe. These two sets of indicators help planners and policy makers identify the pros and cons of different energy mix options and optimise investment decisions accordingly.

#### SDG 11 – Sustainable cities and communities

One of the goals under SDG 11 is to make cities and human settlements inclusive, safe, resilient and sustainable. Many cities over the world are exposed to natural hazards, such as floods, which presently account for 31% of all economic losses worldwide resulting from natural hazards. As the frequency and magnitude of flood disasters is projected to increase due to climate change, soil sealing and growing population exposure, flooding is one of the key societal challenges of this century. The Copernicus Emergency Management Service (CEMS) provides information for emergency response in relation to different types of disasters, including floods, as well as related prevention, preparedness, response and recovery activities. An example of how CEMS supports emergency preparedness and response globally, is the activation of its Rapid Mapping component following floods in Peru in early 2017. These events resulted in more than 100 deaths, caused the evacuation of around 158,000 people and damaged 210,000 homes. The maps produced by Copernicus helped analyse the affected areas and the extent of the floods in real time, allowing the civil protection authorities to target their rescue operations. The Copernicus EMS Global Flood Awareness System (GloFAS) and the CEMS Rapid Mapping component provided local emergency responders, national authorities and international relief operators with essential information on the flooding situation in Peru.

Another goal pertaining to SDG 11 is to strengthen efforts to protect our cultural heritage. Cultural heritage is often affected by natural disasters, in particular earthquakes. The Copernicus programme can contribute to safeguarding cultural heritage by monitoring and documenting the impact of earthquakes. Although damages to historical buildings cannot be reversed, the mapping of the severity of an earthquake and assessment of the resulting damage allows the competent authorities to safeguard the remaining buildings. One of the ways Copernicus can assist in this matter is by assessing the magnitude of the earthquake through interferograms, which depict where the earthquake impact was most severe. This method was used, for instance, to help preserve historical sites hit by an earthquake in Central Italy in August 2016.

#### SDG 13 – Climate action

Climate change is now affecting every country on every continent. It is disrupting national economies and affecting lives, costing people, communities and countries dearly today and even more tomorrow. To address climate change, countries adopted the Paris Agreement at the COP21 in Paris on 12 December 2015, which aims at keeping this century's global temperature rise well below 2 degrees Celsius above pre-industrial levels, and to pursue efforts to limit the temperature increase even further to 1.5 degrees Celsius. The Copernicus Climate Change Service (C3S) routinely monitors the Earth's climate and its evolution. It provides routine

access to key indicators on a number of Essential Climate Variables (temperature, sea-ice, CO<sub>2</sub>, etc.) and is therefore a powerful tool to monitor the success of the implementation of the Paris Agreement. These climate indicators will also support European adaptation and mitigation policies in a number of economic sectors.

#### SDG 14 – Life below water

The Copernicus Marine Environment Monitoring Service (CMEMS) produces ocean monitoring products based on satellite and in situ observations as well as numerical models. By the end of 2018, its in situ and numerical model capacity will be reinforced for an improved monitoring of the oceanic carbon cycle at global and regional scales. Once this milestone is achieved, Eurostat, the statistical office of the EU, will use ocean PH and acidity products from CMEMS for all European regional seas for the development of its new official environmental indicators. Such indicators can be used to monitor and control water quality in Europe through a unified set of parameters.

As part of the Copernicus Security Service (CSS) the Maritime Surveillance component, managed by the European Maritime Safety Agency (EMSA), provides relevant and targeted information on activities at sea. Activities covered in the scope of the service also include fisheries control, in particular the monitoring of fishing grounds. Effective maritime surveillance can help combat illegal, unreported and unregulated fishing, thereby contributing to sustainable fisheries goals. On request of authorised fisheries control authorities, the Copernicus Maritime Surveillance Service provides a systematic overview of vessels and observable fishing activities at a particular time and place. The service is delivered in near-real-time to the end users, meaning within 30 to 45 minutes depending on the type of imagery. The figure below shows a SAR satellite image allowing detection of vessels at sea. The vessel detection results can be combined with additional information such as vessel identification and position data from on-board reporting systems or data on fishing grounds and restricted areas. This fused data can draw attention to vessels which are not reporting, help identify discrepancies in records, and alert authorities of unusual vessel behaviour. Through the Copernicus Maritime Surveillance Service, with the support of the European Fisheries Control Agency (EFCA) as well as EMSA, fisheries control administrations from across the EU can benefit from Copernicus satellite data in their efforts to ensure that fishing is carried out safely and sustainably.

#### SDG 15 – Life on land

As part of the Copernicus Land Monitoring Service (CLMS), the European Environment Agency (EEA) delivers spatially detailed products on pan-European and local land cover and land use information. The local component focuses on areas that are prone to specific environmental challenges and issues in the European Union. Under this local component, EEA offers information on Natura2000 protected hotspots, which is used to assess the preservation and status of these sites, and whether the decline in the grasslands cover is evident. The status of Natura2000 hotspots will ensure that these are accurately mapped, and can be used to draw attention to events that threaten the preservation of the sites.

But what about land degradation, deforestation or loss of biodiversity in other areas of the world? The Global component of the Land Service, is currently also mapping protected areas but in Africa to support the biodiversity strategy. Furthermore and recently the Global component extended its product portfolio to include a Global Land Cover Map in order to provide spatial information about land for applications ranging from global forest monitoring (REDD+), crop area monitoring, biodiversity conservation to land status and climate modelling. The new Land Cover Map is completing the current portfolio of vegetation products that are related to biomass dynamics. These products are clearly earmarked for addressing the SDG 15.3 on land degradation neutrality.

3. How is the programme performing ? .....	400
3.1. Performance .....	400
3.2. Key achievements .....	402
3.3. Evaluations, studies and reports .....	403
4. Programme 2021-2027 - Key monitoring indicators .....	404
Specific Objective 1 :Enhance research and innovation capacities and the uptake of advanced technologies .....	404
Specific Objective 2 :Reaping the benefits of digitisation for citizens, companies and governments .....	405
Specific Objective 3 :Enhancing growth and competitiveness of SMEs .....	406
Specific Objective 4 :Developing skills for smart specialisation, industrial transition and entrepreneurship .....	406
Specific Objective 5 :Enhancing digital connectivity .....	407
Specific Objective 6 :Promoting energy efficiency measures and reducing green-house gas emissions .....	407
Specific Objective 7 :Promoting renewable energy .....	408
Specific Objective 8 :Developing smart energy systems, grids and storage outside TEN-E .....	409
Specific Objective 9 :Promoting climate change adaptation, risk prevention and disaster resilience .....	409
Specific Objective 10 :Promoting sustainable water management .....	410
Specific Objective 11 :Promoting the transition to a circular economy .....	411
Specific Objective 12 :Enhancing nature protection and biodiversity, green infrastructure in particular in the urban environment, and reducing pollution .....	411
Specific Objective 13 :Promoting sustainable multimodal urban mobility .....	412
Specific Objective 14 :Developing a sustainable, climate resilient, intelligent, secure and intermodal TEN-T .....	412
Specific Objective 15 :Developing and enhancing a sustainable, climate resilient, intelligent and intermodal national, regional and local mobility, including improved access to TEN-T and cross-border mobility .....	414
Specific Objective 16 :Enhancing the effectiveness of labour markets and access to quality employment through developing social innovation and infrastructure .....	415
Specific Objective 17 :Improving access to inclusive and quality services in education, training and lifelong learning through developing infrastructure .....	416
Specific Objective 18 :Increasing the socio-economic integration of marginalised communities, migrants and disadvantaged groups, through integrated measures including housing and social services .....	416

Specific Objective 19 :Ensuring equal access to health care through developing infrastructure, including primary care .....	417
Specific Objective 20 :Fostering the integrated social, economic and environmental development, cultural heritage, tourism and security in urban areas.....	418
5. Programme 2014-2020 - Key monitoring indicators .....	418
Previous Program 1 : European Regional Development Fund (ERDF).....	418
General Objective 1 :To reduce disparities between the levels of development of the various regions, in particular for rural areas, areas affected by industrial transition, and regions which suffer from severe and permanent natural or demographic handicaps and to contribute to achieving the targets set out in the Europe 2020 strategy of smart, sustainable and inclusive growth, and in particular towards the achievement of quantitative headline targets identified in that strategy .....	418
Specific Objective 1 :Strengthening research, technological development and innovation.....	422
Specific Objective 2 :Enhancing access to, and use and quality of, information and communication technologies.....	424
Specific Objective 3 :Enhancing the competitiveness of small and medium-sized enterprises .....	425
Specific Objective 4 :Supporting the shift towards a low-carbon economy in all sectors .....	428
Specific Objective 5 :Promoting climate change adaptation, risk prevention and management.....	431
Specific Objective 6 :Preserving and protecting the environment and promoting resource efficiency .....	432
Specific Objective 7 :Promoting sustainable transport and removing bottlenecks in key network infrastructures.....	434
Specific Objective 8 :Promoting sustainable and quality employment and supporting labour mobility .....	438
Specific Objective 9 :Promoting social inclusion, combating poverty and any discrimination .....	438
Specific Objective 10 :Investing in education, training and vocational training for skills and lifelong learning.....	440
Specific Objective 11 :Enhancing institutional capacity of public authorities and stakeholders and an efficient public administration .....	441
6. The programme contribution to horizontal policies .....	441
6.1. Contribution to climate mainstreaming.....	441
6.2. Contribution to biodiversity mainstreaming.....	443
6.3. Contribution to clean air financing.....	444
6.4. Contribution to gender equality .....	445
6.5. Contribution to the sustainable development goals.....	445

## **1. Overview**

### **1.1. Challenges**

REGIO delivers its objectives through management of programmes financed primarily under the European Regional Development Fund (ERDF) and the Cohesion Fund (CF). The implementation of these funds allows fulfilling the long-term objectives of strengthening economic, social and territorial cohesion in the EU.

Together with the European Social Fund (ESF), the ERDF and CF (and, from 2021, the Just Transition Fund - JTF) comprise the European Union's cohesion policy funds.

Regional disparities show a generally decreasing trend among the EU regions, based on 2019 data, even though the pace of convergence was slower after the crisis of 2008. In 2000, GDP per head of the most developed regions accounting for 10% of the Union's population was 6.1 times higher than GDP per head of the least developed regions also accounting for 10% of the Union's population. In 2018, the ratio dropped to 3.4. However, significant disparities still remain and many regions still have a GDP per head and an employment rate below pre-crisis levels. Only in 2014, disparities in employment started to narrow, followed by disparities in GDP per head in 2015.

Today, Europe is severely affected by the COVID-19 pandemic. In response, the Commission proposed a strong and coordinated reaction to the health crisis and its impact on Europe's economy and society.

Amidst the COVID-19 pandemic and other ongoing challenges, cohesion policy is crucial for ensuring a balanced recovery, fostering convergence and making sure no one is left behind. Funding from the ERDF, the CF as well as from the European Union Solidarity Fund (EUSF) played a central role in 2020 and will continue doing so in the years to come.

The main challenges that cohesion policy will have to face in the coming years relate to the economic situation. Despite the fact that the overall impact of the ongoing COVID-19 crisis cannot yet be assessed, it is already apparent that regions and sectors are unevenly affected, which is likely to have a long-term impact on the pace and direction of convergence. The implementation of the

Green Deal and the transition towards a climate neutral economy will also impact regions hosting highly emitting industries of fossil fuel extraction activities. The design of the 2021-2027 programmes, which focuses resources on environmental and climate spending under the second policy objective ('a greener, low-carbon transitioning towards a net zero carbon economy and resilient Europe by promoting clean and fair energy transition, green and blue investment, the circular economy, climate change mitigation and adaptation and risk prevention and management, and sustainable urban mobility') will allow regions to benefit from economic opportunities arising from the green transition. The JTF will support, from 2021 onwards, the economic reconversion of the territories the most negatively impacted by the costs of the transition towards a climate-neutral economy.

## 1.2. Mission (general objectives)

REGIO's activities are guided by the Treaties on the European Union (TEU) and on the Functioning of the European Union (TFEU). Article 174 of the Treaty provides that, in order to strengthen its economic, social and territorial cohesion, the Union is to aim at reducing disparities between the levels of development of the various regions and the backwardness of the least favoured regions, and that particular attention is to be paid to rural areas, areas affected by industrial transition and regions which suffer from severe and permanent natural or demographic handicaps. Thanks to the policy's specific features (e.g. redistribution of resources at EU level, alignment of investment to EU-wide priorities, concentration of resources on less developed and transition regions, multiannual programming, place-based approach, multi-level governance, interregional cooperation), the supported investments bring strong European added value, while respecting the principle of subsidiarity.

The main advantages of the policy are the following:

1. **Aligning investment to EU priorities:** Even if the policy is multi-thematic, EU priorities are given preference across the investment fields set out in the regulation via thematic concentration requirements. This in turn is intended to influence national investment policies, leading to coordinated EU-wide action that is critical to addressing global challenges. For 2021-2027, in line with the political priorities of the von der Leyen Commission (A European Green Deal, A Europe Fit for Digital Age, An economy that Works for People and A stronger Europe in the world), priority is given to smart and green growth.
2. **Contributing to economic governance:** There is a close relationship between regional policy funding and economic governance with incentives (macroeconomic conditionalities), concrete support to Country Specific Recommendations (CSRs) and "enabling conditions" (i.e. framework conditions meant to ensure effectiveness of policy implementation ex ante) expected to play a significant role in improving application of EU legislation in Member States, as well as in fostering structural reforms.
3. **Multiannual programming provides stability, certainty and sustainability to investment plans in Member States, reducing their vulnerability across economic and political cycles and improving prospects for implementation on the ground.** However, the policy's flexibility was also shown during the COVID-19 crisis, demonstrating its ability to adapt quickly to new circumstances - funds were mobilised with unprecedented speed and flexibility.
4. **Concentration of resources on the less developed and transition regions:** support is provided to key investments, which would otherwise not take place in poorer regions. That concentration also produces spill-over effects from less developed regions to the rest of Europe, notably via increased connectivity and trade flows and thus supporting the Single Market.
5. **The "place-based" approach of ERDF programming allows the identification of specific development needs, the definition of appropriate multi-thematic investment strategies aligned to EU priorities and better conditions for sound implementation of investments on the ground.**
6. **Interregional cooperation and the exchange of experience:** Cooperation - both cross-border and across the EU - is an area where the ERDF brings clear European added value. REGIO makes a substantial contribution to identifying cross-border barriers to the Single Market and offers tailor-made solutions.

## 1.3. Specific objectives

In line with the cohesion policy legislative framework for 2021-27 period, EU high-level policy objectives are proposed as follows:

1. A more competitive and smarter Europe by promoting innovative and smart economic transformation and regional ICT connectivity
2. A greener, low-carbon transitioning towards a net zero carbon economy and resilient Europe by promoting clean and fair energy transition, green and blue investment, the circular economy, climate change mitigation and adaptation and risk prevention and management, and sustainable urban mobility;
3. A more connected Europe by enhancing mobility;
4. A more social and inclusive Europe implementing the European Pillar of Social Rights;
5. A Europe closer to citizens by fostering the sustainable and integrated development of all types of territories and local initiatives.

Policy objectives 2 and 3 above are proposed for CF while all five objectives are proposed for the ERDF. The five policy objectives are broken down to 23 specific objectives for the ERDF and CF and there are 2 Interreg specific objectives. As an additional instrument the JTF follows a specific objective that is added to the above five and only the JTF implements it.

## 1.4. Public intervention context

The ERDF and CF, together with the newly established JTF and the ESF, are the budgetary instruments of the EU's cohesion policy. Article 174 TFEU establishes cohesion policy and describes its objectives.

According to Article 175 of the TFEU, the formulation and implementation of the Union's policies and actions and the implementation of the internal market shall take into account the objectives of the cohesion policy and shall contribute to their achievement.

271.1 billion (in current prices) is earmarked for cohesion policy in the 2021-2027 period, which represents over 22% of the EU budget (excluding Next Generation EU) for this period.<sup>1</sup>

### 1.5. Actions

Through the ERDF and CF, a critical mass of investment is delivered in key priority areas, to bring structural change and respond to the needs of the real economy by supporting job creation, business competitiveness, economic growth, sustainable development, and by improving citizens' quality of life.

**Cohesion policy** addresses disparities through multi-thematic strategies, supporting multi-annual investments across diverse categories of regions (less developed regions, transitional regions and more developed regions). The policy is distinguished by the diversity of activities and actions.

Both **ERDF and CF** (and from 2021 the JTF) provide investments to develop infrastructures, productive investments in enterprises and "soft" supports (consultancy services and advice), thus strengthening public policies across a range of themes. EU support is predominantly provided through grants but funding is also provided through financial instruments.

The **CF** is distinguished by its focus on mainly capital intensive environmental and transport investments under policy objective 2 – Greener Europe and policy objective 3 - Connected Europe.

### 1.6. Delivery mode

Cohesion policy funds are delivered through shared management. Under the shared management mode, the co-legislators fix the legal framework and the overall funding and determine the allocations by Member States<sup>2</sup> and category of region. The Commission adopts the programmes. As regards implementation, the Commission cooperates with Member States' administrations (at national and regional level), which are in charge of the operational implementation. REGIO leads on the Commission's side.

The ERDF is supporting all Member States and is implemented through national, regional and interregional (Interreg) programmes. The CF covers only 15 Member States - those with a Gross National Income (GNI) per inhabitant below 90% of the EU average.

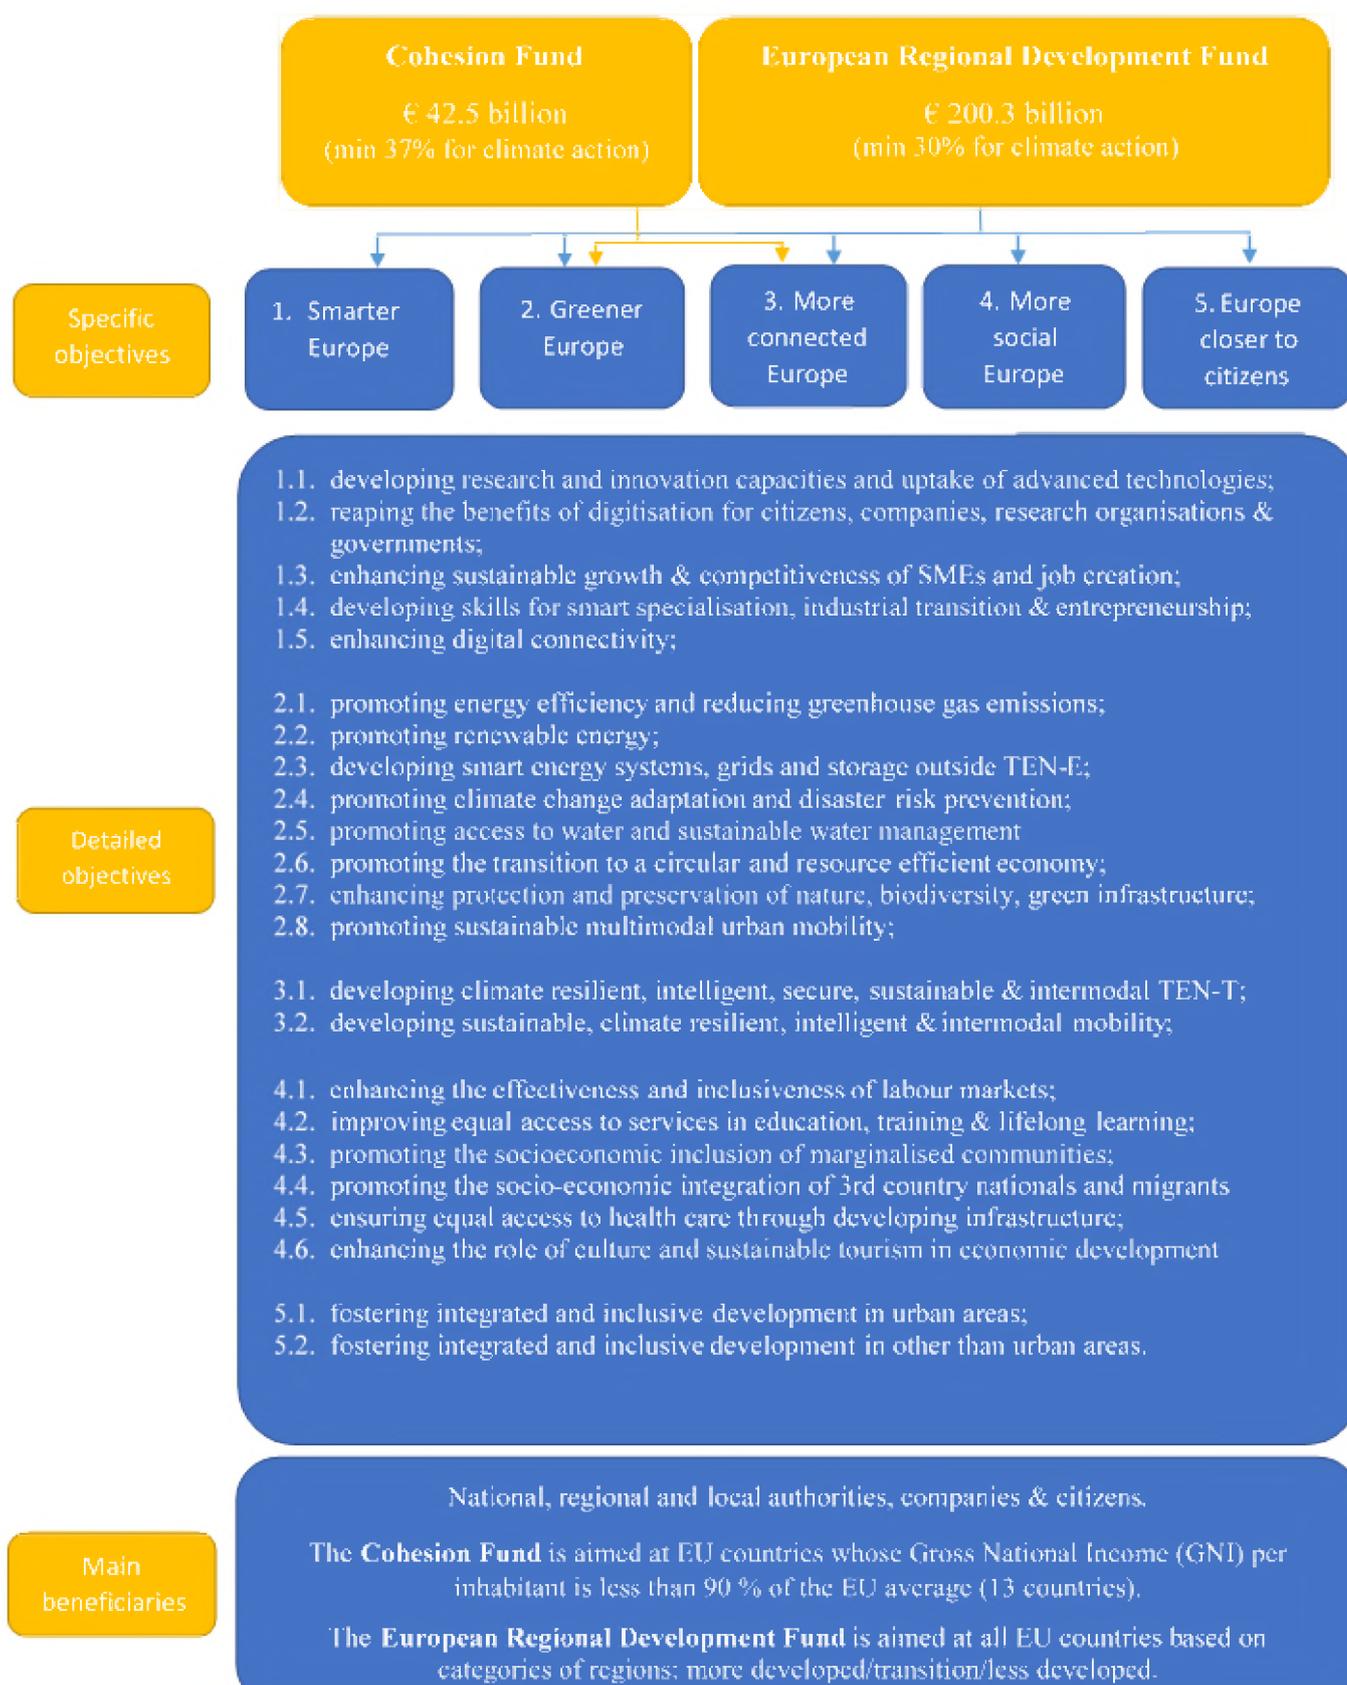

### 1.7. Graphic overview of the programme structure

---

<sup>1</sup> ERDF (including Interreg), CF (without transfer to CEF), JTF (excluding NGEU resources) and without REACT-EU

<sup>2</sup> Where appropriate and for reasons of brevity, the term 'Member States' includes the United Kingdom, although the country has left the Union in 2020

Implemented via shared management\* between European Commission - DG Regio & Member State authorities

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM (2018) 372: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on the European Regional Development Fund and on the Cohesion Fund COM (2018) 373: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on a mechanism to resolve legal and administrative obstacles in a cross-border context COM (2018) 374: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on specific provisions for the European territorial cooperation goal (Interreg) supported by the European Regional Development Fund and external financing instruments	2021 - 2027	48 026,2
	2021 - 2027	226 047,5

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
ERDF *	29 240,3	30 173,8	31 142,2	32 201,1	33 291,9	34 416,3	35 577,7	226 043,2
Cohesion Fund *	4695,7	4864,6	5038,5	52131,0	5429,6	5634,5	5846,9	36740,6
REACT EU	27 856,7	7 581,0	0,0	0,0	0,0	0,0	0,0	35 437,7

\* These amounts take into account the contribution of ERDF to the Just Transition Fund but does not take into account the contribution of the Cohesion Fund to the Connecting Europe Facility.

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The ERDF in 2021-2027 will focus on investing in five policy objectives: a smarter (1), greener (2), more connected (3), more social (4) Europe that is closer to its citizens (5). These correspond to the 11 thematic objectives in 2014-2020 presented in a new structure. With this structure the funds are leaner while maintaining the logic of the previous period. Via the thematic concentration (Article 3), the CF will focus on two main objectives: a smart and digital transformation of the regional economies (Policy Objective 1) as well as a green transition towards a climate neutral economy (Policy Objective 2).

ERDF and CF sustained a link to the Country Specific Recommendations through the mechanisms of programming, macro-economic conditionality and mid-term reviews. In addition, programmes financed by the funds need to be based on the European Pillar of Social Rights and the National Energy and Climate Plans (under the energy Union).

The 2021-2027 regulation introduces new initiatives under direct or indirect management:

- European Urban Initiative: a tool integrating existing tools for cities and towns.
- Interregional Innovative Investment: initiative that targets cooperation in research and innovation.

In relation to financial management, the logic of many targets was maintained from the 2014-2020 framework while the targets for the new programmes are more ambitious:

- EU-level targets for climate expenditure for ERDF and CF was set in the Common Provision Regulation (at 30% and 37% respectively);
- Flexibility amount, corresponding to 50% of the 2026 and 2027 commitments has been introduced (such amount will be definitively programmed at the mid-term review);
- N+3 rule has been maintained for decommitment (as for 2014-20) and except for last year, where we had N+2;
- Co-financing rates are stratified and slightly reduced compared to 2014-20. They were set out at 85% for less developed regions; 70% for transition regions that were classified as less developed in 2014-20; 60% for transition regions; 50% for more developed that were classified as transition in 2014-20, and 40% for more developed region
- Globally the funds are facing a 4% reduction of the budgetary resources, in 2018 prices, (from EUR 350 billion to EUR 337 billion, including EUR 17.5 billion (EUR 19.3 billion in current prices) under JTF – for EU27) (without taking into account REACT-EU).

## 1.10. Relevant websites providing more information

The main websites of the cohesion policy funds provide all the necessary details about their nature and structure, their legal basis, news and further practical guidance. The Cohesion Open Data Platform - <https://cohesiondata.ec.europa.eu/> - provides data on

investment financing and achievements under the ESI funds 2014-2020 and the extension of coverage to the 2021-2027 programmes is already planned. The platform visualises, currently for 290 ERDF and CF programmes, the latest data is available here:

[https://ec.europa.eu/regional\\_policy/index.cfm/en/funding/erdf/](https://ec.europa.eu/regional_policy/index.cfm/en/funding/erdf/)

[https://ec.europa.eu/regional\\_policy/index.cfm/en/funding/cohesion-fund/](https://ec.europa.eu/regional_policy/index.cfm/en/funding/cohesion-fund/)

## **2. Where are we in the implementation ?**

### **2.1. Programme 2021-2027**

The presentation of results for the ERDF and CF will be presented in a single programme statement from this year onwards. The JTF will be presented in a separate Programme Statement. We will present global figures for both funds together (especially on performance), as the funds' logic and objectives are similar. However, key budgetary figures and performance figures will continue to be presented separately by fund. This allows for a shorter, more focused presentation of the performance of both funds.

In the 2021 budget, the allocation for ERDF and CF together equals EUR 33.7 billion (ERDF EUR 29 billion and CF EUR 4.7 billion) in commitment appropriations. Both the 2021 commitments and first pre-financing payments for all the MFF instruments will take place once the new programmes for the 2021-2027 period are adopted. An amount of EUR 1.4 billion is available in payment appropriations for pre-financing. As regards the adoption of 2021-2027 programmes, this is expected to be delayed due to the late adoption of the legal basis expectedly entering into force in June/July 2021, the COVID-19 crisis and its severe socio-economic impacts in some Member States as well as the adoption of new funding lines such as REACT-EU.

### **2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations**

<b>Programmes</b>	<b>Sum of Net Planned EU Amount</b>	<b>Sum of Total net payments</b>	
Cohesion Fund <sup>1</sup>	61 455 291 487.00	34 906 531 046.65	56.8%
ERDF	200 206 744 732.00	101 231 055 970.82	50.6%

Implementation as of 31/12/2020

Source: Open Data Platform

<sup>1</sup> *Financial information source:* EU Open Data Portal for the European Structural and Investment Funds.

At the end of December 2020, the overall implementation of the 2014-2020 period stands at 52% on average for CF and ERDF. In the first half of the 2014-2020 period, EU payments tended to be modest, but in line with the previous programming periods. This is mainly due to the nature of cohesion policy investments, which have a long start-up phase (planning, programming, authorisations) without significant financial execution. The impact of the 2008-2010 crisis slowed the execution of 2007-2013 national and regional programmes, leading to the late completion of those programmes (in 2014 and 2015) overlapping with the start of the 2014-2020 programmes. In addition, the regulatory provisions of the 2014-2020 period (e.g. the level of pre-financing, the N+3 de-commitment rule) have provided limited incentives to a fast start of implementation in Member States.

In 2020, there was a significant increase in EU payments which was triggered by the sharp progress in project selection rates over the last years. Moreover, the prompt cohesion policy response to the COVID-19 pandemic and the adopted measures have played an important role in the implementation of the funds. In fact, the Coronavirus Response Investment Initiative (CRII(+)) measures foresee 100% co-financing for expenditure declared during the current accounting year 2020-2021 while 2019 annual pre-financing amounts have not been recovered in 2020 in order to ease budgetary pressure and accelerate expenditure related to COVID-19. The implementation has also been impacted by some revised allocations due to the performance review exercise and CRII(+) transfers. Considering all those aspects, ERDF and CF show respectively an implementation rate of 51% and 57% at the end of 2020, substantially higher than the rates registered at the end of 2019 (ERDF 35% and CF 39%).

In addition to CRII(+), the Commission also proposed additional financing under "Recovery Assistance for Cohesion and the Territories of Europe initiative" (REACT-EU). Over 2021-23, original 2014-2020 EU financing will be topped up by EUR 50.6 billion (in current prices) under REACT-EU to finance crisis repair measures. This will contribute to a green, digital and resilient recovery of the economy by adding fresh additional resources to existing cohesion policy programmes.

Overall, the implementation rate in terms of net payments is nonetheless slower than that of the 2007-2013 period in the corresponding year where net payments amounted to 6-7 p.p. higher (57% of the ERDF allocation and 62% of CF at the end of 2013).

With regard to financial instruments<sup>3</sup>, almost EUR 29 billion of ERDF and CF resources are planned to be delivered through financial instruments by 2023, constituting over 8% of the overall allocation, creating an efficient and sustainable alternative to traditional grant-based support. The use of financial instruments has also accelerated due to CRII(+) measures. Payments via

<sup>3</sup> In addition to traditional grants, ERDF and the CF support projects on the ground through financial products, such as loans, guarantees or equity.

financial instruments to boost working capital to SMEs increased by EUR 3.5 billion. Programmes in 24 Member States and the UK benefit from these instruments. The total amount invested in final recipients by the end of 2020 exceeded EUR 9.4 billion (62% of funds paid to FIs). Loans accounted for 51% of eligible costs for all selected instruments, followed by equity-type instruments (22%) and guarantees (21%).

In 2021, the outflow of funds aligns with the general trend of consumption for the 2014-2020 period. However, the economic crisis and the parallel implementation of other instruments (e.g. REACT-EU and the start of the 2021-2027 programming period) might affect implementation progress in some Member States. Most importantly, once REACT-EU resources are added to the on-going 2014-2020 programmes, the pace of financial implementation rate might appear to be slowing down in terms of percentages of overall allocation due to the increased base amount.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

The delayed agreement on the MFF 2021-2027 and of the adoption of the legislative proposals for the ERDF and CF mean that the programmes can officially be submitted for approval as from mid-2021. It is yet unclear as to whether the COVID-19 crisis and its severe socio-economic impacts in some Member States as well as the adoption of new funding lines such as REACT-EU and the new Recovery and Resilience Facility (RRF) will have further impact on delaying the adoption of programmes.

The MFF 2021-2027 provides for the total budget appropriations available by fund, Member State and category of region. It is only with the formal adoption of the national and regional shared management programmes that the budget, the indicators and target values for each specific objective becomes stable. Until the formal shared management programmes are adopted, it is therefore not possible to detail the budgets set by specific objective nor the indicator targets that will be set.

In the programme statement for draft budget 2023, the Commission will set out the degree of progress made in the shared management programming and provide an explanation of the progress in setting up the performance framework based on adopted programmes.

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.3. Previous programme performance**

The 2014-2020 ERDF and CF programmes contribute principally to four of the policy priorities of the von der Leyen Commission: a European Green Deal, a Europe fit for the Digital age, an economy that works for people and a stronger Europe in the world. The programming was aligned to contribute to the EU's effort to overcome the structural weaknesses in its economies, improve competitiveness and productivity and underpin a sustainable social market economy.

The efforts of the 2014-2020 programmes to set clearer intervention logics and to use fund-specific common indicators has led to more robust and coherent performance reporting on the investment actions and outputs. The delayed programme reports submitted in September 2020 (the CRII(+) amendments allowed for a postponement on the original May 2020 deadline) present a rich source of information on performance, in terms of common indicator achievement values at the end of 2019 (before the start of the COVID-19 pandemic). Generally, the reported values show a strong upward progress in implementation by end-2019 and a plausible relationship between the indicator targets and values from selected projects.

In response to the COVID-19 outbreak, the Commission proposed specific measures to broaden the list of eligibility measures in the healthcare systems to support the public health response in Member States and to encourage reprogramming in other sectors of their economy, while providing exceptional flexibility for the use of the ESI funds under CRII(+). Specific measures adopted in CRII(+) have enabled Member States to mobilise support from ERDF, ESF and CF and focus it on the most urgent needs (saving lives, preventing job losses through short-time work schemes and supporting SMEs).

The vast majority of Member States have used at least one or another form of CRII(+) flexibility, such as extended deadlines for project implementation and for project calls, accelerating payments to beneficiaries and have used the opportunity to submit COVID-19 related expenses for reimbursement with retroactive eligibility since 1 February 2020. The use of financial instruments have also accelerated due to CRII(+) measures. Examples of impact of the used flexibilities:

- A EUR 7.6 billion immediate increase of liquidity was provided;
- 170 cohesion policy programmes have so far opted for 100% EU co-financing for 2020/2021;
- EUR 5.7 billion has been transferred between funds and between categories of regions allowing for greater flexibility in using the available resources;
- Payments to financial instruments increased by EUR 3.5 billion.

As well as tracking the financial reprogramming and other financial flexibilities, the Commission also worked with programmes to use COVID-19 specific indicators in order to understand the main priorities and achievements of the programmes in terms of supporting the health response, supporting SMEs and supporting people. By February 2021, 124 ERDF programmes have set

targets using those ad hoc COVID-19 indicators. The first reports of implementation will arrive with the 2021 programme implementation reports. See the cohesion policy [CORONAVIRUS DASHBOARD](#) for more details.

More generally, the more extensive use of EU common indicators for 2014-2020 has significantly improved the information available on performance. The data reported by Member States and the United Kingdom in autumn 2020 reflect the situation at the end of 2019. The first impacts of the unprecedented COVID-19 pandemic on the progress in achieving the indicator targets will not be visible until late 2021, when the 2020 implementation reports from the programmes are processed.

It is expected that there will be significant changes (increases and decreases) in a number of targets linked to (1) changing priorities in response to the pandemic, (2) the addition of EUR 40 billion of REACT-EU resources during 2021 and (3) the negative effects of the crisis on SMEs, the construction sector and on the cultural and tourism sectors. Overall, the uncertain socio-economic conditions, reduced demand, high unemployment and uncertain prospects for the relaunch of the economy mean that the uncertainty around performance has risen. The Commission will monitor closely the programmes during 2021 and 2022 and work with the Member States to maximise the benefits of the EU budgetary resources.

