The SWD pointed out that cooperation is an effective way to achieve this since it is likely that the development of a new generation of major defence systems and new defence technologies is increasingly beyond the reach of EU Member States acting on their own and that no single European country can afford to maintain a full spectrum defence industrial base and corresponding defence capabilities on its own. The EU can make a substantive contribution to fostering defence cooperation schemes and provide targeted incentives to support legal entities in developing new defence products and technologies while bearing in mind the specificities of the defence market where solely Member States as end-users create and shape the demand. The SWD concluded that the European defence industry faces significant challenges linked to increasing costs, low investments in defence R&D, fragmentation and limited cooperation and that a single and coherent Fund at EU level providing support for the full cycle of research and development of defence capabilities will bring significant value added by incentivising collaborative defence research and development projects in Europe in key capability areas. It will thus foster the competitiveness of the European defence industry whilst the expected benefits will outweigh the costs.

In this regard, the SWD also concluded that a globally competitive defence industry in Europe is not only important in terms of strategic autonomy and security but also economically significant as European defence companies yield high annual turnovers and are important employers of highly skilled individuals. Furthermore, important synergies exist between the defence and civil sectors. Therefore, Investing in the defence sector produces positives externalities not only in terms of direct creation of high value-added within the EU but also indirect spill-over in other sectors. It will bring benefits to the whole “eco-system” including notably SMEs and Research Institutions, as well as prime contractors.

Inter-institutional negotiations to clear the way for final adoption by the European Parliament and the Council of the proposal for a Regulation establishing the EU Defense Fund Regulation were successfully concluded. In parallel, preparatory works on the EDF Work Programme and discussions with key stakeholders were conducted in 2020 and will be continued.

#### **4. Programme 2021-2027 - Key monitoring indicators**

##### **Specific Objective 1 :Support collaborative research that could significantly boost the performance of future capabilities throughout the Union**

###### **Indicator 1:Participants: Legal entities involved**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	No data
Indicator type	Output
Unit of measurement	The number of unique entities involved in collaborative Research and Development (R&D) actions financially supported by the European Defence Fund (EDF)
Cut-Off Date	31/12/2023
Data source	European Commission, EDF grant agreements
Link to the objective	Outreach and inclusiveness of the actions financially supported by the EDF, therefore contributing to strengthening and improving the agility of both defence supply and value chains, widening cross-border cooperation between legal entities. This indicator also contributes to the specific objective 2 and the computation takes into account both research and development actions
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	Cumulative count for all the years for which data is available. The breakdown of the number of entities by size, type and country of establishment is also provided.
Full metadata available at this address	
Justification of the trend	N/A

###### **Indicator 2:Collaborative Research: Funded actions**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									

<sup>3</sup> <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52018SC0345>

	Actual Progress										Final

Are we on track	No data
Indicator type	Output
Unit of measurement	Number (count) and Value in EUR million of collaborative defence research actions financially supported by the European Defence Fund (EDF)
Cut-Off Date	31/12/2023
Data source	European Commission, EDF grant agreements
Link to the objective	The capacity of the EDF to achieve a genuine effect and efficiently deliver in supporting collaborative defence research that can maximise innovation and introduce new defence products and technologies (including disruptive ones) will strongly depend on the uptake of the Fund.
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	The data is presented as a cumulative value for all research actions funded and cumulative number for all the years for which data is available.
Full metadata available at this address	
Justification of the trend	N/A

### Indicator 3: Collaborative Research: Share of contracts awarded involving collaboration with cross-border SMEs and midcaps

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target	
	Milestones										
	Actual Progress										Final

Are we on track	
Indicator type	Output
Unit of measurement	Percentage (share of the eligible costs of the actions that is allocated to cross-border SMEs and midcaps in research actions)
Cut-Off Date	31/12/2023
Data source	European Commission, EDF grant agreements
Link to the objective	Supporting collaborative actions and cross-border cooperation between legal entities throughout the Union, in particular SMEs and mid-caps as well as strengthening and improving the agility of both defence supply and value chains, widening cross-border cooperation between legal entities.
Link MFF 14-20 / MFF 21-27	MFF 14-20 precursor PADR will provide indication on the target.
Other methodological comments	The data is determined on the basis of the information provided by the beneficiaries. The indicator will present the average share for all the years for which data is available.
Full metadata available at this address	
Justification of the trend	N/A

### Indicator 4: Collaborative Research: Share of recipients that did not carry out research activities with defence applications before the entry into force of the Fund

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target	
	Milestones										
	Actual Progress										Final

Are we on track	
Indicator type	Result
Unit of measurement	Share of recipients expressed as percentage.
Cut-Off Date	31/12/2023
Data source	European Commission, based on grant agreements and information provided by the beneficiaries on past research activities.
Link to the objective	By attracting and integrating non-traditional players in the defence industrial and technological base, robustness of the supply and expertise base increases. Moreover, synergies between civil and defence research can be exploited with the aim to increase the innovative potential of the defence industry.
Link MFF 14-20 / MFF 21-27	MFF 14-20 precursor PADR will provide indication on the target and will be taken into account as previous research activity with defence applications.
Other methodological comments	The share is based on a cumulative count of (unique) recipients for all the years for which data is already available. Data is partially based on information provided by the beneficiaries.
Full metadata available at this address	
Justification of the trend	N/A

**Indicator 5: Innovation products: New patents deriving from projects financially supported by the Fund**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number (of patent applications and patents awarded deriving from actions financially supported by the EDF).
Cut-Off Date	31/12/2026
Data source	European Commission, based on reports submitted by the beneficiaries.
Link to the objective	The number of patents deriving from actions supported by the EDF provides an indication of the generation of innovative results. Innovations generated in projects targeting defence applications can have spill-over effects to other sectors of the economy. This indicator also contributes to the specific objective 2 and the computation takes into account both research and development actions.
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	Data is gathered during the time where the consortia are subject to reporting obligations. Aggregated distribution of patents amongst mid-caps, SMEs and legal entities that are neither mid-caps nor SMEs and aggregated distribution of patents per Member State will also be provided.
Full metadata available at this address	
Justification of the trend	N/A

**Specific Objective 2 :Support collaborative development of defence products and technologies consistent with defence capability priorities commonly agreed by Member States notably within the Capability Development Plan****Indicator 1: Collaborative capability development: Funded actions that address the capability shortfalls identified in the Capability Development Plan**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	No data
Indicator type	Output
Unit of measurement	Number and Value in EUR (million), cumulated over years.
Cut-Off Date	31/12/2023
Data source	European Commission, EDF grant agreements
Link to the objective	The EDF should support collaborative development actions consistent with the defence capability priorities commonly agreed by Member States within the Framework of the Common Foreign and Security Policy and particularly in the context of the Capability Development Plan (CDP), whilst regional and international priorities serving the Union's security and defence interest, may be taken into account.
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	The indicator will provide the cumulative number and value (cost of the actions) of funded development actions addressing the capability shortfalls identified in the Capability Development Plan (CDP) and provide a comparison with the overall number and value of the development actions funded.
Full metadata available at this address	
Justification of the trend	N/A

**Indicator 2: Continuous support over the full R&D cycle: Share of projects building on the results of previously EU-supported defence R&D actions.**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Share of research and development actions fulfilling the condition within the year relative to the total number of actions supported within the year. The same set of IPR can be counted multiple times across different supported actions.
Cut-Off Date	31/12/2023
Data source	European Commission, grant agreements and information provided by the beneficiaries.
Link to the objective	Support of collaborative research projects, aiming at introducing new defence products and technologies and to the specific objective to support collaborative development projects contributing to greater efficiency of spending and reducing the risk of unnecessary duplication. This indicator also contributes to the specific objective 1 and the computation takes into account both research and development actions.
Link MFF 14-20 / MFF 21-27	Projects supported by MFF 14-20 precursors PADR and EDIDP are considered as previously supported projects.
Other methodological comments	'Previously supported actions' refer to actions financially supported by the EDF, the PADR or the EDIDP for which the grant agreement or contract has been signed before the considered action.
Full metadata available at this address	
Justification of the trend	N/A

### Indicator 3: Job creation / support: Defence R&D employees supported in funded actions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of Annual Full-time equivalents aggregated over research and development actions, cumulated over years.
Cut-Off Date	31/12/2023
Data source	European Commission, EDF grant agreements
Link to the objective	Continuous support of the European Defence Technological and Industrial Base R&D capacity and of the highly specialised expertise in defence research and development. The number of supported R&D employees is linked to the undertakings' capacity to provide innovative products. This indicator also contributes to the specific objective 1 and the computation takes into account both research and development actions.
Link MFF 14-20 / MFF 21-27	MFF 14-20 precursors PADR and EDIDP will provide indication on the target.
Other methodological comments	The indicator measures the R&D employees costs directly supported within the consortium and subcontractors for the duration of the supported action.
Full metadata available at this address	
Justification of the trend	N/A

## 5. Programme 2014-2020 - Key monitoring indicators

### Previous Program 1 : European Defence Industrial Development Programme

#### Specific Objective 1 : To foster the competitiveness, efficiency and innovation capacity of the EU defence industry, by supporting actions in their development phase

##### Indicator 1: Total value of funded cooperative projects

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
						242,95	497,10			497,10
	Actual Progress									Final
						246,72				

Are we on track	On track
Indicator type	Output
Unit of measurement	Number (count). Value in EUR million.
Cut-Off Date	31/12/2020
Data source	EDIDP Grant Agreements and EDIDP Contribution Agreement signed with OCCAR (for direct

	awards)
Narrative	
Methodology	The milestones are based on the accumulated budget appropriations published in the Commission Implementing Decision on the financing of the EDIDP and the adoption of the Work Programme for the years 2019 and 2020. The actual progress is the accumulated EU budget of the signed EDIDP grant agreements plus the budget appropriations reserved for the direct awards to be managed by OCCAR. The accumulated total eligible costs of the projects consist of the EU budget of the signed EDIDP grant agreements plus the co-funding received from the Member States. These figures are provided in notes below the table.
Link MFF 14-20 / MFF 21-27	The European Defence Industrial Development Programme (EDIDP) supports collaborative defence development actions with an overall budget of EUR 497.1 million over 2019-2020.
Other methodological comments	Data on actual progress for 2019: the accumulated EU budget of the signed EDIDP grant agreements is equal to EUR 200.37 million. The accumulated total eligible costs of these projects, including co-funding from the Member States, equals to EUR 279.11 million. Data for year 2020: will be available during second half of 2021, when the corresponding grant agreements will be concluded. They are listed as non-available (NA) in the table.
Full metadata available at this address	
Justification of the trend	The indicator is on track (the milestone for 2019 has been achieved). There are no sufficient data to analyse the future trend).

### Specific Objective 2 :To support and leverage the cooperation between undertakings, including small and medium-sized enterprises and midcaps, and collaboration between Member States in the development of defence products or technologies.

#### Indicator 1:Average number of Member States in which the undertakings participating in a consortium receiving funding are established

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
						5	5			5
	Actual Progress									Final
						7				

Are we on track	On track
Indicator type	Output
Unit of measurement	Number (Rounded)
Cut-Off Date	31/12/2020
Data source	Signed EDIDP Grant Agreements
Narrative	
Methodology	The calculation includes beneficiaries, linked third parties, and subcontractors involved in the action.
Link MFF 14-20 / MFF 21-27	The European Defence Industrial Development Programme (EDIDP) supports collaborative defence development actions with an overall budget of EUR 497.1 million over 2019-2020.
Other methodological comments	Data for the year 2020 will be available during the second half of 2021 when the corresponding grant agreements will be concluded. They are listed as non-available (NA) in the table.
Full metadata available at this address	
Justification of the trend	The indicator is on track (the milestone for 2019 has been achieved). There are no sufficient data to analyse the future trend.

#### Indicator 2:Average number of companies involved as consortium members in a funded cooperative project

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
						5	5			5
	Actual Progress									Final
						14				

Are we on track	On track
Indicator type	Output
Unit of measurement	Number (Rounded)
Cut-Off Date	31/12/2020
Data source	Signed EDIDP Grant Agreements
Narrative	
Methodology	The calculation includes beneficiaries, linked third parties, and subcontractors involved in the action.
Link MFF 14-20 / MFF 21-27	The European Defence Industrial Development Programme (EDIDP) supports collaborative defence development actions with an overall budget of EUR 497.1 million over 2019-2020.

Other methodological comments	Data for the year 2020 will be available during the second half of 2021 when the corresponding grant agreements will be concluded. They are listed as non-available (NA) in the table.
Full metadata available at this address	
Justification of the trend	The indicator is on track (the milestone for 2019 has been achieved). There are no sufficient data to analyse the future trend.

### Indicator 3: Number of SMEs involved in projects funded

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
						60	120			120
	Actual Progress									Final
						83

1.8. Legal basis and financial programming .....	1089
1.9. Link with the 2014-2020 MFF .....	1090
1.10. Relevant websites providing more information .....	1090
2. Where are we in the implementation ? .....	1090
2.1. Programme 2021-2027 .....	1090
2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations .....	1105
3. How is the programme performing ? .....	1117
3.1. Performance .....	1117
3.2. Key achievements .....	1130
3.3. Evaluations, studies and reports .....	1154
4. Programme 2021-2027 - Key monitoring indicators .....	1154
Specific Objective 1 :To support and foster dialogue and cooperation with third countries and regions in the Neighbourhood, in Sub-Saharan Africa, in Asia and the Pacific, and in the Americas and the Caribbean; to develop special strengthened partnerships and enhanced political cooperation with the European Neighbourhood, founded on cooperation, peace and stability and a shared commitment to the universal values of democracy, rule of law and respect for human rights, and aiming at deep and sustainable democracy and progressive socio-economic integration as well as people-to-people contacts .....	1154
Specific Objective 2 :At global level, to protect, promote and advance human rights, including gender equality and the protection of human rights defenders, including in the most difficult circumstances and urgent situations, democracy, and the rule of law, including accountability mechanisms, to support civil society organisations, to further stability and peace, prevent conflict, thereby contributing to the protection of civilians, to address other global challenges such as, climate change, protection of biodiversity and the environment, as well as migration and mobility; .....	1155
Specific Objective 3 :To respond rapidly to: situations of crisis, instability and conflict including those which may result from migratory flows and forced displacement and hybrid threats; resilience challenges, including natural and man-made disasters, and linking of humanitarian aid and development action; as well as the Union's foreign policy needs and priorities .....	1159
5. Programme 2014-2020 - Key monitoring indicators .....	1161
Previous Program 1 : European Neighbourhood Instrument (ENI) .....	1161
General Objective 1 :Establishing an area of shared prosperity and good neighbourliness involving the Union and the partner countries by developing a special relationship founded on cooperation, peace and security, mutual accountability and shared commitment to universal values of democracy, the rule of law and respect for human rights in accordance with the Treaty on EU .....	1161
Specific Objective 1 :Promoting human rights and fundamental freedoms, the rule of law, principles of equality and fight against discrimination in all its forms, establishing deep and sustainable democracy, promoting good governance, fight against corruption, strengthening institutional capacity at all levels and developing a thriving civil society including social partners. ....	1163
Specific Objective 2 :Achieving progressive integration into the Union internal market and enhanced sector and cross-sectoral cooperation including through legislative approximation and regulatory convergence towards Union and other relevant	

international standards and improved market access including through deep and comprehensive free trade areas, related institution building and investments, notably in interconnections. ....	1164
Specific Objective 3 :Creating conditions for the better organisation of legal migration and the fostering of well managed mobility of people, for the implementation of existing or future agreements concluded in line with the Global Approach to Migration and Mobility, and for promotion of people-to-people contacts, in particular in relation to cultural, educational, professional and sporting activities. ....	1165
Specific Objective 4 :Supporting smart, sustainable and inclusive development in all aspects; poverty reduction, including through private-sector development and reduction of social exclusion; promotion of capacity building in science, education and in particular higher education, technology, research and innovation; promotion of internal economic, social and territorial cohesion; rural development; public health; environmental protection, climate action and disaster resilience. ....	1166
Specific Objective 5 :Promoting confidence building, good neighbourly relations and other measures contributing to security in all forms and the prevention and settlement of conflicts, including protracted conflicts. ....	1167
Specific Objective 6 :Enhancing sub-regional, regional and Neighbourhood wide collaboration as well as Cross-Border Cooperation. ....	1168
Previous Program 2 : European Instrument for Democracy and Human Rights (EIDHR) .....	1170
General Objective 1 :Enhancing the respect for and observance of human rights and fundamental freedoms, as proclaimed in the Universal Declaration of Human Rights and other international and regional human rights instruments, and strengthening their protection, promotion, implementation and monitoring, mainly through support to relevant civil society organisations, human rights defenders and victims of repression and abuse. ....	1170
General Objective 2 :Supporting, developing and consolidating democracy in third countries, by enhancing participatory and representative democracy, strengthening the overall democratic cycle, in particular by reinforcing an active role for civil society within this cycle, the rule of law and improving the reliability of electoral processes, in particular by means of election observation missions. ....	1171
Specific Objective 1 :Support to Human Rights and Human Rights Defenders in situations where they are most at risk. ....	1171
Specific Objective 2 :Support to other priorities of the Union in the fields of human rights .....	1172
Specific Objective 3 :Support to Democracy. ....	1173
Specific Objective 4 :EU Election Observation Missions. ....	1174
Specific Objective 5 :Support to targeted key actors and processes, including international and regional human rights instruments and mechanisms. ....	1175
Previous Program 3 : Instrument contributing to Stability and Peace .....	1176
General Objective 1 :To provide direct support for the Union's external policies by increasing the efficiency and coherence of the Union's actions in the areas of conflict prevention, crisis preparedness and crisis response and peace-building, and in addressing global and transregional threats. ....	1176
Specific Objective 1 :In a situation of crisis or emerging crisis, to swiftly contribute to stability by providing an effective response designed to help preserve, establish or re-establish the conditions essential to the proper implementation of the Union's external policies and actions in accordance with Article 21 TEU. ....	1177
Specific Objective 2 :To contribute to the prevention of conflicts and to ensuring capacity and preparedness to address pre- and post-crisis situations and build peace. ....	1177
Specific Objective 3 :To address specific global and trans-regional threats to peace, international security and stability. ....	1178
Previous Program 4 : Partnership instrument for cooperation with third countries (PI) .....	1179
General Objective 1 :The Partnership Instrument shall support measures that respond in an effective and flexible manner to objectives arising from the Union's bilateral, regional or multilateral relationships with third countries and address challenges of global concern, or ensure an adequate follow-up to decisions taken at multilateral level. ....	1179
Specific Objective 1 :To support the Union's bilateral, regional and inter-regional cooperation partnership strategies, by promoting policy dialogues and by developing collective approaches and responses to challenges of global concern. ....	1179
Specific Objective 2 :Implementing the international dimension of .....	1181
Specific Objective 3 :Improving access to third country markets and boosting trade, investment and business opportunities for European companies, while eliminating barriers to market access and investment, by means of economic partnerships, business and regulatory cooperation. ....	1182
Specific Objective 4 :Enhancing widespread understanding and visibility of the Union and its role on the world scene by means of public diplomacy, people to people contacts, education/academic/think tank cooperation and outreach activities to promote the Union's values and interests. ....	1183
Previous Program 5 : Development Cooperation Instrument (DCI) .....	1184

General Objective 1 :Fostering the sustainable and inclusive development in partner countries and regions and the promotion of democracy, the rule of law, good governance and respect for human rights, as foreseen in the TEU, with the primary aim of eradicating poverty.....	1184
Specific Objective 1 :Poverty reduction and fostering sustainable economic, social and environmental development. ....	1185
Specific Objective 2 :Consolidating and supporting democracy, the rule of law, good governance, human rights and the relevant principles of international law.....	1188
Previous Program 6 : European Fund for Sustainable Development (EFSD).....	1189
6. The programme contribution to horizontal policies .....	1190
6.1. Contribution to climate mainstreaming.....	1190
6.2. Contribution to biodiversity mainstreaming.....	1192
6.3. Contribution to clean air financing.....	1194
6.4. Contribution to gender equality .....	1194
6.5. Contribution to the sustainable development goals.....	1196

## **1. Overview**

### **1.1. Challenges**

The challenges that need to be tackled by external action have increased over recent years. Rising fragility, instability and conflicts, persistence of authoritarian regimes, poor governance, hostile influence campaigns and disinformation, terrorism, violations of human rights and freedoms, inequalities, including gender inequalities and gender based violence, growing migratory pressures are all part of a complex reality that has been compounded by pandemics, population growth, climate change and environmental degradation. At the same time, the diversity of partners with which the EU cooperates has become much more apparent. Some partners, including some with large populations, are graduating out of the Development Assistance Committee's official development assistance (ODA) eligibility criteria. Other countries have made progress on poverty reduction, only to see it eroded due to economic and environmental shocks, notably in relation to COVID-19. Others are least developed countries that remain locked in fragility and poverty.

The Neighbourhood, Development and International Cooperation Instrument (NDICI) provides for a new broad framework through which the EU can address this evolving landscape and meet expectations and international commitments. With a coherent set of principles, the instrument will allow the EU to pursue and achieve its policy objectives and overcome gaps, overlaps and inconsistencies that exist between today's multitude of geographic and thematic instruments. One broad instrument does not mean a single policy. On the contrary, it will be an enabler for EU action around the world, without boundaries and across themes, depending on the needs of the different countries and regions. More flexibility will enable the EU to react swiftly to evolving needs and priorities, and a simplified management structure will reduce the administrative burden for EU institutions, Member States and implementing partners.

### **1.2. Mission (general objectives)**

The objective of the NDICI is to uphold and promote the Union's values, principles and fundamental interests worldwide in order to pursue the objectives and principles of its external action, as laid down in Article 3(5), Articles 8 and 21 of the Treaty on European Union (TEU). The NDICI thus contributes to the reduction and, in the long term, the eradication of poverty, consolidating, supporting and promoting democracy, the rule of law and respect for human rights, sustainable development and the fight against climate change and addressing irregular migration and forced displacement, including their root causes..

The NDICI will contribute to the promotion of multilateralism, the achievement of the international commitments and objectives that the Union has agreed to, in particular the 2030 Agenda and its Sustainable Development Goals, and the Paris Agreement. It will promote stronger partnerships with third countries, including with the European Neighbourhood based on mutual interests and ownership with a view to fostering stabilisation, good governance and building resilience.

### **1.3. Specific objectives**

The specific objectives of the NDICI are:

1. to support and foster dialogue and cooperation with third countries and regions in the Neighbourhood, in Sub-Saharan Africa, in Asia and the Pacific, and in the Americas and the Caribbean; to develop special strengthened partnerships and enhanced political cooperation with the European Neighbourhood, founded on cooperation, peace and stability and a shared commitment to the universal values of democracy, rule of law and respect for human rights, and aiming at deep and sustainable democracy and progressive socio-economic integration as well as people-to-people contacts;

2. at global level, to protect, promote and advance human rights, including gender equality and the protection of human rights defenders, including in the most difficult circumstances and urgent situations, democracy, and the rule of law, including accountability mechanisms, to support civil society organisations, to further stability and peace, prevent conflict, thereby contributing to the protection of civilians, to address other global challenges such as, climate change, protection of biodiversity and the environment, as well as migration and mobility;

3. to respond rapidly to: situations of crisis, instability and conflict including those which may result from migratory flows and forced displacement and hybrid threats; resilience challenges, including natural and man-made disasters, and linking of humanitarian aid and development action; as well as the Union's foreign policy needs and priorities.

Specific Objectives of NDICI are aligned for DG INTPA with the Specific Objectives (SO) defined in its Strategic Plan<sup>1</sup> 2020-2024. First Specific Objective covers all 16 SOs of the Strategic Plan, the second Specific Objective covers SO 3 to 16 of the Strategic Plan, and SO 3 of NDICI corresponds to SO 15 of the Strategic Plan.

Under the NDICI, priorities would be strengthened through horizontal spending targets:

- At least 93% of Official Development Assistance (ODA)
- At least 20% of the Official Development Assistance (ODA) spending dedicated to human development and social inclusion;
- At least 85 % of new actions implemented under this Regulation, should have gender equality as a principal or a significant objective, as defined by the gender equality policy marker of the OECD DAC. At least 5% of these actions should have gender equality and women's and girls' rights and empowerment as a principal objective.
- 30% for climate change objectives; while contributing to the ambition of providing 7,5 % of annual spending under the Multiannual Financial Framework to biodiversity objectives in the year 2024 and 10 % of annual spending under the Multiannual Financial Framework to biodiversity objectives in 2026 and 2027, while considering the existing overlaps between climate and biodiversity goals.
- Indicatively 10% to support management and governance of migration and forced displacement, as well as to address the root causes of irregular migration and forced displacement when they directly target specific migration challenges.

#### 1.4. Public intervention context

Part Five, Title III, Chapters 1 and 2 of the Treaty on the Functioning of the European Union, provides the legal framework for cooperation with partner countries and regions, for which the EU and its Member States have **shared competences**. The NDICI legislative proposal is based on Articles 209, 212 and 322 of the Treaty on the Functioning of the European Union. It is presented by the Commission in accordance with the ordinary legislative procedure laid down in Article 294 of the Treaty on the Functioning of the European Union and takes the form of a Regulation, ensuring its uniform application, binding nature in its entirety and direct applicability. In line with the principle of proportionality, the proposed Regulation does not go beyond what is necessary to achieve its objectives.

The EU is in a unique position to deliver external assistance for a number of reasons. Its status as a supranational entity brings with it political influence and consequent leverage. The EU has a global presence through its Delegations, which ensures a vast network of information on developments affecting countries worldwide. The EU is also a party to most multilateral processes aiming at addressing global challenges. This allows the EU to be constantly aware of new needs and problems and, therefore, to reallocate

<sup>1</sup> **SO 1** - A new partnership agreement with the countries of the Organisation of African, Caribbean and Pacific States (OACPS) is concluded and operationalised; **SO 2** - A new joint AU-EU Partnership agenda is concluded and operationalised; **SO 3** - A Team Europe approach is strengthened by working better together with EU Member States in joint programming and joint implementation; **SO 4** - Sustainable Partnerships with International Financial Institutions (IFIs), the UN and other multilateral partners around EU Priorities are built; **SO 5** - Partner Countries capacities to adapt to climate change and reduce greenhouse gas emissions are increased; **SO 6** - An ambitious agenda for the conservation, restoration and sustainable management of natural resources and ecosystems, and for halting biodiversity loss and wildlife crime is adopted and implemented; **SO 7** - A partnership for a global green energy transition from fossil fuels to sustainable energy is mobilised; **SO 8** - Partner countries capacities in the transition toward green and circular economies are strengthened; **SO 9** - Digital governance, policy and regulatory frameworks are improved and digital infrastructure and affordable and secure broadband connectivity are enhanced; **SO 10** - The digital skills of individuals needed to fully capitalise on the digital transformation are improved; **SO 11** - The provision and quality of public and private digital services in partner countries are improved; **SO 12** - Mobilisation of public and private financing for sustainable development is enhanced contributing to decent jobs creation, and the reduction of inequalities; **SO 13** - Comprehensive and balanced Migration Partnerships with priority partner countries are supported in line with sustainable development and poverty reduction goals; **SO 14** - Human development for all is improved, in particular for youth, women and girls, and the most marginalised and vulnerable populations; **SO 15** - Governance, resilience and peace building is enhanced through all available instruments in fragile countries or affected by/under risk of conflict; **SO 16** - Promotion and protection of human rights and fundamental freedoms; equality, democracy and the rule of law are enhanced and civil society participates in democratic and development processes in an enabling environment

resources accordingly. The EU has the opportunity to establish dialogue and cooperation with international and regional organisations, and can provide added value based on the volume of resources channelled through its instruments, its relatively flexible modes of management and the predictability of resources over the period of the Multi-annual Financial Framework.

Coordination between EU action and the actions carried out by the Member States are increasing, taking the form of joint programming and joint implementation, where possible, as part of the Team Europe approach. This also enhances and facilitates dialogue and cooperation with partner countries. The NDICI supports the implementation of the reviewed European Neighbourhood Policy (ENP), which requires from EU institutions and Member States a mutual duty of cooperation. The EU is also able to complement Member States activities in dealing with crisis or in the event of particularly costly interventions. In some areas where Member States are not active, the EU remains the main, and sometimes the only actor to intervene. This is the case, for instance, in sensitive contexts such as the defence of human rights and electoral observation missions.

## 1.5. Actions

The NDICI will have three components:

1. a geographic pillar, which will cover cooperation with the European Neighbourhood, sub-Saharan Africa, Asia and the Pacific and the Americas and the Caribbean. This will account for at least 75% of the total funds available under the NDICI;
2. a worldwide thematic pillar that will complement the geographic pillar with specific programmes on human rights and democracy; civil society organisations, peace, stability and conflict-prevention as well as global challenges.
3. a worldwide rapid response pillar to contribute to: peace, stability and conflict prevention; strengthening resilience and linking humanitarian aid and development action; and addressing EU foreign policy needs and priorities.

The NDICI will also include an emerging challenges and priorities ‘cushion’, which will provide the opportunity to top-up any of the three pillars with extra resources, as and when necessary, thus enhancing the EU’s capacity to respond effectively.

Under the specific provisions for the Neighbourhood area, the NDICI would support implementation of the performance-based approach through supplementary allocations to the partner countries listed in NDICI Annex I and contribute to cross-border cooperation programmes.

The NDICI will contain an investment framework for external action to raise additional financial resources for sustainable development from the private sector. It will consist of the European Fund for Sustainable Development (EFSD+), which is part of the External Action Guarantee, with the aim to:

- support micro enterprises and SMEs;
- promote decent job creation;
- strengthen public and private infrastructure;
- foster the green and digital transition;
- foster renewable energy and sustainable agriculture, etc.;

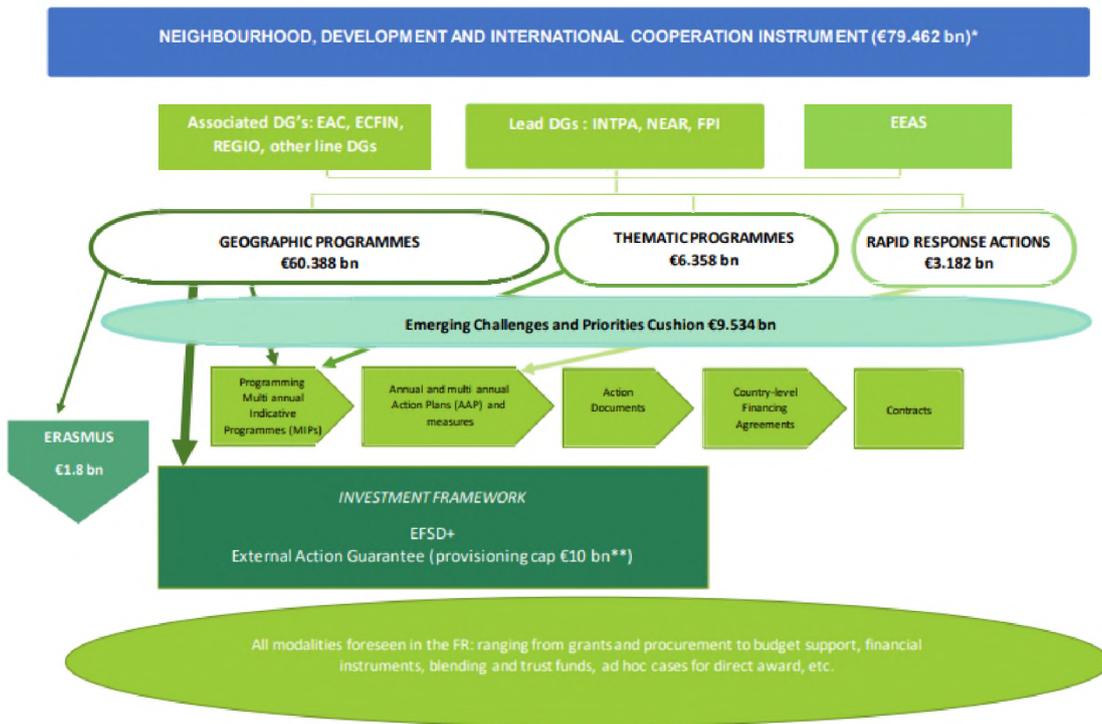

Together with the private sector and thanks to the leverage effect, this may mobilise more than half a trillion euro in investments for 2021-2027. To ensure that the EU supports those countries that need it most, particular attention is given to addressing investment needs in the Neighbourhood, Africa, as well as in countries experiencing fragility or conflict, least-developed countries and highly indebted poor countries, as well as on regions with critical infrastructure and connectivity needs.

## 1.6. Delivery mode

Direct management by the Commission from Headquarters and/or through the Union Delegations and under indirect management by entities, such as the EU member States agencies or international organisations, that ensure a level of protection of the EU’s financial interests equivalent to that under direct management. Indirect management may also be entrusted to partner countries or the bodies they designate. Innovative financial instruments including in partnership with the European Investment Bank, Member States’ financial institutions and other international financial institutions will be used for blending activities.

The lead services involved in implementing the instrument are DG INTPA, DG NEAR, and FPI, in cooperation with the EEAS and other Commission services, especially on external dimensions of internal policies like climate, environment, education, energy and digital.

**NDICI TARGETS** 30% of total amount for climate-related actions, at least 20% of ODA-eligible funds for social inclusion and human development (including basic social services), indicatively 10% of total amount for migration-related actions, at least 85% of actions scoring G1 or G2 at the DAC gender equality marker (of which at least 5% for G2).

1.8. Legal basis and financial programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
-------------	-----------------------	--------------------------------

Procedure 2018/0243/COD COM (2018) 460: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the Neighbourhood, Development and International Cooperation Instrument	2021 - 2027	79 461,7
--	-------------	----------

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							
	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
<b>Total</b>	<b>12 071,1</b>	<b>12 526,6</b>	<b>11 962,4</b>	<b>11 370,8</b>	<b>10 751,0</b>	<b>10 102,1</b>	<b>10 575,0</b>	<b>79 359,2</b>

### 1.8.4. Financial programming explanation

The Financial Programming for NDICI follows the overall reference amount as provided in the MFF package and the annual profile for Heading 6 - 'Neighbourhood and the World'.

The initial total amount of EUR 79 462 million for NDICI for the period 2021-2027 has been decreased by EUR 111,9 million (EUR 15,988 million per year) for the transfer of certain staff in EU Delegations from the Commission to the EEAS, as described in Amending letter 1/2021. A reinforcement of the Southern Neighbourhood line by EUR 10,2 million (from the margin) was agreed in conciliation for the year 2021 to increase support for UNWRA. The Commission proposes with DB 2022 and additional transfer of certain staff in EU Delegations from the Commission to the EEAS in the total amount of EUR 904 320 for 2021-2027.

The overall programmed amount for NDICI is therefore EUR 79 359 million for the period 2021-2027.

### 1.9. Link with the 2014-2020 MFF

The lessons learned from the 2014-2020 MFF show that the EU external action instruments are relevant and delivering results. For the 2021-2027 MFF, it was therefore proposed to build on the activities formerly covered under the 2014-2020 instruments, and mainly focus on how the instruments operate. In particular, the NDICI streamlines a number of the EU's external action instruments into one instrument (including the Common Implementing Regulation, the Development Cooperation Instrument (DCI), the (off-budget) European Development Fund (EDF), the European Fund for Sustainable Development (EFSD), the main part of the External Lending Mandate (ELM), the European Neighbourhood Instrument (ENI), the European Instrument for Democracy and Human Rights (EIDHR), the main part of the provisioning for the Guarantee Fund for external action, the Instrument contributing to Stability and Peace (IcSP), and the Partnership Instrument (PI)).

Having a streamlined system would allow the relevant EU institutions to have a better, more comprehensive view of external action and better deliver on results. The challenges faced by the EU often cannot be met within geographic and thematic boundaries. To respond to these challenges, a broad instrument would provide a more comprehensive approach, facilitating the implementation of different policies in a trans-regional, multi-sectoral and global way.

The flexibility features introduced in the NDICI are inspired by the European Development Fund and will be extended to all regions covered by the new instrument. Building on the experience of the EU's External Investment Plan, the EFSD+ and the External Action Guarantee (EAG) will support innovative financial instruments to raise additional financial resources for sustainable development from the private sector. Existing flexibilities for crisis response will be consolidated.

### 1.10. Relevant websites providing more information

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

In the NDICI programming exercise, Commission services and EEAS work together. This exercise has been officially launched by DG INTPA, DG NEAR, the EEAS and FPI early November 2020 and should be concluded by end 2021 with the adoption of geographic and thematic multi-annual programming documents (MIPs).

Consultations are currently taking place at country, regional and Brussels/global levels as per NDICI programming guidelines. Final draft MIPs will be prepared by end May in view of organising the geopolitical dialogue with the European Parliament of September. Then final MIPs should be submitted to the NDICI comitology in view of their adoption end 2021. The country, regional and thematic coordination team meetings, gathering Commission DGs and services to discuss programming should be co-organised by the EEAS, INTPA and NEAR in March and April. The Inter-service consultations for MIPs should be launched in September/October.

The thematic MIP for ERASMUS+ (which will also cover Instrument for Pre-Accession (IPA) III countries) should be adopted by the summer.

### **NDICI Geographic programmes:**

#### **Neighbourhood:**

##### **Southern Neighbourhood**

The year 2021 will represent a transition on many fronts, with the expected entry into force of the new instrument and the 2021-2027 MFF which will support the implementation of the new Commission priorities, in a context which is still very impacted by the COVID-19 crisis and its socio-economic consequences. The new spending targets on climate change, human development and social inclusion, and migration require a rethinking of the approach and programmes in some partner countries.

The financial assistance to the Neighbourhood South in 2021 will build on previous cooperation as well as on measures aiming to mitigate the long-term impact of the pandemic through a sustainable recovery, and reflecting Commission's priorities, such as the Green Deal and an Economy that works for people. There will be a special focus on youth, which has been severely impacted, and further support to the health systems, including vaccines. Neighbourhood South programmes will integrate the priorities defined in the Communication for a renewed partnership with the South and the work on the Joint Documents.

Migration will continue to be a core element in relations with partners in the Neighbourhood South. Most partner countries of this region are origin, transit and destination of mixed migration. Whilst many challenges remain, including forced displacement, irregular movements to Europe and the need to ensure international protection, migration and mobility must be factored into cooperation with partner countries. In September 2020, the European Commission launched a New Pact on Migration and Asylum, where the EU's relationship with third countries is indicated as essential to achieve an effective migration policy in Europe. In this context, migration needs to be integrated consistently in cooperation with partner countries in bilateral assistance, but also through dedicated programmes for the region.

In the Middle East the context is marked by conflict, displacement, inequalities, limited growth, large unemployment, environmental degradation and lack of structural reforms, and it has been aggravated by the pandemic. Programmes in 2021 will contribute to addressing these negative consequences and putting the countries on a sustainable recovery path.

In 2021 the following annual plans covering the Neighbourhood South are expected to be submitted for approval and adoption (6 Annual Action Plans (AAPs), 1 Regional Action Plan (RAP) and 3 Special Measures).

- **Palestine**<sup>2</sup> AAP 2021, is expected to be on governance and fiscal consolidation, sustainable service delivery, support to Palestinian refugees through United Nations Relief and Works Agency (UNRWA, support to East Jerusalem, access to self-sufficient water and energy services and sustainable economic development.
- **Lebanon** AAP 2021 envisages support to reforms and alignment with the priorities of the Reform, Recovery and Reconstruction Framework on governance and accountability, jobs and economic opportunities, social protection, and services and infrastructure.
- **Jordan** AAP 2021 aims to focus on green growth, private sector development, social protection, and support to justice and security sector reforms, including through support to their digitalisation.
- **Syria** Special Measure 2021 aims to focus on supporting resilience, social cohesion and inclusiveness, rights protection, and empowering grassroots change.
- **Israel** Special Measure 2021 is expected to continue promoting the legislative and regulatory approximation in sectors of mutual interest through Twinning projects.
- In **Libya** the Special Measure 2021 is expected to be articulated around 2 pillars: economic and democratic governance, both supporting the respective tracks of the Berlin Process.
- As a result of the refusal of the Egyptian Government to sign the Financing Agreements for the three projects approved in the AAP 2019 before the end of 2020, it is expected that no further funding will be allocated to **Egypt** in 2021. In the event that it is considered preferable to allocate funding for Egypt
  - in 2021, this could focus on water reforms, and support to civil society.
- **Morocco** AAP 2021 is expected to focus on four areas: financial inclusion, public administration reform, social protection and the Green Moroccan Plan.
- **Tunisia** AAP 2021 is expected to focus on security and border management, economic governance, environment and social cohesion.
- **Algeria** AAP 2021 aims to continue supporting the economic diversification and focusing on building blocks of green and inclusive economic recovery at national and local level.

<sup>2</sup> This designation shall not be construed as recognition of a State of Palestine and is without prejudice to the individual positions of the Member States on this issue.

- The **Neighbourhood South** RAP 2021 is expected to focus on those areas where regional action has an added value, is of mutual interest for the EU and the Southern partners and complements bilateral actions. The regional programme foresees support in four key areas: (i) an economy that works for people focused on job creation; (ii) a Green Deal in maritime transport and energy connectivity; (iii) human development; and (iv) security cooperation on civil protection and border security.

### Eastern Neighbourhood

The 2021 programming exercise follows the finalisation of the Eastern Partnership “20 deliverables for 2020” agenda and will be guided by the post-2020 policy framework outlined in the Joint Communication “Eastern Partnership policy beyond 2020: Reinforcing Resilience - an Eastern Partnership that delivers for all”<sup>3</sup> adopted on 18 March 2020.

The programmes prepared in 2021 are expected to support the five long-term policy objectives outlined in the Joint Communication: (1) resilient and integrated economies; 2) rule of law and security; 3) green transition; 4) digital transformation; and 5) inclusive societies), including cross-cutting themes. The social and economic recovery from the pandemic will be a key priority, as well as health which for the first time becomes part of the EaP policy.

Programming priorities for 2021 are being also shaped on the basis of the Association Agendas and Partnership Priorities and of the multi-annual programming documents for the period 2021-2027, which are currently being prepared for Armenia, Azerbaijan, Georgia, Moldova, Ukraine and Regional East. In the case of Belarus, where no agreement on Partnership Priorities has been reached, it is expected to continue using special measures.

In 2021 the following annual plans covering the Neighbourhood East are planned to be sent for approval and adoption (5 AAPs, 1 RAP and 1 Special Measure).

- **Ukraine** AAP 2021 is expected to include actions under the four priority areas mentioned in the (draft) Multi-annual Indicative programme: (i) green, digital and resilient economy, (ii) good governance, (iii) societal resilience and response to conflict, and (iv) human capital development including support of the healthcare system. The AAP 2021 foresees a Technical Cooperation Facility to support the implementation of the Association Agreement and key reform areas.
- **Georgia** AAP 2021 intends to complement the support for the Georgian economy provided under the AAP 2020 and to help the country pursue innovation and sustainability while building a more resilient society and economy after the COVID-19 pandemic.
- **Moldova** AAP 2021 is expected to have a strong focus on economy and education, which are considered key to the COVID-19 recovery process. Also, the AAP is expected to support public administration, security, the green and digital transitions, civil society, strategic communication, and the participation of Georgia in EU programmes.
- **Armenia** AAP 2021 envisages a strong focus on resilience and economic recovery following the COVID-19 pandemic and recent hostilities over the Nagorno-Karabakh conflict.
- **Azerbaijan** AAP 2021 foresees the EU Multi-sectoral Resilience Facility, which aims to respond to socio-economic challenges emerged from the pandemic as well as the Nagorno-Karabakh conflict.
- **Belarus** 2021 Special Measure is expected to build on the Special Measure 2020, focusing on civil society, independent media, youth, SMEs and health.
- The **Neighbourhood East** RAP 2021 is foreseen to complement bilateral actions, by targeting issues that are better addressed at the regional level, including social and economic recovery needs deriving from the COVID-19 pandemic. While the plan will follow up on the five specific objectives from the EaP Joint Communication and will place a special focus on reinforcing the green and digital transformation, further actions will be foreseen also as regards other EU regional policies such as Northern Dimension and the Black Sea Synergy.

### Sub-Saharan Africa:

Under the geopolitical ambition and political guidelines set by the President of the European Commission, and without prejudice to the respective roles of the EEAS and the Commission in programming,<sup>4</sup> DG INTPA leads on international cooperation, building partnerships with countries and organisations across the globe. DG INTPA closely coordinates with Member States under a strong Team Europe approach to support the EU’s global agenda.

In 2021, DG INTPA will continue to support, through international partnerships, the Commission priorities through a great number of initiatives including, *inter alia*, the adoption, operationalisation and implementation of the new external financing instruments for the 2021-2027 period, notably the NDICI.

<sup>3</sup> [https://eeas.europa.eu/headquarters/headquarters-homepage\\_en/76166/Joint%20Communication:%20Eastern%20Partnership%20policy%20beyond%202020:%20Reinforcing%20Resilience%20-%20an%20Eastern%20Partnership%20that%20delivers%20for%20all](https://eeas.europa.eu/headquarters/headquarters-homepage_en/76166/Joint%20Communication:%20Eastern%20Partnership%20policy%20beyond%202020:%20Reinforcing%20Resilience%20-%20an%20Eastern%20Partnership%20that%20delivers%20for%20all)

<sup>4</sup> as set out in the Council decision 2010/427/EU of 26 July 2010 establishing the organisation and functioning of the EEAS and the 2012 Working arrangements between Commission services and the EEAS in relation to external relations issues (SEC(2012)48).

Despite the COVID-19 pandemic, long-term strategic priorities must remain at the forefront of the partnership with Africa. The green transition, digital transformation, sustainable investment and jobs, migration and mobility, peace, security and governance, as laid out in the Joint Communication “Towards a Comprehensive Strategy with Africa”<sup>5</sup> and supported by the Council Conclusions on Africa of June 2020, remain relevant for the post-COVID recovery.

In 2021, the EU, its Member States, their national development finance institutions, and development/implementation agencies, as well as European financial institutions will work even closer together in implementing EU external policy and development cooperation. The “Team Europe” approach was launched at the occasion of the external response to the COVID-19 crisis as an important way to showcase the EU’s global influence and leadership, as well as tangible solidarity to partner countries. In the course of 2021, EU Delegations will prepare draft Multi-annual Indicative Programme (MIPs) including “Team Europe Initiatives” in cooperation with partner countries.

In Africa, new prospects and challenges are emerging from economic, political, social, technological, demographic, climate and environmental changes. We need to partner with Africa to tackle together the challenges of the 21st century and to pursue our common interests including, among others, developing a green growth model; improving the business environment and investment climate; boosting education, research and innovation, creating decent jobs; maximising the benefits of regional economic integration and trade; ensuring food security and rural development; combatting climate change; ensuring access to sustainable energy and protecting biodiversity and natural resources; promoting peace and security; ensuring well-governed migration and mobility; promoting human rights, democracy, rule of law and gender equality. We also need to partner with Africa through public diplomacy and educational, scientific and cultural exchanges to defend a rules- and values based international order in an increasingly competitive multilateral environment.

Most of Africa has been recording steady economic growth; however, a number of challenges remain. Thirty-six of the world’s most fragile countries are in Africa, often weakened by conflicts. The continent hosts 390 million people living below the poverty line. Growth has not always been inclusive, notably due to governance challenges. Africa is also affected by the consequences of climate change, environmental degradation and pollution. The EU and Africa will need to work together to address these challenges and develop actions that ensure **stability, peace, security, human rights, democracy, gender equality, sustainable livelihoods, sustainable economic growth based on healthy ecosystems, social cohesion and good governance.**

2020 has been a particularly challenging year due to the COVID-19 pandemic, which caused suffering worldwide. In 2021, together with the EU Member States, DG INTPA will support a sustainable recovery consistent with the implementation of the SDGs and the Global Recovery Initiative for a green, digital, fair and resilient recovery. DG INTPA will also continue to support human development in partner countries, and to address inequalities. Gender equality and women’s empowerment will be an essential component in the recovery process.

Given the outbreak of the COVID-19 pandemic, the 6th EU-AU (European Union-African Union) Summit was postponed. In the run up to this EU-AU Summit, the EU will continue reaching out to African partners in order to agree upon a new joint AU-EU Partnership agenda. The EU-AU Summit will help African and European partners to determine joint priorities for their common future as well as to frame actions that DG INTPA will commit from 2021 onwards.

In its conclusions of October 2020, the European Council reiterated the importance to strengthen its strategic relations with the African partners. In particular, the Council indicated that in parallel with its own green and digital transformation, the EU wishes to extend its partnership with Africa on its economic transformation. In this context, the Council discussed its intention to work with its African partners and boost investment by working together on a comprehensive multi-sector and multi-stakeholder investment programme. The European Council also indicated the following sectors as being key for further cooperation and investment: digital and knowledge economy, renewable energy, transport, health, and agri-food systems.

The Council also reiterated that long-lasting peace, security and stability in Africa are shared objectives and key conditions for sustainable development. The EU is ready to continue supporting African efforts on peace and security, good governance and the promotion of human rights. The EU will also engage African partners in addressing mobility and all aspects of migration, including legal migration, combatting illegal migration, readmission, and the fight against migrant-smuggling networks, both within and between the two continents.

## West Africa

In 2021, based on the adopted NDICI, most if not all programming documents for the 17 Western Africa countries should be adopted. The majority of the programming documents will be country Multiannual Indicative Programmes and two Joint Programming Documents with EU Member States. The programming documents will set out the priorities areas selected for financing, the objectives and expected results. The programming will contribute to implementing the external dimension of the

<sup>5</sup> [https://ec.europa.eu/international-partnerships/system/files/communication-eu-africa-strategy-join-2020-4-final\\_en.pdf](https://ec.europa.eu/international-partnerships/system/files/communication-eu-africa-strategy-join-2020-4-final_en.pdf)

Commission priorities: “A European Green Deal”, “A Europe fit for the digital age”, “An economy that works for people”, “Promoting our European way of life”, “A new push for European Democracy”. Human development, gender equality and women’s empowerment are essential areas to address inequalities by building fair, inclusive and sustainable societies. Moreover, together with the EU Member States, West Africa programmes will support, through the ‘Team Europe’ approach, a sustainable recovery from the sanitary, social, and economic shocks caused by the COVID-19 pandemic, consistent with the implementation of the SDGs and the Global Recovery Initiative for a green, digital, fair and resilient recovery. Based on programming, a number of Annual Action Plans will be adopted by year-end. Priority is given to the very fragile Sahel Countries. In addition to the national programming, a Multiannual Regional Sub-Saharan Programme is to be adopted. This programme will finance multi-country initiatives involving several Western Africa countries.

In **2022**, on the basis of the programming documents adopted in 2021, the 17 countries being part of the West Africa region will adopt an Annual Action Plan focusing on the International Partnerships priorities: “Green Deal”, “Digital”, “Jobs and Growth”, “Addressing root causes of migration”, “Governance, Peace and Stabilisation”. Budget Support projects, guarantees and blending will be among the main aid modalities put in place. Priority will be given to the very fragile Sahel Countries. In addition, the Regional Multiannual Programme will finance multi-country initiatives involving several Western Africa countries.

### **East and Central Africa**

In **2021**, on the basis of the adopted NDICI, most of the programming documents for the 18 Eastern and Central Africa countries should be adopted. Most programming documents will be country Multiannual Indicative Programmes and one will be a Joint Programming Document. The programming documents will set out the priorities areas selected for financing, the objectives and expected results. The programming will contribute to implementing the external dimension of the Commission priorities: “A European Green Deal”, “A Europe fit for the digital age”, “An economy that works for people”, “Promoting our European way of life”, “A new push for European Democracy”. Human development, gender equality and women’s empowerment are essential areas to address inequalities by building fair, inclusive and sustainable societies. In addition, together with the EU Member States, Eastern and Central Africa programmes will support, through the ‘Team Europe’ approach, a sustainable recovery from the sanitary, social, and economic shocks caused by the COVID-19 pandemic, consistent with the implementation of the SDGs and the Global Recovery Initiative for a green, digital, fair and resilient recovery. Fragile countries will be a priority.

Based on the programming, a number of AAPs will be adopted by year-end. In addition to the national programming, a Multiannual Regional Sub-Saharan Programme is to be adopted. Multi-country initiatives involving several Eastern and Africa countries will be financed by this programme.

In **2022**, on the basis of the programming documents adopted in 2021, most of the 18 countries being part of the Eastern and Africa region will adopt an AA Programme focusing on the International Partnerships priorities: “Green Deal”, “ Digital ”, “Jobs and Growth”, “Addressing root causes of migration”, “ Governance, Peace and Stabilisation” and “Human Development”. Budget Support, projects, blending and guarantees will be the main aid modalities put in place. Priority will be given to the fragile countries. In addition Multi-country initiatives involving several East and Central Africa countries will be financed by the Regional Multiannual Programme.

### **Southern Africa and Indian Ocean**

In **2021**, on the basis of the adopted NDICI, most of the programming documents covering the 14 Southern Africa and Indian Ocean countries should be adopted. All programming documents will cover country and regional Multiannual Indicative Programmes. The programming documents will set out the priorities areas selected for financing, the objectives and expected results. The programming will contribute to implementing the external dimension of the Commission priorities: “A European Green Deal”, “A Europe fit for the digital age”, “An economy that works for people”, “Promoting our European way of life”, “A new push for European Democracy”. Human development, gender equality and women’s empowerment are essential areas to address inequalities by building fair, inclusive and sustainable societies. In addition, together with the Member States, Southern Africa and Indian Ocean programmes will support, through the ‘Team Europe’ approach, a sustainable recovery from the sanitary, social, and economic shocks caused by the COVID-19 pandemic, consistent with the implementation of the SDGs and the Global Recovery Initiative for a green, digital, fair and resilient recovery.

Based on the programming, a number of bilateral AAPs will be adopted by year-end. In addition to the national programming, a Multiannual Regional Sub-Saharan Programme is to be adopted. Multi-country initiatives involving several Southern Africa and Indian Ocean countries will be financed by this programme.

In **2022**, on the basis of the programming documents adopted in 2021, most of the 14 countries being part of the Southern Africa and Indian Ocean region will adopt a bilateral A AP focusing on the International Partnerships priorities: “Green Deal”, “ Digital ”, “Jobs and Growth”, “Addressing root causes of migration”, “Governance, Peace and Stabilisation” and “Human Development”.

Budget Support, projects, blending and guarantees will be the main aid modalities put in place. Priority will be given to the fragile countries. In addition Multi-country initiatives involving several Southern Africa and Indian Ocean countries will be financed by the Regional Multiannual Programme.

### **Asia and the Pacific:**

The country and regional allocations for 2021 and 2022 will be programmed based on the 2021-2027 country and regional Multiannual Indicative Programmes (MIPs) under preparation.

In a context of post COVID-19 recovery, the MIPs will support the necessary reforms to build more sustainable, inclusive and resilient societies, promoting common values and shared interests.

To deliver on the political orientations and achieve visible results, **Team Europe Initiatives (TEIs)** at country or regional level have been identified and will be part of most MIPs. At least 27 TEIs have been identified at this stage in the Middle East, central Asia and Asia as well as the Pacific, covering issues of strategic priority: 18 relate to the Green Deal, 2 to the Digital agenda, 6 to Sustainable jobs and growth and 1 on Peace, security and human development. The MIPs coverage goes beyond these TEIs and will deliver, at country and a regional level, on many other areas.

As regards the approach, supporting and facilitating investment is one of the main areas for EU engagement gained momentum over the last years. Areas for strategic engagement in line with EU priorities and strategies (such as Green Deal, Digital, Jobs and Growth and Connectivity) will be devised with the relevant finance institutions in close link with the EU Delegations. This strategic engagement will be underpinned by a solid pipeline of investment projects and guarantees.

The estimated amount of the 2022 payment appropriations is based on the expected consumption of RAL (reste à liquider) at the end of 2021 and the forecast collected by the EU Delegations.

The initial disbursements for the 2021 and 2022 NDICI AAPs will be part of the implementation of the payment appropriations for 2022. The NDICI actions will cover issues of strategic priority and will include TEIs. TEIs will be present in all these regions: Middle East, Central Asia, South Asia, Southeast Asia and the Pacific. They comprise a variety of initiatives at country and at regional level, with a particular focus on the Green deal, Connectivity and Sustainable jobs and growth.

### **The Americas and the Caribbean:**

The funds for financial year 2021 and 2022 will be implemented through direct and indirect management. Budget Support remains a preferred modality, followed by grants and service contracts, while all indirect management is done via PAGODA with a large variety of partners in the region as well as EU Member States and the EIB.

Continuity of on-going programmes is foreseen in 2021 and efforts will be undertaken to adopt MIPs and AAPs for NDICI 2021-2027. In a context of post COVID-19 recovery, the MIPs will support the necessary reforms to build more sustainable, inclusive and resilient societies, promoting common values and shared interests. The Foreign Affairs Council of 12 October has put Latin America and the Caribbean higher up the EU's external action agenda and the informal Ministerial meeting in Berlin on 14 December 2020 was a tangible step of the common desire to revive high level bi-regional dialogue. Ministers agreed that the COVID-19 crisis is an opportunity to "build back better" in line with the UN 2030 Agenda for Sustainable Development and agreed to join forces to develop robust green and digital partnerships. In this design and identification process for the MIPs and AAPs, particular attention will be given to build partnerships around shared priorities as well as continuing to work on regional integration and like-minded regional/multi-country actions or with regional processes and/or organisations (e.g. Mercosur, Pacific Alliance, SICA/SIECA, Organisation of American States, Association of Caribbean States, CARICOM, and CARIFORUM). The regional MIP would support the EU's engagement in countries without a bilateral MIP, including the region's G20 countries and high-income countries.

Regarding thematic focus, the partnership with the Americas and the Caribbean will contribute to the NDICI targets on climate change, social inclusion and human development, gender equality, and migration. To deliver on the political orientations and achieve visible results, **TEIs** for each country or groups of countries, or at the regional level have been identified. The TEIs cover issues of strategic priority and will guide the MIPs and AAPs to be adopted in 2021 and 2022. To match the EU's ambitious agenda with region, the MIPs will also support the EU's public diplomacy to enhance the understanding of the EU and its policies with key stakeholders in the hemisphere.

The proposed TEIs for the region (27 TEIs, 17 already confirmed) relate to the Green Deal (17 TEIs), followed by the sustainable jobs, growth and regional economic integration (4) Digital agenda (3), and Peace, security and human development (3). Human development and social inclusion will be supported by well-functioning multi-country / regional programmes in the field of social cohesion/fight against inequalities.

A number of **regional / multi-country TEIs** are being considered with the following preliminary elements:

- **EU-LAC Green Transition Partnerships**, focused on climate governance, implementation of the Paris Agreement, environmental protection, protection of biodiversity, green and blue economy, circular economy, smart and sustainable urban planning; this could encompass a multi-country Amazon Basin Initiative and a multi-country Raw Materials Initiative (Lithium).
- **EU-LAC Digital Alliance**, responding to LAC countries and private sector aspiration to modernise the economy and build a regional digital market, advancing digital regional integration and addressing digital divide. Two tracks are proposed: (1) convergence of regulatory frameworks, standards and skills development, (2) regional digital connectivity and infrastructure.
- **EU-LAC Security & Justice Partnership**, in full alignment with the new EU security package, this initiative would encompass: (1) cooperation to fight against serious and organised crime (justice security chain, anti-money laundering and corruption, border management, common intelligence standards), (2) focus on drug trafficking, environmental crime and cybercrime, (3) innovative approaches to fight against crime (triangular cooperation on new citizen security approaches of LAC cities, new digital technologies), (4) strengthening of governance, democracy, the rule of law, the respect of human rights and fundamental freedoms.
- **EU-LAC Partnership for social cohesion** would aim at ensuring that inequalities are the primary targets of specific actions, but also duly addressed in all development interventions in LAC. It would cover (1) gender equality and empowerment; (2) inclusive social policies, notably in the fields of education, labour, social protection and health (3) governance, including fiscal policies, territorial cohesion, and strengthening the social contract. Particular attention would be devoted to youth and migrant inclusion.

Successful programmes such as EUROsociAL+, Erasmus+, Creative Europe, El PacCTO, COPOLAD, or EUROCLIMA+ will be provided with adequate funding to continue, though adapted to the new context.

The **EU Trust Fund for Colombia** supports the implementation of the peace agreement between the Colombian Government and the FARC. It translates the EU's political support to the Peace Agreement, in particular on the elements related to rural reform, and the social and economic reincorporation of former FARC combatants. The Trust Fund has been extended till end 2021. This extension, which is in line with the extensions for the other EUTFs, provides for a bridging period to the next MFF. Support to sustainable and inclusive peace in Colombia beyond 2021 will continue through a Team Europe Initiative for Peace together with EUMS. Through this continued support, the EU will remain politically engaged in the (still fragile) peace process in Colombia and will be able to consolidate results achieved so far.

### **The External Action Guarantee:**

The External Action Guarantee (EAG) is a powerful implementing tool that aims at leveraging funds from the private and public sector and promote investment in partner countries and thus multiplying the effect of the EU assistance worldwide. EAG will allow the EU to reduce the risk for public and private investment operations in partner countries covered by the NDICI and by the Instrument for Pre-Accession Assistance III (under the EAG), and to support those countries experiencing a balance of payments crisis (with macro-financial assistance).

By means of the European Fund for sustainable Development Plus (EFSD+), the EAG will cover guarantees to partly reduce the risk of loans provided by European and international financial institutions to governments, administrations and businesses, so that they can recover swiftly and survive the current crisis and its aftermath. The EFSD+ is a comprehensive instrument that includes not only guarantees but also grants provided through blending –a mix of EU grants with bank loans, such as technical assistance to help improve the quality of projects and the implementation of reforms, investment grants and risk sharing instruments that can be used to support the development of partner countries.

EAG will also cover Macro-Financial Assistance loans to support partner countries' balance of payments and thereby provide policy space to counter the economic fallout from the COVID-19 crisis. This leveraging tool is appropriate to address the negative consequences of the COVID-19 crisis, in particular for the promotion of investments to reinforce the sanitary systems and the socio-economic recovery of partner countries, including by ensuring their macro-economic stability.

The EU guarantee will cover all partner countries where the EU provides development and other assistance measures, with a particular attention to the EU Neighbourhood, to the Western Balkans region, as well as to Africa with special attention to least developed and fragile countries.

The planned commitment appropriation for the provisioning of the EAG in 2021 and 2022 is more than EUR 2 billion yearly. No payment appropriations were budgeted for the provisioning of the EAG in 2021.

The Commission proposes to increase the funds for the provisioning of the EFSD+ foreseen in the voted budget 2021 by 700 million through an internal transfer from Africa, Asia and The Americas geographic lines in order to allow a more flat profile for the geographic lines.

As of 31 December 2020, Commission exhausted the capacity of the precursor EFSD Guarantee by signing 18 guarantee agreements worth EUR 1,548,700,000. The EFSD+ guarantee should be used for the remaining ten guarantee tools that were already approved under EFSD but had to be postponed, limited or recalibrated to address the impact of COVID-19.

The EU guarantee foreseen under the External Lending Mandate (ELM) 2014-2020 was not exhausted completely by the end of 2020. This offers the opportunity to use the remaining available guarantee cover (EUR 4.4 billion) to enable the EIB to continue lending outside the EU with ELM guarantee cover also in 2021, while the NDICI is in the process of being adopted by the co-legislators, the multiannual indicative programming of EU external action financing being concluded and new guarantee agreement(s) being negotiated between the Commission and the EIB under the framework of the EFSD+.

In the context of discussions on the NDICI, a one-year extension of the validity of the investment period under the ELM has been provisionally agreed by the co-legislators. This will not only permit the utilization of the unused guarantee cover of the ELM 2014-2020 but it will also provide valuable time for adapting to the substantial changes that NDICI proposes in regards to the EU external action.

With the ambitious development goals, the Commission shall be able to monitor and evaluate the direct contribution (output level) and the direct (outcome) and indirect, medium-long term influence (impact) of operations supported by the EAG against the main objectives of the initiative and those set out in the Multiannual Indicative Programmes 2021-2027. The contribution of the EU guarantee to sustainable and inclusive growth in partner countries will be measured against the objectives with a series of outcome and impact indicators in relation to: Contribution to the achievement of Sustainable Development Goals; Generation of sustainable and inclusive growth; Creation of decent jobs; Promoting gender equality and the empowerment of women and young people; Positively impact on climate change; Contributing to poverty eradication.

For the 2021-2027 programming the results measurement will be carried out in the context of the EU results framework. The Commission established the Results Measurement Framework for the precursor EFSD Guarantee that was already used in blending projects, as well as in the guarantee agreements signed to date. It covers three levels: (1) the EFSD as a whole, including both the EFSD Guarantee and the blending operations; (2) the Investment Platforms and Investment Windows; (3) the investment programmes under the EFSD Guarantee and the projects under the blending operations. The Commission is responsible for monitoring and reporting under the first two levels, based on a set of pre-defined indicators. At programme and project level, the reporting on expected and actual operational results is the responsibility of the lead financial institution. The list of indicators, the frequency and format of reporting are part of the guarantee agreements signed with the financial institutions.

## **NDICI Thematic Programmes:**

### **1. Human rights and democracy**

With the adoption of the Council conclusions<sup>6</sup> of 19 November 2019 which endorsed the ‘Action Plan on Human Rights and Democracy 2020-2024’<sup>7</sup> the EU reaffirms its strong commitment to human rights and democracy. The Action Plan sets out the EU’s ambitions and priorities in this field in its relations with all partner countries.

The NDICI includes a dedicated thematic programme for Human Rights and Democracy, which preserves the unique features of the EIDHR. The multi-annual indicative programming for this new programme will be guided by the “**Action Plan on Human Rights and Democracy 2020-2024**”, ensuring thus the greatest possible coherence and synergy between agreed policy priorities and EU funding.

The MIP therefore follows the structure of the EU Action Plan on Human Rights and Democracy 2020-2024 and is structured around five priorities: I. Protecting and empowering individuals; II. Building resilient, inclusive and democratic societies; III. Promoting a global system for human rights and democracy; IV. Safeguarding fundamental freedoms, including harnessing the opportunities and addressing challenges of new technologies; and V. Delivering by working together.

Considering the significant negative impact the COVID-19 crisis is having on human rights, democracy and rule of law in many parts of the world, it is of critical importance of maintain an uninterrupted support at country level as well as to a number of global key actors, it is proposed for the budget for 2021 to be implemented through the adoption of a special measure.

#### **I. Protecting and empowering individuals**

Protecting and empowering individuals means ensuring that everyone can fully enjoy all human rights, be they civil and political rights, economic, social and cultural rights. Empowering individuals means enabling them, through the full enjoyment of all human rights, to reach their full potential and realise their legitimate aspirations as equal and active members of society.