When interpreting performance against targets over time, three general aspects should be recalled:

1. The multi-annual character of interventions (especially in cases of infrastructure interventions) and long programme cycle need to be factored in. Actual achievements were not visible in early years. The experience from 2007-2013 is that many infrastructure investments are fully implemented only by the end of the period. The implementation of the 2014-2020 programming period lasts until 2023 (N+3 rule), therefore the 2019 achievement values refer to the situation at the 6th year of a 10 years long implementation cycle.
2. Milestone-values (2018) are not available for most indicators as milestone values had to establish only for a subset of the indicators in the programmes. If at the EU aggregate level the subset for a certain indicator represents a small share of the total, the milestone value is not representative to illustrate performance objectives.
3. The common indicators covered an estimated 50-60% of the actions funded and they give a partial picture on the performance (programmes use over 8 000 specific indicators beyond the 46 common indicators, which cannot be aggregated at EU level due to their specific nature). Target values for common indicators can change (the EU legislation allows for programme amendments during the implementation period) and are mainly driven by changes in national or regional development needs, changing economic conditions, variability in demand for different supports and the reallocation of funding within and across theme.

At EU level, the following overall performance trends are evident from the monitoring of the ERDF and CF based on 2019 achievements reported:

- Overall project selection rates at nearly 100% of planned investment by end 2020<sup>4</sup>. EU interim payments at around 45% for ERDF and 49% for CF are, however, slower than the same point in the last period. This can be explained by the fact that a high selection rate does not automatically translate into prompt expenditure. Expenditure is slower to materialise for projects that are still in the planning or procurement stage, projects with multi-annual character or projects that are otherwise immature.
- By thematic objective, project spending is well advanced in areas such as SME competitiveness and sustainable transport. On the other hand, the average spending rates for ICT, low-carbon economy and environmental investments are behind (as was the case in 2007-2013).
- The bulk of countries are clustered around the EU average spending rate for ERDF. That said, there is some difference in reported progress with SK and RO lagging behind.
- The performance data below reflects the end-2019 reporting on common indicators (reported in September 2020). Overall, positive implementation trends are registered for most indicators (see “key achievements”).
- For some indicators with more important gaps between the decided and implemented the forecast indicator values from selected projects are close to or exceed the target values, raising the prospect that the targets could still be achieved. In many of those cases, the high level of project selection is expected to translate into achieved outputs only late in the period. That phenomenon of late achievement of indicator values was evidenced by the trend in reporting in the 2007-2013 period. The 2020 reporting exercise suggested that at the end of 2019 many of the 2023 targets for those indicators could still be achieved.
- For some common indicators (i.e. those measuring population benefiting from wastewater, water supply, risk prevention and health interventions), the decided values from selected projects, compared to targets, show a prospect of overachievement. Deviations from targets are scrutinised and followed-up in cooperation with the Member States affected by implementation difficulties.
- The impact of the COVID-19 pandemic has led to increased uncertainty and sharp changes in needs. A wave of programme modification in 2020 led to a rise in some target values, particularly in the areas of enterprise support linked to crisis support during the pandemic. However, the uncertain socio-economic conditions, reduced demand, high unemployment and uncertain prospects for the relaunch of the economy mean that the Commission will have to monitor carefully the programmes during 2021 and 2022. It is yet unclear how the unprecedented shock of the pandemic will affect the achievements of targets for indicators related to job creation, support to new enterprises, the take up of R&I measures

<sup>4</sup> after adjusting for overbooking effects

and the construction of infrastructure projects. There are risks that the impacts could be negative unless the economy gathers pace in the second semester of 2021.

- In relation to the reprogramming during 2020 to support the immediate response to the pandemic and its effects, the new COVID-19 specific indicators give an important insight into the supported actions and their target outputs:
- 2.3 billion items of personal protective equipment for the health services;
- 4 500 ventilators, 5 000 additional bed spaces and 246 ambulances supported
- 470 000 SMEs targeted with grant based working capital
- 170 000 SMEs targets with repayable working capital

The progress in delivering those targets in 2020 will be reported to the Commission for the first time later in 2021.

By the end of 2019, 1 of the 41 original common indicators has already exceeded its 2023 target and a second is very close to outperforming its target. A majority - 28 indicators - show very strong or strong trends. 17% of indicators show a moderate trend that requires accelerating annual growth rates in order to achieve their 2023 targets.

In turn, underperformance is evident for the following 3 indicators:

- SO 4 Indicator 4: Number of additional energy users connected to smart grids
- SO 9 Indicator 3: Public or commercial buildings built or renovated in urban areas
- SO 9 Indicator 4: Rehabilitated housing in urban areas

**Table: performance of (common) indicators per specific objective (SO)**

(Green colour shows positive performance, red shows weak/at risk performance)

	SO 1	SO 2	SO 3	SO 4	SO 5	SO 6	SO 7	SO 8	SO 9	SO 10	SO 11	Total	%
<b>outperform</b>	0	0	0	0	1	0	0	0	0	1	0	2	5%
<b>very strong trend</b>	1	0	4	1	1	1	3	1	1	0	0	13	32%
<b>strong trend</b>	3	1	3	3	0	4	1	0	0	0	0	15	37%
<b>moderate trend</b>	2	0	2	0	0	0	1	0	1	0	1	7	17%
<b>weak trend</b>	0	0	0	1	0	0	0	0	1	0	0	2	5%
<b>at risk of underachievement</b>	0	0	0	0	0	0	0	0	1	0	0	1	2%
<b>Insufficient aggregated data</b>	0	0	0	0	0	0	1	0	0	0	0	1	2%

Overall, most indicators were on track to meet their targets at the end of 2019. For the few indicators that are not performing well, the reasons are diverse. Indicators linked to urban investments in renovated building and housing show low achievement but have project selection rates that approach or exceed the target values. Several indicators have a limited use and representativeness: Building new railway tracks is a target in only two countries. Moreover, it is not the main investment target in the railway sector, which is rather reconstruction and modernisation. The smart grid indicator is a new indicator for 2014-2020, with a modest budget and few programmes using the indicator. Lastly and more generally, the long life cycle of infrastructure projects, such as railways and certain energy infrastructures, delays the output of such projects towards the end of the project period.

All reported data is available online through the ESI Funds Open Data Platform based on indicators reported by the Member States. This platform offers transparency and provides additional encouragement through 'peer pressure' in reporting timely and reliable data.

For the general objective the indicators and their values presented below are statistical in nature, many being provided by EUROSTAT.

For the specific objectives the indicators are ERDF and CF common output indicators. The target values have been corrected to the values set under the adopted programmes as of end 2019 (changes take place over time linked in particular to the reallocation of finances between themes impacting the targets or to correct errors). With 290 programmes the achievement values can also be corrected over time (for instance in case of previous under reporting or in order to correct implemented values where operations are no longer EU funded). The most recent public values are visualised on the [ERDF](#) and [CF](#) pages on the ESI Funds Open Data Platform under "achievements" and the data is found in [this data file](#).<sup>5</sup>

### 3.2. Key achievements

<sup>5</sup> Note: As compared to last year, REGIO has moved in this document from the previously used SFC data warehouse to the Open Data Platform warehouse. There are two key reasons for this shift: first, we want SFC to gradually become our back-end infrastructure with a more fluid database; at the same time, we are constantly improving the use of the Open Data Platform as a stable front-end platform. To this end, we are trying to base most public reporting on data from this warehouse to ensure alignment of the various data we publish. However, it is important to note that both warehouses use the same database. In that respect, the data we are providing this year is of the same quality as last year.

**SMART GROWTH:**

4,6 million	610 000	11.5 billion	185 000	8 200
households have access to broadband of at least 30 Mbps by the end of 2019	enterprises were supported by the end of 2019	EUR of private investment was leveraged by the end of 2019 to match public support to enterprises	jobs were created in supported enterprises by the end of 2019	researchers were employed in supported entities by the end of 2019

**SUSTAINABLE GROWTH**

2.8 million	285 000	1 200	1.2 million	1 200
tonnes of CO2 equivalent were saved by the end of 2019	households saw an improvement of their energy consumption classification by the end of 2019	GigaWh/year of annual primary energy consumption of public buildings were saved by the end of 2019	tonnes/year of additional waste recycling capacity were implemented by the end of 2019	km of railway lines were reconstructed or upgraded by the end of 2019

**INCLUSIVE GROWTH**

39 million
people benefitted from new or modernised health services by the end of 2019

**3.3. Evaluations, studies and reports**

In line with the regulatory requirements, all programmes submitted an evaluation plan to their monitoring committees within one year from adoption. According to the plans, the programmes were expected to carry out around 1 500 evaluations for ERDF and CF in 2014-2020. Some of the latest updates of the plans have refined the number of the evaluations planned and their timeline, without affecting the thematic coverage.

To date more than 1 000 evaluations have been carried out by Member States on ERDF and CF and multi-fund programmes since January 2015. This includes also evaluations referring to the period 2007-2013. Nearly one third of all ERDF and CF evaluations carried out since January 2015 were published in 2020.

While evaluations published in the first years of 2014-2020 were mostly concerned with assessing implementation progress and monitoring of the programmes, the number of evaluations focused on impact has been increasingly growing in 2020, amounting to about 20% of all evaluations referring to the 2014-2020 period. Impact-oriented evaluations are in general well designed and some apply advanced techniques to distinguish the effects of the measures examined from other factors.

Within the framework of its own evaluation activities, the Commission published two Staff Working Documents (SWD) in 2020, which present the ex post evaluation of **major projects** supported by ERDF and CF between 2000 and 2013<sup>6</sup>: the first focused on transport<sup>7</sup> and the second on environmental infrastructure projects<sup>8</sup>. They confirmed the importance of EU support for achieving EU objectives. Investments have improved accessibility in the countries and regions concerned and paved the way for increased trade with the rest of the EU. Large-scale environmental infrastructure projects have made a major contribution to EU sustainable development strategies. The SWDs also highlighted the EU added value, as it appeared that the availability of a significant proportion of EU funding was critical for enabling or accelerating implementation, and thus the achievement of the objectives.

The Commission also made progress on its ex post evaluation of investment projects in **research and technological development (RTD) infrastructures, competence centres and activities** financed by the ERDF in 2007-2013 for EUR 17 billion. The evaluation analyses the factors that contributed to the success or failure of the actions and investigates the mechanisms of change under different socio-economic conditions. Its methodology is based on the use of detailed data on projects and beneficiaries that helps providing a better view of the impact of the funds and will also serve as a model for the 2014-2020 ex post evaluation. The final report of the evaluation is expected in the second half of 2021.

<sup>8</sup> [https://ec.europa.eu/regional\\_policy/sources/docgener/evaluation/pdf/swd\\_ex\\_post\\_env\\_2000\\_2013\\_en.pdf](https://ec.europa.eu/regional_policy/sources/docgener/evaluation/pdf/swd_ex_post_env_2000_2013_en.pdf)

In 2020, the Commission launched an evaluation of **e-Cohesion**, the electronic data exchange system to facilitate the exchange of documents and data between the beneficiaries of ESI funds (including the ERDF and CF) and the relevant authorities, in place for 2014-2020. In order to allow the managing authorities to incorporate any changes in their systems, the Commission aims to deliver the findings of this evaluation at an early stage of the implementation of the 2021-2027 programmes.

In December 2020, the Commission published an assessment study<sup>9</sup> on Urban Innovative Actions (UIA). The UIA is an EU initiative under cohesion policy aimed at incentivising cities to innovate. The assessment study evaluated the effectiveness, efficiency, relevance, coherence and EU added value of the UIA.

As required by Article 175 of the Treaty on the Functioning of the European Union, the 8<sup>th</sup> Cohesion Report is being prepared and will be published in autumn 2021. The report accompanies the early programming efforts during the new cohesion policy period. It will summarise what the programmes aim to achieve. The analysis will show how regional disparities have changed and identify key domains for policy intervention. It will discuss where public investment needs to be increased to stimulate economic growth and further reduce regional disparities. The analysis will be structured along the five new policy objectives and take into account the key elements of the European Semester process.

In 2021, the Commission will publish the mid-term evaluation of the Joint Assistance to Support Projects in European Regions (JASPERS) initiative - focusing on the period 2014-2018. JASPERS is an initiative of the European Commission (EC) and the European Investment Bank (EIB) proposing an independent and free-of-charge technical advisory services for large infrastructure projects to all Member States (MS) and pre-accession countries in all sectors relevant for EU funded investments. The ultimate aim is to ensure the preparation of high-quality infrastructure projects to be supported by EU funds (via ERDF, CF, CEF or IPA II). The evaluation aimed to assess the implementation of the services provided by JASPERS in accordance with the five evaluation criteria defined by the European Commission's Better Regulation Guidelines: effectiveness, efficiency, coherence, relevance and EU added value.

Finally, as the 2014-2020 period moves towards its closure phase (end-2023) the Commission will carry out an ex-post evaluation of, inter alia, the ERDF, the CF and the JTF, to be completed by the end of 2024. It is during the evaluation phase that the wider impacts and achievements of programming can be assessed.

## **4. Programme 2021-2027 - Key monitoring indicators**

### **Policy Objective 1 :Enhance research and innovation capacities and the uptake of advanced technologies**

#### **Indicator 1:Enterprises supported to innovate**

Justification of the trend	

## 5. Programme 2014-2020 - Key monitoring indicators

### Previous Program 1 : European Regional Development Fund (ERDF) and Cohesion Fund

**General Objective 1 :To reduce disparities between the levels of development of the various regions, in particular for rural areas, areas affected by industrial transition, and regions which suffer from severe and permanent natural or demographic handicaps and to contribute to achieving the targets set out in the Europe 2020 strategy of smart, sustainable and inclusive growth, and in particular towards the achievement of quantitative headline targets identified in that strategy**

### Indicator 1:Employment rate by sex, age group 20-64

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2016	Milestones									2020
							75%			75%
71.1%	Actual Progress									Final
	69,20	70,10	71,10	72,20	73,20	73,90				

Are we on track	On track
Indicator type	Impact
Unit of measurement	Percentage of population 20-64
Cut-Off Date	08/02/2021
Data source	Eurostat lfsi_emp_a
Narrative	In 2019, the employment rate of the 20-64 year old population increased by 0.6% to 74%. Despite the slowdown in 2019 (the employment rate increased by 0.7% instead of 1% in 2018), the trend remains positive and the 2020 target of 75% is still within reach. However, these figures do not take into account the impact of the COVID-19 pandemic. With major impacts already visible across Europe, we expect the target set to be missed.
Methodology	Labour Force Survey
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	<a href="http://ec.europa.eu/eurostat/cache/metadata/en/lfsi_esms.htm">http://ec.europa.eu/eurostat/cache/metadata/en/lfsi_esms.htm</a>
Justification of the trend	Cohesion policy contributes to improving the labour market situation through various strands. Relevant Specific Objectives: SO 2

### Indicator 2:Gross domestic expenditure on R&D (GERD)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2016	Milestones									2020
							3%			3%
2,03%	Actual Progress									Final

	2.03%	2.04%	2.04%	2.08%	2.11%	2.14%				
--	-------	-------	-------	-------	-------	-------	--	--	--	--

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	% of GDP
Cut-Off Date	08/02/2021
Data source	Eurostat RD_E_GERDTOT
Narrative	In 2019, gross domestic expenditure on R&D (GERD) increased by 0.03%. With the very slow increase of 0.02% on average between 2015 and 2019, the overall situation remains unsatisfactory, if not critical.
Methodology	Statistical indicator
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	<a href="https://ec.europa.eu/eurostat/cache/metadata/en/rd_esms.htm">https://ec.europa.eu/eurostat/cache/metadata/en/rd_esms.htm</a>
Justification of the trend	Cohesion policy makes an important contribution to the sector and is even an important source of a large part of public investment in R&D in some countries. But it is also clear that these efforts are not enough. Especially since, in view of the pandemic, it is to be expected that the figures will initially fall (especially in the private sector) before they rise again. Public investment therefore remains critical in this area and the increased efforts through REACT-EU and the new programmes are an essential but probably insufficient contribution to raising the rate to a satisfactory level. Ultimately, however, Europe will not be able to avoid a joint effort by all actors to give this area the boost it needs. Relevant Specific Objectives: SO 1

### Indicator 3: Greenhouse gas emissions, base year 1990

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2016	Milestones									2020
							74			74
	Actual Progress									Final
	77,59	78,28	77,92	78,38	76,76					

Are we on track	On track
Indicator type	Impact
Unit of measurement	Index 1990 = 100
Cut-Off Date	08/02/2021
Data source	European Environment Agency (EEA)
Narrative	2018 was the first year in which, after a series of ups and downs, the indicator fell well below the 77-point mark. In addition, the latest projections show that the pandemic was an important driver of greenhouse gas emissions (GHG) reductions, allowing many EU countries to meet their 2020 targets. Despite the good news, it is unclear how sustainable this trend is. It remains to be seen whether efforts at the European level will have the necessary impact to ensure a satisfactory trend toward the 2030 targets. Cohesion policy will continue to be an important source of funding in the area of GHG emission reductions.
Methodology	Index 1990 = 100; statistical indicator
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	<a href="https://ec.europa.eu/eurostat/cache/metadata/en/sdg_13_10_esmsip2.htm">https://ec.europa.eu/eurostat/cache/metadata/en/sdg_13_10_esmsip2.htm</a>
Justification of the trend	The new targets for REACT-EU (25% contribution to climate-related investments) and the 2021-2027 programs (30% ERDF and 37% CF) ensure that our programs will continue to be at the forefront of this effort. In addition, the latest projections show that the pandemic was an important driver of greenhouse gas emissions reductions, allowing many EU countries to meet their 2020 targets. Despite the good news, it is unclear how sustainable the trend is. It remains to be seen whether efforts at the European level will have the necessary impact to ensure a satisfactory trend toward the 2030 targets. Untouched by this question, cohesion policy continues to be an important source of funding in the area of GHG emission reductions. The new targets for REACT-EU (25% contribution to climate-related investments) and the 2021-2027 programs (30% ERDF and 37% CF) ensure that our programs will continue to be at the forefront of this effort. Relevant Specific Objective: SO 4

### Indicator 4: Share of renewables in gross final energy consumption

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2015	Milestones									2020
16.7%							20%			20%
	Actual Progress									Final
	16.2%	16.73%	16.98%	17.48%	18.01%	18.87%				

Are we on track	On track
-----------------	----------

Indicator type	Impact
Unit of measurement	% of gross final energy consumption
Cut-Off Date	08/02/2021
Data source	European Environment Agency (EEA) ( NRG_IND_REN )
Narrative	In 2019, Europe will reach a share of renewable energies in gross final energy consumption of almost 19%. Projection shows that due to the moderate increase in the renewable energy sector in recent years, with an average increase of plus 0.5% between 2015 and 2019 and the overall positive trend, the achievement of the 2020 target (20%) remains within reach.
Methodology	statistical indicator
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	<a href="https://ec.europa.eu/eurostat/cache/metadata/en/sdg_07_40_esmsip2.htm">https://ec.europa.eu/eurostat/cache/metadata/en/sdg_07_40_esmsip2.htm</a>
Justification of the trend	In view of the upcoming funding period, the current 2030 climate and energy framework and the Green Deal, this figure needs to increase even more significantly to avoid reputational damage for the EU. Cohesion policy will continue to make an important contribution to ensuring the performance of the sector. However, the expectations and targets set will necessarily remain challenging. This is the main reason why performance under the heading "European Green Deal" has become the top priority in DG REGIO's strategic plan for the next five years. Relevant Specific Objective: SO 4

#### Indicator 5: Energy intensity of the economy (proxy indicator for Energy savings, which is under development)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Primary energy consumption										
2015	Milestones									2020
1 529,1						1 483				1 483
	Actual Progress									Final
	1 511.78	1 535.98	1 544.20	1 561.82	1 552.80	1526.12				
Final energy consumption										
2015	Milestones									2020
1 082,2						1 086				1 086
	Actual Progress									Final
	1 069.00	1 091.07	1 111.48	1 123.25	1 124.90	1117.71				

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	Million tonnes of oil equivalent (TOE)
Cut-Off Date	08/02/2021
Data source	Eurostat NRG_IND_EFF
Narrative	Both Europe's primary and final energy consumption decreased in 2018, and for the first time relative to final energy consumption levels in 2014-2018. Our projection shows that a continuation of this trend could lead to the achievement of 2020 targets for both categories. While this is clearly a positive and necessary trend, it remains unclear how sustainable this trend is. Together with the indicators on renewable energy consumption and greenhouse gas emission reductions, the picture is slightly positive of a trend pointing in the right direction, but deserving further attention in the coming years.
Methodology	Statistical indicator
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	<a href="https://ec.europa.eu/eurostat/cache/metadata/en/sdg_07_10_esmsip2.htm">https://ec.europa.eu/eurostat/cache/metadata/en/sdg_07_10_esmsip2.htm</a>    <a href="https://ec.europa.eu/eurostat/cache/metadata/en/sdg_07_11_esmsip2.htm">https://ec.europa.eu/eurostat/cache/metadata/en/sdg_07_11_esmsip2.htm</a>
Justification of the trend	Cohesion policy contributes to improving energy consumption through various strands. In its focus on sustainable growth, it will play its part in ensuring that the positive trend continues. Whether this alone will be sufficient cannot be answered at this stage. Relevant Specific Objective: SO 4

#### Indicator 6: Early leavers from education and training by sex; Tertiary educational attainment by sex, age group 30-34

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Early School Leavers: Total										
2014	Milestones									2020

	Actual Progress								Final
	42.3%	43.4%	43.9%	44.9%	45.8%	46.7%			
Younger generation: Male									
2014	Milestones								2020
33,6%	> 40%								> 40%
	Actual Progress								Final
	33.6%	34.0%	34.4%	34.9%	35.7%	36.6%			

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	% of the population
Cut-Off Date	08/02/2021
Data source	Leavers: Eurostat ( EDAT_LFSE_14 )   tertiary education Eurostat ( EDAT_LFSE_04 )
Narrative	As for the 2019 figures, the numbers of early school leavers have decreased by 0.2 percentage points (overall) and the proportion of the population with tertiary education has increased by 0.9 percentage points. A clear gender gap is evident in the figures for primary and tertiary education. However, leaving aside the significant role of gender in education, which is well documented by many studies, the overall trend is positive. Thus, while the outcome for males will fall well short of the 2020 target, it can be extrapolated that if the trend continues, the targets will likely be met in 2023 (early school leavers) or 2024 (tertiary education).
Methodology	Statistical indicators
Link MFF 14-20 / MFF 21-27

Justification of the trend	Cohesion policy contributes to improving education and childcare through various strands. Relevant Specific Objectives: SO 10

### Indicator 7: People at risk of poverty or social exclusion

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2015	Milestones								2023	
116 200	< 96 200								< 96 200	
	Actual Progress								Final	
	122026	119077	118060	112930	109863	107535				

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	In thousand persons
Cut-Off Date	11/02/2021
Data source	Eurostat ilc_peps0
Narrative	The decline in people at risk of poverty or social exclusion peaked in 2017 (-4%), and since then the trend has been declining and threatens to stall in the current crisis. This represents a major blow to European efforts towards strengthening social inclusion and cohesion. Future programs and efforts face significant challenges to address this situation. Moreover, recent internal studies have highlighted the local dimension of social exclusion and the negative impact this has on social cohesion. Cohesion policy is in a prominent position to improve this situation. The most recent outcome of this ambition has been the establishment of the Just Transition Fund and REACT EU, which are designed to mitigate the negative side effects of the transition to a climate-neutral EU and to improve cohesion within the European Union.
Methodology	Statistical indicator
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Simulations based on economic models (namely QUEST and RHOMOLO) suggest a positive and significant impact of cohesion policy interventions on GDP and employment during and after the implementation of programmes. In the EU-12, programmes of the 2007-2013 period are expected to

	have increased the level of GDP by 2.7% per year between 2007 and 2016 and employment by around 735,000 units. Programmes of the 2014-2020 period are expected to increase the level of GDP by 1.7% per year between 2014 and 2023 in the EU-12.

Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Impact of R&D funding on researcher employment. We see a significant increase of 53% from 2018 to the 2019 figures now available, resulting in an achievement rate of approximately 31% compared to the 2023 target. Nevertheless, the current achievement figures are still well below the set target. On the other hand, the level of project selection is high (over 24 000 projects were already selected/are forecast) which raises the prospect that the targets could be achieved.
Methodology	Data collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Moderate trend. Projections show that we will have to maintain the current growth rates of 50% per year to achieve the set target. This is a challenge, particularly in view of the general decline in growth rates over the years. The risk of underachievement therefore remains.

#### Indicator 2: Number of enterprises cooperating with research institutions

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
										64089
	Actual Progress									Final
	2	77	640	7764	19671	34183				

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of enterprises
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Measurement of uptake of innovation. Over 34 000 companies were enabled to cooperate with research institutions thanks to regional funding. From 2018 to the 2019 figures now available, there has been a significant increase, resulting in an achievement rate of approximately 53% compared to the 2023 target. This means that the programmes are on track to meet their 2023 goal.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Strong trend. The projections show that we are likely to meet the 2023 target.

#### Indicator 3: Number of researchers working in improved research infrastructure facilities

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
					28250					91949
	Actual Progress									Final
	364	6959	13873	23825	36774	37259				

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	Number of researchers (Full time equivalent)
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Impact on improving facilities for R&D funding researchers. In the current numbers, we see almost no increase from 2018 to the 2019 numbers now available (1%), resulting in a stagnant target achievement of about 41% compared to the 2023 target. The current numbers continue to be well below the set target. On the other hand, the level of project selection is very high (over 99 000 projects were already selected/are forecast) which raises the prospect that the targets could be achieved.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Moderate trend. Projections show that we need to increase the current numbers by 35% per year to still reach the set target. Achieving this is a challenge, especially given the slower growth in achievements rates in 2019. With an expected increase in the momentum of financing and demand for financing in the post-COVID-19 years, such growth rates may not be unrealistic. However, it is likely that such a trend will only become visible in 2022-23.

#### Indicator 4: Private investment matching public support in innovation or R&D projects

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
										14205396817
	Actual Progress									Final
	81958544	324827483	802694672	1235370214	2124433268	3569540984				

Are we on track	On track
Indicator type	Output
Unit of measurement	EUR
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Effect on private R+I investments. EUR 3.6 billion in private investment was released through cohesion policy mechanisms. From 2018 to the 2019 figures now available, there has been a significant increase of 68%, resulting in an achievement rate of about 25% against the 2023 target. This means that the programmes are well on track to meet their targets.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Very strong trend. Projections show that we will reach the 2023 target even if the annual growth rate of the indicator falls below 60%, which is unlikely given the stable growth rates in recent years. The only concern at the moment is the uncertainties related to the Corona pandemic. More figures on this will be available next year.

#### Indicator 5: Number of enterprises supported to introduce new to the market products

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of enterprises
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Measurement of uptake of innovation. Until 2019, roughly 17,500 new products were introduced to the market by enterprises supported by ERDF and CF. From 2018 to the 2019 figures now available, there has been a significant increase of 48%, resulting in an achievement rate of approximately 61% against the 2023 target. This means that the programmes are well on their way to meeting their goal.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	

Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Strong trend. Projections show that we will meet the 2023 target even if the general downward trend of recent years continues. However, it would have to stabilise around an annual increase of nearly 19%. The only real concern at this time is the uncertainties related to the COVID-19 pandemic. Further figures on this will be available next year.

**Indicator 6: Number of enterprises supported to introduce new to the firm products**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of enterprises
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Measurement of uptake of innovation. By 2019, approximately 23,300 new products had been introduced in ERDF and CF-funded companies. From 2018 to the 2019 figures now available, there has been a significant increase of 63%, resulting in an achievement rate of approximately 38% against the 2023 target. This means that the programmes are well on their way to meeting their goal.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Strong trend. The projections show that we will meet the 2023 target even if the slower increase in numbers we have seen in recent years continues. However, in this scenario, the current slowdown should be reduced so that the 2023 targets continue to be achieved. Ultimately, it is more the uncertainties of the Corona pandemic that could be significant. Further figures on this will be available next year.

**Specific Objective 2 :Enhancing access to, and use and quality of, information and communication technologies****Indicator 1: Additional households with broadband access of at least 30 Mbps**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
										10769090
	Actual Progress									Final

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of households
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Measurement of outreach of support to broadband. Until 2019 over 4.57 million additional households received broadband access of at least 30 Mbit/s with the help of regional funding. From 2018 to the 2019 figures now available, there has been a significant increase of 53%, resulting in an achievement rate of approximately 42% against the 2023 target. This means that the programmes are on track to meet their 2023 goal.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	No milestone figure concerning this indicator associated with specific objective 2 is included in the table above, as the programmes which include this indicator in the performance framework where milestones are set represent a small share of the total, which render the milestone value available not representative at EU level.
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Strong trend. Projections show that we will meet the 2023 target even if the slower increase in numbers we have seen in recent years continues. However, a more pessimistic scenario of a continuation of the current dynamic in growth decline of the numbers would result in an achievement rate of only 89% in 2023 (11% below the set target).

**Specific Objective 3 :Enhancing the competitiveness of small and medium-sized enterprises****Indicator 1: Number of enterprises receiving support**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	EUR
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Effect on private investments matching financial instrument support. By 2019, over EUR 2.6 billion in private investment (excluding grants) has been mobilized with the help of regional funding. Looking at the current figures, we see a significant increase of 65% from 2018 to the 2019 figures now available. However, this leads to an overall achievement rate of about 30% compared to the 2023 target. In other words, the current figures are still significantly below the set target. On the other hand, the level of project selection is much higher (projects representing over EUR 6 billion of investment were already selected/are forecast), raising the prospect that the targets could be achieved.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Moderate trend. Projections show that we need to maintain the current rates of increase of at least 50% per year to still meet the set target. This is a challenge, especially in view of the general decline in growth rates over the past few years. The uncertainties of the COVID-19 pandemic add to this challenge. More figures on this will be available next year but the risk of underachievement remains.

**Indicator 8: Employment increase in supported enterprises**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023

Are we on track	On track
Indicator type	Output
Unit of measurement	Megawatts (MW)
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Contribution to renewable energy capacity. Until 2019, an increase over 2000 MWH of additional capacity of renewable energy production was achieved thanks to regional funding. From 2018 to the 2019 figures now available, there has been a significant increase of 131%. However, this results in an

	achievement rate of only approximately 29% compared to the 2023 target.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	ERDF and CF programmes contribute to the target.
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Strong trend. Projections show that we will reach the 2023 target even if the general downward trend of recent years continues. Additionally, based on past experience the achievement of outputs linked to multi annual infrastructure projects occurs late in the period. The decided values in selected projects suggest that the target may be achieved by end-2023.

**Indicator 2: Number of households with improved energy consumption classification**

0	Actual Progress									1034000
					78571	169070				Final

Are we on track	Deserves attention**
Indicator type	Output
Unit of measurement	Users
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Outcome of smart energy systems. Until 2019, over 169,000 additional energy users were connected to smart grids with the help of regional funding. From 2018 to the 2019 figures now available, there has been a significant increase of 115%. However, this results in an achievement rate of only approximately 11% compared to the 2023 target. The current numbers continue to be well below the set target. On the other hand, the level of project selection is much higher (projects representing over 4 million additional users were already selected/are forecast), raising the prospect that the targets could be achieved.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	"ERDF and CF programmes contribute to the target. Aggregate target is not considered robust and likely to be exceeded due to difficulties forecasting ex ante the population covered by projects later selected."
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Weak trend. Projections show that we need to keep the current numbers on a level of around 110% increase per year to still reach the set target. This is a challenge that seems difficult to achieve, especially given the general decline in growth rates over the years. However, based on past experience the achievement of outputs linked to multi annual infrastructure projects occurs late in the period. Additionally, with an expected increase in the dynamics of financing and demand for financing in the post-COVID-19 years, such growth rates are not necessarily unrealistic, but it is likely that such a trend will not become visible until 2022-23.

**Indicator 5: Estimated annual decrease of GHG**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
European Regional and Development Fund										
2014	Milestones									2023

0	Actual Progress									2809229
			0	6995	142035	331348				Final

Are we on track	On track
Indicator type	Output
Unit of measurement	Tonnes of CO2 equivalent
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Outcome of measures to reduce GHG emissions. By 2019, a reduction of over 2.8 million tons of CO2

	equivalent per year had been achieved with the help of regional funds. From 2018 to the 2019 figures now available, there has been a significant increase of 152%. However, this results in an achievement rate of only about 14% compared to the 2023 target.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	"ERDF and CF programmes contribute to the target. Aggregate target is not considered robust and likely to be exceeded due to difficulties forecasting ex ante the population covered by projects later selected."
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Strong trend. Although the current numbers remain well below the set target, the projections show that we can achieve the 2023 target even if the slower increase in numbers we have seen in recent years continues or intensifies. Regardless of this, it is clear that the numbers need to remain at a very strong level (around 90% increase per year) to ensure the achievement of the set target.

## Specific Objective 5 :Promoting climate change adaptation, risk prevention and management

### Indicator 1:Population benefiting from flood protection measures

Narrative	Scope of supported projects for the reconstruction of rail network. There is insufficient aggregated data to assess current achievements. Additionally, the aggregate target is not considered robust and likely to be exceeded due to difficulties forecasting ex ante the population covered by projects later selected. On the other hand, similarly to new TEN-T railway lines, the level of project selection for reconstructed ones is more promising: projects representing nearly 3 000 km of railway lines for TEN-T were already selected/are forecast.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2028
Other methodological comments	ERDF and CF programmes contribute to the target. Aggregate target is not considered robust and likely to be exceeded due to difficulties forecasting ex ante the population covered by projects later selected.
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Moderate progress from 2018 to 2019, but in general insufficient aggregated data are available. Based on past experience the achievement of outputs linked to multi annual infrastructure projects occurs late in the period.

**Indicator 3: Total length of newly built roads**

Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Scope of supported projects for the improved inland waterways. By 2019, over 440 km of improved or newly created inland waterways had been completed with support from the regional funds. From 2018 to the 2019 figures now available, there has been a significant increase of 128% in this figure, resulting in an achievement rate of around 45% against the 2023 target.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2031
Other methodological comments	ERDF and CF programmes contribute to the target.
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Very strong trend. The forecasts show that the 2023 target will be reached, even if the figures increase more slowly than in recent years.

## Specific Objective 8 :Promoting sustainable and quality employment and supporting labour mobility

### Indicator 1:Employment increase in supported enterprises

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
0										397339
	Actual Progress									Final
	4052		11898		40490		108654		184529	

Are we on track	On track
Indicator type	Output
Unit of measurement	Jobs (FTE)
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Effects on employment in enterprises supported. By the end of 2019, over 184,500 jobs had been created in assisted enterprises. From 2018 to the 2019 figures now available, there has been a significant increase of 70% in this figure, resulting in an achievement rate of around 46% against the 2023 target.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	No milestone figure concerning indicator 1 above is included in the table above, as the programmes which include this indicator in the performance framework where milestones are set represent a small share of the total, which render the milestone value available not representative at EU level.
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Very strong trend. The forecasts show that the 2023 target will be reached, even if the figures increase more slowly than in recent years.

## Specific Objective 9 :Promoting social inclusion, combating poverty and any discrimination

### Indicator 1:Population covered by improved health services

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023

	1590288		5552309		15256131		27458607		38716940	

Are we on track	On track
-----------------	----------

Indicator type	Output
Unit of measurement	Persons
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Outreach of supported projects for health care facilities. In 2019, over 38.7 million people were covered by improved health services thanks to support from Cohesion Funds. From 2018 to the 2019 figures now available, there has been a significant increase of 41% in this figure, resulting in an achievement rate of around 70% against the 2023 target.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	Aggregate target is not considered robust and likely to be exceeded due to difficulties forecasting ex ante the population covered by projects later selected.
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Very strong trend. Projections show that the 2023 target will be met, even if the numbers increase at a slower rate than in recent years. In addition, the overall target is not considered robust and is likely to be exceeded due to the difficulty in forecasting ex ante the population covered by the later selected projects. Finally, the measures related to the Corona pandemic response will help to raise these numbers further above the target.

### Indicator 2: Open space created or rehabilitated in urban areas

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
					3350732					29814495
	Actual Progress									Final
			42410	1056066	5254854	9582496				

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	Square metres
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Measurement of the scope of supported open spaces in urban areas. By 2019, over 9.5 million square metres of open space had been created or redeveloped in urban areas with the help of regional funding. Looking at the current figures, a significant increase of 82% is recorded between 2018 and 2019. However, this only leads to an overall achievement rate of about 32% compared to the 2023 target. In other words, the current figures are still significantly below the set target. On the other hand, the level of project selection is much higher (projects representing over 42 million m2 were already selected/are forecast), raising the prospect that the targets could be achieved.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Moderate progress. Projections show that we need to maintain the current rates of increase per year in order to still reach the set target. This is a challenge, especially given the general decline in growth rates in recent years.