Under this priority, the following actions are intended for 2021:

<sup>6</sup> <https://data.consilium.europa.eu/doc/document/ST-12848-2020-INIT/en/pdf>

<sup>7</sup> [https://eur-lex.europa.eu/resource.html?uri=cellar:e9112a36-6e95-11ea-b735-01aa75ed71a1.0002.02/DOC\\_4&format=PDF](https://eur-lex.europa.eu/resource.html?uri=cellar:e9112a36-6e95-11ea-b735-01aa75ed71a1.0002.02/DOC_4&format=PDF)

- Implementation of the crisis facility to address in a timely, flexible and reactive way the most difficult human rights situations in the most difficult contexts where CSOs and human rights defenders are at risk and work under severe constraints.
- Support human rights and democracy issues at country level through country allocations implemented by EU Delegations

## **II. Building resilient, inclusive and democratic societies**

Building resilient, inclusive and democratic societies entails addressing in a comprehensive way all aspects of democratic governance. It means strengthening democratic, accountable and transparent institutions, promoting participatory and representative decision-making and protecting the integrity of electoral processes.

On specific action which is planned would support enhanced cooperation between EU and Member States in the area of Democracy and Human Rights. The need is urgent in order to respond to calls for a global alliance for democracy, facilitating EU positioning ahead of the proposed Summit for Democracy, and providing the required data, analysis, consultation and communications mechanisms for the EU and member states.

## **III. Promoting a global system for human rights and democracy**

Promoting a global system for human rights and democracy is at the core of the EU's commitment to strengthening multilateralism. The EU's strategic response to the changing international environment is to work together with all key actors to advance the realisation of all human rights for all.

The following actions are intended for 2021:

- Continue our support to multilateralism through support to the Office of the United Nations High Commissioner for Human Rights (OHCHR),
- Continue our support to Global Campus of Human rights, a unique network of hundred universities around the world. The funding needed for the Global Campus follows the academic year.

## **IV. Safeguarding fundamental freedoms, including : harnessing opportunities and addressing challenges on new technologies**

Digital technologies must be human-centred. New technologies can contribute significantly to the protection and promotion of human rights and democracy, by making public participation easier and more effective, increasing access to public services, facilitating the documentation of violations and abuses, and supporting online activism. However, these technologies can also have a negative impact, such as facilitating access to specific illegal content, or the spread of disinformation, which must be countered.

## **V. Delivering by working together**

This action plan enables the EU to respond to emerging challenges through focused action and coordinated efforts and its implementation and monitoring should be subject to a broad stakeholder dialogue which could also include the EU Special Representative for Human Rights (EUSR). The EU Institutions and Member States will work together to implement it in a joined-up approach each according to their competences under the Treaties, and with exchange of good practices and knowledge. The imperative of "Working together" underpins all four priorities, and is key to achieve concrete results. A joined-up approach will be adopted to develop a compelling narrative on human rights and democracy, with a multiplying effect.

Overall, in order to support all the actions mentioned above, in 2021, the commitment appropriations foreseen for INTPA are EUR 118.3 million and payment appropriations EUR 10.8 million.

Pending approval of the MIP, implementation in 2022 will be guided by the "Human Rights and Democracy" Multiannual Action Programme (MAP) 2021-2024, to be adopted in early 2022, and the annual action programmes for electoral support, the Election Observation Missions (EOMs).

The MAP 2021-2024 will be guided by the priorities set in the Action Plan on Human Rights and Democracy 2020-2024 and the Multi-annual Indicative Programme 2021-2027. It will combine actions at global, regional and local level to optimise impact and will involve all relevant actors to improve synergies and contribute building a coordinated approach. To do so, it will use a wide range of aid modalities, allowing to use the right mix for each axis of action in order to achieve objectives and enhance impact.

The main activities will indicatively consist of: i) protection and emergency assistance to human rights defenders through the renewal of the relevant mechanisms; ii) actions addressing the most difficult human rights situations worldwide in countries with a very restrictive and closed environment, and/or aiming at supporting vulnerable and marginalized groups, iii) support to global

players such as the Office of the United Nations High Commissioner for Human Rights or the International Criminal Court, as well as national human rights institutions, iv) support to the 8th World Congress Against the Death Penalty, which will be held in Germany/Berlin in 2022. Support to other players such as parliaments or political parties could also be considered.

Again, allocations will be included to support human rights and democracy issues at country level through country allocations implemented by EU Delegations to counter violations and shrinking civic and democratic space.

In 2022, the commitment appropriations should be devoted to the implementation by DG INTPA of the above-mentioned actions on the new thematic programme Human Rights and Democracy (14 02 02 11) under the NDICI.

### **Election Observation Missions:**

Within the Human Rights and democracy programme, EUR 52 million will be allocated to the Election Observation Missions (EOMs) in the year 2022.

EOMs are a highly visible demonstration of the EU's commitment to support democracy and promote respect for human rights across the world. The High Representative/Vice-President, assisted by the EEAS, establishes an annual list of election priorities for possible EU EOMs, in consultation with the Member States and the European Parliament. The list of election priorities is reviewed mid-term, to take into account political developments that could emerge during the year. The various missions include fully-fledged election observation missions, election expert missions, election follow-up missions and complementary activities. On average, 23 missions are deployed each year.

Given the high uncertainty around the possibility to deploy observation missions for all priority elections in 2022, due to the possibility of persisting difficulties caused by the COVID-19 crisis, it is suggested that, in the event that commitment appropriations become un-utilised, excess appropriations be transferred primarily to other financing decisions under the Human Rights and Democracy Programme.

## **2. Civil Society Organizations**

For 2021, The CSO Programme will aim at strengthening civil society organisations worldwide. The key priorities will be the enabling environment for civil society, dialogue and policy participation and capacity building. Due to the finalization of the programming at year-end 2021, the vast majority of commitments appropriations will be contracted in 2022. Nearly all 2021 payments will be made from the completion line.

Regarding 2022, for the same reason as above, the 2021 shift of contracting in 2022 will imply the following structure of payments: a part will be allocated as new contracts payments, and another part will be from the completion line (where a share of 30% of the RAL is a fair assessment of the past years).

With regard to Development Education and Awareness Raising (DEAR), for the financial year 2021, the requested commitment appropriations under the NDICI will amount to EUR 4 million (Presidency Project and North-South Centre). Objective of the projects is to ensure the commitment to and increase engagement of EU citizens for sustainable development.

For the financial year 2022, commitment appropriations will amount to EUR 27 million (first projects selected under a call for proposals to be launched end 2021). Payment appropriations will represent payments to ongoing projects and first payments to new projects.

## **3. NDICI Global challenges**

In line with the 2030 Agenda and the European Consensus, and the geopolitical priorities of the Commission, the programme Global Challenges will pursue actions of global nature, contributing to the objective of "A Stronger Europe in the World". It will aim to "strengthen the EU as a global actor in the delivery of the 2030 Agenda and the Paris Agreement to help eradicate poverty, reducing inequalities and achieve sustainable development".

### **People – Global Challenges**

#### **Health**

Subject to programming outcomes, actions for 2021-2027 for human development will address EU external action objectives on **health**, including support to Gavi, the vaccine alliance, with the aim of contributing to immunisation from infectious diseases and cancer in partner countries, pooled procurement enabling market shaping, ensuring low price and access, and advocacy for immunisation (combatting vaccine hesitancy). The programme will also contribute to the Global Fund as the single largest provider of external assistance for health, which puts it in a strong position to push for health sector reform and promotion of human rights. It produces impressive results and addresses diseases particularly affecting the poor and disadvantaged. Furthermore, the EU will

work with WHO to strengthen health systems for universal health coverage. WHO assists 115 countries' Ministries of health to build robust health systems and secure access to equitable health systems for 2 billion people.

### **Education**

In **education** the programme will promote access to quality education through education system strengthening, also in situations of protracted crises and fragility through support to global education initiatives such as the Global Partnership for Education and Education Cannot Wait. Particular attention will be given to enhancing 21<sup>st</sup> century skills, inclusion of marginalised populations including girls. The programme will also strengthen evidence based policy making and monitoring of SDG4 progress through supporting capacity building, collection and analysis of data and statistics.

### **Gender equality and women and girls empowerment**

The EU will actively contribute to advance the gender equality agenda through its new EU Gender Action Plan in external relations which will be implemented during the following 5 years (2021-2025). It will take a three-pronged approach: gender mainstreaming, include gender equality in policy/political dialogues and identify key gender-specific initiatives. The new EU Gender Action Plan (2021-2025) will connect policy and programming priorities, including by increasing country level responsibility for conducting gender country analysis and mainstreaming across sectors and modalities of aid. It will also include gender-targeted actions. This will require technical assistance and the allocation of appropriate resources, in line with the EU commitment to 'lead by example' on gender equality.

At the global level, the EU action will give a prominent place to sexual and gender based violence in international fora, strengthening the international gender equality acquis and increasing dedicated investments. Effective international cooperation is essential to tackle global challenges. In this spirit, the EU has established solid partnerships with governments, global actors such as the UN and other international and regional organisations, private sector, civil society, including women's rights organisations and academia. There will also be knowledge building based on results, experiences, lessons learned and best practises from the Spotlight Initiative, currently up and running in 26 countries and 6 regions, and which might be further expanded as well as our support to women CSOs through UN global funds.

### **Children and Youth**

Actions targeting **children and youth** under the Global Challenges Programme will focus on increasing children' and youth participation to inform and influence decision-making and unleash transformation at the global level and creating bridges between European children and youth and their counterparts in partner countries. In 2022, actions will support the implementation of a global outreach strategy on children' and youth participation, data collection and networking. In order to support these actions, the commitment appropriations foreseen under this Programme for 2022 are EUR 5 million and payment appropriations EUR 2 million.

### **Migration and forced displacement**

Subject to the finalisation of the Multi-annual Indicative Programme 2021-2027, actions contributing to improve the governance of migration and forced displacement at global level will be supported under this programme, in full complementarity with actions at national and regional levels, funded by the geographical part of the NDICI. As a number of global programmes were recently launched under the DCI's Global Public Goods and Challenges (GPGC) thematic programme (2014-2020) and are currently ongoing, no commitment or payment appropriations will be required for 2021. Preparations on an Annual Action Programme for 2022 will start as soon as the programming process, including for the geographical programmes, is more advanced.

### **Decent work, social protection, inequality and inclusion**

COVID-19 has brought new evidence that only comprehensive **social protection** systems are scalable and crisis-resilient. The programme will reinforce the Global Partnership for Universal Social Protection that holds the global mandate to coordinate efforts for achieving substantial social protection coverage, involving partner countries. Standardization of social protection processes at global level is pivotal for a quick and cost-effective implementation of a social protection system at country level (social registries, MIS, programme design). The EU will join the UN Partnership on the Rights of Persons with Disabilities (UNPRPD)

+ Global Action on Disability Network (GLAD) that aims to reduce **inequalities for people with disabilities** by supporting the implementation of the Convention of the Rights of Persons with Disabilities and the related SDGs globally and at country level. Activities include advocacy, developing and testing of tools and capacity building.

### **Culture**

The Global Partnership for Education (GPE) will replenish in July 2021 and start implementing its new strategy, which focuses on building capacities in partner countries for education system transformation to accelerate progress on SDG4. The first part of our estimated contribution 2021-2025 should be contracted in 2022 (EUR 150 million covering 2021-2022). Following the COVID19 pandemic and additional support granted to partner countries through Education Cannot Wait has increased the need for additional financial resources to ensure children in fragile situations and protracted crises can continue learning. The Commission plans a commitment of EUR 15 million as initial EU contribution in 2022. For global challenges commitments, EUR 2.5 million would be needed for support measures (2 million for the education advisory services and 500.000 for culture) that will support the implementation of NDICI (HQ and EU Delegations) for the full project cycle. The current education contract expires in August 2022 and the culture contract in January 2023.

## **Planet – Global Challenges**

### **Ensuring a healthy environment and tackling climate change**

The design and implementation of the first Annual Action Plan (AAP) under the Planet component of the Global Challenges programme is on track and in line with the Multi-annual Indicative Programme.

The AAP 2021 fits in the implementation of the external dimension of the European Green Deal. More specifically, it will support global transformative action to foster sustainable development while progressing towards climate neutrality and resilience, halting biodiversity loss and decoupling economic development from the unsustainable use of natural resources, in particular oceans, water, land and forests. It will support global efforts to promote the transition to inclusive, climate-neutral, resilient, and sustainable economies.

As far as climate is concerned, in 2021 and 2022, mainstreaming efforts will increasingly focus on the implementation of the Paris Agreement in order to boost environmental sustainability in partner countries and achieve the EU objectives of allocating at least 30% of its budget to climate relevant actions during the 2021-2027 programming period. Implementation will focus on: (i) promoting climate change adaptation and disaster risk reduction especially in the most vulnerable countries; (ii) supporting climate change mitigation and the implementation of Nationally Determined Contributions (NDCs) established under the Paris Agreement; (iii) mainstreaming environmental and climate change considerations into the EU's and partner countries' into policies, strategies, investments, programmes and projects.

In 2022, appropriations will cover the budget needed for implementing actions aiming to support the transition to climate neutrality and green and circular economies, the conservation and sustainable use of biodiversity, sustainable agriculture and food systems, tackling pollution and promoting sustainable finance. Ambitious climate action will aim to implement the Paris Agreement, particularly by supporting partner countries in the implementation of their Nationally Determined Contributions (NDCs) and National Adaptation Plans (NAPs). Dedicated technical cooperation in selected areas will specifically aim to reduce greenhouse gas emissions, increase carbon sinks and strengthen adaptation and disaster risk reduction capacities. The external climate action will also aim to strengthen scientific, technical, and institutional capabilities for climate and environmental management and mainstreaming while also building capacity to monitor, report and verify Measurement, Reporting and Verification (MRV) results.

In order to respond to the COVID-19 crisis some actions previously envisaged in the 11th EDF Disaster Risk Reduction (DRR) Programme were re-oriented in order to enlarge the type of disaster events tackled through this action. Within the EUR 100 million action on DRR approved in 2020, INTPA will support activities related to risk assessment and response that will enhance the structural capacity of ACP countries to react and recover from disaster events – being climate related or pandemics-related, like COVID-19.

### **Sustainable Energy:**

The formulation and implementation of the programme is on track and in line with the Multi-annual Indicative Programme 2019/2020 for Sustainable Energy. The implementation of the budget allocations 2021 will focus on promoting energy access, renewable energy deployment and energy efficiency including through the implementation of:

- the DESIREE programme (Demand side management, Social Infrastructures, Renewables and Energy Efficiency) on Energy Efficiency and electrification of social infrastructure;
- the Clean Cooking programme;
- the Transferability & Convertibility Facility for de-risking renewable energy generation investments;
- ElectriFI, Climate Investor One, Facility for Energy Inclusion, Africa Renewable Energy Scale-up Facility;
- the GET.invest, and the EU Technical Assistance Facility for Sustainable Energy and the Covenant of Mayors for Sub-Saharan Africa programme.

The main policy outputs for the EU's external cooperation and international partnerships on sustainable energy will be:

- Provide quality support and expertise to EU Delegations to ensure well-designed sustainable energy related actions as part of TEIs and bilateral/regional programming in order to contribute in meeting the objectives under the Green Deal and the Paris Agreement;
- The deployment of the Africa-EU Green Energy initiative (AEGEI);
- Support the African institutions (African Union Development Agency – New Partnership for Africa’s Development AUDA-NEPAD) in collaboration with African Union Commission (AUC), African Development Bank (AfDB), United Nations Economic Commission for Africa (UNECA) and other development partners) who will launch the continental transmission network masterplan for Africa to promote a single electricity market, energy access and regional integration;
- Mobilisation of investment pipelines with technical assistance and GET.invest for EFSD to contribute, inter alia, to the fast recovery from COVID-19 and its consequences;
- Rollout of the first EU-supported competitive tendering procedures for renewable energy deployment in Africa by EIB, Agence française de développement (AFD), Cassa Depositi e Prestiti (CDP) and Kreditanstalt für Wiederaufbau (KfW) under EFSD.

In 2022, appropriations will cover the continuation of the work programme in support of international partnerships in the area of sustainable energy including for the successful continuation of investment de-risking programmes Climate Investor One (CIO); Africa Renewable Energy Scale Up Facility (ARESUF); Digital Energy Facility (DEF); Electrification Financing Initiative (ElectriFI); Facility for Energy Inclusion (FEI); Demand side management, Social Infrastructures, Renewables and Energy Efficiency (DESIREE).

## **Prosperity – Global Challenges**

### **Sustainable and inclusive growth, decent jobs and private sector engagement**

In 2021 actions will aim to ensure that the EU continues to play a strong and visible role in promoting sustainable and inclusive growth and decent job creation by supporting economic stability oriented policies, mobilising public and private financing; building and sharing knowledge and targeted technical support, thus contributing to the Green deal objectives. These actions will be aligned with the strategic priorities of the United Nations Agenda 2030 for Sustainable development, the new European Consensus for Development and the EU’s External Investment Plan (EIP). Particular attention will be paid to youth employment and women entrepreneurship, Micro, Small and Medium Sized Enterprises (MSMEs), digital financial inclusion, local financial market development, corporate responsible sustainability, enforcement of labour standards – in particular the eradication of child labour -, engagement in fragile states and Least Developed Countries (LDCs) and implementation of the Aid for Trade Strategy. In 2021, priorities under the expertise hub for support to private sector and trade development will be: (1) supporting private sector and trade development through promoting global knowledge (2) improving the implementation and content of international standards (3) building up sustainable supply chains (4), fostering global partnerships and developing flagships, with special attention to women economic empowerment (5), providing harmonised thematic assistance to EU Delegations (6) and promote due diligence and Corporate Social Responsibility in global value chains, ratification and enforcement of labour standards in particular in EU trade partner, and contribute to the formulation and adoption of growth strategies that maximise decent job creation.

Actions in 2022 will aim at: (1) Promoting increased EU leadership in global knowledge platforms on areas such as financial and economic inclusion, financial markets, safe, secure and sustainable value chains and conflict-sensitive business practice. (2) Continue ensuring that partner countries have better access to global public goods such as international standards that contribute to sustainable trade and private sector development, promoting economies that work for people and the planet. (3) Supporting EU Delegations with targeted and harmonised support on investment climate, trade and private sector development, particularly in view of the effective implementation of an integrated approach to the EIP. (4) Promoting an harmonized approach to better understanding of financial markets to allow for increase access to finance and deepening financial inclusion both for households and small and medium sized businesses, in particular vulnerable groups, by increasing access to financial services and to opportunities offered by digital technologies (digital financial services, digital entrepreneurship). (5) Enhancing trade for development as a key component of EU’s support to growth and jobs creation and promotion of developing countries’ integration into regional and global value chains and trade flows. This will also be part of the implementation of the EU Aid for trade strategy, with view to achieving more and better results, and at putting a special emphasis on tailoring the EU approach to the LDCs and countries in fragility. (6) EU delivering on its international commitments by supporting global flagship initiatives on private sector development, sustainable value chains and trade such as overcoming gender inequality and barriers to women’s economic empowerment that remain among the biggest global challenges to inclusive and sustainable growth. (7) Promoting due diligence and Corporate Social Responsibility in global value chains, as well as the ratification and enforcement of labour standards in particular in EU trade partners. (8) Contributing to the formulation and adoption of growth strategies that maximise decent job creation.

For the current year 2021, funds for actions to support Domestic Revenue Mobilisation (DRM) reforms with a focus on tax administration will be committed under Prosperity – Global Challenges (Tax Administration Diagnostic Assessment Tool and Addis Tax Initiative (TADAT-ATI) – EUR 5 million). This is part of the wider EU fiscal policies agenda, Collect More – Spend Better (CMSB) and a way of implementing the Addis Tax Initiative commitments 2025. The European Commission/INTPA was strongly involved in co-creating the commitments of Addis Tax Initiative ATI 2025, ensuring they are in line with EU priorities including on a just, green and digital transition and recovery. The financing of the TADAT by the EU is a priority to ensure that work on TADAT, as part of the Financing for Development agenda, fully reflects the Commission priorities.

For the financial year 2022, appropriations are requested for actions to support Domestic Revenue Mobilisation reforms with a focus on tax avoidance, evasion and reduction of illicit financial flows under Prosperity – Global Challenges (OECD, Tax inspectors without borders, Platform for Collaboration on Tax – EUR 10.5 million). The OECD is the G20 mandated standard setter on tax avoidance (Base Erosion and Profit Shifting) and tax evasion (through the Global Forum on transparency and exchange of information for tax purposes). Technical advice to partner countries on carbon taxation will be important to provide a basis for a green and just transition in line with the Paris Agreement and the Green Deal. In addition the programme contributes in reducing Illicit Financial Flows. The Platform for Collaboration on Tax helps to coordinate work on tax and development between IMF, WB, OECD and the UN. By supporting the secretariat, and thereby joining the advisory board, the Commission would be in an important position to influence the work and orientation of the platform in line with its own policy priorities.

### Food and nutrition security

The formulation and implementation of the programme is on track and in line with the Multi-annual Indicative Programme. The implementation of the Annual Action Plan in 2021 will focus on sustainable agri-food systems as overarching theme, incorporating the following four objectives:

- Increased sustainability of food and agriculture production and agri-food value chains;
- Improved food quality and safety;
- Increased resilience of vulnerable populations to food crises and climate stresses;
- Improved governance around food systems.

In 2022, appropriations will cover actions that will aim at enhancing sustainable food systems, as a contribution to the Farm to Fork strategy of the Green Deal, through the reduction of malnutrition in all its forms, innovation and research contributing to inclusive climate-relevant practices in sustainable agriculture and agricultural/agro-forestry value chains, and the prevention of and response to food crises.

### Digitalisation

The formulation and implementation of the programme is on track and in line with the Multi-annual Indicative Programme. The implementation of the Annual Action Plans in 2021 will include a focus on (i) supporting the activities of the Digital for Development initiative (D4D), (ii) enhancing cooperation with financial institutions, other relevant EU institutions or DGs (JRC, CNECT, RTD) and Member States in research, innovation, digitalisation, (iii) promoting and strengthening the TEIs in digital, (iv) support the Delegations in mainstreaming digitalisation in their programming.

In 2022, appropriations will cover the preparation of digital activities to be financed by the EFSD+, the cooperation with private sector on connectivity, capacity building and technical assistance in collaboration with relevant international institutions (International Telecommunication Union (ITU)), strengthening the nexus green/digital/energy, the participation in global alliances in education, research, innovation, in order to exploit the full potential of digital technologies, the promotion of EU values and vision in the global debates on digital governance, data protection and cybersecurity, Copernicus and Galileo/EGNOS (European Geostationary Navigation Overlay Service) initiatives, support of the D4D activities, including the four regional branches.

## **Partnership – Global challenges**

### Strengthen the role of Local Authorities as actors of development

Support to Local Authorities in partner countries will be carried out within the geographic programmes (in comparison to the previous MFF where it was funded under a thematic programme) while the support to the regional and global Associations of local authorities will be financed within the Global Challenges thematic Program. The Global Challenges section on Partnerships which includes the support to the Associations of Local authorities, foresees for 2021-2027 the continuation of Strategic Partnerships Agreements. It also foresees a facility to support the geographization of the support to local authorities in partner countries, the roll out of the Road maps of local authorities to all countries, the support to adopt in all countries the Territorial Approach to local development. In addition every two years the Forum of Cities and Regions for Development Cooperation will be organized and depending on the result of the feasibility study on the setting up of a portal for decentralized cooperation the portal will be set up.

**DEAR (local authorities)**

Actions in the area of development education and awareness raising under the NDICI 2021-2027 Global Challenges Programme will focus on building support of EU citizens, particularly youth, for sustainable development and cooperation with partner countries, promoting solidarity and encouraging active citizenship engagement in areas such as climate change and inequalities. In 2022, the activities will include selection of grants through a call for proposals for local authorities working in the area of global citizenship education, as well as campaigning and advocacy, with increased participation of youth organisations, including through ensuring support to small-scale and youth driven initiatives. In order to support these actions, the commitment appropriations foreseen under the Global Challenges Programme for 2022 are EUR 8 million and payment appropriations EUR 2 million.

**Inclusive societies, economic governance**

For the year 2021, funds for actions to support the improvement of debt management will be committed under Partnership – Global Challenges (Debt Management Financial Analysis System (DMFAS) - EUR 2 million); DMFAS is a crucial tool for debt transparency and debt data recording and reporting in the current context of increasing debt crisis aggravated by the COVID pandemic. Continuation of EU support is essential in this context.

For the financial year 2022, the commitment appropriations are requested for actions to support the improvement of macroeconomic stability and debt management under Partnership – Global Challenges (World Bank/IMF Debt Management Facility (DMF) multi-donor trust fund; OECD database on private debt data; Support to strengthen Statistics systems in partner countries; Macroeconomic Facility; Enhancing monetary policy frameworks and supervision of financial sectors – EUR 18.5 million). With the pandemic triggering mounting debt sustainability problems in partner countries, the World Bank/IMF Debt Management Facility is crucial for the implementation of the EU's Global Recovery Initiative on debt relief and investment. The OECD database is a crucial step forward towards enhanced debt transparency by including debt from private creditors. The creation of this database was strongly supported by the G20 and a logical consequence of the increasingly diverse creditor landscape. EU support will kick in after the pilot phase currently ongoing at the OECD and support the initial phase of full deployment and maintenance of the database. The support to international initiatives to strengthen statistical systems will be an important contribution to the implementation of Integrated National Financing Frameworks (INFF) for the achievement of Agenda 2030 in partner countries. The macroeconomic Facility will support the enhanced macroeconomic mandate of DG INTPA and its geo-economic analysis capacity. Eventually stability and resilience of financial sectors is crucial for maintaining macro-economic stability, financing productive activities and developing innovative financial products such as green finance and digital solutions. The programme will complement INTPA policy on development of local financial instruments including the Green bond initiative and strengthen the policy framework for sustainable finance in partner countries. This will also improve government treasury management and foreign exchange reserves through enhanced Central Bank capacity.

**4. Peace, Stability and Conflict Prevention**

In 2022, EUR 139 million is requested for the programmable Peace, Stability and Conflict Prevention programme, under the Thematic pillar.

The level of commitment appropriations requested for 2021 and 2022 will allow to adapt actions and interventions in the field of peace, stability and conflict prevention to the changed and evolving global scenario. The COVID-19 crisis, with its health, economic and social impacts, might be a multiplier and an amplifier of conflicts and tensions around the world. Therefore, it is important to ensure adequate funding for peacebuilding and conflict prevention activities, especially in 2021 and 2022.

The financial needs to ensure timely payments for supported initiatives starting in 2021 and in 2022, are calculated on the basis of the implementation experience of the previous IcSP programme and the timeline for the approval of the Annual Action Programmes (AAPs) for 2021 and 2022. The AAP 2021, in particular, will probably be approved late in 2021, therefore the related payment credits are minimal.

**NDICI Rapid Response pillar****Crisis Response**

In 2022, EUR 268 million in commitment appropriations will be needed for non-programmable Crisis Response actions under the Rapid Response pillar.

**Resilience**

The Resilience line of the Rapid Response Pillar is intended to strengthen resilience and better link humanitarian aid, development cooperation and peacebuilding as part of a response to unforeseen events or developments. It is not a reserve, but it is a non-programmable budget line that sits in between humanitarian aid and reserves. It is intended to complement national and regional programming, as well as the other lines of the Rapid Response Pillar. It will finance measures to tackle factors of fragility and strengthen existing capacities, mitigate adverse effects of shocks, support rehabilitation and reconstruction, disaster prevention and

preparedness mechanisms, as well as operationalising integrated approaches by improving coordination. It is at this stage not possible to make an indicative programme.

### **Support to EU Foreign Policy Needs:**

Under the Rapid Response pillar, EUR 51 million in commitment appropriations are requested for the Foreign Policy needs actions in the year 2022. The level of allocations under the geographic pillar for industrialised countries and public diplomacy needs to be confirmed.

The level of commitment and payments appropriations requested for 2021 and 2022 corresponds to estimated needs based on past experiences and absorption alongside anticipated future needs in relation to further strengthening the role of the EU as a foreign policy actor, promoting multilateralism and seizing opportunities to enhance political and economic cooperation, linked to overall COM priorities and public diplomacy.

## **2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations**

### **Previous programme 1: Development and Cooperation Instrument (DCI):**

	<b>Commitments</b>	<b>Payments</b>
Implementation Voted budget	<b>19 969 388 092</b>	<b>10 949 253 215</b>
Implementation Carry-overs	<b>0</b>	<b>65 523 759</b>
Implementation total	<b>19 969 388 092</b>	<b>11 014 776 974</b>
total envelop*	<b>19 970 133 478</b>	
cumulative implementation rate	<b>100%</b>	<b>55%</b>

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

At the end of 2020, the Commission has committed 100% of the DCI allocation. So far, only 0,8% of this amount has been decommitted. Those results demonstrate very good planning and implementation ability.

With regards to the payment appropriations, at the end of 2020 the implementation rate was of 55%. This implementation rate reflects a normal situation, given the specificity of the DCI. All the payment appropriations voted for the DCI budget lines have been used. There is no delay in the implementation of the programmes. Most of the external actions are multiannual. According to the Financial Regulation, the financing agreements with the beneficiary countries and all contracts implementing external actions have to be signed within a limit of 5 years. However, the financial performance of the Commission is far better, reaching an average implementation period of 3 years for the cooperation programmes. This period of 3 years does not only include the conclusion of the Financing Agreements and contracts but also the actual implementation of the activities and the execution of related payments. The geographic budget lines, where the Financing Agreements add 3 years to the deadline for contracting, the payments implementation rate is 49,7%, while for thematic lines it is 59,7%. The RAL absorption ratio in 2020 was 3,1, decreasing from 5,1 in 2014.

In 2020, the COVID crisis led to a transfer of EUR 65.9 million in commitment appropriations from the DCI Asia to Humanitarian Aid to reinforce the Commission's COVID19 response in Iran (EUR 13 million), in Pakistan (EUR 27.9 million), in Afghanistan (EUR 15 million) and in Iraq (EUR 10 million, for supporting the Commission's programme implemented through WHO for the implementation of the Iraq National Health Security Action Plan).

Due to the COVID-19 response package, the total amount paid in 2020 for the DCI has largely exceed the 2019 result (+ EUR 393 million). More specifically, the response was implemented through the disbursement of Budget Support Tranches in the different regions (around EUR 600 million paid in 2020) and through specific programmes (for eg: "Response to the COVID-19 crisis: Support to maternal health in Yemen" and "Addressing the needs of Afghan refugees and host communities affected by the COVID-19 pandemic in Pakistan").

### **DCI Geographic:**

#### **DCI Latin America:**

In Latin America, the **2020 DCI programme commitments and implementation** largely went as planned, except for the COVID-19 mitigating measures which resulted in an increase of commitments. The total available amount of DCI credits was committed

through 30 new decisions (or addenda) in key sectors such as education, sustainable growth and jobs, food security, climate change; private sector and investment; security, rule of law and governance. Budget Support remains an important instrument for implementation in Latin America and accounted for roughly 44% of the total amount committed for DCI. Working directly with country systems, it proves to be a strong tool in reinforcing policy dialogue on key reforms and improving public financial management systems, domestic revenue mobilisation efforts, transparency and accountability. The new Budget Support decisions adopted (10), focus on education, public policy reforms, social protection, private sector development and supporting the peace process in Colombia.

Regional programmes remain crucial for strengthening the impact of the EU-Latin America partnership and represented 31% of the new commitments in 2020. The importance of sustainable investments continues to grow and the DCI contribution the Latin America Investment Facility (LAIF) continued as EUR 65 million were committed in 2020 (15% of total 2020). Given the COVID-19 pandemic, 6 new actions for a total value of EUR 67 million were adopted to support the mitigating measures of the partner countries, benefitting Peru, Colombia, Venezuela, Guatemala, SICA and Central America.

The **EU Trust Fund for Colombia** continued to support the implementation of the peace agreement between the Colombian Government and the FARC (the Revolutionary Armed Forces of Colombia). It translates the EU's political support to the Peace Agreement, in particular on the elements related to rural reform, and the social and economic reincorporation of former FARC combatants. The EU Trust Fund for Colombia has currently 30 projects ongoing for a total amount of EUR 110 million. Main results achieved are in the area of sustainable rural development and socio-economic reintegration of former FARC-EP (the Revolutionary Armed Forces of Colombia – People's Army) combatants.

Regarding **implementation (payments) Budget Support remains an important modality** for operationalising the EU partnership with Latin America. In 2020 around 34% of all payments were for Budget Support operations, marking continuity with the previous years. Given the outbreak of the COVID-19 pandemic, Budget Support proved to be an adequate instrument to support the mitigating measures of the partner countries and most of the Budget Support financing agreements were adjusted to frontload payments or to allocate undisbursed funds to a special COVID-19 fixed Tranche. The initial 2020 payment forecast was increased by 50% to provide fiscal space to the partner countries, targeting those hardest hit by the pandemic. To operationalise these adjustments, around 20 addenda (or exchange of letters) were processed in a record time resulting in a year-end disbursement rate around 30% superior to the initial forecast.

Regarding the **payment appropriations 2021**, an indicative amount of EUR 297 million is budgeted to ensure continuity of initiated actions under the 2014-2020 programme. The complementary mix of instruments will be maintained with Budget Support as preferential instrument, followed by grants and service, PAGODA for delegated cooperation and an important part will fast track implementation of the Latin America Investment Facility (LAIF). The first disbursements for the Venezuela Migration package, adopted in 2020, will be an important milestone. Likewise, first disbursements are also forecasted for important new actions; mainly in the area of **governance**, such as for Bolivia (Support to the National Strategy to fight against Drug Trafficking and Control of Surplus Cultivation of Coca) and for Guatemala (Strengthening public institutions and increasing rural income). Continuity will be given to the regional programmes such as El PAcCTO (continent-wide security programme) and COPOLAD (Cooperation Programme between Latin America, the Caribbean and the European Union on Drugs Policies). In the area of **Human Development**, important disbursements are foreseen for 2 new actions in Paraguay in the area of education and social protection; for El Salvador on social protection and for the regional programme EUROsociAL. In the area of climate change and environment, the EUROCLIMA+ programme will enhance its implementation (including an evaluation) as well as the in 2020 adopted actions supporting the transition toward **green and circular economies** in Bolivia, Colombia and Ecuador. The **EU Trust Fund for Colombia has been extended till end 2021** with currently 30 projects ongoing for a total amount of EUR 110 million. Implementation will focus on the operationalisation of new actions on land reform and social and economic reintegration.

Implementation of the **payment appropriations for 2022** will be split between continued implementation of actions under the 2014-2020 programme and initial disbursements for the operationalisation of AAPs for NDICI 2021-2027. The new actions under NDICI 2021-2027 will cover issues of strategic priority and will be based on the TEIs. The already confirmed TEIs for the region relate mainly to the Green Deal, followed by the sustainable jobs, growth and regional economic integration, Digital agenda, and Peace, security and human development. Human development and social inclusion will be supported by well-functioning multi-country/regional programmes in the field of social cohesion/fight against inequalities. Regional programmes remain pivotal in EU's added value to operationalise the partnership with the region and successful programmes such as EUROsociAL+, El PAcCTO, COPOLAD, or EUROCLIMA+ will be continue though adapted to the new context.

### **DCI Asia:**

#### **In Asia and Middle East:**

In 2020, the residual MFF (2014-2020) credits (14%) were committed through 19 AAPs, 11 special measures and 1 support measure for the following countries: Afghanistan, Bangladesh, Bhutan, Cambodia, Maldives, Myanmar, Pakistan, Philippines, Sri Lanka, Vietnam, Asia region, Mongolia, Kyrgyzstan, Tajikistan, Uzbekistan, Central Asia region, Iraq and Yemen.

In 2020, commitments aimed at completing the use of the allocations of the MFF 2014-2020 in Afghanistan, Bangladesh, Bhutan, Cambodia, Laos, Myanmar, Nepal, Pakistan, Philippines, Sri Lanka, Vietnam, Asia region, Kyrgyzstan, Tajikistan, Uzbekistan, Central Asia region, Iraq, Yemen and Iran in the focal sectors identified and confirmed in the Mid-Term Review of 2018. This

included AAPs for the countries with a MIP, the two RIPs for Central Asia and Asia and Special Measures for Yemen, Iraq and Iran and all additional commitments on top-ups on ongoing decisions.

In addition, EUR 950 million were committed through new Commission implementing decisions and addenda to existing measures as part of the EU response to the COVID-19 crisis, in line with the Joint Communication on the Global EU response to COVID-19 (JOIN/2020/11).

Budget Support remains the main aid modality to work directly with countries when possible and relevant, reinforcing policy dialogue on key reforms and improving public financial management systems, domestic revenue mobilisation efforts, transparency and accountability. A variety of sectors are targeted, such as social protection, nutrition, energy, and agriculture, while the most supported sectors are education and vocational training. In 2020, Budget Support was a very effective tool for the emergency COVID-19 response, providing fiscal space to partner countries in these difficult times. Budget Support represented broadly 50% of our COVID response payments, with a total of EUR 578 million being disbursed throughout the year, which is broadly the double compared to 2019.

Investments gained momentum over the last four years. The EU contribution to investment and blending under the investment facilities for Asia and Central Asia totalled EUR 423 million in the period 2017-2020, compared to EUR 193 million for the period 2014-2016. The amount for 2017-2020 has been fully contracted.

In 2021, payments of the subsequent tranches of 23 Budget Support programmes in 11 countries (Afghanistan, Bangladesh, Bhutan, Cambodia, Kyrgyz Republic, Laos, Mongolia, Myanmar, Nepal, Pakistan and Uzbekistan) should amount to a total EUR 495.9 million if all conditions are fulfilled. This represents the vast majority of the volume of payments to be performed in 2021.

The implementation of the payment appropriations for 2022 will include the continued implementation of actions under the 2014-2020 programmes.

### **DCI South Africa:**

The DCI South Africa commitment appropriations 2014-2020 were fully used and implemented as planned through a comprehensive programming process. The result of the process has been a set of programming documents that define per bilateral/regional/thematic programme: the priority areas for financing, the specific objectives, expected results, indicators and indicative allocations. There is no need for corrective action at this stage.

In **2021**, payment appropriation will be used for Budget Support programmes such as: the Education for Employability Programme, the Support Programme to the Wine and Spirits Sector, and the Gender Equality and Women Empowerment Programme. Other programmes not using Budget Support include the Dialogue Facility, the Capacity Building for Employment Promotion and the Accountability Programme.

In **2022**, payment credits will be used for Budget Support programmes such as the Support Programme to the National System of Innovation, the Support Programme to the implementation of the EU-SADC Economic Partnership Agreement, the Support Programme to the Wine and Spirits Sector, and the Gender Equality and Women Empowerment Programme. Other programmes not using Budget Support include the Technical Assistance Facility to support sustainable infrastructure.

### **DCI Thematic:**

#### **DCI Global Public Goods and Challenges (CPGC):**

##### **Environment and Climate change**

For the 2014-2019 period, out of a total EUR 49.938 billion in EU development cooperation managed by DG DEVCO (under DCI and EDF), climate change-related aid amounted to EUR 10.270 billion. This corresponds to 20.4% of total commitments.

In 2021, the payment appropriations requested for the Environment and Climate Change DCI completion line, as well as those for Sustainable Energy DCI completion line will be used to finance projects: (i) focusing on strong coordinated action at global level to tackle climate change, promote the implementation of the Paris Agreement and support sustainable energy transition; (ii) strengthening international environmental governance and supporting the implementation of multilateral environment agreements, in particular the Convention on Biological Diversity, and of EU action plans on deforestation, Forest Law Enforcement Governance and Trade and Wildlife Trafficking; (iii) enhancing environmental knowledge and monitoring to support evidence-based policies and providing technical assistance to partner countries and regions on Green Deal-related priorities.

All commitment appropriations for 2020 were duly committed; payments corresponding to 100 % of payment appropriations were made. Actions funded under the Multi-Annual Indicative Programme (MIP) for 2019-2020 continued to support action from the global to the local level to promote a healthy environment and to tackle and adapt to climate change, notably through the Global

Climate Change Alliance Plus (GCCA+) flagship initiative, the biodiversity crisis through the Biodiversity for Life flagship, deforestation and forest degradation in particular under the EU Forest Law Enforcement, Governance and Trade (FLEGT) Action Plan. In synergy with other action areas, the programme supported action to combat desertification and land degradation and promote sustainable and integrated management of land. The programme supported action to strengthen global environmental and climate governance, notably through support to selected Multilateral Environmental Agreements; and action on water, focusing on the integrated management of transboundary waters. Action to further promote sustainable consumption and production and support the transformation towards an inclusive green economy through the Switch to Green Initiative and actions to prevent and address pollution.

As far as 2020 commitments are concerned, a Decision provided for the establishment of an EU Nationally Determined Contributions (NDC) Technical Facility (EUR 14 million) and a new environment and climate change Mainstreaming Facility (EUR 2 million) whose objective, amongst others, is to support the current programming phase with the aim to reinforce the implementation of the external dimension of the Green Deal. The NDC Facility will support efforts to achieve climate neutrality by working specifically on NDCs update and implementation while not neglecting adaptation and disaster risk reduction aspects. The second facility will strengthen mainstreaming of climate change mitigation and adaptation, ecosystem based approaches, disaster risk reduction and environment in EU international cooperation. The facilities will start operations in 2021 and are expected to run until 2026.

In 2020, the EU fulfilled its pledge to provide a EUR 10 million financial contribution to the Adaptation Fund – one of the international climate funds established under the United Nations Framework Convention on Climate Change (UNFCCC), thus contributing to the global efforts to address climate change in the most vulnerable countries of the world.

Under the 2020 and 2021 payment appropriations for the completion budget lines, the implementation of projects will focus on international environmental and climate governance through targeted support to multilateral environmental agreements and processes; promoting a switch to green finance; enabling a future with forests; supporting EU action for sustainable landscape management; developing knowledge-based management of natural ecosystems for sustaining green growth and ensuring stability; tackling emerging threats to biodiversity and security in high value ecosystems, and ensuring support to water for Prosperity, Peace and Planet.

Appropriations requested for 2022 under the completion budget line will cover the implementation of the above-mentioned projects.

#### Sustainable Energy

Implementation status of the projects corresponding to the 2020 commitment and payment appropriations and to the 2021 payment appropriations under the ex-DCI (completion budget lines):

The AAP 2020 commitment credits will be fully executed.

Under the 2020 payment appropriations for the completion budget lines, the implementation of projects is on track. The payment appropriations for 2020 under DCI/GPGC have been fully disbursed.

Under the 2021 payment appropriations, the smooth implementation of projects committed under the previous MFF will continue.

The COVID-19 crisis did not have a major impact on the implementation, as adequate mitigation measures allowing their smooth continuation of project activities were put in place.

The payment appropriations requested for 2022 will cover the smooth implementation of projects committed under the previous MFF and those to be committed in 2021, in line with the respective payment schedules as encoded in BPC.

#### Human Development

In line with the United Nations 2030 Agenda for Sustainable Development and the new European Consensus on Development<sup>8</sup>, the programme seeks to systematically integrate and balance the economic, social and environmental dimensions of sustainable development in the implementation of the GPGC. Across its five action areas, it aims at promoting human development, sustainable investments and job creation, strengthen state and societal resilience, and addressing irregular migration and forced displacement, contributing to sustainability and security. As per the recommendations of the Mid-term review<sup>9</sup>, more attention was given to promoting interlinkages and cross-sectoral action at the nexus between different action areas that could contribute to multiple SDGs; and to enhance complementarity, coherence and synergies between thematic and geographic programmes. Building on lessons learned, actions seek to 'enhance the role of the EU as a global actor in the delivery of the 2030 Agenda and the Paris Agreement to help eradicate poverty and achieve sustainable development'.

#### Health

All commitments in 2020 were adopted as planned. The Commission contributed to the Global Fund against AIDS, Tuberculosis and Malaria (the Global Fund) and to GAVI, the Vaccine Alliance (GAVI). The Global Fund has saved 38 million lives since 2002. Only in 2019, 18.9 million people were on life-saving HIV treatment; 5.7 million treated for tuberculosis; and 160 million mosquito

<sup>8</sup> OJ 2006/C 46/01

<sup>9</sup> COM(2017)720 of 15/12/2017

nets distributed. Overall, the number of deaths caused by AIDS, TB and malaria went down by 40 % since 2002 in countries where the Global Fund invests. GAVI spends about USD 1.5 billion per year in the 73 poorest countries and helped to immunise 760 million children, preventing more than 13 million future deaths. Today about half of the world's children receive vaccines supported by GAVI. It will also take on a new role in polio eradication. GAVI is also hosting the COVAX Facility as the leading global purchasing mechanism that aims to procure at least 2 billion doses of future COVID-19 vaccines, enough so that at least 20% of the world can be immunised in every country.

Support to health systems strengthening including pandemic preparedness has been implemented through the Universal Health Coverage Partnership with the World Health Organisation. The programme has assisted ministries of health in 115 countries to build robust health systems and secure access to equitable health for 2 billion persons in order to respond and recover from the pandemic quickly.

### Education

Commitments were adopted as planned and payments had to be frontloaded following increased disbursement by global education initiatives due to extraordinary COVID-19 responses. EU involvement in financing and governance of the Global Partnership for Education (GPE) and the Education cannot Wait (EcW) platform made it possible to make progress in addressing the global learning crisis, in particular regarding vulnerable groups in Low Income Countries (LICs) and children in situations of crises. Both initiatives put in place rapid COVID-19 responses during 2020 to help countries mitigate the impact of the pandemic and to ensure continued learning during school closures. GPE allocated additional grants to more than 66 countries, and this led to greater disbursements than planned. The EU's contributions to GPE contributed to achieving a large part of the GPE's milestones, across key dimensions such as education policy, management, access, quality, equity and learning outcomes. EcW has improved access to quality education for up to 3.4 million children and young people affected by crisis in more than 30 countries, of which nearly half are girls. In addition to first emergency responses, multi-year resilience programmes have been launched to address challenges in protracted crises situations.

2022 payments will honour remaining contracts from the previous MFF (such as the Teacher Initiative in Sahel, the Gender at the Centre Initiative and Building Resilience through Education in crises).

### Culture:

Since 2018 the "Investing in Culture and Creativity" programme funds three actions reinforcing cultural and creative sectors to enhance their contribution to sustainable development. The EU-UNESCO Expert Facility is supporting 12 countries to develop appropriate regulatory frameworks for cultural and creative sectors, to boost their revenue potential. The selection process was complex and delays incurred slowing down disbursements, however corrective actions were taken. The 'Investing in Culture and Creativity' programme with UNESCO shows promising results in relation to cultural tourism and community development along the Silk Roads and a top-up was committed as planned in 2020. The project reoriented to budget to adapt its activities due to COVID-19 pandemic. This complements another action with the International Trade Center that is helping to provide livelihoods to women working in the textile and fashion sectors in African and Asian countries. Intercultural and interfaith dialogue projects support community dialogues and cultural interventions with and for disadvantaged communities, women, youth and refugees and are now reaching their final year of implementation, showing promising results for the promotion.

2022 payment appropriations will cover implementation of ongoing contracts.

### Gender equality (Gender Action Plan) and Elimination of Violence against Women and Girls (EVAWG)

The challenges to gender equality are as varied as the contexts in which they emerge and call for context specific responses. There is, however, not a single country in the world that is close to achieving by 2030 gender equality and empowerment of all women and girls. Some progress has been achieved, but deep-rooted inequalities persist aggravated by the current COVID crisis. The EU is a global front-runner in promoting gender equality as a key political objective of its external action and common foreign and security policy. The EU pursues a three-pronged approach, combining gender mainstreaming, targeted actions and political dialogue. On 25 November 2020, an ambitious Gender Action Plan III (2021-2025) was adopted.

EU actions continued to promote gender equality in partnership with governments and non-government stakeholders along the thematic priorities of the Gender action plan II. The amount of funds specifically targeting gender equality continued to increase, reaching 8.7 bio (64.71% of all new actions) in 2019, accompanied by more coordination and coherence among EU actors, an increase of political and policy dialogues on gender equality issues, as well as a sustained and strong support to civil society organisations. Close to 3,500 dialogue events with partner countries were reported in 2019 on topics related to gender equality. Most of these were sectoral dialogues. Women's human rights and democracy, sexual and reproductive health and rights, decent work and employment, and education were the issues most frequently discussed during such sectoral dialogues. Overall, collaboration between EU Institutions and Member States' authorities increased in 2019. New donor coordination mechanisms on gender equality issues were established, 58 of which are led by EU Delegations.

Programmes that focus on preventing and responding to violence against women and girls continued to be one of the principal objectives. The Spotlight Initiative, the biggest ever global effort to eliminate violence against women and girls created in September 2017, was up and running in 26 countries and 6 regions by the end of 2020 and the full amount of EUR 497 million committed. A first narrative report was received about the implementation on the Initiative in the ASEAS region, 8 African countries and 4 Latin-American countries. 41 laws have been developed or strengthened in 11 countries on topics related to

EVAWG, 29% of the targeted countries integrated EVAWG into sector plans and 9 countries prioritized gender responsive budgeting. 437 communities in 11 countries have set up advocacy platform to promote gender equitable norms, attitudes and behaviours and over 350.000 adolescents were reached through education programmes. There was a 15% increase in survivor's seeking assistance and a 10% increase in cases reported to the police. During 2019 and 2020, we also considerably increased funding to grassroots organizations and women's organisation through the two UN Trust Funds with which we partnered.

In the light of upsurge in domestic violence against women and children triggered by the COVID-19 crisis, the Commission has through the EU-UN Spotlight Initiative redirected over EUR 20 million to boost prevention, increase support for victims, as well as support for women's grassroots organisations providing essential services. It is expected that the COVID-19 will affect implementation in some countries (delays) and that innovative ways of delivering will need to be up scaled.

### Child wellbeing

On child wellbeing, the previous years have been mainly dedicated to the implementation of four regional programmes to promote and protect specific children rights, all ended implementation during 2020 or before. These programmes are: the EU-funded Joint Programmes with UNICEF/UNFPA (United Nations Population Fund) to end Child marriage and to abandon FGM, which have both played a key role in maintaining the momentum to end child marriage and FGM by promoting the global agenda and positioning policy and legislative support, as well as by demonstrating innovative community action. The EU-funded UNICEF programme "Towards Universal Birth Registration in Africa: Burkina Faso, Cameroon, Uganda and Zambia" which has recorded tangible results (see section Key achievements) and finally the "EU-funded Global Programme to Prevent Son Preference and Gender-biased Sex Selection: Improving the sex ratio at birth in select countries in Asia and the Caucasus". A second phase of this programme is now being prepared. Details of these four programmes are in section Key achievements, below. Given that these projects ended in 2020 they were not affected by the COVID crisis as such.

In 2020 funding has been secured for 4 new projects which will be contracted during the first quarters of 2021 and they will also integrate the consequences of the COVID-19 and explore alternative modalities were needed. The 3 programmes are:

1. The "Access to Justice for Children in the move in West Africa" project with UNICEF (EUR 7.89 million) will improve children's access to child-friendly justice through age and gender-sensitive juvenile justice mechanisms and alternatives to detention of children on the move and vulnerable children in West Africa.
2. The "Addressing Gender-Biased Sex Selection and Related Harmful Practices in the South Caucasus" project with UNFPA (EUR 2 million) is the continuation of the previous Programme on Son Preference and will scale up the successful results and effective practices achieved during Phase I, address gaps, and foster gender-transformative approaches to eliminate discriminatory social norms and harmful practices by scaling up effective, evidence-based interventions.
3. The "Reparations and redress for victims of conflict-related sexual violence" project with the Global Survivors Fund (EUR 2 million) aims to enhance survivors' of conflict-related sexual violence access to reparations and other forms of redress globally, including where the States or other parties responsible for the violence are unwilling or unable to provide reparations.

### Employment, decent work, skills, social protection and social inclusion:

Social Protection payment appropriations for 2021 and 2022 will be used to support the ongoing thematic programme "Improving synergies between Social Protection and Public Finance Management".

### Growth, jobs and private sector engagement

In 2020 part III of Sustainable Investment Climate and Value Chains Programme was adopted aiming at continuation of inserting partner countries into regional and global value chains through supporting investment climate improvements and enhancing capacity-building, access to markets and value addition, to ensure that they can take advantage of trade and investment opportunities to foster growth and job creation. In this regard a particular focus was put on increasing partner countries' capacity to implement sanitary and phyto-sanitary standards; improving transparency, accountability and good governance in the mineral value chains; and supporting the improvement of the investment climate and the facilitation of public-private dialogue in partner countries.

### Food and nutrition security and sustainable agriculture

The 2020 commitments and payment appropriations on the DCI Food security, nutrition and agriculture budget line have been fully implemented.

The 2021 payment appropriations (EUR 195,000,000) and the 2022 payment appropriations will cover actions in the areas of sustainable agriculture, nutrition and food security.

### Migration and asylum

Migration and forced displacement rose to the top of the EU political agenda during the period 2014-2020, which was also reflected in the increased budget for the Migration and Asylum programme. The initial budget amounted to EUR 344 million for the period 2014-2020. However, since 2016, the annual allocations have increased. In 2016, the programme was increased with EUR 12

million and in 2017, the budgetary authority decided to grant an additional EUR 356.7 million for the programme. Moreover, the budgetary authority increased the budget allocation for 2019 by EUR 1.8 million and requested to redouble EU development cooperation efforts on child protection in the context of migration. The total budget allocated to the programme for the whole period exceeded EUR 700 million.

Under the first MIP 2014-2017, the programme supported actions to (1) *promote effective governance of migration and improve management of migratory flows in all their dimensions*, (2) *enhance the positive impact of the increased regional and global migration and mobility on economic, social and environmental development* and (3) *improve a common understanding of the migration and development nexus*, for a total amount of EUR 540 million. These actions have contributed to implement EU policy priorities in the area of migration, notably the European Agenda on Migration and the Partnership Framework, as well as EU commitments at global level. Under the second MIP 2018-2020, the programme supported actions to:

(1) *Maximise the positive impact of migration on sustainable socio-economic development*. Several programmes were adopted and are now ongoing and include a large programme with IFAD (International Fund for Agricultural Development) on improving remittances in Africa (EUR 15 million); a programme on strengthened engagement with diaspora communities and organisations with ICMPD (International Centre for Migration Policy Development) (EUR 5 million); and the Global Knowledge Partnership on Migration and Development (KNOMAD) migration knowledge programme, aiming to improve targeted migration research and data with the World Bank (EUR 5 million).

(2) *Promote safe, regular and well-managed migration*. To support this objective a contribution to the EU Trust Fund for Africa was made under the AAP 2018 (EUR 29.5 million) and two actions were adopted under the AAP 2019: an EU Global Migration capacity building support programme with the International Organization for Migration (IOM) (EUR 12 million) and a global Action to promote best practices for children affected by migration, with UNICEF (EUR 7 million).

(3) *Implement the development oriented approach towards forced displacement*. Following the 2016 Commission Communication 'Lives in Dignity: from Aid-dependence to Self-reliance' and the rollout of the Comprehensive Refugee Response Framework, more attention was paid to this objective. In line with this new EU policy approach, a substantial part of the programme was dedicated to this objective since 2018. On the one hand, several contributions have been made to the Syria Trust Fund for activities to be carried out notably in Iraq (EUR 5 million in 2018, EUR 7.5 million in 2019 and EUR 8.3 million in 2020). On the other hand, contributions to addressing forced displacement in the Americas through innovative approaches have been subject to one action in Central America (2018 – EUR 4 million) and three actions in relation to the Venezuela refugee crisis (2018 – EUR 6 million, 2019 – EUR 10 million and 2020 – EUR 27 million). Finally, the political importance of this objective has led to supporting one innovative action in relation to climate displacement in the Pacific (2018 – EUR 3 million) and in the launch of a new EU Global Facility for Refugees (2019 – EUR 20 million and 2020 – EUR 20 million).

Since the design of the programme, the overall migration situation has evolved dramatically, leading to a sharp increase in funding allocations for migration under other instruments and programmes, notably the EU Trust Fund for Africa, the MADAD Trust Fund, but also sizable allocations for countries in Asia under the DCI. Actions funded under the GPGC were implemented in full coherence and in close coordination with these programmes, complementing actions at national and regional level by engaging also at global and cross-regional levels.

#### Civil society in development

Engagement with civil society remained crucial in 2020 in response to the COVID-19 crises and the further deterioration of shrinking civil space. During 2020, EUR 285 million were contracted for the programme CSO-LA. Due to the COVID situation, a number of EU Delegations have used their 2020 allocations already in 2020 by the way of direct awards in the flexible procedures of the crisis situation. The 2019 funds were fully committed at country and global level and the 2020 payments under the CSO budget line reached EUR 221 million; an increase compare to 2019 (EUR 193 million).

At global and regional level, 2020 payment appropriations have been used in the context of 24 already existing Framework Partnership Agreements. A call for proposals on Inequalities has led to the signature of two contracts for Africa and Asia for a total of EUR 7.2 million. The increased cooperation with Foundations has materialized with four contracts for a total amount of EUR 9.9 million, mostly related to COVID to address the health and socio-economic consequences of COVID-19 in Africa. An evaluation of the support to the Framework Partnerships Agreements (FPA) was performed during 2020. Finally, we pursued the support to the Policy Forum on Development. INTPA dialogue with civil society organisations and local authorities through the Policy Forum on Development focused on future EU priorities and programming.

At country level, during 2020, EU Delegations implemented the CSO programme in the priorities foreseen by the Multiannual Action Programme. 202 contracts were finalized for a total amount of EUR 154 million.

With regard to Development Education and Awareness Raising (DEAR), five contracts amounting to EUR 45.2 million were signed in 2020 (from 2018 call for proposals). In addition, one service contract (DEAR Support Team) was concluded for EUR 2.6 million and one direct grant for EUR 1.9 million (Presidency Project).

#### Local authorities in development

For the Local Authorities thematic program 2020 has been the last year of the 2018-2020 Multiannual Indicative Programmes

(MIPs) and the last year of the Multiannual Action Programme 2018-2020 adopted in November 2019. In addition it marks the end of the Thematic Program for Local Authorities (not retained in the next MFF 2021-2027); it also marks the end of the approach inaugurated in 2018 with the centralization in HQ of the funds, previously attributed to Delegations, and totally dedicated to decentralized cooperation (cooperation extended by Local Authorities of the EU Member States to local authorities of partner countries). Under the program Partnerships for Sustainable Cities a call for proposal was launched in February 2020 and successfully concluded in December 2020 with 26 new partnerships set up for a total budget of EUR 71.1 million and attributed to Delegations for management. The Specific Grant Agreements concluded with the five signatories of the Framework Partnerships Agreements were implemented focusing most of their activities on support to Local Authorities and their associations in facing the COVID crisis and preparing the stakeholders to the new approach of the NDICI regulation with the geographization of the Local Authorities thematic budget line. With the Support measures of the MIP 2018-2020 and with ATA credits a coordination committee of the 43 partnerships grants put in place with the last two centralized calls was established, as well as a contribution agreement with the OECD for a homogeneous monitoring of the partnership and their contribution to SDG 11 and SDG 17 implementation and SDGs localization. A mapping exercise on the funds attributed to Local Authorities between 2007-2017 was started.

In 2021 the 5 Strategic Partnerships with the Regional and Global Associations of Local Authorities (operating and action grants) will be renewed (under the Budget 2020) for an amount of EUR 13.594 million. Under the Program Partnerships for Sustainable Cities a third call for Proposals on decentralized cooperation (Local Authorities of EU to Local Authorities of partner countries) will have to be launched for an amount of EUR 39.849 million, due to the lack of absorption of all funds under the second call for proposal 2020 (COVID pandemic's disruptions on Local Authorities capacities to reply to the call).

### **DCI PanAf:**

The Pan-African Programme is mostly implemented by the African Union Commission or specialised International Organisations in fields where they provide an added-value or have a recognised international mandate. In area such as higher education, statistics and aviation, where the main objective is to share with the African partners our European expertise, technologies and know-how, the cross-delegation to line DGs or their implementing agencies is the favoured modality.

Within the Pan-African Programme, the DCI budget financed programmes contributing to the strategic areas of the Multi-Annual Indicative Programmes 2018-2020, in line with the Joint Africa-EU Strategy (JAES). Over 2018-2020, actions were particularly focused on higher education, economic integration, migration, digitalisation, statistics, infrastructures and governance.

The 2020 Annual Indicative Programme (AAP) has focused on: (i) the support to the negotiations, ratification and implementation of the African Continental Free Trade Area (AfCFTA), (ii) the support to the operationalisation of the Digital Economy Task Force Partnership; (iii) the support to the operationalisation of the Single African Air Transport Market; and (iv) a Science and Technology partnership on sustainable use of natural resources.

The commitment and payment appropriations of the year 2020 for DCI Panaf were fully implemented.

The payment appropriations of the year 2021, for DCI Panaf (on the completion line) will be used for ensuring the implementation of various projects mainly included in the Annual Action Plans for 2019 and 2020, in the areas of infrastructures, higher education, governance, migration, statistics, economic integration and digital connectivity.

Regarding the year 2022, the request of payment appropriations for DCI Panaf reflects the need to continue the implementation of programmes in the areas of economic integration (support to the African Continental Free Trade Area), digitalisation, science and technology.

### **Previous programme 2: European Instrument for Democracy and Human Rights (EIDHR)**

	Commitments	Payments
Implementation Voted budget	1 250 289 782	832 616 023
Implementation Carry-overs	0	15 074 093
Implementation total	1 250 289 782	847 690 116
total envelop*	1 250 546 102	
cumulative implementation rate	100%	68%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

2020 has been the last year of the 2018-2020 Multiannual Indicative Programmes (MIP)<sup>10</sup> and also the last year of the Multi-annual Financial Framework 2014-2020, marking the end of a strategic period. The actions implemented during 2020 were set out in the

<sup>10</sup> Commission Implementing Decision C(2018) 6409 final of 5.10.2018.

Special Measure 2018<sup>11</sup> and the Multiannual Action Programme 2018-2020<sup>12</sup>. The Election Observation Missions (EOM) activities are adopted annually through work programmes.

Since 2014, the EIDHR programme has concluded contracts for more than EUR 947 million and has realized payments for over EUR 885 million.

At the end of the year 2020, the EIDHR implemented all the commitment appropriations available.

With regards to the payments appropriations, the implementation rate at the end of 2020 was of 68%, which reflects the normal rhythm of implementation for this instrument. The bulk of the contracts are signed in the following year (N+1) and most often the first prefinancing is made during this same year. The subsequent payment rate is linked to the implementation of the actions which have an average duration of 3 years. The RAL absorption ratio in 2020 was 2,5, a level similar to previous years.

Through the implementation of these funds, the EIDHR programme has not only implemented its activities as planned and reached its objectives in a context of shrinking civic and democratic space. It has also put in place a set of measures to face COVID-19 crisis and its significant negative repercussions on human rights, democracy and the rule of law. The EIDHR detailed performance are described below in section 3.

The activities which are still to be done in 2021 and 2022 in relation to the 2014-2020 EIDHR are mostly related to ongoing projects and actions under the country allocation and projects managed at global level. The outstanding RAC (reste à contracter) for DG INTPA and DG NEAR is EUR 75 million.

These are in particular:

- the two Flagship initiatives on providing emergency assistance to human right defenders worldwide
- the crisis facility aimed at addressing the most difficult human rights situations worldwide, for which we still have EUR 3 million to be committed
- finalise the call for proposals launched in 2020 with the objective of countering the shrinking space for civil society (EUR 10 million)
- Continue the flagship pilot project on parliamentary strengthening entitled "INTER PARES | Parliaments in Partnership - EU Global Project to Strengthen the Capacity of Parliaments" launched in 2018 (EUR 5 million). It has a peer-to-peer implementation approach, facilitating exchanges between EU Member States parliaments and parliaments from partner countries around the world
- Contract the allocations at country level for the year 2020 under the CBSS (Country Based Support System, overall allocation EUR 99.8 million)
- Continue our support to key human rights players, such as the UN Office of the High Commissioner for Human Rights (OHCHR), the International Criminal Court (ICC), the European Network of National Human Rights Institutions (ENNHRI), the Global Campus higher education network and its seven regional university networks, the Council of Europe and the American Court and American Commission of Human Rights
- Continue our support to raising the voice of indigenous people through the Navigator.

Actions described above will imply the contracting by INTPA, in 2021, of the commitment appropriations allocated in 2020 (RAC). Their implementation will continue throughout 2022. The use of payment appropriations on the completion line for EUR 120 million is foreseen in 2021 (14 02 99 04).

#### **Election Observation Missions (within EIDHR):**

Implementation of the EOM budget depends on the actual deployment of missions. The total number of processes observed and assessed by the EU depends on:

- the political agenda, as defined by the High Representative/Vice President,
- any changes (postponements/cancellations) in the relevant electoral calendars/processes,
- the annual budget available,
- the EU's capacity to deploy electoral missions in view of the operational and security (including health) conditions in the countries concerned.

Unstable security situations or changes in the electoral calendar may cause cancellations of the missions and thus lead to lower implementation rates.

#### **Impact of the Covid crisis in the implementation:**

The COVID crisis resulted in a significant deterioration of Human Rights and Democracy worldwide. Seven sensitive actions for EUR 5 million were swiftly contracted in 2020 under the *EIDHR Human Rights Crisis Facility*, to answer to the most pressing needs (e.g. support to LGBTI organisations; indigenous communities affected by COVID; torture and detention conditions).

Other amounts were dedicated to address specific difficulties linked to the COVID crisis for a total of approximatively EUR 23 million as part of the EU Global Recovery Response, a few examples below.

<sup>11</sup> Commission Implementing Decision C(2018) 5123 final of 10.8.2018.

<sup>12</sup> Commission Implementing Decision C(2018) 6798 final of 19.10.2018.

The COVID crisis has inevitably affected project implementation and a number extension riders and budget reallocations had to be signed.

- A new partnership was concluded in 2020 with a consortium of CSOs. Projects for an amount of EUR 10 million were concluded to strengthen national child protection systems and raise children's voices in 5 African countries and this to respond to the increasing figures of negligence and violence against children;
- A pilot initiative of EUR 5 million was started in 2020 to contribute to greater democratic accountability of public institutions globally, specifically by empowering civil society to demand systemic change to address accountability and anti-corruption deficits in 16 countries (SANCUS project);
- The EU mobilized EUR 5.5 million in 2020 for support to journalists affected by the pandemic. Journalists from some 35 countries in Africa and Latin America will receive direct financial support;
- Support to the newly created "Global Monitor of COVID-19's Impact on Democracy and Human Rights" in 2020, a "one-stop" online global monitoring platform (a "tracker of trackers"), implemented by International Institute for Democracy and Electoral Assistance (IDEA), with data and brief analysis by country, for 162 countries around the world.

Due to the COVID-19 pandemic, the implementation rate for election observation missions in 2020 has been low. Many missions could not be deployed, due to the increase in global travel restrictions or high-risk sanitary situations. At the same time, difficult security situations in places where missions do take place can lead to significantly higher costs per mission. However, the total expenditure of the EOM budget remained low due to fewer missions.

### Previous programme 3: European Fund for Sustainable Development (EFSD)

	Commitments	Payments
Implementation Voted budget	350 000 000	50 000 000
Implementation Carry-overs	0	300 000 000
Implementation total	350 000 000	350 000 000
total envelop*	350 000 000	
cumulative implementation rate	100%	100%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

At the end of 2020, the EFSD was fully implemented, in terms of commitment and payment appropriations.

In the framework of the External Investment Plan (EIP), the European Commission has established the European Fund for Sustainable Development (EFSD)<sup>13</sup> to support investments in Africa and the Neighbourhood. The overall aim of the EFSD is to contribute to the goals of the United Nations 2030 Agenda for Sustainable Development, in particular poverty eradication, as well as to the commitments under the recently revised European Neighbourhood Policy. By supporting investments in Africa and the Neighbourhood, the EFSD also aims to address specific socioeconomic root causes of migration, including irregular migration, and to contribute to the sustainable reintegration of migrants returning to their countries of origin and to the strengthening of transit and host communities. The guarantee aims to serve as a risk mitigation mechanism to leverage private sector financing whilst avoiding market distortions and to crowd-in private sector funds.

Pursuant to Article 8 of the EFSD Regulation, the investment period, during which guarantee agreements for supporting investment programmes could be concluded with the eligible counterparts, lasted until 31 December 2020. As of 31 December 2020, the Commission exhausted the present capacity of the EFSD Guarantee by signing 18 guarantee agreements worth EUR 1,548,700,000, exceeding the initial EFSD Guarantee capacity of EUR 1,5 billion as a result of additional contributions from donors. Some guarantee tools had to be postponed to EFSD+ and others recalibrated to address impact of COVID-19. More details on the signed guarantee agreements are provided below in Key achievements. All commitment and payment appropriations for year 2020 were fully exhausted.

Under the established EFSD Guarantee, the Commission provided partial guarantees to eligible counterparts, which in turn would provide support to downstream beneficiaries. Partner financial institutions subsequently have four years as from the conclusion of the guarantee agreement to conclude agreements for underlying operations with co-financing partners, financial intermediaries or final beneficiaries. As a rule, the duration of the guarantees extended to eligible counterparts under each guarantee agreement should not exceed fifteen years.

<sup>13</sup> Regulation (EU) No 2017/1601 of the European Parliament and of the Council of 26 September 2017 establishing the European Fund for Sustainable Development (EFSD), the EFSD Guarantee and the EFSD Guarantee Fund.

**Previous programme 4: European Neighbourhood Instrument (ENI)**

	Commitments	Payments
Implementation Voted budget	17 566 351 371	9 761 093 767
Implementation Carry-overs	0	32 154 905
Implementation total	17 566 351 371	9 793 248 672
total envelop*	17 568 263 104	
cumulative implementation rate	100%	56%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

As of 31 December 2020, the Commission implemented 100% of the ENI commitment appropriations and 56% of the payment appropriations.

While the actions in the neighbourhood region were implemented in the challenging external relations context characterised by the limited scope for predictability and reliability of planning, the implementation of ENI appears to be on track. At the end of 2020, in average 3.2 years<sup>14</sup> were needed to pay the total costs of legal commitments, much less than the target of 4 years. In recent years, the Commission accelerated the implementation of the ENI. The payment implementation increased from EUR 1.7 billion in 2018 to EUR 2.6 billion in 2020. As 2020 was highly impacted by urgent payments, related Covid-19 pandemic, the ENI payment implementation rate should decrease in the following years 2021-2022, still allowing for payment of the total costs of taken commitments on time.

The EU budget is an investment budget and finances projects that run over a long period of time, in particular in external actions. The financing agreements with the beneficiary countries must be signed by the end of the year following the year in which the budgetary commitment was made, while contracts implementing these agreements must be signed within the following three years with varying implementation periods. In addition, contracts are implemented in on average 3 years, while those with International Financial Institutions, such as blending and guarantees, have longer implementation periods (6-9 years).

**The COVID-19 impact on implementation**

In 2020, there was an increased need for payment appropriations due to the fact that the Commission immediately re-oriented, re-programmed its support, and speeded-up the implementation of contracts in benefit of all partner countries in order to maximise its response to the consequences of COVID-19 outbreak. As part of the Team Europe, the Commission allocated EUR 2.3 billion (including EUR 2.3 billion for the Southern Neighbourhood and EUR 1 billion for the Eastern Partnership) for:

- urgent, short-term emergency response to the health crisis and the resulting humanitarian needs;
- strengthening health and water systems;
- addressing economic and social consequences.

Having above in mind, the implementation of actions in response to the COVID-19 is considered successful. Nevertheless, the overall pandemic situation had a limited impact on some procedures and procurements linked to individual contracts slowing them down, in particular those with reduced priority as a result of the re-orientation and re-programming exercises.

**Implementation status**

The following programmes were adopted in 2020:

- 12 Annual Action Programmes (including two Regional Action Programmes, one for the East and one for the South).
- 5 Special Measures (on Belarus, Egypt, Israel, Libya, and Syria).
- 2 Special Measures on the 2020 ENI contribution to the European Union Regional Trust Fund in response to the Syrian crisis.
- 2 Special Measures on the 2020 ENI contribution to the European Union Emergency Trust Fund for stability and addressing root causes of irregular migration and displaced persons in Africa.
- 1 decision on the Neighbourhood Investment Platform (NIP),
- 1 emergency package “EU COVID-19 Solidarity Programme for the Eastern Partnership”

Total operational commitments for ENI in 2020: EUR 2.8 billion.

<sup>14</sup> The RAL absorption period is estimated by the key performance indicator K04 as the number of years needed to pay the total costs of legal commitments.

Total operational payments for ENI in 2020: EUR 2.5 billion.

**Previous programme 5: Instrument contributing to Stability and Peace (IcSP)**

	Commitments	Payments

Implementation total	2 366 901 412	1 672 034 690
total envelop*	2 367 067 406	
cumulative implementation rate	100%	71%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The implementation of the IcSP financial programming 2014-2020 has been fully in line with the expectations. Until the end of 2020, 100% of the total envelop has been committed and 71% paid.

The 100% execution of commitment appropriations reflects the full implementation of the allocated envelope for IcSP actions.

The 71% execution of payment appropriation is explained by the fact that IcSP actions respond to conflict situations or situations where there is a risk of conflict, the risk of unforeseen events is high and actions at times have to be amended as a consequence. Sometimes this meant that not all foreseen activities could be implemented, which was reflected as underspending and hence the need to de-commit.

Under IcSP, during the 2014-2020 period, more than 600 projects were launched worldwide in the field of crisis response, conflict prevention and peacebuilding and more than 300 projects in the field of global and trans-regional threats.

Actions through the IcSP were among the first in the Commission's Team Europe response to the COVID-19 pandemic. Under Art. 3, eleven new financing decisions (EUR 50.85 million) and five increases to existing financing decisions (EUR 5.42 million) were adopted. Furthermore, activities under more than 60 on-going actions were re-oriented to deal with COVID-19 related needs (EUR 8.6 million). Travel restrictions related to COVID-19 have caused some delays in implementation during 2020, but the vast majority of actions swiftly adapted to the new context and to new online tools.

**Previous programme 6: Partnership Instrument (PI)**

	Commitments	Payments
Implementation Voted budget	961 252 204	538 651 306
Implementation Carry-overs	0	2 838 603
Implementation total	961 252 204	541 489 908
total envelop*	961 739 570	
cumulative implementation rate	100%	56%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

At the end of 2020, 100% of the total envelope of the instrument has been committed and 56% paid. The instrument was on highdemand

The 100% execution of commitment appropriations reflects the full implementation of the allocated envelope for PI actions.

The 56% execution of payment appropriations reflects the way the PI is implemented through Annual Action Programmes and multi-year contracts (on average 4 years). Consequently PI project implementation will continue over the coming years, with the last contracts ending around 2025-2026.

The impact of the COVID-19 crisis on the financial implementation of the PI was limited thanks to the measures taken to ensure business continuity regarding the instrument's functioning and operations. In 2020, 11 new actions (EUR 50 million) were programmed with a focus on the response to the pandemic. In addition, 59 ongoing actions (EUR 7.6 million) were re-oriented to cover COVID-19 aspects.

PI contributed to the Commission's Team Europe response to the COVID-10 pandemic through the adoption of 11 new actions (EUR 50 million) and the re-orientation of 59 ongoing actions (EUR 7.6 million).

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.3. Previous programme performance**

##### **3.1.3 Performance of corresponding 2014-2020 programme Development and Cooperation Instrument (DCI):**

The specific, diverse and rapidly changing context of EU external action requires the use of all the existing implementation modalities and delivery methods to pursue the policy objectives and operational priorities. With a budget of approximately EUR 20 billion, the DCI has been a key financing instrument to support EU development policy. Many initiatives that were successfully started under the DCI will provide a solid basis for future interventions planned under the NDICI. Looking at its performance over the years, it has effectively supported the implementation of the 2030 Agenda for Sustainable Development, the Addis Ababa Action Agenda on financing for development and the Paris Agreement on Climate Change, globally and directly with partner countries. With its overall objective to eradicate poverty in partner countries and provide a long-term response to global threats/challenges (many of which have their roots in poverty and under-development), the DCI substantially contributed to the 2014-2019 Commission objectives of 'Europe as a stronger global actor' and 'Towards a new policy on migration'. Its relevance has not decreased with the 2019-2024 Commission, where its actions supported the EU policy objectives of 'A stronger Europe in the world' in particular.

Accompanying the general objective to 'Eradicate poverty' were the following specific objectives: 'Fostering sustainable development' and 'Consolidating and supporting democracy'. To achieve these, the DCI provided funding for: (1) geographical programmes covering most developing countries (approximately 60 % of the DCI budget); (2) thematic programmes (approximately 36 %); (3) the Pan-African programme which supports the Africa-EU Strategic Partnership (approximately 4 %).

The EU's financial support via the DCI has helped to improve the lives of millions of people worldwide, enable youth to fulfil their potential, fight inequality and support equitable and sustainable growth. Good progress has also been made in some key areas of the DCI, notably those related to Sustainable Development Goals (SDGs) for girls' access to education and reducing the prevalence of stunting among children under 5 years old. As per the recommendations of the Mid-term review, more attention was given to promoting interlinkages and cross-sectoral action at the nexus between different action areas that could contribute to multiple SDGs; and to enhance complementarity, coherence and synergies between thematic and geographic programmes. COVID 19 pandemics did not hamper working toward achievements of the DCI objectives, on the contrary it showed how flexibility and fast response is important to rapidly growing needs.

Regarding progress on the first specific objective, most of the population residing in DCI partner countries has experienced progress in poverty reduction and human and economic development over the last ten years. Indeed, the proportion of the world population below the international poverty line has dropped every single year since 2014, reaching 8.7 % in 2019 and staying there in 2020. Similarly, the under-five mortality rate, and the prevalence of stunting have also decreased every single year over the 2014-2019 period. Despite these positive trends, the rates of change have slowed over time as numbers have approached (but not reached) their ambitious targets. Prevalence of stunting is the exception for which targets have consistently been met.

Regarding progress on the second specific objective relating to the consolidation of democracy, rule of law, good governance and human rights, the indicators tell a less encouraging story. For the World Bank's Rule of Law score, the situation deteriorated between 2014 and 2016 and has not significantly improved since. For the proportion of seats held by women in national parliaments, the progress has been so slow that if the current pace of change were to continue in the future, the 2020 target would be only met in 2035. This is why the Commission has insisted and financed a number of projects to promote democracy, rule of law, good governance and human rights significantly above the target of 100 projects per year on average over the 2014-20 period.

Despite these statistics, it remains difficult to measure the direct impact of the DCI 2014-2020 on development outcomes such as

poverty reduction because there are so many other actors and factors which have also contributed to achieving these results, consequently they cannot be directly attributable to the DCI.

Annual results reporting exercises have been conducted since 2015 and monitoring of indicators have been constantly upgraded to ensure better and wider coverage of result achieved. Collected information feeds the External Assistance Annual Reports<sup>15</sup>, DG INTPA's Annual Activity Reports, assessments of a particular implementation modality e.g. 'Budget Support - trends and results 2020'<sup>16</sup> or assessments of thematic objectives achievement e.g. 'Action plan on nutrition: Fifth progress report April 2019 - March 2020'<sup>17</sup> (n) or '2019 Implementation Report on Gender Action Plan II Gender Equality and Women's Empowerment: Transforming the Lives of Girls and Women through EU External Relations 2016-2020'<sup>18</sup>. Selected results have been also aggregated through the EU Results Framework (set up 2015, then revised in 2018). To improve the consistency of performance monitoring of actions under the NDICI and make it aligned with the DGs Strategic Plans 2020-2024, the EU Results Framework is under revision (Staff Working Document planned in spring 2021).

By using the DCI, the EU financed actions aimed at supporting geographic and thematic cooperation with developing countries included in the list of aid recipients compiled by the OECD DAC. Unlike other External Financing Instruments, the actions under the DCI geographic instruments had to be designed so as to fulfil the eligibility criteria for Official Development Assistance (ODA) as published by the OECD DAC. These criteria are both geographic (list of eligible recipients) and related to the design of the project eligibility. Only a few exceptions existed in the case of the thematic Global Public Goods and Challenges programme and the Pan-African programmes, where a limited percentage (5 and 10 % respectively) could be used for non-ODA eligible activities.

In terms of mainstreaming EU priorities, good progress has been noted e.g. in the areas of climate change and environment - between 2014 and 2020, there was a steady increase of climate change-related financing, which has exceeded the 20 % target for the DCI instrument. Mainstreaming human rights including gender equality and women's empowerment has been considered as work-in-progress, in particular the path towards the 85 % target for new programmes to include gender equality as a significant or principal objective. Indeed, further efforts are required, as partner governments sometimes show a lack of interest or even certain resistance in these areas. In order to deliver on the contribution expected from the external dimension of the EU Green Deal in the area of climate change and the environment, more remains to be done to systematically integrate these themes across all areas of cooperation covered by the DCI.

The programme demonstrated the capacity to react to priorities, enabling the EU to implement its development policy framework and, to some extent, being flexible enough to respond to emerging challenges. In particular, in response to the global spread of the COVID-19 pandemic that began affecting the world at the beginning of the year, in April 2020 the EU issued a joint communication on its global response to COVID-19<sup>19</sup>. The Communication announced a substantial package of aid to help partner countries fight the pandemic that followed a Team Europe approach. This involved drawing contributions from all EU institutions and combining them with the resources mobilised by EU Member States and financial institutions, in particular the EIB and the EBRD, in coordinated action to support partner countries. To fulfil an unprecedented need for this urgent mobilisation of funds from DCI within a very limited timeframe, the Commission put in place simplified and rationalised procedures within the limits and in compliance with the legal basis of programmes and the 2018 Financial Regulation. This included the simplification of Action Document templates and expedited quality review. Minimum requirements on objectives, results and indicators (agreed with our partners) have been requested to ensure data on results are aggregable for future reporting. To promote accountability, a COVID-19 marker has been introduced to easily identify the EU contribution to mitigating the effect of the crisis, as a main or significant objective. To collect early evidence and provide an independent assessment of the EU's response (as provided by the EU institutions, EU Member States, EIB and EBRD) to the COVID-19 crisis in support of partner countries and regions, the Commission has launched a dedicated strategic evaluation. This evaluation seeks to be a stock-taking, lesson-learning and forward-looking exercise on the objectives of the new Team Europe approach and their achievement (to the extent possible).

In terms of efficiency, the DCI appropriations 2014-2020 were fully used and implemented as planned, through a comprehensive programming process; there is no need for corrective action. The result of the process has been a set of programming documents that define per bilateral/regional/thematic programme: the priority areas for financing, the specific objectives, expected results, indicators and indicative allocations.

The DCI has been implemented both via direct management (including when it acts through the EU Delegations or an executive agency of the EU) and indirect management. For indirect management the EU has been relying on a variety of partners such as international organisations, Member States agencies and organisations, civil society organisations, national, regional and local authorities, international and development financial institutions in situations where they have a clear added-value, building on the experience achieved and the lessons learned.

<sup>16</sup> [https://ec.europa.eu/international-partnerships/system/files/budget-support-trends-and-results\\_en.pdf](https://ec.europa.eu/international-partnerships/system/files/budget-support-trends-and-results_en.pdf)

<sup>17</sup> [https://knowledge4policy.ec.europa.eu/publication/action-plan-nutrition-fifth-progress-report-april-2019-march-2020\\_en](https://knowledge4policy.ec.europa.eu/publication/action-plan-nutrition-fifth-progress-report-april-2019-march-2020_en)

<sup>18</sup> [https://ec.europa.eu/international-partnerships/system/files/eu\\_gap\\_2019\\_web\\_0.pdf](https://ec.europa.eu/international-partnerships/system/files/eu_gap_2019_web_0.pdf)

<sup>19</sup> Joint Communication to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions, "Communication on the Global EU response to COVID-19", JOIN (2020) 11; ([https://ec.europa.eu/commission/presscorner/detail/en/IP\\_20\\_604](https://ec.europa.eu/commission/presscorner/detail/en/IP_20_604)).

The role of DCI was not only to support developing countries, but also to ensure focus and coherence among contributors on key challenges and to move toward a values-based, transparent and results-focused development cooperation system.

While there is some evidence of coherence between the DCI, other instruments and EU external action policies, a more strategic approach is needed. This more strategic and coordinated approach is well embedded in the NDICI. Building on the experience gathered from the previous instruments, the NDICI allows for setting up clear and coherent monitoring and reporting mechanisms across all implementation modalities, geographical areas and sectors at various level of operational strands. It will support the Commission in continued efforts to improve performance assessment of the external instruments at both programme and intervention levels and its reporting on progress achieved.

### **3.1.3 Performance of corresponding 2014-2020 programme European Instrument for Democracy and Human Rights (EIDHR):**

The EIDHR was implemented against the backdrop of an overall slowdown or recess in the consolidation of democracy, rule of law, good governance and human rights globally. For the World Bank's Rule of Law score, the situation deteriorated between 2014 and 2016 and has not significantly improved since. For the proportion of seats held by women in national parliaments, the progress has been so slow that if the current pace of change were to continue in the future, the 2020 target would be only met in 2035.

2020 has been the last year of the 2018-2020 Multiannual Indicative Programmes (MIP)<sup>20</sup> and also the last year of the Multi-annual Financial Framework 2014-2020, marking the end of a strategic period. For the full period of the EIDHR instrument (2014-2020) implementation was done through action plans for 2014 (special measure), 2015, 2016-2017, a special measure in 2018 and the multi-annual action plan covering 2018, 2019 and 2020.

Over the whole period, the EIDHR has been successful in delivering on its 5 objectives: i) support to human rights and human rights defenders in situations where they are most at risk; ii) support to other EU human rights priorities; iii) support to democracy; iv) EU election observation; and v) support to targeted key actors and processes, including international and regional human rights instruments and mechanisms. It has been an enabling, flexible and responsive instrument which demonstrated its added value as a "niche" instrument to promote human rights and democracy.

Given the nature of the activities targeted, some confidential, we did have a small number of projects whereby implementation was delayed or could not fully address all its objectives. Actions had to be adapted in case of particularly difficult country situations. Implementation rates in term of commitments and payments have been overall very satisfactory. An important part of the EIDHR (65% - excluding the election observation missions allocations and administrative costs) is implemented by our EU Delegations worldwide to address country-specific issues.

The EIDHR key added-value has been the independence of action and worldwide coverage, allowing for interventions in the most difficult country situations and without the consent of the host governments, creating synergies and complementarity where other instruments and donors cannot or do not act. It has been able to address human rights and democracy challenges, even in the most difficult and challenging environments – confirming that EIDHR and the Human Rights and Democracy thematic programme under the NDICI remain more than ever relevant to the political priorities of the EU.

The mid-term evaluation conducted in 2017 also considered the EIDHR generally efficient thanks to a relatively low level of administrative expenditure and its essential, in-built flexible tools (e.g. direct support to human rights defenders, direct small grants, working with informal partners, financial support to third parties by grantees).

Insofar the **COVID response in 2020 is concerned we refer to the narrative above.**

Main results over the whole period and some examples of "flagships" along the five axes of work, corresponding to the specific objectives of the EIDHR instrument:

#### **Support to Human Rights Defenders at risk and other human rights**

The **EIDHR support to human rights defenders (HRD)** at risk (individuals, organisations and groups) is the basis for the EU world leadership in HRD support. The EIDHR provides emergency grants, physical/digital protection, legal and medical support, urgent relocation/sheltering, training or permanent (24h/7) helpline, psychosocial assistance for and support to family members of human rights defenders at risk so that they are able to continue their important work. This support has been and still is provided through two flagship programmes: ProtectDefenders and the EU Emergency response, both projects were renewed in 2019 and will be running until 2022. Between 2014 and 2020 7,700 HRDs at risk have been supported mainly by these two programmes. In 2020 alone, more than 1,700 HRDs and family members have been supported.

The **EIDHR Human Rights Crises Facility** (EUR 3.5 million per year) was set up in 2014, in order to provide a flexible funding modality to respond to situations where there is a serious lack of fundamental freedoms, where human security is most at risk, where human rights organisations and defenders work in exceptionally difficult conditions and/or where the publication of a call for

<sup>20</sup> Commission Implementing Decision C(2018) 6409 final of 5.10.2018.

proposals would be inappropriate. In 2016-2020 period, a total of 24 projects have been supported in the Enlargement region, the Eastern and Southern Neighbourhood, Central Asia, Middle East, Sub-Saharan and East of Africa, and Asia (details of grants and countries of operation are confidential). In 2019, six Facility projects had re-granting and capacity-building of HRDs as their main objective.

From 2015 to 2020, six global calls were launched which provided for continued support to civil society working on a broad range of sensitive, innovative or priority issues, including human rights in most restrictive environments, human dignity, discrimination, economic, social and cultural rights, and democracy-related issues. Examples of these issues include: LGBTI human rights defenders, fight against the death penalty, support for civic activism and participation by leveraging digital technologies, business and human rights, combatting torture and increasing democratic accountability.

The EU has a longstanding engagement to further **promote indigenous peoples' rights** at bilateral and multilateral levels. During the period 2014-2020, the EU has supported through its European Instrument for Democracy and Human Rights:

- i) Docip, the Centre for Documentation, Research and Information for indigenous people that enables indigenous communities and leaders leading advocacy work in international fora in Brussels, Geneva and New-York (EUR 4 million);
- ii) The Indigenous Navigator, a framework where community-based data covering 216,000 people from 11 countries is used in advocacy and communication activities at the UN fora and to empower indigenous peoples through small development projects (EUR 2.2 million);
- iii) Global Call 2017- Lot 1 (EUR 5 million), Supporting HRDs in the area of land-related rights, indigenous peoples, in the context of inter alia 'land grabbing' and climate change.

An important part of the EIDHR instrument is implemented at country level. Implementation is done through calls for proposals or direct awards. Between 2014 and 2020, more than 1,700 contracts were concluded by our Delegations. The priorities most worked on over all these years are, amongst others: women and children rights, democracy (election observation, freedom of expression,...) and anti-discrimination. During the last 3 years the Commission strived to primarily focus its effort on the most pressing and sensitive human right needs in countries.

The delivery of the awareness raising and training for the operationalization of **the rights based approach and gender mainstreaming** started in 2017 and also continued throughout 2020 albeit through an adapted virtual approach, also given the fact that programming started in 2020: 11 training took place, one at HQ level and 10 countries, most of them virtual.

### **Support to Democracy**

From 2015-2019 we had the implementation of the “**Supporting Democracy**” project which assisted Delegations in improving their work with civil society promoting democratic development and how best to counter the shrinking space which occurred in a number of countries through exchanges of best practises and networking. As an example, in 2019, its last year, "Supporting Democracy" has organised two regional events in Malaysia and Lebanon that brought together CSO representatives to discuss how to use new technologies to tackle shrinking space in their regions.

Other achievements include the Citizen Observers Forum in 2016, bringing together 250 domestic observer organisations from all over the world, facilitating peer to peer exchanges and promoting the Declaration of Global Principles for Electoral Observers, training domestic observers in Afghanistan, Democratic Republic of Congo, Lebanon, Madagascar, Maldives, and the launch of an annual worldwide 'EU4Democracy' campaign promoting EU support to democracy in partner countries. In 2018, the "EU4Democracy" focused on civic activists, which use new technologies to promote democracy and six "CivicTech" prizes were awarded to projects selected from over 100 applications.

Another Facility which was put in place in 2017 was “**Media4Democracy**” to support our Delegations to develop actions to promote the freedom of expression and media. Through this support we saw an increase in the interest for the subject as well as the number of projects funded in this area. In 2020 we successfully launched the Media4Democracy comprehensive Handbook: Protecting the Safety of Journalists, Protecting Freedom of Expression.

The EIDHR also funds '**V-DEM**', one of the largest democracy indicators-related data collection efforts with a database containing over 18 million data points. In 2016, V-DEM received the most prestigious award for comparative datasets in political science: the Lijphart/Przeworski/Verba Best Dataset Award presented by the American Political Science Association. In 2018 and 2019, V-DEM produced two reports: one on shrinking space in Southern-Eastern Africa and South-Eastern Asia, and one on the topic of women political empowerment EU's democracy support around the world and one on data relating to political risks in the countries receiving EU Budget Support.

Under the pilot programme to strengthen the capacity of **political parties**, a call for proposals was launched in 2017 and five grants were awarded for projects implemented in ten countries (Malawi, Bolivia, Morocco, Benin, Paraguay, Mongolia, Moldova, Tunisia, Kyrgyzstan, Georgia). These projects have contributed to strengthening the role of women in political party life and supporting multi-party systems, including inter-party dialogues on the legal, financial and/or policy framework for political parties and political party financing. They have also revealed the need to continue supporting this crucial aspect of democracy, often left behind. This need was taken on board in the NDICI by promoting a comprehensive approach for democracy report at country level, regional level and global level.

In 2019, the flagship project "**INTER PARES | Parliaments in Partnership** - EU Global Project to Strengthen the Capacity of Parliaments" on parliamentary strengthening through a peer-to-peer approach was launched. In 2020, the project, like many other ones had to adapt its delivery methods to continue facilitating peer-to-peer exchanges between EU Member States parliament and partner parliaments around the world. It has also contributed to collecting and sharing best practices on parliaments' responses to the pandemic and has become a hub for across-the-board cooperation on parliamentary development, revamping the AGORA collaborative platform, supporting the Inter-Parliamentary Union's (IPU) Centre for Innovation in Parliaments (CIP) and the iKnowPolitics platform on women's political participation. Political parties have also been affected since the pandemic has been used as an excuse to crack down on the opposition. In this light, EU-funded projects in support of multi-party democratic systems have continued, adjusting their implementation.

Finally, the Commission also refer to the action funded through global calls for proposals and country allocations mentioned in the previous point on human rights support.

### **Support to targeted key actors and processes**

Despite increasing attacks against the international human rights system and the international justice system, the EIDHR has continued to staunchly support the key institutions, including the **International Criminal Court (ICC)** (EUR 1 million per year) and the **UN Office of the High Commissioner for Human Rights (OHCHR)** (approx. EUR 4.5 million per year).

The '**Global Campus for Human Rights and Democracy**' (approx. contribution of EUR 5 million a year) is a unique global network of more than 100 universities teaching and promoting human rights and democracy. Supported by the EU from its beginnings, the Global Campus confers masters degrees in human rights and democracy to more than 250 students a year. It covers seven regions in the world and represents a beacon of excellence in human rights and democracy education. A 7<sup>th</sup> region (Arab region) was included in 2017.

Continued support to the **Global Alliance of National Human Rights Institutions (GANHRI)** and its four regional networks (Africa, Europe, Asia and Latin-America) of National Human Rights Institutions (NHRIs) (EU contribution EUR 3.75 million 2019-21). The three-year targeted programme is managed by the Danish Institute for Human Rights as mandated by GANHRI builds on the results of the previous programme which ran from 2015-2019. It provides much needed training and capacity building opportunities, exchange and communication platforms, institutional development and rapid support for NHRIs in distress through re-granting.

Finally, we successfully organised on a regular basis the **EU-NGO Human Rights Forum** event. In 2020 this was done through a virtual platform, the [22<sup>nd</sup> edition of the EU-NGO Human Rights Forum](#), which gathered 789 registered participants and focused on the impact of technologies on Human Rights.

### **Election Observation Missions**

In 2020, the Commission demonstrated its flexibility and adaptability during the COVID-19 pandemic that triggered travel restrictions and created challenging sanitary conditions. In light of the COVID-19 pandemic, the Commission developed a combination of various tools that allowed to strike a balance between keeping election observations missions going and keeping observers in the countries safe and sound. In order to cover as much ground as possible, most of the fully-fledged EOMs were replaced by reinforced EEMs or by desk reviews. Wherever a mission was deployed, the Commission put in place the necessary security and risk mitigation measures to ensure the safety of the observers.

In 2020, the Commission implemented 17 missions and remote desk reviews and supported 14 electoral processes with around 350 staff on the ground.

### **3.1.3 Performance of corresponding 2014-2020 programme European Fund for Sustainable Development (EFSD):**

#### Timeline of implementation

Following the Communication from the Commission in September 2016 on the External Investment Plan, the Regulation establishing the European Fund for Sustainable Development was adopted in September of 2017. This rapid transition from Communication to Regulation set the tone for the performance of the EFSD. When considered as part of the toolbox of development, the EFSD is a highly efficient instrument with a comparatively rapid performance.

Immediately after the official Regulation was adopted, the Commission and Member States established the EFSD Governance structure. In turn, discussion between Member States, the European External Action Service and the Commission quickly led to the establishment of the 'investment windows', sectoral priorities for the EFSD. The Commission invited Partner financial institutions to propose investment programmes to be covered by the EFSD Guarantee.

The response by the financial institutions was very positive. The EFSD was heavily oversubscribed i.e. the requests from the Financial Institutions exceeded the capacity of the EFSD Guarantee by over EUR 2 billion. The Commission received 46 proposals from 12 partner institutions for a total value of more than EUR 3.5 billion. From a performance assessment perspective, this is a

crucial indication that the instrument was well designed. Such a high amount of requests reveal that there is a significant gap in the market that the EFSD is filling, precisely one of the objectives of the EFSD.

The regulation set an ambitious target for contracting, aiming to end the contracting period on 31 December 2020. The financial structures involved required significant negotiations between the Commission, the partner Financial Institutions, and the Guarantee Technical Assessment Group, a body specialised in financial risk assessment established for the EFSD.

The Commission successfully negotiated the first Guarantee Agreement, the NASIRA programme with the Dutch Development Bank, FMO, at the end of 2018. Six more agreements followed in 2019, displaying the exponential growth in the speed and capacity of the EFSD to turn proposals into signed Guarantee Agreements.

In the course of 2020, as the Covid-19 virus spread around the globe, the Commission decided to use the EFSD as a tool to help Partner Countries overcome the crisis. This meant that the EFSD needed to adapt quickly to the economic needs created by the global pandemic. This meant a focus on Micro, Small and Medium-Sized enterprises (MSMEs), local currency financing, and support to the health sector. Previously signed Agreements covering MSME financing were topped up, new agreements were negotiated and signed. A particularly important shift was a new agreement to provide EUR 400 million in financing towards the distribution of Covid-19 vaccines to Partner Countries. To create space for the new initiatives in response to Covid-19, several guarantees were postponed to the successor instrument, the ESFD+ Guarantee. They should be treated as a priority as soon as NDICI is finally adopted.

As of 31 December 2020, the Commission successfully contracted the entire capacity of the EFSD Guarantee. This amount, over EUR 1.5 billion, was contracted through 18 Guarantee Agreements with a diverse group of Financial Institutions. This was an important achievement in the EFSD's performance. The instrument reached the ambitious target of finalising contracting by the target originally set in the EFSD regulation, despite the need to restructure the Guarantee to address the effects of the Covid-19 pandemic. In addition to the most innovative element of the EFSD, the Guarantee, Blending projects have continued to contribute to sustainable growth in our Partner Countries.

## Results Framework

The Commission established a Results Measurement Framework for the EFSD used in the guarantee agreements. It covers three levels: (1) the EFSD as a whole, including both the EFSD Guarantee and the blending operations; (2) the Investment Platforms and Investment Windows; (3) the investment programmes under the EFSD Guarantee and the projects under the blending operations. The Commission is responsible for monitoring and reporting under the first two levels, based on a set of pre-defined indicators. At programme and project level, the reporting on expected and actual operational results is the responsibility of the lead financial institution. The list of indicators, the frequency and format of reporting are part of the guarantee agreements signed with the financial institutions.

The EFSD is managed by the European Commission and implemented through two Regional Investment Platform: the African Investment Platform and the Neighbourhood Investment Platform. This has the aim to use scarce public resources in an innovative way to mobilise public and private investment, thereby creating growth and employment opportunities, maximising additionality, delivering innovative products and crowding-in private sector funds.

The EFSD Guarantee covers portfolios of investments to be implemented by eligible counterparts in targeted areas, so-called Investment Windows. Investment under the EFSD is guided by development and sector policies of the beneficiary, and helped foster an enabling environment (governance, legislation and regulations) through the support provided under the Technical Assistance and the pillar "enabling the business environment of the External Investment Plan.

Based on the information provided by the financial institutions in their proposals, the guarantees approved are expected to contribute to the creation of close to 4 million jobs. They should also contribute to reducing carbon emissions by 6 000 kilotonnes a year and generate 4 + GW, particularly in renewable energy.

## The EFSD+ and the NDICI

The EFSD is a modality that translated quickly from regulatory decisions to impact on the ground. In addition, a key performance of the EFSD is the capacity to leverage investments from the private sector. Investments are already materialising and the EFSD has already begun to show results. Shipments of Covid-19 vaccines have reached partner countries, entrepreneurs have received loans and private investors have invested alongside the Commission and its Partner Financial Institutions. It is important to notice that the investment period has only recently begun and the duration of many of the guarantees is over ten years. This means results will continue to be monitored and will increase in the coming years.

Given the rapid and efficient roll-out of the EFSD, the NDICI proposes a similar structure in the form of the EFSD+. While the EFSD was limited to Sub-Saharan Africa and the European Neighbourhood, the EFSD+ will have a global outreach. In addition, the EFSD+ will expand its toolkit to include transactions originally not part of the EFSD, such as sovereign loans. Accordingly, the results framework designed for EFSD will be enhanced to capture the architecture, tools, and modalities designed for EFSD+ and at the same time ensuring coherence with NDICI priority areas.

### **3.1.3 Performance of corresponding 2014-2020 programme European Neighbourhood Instrument (ENI):**

The **European Neighbourhood Instrument** has proved to be a flexible and responsive instrument addressing the priorities established under the European neighbourhood policy framework and reacting to needs and challenges in the region, including protracted crises.

One of the essential elements of the ENI regulation is the incentive-based approach, also referred to as “more for more”. Indeed, the share of available resources offered to partner countries is adapted primarily to their progress in building and consolidating deep and sustainable democracy and in implementing agreed political, economic and social reform objectives.

On the other hand, the mid-term review of external action instruments, published in December 2017, has highlighted the need to strengthen the coordination and coherence between various external action instruments. This issue is addressed in the NDICI, which has been designed to reinforce a policy-driven approach to EU cooperation. The aim is to make it more strategic and responsive to the EU’s interests as well as both to the political priorities of the renewed European Neighbourhood Policy and the general policy framework. It also simplifies the current architecture providing a common, integrated framework for the Union’s external action policies, while preserving their specificities, in particular for development cooperation and the Neighbourhood policies.

Having a broad financing instrument would better serve the goals and priorities of the European Neighbourhood policy. Cooperation with EU neighbours will gain from being financed by the NDICI, as it would give more means and flexibility in support of the special relationship between the EU and its Neighbours. It will be better equipped to address challenges that span across regions covered currently by different instruments. Additional funding could be mobilised easily through the "Emerging challenges and priorities cushion". The possibilities offered by the “cushion” would allow the EU to be prepared to challenges that may raise in the future. Some features currently reserved to the EDF would also be extended to the Neighbourhood, including the ability to carry-over unused funds from one year to the following one or to reuse decommitted funds. This is particularly appropriate for the management of actions in the Neighbourhood, which is characterised by a highly volatile environment requiring continuous adaptation.

#### **Impact of the Covid-19 crisis**

The Covid-19 crisis has resulted in the re-purposing of ENI financial assistance and targeted support to sectors that are most likely to be impacted: health and social systems and the economy. The performance of ENI has improved as a consequence, in that the support and partnership of the EU has become ever more valued and welcome by our neighbouring countries. In particular, as regards 2020, DG NEAR has over-executed budget credits across the neighbourhood, drawing on surplus allocations in the context of the global transfer exercise

The available budget for 2020 was fully committed despite the eruption of the Covid-19. For example, in Southern Neighbourhood the EU mobilised 2.3 billion, including by amending and reprogramming past commitments or adapting 2020 commitments. Furthermore, Covid-19 related needs triggered acceleration of payments, including budget support, to respond to the socio-economic impact and maintain the fiscal sustainability of partner’s states. As a result, half a billion euro more was paid compared to 2020 initial forecast.

#### **Specific Objective 1: Promoting human rights and fundamental freedoms, the rule of law, principles of equality and the fight against discrimination in all its forms.**

Indicator 2 takes the scores from eight publically available external sources, grouped under three components:

1. Corruption Index (Transparency International) and Control of Corruption (World Bank);
2. Press Freedom (Reporters without Borders) and Freedom of Press (Freedom House);
3. Government Effectiveness (World Bank), Rule of Law (World Bank), Regulatory Quality (World Bank) and Voice and Accountability (World Bank).

These sub-indicators are based mostly on perceptions and do not reflect the impacts made by the EU assistance and policy in these areas, but the improvement observed does reflect the sense of direction sought. Overall, the trend in the neighbourhood has been fluctuating, but the most recent development has seen a leap in the score and the target was exceeded for the first time since the reporting period. However, for the Eastern Partnership multiannual framework 10<sup>th</sup> anniversary in 2019, the Commission carried out a broad and inclusive consultation that shown that progress is still needed in the areas of rule of law, fighting corruption, spaces for civil society and media independence. There are also many external factors, which might influence overall scores (such as political instability, security situation, etc.). In particular, for some countries in the southern neighbourhood, political instability and the security situation are hampering the progress. A relevant example in the eastern neighbourhood is Belarus, where the presidential elections of 2020 resulted in popular protests and state violence towards protesters.

Furthermore, the EU has promoted the values of human rights and fundamental freedoms, the rule of law, principles of equality and the anti-discrimination through its interventions. Over the period 2013-2019, the EU supported 45 government policies with civil society throughout east and south neighbourhood. More than 3000 victims of human rights violations directly benefited from assistance funded by the EU. While around 48 000 benefited from legal aid interventions supported by the EU.<sup>21</sup>

**Specific Objective 2: Achieving progressive integration into the EU's internal market and enhanced sectoral and cross-sectoral cooperation.**

The same consultation mentioned above that the Commission carried out at the occasion of the 10<sup>th</sup> anniversary of the Eastern Partnership multilateral framework in 2019 has shown that there is a consensus the Eastern Partnership is robust and delivers tangible benefits to the daily lives of people across the region. There are notably strong achievements in the priority areas of the economy, connectivity and a stronger society. However, the same external factors mentioned above are hampering progress in the Southern Neighbourhood. Cooperation with the North African partner countries is challenging and subject to the evolution of the situation, notably in Libya. Across the Middle East region, the impact of ongoing conflicts, insecurity and poor governance destabilises the EU's partners, disrupts trade and investment and limits opportunities for the population.

Under Specific Objective 2, the targets for the indicator expressing the level of integration of the economies into the world economy (indicator 1) was reached in 2017, although information was not available for some countries in the Southern Neighbourhood. Hopefully these positive developments will remain stable throughout coming years and beyond. To be noted that many factors will impact this indicator, in particular EU economic growth, unfolding crisis situations in the region and data availability.

Progressive integration into the EU's internal market and enhanced sectoral and cross-sectoral cooperation is being achieved. For example, the EU is supporting strengthening of revenue mobilisation, public financial management and/or budget transparency in almost all neighbourhood countries. While economic operators in this region obtained 73 conformity schemes-related certifications, accreditations, approvals or recognitions for their products, services or systems following relevant support from the EU. Furthermore, 173 624 people have benefited from institution- or workplace-based VET/skills development interventions supported by the EU in the neighbourhood countries.<sup>22</sup>

In the Neighbourhood South, although a number of deep and comprehensive free trade agreement (DCFTA) negotiation rounds took place over the period - especially with Morocco and Tunisia – no agreement on a DCFTA could be finalised. Nevertheless, a number of gap and impact analyses were carried out and trainings were performed on the most important legal aspects of DCFTA agreements (competition policy, public procurement, intellectual property protection, investment protection, etc.) thus laying the groundwork for future trade engagement (e.g. Investment Promotion Agreements as suggested in the most recent EU trade policy review).

In addition, a number of cooperation programmes in the area of regulatory approximation or trade promotion (e.g. Réussir le Statut Avancé I and II in Morocco; PACE in Tunisia) were implemented. If regulatory approximation has been slow in most countries (with the exception of Morocco), trade promotion programmes have allowed to simplify customs rules and procedures, digitalise export procedures (e.g. PACE programme in Tunisia, PACC in Morocco), or provide access to financing to Moroccan or Tunisian SMEs with a view to help them export to the EU (i.a. *Insadder* project in Tunisia).

**Specific Objective 3: Creating conditions for the better organisation of legal migration and the well-managed mobility of people.**

ENI contributes greatly to the achievement of objective 3 and will continue to do so as part of NDICI. The objective is formulated in an active form and it is in that sense still ongoing. Most of the work done on migration and forced displacement since 2015 in the Southern Neighbourhood was financed by approximately EUR 2 billion of ENI funds through the EU Emergency Trust Fund for Africa (North of Africa window), and the EU Regional Trust Fund in Response to the Syrian crisis. In the Eastern Partnership, at least EUR 230 million were spent focusing mainly on legal migration, including mobility, circular migration, diaspora cooperation, as well as on border management.

Activities in the area of migration is key to implement the political priorities set out in the new Pact on Migration and Asylum and the Joint Communication on a Renewed Partnership with the Southern Neighbourhood. Work under ENI is essential for a comprehensive and balanced engagement with partner countries, with focus on key countries of origin and transit and destination, and a specific approach aimed at establishing tailor-made, mutually beneficial partnerships based on the assessment of the EU and the partner countries' interests. Work under our programmes will cover several areas including protecting those in need and supporting host countries; building economic opportunity and addressing root causes of irregular migration; partnerships to strengthen migration governance and management; fostering cooperation on readmission and reintegration; legal pathways.

<sup>21</sup> See EU Results Framework indicators in the 2020 Annual Report on the implementation of the European Union's instruments for financing external actions in 2019.

<sup>22</sup> See EU Results Framework indicators in the 2020 Annual Report on the implementation of the European Union's instruments for financing external actions in 2019.

The first indicator below (number of mobility partnerships in place) is an example of good performance where the targets have been either met (Neighbourhood East) or almost (Neighbourhood South). Mobility Partnerships declarations are the instrument through which the EU and its partners in the Neighbourhood intend to set a framework to manage migration flows with commonly agreed objectives and programmes. Mobility Partnerships follow the Global Approach to Migration and Mobility guidelines. Thus, they are a good measure of the achievements in this field.

For the second indicator, especially in the Southern Neighbourhood, no readmission and visa facilitation agreements have been concluded due to sensitive and complex negotiations in an uncertain political environment. Furthermore, the criteria for these type of agreements are more stringent than those for mobility partnerships. Based on visa facilitation/ liberalisation agreements, both the EU and the non-EU citizens benefit from facilitated procedures for issuing visas. Visa facilitation/liberalisation agreements are linked to readmission agreements which establish the procedures for the return of persons in irregular situation (own or third country nationals or stateless persons) to the EU or to the partner non-EU country. Readmission and visa facilitation/liberalisation agreements are key elements to assess progress regarding mobility and the promotion of people to people contacts. No readmission and visa facilitation agreements have been concluded with Morocco, Tunisia and Jordan due to sensitive and complex negotiations in an uncertain political environment. The same external factors mentioned above, political instability and the security situation have entailed a large numbers of refugees and displaced persons in the Southern Neighbourhood.

Nevertheless, the EU has continued creating conditions for well-managed migration and mobility. For example, 29 strategies and policies for migration management or forced displacement were developed/revised or are under implementation with EU support in the neighbourhood countries. Examples of migration management/forced displacement strategy/policy areas include border management, labour and facilitated migration, assisted voluntary return, assistance for vulnerable migrants/displaced persons, socio-economic inclusion of migrants/forced displaced person, etc. Developed/revised strategies or policies are those endorsed by the authorities relevant to the local context.

#### **Specific Objective 4: Supporting smart, sustainable and inclusive development in all respects.**

Progress was noted in this specific objective. Indicator 1, which is based on UNDP's human development index, has been stable and going towards the target. Indicator 2 measuring the ease of doing business improved in both eastern and southern neighbourhood. This was not enough to reach the target, although in case of neighbourhood south, it was very close.

In this regard, the EU supported 12 countries in the Eastern and Southern neighbourhood to strengthen investment climate by supporting reforms aiming to reduce business costs, risks and create a more conducive environment for competitiveness, sustainable and inclusive growth, and decent job creation. Additionally, more than 70 000 jobs were directly supported or sustained by the EU and in that way contributed to development and economic growth in the region.<sup>23</sup>

#### **Specific Objective 5: Promoting confidence building, good neighbourly relations and other measures contributing to security in all its forms and the prevention and settlement of conflicts.**

The only indicator under Specific Objective 5 measures perceptions of the likelihood that the government will be destabilised or overthrown by unconstitutional or violent means, including politically-motivated violence and terrorism. The most recent results under this indicator show stability in southern neighbourhood, but there was a drop in eastern neighbourhood where Armenia and Georgia have scored lower in comparison to the previous year. There have been instances of political instability in the east, e.g. the protests in Armenia, the current political instability following the elections in Georgia, or the popular protests in Belarus.

Nevertheless, the EU continued contributing to this objective by supported over 600 state institutions and non-state actors on security, border management, countering violent extremism, conflict prevention, protection of civilian population and human rights. Additionally, almost 160 000 individuals directly benefited from EU-supported interventions that specifically aimed to support civilian post-conflict peacebuilding and/or conflict prevention.<sup>24</sup>

Overall, security cooperation between the EU and the neighbourhood aims to address security-related challenges in the region and the global ones. It is part of broader efforts to strengthen the resilience of states, societies and individuals around the EU borders. Cooperation on security is an important feature of the EU relations with partners both in the East and in the South. As regards the East, extensive ENI support was provided on building capacity to combat organised crime, cybercrime and hybrid threats, security sector reform, energy security and nuclear safety. Support was underpinning bilateral dialogues, based on each country's needs, complemented by initiatives at regional level. As regards the South, the EU continued its regular security dialogue with the League of Arab States (LAS) on a wide range of issues (e.g. regional security, counter terrorism, migration-related issues and civil protection) and pursued its engagement in the framework of the Union for the Mediterranean (UfM). Neighbourhood South continued to face serious challenges related to organised crime but above all terrorism and violent extremism. ENI support therefore focused on judicial and police cooperation, in particular at regional level and in cooperation with EU JHA Agencies and specialised international organisations such as INTERPOL, supporting national policies to counter violent extremism and capacity

<sup>23</sup> See EU Results Framework indicators in the 2020 Annual Report on the implementation of the European Union's instruments for financing external actions in 2019.

<sup>24</sup> See EU Results Framework indicators in the 2020 Annual Report on the implementation of the European Union's instruments for financing external actions in 2019.

building to prevent and address financing of terrorism and anti-money laundering. In the area of civil protection, specific dialogues have helped identify priority areas of cooperation. Disaster risk reduction, climate resilience and adaptation, as well as enhancing local authorities' capacities remained the main themes for cooperation and ENI assistance.

### **Specific Objective 6: Enhancing sub-regional, regional and European neighbourhood-wide collaboration and cross-border cooperation.**

In the Southern Neighbourhood, there has been positive progress on increasing credibility of the Union for the Mediterranean through regular ministerial meetings and conferences (indicator 4). Furthermore, all but one Cross-Border Cooperation (CBC) programme have been adopted (indicator 1).

Regarding indicator 2 "Number of ministerial, platform and panel meetings under the Eastern Partnership" there has been a substantial increase of the number of events. This is mainly due to the increased number of the requests coming from high-level decision-makers.

ENI CBC (in the future: Interreg NEXT) is an important element of EU policy towards its eastern and southern neighbours, adding cohesion and territorial cooperation to EU relations. These multiannual, shared management programmes offer an opportunity for the Neighbourhood partner countries on regional and local level to cooperate with Member States counterparts on equal footing. They contribute to trust building between stakeholders of the Neighbourhood and the EU.

In 2020, the 15 ENI CBC programmes (13 of which are in the east) for the period 2014-2020 totalling around EUR 1 billion reached a cruising speed of implementation. By January 2021, 765 projects were contracted, which represents 83% of all projects selected for support. 49 large infrastructure projects are contracted and in implementation.

The projects to be implemented under these programmes support sustainable economic development along the EU's external borders, thus reducing differences in living standards and addressing common challenges across these borders. For each of these programmes, the participating countries have selected up to four thematic objectives, such as SME development, culture and environment, and climate change.

The ENI CBC projects contributed to tackle the COVID-19 pandemic in 2020: e.g. the RESCUE project supported under Poland-Belarus-Ukraine programme was promoted among 15 other exemplary projects fighting the pandemic by the Commission.

Furthermore, the preparation of the Interreg NEXT 2021-2027 – substantially progressed during 2020. 16 (out of 17) programming committees or task forces were set-up. The future programmes' implementation will be governed mainly by the cohesion policy regulations which was agreed by the end of 2020. The preparation of the financing agreement template is on-going. The relatively stable legal environment should allow the programmes to progress and finalise its preparations during 2021.

Considering the strong qualitative nature of indicators 3 and 5 it has proven not realistic to continue monitoring these as such.

#### **3.1.3 Performance of corresponding 2014-2020 programme Instrument contributing to Stability and Peace (IcSP)**

Between 2014 and 2020, the Instrument contributing to Stability and Peace (IcSP) has funded activities in the areas of (1) crisis response, (2) conflict prevention, peacebuilding and crisis preparedness, and (3) response to global, trans-regional and emerging threats. The instrument's activities are implemented in partner countries around the world, in conflict zones, in post-conflict environments and in emerging crisis settings.

With a view to allowing the EU to respond quickly to crises, 70% of the funds under the instrument (EUR 2.4 billion) was allocated to the non-programmable crisis response component (Article 3). Longer-term programmable actions aiming to support conflict prevention, peacebuilding and crisis preparedness (Article 4), as well as responses to global, trans-regional and emerging threats (Article 5) represented 9% and 21% of the overall budget respectively. This amount included EUR 100 million specifically for capacity building of military actors in support of development and security for development (CBSD). The CBSD was launched in December 2017. It allowed working with military actors for civilian purposes in exceptional circumstances, with three pre-conditions to be met cumulatively: 1) when requirements cannot be met by recourse to non-military actors; 2) in case of a threat to functioning state institutions or to the protection of human rights and fundamental freedoms and when the state institutions cannot cope with that threat; and 3) when there is agreement between the partner country concerned and the EU that these first two conditions are indeed fulfilled. Following the positive experience under this pilot initiative, such actions have been included in all pillars of the NDICI.

The IcSP was a key element of the EU's diplomatic efforts to respond to crises, promote peace-building and support conflict prevention efforts. The funding of actions was determined by the EU's political priorities. Overall, in the period of 2014-2020 EUR, 1.73 billion was committed under the crisis-response and peacebuilding components (IcSP Article 3 and Article 4), with over 300 financing decisions adopted and about 1 000 interventions implemented. For the responses to global, trans-regional and emerging threats (IcSP Article 5), EUR 494 million was committed through 7 financing decisions.

The non-programmable crisis response component (Article 3) allowed for rapid mobilisation of EU funding to support short-term rapid actions. This enabled timely and flexible EU responses to prevent conflict, support post-conflict political stabilisation and

early recovery in situations of crisis, emerging crisis or disaster. This contributed to fostering the conditions for the implementation of EU assistance and cooperation policies and programmes, when opportune financial assistance cannot be provided through other EU financing instruments. Activities covered a wide range of sectors: mediation, dialogue and reconciliation, confidence-building; support to democratic institutions, rule of law, transitional justice, security sector reform (SSR) and disarmament, demobilisation and reintegration (DDR) processes, infrastructure rehabilitation and reconstruction, employment generation, de-mining, counter terrorism and countering violent extremism (CT/CVE), stabilisation; and migration, and contexts relating to refugees and internally displaced persons (IDPs). The IcSP has been mobilised to support a multitude of crisis response and peace-building processes, including in Colombia, the Central African Republic, Mali, Libya, Yemen, Syria and Ukraine. At the same time, the IcSP was able to respond to a multitude of local conflict contexts, as well as contexts where there was a risk of conflict.

The peacebuilding component (Article 4) focused on increasing support for early and preventive action and on strengthening capacity at community level. Such actions have allowed the EU to build and strengthen its own capacity and that of its partners to prevent conflicts, enhance resilience and build peace. IcSP support was instrumental in the establishment and development of the EU early warning system, an essential tool to anticipate conflicts and prepare early actions. It underpinned many EU external policies in the field of peace and security such as mediation, transitional justice and security sector reform and governance: ad-hoc facilities in these 3 fields allowed the EU to support more than 100 initiatives in 40 countries. It also contributed to assert multilateralism by providing the EU contribution to recovery and peacebuilding assessments as well as to the UN Peace-building Fund. Furthermore, IcSP support has contributed to the consolidation and dissemination of international due diligence on responsible minerals which is the basis of EU Regulation 821/2017. Responding to the specific mandate in the latter, during the period 2014-2020, the IcSP supported civil society organisations, in particular local organisations in third countries, strengthening their capacities and skills in conflict prevention and peacebuilding, aiming at an inclusive approach and concretely contributing to the effectiveness and long-term ownership of mediation, peace and stabilisation processes.

The response to global, trans-regional and emerging threats component (Article 5) included actions to address specific global, trans-regional and emerging threats having a destabilising effect, primarily in the areas of threats to law and order, security and safety of individuals, critical infrastructure and public health. Actions aimed at strengthening the capacity of law enforcement and judicial and civil authorities involved in the fight against terrorism, organised crime and all forms of illicit trafficking, and in the control of illegal trade and transit. Over the period 2014-2020, the threat picture has evolved fast. The EU and partner countries faced new security challenges and had to quickly adapt. The challenging global security environment involving complex conflicts, such as in Syria or Yemen, combined with an increasingly agile, flexible, and often state-embedded transnational organised crime landscape, placed the traditional concept and implementation of external policy under unprecedented pressure. The need to address issues such as the root-causes of terrorism, violent extremism, organised crime (including environmental), threats from new modes of operating such as cyber-attacks, biological agents and new forms of Improvised Explosive Devices has also increased.

Supported actions were global in nature and adopted a 'niche' approach, complementing and adding value to other funding instruments. Possibilities under this component were fully utilised including *inter alia* security-targeted actions, non-development initiatives and actions with a trans-regional scope. IcSP Article 5 also played a pioneering role, engaging in areas not previously covered by EU cooperation instruments, through pilot actions which in some cases were later scaled-up under the more traditional development cooperation instruments such as the European Development Fund. Pertinent examples includes those in the Sahel (on police cooperation and counter- terrorism), the Horn of Africa (on prevention and the financing of terrorism) and in Latin America (police cooperation).

IcSP actions have enhanced the role of the EU as a relevant and responsive global peace actor in often sensitive contexts. In countries that have been subject to the EU early warning analysis, the IcSP has been mobilised to translate early warning into early action.

**SO1 In a situation of crisis or emerging crisis, to swiftly contribute to stability by providing an effective response designed to help preserve, establish or re-establish the conditions essential to the proper implementation of the EU's external policies and actions in accordance with Article 21 of the Treaty on European Union**

2020 was dominated by the outbreak of the COVID-19 pandemic that both presented new needs for urgent action -with the adoption of a specific response package- and affected all aspects of operations, as safety protocols and travel restrictions required adaptations to ongoing actions. In addition, an exceptionally high amount of new crisis response actions were adopted during the year to respond to situations such as Nagorno-Karabakh, Belarus and Lebanon, following the devastating explosion in Beirut on 4 August 2020. The IcSP was mobilised to support peacebuilding, dialogue, mediation and stabilisation initiatives, as well as capacity-building for Security and Development (CBSD) activities in the Sahel. The instrument also responded to situations that could lead to conflict, including support to numerous electoral processes in Latin America, Africa and the Middle East, as well as to actions addressing potential tensions between host communities and migrant and refugee populations in Latin America, Turkey, Bangladesh (linked to the Rohingya crisis) and the Western Balkans. The IcSP continued to support civil society actors that operated in conflict settings in their work to prevent conflict and to promote dialogue and reconciliation.

During the seven-year period 2014-2020, the Commission presented 364 IcSP crisis response actions (exceptional assistance measures (EAM) and interim response programmes (IRP)) to EU Member States in the Political and Security Committee (PSC) through 43 IcSP Information Notes. These actions were guided by the policy priorities and objectives of the EU in response to

developments on the ground in crisis and conflict affected countries and regions as well as. The IcSP has been able to deliver timely responses in the vast majority of times, but on occasion, the percentage of actions adopted within 3 months of a crisis context (i.e. the period from date of presentation to PSC to the date of adoption of the financing agreement) dipped. Of the 51 short-term crisis response actions (COM Decision) adopted in 2020 to respond to situations of crisis or emerging crisis (Article 3), 44 were adopted within 3 months of a crisis context. This constitutes a percentage rate of 86.3%, above the final objective of 75%. The relatively lower performance in 2020 remains well above the target and is explained by the disruptions caused by the COVID-19 crisis combined with the high amount of new crisis response actions adopted in 2020 as mentioned above.

**Percentage of IcSP Crisis Response Actions adopted within three months of presentation to PSC:**

2014	2015	2016	2017	2018	2019	2020
68	64	61	47	82	91	86

This was particularly the case in 2017, when the transfer of FPI posts from specific EU delegations to newly the five newly establishment FPI Regional Teams (Bangkok, Beirut, Nairobi, Dakar, Brasilia) caused a period of disruption and adaptation and the rate of adoptions within three months for the first and only time dipped below 50%. Despite the disruption caused by the transition, the significant increase in speed in the following years indicates that the new setup indeed contributed to making the instrument even more responsive,

In terms of emerging crisis the IcSP has been instrumental for the development of the EU Early Warning System. Furthermore, in countries that have been subject to the EU early warning analysis the IcSP has been mobilised to translate early warning into early action.

IcSP contributed to the EU's efforts to promote peace in a variety of circumstances. In Colombia, the peace process from the negotiations in Havana to the 2016 Peace agreement and its implementation were accompanied; in Afghanistan, the peace process was supported with a particular emphasis on the involvement of women and local civil society; in the Central African Republic the mediation for the peace process led to the 2018 Khartoum Agreement; most recently, a comprehensive package of support through IcSP for the UN-led peace process in Libya lead to the most encouraging ceasefire in Libya in recent years.

Even in processes where peace processes continue to face challenges, the IcSP financial support contributed to put the EU's policy positions and objectives into action. For example:

- In Syria, to support to the efforts of the UN Special Envoy for Syria, to the increased involvement of women and civil society in the political process as well as support to accountability and to conflict affected communities;
- in Ukraine, to help the important work of the OSCE Special Monitoring Mission among many other actions; and
- in Yemen to contribute to the UN-led peace process.

What is true for all these examples and many more is that the IcSP has fulfilled a unique role within the EU foreign policy framework. It has been a quick and flexible tool that allows the EU to respond immediately to crisis and to start processes, which allows time for other, more long-term, instruments prepare and take over.

**SO2: To contribute to preventing conflicts and to ensuring the capacity and preparedness to address pre- and post-crisis situations and build peace.**

The prevention of conflict and peace-building have been central objectives for IcSP crisis response programmable actions under Article 4 actions. In particular, actions contributed to strengthening dialogue and cooperation with civil society on issues pertaining to conflict prevention and peacebuilding, and to empowering local civil-society actors to play an active role in conflict-affected contexts, contributing to more resilient societies and to building long-term peace.

The IcSP has also supported the EU commitment to multilateralism. This includes a successful strategic cooperation on peace-building and mediation with the United Nations, the World Bank, the Organisation for Economic Cooperation and Development and other international organisations. One iteration of this is the Recovery and Peace Building Assessment framework with the UN and the World Bank. Another example is the contribution, to the UN Peacebuilding Architecture, which includes support to the UN Peace Building Fund, the UN Peace and Development Advisers that support UN Resident Coordinators in countries affected by, or at risk of, conflict as well as the UN Standby Team of Senior Mediators that can be deployed across the globe at short notice.

The IcSP has supported the consolidation and dissemination of the international due diligence for responsible minerals which has been the basis of the EU Regulation 821/2017 on the obligations for EU importers of some minerals from conflict affected and high-risk areas.

Through a set of facilities IcSP has been able to support with short term actions, ad hoc initiatives in more than 30 countries in the field of mediation, justice in transition and security sector governance

Through 75 action grants to civil society organisations in the period 2014-2020, IcSP has been able to support a multitude of locally grown conflict prevention actions in more than 30 countries, strengthening the role of women and youth in confidence

building activities and peace processes, promoting local driven solution for ,conflicts over the use of natural resources, engaging religious leaders to promote a culture of tolerance. The involvement of local actors and in particular of the local civil society organisations is key for the effectiveness and sustainability of conflict prevention actions. However, a specific challenge is how to reach out the small organisations. These organisations that are well-grounded in the third countries' realities do not always have the adequate capacity and need specific support to respond to the EU requirements to be beneficiaries of grants.

### **SO 3: To address specific global and trans-regional threats to peace, international security and stability**

The tackling of global and trans-regional threats remains a concern and the programme has continued the establishment and expansion of sustainable cooperation frameworks and networks. Through engagement in areas such as counter terrorism, Chemical, Biological, Radiological and Nuclear risk mitigation as well as fighting organised crime and protecting critical infrastructure, efforts are made to enhance peace and stability, ultimately leading to enhanced security of citizens. The IcSP security actions– especially in the neighbouring countries and in Africa – reinforced the EU's role as the largest external cooperation partner in the world and a global security actor.

IcSP actions in support of demobilisation, disarmament and reintegration have not always been as successful as intended, mainly due to the lack of longer-term funding sources to ensure the continuity of the actions. A long-term perspective is required for these actions in light of the timeline for completing demobilisation, disarmament and reintegration processes.

The IcSP's response to the Ebola outbreak in western Africa has shown that the programme provides clear added value in preventing a conflict as a consequence of a health emergency. However, humanitarian funding for public health should be preferred in the future, since the IcSP's implementing partners are not properly equipped to handle humanitarian aid procedures.

It also included the first CBSD action in Central Asia, in collaboration with the OSCE.

The IcSP security actions– especially in the neighbouring countries and in Africa – reinforced the EU's role as the largest external cooperation partner in the world and a global security actor. Activities were deployed to address threats linked to counter-terrorism, CBRN, fighting organised crime and protecting critical infrastructure, in particular in the areas of cyber and maritime security.

#### **3.1.3 Performance of corresponding 2014-2020 programme Partnership Instrument (PI):**

During the period 2014-2020, the Partnership Instrument (PI) was a policy-supporting instrument strengthening the EU by promoting its interests, values and visibility externally. It operated as such under the framework defined by the EU Global Strategy and other EU policies (the Commission's priorities, Agenda 2030 and the Sustainable Development Goals) and in support of EU foreign policy objectives. Programming was driven by thematic rather than country-focused considerations. For example, PI actions underpinned bilateral and regional dialogues in multiple areas of strategic EU interest and bilateral and multilateral negotiations. It did so by providing support for concrete policy deliverables, thereby strengthening the position of the EU as a credible partner. Other actions aimed at developing common approaches with key partners to influence international processes and agendas, thereby underpinning multilateralism, fostering the building of partnerships and alliances in a global context and contributing to the rules-based global order. In the area of trade policy, the PI provided unprecedented support to the EU's trade agenda in the world, focusing on countries/regions where trade and investment agreements exist or are being negotiated. Further actions enabled the EU to promote its standards abroad, help develop a level playing field, create opportunities for its companies, and enhance its image and perception abroad through public and cultural diplomacy, engaging with key decision-makers and target groups in strategic partner countries.

The Partnership Instrument (PI) contributed to most indicators in a long-term perspective, through the processes, dialogues and cooperation that are enabled through its cooperation actions. Therefore, the PI core outcome indicators introduced in 2016 are considered to provide realistic and relevant information on PI performance. PI actions fund activities and deliver outputs in order to achieve outcomes in terms of influence over political and decision-making processes. Some of the main outcomes are measured by the PI outcome indicators (see box hereunder).

#### **Core PI outcome indicators**

The aim of outcome indicators is to measure the influence, which the action is having on some kind of process or on behaviour of the target groups.

'Process' is used as a generic term for any line of action, position, policy development in a partner country or in a mutual relationship.

PI actions aim to influence or initiate some processes (outcome), often political, in order to create enabling conditions for a change (impact). Normally there will be a process under way, or which needs to be developed, and which may ultimately lead to the desired change in the longer term. This process may need to be initiated, or moved forward in some way, or enhanced to improve the chances of the action contributing to the desired impact. The outcome to which the actions aim to contribute is that the process is enhanced; in the longer term this may lead to a strategic partnership, an agreement on migration, a policy that can

contribute to the reduction of greenhouse gas emissions, improved options for trade, standard-setting in line with EU standards, or a better understanding of the EU and its place in the world.

The indicators comprise mainly agreements, declarations and action plans. The EU has designated the following countries as Strategic Partners: Brazil, Canada, China, India, Japan, Mexico, the Republic of Korea, the Russian Federation, South Africa and the U.S.A.

In the framework of the Strategic Partnerships, or in addition to it, the EU often concludes bilateral agreements with these countries. Bilateral agreements traditionally contain three pillars: cooperation, trade and economic relations and political dialogue. These agreements vary in scope, content and level of ambition/engagement such as Free Trade Agreements, Partnership and Cooperation Agreements, Association Agreements and Visa Liberalisation Agreements. The PI facilitated the implementation of such agreements, notably, by supporting EU negotiators, spreading knowledge about new opportunities created by the agreements and by setting up specific public diplomacy actions.

Information on developments in the negotiation and conclusion of these processes will be obtained directly from EU internal sources (the Commission services and the EEAS) and from data sources relevant for the strategic partners, including relevant websites.

Ensuring synergies and strict complementarity of PI programmes with both EU external action instruments and internal instruments with an external window continued to be crucial, given the strong demand for PI actions in several relevant domains (e.g. digital, regulatory cooperation, public diplomacy). This challenge was overcome through a continued effort of coordination by FPI, in particular in the context of the Quality Support Group process that screens actions before including them in the annual programme.

The PI was able to cater for high demand by line DGs and the EEAS thanks to its capacity to provide targeted, flexible and quick response. Due to limited funding, priorities had to be established and not all requests could be satisfied, even if they are in line with PI objectives and priorities. Managing increased demand and related expectations, while making sure that funds are used on those issues and with those partners where they could have the greatest impact in terms of leveraging EU influence, was a key consideration for the Service over the past year.