### Indicator 3: Public or commercial buildings built or renovated in urban areas

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
					164870					2438758
	Actual Progress									Final
			6079	69339	277935	514323				

Are we on track	Deserves attention**
Indicator type	Output
Unit of measurement	Square metres
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Outreach of supported projects renovation the urban building stock. Until 2019 over 500,000 square metres of public or commercial buildings were build or renovated with the support of regional funding. Looking at the current figures, a significant increase of 85% is recorded between 2018 and 2019. However, this only leads to an overall achievement rate of about 21% compared to the 2023 target. In other words, the current figures are still significantly below the set target. On the other hand, the level of project selection is promising: projects representing over 2.6 million m2 were already selected/are forecast.

Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will not report the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Weak trend. Projections show that we need to maintain the current increase rates per year to still reach the set target. This is a challenge that seems difficult to achieve, especially given the general decline in growth rates over the years. With an expected increase in the dynamics of financing and demand for financing in the post-COVID-19 years, such growth rates are not unrealistic. However, it is likely that such a trend will not become visible until 2022-23.

**Indicator 4: Rehabilitated housing in urban areas**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
					2767					23699
	Actual Progress									Final
				289	1837	3354				

Are we on track	Deserves attention**
Indicator type	Output
Unit of measurement	Housing Units
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Outreach of supported projects for housing services. Until 2019 around 3 350 housing units have been rehabilitated in urban areas with the support of regional funding. Looking at the current figures, a significant increase of 83% is recorded between 2018 and 2019. However, this only leads to an overall achievement rate of about 14% compared to the 2023 target. In other words, the current figures are still significantly below the set target. On the other hand, the level of project selection is promising: projects representing nearly 21 000 housing units were already selected/are forecast.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will not report the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	At risk of underachievement. Projections show that we need to increase rates per year even above the current level (around 90%) to still reach the set target. This is a challenge that seems difficult to achieve, especially given the general decline in growth rates over the years. With an expected increase in the dynamics of financing and demand for financing in the post-COVID-19 years, such growth rates are not unrealistic. However, it is likely that such a trend will not become visible until 2022-23.

**Specific Objective 10 :Investing in education, training and vocational training for skills and lifelong learning****Indicator 1:Capacity of supported childcare or education infrastructure**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2020
							6900747			6953900
	Actual Progress									Final
		2663	32642	166450	6799156	15550946				

Are we on track	On track
Indicator type	Output
Unit of measurement	Places
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Outreach of supported projects for enhancing access to education infrastructures. In 2019, over 15.55 million places were created in childcare and education facilities thanks to support from the regional funds. From 2018 to 2019, there has been a significant increase in numbers (129%), resulting in an achievement rate of around 224% against the 2023 target.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	No milestone figure concerning this indicator associated with specific objective 10 is included in the table above, as the programmes which include this indicator in the performance framework where milestones are set represent a small share of the total, which render the milestone value available not representative at EU level.
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>

Justification of the trend	Outperform. Projections show that the 2023 target will be exceeded by over 241%, even if the numbers drop off at a similar rate as in recent years.
----------------------------	---

## Specific Objective 11 :Enhancing institutional capacity of public authorities and stakeholders and an efficient public administration

### Indicator 1:Population living in areas with integrated urban development strategies

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
0	Actual Progress									44187669
	136330	136330	6278313	9979459	16017698	19186206				Final

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	Persons
Cut-Off Date	31/12/2019
Data source	EC/Member States
Narrative	Outreach of supported projects for integrated urban development. By 2019, over 19.1 million persons benefitted from living in areas with integrated urban development strategies supported by regional funding. Looking at the current figures, an increase of 20% is recorded between 2018 and 2019. However, this only leads to an overall achievement rate of about 42% compared to the 2023 target. In other words, the current figures are still significantly below the set target. On the other hand, the level of project selection is promising: projects representing almost 40 million persons were already selected/are forecast.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	No milestone figure concerning indicators 1 above is included in the tables above, as the programmes which include this indicator in the performance framework where milestones are set represent a small share of the total, which render the milestone value available not representative at EU level.
Full metadata available at this address	<a href="https://cohesiondata.ec.europa.eu/d/xiq3-56nq">https://cohesiondata.ec.europa.eu/d/xiq3-56nq</a>
Justification of the trend	Moderate trend. Projections show that we need to increase the current increase rates per year in order to still reach the set target. This is a challenge, especially given the general decline in growth rates in recent years.

## 6. The programme contribution to horizontal policies

### 6.1. Contribution to climate mainstreaming

#### 6.1.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
17 473,7	12 747,5	11 206,9	11 595,8	11 996,5	12 409,6	12 836,6	90 266,6

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.1.2. Explanation and justification on the financial contribution

	2021 estimates	2022-2027 programming						Total (in million EUR)
	2021	2022	2023	2024	2025	2026	2027	
Cohesion Fund	1.737,41	1.799,88	1.864,23	1.935,45	2.008,94	2.084,78	2.163,34	13.594,04
ERDF	8.772,08	9.053,35	9.342,66	9.660,34	9.987,57	10.324,88	10.673,30	67.814,17
REACT EU	6.964,18	1.894,26	0	0	0	0	0	8.858,43
<b>TOTAL</b>	<b>17.473,67</b>	<b>12.747,49</b>	<b>11.206,88</b>	<b>11.595,79</b>	<b>11.996,50</b>	<b>12.409,66</b>	<b>12.836,64</b>	<b>90.266,64</b>

The ERDF and CF are important contributors to the overall EU tracking target - 20% of the EU budget 2014-2020 – given the scope of their objectives and the scale of their total budgets. Cohesion policy funding is delivering more than EUR 51 billion in investment in climate action in the 2014-2020 period (i.e. almost 20 % of the total ERDF/CF planned budget). With the

establishment of a legally binding budget share for climate-related investments of 30% for the ERDF and 37% for the CF, the ambitions for the period 2021-2027 in this area have even increased.

In order to support the delivery on the ground of the European Green Deal, we need to be in close partnership with regions and cities. Cohesion policy is expected to invest more than EUR 78.2 billion in projects related to climate and environment over the next 7 years (2021-2027) in this partnership approach. The draft regulation sets out that “[t]he ERDF and the Cohesion Fund shall contribute with 30% and 37% respectively of the Union contribution to expenditure supported for the achievement of the climate objectives set for the EU budget”. Based on these values, we estimate an annual share of 30% and 37% of Union contributions for this area. A more detailed projection will be possible only once the programming of the funds at national and regional level is more advanced.

The methodology used for tracking the ERDF and CF contribution to mainstreaming of climate action in 2022 remains stable and coherent with last year's programme statement. Based on the categories of intervention reported directly by the Member States, REGIO identifies the relevant financial allocations and tracks financial implementation as reported from the Member State level and the amounts can be explored using this [Climate tracking tool](#).

With regard to the 2014-20 programmes, the tracking of the contribution of ERDF and CF to the mainstreaming of climate action is done through the weighting of selected thematic allocations (100%-40%-0%) in the Member States' funding priorities reflected by the categories of intervention, which is then expressed as a percentage of the budget to be made available by year (latest data is for 2020).

### 6.1.3. Key achievements

Relevant objective/output	Budget 2020	Total 2014-20
II Productive investment	€ 5	€ 29.20
II Infrastructure providing basic services and related investment: Energy infrastructure	€ 2,695	€ 19,994.69
II Infrastructure providing basic services and related investment: Environmental infrastructure	€ 106	€ 1,454.64
II Infrastructure providing basic services and related investment: Transport infrastructure	€ 486	€ 8,831.79
II Infrastructure providing basic services and related investment: Sustainable transport	€ 587	€ 5,782.20
IV Development of endogenous potential: Research and development and innovation	€ 130	€ 782.42
IV Development of endogenous potential: Business development	€ 553	€ 3,488.18
IV Development of endogenous potential: Environment	€ 1,129	€ 10,497.61
IV Development of endogenous potential: Other	€ 2	€ 14.20
<b>Total</b>	<b>€ 5,693</b>	<b>€ 50,874.92</b>
		In million

At the end of 2019 the ERDF and CF share of the EU planned support allocated to climate action was over 21% of the combined budget of the funds (EUR 55.2 billion). By end 2020, the ERDF and CF climate action share had fallen to almost 20% as a result of the reallocations linked to the CRII(+) initiative to support the pandemic response, in particular to reinforcing allocations to the immediate public health response and support to SMEs. Under the adopted REACT-EU initiative the objective is that 25% of the additional EU financing be committed to climate action, which should redress the reduction in 2020 linked to the immediate pandemic response.

The high share of ERDF and CF resources allocated and tracked for climate action have led to the selection of indicators and target values and leads to annual reporting on progress in implementation. The most relevant common indicators presented in detail in section 5 above are as follows:

- Specific Objective 4 : Low carbon economy  
Indicators on new renewable energy capacity, GHG emission reductions, energy savings
- Specific Objective 5: Climate action  
Indicators on population benefitting from climate related risks (wild fires and floods)
- Specific Objective 7: Network Infrastructure  
Indicators on rail investments

The following example shows how climate protection and regional development can go hand in hand.

#### A French municipality in Bourgogne at the forefront of the energy transition

The project involves the installation of a wood chip boiler to power the town hall, the school and a business in Venizy, a small municipality located in the Bourgogne-Franche-Comté region. The heating systems of the communal buildings, which ran on fuel oil, accounted for a significant budget. On the recommendations of a feasibility study, the municipality of Venizy installed a wood chip boiler.

The new boiler room saves more than 50% of the costs related to heating and domestic hot water. The substituted fossil energy is equal to 20 tonnes of oil equivalent (TEP) per year and the fossil CO<sub>2</sub> avoided corresponds to 63 tonnes per year. In addition, this boiler room makes it possible to develop the local wood resource and to perpetuate an agricultural group operating jointly in the wood sector.

Total investment for the project ‘Installation of a wood chip boiler’ is EUR 277 347; the European Regional Development Fund contribution is EUR 133 451.

### 6.1.4. Performance

Of the eleven indicators relevant for Climate mainstreaming (Specific Objectives 4, 5 and 7), nine show a strong trend in terms of achieving their 2023 targets. The only indicator that underperforms relates to the deployment of smart grids, an area of intervention characterised by complex planning and long project cycles. Overall, performance on the climate-related indicators can be described as satisfactory.

Performance on the following indicators underlines this trend:

- Until 2019, an increase over 2000 MWh of additional capacity of renewable energy production was achieved thanks to regional funding. From 2018 to the 2019 figures now available, there has been a significant increase of 131%. However, this results in an achievement rate of only approximately 29% compared to the 2023 target. Nevertheless, projections show that we will reach the 2023 target even if the general downward trend of recent years continues.
- A decrease of over 1.2 billion kWh of annual primary energy consumption of public buildings was achieved with the help of regional funding. From 2018 to the 2019 figures now available, there has been a significant increase of 413%.
- By 2019, a reduction of over 2.9 million tons of CO<sub>2</sub> equivalent per year had been achieved with the help of regional funds. From 2018 to the 2019 figures now available, there has been a significant increase of 152%. However, this results in an achievement rate of only about 14% compared to the 2023 target. Although the current numbers remain well below the set target, the projections show that we can achieve the 2023 target even if the slower increase in numbers we have seen in recent years continues or intensifies.

## 6.2. Contribution to biodiversity mainstreaming

### 6.2.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
1 696,8	2 050,0	2 424,1	2 826,1	3 252,6	3 704,7	4 183,9	20 138,2

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.2.2. Explanation and justification on the financial contribution

Europe is currently not on track to halt biodiversity loss. The underlying causes (e.g. urban sprawl, intensive agriculture, pollution and invasive species) will probably persist, and the impact of climate change is projected to intensify. Cohesion policy investments support the EU's nature and biodiversity policies, for instance by strengthening the Natura 2000 network of protected areas. Such investments also contribute to EU objectives in the fields of water quality, air quality and climate change adaptation, which in turn are important for regional development.

The methodology used for estimating ERDF and CF contribution to financing biodiversity in 2022 remains stable and coherent with last year's programme statement and the values presented in this [Biodiversity tracking tool](#). Based on the categorisation of the planned and implemented expenditure reported directly by the Member States, DG REGIO calculates the relevant financial allocations based on weighting agreed with expert Commission services (no target was set in legislation).

At the level of the 2021-2027 MFF the overall objective is to provide 7.5% of annual spending under the MFF to biodiversity objectives in the year 2024 and 10% of annual spending under the MFF to biodiversity objectives in 2026 and 2027.

Based on the 2014-2020 planned values (end 2020) the share of the total ERDF and CF budget allocated to biodiversity related activities is 4%. At this early stage of programming, precise figures on future commitments are not available, and a more reliable projection will only be available when programming of the 2021-2027 funds is further advanced. Maintaining at least the 4% share for the 2021-2027 period would result in a total allocation of EUR 10 billion to biodiversity objectives from ERDF and the Cohesion Fund. The Commission will work with the Member States during the programming towards securing a higher share of cohesion policy funding to biodiversity activities, than in the 2014-2020 period.

### 6.2.3. Key achievements

Relevant objective/output	Budget 2020	Total 2014-20
II Infrastructure providing basic services and related investment: Environmental infrastructure	€ 560.19	€ 3,920
IV Development of endogenous potential: Environment	€ 1,010.97	€ 6,434
<b>Total</b>	<b>€ 1,571.16</b>	<b>€ 10,354</b>

In million

In the investment framework of the 2014-2020 period, Member States have allocated EUR more than EUR 10.3 billion to this area. National financing adds to this, and leverages additional private funding. Cohesion policy is complemented by other EU funding sources, such as LIFE. As a result almost 6 million hectares – roughly the size of Latvia – of habitats are supported in order to attain a better conservation status (for more details - see the section on Specific Objective 6).

#### Former gravel mines turned into nature reserve in Poland

When mines near the town of Stary Sącz, in Poland's Malopolskie region shut down in the 1990s, they left behind gravel pits that had a lasting impact on two rivers. With the help of EU funding, local authorities restored the area and transformed a section of it into a nature reserve designed to be enjoyed by all.

The 'Bobrowisko' Nature Enclave includes 400 m of new paths that cross the flood plains at the fork of the Dunajec and Poprad rivers. The pathways avoid the most biologically diverse areas, to conserve the natural environments, but include observation points along the route, allowing nature lovers to take in the unique wildlife and flora. A mobile application encourages locals and tourists to enjoy the area using maps and an audio guide for visually impaired people.

Total investment for the project "The "Bobrowisko" Nature Enclave" is EUR 366 060, with the EU's European Regional Development Fund contributing EUR 307 743.

#### 6.2.4. Performance

The allocation of ERDF and CF resources to biodiversity actions have led to the selection of indicators and target values and leads to annual reporting on progress in implementation. The most relevant common indicator presented in detail in section 5 above is funded under Specific Objective 6: Environment - "Area of habitat with improved status".

The key areas of investment lie in two categories, i.e. (i) protection and enhancement of biodiversity, nature protection and green infrastructure and (ii) protection, restoration and sustainable use of Natura 2000 sites.

However, the full range of investments that are indirectly related to biodiversity reach more than EUR 10.3 billion once the allocations to three other related interventions, indicated below, are taken into consideration:

- waste water treatment
- adaptation to climate change, prevention and management of climate risks
- development and promotion of tourism potential of natural areas

Strong performance is evident in these areas:

- By 2019, nearly 3 million additional people had been served by improved wastewater treatment with the help of regional funds. From 2018 to the 2019 figures now available, there has been an increase of 92%, resulting in an achievement rate of approximately 17% against the 2023 target. Despite the low overall attainment rate, programs are on track to meet their 2023 objective, projections show that we will reach the 2023 target even if the deceleration in the increase in numbers that we have seen in recent years remains.
- By 2019, nearly 6 million hectares of habitats have achieved better conservation status with support from regional funds. From 2018 to the 2019 numbers now available, there has been a significant 112% increase in this number, resulting in an achievement rate of about 70% over the 2023 target. Projections show that the 2023 target will be met even if there is a slower increase in numbers than in recent years.

### 6.3. Contribution to clean air financing

#### 6.3.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
3 868,7	3 994,8	4 124,6	4 267,3	4 414,2	4 565,8	4 722,4	29 957,8

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.3.2. Explanation and justification on the financial contribution

Clean air is essential to our health and to the environment. But as a result of rising industrial and energy production, the burning of fossil fuels and biomass, as well as the dramatic rise in traffic on our roads, our towns and cities suffer from air pollution.

Investing in the reduction of air pollution therefore not only fosters human wellbeing and supports the protection of natural resources, but also makes economic sense and contributes to regional development.

Cohesion policy, through the ERDF and the CF, supports European regions and Member States in their efforts to reach the European clean air targets set for 2030. In the 2014 – 2020 period the policy has allocated more than EUR 29.7 billion to investments directly aimed at reducing pollution.

The methodology used for estimating the ERDF and CF contribution to financing clean air was introduced in 2020 through this [Clean air tracking tool](#). Based on the categorisation of the planned and implemented expenditure reported directly by the Member States, DG REGIO tracks the relevant financial allocations based on weightings in line with the common methodology established via the NEC Directive 2016/2284 (no target was set in the 2014-2020 regulation).

Cohesion policy investments contribute to improving air quality, for instance through reconstruction of building heating systems or clean urban transport infrastructure. Over 11% of the ERDF planned allocation for the 2014-2020 period contributes to improved air quality. REGIO tracks the cumulative amounts allocated since the start of the programming period.

Based on the 2014-2020 planned values we have projected an estimated annual share of 11% of ERDF and CF contributions for clean air over the entire period 2021-2027. A more reliable ERDF and CF projection will be possible when the programming of the 2021-2027 funds is more advanced. Projections show that cohesion policy will contribute an additional EUR 30 billion to improving air quality between 2021 and 2027.

The methodology used for estimating ERDF and CF contribution to clean air in 2021 and 2022 remains stable and coherent with last year's programme statement.

In the 2021-2027 period the ERDF thematic concentration requirement on policy objective 2 (a greener, low-carbon transitioning towards a net zero carbon economy and resilient Europe) and the thematic focus of the CF will ensure that substantial funding will be allocated to measures that contribute to reducing air pollution and to reach the European clean air targets set for 2030. Based on the 2014-2020 values we have projected an estimated annual share of 12% of Union contributions for this area. A more reliable projection will be possible when the programming of the funds is more advanced.

## 6.4. Contribution to gender equality

### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
167,3	172,8	178,4	184,5	190,9	197,5	204,2	1 295,6

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.4.2. Key achievements and performance

Gender equality is a horizontal principle of the ERDF and CF (including REACT-EU) in the 2014-2020 and the 2021-2027 period. This means that gender equality and a gender perspective are taken into account and promoted throughout the preparation and implementation of the programmes. Bodies responsible for promoting social inclusion, fundamental rights, gender equality and non-discrimination are among the key partners who have to be involved by Member States and the Commission in the partnership process.

For the 2021-2027 period, the legal requirements as regards gender equality have been further strengthened in two ways. First, a new funding precondition for Member States, called enabling condition, was introduced on ensuring the effective application of the EU Charter on Fundamental rights, containing also the requirement on equality between men and women; and the enabling condition related to gender equality was further strengthened. Second, gender tracking system was proposed for the ERDF and CF which will allow for better monitoring of the investments related to gender equality.

The ERDF directly contributes to gender equality by improving the quality and access to childcare and by improving business support measures for women entrepreneurs. Data are available only for early childhood education and care infrastructure with EUR 1.3 billion being programmed in the 2014-2020 period. ERDF and CF investments also contribute to gender equality indirectly through improvements in education, research, business, health and other infrastructure, enhancing opportunities for women. Examples include ERDF projects supporting women entrepreneurship, return of women to labour market, reproductive health, equality in employment for women in specific (traditionally male) sectors and others.

#### **Building gender equality into urban planning in seven European cities**

Seven European cities are exchanging best practices to ensure their policies, services and development are gender equal, thanks to the URBACT action planning network project Gendered Landscape. The aim is to redefine cities as places that embody and reinforce gendered power structures.

Working in Umeå, Sweden; Frankfurt, Germany; Trikala, Greece; Barcelona, Spain; La Rochelle, France; Panevezys, Latvia; and Celje, Slovenia, the project is creating awareness among urban planners and decision makers about how gendered power structures are perpetuated in cities and then to use this knowledge to make their policies and services gender equal.

Total investment for the project "GenderedLandscape - Gender + Equal + Cities" is EUR 749 400, with the EU's European Regional Development Fund contributing EUR 572 700.

## 6.5. Contribution to the sustainable development goals

### 6.5.1. Goals

*SDG 3 Ensure healthy lives and promote well-being for all at all ages*

#### **SDG 3**

In 2019, the **development of social service infrastructure** in Akmenė District Municipality was completed. The care centre building was repaired and adapted to its activities. As a result of this project, 25 places for social service recipients were

established. The ERDF investment was used to target and effectively promote a sense of belonging to the community. The establishment of the day care centre increased the accessibility of social services for disabled people and created favourable conditions for their integration into society.

The project budget amounts to EUR 171,149.52, of which the ERDF contribution was EUR 114,219.76.

#### *SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all*

##### **SDG 4 and SDG 8**

The **House of Digitalisation** is a regional ecosystem in the field of digitalisation to promote education and training, science, industry and administration in the region of Lower Austria. Its objective is to provide cross-sectoral support to the domestic industry to increase the speed and efficiency of its digital transformation. During the COVID-19 lockdown, House of Digitalisation project supported regional companies in strengthening their online trading opportunities. The mobile application, developed by the students in Lower Austria allowed small shops to quickly and easily enter online retailing and keep in touch with the customers. The ERDF contribution amounts to EUR 1.2 million.

#### *SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all*

##### **SDG 7, SDG 11 and SDG 13**

**Poland rolling out smart grid infrastructure.** To enhance the effectiveness and security of the electrical energy distribution network in seven Polish provinces: Łódzkie, Wielkopolskie, Zachodniopomorskie, Kujawsko-Pomorskie, Mazowieckie, Pomorskie, Warmińsko-Mazurskie, energy distribution system operator Energa implemented smart grid infrastructure. The project reduces energy consumption and allows residents to see in real time how much electricity they are using. This is Poland's largest project for developing smart electricity distribution networks. Other advantages of the project are enhanced resistance to extreme weather and better options for connecting to more sustainable energy sources. For the 2 980 422 inhabitants connected to the new smart grids, this means less network failures, increased security of supply, and a better quality of life. The project is considerably improving the efficiency of energy distribution in Poland. In total, the new smart grid system is expected to reduce primary energy consumption by 1 054.11 GJ/year, resulting in savings of 97.60 MWh/year.

Total investment for the project is EUR 56 040 808 (PLN 240 600 300), with the EU's CF contributing EUR 38 725 408 (PLN 166 260 000).

#### *SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all*

##### **SDG 8, SDG 9 and SDG 11**

**Passenger trains returned to the Lewki-Hajnówka route after 25 years.** The inhabitants of five localities, located along railway line no. 52, got access to railways, which will allow for daily commuting to school and work to Białystok and Bielsk Podlaski, whereas tourists – better access to the Białowieża Forest area, which is a popular tourist destination. To increase the safety along the 27 km route 22 railroad crossings were refurbished. One new stop has been built and 5 closed stops have been refurbished and reopened. The train stops were equipped with modern security systems, bicycle stands, modern platforms and wheelchairs ramps for people with reduced mobility.

Total investment for the project is EUR 26,136,077, with the EU's ERDF contributing EUR 16,821,915.

#### *SDG 13 Take urgent action to combat climate change and its impacts*

##### **SDG 13 and SDG 15**

**In Centro Region (Portugal), part of an urban coast (in Torres Vedras) was protected against the risk of sea level rise,** which causes instability in the cliffs in an urban context, thereby protecting and safeguarding the safety of people (around 8.530 citizens) and property from the effects caused by coastal erosion.

Of the total eligible costs of EUR 2.210.798 contribution from the CF amounted to EUR 1.936.643.

## **6.5.2. Key achievements and performance**

The cohesion policy funds (ERDF, CF, ESF) are contributing substantially - 95% of the planned financial resources (2014-2020) supports the achievement of 11 SDGs (out of the total 17 SDGs).

The 2021-2027 cohesion policy will enable the EU to continue to deliver on the 2030 Agenda for Sustainable development and will help further the localisation of the SDGs, since the policy is delivered in close cooperation with regions and local authorities. In this regard, cohesion policy is also a key tool to promote social inclusion, while fighting poverty and discrimination.

REGIO maps the contribution of its funds to the SDGs along and on the basis of the intervention codes that each Member State provide along with the data of its programs. On this basis, an estimate of the use of funds can be reliably made. Such mapping is only possible if the programming of the programmes provides sufficiently clear data on the allocation of funds. As stated several times in this programme statement, a reliable estimation of the allocation of funds along the programme data will be possible in PS 2023.

In the section below, we are presenting a list of those SDGs that are of key relevance for the 2014-2020 programmes. It is reasonable to assume that this list will apply in the same way to the programs for the 2021-2027 period.

#### ERDF and CF investment mapped to relevant SDGs (at end 2020)

In million EUR

SDG	SDG NAME	Planned Total Amount (EU+National)	Total Eligible Costs selected	Rate of selection (%)	% of total	Selection rate (change vs 2019)	Total Eligible Costs selected (change vs 2019)
SDG1	No poverty	€ 9,840.69	€ 9,746.49	99%	3%	22%	110%
SDG3	Good health and well being	€ 14,583.29	€ 12,310.43	84%	3%	-17%	190%
SDG4	Quality education	€ 9,566.70	€ 10,936.13	114%	3%	20%	124%
SDG6	Clean water and sanitation	€ 17,198.53	€ 21,762.01	127%	6%	23%	112%
SDG7	Affordable and clean energy	€ 34,547.21	€ 37,276.79	108%	10%	33%	510%
SDG8	Decent work and economic growth	€ 73,315.74	€ 88,751.00	121%	23%	21%	127%
SDG9	Industry, innovation, infrastructure	€ 138,272.24	€ 157,100.85	114%	40%	19%	112%
SDG11	Sustainable cities and communities	€ 6,833.45	€ 5,961.03	87%	2%	4%	141%
SDG12	Responsible consumption and production	€ 7,597.50	€ 7,650.57	101%	2%	24%	27%
SDG13	Climate action	€ 8,989.42	€ 10,890.99	121%	3%	26%	117%
SDG15	Life on land	€ 9,438.78	€ 8,211.81	87%	2%	18%	121%
	No SDG assigned	€ 20,015.26	€ 19,121.40	96%	5%	13%	113%
<b>Total ERDF+CF (EU+National)</b>		€ 350,198.80	€ 389,719.49	111%	100%	19%	119%

(1) Due to the overlap among SDGs, SDG11 and SDG13 are underestimated (a significant share of investments assigned to SDG6, SDG9 and SDG12, for instance, are planned for urban areas and investments in SDG7 are relevant for climate action).

Cohesion policy's overall mission to reduce economic, social, and environmental territorial disparities between the EU regions is largely in line with the principles underpinning the SDGs, which allows for an assessment of how the Policy contributes to them.

In the long term, cohesion policy contributes to *reducing inequality within and among countries* (SDG10). The overarching mission of the funds is to *reduce economic, social, and environmental territorial disparities between the EU regions*. It can be deduced that cohesion policy aims at contributing to SDG 10 in the medium to long term. However, its contribution to SDG10 cannot be quantified on the basis of monitoring data, but must be assessed through evaluations. Based on monitoring data, it is, nonetheless, possible to reliably estimate and assess how cohesion policy, across all its funds, contributes to the thematic chapters of the SDGs, as explained below.

The distribution of investments across the SDGs is shown in the table above. Here it can be seen that more than 70% of the investments are allocated and invested for the goals "affordable and clean energy" (SDG7), "decent work and economic growth" (SDG8) and "industry, innovation, infrastructure" (SDG9). In terms of implementation by December 2020, project selection data shows significant progress, with selection rates just below 100% of planned allocation for almost all SDGs. Only SDG 3, SDG 11, and SDG 15 have rates below 90%. However, compared to last year's data a steep increase of fund allocation for SDG 3 (health) and SDG 7 (climate) becomes apparent.

As explained in other parts of the statement, the shift in funding can be explained in part by a shift in priorities at the Member State level that occurred particularly during the pandemic. However, the significant increase in investments under SDG 7 cannot be explained by the pandemic alone, but could be a result of the Commission's new priorities and the increased emphasis on green aspects of future investments. On the other hand, the overall share of 10% for SDG 7 remains moderate compared to other chapters, considering that SDG 7 also accounts for the lion's share of total climate investments. The undeniable trend away from investing in *responsible consumption and production (SDG 12)* shows, on the other hand, points to the side effects of such policy changes.

It is expected that with the new flexibility under CRII(+), rates for SDG 3 (Good Health and Wellbeing) in particular will increase.

Section 6.5.1. serves as a pool of examples for the variety of the different projects funded under cohesion policy and their contribution to the different SDGs.

**1. Overview**

## 1.1. Challenges

The Aid Programme aims to facilitate the reunification of Cyprus by encouraging the economic development of the Turkish Cypriot community.

Revision of the programme can only occur in the case where a reunification is achieved during the MFF period (in the absence of this, no major changes of strategy can be made)

## 1.2. Mission (general objectives)

The programme is the only EU funding for the Turkish Cypriots, who are EU citizens. There is very little assistance from individual Member States due to difficult legal and political circumstances in the de-facto divided island. The EU programme supports reunification efforts and prepares the Turkish Cypriots for the lifting of the suspension of the application of the acquis in those areas of the Republic of Cyprus in which the Government of the Republic of Cyprus does not exercise effective control. The EU contribution, in supporting the political process, economic integration and improved living standards, is vital. Economic development of the Turkish Cypriot community in order to facilitate the reunification of Cyprus is mentioned very prominently in the Aid Regulation.

## 1.3. Specific objectives

The Aid Regulation was adopted in 2006. On this basis, the Commission continues to deliver assistance to facilitate the reunification of Cyprus by encouraging the economic development of the Turkish Cypriot community, and by working under six objectives:

- Objective 1: Developing and restructuring of infrastructure;
- Objective 2: Promoting social and economic development;
- Objective 3: Fostering reconciliation, confidence building measures, and support to civil society;
- Objective 4: Bringing the Turkish Cypriot community closer to the EU;
- Objective 5 and 6: Preparing the Turkish Cypriot community to introduce and implement the acquis, in view of the withdrawal of its suspension in accordance with Article 1 of Protocol No 10 to the Act of Accession.

Specifically, the Aid Programme contributes significantly through support to private sector development, facilitating the involvement of the World Bank and the European Bank for Reconstruction and Development, and human capital development. Measures to be financed under the Aid Programme are exceptional and transitional in nature and are intended, in particular, to prepare and facilitate, as appropriate, the full application of the EU acquis in the areas where the Government of the Republic of Cyprus does not exercise effective control, in view of the withdrawal of its suspension in accordance with Article 1 of Protocol No 10 to the Act of Accession, following a solution to the Cyprus problem.

The Aid Programme remains ready to accommodate developments in the settlement process and to finance confidence-building measures resulting from this process.

## 1.4. Public intervention context

The assistance programme is of an exceptional, transitional and temporary nature, aiming to facilitate the reunification of Cyprus. The Aid Regulation has no end date. Revision of the programme can only occur in the case a reunification is achieved during the MFF period (in the absence of this, no major changes of strategy can be made).

## 1.5. Actions

The assistance is implemented through direct and indirect management, taking account of the different types of constraints. Recently, innovative mechanisms on delivering aid have been initiated with the purpose of bringing coherence and streamlining priority infrastructure actions (Local Infrastructure Facility), improving the entrepreneurship ecosystem through enhanced linkages between research and business (Innovative Entrepreneurship), and supporting the bi-communal Technical Committees to carry out their activities more effectively. The underlying aim is to bring more tangible and visible impact in the priority areas with an annual programming resulting in a streamlined and compact set of actions.

Several infrastructure investments, with a strong environmental and bi-communal focus, are under implementation and will continue to be programmed through the Local Infrastructure Facility and/or through targeted direct interventions. Continued support is provided for strengthening the private sector and labour market, with an emphasis on innovation and increasing employability. Likewise, concrete measures have been put in place aimed at eradicating animal disease and improving food safety standards. The 'confidence building measures' (support for the Committee on Missing Persons and for the Technical Committee for Cultural Heritage) have shown solid progress and good bi-communal acceptance. Two new Green Line crossing points, specifically requested as a confidence building measure were opened in 2018 and in July 2019. The Commission played an active role in

reaching a technically acceptable solution to both communities on the interoperability of mobile phones across the island. Intensive efforts continue on the preparation for the implementation of the acquis.

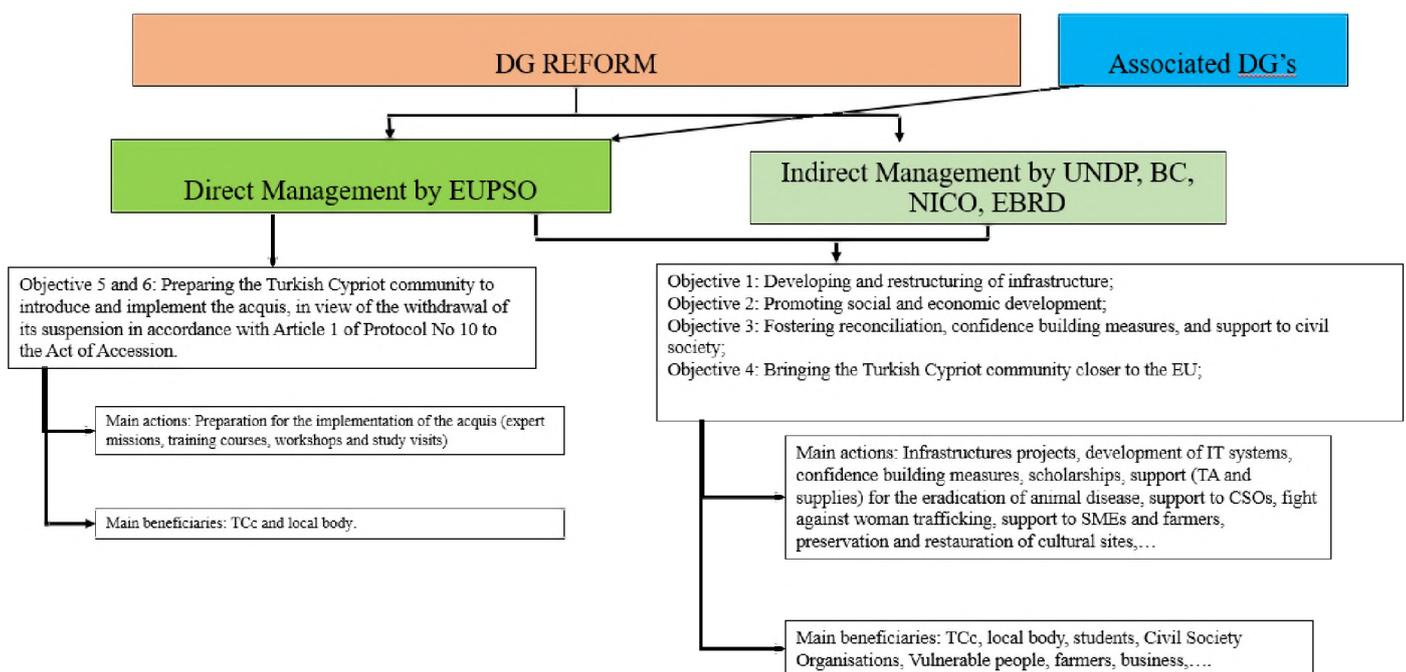

The Aid Programme remains ready to accommodate developments in the settlement process and to finance confidence-building measures resulting from this process

The EU contribution, in supporting the political process, economic integration and improved living standards, will be vital.

### 1.6. Delivery mode

DG REFORM is the lead service for the programme implementation. The programme is implemented through direct management (procurement contracts and grants) and indirect management (contribution agreements with International Organisations and Member State Agencies).

### 1.7. Graphic overview of the programme structure

### 1.8. Legal basis and financial programming

#### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Council Regulation (EC) No 389/2006 of 27 February 2006 establishing an instrument of financial support for encouraging the economic development of the Turkish Cypriot community and amending Council Regulation (EC) No 2667/2000 on the European Agency for Reconstruction	2021 - 2027	193,0

#### 1.8.2. Legal basis explanation

Council Regulation (EC) No 389/2006 and amending Council Regulation (EC) No 2667/2000

The assistance programme is of an exceptional, transitional and temporary nature, aiming to facilitate the reunification of Cyprus.

The Aid Regulation reflects this particularity. It has been adopted in 2006 and remains in force until a comprehensive settlement of the Cyprus problem.

#### 1.8.3. Financial programming table

Financial Programming (EUR million)
Support to the Turkish Cypriot Community

	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
<b>Total</b>	<b>32,0</b>	<b>33,3</b>	<b>33,6</b>	<b>34,3</b>	<b>35,0</b>	<b>35,7</b>	<b>36,2</b>	<b>240,0</b>

#### 1.8.4. Financial programming explanation

The programming of the financial assistance under the Aid Programme is based on a number of established programming principles such as project maturity, policy relevance and track-record of past implementation. The underlying aim is to bring more tangible and visible impact in the priority areas with an annual programming resulting in a streamlined and compact set of actions. In addition, under this programming approach, the beneficiary is involved at an early stage which includes the submission of 1-page project outlines and a series of direct exchanges. Continued efforts are being made to instil more ownership in the process from the beneficiary coordinating body, the EU Coordination Centre, that takes a more active role in prioritisation and self-assessment of projects.