### 3.2. Key achievements

#### Corresponding 2014-2020 programme: Development and Cooperation Instrument (DCI):

##### DCI Latin America

<b>1.8 billion</b>	<b>56,430</b>	<b>more than 49,000</b>	<b>7.1%</b>	<b>80,065</b>	<b>60</b>
euros leveraged through Latin America Investment Facility (LAIF) projects approved in 2019 and 2020 for sustainable investments in the LAC region, These projects included the first project on migration in Colombia and the first ever EU contribution to a Green Bond Fund "LAGREEN"	vulnerable families in Honduras benefited from nutrition and food security actions through the Budget Support Programme EUROSAN in 2019	small and medium enterprises from 18 LA countries benefitted since 2016, i.e. the beginning of the project until March 2020 from tools to improve commercial and market management, increase productivity, and promote integration of innovation, manufacturing good practices, environmental management and corporate social responsibility through the regional programme AL-	more children completing primary school in Paraguay thanks to support provided between 2014 and 2017 through a Sector Budget Support programme on Education.	vulnerable families obtained formal land titles in Bolivia in selected Municipalities between July 2018 and July 2019 with outbound migration to coca leaf production areas through the Budget Support Programme "Reinforcing family agriculture and food sovereignty in outbound migration areas to coca leaf production zones in Bolivia"	projects on climate change and environment in six sectors under implementation in 2020, covering all 18 eligible Latin America countries through the EUROCLIMA programme

		INVEST 5.0 involving 110 EU and LA institutions and organisations )			
--	--	--	--	--	--

In 2020, the **EU Trust Fund for Colombia, partially funded from the DCI**, continued to support the implementation of the peace agreement between the Colombian Government and the FARC. It translates the EU's political support to the Peace Agreement, in particular on the elements related to rural reform, land reform and the social and economic reincorporation of former FARC combatants. The Trust Fund has become the most visible tool of EU cooperation in Colombia. It has allowed the necessary flexibility to adapt to changing circumstances, and enabled an effective response to evolving political priorities. The EU Trust Fund for Colombia currently has 30 projects ongoing for a total amount of EUR 110 million. Two large new actions were approved in 2020 on land reform and social and economic reintegration.

The EU continued its role at the forefront as a key actor of the international response to the **Venezuelan crisis**. In May 2020, the EU led an "International Donors' Conference in solidarity with Venezuelan migrants and refugees, in the midst of COVID-19" together with Spain, with the support of UNHCR, IOM, Norway and Canada. This Pledging Conference managed to raise EUR 2.5 billion, of which EUR 595 million in grants and also sent a strong representation of Team Europe approach. The pledge from the EU and EU Member States amounted to EUR 236 million in grants (of which EUR 70 million from DEVCO/INTPA) and EUR 400 million in loans from the European Investment Bank. By end 2020, through a re-allocation of different MIPs, about EUR 42.5 million was committed in four new programmes to mitigate the effects of the Venezuelan migrant crisis also taking into account the COVID-19 mitigating measures.

For **Paraguay**, two important Budget Support programmes in support to the social development were adopted: a EUR 48 million to support the Social Protection System and EUR 38 million to support the transformation of the Education System. A first payment of EUR 16 million was disbursed for the social security support programme. The negotiations of the new programme on Social Protection has gone hand in hand with the new Social Protection System of Paraguay and has contributed to the adoption and prioritisation of the 46 Social Actions and the development of a monitoring and evaluation framework.

In **Bolivia** a new Government was elected which allowed for the negotiation and adoption of important new programmes on support to the justice system and two Budget Support operation Support to the National Strategy for Integral and Sustainable Development with Coca 2019-2023 (ENDISC) (EUR 20 million) and Support to the National Strategy to Fight against Drug Trafficking and Control of Surplus Cultivation of Coca 2016-2020 (ELCN&CCEC) and Action Plan 2020-2022 (EUR 30 million). The predecessor of this programme has been instrumental in assuring that by end 2019, around 80,000 vulnerable families obtained formal land titles in Bolivia in selected Municipalities with outbound Migration to coca leaf production areas.

On the regional programmes, **Euroclima+** remains the EU's flagship programme for Latin America in climate change and environment, and shifted in 2020 most of its activities on-line, and building significant capacity amongst staff, partners and stakeholders. The programme's carbon footprint massively declined at the same time its effectiveness and reach increased. Operationally, around 60 projects in six sectors are under implementation in 2020, covering all 18 eligible countries. Key achievements in 2020 relate to the formulation of Chile's new climate change law, support provided to six Central American countries in the strengthening of their regionalized climate change scenarios; three national systems for monitoring and evaluating climate policies strengthened: in Chile, Costa Rica and El Salvador; creation of an indigenous climate platform in Peru; the adoption/implementation of three Early Warning Systems on multiple risks of droughts and floods in Bolivia and Peru.

The focus on climate change and green investment continue to dominate also the Latin America Investment Facility (LAIF) portfolio, with new actions in Costa Rica and Peru and an EU contribution of EUR 15 million to the first Green Bonds Fund in Latin America and the Caribbean designated as "LAGREEN". LAGREEN is a fund of more than EUR 500 million and is led by the German government, supporting climate- and resource friendly investments enabling LAC countries to meet their Nationally Determined Contributions (NDC) through the mobilisation of local and international private capital. LAGREEN is an innovative pilot applying the EU green bond standards as part of the partnership portfolio of instruments.

The **Latin American Investment Facility (LAIF)** committed over EUR 470 million since its launch in 2010. Traditionally focused on capital-intensive sectors such as energy, transport and water and sanitation, the projects financed are evolving into more sophisticated products with a strong focus on climate change action and support to SMEs. Projects target a variety of sectors that have a strong impact on both poverty reduction and environmental sustainability, and LAIF has become a lab for new approaches in the region. In 2020, five projects approved were contracted (EUR 50 million EU contribution leveraging over EUR 800 million in investments), including the first project on migration in Colombia and the first ever EU contribution to a Green Bond Fund "LAGREEN" (regional project). Four new applications were approved in 2020 adding up to EUR 24 million in future contracts and EUR 1 billion in expected leverage (totaling EUR 1.8 billion for 2019 and 2020). From these projects, two directly contribute to the sustainable recovery in the context of the COVID-19 pandemic, one in the health sector and one supporting economic recovery.

AL-INVEST has been the flagship EU programme for private sector development in LA. The activities of the fifth edition were completed in 2020 and a closing event, gathering more than 1,100 participants, with active participation of different services of the Commission, facilitated the dissemination of the results obtained, providing a high visibility for the EU action in LA. In summary, AL-INVEST 5.0 implemented 67 projects involving 110 EU and LA institutions and organisations from 18 countries and more than 49,000 SMEs benefitted from the programme. As a result more than 22,000 SMEs count now with tools to improve commercial and market management; more than 18,000 SMEs have increased their productivity; more than 24,000 SMEs have started the integration of innovation in their processes.

The regional **rule of law programme El PacCTO** was instrumental in facilitating an immediate response to the pandemic by creating a space for exchange between the EU and LA security forces, representatives of the justice and penitentiary systems on concrete practices and protocols used during the pandemic. The launching in June 2020 of the Latin American Committee for Internal Security (CLASI) which aims to strengthen EU-Latin America cooperation on security issues at ministerial level is a major achievement. An important successful first high-level meeting of the main justice institutions and networks from LA and EU took place in September 2020. The active involvement of EU Delegations, various EU services (DG HOME, DG JUST, EUROPOL and EUROJUST) but also increasingly in 2020, the Council and the Parliament, has improved over the past year and is crucial for its effective implementation.

### DCI Asia

Afghanistan	Afghanistan	Afghanistan	Afghanistan	Afghanistan
30%	5.6 million	7 million	12,000	40,000
drop in the new-born mortality rate (from 53% to 23%) over the past two decades, in Afghanistan. 		and 2019	
--	--	----------	--

### **Asia and Middle East/Gulf:**

In 2020, the development cooperation in Asia continued to have a strong focus on least developed and fragile countries.

When it comes to **investments**, the Commission allocated funds to projects facilitating investments in line with its policy objectives under the Investment Facility for Central Asia (IFCA) and the Asia Investment Facility (AIF). In blending operations, EU grants are used strategically to mobilise financing from partner financial institutions and the private sector with the objective to enhance the development impact of investment projects and/or to promote investments that without the grant contribution would be difficult to fund due to market failure.

**IFCA** contributes to achieving the objectives of the EU-Central Asia Strategy: investments can contribute directly and indirectly to better regulatory frameworks, resilience, prosperity, market creation and expansion (in particular for renewable energy), sustainable connectivity, improved water management, enhanced regional integration, and job creation. The specific objectives for investments as well as result indicators are defined at individual project level and approved under the DCI Blending Framework.

Under the RIP 2014-2020, EUR 165 million have been allocated to IFCA, with a focus on green growth and SME development. In addition, following the MTR, bilateral investment allocations have been earmarked for Kyrgyzstan (EUR 10 million), Tajikistan (EUR 20 million) and Uzbekistan (EUR 15 million) for projects that boost sustainable investments in these countries.

The **AIF** contributes to the achievement of objectives related to SME financing and development, energy, climate change, environment and natural resources management, including water management, disaster preparedness, forest restoration and risk reduction. It has benefitted from DCI allocations of EUR 451.5 million for the period 2014-2020, funding 47 blending projects. EU contributions have been committed for projects benefitting Mongolia, India, Cambodia, Indonesia, Sri Lanka, Bangladesh, Vietnam, Myanmar, Laos and China, notably to boost investments in green policy, climate resilience, agriculture, the health sector and support to SMEs.

Under the **Asia Regional Programme**, a decision (EUR 16.5 million) was adopted to support the provision of reliable and affordable electricity for the first time in their history to two districts in the Badakhshan Province in Northern Afghanistan. The project paves the way for the electrification of the full province under a public-private partnership and has the potential to attract blended finance in the future. In line with the policy to ensure synergies between support to Central Asia and Afghanistan, this project is directly linked to the EU-supported Sebzor 11MW hydropower plant in Tajikistan's VMKB region which borders Northern Afghanistan.

In **Bangladesh**, the EU is a longstanding supporter of the primary Education sector. Part of the EU Budget Support programme in the education sector (EUR 150 million out of EUR 205 million) currently supports the Fourth Primary Education Development Programme (2019-2023) to promote an equitable and quality education for more than 16 million children. The EU programme contributed - along with other Donor Partners - to substantial progress in the sector. In 2020 following a positive joint sector review, the EU released a first payment of EUR 46 million after positive records were noted in Enrolment and School attendance rates, reduced dropout rates, and better survival rates to grade 5.

The EU also supports Bangladesh's National Social Security Strategy reforms through a Budget Support programme (EUR 152 million). The programme implementation started in 2019 and already places the EU as a key development partner in social protection matters in the country. In 2020, the EU already disbursed a first Budget Support instalment of EUR 24 million against positive progress in the social protection system: strengthening and scaling up of direct cash transfers from Government to People (G2P), monitoring and evaluation and grievance redress systems; improved coverage of core programmes for poor and vulnerable Bangladeshis (increased number of people receiving the old age allowance (different from the civil servant pension scheme) from 3.5 to 4 million; increased duration and benefit level under the Maternal and Lactating Mother Allowance programme (by 60%, from EUR 5.37 to EUR 8.59/month). Later in the year 2020 – the EU Social Protection programme has been instrumental for the Team Europe Response to COVID-19 in Bangladesh. EU transferred EUR 80 million through the EU programme to support the establishment of a mechanism and deliver assistance to eligible beneficiaries of the Government's "Social Protection Programme for Unemployed and Distressed Workers in the Ready-Made Garment, Leather goods and Footwear Industries".

In **Bhutan**, EU support contributes to the ongoing local government reforms and the policies for agriculture and rural development. This will aim at reducing poverty and inequality, development of sustainable rural livelihoods resilient to climate change impacts and promoting carbon neutral development. Performance-based grants are being rolled out to 50 local authorities providing funds for the construction of farm roads, water supply and irrigation schemes, religious sites, schools and health facilities, electrification, fencing/gates, walls and drainage. Progress was made in sustainable agriculture, land management and organic agriculture promotion; certification of organic products, rural infrastructure and registration of farm shops, farmer groups and cooperatives.

The Commission adopted in 2020 the EUR 10 million Programme "EU Peace Support in Myanmar/Burma – PEACE V". This Programme will contribute to lasting peace and national reconciliation, security, stability and sustainable and principled development in **Myanmar/Burma**. PEACE V aims to achieve "successive milestones of the peace process" and to support "inclusive, gender sensitive and environmentally sustainable durable solutions for vulnerable populations in conflict-affected areas, areas affected by inter-communal violence and areas affected by natural disaster". The action adopts a conflict sensitive approach to maximise positive impacts of intervention on conflict. As in many peace processes gender equality is one of the most prominent cross-cutting issues. Increased participation of women in peace negotiations and in decision-making bodies is built-in in the programme.

In 2020, the Commission adopted a EUR 5 million programme entitled "Contribution to the Extraordinary Chambers in the Courts of **Cambodia** (ECCC) – National and international components". This programme is a continuation of our ongoing support to the ECCC. The overall objective of the programme is to promote human rights, good governance and the rule of law, and to combat impunity and foster reconciliation. This will be done by i) supporting the international and national components of the Court to ensure the necessary international standards of justice for the hybrid tribunal, and ii) providing genocide education as a means for understanding, encouraging and reinforcing cultural diversity and gender equality at the national, local and individual level.

The Commission adopted in 2020 the EUR 142 million "EU-Viet Nam Sustainable Energy Transition Programme". Building on the ongoing Energy Sector Policy Support Programme to enhance Access to Sustainable Energy in Rural Areas of Viet Nam, which started in 2017, this action aims at contributing to a sustainable energy transition in Viet Nam. Its specific objectives are: i) improved energy efficiency; ii) larger share of renewable energy in the energy mix; and iii) improved performance of the Viet Nam Energy Information System. The action will be implemented mainly through a Sector Reform Performance Contract. Complementary support measures will be provided to enhance institutional capacities and the legal and technical framework, support the development of the private sector and increase overall awareness on the benefits of energy efficiency and renewable energy solutions.

As regards **migration** in 2020, the EU continued its engagement on migration and displacement, notably with Afghanistan, Bangladesh, Iran, Iraq and Pakistan, implementing its commitments made since 2016 which now reach a total of more than EUR 300 million towards supporting Afghan refugees in Iran and Pakistan, Afghan IDPs, returnees and host communities in Afghanistan, as well as returnees/IDPs and host communities in Iraq, Pakistan and Bangladesh. In 2020, additional funds have been added to a number of programmes to take account of increased vulnerabilities due to the COVID-19 pandemic. Through its assistance, the EU particularly aims at addressing the regional dimension of Afghan displacement, which has been further elevated in 2020 as the EU committed to chair (in 2021) the core group of the Support Platform for the Solution Strategy for Afghan Refugees. In the framework of the EU-Afghanistan Joint Way Forward on migration, assistance has been provided and a new framework, the "Joint Declaration on Migration Cooperation", has been negotiated.

In 2020, activities aimed at sustainable integration of migrants and refugees and reintegration of returnees have continued although with limitations due to the COVID-19 pandemic, with main focus on the Afghan displacement crisis. EU development support focused on improved access to livelihoods, skills development, health, education and protection for displaced Afghans and their host and return communities in Iran, Pakistan and Afghanistan.

In Iran, sites for constructions of additional 8 schools have been identified, and construction of new schools completed or started, directly benefitting 3,000 Afghan and Iranian students. In Pakistan, 5 schools have been rehabilitated. More than 5,000 Afghan refugees received training in more than 50 vocations in Iran and Pakistan and additional 1,510 youth were identified in Pakistan to be enrolled in future skill development trainings. Over 25,000 refugees, asylum seekers and returning refugees benefitted from legal assistance, protection, and referral in Pakistan and Afghanistan.

An important component of EU development support came in response to the COVID-19 pandemic. In Iran, 58,000 vulnerable Afghan refugees could access primary health insurance, and 66 portable ventilators were distributed to health posts in refugee-hosting areas and refugee settlements, together with other medical, protective and information items. New actions have also been launched in Pakistan, that will support over 300,000 vulnerable Afghan refugees and host community members recover from the socio-economic impact of the crisis.

The Commission also continued its response to the forced displacement of Rohingya from Myanmar. Following the influx of more than 700,000 Rohingya into Bangladesh's southern district of Cox's Bazar in 2017, DEVCO mobilised substantial funding to address the needs of Rohingya refugees and their host communities. The EU development response focuses on improving access to effective basic services such as education and child protection, food and nutrition security, and water, sanitation and hygiene (WASH). A new programme in support of Rohingya refugees and their host communities in Cox's Bazar district, Bangladesh was financed in 2020 with EUR 35 million, including a top-up of EUR 15 million to respond to the COVID-19 health and socio-economic crisis. The programme continues the activities on health, water & sanitation and education and focuses as well on protection, empowerment of refugees, livelihood support and facilitating communication between CSOs across the border to Myanmar for better information exchange.

Looking forward, the Rohingya donor conference was successfully co-organized with UNHCR, US, UK, DG ECHO and EEAS in October 2020 and resulted in the EU pledge of EUR 96 million.

In **Afghanistan**, building up on its previous support to **community-based service provision**, the EU adopted a decision (EUR 44 million) to support the expansion of the national programme "Citizens' Charter" in urban areas facing a rapid wave of urban growth without having the most basic infrastructure and services in place, such as potable water, solid waste management, and access to electricity. This is intended to reduce governance challenges and improve livelihoods of the majority of Afghans living in urban areas, including **IDPs and returnees**, many of which are settling in urban and semi-urban areas of the country.

In 2020, the EU approved three programmes to benefit **Tajikistan** totalling EUR 112.2 million. From the newly approved programme package, EUR 46.2 million was allocated for COVID-19 support, on top of funds reoriented under existing actions (approx. EUR 5 million). This programme intends to strengthen Tajikistan's primary health care and infection prevention and control systems, as well as to improve water, sanitation and hygiene standards in schools, and to strengthen distance learning preparedness. Exceptionally, a small but meaningful part of these funds (approx. EUR 6 million) was frontloaded to deliver 64 tons of critical medical supplies and 95 lung ventilators to the health facilities and hospitals most in need.

**Central Asia** has been severely impacted by the COVID-19 pandemic. Regional growth has halted; trade has been disrupted; consumption and investment have plummeted; the impact on the most vulnerable, especially women and migrant workers has been considerable. Through re-directing programmes and front-loading Budget Support, the EU rapidly mobilised over EUR 125 million for programmes providing economic support to affected populations as well as essential medical services. In addition, a EUR four million programme financed a COVID-19 response programme under implementation by the WHO, in Kazakhstan and Turkmenistan, which as UMICs do not benefit from bilateral programmes, and Mongolia.

In 2020, a first ever sector Budget Support in **Mongolia** has been launched and the first tranche of EUR 16 million has been disbursed in October. The EUR 50.8 million Budget Support in Employment and PFM Sector includes complementary measures implemented by UN agencies, with a Contribution Agreement of EUR 7.4 million signed by UNDP in September. Increase of the first Budget Support fixed tranche to EUR 16 million was part of the EU COVID-19 response, which amounts to a total of EUR 37.5 million. The EU COVID-19 response contributed to strengthening of the health sector, and to mitigating the socio-economic consequences of the pandemic crisis.

### **DCI South Africa**

The South African component of the DCI has been implemented as planned. In 2020, there was a financing decision for a Technical Assistance Facility to Support Sustainable Infrastructure Development in South Africa (EUR 9 million).

There are several relevant cooperation programmes in the priority areas of education, training and innovation. We can underline two of them: (a) the Support Programme to the National System of Innovation and (b) the Teaching and Learning Development (TLD) Sector Reform Programme.

(a) National System of Innovation. The overall objective of the programme is to support the government of South Africa to improve the National System of Innovation (NSI) responding to the priorities of the National Development Plan.

Results: the Department of Science and Innovation (DSI) Strategic Plan 2015-2020 has made good progress. In 2017/18, the performance of the Department when measured against its pre-determined objectives was 89%, confirming the improvement in performance from 71% in 2012/13. There have been significant contributions to addressing poverty, unemployment and inequality in South Africa since 2019.

(b) Teaching and Learning Development. The programme focuses on developing a teacher education system that can deliver quality professional development projects, as well as opportunities for educators, primary school teachers, vocational education lecturers and the professional development of university academics.

Results: Twenty-five research projects are being implemented as part of TLD Capacity Improvement Programme. As part of the research, 164 post-graduate students are being supported to undertake Masters and Doctoral studies. The College Lecturer Education Project is making excellent progress. Seven universities have received programme accreditation from the Council on Higher Education. Furthermore, 213 students are registered for the Advanced Diploma in Technical and Vocational Teaching (Nelson Mandela University).

### **DCI thematic:**

#### **DCI GPGC:**

#### **DCI Environment and Climate change, Food security and sustainable agriculture:**

46	Climate change 191	Environment (– Biodiversity / forests) 481,290 km <sup>2</sup>	Sustainable energy 13,247 GW	Food security and sustainable agriculture 19.7 million
countries supported to strengthen investment climate from 2013 to 2018	countries and cities supported to develop or implement strategies for climate change or disaster risk reduction from 2013 to 2018	of areas protected with the support of EU development projects (projects active between 01/01/2018 and 31/12/2018), to be compared with 157,240 km <sup>2</sup> in 2014)	of renewable energy generation capacity installed with EU support (result for the period 2014-2019)	women, adolescent girls and children reached by the 2013-2019 EU interventions (e.g. for improved diets and breastfeeding, household resilience, food security, health care and stunting reduction)

Climate change (one § explaining in more details what is mentioned above in the table):

According to the EU Results Framework, in 2018, 24% of EU-funded international cooperation and development assistance contributed to climate change adaptation and mitigation. The figures are calculated using a contribution approach (i.e. where a project was financed by the EU jointly with other funders – other donors and/or the partner country governments themselves – the overall results of the collective effort is reported.) The information on the results is drawn from the reporting by the partners implementing EU funded projects and programmes (i.e. partner countries, international organisations, EU Member State development agencies, international financial institutions and NGOs).

Environment (1 or 2 § explaining in more details what is mentioned above in the table):

The figure of 481,290 km<sup>2</sup> is the total aggregated area of terrestrial and freshwater ecosystems protected with EU support (projects active between 01/01/2018 and 31/12/2018), to be compared with 157,240 km<sup>2</sup> in 2014.

Food security and sustainable agriculture (one § explaining in more details what is mentioned above in the table):

The figure of 19.7 million provided in the above table represents the total number of women of reproductive age and children under 5 reached by EU interventions. It is reported in the 2020 Progress Report on the Commission Action Plan on Nutrition. As part of the global effort to tackle all forms of malnutrition, the EU has been actively working on improving child and maternal nutrition. The Commission pledged to allocate EUR 3.5 billion between 2014 and 2020, and to reduce the number of stunted children in partner countries by at least 7 million by 2025.

### DCI Human Development

3.4 million	39*	65 million	20.1 million	160 million	At least 66
children living in crises and conflict receiving education through Education Cannot Wait since its inception (2018-2020)	partner countries receiving support for making their national social protection system more inclusive, financially sustainable and responsive to shocks (i.e. COVID-19) in 2020	children reached with at least one vaccine in the year 2019, through contributions to GAVI	people on anti-retroviral treatment for HIV in countries supported through contributions to the Global Fund to fight AIDS, TB, Malaria in the year 2020	mosquito bednets distributed in 2020 through contributions to the Global Fund to fight AIDS, TB, Malaria	countries received additional grants in 2020 from the Global Partnership for Education to help continue learning through the COVID-19 pandemic through high and lowtech means

#### \*List of countries:

- Bilateral programmes (**BS**) – 12 : Morocco, Senegal, Tunisia, Mozambique, Bangladesh, Cambodia, El Salvador, Paraguay, Peru, Barbados, Haiti, Jordan
- Countries supported by the **global thematic programme** on “Improving synergies between SP and PFM” - additional 13: (Cambodia), Nepal, Uganda, Ethiopia, Angola, (Senegal), Burkina Faso, (Paraguay), (Bangladesh), Cabo Verde, Cote d’Ivoire, Ecuador, Malawi, Myanmar, Nigeria, (Peru), Sri Lanka, and Togo
- Bilateral programmes (**programme approach**) – additional 14: (Angola), (Ethiopia), Gambia, Ghana, Lesotho, (Malawi), (Nigeria), Somalia, Sudan, Tanzania, Zambia, China, Tajikistan, Yemen, Iraq, Honduras, Lebanon, Palestine.

The implementation of the Human Development component of the GPGC programme took place over the period 2016-2020 according to planning and without particular problems or delays. The available credits were committed across all areas of intervention covered by the Human Development budget line of the programme, such as health, education, culture, gender and child welfare, social inclusion, decent work, vocational education and training, sustainable growth and jobs, as well as domestic resources mobilisation. The COVID-19 pandemic required additional and focused measures to address the pandemic and its socioeconomic consequences.

The project portfolio is a mix of stand-alone projects and contributions to key global initiatives. The latter include support through the Global Partnership for Education, Education Cannot Wait, the Global Fund to fight AIDS, Tuberculosis and Malaria, the World Health Organisation, GAVI and the COVAX Facility for procuring COVID vaccines and the Spotlight Initiative (EUR 90 million) to end violence against women and girls. Other project and programmes include the EUR 20 million programme on Improving synergies between Social Protection and Public Finance Management, the EUR 21 million Building Resilience in Crises through Education project (BRiCE) or the EUR 50 million Spotlight Initiative in Latin America: ending violence against women and girls.

### **Gender equality (Gender Action Plan) and elimination of violence against women and girls (EVAWG)**

Support under the GPGC programme over the period 2014-2020 allowed the EU to put into motion the commitments taken under the Gender Action Plan II (2016-2020), organize trainings and awareness sessions, create a gender focal point network, issue guidance notes and mainstream gender throughout EU development cooperation and organize consultations. In 2020 the Commission also prepared the new and ambitious Gender Action Plan III. The Gender Action Plan II (2016-2020) had its last year of implementation in 2020. The amount of funds committed that specifically target gender equality in external relations has increased every year since 2016, as has the proportion of these funds within overall development funding, from 58.10% in 2016 to 64.71% in 2019. Notwithstanding progress, these figures show the need to renew efforts in the context of the new EU Gender Action Plan III (2021-2025). The GAP II contributed to progress towards achieving the Sustainable Development Goals. Indeed, progress towards the realisation of gender equality and the empowerment of all women and girls (SDG 5) contributes to the achievement of all SDGs.

The DCI programme (EUR 147 million) also contributed to the largest investment ever done to combat and eliminate Violence against women and girls through the creation of **the Spotlight Initiative** in partnership with the UN in September 2017. Today the initiative is up and running in 26 countries and 6 regions. The countries and regions covered by DCI are in Asia and Latin America, 3 regions and 8 countries. Its implementation will at least continue until the end of 2022 but might be extended. Some results as well as the COVID response have been highlighted in the previous paragraph.

### **Child wellbeing**

On child wellbeing the GPGC has been instrumental for the support of **four regional programmes** to promote and protect specific children rights:

- The EU-funded **Joint Programmes with UNICEF/UNFPA to end Child marriage and to abandon FGM** have both played a key role in maintaining the momentum to end child marriage and FGM by promoting the global agenda and positioning policy and legislative support, as well as by demonstrating innovative community action. The programmes have been on track every year since 2016 to achieve the expected results, with aggregate tracking showing signs that the programmes are extending their reach and accelerating their approach in most of the beneficiary countries, sometimes even surpassing the targets. A review of work from 2016 through 2019 found that in the 12 target countries, the Joint Programme on child marriage had notably empowered 7.2 million adolescent girls, helped 22,000 schools strengthen adolescent girl-friendly education, and partnered with 107 youth-led groups and 88 women's rights organisations. In 2019, some notable results from the 16 countries covered by the Joint Programme on FGM include: recording a 50% rise since 2017 in the number of communities building girls' capabilities and assets so they know and can claim their rights; 5.4 million people being reached through education, sensitization and social mobilisation, and more than 2.8 million people across 3,362 communities participating in public declarations of FGM elimination.
- The EU-funded UNICEF programme "**Towards Universal Birth Registration in Africa: Burkina Faso, Cameroon, Uganda and Zambia**" is now complete and has recorded tangible results: the overall objective of the project was to contribute towards the increase in registration of birth of children under-5 and was realised to a certain extent. In the target countries, interoperability between civil registration and the health sector has been reformed and standardised and this has contributed to increased birth registration rates.
- The EU-funded "**Global Programme to Prevent Son Preference and Gender-biased Sex Selection: Improving the sex ratio at birth in select countries in Asia and the Caucasus**" is now complete. In particular, a close work has been developed with governmental institutions, experts, civil societies, faith based communities, youth and international development partners to raise awareness and engaged in strategic advocacy on the issue of son preference and gender-biased sex selection to build technical capacity across stakeholders to promote policy change and evidence based programming.

As the above projects ended before the COVID crisis there was no real implication for them. The first two projects have been continued under the Spotlight regional programme which implementation start was delayed until July 2020.

Another issue which was tackled was the "**Quality alternative care for children and deinstitutionalisation**", five projects are currently being implemented in Armenia, Burundi, Cambodia, Georgia and Myanmar through five contracts managed by EU Delegations. The goal of the ongoing projects is to ensure better outcomes for children by ensuring better implementation of the UN's Guidelines for the alternative care of children in their entirety, so that children enjoy equal chances to reach their full potential in societies. An example is Myanmar, where some convincing results have already been observed: 766 children have been removed from state-run institutional care and integrated with their families or provided with alternative family-based care according to international standards.

As for other projects it is expected that COVID will have an impact on timeline of the activities and change in implementation rate and modalities applied for a number of activities.

### DCI Migration:

At least 35	266.3 million	At least 65 000
Countries supported under the GPGC to improve migration governance and management	euros committed under the GPGC to support forcibly displaced persons and their host communities	women and children affected by migration supported with targeted assistance under the GPGC

During the period 2014-2020, the issue of migration and forced displacement received unprecedented political importance at EU level, due to the substantially increased arrivals of refugees and migrants in the EU since 2015, and the increase of forced displacement situations at global level. This also translated into increased calls for EU support to and cooperation with partner countries in this area. As a result, the Commission increasingly integrated migration and forced displacement considerations within its overall relations with partner countries, both through political dialogue and through development cooperation activities. It also resulted in a sharp increase in funding allocations for migration under other instruments and programmes, notably at geographical level through the EU Trust Fund for Africa, the MADAD Trust Fund, but also sizable allocations for countries in Asia under the DCI. Actions funded under the GPGC programme were implemented in full coherence and in close coordination with these programmes, providing added value in terms of its ability to complement actions at national and regional level by engaging also at global, multi-country and cross-regional levels.

Actions funded under this programme successfully contributed to establish and to strengthen tailor made migration partnerships at regional level, but also with a number of priority countries in Sub-Saharan Africa and in Asia in particular. In particular, the programme launched a number of targeted support actions contributing to the global EU commitments in the area of migration and forced displacement, but also to the implementation of agreed priorities in migration dialogues at country, regional and global level. Following the EU commitments announced at the first Global Refugee Forum in December 2019, a particular focus was put on Forced displacement in 2020. A number of new initiatives to support refugees as well as host countries and communities were launched, including actions to address the Rohingya crisis in Bangladesh, the Venezuela refugee crisis and a new global EU facility to address refugee situations worldwide.

As an example, more than 35 countries worldwide were supported with technical assistance to improve their institutional, legislative and operational capacities to manage migration and forced displacement in all its aspects. In addition, through programmes specifically targeting women and children involved or affected by migration, more than 65,000 individuals were assisted through service provision and protection activities, catering for the particular vulnerabilities of women and children on the move. Finally, more attention was given to the particular vulnerabilities and needs of forcibly displaced persons (internally or internationally) as well as their host countries and communities in the second part of the Multi-annual Indicative Programme, with programmes worth more than EUR 250 million to provide medium- to long-term assistance to persons and hosts affected by forced displacement.

### DCI Civil Society Organisations (CSO)

The CSO programme strengthened its cooperation with foundations including to address the health and socio-economic consequences of COVID-19 in Africa.

The EU has signed all contracts identified from the 2018 Call for Proposal and the projects have started their implementation. The projects implemented under the Programme contributed to increasing citizens' engagement for sustainable development, changes in business and consumer behaviour, in policies and in formal and non-formal education curricula, teaching and learning. A dedicated project has also contributed to increasing the coordination and exchange of best practices between EU Member States in the field of Development Education.

#### DCI Local authorities in development (LA)

42	5
new partnerships of decentralized cooperation were established among more than 100 local authorities of the EU Member States and those of partner countries in Africa, Latin America, Asia and neighbourhood to contribute to SDG 11 and SDG 17 achievements with a peer to peer approach	Operating and Action Grants were implemented providing capacity building/policy support/policy dialogue with Commission services to their 242,554 members

Under the Local Authorities (LA) component of the programme CSO-LA, the institutional, operational and financial capacities of 5 Global, Regional and National Associations of Local Authorities (ALA's) were strengthened and their influence in international forum to represent the voice of their members was enhanced including in the field related to the localisation of the SDGs. Due to the COVID pandemic most of the advocacy activities, including the Associations of Local Authorities (ALA's) policy dialogues on NDICI/ the new programming exercises/ activities in view of the Local and Regional Governments forum within the EU- EU Summit were held on line. Consequently few adaptations had to be reflected in their strategic annual plans/description of the actions (due to their planning in live modality). The first block of 16 new partnerships among local authorities of EU Member States and partner countries started the implementation of the activities which was affected by the COVID pandemic requesting for most of the grants an adaptation of their planned scheduling. All the ancillary contracts related to the monitoring, coordination, communication and visibility activities had to postpone most of the activities planned. Following the launch of the second call further 26 partnerships among local authorities of EU Member States and partners countries were established in all continents.

#### DCI PanAf

Since 2014, 28 consortia of African higher education institutions have been selected under the "Intra-Africa Academic Mobility scheme". Those consortia involve 72 universities from 28 African countries. During the implementation of their projects, those higher education institutions supported the mobility of around 1,450 master and doctorate students and 350 (academic and administrative) university staff.

Under the AfricaConnect project, over 5 million students/lecturers/researchers from 1,900 African higher education and research institutions in 20 countries benefitted from improved and more affordable internet connectivity. Thanks to this project, those institutions are interconnected through their regional networks and are connected with their peers in Europe and worldwide, thereby getting access to increased opportunities for collaboration.

The support provided so far to various African governance institutions and organisations has created the basis for the definition of an African Governance Architecture that will constitute the framework for the African Union's aspiration and commitment to promoting democratic governance and human rights.

In the area of economic integration, EU support has been instrumental for the successful conclusion of the AfCFTA (African Continental Free Trade Area) negotiations in 2018 and has positioned the EU as the main recognized partner of the AU in this ambitious programme. The EU support has ensured the needed capacity and technical expertise in the African Union Commission's dedicated AfCFTA negotiation unit (consultations with the civil society including private sector, national authorities and Regional Economic Communities across Africa, technical studies and ad hoc analysis of the impact of the AfCFTA on national economies and specific sectors). In 2019, advocacy actions vis-à-vis the AU Member States on ratification of the agreement have been implemented and AfCFTA national implementation plans have been developed for several countries and regions. Of notable importance also the establishment in 2020 of the African Trade Observatory to monitor intra-African trade flows.

The EU is also transferring technologies and know-how to African partners. Examples include improving know-how and access to European Earth Observation facilities (Copernicus) and expertise to manage meteorological information, continental water and environmental, marine and coastal resources, and aviation systems and technologies, strengthening capacity of African Geological Surveys (PanafGEO project) through technical training and collaboration with EU Geological Surveys.

On migration, PanAf has been supporting the various policy dialogues with Africa. In the framework of the Khartoum process, partners were able to share knowledge and foster dialogue on a regular basis. One of the key results was that participating officials shared good practices which can be applied in their work, thus improving the overall quality and mutual understanding of their respective practices in the field of migration.

In the context of the Rabat process, the Marrakesh Political Declaration and Action Plan covers all migration related aspects thereby reflecting the Euro-African balance, which lies at the heart of the dialogue. Particularly noteworthy was the increased participation of non-state actors – civil society organisations, academia and international organisations – in the dialogue. This contributes to both enriching the exchanges (enabling partners to benefit from voices on the ground and lessons learnt of those working directly with migrants) and creating a pool of qualified experts on matters related to the Marrakesh Action Plan.

**Corresponding 2014-2020 programme: European Instrument for Democracy and Human Rights (EIDHR):**

<b>7,700</b>	<b>162</b>
human rights defenders (HRDs) at risk supported during the period 2014-2020	countries covered by the Global Monitor of COVID-19's Impact on Democracy and Human Rights created in 2020

**1. Support mechanism for Human Rights Defenders (HRDs) and human rights where there are most at risk were set up**

Between 2014 and 2020 approximately 7,700 HRDs at risk and their family members have been supported by direct emergency grants by Protect Defenders and the EU Emergency Fund. In 2020 alone, more than 1,700 HRDs and family members have been supported.

**2. In the context of shrinking civic and democratic space, worsened by the current COVID crisis, the EU has re-affirmed its unconditional support to Human Rights and Democracy worldwide. The European instrument for Human Rights and Democracy has remained the symbol of the EU global leadership on these topics. In this context, the need for transparency and accountability over government actions is ever more important. Among key democracy support actions this year was the "Global Monitor of COVID-19's Impact on Democracy and Human Rights" a "one-stop" online global monitoring platform (a "tracker of trackers"), implemented by International IDEA, with data and brief analysis by country, for 162 countries around the world.**

**3. Disinformation efforts have exploded into an "infodemic" and independent journalists and media outlets were among the first to be affected by the economic crisis, travel restrictions and restrictive measures taken by governments. As part of the EU Global Recovery response to COVID, DEVCO has mobilized in 2020 EUR 5.5 million from the EIDHR for support to journalists affected by the pandemic. Journalists from some 35 countries in Africa and Latin America will receive direct financial support. The EU also finances the "Tracker 19", an RSF (Reporters Sans Frontières) tool documenting state censorship and deliberate disinformation, and their impact on the right to information. We also launched the 2020 EIDHR global call for proposals focusing on shrinking civic and civil society space in four different regions.**

**Election Observation Missions:**

<b>14</b>	<b>350</b>
Electoral processes and democratic cycles supported, observed, and followed by means of Election Observation Missions (fully-fledged Electoral Observation Missions, Election Experts Missions, Election Follow-up Missions, complementary activities) in 2020	Number of election observers deployed in 2020

In light of the COVID-19 pandemic, EOM helped to develop a combination of various tools that allowed to strike a balance between keeping election observations missions going and keeping observers in the countries observed safe and sound. In order to cover as much ground as possible, most of the fully-fledged EOMs were replaced by reinforced Electoral Expert Missions (EEMs) or by desk reviews. Wherever a mission was deployed, the necessary security and risk mitigation measures were put in place to ensure the safety of the observers.

Three fully-fledged Election Observation Missions (EOMs) were deployed to observe the electoral process in Peru, Guyana and Ghana, including assessments of the campaign, the legal framework, the political environment and the overall electoral process. These missions were deployed in the field, on average, for 3 months. Furthermore, 4 Electoral Expert Missions (EEMs) were deployed in Mali, Burkina Faso, Niger and the Central African Republic and 4 reinforced EEMs to Bolivia, Jordan, Myanmar and the Côte d'Ivoire. For the Dominican Republic, Malawi and Myanmar, where election observation was not possible or only a specific aspect of electoral processes needed to be assessed, desk reviews were conducted. Wherever a mission was deployed, the necessary security and risk mitigation measures were put in place to ensure the safety of the observers, entailing additional costs for the EOMs.

The **EOM to Peru** took place at the beginning of 2020. By the time the WHO declared the outbreak of the global pandemic, the majority of the EOM international staff had already left Peru. To take account of the circumstances, a “virtual” return visit was organised which involved the presentation of the mission report to the local authorities, with the help of the EU Delegation.

The **EOM Guyana** operated normally for most of its observation period. However, due to the evolution of the COVID- pandemic and the imminent suspension of commercial flights, the deployment of long-term observers was slightly shortened and the remaining experts were successfully repatriated. Once the mission members were back in Europe, the necessary working conditions were created for experts to allow for finalisation of the mission in accordance with its mandate.

The **EOM to Bolivia** was planned and launched in early 2020. The deployment was suspended in March in view of the postponement of elections due to the COVID-19 pandemic. In September, a **reinforced EEM** was successfully deployed despite the fact that most airports were closed, the weak medical infrastructure and the uncertain security situation.

Notwithstanding the COVID-19 pandemic, in November 2020, the deployment of around 100 observers took place to observe the general elections in **Ghana**. Solutions were found to all logistical and sanitary obstacles. All observers and local staff were tested for COVID-19, under medical supervision, and accommodated in the suitable housing all over the country.

#### **Corresponding 2014-2020 programme: European Fund for Sustainable Development (EFSD):**

14	100 million	60 million	50 million	91.7million
guarantee agreements signed in 2020	Euros allocated to the EU Municipal, infrastructure and industrial resilience programme of European Bank for Reconstruction and Development (EBRD), aiming to contribute to the green transition of the economies in the EU Neighbourhood (guarantee agreement signed in 2020)	Euros allocated to the Financial Inclusion Programme (InclusiFI) of Cassa Depositi e Prestiti (CDP), aiming to promote financial inclusion driven by diasporas, leveraging private financing to foster inclusive and sustainable entrepreneurship and growth of Micro-, small and medium-sized enterprises (guarantee agreement signed in 2020).	Euros allocated to the European Guarantee for Renewable Energy – Non Sovereign (EGRE NS) – of Agence Française de Développement (AFD), aiming to improve certainty of payments for investors under offtake contracts in renewable energy projects in Africa and addressing the offtakers <sup>25</sup> non-payment risk which is considered critical for the development of independent power producers (guarantee agreement signed in 2020).	Euros allocated to the Agricultural and Rural Finance Guarantee Programme (AgreenFI) of Agence Française de Développement (AFD), aiming to catalyse investment and support for local agricultural businesses in riskier environments and aiming to improve liquidity and access to finance for smallholder farms and agri/rural micro, small and medium enterprises (guarantee agreement signed in 2020).

<sup>25</sup> An offtaker is a purchaser of renewable energy in an offtake agreement which is an arrangement between a producer and a buyer to purchase or sell portions of the producer's upcoming goods.

145 million	12 million	20 million	58 million	68.2 million
Euros allocated to the EU Market Creation Facility (TCX) - Capacity Component of Kreditanstalt für Wiederaufbau (KfW), aiming to increase access to local currency indexed borrowing to institutions based in Sub-Saharan Africa and the European Neighbourhood and to address short- and medium-term funding requirements triggered by the ongoing global health crisis (guarantee agreement signed in 2020).	Euros allocated to the European Guarantee For Renewable Energy – Non Sovereign (EGRE NS) of Cassa Depositi e Prestiti (CDP), aiming to improve certainty of payments for investors under offtake contracts in renewable energy projects in Africa and addressing the offtakers' non-payment risk which is considered critical for the development of independent power producers (guarantee agreement signed in 2020).	Euros allocated to the Renewable Energy Support Programme of Compañía Española de Financiación del Desarrollo (COFIDES), aiming to enable the development of off-grid and mini-grid renewable energy projects in Sub-Saharan African countries (guarantee agreement signed in 2020).	Euros allocated to the International Finance Corporation (IFC)'s Small Loans and Guarantee Program (SLGP), aiming to catalyse investment in and support for local businesses in riskier environments (guarantee agreement signed in 2020).	Euros allocated to the PROPARCO's COVID-19 Response Component to Agricultural and Rural Finance Guarantee Programme (AgreenFI), and aiming to catalyse investment and support for local agricultural businesses in riskier environments and aiming to improve liquidity and access to finance to smallholder farms and agri/rural micro, small and medium enterprises (guarantee agreement signed in 2020).

20 million	100 million	46 million	458 million	100 million
Euros allocated to the EU Market Creation Facility (TCX) - Pricing Component of Kreditanstalt für Wiederaufbau (KfW), aiming to increase access to local currency indexed borrowing to institutions based in Sub-Saharan Africa and the European Neighbourhood and to address short- and medium-term funding requirements triggered by the ongoing global health crisis (guarantee agreement signed in 2020).	Euros allocated to the Resilient City Development (RECIDE) of Agencia Española de Cooperación Internacional para el Desarrollo (AECID), aiming to help African cities develop public-private partnerships to cope with the effects of climate change and improve services to the citizens (guarantee agreement signed in 2020).	Euros allocated to the African Energy Guarantee Facility (AEGF) of Kreditanstalt für Wiederaufbau (KfW), aiming to promote renewable energy solutions to meet growing demand, address bottlenecks in private investments and bridge the gap between real and perceived risks in the African energy market (guarantee agreement signed in 2020).	Euros allocated to the European Investment Bank's African Health Diagnostics Platform (AHDP), aiming to improve healthcare with high-quality health screening labs and including a 400 million euro contribution to the COVID-19 Vaccine Global Access Facility (COVAX) (guarantee agreement signed in 2020).	Euros allocated to the European Investment Bank's SME Access to Finance Guarantee Agreement, aiming to enhance access to finance for SMEs and to enable financial intermediaries to take on more risk and reach out to underserved segments of the economy (guarantee agreement signed in 2020).

On 23 November 2017 the Commission established a first set of Investment Windows for the EFSD Guarantee, which were subsequently endorsed by the EFSD Strategic and Operational Boards. These cover five areas, namely: Sustainable Energy and Connectivity; Micro, Small and Medium Sized Enterprises (MSMEs) Financing; Sustainable Agriculture, Rural Entrepreneurs and Agribusiness; Sustainable Cities; and Digital for Development.

Following the establishment of the Investment Windows, partner financial institutions were invited to propose investment programmes to be covered by the EFSD Guarantee. The response by the financial institutions was very positive: the Commission received 46 proposals from 12 partner institutions for a total value above EUR 3.5 billion, thus exceeding the current entire capacity of the EFSD Guarantee by over EUR 2 billion.

On 20 June 2018, the EFSD Operational Board involving the EU Member States gave its green light to a first set of twelve guarantee tools to be supported under the EFSD. Sixteen additional guarantee tools were approved by the EFSD Operational Board on 13 November.

Pursuant to Article 8 of the EFSD Regulation, the investment period, during which guarantee agreements for supporting investment programmes can be concluded with the eligible counterparts, lasted until 31 December 2020. Eligible counterparts subsequently have four years as from the conclusion of the guarantee agreement to conclude agreements for underlying operations with co-financing partners, financial intermediaries or final beneficiaries. As a rule, the duration of the guarantees extended to eligible counterparts under each guarantee agreement should not exceed fifteen years.

As of 31 December 2020, the Commission exhausted the present capacity of the EFSD Guarantee by signing 18 guarantee agreements worth EUR 1,548,700,000.

#### **Corresponding 2014-2020 programme European Neighbourhood Instrument (ENI):**

<i>7.8 million</i>	<i>88 000</i>	<i>185 600</i>
Beneficiaries reached by the on-going programmes of the EU Regional Trust Fund in Response to the Syrian crisis since its start in late 2014	students and academic staff from the Neighbourhood countries enabled by the Erasmus+ to study or teach in the EU in 2014-2020	Small and Medium Enterprises (SMEs) benefited from the EU4Business support in 2016-2020

The ENI proved to be a flexible and responsive instrument addressing the priorities established under the European Neighbourhood Policy framework and react to needs and challenges in the region, including to protracted crises.

## **SOUTHERN NEIGHBOURHOOD**

### **Palestine**

Most of the EU's support to Palestine<sup>26</sup> is channelled through the Palestinian-European Mechanism for Managing Socio-Economic Assistance (PEGASE). This programme includes support to salaries and pensions of the Palestinian Authority's civilian payroll reaching out to 55 000 beneficiaries in the West Bank, while through the support to the Palestinian Cash Transfer Programme it provides quarterly cash assistance to 22 000 poor and vulnerable families in the West Bank and 65 000 in the Gaza Strip. Moreover, the Commission has supported the Palestinian Authority with regular contributions to the payment of medical referrals to 6 Palestinians Hospitals in East Jerusalem. This support maintains the availability, access and sustainability of essential tertiary healthcare services to the Palestinian population, most of which are not available elsewhere in Palestine.

### **Syria**

In the health sector, the Programme to strengthen the primary health care sector in Syria implemented by Expertise France in partnership with Union des Organisations de Secours et Soins Médicaux, reported outstanding results including: 1.8 million primary health care consultations, 15 085 referrals, 6 751 deliveries, rehabilitation of 8 primary health care clinics, support to 320 primary health staff, and robust capacity building increasing the competency of health staff across several needs-based areas. The programme also provides reported improvements in quality of care including a useful forum to discuss EU approaches with Syria? 20% increase in terms of alignment of clinical practices with protocols and a 90% satisfaction rate amongst users. The programme overachieved on its target of supporting the development of three policies and 17 analyses by contributing to the drafting 6 policies

<sup>26</sup> This designation shall not be construed as recognition of a State of Palestine and is without prejudice to the individual positions of the Member States on this issue.

and 19 analyses. School health services were also launched during the last year of project implementation in 105 schools benefitting 77 247 school age children against an original target of 15 000. Through the programme, vaccinations were also provided to 182 391 children. Overall, there is broad consensus among all stakeholders with the aim of improving aid effectiveness that programme activities were well-designed, relevant and responsive to critical health needs. This large programme ended in March 2020

### **EU Regional Trust Fund in Response to the Syrian Crisis**

In 2020, the EU continued to play a pivotal role in providing for a coherent and integrated response to the massive needs resulting from the Syrian refugee crisis. The EU Regional Trust Fund in Response to the Syrian Crisis, herein after EUTF Syria, addresses the early recovery and longer-term resilience needs of Syrian refugees, internally displaced persons and overstretched local administrations in neighbouring countries, mainly in Lebanon, Jordan, Iraq and Turkey. By December 2020, the EUTF Syria signed 110 contracts with more than 200 implementing partners, supporting large scale resilience programmes on basic and higher education, livelihoods and social assistance, health, water and sanitation (WASH), as well as protection.

The Trust Fund Syria has already reached more than 7.8 million beneficiaries through direct access to services, while 43,155 beneficiaries have been trained as part of the local capacities strengthening and 6,229 local facilities were supported as part of the local infrastructure strengthening. Key results achieved per sector include;

- Basic and higher education: 474,718 children gained access to basic formal and non-formal education, while 18,944 teachers were trained; 289 education facilities were constructed and/or refurbished; and 6,989 young people with access to higher and further education.
- Protection: access to psychosocial support and specialised services was guaranteed to more than 500,000 beneficiaries, and 5,736 individuals were trained on child protection and gender-based violence;
- Livelihoods: more than 533,108 beneficiaries accessed services, including employability and skills trainings, and assistance opportunities; 3,334 Micro Small and Medium Enterprises (MSMEs) were trained.
- Health: more than 4.2 million beneficiaries accessed primary health care consultations and health related education activities;
- 7,593 professional staff were trained in primary, secondary or tertiary health care services;
- 202 health infrastructures have been upgraded, refurbished and equipped.
- WASH: access to WASH services was improved for 483,704 individuals, notably increasing access to safe drinking water sources and hygiene promotion; 2,261 number of people trained in the WASH sector; and 250 municipal/regional water and wastewater facilities were constructed and/or rehabilitated.

### **Libya**

Local development and local governance: EU funded programmes both on ENI and North of Africa window of the EU Emergency Trust Fund for Africa covered about 65% of the 114 Libyan municipalities in 2020. Activities focussed mostly on rehabilitation of key social infrastructure for service delivery, capacity building of municipal authorities and strengthening of relationships between municipal actors.

### **Jordan**

In the governance domain, the EU supported the Parliament in its move to become an e-parliament, via setting up electronic conference and voting systems and electronic library, archive and registration of citizens' concerns, which strengthened transparency and accountability. The EU also supported the Electoral Commission to carry out elections in a more efficient and transparent manner as well as CSOs in promoting political participation, especially for women and youth.

In 2020, in the education domain, the EU provide higher education and vocational training to around 5 000 Syrian refugee students and disadvantaged youth in host communities in the form of language training, academic readiness skills, coaching and distance education programmes. Nearly 1 500 students could take advantage of the Erasmus+ programme. E-learning via the Madrasati platform financed by the EU provided around 550 teachers from 207 schools across Jordan with capacity-building opportunities on pedagogical and collaborative use of ICT, utilising innovative teaching tools, along with strengthening their interpersonal skills, digital learning, citizenship and values. The EU also worked on a more systemic level for the reform of the TVET sector.

### **Tunisia**

Economic support instruments include: 1) Direct support to enterprises (co-financing of consulting missions for the benefit of SMEs, implemented by the EBRD). A programme that has enabled more than 600 companies to benefit from expertise to upgrade production, internal management or marketing processes. 2) Implementation of guarantee mechanisms (in loans) on credit lines to SMEs (financed by the European development banks: EBRD, AFD, KfW) to facilitate access to credit. 3) Budget Support which enables us to work on the regulatory approximation of Tunisian standards with European standards (industrial standards and SPS), on trade facilitation (e.g. digitalisation of foreign trade procedures), on the business climate etc., while helping public finances to stay afloat. 4) Sectoral projects in the field of innovation (to provide funding for initiatives to support young entrepreneurs or start-ups), tourism (to diversify the range of tourism on offer in order to attract new tourist profiles and enhance the value of the cultural heritage).

The **EUTF for Africa** has continued supporting Tunisia in the implementation of its national strategy on migration. The results were as follows: More than 700 asylum seekers and refugees received access to legal assistance. 63 micro, small and medium-sized enterprises were created or supported. 230 institutions and non-state actors were supported through capacity building or operational support on protection and migration management and 135 people received professional training (TVET) and/or skills development. In the field of border management in Tunisia in 2020 the first contracts were signed to improve radar surveillance infrastructures along the coast.

At **regional level**, ENI funds continued supporting inclusive economic development, environment and climate change, independent media and civil society, as well as cooperation on security matters. However, the COVID-19 pandemic severely impacted the economies of the Southern Neighbourhood, and DG NEAR adapted its regional programmes from the AAP 2019 and 2020 for a total of EUR 26 million to address the long-lasting economic consequences of the pandemic on employment. In this context, regional initiatives with a focus on job creation were brought forward, notably trade and investment programmes with OECD, ILO, and a regional programme on innovation and cluster cooperation.

Particular emphasis was also put on social economy as an innovative model addressing social problems and inequality in Arab countries, while providing an economic perspective, especially for young people. Since 2018, the MedUP programme promotes the development of social entrepreneurship in the Southern Mediterranean by increasing economic inclusiveness and fair employment in Morocco, Egypt, Tunisia, Egypt, Lebanon, Palestine and Jordan. In 2020, the programme established a platform for public-private dialogue and exchange of good practices and provided high-quality services to participating entrepreneurs. The MedUP programme triggered positive policy outcomes, notably the adoption of new regulations in Jordan and Tunisia related to social entrepreneurship, and the development of strategies on social economy. At company level, 64 social entrepreneurs from Palestine, Lebanon, and Jordan benefitted from sub-grants through NGOs and civil society organisations under the MedUP label.

Under the **Neighbourhood Investment Platform** (NIP), blending continued to be a powerful instrument to leverage investments in the region through the approval of 14 operations for a total amount of EUR 276 million in 2020. Moreover, as part of the COVID-19 response, 3 regional facilities were signed totalling EUR 95 million, topping-up existing facilities and accelerating new programmes with European Financial Institutions, to support mostly SMEs and financial intermediaries, by providing immediate liquidity, more local currency funding, and support to green recovery. SANAD – the MENA Fund for MSMEs provided microfinance support to entrepreneurs, while the Green for Growth Fund promoted renewable energy investment and competitiveness via energy and resource efficiency for enterprises and households, in cooperation with KfW.

Assistance to the **Union for the Mediterranean** (UfM) networks and fora to foster dialogues from political to technical levels in energy, transport, environment, trade, economy and job creation throughout 2020 continued being provided. Despite the pandemic, the UfM Trade Ministerial took place on 12 November (though in virtual format), resulting in a Joint Statement of Ministers to reaffirm their commitment to rule-based free trade and investment. It was accompanied by the UfM Business Forum (held online) to discuss trade, investment and employment opportunities in light of the COVID-19 crisis, which led to the creation of a UfM Hub for Jobs, Trade and Investment Promotion, as a means to inclusive economic development. On 27 November 2020, the UfM Regional Forum brought together Ministers of Foreign Affairs at the occasion of the 25th Anniversary of the Barcelona Declaration to reiterate their commitment to the Euro-Mediterranean dialogue and cooperation. The Regional Forum was preceded by the EU-Southern Neighbourhood Ministerial Meeting, and set to discuss a renewed partnership under the European Neighbourhood Policy.

The joint EU-CoE programme “Ensuring Sustainable Democratic Governance and Human Rights in the Southern Mediterranean” has actively worked on addressing gender based violence as a human rights violation, and as a serious obstacle to sustainable development, stability, peace and good governance building in the region. Under the framework of the Council of Europe Convention on Combating and Preventing Violence against Women and Domestic Violence (Istanbul Convention), this regional programme has supported gender responsive capacity building of legal professionals, state bodies and civil society on the Istanbul Convention, as well as key gender responsive legal reforms in Tunisia and Morocco. Tunisia requested accession to the Istanbul Convention in November 2019.

## EASTERN NEIGHBOURHOOD

The EU remains a major partner for countries of the Eastern Partnership. In addition to the bilateral agreements in place, the Eastern Partnership multilateral framework has been guided by the result-oriented and jointly owned agenda “20 Deliverables for 2020”. In 2019, as the partnership marked its 10th anniversary, the Commission carried out a broad and inclusive consultation to define the future policy objectives. Overall, there is a consensus that the Eastern Partnership is robust and delivers tangible benefits to the daily lives of people across the region. The achievements are clear. There are more diversified and vibrant economies in the region, with over 125,000 loans provided to SMEs, 50% of which in local currency. There are better transport links and infrastructure with the extension of the TEN-T network with almost 5000 km of new and rehabilitated roads and railways. The trade and investment opportunities have increased with the number of companies from DCFT countries exporting to the EU going up by 35% for Georgia, 40% for Moldova, and 26% for Ukraine. Visa free regimes have been put in place between the EU and Georgia, Ukraine and Moldova. Thanks to EU support, almost 100,000 families were able to benefit from energy efficiency initiatives and reduce their energy bills. The Covenant of Mayors has grown into a network of 400 municipalities, covering around

60% of the EaP countries. The EU financial assistance has enabled the easier access to high-capacity broadband internet for 2 million scientists, academics and students at over 700 Research and Education institutions. There have been over 80,000 youth exchanges, including through the Erasmus+ programme. A European School was inaugurated in Tbilisi, in the context of the EaP policy

On 18 March 2020, the Commission put forward a proposal for the long-term policy objectives of the Eastern Partnership beyond 2020. These aim at increasing trade, strengthening connectivity and deepening economic integration with Armenia, Azerbaijan, Belarus, Georgia, the Republic of Moldova and Ukraine, strengthening democratic institutions, the rule of law, environmental and climate resilience, supporting the digital transformation, and promoting fair and inclusive societies.

### COVID-19 response

In the Eastern Partnership, the Commission rapidly redirected about EUR 1 billion of grant assistance in support to the six partners. This included EUR 80 million for immediate needs of the public health sector, civil society, and independent media, and another EUR 900 million for longer-term socio-economic recovery. Together with the World Health Organisation, the Commission provides medical supplies across the region, with deliveries last year over 11 million items of personal protective equipment, 12 000 laboratory kits, over 1 500 ventilators, oxygen concentrators and pulse oximeters, and over 20 000 PCR test kits. In Ukraine, according to the World Health Organisation estimates, the timely delivery of COVID-19 supplies has already saved 100 000 lives.

In keeping with existing financial assistance, under the ENI support is rapidly being mobilised for socio-economic recovery in support of SMEs and also local communities. Altogether the Commission provides support to at least 500 000 SMEs to help build back better. The Commission will continue to provide financing in local currency to reduce the risks to SMEs. This will encourage European companies to invest to help consolidate the performance of specific industrial sectors.

In addition, the Commission is making every effort to deliver vaccines to essential medical workers and vulnerable groups across the region as soon as possible. The EU supports COVAX with over EUR 500 million from the EU budget and some the EaP countries are scheduled to receive vaccines through COVAX very shortly.

In **Armenia**, the EU provides companies with funding, training, and export support to new markets, including through the EU4Business initiative. In the period 2014-2020, the EU4Business initiative has triggered loans of over EUR 250 million, benefitting 15,000 SMEs and creating almost 2000 new jobs

. Under Erasmus+ (2014-2020), close to 2,500 students and academic staff from Armenia have studied or taught in Europe, and 1,250 Europeans went to Armenia. In addition, over 8,000 young people and youth workers took part in short-term exchanges, mobility, training and volunteering projects.

In **Azerbaijan**, almost EUR150 million of EU-backed loans have been provided for thousands of Azerbaijani companies in the period 2014-2020 and improving the business and investment climate in the country. Also, in the past 10 years, over 25 ministries and public institutions in Azerbaijan have participated in almost 50 projects bringing EU public sector expertise to their Azerbaijani counterparts. Upgraded air quality monitoring, introduction of a mandatory health insurance and the EU Azerbaijan Business Forum are examples of successful EU-Azerbaijan cooperation.

**Belarus** has access to EUR 10 million for key projects in energy efficiency and environmental protection through the EBRD-managed Eastern Europe Energy Efficiency and Environment Partnership. The first project - Puhovichi Solid Waste - has helped to leverage total investments of EUR 7 million. A new investment grant for wastewater treatment facilities in 6 cities in Belarus was approved at the end of 2019. EU support has helped to improve energy efficiency in educational facilities for the benefit of 2,000 school and pre-school children, and support to modernisation has improved the living conditions of 10,000 citizens and reduced electricity bills for 10 municipalities.

In **Georgia**, the EU is modernising agriculture through the European Neighbourhood Programme for Agriculture and Rural Development (ENPARD), which aims to improve the living conditions of rural Georgians. Through ENPARD the EU has supported the rollout of the agriculture cooperative model in Georgia, leading to the establishment of 1,200 cooperatives in the country. The EU's financial and technical support to them aims to help farmers improve their working conditions and income. EU support has also helped establish 59 information and consultation centres around the country, which have trained over 250,000 farmers. Through Local Action Groups, the EU has supported over 500 local development initiatives in rural areas, which have provided better employment conditions for over 1,000 households and improved living conditions for over 10,000 people.

In **Moldova**, as part of the COVID response, the EU has supported 19,000 SMEs from Moldova through regional programmes. EUR40 million was directly committed for Moldovan SMEs to respond to the liquidity crisis, provide credit deferral and continue supporting long-term SMEs funding in particular in local currencies. The EU actively supports improvements in transport, environment and energy well as to local community development and agriculture. On transport, around 700 kilometers of roads have been or will be rehabilitated in the Republic of Moldova thanks to EU support. Public transport has been improved in Chişinău and Bălţi with modern trolley buses. Twelve brand new locomotives were delivered in July 2020 for the national railroad company and are mainly used for freight transportation. In the energy sector, the EU is also co-financing a permanent interconnection between the electrical networks of Moldova and Romania, while the construction of a gas pipeline between the two countries was completed on August 2020 increasing the energy security of Moldova. In the Municipality of Balti, Moldova's

second largest city, the district heating utility has been upgraded so that citizens will have the possibility to better regulate their heat consumption. New drinking water supply infrastructure in local communities was built with EU support. As a result, approximately 15 700 people have access to sufficient and safe drinking water. The EU continues to offer support to organic agriculture and non-genetic modified organisms. As a result, the national soya production grew almost two-fold in 2019 in spite of the severe draughts experienced.

## Ukraine

The EU assistance contributed to the comprehensive reform programme of **Ukraine** and stabilisation of its economy with unprecedented assistance packages (around EUR 1.6 billion of bilateral assistance in 2014-2020), through *inter alia* decentralisation (U-LEAD with Europe), anti-corruption (EUACI), the rule of law (PRAVO) and public administration reform (EU4PAR) programmes, with the following results:

1. **U-LEAD with Europe: Ukraine Local Empowerment, Accountability and Development Programme – Component 1** contributing to the establishment of multilevel governance, which is transparent, accountable and responsive to the needs of the population.
  - 534 municipalities introduced new taxes and fees after receiving support from U-LEAD with Europe.
  - 900 municipalities benefited from U-LEAD’s policy advice.
  - 9500 representatives from business and civil society were further enabled to promote local development.
  
2. **EU Anti-Corruption Initiative (EUACI)** providing substantial support to frontline anti-corruption agencies, local authorities, the civil society and investigative media in the form of technical advice, capacity building, grants and IT solutions, drawing on the EU's and international best practices and experience.
  - 300 high-level corruption cases against senior officials, politicians and businessmen are already handled by the High Anti-Corruption Court established with the EU support.
  - 5 integrity Cities across Ukraine received modern tools to fight corruption and build integrity in city administration and provision of municipal services.
  - 1.9 million viewers from Ukraine and abroad watched high quality investigative journalism stories produced with EU support.
  - EUR 74 million gained to the Ukrainian state and municipal budgets from a transparent sale and lease of state property on Prozorro – a sale platform supported by the EU.
  
3. **EU support to comprehensive Reform of Public Administration** contributes to establishment of a modern, efficient, professional and transparent public administration of Ukraine in line with the Principles of Public Administration developed by OECD/SIGMA<sup>27</sup> through budget support, technical assistance and capacity building to various stakeholders, including Members of the Parliament and relevant parliamentary Committees, the President and its Administration, Members of the Cabinet of Ministers, National Agency of Ukraine for Civil Service and civil society organisations.
  - Over 20 000 civil servants from 18 institutions included in the Human Resources Management Information System (HRMIS).
  - 31 electronic services and information from 6 national registers available to the Ukrainian citizens on the unified government gateway diia.go.ua.
  - “E-baby services” (such as registration of birth, registration of child’s origin, registration of child’s place of residence) used by over 40 000 families.
  - Creation of 95 policy directorates in ministries and recruitment of more than 700 civil servants under merit-based procedure.
  
4. **Support to Rule of Law Reforms in Ukraine (PRAVO)** has two components: Pravo-Justice provides assistance to justice sector national authorities in strengthening the rule of law in Ukraine, in line with best European and international practices; Pravo-Police in coordination with European Union Advisory Mission Ukraine supports reforms of Ukrainian law-enforcement agencies, contributing to improved criminal investigations, public order protection, policing, and, above all, piloting best European models and practices.
  - 197 judges of the renewed Supreme Court were selected following a transparent and merit-based process, including an integrity check and advanced psychological testing, conducted with EU support.
  - 9 800 prosecutors at the regional and local level are undergoing a rigid vetting procedure, including professionalism and integrity checks and adaptive ability testing. 8 400 of them have already completed it and 6 500 successfully passed it.

<sup>27</sup> SIGMA (Support for Improvement in Governance and Management) is a joint initiative of the Organisation for Economic Co-operation and Development (OECD) and the European Union

- Complaints against illegal raiding of property and businesses reduced by 25% in 2020 compared to 2019 thanks to the registration and anti-raidership reforms carried out with EU support.
- 150 000 respirators, 462 500 medical masks and 6 500 protective overalls of personal protective equipment needed during pandemic was delivered to the National Police of Ukraine's COVID-19 "front line workers".