#### 1.9. Link with the 2014-2020 MFF

The Multiannual Financial Framework (MFF)<sup>1</sup> 2014-2020 provides a multi-annual perspective to the programme with a provision for stable, funding amounting to EUR 236 million.

total envelop*	235 487 520	
cumulative implementation rate	100%	75%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

	Commitments - MEUR	Payments MEUR
Implementation	235,5	177,1
Cumulative implementation rate	100%	75%

The Aid Programme is implemented in a unique diplomatic, legal and political context. Major difficulties encountered in the implementation of the programme arise from the unrecognised status of the beneficiary as well as from disputes with contractors, notably when it comes to works contracts. Those challenges are further exacerbated by the lack of absorption capacity and

<sup>1</sup> Council Regulation 2015/623 of 21 April 2015.

resources on the beneficiary side as well as by the deficiencies in available data and statistics. This often results in serious delays in the preparation of projects and in bringing them to maturity, which – over the years – has led to a substantial amount of uncommitted funds. This ‘backlog’ was successfully addressed in the recent period through better programming, more efficient handling of tendering procedures, and smoother internal procedures and coordination within DG REFORM.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

The Aid Programme is implemented in a unique diplomatic, legal and political context. Major difficulties encountered in the implementation of the programme arise from the unrecognised status of the beneficiary as well as from disputes with contractors, notably when it comes to works contracts. Those challenges are further exacerbated by the lack of absorption capacity and resources on the beneficiary side as well as by the deficiencies in available data and statistics. This often results in serious delays in the preparation of projects and in bringing them to maturity, which – over the years – has led to a substantial amount of uncommitted funds. This ‘backlog’ was successfully addressed in the recent period through better programming, more efficient handling of tendering procedures, and smoother internal procedures and coordination within DG REFORM.

Since the Aid Regulation has been adopted, the TCc has benefited from a financial assistance amounting to EUR 592 million. The Aid Programme is implemented in a territory whose existence is not recognised internationally (with the exception of Turkey) and whose ‘institutions’ should therefore not be strengthened. This means that we are operating with perennially weak partners and this impacting negatively on the efficiency and effectiveness of our intervention. The paradox is of course that such bodies often have an important role to play in implementing the policies required for closer integration with the EU acquis, particularly in areas such as animal health and food safety. This unique situation has got a certain number of consequences when it comes to programme implementation:

- Property rights have to be respected when it comes to works contracts. This limits, in terms of geographical areas, the scope of our intervention. In addition, the procedure for property clearance (via the Ministry of Foreign Affairs of the Republic of Cyprus) is long and cumbersome and is delaying the implementation of our works contracts.
- Development of IT systems is an area where we have encountered difficulties and inefficiency. As a recent example, in our support to the eradication of animal disease, we have financed the development of an Animal Identification Registration database. The database is not yet functional. As a consequence, it was decided to refrain from supporting development of IT systems except in very well justified circumstances.

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.3. Previous programme performance**

The main policy objective under the legal base (Regulation (EC) No 389/2006) is to facilitate the reunification of Cyprus by encouraging the economic development of the Turkish Cypriot community (TCc). The Aid Programme has supported this with a distribution of resources among the six objectives specified in the Regulation. The below provides some illustrations of what has been achieved for each of the objective:

An independent evaluation of the Aid Programme for the period 2013-2018 concludes as follows “EU-funded interventions were generally well-aligned with local needs and EU priorities. Overall, the EU programme was mostly able to achieve the intended results (although often with significant delays) and beneficiaries are generally satisfied with the assistance received. The support provided to bi-communal initiatives played an important role in keeping the reunification option open, whereas the impact on economic development was more modest, mainly due to the scarce assistance to more dynamic sectors. Due to the peculiar local conditions (non-recognition of TCc bodies and pervasive weaknesses in human resources), programme implementation required an intensive effort, and the management and supervision of activities absorbed some 10% of budgetary resources. Sustainability is affected by TCc’s limited capabilities and financial resources, and in certain areas (e.g. EU acquis) progress would likely stall without continuing EU support.”

We consider the programme to be on track. Nevertheless it has to be said that ultimate success will depend upon the will of both sides in the Cyprus dispute to arrive at a settlement. This is a sine qua non for success. Nevertheless, the programme assumes that such a willingness to arrive at a solution exists and is building the capacity of the Turkish Cypriot side to integrate a bi-communal bi-zonal federation, with adoption of the EU acquis. This can be shown in terms of hard support – ie physical infrastructure notably in the environmental field, bringing the TCc closer to European norms and standards, but also with technical assistance in important sectors. One such sector is animal health and food safety. In the context of a potential agreement on a PDO for Halloumi/ Hellim and the possibility for Turkish Cypriot farmers and food producers to export the product (17% of GDP of Turkish Cypriot community) it is necessary to ensure compliance with EU “farm to fork policy”. Major efforts have been under way to ensure the traceability of the animals concerned, the eradication of animal diseases and hygienic production methods.

The Aid Programme has been substantially mobilised to address the impact of the Covid-19 pandemic crisis on the TCc community. In March 2020, an envelope of EUR 3 million has been made available through the 2020 Annual Action programme to cover the needs identified by the health sector and the local communities in terms of equipment and supplies for the health sector including Personal Protective Equipment, laboratory devices, testing kits and ventilators. The Aid Programme was also substantially mobilised to support SMEs negatively impacted by the pandemic. More details are provided in the section dealing with objectives 2.

When it comes to project implementation, the COVID 19 pandemic has for consequence that some of the contracts had to be suspended for force majeure as the actions could not be implemented. This was particularly the case for ongoing work contracts for which suspension was suspended for 3 to 4 months in 2020 when the pandemic was declared. The situation came back in summer 2020 to a certain level of normality allowing implementation to be resumed. For technical assistance project (service contracts) and grant agreement, the impact of the COVID 19 on project implementation has been limited thanks to the remote alternatives available.

#### 1. Objective 1: Developing and restructuring of infrastructure.

Major infrastructure investments, with a strong environmental and bi-communal focus, have been funded and will continue to be programmed through the Local Infrastructure Facility and/or through targeted direct interventions. In total, 260 kilometres of water supply networks and some 100 kilometres of sewerage pipes have been financed through the Aid Programme.

Since 2014, some EUR 80 million have been invested in projects mainstreaming climate actions and contributing to the Europe 2020 priorities, notably through the following:

- The large wastewater treatment plant in Nicosia was inaugurated in 2014. This is the largest such plant on the island and serves 300,000 'population equivalent' in both communities.
- Actions to set up a sustainable integrated waste management plan have been funded allowing for the collection and transport of solid waste to the central landfill to be optimised and the recycling of valuable resources, this is now completed.

The EU remains committed to providing the citizens of Famagusta with a functional and hygienic sewerage system. An initial work contracts, for an approximate value of EUR 10 million has been concluded in 2009. The Contractor has built a sewer network and pumping stations that both Parties agree are riddled with defects (such as reverse slopes and defects joints). As a consequence of the importance of the defects and the impossibility to fix them, the EU has decided to launch a tender aiming at repairing the existing one by constructing a network in parallel of the defects one. A contract has been awarded for an approximate value of EUR 20 million and the works are expected to be started in 2021.

The European Commission has since 2018 concluded a "Local Infrastructure Facility" contribution agreement – totalising EUR 23.4 million - with the United Nations Development Programme to continue supporting the well-established mechanism for EU-funded infrastructure investments. The facility aims to provide support for the identification, screening, development, procurement, and physical implementation of relevant local infrastructure investments. With twelve significant ongoing projects well progressed, 2020 saw an additional five important infrastructure projects being added to the LIF pipeline

#### 2. Objective 2: Promoting social and economic development.

The main achievements are the following:

- EU actions also support the development of rural areas, human resources and regions. In total, since 2006, more than 500 grants have been awarded to farmers, local communities, schools, and SMEs.

More specifically, 286 rural development grants have been concluded for an approximate value of EUR 32.3 million and 200 farmers received training in husbandry practices to improve water use efficiency and farm hygiene. The targeted support to farmers through facilitating investments and purchase of equipment enables them to upgrade their material and to secure their survival in a difficult and closed economic environment. Concrete measures have been put in place, aimed at eradicating animal disease and improving food safety standards.

- Access to credit has been and remains a major problem in the Turkish Cypriot community. The Aid Programme has also supported the promotion of security growth and job creation through conclusion of 160 grant agreements with SME and start-ups, complementing by access to credits and capacity building, supporting local businesses. The SME grant scheme permitted companies to benefit from EU support enabling them to improve their competitiveness and thereby ensuring their survival in a difficult economic environment.
- Capacity of veterinary services to design and implement EU aligned animal diseases surveillance, control and eradication programmes has been strengthened. EU intervention helped decline of the prevalence of brucellosis in the northern part of Cyprus. For example, the prevalence of the disease dropped (in a period 2016 to 2020) from 10,4% to 8.3% among cattle

herds, and from 10,4% to 6,1% among sheep and goats herds. This is of significant importance for local farmers and consumers (because brucellosis causes economic losses in animal production and presents a risk for human health). Over 800 farmers informed on animal diseases risks and prevention and long term benefits of elimination of diseases in food producing animals.

- The ongoing annual work programmes for the Aid Programme (AAPs) have been arranged to ensure a timely contribution for emergency SME support following the COVID-19 pandemic. Since it was not possible to mobilise additional Aid Programme funding for emergency economic measures, the support had to come through the existing envelopes. The Commission made an exercise of reassessing the priorities, aiming to ensure the most efficient and optimal use of available resources. Part of these came from cancelling the not-yet-committed actions, where either beneficiaries lost interest or more preparatory work was needed and thus projects can be postponed for future years. The rest would be covered by savings and reserve funds under the support and settlement facility. Overall, the proposed changes involve a global reshuffling within and between the Annual Action Programme whose end dates for contracting were not expired, while keeping the respective annual budgetary envelopes unchanged. An Economic emergency package (EUR 11 million) was established to help address the broader socio-economic impact of the Covid-19 pandemic in the Turkish Cypriot community. It includes grants allowing self-employed and micro and small businesses to restock their supplies and cover other ad-hoc costs necessary to restart their operations, as well as emergency economic support including grants to small and medium businesses

### 3. Objective 3: Fostering reconciliation, confidence building measures, and support to civil society.

The main achievements are the following:

- A high level of output was achieved by the Committee on Missing Persons (CMP), which has exhumed 1,188 sets of remains, of which 993 were genetically identified (December 2020 figures). The CMP's objective is to recover, identify, and return to their families, the remains of 2,002 persons. The CMP establishes the fate of those persons declared missing by both communities as a consequence of the tragic events of 1963-64 and 1974.
- The bi-communal Technical Committee for Cultural Heritage (TCCH) was established in 2008 for the promotion and protection of the rich and diverse cultural heritage of the island. The work of the Technical Committee on Cultural Heritage provides technical support and helps building trust between the two communities. The Committee is supported in its work by archaeologists, architects, art historians and town planners from both communities. The Technical Committee works to provide a mutually acceptable mechanism for the implementation of practical measures for the proper preservation, physical protection and conservation of the cultural heritage of Cyprus. The protection of cultural heritage is an integral part of the ongoing process of broadening areas of cooperation between Greek Cypriots and Turkish Cypriots. The protection of cultural heritage in this context stimulates sustainable development and mutual understanding. The conservations include religious sites (Orthodox, Muslim, Latin, Armenian and Maronite), but also mills, fountains and hamams. Local communities attend completion events and for some this provides an opportunity to visit sites that they never visited before.

EU contributions under the Aid Regulation started in 2011 reaching an amount of nearly EUR 20 million to date. By the end of 2020, a total of 79 conservation works have been completed and over 100 cultural heritage sites have benefitted from this assistance, while 16 projects and 22 designs for conservation are in progress. For information purposes, the following large flagship projects have been completed so far: Upgrading to Kyrenia Shipwreck Gallery; Agios Panteleimonas monastery in Myrtou/Camlibel; Apostolos Andreas monastery in Rizokarpaso; Othello Tower in Famagusta; Famagusta Walls complex (2017)

- Strengthening civil society as a key actor in the development of a culture of dialogue, participation in the community life and the promotion of values of tolerance, peace and active citizenship and the promotion of reconciliation, closer relationship and trust between the Turkish Cypriot and Greek Cypriot communities. Sixty projects and more than 80 civil society organisations have been supported since the inception of the Aid Programme with a total support of EUR 13 million. These grants fund a variety of actions in the fields of environment, human rights, art and sport and encourage citizens' engagement and cross-community exchanges. A seventh *Cypriot civil society in action* call for proposals has been launched in July 2020 for EUR 2 million and has attracted many applicants.

The active citizenship mechanism is a component of the technical assistance (TA) that supports CSOs in the TCc. It has proved to be particularly successful from the perspective of the final beneficiaries. Also called **Grow Civic**, it is an 'in-kind' support for activists, citizen's initiatives, platforms, networks, and civil societies organizations (CSOs). The maximum amount that an activist/CSO can request at one time is EUR 3,000 (and up to EUR 10,000 overall the TA's duration) Greek Cypriots can apply provided they are working with a Turkish Cypriot partner. This mechanism has supported 92 actions since 2016 in very different areas (e.g. peace and reconciliation, human rights, health, wild life protection, art, youth, environment, sports). Out of the 92 actions, 44 (48%) were either bi-communal or involving peace and reconciliation. The new TA, which started in December 2020, will continue to run the mechanism from March 2021 onwards.

## 4. Objective 4: Bringing the Turkish Cypriot community closer to the EU.

The Aid Programme supports scholarships for Turkish Cypriot students and professionals, which both provide experience and a route to qualifications abroad and contribute to the image of the EU among Turkish Cypriots. Students and professionals from the TCc have at best limited access to EU scholarship programmes. Since 2007, 14 annual grant schemes have delivered over 1,600 grants for study in EU places of learning, involving more than 100 universities, covering 23 EU countries of destinations and securing the training of 20 different professions

## 5. Objectives 5 and 6: Preparing the Turkish Cypriot community to introduce and implement the acquis, in view of the withdrawal of its suspension in accordance with Article 1 of Protocol No 10 to the Act of Accession.

Preparation for the acquis takes place mainly through the Technical Assistance and Information Exchange (TAIEX) instrument (expert missions, training courses, workshops and study visits) with around 1,250 TAIEX actions in 2014-2020. TAIEX allowed for the drafting of more than 220 legal texts covering 17 areas of the EU acquis.

### 3.2. Key achievements

Summary of key achievements since the inception of the Aid Programme starting in 2006.

Developing and restructuring infrastructure	Promoting social and economic development	Encouraging reconciliation, building confidence, supporting civil society and bringing the Turkish Cypriot community closer to the EU:
<p><b>263 km</b> of water supply distribution networks renewed</p> <p><b>3</b> waste water treatment plants constructed</p> <p><b>99 km</b> of sewage networks constructed</p> <p><b>23</b> refuse collection vehicle supplied</p> <p><b>2</b> incinerators for animal by-products supplied</p>	<p><b>286</b> rural development and local community development projects supported</p> <p><b>138</b> projects for schools, lifelong learning organisations and the labour market supported</p> <p>More than <b>150</b> grants to SMEs / start-ups</p> <p>Consultancy services and training provided for <b>more than 1 000</b> businesses and entrepreneurs</p> <p>Training provided for <b>almost 200</b> farmers to improve water use efficiency and farm hygiene</p> <p><b>Over 800</b> farmers informed about disease-related risks, disease prevention and the long-term benefits of disease elimination among livestock</p> <p>COVID 19 urgency measures : PPE and medical equipment, support to preparing vaccination and testing and <b>more than 800</b> business assisted</p>	<p><b>1</b> EU Infopoint established to proactively inform the Turkish Cypriot community about EU policies and the Aid Programme, via events, social media and web-based information activities</p> <p><b>60</b> projects for civil society organisations supported</p> <p><b>More than 80</b> training sessions carried out to strengthen the work of civil society organisations</p> <p><b>993</b> missing persons identified and their remains returned to their families</p> <p>More than <b>1 600</b> Turkish Cypriots given educational opportunities in EU Member States through EU scholarships</p> <p><b>79</b> cultural heritage sites supported island-wide</p> <p><b>5</b> new Green Line crossing points opened</p> <p>All bi-communal committees helped to better operate</p> <p>Around <b>1,250 TAIEX</b> actions allowing the drafting of <b>225 legal texts</b> covering 17 areas of the EU acquis.</p>

The Commission reports annually on implementation of the Regulation<sup>2</sup>. Some examples and more details of the recent programme achievements are:

- The contract for the construction of the New Nicosia Trunk Sewer was concluded in 2018 and the works are under implementation since summer 2019. The Nicosia branch includes the construction of approximately 13 km of sewers and force mains and four pumping stations. The works include odour treatment systems to avoid odour nuisance for the citizens. A contract for the irrigation works in Morphou was also awarded in 2018 and the implementation of the works has been finalised in 2020.

<sup>2</sup> The 14th annual report, covering 2019, was published on 18/06/2020 (COM(2020) 238 final).

- The contract for the remedial works of the Famagusta sewerage network, amounting to EUR 20.5 million, was signed in April 2019. The remedial works at the sewerage network include parallel replacement of 31 kilometres of existing sewers in corrugated polyethylene, renewal of 2,347 existing house connections, and replacement of approximately 326 "blind" tee pieces. It also includes the remedial works at the pumping stations. The entry into force of the contract and the commencement of the works are subject to obtaining clearance from the Republic of Cyprus on the use of the land and validation of the "design visa" by the Turkish Cypriot Chamber of Civil Engineers. The latest re-submission for the design visa to the Chamber was submitted on 2 December 2020.
- The works for the construction of an irrigation system for the reuse of the Morphou/Guzelyurt waste water treatment plant (WWTP) treated wastewaters was completed in March 2020. In addition, the detailed design and associated tender dossier were finalised for the project 'reuse of treated wastewater and sludge generated from the new Nicosia WWTP'
- The two works contracts concerning the projects "Extension to the Koutsoventis/Güngör landfill" and "Landfill Degassing Plant" were amended, now representing an investment of over EUR 4.5 million in solid waste management, progressed well despite the difficulties caused by the Covid-19 pandemic. The amendments are to result in renewable energy being produced, ensuring the continued sustainable operation of the landfill and treatment of the wastewaters (leachate). The project is to be completed in the first quarter of 2021.
- The European Commission has since 2018 concluded a "Local Infrastructure Facility" contribution agreement with the United Nations Development Programme to continue supporting the well-established mechanism for EU-funded infrastructure investments. The initial contribution agreement, for EUR 17.7 million over a four year period (December 2018 – December 2023), was revised and amended in 2020 increasing the overall budget to EUR 23.4 million over five years; this planned to be replenished by a complementary envelope of EUR 4.7 million in the first quarter of 2021. The facility aims to provide support for the identification, screening, development, procurement, and physical implementation of relevant local infrastructure investments. With twelve significant ongoing projects well progressed, 2020 also saw the completion of a second 'LIF' call for proposals directed at the local communities resulting in an additional five projects being added to the LIF pipeline.
- Late 2020 saw the formal adoption by the Turkish Cypriot community of the 'Integrated Waste Management Plan' that had been in development and finalised a couple of years previously with European Commission assistance. The 'Plan' aims to provide a sustainable framework for continued reform, investment and action for upgrading solid waste management practices in the Turkish Cypriot community, enabling gradual approximation of local waste management practices to EC norms and standards; the Plan covers a 20-year period from 2018-2038.
- Around 500 grants have been given to diverse beneficiaries including farmers, schools, small businesses and business and community development and other civil society organisations. These helped farms and businesses to modernise and improve competitiveness, and schools along with other educational establishments to improve teaching methods and meet the labour market needs. Work in the communities and with civil society organisations helped develop advocacy, improve community services and civic engagement and bi-communal relations. In particular a number of NGOs worked in combatting human trafficking, resulting in the practice being recognised as a criminal offence. Major efforts have continued to improve animal health and food safety requirements in order to bring these into line with the standards prevailing in the EU.
- In 2018/2019, EU further contributed strengthening capacities of veterinary specialists to prevent, control and eradicate animal diseases. EU project enabled sampling of around 300,000 animals and implementation of 380,000 diagnostic tests to detect and eliminate priority diseases (such as brucellosis). As a result brucellosis prevalence in the northern part of Cyprus is in decline. In addition, a number of serological surveys, implemented by EU technical assistance in 2019, demonstrated absence of economically important animal diseases such as foot and mouth disease and "*peste des petites ruminants*". In 2019 and 2020, EU also contributed to long-term engagement of private veterinarians to implement sampling and testing of animals and other veterinary measures to protect animal and public health.
- In 2020 EU supplied range of field and laboratory tests and consumables to help continued implementation of animal health programmes in the northern part of Cyprus. It also supplied range of equipment for food and health laboratories. This increases scope of the laboratory testing and helps better reliability of test results produced in these laboratories.
- It should be noted that in 2020 the Aid Programme has been substantially mobilised to address the impact of the Covid-19 pandemic crisis on the TCc community. In March 2020, EUR 3 million were provided (through an existing contribution agreement with the UNDP) to cover the needs identified by the health sector and the local communities in terms of equipment and supplies for the health sector including Personal Protective Equipment, laboratory devices, testing kits and ventilators.
- An Economic emergency package (EUR 11 million) was established to help address the broader socio-economic impact of the Covid-19 pandemic in the Turkish Cypriot community. The ongoing annual work programmes for the Aid Programme (AAPs) have been arranged to ensure a timely contribution for emergency SME support following the COVID-19 pandemic. It includes grants allowing self-employed and micro and small businesses to restock their supplies and cover other ad-hoc costs necessary to restart their operations, as well as emergency economic support including grants to small and medium businesses and a new instrument to create jobs through energy efficiency measures.

- The European Commission concluded a contribution agreement with Northern Ireland Cooperation Overseas (NI-CO) for a total value of EUR 17 million to support business entry and development. NICO is responsible to manage the economic emergency package highlighted above.
- With respect to confidence-building measures, the interoperability of mobile phones across the island was established on 11 July 2019, with the aim of improving communication between the communities and bringing all Cypriots closer together. The Commission played an active role in facilitating the discussion between actors of the two communities and acted as catalyser and facilitator to secure a solution that could be implemented technically.
- A high level of output was achieved by the Committee on Missing Persons (CMP), which has exhumed 1,188 sets of remains, of which 993 were genetically identified (December 2020 figures). The CMP's objective is to recover, identify, and return to their families, the remains of 2,002 persons. The CMP establishes the fate of those persons declared missing by both communities as a consequence of the tragic events of 1963-64 and 1974. The Aid Programme has financed more than 75% of the CMP costs since 2006.
- The bi-communal Technical Committee for Cultural Heritage (TCCH) was established in 2008 for the promotion and protection of the rich and diverse cultural heritage of the island. EU contributions under the Aid Regulation started in 2011 reaching an amount of nearly EUR 20 million to date. By the end of 2020, a total of 79 conservation works have been completed and over 100 cultural heritage sites have benefitted from this assistance, while 16 projects and 22 designs for conservation are in progress.
- A EUR 1 million support facility for the first time in history targeting all bi-communal Technical Committees has also been concluded in 2019 with the purpose to help the Technical Committees to overcome structural and practical obstacles, which they face in their daily operations. Since then, five activities were completed, while other four are ongoing for a total of seven committees supported. The facility has been widely acknowledged as revitalising their work.
- The Commission, through its EU Infopoint and other projects, has carried out a range of communication and visibility actions (1,710) in 2014-2020 providing information about EU policies, priorities and actions in support of the Turkish Cypriot community (TCc), and promoting European culture. This has considerably enhanced the visibility of the EU in the northern part of Cyprus.
- The Aid Programme supports scholarships for Turkish Cypriot students and professionals, which provide both experience and a route to qualifications abroad and contribute to the image of the EU among Turkish Cypriots. Students and professionals from the TCc have no or only limited access to EU scholarship programmes. Since 2007, 14 annual grant schemes have delivered over 1,600 grants for study and work in EU places of learning.
- In the year 2019 a new Scholarship programme was established as a pilot programme, giving the opportunity to three Greek Cypriots and three Turkish Cypriots to go for two academic years to attend the United World College (UWC) for the International Baccalaureate diploma. The students departed in August 2020 and are enjoying a challenging and transformational educational experience to inspire them to become agents of positive change and to create a more peaceful and sustainable future, in a diverse group of young people from all backgrounds. The pilot programme was successful and a new call, with a bigger number of Cypriots benefitting, was open early 2021.
- With the aim of highlighting that a settlement of the Cyprus problem could bring economic benefits, the PRIO Cyprus Centre was funded to update their 2014 reports, quantifying and helping to deliver the sizeable "peace dividend" that is achieved with a comprehensive settlement of the Cyprus Problem and the reunification of the island. The new study highlighted that a solution will be good for business, addressing the concerns of ordinary Cypriots about the economic impact of a settlement. The study was published in three languages (Greek, Turkish and English) and was presented to the public and to the international community in February 2020.
- In March 2020, thanks to the EU funded grants working on fighting trafficking in human beings, the support of a TAIEX expert and of the TA for CSOs (Civic Space), the local legal text has been amended and now includes trafficking in human beings and hate speech as crimes that can be legally prosecuted. This important step paves the way for a full-fledged legal text addressing all four 4 'Ps' of anti-trafficking (prevention, protection, prosecution and partnership). In 2021, the EU funded grant beneficiaries will continue their advocacy towards this aim.
- Intensive efforts continue on the preparation for the implementation of the acquis in the areas of the Republic of Cyprus where the government does not exercise effective control upon the entry into force of a comprehensive settlement of the Cyprus problem. Preparation for the acquis takes place mainly through the Technical Assistance and Information Exchange (TAIEX) instrument (expert missions, training courses, workshops and study visits) with around 1,250 TAIEX actions in 2014-2020. TAIEX allowed for the drafting of 224 legal texts covering 17 areas of the EU acquis. In 2020, the European Commission selected a new pool of public experts from EU Member States to implement the TAIEX assistance until end 2022 (extendable to 2025).

### *Contribution to policy achievements*

The main policy objective under the legal base (Regulation (EC) No 389/2006) is the reunification of Cyprus and the Aid Programme has supported this with a distribution of resources among the objectives specified in the Regulation.

### 3.3. Evaluations, studies and reports

In 2018, DG REFORM concluded a contract for the implementation of the first Results Oriented Monitoring (ROM) exercise aiming at reviewing a minimum of 16 actions in terms of relevance, efficiency, effectiveness and sustainability. The goal was to assist DG REFORM with respect to the monitoring of and reporting on EU funded projects under the Aid Programme for the Turkish Cypriot community.

The ROM reviews and support missions to be carried out are the following:

- a) ROM reviews of strategic projects for which such ROM reviews may have a particular usefulness or for innovative projects.
- b) ROM reviews of projects signalled as having implementation problems and where EC services or EUPSO have identified a need for an outside expert review to assist in addressing the problems, identifying causes and options for solution and making recommendations.
- c) Support to improve the current monitoring systems of projects and, where relevant, to help operational Programme Managers to set-up a ROM-compliant monitoring system.

The ROM reviews focussed on service contracts and grants schemes and covered a significant number of contracts, both recently closed and ongoing. The implementation of the Results Oriented Monitoring contract has started in end 2018 and was due to be finalised by end 2020. Due to the Covid-19 pandemic, the contract was prolonged for another year, i.e. end 2021.

All the 16 projects have now been reviewed and assessed. The first project management training took place in November 2019 and was delivered to more than 30 participants. The second and final project management training is scheduled to take place in summer 2021.

The recommendations issued by the ROM experts have been very useful for the project managers to improve the implementation of the projects. A few illustrations:

- Further EU support is needed to ensure the capacity increase of Turkish Cypriot civil society organisations (CSOs). The current project provides a comprehensive ‘toolbox’ that largely responds to the needs of the Turkish Cypriot CSO community. As recommended, the project design has been improved in the new project.
- For the EU Info Point contract, it was considered that the scope could be expanded in terms of the support it provides to other EU funded projects with communication and visibility rather than just sharing visibility products developed by projects. The content of the actions should reflect better the TCc context e.g. by ensuring more input from local partners. These issues are being dealt with in the inception phase under the new EU Info Point contract.
- For the assistance to grant beneficiaries and the Contracting Authority regarding grant agreements, monitoring and evaluation experts have been mobilised, procedures have been simplified and workshops for experts have been organised.

The project management training combined theoretical and practical knowledge which was tailored to the need of the participants. Project managers from EU Coordination Centre, EUPSO and grants implementing partners benefited from this hands-on training.

A contract for the evaluation of the Aid Programme provided during the period 2013-2018 was concluded in December 2019. The project for the evaluation of the Aid Programme continued in 2020. The purpose of the evaluation is to provide an overall independent assessment and to gather evidence on progress made towards the objectives set in the Aid Regulation during the 2013-2018 period. The draft final report was delivered in December 2020 and the results of the evaluation will be published in early 2021. The draft conclusions are positive and the draft report concludes that the Aid Programme can be considered as a highly relevant and, given the peculiar circumstances of the TCc context, a relatively successful initiative. It has also been a generally coherent and, although often suffering from delays, efficient programme through which the EU has added substantial value. However, prospects for sustainability in most areas primarily rely on continued EU support.

## 4. Programme 2021-2027 - Key monitoring indicators

**Specific Objective 1 : the promotion of social and economic development including restructuring, in particular concerning rural development, human resources development and regional development**

**Indicator 1: Number of enterprises having received EU support in the form of a grant**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	3000	3000								
	Actual Progress									Final

Are we on track	On track
Indicator type	Output
Unit of measurement	
Cut-Off Date	
Data source	
Link to the objective	
Link MFF 14-20 / MFF 21-27	Unchanged
Other methodological comments	The Aid Programme aims at supporting the economic development of the TCc and under normal circumstances the annual programme will continued supporting private sector developments. The estimates will be based on what has been achieved so far under the MFF 2014-2020, taking into consideration the portion of the future programmes to be allocated to support of enterprises.
Full metadata available at this address	
Justification of the trend	

### Indicator 2: Cross-green-line trade volume in process of progressive increase

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	5000000	5500000								
	Actual Progress									Final

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	
Cut-Off Date	
Data source	
Link to the objective	
Link MFF 14-20 / MFF 21-27	Unchanged
Other methodological comments	Mostly based on past volume, taking into consideration a marginal yearly increase
Full metadata available at this address	
Justification of the trend	

### Specific Objective 2 :the development and restructuring of infrastructure, in particular in the areas of energy and transport, the environment, telecommunications and water supply

### Specific Objective 3 :reconciliation, confidence building measures, and support to civil society

#### Indicator 1: To increase EU visibility in northern Cyprus: Communication actions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	Based on our past experience which can be considered as a benchmark for the future targets
Full metadata available at this address	
Justification of the trend	

**Specific Objective 4 :bringing the Turkish Cypriot community closer to the Union, through inter alia information on the European Union’s political and legal order, promotion of people to people contacts and Community scholarships**

**Indicator 1: Number of individuals having benefited from a scholarship**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	129	121								
	Actual Progress									Final

Are we on track	On track
Indicator type	Output
Unit of measurement	
Cut-Off Date	
Data source	
Link to the objective	
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	Based on our past experience which can be considered as a benchmark for the future targets
Full metadata available at this address	
Justification of the trend	

**Specific Objective 5 :preparation of legal texts aligned with the acquis communautaire for the purpose of these being immediately applicable upon the entry into force of a comprehensive settlement of the Cyprus problem**

**Specific Objective 6 :preparation for implementation of the acquis communautaire in view of the withdrawal of its suspension in accordance with Article 1 of Protocol No 10 to the Act of Accession**

**5. Programme 2014-2020 - Key monitoring indicators**

*Previous Program 1 : Instrument of financial support for encouraging the economic development of the Turkish Cypriot community and amending Council Regulation (EC) No 2667/2000 on the European Agency for Reconstruction*

**Specific Objective 1 :To facilitate the reunification of Cyprus by encouraging the economic development of the Turkish Cypriot community with particular emphasis on the economic integration of the island, on improving contacts between the two communities and with the EU, and on preparation for the acquis communautaire.**

**Indicator 1:Reconciliation and confidence building: "Tendency to trust the EU as an institution"**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
			53%	55%	56%	57%	60%	0,60	0,60	60%
57%	Actual Progress									Final
	66%	51%	52%	52%	53%	0,47	0,43			

Are we on track	Deserves attention**
Indicator type	Result
Unit of measurement	Percentage based on polling
Cut-Off Date	31/08/2020
Data source	Eurobarometer
Narrative	Pooling of the TCc in the trust of EU Institution
Methodology	Independent polling of opinion
Link MFF 14-20 / MFF 21-27	Same indicator
Other methodological comments	The 2014 figure may have been the result of re-starting the settlement talks and high optimism.
Full metadata available at this address	
Justification of the trend	The decrease of this indicator in 2019 can be explained by the absence of concrete progress in the resolution of the Cyprus problem and to the perception from the Turkish Cypriot community of the EU siding with the Republic of Cyprus on many issues, including hydrocarbons. The situation has even further deteriorated in 2020 due to the COVID 19 pandemic and the perception from the Turkish Cypriot community that the EU has not been active enough.

### Indicator 2: Number of enterprises having received EU support in the form of a grant

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
290		330		370	370	420	420	3000	3000	Final
	Actual Progress									
		330	330	330	380	407	1910			

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of enterprises/businesses
Cut-Off Date	31/12/2020
Data source	European Commission
Narrative	Number of enterprises having benefiting from EU support
Methodology	In addition to the previous SME grant schemes and the proactive development of an entrepreneurial ecosystem, the 2020 pandemic required a prompt response to support businesses by providing emergency working capital to specific sectors/SMEs, safeguard and/or create jobs, and support business development (more recently with focus on innovation, green economy and digital transition).
Link MFF 14-20 / MFF 21-27	Unchanged
Other methodological comments	The actual results for the period 2015-2017 have been adjusted to reflect the effective number of enterprises having received EU funding. The recently launched "Safeguarding & Creating Employment Grant Scheme for SMEs in the TCc" has the objective to safeguard and/or create jobs in c.1,000 SMEs in Phase 1. Phase 2 will support business development of c.100 SMEs.
Full metadata available at this address	
Justification of the trend	The 2020 pandemic required a prompt response to support businesses. An Economic emergency package (EUR 11 million) was established to help address the broader socio-economic impact of the Covid-19 pandemic in the Turkish Cypriot community (see more details in section 3.1.3). EUR 3 million has already been disbursed in favour of micro-business to keep them open while enabling them to restock and pay bills which they would otherwise have been unable to do. A similar exercise is currently being implemented with medium-sized businesses in a number of key sectors. This short-term, "emergency" support will be followed-up by bespoke support to specific businesses on a strategic basis.

### Indicator 3: Cross-green-line trade volume in process of progressive increase

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
3411593				6500000	5270000	5500000	8500000	5000000	5500000	8500000
	Actual Progress									Final
	3520045	3613989	4374968	4790963,9	4856892	5423076	4693898			

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Volume of trade expressed in EUR
Cut-Off Date	31/12/2020
Data source	Republic of Cyprus
Narrative	Volume of trade over the Green Line
Methodology	
Link MFF 14-20 / MFF 21-27	Same indicator
Other methodological comments	Trade across the Green Line has developed more slowly than anticipated as a number of obstacles to

	trade, identified in the annual reports on implementation of the Green Line Regulation, remain in place. To take one example, the Republic of Cyprus still does not allow the crossing of processed food products and materials for contact with food. The Commission is engaged in contacts with the Republic of Cyprus to address this issue. Trade across the Green Line increased by 1.4 % last year. The 2017 targets were set too high and the targets for the years 2020 are most probably too ambitious as we expect a roughly similar increase in the years to come.
Full metadata available at this address	
Justification of the trend	A number of obstacles to trade remain, notably prohibition of crossings for commercial vehicles above 7.5 tonnes, the Republic of Cyprus does not allow the crossing of processed food products and materials for contact with food due to concerns raised by health services. More details are available in report issued by the Commission on the implementation of the Green Line Regulation. The trade in 2020 was negatively affected by the COVID19 pandemic as a consequence of the closure of the crossing points.

#### Indicator 4: To increase EU visibility in northern Cyprus: Communication actions

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
49			50	90	90	90	90	250	250	90
	Actual Progress									Final
	53	188	138	120	330	343	429			

Are we on track	On track
Indicator type	Output
Unit of measurement	Actions/year
Cut-Off Date	31/12/2020
Data source	European Commission
Narrative	Number of communication activities
Methodology	
Link MFF 14-20 / MFF 21-27	Same indicator
Other methodological comments	The high results obtained as of 2015 is due to a very active, "Infopoint" project, and various EU-funded projects incorporating comprehensive communication and visibility activities. The COVID-19 challenge for physical events was transformed into opportunities of engagement for online activities and campaigning for the EU's work in the TCc, under various EU funded projects as well as the EU Infopoint project which extensively carried out communication and visibility actions in various online platforms. We expect this trend to be continued in 2021 and 2022 with approximately 300 actions on a yearly basis. This is the consequence of the increased level of activity with the aim to improve the EU visibility of EU funded projects in the Turkish Cypriot community.
Full metadata available at this address	
Justification of the trend	Due to COVID-19 pandemic, the EU funded projects continued communication and visibility actions extensively in online platforms, with online events and campaigns, throughout 2020.