In addition to bilateral programmes, regional programmes benefitting more than one country have also achieved results, such as:

- Since the launch of the Eastern Partnership in 2009, the EU has supported more than 125 000 enterprises, backing EUR 2 billion worth of loans, and sustained over 250 000 jobs and helped the creation of around 34 000 new jobs.
- EU-EaP trade has nearly doubled turning the partner countries into the EU's 10th largest trading partner. The EU is the first trading block for four partner countries (Azerbaijan, Georgia, Moldova and Ukraine), while for Armenia (over EUR 1.2 billion worth of trade in 2018) and Belarus the EU is the second biggest trading partner. These trade relations have also led to diversification in exports of goods from partner countries, and to their better integration in global value chains. Furthermore, the number of companies exporting to the EU from Georgia has increased by 46%, from Moldova by 48% and from Ukraine by 24%. This clearly reflects the mutual benefits of EaP.

From 2014-2020, **Erasmus+** higher education strand has enabled more than more than 28 000 students and academic staff from the Eastern Partnership countries to study or teach in EU or other European programming countries. Close to 600 full degree scholarships Erasmus Mundus Joint Master Degrees scholarships were awarded as well as 179 projects supporting capacity building for Higher Education involving EaP partners and 170 Jean Monet projects supporting innovation, knowledge-sharing, and communication on European issues. Under the Erasmus+ youth strand, close to 55 000 young people and youth workers from the EaP region participated in youth dialogue, youth exchanges, youth workers mobility and volunteering activities, and close to 800 young people in European Solidarity Corps activities. Now in its third academic year, the European School in Georgia continues to offer quality education to pupils from all EaP countries, increasing their future opportunities, fostering co-operation and fundamental values, and promoting a better understanding of the EU.

**"EU4Business"** - an umbrella initiative covering all EU support for small and medium-sized enterprises (SMEs) in the Eastern Partnership region - improves access to finance for SMEs, provides business development services and participates to enhance the investment climate in the region. With an active portfolio of EUR 720 million, and through a portfolio of 116 contracts, in 2019 EU4Business provided support to 79,000 SMEs, helped created 117,000 jobs, and was instrumental in the adoption of 714 new laws, policies and regulation aiming at improving investment climate. More than EUR 128 million was allocated to almost 1,900 women-led SMEs through the EU4Business initiative, which also provided training for 11,014 women-led SMEs, in 2019 alone.

- A decision on extending the Trans-European Transport Network to the eastern Neighbourhood by 2030 was reached in 2016 as a concrete step towards better connections and a streamlined approach to infrastructure investments. This decision complements reforms in the sector in view of making transport more secure, safer and more environmentally friendly.
- Over 450 municipalities, covering 30 million people in the Eastern Partnership countries, signed up to the EU's Covenant of Mayors. This aims to reduce their CO2 emissions by 30% by 2030, almost 20 million tonnes by the end of 2020, which is equivalent to planting almost 500 million trees.

Beyond the Eastern Partnership multilateral framework, ENI funds continued to support two other policies, namely the **Northern Dimension** and the **Black Sea Synergy**, promoting effective regional cooperation with the Eastern Neighbourhood and beyond.

	conflict resolution.				
--	----------------------	--	--	--	--

### IcSP Articles 3 and 4

At the end of 2020, there were 250 on-going IcSP actions across Europe, Asia, Africa and the Americas. Examples of timely EU responses to high-priority crises on the EU political agenda are given below. Information on the actions funded by the Instrument under Articles 3 and 4 are available for the general public through the following online tool: <https://icspmap.eu>.

- In 2020, the EU Afghanistan Peace Support Mechanism (EU APSM) contributed to the preparations of an inclusive peace process by supporting a comprehensive group of civil society partners through an innovative Partnership Approach, developing a transfer mechanism for interaction between the negotiating parties and civil society, as well as establishing networks with official actors and key stakeholders. In so doing, the EU APSM has built capacity among under-represented groups and amplified their voices, while addressing a number of key topics in the peace and security dynamics. By the end of the action on 17 December 2020, 13 projects had been implemented in 23 out of 34 provinces by 15 Afghan CSOs 2 Afghan think-tanks, one Afghan media organisation, one international NGO and 3 universities. The support to CSO partners has enabled civil society engagement on peace among a diverse group of marginalised voices, including youth, women, victims of war, as well as ethnic and religious minorities. The EU APSM has also facilitated coordination between different CSOs to promote synergies and collaboration. The EU APSM provided technical and financial support to the Afghanistan Mechanism for Inclusive Peace (AMIP) which, since its launch in September 2020, functions as a Transfer Mechanism to connect Afghan civil society to the formal peace negotiations.
- The response to the COVID-19 pandemic greatly affected use of the IcSP during 2020. Early in the year, 3 main areas were identified where the IcSP mandate and added value were particularly clear: i) Prevent the aggravation of existing conflicts where specific groups may be excluded from national response efforts and/or stigmatised as a result of the COVID pandemic; ii) Countering disinformation and rumours that could be dangerous and divisive by promoting access to conflict-sensitive accurate and reliable information in conflict-affected or prone contexts; and iii) support to the UN Secretary-General's call for a global ceasefire in response to the pandemic. Under the IcSP, a response package of 11 new financing decisions and five increases to existing financing decisions (EUR 56.2 million) was presented, as well as a redirection of activities in more than 60 on-going actions (EUR 8.6 million) alongside contributions to help crisis and conflict-prone countries plan for their recovery. As part of on-going cooperation with the UN and the World Bank, the methodology of the Post-Disaster Needs Assessment (PDNA) and the Recovery and Peace Building Assessment (RPBA) was adapted to also include the COVID-19 Recovery Needs Assessments (CRNA). So far, support through the IcSP contributed to such assessments in El Salvador, Ecuador, the Dominican Republic and, at the end of 2020, assessments for Haiti, Eswatini and Zambia were under consideration.
- In Libya, the IcSP was used to support the implementation of the January 2020 Berlin Conference in close coordination with, and in support of, the UN Special Envoy for Libya. This has ranged from logistical support, related to the process itself, to sophisticated ceasefire monitoring support. The IcSP-supported mediation efforts continued to operate and played a part in facilitating the ceasefires of June and October 2020. There was a particular focus on human security for the civilian Libyan population. Following the withdrawal of General Haftar's forces from Tripoli in June 2020, support responded to the threat posed by booby-traps, improvised explosive devices as well as other explosive remnants of war in close cooperation with the de-mining teams of the Ministry of the Interior.
- Following a massive explosion in Beirut, the capital of Lebanon on 4 August 2020, IcSP quickly mobilised additional support to the support the strained medical sector as it tried to deal with thousands of injured people in severely-damaged hospitals whilst the COVID-19 pandemic was on-going. An action that started in April 2020 to increase the number of beds and equipment available in public hospitals was quickly reinforced to help deal with the double crisis affecting the Lebanese public health system and help it respond to the COVID-19.
- Under the component covering programmable actions for conflict prevention, peace-building and crisis preparedness (Article 4), a total of 1,034 processes and 692 entities benefited from the strengthened capacity attributable to IcSP funding during the course of 2020<sup>(29)</sup>. This allowed the EU to engage with its partners – international, regional, sub-regional organisations, the Member States and civil society actors – on structural measures to support peace-building in a more comprehensive manner.

### IcSP Article 5

Under the third IcSP objective covering programmable actions to address global, trans-regional and emerging threats, preliminary key programme results, based on established programme indicators, show that planned objectives were carried out. In terms of overall programme management, a successful change process over the past years has led to actions being designed for a longer duration. The average size of contracts has also increased which has led to efficiency gains and a more effective use of resources.

Legislative and operational capacity in third countries was strengthened, and global and trans-national cooperation frameworks and

<sup>(29)</sup> Annual achievement.

networks established, as demonstrated below. The focus has been two-fold: supporting security capacities at national and regional levels on the one hand and promoting frameworks for effective global and trans-regional cooperation on the other. Following a tailored approach, key countries were identified in priority regions and the capacities of local law enforcement and security units strengthened by setting up or further developing specialised units and inter-agency cooperation. Regional coordination and information-sharing functions continued to be supported to foster regional and trans-regional cooperation, primarily by making use of existing structures whenever possible.

- **CBSD:** The Annual Action Programme 2020 for Article 5 included 2 CBSD actions that aimed to prevent the spread of terrorist, armed groups in Ghana and Togo as well as the Virunga National park in DRC. Another action in Benin/Burkina Faso was launched.
- **Cybersecurity:** The EU CyberNet action was launched to strengthen the global delivery, coordination and coherence of the EU's external cyber capacity-building actions, and to reinforce the EU's own capacity to provide technical assistance to third countries in the field of cybersecurity, while promoting an inclusive multi-stakeholder and rights-based approach to ensure compliance with the rule of law and good governance principles. In 2020, the action was reinforced with additional resources.
- **Counter Terrorism and Prevention and Countering of Violent Extremism:** In 2020, Counter-terrorism (CT) and the Prevention and Countering of Violent Extremism (P/CVE) remained high priorities, with continued investment in global actions that strengthen the resilience of communities and governments against violent extremism and terrorist attacks.

Specific examples include a EUR 20 million global action on anti-money laundering and counter-terrorist financing (AML/CFT). The EU is an important actor in the area of CFT within and outside Europe. Additional resources have been added to provide assistance to partner countries aimed at supporting efforts to put in place effective AML/CFT frameworks in compliance with EU requirements, Financial Action Task Force (FATF) recommendations and relevant UN Security Council Resolutions on AML/CFT.

Furthermore, a number of Counter Terrorism (CT) specific actions were launched in 2020 focusing on terrorist threats' responses to improve partner countries' best practices in detection capacity, exchange of information and criminal justice systems' cooperation (CT Inflow), cross-border investigations and prosecutions (LEICA). Targeted regions were identified from North Africa and Middle East to Central Asia.

Additionally, with 15 partner countries supported in all regions, the UN EU CT Travel project was developed to enhance detection capacity by processing passenger data (API/PNR) to stem the flow of Foreign Terrorists Fighters and other criminals. Implemented by the UN Office to Counter Terrorism (UNOCT), the action develops a two-pronged approach: strengthening the legislative frameworks in partner countries to regulate the collection, transmission, use, retention and sharing of passenger data, in compliance with international human rights; and establishing Programme Implementation Units to conduct risk assessments, and to identify, detect and intercept Foreign Terrorist Fighters, using the UN goTravel software solution.

Prevention and reduction of terrorist attacks and their effects in urban public spaces was another area of support in 2020. The CT Public Spaces action will address these needs and concerns by strengthening public space security through improved capacities of law enforcement authorities and opportunities for public-private sector cooperation, in 3 selected countries (Senegal, Ghana and Kenya).

Building on the results of CASE I covering civil aviation security, a second phase starting in 2020 will focus more on sustainability, thereby ensuring a risk-based approach to civil aviation security. The action will deliver a broad range of demand-driven technical assistance activities on civil aviation security in selected partner countries and short-term targeted capacity-building activities, in the domains of security culture, insider threats, landside security, other existing/emerging threats (such as Improvised Explosive Devices).

A number of global P/CVE-specific actions have been launched around the world under the Strengthening Resilience to Violent Extremism (STRIVE) programme. These STRIVE actions aim to facilitate innovative P/CVE engagement in collaboration with local communities, strengthen conditions conducive to development, and build resilience towards violent extremism. Commencing in 2013, over EUR 40 million has been allocated to actions in over 20 countries globally to prevent and counter violent extremism. The key common factor is that the specific actions under the programme are innovative, testing new ground and creating a platform for learning.

**Organised Crime:** the consolidation of the Global Illicit Flows Programme continued with the addition of the 2 SALW (small arms and light weapons) actions. ENACT (Enhancing Action against Organised Crime in Africa) was extended and is transitioning successfully to a second phase following an extremely successful pilot confirmed by an evaluation at the end of 2020. Results included the launch of an Organised Crime Index for Africa in late 2019, setting up 5 Regional Organised Crime Observatories, publishing a high number of analyses and policy briefs and training 4 criminal analysts in selected Interpol bureaus across the continent.

Phases III and IV of the Seaport Cooperation action ended with the inclusion of cooperation with 12 Caribbean partner countries and a further 8 Latin American partner countries with mixed success. CRIMJUST continued its innovative International Investigative Fora bringing senior law enforcement officers and magistrates together to advance specific transnational criminal cases. AIRCOP continued to consolidate its expansion, with the addition of Ecuador to the Joint Inter-Agency Task Forces network

at airports and continued to advance with the previous challenging additions of Mozambique, Kenya and Ethiopia as project partners. In cooperation with ENACT (see above), the most recent action on the cocaine trafficking route, COLIBRI identified the 7 most appropriate pilot countries in West Africa. It also completed its scoping missions to Latin America, capitalising on training initiated on general aviation control for selected customs and police officers and continued its elaboration of the general aviation controls handbook with an international team of experts, while setting up an online training platform to adapt to COVID-19 conditions.

Finally, EU-ACT, the former heroin route programme, continued its engagement with its 5 partner countries on supporting the fight against drug supply, demand and the reduction of drug-related harm on the heroin route, while also organising its first successful transnational law enforcement conference in Pakistan in February, geared towards improving counternarcotic cooperation around the Western Indian Ocean.

**Chemical Biological Radiological and Nuclear risks mitigation:** In 2020, support to more than 60 partner countries has continued through the EU CBRN Centres of Excellence (CBRN CoE) Initiative. Building on previous capacity-building activities, and the existing available expertise, funds could quickly be shifted towards ad-hoc actions in response to the global health crisis provoked by the COVID-19 epidemic.

EUR 10 million was mobilised in a timely way through the LABPLUS AFRICA action for (a) creating an African Centre of Excellence for Training in Surveillance and Epidemics Preparedness, Intelligence, Response and Control at Institut Pasteur Dakar and (b) building an outreach capacity to provide diagnostics, sequencing, health services in remote areas using a fleet of mobile laboratories to be deployed by the Praesens Care Foundation in Senegal and other neighbouring countries.

All ongoing CBRN CoE actions addressing biological safety and biological security in different geographic regions (Central Asia, South East Europe, Southeast Asia and West Africa) were extended and reinforced with the allocation of EUR 5 million to increase training and provide equipment.

Among those, three interconnected actions Medilab SECURE, MediPIET and STRONGLABS strengthened the capacities of partner countries on awareness, risk assessment, monitoring and control of vector borne diseases as well as the alert capacity of laboratories and institutions in charge of field epidemiology to prevent new epidemic variants. All the above actions are implemented in five CBRN CoE regions (African Atlantic Façade, Middle East, North Africa and Sahel, South East and Eastern Europe and Central Asia) with approximately 30 partner countries. The first confirmed cases of infection by the COVID-19 in Morocco, Algeria, Lebanon, North Macedonia and Serbia were identified by senior laboratory experts thanks to the support of MedilabSECURE.

Each of the 8 EU CBRN CoE regions has contributed to the fight against COVID-19 by mobilising ongoing actions and existing resources through awareness raising campaigns, peer-to-peer exchanges, expert consultations, distribution of WHO guidelines, online refreshment trainings to first responders. Examples include the MEDISAFE action that reached 85,000 health workers in the public and private sectors through an SMS campaign via SMS, raising awareness of the dangers of falsified medicines and medical consumables used to protect against the COVID-19 pandemic.

All on-going actions reported some progress as a number of different tools were set up by the implementers to continue providing capacity-building opportunities. Nevertheless, most actions were extended to allow for re-scheduling of activities requiring in presence events such as field exercises and laboratory training courses. .

In the area of **strategic trade controls**, the EU P2P Export Control Programme for Dual-Use Goods allowed partner countries to create, consolidate or update their effective strategic trade controls systems. In 2020, for example, the EU P2P Programme supported the Philippines in drafting its proliferation finance control legislation in a concerted approach with the US Department of State. The programme also supported 11 countries (Belarus, Ukraine, Morocco, Tunisia, Cambodia, Lao PDR, Vietnam, Philippines, Iran, Iraq and Uzbekistan) to participate in the sixth (online) edition of the EU P2P Summer University on Strategic Trade Controls

#### **Corresponding 2014-2020 programme Partnership Instrument (PI):**

International Urban Cooperation Programme (IUC) in 2020.		2020.	Conduct and due diligence implementation in 2020.
--	--	-------	---

In order to measure the PI achievements in 2020, it is important to note that the instrument focuses on influencing processes through facilitation and support, and on increasing EU capacity to impact policy-making.

Some examples are:

The **Low carbon business action in Brazil and Mexico** promotes the decoupling of economic growth and CO<sub>2</sub> emissions in order to address global climate change as well as to improve market opportunities for leading EU businesses in the green-technology sector. In Brazil, technical assistance was provided to 95 Business Concepts, of which 75 are under implementation or will be implemented. The impact assessment shows the potential to create economic, social and environmental positive impacts for European and Latin-American companies. The forecast estimates that the action will generate an investment of EUR 400 million in Brazil, representing an average of EUR 5.3 million for each cooperation partnership agreement (signed between EU and Brazilian companies) supported by the action. It was also calculated that a total of 315 new jobs will be generated in Europe and 820 in Brazil. In Mexico, for 40 concept notes, a feasibility study was carried out, with 33 proposed solutions at the end of the contract<sup>30</sup>: for the 5 adopted solutions, an environmental and social impact assessment was carried out, with 126 jobs created in Europe and 106 in Mexico. On average, each action is expected to generate 15 new jobs. As a follow up to these results, a new action started in 2020 to extend its beyond Brazil and Mexico to Argentina, Canada, Colombia and Chile. The scope of the action now also covers the circular economy.

The action “**International Urban Cooperation Programme (IUC)**” implements city-to-city cooperation between the EU and target countries in Asia and the Americas in the context of the New Urban Agenda and in support of EU regional policy engagement. Through the action, cities from Europe and other global regions are paired together, jointly committing to design and implement pilot projects that enhance sustainable development at the local and regional levels. To date, 80 pairings have been established between local governments through the IUC programme leading to the identification of 84 pilot actions. For example, the number of cities signing up to the Covenant of Mayors (CoM) Japan increased from five cities in 2017 to 21<sup>31</sup> in 2020. Partnerships concentrated on topics such as smart cities, sustainable transport, inclusive growth, climate mitigation and energy, circular economy, nature based solutions and resilience, social inclusion, urban regeneration, health care, culture, and education.

Key partnerships of the EU with the UN and the OECD on **Responsible Business Conduct (RBC)** strengthened **multilateralism**, contributed to important policy development and business model changes in Asia, in the Americas and in the G7 and G20 fora. For example, more than 20 major agri-businesses with supply chains across the Asian region and reaching Europe were committed to improve their RBC and due diligence implementation. In Japan, PI support resulted in the development and implementation of the new Guide on Environmental Due Diligence in Value Chain Management under the leadership of the Japanese Ministry of Environment (MOEJ). For the first time, a global policy instrument focused on environmental aspects of supply chain due diligence, which set an example to other OECD and EU Members. Thanks to the PI, international standards are now reflected in the Japanese National Action Plan (NAP) on Business and Human Rights, adopted in October 2020. Moreover, the Japanese government committed to promote due diligence in domestic and overseas supply chains. PI actions also contributed to make Thailand the first example of integration of OECD RBC standards in the financial sector in South-east Asia. For example, the Government Pension Fund, Thailand’s second largest institutional investor (USD 30 billion assets), has integrated RBC in their policies and documents. In Latin America, the PI supported the development, or implementation, of NAPs on business and human rights. In Brazil, for example, the link between the Trade and Sustainable Development (TSD) chapter of the EU-Mercosur Association Agreement and the RBC principles is evident, and the project used the Brazilian bid to the OECD as an entry point to promote its agenda.

Under the action “**Support to EU Film Festivals**”, more professional and engaging film festivals are organised by the EU Delegations due to access to a dedicated repository of 47 European feature films and 8 short-films with pre-negotiated screening rights worldwide. Due to the COVID-19 pandemic, 27 EU Delegations organised their first online film festival with approximately 35 000 viewers in June 2020 and 20 EU Delegations with approximately 55 000 viewers in November 2020. Due to the technical and professional support provided under this contract, European film festivals in third countries moved from occasions to showcase the quality of EU films into real moments of dialogue with local stakeholders, civil society and citizens at large, while contributing to enhance the visibility and understanding of the EU and its policies abroad.

The Mid-Term Review evaluation<sup>32</sup> found evidence that the PI played an often critical role through both strengthening and opening up areas for cooperation and dialogue. This catalytic effect of the instrument is reflected in a new Partnership Instrument intervention logic and a set of core indicators developed and adopted in 2016 and on which data is provided in this section<sup>33</sup>.

<sup>30</sup> 5 were adopted (EUR 1.6 million), 9 were approved (for EUR 80 million), and 19 are pending (for EUR 60 million EUR)

<sup>31</sup> Including Tokyo, Yokohama, Kyoto, Toyama, Kitakyushu and Hiroshima.

<sup>32</sup> Mid-term evaluation of the Partnership Instrument for cooperation with third countries, SWD(2017) 608 final of 15.12.2017 [https://ec.europa.eu/europeaid/sites/devco/files/swd-mid-term-review-pi\\_en\\_0.pdf](https://ec.europa.eu/europeaid/sites/devco/files/swd-mid-term-review-pi_en_0.pdf)

<sup>33</sup> The figures for activities, outputs and outcomes for 2019 are sometimes markedly different than those presented in the previous working programme

The indicators are divided into activity, output and outcome indicators.

Various **activities** are implemented under the PI funded actions. These activities can be divided into three main categories:

- Exchanges, events, knowledge-sharing
- Provision of expertise, technical assistance
- Promotion, outreach, engagement

Cumulative data (2014-2020) on core activity indicators are presented in the table below.

PI Activities implemented	Total recorded
A1: Total number of events organised and supported (aggregated)	7 690
Number of visits, exchanges, study tours	455
Number of business missions	388
Number of technical meetings (to discuss a specific technical subject)	1 271
Number of group events (conferences, debates, workshops, seminars)	2 590
Number of training events	768
Number of outreach and advocacy (including networking events, cultural collaboration activities)	1 005
<b>A2: Person-days of expertise or technical assistance provided</b>	<b>NA<sup>34</sup></b>
<b>A3: Number of public/media/communication campaigns designed and implemented (aggregated)</b>	<b>976</b>

Source: Project Implementation Monitoring System

The activities implemented under PI actions lead to delivery/production of a wide range of **outputs**, which can be grouped into different 4 main categories:

- Direct benefits of events (e.g. increased knowledge, understanding, awareness, networking, engagement)
- Knowledge-based products
- Outcome statements
- Advocacy, awareness raising products

Cumulative data (2014-2020) on **core output indicators** are presented in the table below.

PI Outputs delivered	Total recorded
OP1: Number of participants in an event	3 588 207
OP2: Percentage of participants who report having benefited from an event	88%
OP3: Number of EU companies that participated in an event	5 157
OP4: Percentage of EU companies which report having benefited from an event	76%
Number of non-EU companies which participated in an event	4 721
Percentage of non- EU companies which report having benefited from an event	60%
OP5: Number of outcome statements emanating from an event	209
OP6: Number of knowledge-based products developed	21 542
OP7: Number of communication products developed	167 929

statements. This is explained by the fact that previous figures were only partial and that collection of data for indicators is now done in full; also, the PI is now working at full capacity; finally, some figures from previous years have been corrected after training was provided to the contractors implementing the actions.

<sup>34</sup> No longer reported on as per 'Annex - 13 List of core indicators for PI' of the FPI Manual (See: <https://my.intracomm.ec.europa.eu/dg/fpi/HowWeWork/ProjectManagement/Pages/Index.aspx>)

### 3.3. Evaluations, studies and reports

The Common Implementing Regulation (in Article 17) requires a mid-term review report of the EU's external financing instruments ('the instruments') to assess whether these instruments remain fit for purpose, with a view to ensuring the effective implementation of the EU's assistance. The mid-term review COM(2017) 720 final and the related staff working documents were published on 15 December 2017, concluding that the current set of instruments were still relevant and has proved to be sufficiently enabling. The main findings of the evaluation point to a need to adapt the way the instruments are implemented, notably through a more strategic and overarching programming and ensuring coherent interactions at operational level in the renewed international context.

A series of external evaluations took place in 2016-2017 on all the instruments including the DCI, ENI, EIDHR, IcSP, PI and IPA II. The mid-term review final reports SWD (2017) 600, 602, 604, 607, 608 and 463 respectively, were presented by the Commission on 15 December 2017. The SWD (2019) 418 final, presented the findings of the evaluation of the EU's support to economic governance in enlargement and neighbourhood countries, finalised in August 2017. In addition, COM(2020) 224 final reported on the implementation of the European Fund for Sustainable Development that provides its initial assessment of the main evaluation criteria of relevance, efficiency, effectiveness, coherence and value added.

At the mid-term of their implementation (2014-2020), the instruments overall shown themselves to be fit for purpose. The DCI was found to be largely on track to deliver on its objectives and commitments. The ENI was found overall relevant and an instrument that allowed the EU to implement the reviewed Neighbourhood policy. The EIDHR with its wide and comprehensive scope, it was and has remained an enabling, flexible and responsive instrument to protect and promote human rights and democracy worldwide, at international, regional and local levels. The IcSP was found on track to achieve the objectives for which it was designed and it was considered to perform a unique function of crisis response and conflict prevention, triggered by EU political priorities, contextual needs and opportunities in fragile and conflict-affected contexts. The PI proved its continued relevance to long standing EU priorities and demonstrated its flexibility through responses to new and changed policy priorities that have arisen since its adoption.

As requested by the EU Regulation No 236/2014 laying down common rules and procedures for the implementation of the Union's instruments for financing external action, in its Art. 17, a final evaluation report on the period from 2014 to 2020 shall be established by the Commission within the interim review of the successor instruments in the next financial period. This evaluation is expected to be launched in 2023.

## 4. Programme 2021-2027 - Key monitoring indicators

**Specific Objective 1 :To support and foster dialogue and cooperation with third countries and regions in the Neighbourhood, in Sub-Saharan Africa, in Asia and the Pacific, and in the Americas and the Caribbean; to develop special strengthened partnerships and enhanced political cooperation with the European Neighbourhood, founded on cooperation, peace and stability and a shared commitment to the universal values of democracy, rule of law and respect for human rights, and aiming at deep and sustainable democracy and progressive socio-economic integration as well as people-to-people contacts**

**Indicator 1:Rule of Law score in relation to countries benefiting from EU assistance**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Index, taking values from 0 to 1
Cut-Off Date	
Data source	<a href="https://info.worldbank.org/governance/wgi/Home/Reports">https://info.worldbank.org/governance/wgi/Home/Reports</a>

Are we on track	Deserves attention**
Indicator type	Result
Unit of measurement	Agreements (AA) & Action plans (AP) in force
Cut-Off Date	
Data source	European Commission
Narrative	South:Baseline 2012: Association agreements in force with 8 of the 10 southern partners (i.e.

	excluding Libya and Syria). Three First generation Action Plans (or equivalent documents) adopted or in place: Israel, Egypt and Palestine. 2nd generation action plans for Jordan and Morocco approved. Political agreement on the second generation of the Tunisia and Lebanon Action Plans but formal adoption by Council pending. East: Baseline 2012: Five Partnership and Cooperation Agreements in force, one Association Agreement (Ukraine) initialled on 30.03.2012. Negotiations for Association Agreements ongoing with 4 countries: Republic of Moldova (launched in January 2010), Armenia, Azerbaijan & Georgia (July 2010). Five Action Plans in force.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Libya: Discussions on the negotiations for a Framework Agreement are stalled due to the crisis situation since June 2014. Ratification of Association Agreement is suspended. Preliminary discussions on future EU-Israel and EU-Palestine Partnership Priorities have been initiated. The UE has adopted Compacts with Jordan and Lebanon. The second phase of the ENI programming (2017-2020) was launched and Single Support Frameworks for 2017-2020 are being finalised with the Governments of Lebanon, Palestine, Egypt, Jordan and Tunisia. Palestine has materialised the Joint Programming process in the first-ever European Joint Strategy in the Neighbourhood that will cover 2017-2020. With Morocco, the EU has deployed every effort in maintaining a constructive relationship throughout the year in the area of technical and financial cooperation, amid a tense atmosphere pertaining to the ECJ ruling on the agreement on the free trade of agricultural products. In Libya the EU focused on reactivating init
Full metadata available at this address	
Justification of the trend	East: 2014-2020: three Association Agreements entered in force with Georgia, Moldova and Ukraine, a Comprehensive and Enhanced Partnership Agreement (CEPA) enter into force with Armenia, and Partnership Priorities (PP) concluded with Azerbaijan (with whom the Partnership and Cooperation Agreement in force since 1999 is still the basis for relations, while a new Agreement is being concluded). All the five countries count with equivalent documents to Action Plans (Association Agendas for Georgia, Moldova and Ukraine; a CEPA Roadmap for Armenia, and the PP for Azerbaijan. South: 2014-2018: 8 AA, 8 AP or similar documents (Partnership Priorities). 2019: 8 AA still in force for the southern countries. No AA with Syria and Libya due to crisis situations in these countries. 8 AP or similar documents (Partnership Priorities) in force. 2020: 8 AA still in force for the southern countries. No AA with Syria and Libya due to crisis situations in these countries. 8 AP or similar documents (Partnership Priorities) in force. 8 Association agreements still in force (all excluding LY and SY), 6 Partnership priorities valid until end 2020 and 2 action plans valid until end 2021 (IL, PS)

**Indicator 2: GDP per capita as percentage of EU-28 (current prices)**

Unit of measurement	As percentage of EU-28 in current prices
Cut-Off Date	
Data source	World Bank
Narrative	Availability of Data: The 2014 value does not include Libya, Lebanon and Syria, for which data are not available. The 2015 value on Neighbourhood South only includes Algeria, Morocco, Jordan and Palestine, for which data on GDP are available. The 2016 to 2019 values only exclude Syria.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The indicator shows the degree of economic convergence of Neighbourhood countries towards the European average. The projections are based on a hypothesis of growth rate of 1.9% for the EU area and 3.5% for both Neighbourhood South and Neighbourhood East.
Full metadata available at this address	
Justification of the trend	There is a positive development in the Eastern Neighbourhood, where the target was reached. The trend in the Southern Neighbourhood has been fluctuating, but the latest figures were surging.

**Specific Objective 1 :Promoting human rights and fundamental freedoms, the rule of law, principles of equality and fight against discrimination in all its forms, establishing deep and sustainable democracy, promoting good governance, fight against corruption, strengthening institutional capacity at all levels and developing a thriving civil society including social partners.**

**Indicator 1:Progress made in achieving political reforms, as assessed by relevant reports**

Indicator type	Impact
Unit of measurement	Progress
Cut-Off Date	
Data source	European Commission and the EEAS
Narrative	
Methodology	The indicator assesses how the ENP partner countries progress in implementing the political reforms agreed in bilateral legal (for example: Partnership and Cooperation Agreements, Association Agreements) and political (for example: ENP Action Plans, Association Agendas) frameworks. The target is coherent with 2014-2020 programming period and is based on the past trend, the baseline value and the benchmarks. Following the ENP Review of 2015 the annual progress reports (jointly prepared by the European Commission with the EEAS) have been replaced by a new style of assessment, timed to provide the basis for a political exchange of views in the relevant high-level meetings with partner countries.

Narrative	

Methodology	The indicator is a weighted score based on 8 external sources taken in three groups, each weighted one third after normalisation:1. Corruption Index (Transparency International) and Control of Corruption (World Bank);2. Press Freedom (Reporters without Borders) and Freedom of Press (Freedom House);3. Government Effectiveness (World Bank), Rule of Law (World Bank), Regulatory Quality (World Bank) and Voice and Accountability (World Bank).
Link MFF 14-20 / MFF 21-27	
Other methodological comments	It should be noted that the indicators are based mostly on perceptions and do not necessarily reflect the impacts made by the EU assistance and policy in these areas. There are also many external factors, such as political instability and security situation, which might influence overall scores. Therefore, these indicators only indirectly influenced by EU actions.
Full metadata available at this address	
Justification of the trend	Overall, the trend in the neighbourhood has been fluctuating, but the most recent development has seen a leap in the score and the target was exceeded for the first time since the reporting period.

**Specific Objective 2 :Achieving progressive integration into the Union internal market and enhanced sector and cross-sectoral cooperation including through legislative approximation and regulatory convergence towards Union and other relevant international standards and improved market access including through deep and comprehensive free trade areas, related institution building and investments, notably in interconnections.**

**Indicator 1:Value of ENI countries export to EU-28 in relation to baseline data in year 2010 (Eurostat figures).**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	
Data source	Eurostat
Narrative	The targets are based on a hypothesis of GDP growth of 3.5% for the two regions and of 2.97% for the exports of the Neighbourhood East and 5.88% for the Neighbourhood South. For this second region the baseline is calculated on the volume of exports and GDP of the countries for which both exports and GDP data were available for 2014 (Algeria, Israel, Jordan and Palestine. To note that in 2020, the COVID pandemic has had a negative impact on growth across Europe and the neighbourhood countries.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The 2015 value for Neighbourhood East does not reflect Ukraine and Azerbaijan, for which export values are not available for 2015. For 2016, only Syria excluded. Declining ratio reflects substantial reduction of values of exports of hydrocarbons for Algeria (due to price decline) and Libya (also due to the political instability). For 2017, the value for Ukraine is based on 2016 data, as data for 2017 were not available. No data available for 2018 score for Libya, Tunisia and Jordan. For 2019, not enough data available to calculate the score.
Full metadata available at this address	
Justification of the trend	The targets for the indicator were reached in 2017, although information was not available for some countries in the Southern Neighbourhood. Hopefully these positive developments will remain stable throughout coming years and beyond. To be noted that many factors will impact this indicator, in particular EU economic growth, unfolding crisis situations in the region and data availability.

**Indicator 2:Number of Deep and Comprehensive Free Trade Agreements (DCFTA) and Agreements on Conformity Assessment and Acceptance of industrial products (ACAA)**

Justification of the trend	

**Specific Objective 3 :Creating conditions for the better organisation of legal migration and the fostering of well managed mobility of people, for the implementation of existing or future agreements concluded in line with the Global Approach to Migration and Mobility, and for promotion of people-to-people contacts, in particular in relation to cultural, educational, professional and sporting activities.**

**Indicator 1: Number of Mobility Partnerships in place**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Neighbourhood East										
2012	Milestones									2020
3										4
	Actual Progress									Final
	4	4	4	5	5	6	6			
Neighbourhood South										
2012	Milestones									2020
1										4
	Actual Progress									Final
	3	3	3	3	3	3	3			

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Mobility Partnerships
Cut-Off Date	
Data source	Information from Directorate-General for Migration and Home Affairs (DG HOME).
Narrative	South: Baseline 2012: Mobility Partnership signed with one country in 2013. Preparatory discussions launched with two countries.
Methodology	
Link MFF 14-20 / MFF 21-27	

Other methodological comments	Mobility Partnerships declarations are the instrument through which the EU and its partners in the Neighbourhood intend to set a framework to manage migration flows with commonly agreed objectives and programmes. Mobility Partnerships follow the Global Approach to Migration and Mobility guidelines. Thus, they are a good measure of the achievements in this field.
Full metadata available at this address	
Justification of the trend	The first indicator (number of mobility partnerships in place) is an example of good performance where the targets have been either met (Neighbourhood East) or almost (Neighbourhood South).

### Indicator 2: Number of readmission/visa facilitation agreements and Visa Liberalisation Action Plans (VLAP) in place

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Neighbourhood East										
2008	Milestones									2020
1			3							4 readmission/visa facilitation agreements in place

	5	5	5	5	5	5	6			
Neighbourhood South										
	Milestones									2020
0			2							5
	Actual Progress									Final
	0	0	0	0	0	0	0			

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	Number of readmission/visa facilitation agreements and Visa Liberalisation Action Plans (VLAP) in place
Cut-Off Date	
Data source	Information from Directorate-General for Migration and Home Affairs (DG HOME).
Narrative	Visa liberalisation continues to be in place with Georgia, Moldova and Ukraine; Visa Facilitation and Readmission Agreements in place with Armenia, Azerbaijan and Belarus.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Based on visa facilitation/ liberalisation agreements, both the EU and the non-EU citizens benefit from facilitated procedures for issuing visas. Visa facilitation/liberalisation agreements are linked to readmission agreements which establish the procedures for the return of persons in irregular situation (own or third country nationals or stateless persons) to the EU or to the partner non-EU country. Readmission and visa facilitation/liberalisation agreements are key elements to assess progress regarding mobility and the promotion of people to people contacts.
Full metadata available at this address	
Justification of the trend	the target attained for the Eastern Neighbourhood. In the Southern Neighbourhood, no readmission and visa facilitation agreements have been concluded due to sensitive and complex negotiations in an uncertain political environment.

**Specific Objective 4 :Supporting smart, sustainable and inclusive development in all aspects; poverty reduction, including through private-sector development and reduction of social exclusion; promotion of capacity building in science, education and in particular higher education, technology, research and innovation; promotion of internal economic, social and territorial cohesion; rural development; public health; environmental protection, climate action and disaster resilience.**

### Indicator 1: Inequality-Adjusted Human Development Index

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

	Actual Progress								Final	
	0,6992	0,7050	0,7168	0,7309	0,7581	0,7447	0,7563			
Neighbourhood South										
2012	Milestones								2020	
0,5726				0,56						0,59
	Actual Progress								Final	
	0,5407	0,5421	0,5484	0,5545	0,5677	0,5705	0,5855			

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	
Data source	World Bank
Narrative	Indicator 2 is based on World Bank's ease of doing business report. The sustainability of development highly depends on the capacity of our countries to facilitate the creation of a productive base, i.e. the creation of local business that can ignite a virtuous circle of economic growth on a sustainable basis.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The distance to frontier measures the distance from the best performing country based on the different criteria used. Indicator aligned with the one used for the EU Results Framework.
Full metadata available at this address	
Justification of the trend	This indicator has been reflected a good performance, albeit with some fluctuations. The target for 2020 was almost attained for Neighbourhood South. The more ambitious target for Neighbourhood North unfortunately was not. External factors such as political instability and security situation have an effect on the results of these indicators.

### Specific Objective 5 :Promoting confidence building, good neighbourly relations and other measures contributing to security in all forms and the prevention and settlement of conflicts, including protracted conflicts.

#### Indicator 1:Political stability and absence of violence: number of countries in a percentile rank above 0-30 (lowest rank)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Actual Progress										Final
	4	5	4	5	6	6				

Are we on track	Deserves attention**
Indicator type	Impact
Unit of measurement	Number of countries
Cut-Off Date	
Data source	Based on the number of programmes identified in the CBC Programming Document.
Narrative	This indicator measures perceptions of the likelihood that the government will be destabilised or overthrown by unconstitutional or violent means, including politically-motivated violence and terrorism.
Methodology	Baseline: Countries in a percentile rank above 0-30 (Armenia, Belarus, Moldova, Ukraine) and Countries in a percentile rank above 0-10 (Jordan, Morocco, Tunisia, Libya, Egypt, Israel) respectively. Milestone 2016 South: 6 and Algeria, Lebanon Target South: 8 countries + Syria
Link MFF 14-20 / MFF 21-27	
Other methodological comments	This indicator measures perceptions of the likelihood that the government will be destabilized or overthrown by unconstitutional or violent means, including politically - motivated violence and terrorism. Higher values in percentile rank indicate better governance ratings.Source: Worldwide Governance Indicators (WGI) project (WB group).
Full metadata available at this address	
Justification of the trend	The most recent results under this indicator show stability in southern neighbourhood, but a drop in eastern neighbourhood where Armenia and Georgia have scored lower in comparison to the previous year.

### Specific Objective 6 :Enhancing sub-regional, regional and Neighbourhood wide collaboration as well as Cross-Border Cooperation.

#### Indicator 1: Number of Cross-Border Cooperation programmes in place

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
				17						17
Actual Progress										Final
	1	14	16	16	16	16	16			

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	
Cut-Off Date	
Data source	Based on the number of programmes identified in the CBC Programming Document.
Narrative	This indicator shows the progress in building cooperation in border regions among EU Member States on one side and Neighbourhood partner countries, and the Russian Federation, on the other side. Given that these Cross Border Cooperation programmes are agreed among the EU member States and the partner countries, the adoption and implementation of the programme is a good indicator of the willingness of all parties to cooperate in the border regions. Each CBC programme contains a multiplicity of smaller projects benefiting the socio-economic development of the area's population.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The indicator shows the progress in building cooperation among EU Member States on one side and Neighbourhood partner countries and the Russian Federation on the other side, in border regions.
Full metadata available at this address	
Justification of the trend	ENI CBC Mid-Atlantic programme was finally not adopted.

#### Indicator 2: Number of ministerial, platform and panel meetings under the Eastern Partnership

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2020

Other methodological comments	
Full metadata available at this address	
Justification of the trend	The data has not been available since 2017.

**General Objective 2 :Supporting, developing and consolidating democracy in third countries, by enhancing participatory and representative democracy, strengthening the overall democratic cycle, in particular by reinforcing an active role for civil society within this cycle, the rule of law and improving the reliability of electoral processes, in particular by means of election observation missions.**

**Indicator 1: Number of electoral processes and democratic cycles supported, observed, and followed**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
20	45	70	95	120	145	170	195			195
	Actual Progress									Final
	44	69	105	140	173	203	217			217

Are we on track	On track
Indicator type	Input
Unit of measurement	Cumulative number (of electoral processes)
Cut-Off Date	31/12/2020
Data source	The list of projects resulting from a search in CRIS using DAC code 15151 with domains EOM and EIDHR
Narrative	This indicator informs us on how many different electoral cycles the EU has been supporting through its EIDHR, including the EOM component.
Methodology	Electoral processes and democratic cycles supported, observed and followed include: 1. EU Election Observation Missions (EOMs): fully-fledged election observation missions 2. EU Election Assessment Team missions: limited observation or assessment missions in countries with particularly difficult security situations 3. EU Election Expert Missions (EEMs): small-scale missions composed of electoral experts of assessment of the election process 4. Complementary activities (studies) which started in 2017: In addition to the electoral missions, preparation of a study or conducting a desk review on an electoral issue and any other activities linked to electoral missions 5. Election Follow up missions 6. Electoral assistance (eg technical assistance, provision of voting material & equipment, support to the registration of political parties and/or of voters, support to civil society organisations in areas such as voter & civic education or training of local observers, media monitoring, etc.)
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	This indicator builds on the number of electoral process at national level that have been established by partner countries' own constitutional calendars. In 2020 electoral assistance or election observation projects were provided under EIDHR funds (the indicator does not include EDF, nor IcSP, nor CSO-LA funds) in Somalia, Côte d'Ivoire, Ghana, Malawi, Bolivia, Ethiopia, Guyana, Salvador, Kosovo, The Gambia, Zambia, Tanzania, Uganda, Papua New Guinea.
Full metadata available at this address	
Justification of the trend	The COVID pandemic is the essential reason for fewer deployments of observers of election assistants in 2020. The ability to have maintained the support to 14 election cycles, in spite of the pandemic, must be recognized as an unexpected success. It has to be recalled that the EU also supports elections through EDF, IcSP and CSO-LA.

**Specific Objective 1 :Support to Human Rights and Human Rights Defenders in situations where they are most at risk.**

**Indicator 1: Number of Human Rights Defender individuals who have received EU support (being protected politically, legally and/or physically and pulled out of their position of abuses)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
230	1200	1200	1200	1200	1200	1200	1200			1200
	Actual Progress									Final
	421	258	1181	1231	1394	1520	1711			

Are we on track	On track
Indicator type	Output
Unit of measurement	Number
Cut-Off Date	31/12/2020
Data source	Fondation Internationale pour les Défenseurs des Droits de l'Homme (FIDDH) and Protect Defenders consortium (implementing partners of the EU Human Rights Defenders mechanism: EU Emergency Fund for human rights defenders at risk and ProtectDefenders.eu)
Narrative	
Methodology	• The numbers under ProtectDefenders.eu and the Emergency Fund include individual human rights defenders (HRDs) and their family members, as well as organisations, who received direct support. •

	Training, capacity-building, outreach and advocacy activities conducted in the framework of ProtectDefenders.eu were not included. • HRDs benefiting from projects under the human rights crisis facility were not included. • HRDs supported by projects financed via global or local calls for proposals were not included.
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The number of human rights defenders at risk who receive EU support under the EU Emergency Fund for human rights defenders at risk and ProtectDefenders.eu steadily increases. This is due to increasing restrictions and clampdown on human rights defenders and their working environment.

### Indicator 2: Number of crisis response projects implemented under the EIDHR

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
10	15	15	15	15	15	15	15			15
	Actual Progress									Final
	15	8	17	27	20	33	40			

Are we on track	On track
Indicator type	Input
Unit of measurement	Number (of crisis response projects)
Cut-Off Date	31/12/2020
Data source	DEVCO B1 EIDHR project database
Narrative	
Methodology	In 2020: 5 crisis facilities, 2 global projects and 40 projects under the Country Based Support Scheme in 28 countries. In 2019: 4 country-specific projects under the EIDHR Crisis Facility, 2 global projects (EIDHR Emergency Fund and the grant to the EU Comprehensive HRDs mechanism Protectdefenders.eu), and an estimated number of 27 projects under the Country Based Support Scheme (Honduras, Guatemala (2), Venezuela (2), Nigeria, Niger, Ukraine (2), Russia (2), Sudan, Syria, Serbia (3), Peru, Mexico, Iraq, Kenya (2), Colombia (2), Salvador (2), Bolivia, Myanmar). In 2018: five country-specific projects under the EIDHR Crises Facility and an estimated number of 15 projects under the Country Based Support Scheme (e.g. Syria, Congo, Philippines, Ethiopia, Yemen). In 2017: four country-specific projects under the EIDHR Crises Facility, one global project and 22 projects under the Country Based Support Scheme (e.g. Syria, Turkey, Philippines, Ethiopia, Yemen).
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF
Other methodological comments	In 2016: at least six projects, four in countries and two regional, under the EIDHR Crises Facility and eleven projects under the Country Based Support Scheme. In 2015: at least 6 in-country projects under the EIDHR Crises Facility and 2 global projects (EIDHR Emergency Fund and the grant to the EU Comprehensive HRDs mechanism Protectdefenders.eu). In 2014 : 9 in country projects (most difficult situations as Belarus, Syria, Ukraine) and 6 global projects were deployed offering a global coverage and compiling a mix of in-country and multi-country projects (most difficult type of HR violation and/or categories of defenders at risk) activities.
Full metadata available at this address	
Justification of the trend	An increase in polarisation and populist politics worldwide and a dearth of geopolitical actors criticising authoritarianism have brought rise to numerous human rights crises, at the same time making it even more difficult for CSOs to work in many countries. Restrictions on freedoms of assembly, association and expression as part of the COVID-19 response have exacerbated these trends. As a result the number of crisis response projects increased by 21% in 2020 relative to 2019.

### Specific Objective 2 :Support to other priorities of the Union in the fields of human rights

#### Indicator 1: Number of EIDHR projects in line with EU Guidelines

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
150	250	250	250	250	180	180	250			250
	Actual Progress									Final
	271	332	132	186	140	204	408			

Are we on track	On track
Indicator type	Input
Unit of measurement	Number (of projects)
Cut-Off Date	31/12/2020
Data source	DEVCO B1 EIDHR project database
Narrative	

Methodology	EU guidelines are not legally binding, but because they have been adopted at ministerial level, they represent a strong political signal that they are priorities for the Union. Guidelines are pragmatic instruments of EU Human Rights policy and practical tools to help EU representations in the field better advance our Human Rights policy. They also serve as priorities for defining activities in order to put into practice the political orientation. There are 11 Human Rights Guidelines the EIDHR is delivering on: 1. Violence against women and girls and combating all forms of discrimination against them (2008) 2. Human Rights dialogues with third countries (2008) 3. Children and armed conflict (2008) 4. Human Rights defenders (2008) 5. International Humanitarian Law (2009) 6. Promotion and protection of freedom of religion or belief (2013) 7. Enjoyment of all Human Rights by lesbian, gay, bisexual, transgender and intersex (LGBTI) persons (2013) 8. Death penalty (2013) see below for more
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF
Other methodological comments	continued from above: 9. Freedom of Expression Online and Offline (2014) 10. Promotion and Protection of the Rights of the Child (2017) 11. Torture and other cruel, inhuman or degrading treatment or punishment (2019)
Full metadata available at this address	
Justification of the trend	The large increase in 2020 can be partly explained by the negative repercussions that COVID-19 has had on the topics covered by the Guidelines.

### Indicator 2: Number of Human Rights victims benefitting from EIDHR projects

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
3000	4000	4000	4000	4000	4000	4000	4000			4000
	Actual Progress									Final

Are we on track	No data
Indicator type	Output
Unit of measurement	Number (of human rights victims)
Cut-Off Date	31/12/2020
Data source	Data not available as there is no data collection tool available.

Methodology	Yearly
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Data not available as there is no data collection tool available.

### Specific Objective 3 :Support to Democracy.

#### Indicator 1: The percentage of countries belonging to the Democracy Pilot Countries which have improved their V-DEM Electoral Democracy Index

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
0.000	0.150	0.300	0.500	0.650	0.750	0.900	1.000			1.000
	Actual Progress									Final
		0.416	0.429	0.600	0.300	0.300	0.310			

Are we on track	Deserves attention**
Indicator type	Impact
Unit of measurement	Percentage (number of countries which have improved their VDEM index/total number of Democracy Pilot Countries)
Cut-Off Date	31/12/2020
Data source	The V-DEM Electoral Democracy Index can be found at V-DEM net ( <a href="https://v-dem.net/about">https://v-dem.net/about</a> ). This percentage includes both the 1st and 2nd generation of Pilot Countries, in total 13 countries.
Narrative	
Methodology	This indicator measures the Democratic progress in the following countries: Benin, Bolivia, Georgia, Ghana, Lebanon, Malawi, Maldives, Mongolia, Morocco, Mozambique, Myanmar, Kyrgyzstan, Paraguay, Philippines, Republic of Moldova, Solomon Islands, Tanzania, Timor Leste and Tunisia; based on data from the V-DEM index (electoral democracy indicator).
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF
Other methodological comments	The V-DEM Electoral Democracy Index can be found at V-DEM net ( <a href="https://v-dem.net/about">https://v-dem.net/about</a> ). This percentage includes both the 1st and 2nd generation of Pilot Countries, in total 13 countries. The result for the year 2019 will become available in April 2020.

Full metadata available at this address	
Justification of the trend	Decline of democracy in the world unrelated to our projects.

### Indicator 2: The percentage of actions of the democracy support action plans implemented

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0.00	0.00	0.00	0.15	0.25	0.45	0.60	1.00			1.00
	Actual Progress									Final
	0.00	0.00	0.25	0.30	0.35	0.40	0.40			

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage (number of actions implemented/total number of actions in democracy support action plans)
Cut-Off Date	31/12/2020
Data source	Data on implementation of Democracy Action Plans, Human Rights and Democracy Country Strategies and EOM recommendations follow-up plans
Narrative	
Methodology	Percentage of actions planned by Delegations in the framework of their Democracy Action Plans as reported in the Human Rights and Democracy country strategies.
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Stable situation in the last years.

### Specific Objective 4 :EU Election Observation Missions

#### Indicator 1: Number of electoral processes and democratic cycles supported, observed, and followed by means of Election Observation Missions, Election Assessment Teams and Election Experts Missions proposing recommendations to the host country

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
17	19	21	22	23	18	18	23			23
	Actual Progress									Final
	17	16	16	19	21	16	14			14

Are we on track	Deserves attention**
Indicator type	Output
Unit of measurement	Number (of electoral processes)
Cut-Off Date	31/12/2020
Data source	FPI
Narrative	The actual deployment of missions actually deployed contributes to the Specific Objective 4: EU Election Observation Missions
Methodology	Yearly
Link MFF 14-20 / MFF 21-27	Under the MFF 21/27, the indicator will be merged with Indicator 2 for further alignment with the Annual Activity Report.
Other methodological comments	The indicator includes the:- EU Election Observation Missions (EOMs): fully-fledged election observation missions;- EU Election Assessment Team missions (EATs): limited observation or assessment missions in countries with particularly difficult security situations; Since 2015, no EATs have been deployed. It has been decided either to deploy a fully-fledged EOM or an EEM;- EU Election Expert Missions (EEMs): small scale missions composed of electoral experts of assessment of the election process;- The studies or desk reviews on an electoral issue and any other activities linked to electoral missions that started in 2017. The indicator, however, does not take into account the Exploratory Missions, which aim at preparing EOMs and assess the usefulness, advisability and feasibility of the fully-fledged EOM.
Full metadata available at this address	
Justification of the trend	In the conditions of the global COVID-19 pandemic, travel restrictions, security and sanitary situation in the countries, many of the missions could not be deployed.

#### Indicator 2: Number of Election Follow-up Missions (post-election expert missions) deployed in countries after an Election Observation Mission to assess the implementation of recommendations.

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
----------	------	------	------	------	------	------	------	------	------	--------

2013	Milestones								3030
2	2	3	4	4	5	5	8		8
	Actual Progress								Final
	2	3	3	4	4	7	0		

Are we on track	Deserves attention**
Indicator type	Output
Unit of measurement	Number (of electoral missions)
Cut-Off Date	31/12/2020
Data source	FPI
Narrative	The deployment of follow-up missions deployed contributes to the Specific Objective 4: EU Election Observation Missions. The aim of Election Follow-up Missions is to take stock of the state of implementation of the EOM/EAT recommendations. EFMs are conducted within a period of 2 to 3 years into the electoral cycle (which starts with the initial EOM/EAT mission). They serve to deepen the dialogue with partner countries on the recommendations, but also open up space for wider political dialogue on the governance and rule of law in partner countries. EFMs have been implemented since 2013.
Methodology	Yearly
Link MFF 14-20 / MFF 21-27	Under the MFF 21/27, the indicator will be merged with Indicator 1 for further alignment with the Annual Activity Report.
Other methodological comments	The aim of Election Follow-up Missions is to take stock of the state of implementation of the EOM/EAT recommendations. EFMs are conducted within a period of 2 to 3 years into the electoral cycle (which starts with the initial EOM/EAT mission). They serve to deepen the dialogue with partner countries on the recommendations, but also open up space for wider political dialogue on the governance and rule of law in partner countries. EFMs have been implemented since 2013. The target for 2020 will be difficult to reach since there will be many important elections that will absorb the Human Resources capacities and budget.
Full metadata available at this address	
Justification of the trend	In the conditions of the global COVID-19 pandemic, travel restrictions, security and sanitary situation in the countries, all follow-up missions were postponed to 2021.

### Specific Objective 5 :Support to targeted key actors and processes, including international and regional human rights instruments and mechanisms.

#### Indicator 1: Number of States that have signed and ratified international & regional Conventions and related optional Protocols

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
5	10	10	10	10	10	10	10			10
	Actual Progress									Final
	34	53	49	27	24	24	12			

Are we on track	On track
Indicator type	Output
Unit of measurement	Number (of states)
Cut-Off Date	31/12/2020
Data source	OHCHR website: <a href="http://indicators.ohchr.org/">http://indicators.ohchr.org/</a> and <a href="https://tbinternet.ohchr.org/SitePages/MonthlyReport.aspx">https://tbinternet.ohchr.org/SitePages/MonthlyReport.aspx</a>
Narrative	
Methodology	This indicator will be based on the information in: <a href="https://indicators.ohchr.org/">https://indicators.ohchr.org/</a> and <a href="https://www.ohchr.org/EN/ProfessionalInterest/Pages/CoreInstruments.aspx">https://www.ohchr.org/EN/ProfessionalInterest/Pages/CoreInstruments.aspx</a>
Link MFF 14-20 / MFF 21-27	This indicator will be not used to monitor the 2021-2027 MFF.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	COVID-19 crisis has made the ratification processes more difficult.

#### Indicator 2: Number of key actors supported, in particular international, regional and national organisations

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
10	15	15	15	15	15	15	15			15
	Actual Progress									Final
	15	11	10	15	15	15	19			

Are we on track	On track
-----------------	----------

Indicator type	Output
Unit of measurement	Number (of key actors)
Cut-Off Date	31/12/2020
Data source	DEVCO B1 implementation data
Narrative	
Methodology	In 2017, 2018, 2019 and 2020, 19 key actors were supported : Global Campus of Human Rights Education/European Inter-University Centre for Human Rights and Democratisation (7 stakeholders), ILO - International Labour Organization, OHCHR - Office of the UN High Commissioner for Human Rights, ICC - International Criminal Court, Inter-American Human Rights Court and Commission, Council of Europe, International IDEA, the Global Alliance of National Human Rights Institutions (GANHRI), and four regional NHRI secretariats (5 stakeholders). Support has also been given to the participation of civil society in key processes, e.g. in human rights negotiations, dialogues, etc.
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF
Other methodological comments	In 2014 : 15 key actors : OHCHR - Office of the High Commissioner for Human Rights, EIUC - European Inter-University Centre for Human Rights and Democratisation, National Human Rights Institutes, ICC - International Criminal Court, International Organization for Migration. In 2015 11 key actors were supported: European Inter-University Centre for Human Rights and Democratisation (7 stakeholders), IOM - International Organization for Migration, OHCHR - Office of the UN High Commissioner for Human Rights, UNICEF and indirectly the African Union. In 2016: 10 key actors were supported : European Inter-University Centre for Human Rights and Democratisation (7 stakeholders), ILO - International Labour Organization, OHCHR - Office of the UN High Commissioner for Human Rights, UNHCR – the UN Refugees Agency.
Full metadata available at this address	
Justification of the trend	Support to strategic stakeholders.

*Previous Program 3 : Instrument contributing to Stability and Peace*

**General Objective 1 :To provide direct support for the Union's external policies by increasing the efficiency and coherence of the Union's actions in the areas of conflict prevention, crisis preparedness and crisis response and peace-building, and in addressing global and transregional threats.**

**Indicator 1: Number of conflicts worldwide**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Total										
2012	Milestones									2020

Are we on track	No data
Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	05/03/2021
Data source	Conflict Barometer published annually by the Heidelberg Institute for International Conflict Research; <a href="https://hiik.de/conflict-barometer/current-version/?lang=en">https://hiik.de/conflict-barometer/current-version/?lang=en</a>
Narrative	This indicator describes the context in which IcSP operates
Methodology	See Heidelberg Institute for International Conflict Research for information on the methodology
Link MFF 14-20 / MFF 21-27	This indicator will not be followed under the MFF 21/27.
Other methodological comments	Note: This indicator is used on a trial basis and will need to be evaluated over a longer time period

	whether it is appropriate for the assessment of the EU's impact on global crises. The indicator is based on the "Conflict Barometer" of the Heidelberg Institute for International Conflict Research (HIIK)
Full metadata available at this address	
Justification of the trend	The number of conflicts have steadily decreased over the period. The overall number is down 15.5%, with the most violent down 17.4%; the mid-intensity conflict by 10.8%; and the least violent by 19.9%.

**Specific Objective 1 :In a situation of crisis or emerging crisis, to swiftly contribute to stability by providing an effective response designed to help preserve, establish or re-establish the conditions essential to the proper implementation of the Union's external policies and actions in accordance with Article 21 TEU.**

**Indicator 1:Percentage of projects adopted within 3 months of a crisis context (date of presentation to PSC).**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
69%	70%									75%
	Actual Progress									Final
	68%	64%	61%	47%	82%	91,3%	86%			

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	FPI
Narrative	The adoption of decisions on projects (actions) within a limited time contributes directly to the objective to swiftly contribute to stability.
Methodology	Yearly values
Link MFF 14-20 / MFF 21-27	This indicator will be followed under the MFF 21/27
Other methodological comments	Out of the 55 financing decisions adopted under the Article 3 of the IcSP in 2020, 51 exceptional assistance measures are considered for this indicator (the other 5 required comitology in line with the Regulation). Of those 51 decisions, 44 were adopted (COM Decision) within 3 months of a crisis context (presentation to PSC), a percentage rate of 86.3%. The objective set for 2020 is to reach a percentage rate of 75%.
Full metadata available at this address	
Justification of the trend	The set milestone and final objective was surpassed. While the re-organisation and creation of the FPI Regional Teams in 2017, coincided with a lower performance in that year, this new arrangement combined with a closer monitoring of decision making at Headquarters led to a steep increase in the speed of decision-making in the following years. The relatively lower performance in 2020 remains well above the target (86.3% vs 75%) and is explained by the disruptions caused by the COVID-19 crisis combined with an exceptionally high and record amount of new crisis response actions to be adopted in 2020.

**Specific Objective 2 :To contribute to the prevention of conflicts and to ensuring capacity and preparedness to address pre- and post-crisis situations and build peace.**

**Indicator 1:Number of processes and entities with strengthened capacity attributable to IcSP funding**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Are we on track	On track
Indicator type	Result
Unit of measurement	Number
Cut-Off Date	31/12/2020
Data source	FPI documents related to the financed projects
Narrative	The indicator measures the strengthened capacity beneficiaries of EU assistance to prevent conflicts, address pre- and post-crisis situations and to build peace
Methodology	The figures aggregate the processes and entities stemming from the contracting of the year n-1 Annual Action Programme. Processes: refers to the annual number of processes (for example: mediation processes, ad hoc training and coaching, training of trainers, capacity-building activities, high-level conferences, international fora, Recovery and peacebuilding assessments, specific researches) attributable to IcSP funding which contribute to conflict prevention, crisis preparedness and peace-building. Entities: refers to the annual number of entities (local communities and community-based organisations, third country governmental and local authorities, youth and women organisations, international, regional and national NGOs, associations of private sector operators) benefiting from strengthened capacity, attributable to IcSP funding in conflict prevention, crisis preparedness and peace-building
Link MFF 14-20 / MFF 21-27	This indicator will not be followed under the MFF 21/27
Other methodological comments	Total: The indicator measures the strengthened capacity of EU and beneficiaries of EU assistance to prevent conflicts, address pre- and post-crisis situations and to build peace. The figure aggregates the processes and entities stemming from the contracting of the year n-1 Annual Action Programme. Processes: It refers to the annual number of processes (for example: mediation processes, training and coaching, training of trainers, capacity building activities, specific researches) attributable to IcSP funding which contribute to conflict prevention, crisis preparedness and peace-building. Entities: It refers to the annual number of entities (local communities and community-based organizations, youth and women organisations, formalised NGOs, private sector operators, traditional as well local and government authorities) benefiting from strengthened capacity, attributable to IcSP funding in conflict prevention, crisis preparedness and peace-building.
Full metadata available at this address	
Justification of the trend	The increase of "processes and entities during the 7 years of the programme is correlated to the progressive increase of the amounts committed every year and the consequent increase of the number of the funded actions

### Specific Objective 3 :To address specific global and trans-regional threats to peace, international security and stability.

#### Indicator 1:EU contribution towards tackling global and transregional threats, measured as

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Risk Mitigation: Number of former weapon scientists talents redirected to peaceful activities (Astana and Kiev):

Data source	Project Implementation Monitoring System (PIMS) reporting
Narrative	This indicator measures progress towards supporting the Union's bilateral, regional or multilateral relationships with non-EU countries and addressing challenges of global concern and adequate follow-up to decisions taken at multilateral level.
Methodology	Partnership Instrument Monitoring System reporting
Link MFF 14-20 / MFF 21-27	This indicator will not be followed under the MFF 21/27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The discrepancy between results and targets is due to a change in the methodology for the use of indicators. Instead of 'customised' project-level indicators, which cannot easily be aggregated at programme/instrument level, there was a move to core indicators which are identical for the entire PI and can hence be easily aggregated.

**Specific Objective 1 :To support the Union's bilateral, regional and inter-regional cooperation partnership strategies, by promoting policy dialogues and by developing collective approaches and responses to challenges of global concern.**

**Indicator 1: Progress made by key partner countries in the fight against climate change or in promoting the environmental standards of the Union, as measured by the following sub-indicators**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Data source	<a href="https://icapcarbonaction.com">https://icapcarbonaction.com</a> – International Carbon Action Partnership (ICAP); <a href="http://energyatlas.iea.org">http://energyatlas.iea.org</a> . Latest data available 2018. <a href="https://www.covenantofmayors.eu/en/">https://www.covenantofmayors.eu/en/</a> .

Narrative	The data collected demonstrate that the PI is effective in influencing partner country approaches that are beneficial to the achievement of the Europe 2020 strategy and its uptake by partner countries.
Methodology	This indicator measures progress towards supporting the EU's bilateral, regional and inter-regional cooperation partnership strategies, by promoting policy dialogues and developing collective approaches and responses to challenges of global concern, in particular climate change and environment.
Link MFF 14-20 / MFF 21-27	This indicator will not be followed under the MFF 21/27
Other methodological comments	The specific objective 1 is reflected by five core PI outcome indicators. Values captured for these indicators demonstrate that the instrument has already delivered important results (see underneath). For sub-indicators 1b and 1c: The data will be available 3 years after the reference year. The data for 2020 will be available at the beginning of 2022. Data for 31/12 of each year provided directly by the Covenant of Mayors Office.
Full metadata available at this address	
Justification of the trend	Most indicators are on track except for Japan where the trend is linked to the closure of nuclear plants and consequent turning into coal.

## Specific Objective 2 :Implementing the international dimension of "Europe 2020 - A strategy for smart, sustainable and inclusive growth".

### Indicator 1:Uptake of the "Europe 2020" strategy by key partner countries, as measured by the following sub-indicators

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of cities that have signed new bilateral or multilateral agreements on sustainable urban development

Are we on track	On track
Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	World Bank (poverty rate); UN population division (population's weights)
Narrative	The indicator Proportion of population below the international poverty line is defined as the percentage of the population living on less than USD 1.90 a day at 2011 international prices. The 'international poverty line' is currently set at USD 1.90 a day at 2011 international prices. Monitoring poverty is important on the global development agenda as well as on the national development agenda of many countries.
Methodology	Indicator calculated on the basis of DCI eligible countries. The 2014 value was computed on country level data from 2012 or before, the 2015 value considers country level data from 2013 or before, the 2016 value considers data from 2014 before the 2017 value considers data from 2016 or before, the 2018 value considers data from 2017 or before and the 2019 value considers data from 2018 or before. The 2020 value also considers data from 2018 or before (data extracted in January 2021).
Link MFF 14-20 / MFF 21-27	This indicator will be used to monitor the 2021-2027 MFF, using the same name.
Other methodological comments	2030 is the target date set by world leaders for achieving Sustainable Development Goals (UN). Baseline taken from the previous MDG 1.1 Proportion of population below USD 1.25 (PPP) per day. All DCI budget contributes to this SDG. Eradicating poverty in all its forms remains one of the

	greatest challenges facing humanity. While the number of people living in extreme poverty has dropped by more than half – from 1.9 billion in 1990, to 836 million in 2015 – too many are still struggling for the most basic human needs. Globally, more than 800 million people are still living on less than USD 1.25 a day; many lacking access to adequate food, clean drinking water and sanitation. Rapid economic growth in countries like China and India has lifted millions out of poverty, but progress has also been uneven. Women are disproportionately more likely to live in poverty than men due to unequal access to paid work, education and property.
Full metadata available at this address	
Justification of the trend	2030 is the target date set by world leaders for achieving SDGs (UN). Baseline taken from the previous MDG 1.1 Proportion of population below USD 1.25 (PPP) per day. All DCI budget contributes to this SDG. Eradicating poverty in all its forms remains one of the greatest challenges facing humanity. While the number of people living in extreme poverty has dropped by more than half - from 1.9 billion in 1990, to 836 million in 2015 - too many are still struggling for the most basic human needs. Globally, more than 800 million people are still living on less than USD 1.25 a day; many lacking access to adequate food, clean drinking water and sanitation. Rapid economic growth in countries like China and India has lifted millions out of poverty, but progress has also been uneven. Women are disproportionately more likely to live in poverty than men due to unequal access to paid work, education and property. Progress has also been limited in other regions, such as South Asia and sub-Saharan Africa, which account for 80 percent of the global total of those living in extreme poverty. This rate is expected to rise due to new threats brought on by climate change, conflict and food insecurity. Through to 2030, SDG 1 foresees a world where extreme poverty will have been eliminated, such as through social protection for all, access to land and economic resources, and their protection against the impacts of climate change and other economic, social and environmental disasters.

### Specific Objective 1 :Poverty reduction and fostering sustainable economic, social and environmental development.

#### Indicator 1:MDG 3.1 Ratio of girls to boys in primary, secondary, tertiary education

Data source	MDG Report Statistical Annex: Millennium Development Goals, Targets and Indicators, 2014 & 2015 <a href="http://mdgs.un.org/unsd/mdg/Host.aspx?Content=Products/ProgressReports.htm">http://mdgs.un.org/unsd/mdg/Host.aspx?Content=Products/ProgressReports.htm</a>
Narrative	
Methodology	These results are estimates calculated by the UN MDG Team provided for the Progress report of the MDGs being final in 2015. Updated results will not be published anymore. This indicator has been replaced by the new indicator SDG 4.1.1 "Percentage of children/young people at the end of each level of education achieving at least a minimum proficiency level in (a) reading and (b) mathematics (Disaggregation: sex, location, wealth and others where data are available)", which is aligned to Target 4.1: "By 2030, ensure that all girls and boys complete free, equitable and quality primary and secondary education leading to relevant and effective learning outcomes." However, it should be noted that this indicator is not available yet: methodology not defined, no data. It will take 3 to 5 years before this indicator can be used according to UNESCO, which is leading on education SDG indicators. Baseline and targets to be set in the UN process.
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	These results are estimates calculated by the UN MDG Team provided for the Progress report of the MDGs being final in 2015. Updated results will not be published anymore.
Full metadata available at this address	
Justification of the trend	Data has not been published since 2015 because the MDGs have been replaced by the SDGs.

**Indicator 3:SDG 3.2.1 Under-five mortality rate (deaths per 1,000 live births)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2030

Indicator type	Impact
Unit of measurement	Per 1 000 live births
Cut-Off Date	31/12/2019
Data source	<a href="http://apps.who.int/gho/data/view.main.CM1300R">http://apps.who.int/gho/data/view.main.CM1300R</a> or <a href="https://unstats.un.org/sdgs/indicators/database/">https://unstats.un.org/sdgs/indicators/database/</a>
Narrative	This indicator is aligned to SDG 3.2 which calls for an end to preventable deaths of new-borns and children under 5 years of age by 2030, with all countries aiming to reduce neonatal mortality to at least as low as 12 per 1 000 live births and under-five mortality to at least as low as 25 per 1 000 live births. The under-five mortality rate measures child survival. It also reflects more broadly the social, economic and environmental conditions in which children (and community) live.

Narrative	The indicator 3.1.1 maternal mortality ratio (MMR=maternal deaths per 100,000 live births) is aligned to SDG 3.1: "By 2030, reduce the global maternal mortality ratio to less than 70 per 100,000 live births.
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	No data has been reported since 2017 on both references mentioned above.
Full metadata available at this address	
Justification of the trend	Maternal mortality was still unacceptably high in 2017 - an estimated 295 000 women died from pregnancy- or childbirth-related complications. Almost all maternal deaths (99 %) occur in developing countries. More than half of these deaths occur in sub-Saharan Africa and almost one third occur in South Asia. More than half of maternal deaths occur in fragile and humanitarian settings. To improve maternal health and reduce MMR, barriers that limit access to quality maternal health services must be identified and addressed at all levels of the health system. Within a country, major differences in MMR are often identified between regions and between urban/rural settings, and socioeconomic characteristics (such as education level and wealth quintile). Ensuring universal health coverage for comprehensive reproductive, maternal, and newborn healthcare will be essential to achieve the SDG MMR target.

**Indicator 5:SDG 2.2.1 Prevalence of stunting (height for age <-2 SD from the median of the WHO Child Growth Standards) among children under five years of age**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Cut-Off Date	31/12/2019
Data source	Figures are reported in the annual report « Joint Child Malnutrition Estimates » by UNICEF, WHO and World Bank and can be accessed using the following link: <a href="https://data.unicef.org/resources/dataset/malnutrition-data/">https://data.unicef.org/resources/dataset/malnutrition-data/</a> .
Narrative	WHO maintains the WHO Global Database on Child Growth and Malnutrition ( <a href="http://www.who.int/nutgrowthdb">www.who.int/nutgrowthdb</a> ), a repository of standardized anthropometric child data which has existed for 20 years. The methods have remained unchanged since 2012, except for some minor refinements: 1. Year assigned to each survey. When data collection is split between two calendar years the year where most of the data collection is done is the year that is reported. 2. Final reports only. Since 2014 only final reports are presented (rather than preliminary reports) 3. Updated data sources. Data has been reanalysed to ensure consistency of reporting. Some results in the JME database may differ from the reported results. 4. Since 2014 population coverage has been calculated to alert the user to where the data should be interpreted with caution due to low population coverage. 5. Prevalence thresholds for stunting (and wasting and overweight in children under 5 years have been redefined since 2018 by the WHO-Unicef TEAM.
Methodology	The joint global and regional estimates that make up the UNICEF/WHO/World Bank Group Joint Child Malnutrition Estimates have been generated using a country-level dataset which is mainly comprised of estimates from nationally representative household surveys (e.g. DHS, MICS, SMART). These data are collected infrequently (every 3 to 5 years in most countries) and measure malnutrition at one point in time (e.g. during one or several months of field work), giving an estimate of prevalence. These data are received and reviewed by UNICEF and WHO and checked for validity and consistency. The resulting raw data sets are analysed following a standard procedure to obtain comparable results.

Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	The values reported for this indicator are accompanied by lower and upper bounds for the 95% confidence interval. In 2019, these bounds were 19.7% and 22.8%, respectively. This means that the 2019 milestone of 20.8% falls comfortably within the confidence interval for the 2019 observation, i.e. that the milestone was met.
Full metadata available at this address	
Justification of the trend	As is often the case with international statistics, the more recent historical values are updated annually to reflect data that is reported with a delay and related corrections. Consequently, the entire time series has been updated to reflect the latest data available. Target for 2025: The EU committed to meet at least 10 % of the World Health Assembly's global target to reduce stunting of 70 million children by 2025, pledging to reduce this number by at least 7 million. The updates in global stunting rates come from the March 2020 JME Edition. The WHO updates stunting data on a regular basis. They do this to produce standardised estimates over time and to ensure comparability between countries. This has included reanalysis of data from previous years for all countries as well as the removal of some surveys, due to quality issues, alongside new surveys being identified and added. These updates have led to slight changes to in global data for these estimates each year. The new data represents the March 2020 updates. The next update for which global data will be available will be March 2021, even though a further update was made in July 2020 – for which global estimates were not made (only country estimates). The global progress on reducing the prevalence of child stunting obscures the disparities in countries that are performing well and those that are making negligible progress. For example, considerably more progress has been made in Asia compared to Africa.

## Specific Objective 2 :Consolidating and supporting democracy, the rule of law, good governance, human rights and the relevant principles of international law.

### Indicator 1:Average score in the Rule of law as measured by the World Bank's Worldwide Governance Indicator (DCI countries eligible for geographic cooperation)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2008	Milestones									2020

	Actual Progress									Final
	-0,74	-0,75	-0,77	-0,77	-0,78	-0,77				

Are we on track	On track
Indicator type	Impact
Unit of measurement	Number of standard deviations relative to mean for standard normal distribution
Cut-Off Date	31/12/2020
Data source	<a href="https://info.worldbank.org/governance/wgi/">https://info.worldbank.org/governance/wgi/</a>
Narrative	The Rule of Law indicator is one of the six aggregate indicators of the World Bank Worldwide Governance Indicators (WGI). It captures perceptions of the extent to which agents (i.e. firms, individuals and public officials) have confidence in and abide by the rules of society, and in particular the quality of contract enforcement, property rights, the police, the courts, as well as the likelihood of crime and violence. Consolidated figure for the 29 DCI countries. The 2020 value was computed with data from 2019 (data extracted in January 2021). World Bank's Worldwide Governance Indicator currently covers the period 1996-2017. The dedicated webpages of the World Bank provide information about the methodology used for the World Bank WGIs ( <a href="http://info.worldbank.org/governance/wgi/index.aspx#doc">http://info.worldbank.org/governance/wgi/index.aspx#doc</a> ) and updated annually Country Data Reports ( <a href="http://info.worldbank.org/governance/wgi/index.aspx#countryReports">http://info.worldbank.org/governance/wgi/index.aspx#countryReports</a> ).
Methodology	<a href="https://info.worldbank.org/governance/wgi/Home/Documents">https://info.worldbank.org/governance/wgi/Home/Documents</a> <a href="https://europa.eu/capacity4dev/sites/default/files/4_final_rol_feb_2015.doc">https://europa.eu/capacity4dev/sites/default/files/4_final_rol_feb_2015.doc</a>
Link MFF 14-20 / MFF 21-27	This indicator will continue to be used to monitor the 2021-2027 MFF, using the following name: Rule of Law score in relation to countries benefiting from EU assistance.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	DG DEVCO monitors information for the countries available for DCI geographic funding under the Multi Financial Framework 2014-2020 (29 countries). The data shows the average index score for these countries. The index ranges from -2.5 (worst possible score) to +2.5 (best possible score) where '0' means average score (across all the countries where the index is measured).

### Indicator 2: Number of projects funded from the DCI to promote democracy, the rule of law, good governance and respect for human rights in the DCI beneficiary countries

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Narrative									
Methodology	In 2020, the same DAC sectors as in 2019 were applied: 15110, 15111, 15112, 15113, 15114, 15130, 15150, 15151, 15152, 15153, 15160, 15170, 15180. In 2019, we used the same methodology of 2017 and 2018, using the same DAC sectors: 15110, 15111, 15112, 15113, 15114, 15130, 15150, 15151, 15152, 15153, 15160, 15170, 15180 to cover a broader range of sectors included in the indicator under 'democracy, the rule of law, good governance and respect for human rights': 352 contracts. In 2018, we used the same methodology of 2016 and 2017, using the same DAC sectors: 15110, 15111, 15112, 15113, 15114, 15130, 15150, 15151, 15152, 15153, 15160, 15170, 15180 to cover a broader range of sectors included in the indicator under 'democracy, the rule of law, good governance and respect for human rights': 76 contracts.								
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.								
Other methodological comments	In 2017, we used the same methodology of 2016, using the following DAC sectors: 15110, 15111, 15112, 15113, 15114, 15130, 15150, 15151, 15152, 15153, 15160, 15170, 15180 to cover a broader range of sectors included in the indicator under 'democracy, the rule of law, good governance and respect for human rights': 391 contracts. In 2016, using the following DAC sectors: 15110, 15111, 15112, 15113, 15114, 15130, 15150, 15151, 15152, 15153, 15160, 15170, 15180 to cover a broader range of sectors included in the indicator under 'democracy, the rule of law, good governance and respect for human rights': 310 contracts. In 2015: 84 contracts were signed in total under the DCI, with the following detail: Democracy: 17 contracts; Democratic participation and civil society DAC 15150: 170 projects (8+24); Anti-corruption DAC 15113: 5 contracts; Justice DAC 15130: 17 contracts; HR: 21 contracts. Baseline is an average of 2010-2012.								
Full metadata available at this address									
Justification of the trend	The decrease in the number of projects is likely due to the fact that 2020 is the end of the 2014-2020 financial cycle, with a decrease in the availability of funds.								

### Indicator 3:SDG 5.5.1 Proportion of seats held by women in national parliaments

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2011	Milestones									2020

Indicator type	Impact								
Unit of measurement	Seats in parliament								
Cut-Off Date	31/12/2020								
Data source	Inter Parliamentary Union (IPU) <a href="https://data.ipu.org/women-ranking?month=1&amp;year=2021">https://data.ipu.org/women-ranking?month=1&amp;year=2021</a>								
Narrative									
Methodology	Seats in lower or single house of parliaments of sovereign states, excluding IPA countries. On the basis of the data provided by IPU, the average is done calculating the proportion of seats held by women in national parliaments (lower or single house parliament) as compared to the total number of seats available in national parliaments (lower or single house parliament), for DCI excluding IPA countries.								
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.								
Other methodological comments	Baseline: 18.2% excluding IPA countries.								
Full metadata available at this address									
Justification of the trend	Women face several obstacles to participating in political life. Structural barriers as well as deep-rooted social norms still limit women's option to run for office. The domestic burden that falls in majority under women's responsibility also impede them to take-up participation in political life. Furthermore, capacity gaps and the lack of role-models mean women are less likely than men to have the education, contacts and resources needed to become effective leaders. Political women also suffer more than men from harassment online and offline, deterring women from taking such responsibly. The EU supports activities to overcome these barriers and promote the democratic participation of women and men in the political decision-making process. This support is reiterated in the GAP III joint communication and staff working document, adopted on 25 November 2020.								

### Previous Program 6 : European Fund for Sustainable Development (EFSD)

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

#### **6.1.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
3 618,0	3 758,0	3 589,0	3 411,0	3 225,0	3 031,0	3 173,0	23 805,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.1.2. Explanation and justification on the financial contribution**

For the period 2021-2027, as at this stage the programming is not advanced yet, the estimated amounts for the NDICI contribution to climate objectives are based on the climate spending target of the NDICI (30% of the NDICI total envelope).

For the period 2014-2020, as the delivery of EU climate objectives requires significant investment, the EU agreed that at least 20 % of the EU budget in 2014-2020 should be climate-related. The EU's financial objective is currently being met for INTPA managed funds, but contributions needed to be maintained during 2020 to secure it, while results will be available in July 2021.

The climate change related aid under DCI in 2014-2020 was EUR 5,230 million EUR, while under EIDHR the contribution to climate action represented EUR 40 million over the same period. Under EFSD, the climate related contribution in 2014-2020 was EUR 136.7 million.

Under ENI, in the period 2014-2020, EUR 2,081.7 million (12.1 % of ENI operational commitments) were allocated to actions directly contributed to climate change action, mitigation and/or adaptation.

Under IcSP, EUR 67.21 million were allocated to actions directly contributed to climate change action, mitigation and/or adaptation during the period 2014-2020

Under PI during the period 2014-2020, EUR 239.62 million were allocated to actions directly addressing climate change.

#### **6.1.3. Key achievements**

The programme Making Cities Sustainable and Resilient, which was jointly implemented by UN-Habitat and United Nations Office for Disaster Risk Reduction (UNDRR), was concluded successfully developing a strong and well-structured methodology for urban resilience. UN-Habitat developed an integrated City Resilience Profiling Programme methodology, hereinafter called "CRGP methodology" which was developed in collaboration with the city of Barcelona. The CRGP methodology was continuously developed in parallel with its implementation in the four pilot cities: Maputo, Asuncion, Port Vila and Dakar. In each of the cities, data was collected and analysed, producing a diagnosis and delivering recommendations for action. With regards to the UNDRR component of the programme, a total of 1,826 cities and local governments joined the Making Cities Resilient (MCR) Campaign and endorsed the "10 Essentials". Capacities of local governments were strengthened in disaster resilience self-assessment and Disaster Risk Reduction (DRR) action planning in more cities than anticipated: 214 cities completed the self-assessment reports and 23 local governments developed climate and disaster risk reduction action plans and many initiated implementation.

The ACP-EU Natural Disaster Risk Reduction (ACP-EU NDRR) programme aims to strengthen governments' capacities to integrate disaster risk management into their development agendas. In 2020 it expanded its portfolio adding 17 new projects for a total of 147 projects benefiting over 70 countries since its inception in 2011. At the end of 2020 the programme had 31 active projects in Sub-Sahara Africa, 18 active projects in the Caribbean, and 10 active projects in the Pacific. Only in 2020, 36 new knowledge products were produced, 11 early warning systems were strengthened and eight financial protection mechanisms against disasters, including reserves, contingency funds or risk transfer were improved.

The World Bank (WB)/Global Facility for Disaster Reduction and Recovery (GFDRR) - EU Global Partnership on Disaster Risk Financing Analytics Project, was also finalized in 2020 after having completed most of the envisaged activities with the objective to improve the understanding and to increase capacity of governments to take informed decisions on Disaster Risk Financing (DRF) based on sound financial analysis. As an example, in the Philippines, a financial disaster risk assessment was completed which led to the formulation of policy options for DRF and to the preparation of customised country analytic tools. A customised analytics tool was developed and delivered to the government of the Philippines. This work directly supported the placement of a \$206 million catastrophe risk insurance program in July 2017, as well as a renewal of the program for a \$390 million coverage in December 2018. A second tool was developed to address needs for broader and more comprehensive risk financing strategies at both state and provincial levels, as well as at city level for the most exposed ones. The contribution of the DRF Analytics project proved critical in guiding the Philippine government's high-level decision on risk financing layers, instruments and coverage. It is also informing the preparation of a new national indemnity insurance program, providing protection to critical infrastructure assets

(final selection to be completed, but likely to include schools, hospitals, and roads), which will be placed on international insurance markets in 2021.

The Technical Assistance Project on Capacity Building for CO<sub>2</sub> mitigation from international aviation was implemented by the International Civil Aviation Organization (ICAO). It assisted 14 selected countries from Sub-Saharan Africa and the Caribbean to develop and implement their State Action Plan on emissions reduction and to establish aviation environmental systems for CO<sub>2</sub> emissions monitoring and reporting. The 14 selected States have developed Action Plans fully compliant with ICAO's guidelines including robust historical data and reliable base scenarios. Following the success of this project, the EU launched the second phase. The 2<sup>nd</sup> phase is implemented by the European Aviation Safety Agency (EASA) and ICAO.

Following a successful phase I, Local Climate Adaptive Living Facility (LoCAL), now active in 14 countries (Bangladesh, Benin, Bhutan, Cambodia, The Gambia, Ghana, Lao PDR, Lesotho, Mali, Mozambique, Nepal, Niger, Tanzania and Tuvalu), has received support for a new period of four years. LoCAL helps local governments to address climate change adaptation. LoCAL deployed country-based mechanisms to integrate climate change adaptation into local governments' planning and contributed to channelling climate finance to over 240 local governments representing 6 million people. The LoCAL facility was specifically designed to work with – and complement – the climate adaptation programmes of other governments and donor partners. The grants have enabled local governments to tackle the effects of climate change – such as changing rainfall patterns and downstream run off as a result of it.

The EU supported its partners' in implementing their Nationally Determined Contributions (NDCs) through existing programmes such as the Global Climate Change Alliance+ (GCCA+). Adaptation is the climate top priority for most developing countries, in particular for the Small Island Developing States (SIDS) and the Least Developed Countries (LDCs). In this regard, the Global Climate Change Alliance (GCCA+) EU flagship initiative has continued to focus on SIDS and LDCs as priority beneficiaries. It has also contributed to setting up monitoring and evaluation systems for climate change mitigation, supporting national deforestation and forest degradation programmes as well as creating carbon sinks through reforestation, afforestation and rehabilitation of vegetation, as well as building coastal resilience through natural adaptation solutions. The GCCA+ has funded over 80 national, regional and worldwide projects in Africa, Asia, the Caribbean and the Pacific. So far, the results of these projects include significant contributions to more than 80 national climate change strategies, more than 40 awareness campaigns in over 60 countries, and more than 30 United Nations Framework Convention on Climate Change related strategies and programmes.

The operationalisation of the intra-ACP<sup>35</sup> component of the GCCA+ was completed in 2020. All ten regional programmes were up and running by the end of the year. Activities include: building ACP organisations' operational and institutional capacity in international climate negotiations and in the implementation of the Paris Agreement (including its Nationally Determined Contributions); establishing and implementing regional and national climate change strategies; implementing pilot adaptation projects; improving the service quality of the institutions operating in capacity building, research and innovation in sectors related to mitigation and adaptation to climate change.

Under the European Neighbourhood Instrument (ENI), bilateral and regional projects have been targeting climate adaptation and mitigation. For example, EU for Climate Action in the Southern Neighbourhood, known as Clima MED (2018 – 2025) provides technical assistance to support the transition of Southern Neighbourhood countries towards sustainable, low-carbon and climate-resilient development. By 2020, the project has reached 9 million people in 8 countries through the development and implementation of Sustainable Energy and Climate Action Plan (SECAPs). 6 Communication campaigns have been held. 138 cities were trained and benefitted from help desk on Covenant of Mayors. 420 cities' staff trained on developing sustainable local actions. Another example is the EU4Climate project which supports the development and implementation of climate policies by the Eastern Partnership countries in line with the Paris Agreement, EU acquis and European best practice. The programme supported the finalisation of the updated National Determined Contribution (NDC) for Moldova, with the other countries in the region on track to deliver updated NDCs in 2021. In addition, gap analyses of the national legislation against the EU acquis were developed in all six countries, and Azerbaijan developed a roadmap for Low Emission Development Strategy 2050 development. Work on these components is ongoing in all partner countries, as is support on MRV systems, climate mainstreaming, climate investment, and adaptation.

#### 6.1.4. Performance

In December 2018 the EU joined the InsuResilience Global Partnership as a core member. Launched in 2017 as a joint G7, G20 and V20 (48) initiative, this aims to strengthen the resilience of developing countries to natural disasters and complement ongoing efforts to avert, minimise and address climate risks. Other regional actions on land restoration and sustainable use (e.g. the Great Green Wall initiative and REDD+ (49) actions) contribute to climate change adaptation and mitigation efforts worldwide.

The EU supports climate change action through both dedicated (thematic) actions and through mainstreaming of climate change into other sectors. On the DCI Annual Action Program (AAP) 2020, a new Decision was adopted for an EU NDC technical Facility (EUR 14 million) and a new Mainstreaming Facility (EUR 2 million) to support the new Programming phase to implement the

<sup>35</sup> African, Caribbean and Pacific States

external dimension of the Green Deal. They will focus on climate neutrality, and adaptation strategies via NDCs update and implementation, on sustainable greening of the cooperation whatever the financing modalities, and on the inclusion of DRR. These two technical facilities will start in 2021 for the period 2021-2026.

In 2020, the EU fulfilled its pledge to provide a EUR 10 million financial contribution to the Adaptation Fund – one of the international climate funds established under the United Nations Framework Convention on Climate Change (UNFCCC), thus contributing to the global efforts to address climate change in the most vulnerable countries of the world. The contribution will be channelled through the Innovation Small Grant Aggregator Platform programme.

In 2020 the EU adopted a new EUR 100 million Disaster Risk Reduction (DRR) programme to be funded under the EDF. The programme aims to contribute to reduce the impact of disasters, including those related to climate change and biological hazards, and increase resilience in ACP countries. The Intra-ACP Climate Services programme began implementation in Southern, Eastern and Western Africa, and at global level through contributions agreements with the EC's Joint Research Centre (JRC) and the World Meteorological Organisation (WMO) in 2020. Agreements to implement the programme in the Indian Ocean, the Caribbean, the Pacific, Central Africa and at Africa level were about to be signed at the end of 2020 or beginning of 2021.

In 2020 the GCCA+ joined forces together with DeSIRA (Development-smart Innovation through Research in Agriculture) initiative to support actions that jointly address climate change adaptation and mitigation, sustainable agriculture and food security issues. Under this new adopted 87,9 MEUR joint initiative 16 projects in the area of climate-relevant innovations in specific crops, agro-ecosystems and value chains will be supported (Brazil, Cameroon, Colombia, Costa Rica, Democratic Republic of Congo, Ethiopia, Madagascar, Mongolia, Nepal, Nigeria, regional Centroamerica or 5 Great Forest Mesoamerica, Uzbekistan, Uganda, Vietnam, Zambia, Zimbabwe). By December 2020, the GCCA+ programmes adopted in 2019 for Suriname, Rwanda, Timor-Leste, Cuba and Tchad started their implementation. In December 2020, the GCCA+ also launched a last adaptation-focused regional programme in Africa in cooperation with the Africa Union Commission.

Under ENI, the EU supports climate change action through both dedicated (thematic) actions and through mainstreaming of climate change into other sectors. The figures show that between 2014 and 2020 ENI climate related expenditure has been regularly increasing from 8% to more than 23%.

The Partnership Instrument also addressed climate change. For example, the action “Support to the Implementation of the Paris Agreement (SPIPA) with major economies” aims at supporting and encouraging partner countries to successfully execute their climate change mitigation and adaptation policies. The aim is to reduce their greenhouse gas emissions, adapting to the effects of climate change, and thus ultimately contributing to the long-term targets laid out in the Paris Agreement through their nationally determined contribution (NDC).

## 6.2. Contribution to biodiversity mainstreaming

### 6.2.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
723,7	814,2	837,4	852,8	913,9	1 010,2	1 057,5	6 209,7

(\*Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.2.2. Explanation and justification on the financial contribution

The amounts in the above table, representing the estimated NDICI contribution to biodiversity, are calculated by applying an increasing yearly percentage to the yearly NDICI total amounts, starting from 6% in 2021, 6,5% in 2022, 7% in 2023, 7,5% in 2024, 8,5% in 2025 to 10% in 2026 and 2027.

As the delivery of EU biodiversity objectives requires significant investment, the EU agreed that, out of the EU's 2021-2027 budget, at least 7.5 % in 2024 and 10 % in 2026 and 2027 should be biodiversity-related.

For the period 2014-2020, the DCI contribution to biodiversity objectives was EUR 1,370 million.

Under PI during the period 2014-2020, EUR 82.37 million were allocated to actions contributing to biodiversity.

Under ENI, in the period 2014-2020, EUR 453.0 million (2.6 % of ENI operational commitments) were allocated to actions contributing to biodiversity mainstreaming.

The impact of all development programs on biodiversity is mainstreamed by a formal procedure agreed with OECD (DAC Codes). Through the DCI, the B4Life Flagship project contributed to integrating the conservation of biodiversity and ecosystems in

development strategies and poverty eradication. The EU external budget also mobilised substantial funds for combatting forest and wildlife crime, including to build national capacities of police, justice and customs authorities (through Interpol and the UN Organisation for Drugs and Crime) and to combat poaching and trafficking on the ground through civil society organisations in Africa (Congo Basin, Liberia, Kenya), Latin America (Peru, Ecuador, Bolivia, Colombia, Brazil) and Southeast Asia (Mekong region).

With the 2021-2027 MFF, to meet the target, biodiversity will be mainstreamed through all relevant interventions using all the available toolbox, from capacity building measures, investments, to Budget Support. In addition, specific programmes will be developed targeting biodiversity loss. For example in 2021, the preparation of new programmes under the NaturAfrica initiative will start, comprising Team Europe initiatives at country and multi-country level. They will promote a holistic approach to nature conservation, boosting job opportunities in the green sector/tourism and tackling illegal exploitation of natural resources and biodiversity loss. Forests protection and preservation should receive particular attention.

The Green Deal, EU Biodiversity Strategy 2030 and the related ambitions for the post 2020 global biodiversity framework provide further orientations regarding biodiversity financing and resource mobilization. The Union will continue to support the protection of biodiversity by implementing the objectives of the EU Biodiversity Strategy to 2030. The Commission tracks how much is spent on these objectives to ensure that spending has the desired positive outcomes for biodiversity and our society. As a party to the Convention on Biological Diversity and to OECD, the EU reports on its domestic and international biodiversity-related financial flows. The Commission will assess and possibly revise its biodiversity tracking methodology to adapt it to new MFF and other relevant developments.

Under the European Neighbourhood Instrument (ENI), bilateral and regional projects have been targeting biodiversity. In the Southern neighbourhood, Regional programs contributed to the implementation of the Barcelona Convention by acting either on the reason of the biodiversity loss or on the preservation of endangered ecosystems. For example, the IMAP-MPA project (Towards achieving the Good Environmental Status of the Mediterranean sea and coast through an ecologically representative and efficiently managed and monitored Marine Protected Area) has strengthened and further developed the Marine Protected Areas (MPA) network. The WES project (Water and Environment Support) has provided technical assistance and trainings on depollution of the Mediterranean Sea, on plastics in particular.

In the Eastern neighbourhood, the EU4Environment project has supported six Eastern partner countries (EaP) - Armenia, Azerbaijan, Belarus, Georgia, the Republic of Moldova and Ukraine – to preserve their natural capital and increase people's environmental well-being by supporting environment-related action, demonstrating and unlocking opportunities for greener growth, and setting mechanisms to better manage environmental risks and impacts. In 2020 an online self-assessment tool for greening SMEs in the Republic of Moldova has been set up. The online tool helps SMEs to assess their environmental performance and opens up ways for receiving further support to improve their environmental performance either by in-person advisory or financial resources from various sources.

### 6.2.3. Key achievements

For the period 2014-2020, the Partnership for Action on Green Economy supported twenty partner countries to contribute to 79 green economic policies and practices through knowledge development, policy dialogue and technical cooperation. Over the same period, seven African countries were support through SWITCH Africa Green towards green business development with projects combining policy and regulatory guidance on partnerships with the private sector, in particular Small-and-Medium-Sized Enterprises.

With the overall objective of tackling illegal timber harvesting and trade, the Forest Law Enforcement, Governance and Trade (FLEGT) has helped improve forest policies and regulatory framework enabling better sustainable forest management and preservation of forest in some 20 partner countries. In these countries, the FLEGT process has facilitated the implementation of Reducing Emissions from Deforestation and Forest Degradation + (REDD+) strategy and contributed to the Nationally Determined Contributions (NDC).

The Commission is a proud and early supporter of the African-led Great Green Wall initiative, to which the EU budget contributed through a few dedicated programmes. The most ambitious EU contribution has been so far delivered through the Regreening Africa programme. Together with partner organisations, the EU has set an ambitious target of scaling-up of evergreen agriculture/agroforestry/farmer-managed natural regeneration techniques over at least 1 million hectares in eight African countries, while contributing to climate action, providing livelihood opportunities for more than 500,000 households and informing policy-makers. The project is midway into implementation and has already contributed to the restoration of more than 400,000 hectares in the eight participating countries.

Between 2016 and 2020, the ACEWATER II project addressed research, data-sharing, technology transfer and human capacity development challenges for junior and senior water professionals in thirteen countries in Central-East, West, and Southern Africa. Twenty centres were created benefiting 1,200 students at Master's and technical levels through tailored courses (e.g. water quality, water supply, IWRM, groundwater). Furthermore, the UNECE Water Convention supporting transboundary water cooperation has

strengthened water governance, transboundary, and regional cooperation since its entry into force in 1996. More than 90 bilateral and basin agreements and arrangements for transboundary water cooperation have been made. Since the Water Convention's global opening in 2016, Chad, Senegal and Ghana acceded the convention. Accession to the Water Convention by Chad and Senegal in 2018 increased inter-ministerial cooperation and has reduced conflict in the countries' basins through further transboundary cooperation. Twenty-three additional partner countries have been involved in the process since then.

#### 6.2.4. Performance

The EU Biodiversity Strategy (2020) further reaffirms the importance of biodiversity financing. The EU ambition on biodiversity is in line with international biodiversity policy. The global Strategic Plan for Biodiversity (2011-2020), the Aichi Biodiversity Targets and subsequent decisions adopted by the Conference of the Parties of the Convention on Biological Diversity call for Parties to CBD to report domestic and international biodiversity expenditures, funding needs, gaps and priorities, prepare national financial plans for biodiversity, and mobilize financial resources from all sources to reduce the gap between identified needs and available resources at domestic level.

The EU supports biodiversity through both dedicated actions and by mainstreaming sustainable natural resource management and biodiversity protection/conservation in other sector.

### 6.3. Contribution to clean air financing

Not applicable

### 6.4. Contribution to gender equality

#### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming					Total	
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.4.2. Key achievements and performance

##### Contribution

The challenges to gender equality are as varied as the contexts in which they emerge and call for context specific responses. There is, however, not a single country in the world that is close to achieving by 2030 gender equality and empowerment of all women and girls. Some progress has been achieved, but deep-rooted inequalities persist, including on basic access to health, education and jobs, but also with regards to widespread gender-based violence everywhere in the world. In many places, women's and girls' rights are called into question and often denied. Instability, fragility, conflict, climate change, environmental degradation, migration, forced displacement and lately the COVID-19 pandemic are among the critical factors exacerbating inequalities and threatening hard-won gains. Civil society organisations, including women's rights organisations, are facing shrinking civil, civic and democratic space.

The EU is a global front-runner in promoting gender equality as a key political objective of its external action and common foreign and security policy, aimed at accelerating progress towards global goals including the Sustainable Development Goals (SDG) at the core of the 2030 Agenda.

The EU pursues a three-pronged approach, combining gender mainstreaming, targeted actions and political dialogue. Article 8 of the NDICI stipulates that programmes and actions funded under this Regulation shall promote gender equality, women's and girls' rights and empowerment and non-discrimination on any grounds, through targeted and mainstreamed actions.

At least 85 % of new actions implemented under this Regulation, should have gender equality as a principal or a significant objective, as defined by the gender equality policy marker of the OECD DAC. At least 5% of these actions should have gender equality and women's and girls' rights and empowerment as a principal objective. On 25 November 2020, the Gender Action Plan III (2021-2025) was adopted containing the same objectives.

Three objectives of the GAP III are included in this programme statement: 1) the number of projects funded with the OECD DAC marker G1 and G2 (targets: 85% and 5% respectively), 2) the total amount of funding of projects with OECD markers G1 and G2 (target: increasing), 3) the amount of funding directed towards women's rights organisations and movements (target: increasing)<sup>36</sup> (OECD DAC code 15170).

#### Number of G1 and G2 actions

<sup>36</sup> OECD DAC code 15170

Actual	DB	Estimates					Total
2021	2022	2023	2024	2025	2026	2027	N of actions  85% G1+G2

12mio EUR <sup>40</sup>	Increase						

**6.4.2. Key achievements and performance**

The Gender Action Plan II (2016-2020) had its last year of implementation in 2020.

Progress continued towards the GAP II's target of ensuring that, by 2020, 85% of new programmes promote gender equality as a significant or principal objective (marked respectively as 'G1' or 'G2')<sup>3</sup>. In 2019, 64.71% of the Commission's new programmes were marked 'G1' or 'G2.' It is estimated that a budget of EUR 8.7 billion worth of development funding supported gender equality and women's empowerment in 2019 (or 56.95% of total funding). Funding that specifically targets gender equality and women's empowerment (i.e. 'G2') amounted to EUR 643 million (4.21% of the total). The amount of funds committed that specifically target gender equality has increased every year since 2016, as has the proportion of these funds within overall development funding.

Notwithstanding progress, these figures show the need to renew efforts in the context of the new EU Gender Action Plan III (2021-2025).

The GAP II contributed to progress towards achieving the Sustainable Development Goals. Indeed, progress towards the realisation of gender equality and the empowerment of all women and girls (SDG 5) contributes to the achievement of all SDGs.

Close to 3,500 dialogue events with partner countries were reported in 2019 on topics related to gender equality. Most of these were sectoral dialogues. Women's human rights and democracy, sexual and reproductive health and rights, decent work and employment, and education were the issues most frequently discussed during such sectoral dialogues. Overall, collaboration between EU institutions and Member States' authorities increased in 2019. New donor coordination mechanisms on gender equality issues were established, 58 of which are led by EU Delegations

Due attention is paid to combating gender-based violence and promoting the participation of women in peace-building. In this regard, key priority is given to ensuring that all actions contribute to delivering on EU commitments on Women, Peace and Security (WPS) based on the Comprehensive EU Approach to the Implementation of UNSCR 1325 and 1820 on WPS (2008) and

<sup>37</sup> Situation end of 2019

<sup>38</sup> Situation end of 2019

<sup>39</sup> Situation end of 2019

<sup>40</sup> 2020 baseline is EUR 11.669.400 paid to NGOs with DAC sector code 15170.

the EU Strategic Approach to Women, Peace and Security (15086/18) adopted by the Council in December 2018. The Instrument contributing to Stability and Peace (IcSP), as one of the prime EU external instruments when it comes to rapid crisis response and conflict prevention, has been increasingly mobilized to promote Women, Peace and Security. In 2019, around 70% of new IcSP interventions have gender equality and the participation of women in peace processes either as their main objective or as a significant component. This represents an engagement of close to € 100 million.

#### Some concrete examples:

Programmes that focus on **preventing and responding to violence against women and girls** continued to be one of the principal objectives. The Spotlight Initiative, the biggest ever global effort to eliminate violence against women and girls created in September 2017, was up and running in 26 countries and 6 regions by the end of 2020 and the full amount of EUR 497 million committed. In the light of upsurge in domestic violence against women and children triggered by the COVID-19 crisis, the Commission has through the EU-UN Spotlight Initiative redirected over EUR 20 million to boost prevention, increase support for victims, as well as support for women's grassroots organisations providing essential services.

In the Neighbourhood Southern region, collaboration with the League of Arab States (El-Hiwar Programme) and the Union for the Mediterranean targeted the implementation of UNSCR 1325 in the Southern Neighbourhood, alongside the potential development of a regional WPS action plan. The EU-CoE joint programme has supported gender responsive capacity building of legal professionals, state bodies and civil society on the Istanbul Convention. The EU supported a project on 'Strengthening access to protection, participation and services for women refugees, internally displaced people and women in the host communities', in the framework of the EU Regional Trust Fund in Response to the Syrian Crisis, the 'Madad Fund'.

Regarding programmes focusing on **women's economic empowerment**, support has been given to the empowerment of young women and men by investing in inclusive education, gender sensitive vocational education and training (VET) programmes with a pilot project in Libya. In the Eastern Neighbourhood region the programme EU4Gender Equality – Together against gender stereotypes and gender-based violence aims to strengthen equal rights and opportunities for women and men by shifting social perceptions, challenging gender stereotypes and championing men's participation in care work. In Azerbaijan, work was done to tackle trafficking and strengthen the national referral mechanism.

Gender aspects continued to be strategically mainstreamed throughout all EU actions in PNG and is a focal element of the largest project (EUR 85 million) we have in country on the Support to Rural Entrepreneurship Investment and Trade (STREIT); women and youth receive dedicated attention to empower them and ensure that they can become active "agripreneurs".

In addition, the actions "Win-Win: Gender Equality Means Good Business in Latin America", "We Empower in G7", and "We Empower Asia" (under the Partnership Instrument) engage private sector companies, women business networks, women entrepreneurs to foster women's economic empowerment and exchange good practices with a view to reduce inequalities and strengthen economic and societal resilience. The projects focuses amongst others on specific government practices such as gender-sensitive public procurement or capacity building for women entrepreneurship. These actions enabled the EU to engage with Asian and Latin American networks of women entrepreneurs, public institutions, and the private sector to ensure the full implementation of the WEPs (example of Chili in the energy sector to promote gender equality in companies). The programme also allowed to keep gender equality on multilateral agenda sustain the efforts of 15 G7-headquartered companies to promote women's economic empowerment through the creation of the booklet on Women's Economic Empowerment through Responsible Business Conduct in G7 countries.

On **Women, Peace and Security**, following interventions can be singled out: (1) Support to women mediators which aims at strengthening the quality inclusion of women in peace and transition processes at all levels. The Action foresees mentorship for women leaders and mediators, networking, capacity-building as well as the provision of resources to allow the effective participation of women in peace process in the middle east and North African region. (2) Preventing Violent Extremism: Integrating a Gender Perspective, a partnership with UN Women with the aim to prevent violent extremism in Jordan, Pakistan and globally by strengthening capacities at the local level and building resilience, with a focus on the gender aspects of the threat and response.

## **6.5. Contribution to the sustainable development goals**

### **6.5.1. Goals**

Not applicable

### **6.5.2. Key achievements and performance**

#### **Introduction**

The UN Sustainable Development Goals (SDGs) are a central priority for the EU. Commission President von der Leyen reaffirmed the EU's commitment to sustainability by placing the SDGs squarely at the heart of EU policy-making and action. All of the

SDGs feature in one or more of the six headline ambitions in President von der Leyen's Political Guidelines. Among these, the European Green Deal is an ambitious new strategy for growth and will be an integral part of this Commission's strategy to implement the 2030 Agenda and SDGs, both at home and abroad.

In line with the new European Consensus for Development, the EU has continued to support the implementation of the 2030 Agenda, the Addis Ababa Action Agenda on financing for development and the Paris Agreement on Climate Change, both globally and with partner countries. Official development assistance (ODA), which still plays a significant role in many developing countries, will be used more catalytically to generate additional financing for sustainable development. The EU and its Member States are firmly committed to implementing the SDGs and to eradicating poverty.

While all Commissioners must ensure the delivery of the SDGs within their policy area pursuant to their mission letters, in the case of international partnerships there is an additional specific requirement to ensure that external finance contributes to the 2030 Agenda. SDGs play an important role in the NDICI, as well as in the EU's new partnerships with Africa, the Caribbean and the Pacific (the ACP countries). EU development cooperation pursues the eradication of poverty and fosters sustainable development in partner country, so by design it leads to international partnerships that contribute basically across all the SDGs. Furthermore, the Multilateralism Communication (adopted February 2021) presents a new strategy for a renewed rules-based multilateralism that also aims to have a more focused EU engagement in favour of 2030 Agenda and its SDGs.

The reporting systems for development cooperation require to report on the various relevant SDGs of each project. In this respect, as stated in the Consensus and more recently in the NDICI, development cooperation actions should pay particular attention to interlinkages between the SDGs and to integrated actions that can create co-benefits and meet multiple objectives in a coherent way. This is consistent with the objective stated in the Staff Working Document "Delivering on the UN's Sustainable Development Goals – A comprehensive approach"<sup>41</sup>, of capturing the transversal nature of the SDGs and the simultaneous contribution of most projects and programmes to different SDGs, in the light of interlinkages and co-benefits. This has to be taken into account in the following summary which is presented along individual SDGs for practical purposes, even though most projects and programmes have actually contributed to several SDGs at once.

For the Neighbourhood South region, the 2022 programmes are guided by the post-2020 policy framework outlined in the Joint Communication on "A new Agenda for the Mediterranean" of February 2021, aimed at relaunching cooperation in a context of protracted conflicts, generating human suffering and forced displacement, and weighting heavily on the economic and social prospects of the region. The key challenges identified under the previous MFF remain broadly relevant, and have been exacerbated by the COVID-19 crisis, which has severely disrupted socio-economic activity and aggravated structural grievances across the Southern Neighbourhood. Therefore, the proposed objectives build on the achievements of previous cooperation, and on the need to mitigate the long-term impact of the pandemic. The programme proposes a range of actions contributing to the following SDGs: affordable and clean energy (SDG 7); decent work and economic growth (SDG 8); industry, innovation and infrastructure (SDG 9); reduced inequalities (SDG 10); climate action (SDG 13); peace, justice and strong institutions (SDG 16); partnerships for the goals (SDG 17).

For the Neighbourhood East region, the 2022 programmes are guided by the post-2020 policy framework outlined in the Joint Communication on the "Eastern Partnership policy beyond 2020" of March 2020. The concrete priorities are a built on the EaP commitment "20 deliverables for 2020", and are based primarily on the Association Agendas and Partnership Priorities, while also taking into account the current post COVID-19 context. The programme has a strong focus on economic recovery, building sustainable, modern and attractive economies, and promoting long-term jobs and sustainable growth, connectivity, greening, digitalisation and health resilience. Targeted support contributes primarily to the achievement of the following SDGs: affordable and clean energy (SDG 7); decent work and economic growth (SDG 8); digital transformation (SDG 9); reduced inequalities (SDG 10); climate action (SDG 13); peace, justice and strong institutions (SDG 16).

### **SDG 1 No poverty**

The 2030 Agenda for Sustainable Development, with the 17 SDGs at its core, is the principal international blueprint for poverty eradication and sustainable development. Eradicating poverty in all its dimensions, tackling discrimination and inequalities and leaving no one behind are at the heart of the European Consensus on Development. Poverty is multidimensional and relates to economic, social, environmental, cultural and political aspects. Tackling the various dimensions of poverty requires actions on all fronts (including education, health, social protection, gender equality and strengthening resilience). The EU and Member States' actions under all SDGs contribute in some way to the core goal of eradicating poverty. Poverty eradication is the result of many interacting activities. This also means actions mentioned under most other SDGs (for instance in relation to access to social services and the promotion of growth) are designed to contribute across the board to this primary objective.

---

<sup>41</sup> SWD(2020) 400 of 18.11.2020.

Launched in January 2015 and co-financed by the European Commission, the OECD and the governments of Finland and Germany, the “EU Social Protection Systems Programme” is a four-year programme supporting 10 low- and middle-income partner country governments and national expert institutions in their efforts to develop comprehensive social protection systems comprising social assistance, social insurance, active labour market measures and access to essential social services and care. Partner countries include Cambodia, Ethiopia, Indonesia, Kyrgyz Republic, Mozambique, Namibia, Tanzania, Togo, Vietnam and Zambia. One of the aims of the programme is generating evidence-based knowledge, for future EU cooperation and for use by other development partners, on the effectiveness of social protection in reducing poverty (SDG 1) and vulnerability, addressing inequality (SDG 10) and promoting social cohesion.

To reduce poverty, the EU supports development of policies that seek to maximise positive social outcomes and impacts. In this context, EU actions supports national initiatives in partner countries for domestic resource mobilisation, which is key to ensuring long-term inclusive growth, sustainable development and the provision of social services.

The EU works to enhance social cohesion, to reduce inequality of outcomes and to promote equal opportunities for all, and has stepped up its efforts to mainstream the combat against inequality in its external action. EU actions in support of social protection systems, including minimum subsistence levels, are important to ensure that no one is left behind, as stated under SDG 1.3. Universal, sustainable and equitable social protection systems are fundamental to prevent and reduce poverty across the life cycle, including cash transfers for children, for mothers with new-borns, for persons with disabilities, for those who are poor or without jobs, and for older persons. In line with the NDICI and the European Consensus on Development, the EU has confirmed its commitment to allocating at least 20% of its official development assistance to social inclusion and human development.

In social protection, the EU supports bilateral social protection programmes financed through geographic funding allocations in 29 partner countries. Half of this EUR 1 billion investment is implemented through Budget Support (direct transfers of funds to partner country authorities); the other half follows a programme approach.

### **SDG 2 Zero hunger**

World hunger and food insecurity have again been on the rise in the past few years. According to the 2019 Global report on food crises, more than 113 million people across 53 countries experienced acute hunger requiring urgent food, nutrition and livelihoods assistance in 2018. SDG 2 is therefore one of the goals where trends deteriorated in recent years, which will be aggravated by the Covid-19 crisis.

The EU and its Member States remain strongly committed to achieving SDG 2 and therefore continued working with partners to collectively step up support to address hunger in all its forms, including by promoting sustainable and resilient agriculture. Agriculture and rural development can be powerful drivers of growth, job creation and poverty reduction and thereby contribute to other SDGs.

Support to sustainable agricultural growth includes initiatives focused on scaling up research and innovation in partner countries. The DeSIRA (development smart innovation through research in agriculture) initiative, launched at the One Planet Summit in December 2017, has brought fresh energy and momentum to the EU, its Member States and other partners, with stakeholders rallying around the benefits of enhancing climate-relevant research and innovation in agriculture. The EU has increased his efforts and helped energise support and action, by providing a platform and mobilising around EUR 95 million to build capacities for innovation at country, regional and global levels leading to rural and agriculture transformation.

EU actions also target problems of undernutrition, particularly in children aged under five, and their negative consequences on their cognitive, social and economic development. For instance, the Afikepo Nutrition programme in Malawi aims to enhance nutrition security in Malawi through increased and diversified dietary intake, nutrition education, good governance for optimal nutrition for women of childbearing age, adolescent girls, infants and young children.

### **SDG 3 Good health and well-being**

The central role of health has been put under the spotlight with the COVID-19 crisis, given the multiple impacts across economic and social aspects. At the same time, to ensure continued progress towards SDG 3, effective health policy and programmes require complementary work and progress in SDGs relevant to other sectors, such as SDG 2 (nutrition), SDG 4 (education), SDG 5 (gender equality and women’s empowerment) and SDG 10 (reducing inequalities). Good health is a global public good and an essential component of the human development of each country, and hence a co-determinant for its economic and social development.

EU assistance for health issues amounts to EUR 2.6 billion in the period 2014–2020. 50% is allocated to global initiatives, while the other 50% is implemented through bilateral and joint EU actions in 17 countries aimed at strengthening country health systems and supporting countries to reach their SDG 3 targets, including universal health coverage. The EU plays a significant role in shaping the international policy agenda through its contributions to global initiatives such as the Global Fund to Fight AIDS,

Tuberculosis and Malaria (GFATM); GAVI, the Vaccine Alliance; the Universal Health Coverage Partnership of the World Health Organisation (WHO); and the United Nations Population Fund (UNFPA). During 2019, the Commission pledged EUR 550 million to the Global Fund for the period 2020–2022.

The EU uses its Partnership Instrument (PI) to build alliances and partnerships across the world to build resilience against global health threats. EU initiatives to build resilience against global health threats have contributed to protecting millions of people in Latin America and will lead to significant cumulative savings for the economy. In particular, these actions strengthen the joint work of the World Health Organisation, the UN Food and Agriculture Organization, and the World Organisation for Animal Health to fight antimicrobial resistance, strengthen national action plans and promote a prudent use of antimicrobials in the food industry and the private sector in Latin America.

In 2020, three new PI actions in Latin America and in Asia, for a total of EUR 14 million, were programmed targeting the response to the COVID-19 crisis as main objective. These actions seek to explore avenues for enhanced cooperation with multilateral and bilateral partners in response to this common challenge. Eight new PI actions, for a total of EUR 36 million, address COVID as a significant objective. Furthermore, 59 existing actions, for a total of EUR 239 million have been re-oriented to take into account the COVID-19 crisis. These re-oriented actions address the adaptation to and mitigation of the pandemic and support the sharing of best practices, including on the socio-economic impact of the crisis.

The Supporting public health institutes programme (SPHIP) (2015–2020) strengthens institutes of public health in eight low-income countries so that they are better able to assist national authorities with evidence-based policy-making in key public health areas. In the SPHIP projects, knowledge translation influences public health policy development by guiding relevant health sector stakeholders on the use and communication of research data.

In addition, under IcSP Article 5, **Chemical, Biological, Radiological and Nuclear** (CBRN) actions are key in relation to SDG 3 “Ensure healthy lives and promote well-being for all at all ages”. Through the development of CBRN-related National Action Plans (NAPs), based on Needs Assessment Questionnaires (NAQs) and assessments of capabilities and risk, the CoE initiative continues to work towards the achievement of two key indicators for SDG 3: developing national capacities to assist in reducing the risks of illness and death from hazardous chemicals and air, water and soil pollution and contamination; and strengthening national capacities for early warning, risk reduction, and the management of national and global health risks.

#### **SDG 4 Quality education**

Access to quality education is an essential means of achieving sustainable growth and jobs: it helps citizens and professionals to grasp the opportunities created by digital technologies, strengthens societies’ resilience to emergencies and crises, and contributes to sustaining peace and preventing violent extremism. It has also a powerful role to play on climate change, environment and gender equality through skills building, awareness raising and strengthening resilience. The EU continued its proactive engagement towards achieving SDG 4, supporting around 100 countries and offering support to global education partnerships such as the Global Partnership for Education (GPE) and Education Cannot Wait (ECW).

The EU, together with its Member States, is the biggest contributor to GPE, which supports basic education, focusing on the poorest countries and/or those in fragile situations. For 2018–2020 an additional EUR 100 million was pledged, on top of the EUR 375 million for 2014–2018.

Through the Erasmus+ programme, the EU continued to help partner countries facilitate mobility of individuals, and reinforce intercultural dialogue and understanding. Between 2015 and 2019, under Erasmus+ mobility in higher education, more than 130 000 students and university staff moved between partner countries and Europe and vice versa.

The EU also contributes to the Building Resilience in Crises through Education (BRiCE) and Education Cannot Wait (ECW) initiatives. BRiCE supports access to quality education at preschool, primary and lower secondary levels for children in fragile and crisis-affected environments in several African countries, with EUR 24 million contributed for 2018–2021. ECW has enabled the provision of: (i) education to 1.5 million children and youth, half of whom are girls, in 19 crisis-affected countries; and (ii) training to more than 21 000 teachers. In addition, a specific mental health and psychosocial support for children in conflict has been incorporated into ECW-supported actions. The EU financial contribution for the period 2018-2021 amounts to EUR 21 million.

#### **SDG 5 Gender equality**

Gender equality and empowerment of women and girls are EU core values and principles embedded in its development and international partnerships policy.

Through the implementation of the GAP II, with its target of at least 85% of all new programmes promoting gender equality by 2020, the EU has substantially contributed to gender equality and women's empowerment in the 2030 Agenda.

The continuing implementation of the Spotlight Initiative, a transformative EU–UN partnership aiming to eliminate all forms of violence against women and girls worldwide, greatly contributed to this target. The partnership was launched in September 2017 with an initial investment of EUR 500 million and by 2019 EUR 460 million was committed to specific projects.

The Partnership Instrument continued to implement the EUR 22.5 million 'WeEmpower' programme to increase the public and private sectors' commitment to gender equality and to women's empowerment in the world of work at all levels. The joint work of the EU with UN Women and the International Labour Organization contributes to create sustainable, inclusive, and equitable global growth through increased women's economic empowerment and leadership. These actions enabled the EU to engage with Asian and Latin American networks of women entrepreneurs, public institutions, and the private sector to ensure the full implementation of the Women's Empowerment Principles. Under this initiative, in Chile the National Ministry of Energy launched the "Programa Energía + Mujer" and Plan of Action to promote gender equality in companies in the energy sector. The programme allowed to sustain the efforts of 15 companies to promote women's economic empowerment through the creation of the booklet on Women's Economic Empowerment through Responsible Business Conduct in G7 countries.

### **SDG 6 Clean water and sanitation**

The EU continues to support access to water and sanitation, sustainable and integrated water management and capacity building. The European Green Deal provides further impetus to maximise the impact of actions linked to water in EU external actions.

Despite recent progress, data suggests that achieving universal access to basic drinking water and sanitation services by 2030 will require doubling the current annual rate of progress.

Water is a resource under increased strain and the number of. In the case of Jordan, one of the most water-scarce countries globally, the deterioration of water services has fuelled tensions between host communities and Syrian refugees. The project "Improved access to (waste-) water services in Jordan for host communities and Syrian refugees" (2016-2020), implemented by Agence Française de Développement (AFD) with support worth EUR 21.5 million from the EU Regional Trust Fund in response to the Syrian crisis addresses this problem in Jordan's Irbid Governorate.

Transboundary water cooperation is increasingly vital to prevent conflicts and ensure effective and sustainable use and management of shared resources. However, cooperation in many water basins is inadequate to tackle the existing problems and challenges, including weak legal and/or institutional frameworks, insufficient implementation of joint policies and low capacity. The EU supports a range of actions on this matters and funds the action "Promoting accession to the Water Convention to strengthen transboundary water cooperation" to promote universalisation of the Water Convention.

Under the IcSP Article 5, CBRN actions contribute to the attainment of SDG 6 "Ensure availability and sustainable management of water and sanitation for all". Through the CoE initiative, partners are assisted in developing measures to ensure the elimination dumping and the minimal release of hazardous chemicals and materials, in order to improve water quality.

### **SDG 7 Affordable and clean energy**

Sustainable energy is key to achieving the 2030 Agenda and Paris Agreement targets and has a pivotal role in the European Consensus on Development and in the external dimension of the European Green Deal. The EU continues to support access to sustainable energy across the world as well as actions towards energy efficiency and decarbonisation of energy.

The EU's innovative financial tools to boost private sector investment in development cooperation are expanding. Eight guarantee instruments under the European Fund for Sustainable Development have been endorsed (totalling EUR 603.5 million), of which six focus on Africa. The Electrification Financing Initiative (ElectriFI) has grown rapidly and has a portfolio of 28 projects, expecting to give electricity to 10.6 million people and save 835 000 tonnes of CO2 emissions (equivalent to 180 000 cars driven for one year

The EU Partnership Instrument also contributes to achieving SDG 7 by promoting policy cooperation with countries of strategic interest to the EU, in particular the G20 countries. The EU Partnership Instrument continued its work on themes such promoting the development of renewable energy technologies and ensuring market access for EU companies, support to energy efficiency measures including business to business events to promote energy efficiency in industry and buildings, support to the global just energy transition and the development of flexible and fair liquefied natural gas (LNG) markets to contribute to the EU's energy security). Most of the 940 million people that lack access to electricity live in remote rural areas. Solar home systems (SHS) that are stand-alone photovoltaic systems offer a cost-effective way of supplying power to remote off-grid households. EU-funded

ElectriFI has invested EUR 4.5 million in PEG Africa, a SHS distributor in remote off-grid areas in Ghana, Côte d'Ivoire and Senegal.

In the Southern Neighbourhood, in line with the external dimension of the “Green Deal” and the priorities of energy efficiency in the framework of the Union for the Mediterranean (UfM), the programme contributes to energy security, transition towards clean energy, promotion of energy efficiency in key sectors, and massive deployment of renewables in order to “green” the production mix and diversify energy sources.

In the Eastern Neighbourhood, the programme contributes to develop energy resilience, focusing in parallel to energy and climate policies. NDICI aims at reducing energy dependency through green finance, diversifying energy sources and routes, and securing supply by promoting energy efficiency and renewable energy. Investments in infrastructure for energy and transport interconnectivity between EaP countries and the EU also address infrastructure vulnerability to the impact of climate change, environmental challenges and hybrid threats.

### **SDG 8 Decent work and economic growth**

The EU supports SDG 8 by implementing ongoing actions and adopting several new actions funded by various financing instruments. The ‘Sustainable investment climate and value chains programme II’ (EUR 13.5 million) supports a number of global and European partnerships, platforms and programmes promoting key aspects of investment climate, trade and private sector development in the context of the 2030 Agenda, its SDGs and the EU’s EIP third pillar.

A EUR 5.5 million PI action started implementation in 2020 through an EU-UN partnership to promote the agenda on business and human rights and ensure that it is taken up further by Asian governments and business. To this end, the EU and United Nations Development Programme (UNDP) will jointly promote the implementation of the UN Guiding Principles on Business and Human Rights in Asia through national action plans, policy discussions and awareness raising programmes on Human Rights Due Diligence in six Asian countries. Partnerships and alliances across the world have continued to ensure the respect for workers’ rights and the environment. Ongoing Partnership Instrument projects include ‘Responsible Supply Chains in Asia,’ a EUR 9.5 million joint initiative (EU-ILO-OECD) to improve compliance with human rights, labour and environmental standards by businesses with supply chains in Asia, aligning their practices to international standards in six Asian countries. Another EUR 9.5 million project in Latin America and the Caribbean supports responsible business conduct in line with the UN, ILO and OECD instruments in nine countries. These actions encourage the uptake of the OECD’s Guidelines for Multinational Enterprises, the International Labour Organization (ILO) Tripartite Declaration, and the UN’s Guiding Principles on Business and Human Rights in Latin American and Asian supply chains. These actions contribute to strengthening the longstanding EU-UN partnership, thereby promoting multilateralism and to levelling the playing field for businesses that integrate human rights considerations into their operations and supply chains.

In 2019, a large-scale sector reform contract for employment and skills in Albania (EUR 29 million) was completed that initiated institutional and structural changes in the financing and governance of the labour market and VET systems, developed and implemented the Albanian Qualification Framework, modernised the legislative framework for initial VET and adult training, and supported turning EU occupational health and safety directives into national law. Albania established a National Agency for Employment and Skills and three multifunctional training centres. The National Employment Service was modernised and 36 labour offices were reorganised improving compliance with international labour standards and providing a broader range of employment promotion services.

In the Southern Neighbourhood, EU support aims at enhancing cooperation on youth, education, research and innovation; sharing EU experience in accompanying innovation efforts and supporting the development of Smart Specialisation Strategies; promoting cooperation on digital education; and developing skills strategies and labour market policies, as well as skills and capacity development.

In the Eastern Neighbourhood, the programme aims at achieving two key long-term EaP policy objectives beyond 2020: resilient, sustainable and integrated economies; and resilient, fair and inclusive societies. This entails increased trade and further regional and bilateral integration of the economies of EU and partner countries, together with cooperation for progressive decarbonisation towards climate neutrality, embracing the opportunities from the twin ecological and digital transformation. The programme supports structural reforms, access to finance, SME growth, investing in people - particularly the youth - and better connecting education, research and innovation with private sector needs.

### **SDG 9 Industry, innovation and infrastructure**

Connectivity plays a fundamental role in achieving the SDG targets. Digitalisation, a key part of connectivity, is essential in addressing inequalities and achieving sustainable development and is mentioned in several SDGs. However, digital transformation has the potential for positive impacts across the entire 2030 Agenda. To boost the implementation of the transport-related parts of

SDG 9, the EU continues to support strategic multimodal corridor development that builds on economic, social and environmental sustainability.

Digital transformation is at the heart of the Commission's agenda. The Commission has identified the digital sector as a target area for support under the External Investment Plan, focusing on innovation that addresses local social needs, financial inclusion and job creation. Three guarantees have been approved under the digital window (EUR 220 million), aiming to (i) increase the use of digital technologies, (ii) widen rural access to broadband and (iii) boost investment in innovative start-ups using digital solutions.

Mainstreaming the digital revolution throughout the energy industry will contribute to a more efficient energy sector and therefore to socioeconomic development and climate change mitigation. The overall objective of the Digital Energy Facility is to support energy sector modernisation and digitalisation, innovative business models and the long-term sustainability of energy systems. This can establish the necessary preconditions for increased access to energy and renewable energy development worldwide, with a specific focus on Africa. The Facility will be deployed under two contracts with EU contributions totalling EUR 23.5 million.

The Partnership Instrument is well aligned with the aims of this SDG and has been contributing to it both in the EU and in a number of partner countries in a variety of different ways through all its objectives. While innovation is mainstreamed through a number of Partnership Instrument actions across sectors and across the globe, an interesting example of promoting sustainable industrialisation is the low carbon business actions in Brazil and Mexico.

In the Southern Neighbourhood, NDICI interventions still aim at improving the investment environment, and promoting coordination with International Financial Institutions - namely European FIs - which have signalled important additional outreach in the South. The programmes co-finance investments funded in the context of the EFSD+; supports initiatives to assist partners in attracting and retaining opportunities in selected sectors; steps-up support to the green, blue and social economies through innovative financial vehicles, including impact finance; supports the implementation of SME policies; and assists the development of sustainable transport and tourism.

In the Eastern Neighbourhood, in line with the EaP policy objective beyond 2020 of a resilient digital transformation, the programme contributes to the achievement of strong interconnections between the EU and partner countries, and among partner countries themselves. This is an important driver for economic development, and encompasses regional integration, secure connectivity, trade and mobility. On transport, the programme supports the investments outlined in the Trans-European Transport Network (TEN-T) indicative investment action plan. This includes upgrading key physical infrastructure in road, rail, port, inland waterway and airport facilities, as well as logistics centres, primarily through blending and guarantees under the Neighbourhood Investment Platform.

## **SDG 10 Reduced inequalities**

SDG 10 calls for reducing inequalities within and between countries. The objective of addressing inequalities is also at the heart of EU development cooperation, as emphasised in the European Consensus on Development, and will help build more sustainable societies. In the past few years, the EU has increased efforts in ensuring that migration leads to inclusive growth and sustainable development, as set out in the Consensus document.

EU funding instruments have established a more structured way to cooperate with partner countries on migration, through the EU Emergency Trust Fund for Africa (EUTF), the EU Facility for Refugees in Turkey and the EU Trust Fund in Response to the Syrian Crisis. The EUTF further consolidated its achievements in partnership with EU Member States development cooperation agencies, UN organisations, NGOs and partner countries with the approval of an additional 36 programmes and 16 'top-ups' across its three regions for a total of EUR 851 million. This brings the total number of approved programmes to 223 with a total budget of EUR 4.4 billion since 2015.

"Bridging the gap" is a joint initiative of the EU and several Member States to increase the inclusion of people with disabilities. It delivers support to the Office of the United Nations High Commissioner for Human Rights to develop tools such as indicators, guidelines and data, to promote the rights, participation and inclusion of people with disabilities in implementing the 2030 Agenda. It also supports the governments and relevant organisations in five countries (Burkina Faso, Ecuador, Ethiopia, Paraguay and Sudan) to implement and monitor disability-inclusive policies in areas such as education, health, employment and social protection. 892 people in Sudan (60% women) have increased their access to the job market and are now employed, self-employed or in technical and vocational education and training. Over 1 500 people with disabilities in different districts in Ethiopia have access to basic services and 115 have been granted small loans to sustain their incomes.

In the Southern Neighbourhood, the programme enhances cooperation on migration on the basis of a comprehensive, balanced and mutually beneficial approach. NDICI interventions address the challenges of forced displacement and irregular migration; support partners' capacity to effectively manage their asylum systems and their capabilities to perform return operations; and support assisted voluntary return and reintegration.

In the Eastern Neighbourhood, the programme also addresses migration as a comprehensive and joint priority, continuing to support mobility in a secure and well-managed environment, and to ensure support to vulnerable migrants and refugees. Labour migration initiatives aim at establishing partnerships to foster legal migration and mobility, and enhancing cooperation and cross fertilisation of skills and competencies.

### **SDG 11 Sustainable cities and communities**

Urbanisation and the role of cities in the economy are increasingly shaping development challenges and opportunities in developing countries, so much so that local authorities are increasingly recognised as key actors in achieving most of the SDGs. With cities globally contributing 80% of GDP, 70% of global energy consumption and 70% of global carbon emissions and nearly one billion people living in slums, achieving the SDG 11 targets represents a major challenge.

The EU has put several instruments in place to support cities and sustainable urban development. In the context of the European External Investment plan, three guarantee programmes have been endorsed under the ‘Sustainable cities’ window. Through continued support to the PI-funded International Urban Cooperation (IUC) programme (EUR 30.2 million from 2015-2020), the EU brings together cities across the world, such as Aarhus (Denmark), Bologna (Italy), Udaipur (India) or Austin (USA), to craft urban development strategies that work for people and the planet. In 2020, the Partnership Instrument contracted the extension of the programme via two actions: (i) IURC (International Urban and Regional Cooperation) for EUR 12 million (over three years) and (ii) GCoM (Global Covenant of Mayors) for EUR 13 million (over four years) with joint funding from the Commission departments.

One billion people all over the world face the challenges of being excluded from modern society. Numbers of slum dwellers continue to grow and challenges faced by informal settlements remains a critical factor for persisting poverty and exclusion in the world. The Participatory Slum Upgrading programme (PSUP) is a joint effort of the ACP countries, the Commission and UN-Habitat to address the informal settlements challenge. So far, the programme has reached out to 40 ACP countries and 160 cities.