## 6. The programme contribution to horizontal policies

### 6.1. Contribution to climate mainstreaming

#### 6.1.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
3,0	5,0						8,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.1.2. Explanation and justification on the financial contribution

The installation of solar panels in SMEs, farms and solid-waste management facilities is part of wider support actions, whose total combined value is EUR 5.7 million. This contribution is split in 26% for the SME actions, 6% for the rural development support grants, and 68% for the solid-waste management facilities.

#### 6.1.3. Key achievements

"The programme contributed EUR 70,5 million in the 2014-2020 period". As previously mentioned, achievements in climate mainstreaming focused on setting the ground for wider-scope energy efficiency measures, as well as increasing the uptake of renewable energy in the local energy mix by supporting small operators and farmers.

**6.1.4. Performance**

Efforts to support renewable energy and reduced dependence on fuel for producing electricity.

**6.2. Contribution to biodiversity mainstreaming****6.2.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

**6.2.2. Explanation and justification on the financial contribution**

The contribution of the European Commission was EUR 0.15 million and was funded through the annual action plan of 2014.

**6.2.3. Key achievements**

The main achievements of this project involved the construction of walking trails, bird watching observatories, screening points for vegetation, information boards and points.

**6.2.4. Performance**

Limited assistance provided

**6.3. Contribution to clean air financing****6.3.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,4	0,0						0,4

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

**6.3.2. Explanation and justification on the financial contribution**

The total financial contribution to Clean Air related projects equals EUR 1.9 million. Of this contribution, 55% corresponds to the renovation of the existing air quality stations, 11% to the procurement of a mobile air monitoring station, 26% to the procurement of analytic instruments for the reference laboratory and 8% to the installation of the laboratory infrastructure.

**6.4. Contribution to gender equality****6.4.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,5	0,5						1,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

**6.4.2. Key achievements and performance**

In March 2020, thanks to the EU funded grants working on fighting trafficking in human beings, the support of a TAIEX expert and of the TA for CSOs (Civic Space), the local legal text has been amended and now includes trafficking in human beings and hate speech as crimes that can be legally prosecuted. This important step paves the way for a full-fledged legal text addressing all four 4 'Ps' of anti-trafficking (prevention, protection, prosecution and partnership). In 2021, the EU funded grant beneficiaries will continue their advocacy towards this aim.

**6.5. Contribution to the sustainable development goals**

### 6.5.1. Goals

#### ***SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture***

Through objective 2 of the Aid Programme, special support has been provided through the form of grants for farmers, aimed at increasing productivity of agricultural and dairy produce, as well as the competitiveness of farms. In addition, the European Commission has invested approximately EUR 4.9 million between 2014 and 2020 in supporting the testing and eradication of animal diseases such as brucellosis in local sheep, goat and cattle herds, as well as the training of local veterinarians.

In addition, the Commission has played a crucial role in facilitating trade of Cyprus potatoes between the Greek Cypriot and Turkish Cypriot communities, through Green Line trade.

#### ***SDG 3 Ensure healthy lives and promote well-being for all at all ages***

The Aid Programme has funded grants that promoted patients' rights in the medical system and managed to secure the creation of a patients' rights unit in the local hospital.

#### ***SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all***

The aid programme has provided training for teachers in curriculum development, invested in vocational education and training as well as providing equipment for schools, including science laboratories. In addition, the Aid Programme provides every year scholarships to study and work in EU countries, with two programmes: the EU Scholarship programme for the Turkish Cypriot community, addressed to students and professionals from universities, and the UWC scholarship programme, that provides scholarships for high school students.

#### ***SDG 5 Achieve gender equality and empower all women and girls***

The Aid Programme has provided grants to association fighting domestic violence to support survivors of domestic violence, prepare draft legal text on domestic violence, raise awareness about domestic violence and gender violence and promote sex education in the community and among youth.

The Aid programme has contributed to the building of a shelter for victims of domestic violence in the northern part of Nicosia (in collaboration with the Nicosia local community).

#### ***SDG 6 Ensure availability and sustainable management of water and sanitation for all***

Through objective 1 of the Aid Programme, the upgrade of water treatment, distribution and sanitation infrastructure is a priority. Between 2014 and 2020, the European Commission has allocated approximately EUR 38.6 million for water-related project, accounting for approximately 19% of the total investment of the Aid Programme in that period. The most relevant projects in this field are the construction of the North Nicosia Trunk Sewerage pipe and the Famagusta Sewerage Remedial Works.

#### ***SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all***

Between 2014 and 2020, the European Commission focused in introducing energy efficiency measures for buildings by conducting an energy audit on 10 schools. The objective of this project was to identify the scope for possible interventions aimed at improving the schools' envelopes and heating/cooling systems. In addition, the Aid Programme has supported an increased uptake of renewable energies by local businesses, farmers and solid-waste facilities for up to 1.6 MW of installed solar power.

#### ***SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation***

The Aid Programme has assisted through objective 1 in providing solid waste disposal sites compliant with EU standards as well as tackling the problem of disposal of animal by-products. This involved the construction of seven waste transfer stations for both, domestic/municipal waste and animal by-products between 2017 and 2020. In addition, the European Commission has supported local communities with the provision of up to 23 waste collection trucks and increased the capacity of the landfill in Koutsoventis/Güngör to 2.3 million cubic metres.

#### ***SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable***

The Aid Programme has supported projects to monitor, check and control environmental quality in urban environments with the objective to improve living conditions. Through the annual activity programmes of 2017 and 2018, the air quality monitoring network has been expanded and strengthened. In addition, further monitoring capabilities have been provided to the relevant control

bodies to check on the quality of fuels being sold for residential combustion and transport, as well as to better manage the quality of water.

***SDG 12 Ensure sustainable consumption and production patterns***

The SME grant scheme permitted companies to benefit from EU support enabling them to improve their competitiveness and to upgrade and improve their production patterns.

***SDG 13 Take urgent action to combat climate change and its impacts***

The actions described in SDG 7 are of immediate application to combat climate change and its impacts. A reduced primary energy consumption produced by an energy-efficient building, as well as an increased use of renewable energy all result in less CO<sub>2</sub> emissions from combustion. This in turn contributes less to climate change.

***SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development***

In line with the interventions described under SDG 11, the Commission has supported in 2020 a project intended to procure water sampling and monitoring equipment for the relevant control body in the Turkish Cypriot community. The equipment will allow the control body to gauge the quality parameters of waters of coastal waters with the objective to take corrective action in the presence of pollution.

The Aid Programme has supported grants that bi-communally address the issue of marine litter, raise awareness among youth and work with fishers and coastal businesses to encourage litter collection and lower-waste, environmentally friendly practices.

***SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss***

The Commission financed a grant in 2014 aimed at strengthening conservation of bird species nesting in the Koukklia/Köprülü water reservoir, increasing awareness amongst locals, and registering relevant environmental conditions.

***SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels***

The programme has specifically targeted the problem of human trafficking and awarded grants to organisations working on both awareness-raising and legal changes. Draft legislation to recognise human trafficking as a crime has been introduced.

The Aid programme, in addition, provides support to a series of Confidence Building Measures that support intercommunal dialogue: the support to the Technical Committee on Cultural Heritage, the support to the Committee on Missing Persons and the facility to support the bicomunal Technical Committees. In the 2020 the Aid programme funded a study to promote and disseminated the peace dividend of a settlement of the Cyprus problem.

The Aid Programme has supported grants that help address discrimination against LGBTIQ, combat hate crime, hate speech, violence and harmful practices against LGBTIQ people.

**1. Overview****1.1. Challenges**

The Recovery and Resilience Facility, as the centrepiece of NextGenerationEU, will jointly with the regular MFF programmes support the Union's recovery from the Covid-19 crisis and strengthen resilience against future shocks. It provides a mid-term response to the damage caused by the crisis, and is intended to support the recovery in the mid- to long-term by enabling Member States to implement reforms and investments responding to their country's specific challenges. In a context of a global climate emergency and the fast-paced digital transition, the Facility is further intended to support both the green and digital transitions, helping to foster sustainable and forward-looking implementation economic and social structures across the EU.

**1.2. Mission (general objectives)**

The Recovery and Resilience Facility (the 'Facility') offers large-scale financial support for public investments and reforms that make Member States economies more resilient, and better prepared for the future. Each Member State will put forward a Recovery and Resilience Plan to access this financial support, which will be assessed by the Commission. Payments will be made against the achievement of agreed milestones and targets set out in a Council Implementing Decision. The Facility can support recovery and resilience within the scope of the following policy areas of European relevance ('six pillars'): green transition; digital

transformation; smart, sustainable and inclusive growth, including economic cohesion, jobs, productivity, competitiveness, research, development and innovation, and a well-functioning internal market with strong small and medium enterprises (SMEs); social and territorial cohesion; health, and economic, social and institutional resilience with the aim of, inter alia, increasing crisis preparedness and crisis response capacity; and policies for the next generation, children and the youth, such as education and skills.

In line with the six pillars, the general objective of the Facility is to promote the Union's economic, social and territorial cohesion by improving the resilience, crisis preparedness, adjustment capacity and growth potential of the Member States, by mitigating the social and economic impact of that crisis, in particular on women, by contributing to the implementation of the European Pillar of Social Rights, by supporting the green transition, by contributing to the achievement of the Union's 2030 climate targets set out in point (11) of Article 2 of Regulation (EU) 2018/1999 and by complying with the objective of EU climate neutrality by 2050 and of the digital transition, thereby contributing to the upward economic and social convergence, restoring and promoting sustainable growth and the integration of the economies of the Union, fostering high quality employment creation, and contributing to the strategic autonomy of the Union alongside an open economy and generating European added value.

### 1.3. Specific objectives

The specific objective of the Recovery and Resilience Facility shall be to provide Member States with financial support with a view to achieving milestones and targets of reforms and investments as set out in their recovery and resilience plans.

### 1.4. Public intervention context

The Recovery and Resilience Facility will support reforms and investments in a broad range of policy areas ("six pillars"). Specifically, it provides both non-reimbursable and reimbursable (loans) financial support to Member States, which will implement reforms and investments set out in their Recovery and Resilience Plans. The Facility represents the EU's main instrument as mid-term response to the crisis caused by the Covid-19 pandemic. Past experiences have shown that investment is often drastically cut during crises. However, it is essential to support investment in this particular situation to speed up the recovery and strengthen long-term growth potential. A well-functioning internal market and investing in green and digital technologies, in innovation and research including in a knowledge-based economy, in the clean energy transition, and in boosting energy efficiency in housing and other key sectors of the economy are important to achieve fair, inclusive and sustainable growth, help create jobs, and reach EU climate neutrality by 2050.

The Facility is intended to work in conjunction with the other programmes under NextGenerationEU, other shorter-term repair actions such as the European instrument for temporary Support to mitigate Unemployment Risks in an Emergency (SURE) and the wider set of MFF programmes. It also comes in a framework of other measures taken to alleviate the damage and enable countries to respond to the crisis, such as a temporary state aid framework and the activation of the general escape clause under the stability and growth pact.

### 1.5. Actions

The Facility will provide non-repayable financial support under direct management and loans to Member States to support public investments and reforms, as set out in recovery and resilience plans prepared by the Member States. Repayable financial support (loans) will complement the non-repayable support and will be provided to Member States that demonstrate additional financial needs and commit to implement suitable reforms and investments beyond those that already benefit from the non-repayable financial support.

The envelope will be financed from the borrowing operations of the Union as set out in Regulation (EU) 2020/2094 (EURI regulation). Given the temporary nature of the financing scheme of the Facility in relation to Member States' economic recovery, the availability period of these resources is limited. 70% of non-repayable support will be available for commitments until 31 December 2022, the remaining 30% of the non-repayable financial support and the entire loan support will be available until 31 December 2023. The allocation per country is determined through allocation keys foreseen in Annex II (for the 70%) and Annex III (for the 30%) of the Regulation. Annex IV of the Regulation provides a table with the indicative allocation of the non-repayable financial support per Member State.

If necessary and justified by the cost of additional reforms and investments included in the Plan, Member States may in addition to the grant also request the additional reimbursable financial support up to 6,8% of each Member State's 2019 GNI in current prices. Subject to the availability of resources, in exceptional circumstances the amount of the loan support may be increased. All the same rules and requirements of the Regulation apply as to non-reimbursable financial support, and Member States may request this additional loan support either at the time of submission of their Plan or, with a revised Plan, at a different moment in time until at the latest 31 August 2023.

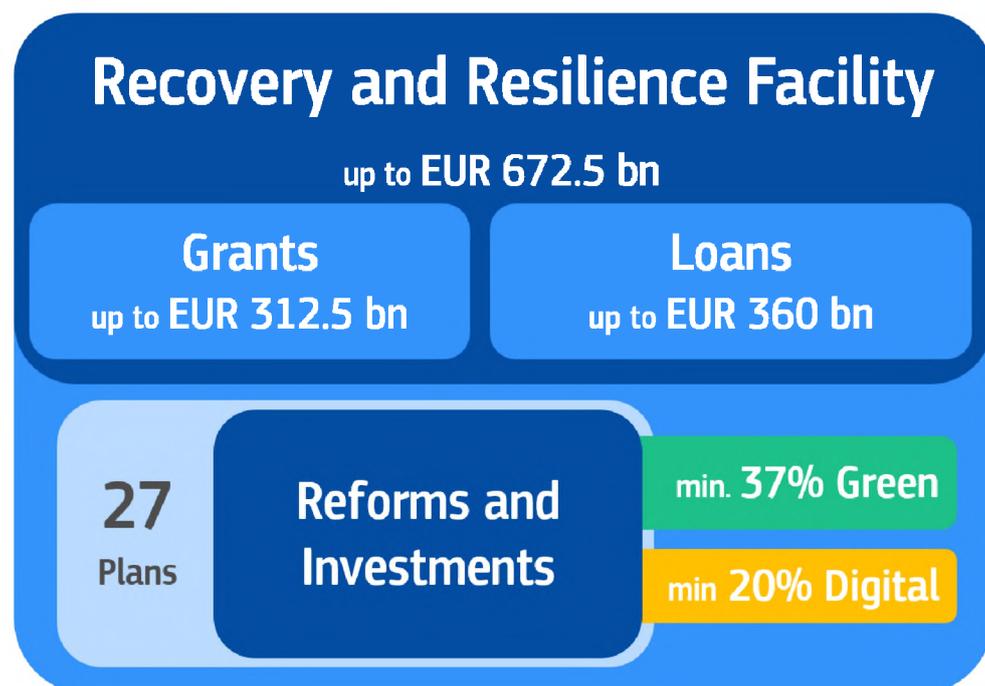

The ultimate implementation and decision on which measures to include in the Recovery and Resilience Plan and when to submit this Plan, within the requirements of the Regulation, lies with the relevant Member State. The Commission will monitor

implementation and disburse funds when the relevant Member State demonstrates that an agreed set of milestones and targets has been achieved.

## 1.6. Delivery mode

The Recovery and Resilience Facility shall be implemented by the Commission in direct management in accordance with the Financial Regulation (Article 6). The specific objective of the facility shall be pursued in close cooperation with the Member States concerned.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Procedure 2020/0104/COD COM (2020) 408, 28.5.2020 : Proposal for a Regulation of the European Parliament and of the Council establishing a Recovery and Resilience Facility	2021 - 2027	

### 1.8.2. Legal basis explanation

Regulation (EU) 2021/241 of the European Parliament and of the Council of 12 February 2021 establishing the Recovery and Resilience Facility

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>116 069,6</b>	<b>118 391,4</b>	<b>103 472,4</b>	<b>8,6</b>	<b>8,8</b>	<b>9,0</b>	<b>9,2</b>	<b>337 969,0</b>

### 1.8.4. Financial programming explanation

#### 1.8.4 Financial Programming Explanation

At this point the Commission has not yet received any final Recovery and Resilience Plans, accordingly no commitments have been made. While it can be reasonably assumed that Member States will request all or most of their allocated non-reimbursable financial

contribution, the possible loan amounts are more difficult to predict. The actual disbursement schedule too, at this early stage of implementation, cannot be predicted with reasonable accuracy.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

The Regulation establishing the Recovery and Resilience Facility has come into force on 19 February 2021. Member States are actively discussing draft plans and specific reforms and investments with the Commission services and are preparing their final plans for submission. No final plan has been received (as of 8 March) and no financial commitments have been made. Member States will as a rule submit their RRFs by 31 April 2021, upon which the Commission will have two months to assess the plans and propose a Council Implementing Decision. The Council should endeavour to adopt the proposal within four weeks, whereupon the Commission shall conclude a financing agreement and where relevant also a loan agreement with the Member State. Accordingly, the first commitments and payments are expected for summer 2021.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

## 3. How is the programme performing ?

### 3.1. Performance

#### 3.1.1. Introduction

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### 3.1.2. Active programme performance

Overall, the RRF is a performance-based programme, unlike all other EU programmes, and payments will be made against milestones and targets. As such, the key performance indicator for the RRF is whether Member States achieve the agreed milestones and targets.

In addition, Article 29 of the Recovery and Resilience Facility Regulation empowers the Commission to adopt three delegated acts by the end of December 2021, including a specific delegated act setting out “the common indicators to be used for reporting on the progress and for the purpose of monitoring and evaluation of the Facility towards the achievement of the general and specific objectives.” The common indicators will accordingly only be known once the respective delegated act is adopted.

#### 3.1.3. Previous programme performance

### 3.2. Key achievements

### 3.3. Evaluations, studies and reports

**1. Overview****1.1. Challenges**

**The outbreak of the COVID-19 pandemic has changed the economic outlook** for the years to come in the EU and in the world. The medium and long-term effects of the crisis will depend on the resilience of Member States' economies. There is a need to plan strategically the recovery, revitalise our economies and getting back on a path of sustainable and inclusive growth, geared towards the green and digital transition objectives.

Smart, sustainable and socially responsible reforms help to **strengthen the resilience of our economies and societies**. They contribute to keeping our economies flexible and competitive and help to improve the quality of public services. Given that the economies of Member States are strongly intertwined, the successful implementation of well-designed reforms benefits is a matter of common concern and helps to strengthen the EU's social, economic and territorial cohesion.

However, **the process of designing, developing and implementing reforms is complex**. Member States have different levels of technical expertise and administrative capacity to address the reform challenges that lie ahead. Therefore, strengthening Member States' capacity to implement reforms is crucial.

In line with the subsidiarity and proportionality principles, the EU's intervention brings added value by offering Member States technical expertise to enhance their capacity to carry out reforms and to foster the exchange of good practices across the EU.

Building on the success of the Structural Reform Support Programme (2017-2020), with the Technical Support Instrument (TSI), the European Commission will continue accompanying Member States' efforts to tackle reform challenges.

## 1.2. Mission (general objectives)

**The Technical Support Instrument is the main EU funding programme providing technical support to EU Member States to support them in their reform agendas.** The TSI provides **tailor-made technical expertise** to Member States for the design and implementation of institutional, administrative and resilience-enhancing reforms. The support is **on-demand** and does not require co-financing from Member States.

Member States can request technical support under the TSI for implementing growth-sustaining and resilience-enhancing reforms in the context of EU economic governance, such as European Semester country-specific recommendations and the implementation of EU law. In addition, Member States can also request technical support to prepare, amend, implement and revise national recovery and resilience plans under the Recovery and Resilience Facility. Lastly, support can be requested for implementing economic adjustment programmes or reforms undertaken at Member States' own initiative.

The TSI covers a wide range of policy areas, which include revenue administration and public financial management, governance and public administration, sustainable growth and business environment, education and skills, labour market, migration, healthcare and social security systems, financial sector, and preparation for euro-area membership. In addition to this, there is specific focus on the actions that foster the green and digital transitions. These include actions in the area of climate change mitigation, environmental protection, energy transition, e-governance and artificial intelligence.

The general objective of the TSI is to promote the EU's economic, social and territorial cohesion by supporting Member States' efforts to implement reforms. This is necessary to encourage investment, to increase competitiveness and to achieve sustainable economic and social convergence, resilience and recovery. This is also necessary to support Member States' efforts to strengthen their institutional and administrative capacity, including at regional and local level, to facilitate socially inclusive, green and digital transitions, to effectively address the challenges identified in the country-specific recommendations and to implement EU law.

## 1.3. Specific objectives

To achieve its general objective, the TSI shall have the specific objectives of assisting national authorities in improving their capacity to:

- (a) design, develop and implement reforms
- (b) prepare, amend, implement and revise recovery and resilience plans pursuant to Regulation (EU) 2021/241.

The specific objectives shall refer to policy areas related to cohesion, competitiveness, education, productivity, research and innovation, smart, fair, sustainable and inclusive growth, jobs and investment, with specific emphasis on actions that foster the digital and just green transitions, and in particular focus on one or more of the following:

- (a) **public financial and asset management**, budget process, including green and gender budgeting, macro-fiscal framework, debt and cash management, expenditure and tax policy, tax compliance, revenue administration and customs union, as well as fighting aggressive tax planning, tax fraud, tax evasion and tax avoidance;
- (b) institutional reform and efficient and service-oriented functioning of **public administration and e-government**, simplification of rules and procedures, auditing, enhancing capacity to absorb Union funds, promotion of administrative cooperation, effective rule of law, reform of the justice systems, capacity building of competition and antitrust authorities, strengthening of financial supervision and reinforcement of the fight against fraud, corruption and money laundering;
- (c) **business environment**, including for small and medium-sized enterprises, the self-employed, entrepreneurs and social economy enterprises, the re-industrialisation and relocation of production to the Union, private sector development, product and service markets, public and private investments including into physical and virtual infrastructure, project promoters and nurseries, public participation in enterprises, privatisation processes, trade and foreign direct investment, competition, efficient and transparent public procurement, sustainable sectoral development, and support for research, innovation and digitisation;
- (d) **education**, life-long learning and training, vocational education and training, youth policies, labour market policies, including social dialogue, for the creation of jobs, increased labour market participation of under-represented groups, up- and re-skilling in particular digital skills, media literacy, active citizenship, active ageing, gender equality, civil protection, border and migration policies, the promotion of social inclusion and the fight against poverty, income inequality and all forms of discrimination;
- (e) accessible, affordable and resilient **public healthcare, social security systems**, care and welfare, and childcare;

- (f) policies for the **mitigation of climate change**, the digital and just green transitions, e-government solutions, e-procurement, connectivity, data access and governance, data protection solutions, e-learning, use of Artificial Intelligence based solutions, the environmental pillar of sustainable development and environmental protection, climate action, transport and mobility, promoting the circular economy, energy and resource efficiency and renewable energy sources, achieving energy diversification, tackling energy poverty and ensuring energy security, and for the agricultural sector, soil and biodiversity protection, fisheries and the sustainable development of rural, remote and insular areas;
- (g) **financial sector policies and regulation**, including financial literacy, financial stability, access to finance and lending to the real economy, in particular for small and medium-sized enterprises, the self-employed and entrepreneurs;
- (h) the production, provision and quality monitoring of **data and statistics**;
- (i) preparation for **membership of the euro area**;
- (j) early detection of and a coordinated response to substantial **public health or security risks**, as well as ensuring business and service continuity for essential public and private institutions and sectors.

#### 1.4. Public intervention context

The Regulation establishing a Technical Support Instrument (Regulation (EU) 2021/240) is adopted on the basis of the third paragraph of Article 175 and Article 197(2) of the Treaty on the Functioning of the European Union. Article 197(2) TFEU provides that the Union may support the efforts of Member States to improve their administrative capacity to implement Union law, inter alia, through facilitating the exchange of information and supporting training schemes. Article 175, third paragraph, TFEU provides that, if specific actions prove necessary outside the Funds and without prejudice to the measure decided upon within the framework of the other Union policies, such actions may be adopted by the European Parliament and the Council. The Technical Support Instrument aims at enhancing cohesion, through measures that allow recovery, resilience and convergence in/of the Member States concerned.

#### 1.5. Actions

The specific objectives are pursued in close cooperation with the Member States concerned, including through exchange of good practices, processes and methodologies, stakeholder involvement, where appropriate, and a more effective and efficient human resources management.

The type of actions eligible for financing under the TSI include, among others:

- Expertise related to policy advice, policy change, formulation of strategies and reform roadmaps, as well as to legislative, institutional, structural and administrative reforms;
- Provision of experts, from national administrations, international organisations, private firms and consultancies, or expertise directly from the European Commission;
- Institutional, administrative or sectoral capacity building (including workshops, exchange of best practices, and training) at all governance levels.
- Carrying out studies, including feasibility studies, research, analyses and surveys, evaluations and impact assessments.

#### 1.6. Delivery mode

The Technical Support Instrument is mainly implemented by DG REFORM under direct management, i.e. through grants and procurements, but also through internal Commission-wide expertise.

In some cases, it is also implemented by DG REFORM through indirect management, entrusting tasks to international organisations or other bodies in accordance with the Financial Regulation.

#### 1.7. Graphic overview of the programme structure

## TECHNICAL SUPPORT INSTRUMENT - OVERVIEW

To achieve its general objective, the TSI shall have the specific objectives of assisting national authorities in improving their capacity to:

- (a) design, develop and implement reforms
- (b) prepare, amend, implement and revise recovery and resilience plans pursuant to Regulation (EU) 2021/241.

### PRIORITY AREAS FOR INTERVENTION

1- Public financial management and revenue administration

2 -Governance and public administration

3 - Growth, business environment and sectoral issues

4 - Labour market, education, health and social services

5 - Financial sector and access to finance

### DELIVERY MODES

DG REFORM is responsible for the implementation of the TSI programme, which is implemented through:

#### Direct management

- European Commission internal expertise
- Private experts
- TAIEX-TSI Peer-2-Peer
- Procurements
- Grants

#### Indirect management

- Agreements with International Organisations
- Agreements with other bodies

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Procedure 2020/0103/COD COM (2020) 409, 28.5.2020: Proposal for a Regulation of the European Parliament and of the Council establishing a Technical Support Instrument	2021 - 2027	864,0

### 1.8.2. Legal basis explanation

The Technical Support Instrument is managed in accordance with the provisions of Regulation (EU) 2021/240.

One of the specific objectives of the Technical Support Instrument is assisting national authorities in improving their capacity to prepare, amend, implement and revise recovery and resilience plans pursuant to Regulation (EU) 2021/241.

In addition, resources allocated to Member States under shared management may, at their request, and in accordance with the conditions and the procedure set out in the Common Provisions Regulation for 2021-2027, be transferred to the Technical Support Instrument for the purpose of financing clearly identified technical support requests, and transferred back if not committed.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							
	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
Operational expenditures *	114,4	116,7	119,0	121,4	123,8	126,3	128,1	849,5
<b>Total</b>	<b>114,4</b>	<b>116,7</b>	<b>119,0</b>	<b>121,4</b>	<b>123,8</b>	<b>126,3</b>	<b>128,1</b>	<b>849,5</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The Technical Support Instrument is the successor of the Structural Reform Support Programme (SRSP) set for the period 2017-2020 and is part of the initiatives taken by the Commission in response to the outbreak of the COVID-19 pandemic, to help Member States mitigate the huge economic and social consequences.

The Technical Support Instrument builds on the success of the SRSP, which has funded since 2015 more than 1000 projects in 27 Member States, and has constantly experienced positive feedback from beneficiary Member States and excess demand in respect of the budgets available in the past selection rounds.

For the MFF 2021-2027, the Technical Support Instrument is scaled-up with a higher budget over the whole period of the MFF and a larger scope, including the support for preparing and implementing the recovery and resilience plans at national level. The Technical Support Instrument is consistent, coherent and complementary to the existing resources for capacity building and technical assistance, which are available within other Union financing programmes.

## **5. Programme 2014-2020 - Key monitoring indicators**

### **6. The programme contribution to horizontal policies**

#### **6.1. Contribution to climate mainstreaming**

Not applicable

#### **6.2. Contribution to biodiversity mainstreaming**

Not applicable

#### **6.3. Contribution to clean air financing**

Not applicable

#### **6.4. Contribution to gender equality**

Not applicable

#### **6.5. Contribution to the sustainable development goals**

##### **6.5.1. Goals**

##### ***SDG 1 End poverty in all its forms everywhere***

The support measures for social protection and social welfare, are expected to increase the competent authorities' capacity to prepare, monitor, and evaluate reforms of social policies and programmes. The support measures are therefore also expected to strengthen the capacity of the competent authorities to deliver social protection benefits and services, especially to the most vulnerable populations such as children, the unemployed and inactive, inwork poverty people, the elderly, ethnic minorities, people with a migrant background, people living in informal settlements, as well as people with disabilities and long-term care needs. The support measures are further expected to contribute to the design and implementation of policies aimed at promoting affordable housing. In various social policy areas, the TSI support measures are expected to contribute to more integrated data collection, stronger analytical capacities and a more integrated administration and provision of benefits and services across various levels of government. Lastly, the support measures are expected to help improve emergency preparedness in migration management.

##### ***SDG 3 Ensure healthy lives and promote well-being for all at all ages***

In the area of healthcare, the measures are expected to contribute to: i) the provision of strategic and operational tools for the governance, planning, monitoring and evaluation of health system resources in the areas of eHealth, health system performance assessment, cancer prevention and long-term care; ii) recommendations and tools for improving the accessibility of healthcare and the effectiveness of healthcare payment models; iii) the design and implementation of effective and efficient care delivery models, for instance in the areas of cancer care, medicines, blood transfusion and long-term care; and iv) the development and implementation of tools for improving the skills and expertise of the health workforce.

##### ***SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all***

The different support measures for **skills, education and training** are expected to help (through concrete recommendations, practical advice and guidance) to improve the quality, relevance, inclusiveness, efficiency and sustainability of concerned Member States' skills, education and training systems (both programmes and institutions). This should be achieved, and among other things, by (i) increasing the capacity of national and regional institutions to implement curriculum reform and the digital transformation of their education and training systems; (ii) enhancing the adaptability of teaching professionals, as well as their level of familiarity with digital teaching; (iii) drafting legislative proposals and governance frameworks for early school leaving policies and strategies; and iv) drafting new regulatory proposals to foster the cooperation between universities and businesses.

The support measures are expected to enhance the analytical capacity of various Member States in the area of **education reform**, including through (i) the systematic collection of data needed for policy design purposes; (ii) the improvement of IT systems and design of new e-tools to adapt to the post-COVID increasingly digitalised world; and (iii) the development of analytical tools needed to assess and anticipate skills gaps and training needs emerging from the green and digital transition. The measures should also allow the preparation of policies and specific guidelines to companies, national institutions and VET centres to upgrade the adult learning and vocational education and training offer and promote participation of potential beneficiaries.

***SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all***

The support measures for **energy and climate** are expected to contribute to greater energy efficiency, in particular in buildings, promote and deploy of renewable energy and hydrogen, set up a national decarbonisation fund, update energy and climate policies, implement and monitor energy and climate plans, and decarbonise specific sectors such as airports or energy sources such as gas. Furthermore, the support measures are expected to help authorities to implement territorial just transition plans, reduce energy poverty, enable citizen driven energy transition, improve the energy system integration, and reform the regulatory framework for network industries.

***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

The different measures supporting **labour market policies** are expected to help improve the quality of and better target ALMP measures, including through innovative solutions. The support measures are also expected to help increase the competent authorities' administrative and analytical capacity in this area, including through: (i) the systematic collection of data needed for policy design purposes; (ii) new IT systems and platforms; and (iii) analytical tools to assess and anticipate labour market developments and profiling of job seekers.

***SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation***

The different support measures for **public assets**, are expected, among other things, to contribute to better strategic planning and improved capacity for preparing and managing public investments, in particular infrastructure investments and guidance on the introduction of public private partnerships, better governance of spatial planning, more effective State aid, a stronger policy on the management of state-owned enterprises and improved management of state assets, including ports.

***SDG 13 Take urgent action to combat climate change and its impacts***

The support measures for **energy and climate** are expected to contribute to greater energy efficiency, in particular in buildings, promote and deploy of renewable energy and hydrogen, set up a national decarbonisation fund, update energy and climate policies, implement and monitor energy and climate plans, and decarbonise specific sectors such as airports or energy sources such as gas. Furthermore, the support measures are expected to help authorities to implement territorial just transition plans, reduce energy poverty, enable citizen driven energy transition, improve the energy system integration, and reform the regulatory framework for network industries.

***SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss***

Support measures for natural resources, are expected, for example, to help to advance the green transition as part of the resilience and recovery plans, develop and implement strategies for sustainable development and policy instruments to accelerate the circular economy, improve water monitoring and waste management, improve the efficiency of environmental permits and inspections, and develop green infrastructure for transport. In addition, support measures will help to (i) increase the capacity to manage coastal and marine areas, (ii) be better prepared for forest pest risk, and (iii) improve wildfire management. Furthermore, it is expected that support measures will help develop capacity, governance and methodologies to encourage sustainable and smart mobility, improved transport and offer a better public transport service, which includes better coordination of transport hubs.

***SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels***

The objectives of support measures for **anti-corruption strategies** include better implementation of anti-corruption action plans, closer national coordination and cooperation, and improved risk-assessment processes, financial control and auditing and whistleblowing systems.

The measures supporting the **fight against fraud** aim to help relevant stakeholders increase their capacity to manage risks and find operational solutions.

The support measures for **justice systems** are expected to help improve the functioning of justice systems, e.g. through measures that make justice systems more efficient and transparent, and that do this especially by helping to build the capacity of judicial institutions and better implement e-justice. The support is also expected to help improve the quality of the work of the judges and court staff and strengthen the independence of justice systems. Finally, support should also help in achieving specific goals, in particular the protection of victims.

---

The support measures for **e-Government/digital public administration** are expected to help improve the ICT maturity of Member States, enabling them to deliver better e-services to citizens and businesses and to deploy suitable back-office solutions supporting a transformed and efficient public service. The support measures will also contribute to Member States' readiness to provide services on the EU Single Digital Gateway.

**HEADING 2B: Resilience and Values****Protection of the Euro Against Counterfeiting**

**1. Overview****1.1. Challenges**

The protection of the European single currency as a public good has a clear transnational dimension, and therefore euro protection goes beyond the interest and the responsibility of individual EU MS. Considering the cross-border circulation of the euro, the deep involvement of international organised crime in euro counterfeiting (production and distribution), national protection frameworks need to be complemented in order to ensure homogeneous national and international cooperation, and to face possible emerging transnational risks.

## 1.2. Mission (general objectives)

The mission of the Pericles IV programme is to prevent and combat counterfeiting and related fraud, preserve the integrity of the euro banknotes and coins, thus strengthening the trust of citizens and business in the genuineness of these banknotes and coins and therefore enhancing the trust in the Union's economy, while securing the sustainability of public finances.

The programme will promote transnational and cross-border cooperation within the EU as well as internationally ensuring a global protection of the euro against counterfeiting, and will in particular, take responsibility for countering specific emerging threats and the (challenging) relationship with certain countries (as it is difficult for individual MS to effectively address these threats on their own).

## 1.3. Specific objectives

To protect euro banknotes and coins against counterfeiting and related fraud, by supporting and supplementing the measures undertaken by the Member States and assisting the competent national and Union authorities in their efforts to develop among themselves and with the Commission a close and regular cooperation and an exchange of best practice, where appropriate including third countries and international organisations.

## 1.4. Public intervention context

The protection of the European single currency as a public good has a clear transnational dimension, and therefore euro protection goes beyond the interest and the responsibility of individual EU Member States. Considering the cross-border circulation of the euro, the deep involvement of international organised crime in euro counterfeiting (production and distribution), national protection frameworks need to be complemented in order to ensure homogeneous national and international cooperation, and to face possible emerging transnational risks.

The Pericles programme for euro-area Member States is based on Article 133 Treaty on the Functioning of the European Union (TFEU), as it lays down measures necessary for the use of the euro as the single currency. The application of the Pericles programme will be extended to the Member States that have not adopted the euro as their single currency, through a proposal for a parallel Regulation based on Article 352 TFEU.

The Treaty provides that the European Parliament and the Council shall lay down the measures necessary for the use of the euro as a single currency (Article 133 TFEU). These measures include inter alia the protection of the euro against counterfeiting. Based on that Article, the protection of the euro as the single currency is a responsibility of the EU. In parallel, the national authorities issue euro banknotes and coins, in line with Article 128 TFEU.

Member States have adopted national legislation and established internal rules for its protection. EU secondary legislation on counterfeiting contains provisions on multidisciplinary cooperation; the analysis, identification and withdrawal of counterfeit banknotes and coins; and authenticity checks for the protection of the euro. The Pericles IV programme complements, through its specific objectives, these regulatory tools and national frameworks for the protection of the euro.

The European framework of the protection of the euro also includes the following tools:

- [Council Regulation \(EC\) No 974/98 of 3 May 1998 on the introduction of the euro](#)
- [2005/37/EC: Commission Decision of 29 October 2004 establishing the European Technical and Scientific Centre \(ETSC\) and providing for coordination of technical actions to protect euro coins against counterfeiting](#) amended by [Commission Decision \(EU\) 2017/1507](#)
- [2005/511/JHA: Council Decision of 12 July 2005 on protecting the euro against counterfeiting, by designating Europol as the Central Office for combating euro counterfeiting](#)
- [Regulation 1338/2001 protecting the euro from counterfeiting in the euro area](#) and [Amending regulation 44/2009](#)
- [Regulation 1339/2001 protecting the euro from counterfeiting outside the euro area](#) and [Amending regulation 45/2009](#)
- [2010/597/EU: Decision of the European Central Bank of 16 September 2010 on the authenticity and fitness checking and recirculation of euro banknotes \(ECB/2010/14\)](#)
- [Authentication regulation 1210/2010 on euro-coin authentication & handling of coins unfit for circulation](#)
- [Council Regulation \(EC\) No 2182/2004 concerning medals and tokens similar to euro coins \(6/12/2004\)](#)
- [Council Regulation \(EC\) No 2183/2004 extending to the non-participating Member States the application of Regulation \(EC\) No 2182/2004 concerning medals and tokens similar to euro coins \(6/12/2004\)](#)
- [Directive 2014/62/EU on the protection of the euro and other currencies against counterfeiting by criminal law](#)

## 1.5. Actions

a) exchange and dissemination of information, in particular through organising workshops, meetings and seminars, including training, targeted placements and exchanges of staff of competent national authorities and other similar actions. The exchange of information shall, among others, be targeted at:

- best practices in preventing counterfeiting and fraud relating to the euro;
- methodologies for monitoring and analysing the economic and financial impact of counterfeiting;
- operation of databases and early warning systems;
- use of detection tools, including with computer back-up;
- enquiry and investigation methods;
- scientific assistance, including monitoring of new developments;
- protection of the euro outside the Union;
- research actions;
- provision of specific operational expertise.

(b) technical, scientific and operational assistance, as appears necessary as part of the programme including in particular:

- any appropriate measure which establishes teaching resources at Union level, such as a handbook of Union legislation, information bulletins, practical manuals, glossaries and lexicons, databases, especially in the area of scientific assistance or technology watch or computer support applications, such as software;
- relevant studies with a multidisciplinary and transnational dimension, including research on innovative security features;
- development of technical support instruments and methods to facilitate detection actions at Union level;
- support for cooperation in operations involving at least two States when such support is cannot be made available from other programmes of European institutions and bodies.

(c) the purchase of equipment to be used by specialised anti counterfeiting authorities of third countries for protecting the euro against counterfeiting, in compliance with Article 10(3)7 of the Pericles IV Regulation.

## 1.6. Delivery mode

The programme shall be implemented through direct management by the Commission. Directorate-General for Economic and Financial Affairs (DG ECFIN) is the lead DG for the programme implementation. Projects financed under the programme are implemented either directly by the Commission (DG ECFIN) or in the form of grants awarded to national competent authorities in the EU (both in the euro area and non-euro area Member States).

The programme shall provide, under the conditions set out in the annual work programmes referred to in Article 10 of the Pericles IV Regulation, financial support for the eligible actions.

Eligible actions include:

- a) exchange and dissemination of information, in particular through organising workshops, meetings and seminars, including training, targeted placements and exchanges of staff of competent national authorities and other similar actions.
- b) technical, scientific and operational assistance, as appears necessary as part of the Programme
- c) the purchase of equipment to be used by specialised anti-counterfeiting authorities of third countries for protecting the euro against counterfeiting in compliance with the article as referred to in the Pericles IV Regulation.

## 1.7. Graphic overview of the programme structure

**Lead DG**

- Directorate-General for Economic and Financial Affairs (DG ECFIN)

**Management Type**

- Direct management in accordance with the Financial Regulation (Regulation (EU, Euratom) No 2018/1046).
- The programme shall be implemented by the Commission in cooperation with the Member States, through regular consultations at different stages of the implementation of the programme.

**Specific objective**

- To protect euro banknotes and coins against counterfeiting and related fraud, by supporting and supplementing the measures undertaken by the Member States and assisting the competent national and Union authorities in their efforts to develop among themselves and with the Commission a close and regular cooperation and an exchange of best practice, where appropriate including third countries and international organisations.

**Main types of expenditure**

- The programme shall provide, under the conditions set out in the annual work programmes, financial support for the following actions:
  - a) Exchange and dissemination of information, in particular through organising workshops, meetings and seminars, including training, targeted placements and exchanges of staff of competent national authorities and other similar actions.
  - b) Technical, scientific and operational assistance, as appears necessary as part of the Programme.
  - c) The purchase of equipment to be used by specialised anti-counterfeiting authorities of third countries for protecting the euro against counterfeiting, in compliance with the Article in the Pericles IV Regulation

**Eligible entities to apply for funding**

- Entities eligible for funding under the programme shall be the competent national authorities as defined in point (b) of Article 2 of Regulation (EC) No 1338/2001.

**1.8. Legal basis and financial programming****1.8.1. Legal basis**

Legal Basis	Period of application	Reference Amount (EUR million)
procedure 2018/0194/COD COM (2018) 369: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing an exchange, assistance and training programme for the protection of the euro against counterfeiting for the period 2021-2027 (the 'Pericles IV programme') Procedure 2018/0219/APP COM (2018) 371: Proposal for a COUNCIL REGULATION extending to the non-participating Member States the application of Regulation (EU) No .../2018 establishing an exchange, assistance and training programme for the protection of the euro against counterfeiting for the period 2021-2027 (the 'Pericles IV' programme)	2021 - 2027	6,2

**1.8.2. Legal basis explanation**

Proposal for a Regulation of the European Parliament and of the Council, submitted by the Commission on 31 May 2018, establishes an exchange, assistance and training programme for the protection of the euro against counterfeiting for the period 2021-2027 (the 'Pericles IV programme') (COM(2018) 369).

Proposal for a Council Regulation, submitted by the Commission on 31 May 2018, extending to the non-participating Member States the application of the proposal for Regulation (COM(2018) 369), establishes an exchange, assistance and training programme for the protection of the euro against counterfeiting for the period 2021-2027 (the 'Pericles IV' programme) (COM(2018)371).

**1.8.3. Financial programming table**

Financial Programming (EUR million)

<b>Total</b>	<b>0,8</b>	<b>0,8</b>	<b>0,9</b>	<b>0,9</b>	<b>0,9</b>	<b>0,9</b>	<b>0,9</b>	<b>6,2</b>

#### 1.8.4. Financial programming explanation

Not applicable

#### 1.9. Link with the 2014-2020 MFF

Pericles IV is a continuation of the current Pericles 2020 programme. The key performance indicators have been updated to more accurately measure the performance of the programme. This strengthens the monitoring process. Furthermore, the application process is simplified through the use of the eGrants system (fully electronic management system for grants) via the [Funding and Tenders Portal](#)

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

Budget Line 06 03 01 - Protection of the Euro against counterfeiting – Financial year 2021 – Total appropriations

Commitments: EUR 834 082 - Payments: EUR 417 041

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	75 616 286 638	53 821 246 280
Implementation carry-overs	0	377 284 123
Implementation total	75 616 286 638	54 198 530 403
total envelop*	75 623 564 572	
cumulative implementation rate	100%	72%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The annual budget for the implementation of the Programme for the year 2020 was set at EUR 1 100 000, and a total of EUR 1 095 203 was committed in 2020. The Programme is implemented through co-financed actions (grants) originating from the competent authorities of the Member States and through "Commission actions", organised directly by the Commission.

The implementation of the Programme reflects the commitment of Member States and the Commission to protect the euro against counterfeiting. Discussions of the multi-annual strategy at the meetings of the Euro Counterfeiting Experts Group (ECEG) made it possible to commit 99.56% of the overall budget in 2020.

In 2020, the Programme committed to funding 9 projects in total. Altogether, 7 grants were successfully awarded from applications originating from the competent authorities of the Member States, a decrease from 10 grants in 2019. One application submitted in the second deadline was not awarded a grant as it did not fulfill the eligibility criteria. Furthermore, 1 Commission action was funded, but had to be cancelled due to the Covid-19 situation.

It is noteworthy that France (1), Italy (1) and Spain (3), the Member States most affected by euro counterfeiting, applied for grants again in 2020. In addition, The Netherlands and Romania have also successfully applied for grants as part of the programme in 2020. Of particular note is the Netherlands, a first time applicant to the Pericles 2020 Programme, which demonstrates the increasing participation of competent national authorities as beneficiaries to the programme. All their efforts enhance the protection of the euro, which is beneficial to all Member States.

The actions for which commitments were made in 2020 consist of 2 conferences, 2 technical trainings, 2 staff exchanges and 1 study. The actions are set to take place both inside and outside the EU depending on the specific needs to protect the euro against counterfeiting. Since its inception, the Programme has consolidated its regional approach by implementing actions involving particularly sensitive regions of the world. For the year 2020, grants were awarded for actions to take place in Latin America (a training seminar will be organised by Spain in Uruguay with attendants from a total of 19 Latin American countries) and South-Eastern Europe (a three-day conference will be organised by Romania in Bucharest with representatives from a total of 13 countries, including both EU Member States and countries in the region).

7 actions will be implemented in 2021 and later. Finally, 1 commitment has been made to cover the costs to incorporate the future Pericles IV programme (2021 – 2027) into the eGrants tool, a fully electronic (paperless) management system for grants.

The global COVID-19 pandemic has profoundly affected the implementation of the Pericles Programme in 2020. Pericles is an exchange, assistance and training programme that promotes transnational and cross-border cooperation within the EU, as well as internationally, in order to ensure a global protection of the euro against counterfeiting. The programme is implemented through actions with a wide intended range of participants from EU Member States and third countries, which therefore requires traveling and the conglomeration of groups. Due to the pandemic and the continued risks related to traveling and conglomeration, the safe implementation of these actions was no longer possible.

The ongoing epidemiological situation, which started in March 2020, has therefore resulted in the rescheduling of almost all of the actions to 2021.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.3. Previous programme performance**

Pericles 2020 achieved its objective of protecting euro banknotes and coins against counterfeiting and fraud by supporting the Member States and assisting the competent national and Union authorities. The programme made a substantial contribution to the further improvement of coordination and cooperation at international, European and Member States level, as well as the creation of more solid structures for the protection of the euro (e.g.: the establishment of a specialised investigation group in Chile, and the increased cooperation networks in the Balkans). The programme also contributed to the adoption of legislation aimed at improving euro protection and the establishment of national central offices (e.g.: the establishment of National Central Office in Argentina).

The mid-term evaluation of the programme concluded that all findings converge towards a positive overall assessment. In particular, it notes that in terms of effectiveness, Pericles 2020 actions were typically implemented as planned and achieved the intended outputs, and evidence suggested that the outputs delivered did translate into tangible outcomes. Participant feedback provided immediately after events shows a high degree of appreciation, with 97% expressing a positive or highly positive assessment. More importantly, survey results showed that a large share of participants claimed to have learned about best practices, acquired useful skills, and established contacts with colleagues in other countries. The quality of actions was also judged positively by the authorities involved.

Available evidence suggested that the outputs delivered did translate into tangible outcomes, although there were some variations across the various groups and the type of progress recorded. Improvements in operational capabilities and the adoption of improved methods were emphasised by third country authorities and by individual participants in the programme's initiatives. A different situation was found regarding the improvements in international cooperation. In this case, the most positive results were achieved by the competent national authorities (CNAs), ECB and Europol. Positive developments were also reported by third country authorities and by individual participants, but to a less extent. This dichotomy in results well illustrated the challenges faced by the programme, which is confronted with a widely diversified audience, with different agendas, levels of capabilities, and needs that are not always easy to reconcile.

One of the recommendations from the mid-term evaluation was to encourage more competent national authorities to apply to the programme. This could be achieved by a more intense marketing strategy and the establishment of contacts with high level decision-makers to ensure the opportunities of the programme are well understood. In this respect, the advertising of the Programme and the increased co-financing rate for actions organised by new applicants led to several first time applicants.

Despite the fact that the phenomenon seems to be currently under control, counterfeiting continues to be a major threat to the euro. The increased number of counterfeit banknotes, the rise of ‘sophisticated’ counterfeits, the increasing availability of technology and the interest in counterfeiting of Organised Crime Groups requires a continuous attention.

The Pericles 2020 programme used a set of four specific quantitative performance indicators as laid down in the basic legal act: the number of (i) counterfeit detected, (ii) illegal workshops (print shops and mints) dismantled, (iii) individuals arrested, and (iv) penalties imposed.

Despite the fact that the performance indicators are linked to the protection of the euro and the results for these indicators are mainly on track to reach their targets, the primary challenge is that the link between the indicator results and Pericles 2020 actions is not direct as:

- other external factors can influence the indicators, and
- they primarily measure the repression (and not the prevention) aspect of the counterfeit phenomenon.

Quantifying the impact of a capacity building initiative in terms of operational results is an exercise fraught with difficulties due to the influence of a host of intervening factors (such as criminal intent of certain crime groups, priority set by Member States law enforcement, the length and scope of police investigations, etc.). This is particularly the case of initiatives intended to protect against criminal activities, the magnitude of which is almost by definition unknown.

Subject to this major caveat, there is evidence that, in selected situations, the programme has indeed exerted a direct tangible influence on euro protection operational activities (for example successful police operations in South America, following Pericles trainings as indicated in the mid-term evaluation of the programme). Moreover, for indicators (iii) and (iv) it has proved difficult to acquire the data and/or to adequately measure the indicator.

### 3.2. Key achievements

460 000	201 565	22	5 994	13	565
counterfeit euro banknotes were detected in 2020 <sup>(1)</sup>	counterfeit euro coins were detected in 2020 <sup>(1)</sup>	illegal workshops (mints and print shops) were dismantled in 2019 <sup>(1)</sup>	individuals arrested in 2019 <sup>(1)</sup>	seminars and exchange activities related to counterfeiting were funded in 2019	people took part in the different activities funded in 2019 (estimated number)

(1) These indicators, while linked to the protection of the euro, are not directly related to the implementation of the programme.

### 3.3. Evaluations, studies and reports

Mid-term evaluation:

The key findings of the latest evaluation: Communication from the Commission to the Council and the European Parliament on the mid-term evaluation of the Programme for exchange, assistance and training for the protection of the euro against counterfeiting (‘Pericles 2020’ Programme) COM/2017/0741 final, have been presented in the Programme Statements of the Draft Budget 2020.

Final evaluation:

**Pursuant to Article 13(6) of the Council Regulation (EU) No 331/2014, the Commission shall present to the European Parliament and to the Council by 31 December 2021, a final evaluation report on the achievement of the objectives of the programme.**

The evaluation will cover the different types of actions committed or implemented under the programme, also taking stock of the work carried out during the mid-term evaluation, published in 2017.

## **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :To protect euro banknotes and coins against counterfeiting and related fraud, by supporting and supplementing the measures undertaken by the Member States and assisting the competent national and Union authorities in their efforts to develop among themselves and with the Commission a close and regular cooperation and an exchange of best practice, where appropriate including third countries and international organisations**

**Indicator 1: Number of counterfeit euros detected**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

## **1. Overview**

### **1.1. Challenges**

The European Union ('the EU') plays a key role in coordinating the response to disasters in Europe and beyond. Disasters have affected every region of Europe in recent years, causing hundreds of casualties and billions in damage to infrastructure and the environment. Epidemics, flash floods, storms, forest fires, earthquakes, and human-induced disasters are continuously putting countries' response capabilities under pressure. Additionally, security concerns have become more complex and climate change is expected to worsen the impact of disasters in the future.

Large-scale and multi-sectorial crises, such as the unprecedented Covid-19 pandemic, have overwhelmed the ability of Member States and Participating States to help each other, revealing the vulnerabilities of the system and underlining the need for enhanced cooperation and coordination at EU level. This is particularly true when several countries are simultaneously confronted with the same type of emergency, and are therefore not able to assist each other. In those circumstances, action at EU level can ensure a faster and more comprehensive response.

The Covid-19 emergency has revealed once more that disasters know no borders, and the importance to continue strengthening and promoting consistency to the international dimension of civil protection, in particular with the countries in the immediate neighbourhood (IPA countries and countries under the European Neighbourhood Policy).

### **1.2. Mission (general objectives)**

The Union Civil Protection Mechanism ('the UCPM') aims to strengthen the cooperation between the Union, the 27 Member States and the six Participating States currently taking part in the UCPM (North Macedonia, Iceland, Montenegro, Norway, Serbia and Iceland, with the UCPM legal framework being applicable to the UK during the transitional period that ended on 31 December 2020), as well as to facilitate coordination in the field of civil protection in order to improve the effectiveness of systems for preventing, preparing for and responding to natural and man-made disasters.

The UCPM promotes solidarity between the Member and Participant States through practical cooperation and coordination, without prejudice to the Member States' primary responsibility to protect people, the environment, and property, including cultural heritage, on their territory against disasters, and to provide their disaster-management systems with sufficient capabilities to enable them to cope adequately and in a consistent manner with disasters of a nature and magnitude that can reasonably be expected and prepared for.

Finally, the UCPM facilitates the cooperation in disaster response among the Member/Participating States, coordinating through the Emergency Response Coordination Centre (ERCC) the provision of assistance to disaster-stricken countries all over the world. The support provided through the UCPM can take the form of in-kind assistance, deployment of specially equipped teams, or assessment and coordination experts sent to the field.

### **1.3. Specific objectives**

The specific objectives of the UCPM are:

1. to achieve a high level of protection against disasters by preventing or reducing their potential effects, by fostering a culture of prevention and by improving cooperation between the civil protection and other relevant services;
2. to enhance preparedness at Member State and Union level to respond to disasters (European Civil Protection Pool and rescEU);
3. to facilitate rapid and efficient response in the event of disasters or imminent disasters, including by taking measures to mitigate the immediate consequences of disasters;
4. to increase public awareness and preparedness for disasters;
5. to increase the availability and use of scientific knowledge on disasters; and
6. to step up cooperation and coordination activities at cross-border level and between Member States prone to the same types of disasters.

## 1.4. Public intervention context

Civil protection obtained Treaty recognition for the first time with the entry into force of the Lisbon Treaty, with a specific legal base: Article 196 TFEU. The Union holds a supporting competence in this area, which is also indicated in Article 6 TFEU.

The UCPM was established in 2013 by Decision 1313/2013/EU. The Decision was subsequently amended in 2019 by Decision (EU) 2019/420. In addition, and in the framework of ongoing legislative revision, the resulting amendment to the initial Decision is likely to take the form of a Regulation. This is needed given that one of the provisionally agreed provisions relate to the carry-over of unused funds for response operations, which requires a derogation from Article 25(5) of the Financial Regulation. Such derogation is based on Article 322 TFEU, which calls for the adoption of a Regulation.

## 1.5. Actions

The UCPM is divided into three stands of activities: prevention, preparedness and response. For each activity, it lays out different types of actions.

Prevention and preparedness activities mitigate the effects of disasters. A training programme for civil protection experts from EU Member States and Participating States ensures compatibility and complementarity between intervention teams, while large-scale exercises each year train capacities for specific disasters. The EU supports and complements prevention and preparedness efforts of its Member States and Participating States by focusing on areas where a joint European approach is more effective than separate national actions. These include risk assessments to identify the disaster risks across the EU, encouraging research to promote disaster resilience and reinforcing early warning tools.

One of the key innovations of the 2019 legislative revision was the creation of a dedicated reserve of civil protection capacities, the rescEU reserve, as part of preparedness actions under the UCPM. rescEU is a European reserve of capacities to be mobilised as a last resort and to provide a safety net in case national capacities are overwhelmed. The initial focus of the rescEU reserve is set around three main areas: aerial firefighting capacities, including firefighting planes and helicopters; emergency medical capacities, including medical evacuation capacities; stockpiles of medical equipment, as well as field hospitals; and CBRN-related capacities, such as for instance decontamination. Capacities to cover other areas could also be developed.

Another main innovation of the 2019 legislative revision was the establishment of the UCPM Knowledge Network, bringing together civil protection and disaster management actors, centres of excellence, universities and researchers.

Under response, following a request for assistance by a Member State or third country through the UCPM, the Emergency Response Coordination Centre (ERCC) mobilises assistance or expertise. In addition, the ERCC monitors events around the globe 24/7 and ensures rapid deployment of emergency support through a direct link with national civil protection authorities. Specialised teams and equipment, such as forest firefighting planes, search and rescue, and medical teams can be mobilised at short notice for deployments inside and outside Europe.

## 1.6. Delivery mode

The lead DG in the European Commission for the UCPM is DG ECHO. The management mode is direct management.

Under Commission proposal COM/2020/220, indirect management under the UCPM is also introduced as a possibility for certain cases foreseen in the Financial Regulation<sup>1</sup>.

## 1.7. Graphic overview of the programme structure

---

<sup>1</sup> Following the political agreement reached in early February 2021, indirect management is expected to be introduced as a mode for budget implementation, albeit with limitations with respect to eligible bodies. Notably, the provision refers to sub-points (ii), (iv), (v) and (vi) of point (c) of Article 62(1)(c) of the Financial Regulation

Lead DG : DG ECHO		
Direct management by the DG		Indirect Management
<b>Prevention</b> [Specific Objectives 1, 4, 6] <div style="border: 1px dashed green; padding: 2px; float: right;">5%</div>	<u>Main actions</u> Grants (projects, capacity building, guidelines, etc.) Procurement (studies, peer reviews, advisory missions, etc.)	<u>Main beneficiaries</u> - MS/PS civil protection authorities (main) - International organisations - Research centres, academia - Private entities (e.g. consultancies)
<b>Preparedness</b> [Specific Objectives 2, 4, 5, 6] <div style="border: 1px dashed blue; padding: 2px; float: right;">85%</div>	<u>Main actions</u> Grants (projects, adaptation grants, development rescEU capacities, Procurement (training and exercises, projects, early warning/scientific support)	
<b>Response</b> [Specific Objectives 3, 4, 6] <div style="border: 1px dashed orange; padding: 2px; float: right;">10%</div>	<u>Main actions</u> Transportation and operations grants Procurement transport services (broker)	
		<u>Beneficiaries</u> As stated in <b>Article 62(1)(c)</b> of the Financial Regulation, eligible entities restricted to sub-points: <b>(ii), (iv), (v), (vi)</b>

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Procedure 2017/0309/COD COM (2017) 772: Proposal for a DECISION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL amending Decision No 1313/2013/EU on a Union Civil Protection Mechanism	2021 - 2027	1 262,9

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>772,7</b>	<b>775,1</b>	<b>786,5</b>	<b>239,1</b>	<b>243,8</b>	<b>248,6</b>	<b>253,6</b>	<b>3 319,4</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The UCPM in the upcoming MFF 2021-2027 builds on the positive results achieved through MFF 2014-2020. While budget for the UCPM was split under two headings in the MFF 2014-2020 (internal – external), it is placed under one single heading in the MFF 2021-2027 ('Heading 2: Cohesion, Resilience and Values') to further improve an effective and efficient budget implementation.

Another significant difference compared to the previous MFF period is that the UCPM financial envelope is now composed by two funding sources: a) the MFF *classic* profile, and b) an allocation stemming from the 'Next Generation EU' (NGEU) funds. As part of the comprehensive recovery instrument adopted to face the consequences of the Covid-19 pandemic, the UCPM/rescEU was identified as a key instrument contributing to the rapid recovery from the crisis through the enhancement of its structures to be prepared for and respond to future crises. As such, an additional allocation of EUR 2 billion was proposed, which complemented the EUR 1.2 billion proposed under the MFF profile, bringing the overall financial envelope to EUR 3.3 billion for the 7-year period.

In order to translate this ambitious budget into a reality, and building on the initial lessons learnt from the Covid-19 pandemic, the Commission tabled a new legislative proposal to further strengthen the UCPM in July 2020 [COM/2020/220]. Following intense

negotiations throughout 2020, a political agreement was reached in early 2021 by the co-legislators and the Commission. The main changes of the new proposal are direct procurement in specific cases of rescEU capacities by the Commission (currently possible only by MS), full Union financing for all rescEU capacities, establishing Union disaster resilience goals as part of prevention actions and more flexibility in budget execution (indirect management, multiannual work programmes, carry-over for commitments for response actions).

### 1.10. Relevant websites providing more information

DG ECHO website: [https://ec.europa.eu/echo/index\\_en](https://ec.europa.eu/echo/index_en)

As main interface with the external public, DG ECHO main website provides an overview of the different activities carried out by the DG, as well as funding opportunities. The website also contains all key strategic documents and relevant legislative texts guiding the work of the DG.

ERCC portal: <https://erccportal.jrc.ec.europa.eu/>

The ERCC portal compiles all information products produced by DG ECHO and/or relevant partners supporting disaster management. Factsheets, daily maps, country-specific information and links to other relevant monitoring tools are found in the portal.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

As regards Commitment Appropriations, the budget adopted in 2021 is in line with the financial programming and the request made for 2022 exceeds the indicative financial programming by EUR 30 million as identified needs require higher financial envelope. The payment appropriations are established on the basis of estimated payment needs triggered by old and new commitments. Implementation is expected to reach 100%.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Union Civil Protection Mechanism – Heading 3

	Commitments	Payments
Implementation Voted budget	728 969 070	337 257 963
Implementation carry-overs	0	1 861 779
Implementation total	728 969 070	339 119 742
total envelop*	766 548 000	
cumulative implementation rate	95%	44%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

Union Civil Protection Mechanism – Heading 4

Implementation total	155 598 038	71 146 374
total envelop*	157 657 655	
cumulative implementation rate	99%	45%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

In a context in which the scope for action was widened considerably to foster the EU's capacity to respond to crises, with a substantially increased budget to fund new operations (the legal basis was amended in 2018), implementation under Heading 3 reached a level of 95%. The implementation under Heading 4 reached a level of 99%.

Budget implementation in 2020 was characterised by challenges relating to COVID-19, resulting in an unprecedented number of activations of the Union Civil Protection Mechanism. The instrument therefore received several budgetary reinforcements (under both heading 3 and heading 4) totalling EUR 442 million through two amending budgets (EUR 415 million) and redeployments from other instruments (EUR 27 million). Such reinforcements funded the creation of the first-ever emergency stockpile of medical equipment (protective equipment, ventilators, etc.) and the repatriation of EU citizens stranded in non-EU countries. The increased budget largely explains the low implementation of payment appropriations in 2014-2020 (45%), as the majority of related payments will be made from 2021 onwards.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.3. Previous programme performance**

The UCPM is not a regular programme funded by the Union, but rather a more complex policy instrument that supports Member States and Participating States in the area of civil protection, intervening in all phases of the disaster risk management cycle (prevention, preparedness, response). By its external dimension, the UCPM also supports the EU as a global actor, projecting EU solidarity in disasters beyond the EU borders.

##### *Performance*

In general terms, the UCPM has shown a **strong performance** over recent years. Notably:

- In the area of **prevention**, the UCPM has been instrumental in fostering an EU-wide culture of prevention, supporting notably those Member States and neighbouring countries whose structures and policies were not sufficiently advanced. Through the compilation of national risk assessments and the dissemination of a document outlining a risk profile at EU level, Member States have generally become more aware of the need to strengthen prevention policies and taken significant steps thereto. Over the past years, some Member States have undertaken bold reforms in their national civil protection structures to emphasise precisely the role of prevention. The UCPM has accompanied and supported such measures. The 2020 EuroBarometer survey (Q1 –What is the risk awareness level in your region?) reveals a positive trend between 2015 and 2020, with awareness level in 2020 at 64% – with an increase of 9 percentage points compared to 2015.
- Prevention strand of work has also included fostering cooperation and coordination of activities at cross-border level. One of the main tools for supporting cross-border cooperation in civil protection and risk management is UCPM prevention and preparedness grants. In 2020, over EUR 6.5 million were awarded to seven projects implemented by partners from 12 Member States and several Participating States and focusing on the development of cross-border risk assessments, improved regional and cross-sectoral coordination and preparation for marine pollution accidents. Attention to the cross-border cooperation issues has also been strengthened a result of the revision of the UCPM Decision in 2019: in line with the new reporting provisions, Member States are required to share regularly information on priority prevention and preparedness measures taken to address disaster risks with cross-border impacts.
- In the area of **preparedness**, there is a clear trend that shows the growing importance the UCPM is having among Member States when it comes to being prepared for disasters. The number and diversity of registered capacities in the European Civil Protection Pool is the highest ever, reaching in certain areas the maximum required at EU level. Moreover, the concrete implementation of the revised UCPM legislation (in force since April 2019) has also strengthened the preparedness component of the UCPM through the progressive development of rescEU capacities in different areas, complementing national capacities. A sophisticated training and exercises programme provides every year experts and capacities with the required competences to better respond to disaster through enhanced coordination, compatibility and complementarity. To support the coordination efforts of Member States and the UCPM, the Knowledge Network was created in 2019. It aims at bringing together civil protection and disaster management experts and organisations, encouraging them to work together to increase **knowledge** within the UCPM and support the Union's ability and capacity to deal with disasters.
- Concerning the **external dimension of prevention and preparedness** activities (covered by former Heading 4), the focus continued to be put on strengthening the cooperation with the immediate neighbourhood, notably with the IPA countries (Western Balkans in particular) as well as the whole Southern and Eastern Neighbourhoods. With the aim to continue bringing these countries closer to the UCPM, new phases of regional programmes in the Balkans and in the Eastern neighbourhood were launched, despite the difficult Covid crisis context and the lack of face-to-face meetings. Moreover,

the dialogue with the Union for the Mediterranean (UfM) has been revamped building on the positive exchanges from past year, delivering concrete results in the form of specific workshops around different areas related to disaster management in general. In addition, the emphasis was also put on continuing financing prevention and preparedness projects in third countries with a cross-border dimension. Such initiatives have been instrumental in promoting cooperation at technical level, developing networks and promoting capacity building. Moreover, continuous efforts were done to increase **the availability and use of scientific knowledge on disasters**. DG ECHO continued strengthening the early warning and information systems for natural disasters (e.g. droughts, floods, forest fires, tropical cyclones or severe weather), and made extensive use of the services and information provided via the Copernicus programme for emergency management, climate change, and security, as well as the interfaces between these three areas. DG ECHO continued strengthening its Geographic and Information System (GIS) capacity to keep supporting operations by means of cartographical and geospatial products. Such services have supported the activities of the UCPM both inside and outside the EU.

- Concerning **response**, despite the unpredictable nature of disasters, the UCPM is very often activated to support Member States and third countries. An activation of the UCPM and providing rapid support it is seen by many Member States as a sign of European solidarity. Moreover, it needs to be underlined that most of the activations of the UCPM are requested by third countries (around 2/3 of UCPM activations are from non-EU countries), which shows the international relevance that the UCPM has acquired and the capacity and will that EU Member States have to send assistance and expertise to third countries in need.
- Concerning the increase of **public awareness and preparedness for disasters**, the various UCPM deployments and operations offered unprecedented opportunities for media and social media communication. DG ECHO has been working very closely and provided necessary support to communication activities by EU Delegations and Commission Representations and by communication multipliers in the Member States and Participating States, to increase the level of awareness of the UCPM. DG ECHO also ran several awareness campaigns in 2020. A campaign on enhanced EU Civil Protection, with online advertising in six EU Member States (Croatia, France, Greece, Italy, Portugal and Spain), reached more than 65 million online views on Facebook/Instagram, YouTube and premium news sites. Despite the fact that the UCPM is more often activated by third countries, efforts to raise awareness of the UCPM in third countries should be continued. In this regard, the role of EU Delegations and the DG ECHO regional offices is essential.

#### Areas of improvements and external factors

Despite a strong performance over the past years, a legislative proposal to strengthen the UCPM was tabled at the end of 2017 and entered into force in April 2019. The proposal addressed some of the limitations identified by the Interim Evaluation conducted in 2017 and by conclusions drawn from operations. The fact that this important legislative modification was carried out without disrupting the proper functioning of the instrument also shows the degree of maturity that the UCPM has been able to reach.

While showing the added value that this reform brought to the UCPM, notably with the creation of the first ever emergency stockpile of medical equipment under rescEU, the large-scale and unforeseen nature of the Covid-19 pandemic put the UCPM to the test and revealed some areas for improvement. As such, in the aftermath of the first wave of the crisis, a new legislative proposal was tabled [COM(2020)220 final] with targeted improvements, for which a political agreement was reached by the co-legislators in early February 2021 and is expected to enter into force by May 2021. The legislative review was also aiming at aligning the financial envelope of the UCPM with the figures of the next MFF. The areas of improvement are related to three main domains:

- a) Although the development of rescEU capacities was an important step forward, it was clear that swift action in moments of emergency was needed. The previous scheme for the development of rescEU capacities involving necessarily a Member State was not always rapid enough, and as such, the new legislation proposed to grant the Commission with additional elements of initiative, such as the possibility to directly procure capacities in certain cases. A compromise was found during political trilogue granting the Commission a higher autonomy in certain cases.
- b) Another element that required further adjustment was the collective planning (prevention and preparedness) for large-scale and cross-boundary emergencies. A proposal to develop Union Resilience Goals, assessing the risks, capability gaps and proposing elements to fill these was also established.
- c) Finally, another area where improvement was needed was related to the budgetary management and needed flexibility to rapidly react and adjust to major crises. As such, a much more flexible budget structure, and with in-built mechanisms (e.g. carry-over) was proposed to increase the efficiency of the UCPM in fulfilling its mandate. The final compromise package reached in February 2021 retained this possibility, which is expected to enter into force by May 2021 following the vote in the EP Plenary of end April 2021.

In addition to the areas of improvement revealed by the Covid-19 pandemic, DG ECHO continues to work on the establishment of the Knowledge Network, one of the key innovations of the 2019 legislative revision. A complex activity, consisting of connecting several activities between disaster related stakeholders, knowledge holders and governance structures; the success of the Network

will rely on its capacity to address the needs of its members and of the UCPM in an efficient and effective way. While the Commission is responsible for its establishment, the construction of the Knowledge Network will only be feasible with the entire collaboration of the Member States and Participating States.

As far as the external dimension is concerned, DG ECHO should continue to reflect in structuring a coherent and proactive international strategy addressing the extension of the UCPM to new Participating States (including criteria to join), as well as the modalities of partnership with the non-participating States (third countries), regional and international organisations. This would also help in ensuring an efficient coordination with all other available tools and funding mechanisms (rescEU, Knowledge Network, trainings, table top and field exercises, peer reviews etc...) in a Team Europe approach.

### Covid section

The Covid-19 pandemic has had a significant impact on the UCPM activities, due to the unforeseen consequences generated by the pandemic. This has required constant and rapid adaptation to the situation, leading generally to two main scenarios: a) finding flexible approaches in order to carry out the different activities foreseen in the Management Plan and different Unit Work Plans; or b) rapidly adapting to new events and setting up new activities/initiatives not initially planned.

Concerning new initiatives not initially planned, the Covid-19 pandemic resulted in an unprecedented number of activations of the UCPM requesting the provision of medical equipment, as well as support for the repatriation of EU citizens (and others) stranded in third countries. In this context, further budgetary reinforcement was necessary and additional financial resources were allocated under the UCPM through two amending budgets (for rescEU medical stockpile, repatriations of EU citizens).

Other areas that have been particularly affected by the pandemic are for instance the ones related to training and exercises, given the restrictions in place and the impossibility of conducting such events by virtual means. Another area whose normal development has been disrupted is the submission of prevention-related information. Given the crucial role that civil protection authorities play in the response to the pandemic, the management of this health crisis has forced some Member States to redirect all resources to response and coordination operations, at the expense of other less urgent tasks, such as reporting. However, this does not affect the validity of this Programme Statement as the deadline for reporting under discussion was 31 December 2020. Prevention-related information, even if with some delay, is gradually coming in during the first months of 2021.

Finally, due to the Coronavirus outbreak, many of the initially planned communication actions had to be revised or postponed, while a large share of the delivered work focused on showing and explaining the EU response to the pandemic (including rescEU preparedness measures and deployments, repatriations, Humanitarian Air Bridge operations).

## 3.2. Key achievements

### *Union Civil protection Mechanism – Internal*

45	18	109	11	15
activations of the Union Civil Protection Mechanism inside the EU in 2020 (100% response rate)	Prevention and preparedness projects have been financed under the UCPM.	Response capacities committed to the European Civil Protection Pool, 75 of which were available for immediate deployment by the end of 2020	Grant agreements signed with 9 Member States for a total funding of EUR 385 million for the creation of the first ever stockpile of emergency medical equipment (protective equipment, ventilators, etc)	Grant agreements signed with Member States and Participating States for Knowledge Network related activities.

The year 2020 was fundamentally shaped by the Covid-19 pandemic, which had a great impact on all UCPM activities (prevention, preparedness and response). This resulted in a necessary adaptation of initially programmed activities, as well as the rapid realisation of new initiatives needed to respond to the large-scale consequences of the pandemic. This section outlines some of the key achievements of 2020:

#### *General*

- From a communication perspective, the Coronavirus outbreak put on hold many of the initially planned communication actions. A large share of the delivered work focused on showing and explaining the EU response to the pandemic (including rescEU preparedness measures and deployments, repatriations). Large-scale emergency deployments, such as the response to the Beirut explosion or the Croatian earthquake, also triggered considerable communication needs.

- The pandemic also led to the cancellation of the celebration of the European Civil Protection Forum, which was foreseen in December 2020. However, an alternative proposal was put forward, proposing to hold several ‘warm-up’ virtual events that would prepare and contribute to the celebration of the live event (date still to be determined). The first of these virtual ‘warm up’ events took place in December 2020, and focused on the importance of enhancing cross-sectoral cooperation in crisis management.

#### *Prevention*

- In 2020, the UCPM financed **18 prevention and preparedness projects**. Seven under the cross-border financing track (‘Track 2’), and 11 projects under the single-country financing track (‘Track 1’) for leveraging investments for disaster risk management. Out of the 18 grants, 11 targeted primarily disaster prevention, while 7 targeted disaster preparedness.
- Related to ‘Track 1’ grants, a joint DG ECHO-World Bank study on the economic dividends of disaster prevention and preparedness and on improved risk transfer mechanisms (including insurance) was initiated and will be finalised in the first quarter of 2021. Under the leadership of DG ECHO, this study brings together 5 other DGs (ECFIN, CLIMA, JRC, ENV, REGIO).
- The reporting guidelines for the submission of the summaries of risk assessments and risk management capabilities as foreseen in article 6.3 of Decision 1313/2013/EU were published in December 2019 ahead of the 22 December indicative date. This can be considered a **climate-related** objective, as the new guidelines introduced climate adaptation as one of the criteria to be taken into account by Member States in the future.