Following a call for proposals ‘Local authorities: partnerships for sustainable cities,’ 16 partnerships between local authorities from EU Member States and partner countries for a total of EUR 53 million have been signed in 2019 to strengthen urban governance, ensure social inclusiveness, improve resilience and greening and foster prosperity and innovation in cities.

Risk mitigation efforts developed through the CoE Initiative under IcSP Article 5, alongside disaster management planning, are actions which contribute directly to reducing the number of deaths and the number of people affected by disasters, including water-related disasters. Developing institutional capabilities and resilience to disasters, alongside integrated policies and plans related to CBRN management is of great importance in this area.

### **SDG 12 Responsible consumption and production**

The EU is committed to pursuing its international cooperation on sustainable consumption and production and the circular economy as an essential contribution to SDG 12. EU international cooperation on sustainable consumption and production and the circular economy focus mainly on developing policy and institutional frameworks in this area, promoting green business development in key value chains, and mobilising finance for the global circular economy transition.

Relevant indicative initiatives include engagement at multilateral level to encourage the use of standards and ensure a level-playing field for the private sector, financial and technical assistance and the circular economy missions to foster links between EU business and partner countries. The SWITCH to Green initiative is the EU’s flagship initiative on sustainable consumption and production and circular economy practices.

Lake Naivasha is the largest freshwater lake in Kenya’s Rift Valley: the hub of Kenya’s cut flower industry. The micro, small and medium enterprises (MSMEs) around the lake face a range of challenges including a dry climate, water shortages, limited access to markets and lack of entrepreneurial skills. To tackle these issues the EU contributed a EUR 1.38 million grant to the SWITCH Africa Green: green horticulture at Lake Naivasha Kenya (Goalan) project consortium through the SWITCH Africa Green programme.

### **SDG 13 Climate action**

Climate change is one of the main priorities of the EU’s external action and a central theme of the European Green Deal. The Green Deal emphasises the EU’s major role as a global leader in tackling climate change and environmental challenges, and represents the EU’s new Growth Strategy. It is about a systemic transformation of our economies and societies, also directly involving sectors such as industry, energy, transport and agriculture towards a sustainable path. The EU is strongly committed to implementing the

Paris Agreement. In the period 2014-2019, EU external climate action contributed to an approximate saving of 28.2 million tonnes CO2 equivalent of greenhouse gas emissions.

The EU supports its partners' in implementing their NDCs through existing programmes such as the Global Climate Change Alliance+ (GCCA+). The GCCA+ has funded over 80 national, regional and worldwide projects in Africa, Asia, the Caribbean and the Pacific. So far, the results of these projects include significant contributions to more than 80 national climate change strategies, more than 40 awareness campaigns in over 60 countries, and more than 30 United Nations Framework Convention on Climate Change related strategies and programmes.

The 'Strategic Partnerships for the Implementation of the Paris Agreement' (SPIPA) project, funded by the Partnership Instrument (EUR 20 million) and the German government (EUR 5 million), encourages major economies to implement the Paris Agreement by facilitating the move from political commitment to meaningful action. In 2020, SPIPA produced knowledge products, including several studies and mappings to provide insights on climate change governance and institutional architecture in climate policy in SPIPA partner countries. SPIPA provided thematic papers on adaptation, Just Transition, long-term strategies, monitoring, reporting and verification (MRV), and sustainable finance. The current project will run until mid 2022. Support for the implementation of the Paris Agreement will continue through an already adopted EUR 12 million, 2-year follow-up project due to start in 2022.

Uganda's central 'cattle corridor,' which runs across the country, is highly vulnerable to climate change, suffering frequent floods, prolonged droughts and unpredictable rainfall. As part of an EUR 11 million programme, GCCA+ has funded more than 300 field schools to help farmers become more resilient to climate change impacts. More than 4 000 farmers have attended the field schools and learnt about diversifying crops and other income-generating activities.

Under Article 5 of the IcSP, an action was contracted in 2020 focusing on enhancing regional cooperation and contributing to maintaining stability in the Central Asia region crucial for security of the EU. Aiming at establishing an integrated approach to climate security challenges and creating climate risks resilient development opportunities, the action will enhance early warning and prevention measures to help promoting good neighbourly relations aiming at reducing tensions over limited natural resources. A knowledge base will be increased through targeted public awareness campaigns to ensure growing consciousness on climate-induced security implications and spill-over effects. This IcSP action will complement an ongoing nuclear-safety oriented action by closing the climate change risks gap.

In the Southern Neighbourhood, climate change resilience is a top priority, to mitigate risks to human lives and livelihoods and to promote sustainable development. Considering urbanisation trends, the loss of biodiversity, the increasing marine and land pollution and the impact of climate change on resources, focus is placed on sustainable water management, including wastewater treatment, water re-use and efficient use of water, as well as measures to protect and restore biodiversity, both marine and terrestrial, animal and vegetal.

In the Eastern Neighbourhood, the programme aims at achieving the key long-term EaP policy objective beyond 2020 of environmental and climate resilience. The EU supports partner countries to transform the region towards modern, resource-efficient, clean, circular and competitive economies, while increasing their environmental and climate resilience, including through more sustainable use of natural resources. The programmes supports the EaP challenges to increase the resource-efficiency of economies; develop new green jobs and economic opportunities linked to the green transition; develop local and renewable sources of energy; and manage natural assets to maximise sustainability.

## **SDG 14 Life below water**

Global progress on addressing major threats, including pollution and eutrophication, overfishing and destruction of habitats, and the impacts of climate change, has been slow and most SDG 14 targets may not be reached by 2030. The EU continues to work on capacity-building and spur local and regional actions on effective governance, and the protection and sustainable use of marine resources. The role of EU external action in support of SDG 14 is growing. The EU promotes an integrated approach to effectively address the drivers of ocean degradation while linking livelihoods with natural resources preservation. In partnership with ACP countries, the EU committed EUR 40 million to improve the productivity, competitiveness and inclusiveness of sustainable fisheries and aquaculture value chains, and EUR 12 million to improve their governance (FISHGOV 2).

Through the Partnership Instrument, the EU is supporting a dedicated project (EUR 9 million) to address marine litter in hotspot countries and rivers in east and south-east Asia. The EU will also provide EUR 17 million to help Pacific countries build waste management programmes and address issues relating to health and well-being, marine litter and biodiversity conservation.

The lagoons and waterfalls of Oyster Lagoon park in Belle-Anse, Haiti, were designated a protected area in 2017. However, with 7 000 families living within the park and dependent on fishing and charcoal production, this project (Strengthening participatory governance in Oyster Lagoon National Natural Park, Haiti) was set up to identify income-generating activities that would reduce

pressure on the biodiversity hotspot's natural resources. 30% of the 2 000 fishermen now earn three times more than before thanks to providing training, motorboats and a cold storage facility. Mangrove cutting and lizard hunting have been largely eradicated thanks to increased public awareness of the endangered species. The local authority has also defined new rules on coastal fishing, hunting, protection of water sources and the sale of charcoal.

### **SDG 15 Life on land**

SDG 15 received particular attention ahead of 2020 designated as 'Super year of nature' with the Green Deal Communication of December placing biodiversity at the centre of EU international priorities. The new EU 2030 Biodiversity strategy has been published in 2020.

Through its Partnership Instrument, the EU uses its influence to halt biodiversity loss by shaping an ambitious post-2020 global biodiversity framework and by advancing its environmental priorities with G7 and G20 partners. By engaging actively with partners to amplify the EU's efforts to switch to a circular and resource-efficient economy, the EU ensured that the 2019 G7 environmental meeting Declaration integrated EU priorities on circular value chains. The PI action on protecting biodiversity mobilises experts, policymakers, young leaders, and scientists from the EU's key partner countries to design an ambitious follow-up framework to the Strategic Plan for Biodiversity (2011-2020).

The Commission signed a EUR 13 million convention with Agence Française du Développement to renew its funding of Critical Ecosystem Partnership Fund (CEPF) from 2020 onwards. CEPF is a multi-donor fund which has successfully positioned itself as the leading donor in CSO financing for key biodiversity areas around the globe. The Fund is efficiently linking conservation of hotspots providing multiple ecosystem services with empowering private sector stakeholders and vulnerable population groups, and providing sustainable livelihoods.

### **SDG 16 Peace, justice and strong institutions**

EU supports the implementation of SDG 16 worldwide through a variety of actions funded under thematic and geographic EU external financing instruments, particularly focusing on promoting democracy and human rights.

The IcSP is mainly contributing to the promotion of peaceful and inclusive societies for sustainable development and to providing access to justice for all and to build effective, accountable and inclusive institutions at all levels in line with SDG 16.

#### **IcSP Art. 3 and 4:**

IcSP Article 3 and 4 made a strong contribution to target 16a (Strengthen relevant national institutions, including through international cooperation, for building capacity at all levels, in particular in developing countries, to prevent violence and combat terrorism and crime). This is particularly true in the field of counter-terrorism and the prevention of violent extremism<sup>42</sup> in Asia, the Middle East and in Africa. During 2020, support to the reintegration of former terrorist fighters in Syria has continued and new actions in Western Balkans and Central Asia have been adopted. Attention to the role of disinformation in the incitement to violence, division and instability has been further strengthened throughout 2020. There is continued cooperation with authorities in the Middle, North, Africa and Asia in the field of human rights compliant counter terrorism as well as in the field of accountability for terrorism crimes. Another IcSP action helps the United Nations Investigative Team to promote accountability for crimes committed by ISIL/Da'esh in the area of digitisation of evidentiary material held by Iraqi national authorities.

In relation to sub-goal 16.1 (Significantly reduce all forms of violence and related death rates everywhere), the IcSP continued supporting peace processes in several countries, notably in the Middle East and Africa, including Syria, Yemen, Libya, the Sahel and Mozambique. During 2020, particular focus was given on risk reduction for vulnerable communities, including refugee and migrant communities in Latin America, the Western Balkans and South Asia. The IcSP also responded to the increased risk of xenophobic reactions, including violence, as a consequence of the COVID-19 pandemic and the. In particular, actions supported the UN Secretary-General's call for a global ceasefire to allow focus on combatting the virus. In Cote d'Ivoire, the IcSP complements national efforts to control the illegal flow of small arms and light weapons in an effort to prevent armed violence in the country.

In relation to sub-goal 16.3 (Promote the rule of law at the national and international levels and ensure equal access to justice), the IcSP encouraged accountability and transitional justice. This was done with flexible short-term actions and expert advice through the EU Transitional Justice Facility, for example in Yemen, Burkina Faso, Mali and Liberia. Other actions supported the transitional justice institutions set-up under the Colombia peace agreement; the investigation and prosecution mechanism for crimes in Syria<sup>43</sup>, the implementation of justice sector reforms in Lesotho and the Special Tribunal for Lebanon.

<sup>42</sup> In line with the June 2017 Foreign Affairs Council Conclusions on EU external action on Counter Terrorism

<sup>43</sup> 'International, Impartial and Independent Mechanism to Assist in the Investigation and Prosecution of Persons Responsible for the Most Serious Crimes under International Law Committed in the Syrian Arab Republic since March 2011'

Concerning sub-goal 16.7 (Ensure responsive, inclusive, participatory and representative decision-making at all levels) the IcSP has supported electoral processes in several contexts during 2020. In Bolivia the Pluri-national Electoral Organ was supported in the context of the 2020 elections. In Iraq, focus was given on building the capacity of the Independent High Electoral Commission in anticipation of the 2021 national poll. Similarly in Uganda and Somalia, needs were identified to encourage a peaceful electoral processes scheduled for 2021. In the Central African Republic, another IcSP action promoted the peace and reconciliation process, including the holding of elections. While in Honduras and Tanzania the action contributed to create the best conditions for transparent and inclusive elections.

#### **IcSP Art. 5:**

In the domain of **counter-terrorism**, the EU Global Facility on Money Laundering and Terrorism Financing aims to disrupt terrorist networks and the activities of recruiters to terrorism, cut off terrorist funding and bring terrorists to justice while continuing to respect human rights and international law. The action contributes to SDG Target 16.3 'Promote the rule of law at the national and international levels and ensure equal access to justice for all' and provides support to partner countries to put in place effective AML/CFT frameworks in compliance with the AML/CFT international standards, notably **EU recommendations on CFT/AML, UNSCRs and FATF recommendations**.

Given the evolution of **transnational organized crime** and moving away from a strictly commodity based approach a new umbrella programme for the trans-regional organised crime portfolio has been created: the Global Illicit Flows Programme (GIFP) targeting the illicit trafficking of drugs and small arms and light weapons, directly contributing to the achievement of SDG Target 16.4 'By 2030, significantly reduce illicit financial and arms flows, strengthen the recovery and return of stolen assets and combat all forms of organized crime.' The purpose is to provide a more effective format for the European Commission to assist partner countries in their efforts to tackle trans-regional organised crime and; to serve as a vehicle for the EU and EU Member States law enforcement authorities to have a greater and enhanced global reach.

**Chemical, Biological, Radiological and Nuclear (CBRN) actions**, and most notably, the Centres of Excellence (CoE) initiative, contribute to the attainment of numerous Sustainable Development Goals (SDGs), in particular 3, 6, 11, 13, 16 and 17, as described below. Under the umbrella of SDG 16: CBRN actions work towards capacity building and strengthening national institutions and developing enhanced cooperation on the national and international levels, facilitated by partnerships through the regionally-established Centres of Excellence. The regional all hazard approach combined with a national inter-agency working method contribute greatly to support SDG16 goals towards an increased security governance by mitigating the impact of future major natural or man-made crisis as reflected also in the actions on COVID-19 launched in 2020.

As far as inclusiveness, responsiveness and participation is concerned, the pilot programme 'INTER PARES' (EUR 5 million) started building capacity of partner country parliaments through peer-to-peer exchanges with EU Member State parliaments. Moreover, three projects were launched through a EUR 5 million global call for proposals on digital civic activism and participation.

The implementation of the 2016 SSR strategic framework continued to make positive changes in the way EU institutions lend their support to the security sector in non-EU countries, with the overarching goal of better securing the EU, promoting peace and EU values worldwide and contributing directly to SDG 16 of the 2030 Agenda.

The Commission continues to focus on development cooperation in preventing, managing and helping to resolve conflicts and crises, averting humanitarian needs and building lasting peace and good governance. In particular, the Commission conducted a strategic evaluation of conflict prevention and peacebuilding for 2013–2017, which will, in addition to providing an independent assessment of EU support, identify key lessons and produce recommendations on EU engagement in the field.

In the Southern Neighbourhood, the NDICI builds on the previous key objectives of preserving stability; strengthening State and local governance, public administration reform and rule of law; and implementing key dialogues and platforms. These encompass promoting modern and accountable public institutions, independent justice and electoral observation and assistance; supporting digital government processes and services, based on ethical standards and good practices; promoting gender equality initiatives and providing capacity building for Civil Society Organisations (CSOs) - including support for the digital transition.

In the Eastern Neighbourhood, the programme aims at achieving the key EaP policy objective beyond 2020 of accountable institutions, the rule of law and security. The EaP continues building an area of democracy, prosperity, stability and increased cooperation based on common values, with the same focus on rule of law, human rights, fight against corruption and discrimination, independent media, civil society and gender equality. On this basis, EU support aims at achieving better measurement of the impact of judicial reforms; taking into further consideration the progress in rule of law reforms when deciding on future assistance; strengthening fight to corruption and economic crime; improving cross-border cooperation on organised crime; stepping up support for security dialogues and cooperation.

#### **SDG 17 Partnerships for the goals**

The European Commissioner for International Partnerships took office in December 2019, sending out a strong message on the central role of partnerships in EU's external action. Successful sustainable development requires partnerships, particularly with our partner governments, but also with the private sector, civil society, multilateral organisations and financial institutions.

The EU continues to be actively engaged in UN processes such as the annual High-level Political Forum (HLPF), the Financing for Development (FFD) Forum, the special high-level meetings of the UN General Assembly such as the Climate Summit, the SDG Summit, the FFD High-level Dialogue and the Small Islands Developing States Summit.

The Commission continues to play an influential role in major OECD Development Assistance Committee (DAC) policies, acts and events. The EU's views were reflected in decisions taken on a revised Peer Review Instrument and the adoption of several key OECD DAC recommendations.

The EU and its Member States maintained their position as the biggest provider of official development assistance (ODA), accounting for about half of global ODA to developing countries (0.46% of gross national income (GNI) in 2019). Latest available figures also show an increase of ODA to least developed countries, reaching 0.125% in 2018.

The EU helped generate political momentum on integrated national financing frameworks (INFFs) to map the different financial sources available for sustainable development at country level and to support country-led financing strategies. The purpose of INFFs is to help countries have a better understanding of all the different financial resources at their disposal and to develop a financing strategy to reach the SDGs. The EU has actively been supporting the Indonesian government who volunteered to be an INFF pioneer country. A joint EU-UNDP scoping mission took place to kick-start the INFF process.

The EU is committed to support the UN peace and security architecture. Through IcSP, the EU works closely with different UN entities<sup>44</sup>. The cooperation also includes assisting Resident Coordinators in their policy and programming responsibilities for the deployment of dedicated Peace and Development Advisers to their offices. This comes in addition to funding of particular UN political and peacekeeping missions *inter alia* in Central African Republic, Libya, Mali, Somalia, Sudan, Syria, Yemen. In addition, regular policy level dialogues with UN partners supports a mutually beneficial partnership for peace.

CBRN actions under IcSP Article 5 make a strong contribution to SDG 17 "Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development". Through encouraging national, regional, and international partnerships via established Centres of Excellence, CBRN programmes are able to enhance access to science, technology and innovation in addition to increased knowledge sharing (like in the Caucasus and Balkans through a regional CBRN innovation competition implemented in 2018-2019). Actions including training, tutoring, and the lending of experts and expertise in the field of CBRN, all contribute to enhancing capacity-building and national planning capabilities.

The Partnership Instrument enables the EU to build partnerships across the world on priorities ranging from climate and biodiversity to trade and security. These alliances influence decision making processes by partners in policy areas of EU and of mutual interest, widely promote EU interests and values in partner countries and in multilateral fora, increase the alignment of the EU and its partners' policy positions and approaches, as well as the harmonisation of legal and policy frameworks, and support the rules-based multilateral system.

---

<sup>44</sup> The UN Department of Political and Peacebuilding Affairs (UN-DPPA), the UN Peacebuilding Fund (UN-PBF), the UN Standby Team of Senior Mediators and the UN Special Political Missions.

## **1. Overview**

### **1.1. Challenges**

The operation of nuclear power plants is a sovereign decision of any State that choose to include nuclear in its energy mix. Nevertheless, as history showed with the accidents of Chernobyl in 1986 and more recently Fukushima in 2011, any accident has transboundary consequences and affects the population and the environment of neighbouring countries and regions.

The European Union must ensure the safety and security of its citizens and protect the environment. The best way to tackle this challenge when considering the use of nuclear energy is to guarantee that the nuclear reactors are operated safely and according to the best international standards.

### **1.2. Mission (general objectives)**

The objective of the EINS is to support the promotion of nuclear safety culture and radiation protection, the safe management of spent nuclear fuels and radioactive wastes and the application of effective and efficient safeguards of nuclear materials in third countries.

This is achieved by cooperating with the key stakeholders and in particular with the nuclear regulatory authorities in charge with the aim of transferring the EU expertise. In particular, the regulation will support the promotion of transparency in nuclear related decision- making by authorities of third countries.

### **1.3. Specific objectives**

The objectives of the EINS are:

- (a) the promotion of an effective nuclear safety and radiation protection culture and implementation of the highest nuclear safety and radiation protection standards, and continuous improvement of nuclear safety, including the promotion of transparency of authorities in third countries in decision making processes relating to the safety of nuclear installations;
- (b) responsible and safe management of spent fuel and radioactive waste and the decommissioning and remediation of former nuclear sites and installations, including the promotion of transparency of authorities in third countries in decision making processes;
- (c) establishing efficient and effective safeguards for nuclear material in third countries.

### **1.4. Public intervention context**

The promotion of nuclear safety is a key priority for the EU since the early days of the EEC and EURATOM. The European Instrument for Nuclear Safety contributes to the promotion of the implementation of international treaties and conventions as well as the adoption of the highest safety standards complementing work inside the EU. The EINS is a specific tool complementing the Neighbourhood Development and International Cooperation Instrument (NDICI). It covers cooperation in nuclear safeguards which is essential to the global non-proliferation policy.

### **1.5. Actions**

The EINS will achieve its objectives by using a combination of implementing methods to establish cooperation and deliver assistance to the beneficiary countries:

1. Provision of services and supply of equipment;
2. Budget support;
3. Technical assistance and information exchange including by twinning;
4. Training and tutoring;

Multilateral projects with Member States or International organisation.

### **1.6. Delivery mode**

Direct management by the Commission from Headquarters and/or through the Union Delegations and under indirect management by entities, such as the EU member States agencies or international organisations, that ensure a level of protection of the EU's financial interests equivalent to that under direct management. Indirect management may also be entrusted to partner countries or the bodies they designate. Innovative financial instruments including in partnership with the European Bank for Reconstruction and Development and other international financial institutions will be used for blending activities.

### **1.7. Graphic overview of the programme structure**

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Procedure 2018/0245/NLE COM (2018) 462: Proposal for a COUNCIL REGULATION establishing a European Instrument for Nuclear Safety complementing the Neighbourhood, Development and International Cooperation Instrument on the basis of the Euratom Treaty	2021 - 2027	300,0

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>37,6</b>	<b>38,6</b>	<b>39,9</b>	<b>41,8</b>	<b>44,1</b>	<b>47,2</b>	<b>50,9</b>	<b>300,0</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The lessons learned from the 2014-2020 MFF show that the EU external action instruments are relevant and delivering results. For the next MFF, it was therefore proposed to build on the activities formerly covered under the 2014-2020 Instrument for Nuclear Safety Cooperation, continuing the assistance in nuclear safety and adapting the new Instrument to emerging challenges and needs.

## 1.10. Relevant websites providing more information

## **2. Where are we in the implementation ?**

### **2.1. Programme 2021-2027**

The 2021 commitment appropriation (EUR 35.9 million) will finance 10 projects in 9 countries and regions as well as the support measures for the programme implementation.

The 2022 commitment appropriation, in line with the multiannual indicative programme, will finance projects related to nuclear safety and radioactive waste management (42.5% each) as well as support measures (5%).

### **2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations**

	Commitments	Payments
Implementation Voted budget	314 375 515	199 215 353
Implementation carry-overs	0	2 387 005
Implementation total	314 375 515	201 602 359
total envelop*	314 420 872	
cumulative implementation rate	100%	64%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

### **Previous programme Instrument for Nuclear Safety Cooperation (INSC):**

The nuclear safety programme is implemented through projects that are contracted after international call for tenders managed from DG INTPA Headquarters exclusively as the necessary technical expertise is missing in the EU Delegations. Moreover, some of the projects needs a prior signature of a financing agreement with the beneficiary country that delays the contracting procedure but allows to contract under the N + 3 rule instead of N + 1. This results in a shift in implementation that is at the origin of the incomplete budget consumption at the end of the MFF exercise, i.e. part of the allocated budget of the 2014 – 2020 INSC will be contracted still in 2021 – 2023. As such, the balance is not indicating any particular delay and is consistent with previous exercises of INSC and TACIS programmes.

The commitment appropriation (CA) for the year 2020 (EUR 31.4 million) will finance 9 projects in 7 countries in the area of nuclear safety (29%), management of radioactive waste (43%) and nuclear safeguards (16%). In addition, the CA will cover the support measures for the management and implementation of the Instrument for Nuclear Safety Cooperation, including the technical support provided by the Joint Research Center.

The payment appropriation of the year 2020 covered the costs of projects contracted in previous years and the 8 projects contracted in 2020.

The payment appropriation of the year 2021 (EUR 31 million) will cover the expenditures related to the 79 on-going projects (including the 8 projects contracted in 2020), the 20 projects from previous Annual Action Plans (2018 – 2020) still to be contracted and part of the 2021 programme.

The 2022 payment appropriation will cover the costs related to past and on-going projects, new projects that will start in 2022 and support measures for the implementation of the European Instrument for International Nuclear Safety Cooperation.

The COVID-19 crisis has significantly slowed down the implementation of the projects in the beneficiary countries as the nuclear safety cooperation instrument is a fully centralised managed instrument. The very specific and technical nature of the instrument implies a technical expertise that is not available in the EU Delegation to the partner countries. Therefore, all programming activities from definition and adoption of the annual action plan to the contracting, management and implementation on the projects and reporting are managed by the dedicated sector in DG INTPA, Unit F1 Climate change and sustainable energy, nuclear safety.

Travel restrictions due to the sanitary situation impacted the ability to deploy activities on-site. Remote cooperation has been used as often as practically feasible, in particular for training activities but did not allow a 100% effective recovery plan. In addition, the number of procedures to contract new projects has also been reduced (8 contracts signed in 2020 only). This impacted the payment forecast that was reduced accordingly.

## **3. How is the programme performing ?**

### **3.1. Performance**

### 3.1.1. Introduction

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

### 3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

### 3.1.3. Previous programme performance

#### Instrument for Nuclear Safety Cooperation (INSC):

During previous programmes (TACIS from 1991 to 2006 and INSC from 2007 to 2020), cooperation with the regulatory authorities was primarily aimed at improving the governmental, legal and regulatory frameworks, based on the experience in the EU. This involved the transfer of regulatory practices used in the EU Member States.

The competence of staff working in the nuclear area is of utmost importance to ensure that the use of nuclear technology is safe. The training and tutoring actions, which transfer EU knowledge to students and young professionals, trained around 2500 staff in the beneficiary countries between 2014 and 2020. Some 34% of these were women, which contributes to the gender equality goal in a highly specialised scientific area. This confirms the success of the programme.

The Central Asian states have inherited 1 billion tonnes of hazardous processing waste, which are highly toxic chemical and radioactive residues left behind and unsafely stored in uranium legacy sites. The EU flagship programme for the remediation of the legacy sites is now mature, with the completion of the necessary feasibility studies and environmental impact assessments that provided for the technical solutions and associated costs to clean-up the selected priority sites. Upon the European Commission request, the European Bank for Reconstruction and Development has set-up an international multi-donors fund (the Environmental Remediation Account – ERA) to finance the implementation of the remediation programme based on the EU funded feasibility studies according to the highest international nuclear safety standards. The first two remediation projects in Kyrgyzstan began in 2020 and activities are planned to start in Uzbekistan in 2021.

A major milestone to make the **Chernobyl** site environmentally stable and safe was met on 29 November 2016 by sliding the New Safe Confinement over the nuclear reactor destroyed in April 1986. The New Safe Confinement is a giant arch-shaped structure that covers the damaged Chernobyl Unit 4 in order to prevent any further radioactive release. The total project cost is in the order of EUR 1.5 billion, to which the EU contributed more than 430 million (under the TACIS (EUR 210 million) and INSC (EUR 220 million) programmes). In July 2019, the facility was officially handed-over to the Ukrainian government. In 2020, the last facility to safely store the spent nuclear fuel has been completed and transferred to Ukraine, terminating the long lasting international engagement for Chernobyl.

The first project supporting the Iranian Nuclear Regulatory Authority started in July 2017, and is running smoothly in a very cooperative atmosphere. Two follow-up projects are ongoing to establish the Nuclear Safety Centre in Tehran, in compliance with the EU's commitment to the implementation of the joint comprehensive plan of action, and to perform stress tests at the Bushehr nuclear power plant. Another capacity-building project was adopted under the 2019 annual action programme, demonstrating the commitment of the EU to the full implementation of the joint comprehensive plan of action, and a fifth project will be submitted under the 2020 annual action programme. Although under difficult conditions with the US withdrawal and the COVID-19 pandemics, the EU continues to fulfil its commitments under the Joint Comprehensive Plan of Action with the Islamic Republic of Iran, supporting the Iranian Nuclear Regulatory Authority and the Bushehr nuclear power plant.

## 3.2. Key achievements

<b>2500</b>	<b>26 countries and 4 regions</b>	<b>36</b>	<b>18</b>
<i>Participants to the training and tutoring programme in the period 2014-2020</i>	<i>Having benefitted from EU assistance in nuclear safety in 2014-2020</i>	<i>Number of regulatory documents drafted and adopted in 2014-2020</i>	<i>Nuclear waste management and strategy documents produced in 2014-2020</i>

## 3.3. Evaluations, studies and reports

The Instrument for Nuclear Safety Cooperation has undergone the following evaluation/studies during its period of implementation:

## Mid-Term Review evaluation (MTR):

The INSC evaluation was launched in the third quarter of 2016 and completed in 2017. Based on the results of this external study, a Staff Working Document has been produced<sup>1</sup>, distributed and adopted by the Commission ("Report from the Commission to the European Parliament and the Council – Mid-term review report of the External Financing Instruments – COM(2017), 720 final of 15.12.2017). All documents are available at the following address: [https://ec.europa.eu/europeaid/public-consultation-external-financing-instruments-european-union\\_en](https://ec.europa.eu/europeaid/public-consultation-external-financing-instruments-european-union_en). The evaluation concluded that:

- the Instrument fits its purpose well and is well-aligned with nuclear safety priorities and EU crosscutting issues;
- the Instrument processes, including strategy, programming, project design, monitoring and evaluation need strengthening and do not offer adequate results orientation and measurability;
- the Instrument has been consistently delivering support for nuclear safety, although its achievements cannot be quantified;
- the Instrument has a distinctive set-up, supporting value added and sector leadership, with scope for strengthened, interactions and complementarities.

Associated to the conclusions, the following recommendations were advised:

- the cooperation of nuclear safety should be pursued and reinforced;
- the measurability and effectiveness should be strengthened;
- the results delivery should be reinforced;
- the institutional set-up and improving the linkage of the Instrument should be strengthened.

The European Commission presented to the Member States in 2017 the assessment of the EU Assistance to the regulatory authority of Ukraine.

The European Commission presented to the Member States in 2019, three additional independent review of the EU assistance for:

- Training and Tutoring projects;
- Nuclear waste projects in Ukraine;

Nuclear safety cooperation with Armenia.

#### **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :The promotion of an effective nuclear safety and radiation protection culture and implementation of the highest nuclear safety and radiation protection standards, and continuous improvement of nuclear safety, including the promotion of transparency of authorities in third countries in decision making processes relating to the safety of nuclear installations (Art 2.2.a)**

**Indicator 1: Number of countries benefiting from EU support in developing of a culture of safety for nuclear energy**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Output
Unit of measurement	Number (of countries)
Cut-Off Date	
Data source	Project documentation
Link to the objective	By providing the number of third countries/regions benefiting from the transfer of the EU expertise, the indicator gives an important information on the relevance of the programme to enhance the nuclear safety and security of the EU citizens as a nuclear accident has consequences worldwide.
Link MFF 14-20 / MFF 21-27	This indicator was used to monitor the 2014-2020 MFF, using the same name and methodology.

Narrative	
Methodology	This indicator describes the implementation of EU projects: • At the preparation phase of the projects, a number of issues are identified through several Cooperation Forums with the IAEA. Subsequently during the implementation phase these issues are addressed through actions (e.g. training, reports, draft regulations). This indicator measures the number of nuclear safety regulatory documents (and actions such as laws, regulations, guidelines) that are produced with the support of the EU project and which proposes solution to the issues identified. • At the final stage, those documents are adopted by the Beneficiary country and applied by the concerned stakeholders (operators, regulatory authorities, nuclear facilities). This indicator is amongst the programme implementation indicators in the MIP 2014-2017. The figures are cumulative.

Link MFF 14-20 / MFF 21-27	This indicator will be used to monitor the 2021-27 MFF, using the same name.
Other methodological comments	The number of deliverables in 2018 reached a peak corresponding to the reported increase with the completion of major projects. These documents are: i) the feasibility study for the Nuclear Safety Center in Iran foreseen in the annex 3 of the Joint Comprehensive Plan of Action presented in June 2018 to the representatives of France, Germany, the United Kingdom, China and Russia; ii) the pre-construction safety assessment report for the radioactive waste disposal facility in Iraq; iii) 6 regulation and guidelines for Jordan; iv) 4 reference regulatory documents for Iran. Commission Implementing Decision of 13.06.2014 on the Instrument for Nuclear Safety cooperation Multiannual Indicative Programme (2014 - 2017) COM(2014)3764 Final.
Full metadata available at this address	
Justification of the trend	No new document has been released officially in the beneficiary countries in 2020 due to the COVID-19 pandemics. Nevertheless, the programme already achieved the objectives at the inception of the period.

### Specific Objective 2 :Responsible and safe management of spent fuel and radioactive waste, namely transport, pre-treatment, treatment, processing, storage and disposal, and the decommissioning and remediation of former nuclear sites and installations

#### Indicator 1: Number of waste management and remediation documents developed with EU support

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
4	2	4	5	6	7	8	9			9
	Actual Progress									Final
	2	3	5	8	13	18	18			18

Are we on track	On track
Indicator type	Result
Unit of measurement	Number (of documents) NB: the figures are cumulative.
Cut-Off Date	31/12/2020
Data source	project documentation
Narrative	
Methodology	The figures are cumulative.
Link MFF 14-20 / MFF 21-27	This indicator will be used to monitor the 2021-2027 MFF, using the same name.
Other methodological comments	Infrastructure improvement for radioactive waste management remediation of contaminated sites and decommissioning in Ukraine including the following document: 'Analysis of investigation priorities for 32 DWSF facilities with uncertain site conditions and radioactivity inventory data'; ii) Development and final approval of 2 remediation plans including feasibility studies for sustainable environmental remediation of uranium legacy sites of Degmay and Taboshar in Tajikistan; iii) National Strategy for Radioactive Waste and Spent Nuclear Fuel Management complemented by Action Plan for the Strategy Implementation and Feasibility Study of radioactive waste management at Sewaqa site in Jordan'. The increase of the target from 8 to 9 is reflecting the newly identified need in Moldova . We are engaging jointly with Sweden in supporting the country under the current instrument taking into account the framework now fully in place to allow implementation of projects.
Full metadata available at this address	
Justification of the trend	No new document has been released officially in the beneficiary countries in 2020 due to the COVID-19 pandemics. Nevertheless, the programme already achieved the objectives at the inception of the period.

### Specific Objective 3 :The establishment of frameworks and methodologies for the application of efficient and effective safeguards for nuclear material in third countries.

#### Indicator 1: Number of nuclear safeguards authorities benefitting from EC funded projects

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020

Justification of the trend	The AAP 2020 in line with the MIP did not include a safeguards project.

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

Not applicable

### **6.2. Contribution to biodiversity mainstreaming**

Not applicable

### **6.3. Contribution to clean air financing**

Not applicable

### **6.4. Contribution to gender equality**

#### **6.4.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
1,6	0,0	3,0	0,0	3,0	0,0	3,0	10,6

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.4.2. Key achievements and performance**

As at this stage the programming is not advanced yet, the estimated amounts for the EINS contribution to gender equality are based on the spending from the previous MFF under INSC. We may revise the yearly profile, once we will advance with the programming process.

The contribution of the programme to gender equality is mainly achieved through all activities related to training and tutoring for which the European Commission strongly encourages the enrolment of women that in turn will provide additional opportunity for career development. This programme started under INSC 2014 – 2020 has a proven incentive for the participation of women in nuclear training and education (34% women participation over the reference period).

### **6.5. Contribution to the sustainable development goals**

#### **6.5.1. Goals**

Not applicable

#### **6.5.2. Key achievements and performance**

##### ***SDG 3 Ensure healthy lives and promote well-being for all at all ages***

The Pridniprovskiy Chemical Plant (PChP) is a former Soviet Union uranium processing plant, located in the city of Kamyanske in Ukraine. Commissioned in 1947, the 240-ha site has received little to no attention in regard to clean-up, safe storage and/or disposal of the many radiological hazards that were simply left at the site when it was shut down in 1992. Around 40% of the 90-ha south area of the site is radiologically contaminated.

The radiological hazards are mainly restricted to the 20 or so buildings utilised formerly for the purpose of Uranium-Ore Processing. However, due mainly to the uncontrolled removal of materials for their scrap value, vandalism and lack of maintenance over the past 26 years, many buildings are in extremely bad condition. This has contributed to a greater distribution of contaminated materials both inside and outside of the buildings.

To complicate matters further, many buildings, have been repurposed and are in use by different State Enterprises under the Ministry of Energy and Coal Industry of Ukraine (MECI). In some cases, the buildings, including a number of the contaminated ones, have been sold to Private Companies.

One recent project, which commenced toward the end of 2017, is aimed at improving the safety to the public from the former Pridniproviskiy Chemical Plant (PChP). The INSC Project will implement urgent measures aimed at making the site safer for members of the public (i.e. non-radiological workers) that work at the site and improve security in order to prevent further vandalism and theft, but specifically to prevent further unauthorised removal of materials from the site.

The remediation programme of the Pridniproviskiy Chemical Plant in Ukraine therefore contributes to the Sustainable Development Goals 3 (Good Health and Well-Being) by protecting people and the environment from radiological hazards.

#### ***SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all***

The safe use of nuclear energy cannot be achieved without competent staff with a strong safety culture. The European Commission has developed a recognised and successful training, tutoring and education programme started under the INSC and that will continue with the EINS. It provides students and young professionals with courses and hands-on training benefitting from the best EU nuclear safety expertise. The programme also promotes the participation of women. Two Masters and one Bachelor diplomas are being established with the French University Nice Côte d'Azur.

The training, tutoring and education programme provides education opportunities in the beneficiary countries contributing to SDG 4 (Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all).

#### ***SDG 6 Ensure availability and sustainable management of water and sanitation for all***

High volume of toxic and radioactive waste from former Soviet Union uranium mining activities is impacting on the environment and the population's health of Central Asia States. In December 2013, the United Nations General Assembly highlighted the issue by adopting Resolution no 68/218 on "The Role of the International Community in Averting the Radiation Threat in Central Asia" which recognises the role of the international community in averting the radiation threat in Central Asia.

Through the Instrument for Nuclear Safety and Cooperation (INSC), the EU has allocated a total funding of EUR 31.1 million to implement a two-phased approach for seven priority uranium legacy sites in Kyrgyzstan, Tajikistan and Uzbekistan. The European Commission has organised in 2017 and 2018 a very successful side event during the 72<sup>nd</sup> and 73<sup>rd</sup> United Nations General Assembly in New York, the latter with the participation of former Commissioner Neven Mimica, to invite Countries to contribute to the multi-donor Environmental Remediation Account established in 2015 by the EBRD upon the European Commission request.

Another contribution of EUR 30 million is foreseen under the EINS.

The remediation programme of uranium legacy sites will clear water and land for a sustainable agriculture in a region known as the breadbasket of Central Asia (Ferghana Valley). This EU programme therefore contributes to the Sustainable Development Goals 6 (Clean Water and Sanitation).

#### ***SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels***

The EU contributes to the G7 decision to render the Chernobyl nuclear site environmentally safe again. The radioactive hazard was entirely secured, making the site safe for the next 100 years. The facility was subsequently handed over to Ukraine in July 2019, 33 years after the Chernobyl accident in 1986. The handover also represented the completion of the largest ever example of international cooperation in nuclear safety, with the establishment in 1997 of the Chernobyl Shelter Fund. The Fund was managed by the European Bank for Reconstruction and Development (EBRD) and funded by contributions from 45 countries, the Commission and the EBRD. The EU contributed EUR 431.6 million through its Instrument for Nuclear Safety Cooperation, making it the largest donor after the EBRD.

Most nuclear safety projects are managed directly by Commission departments. The European Commission has contributed significantly to the implementation of the Joint Comprehensive Plan of Action (JCPoA) with Iran.

Although there is no SDG target specific on nuclear safety, the EU actions contribute to progress on the commitments on SDG16 on governance.

**1. Overview****1.1. Challenges**

The scale, frequency and duration of crises that demand international humanitarian response is increasing, aggravated by long-term trends such as climate change, economic shocks, population growth, rapid and unsustainable urbanisation, resource scarcities as well as increasingly protracted armed conflicts. These are, and will continue to be, the main drivers of humanitarian crises, which in

turn generate growing humanitarian needs globally. In 2020, the situation was further exacerbated globally by the Covid-19 pandemic and in a number of crises by new or escalated conflicts (Nagorno Karabakh or Tigray), or by the locust upsurge in East Africa and the Arabian Peninsula. The Global Humanitarian Overview 2021 published in December 2020 announced funding requirements of USD 35.1 billion to assist 160 million of the 235 million people in need in 56 countries. This represents 1 in 33 people worldwide - a significant increase from 1 in 45 at the launch of the Global Humanitarian Overview 2020, which was already the highest figure in decades. However, funding is not increasing at the same speed as humanitarian needs. In 2020, global humanitarian needs jumped to almost USD 39 billion, with a funding gap of USD 22 billion. This overall gap between available resources and humanitarian needs is expected to continue to grow. Against this background, there will be an ever greater need for front-line life-saving humanitarian assistance. Given the protracted nature of several crises, a triple nexus approach, and enhanced cooperation between humanitarian and development assistance are necessary. Where applicable, the peace element of the nexus remains paramount.

Actual delivery of aid is becoming more difficult and dangerous in view of the shrinking humanitarian space and often deliberate attacks against humanitarian or health care workers and civilian infrastructure, in blatant violation of international humanitarian law.

## 1.2. Mission (general objectives)

The EU Humanitarian aid programme provides emergency, life-saving assistance to people, particularly the most vulnerable, hit by human-induced or natural disasters. Humanitarian aid is a key pillar of the EU's external action. It is also an important element of the EU's ability to project its values globally.

The EU is a leading player in humanitarian assistance on the international stage, both in terms of its ability to provide rapid and flexible assistance across a wide range of crises, and in virtue of its influence in shaping the global humanitarian policy agenda. Because of the financial weight (EU and its Member States together are the world's leading donor) and world-wide scope of its humanitarian actions, the EU is also able to encourage other humanitarian donors to implement effective and principled humanitarian aid strategies. Humanitarian aid is often the only EU instrument able to concretely intervene in acute conflict situations.

In a context of insufficient funding to address ever-growing needs, the EU is trying to fill gaps in global humanitarian aid by addressing needs in areas which are difficult to access and by providing a response not only to the biggest and most visible humanitarian crises, but also to forgotten crises (i.e. crises receiving no or insufficient international aid, political and media attention). Moreover, Member States often look to the EU as a donor to provide assistance in crises where they have only limited means to intervene in a national capacity.

Member States also benefit from the EU's "humanitarian diplomacy", which aims to increase humanitarian space and lead to more effective provision of humanitarian aid. Another key element of EU added value for Member States lies in the strong operational knowledge and technical expertise of the EU's unique network of humanitarian field offices spread over almost 40 countries.

## 1.3. Specific objectives

Together with the Humanitarian Aid Regulation (1257/96), the European Consensus on Humanitarian Aid sets out the specific nature and mandate of humanitarian aid. In line with the Humanitarian Aid Regulation (1257/96), the EU's humanitarian assistance goes directly to people affected by disaster or conflict, irrespective of their race, ethnic group, religion, sex, age, nationality or political affiliation and must not be guided by, or subject to, political considerations. The EU acts on the basis of the international humanitarian principles of humanity, neutrality, impartiality and independence. The main objectives are to:

- provide needs-based delivery of EU assistance to save and preserve life, prevent and alleviate human suffering and safeguard the integrity and dignity of populations affected by natural disasters or human-induced crises, including protracted crises;
- build the resilience and recovery capacity of vulnerable or disaster-affected communities, in complementarity with other EU instruments.

These objectives contribute to the overall objectives, principles and actions of the Union's external action as defined in Article 21 of the Treaty on European Union.

Effective multilateralism and UN-led coordination are central to the EU's humanitarian action. Promoting compliance with International Humanitarian Law and ensuring the protection of civilians, and of humanitarian and health care workers remains an essential objective.

While maintaining constant efforts in areas such as food, nutrition, water and shelter, a number of objectives have been strengthened in response to the global context. The EU will continue to devote 15% of its initial humanitarian budget to 'forgotten crises', and 10% to education in emergencies, to promote access for children in crisis settings to safe and consistent schooling. A stronger focus is being placed on health as well as climate impacts, with disaster preparedness increasingly integrated into the EU's humanitarian response, and with climate mainstreaming to be enhanced across humanitarian action. Through the 'humanitarian-

development-peace nexus', the EU addresses short-term needs and provides long-term solutions and, in conflicts, contributes to building lasting peace.

A meaningful participation of aid beneficiaries in decisions that affect them is key for the EU. In line with its equality agenda, the EU is committed to meeting the specific needs, rights and risks of groups of beneficiaries including women, children, the elderly and people with disabilities. The continued integration of protection for people caught in crisis situations is key in the EU's humanitarian aid.

#### 1.4. Public intervention context

The goals, principles and procedures for implementing EU humanitarian aid operations are set in the Humanitarian Aid regulation (1257/96). The EU's humanitarian aid enjoys strong public support as one of the most visible facets of the EU external action. Under the EU Treaties (article 214 TFEU) both Member States and the EU have important and distinct roles in humanitarian aid. Coordination of efforts, ensuring complementarity and promoting a nexus approach can increase synergies and impact, in areas such as humanitarian diplomacy, consolidated EU pledges and sharing of analysis or pooling of resources.

#### 1.5. Actions

Humanitarian interventions mainly consist of funding projects carried out by humanitarian organisations, most of the times in complex, risky contexts. The Commission (DG ECHO) does not intervene directly on the ground (with some exceptions, e.g. on transport where the Commission aims to enable work of partners). As a rule, DG ECHO manages the EU's humanitarian aid financing through individual agreements with partner organisations (NGOs, United Nations agencies, or other international organisations). The management mode applied with NGOs is direct management, and with the UN and International Organisations, indirect management.

#### 1.6. Delivery mode

The Commission (DG ECHO) implements EU humanitarian aid operations by funding humanitarian projects of around 200 partner organisations, including United Nations agencies, other International Organisations including the Red Cross and Red Crescent movement and non-governmental organisations (NGOs). The Commission has developed a permanent network of international and local humanitarian field experts working in crisis zones around the globe. The EU has been playing a leading role in the development of new policy approaches (e.g. education in emergencies) and innovative funding modalities (e.g. cash-based assistance).

At the World Humanitarian Summit in 2016, the main donors and humanitarian aid organisations agreed on a 'Grand Bargain' to adapt working practices to maximise efficiency and impact<sup>1</sup>. They agreed on the need for flexibility on the donor side (enabling partners to deliver a timely and adapted response, while harmonising reporting requirements). Aid organisations on their side renewed a commitment to coordinated needs assessments, accountability to beneficiaries and taxpayers, transparency and visibility of donors' assistance, making sure that the highest possible proportion of funds reaches people in need. The Grand Bargain also included a strong commitment from donors and aid agencies to channel more resources directly to local responders. In line with these commitments, the Commission strives to modernise its funding mechanisms while further stepping up EU support for localisation.

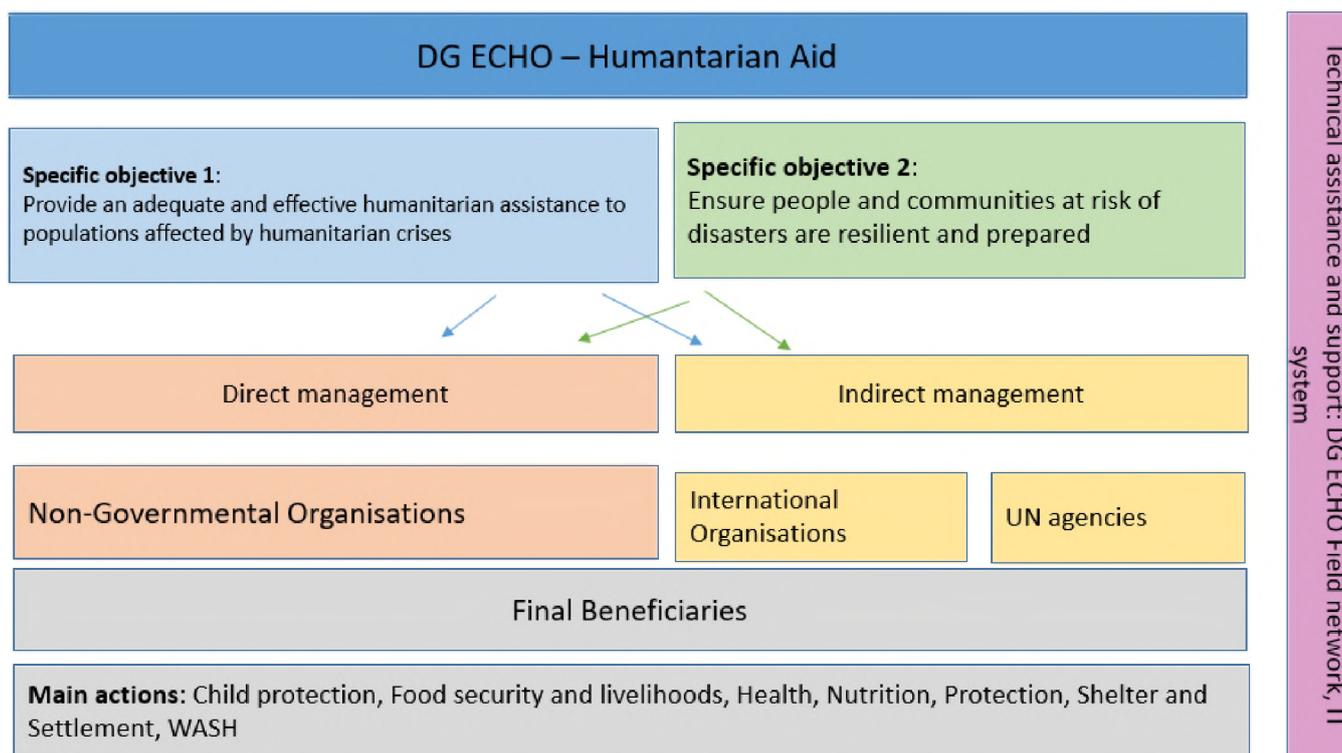

The EU is further promoting innovative solutions that deliver more efficient, cost-effective and climate-proofed aid<sup>2</sup>. This also includes promoting private sector engagement in delivering services and exploring innovative financing options.

#### 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Procedure 1995/0119/SYN COM (1995) 201: Proposal for a COUNCIL REGULATION (EC) CONCERNING HUMANITARIAN AID	2021 - 2027	11 569,2

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>1 503,0</b>	<b>1 595,1</b>	<b>1 626,9</b>	<b>1 660,7</b>	<b>1 693,6</b>	<b>1 727,5</b>	<b>1 762,5</b>	<b>11 569,2</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The Humanitarian Aid Regulation is not time-limited; it contains no clause linking its legal validity to a specific Multi-Annual Financial Framework, nor does it have a clause specifying the financial means allocated to humanitarian aid under a given MFF. Therefore, the policy and legal framework for the EU's humanitarian aid do not require to be changed under the 2021-2027 MFF all the more than the last comprehensive evaluation on humanitarian aid confirmed the relevance of the current framework for humanitarian aid.

On 10 March 2021, the Commission has adopted the Communication to the European Parliament and the Council on the EU's humanitarian action: new challenges, same principles (COM(2021)110).

## 1.10. Relevant websites providing more information

[https://ec.europa.eu/echo/index\\_en](https://ec.europa.eu/echo/index_en)

As main interface with the external public, DG ECHO main website provides an overview of the different activities carried out by the DG, as well as funding opportunities. The website also contains all key strategic documents and relevant legislative texts guiding the work of the DG.

<https://www.dgecho-partners-helpdesk.eu/>

The website provide useful information for DG ECHO's partners.

## **2. Where are we in the implementation ?**

### **2.1. Programme 2021-2027**

As regards Commitment Appropriations, the budget amounts adopted in 2021 and requested for 2022 are in line with the financial programming. The payment appropriations are established on the basis of estimated payment needs triggered by old and new commitments. Considering the increasing humanitarian needs, it is foreseen that implementation will follow the same trend as in programme 2014-20 with limited or any difficulties, i.e. 100%.

### **2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations**

	<b>Commitments</b>	<b>Payments</b>
Implementation Voted budget	<b>10 264 826 877</b>	<b>10 291 154 978</b>
Implementation carry-overs	<b>0</b>	<b>115 141 941</b>
Implementation total	<b>10 264 826 877</b>	<b>10 406 296 919</b>
total envelop*	<b>10 264 886 533</b>	
cumulative implementation rate	<b>100%</b>	<b>101%</b>

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The 2014-2020 budget has been fully implemented (100%). The annual adopted budgets have each time been reinforced from different sources to respond to new humanitarian crises and aggravation of existing ones. In 2020, the total reinforcements amounted to EUR 1.044 billion from the Emergency Aid Reserve (EUR 404.1 million, including EUR 80 million specifically targeting Covid response), redeployment from other instruments (EUR 97.727 million), an amending budget to assist refugees in Turkey (EUR 485 million) and the European Development Fund (EUR 59.9 million). The humanitarian context during the period, characterised by constant increase of unmet needs, and DG ECHO's implementation capacity explain the implementation rates.

As an example, in February 2020, through its humanitarian aid funding, the EU was among the very first to respond to the World Health Organization's Coronavirus Response Plan. EUR 30 million of direct funding was allocated to meet the most pressing needs in some 10 countries already facing humanitarian crises, in line with the EU's priority to have a global, coordinated response to support countries most at risk, based on assessment and needs. In view of the magnitude of needs, an additional amount of EUR 50 million was made available in May to help vulnerable people facing major humanitarian crises, such as the Rohingya or crisis-affected communities in the Sahel, Yemen or Northwest Syria to face a deteriorating humanitarian situation due to the coronavirus.

A re-prioritisation of humanitarian needs and budgetary reinforcements were triggered by the Covid-19 pandemic in 2020 with no significant impact on budget implementation. In the context of the Covid-19 pandemic, humanitarian actions already focusing on the health sector continued helping the local health system to provide access to health care and in epidemics control and prevention. The EU conducted these actions in line with the respective countries' response plans to the coronavirus. In Turkey for example, EU-funded projects give information to refugees on how to prevent the spread of the coronavirus, offer health screening via mobile teams, distribute soap and hygiene kits and hand out comic books that help children understand what the virus is and how to protect themselves against it. Covid-19 prevention and control measures have had a huge impact on humanitarian projects focusing on education. For example, schools in Uganda have closed as part of the measures to prevent the spread of the virus, and many refugee children have to stay home. EU humanitarian funding is helping partners to distribute home-learning kits to more than 13 000 children in Kyangwali refugee settlement, in western Uganda, so that they can continue learning, even if not at school.

## **3. How is the programme performing ?**

### **3.1. Performance**

#### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

### 3.1.3. Previous programme performance

#### Performance

EU humanitarian aid performed well in 2020 in providing emergency assistance to people in need worldwide, particularly the most vulnerable, hit by human-induced or natural disasters, with the Covid-19 pandemic compounding the needs and in many cases complicating the response. In 2020, the EU and the 27 Member States' humanitarian aid contributions amounted to more than USD 9 billion, representing 36.3% of the global share.<sup>3</sup> As the world's largest humanitarian aid donor, the EU and its Member States retained a central role in tackling humanitarian challenges worldwide, notably thanks to a close cooperation with the United Nations Office for the Coordination of Humanitarian Affairs (OCHA), United Nations agencies and other donors. This responded to the overall objectives and principles of the Union's external action as defined in Article 21 of the Treaty on European Union, including by respecting the principles of the United Nations Charter and international law. EU's humanitarian advocacy at international level also benefited the humanitarian community worldwide and indirectly people in need of humanitarian assistance, which resulted eventually in a more effective provision of humanitarian aid.

A key element explaining the achievements of EU humanitarian aid lies in the strong operational knowledge and technical expertise of the EU's unique network of humanitarian field offices spread over almost 40 countries. With a budget of EUR 2.1 billion, the EU could fund more than 170 million interventions, reaching people in need in the most fragile contexts worldwide and providing assistance in 97% of the countries for which the UN launched an appeal. The EU can moreover take advantage of the comprehensive range of humanitarian partners (around 200 partner organisations, including United Nations agencies, the international segment of the Red Cross and Red Crescent movement, and non-governmental organisations) through which people in need can receive assistance even in the areas of the world most difficult to reach. The EU also continued to play a leading role in the development of ambitious policy approaches; the 'Education in Emergencies' initiative is to be particularly highlighted in this respect as, since 2019, the EU has dedicated 10 % of its humanitarian aid budget to support actions in this field and is continuing to do so. In 2020, the EU investment in education in emergencies amounted to over EUR 115 million and supported more than 1.8 million girls and boys affected by humanitarian crises to have access to safe and quality education.

EU-funded humanitarian actions were fully needs-based as EU humanitarian assistance went directly to people affected by disaster or conflict, irrespective of their origin, ethnic group, religion, sex, age, nationality or political affiliation, and was not guided by, or subject to, political considerations. As a result, the EU remained firm on acting on the sole basis of the international humanitarian principles of humanity, neutrality, impartiality and independence.

EU-funded humanitarian aid actions made an important contribution to the objectives of (i) providing needs based delivery of EU assistance to people faced with natural and manmade disasters and protracted crises, and (ii) building the capacity and resilience of vulnerable or disaster affected communities. On the first objective, in 2020 approximately 170 million people benefitted from EU intervention worldwide, 68% of the budget was spent in countries ranked 'very high risk to disaster' according to INFORM Risk index and more than 28% of the initial budget was spent in forgotten crisis. On the second objective, in 2020, approximately 35 million persons worldwide benefitted from disaster preparedness actions in disaster prone regions and Disaster Risk Reduction has been mainstreamed in 46% of EU funded humanitarian operations.

Moreover, the EU ensured a rapid response to crises as they developed (e.g.: the EU mobilised EUR 30 million from the Emergency Aid reserve, in the aftermath of the explosions in Beirut on 4 August, to help address the immediate needs of those affected) and to new needs as they emerged (e.g. EUR 80 million in humanitarian funding from the Emergency Aid reserve were mobilised to increase the emergency response and preparedness to the Covid-19 pandemic). EU humanitarian aid was delivered while ensuring the necessary flexibility, adequate expertise, relevance, efficiency and cost-effectiveness. The scale of funding dedicated to humanitarian aid actions allowed the EU to have a meaningful impact on the ground, addressing the needs of approximately 170 million people in 89 countries. The EU alone contributed to 12% of global humanitarian funding in 2020 (corresponding to USD 3 billion)<sup>4</sup>. Positive impact was also found in regions where funding allocations were more limited, thanks to the selection of projects with high leverage or multiplier effect potential. This was particularly true for 'forgotten crises', to which the Commission continues to pay a particular attention in line with its long-standing commitment.

In addition, the EU furthered its commitment to build capacity and resilience of vulnerable or disaster-affected communities, in a targeted manner through dedicated funding to strengthen preparedness capacities for response and early action, like in the case of the Connecting Early Warning Systems in Mozambique, with action at the community level. This was done in complementarity with other EU instruments, as enshrined in the EU's Integrated Approach and in line with the humanitarian-development-peace nexus, while respecting a principled approach to humanitarian action, as it was the case of the ACP programming for Africa the Caribbean and Haiti, or MIPs funding in Nepal. Thanks to the EU's disaster preparedness targeted actions, local communities were able to react fast and efficiently when disasters occurred, thus helping to save many lives and assets in regions exposed to natural hazards, particularly climate related ones. As an example, in the township of Manila, in the Philippines the beneficiaries of micro-insurance schemes were able to buy equipment to protect their shelters, right before a typhoon hit. To complement this and

<sup>(3)</sup> The total contribution of the EU and the 27 Member States for 2020 amounted to USD 9.091.937.665. Source OCHA FTS, data retrieved on 4 March 2020.

<sup>(4)</sup> Source OCHA FTS, data retrieved on 4 March 2020.

reinforce its contribution to resilience through humanitarian action, the EU also promoted the integration of disaster preparedness and risk reduction measures in regular humanitarian response actions so that communities could be better prepared to respond to aftershocks and to reduce imminent risk to which they were exposed.

### Criticalities

The above should however not hide the fact that delivering principled humanitarian assistance is at times utterly difficult, such as in situations of armed conflict, where warring parties disregard International Humanitarian Law and interfere with or obstruct the delivery of principled humanitarian assistance in the field. Humanitarian and health care personnel, as well as medical facilities and schools have in effect been the subject of armed attacks. While the EU has repeatedly reaffirmed its firm commitment to upholding international humanitarian law, improved compliance in this area implies political support and other means beyond the remit of humanitarian aid assistance as such. Casualties in 2019 exceeded all past years recorded in the Aid Worker Security Database (AWSDB): 483 aid workers were attacked in 277 separate incidents. Victims comprised 125 aid workers who were killed, 234 wounded and 124 kidnapped<sup>5</sup>. More recently, in September 2020, two Syrian aid workers and their driver were injured after the car they were travelling in from a project site in Salqin city. In November, two aid workers were killed in South Sudan while delivering critical nutrition services. In December, four humanitarian workers were killed in a refugee camp in the Tigray region of Ethiopia.

Tribute should also be paid to the versatility and adaptability of many of the EU humanitarian partners, who may have to face difficult logistical challenges when delivering assistance in hard-to-reach areas or other types of unexpected developments in the field that may hinder said delivery. It is particularly in such situations that the in-house expertise available to the Commission, when managing EU humanitarian aid funding and interacting with the humanitarian partners in the field, proves to be invaluable. In close liaison with its partners, the expertise enables the Commission to adjust actions in the field and adapt to evolving circumstances.

While being able to meet acute humanitarian needs in a highly effective manner on a short-term basis, EU humanitarian aid is less well placed to address structural issues, in particular in the context of protracted crises, for which development actors would be best positioned to act. Such situations vindicate the need for developing further the humanitarian-development-peace nexus. This would allow humanitarian aid actors to focus on responding to acute emergencies, while development actors would support strengthening of national systems allowing inclusion of persons affected by emergencies into national service delivery. An initiative in this sense is the Global Network against Food Crises, created in 2016, which brings together development and humanitarian actors with the aim to coordinate analysis and interventions, with a focus on food insecurity.

### Impact of Covid-19

In 2020, Europe and the world were strongly impacted by the Covid-19 Pandemic. The European Union and the Member States, acting together as 'Team Europe', mobilised almost EUR 38.5 billion so far. Of this, the EU humanitarian response to needs resulting from the pandemic amounted to approximately EUR 450 million. As expected, the direct and indirect consequences of the Covid-19 pandemic were most acutely felt by populations already affected by humanitarian crises: refugees, internally displaced persons, and people living in conflict zones and/or in areas devastated by climate change.

The EU immediately responded to increase the emergency response and preparedness to the pandemic in particular in countries where healthcare systems are weak or at risk of being rapidly overwhelmed in case of epidemic outbreak.

In addition, to allow Member States and partners to transport humanitarian staff and supplies to fight the Covid-19 pandemic and to maintain the flow of humanitarian assistance hampered by the pandemic, the EU put in place the EU Humanitarian Air Bridge.

In the efforts to prevent the spread of Covid-19, many governments took measures limiting internal and cross-border movements, unintentionally also impeding humanitarian operations. The EU's advocacy in overcoming Covid-19 related impediments successfully led to the adoption of a common position by EU Member States. Dedicated discussions were also prompted with other donors in the context of the Good Humanitarian Donorship (GHD) initiative.

All ongoing and planned actions across all sectors were analysed with partners, in order to factor in the Covid-19 situation and needs. Projects needing adaptation were identified, contributing to the Covid-19 response in the most vulnerable settings (in Africa, Asia, Latin America and the Neighbourhood).

To allow Member States and humanitarian partners to transport humanitarian staff and supplies to fight the Covid-19 pandemic and to maintain the flow of humanitarian assistance, the EU temporarily put in place the EU Humanitarian Air Bridge, offering air transport to and from various destinations world-wide. It implemented 67 flights to 20 hard-to-reach countries to transport humanitarian and medical staff and supplies between May and October 2020.

---

### 3.2. Key achievements

EUR 2.1 billion	89	1.87 million	67
of humanitarian aid provided to the most vulnerable in 2020.	Countries received humanitarian aid from the EU in 2020.	girls and boys benefited from the education in emergencies initiative in 2020.	flights were organised by the EU Humanitarian Air Bridge to deliver more than 1.2 tons of medical and humanitarian equipment and to transport more than 1 700 medical and humanitarian staff and other passengers in 2020.

In 2020, the EU provided **over EUR 2.1 billion in aid to the most vulnerable** (including EDF and externally assigned revenues) across **more than 80 countries**.

The EU's principled and needs-based approach to humanitarian aid includes addressing 'forgotten crises' (crises with little media attention and poor coverage<sup>6</sup>; more than 28% of the budget). The EU was thus present in every significant humanitarian crisis in 2020 with a variety of adapted funding tools. In larger crises, the EU consistently responded to situations where other donors were not present and often played the role of coordinator and catalyst. 86.9% of the contracts were issued within a very short timeframe (11 days).

**Education in Emergencies** remained a flagship policy, 10% of the budget was dedicated to it, and more than **1.87 million boys and girls in the most vulnerable situations** benefited from it. Moreover, the EU continued to mainstream gender considerations across humanitarian sectors of action, and advanced in the implementation of the approach to gender and gender-based violence in humanitarian crises outlined in the Staff Working Document 'Gender: Different Needs, Adapted Assistance'<sup>7</sup>. In addition, the EU took specific measures in order to mainstream the needs of persons with disabilities across all EU-funded humanitarian actions.

The EU continued to invest in disaster preparedness as an essential means to strengthen national and local response systems in order to reduce humanitarian needs caused by disasters, natural hazards and those related to other types of risks (biological, industrial, etc.) and threats (violence and conflicts). A total of EUR 50 million financed 16 countries<sup>8</sup> and 5 regional interventions across the globe in 2020.

In the framework of its co-chairmanship with Switzerland of the Good Humanitarian Donorship (GHD) initiative (June 2018 – June 2021), the EU continued in 2020 to promote principled donor behaviour, while taking into account the new challenges emerging from the Covid-19 pandemic (e.g. access restrictions). The overall priorities of the GHD co-chairmanship include: reconciling counter-terrorism measures and principled humanitarian aid, promoting respect for international humanitarian law (IHL), innovative financing, as well as assessing the impact of the UN Development System reform rollout on the international humanitarian response in the field.

Besides being co-convenor of the Grand Bargain's work stream 5 on coordinated needs assessments, the EU joined the Facilitation Group (FG) of the Grand Bargain, where it has been playing an active role since October 2019. In April 2020, the EU chaired the Facilitation Group.

As part of its commitment to International Humanitarian Law and safeguarding humanitarian space, in December 2020 the European Union joined the Humanitarian Call for Action launched by Germany and France. In 2020, the EU continued guaranteeing fast and safe access to the field; ECHO Flights continued supporting Humanitarian Aid Transport Services. To allow Member States and humanitarian partners to transport humanitarian staff and supplies to fight the Covid-19 pandemic and to maintain the flow of humanitarian assistance, the EU temporarily put in place the **EU Humanitarian Air Bridge**, offering air transport to and from various destinations worldwide. It implemented **67 flights to 20 hard-to-reach countries** to transport humanitarian and medical staff and supplies between May and October 2020.