#### *Preparedness*

- By the end of 2020, a total of **109 response capacities were committed to the European Civil Protection Pool**, 75 of which were available for immediate deployment.
- Eleven new adaptation grants with 11 Member States were granted in 2020 for a total amount of EUR 4.8 million for the upgrading and repairing of national capacities to allow for their international deployment.
- To date, four European Emergency Medical Teams (EMTs) that received the WHO classification (verification) are registered in the European Civil Protection Pool. In 2020, several deployments of medical teams under the European Medical Corps were facilitated by the UCPM (to Italy, Armenia and Azerbaijan)
- The **rescEU transition scheme** continued to be implemented as foreseen in the legislation in 2020. The Commission signed grant agreements with Member States (Croatia, Italy, Spain, Greece, France and Sweden) to make aerial forest firefighting assets available at EU level during the 2020 forest fire season. This reserve consisted of 15 assets/6 capacities (8 Canadair, 1 Dash and 6 helicopters). Over EUR 15.5 million were dedicated to this action. This can be considered a climate related achievement, as it had a direct impact on the capacity of the Union to support Member States extinguishing forest fires.
- In parallel, the Commission put in place a number of dedicated **Task Teams** meetings to define all the technical and operational specifications to establish as rapidly as possible the rescEU capacities in the priority areas identified by the legislation: aerial firefighting capacities, medical capacities and Chemical Biological Radiological and Nuclear (CBRN) capacities. A total of 9 Task Teams meetings were organised in 2020.
- The Commission has also created the first ever stockpile of emergency medical equipment under the rescEU reserve which included a wide range of medical equipment, such as personal protective equipment (e.g. masks, gloves, gowns, etc.), as well as ventilators. In 2020 alone, the Commission signed a total of **11 grant agreements with 9 Member States** for a total funding of EUR 385 million.
- In 2020, due to COVID 19, most of the training and exercises activities have been suspended. This suspension time was used to revisit the entire training programme and adapt it to the future challenges. It was also an opportunity to transform some of our training and exercise into virtual activities. The lessons of these online activities will be assessed to render in the future activities more performant. In addition in 2020, **15 grants agreements** have been signed to carry out in 2021 and 2022 UCPM exercises and network partnership activities. Finally, 2020 was an opportunity for the Commission to concentrate on the establishment of the Knowledge Network through a series of meetings and brainstorming with Member States and Participating States.

#### *Response*

- In 2020, the UCPM was at the frontline of the response to the Covid-19 outbreak using tools and capacities to respond both inside and outside the EU. From the 102 times the UCPM was activated (over 5 times more than in 2019), **45 were inside the EU**. Out of 102 activations, 85 (83%) were Covid related. The UCPM had a 100% response rate inside Europe.
- More concretely, in 2020, 58 requests have been received for in-kind assistance through the UCPM for personal protective or medical equipment, diagnostic tests, medicines and medical teams (including from 10 EU Member States, with the Netherlands activating twice), 3 UCPM Participating States, 40 third countries (with the Kyrgyz Republic and Belarus activating twice) and 2 International Organisations. 43 requests have since been closed. 31 requests have been partially or fully met by Member and the UCPM Participating States or from the rescEU medical stockpile. In total, the UCPM facilitated the delivery of over 18 million items of critical personal protective and medical equipment in 2020, including over 3 million items from the rescEU stockpiles.
- Apart from Covid-19, assistance via the Mechanism was provided to Croatia (earthquake).

### Union Civil protection Mechanism – External

57	17	100 000	2	32
Activations of the Union Civil Protection Mechanism outside the EU in 2020, 17 of which were non-Covid related.	EU civil protection experts deployed in Lebanon in 2020 following the blast in the port of Beirut, in addition to search and rescue and CBRN modules	Passengers repatriated to Europe, including 90,060 EU citizens in 408 flights	New regional programmes were successfully launched on prevention, preparedness and response (IPA countries; Eastern Partnership countries - PPRD EAST III)	Activations of the Copernicus Emergency Management Service in 2020

The UCPM intervenes in all phases of the disaster management cycle: prevention, preparedness and response. This section outlines some of the key achievements of 2020 in the three areas:

- The UCPM financed two cross-border disaster prevention and preparedness projects which directly target third countries. The former aims to develop a cross-border risk assessment in North Macedonia and Albania. The latter aims to strengthen a network working on training for emergency medical teams, bringing together partners from Israel and Turkey (among others).
- A new methodological framework for the ‘Peer review on disaster risk management’ programme was adopted. The new methodology was established following ample consultation with experts from Member States and International Organisations.
- Building on the significant steps taken in 2019, the regional cooperation with Mediterranean countries was further strengthened through the Union for Mediterranean (UfM) with the celebration of dedicated events around the different working groups agreed in 2019, namely (1) engaging citizens in disaster risk management, (2) civil protection volunteers and (3) preparing for efficient mutual assistance.
- **Two new regional programmes were successfully launched** on prevention, preparedness and response in IPA countries as well as with the Eastern Partnership countries (PPRD EAST III), aiming at bringing these countries closer to the UCPM.
- In 2020, the UCPM was at the frontline of the response to the Covid-19 outbreak using tools and capacities to respond both inside and outside the EU. From the 102 times the UCPM was activated (over four times more often than in 2019), **57 activations were outside the EU**. Out of 102 activations, 85 (83%) were Covid related.
- DG ECHO continued strengthening the early warning and information systems for natural disasters (e.g. droughts, floods, forest fires, tropical cyclones or severe weather) and made extensive use of the services and information provided via the Copernicus programme for emergency management, climate change, and security, as well as the interfaces between these three areas, resulting in **32 activations** of the Copernicus Emergency Management Service in 2020 for disasters outside the Union.

- The UCPM replied positively to 51% of the requests for assistance from outside Europe. DG ECHO mainly supported Member States most heavily affected through the delivery of personal protective equipment under the framework of the rescEU stockpiling.
- Apart from Covid-19, assistance via the Mechanism was provided to Lebanon (industrial accident), with the deployment of **17 civil protection experts** (6 search and rescue teams, a CBRN and a TAST team).

Moreover, the Commission through DG ECHO has also been heavily involved in the repatriation efforts of EU citizens stranded around the world due to the pandemic. In 2020, the UCPM has facilitated the repatriation of 100,313 passengers (including 90,060 EU citizens) to Europe on 408 flights.

### 3.3. Evaluations, studies and reports

#### *EU Civil protection Mechanism – Internal & External*

Article 34(2) of the revised Decision 1313/2013/EU foresees the requirement to submit a report every two years to the European Parliament and to the Council on the ‘progress towards the capacity goals and remaining gaps’ regarding the European Civil Protection Pool, taking into account the establishment of rescEU capacities.

In order to fulfil this requirement, the Commission launched in 2018 a Capacities study, whose final report was published on DG ECHO’s website in December 2019. Based on this study, the ‘Capacity Gaps Report’ was supposed to be finalised during 2020. However, the Covid-19 pandemic led to some delays and the report will be prepared in 2021 taking for the first time into account both the capacities under the European Civil Protection Pool (ECP) and under rescEU.

During 2020, an external evaluation of the ‘Prevention and Preparedness Projects (2014-2020)’ was commissioned in order to extract key lessons from this activity over the past years and identify avenues for improvement. The results are expected to be finalised by April 2021.

Finally, in 2020, DG ECHO published the third edition of the SWD on the ‘Overview of risks that the Union may face’ presenting the latest available evidence on disaster risks that threaten the EU, drawing on the national risk assessments developed by the EU Member States and on the Commission’s cross-sectoral policy and scientific work.

## **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :To achieve a high level of protection against disasters by preventing or reducing their effects by fostering a culture of prevention and by improving cooperation between the civil protection and other relevant services.**

**Indicator 1: Number of Member States that have made available to the European Commission a summary of risk assessments and assessment of risk management capability**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
27										27
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	No of Member States
Cut-Off Date	
Data source	Member States’ reporting to the Commission
Link to the objective	European Green Deal
Link MFF 14-20 / MFF 21-27	This indicator is linked to Indicator 1 & 2 (Specific Objective 1) under the previous programming period.
Other methodological comments	Legal obligation for Member States to report first time by 31/12/2020 and every three years thereafter.
Full metadata available at this address	
Justification of the trend	The first deadline for Member States’ and UCPM Participating States’ reporting under the revised UCPM Decision was 31/12/2020. Not all Member States have reported by the deadline due to the pre-occupation of civil protection services with the Covid-19 emergency, which came at the expense of other, less urgent reporting tasks. However, though with some delays, the reports are being submitted in 2021.

## Specific Objective 2 :To enhance preparedness at Member State and Union level to respond to disasters (European Civil Protection Pool and rescEU)

### Indicator 1: Number of committed and certified capacities included in the European Civil Protection Pool (ECPP)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									>60
60	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of capacities
Cut-Off Date	
Data source	The registration of modules are found in Common Emergency Communication and Information System (CECIS) data base.
Link to the objective	Promoting our European Way of Life
Link MFF 14-20 / MFF 21-27	Continuation of indicator (Specific Objective 2 – Indicator 1)
Other methodological comments	The indicator covers the number of modules, as well as technical assistance and support teams and other response capacities registered in CECIS as part of the Pool. As Member States and Participating States are directly responsible for registering capacities in CECIS, DG ECHO uses an additional internal monitoring tool to verify and (where necessary) request MS/PS to correct their CECIS registrations.

Justification of the trend	

## 5. Programme 2014-2020 - Key monitoring indicators

### Previous Program 1 : Union Civil Protection Mechanism - Heading 3

**General Objective 1 :The Union Civil Protection Mechanism shall aim to strengthen the cooperation between the Union and the Member States and to facilitate coordination in the field of civil protection in order to improve the effectiveness of systems for preventing, preparing for and responding to natural and man-made disasters**

#### Indicator 1:Economic damage caused by natural disasters

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010-2012	Milestones									2020
14,8	13	13	13	13	13	13	13			13
	Actual Progress									Final
	6,7	4,7	11,2	4,8	2,3	3,1	7,8			7,8

Are we on track	On track
Indicator type	
Unit of measurement	USD Billion
Cut-Off Date	31/12/2020
Data source	As recorded in the EM-DAT database
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Estimate based on the average of annual economic damage of the past 10 years. The data reflects economic damage caused by natural disasters worldwide excluding the economic damage caused by natural disasters in the Member States of the European Union. The EM-DAT base is frequently updated and historical data revised.
Full metadata available at this address	
Justification of the trend	A very important part of the annual results and evolution of this indicator depends on external factors (occurrence, frequency, severity and location of disasters) which are totally beyond the control of the Commission. In addition, the proportion of reported damages varies strongly by region, disaster type,

	and time. The specific contribution of the Union Civil Protection Mechanism to the evolution of this indicator is difficult to assess.
--	--

**Specific Objective 1 :To achieve a high level of protection against disasters by preventing or reducing their effects by fostering a culture of prevention and by improving cooperation between the civil protection and other relevant services.**

**Indicator 1: Number of Member States that have made available to the Commission a summary of their risk assessments.**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
14			27	28	28	28	27			28
	Actual Progress									Final
	17	27	28	28	23	26	n.a.			n.a.

Are we on track	No data
Indicator type	Output
Unit of measurement	Number of Member States
Cut-Off Date	
Data source	Member States' reporting to the Commission
Narrative	Member States reporting to the Commission
Methodology	This indicator has become obsolete in 2020 due to legal changes in reporting requirements. The UCPM Decision No 1313/2013/EU, as amended by the Decision No 2019/420/EU, no longer requires Member States to submit separate summaries of their risk management capabilities, but rather combined reports on risk management. In 2020, Member States reported under the new requirements.
Link MFF 14-20 / MFF 21-27	This indicator is now covered by the new indicator "Number of Member States that have made available to the Commission an assessment of their risk management as referred to in Article 6.1(d) of the Decision".
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Non-linear fluctuations in the trend are justified by the fact that the reporting cycle was not annual, with the end date as final possible date. MS, though, had the opportunity to submit their contribution at any given time during the reporting cycle.

**Indicator 2: Number of Member States that have made available to the Commission an assessment of their risk management as referred to in Article 6 of the Decision.**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0	0	0	0	0	0	0	27			27
	Actual Progress									Final
	0	0	0	0	0	0	12			12

Are we on track	
Indicator type	Output
Unit of measurement	Number of Member States
Cut-Off Date	
Data source	Member States reporting to the Commission
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator is linked to the indicator 1 which was monitoring reporting progress under the UCPM before the revision of the legislation in 2019. Indicator 2 reflects the revised reporting requirements and is used to monitor reporting starting with 2020.
Other methodological comments	Obligation to report first time by 31/12/2020 and every three years thereafter.
Full metadata available at this address	
Justification of the trend	The first deadline for Member States' and UCPM Participating States' reporting under the revised UCPM Decision was 31/12/2020. Not all Member States have reported by the deadline due to the pre-occupation of civil protection services with the Covid-19 emergency, which came at the expense at other, less urgent reporting tasks. However, though with some delays, the reports are being submitted in 2021.

**Indicator 3: Number of projects financed for prevention within the Union**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020

7	10	10	12	10	10	8	11			11
	Actual Progress									Final
	15	10	10	5	4	8	7			7

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of projects
Cut-Off Date	31/12/2020
Data source	ABAC – EU Database
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Following the new approach to the prevention and preparedness projects introduced in 2019, projects are expected to be more targeted and produce higher impact. In view of that, the number of cross-border projects (Track 2) has been decreasing. However, in 2019 a new call (Track 1) was introduced to support single-country projects in disaster prevention and preparedness. The values reported above include 4 single-country grants (Track 1), 3 cross-border projects (Track 2). In addition, 1 grant to the OECD (Peer Review methodology).
Full metadata available at this address	
Justification of the trend	Following the new approach introduced in 2019, the number of prevention projects in the Union financed has been steadily growing.

## Specific Objective 2 :To enhance preparedness at Member State and Union level to respond to disasters.

### Indicator 1: Number of response capacities included in the voluntary pool in relation to the capacity goals

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0			15		50		60			60
	Actual Progress									Final
	3	16	56	92	105	109	109			109

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of capacities
Cut-Off Date	31/12/2020
Data source	Common Emergency Communication and Information System (CECIS) data base
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The indicator covers the number of modules, as well as technical assistance and support teams and other response capacities registered or having started the registration process for the rebranded European Civil Protection Pool (formerly known as Voluntary pool).
Full metadata available at this address	
Justification of the trend	The growing number of response capacities pre-committed to the European Civil Protection Pool indicates a positive trend, that reflects the positive legislative development of the past years, with higher financial incentives for Member States to offer capacities and through processes less administratively cumbersome. Under the new legislation in force since March 2019, higher financial incentives are given for capacities to be registered in the ECPP. These are: a) coverage of 75% of the operational costs (including transport) for operations inside the Union, b) 75% of transport costs for operations outside the Union, c) 75% of adaption grants to upgrade the capacity for international deployment; and d) 75% of repair costs to bring a capacity from a state of disrepair to a state of deployability under the Mechanism."

### Indicator 2: Number of standard response units (modules) registered in the EU's Common Emergency Communication and Information System (CECIS)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
150	160		160		175		180			180
	Actual Progress									Final
	160	170	172	173	174	220	224			224

Are we on track	On track
Indicator type	Output

Unit of measurement	Number of capacities
Cut-Off Date	31/12/2020
Data source	Common Emergency Communication and Information System (CECIS) data base
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Measured by the number of modules, technical assistance and support teams, other response capacities registered in accordance with Article 9(6) of Decision No 1313/2013/EU in the EU's Common Emergency Communication and Information System (CECIS) database.
Full metadata available at this address	
Justification of the trend	The growing number of response capacities pre-comitted to the European Civil Protection Pool indicates a positive trend that reflects the positive legislative development of the past years, with higher financial incentives for Member States to offer capacities and through processes less administratively cumbersome.

### Indicator 3: Number of projects financed for preparedness

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2011	Milestones									2020
7	10	10	12	10	10	11	11			11
	Actual Progress									Final
	13	8	10	6	4	8	7			7

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of projects
Cut-Off Date	31/12/2020
Data source	ABAC – EU Database
Narrative	This includes 3 cross-border grants + 4 single-country (Track 1) grants focusing on preparedness.
Methodology	Following the new approach to the prevention and preparedness projects introduced in 2019, projects are expected to be more targeted and produce higher impact. In view of that, the number of cross-border projects (Track 2) has been decreasing. However, in 2019 a new call (Track 1) was introduced to support single-country projects in disaster prevention and preparedness. The values reported above include 4 single-country grants (Track 1), 3 cross-border projects (Track 2).
Link MFF 14-20 / MFF 21-27	
Other methodological comments	This includes 3 cross-border grants + 4 single-country (Track 1) grants focusing on preparedness.
Full metadata available at this address	
Justification of the trend	Based on the new approach to the UCPM prevention and preparedness projects introduced in 2019, projects are expected to be more targeted and produce higher impact. This explains the lower number compared to the target.

### Specific Objective 3 :To facilitate rapid and efficient response in the event of disasters or imminent disasters.

#### Indicator 1: Average speed of interventions under the EU Civil Protection Mechanism (from the acceptance of the offer to deployment).

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
36	24			18			12			12
	Actual Progress									Final
		21	20	11	13,7	7,4	27,6			27,6

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Hours
Cut-Off Date	31/12/2020
Data source	Common Emergency Communication and Information System (CECIS) data base.
Narrative	
Methodology	Measured as the duration between the acceptance of the offer in CECIS and the time when the assistance is ready for transportation from the port of embarkation in the offering EU Member States for movement towards the affected Member State. The indicator covers modules, as well as for technical assistance, medical personnel (not EMT) and support teams and other response capacities corresponding to the categories defined for the European emergency response capacity (EERC – Voluntary pool) as defined by Commission Decision (2014/762/EU).
Link MFF 14-20 / MFF 21-27	

Other methodological comments	EU's Common Emergency Communication and Information System (CECIS) data base. Measured as the duration between the acceptance of the offer in CECIS and the time when the assistance is ready for transportation from the port of embarkation in the offering EU Member States for movement towards the affected Member State. The indicator covers modules, as well as for technical assistance, medical personnel (not EMT) and support teams and other response capacities corresponding to the categories defined for the European emergency response capacity (EERC – Voluntary pool) as defined by Commission Decision (2014/762/EU) of 16 October 2014 laying down rules for the implementation of Decision No 1313/2013/EU of the European Parliament and of the Council on a Union Civil Protection Mechanism. Results of this indicator are partly influenced by the number, severity, nature and the specific context of the emergencies for which the UCPM is activated in a given year.
Full metadata available at this address	
Justification of the trend	There were only two module/team deployments (EMT and Medical Personnel to Italy) inside Europe in 2020. EMTs normally need some preparation time before deploying and generally, they are not urgently needed at the very beginning of an emergency like a USAR Team.

### Specific Objective 4 :To increase public awareness and preparedness for disasters.

#### Indicator 1:The level of awareness of Union citizens of the risks in their region.

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
55%							75%			75%
	Actual Progress									Final
		55%					64%			64%

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	Special Eurobarometer survey no. 511 (fieldwork November–December 2020)
Narrative	Article 3.1(d) of the UCPM Decision specifies that one of the specific objectives of UCPM is to increase public awareness and preparedness for disasters. It also specifies that the progress in this area is measured by the level of awareness of Union citizens of the risks in their region.
Methodology	Public opinion survey
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	Report to be published on <a href="https://ec.europa.eu/commfrontoffice/publicopinion/">https://ec.europa.eu/commfrontoffice/publicopinion/</a>
Justification of the trend	Overall positive trend to which recent disasters and EU communication campaigns might have contributed, though the role of different factors is difficult to establish. A positive trend can be observed between 2015 and 2020. Awareness level in 2020 was 64% - an increase of 9 percentage points compared to 2015.

#### Previous Program 2 : Union Civil Protection Mechanism - Heading 4

### General Objective 1 :The Union Civil Protection Mechanism shall aim at strengthening the cooperation within the EU and facilitating coordination in the field of civil protection in order to improve the effectiveness of systems for preventing, preparing for and responding to natural and man-made disasters in Third countries.

#### Indicator 1:Economic damage caused by natural disasters

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010-2012	Milestones									2020
155	93	93	93	93	93	93	93			93
	Actual Progress									Final
	91,3	78,9	136,1	332,7	105,5	95	144			144

Are we on track	
Indicator type	Result
Unit of measurement	USD billion
Cut-Off Date	31/12/2020
Data source	As recorded in the EM-DAT database
Narrative	

Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Estimate based on the average of annual economic damage of the 2004-2014 years. The data reflects economic damage caused by natural disasters worldwide excluding the economic damage caused by natural disasters in the Member States of the European Union.
Full metadata available at this address	
Justification of the trend	The EM-DAT base is frequently updated and historical data revised. The annual results and evolution of this indicator depends on external factors (occurrence, frequency, severity and location of disasters) which are totally beyond the control of the Commission. In addition, the proportion of reported economic damages varies strongly by countries, disaster type, and time. The specific contribution of the Union Civil Protection Mechanism to the evolution of this indicator is difficult to assess.

**Specific Objective 1 :To achieve a high level of protection against disasters by preventing or reducing their effects by fostering a culture of prevention and by improving cooperation between the civil protection and other relevant services.**

**Indicator 1: Number of projects financed for prevention in Third countries covered by the Instrument for Pre-Accession Assistance and the European Neighbourhood Policy (including exchange of experts)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
	4	4	5	7	7	8	8			8
	Actual Progress									Final
	4	5	4	3	3	0	1			1

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of projects
Cut-Off Date	31/12/2020
Data source	ABAC – EU Database
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In 2019 none of the proposals received under the external call for prevention was successful in the evaluation process.
Full metadata available at this address	
Justification of the trend	Based on the new approach to the UCPM prevention and preparedness projects introduced in 2019, projects are expected to be more targeted and produce higher impact. As a result, less projects have been financed, but with a more ambitious goals and higher financing (maximum EU contribution was raised to 1 million EUR as of 2019). This includes 1 cross-border project (“Track 2”) for prevention in Third Countries. For this reason, the indicator is considered as being on track.

**Specific Objective 2 :To enhance preparedness in Third countries to respond to disasters.**

**Indicator 1: Number of projects financed for preparedness (including training and exercises, workshops and exchanges of experts) in Third countries covered by the Instrument of Pre-Accession and the European Neighbourhood Policy**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
	5	5	6	6	6	7	7			7
	Actual Progress									Final
	5	6	7	6	3	3	2			2

Are we on track	On track

Unit of measurement	Number of projects
Cut-Off Date	31/12/2020
Data source	ABAC – EU Database
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Based on the new approach to the UCPM prevention and preparedness projects introduced in 2019,

	projects are expected to be more targeted and produce higher impact. As a result, less projects have been financed, but with a more ambitious goals and higher financing (maximum EU contribution was raised to 1 million EUR as of 2019). This includes 1 cross-border projects ("Track 2") for preparedness in Third Countries. The indicator shows a stable performance over the years, and reflects as well the new approach introduced in 2019, and for this reason it is considered as on track.
--	--

### Specific Objective 3 :To facilitate rapid and efficient response in the event of disasters or imminent disasters.

#### Indicator 1:Average speed of interventions under the EU Civil Protection Mechanism (from the acceptance of the offer to deployment)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
36	24			60			48			48
	Actual Progress									Final
		22	20	48	75	31,1	40,8			40,8

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Hours
Cut-Off Date	31/12/2020
Data source	Common Emergency Communication and Information System (CECIS) data base
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The increase in response time is explained by the general principle that assistance can only be delivered after the requesting country has accepted the offer. In some situations, the request is made, but the acceptance is not immediate, as the requesting country might consider that it is not needed immediately. In such situations, this creates a distortion in the number of hours, which is not related to the performance of the Mechanism. The indicator is measured as a yearly average of the duration between the acceptance of the offer in CECIS and the time when the assistance is ready for transportation from the port of embarkation in the EU for movement towards the affected country. The indicator covers modules, medical personnel (not EMT) as well as for technical assistance and support teams and other response capacities corresponding to the categories defined for the European emergency response capacity (EERC – Voluntary pool) as defined by Commission Decision (2014/762/EU).
Full metadata available at this address	
Justification of the trend	In 2020, deployments outside Europe consisted mainly in MUSAR (Medium Search and Rescue Teams) teams deployed to Lebanon (Explosion emergency) and EMTs deployed to Azerbaijan and Armenia. MUSAR teams presented very fast deployments. However, the EMTs took more time to deploy given the specific preparations EMTs need to go through.

## 6. The programme contribution to horizontal policies

### 6.1. Contribution to climate mainstreaming

#### 6.1.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
27,1	58,5	60,6	56,1	57,6	58,8	60,3	379,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.1.2. Explanation and justification on the financial contribution

In the 2014-2020 period, the total contribution for climate mainstreaming was EUR 308.76 million. The figure for 2020 (EUR 242.26 million) is the result of the application of a more granular methodology that allows a more precise analysis of climate spending.

EUR 242.26 million spent in 2020 for climate mainstreaming correspond to 39.44% of UCPM funding, including activities scoring 1 and 2

DG ECHO is implementing the central tracking at commitment level, to improve the accuracy and reliability of the data on climate action. The tracking is based on EU climate markers methodology, made of three scores (0/40/100).

In light of the fact that NGEU funds will be used only for Covid-19 response, this methodology applies only to the MFF strand.

### 6.1.3. Key achievements

#### *EU Civil protection Mechanism – Internal & External*

The UCPM will continue contributing to the overall Commission objective to climate mainstreaming through its different activities.

A key achievement over the past years has been the creation of the dedicated reserve of rescEU capacities in the area of forest firefighting through the rescEU transition phase, resulting in an additional capacity of 15 capacities to support Member States in forest firefighting activities. Additional support provided to Member States to reduce the devastation that wildfires create, increasing CO<sub>2</sub> emissions, is considered a key climate-related achievement.

UCPM direct grants to national civil protection authorities under the new ‘Track 1’ programme can be considered a success story and an important achievement. This financing scheme was launched as a pilot in 2019 with the main purpose to provide ‘seed funds’ to carry out strategic disaster risk management activities in Member States. In 2020, the programme delivered its first results. Supported by these grants, Member States have developed long-term disaster risk reduction strategies (Croatia), prepared conceptual basis for a legal reform of civil protection system (Czechia), identified investment needs to address CBRN risks (Lithuania), launched preparatory work for setting up unified disaster loss databases and improving early warning systems (Latvia).

Under the UCPM, a joint DG ECHO-World Bank study was also carried out with the objective to provide some estimate of economic losses from climate-related hazards such as floods and forest fires. The study took as starting point the climate change scenarios developed by the PESETA study of the JRC. The study also intended to put forward recommendations for developing/improving financing instruments that can help the EU better manage climate risks in future. DG ECFIN, CLIMA, JRC, ENV and REGIO are members of the steering group that oversees the study.

Moreover, some specific projects financed under the prevention and preparedness programme also contributed directly to the overall objective of climate mainstreaming. These included for instance, CASCADE - (Community Safety Action for Supporting Climate Adaptation and Development, 2019) ([www.cascade-bsr.eu](http://www.cascade-bsr.eu)), which provided an assessment tool for integrated climate change risks and DRR management in urban contexts in the Baltic Sea Region, as well as prepared guidelines and training courses for local and national CPA, and organised policy dialogues between local, national, regional and international actors to develop policy recommendations for the region.

Another relevant example is the project WUIVIEW (Wildland-Urban Interface Virtual Essays Workbench, 2019), which has developed a risk management tool to help Wildland Urban Interface (WUI) communities adapting to forest fires due to climate change ([www.wuiview.org/](http://www.wuiview.org/)), as well as the project SAVEMEDCOAST, which mapped hotspots all along the Mediterranean coastline which are most exposed to sea level rise and therefore at risk from climate change impacts (costal floods, erosion etc). The project also developed awareness raising campaigns (educations workshop with stakeholders) in communities in high risk flooding areas.

### 6.1.4. Performance

#### *EU Civil protection Mechanism – Internal & External*

Over the course of the past multi-annual financial framework 2014-2020, DG ECHO has successfully integrated climate action into its activities, primarily in terms of adaptation to climate change – both through the civil protection and humanitarian programmes.

Climate change is firmly integrated in the Union Civil Protection Mechanism legislation, and Member States are asked to take into account climate risks in their disaster risk management, particularly in the new Reporting Guidelines on Disaster Risk Management, Art. 6(1)d of Decision No 1313/2013/EU2019/C 428/07 (Commission Notice C/2019/8929). Integrating climate risks in disaster risk management was proposed to be further strengthened in the Commission proposal from 2 June 2020 (COM(2020) 220 final) where climate change is explicitly mentioned in relation to disaster resilience goals, monitoring and providing advice based on scientific knowledge, and disaster resilience planning including scenario-building. Under the Prevention and Preparedness projects (“Track II”), in the 2014-2020 Multi-Annual Financial Framework (MFF), out of 123 projects awarded overall, 13-14 focussed on climate change (this does not yet include projects awarded in 2020). All of this suggests a successful integration of climate action into the civil protection programme between 2014-2020. The 3rd edition of the report “Overview of natural and man-made disaster risks the EU may face” (SWD(2020)330) addressed climate change as a main driver for a changing risk landscape.

## 6.2. Contribution to biodiversity mainstreaming

### 6.2.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.2.2. Explanation and justification on the financial contribution

### 6.2.3. Key achievements

#### *EU Civil protection Mechanism – Internal and external*

In the framework of the latest legislative revision, and following the provisional agreement reached in February 2021 by the co-legislators, the revised Decision No 1313/2013/EU should contribute to the overall EU ambition on biodiversity (i.e. 7.5% of the EU budget expenditure on biodiversity in 2024 and 10% in 2026 and 2027).

When implementing the revised Decision No 1313/2013/EU, the mainstreaming of biodiversity action in the Union policies shall be duly taken into account to the extent that the unpredictability and specific circumstances of disaster preparedness and response so allow.

### 6.3. Contribution to clean air financing

Not applicable

### 6.4. Contribution to gender equality

#### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.4.2. Key achievements and performance

#### *EU Civil protection Mechanism – Internal and external*

DG ECHO commits to gender-sensitive civil protection, including addressing specific vulnerabilities, and exchange on the issue of support to victims of gender-based violence during disasters. DG ECHO prompts gender equality through the disaster risk cycle and raises awareness of the principle of non-discrimination and inclusiveness. DG ECHO promotes gender-inclusive approach in response activities and ensures that the gender component is considered.

### 6.5. Contribution to the sustainable development goals

#### 6.5.1. Goals

#### *SDG 6 Ensure availability and sustainable management of water and sanitation for all*

DG ECHO and Participating States provide water, sanitation and hygiene (WASH) support through the UCPM response to those in need during humanitarian crises and ensure that the most vulnerable have access to WASH.

#### *SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all*

By providing a faster response to natural and man-made disasters, the UCPM helps minimise their impacts on the economical means of the affected areas, and therefore helps preserve the employment of local workers.

#### *SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable*

Through our support for a holistic disaster risk management at all levels and through the promotion of prevention actions aiming to reduce the number of deaths and the number of people affected, and decrease the direct economic losses caused by disasters, DG ECHO promotes a more resilient and sustainable urbanisation.

***SDG 13 Take urgent action to combat climate change and its impacts***

Through preventing, preparing for and responding to climate-related disasters, the UCPM contributes to combatting climate change and its impacts. Climate change impacts are also consistently factored into UCPM activities, including but not limited to risk assessments, early warning systems, funding calls and response capacities.

**6.5.2. Key achievements and performance*****SDG 6 Ensure availability and sustainable management of water and sanitation for all***

DG ECHO and Participating States provide water, sanitation and hygiene (WASH) support through the UCPM response to those in need during humanitarian crises and ensure that the most vulnerable have access to WASH.

***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

By providing a faster response to natural and man-made disasters, the UCPM helps minimise their impacts on the economical means of the affected areas, and therefore helps preserve the employment of local workers.

***SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable***

Through our support for a holistic disaster risk management at all levels and through the promotion of prevention actions aiming to reduce the number of deaths and the number of people affected, and decrease the direct economic losses caused by disasters, DG ECHO promotes a more resilient and sustainable urbanisation.

***SDG 13 Take urgent action to combat climate change and its impacts***

Through preventing, preparing for and responding to climate-related disasters, the UCPM contributes to combatting climate change and its impacts. Climate change impacts are also consistently factored into UCPM activities, including but not limited to risk assessments, early warning systems, funding calls and response capacities.

## **1. Overview**

### **1.1. Challenges**

The COVID-19 pandemic has caused immense human suffering across the European Union and pushed the EU health systems to their limits. The crisis spotlighted the fragility of the national and local health systems and the need for a coordinated strong action at Union level in complementing the health policies of the Member States in order to improve people's health throughout the Union and ensure that public health protection is taken into account in all Union policies.

The EU4Health Programme is a key instrument for delivering a comprehensive response to the health needs of the European citizens, reflecting the lessons learned from both the COVID 19 crisis and previous health programmes.

The Programme contributes to build strong foundations for a European Health Union, in which the EU and Member States work together to reinforce their coordination and to strengthen existing structures and mechanisms for better protection, prevention, preparedness and response against risks to human health.

The EU4Health Programme is a unique opportunity to address critical EU health challenges and improve the access to health for all European citizens addressing health inequalities and inequities in relation to healthcare, making sure that Europe remains the healthiest region in the world.

### **1.2. Mission (general objectives)**

The EU4Health Programme brings a Union added value and complements the policies of the Member States to pursue the general objectives of:

- improving and fostering **health in the Union** to reduce the burden of communicable and non-communicable diseases, by supporting health promotion and disease prevention, by reducing health inequalities, by fostering healthy lifestyles and by promoting access to healthcare;
- protecting people in the Union from serious **cross-border threats to health** and strengthening the responsiveness of health systems and coordination among the Member States in order to cope with serious cross-border threats to health;
- improving the availability, accessibility and affordability of **medicinal products and medical devices**, and crisis-relevant products in the Union, and supporting innovation regarding such products;
- strengthening **health systems** by improving their resilience and resource efficiency, in particular through:
  - supporting integrated and coordinated work between Member States;
  - promoting the implementation of best practices and promoting data sharing;
  - reinforcing the healthcare workforce;
  - tackling the implications of demographic challenges; and
  - advancing digital transformation.

The Programme will create efficiency gains and value-added impacts that could not be generated by action taken at national level.

Where applicable, the Programme will keep the 'One Health' approach recognising the interconnection between human health, animal health and more broadly with the environment in tackling threats to health.

### **1.3. Specific objectives**

The Programme will achieve its general objectives by means of ten specific objectives:

1. In synergy with other relevant Union actions, supporting actions for **disease prevention, for health promotion and for addressing health determinants**, including through:
  - the reduction of damage to health resulting from illicit drug use and addiction;
  - supporting actions to address inequalities in health, to improve health literacy, to improve patient rights, patient safety, quality of care and cross-border healthcare; and
  - supporting actions for the improvement of the surveillance, diagnosis and treatment of communicable and non-communicable diseases, in particular cancer and paediatric cancer, in synergy with other relevant Union actions;

- supporting actions to improve mental health, with special attention given to new care models and the challenges of long term care, in order to strengthen the resilience of the health systems in the Union.
2. Strengthening the capability of the Union for **prevention of, preparedness for, and rapid response to, serious cross-border threats to health** in accordance with relevant Union legislation, and improving the management of health crises, particularly through:
    - the coordination, provision and deployment of emergency healthcare capacity;
    - supporting data gathering, information exchange, surveillance, the coordination of voluntary stress testing of national healthcare systems; and
    - the development of quality healthcare standards at national level.
  3. Supporting actions to enhance the **availability, accessibility and affordability of medicinal products, medical devices and crisis-relevant products** by encouraging sustainable production and supply chains and innovation in the Union, while supporting the prudent and efficient use of medicinal products, in particular antimicrobials, and actions to support the development of medicinal products that are less harmful for the environment, as well as the environmentally-friendly production and disposal of medicinal products and medical devices.
  4. Supporting actions complementing **national stockpiling of essential crisis-relevant products**, at Union level, where needed, in synergy with other Union instruments, programmes and funds, without prejudice to Member State competences, and in close cooperation with relevant Union bodies.
  5. Establishing a **structure and training resources for a reserve of medical, healthcare and support staff** allocated voluntarily by Member States for its mobilisation in the event of a health crisis, in synergy with other Union instruments, programmes and funds, without prejudice to Member State competences and in close cooperation with the ECDC.
  6. Strengthening the **use and re-use of health data for the provision of healthcare and for research and innovation**, promoting the uptake of digital tools and services, as well as the digital transformation of healthcare systems, including by supporting the creation of a European health data space.
  7. Enhancing **access to quality, patient-centred, outcome-based healthcare and related care services**, with the aim of achieving universal health coverage.
  8. Supporting the development, implementation and enforcement and, where necessary, the revision of **Union health legislation** and supporting the provision of valid, reliable and comparable high-quality **data** for evidence-based decision-making and monitoring, and promoting the use of health **impact assessments** of other relevant Union policies.
  9. Supporting **integrated work among Member States, and in particular their health systems**, including
    - the implementation of high-impact prevention practices,
    - supporting work on HTA, and
    - strengthening and scaling up networking through the ERNs and other transnational networks, including in the area of diseases other than rare diseases, to increase the coverage of patients and improve the response to low prevalence and complex communicable and non-communicable diseases.
  10. Supporting **global commitments** and health initiatives by reinforcing the Union's support for actions by international organisations, in particular actions by the WHO, and fostering cooperation with third countries.

The Programme will need to be dynamic and flexible to adapt to new emerging health challenges, and to serve the EU and the Member States in their evolving needs and priorities, making sure that the support provided by the EU4Health Programme is based on national needs.

#### 1.4. Public intervention context

The new EU4Health Programme is a reinforced programme for the Union's action in the field of health, that will focus on EU-added value actions in line with the goals of the Union action and its competences in the area of public health.

Article 168 TFEU provides that the Union is to complement and support national health policies, encourage cooperation between Member States and promote the coordination between their programmes, while fully respecting the responsibilities of Member

States for the definition of their health policies and for the organisation, management and delivery of health services and medical care.

A broad range of beneficiaries could access the EU4Health programme funds such as national, European, and international health institutions, but also public authorities, academia/research institutes, health practitioners, as well as civil society organisations when eligibility criteria are met. Natural persons are not eligible for grants under the Programme.

## 1.5. Actions

The Programme is going to be implemented through a variety of possible eligible actions (listed in Annex I of the Programme).

The actions expected to be addressed by the 2021 Programme implementation are clustered under four over-arching 'programme strands', along with a transversal priority for cancer:

- Crisis preparedness – including actions for prevention, preparedness and rapid response to serious cross-border threats to health; for mitigating risks of shortages of medicines; and for ensuring coordination, provision and deployment of emergency healthcare capacity, including the preparatory actions for the European Health Emergency preparedness and Response Authority (HERA).
- Disease prevention – including actions enhancing the surveillance, diagnosis and treatment of communicable and non-communicable diseases; exchange of best practices and data; and health promotion.
- Health systems and healthcare workforce – including actions improving accessibility, efficiency and resilience of health systems; reducing inequalities in accessing health care; scaling up networking through the European Reference Networks.
- Digital – including actions strengthening the use and re-use of health data for the provision of healthcare and for research and innovation; advancing in the uptake of digital tools and services, as well as the digital transformation of healthcare systems; supporting the creation of a European Health Data space.
- Cancer is a major initiative and transversal priority, implemented by specific actions and actions under the other strands and linked to the Europe's Beating cancer plan.

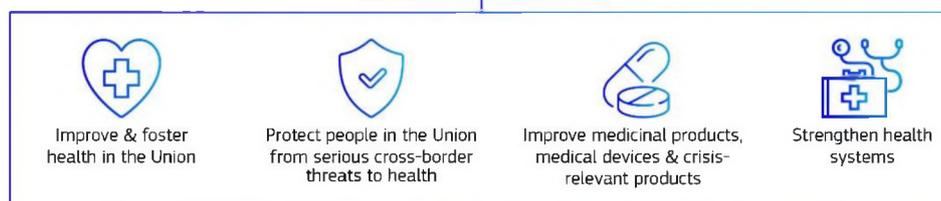

## 1.6. Delivery mode

The EU4Health Programme is mainly implemented by direct management, using in particular grants, prizes and procurement, as well as indirect management. Major part of the EU4Health Programme is expected to be delegated for implementation to the Health and Digital Executive Agency (HaDEA).

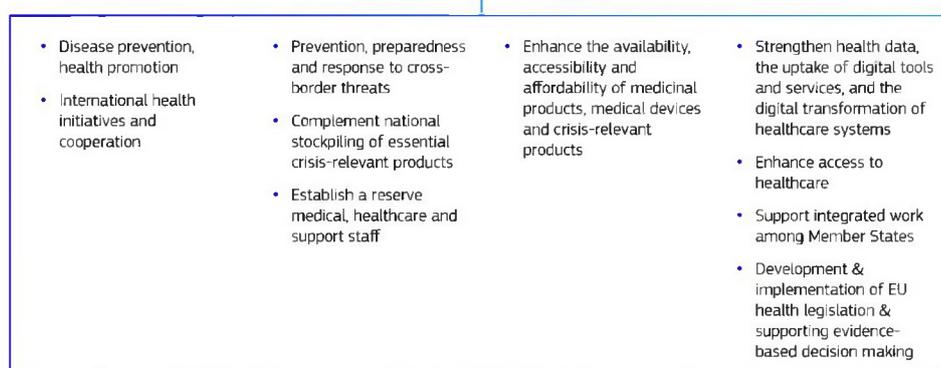

## 1.7. Graphic overview of the programme structure

## EU4Health objectives

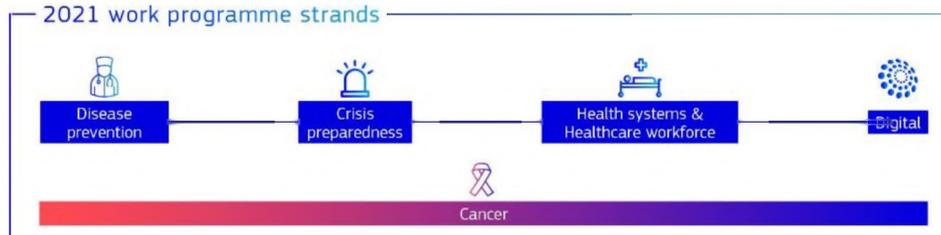

### General Objectives

### Specific Objectives

### 2021 work programme strands

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Procedure 2020/0105/COD COM (2020) 405, 28.5.2020 : Proposal for a Regulation of the European Parliament and of the Council on the establishment of a Programme for the Union's action in the field of health –for the period 2021-2027 and repealing Regulation (EU) No 282/2014	2021 - 2027	2 446,0

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							
	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
<b>Total</b>	<b>327,5</b>	<b>788,7</b>	<b>294,7</b>	<b>308,1</b>	<b>318,1</b>	<b>362,2</b>	<b>263,7</b>	<b>2626,9</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The EU4Health Programme is a new and stand-alone financial instrument that provides a solid basis for a coordinated Union action and an unprecedented EU investment in health; the new programme is also a response to lessons learned during the COVID-19 pandemic and adds actions to implement the Europe's Beating Cancer plan and the Pharmaceuticals Strategy. The EU4Health programme will ensure continuity with the work done under the MFF 2014-2020; in particular with the work for reducing the number of antimicrobial-resistant infections and improvement of vaccination rates. Building on the results of the Third Health Programme, the EU4Health programme will expand successful initiatives such as the European Reference Networks for rare diseases and will continue to pursue EU global commitments and health initiatives.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

DG SANTE has set up an informal Commission Expert Group to start discussions on the Commission's preparatory work and the priorities and strategic orientations of the 2021 Annual Work Programme before the entry into force of the basic act (EU4Health Programme) and the establishment of the Programme's governance bodies and processes. Agreement on the EU4Health programme was reached in Dec 2020 and a formal adoption is expected in March/April 2021.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

#### 1. Financial programming

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) No 282/2014 of the European Parliament and of the Council of 11 March 2014 on the establishment of a third Programme for the Union's action in the field of health (2014-2020) and repealing Decision No 1350/2007/EC	2014 – 2020	449,4

	Financial Programming (EUR million)							2020	Total Programme
	2014	2015	2016	2017	2018	2019			
Administrative support	1,5	1,5	1,5	1,5	1,5	1,5	1,5	10,5	
Operational appropriations	52,9	54,0	56,5	58,8	60,5	62,3	63,6	408,5	
Executive Agency	4,2	4,2	4,2	4,2	4,4	4,6	4,6	30,3	
<b>Total</b>	<b>58,6</b>	<b>59,8</b>	<b>62,2</b>	<b>64,5</b>	<b>66,4</b>	<b>68,3</b>	<b>69,7</b>	<b>449,4<sup>(*)</sup></b>	

(\*) Figure in 2014 prices

#### 2. Implementation rates

	Commitments	Payments
Implementation Voted Budget	452 141 420	300 378 249
Implementation carry-overs	0	4 880 526
Implementation Total	452 141 420	305 258 774
Total envelope*	452 353 300	
Cumulative implementation rate	100%	67%

(\*): Based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020, figures in current prices

As of first quarter 2021, 100% of the allocated budget (452.3 M€ on the period 2014-2020) has been committed through projects and other actions pursuing the Programme's objectives; 67% of the total budget (i.e. 305.3 M€) has been paid to participants/beneficiaries or for the procurement of services necessary for the implementation of the Programme. Outstanding payments (33% of the budget or 147 M€) account for projects or actions launched in the last 2-3 years which are not yet completed and therefore have not led to final payments by the Commission.

### 3. How is the programme performing ?

#### 3.1. Performance

##### 3.1.1. Introduction

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### 3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### 3.1.3. Previous programme performance

In line with the results of the mid-term evaluation of 2017, the Commission (DG SANTE) considers that the Health Programme has been performing well and has been effectively implemented, contributing to better health protection through its policies and activities, in accordance with Article 168 of the Treaty on the Functioning of the European Union. The programme has addressed efficiently the Commission priorities on the implementation of best practices for health promotion and diseases prevention, crisis preparedness and risk management, relevant information in the framework of the EU semester, mental health, and health and innovation.

In the period 2014-2020, the Court of Auditors published several reports assessing the implementation of the Health programme. In the Special report no 07/2019<sup>1</sup> on Cross-border healthcare access, the Court of Auditors mentioned: 'EU actions in cross-border healthcare enhanced cooperation between Member States. The Commission has overseen the implementation of the Cross-border Healthcare Directive well'. This Special report (SR 07/2019) also identified certain shortcomings and improvements to be made in terms of administrative burden reduction and long-term financial sustainability of the European Reference Networks (ERNs). In the ECA's Special report no 21/2019 on Addressing Antimicrobial resistance<sup>2</sup> it is emphasized that 'Fighting against antimicrobial resistance is complicated. The Commission and ECDC support to strengthen Member States One Health approach to antimicrobial resistance was valuable'. However, the Court observed challenges, particularly with regard to the sustainable implementation of the results in the Member States.

While reorienting and gearing a proportion of its resources towards fighting the covid-19 pandemic, the 3<sup>rd</sup> Health Programme continued the implementation of main actions under the programme with a view to enhancing and further consolidating key achievements over the implementation period 2014-2020.

A majority of indicators and sub-indicators (except one sub-indicator<sup>3</sup>) for assessing the performance of the Programme's general and specific objectives showed positive trends over the implementation period 2014-2020, with many of them meeting their targets set out for the year 2020. The performance indicators linked to the programme's specific objectives are relevant, measurable and realistic.

*Objective 1: promote health, prevent diseases, and foster supportive environments for healthy lifestyles:*

34 % of the overall Programme budget (EUR 96 million). From those, EUR 8 million were spent on cancer, inter alia to support screening programmes in MS, improve the quality of patients' lives, address survivorship issues, look into the impact of research in cancer and the uptake of innovative treatments; EUR 11 million were channelled towards the prevention of major risk factors i.e. on alcohol and tobacco control, physical activity and nutrition. Other activities addressed the prevention of chronic diseases, including through the promotion of uptake of validated best practices across the EU in cardiovascular disease or diabetes prevention.

*Indicator: number of Member States involved in health promotion and disease prevention, using evidence-based and good practices through measures and actions taken at the appropriate level in Member States*

*Objective 2: protect Union citizens from serious cross-border health threats:*

10 % of the overall budget, EUR 29 million; more than EUR 14 million for projects to ensure that EU Member States are well prepared to respond to a possible major health threat. These included several table top or other types of exercises addressing generic preparedness; capacity building actions such a quality assurance for diagnostic capacity, as well as specific activities addressing the air transport and shipping sectors. They also included several actions supporting Member States in addressing the challenges of the migratory crisis of 2015-2016.

Currently ongoing actions have been re-orientated as to provide coverage for specific needs regarding the Coronavirus threat (such as training for health professionals including practical advice- isolation, waiting rooms and reception areas, cleaning, appropriate PPE etc; as well as an offer for real-time RT-PCR for detection including coverage of costs for shipment of the samples, if needed).

*Indicator: number of Member States integrating coherent approaches in the design of their preparedness plans*

*Objective 3: support public health capacity-building and contribute to innovative, efficient and sustainable health systems:*

<sup>1</sup> [https://www.eca.europa.eu/Lists/ECADocuments/SR19\\_07/SR\\_HEALTH\\_CARE\\_EN.pdf](https://www.eca.europa.eu/Lists/ECADocuments/SR19_07/SR_HEALTH_CARE_EN.pdf)

<sup>2</sup> [https://www.eca.europa.eu/Lists/ECADocuments/SR19\\_21/SR\\_Antimicrobial\\_resistance\\_EN.pdf](https://www.eca.europa.eu/Lists/ECADocuments/SR19_21/SR_Antimicrobial_resistance_EN.pdf)

<sup>3</sup> **Indicator** : number of Member States involved in health promotion and disease prevention, using evidence-based and good practices through measures and actions taken at the appropriate level in Member States. **Sub-indicator: Cancer**

27 % of the overall budget, EUR 95 million. From those, EUR 30 million were invested in the collaboration on Health Technology Assessment, to develop commonly agreed tools and procedures, as well as carrying out joint assessments or early dialogues, in an approach recognizing the full life cycle of health technologies. Other actions supported the exchange of experience and best practices in addressing the ageing of the population, promoted integrated care models and practices (Joint Action on implementation of digitally enabled integrated person-centred care – JADECARE was launched in autumn 2020 and will run for three years) or supported the EU eHealth network in promoting the uptake of digital solutions. The Joint Action on health information helped to streamline and harmonise health information activities across Europe by working towards building a sustainable and solid infrastructure on EU health information and to enhance coherence and sustainability.

*Indicator: advice produced and the number of Member States using the tools and mechanisms identified in order to contribute to effective results in their health systems*

*Objective 4: facilitate access to better and safer healthcare for Union citizens:*

27 % of the overall budget, EUR 75 million. From those EUR 26 million were invested for set up cost and coordination of the European Reference Networks, including through the assessment of the networks and their healthcare provider members. The effort to jointly address the effects and challenges of increased anti-microbial resistance and healthcare acquired infections; the support to the Member States' collaboration in the area of blood, tissues and cells; and rare diseases were key priority areas of the health programme spending.

*Indicator: number of European reference networks established in accordance with Directive 2011/24/EU; number of healthcare providers and centres of expertise joining European reference networks; number of Member States using the tools developed*

The following actions corresponding to the Commission priorities<sup>4</sup> were taken:

*(i) Health security and Covid-19*

The Commission steered running actions in the area of health security to contribute to the fight against the pandemic. Key examples are: the [Joint Action Healthy gateways](#) supports the coordination among EU countries to improve capacity for combating cross-border health threats at points of entry, including ports, airports and ground crossings, and the [Joint Action on Strengthened International Health Regulations and preparedness \(SHARP\)](#)<sup>5</sup> which collaborated with the European Centre for Disease Prevention and Control (ECDC) [EVD-LabNet \(Emerging Viral Diseases-Expert Laboratory Network\)](#) in ensuring quality control and capacity building for precise diagnostics at an early phase of the pandemic and demonstrated the importance of using laboratory networks as a preparedness and response tool.

*(ii) Vaccination*

Vaccination was already high on the EU political agenda before the emergence of COVID-19. Previous work carried out in this area demonstrated the added value of EU cooperation in this area.

In December 2019, the Health Programme launched a study **on an EU citizens' vaccination card**. The proposed templates resulting from this study are tested in a sample of 10 000 citizens per country across 10 Member States, this pilot testing covering a potential population of more than 200 million citizens. In 2020, the **Joint Action on Vaccination** focused specifically on vaccine hesitancy and uptake, identified by the WHO in 2019 as one of ten top health threats to global health and included in the Commission's roadmap on strengthening cooperation against vaccine preventable diseases.

*(iii) Implementation of best practices for health promotion and diseases prevention:*

The online 'best practice portal' was launched in April 2018. Since June 2018, it counted more than 6 650 visitors from all EU Member States as well as neighbouring countries. Portal visitors can access good practices collected by previous Health Programme actions. Stakeholders can also submit a practice for evaluation.

As of 2020, more than 12 selected best practices are implemented across 75% of the EU countries, in areas such as integrated care; mental health and the fight against depression; nutrition and physical activity; prevention of alcohol abuse or chronic disease prevention and management.

Actions in the field of nutrition delivered important outputs and tools, justifying the need for public health decision makers to invest in prevention rather than cure. A review of the available evidence for cost-effective prevention interventions has identified the food reformulation as the 'best value for money' action to improve nutrition patterns. The Programme also supported the development of a database of nutritional information on processed food and drink products on the market in 16 Member States.

*(iv) The establishment of 24 European Reference Networks (ERNs):*

ERNs are virtual networks involving healthcare providers across Europe. They aim to tackle complex or rare medical diseases or conditions that require highly specialised treatment and a concentration of knowledge and resources. To review a patient's diagnosis and treatment, ERN coordinators are convening a 'virtual' advisory board of medical specialists across different disciplines, using a dedicated IT platform and telemedicine tools. This way, the medical knowledge and expertise travel rather than the patients.

<sup>4</sup> Priorities are defined in the recent annual work programmes of the 3<sup>rd</sup> Health Programme and in

<sup>5</sup> The JA SHARP supports coordination among EU reference laboratories to prevent, detect and respond to biological outbreaks, chemical contamination and environmental and unknown threats to human health

Using the clinical patient management system (CPMS), the members of the ERNs have already been able to consult, explore, diagnose and decide on cases of particular complexity. In February 2019, the ERNs had used 458 panels to discuss 444 patient cases, and the number of cases opened in the CPMS regularly evolves (see for example <https://ec.europa.eu/avservices/video/player.cfm?sitelang=en&ref=I164244>).

The first ERNs are up and running since March 2017. Over the next five years, as the ERNs reach full capacity, thousands of EU patients suffering from a rare or complex condition can expect to benefit. In addition, several networks received co-funding to set up disease and patient registries, building on the clinical patient management system provided through the DG SANTE IT platform.

(v) *Crisis preparedness and management:*

In 2018, the Joint Action EMERGE – Efficient response to highly dangerous and emerging pathogens at EU level – has delivered on its work for the improvement of capabilities for rapid laboratory diagnosis of new or emerging pathogens (e.g. sample sharing). The Joint Action also contributed to combating the outbreaks of ZIKA and Ebola.

The Health Programme is also playing a crucial role in addressing Antimicrobial Resistance (AMR), by defining common approaches to fight AMR and to control healthcare-associated infections in line with ongoing EU and international policies.

Funded under the AWP 2017 (EU contribution of EUR 6.9 million) the Joint Action on Antimicrobial Resistance and Healthcare-Associated Infections (EU-JAMRAI) supports EU Member States in developing and implementing effective one health action plans against antimicrobial resistance (AMR) and healthcare associated infections (HCAI).

(vi) *State of Health in the EU - (1) Country Health Profiles 2019 and (2) Health at a Glance 2020: Europe*

On 28 November 2019, the European Commission published 30 *Country Health Profiles* delivered as part of the *State of Health in the EU* cycle. The accompanying ‘Companion Report’ (a Commission Staff Working Document) and factsheet flagged five key challenges faced by EU health systems:

- Tackling the decline in vaccination confidence across the EU,
- Harnessing the digital transformation of health promotion & disease prevention,
- Strengthening the evidence base on access to healthcare,
- Shifting tasks and changing the skill mix to explore new ways of providing care,
- Breaking down silos for safe, effective and affordable medicines.

Several of these are closely linked to objective 3 of the Health Programme and to the key priorities of the 2019-2024 Commission as set out in the mission letter to Commissioner Kyriakides. Several of these actions were supported by the 3<sup>rd</sup> Health Programme (see below sections on health and innovation, vaccination and access to medicines).

In November 2020, the European Commission and the OECD published *Health at a Glance: Europe 2020*, which the first comparative study on how European countries have experienced and responded to the COVID-19 pandemic.

Delivered under the *State of Health in the EU* grant<sup>6</sup>, the joint EC-OECD report provided a much-needed preliminary assessment of the effectiveness of European countries’ COVID-19 containment and mitigation measures; health systems capacity; testing strategies; measures to protect vulnerable groups; and continuity of care for non-COVID patients. The report provides policymakers with high-quality evidence and emerging insights on how to develop more effective health policy interventions to build greater resilience in the short and the long term.

In addition to the chapter assessing countries’ resilience to the COVID-19 crisis, the 2020 edition of *Health at a Glance: Europe* provides an assessment of the health impact of air pollution on EU citizens. Lastly, the report also provides comparative analyses of the health status, risk factors, health expenditure, quality and access to care in 36 European countries.

(vii) *Accessible and affordable medical technologies:*

The *State of Health in the EU*’s ‘Companion Report’ raised the issue of access to affordable medical technologies whether pharmaceutical products or medical devices, as being essential for the sustainability and resilience of health systems. This is a challenging area, combining implementation of legislation (notably for medical devices); common if not harmonized life-cycle based assessment methods; shared information and expertise on pricing and procurement methods, including joint procurement or other collaboration mechanisms.

The contribution of the health programme is important in this area, through the following:

- It supports the work of civil society and the contribution to the EU level policy dialogue in this field of stakeholder organisations, through the operating grants awarded to Health Action International; the European Public Health Alliance; and the European Organisation of Rare Diseases Associations.

<sup>6</sup> The *State of Health in the EU* cycle was created in 2016 with a view to develop “expertise on performance assessments of health systems, [...] and build up country-specific and cross-country knowledge which can inform health policies at national and European level - including the work of the European Semester of economic policy coordination”.

- It provides continuing financial support to the work of the EUnetHTA 3 Joint Action: The piloting of the EU cooperation on Health Technology Assessment has proven successful. By the end of 2019, the EUnetHTA 3 Joint Action carried out 27 joint reports (13 assessments and 14 early dialogues).

*viii) Digital innovation – paving the way to a European health data space*

The Commission aims to support EU Member States in making the most of the potential of e-health to provide high-quality healthcare and reduce inequalities. Key to achieving this aim is the creation of a ‘European Health Data Space’, to promote health-data exchange and support research on new preventive strategies, as well as on treatments, medicines, medical devices and outcomes.

*ix) Supporting the implementation of the new medical devices regulations*

In 2019, through service contracts, the first communication and information campaign on Medical Devices was implemented, informing stakeholders about the legislative changes brought by the new EU legislation on Medical Devices and in-vitro Diagnostic Medical Devices which will enter into force in May 2020. The campaign mapped all relevant stakeholders, numbering more than 2000 contacts in and outside the EU. It produced eight informative factsheets translated in all EU languages, as well as in Chinese, Japanese and Arabic. The campaign also comprises the organisation of webinars addressed to stakeholders as well as other information material in a layman language.

In 2019, the Joint Action on Market Surveillance of Medical Devices (JAMS) came to its end, yielding significant added value by reinforcing the market surveillance system for medical devices and improving coordination and cooperation among all European Union’s countries.

SCHEER (Scientific Committee on health, environmental and emerging risks) is providing the Commission with risk assessment and scientific advice on medical devices (like hip implants, breast implants, phthalates used in medical devices...).

*x) Addressing health inequalities*

The Joint Action on Health Equity (JAHE), funded under the 3<sup>rd</sup> Health Programme 2014-2020 has been an important opportunity for Member States to work jointly to address health inequalities and achieve greater equity in health outcomes across all groups in society, in all participating countries and in Europe at large. The general objective of this initiative is to improve health and well-being of European citizens across all groups in society. It also has a specific focus on both vulnerable groups and migrants.

*xi) Tobacco control (JATC) and other joint actions:*

In 2020 the Joint Action on Tobacco control (JATC) produced key deliverables fostering an harmonised implementation of the Tobacco products’ directive across the EU: it mapped the implementation’s state of play across the EU; it conducted a needs assessment identifying the areas of support for national competent authorities; it assessed the laboratory testing capacity of national regulators; it looked at emerging trends and new challenges, such as the electronic cigarettes; it reviewed the system of enhanced reporting of additives; and it developed guidelines both on the technical and legal dimensions for improving data sharing and exchange from the EU-CEG across the Member States. The Health Programme also supported the **EU tobacco tracking and tracing system**, in cooperation with WHO and is implementing the development of a set of automatic alerts, exploiting the massive amount of traceability data so as to identify fraud patterns, suspicious behaviours and spot possible fraudsters<sup>7</sup>.

*xii) Cooperation with Member States through joint actions*

In addition to the above described Joint Action on Vaccination, four new **joint actions** were launched in 2020 to be completed in 2021; they are: (a). Strengthening cooperation between interested Member States and the Commission in the area of tobacco control [as a follow up of the above described JATC]; (b). Support to Member States for the implementation of best practices in the area of mental health; (c). Increasing the capacity of National Focal Points to provide guidance, information and assistance to national applicants on the EU4Health programme and other EU funding instruments; (d). Differences in national implementation of the General Data Protection Regulation (GDPR) in the health sector-Development of a code of conduct for data processing.

### Main achievements of the Health programme:

- Following the outbreak of the covid-19 pandemic in the first quarter of 2020, the Programme’s on-going actions have been reoriented in emergency mode, towards combatting the pandemic. For example, the Healthy Gateways Joint Action<sup>8</sup> organised training courses for trainers and specific webinars, providing guidance including questions and answers on points of entry and borders. The SHARP Joint Action<sup>9</sup> (Strengthened International HeAlth Regulations and Preparedness in the EU) supported laboratory diagnostics for covid-19, and mapping the current existing facilities and clinical capacities. In addition to the Health Programme, and in the context of the Joint Procurement Agreement to procure medical countermeasures<sup>10</sup> DG SANTE launched, in emergency mode, joint procurements for protective personal equipment (PPE), for ventilators/respirators, laboratory equipment, covid-19 treatments and vaccines.
- In April 2018 DG SANTE launched the online ‘best practice portal’. Since June 2018, it counted more than 6 650 visitors from all EU Member States as well as neighbouring countries.

<sup>7</sup> The current COVID-19 related restrictions are impacting progress in this work: the contractor cannot access the data room located in the Commission premises

<sup>8</sup> [www.healthygateways.eu](http://www.healthygateways.eu)

<sup>9</sup> [www.sharpja.eu](http://www.sharpja.eu)

<sup>10</sup> [https://ec.europa.eu/health/preparedness\\_response/joint\\_procurement\\_en](https://ec.europa.eu/health/preparedness_response/joint_procurement_en)

- Efficient response to highly dangerous and emerging pathogens at EU level (Joint Action EMERGE) and improvement of capabilities for rapid laboratory diagnosis of new or emerging pathogens (e.g. Ebola, Zika).
- The establishment of 24 European Reference Networks (ERNs), which are providing greater access to high quality healthcare and information, accurate diagnosis and appropriate treatment to patients affected by rare or low prevalence diseases. In this first phase (2017-2018), ERNs include more than 900 highly specialised healthcare providers in 300 hospitals across the EU.
- In 2020 DG SANTE concluded a new call for expression of interest for healthcare providers (HCPs) wishing to join ERNs. Chafea subsequently launched a request for services to the Independent Assessment Bodies (IABs) to assess the compliance of the HCPs with the criteria included in the relevant EU legislation.
- 2020 also marked an acceleration of the work on patient registries within the ERNs, in line with the digital innovation priority: EUR 3,8 million were allocated through 19 grants.
- Effective evaluations and studies conducted: in 2020, DG SANTE/CHAFEA launched a request for services to prepare the impact assessment of the legislation on blood tissues and cells (BTC). An evaluation of this landmark legislation was carried out in 2019, leading to specific recommendations for its revision. Chafea signed two important service contracts targeting Antimicrobial resistance addressing both human and animal dimensions of the problem under the ‘One Health’ strategy. A review of the available evidence for cost-effective prevention interventions has identified the food reformulation as the ‘best value for money’ action to improve nutrition patterns. A service contract was concluded in 2020 to develop a database of nutritional information on processed food and drink products on the market in 16 Member States. This work is complemented by a second study which will map fiscal measures and pricing policies applied to alcohol and products high in fat, sugar and salt (HFSS), including non-alcoholic beverages. The study ‘Support for the health workforce planning and forecasting expert network - SEPEN’ concluded that 75% of EU countries have health workforce planning systems in place; but that their focus remains limited to planning medical professions (GPs, medical specialists), while an innovative approach would require an enlarged scope of planning, encompassing all five sectoral health professions (physicians, dentists, nurses, midwives, pharmacists). The tender on a EU citizens’ vaccination card, started in December 2019 has already completed the mapping (both form and content) of existing vaccination cards and the development of three card templates (paper and digital). Currently, the proposed templates are being tested in a sample of 10 000 citizens/country across 10 Member States, this pilot testing covering a potential population of more than 200 million citizens.
- Establishment of an EU quality register ensuring the safety of medical devices.
- Establishment of an Organ Database, which has helped 34 000 transplants only in 2017.
- Set up of an EU-wide tobacco tracking and tracing system to combat illicit tobacco products trafficking.

#### **The weak aspects of the programme:**

Following the ex-post evaluation of the second Health Programme, the Commission undertook to work on three main aspects of the third Health Programme, as stated in its report to the European Parliament and the Council in May 2016: These commitments were to:

- improve monitoring, reporting and dissemination efforts
- encourage participation of all Member States and other participating countries, and to work with all Member States, particularly those with greater public health needs; and
- develop synergies with the Commission’s main priorities and other programmes.

These points are still valid and the Programme will continue to work on these areas. In particular for the dissemination of results and implementation of best practices in close cooperation with other Programmes investing in health.

The experience from the ongoing Covid-19 crisis has demonstrated that the EU must improve health systems ready to provide state of the art services and care and to be prepared to cope with epidemics and other unforeseeable challenges.

The crisis showed for instance the importance of testing, contact tracing and public health surveillance as essential aspects of preparedness and response. It also uncovered the need for a smooth functioning single market and access to personal protective equipment, medicines and medical devices. Another the key lesson learned was that, whilst physical infrastructure could be expanded, the most pressing need became the availability of healthcare staff that were competent within intensive care units. In some instances, health care service reservists and medical students were called in and, where needed, rapid training was provided.

Maintaining rapid access to surge public health capacities, without neglecting other areas of healthcare is therefore essential, as well as non-pharmaceutical countermeasures, support to vulnerable groups (elderly, those with underlying health conditions, socially marginalised) and equitable access to vaccines.

Overall, the crisis spotlighted the fragility of the national and local health systems and the need for a coordinated strong action at Union level in complementing the health policies of the Member States in order to improve people’s health throughout the Union and ensure that public health protection is taken into account in all Union policies.

The weaknesses that have been detected will be addressed in the new programme (EU4Health<sup>11</sup>), which will be able to support Member States in the transition to better preparedness and stronger health systems. The new programme will bring together two

<sup>11</sup> The objectives of the EU4Health Programme are presented in section 1- Overview of the present document  
EU4Health Programme

strands of actions; a longer-term vision of continuously improving health conditions across the Member States, through better disease prevention, health promotion, access, diagnosis and treatment – objectives which have already been pursued through the currently existing programme. The second strand on health security would endow the EU and Member States with the preparedness and responses capacities to swiftly react to health emergencies. Both strands would contribute to tackling structural weaknesses of European health systems.

### 3.2. Key achievements

### 3.3. Evaluations, studies and reports

The key findings of the latest evaluation (Mid-Term evaluation of the 3<sup>rd</sup> Health Programme [https://ec.europa.eu/health/funding/programme/2014-2020/midterm\\_evaluation\\_en](https://ec.europa.eu/health/funding/programme/2014-2020/midterm_evaluation_en)) have been presented in the Programme Statements of 2018.

The Mid-term evaluation of the 3<sup>rd</sup> Health programme 2014-2020 was published in the Commission Report to the European Parliament and to the Council COM(2017) 586 final. The conclusion was that implementation of the Programme was on track, in alignment with the Commission's main priorities under Article 168 TFEU and the SDG, striving to maximise synergies with other EU policies and financial instruments such as Horizon 2020. All thematic priorities remained valid and most actions delivered useful outcomes with high EU-added value, in particular for crisis management and for the safety and security in Europe.

The open public consultation provided strong support for continued cooperation through the Programme, particularly in areas such as health promotion, disease prevention and eHealth.

The Staff Working Document SWD(2017) 331 final accompanies the Commission's report on the mid-term evaluation. It presents the main findings based on an independent external study conducted from May 2016 to May 2017. The conclusions of the evaluation were used to improve the implementation of the Health Programme in 2018-2020 and serve as a basis for the new Health Programme.

The evaluation indicated that major achievements were:

- establishing 24 European Reference Networks;
- supporting Member States to increase their capacity-building to respond to outbreaks (e.g. Ebola and Zika viruses);
- contributing to the EU's migration policy by supporting Member States to respond to the health needs of high influx of migrants and refugees;
- training health professionals and other front-line staff.

Other achievements of the health programme included exchanges of good practice in areas as diverse as alcohol reduction, cancer screening, HIV/AIDS and TB prevention, additional support for EU health legislation on medicinal products and medical devices, the eHealth Network activities and Health Technology Assessment.

A significant progress represented the joint work with the OECD and the European Observatory on Health Systems and Policies. This collaboration brought together internationally renowned expertise in the State of Health in the EU cycle to strengthen country-specific and EU-wide knowledge on health issues.

Compared to the second Health Programme, the 3rd Health programme design took a more strategic view of a mid-term perspective and has demonstrated its value as an effective and flexible management tool capable of covering unforeseeable needs (refugees' crisis).

The external mid-evaluation of the 3rd Health programme 2014-2020 ('3HP') concluded that the programme complemented and supported to the policies of Member States, in terms of improving the health of EU citizens and reducing health inequalities. The 3HP represented a major improvement. The new structure has increased the Health Programme's ability to target important health needs where it can add value (such as anti-microbial resistance and 'e-Health' in the context of the digital single market to name just a few). It demonstrated efforts to identify common, structural challenges facing Member States. The mechanisms for pooling expertise at EU level and supporting MS in their health reforms have been set up (namely the Expert Panel on Health and the Expert Group on Health Systems Performance Assessment) and the 3HP was providing direct financial support to the OECD and WHO to produce country profiles, giving a clear understanding of country specific needs. This focus was recognised by Member States: the consultation of Programme committee members and national focal points representing Member States' interests confirmed the 3HP structure matches the main health challenges in their country.

The Commission has launched the final (ex-post) evaluation of the 3HP, which will assess the relevance of its objectives, the added value of its actions, whether the programme delivered effectively and efficiently against its intended objectives, the coherence of the actions within the programme and of the whole programme with other relevant EU initiatives.

The final evaluation of 3HP will also follow up on how the recommendations from its mid-term evaluation (2016) were taken into account and its results will serve as input to the implementation of the successor health programme (EU4Health Programme) over the period 2021-2027.

## **4. Programme 2021-2027 - Key monitoring indicators**

Justification of the trend	

**Specific Objective 2 :identify and develop coherent approaches and promote their implementation for better preparedness and coordination in health emergencies**

**Indicator 1: number of Member States integrating coherent approaches in the design of their preparedness plans**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0	0	4	18	20	22	24	28			28
	Actual Progress									Final
	0	16	16	16	22	22	22			

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Member States
Cut-Off Date	
Data source	
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Actual results on the indicators will be available after the next reporting exercise by Member States on preparedness and response planning under Article 4 of Decision 1082/2013/EU. The next reporting exercise took place in 2020.

Justification of the trend	

### Specific Objective 3 :identify and develop tools and mechanisms at Union level to address shortages of resources, both human and financial, and to facilitate the voluntary uptake of innovations in public health intervention and prevention strategies

**Indicator 1:advice produced and the number of Member States using the tools and mechanisms identified in order to contribute to effective results in their health systems**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Advice produced, in particular the number of Health Technology Assessments (HTA) produced per year										
2012	Milestones									2020
2	11	6	12	18	22	29	50			50
	Actual Progress									Final
	6	9	0	4	22	27	41			
Number of Member States using the tools and mechanisms identified in order to contribute to effective results in their health systems										
2012	Milestones									2020
		5	9	8	10	12	18			18
	Actual Progress									Final
		5	10	9	22	23	23			

Are we on track	On track
Indicator type	Output
Unit of measurement	For second sub indicator: Number of Member States HTA bodies reporting uptake of joint HTA reports produced by EUnetHTA.
Cut-Off Date	01/02/2021
Data source	EUnetHTA JA3 (2017-2021).
Narrative	
Methodology	Annually
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Relevant for the first sub indicator: In 2020, EUnetHTA Joint Action 3 carried out 40 joint reports. This is an increase from the previous years, especially in the difficult context of the COVID-19 pandemic. In addition to 18 joint assessments and early dialogues (that are well-established joint HTA activities), EUnetHTA adapted to the COVID-19 crisis by introducing two new type of joint reports: rapid collaborative reviews of SARS-CoV-2 diagnostic methods (2 reports) and rolling and rapid collaborative reviews of potential treatments for COVID-19 (21 reports). Relevant for the second indicator: The uptake of joint HTA reports by MS depends on the needs of national HTA bodies (i.e. was affected by the COVID-19 crisis) and the market strategy of health technology developers (e.g. usually a health technology is not introduced simultaneously in all MS)