Additional examples of EU support in humanitarian crisis:

- The EU continued to deliver life-saving assistance and support to millions of people affected by the crisis in Syria. The EU allocated EUR 263 million to support the most vulnerable impacted by this crisis (including refugees in Lebanon and Jordan) and continued to deliver life-saving assistance and to support millions of people throughout Syria, focusing on the vital delivery of food, medicine, water, and shelter items. In Turkey, the EU continued providing support to the largest

<sup>(6)</sup> As example: Algeria, Burkina Faso, Cameroon, Central America, Chad, Colombia, Mali, Mauritania, Niger, Pakistan, Philippines, Senegal, Sudan, Ukraine

<sup>(7)</sup> [https://ec.europa.eu/echo/files/policies/sectoral/Gender\\_SWD\\_2013.pdf](https://ec.europa.eu/echo/files/policies/sectoral/Gender_SWD_2013.pdf)

<sup>(8)</sup> Bangladesh, Burkina Faso, Burundi, Cameroon, Chad, Ethiopia, Haiti, Iraq, Myanmar, Nepal, Niger, Nigeria, Pakistan, Palestine, Philippines, Uganda + regional approach in the Caribbean, Central America/Mexico, South America, Southern Africa and South-East Asia.

refugee population in the world (close to 4 million, of which 3.6 million Syrians). Under the EU Facility for Refugees in Turkey, the EU contracted about EUR 2.4 billion of humanitarian projects. In addition, it has allocated EUR 531.7 million in humanitarian funding for 2020, including EUR 485 million for the Emergency Social Safety Net (which provides monthly cash payments directly to refugees through a debit card to help meet their basic needs. It supported over 1.8 million refugees by the end of 2020) and the Conditional Cash Transfer for Education which (provides cash transfers to vulnerable families to promote school enrolment and attendance for refugee children. By the end of 2020, it reached nearly 630 000 children).

- In response to the complex crisis in the Sahel, in 2020, the Commission covered emergency humanitarian needs in seven countries of the wider Sahel region (Burkina Faso, Mauritania, Mali, Chad, Niger, Nigeria and Cameroon). The Commission allocated over EUR 190 million (including more than EUR 124 million to the most vulnerable population in the G5 countries) to support interventions in the sectors of food assistance, health, nutrition, education, water and sanitation, protection, coordination and logistics.
- Since the end of 2019, the Horn of Africa has suffered from the worst infection of locusts in decades. The situation remains critical, and over 30 million food-insecure people are further threatened. The EU mobilised EUR 66 million to curb the impact of the infestation, by pre-positioning food and providing food assistance; providing livelihood support (seeds and fodder distribution), supporting nutrition centres and the procurement of nutrition supplies, using cash-based interventions whenever possible.
- In response to the Venezuela crisis, the EU allocated a total of EUR 67.7 million in 2020 to support the affected population in Venezuela and in the wider Latin America region, mainly for the provision of health and nutrition, water and sanitation, protection, education in emergencies, as well as support to host communities. The EU was on the frontline in the organisation of the 2020 Pledging conference in response to the Venezuela migration and refugee crisis.
- Afghanistan continues to be one of the deadliest conflicts worldwide, and about 17 million people live in areas affected by the conflict. 16 million Afghans were severely food insecure in 2020, and the number of internally displaced persons increased to over 3.4 million. In 2020, the EU supported health care and relief operations, in areas of the country, which cannot be supported by other donors. About 10 million Afghans are refugees, the majority in Iran and Pakistan. Here, the EU supported them, the host communities and the most vulnerable local population to access basic services with a total of EUR 23 and 37.9 million respectively.

### 3.3. Evaluations, studies and reports

The time scope of the Humanitarian Aid Regulation (Council Regulation (EC) No 1257/96) is not limited to the duration of one Multiannual Financial Framework. Evaluations could thus cover parts of two different MFF cycles. In addition, because of the ‘continuous’ nature of humanitarian operations, it is deemed that evaluation results have a validity for the medium term (3-5 years) unless actions have been substantially modified, which also provides a basis for the Commission (DG ECHO)’s evaluation approach, by which basically all humanitarian interventions are evaluated over a five-year period. The comprehensive evaluation of European Union Humanitarian Aid (2012-2016) was finalised in 2017. The evaluation considered that EU funded actions were found to be overall cost-effective and positively contributing to saving lives, reducing morbidity and suffering as well as improving dignity of life of populations affected by disasters, and presented some areas of improvement that have been subsequently evaluated in evaluations of concrete actions.

Areas for improvement encompass developing, when appropriate, a more programmatic approach to the partnership between the EU as a donor and its humanitarian partners; increasing the involvement of local implementing partners in the delivery of EU-funded actions; scaling up successful innovative approaches and improved reporting; more systematic coherence and synergies between the EU humanitarian aid and civil protection activities; better communication of the rationale of the EU’s strategic directions; as well as continued emphasis on Linking Relief, Rehabilitation and Development (LRRD) and defining exit strategies.

As a response to the above findings, the Commission (DG ECHO) is, among other actions, 1) looking at ways of further facilitating a longer-term approach to the funding of operations where appropriate; 2) putting in place a framework that would allow for a more strategic or more programmatic relationship with key NGO partner organizations; 3) working on the elaboration of an overall strategy on localisation; 4) improving its communication of the underlying rationale for allocations internally and externally; and 5) working to establish a distinct longer-term reflection process on data collection needs, in the context notably of DG ECHO’s push for building further its evidence-based policy-making capacity.

The following humanitarian aid evaluations were finalised in 2020:

- Combined Evaluation of the European Union’s Humanitarian Interventions in Iraq and in the Protection Sector, 2014-2018. The evaluation found that programming in Iraq and globally in the Protection sector generally achieved short-term objectives; addressing broader threats and deeper vulnerabilities encountered more challenges. Advocacy in Iraq had multiple areas of success. Efficiency and cost-effectiveness of humanitarian aid in Iraq were appropriate, with possibilities for building staff capacities. Nexus results were relatively weak despite some successes. There was some variability in the quality of needs analyses in Iraq and globally, with good relevance of programming relative to needs identified and the context, though with questions regarding the decreased funding in 2018. Recommendations focus on strengthening protection programming, advocacy, strategic planning, capacity for assessing efficiency and cost-effectiveness, deliberation around humanitarian principles, and the nexus.

- Evaluation of the European Union's humanitarian assistance in Ukraine (2014-2018). The evaluation found that EU humanitarian aid was rapid and effective, and overall performed very well. The EU demonstrated system-wide leadership in strategic thinking and coordination. Member States regarded highly the field team's strength and its access to the Non-Government-Controlled Areas (NGCAs). In Ukraine, the EU supported several innovations: notably system-wide joint and impartial needs assessment, advancing an explicit Joint Humanitarian-Development Framework with the other European Union services, and supporting the creation of the Ukraine Humanitarian Fund. All donors, including the EU, were somewhat slow to adapt their programming to the unusually high proportion of vulnerable elderly persons in the affected population. Government, development and humanitarian actors were also slow to connect and work together in the most-affected Government-Controlled Areas. Although access is difficult, needs in the NGCAs remain high, and should continue to be the focus of advocacy and programming in 2020 and beyond.

Evaluations are published on: [http://ec.europa.eu/echo/funding-evaluations/evaluations\\_en](http://ec.europa.eu/echo/funding-evaluations/evaluations_en)

#### **4. Programme 2021-2027 - Key monitoring indicators**

##### **Specific Objective 1 : Provide an adequate and effective humanitarian assistance to populations affected by humanitarian crises**

**Indicator 1: Geographical coverage of the EU Humanitarian Aid: Number of countries with EU supported operations as a percentage of countries in need of humanitarian assistance according to UN Humanitarian Appeals.**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

	20 882	23 834	10 273	9 066	10 373	23 947	14 856			14 856

Are we on track	On track
Indicator type	
Unit of measurement	Number of deaths
Cut-Off Date	31/12/2020
Data source	As recorded in the EM-DAT database
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	It should be noted that a very important part of the annual results and evolution of this indicator depends on external factors (occurrence, frequency, severity and location of disasters) which are entirely beyond the control of the Commission. The specific contribution of EU humanitarian aid to the evolution of this indicator is difficult to assess.
Full metadata available at this address	
Justification of the trend	Overall, the trend of decreasing deaths due to natural disasters continued in 2020. In 2020, approximately 40% of reported fatalities in the EM-DAT database were in Western Europe due to extreme heat events. This is followed by fatalities globally due to storms and flooding.

**Indicator 2:Number of countries ranked very high risk to disasters in the INFORM Index**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

	Actual Progress									Final
	13	13	13	11	15	14	16			16

Are we on track	Deserves attention**
-----------------	----------------------

Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	INFORM
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The index for Risk Management - INFORM is a global, open-source risk assessment for humanitarian crises and disasters. INFORM is a collaboration of the Inter-Agency Standing Committee Task Team for Preparedness and Resilience and the European Commission, developed in a partnership of 23 international and civil society organisations and governments. INFORM consolidates information about risk from different sources into a risk profile for every country, by assessing natural and human hazards and exposure, vulnerability and lack of coping capacity. INFORM categorises countries in five risk clusters: very high, high, medium, low and no risk. More on: <a href="http://www.inform-index.org">www.inform-index.org</a> . In 2017 : Afghanistan, Central African Republic, Chad, Democratic Republic of Congo, Iraq, Niger, Somalia, South Sudan, Sudan, Syria, Yemen. (continues)
Full metadata available at this address	(continues) It should be noted that a very important part of the annual results and evolution of this indicator depends on external factors (occurrence, frequency, severity and location of disasters) which are entirely beyond the control of the Commission. Indeed, the nature and scale of the disasters (natural ones for instance) is not under the control of the EU intervention and is also often evolving positively or negatively mostly due to national situations (such as investment in infrastructures, or on the contrary conflicts etc.).
Justification of the trend	This indicator is the result of the methodology applied, EU humanitarian aid actions have a very limited impact on the evolution of this indicator.

### Specific Objective 1 :Provide needs based delivery of EU assistance to people faced with natural and manmade disasters and protracted crises

#### Indicator 1:% of non-emergency agreements signed in maximum 11 working days

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2015	Milestones									2020
0,77			0,95	0,95	0,95	0,95	0,95			0,95
	Actual Progress									Final
		0,77	0,72	0,73	0,62	0,66	0,86			0,86

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Percentage
Cut-Off Date	
Data source	Hope database
Narrative	This indicator measures the speed of handling of emergency contracts under humanitarian aid policy
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	This indicator evaluates procedures for non-emergency proposals. In 2018, DG ECHO required partners to provide assurance that they had the right systems in place to prevent and respond to Sexual Exploitation, Abuse and Harassment cases. This extra procedure delayed the contracting of non-emergency agreements.
Full metadata available at this address	
Justification of the trend	The trend of this indicator has improved, and DG EGHO is close to the target.

#### Indicator 2:Total number of beneficiaries of Commission's interventions

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Are we on track	On track
Indicator type	
Unit of measurement	Million beneficiaries
Cut-Off Date	
Data source	INFORM
Narrative	
Methodology	

Link MFF 14-20 / MFF 21-27	
Other methodological comments	Measured by the total number of humanitarian aid interventions (estimated by the number of 'action beneficiaries' as declared by the partners implementing humanitarian projects funded by DG ECHO). This indicator is based on the aggregation of the estimated number of 'action beneficiaries' as declared by the partners implementing humanitarian projects funded. One single individual beneficiary in need of humanitarian assistance can thus benefit from more than one humanitarian action and from more than one project. DG ECHO is engaged in methodological work and improving data collection aiming at a better estimate of the number of people assisted by EU humanitarian aid in different crises. (continues)
Full metadata available at this address	(continues) It should be noted in this context that since 2014 the EU has increasingly been funding operations where multi-sector assistance is provided to beneficiaries (as opposed to a single action providing assistance only in a single sector, such as shelter, or food, or protection), often through recourse to multi-purpose cash interventions: these are becoming a major delivery mode for the EU's humanitarian interventions, with their proportion in the EU's overall humanitarian aid programme steadily rising in recent years (to account for 35% of the total in 2017), where a single intervention thus replaces several sectorial interventions. This is the case, for example, for the Facility for Refugees in Turkey or large parts of the EU's assistance to refugees in other countries neighbouring Syria.
Justification of the trend	The figure for 2020 is still an estimate, and subject to change. The number of interventions is lower than in 2019 due to the slight decrease of the budget and the increase of multi-purpose cash actions.

### Indicator 3: % of HA funds spent in "very high risk to disaster" countries

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0,50			0,53		0,55		0,56			0,56
	Actual Progress									Final
	0,51	0,525	0,534	0,527	0,45	0,7858	0,6833			0,6833

Are we on track	On track

Unit of measurement	Percentage
Cut-Off Date	
Data source	
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The calculation for 2019 and 2020 includes Turkey, because the spent amount in this country is related to the Syria crisis (Syria is a "very high risk to disaster" country).
Full metadata available at this address	
Justification of the trend	The decrease compared to 2019 is mostly explained by the higher level of funding in 2019 to the Syrian crisis, including Turkey.

### Indicator 4: % of projects in the health, nutrition, food, shelter and WASH sectors using standard output indicators ('Key Result Indicators')

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
		90%		90%	90%		90%			90%

Other methodological comments	Measured by the total number of humanitarian aid interventions (estimated by the number of 'action beneficiaries' as declared by the partners implementing humanitarian projects funded by DG ECHO). This indicator is based on the aggregation of the estimated number of 'action beneficiaries' as declared by the partners implementing humanitarian projects funded. One single individual beneficiary in need of humanitarian assistance can thus benefit from more than one humanitarian action and from more than one project. DG ECHO is engaged in methodological work and improving data collection aiming at a better estimate of the number of people assisted by EU humanitarian aid in different crises. It

	should be noted in this context that since 2014 the EU has increasingly been funding operations where multi-sector assistance is provided to beneficiaries (as opposed to a single action providing assistance only in a single sector, such as shelter, or food, or protection), (continues)
Full metadata available at this address	(continues) often through recourse to multi-purpose cash interventions. These are becoming a major delivery mode for the EU's humanitarian interventions, with their proportion in the EU's overall humanitarian aid programme steadily rising in recent years (to account for 35% of the total in 2017), where a single intervention thus replaces several sectorial interventions. This is the case, for example, for the Facility for Refugees in Turkey or large parts of the EU's assistance to refugees in other countries neighbouring Syria.
Justification of the trend	Over the past seven years, the use of KRIs in humanitarian sectors has increased. In 2018, it was reported that 100% of the actions were adopting KRIs; this percentage even exceeded the target set at 90%. In 2020, the percentage of actions using KRIs stabilised at 88,5%, being almost in line with the target. The general trend shows a growing use of KRIs in health, food, nutrition, wash and shelter sectors.

### Indicator 5: % of EU HA initial budget for specific crises spent in forgotten crises

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0,156			0,18		0,15		0,15			0,15
	Actual Progress									Final
	0,165	0,167	0,172	0,158	0,339	0,1577	0,2846			0,2846

Are we on track	On track
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	Forgotten crises countries based on the Commission Forgotten Crises assessment - as explained and described in the yearly Operational Priorities document of DG ECHO.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In 2017, the calculation methodology has been modified. While the percentage of the budget allocated to forgotten crises was previously calculated as a proportion of the HA initial budget including the operational reserves, it is now compared to the HA initial budget excluding the operation reserves. This amendment is necessary given that, throughout the year, based on needs assessments, the operational reserves can also be allocated to forgotten crises. Therefore the old method of calculation could potentially underestimate the percentage of the budget allocated to forgotten crises. The baseline and the actual results pre-2017 have been recalculated according to the new methodology. The milestones and targets have also been corrected and updated: the objective for the Commission is to provide a minimum of 15% of its initial humanitarian aid budget to forgotten crises.
Full metadata available at this address	
Justification of the trend	When calculating the result in 2020, errors in the implementation of the methodology in 2019 have been identified. Therefore, the 2019 result has been updated. The significant increase in 2020 compared to 2019 is related to the significantly higher initial budget in 2019, which included EUR 600 million for Turkey and with Syria not considered a forgotten crisis.

### Specific Objective 2 :Build the capacity and resilience of vulnerable or disaster affected communities

#### Indicator 1: Number of persons benefiting from DIPECHO actions in disaster prone regions

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Justification of the trend	The percentage of ECHO funded operations in which Disaster Risk Reduction has been mainstreamed

is counted from the total number of DG ECHO funded operations. In 2020 it appears to be slightly lower than 2019 because the total number of DG ECHO funded operations in 2020 is higher than the total number of 2019 operations – this is mainly due to the increase of projects to prepare or respond to COVID-19. However, the number of ECHO funded operations in which Disaster Risk Reduction has been mainstreamed in 2020 is double the number of 2019.

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

#### **6.1.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.1.2. Explanation and justification on the financial contribution**

In the 2014-2020 period, the total contribution for climate mainstreaming was EUR 1.06 billion. The figure for 2020 (EUR 803.73 million) is the result of the application of a new methodology that allows a more precise analysis of climate spending.

DG ECHO is implementing the central tracking at commitment level, to improve the accuracy and reliability of the data on climate action. The tracking is based on EU climate markers methodology, made of three scores (0/40/100).

#### **6.1.3. Key achievements**

In 2020, DG ECHO financed the NGO Medair with 1.2 million Euros to support the strengthening of Early Warning System (EWS) and linking it to Early Action (EA) in one of the regions most exposed to cyclones in the central west of Madagascar, the Menabe region. The growing of intensity and frequency of these events caused by climate change, in fact, has increased the vulnerability of the population and revealed the weakness of early warning capacity in these areas, as it was in the case of cyclone Idoi in 2019. The intervention (ongoing) aims at reinforcing community / district and province preparedness and capacity for early warning and early action in response to climate related shocks while scaling up the use of innovative technologies.

#### **6.1.4. Performance**

Over the course of the past multi-annual financial framework 2014-2020, DG ECHO has successfully integrated climate action into its activities, primarily in terms of adaptation to climate change – both through the civil protection and humanitarian programmes.

On the humanitarian side, the increased emphasis on climate risk integration and preparing for climate impacts culminated in the revision of DG ECHO's disaster preparedness approach in 2020, as well as the priorities for the Disaster Preparedness Budget Line, which now has a dedicated funding priority on climate and environmental resilience. Increased emphasis on anticipatory action as part of the renewed disaster preparedness approach is also a direct contribution to being better prepared for climate impacts. In 2020, the Resilience Marker was also revised to better capture the extent to which humanitarian projects have embedded considerations of climate risks and contribute to climate resilience. All of this suggests a successful integration of climate action into the humanitarian programme between 2014-2020.

### **6.2. Contribution to biodiversity mainstreaming**

#### **6.2.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.2.2. Explanation and justification on the financial contribution**

In 2020 DG ECHO put forward an ambitious approach to reducing the environmental footprint of humanitarian aid, which will contribute to the protection of biodiversity in humanitarian contexts by reducing deforestation, supporting natural regeneration of ecosystems around camps and settlements and generally reducing pressures on the natural environment. This is also reflected in the funding allocation for disaster preparedness – i.e. the Disaster Preparedness Budget Line 23 02 02 – where environmental (and climate) resilience is identified as a priority for funding for the next 4 years (2021-2024). Additionally, as part of its commitment to

advocate globally for compliance with international humanitarian law, DG ECHO also promotes the respect of the rules on the protection of the environment in armed conflict.

n/a – environmental mainstreaming will apply from 2022 HIPs – no data so far.

### 6.2.3. Key achievements

n/a – environmental mainstreaming will apply from 2022 HIPs – no data so far.

### 6.2.4. Performance

n/a – environmental mainstreaming will apply from 2022 HIPs – no data so far.

## 6.3. Contribution to clean air financing

Not applicable

## 6.4. Contribution to gender equality

### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.4.2. Key achievements and performance

The Commission is committed to ensuring that EU humanitarian aid takes into account the different needs and capacities of women and men of all ages.

The Gender-Age Marker is a tool that assesses to what extent humanitarian actions integrate gender and age considerations. The Gender-Age Marker uses a set of four criteria to assess how strongly humanitarian actions are adapted to and integrate gender and age considerations. The Gender-Age Marker represents a new generation of assessment tools and strengthening the integration of gender and age concerns is an organizational change process for partners that can take time. In the coming years, the EU will continue the targeted training of implementing partners, as well as the dissemination and further development of guidance and toolkits on the gender-age cross-cutting issues. The development of operational best practices will continue to be based on operational experience. Systematic monitoring of operational guidance implementation via feedback loops will be ensured taking into account the results of the assessment of the first three years of implementation.

Several assessment parameters have been developed to ensure quality programming one of them being the Gender-Age Marker.

A first assessment report on the Gender-Age Marker, covering 2014-2015, highlights the usefulness of the Marker and calls upon partners to continue investing in capacity building on gender and age. In June 2020, the EU published its second assessment report on its Gender-Age Marker, showcasing that for projects starting in 2016 and 2017, 89% of all EU humanitarian aid integrated gender and age considerations 'strongly' or 'to a certain extent'.

In December 2019, the EU launched its first-ever e-learning on its Gender-Age Marker, which has since further contributed to build capacity on gender and age mainstreaming and the application of the Marker for its staff and partners.

Furthermore, the EU continued to operationalise its approach to gender and gender-based violence in humanitarian crises outlined in the Staff Working Document 'Gender: Different Needs, Adapted Assistance', supporting prevention and responding to gender-based violence, including through targeted actions and capacity-building of humanitarian actors in this area.

The EU continues to be an active member of the global initiative Call to Action on Protection from Gender-Based Violence in Emergencies (having previously led the initiative between June 2017 and December 2018). In September 2020, a new Call to Action Road Map covering the period 2021-2025 was launched officially at the United Nations General Assembly meeting, in an event hosted by global lead 2010-2020 Canada, and attended by Commissioner Lenarčič.

In 2019, an Enhanced Response Capacity project (UNFPA) that was started during this leadership culminated in the development of inter-agency standards on gender-based violence in emergencies and guidance on how to develop context-specific Call to Action Road Maps (from pilots in Nigeria and Democratic Republic of the Congo). During 2019 and 2020, DG ECHO allocated approximately EUR 56 million to prevent and respond to sexual- and gender-based violence. Furthermore, during 2019 and 2020, it is estimated that the EU allocated approximately EUR 45 million to reproductive health from its humanitarian health programming. In May 2019, the Commissioner for Crisis Management represented the European Union at an international conference on sexual- and gender-based violence in Oslo reiterating the EU's commitment and showcasing EU actions in this field.

In the framework of the implementation of the European Union Gender Action Plan II (2016-2020), progress has been made towards the aim of transforming the lives of girls and women through ensuring their physical and psychological integrity,

promoting their economic and social rights and strengthening girls' and women's voice and participation. A new Gender Action Plan for the EU external dimension for 2021-2025 was adopted in November 2020. The new Gender Action Plan includes a number of humanitarian priorities, including on GBV, sexual and reproductive health and the Gender-Age Marker.

## **6.5. Contribution to the sustainable development goals**

### **6.5.1. Goals**

Not applicable

### **6.5.2. Key achievements and performance**

#### ***SDG 1 End poverty in all its forms everywhere***

The provision of humanitarian aid to the most vulnerable, sometimes in the form of cash transfers for their basic needs, contributes to paving the way for national social safety nets and more structural poverty reduction national programmes.

#### ***SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture***

Humanitarian food and nutrition aid will continue to contribute to improved nutrition outcomes and food security by applying an integrated and multisectoral approach.

The fight against acute hunger and acute malnutrition (severe and moderate) is at the centre of humanitarian interventions aiming at reducing the excess mortality and morbidity caused by hunger and malnutrition. Nutrition interventions in emergencies respond to specific needs of targeted vulnerable groups (infants, young children and pregnant and lactating women), by addressing the immediate and underlying causes of malnutrition. Immediate access to food and free access to lifesaving healthcare respond to acute food and nutrition crises; water, sanitation and hygiene measures together with the provision of accessible health services (disease control measures) and safe environments play a dominant role in individual nutritional status.

Climate change, conflicts and economic shocks increasingly influence food security and nutrition in fragile settings. In 2020, these drivers were exacerbated by the direct and indirect effects of Covid-19, and by the locust upsurge in East Africa and the Arabian Peninsula. More effective and efficient ways of providing humanitarian aid are important to test innovative approaches (e.g. cash transfers, simplified protocols, community-based management of acute malnutrition surge, anticipatory action systems) to make national systems more resilient and able to prepare for and respond to periodic crises.

For example, in 2020 DG ECHO applied an integrated response to the locust crisis affecting the Greater Horn of Africa region. The intervention included an anticipatory element consisting of early food assistance to affected populations and support to the surveillance and control activities led by FAO. It also included a livelihood support programme to help and accelerate the recovery.

DG ECHO funding for nutrition aims at providing lifesaving interventions to the most vulnerable populations. For example, severely malnourished children in Sudan are given therapeutic food in treatment centres; in Ethiopia, recurrent droughts make children much more at risk of acute malnutrition in the Somali region. Humanitarian support responds to the nutritional needs of these children in remote areas with no access to basic services. In Syria, children under 5 years of age and pregnant and lactating women disproportionately affected by the conflict are included in nutrition programmes and provided with treatment to severe acute malnutrition and comprehensive healthcare services.

#### ***SDG 3 Ensure healthy lives and promote well-being for all at all ages***

The health humanitarian assistance aims at limiting excess preventable mortality, permanent disability and diseases associated with humanitarian crises. Lifesaving healthcare services are essential for the most vulnerable populations (children under 5 years old, women, displaced populations) affected by natural or manmade humanitarian crises. In fragile and heavily disrupted systems, humanitarian health funding contributes to the provision of primary healthcare (e.g. in cyclone-affected areas of Mozambique), vaccinations (e.g. during the ongoing Ebola outbreak in the Democratic Republic of Congo), access to medicines and medical devices. Emergency health response to outbreaks and building national capacities for preparedness is important to cope with increased relapse of epidemics.

Mental health and psychosocial support is an integral part of the humanitarian health assistance in case of sexual violence, mental disorders, trauma and high distress (e.g. for conflict-affected people in Ukraine, refugees in Uganda, internally displaced persons in South Sudan). Digitalisation and innovation in the health sector has prominently influenced also humanitarian interventions (e.g. electronic medical records, mobile apps for contact tracing).

#### ***SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all***

The EU continues to be a strong advocate for Education in Emergencies on the international stage. Providing safe and quality education to the most vulnerable children affected by emergencies is a priority of the programme, with funding for Education in Emergencies increasing significantly from 1% of the humanitarian aid budget in 2015 to 10% as of 2019. In the 2015-2020 programming period, the EU invested over EUR 600 million in education in emergencies-related activities. Projects focussed on facilitating access to inclusive, quality and safe education. Activities supported included removing e.g. financial, administrative or

protection barriers; protecting children on the way to and at school through linking up with child protection support and providing psycho-social support; advocating for the protection of education; supporting teachers; providing teaching and learning materials; investing in school infrastructure rehabilitation; and sensitising parents and communities about the importance of education. In 2020, the Covid-19 has brought about unprecedented challenges for the educational sector and exacerbated learning crisis, inequalities, school drop-out rates, and risks of exploitation, violence, abuse and neglect for the most vulnerable children. More than 24 million children are projected to drop out of school due to Covid-19 (UNICEF estimates). Half of all refugee girls in school will not return when classrooms reopen. The EU continues to address these challenges and provide for better educational opportunities for all.

#### ***SDG 5 Achieve gender equality and empower all women and girls***

The EU ensures that gender and age considerations are taken into account in all its humanitarian aid operations. To ensure an effective, quality response, humanitarian action should cater for the differentiated needs and capacities of women, girls, men and boys; and should contribute to the active participation of women and girls in humanitarian aid. Supporting the prevention and response to gender-based violence is considered as a life-saving humanitarian intervention and a priority. During 2019 and 2020, The EU allocated approximately EUR 56m to prevent and respond to sexual- and gender-based violence. Furthermore, during 2019 and 2020, it is estimated that the EU allocated approximately EUR 45m to reproductive health from its humanitarian health programming. In December 2019, the EU launched its first-ever e-learning on its Gender-Age Marker, a tool for mainstreaming gender and age considerations in all EU-funded humanitarian aid projects. In November 2020, a new Gender Action Plan for the EU external dimension for 2021-2025 was adopted. The new Gender Action includes a number of humanitarian priorities, including on GBV, sexual and reproductive health and the Gender-Age marker.

#### ***SDG 6 Ensure availability and sustainable management of water and sanitation for all***

The EU provides safe drinking water, sanitation and hygiene (WASH) support through its humanitarian aid operations to those in need during humanitarian crises and ensures that the most vulnerable have access to WASH. In 2019, the EU continued to be one of the largest donors to humanitarian WASH interventions, allocating around EUR 1,6 million to WASH projects (or projects with a WASH component). At the same time, collective efforts in the WASH sector have led to a 30-fold increase over the past decade.

The promotion of basic WASH services ('minimal WASH package') and multisector outcomes, as part of other 'stand-alone' sector service deliveries, such as health, nutrition, and shelter, remained the primary objective of the EU's WASH policy, especially in the framework of acute and chronic crises (e.g. WASH operations in South Sudan and in the Sahel zone). Additional to this, contribution to DRR/DP/Nexus strategies by anticipating severe water scarcity crisis, which have the potential to spark massive displacement (e.g. Afghanistan) through adapted responses (i.e. water contingency planning, climate adaptation, groundwater level monitoring) also characterised the EU's WASH assistance for 2019.

#### ***SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all***

The EU contributes to SDG 7 through its new approach to reducing the environmental footprint of humanitarian aid, which includes provision of clean energy as one of its key areas of intervention. DG ECHO will therefore support the integration of clean energy as part of humanitarian response, not only because of the environmental benefits of such interventions but also because of positive impacts on health (reduced indoor air pollution), safety (less need to collect firewood, more secure settlements) and livelihoods (access to electricity means access to mobile services). As a result of all these co-benefits, DG ECHO is also an advocate for clean energy interventions and is a supporter of the Clean Energy Challenge. As part of priorities on environmental mainstreaming as well as innovation under DG ECHO's new pilot programmatic partnerships (PPPs) with UN organisations and IOs, dedicated PPPs on clean energy could be supported.

#### ***SDG 13 Take urgent action to combat climate change and its impacts***

The EU contributes to SDG 13 through its targeted disaster preparedness actions aiming at strengthening national and local capacities to respond to climate-related disasters and thus be more resilient to such shocks. Furthermore, the inclusion of climate risk analysis in the design of all humanitarian actions helps ensure that the interventions take into consideration and respond to the risks posed by climate change and to its possible impacts. In 2020, for example, DG ECHO financed the NGO Medair with 1.2 million Euros to support the strengthening of Early Warning System (EWS) and linking it to Early Action (EA) in one of the most exposed region to cyclones in the central west of Madagascar, the Menabe region. The growing of intensity and frequency of these events caused by climate change, in fact, has increased the vulnerability of the population and revealed the weakness of early warning capacity in these areas, as it was in the case of cyclone Idai in 2019. The intervention (ongoing) aims at reinforcing community / district and province preparedness and capacity for early warning and early action in response to climate related shocks while scaling up the use of innovative technologies.

#### ***SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss***

The EU acknowledges that when humanitarian interventions are poorly planned, without considering their impact on or interaction with the surrounding environment, they can lead to unintended environmental degradation, e.g. around refugee settlements, increasing risks for the communities and undermining their health and well-being. In order to avoid such consequences, the EU contributes to environmental resilience by addressing environmental concerns as part of preparedness planning and in integrating

environmental concerns into humanitarian action. This is also reflected in the funding allocation for disaster preparedness – i.e. the Disaster Preparedness Budget Line 23 02 02 – where environmental (and climate) resilience is identified as a priority for funding for the next 4 years (2021-2024).

**1. Overview**

## 1.1. Challenges

The EU, under its Common Security and Defence Policy, will continue working towards addressing challenges in international security and stability. Key challenges include organized crime, terrorism, people smuggling, migration, the proliferation of conventional weapons and weapons of mass destruction, and the rule of law in third countries that may directly affect the EU's own security.

It is therefore essential for the EU to support third countries in security sector reform and help them establish efficient civilian security services, thereby increasing their capacities to tackle internal and external security challenges.

## 1.2. Mission (general objectives)

The credibility of the EU as a peace actor on the international scene is linked among other things to its capacity to act and intervene quickly to address civilian crises through Common Security and Defence Policy Missions and to promote nuclear non-proliferation and disarmament through support for multi-lateral action. Interventions in both areas help the EU to assume its role as a global player as envisaged under Article 21 of the Treaty on European Union "to preserve peace, prevent conflict and strengthen international security" thereby contributing to a 'Stronger Europe in the World

## 1.3. Specific objectives

CFSP pursues the following two specific objectives:

- CFSP supports the deployment of Common Security and Defence Policy Missions to preserve peace and to strengthen international security in accordance with the principles of the UN Charter, of promoting international cooperation and developing and consolidating democracy and rule of law as well as of respecting human rights and fundamental freedoms in line with Article 21 and 42 of the Treaty on European Union and Part Five of the Treaty on the Functioning of the European Union.
- The purpose of CFSP action on nuclear non-proliferation and disarmament is to preserve peace and to strengthen international security in accordance with the principles of the UN Charter, and to promote strategic cooperation with international partners on non-proliferation of weapons of mass destruction, on combatting the illicit accumulation of small arms and light weapons and other conventional weapons and support EU policy on conventional arms exports in line with Article 21 of the Treaty on the European Union.

## 1.4. Public intervention context

Under CFSP, the European External Action Service (EEAS), in consultation with FPI, is responsible for the programming of CFSP actions that are decided and adopted by Member States as per the provision of the Treaties. The Commission is responsible for providing the funding for CFSP actions.

The Commission monitors the execution of the CFSP budget according to the principles of sound financial management as well as the performance of the CFSP funding beneficiaries as regards budget implementation rates. The Commission regularly reports to Member States in the relevant Council Working Party settings on these CFSP budget execution rates.

## 1.5. Actions

All CFSP activities must be consistent with other areas of the EU's external action and must ensure coordination with international organisations. CFSP pursues its objectives by the following means:

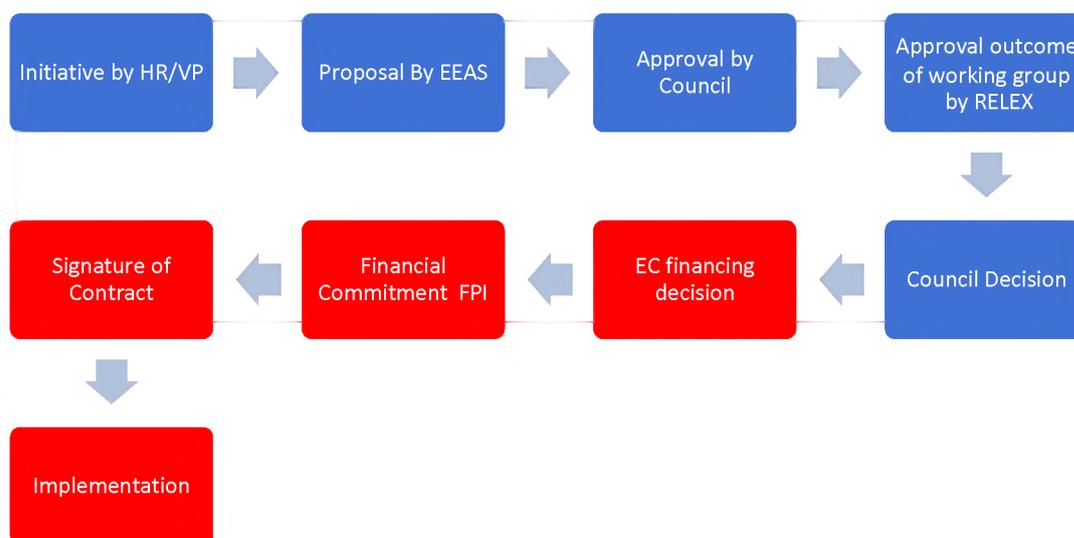

- Different types of civilian Common Security and Defence Policy Missions, depending on the Council's mandate, for example, Advisory Missions counselling host countries on drafting legislation in the security sector or Capacity-building Missions providing hands-on operational activities;
- Different types of mandates of EU Special Representatives promoting EU policies all around the world;
- Actions related to non-proliferation and disarmament. These are implemented through agreements with international organisations, notably within the United Nations family, as well as for specific purposes with other selected organisations in the field of non-proliferation and disarmament (NPD).

## 1.6. Delivery mode

The management mode is primarily in indirect management (for civilian Common Security and Defence Policy (CSDP) Missions and EU Special Representatives, as well as Non-Proliferation and Disarmament actions), and to a lesser extent in direct management. The lead service for the programming of CFSP actions is the EEAS, in consultation with FPI, while FPI is responsible for ensuring the funding under the CFSP and the sound financial management of the funds.

## 1.7. Graphic overview of the programme structure

The CFSP budget is managed by FPI 3. The main beneficiaries of CFSP budget funding are civilian CSDP Missions in the area of security sector reform, accounting for an estimated 80% of the CFSP budget. The remaining approximate 20% of the CFSP budget are used to fund beneficiaries in the field of non-proliferation and disarmament, such as UN agencies and NGOs, and EU Special Representatives.

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
	2021 - 2027	2 678,7

### 1.8.2. Legal basis explanation

CFSP is implemented on the basis of individual Decisions adopted by the Council. Under Articles 42(4) and 43(2) TEU, the Council adopts the legal framework for civilian CSDP Missions. On the basis of Art. 28 TEU, Member States may decide to launch operational actions, for example stabilisation actions. As regards actions in the field of non-proliferation and disarmament, the Council adopts Decision on the grounds of Art. 28(1) and 31(1) TEU.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>351,9</b>	<b>361,7</b>	<b>371,8</b>	<b>382,1</b>	<b>392,7</b>	<b>403,6</b>	<b>414,7</b>	<b>2 678,7</b>

### 1.8.4. Financial programming explanation

Under the new MFF 2021-2027, the Council agreed on an envelope of EUR 2 677 million for CFSP in current prices. For commitment appropriations in 2022 the MFF foresees EUR 361 million, which is a slight increase to a voted 2021 budget of EUR 351 million (also almost identical as in 2020 voted budget).

## 1.9. Link with the 2014-2020 MFF

Under the 2014-2020 MFF, the CFSP budget was EUR 2 340 billion under Heading 4 “Global Europe” as a separate instrument.

During the 2021-2027 MFF, too, CFSP will remain a separate tool, but complementary with other conflict and crisis response instruments, e.g. the rapid response pillar of the Neighbourhood, Development and International Cooperation Instrument (NDICI) during the period. Continued strong support for non-proliferation of weapons of mass destruction and disarmament, with increased levels of support to match the level of ambition of Member States, is expected.

## 1.10. Relevant websites providing more information

Dedicated webpages on civilian CSDP Missions and non-proliferation and disarmament can be found on the EEAS Internet site:

[https://ec.europa.eu/fpi/what-we-do/common-foreign-and-security-policy-preserving-peace-and-security\\_en](https://ec.europa.eu/fpi/what-we-do/common-foreign-and-security-policy-preserving-peace-and-security_en)

[https://eeas.europa.eu/topics/military-and-civilian-missions-and-operations\\_en](https://eeas.europa.eu/topics/military-and-civilian-missions-and-operations_en)

[https://eeas.europa.eu/headquarters/headquarters-homepage\\_en/427/Disarmament.%20Non-Proliferation%20and%20Arms%20Export%20Control](https://eeas.europa.eu/headquarters/headquarters-homepage_en/427/Disarmament.%20Non-Proliferation%20and%20Arms%20Export%20Control)

## **2. Where are we in the implementation ?**

### **2.1. Programme 2021-2027**

CFSP Actions funded under 2014-2020 MFF are still being implemented and there is direct and strong link between the CFSP actions implemented under 2004-2020 MFF and the new 2021-2027 MFF. The level of commitment and payment appropriations requested for 2021 and 2022 are as follows:

- In 2021 requested commitment appropriations stand at EUR 374 Million (composed of EUR 351 million voted budget in 2021 and EUR 23 million carry-over from 2020) and payment appropriations of EUR 336 million (EUR 328 million voted budget for 2021 and EUR 8 million carried over to 2021 from unspent funds in 2020).
- For 2022, requested commitment appropriations stand at EUR 361 Million and payment appropriations at EUR 328 million.

As regards the COVID-19 impact on budget implementation, FPI committed EUR 359.5 million for CFSP actions i.e. 100% of the available commitment appropriations. The COVID-19 pandemic has, however, been an exceptional situation that has affected planning, decision-making and implementation of the mandates of civilian CSDP Missions. In 2020, four Missions (EULEX Kosovo, EUBAM Libya EUPOL COPPS and EUBAM Rafah) could not undergo the Strategic Reviews and their respective mandates were renewed for one year with essentially the same budget. At operational level, a number of mitigating measures were designed and implemented in cooperation with the EEAS to ensure the safety of staff (e.g. through the relocation of staff).

Despite the significant challenges, all Missions have remained operational throughout the pandemic. The Missions successfully balanced duty of care concerns with operational continuity and visibility on the ground. In this regard, FPI contributed by issuing a number of clarifications and instructions to Missions in the field, including on the use of flexible and ad hoc procurement procedures, the management of the budget, relocation of staff and the application of allowances in a crisis situation.

The systematic trend of budget under-consumption by the civilian CSDP Missions continues, and can be expected to increase further as the pandemic continues. In 2020, civilian Missions returned unused funds totalling EUR 42 million, pointing to a lack of absorption capacity and realistic budget planning.

The implementation of the NPD actions has been heavily affected and delayed by the COVID-19 crisis, given their reliance on travel, meetings and workshops. As a result, the Commission put in place a number of no-cost extensions of ongoing NPD actions in 2020, in order to foresee sufficient time to carry out all the envisaged activities.

### **2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations**

	Commitments	Payments
Implementation Voted budget	2 017 183 383	1 915 128 248
Implementation carry-overs	31 743 798	1 818 951
Implementation total	2 048 927 181	1 916 947 199
total envelop*	2 088 043 067	
cumulative implementation rate	98%	92%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

During the period 2014-2020, the implementation rate of CFSP reached 98% for Commitment Appropriations and 92% for Payment Appropriations thanks to FPI's active management of budget lines.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

CSDP Missions are important in enhancing stability and promoting peace and the rule of law. Since the launch of the first Mission in 2003 in the Balkans, the EU CSDP civilian Missions have been one of the key players of the EU's response to international crisis, working with the EU's diplomatic and mediation efforts, development cooperation and humanitarian aid. This constitutes the EU's integrated approach, which makes it a significant contributor to peace and security and a security provider. The establishment of the Civilian CSDP Compact by the EU Member States in December 2018 strengthened the capacity of civilian CSDP. Member States agreed on strategic guidelines, committing politically to 22 development goals and to increased contributions to civilian CSDP Missions by the Member States.

The non-proliferation and disarmament actions funded from the CFSP budget contributed to international peace and security by strengthening the norms against the proliferation of weapons of mass destruction through advancements in universalisation, institutional strength and effective implementation of the relevant treaties and mechanisms, as well as by preventing and combatting the illicit accumulation and trafficking of small arms and light weapons and their ammunition and by supporting the implementation of the Arms Trade Treaty and the adoption of policies in line with Common Position 2008/944/CFSP on exports of military technology and equipment.

##### **3.1.2. Active programme performance**

##### **3.1.3. Previous programme performance**

As already indicated above, the Commission is responsible for the funding, not for the operational programming of actions under CFSP which are decided by the Council. CFSP actions are not subject to external evaluations.

At the end of the 2014-2020 Multiannual Financial Framework, 11 Missions were active on the ground. Their performance was indirectly measured on the basis of the rate of staff deployment. However, due to the Commission's limited role in CFSP, FPI has no influence on shaping the actual deployment rate. Deployment is managed by the Missions, together with the EEAS-CPCC who assists the Missions by publishing calls for contributions for seconded and contracted personnel. The deployment figures that were used for reporting purposes under the 2014-2020 reference period are based on statistics gathered by EEAS-CPCC and put at the disposal of FPI. For this reason, this indicator will no longer be used under the upcoming Multiannual Financial Framework 2021-2027.

Instead, the Commission closely monitors the civilian Mission's performance of budget absorption rates. Missions benefit from the main share of the CFSP budget (up to 80 % each year). Few Missions reach levels of budgetary absorption above 90 %, most Missions reach levels between 80 and 90%, in some cases the level is at 70%. As a result, important amounts of unused funds were returned to the Commission throughout the 2014-2020 period. The budgetary performance remains an important milestone for the measurement of the way CSDP entities handle the funding attributed to them. For this purpose, the Commission regularly takes stock of budget absorption rates across all CSDP Missions. The Commission presents these rates to Member States in the RELEX Working Group in the Council on a quarterly basis. On this occasion, the Commission picks two selected examples of CSDP Missions to portray to Member States the specific reasons which have led to underspending by the Missions. These may be either operational or, more frequently, related to over-ambitious budget planning. In addition, the CivCom Working Group, responsible for the strategic steering of civilian CSDP, is also informed about the absorption rates.

For the reference period 2014-2020, programme performance was monitored by the Commission with regard to evolution of the deployment of international staff in Missions, enabling Missions to conduct their operations and implement their mandates. This was monitored on the basis of staffing figures provided by the EEAS, as the Commission does not have a say in the management of staff resources in civilian Missions.

During the reference period and despite commitments taken by Member States in the 'civilian Compact' to increase the ratio of seconded international staff in Missions, Member States have not met the targets set for themselves to reach a ratio of 70% seconded staff in Missions (versus 30% contracted) to reduce the reliance on international contracted staff. As per figures as of 31 December 2020, Missions were employing 776 seconded staff and 696 international contracted staff, thus a ratio of 53% versus 47%, rather far from the agreed target. Member States are continuing to work towards meeting this milestone, also in the period 2021-2027, which is set to be achieved for summer 2023.

Being in charge of sound financial management, the Commission has closely monitored budget absorption rates of the civilian Missions in the reference period. Few Missions reach an absorption rate of over 90%, the majority of them reach levels of between 80-90%, in some cases, the level is at 70%. During the reference period, no increase in terms of budget absorption has been noticed.

During the reference period 2014-2020, the programme performance was monitored on the basis of indicators reflecting the universalisation of the various non-proliferation treaties and mechanisms. While the number of states which ratified the Comprehensive Nuclear-Test-Ban Treaty increased from 163 in 2014 to 168 as of 31 December 2020 (and 169 as of 4 February 2021) or the number of states which ratified the Arms Trade Treaty increased from 61 in 2014 to 110 in 2020, it is not possible to directly attribute the changes in the universalisation of the non-proliferation treaties and mechanisms to the non-proliferation and disarmament actions funded from the CFSP budget, as the decisions on the ratification of the treaties depend also on other factors, including on political considerations and interests of the states concerned.

The non-proliferation and disarmament actions funded from the CFSP budget contributed to international peace and security by strengthening the norms against the proliferation of weapons of mass destruction through advancements in universalisation, institutional strength and effective implementation of the relevant treaties and mechanisms (for example, the Comprehensive Nuclear-Test-Ban Treaty, International Convention for the Suppression of Acts of Nuclear Terrorism, Chemical Weapons Convention, Biological and Toxin Weapons Convention, Hague Code of Conduct against Ballistic Missile Proliferation), as well as by preventing and combatting the illicit accumulation and trafficking of small arms and light weapons and their ammunition and by supporting the implementation of the Arms Trade Treaty and the adoption of policies in line with Common Position 2008/944/CFSP on exports of military technology and equipment.

### 3.2. Key achievements

1 035	0.5 Million	19
staff of the Palestinian Authority trained by the EU Border Assistance Mission in Rafah from 2015 to 2020	pieces of small arms and light weapons (SALW) and pieces of ammunition destroyed in the Western Balkans in 2017-2019	OPCW fact-finding missions deployed to Syria in 2016-2017 related to the alleged use of chemicals as weapons

#### CSDP Missions

FPI has made considerable progress in its area of competence (finance and procurement) as regards civilian CSDP, notably concerning the harmonisation and simplification of operating procedures in CSDP Missions through the staff embedded in the Mission Support Platform in FPI. Progress was made on a number of key pillars: the central Warehouse funded by the CFSP budget since its start in 2018 has become fully operational by 2020, central framework contracts for the use by the Missions were put in place, a single IT platform (ERP – Enterprise Resource Management) was launched and progressively rolled out to a number of CSDP Missions during the reporting period, standard guidelines and manuals on procurement and financial matters are regularly issued and updated, and were adapted to take into account the impact of the COVID-19 pandemic on the operations of the Missions.

At the end of the reporting period in 2020, 11 CSDP Missions were active, the most recent ones were launched in 2017 (EUAM Iraq) and 2020 (EUAM RCA). At the end of 2020, out of all running Missions, only two were not yet positively pillar assessed. At the same time, 9 EU Special Representatives were active, the most recent mandate for the EUSR for Western Balkan regional issues adopted by the Council in 2020. EUSRs are not required to undergo pillar assessments, with the exception of the EUSR in Kosovo.

#### Non-proliferation and disarmament actions

The non-proliferation and disarmament actions funded from the CFSP budget contributed to international peace and security by strengthening the norms against the proliferation of weapons of mass destruction through advancements in universalisation, institutional strength and effective implementation of the relevant treaties and mechanisms, as well as by preventing and combatting the illicit accumulation and trafficking of small arms and light weapons and their ammunition. Between 2015 and 2020, the EU supported:

- the establishment and secure management of a low-enriched uranium bank located in Kazakhstan under the control of the International Atomic Energy Agency (IAEA). As of 17 October 2019, the low-enriched uranium bank is fully operational and prepared to provide the nuclear fuel to IAEA member states in case the commercial supply of low-enriched uranium is disrupted;
- the enhancement of nuclear security capacity of the IAEA member states by the provision of 44 national, regional and international training courses, 65 expert and advisory meetings, 20 consultancy and expert meetings, 12 pieces of equipment (including detection equipment), 7 fellowships and 4 regional schools;
- the strengthening of the capability of the Comprehensive Nuclear-Test-Ban Treaty monitoring and verification system by providing, repairing or re-configuring equipment at 21 auxiliary seismic stations in 18 countries located in Africa, Asia, Latin America, Pacific and the Middle East;

- the deployment of 19 fact-finding missions of the Organization for the Prohibition of Chemical Weapons (OPCW) to Syria to gather facts related to the alleged use of chemicals as weapons;
- the enhancement of the capacity of State Parties in fulfilling their obligations under the Chemical Weapons Convention (CWC) and of the application of the CWC verification measures by the organization of 1 training course, 1 national implementation capacity assessment, 3 mentorship programmes, 1 regional legal workshop, 3 visits to chemical weapons destruction facilities and the modernisation of the information management system used by the OPCW verification division;
- the improvement of the capacity of Western Balkan countries for physical security and stockpile management of small arms and light weapons (SALW) by the upgrading of 7 SALW storage locations and 15 evidence rooms, by the destruction of 48 014 pieces of surplus SALW and 499 999 pieces of SALW ammunition and by the organization of 3 regional workshops on the stockpile reduction;
- the improvement of the physical security and stockpile management of SALW in the Sahel region by the rehabilitation, construction or provision of 50 storage sites and containerized armories, by the destruction of 5 870 pieces of illicit SALW and 83 069 pieces of ammunition and by the organization of 16 workshops and 18 training sessions.

### 3.3. Evaluations, studies and reports

#### *As regards civilian CSDP Missions:*

CFSP actions are not subject to classical evaluations through external experts, although this had been recommended by the Court of Auditors in its 2017 report on the Sahel Missions. The Court also recommended the use and setting of verifiable indicators to assess the work of Missions. So far, Member States have not put in place an external evaluation system, but rely on their own strategic assessments conducted on the basis of input provided by the EEAS. The Commission has regularly drawn the EEAS' attention to the fact that evaluations should be conducted by external experts as a more appropriate tool to assess the work of the civilian Missions.

Civilian Missions are subject to Strategic Reviews, which are conducted by the internal services of the EEAS for assessment by Member States. These Reviews aim at analysing the achievements and efficiency of a Mission, form the basis for the Missions' Operational Plans and provide orientations for the operational mandate of a Mission in the different areas of security sector reform.

Apart from the Strategic Reviews that each Mission undergoes individually, the EEAS issues an Annual Lessons Learnt Report based on contributions from within the EEAS-CPCC and the Missions on operational planning and conduct of operations as well as Mission support tasks. In addition, ad-hoc reports may be elaborated. For example, in the COVID-19 pandemic context, the EEAS has presented to Member States a specific report drawing on lessons learnt from the health crisis and their impact on the Missions' operations, for example, with regard to operational contingency plans, medical evaluation or policies setting the guidelines for the relocation of Mission staff from the theatre of operations to home countries. Furthermore, the Joint Action Plan implementing the 'civilian Compact' formulates lessons for various work strands of the Missions, the Institutions and Member States. For example, one of the lessons for Member States is to increase the number of national staff deployed in CSDP Missions.

Only the budgetary and financial implementation of the actions undergo regular external auditing as foreseen by the contractual arrangements with the Commission, pillar assessments in line with the Financial Regulation as well as monitoring missions. In 2019, CFSP was subject to an audit of the Commission's Internal Audit Service.

#### *As regards non-proliferation and disarmament actions:*

As regards the evaluation of the non-proliferation and disarmament actions, the competent Council bodies (Working Group on Non-proliferation or conventional arms export) assess the impact of the actions. Annual progress reports are presented to Council on the implementation of the strategies against the proliferation of weapons of mass destruction and against illicit firearms, small arms and light weapons and their ammunition<sup>(1)</sup>. In addition, the Commission and EEAS receive quarterly and annually reports on the implementation from the contract beneficiaries (e.g. IAEA, UN or Member State agency). Regular financial audits are conducted.

## **4. Programme 2021-2027 - Key monitoring indicators**

### **Specific Objective 1 :Fast action to enable resource-effective CFSP intervention as part of the Integrated Approach**

#### **Indicator 1:Percentage of contribution Agreements with EUSRs and CSDP Missions signed within 4 weeks after Council Decision adoption**

<sup>(1)</sup> See for instance [https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:52020XG1013\(05\)&from=EN](https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:52020XG1013(05)&from=EN)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
86	Milestones									
	88	90		95						
	Actual Progress									Final

Are we on track	No data
Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	FPI
Link to the objective	This indicator measures the time elapsed between the adoption of relevant Council Decisions and the signature of the Contribution Agreements signed by FPI.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The target for this indicator (the time required to sign a Contribution Agreement) has been set higher in comparison with previous measurements in order to monitor the capacity to further shorten the time span, by 2024, between the adoption dates of Council Decisions and the signature of Agreements.
Full metadata available at this address	
Justification of the trend	Not applicable

### Indicator 2: Percentage of civilian CSDP Missions coordinating with interventions financed under other EU instruments

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	100	100		100						100
	Actual Progress									Final

Are we on track	No data
Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	FPI
Link to the objective	The indicator measures the number of EU interventions that are subject to coordination between different instruments.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	Therefore, this new indicator will measure the number of CSDP Missions that have effectively demonstrated the coordination of interventions with other EU instruments, against the total number of CSDP Missions whose mandates have been renewed during that calendar year.
Full metadata available at this address	
Justification of the trend	

### Indicator 3: Percentage of positively pillar assessed CSDP Missions not requiring supervisory measures as for article 154.5 of the Financial Regulation.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
82	Milestones									
	86	90		100						100
	Actual Progress									Final

Are we on track	On track
Indicator type	Output
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	FPI
Link to the objective	The indicator measures the compliance of CSDP Missions with the Financial Regulation
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The percentage of positively pillar assessed CSDP Missions reflects the capacity to achieve the end result of a fully compliant CSDP Mission. As the number of Missions deployed on the ground can vary between 2020-2024, depending on political decisions by Member States to open or close CSDP Missions, the population underlying the measurement may change during the period of reporting
Full metadata available at this address	
Justification of the trend	

**Specific Objective 2 :Support the implementation and promotion of: 1) strategy on non-proliferation of weapons of mass destruction in order to increase security in this area; 2) strategy on combating illicit accumulation and trafficking of Small Arms and Light Weapons as well as measures against illicit spread and trafficking of other conventional weapons; 3) EU's policies in the field of conventional arms exports whilst ensuring complementarity with the Stability and Peace actions under NDICI**

**Indicator 1:Percentage of relevant non-proliferation and disarmament actions that are complementary with actions funded under the Instrument contributing to Stability and Peace / Stability and Peace under NDICI**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
100	Milestones									100
	100	100		100						Final
	Actual Progress									

Are we on track	No data
Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	FPI
Link to the objective	The indicator measures the complementarity of EU instruments. The complementarity corresponds to the notion of the integrated approach, referred to in the specific objective 1.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The target has been set at 100%, as all non-proliferation and disarmament actions funded from the CFSP actions have to be complementary to NDICI actions in the same area. The baseline has been set on the basis of the new CFSP funded non-proliferation and disarmament actions launched in 2020 which have been all assessed as complementary or not overlapping with the IcSP actions.
Full metadata available at this address	
Justification of the trend	

## **5. Programme 2014-2020 - Key monitoring indicators**

*Previous Program 1 : Common foreign and security policy (CFSP)*

**General Objective 1 :Contribute to the implementation of the Lisbon Treaty (Article 21 (2) (c) which seeks to preserve peace, prevent conflicts and strengthen international security, in accordance with the purposes and principles of the United Nations Charter, with the principles of the Helsinki Final Act and with the aims of the Charter of Paris.**

**Indicator 1:Actual vs. planned capacity deployment rate (international staff) of the main CSDP missions**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
0,84			0,85	0,86	0,87		0,90			0,90
	Actual Progress									Final
	0,81	0,82	0,82	0,81	0,88	0,80	0,83			

Are we on track	Deserves attention**
Indicator type	Output
Unit of measurement	Percentage (%)
Cut-Off Date	31/12/2020
Data source	EEAS-CPCC Statistics on human resources deployment in CSDP Missions.
Narrative	The indicator measures the actual implementation of the deployment of international staff in CSDP Missions across all job functions (operational and Mission support functions). Reaching the full operational capacity of CSDP Missions depends on how effectively human resources are mobilised.
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator will not be pursued under the MFF 21/27.
Other methodological comments	The indicator measures the actual implementation of the deployment of the CSDP civilian missions under the respective responsibilities of: - EEAS in terms of human resources mobilization, IT, logistics, etc.,- FPI in terms of expenditure management (budget, procurement/contracting, support to Missions in financial issues, etc.).The indicator monitors the effectiveness of the ongoing civilian CSDP Missions' deployment but also the level of cooperation between the HRVP's services (EEAS

	and FPI). The fulfilment of the objectives of the mission's mandate depends on the transfer of know-how which is linked to the rapid generation of civilian capabilities. Reaching the full operational capacity of CSDP Missions depends on effective mobilization of human resources and logistics. Since 2018, most CDSP Missions and EUSRs have two-year mandates. The milestones and targets have been identified on the assumption that these actions will be extended until 2020, while keeping the same objectives.
Full metadata available at this address	
Justification of the trend	Since 2018, most CDSP Missions and EUSRs have two-year mandates. The milestones and targets have been identified on the assumption that these actions will be extended until 2020, while keeping the same objectives. Difficulties to attract international staff into CSDP Missions and to increase the number of deployed staff persist.

## Specific Objective 1 :Support to preservation of stability through substantial CSDP missions and EUSRs mandates

### Indicator 1:Degree of achievement of the objectives as defined in the respective Council Decision / Joint Action

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	EEAS-CPCC Statistics on human resources deployment in CSDP Missions.
Narrative	The indicator measures the actual implementation of the deployment of international staff in CSDP Missions across all job functions (operational and Mission support functions). Reaching the full operational capacity of CSDP Missions depends on how effectively human resources are mobilised.
Methodology	Calculation based on human resource statistics produced by EEAS-CPCC as regards international staff.
Link MFF 14-20 / MFF 21-27	This indicator will not be pursued under the MFF 21/27
Other methodological comments	Libya: Operational activities stalled partially or fully between 2014 and 2016 and again in 2019 due to relocation of Mission to Tunis. Iraq: Mission established in October 2017; low deployment rate in 2018, as the authorised strength of Mission was increased from 52 to 98 staff members end of 2018 and recruitment was not finalised by end of 2018.
Full metadata available at this address	
Justification of the trend	The difficulties to increase the number of international staff in Missions persist, notably in particularly risk-prone countries like Somalia or Libya.

**Specific Objective 2 :Support the implementation and promotion of: 1) strategy on non-proliferation of weapons of mass destruction in order to increase security in this area (WMD); 2) strategy on combating illicit accumulation and trafficking of Small Arms and Light Weapons (SALW) as well as measures against illicit spread and trafficking of other conventional weapons; 3)EU's policies in the field of conventional arms exports, in particular on the basis of Common Position CFSP/944/2008**

**Indicator 1: Number of countries having ratified the treaties mentioned in the baseline**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Comprehensive Nuclear-Test-Ban Treaty Organization, CTBTO

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	Number of countries or state parties that ratified resolutions
Cut-Off Date	31/12/2020
Data source	CTBTO website: <a href="http://www.ctbto.org/the-treaty/status-of-signature-and-ratification/">http://www.ctbto.org/the-treaty/status-of-signature-and-ratification/</a> UN Resolution 1540 website: <a href="http://www.un.org/en/sc/1540/">http://www.un.org/en/sc/1540/</a> IAEA website: <a href="https://www.iaea.org/Publications/index.html">https://www.iaea.org/Publications/index.html</a> Arms Trade Treaty website: <a href="http://www.un.org/disarmament/ATT/">http://www.un.org/disarmament/ATT/</a>
Narrative	The indicator measures the level of universalisation of the various non-proliferation treaties or the universalisation of the implementation of selected non-proliferation mechanisms. The universalisation of the non-proliferation and disarmament treaties and mechanisms is defined as an impact level objective of various non-proliferation and disarmament actions funded by the CFSP budget. However,

	it is impossible to attribute changes in the progress with the universalisation to the CFSP funded actions, given that the decisions on the accession to the various treaties and mechanisms are political.
Methodology	The data presented in the above-mentioned websites is collected by the UN, CTBTO, ATT secretariat and the IAEA. The number of countries which ratified the CTBT and ATT is counted for the CTBT and ATT indicator. For the UNSCR 1540 indicator, the number of countries, which submitted their UNSCR 1540 national implementation plans is counted (there is no accession or ratification process, given that the UNSCR 1540 is not a Treaty and it is directly applicable under Chapter VII of the Charter of the United Nations). For the IAEA indicator, the number of peer review and advisory services missions to the IAEA member states is counted.
Link MFF 14-20 / MFF 21-27	This indicator will not be pursued under the MFF 21/27 because the results do not depend on FPI.
Other methodological comments	Progress in other monitoring reports will be followed: Nuclear Non-Proliferation Treaty (NPT), Chemical Weapons Convention (CWC), Biological and Toxin Weapons Convention (BTWC), Arms Trade Treaty (ATT), Comprehensive Nuclear-Test-Ban Treaty (CTBT) and The Hague Code of Conduct against Ballistic Missile Proliferation (HCoC). To be noted that some results would seem relatively low, compared to the targets set for 2020. Indeed, the indicator measuring the number of countries having ratified the Nuclear Test Ban Treaty is subject to political decisions by states to ratify or not. In addition, delays in the start-up of the support programmes and their implementation further negatively impact on the achievement of actual results. The same is true for nuclear security assistance provided by the International Atomic Energy Agency, as adherence to this programme is demand-driven.
Full metadata available at this address	
Justification of the trend	For the CTBT, the target of 169 ratifications has been almost met, with 168 ratifications as of 31 December 2020. To be noted that Cuba finalized the ratification process on 4 February 2021 and the target of 169 would be therefore met on that date. The trend with the ratifications of the ATT has been positive, with the number of states ratifying the Treaty annually. However, with 110 ATT state parties as of 31 December 2020, the target of 130 state parties has not been met. To be noted that the decision to ratify the ATT or not is a political decision which does not depend solely on the outreach activities funded from the CFSP budget. For the UNSCR 1540 and IAEA indicators, the performance was significantly below the target. The low number of the IAEA peer reviews and assistance visits in 2020 is assumed to be caused by the Covid-19 pandemics and the related restrictions on travel.

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.4.2. Key achievements and performance**

##### *Civilian CSDP Missions and EUSRs*

To be noted that the CSDP Missions report to the EEAS, including on gender-related issues. The Commission is not the addressee of these reports and can therefore only refer in a limited way to achievements by Missions in relation to gender promotion.

While gender activities are not the main core task of the civilian CSDP Missions, they do, to a certain extent, cover topics related to gender in their work in line with Objective 2.2.1 of the EU Gender Action Plan 2016-2020. This is done in particular through measures to combat violence and discrimination against women and girls, such as:

- EUCAP Sahel Mali integrated human rights and gender awareness across its activities, e.g. through the organisation of

workshops on Women, Peace and Security in close cooperation with civil society.

- EUPOL COPP: In close cooperation with the UN Women and the Palestinian Civil Police (PCP) training department, the Mission has engaged in discussions on the review of the gender training package for the PCP, with the aim of building a more gender responsive organization, including concrete steps to raise awareness and build internal capacities.
- EUBAM RAFAH supported enhancing the awareness of the General Administration for Border and Crossings (GABC) staff on Human Rights and Gender Issues through trainings and projects. Mission provided, for instance, equipment necessary for a breastfeeding room for the GABC, with the aim of enhancing the ability of the GABC to conduct border checks whilst taking into account gender sensitivities.
- EUAM Iraq works with the Iraqi Ministry of Interior on gender related aspects of the security sector reform and on domestic violence. The Mission also supports the Female Training Institute of the Ministry of Interior.

EUSRs address gender issues throughout their activities. For example, the EUSR Kosovo has conducted a series of monthly debates ‘*EU Gender Talks: Because We Make a Difference*’, gathering participants across Kosovo institutions, civil society organisations and other stakeholders. He continued backing government’s efforts to fight gender-based violence. The EUSR also launched the project ‘*Women in Politics, Confidence, influence and effective leadership*’, aimed at training Kosovo women with leadership potential and ultimately at improving the situation of under-representation of women in politics in Kosovo.

## 6.5. Contribution to the sustainable development goals

### 6.5.1. Goals

#### *SDG 5 Achieve gender equality and empower all women and girls*

Non-proliferation and disarmament actions contribute to a gender perspective. An example is the decision of the Council of 2018 to approve a three-year actions to be implemented by the United Nation Office for Disarmament Affairs aimed at enhancing the effectiveness of small arms control measures through gender analysis and integration of gender perspectives. Activities under the action include training national officials in eighteen countries on gender-mainstreaming and small arms control; promoting gender mainstreaming in regional initiatives; strengthening the small arms control component in the Women Peace and Security (WPS) framework, and awareness-raising and partnerships. The contribution of the EU amounts to EUR 4,4 million.

#### *SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels*

CSDP Missions work in the field of security sector reform, while EUSR are promoting EU policies in different parts of the worlds. None of them directly report on their activities against the SDGs, but their work may indirectly help achieving development SDG 16 (Peace, justice and strong institutions). To be noted also that CFSP reporting on the substance of the operations conducted by the Missions and the EUSRs is addressed to the EEAS and Member States and not the Commission. The Commission receives the reporting on budget, procurement and finance management.

Non-proliferation and disarmament actions contribute to SDG 16, as they contribute to international peace and security and to the reduction of violence globally by preventing and combatting the proliferation of weapons of mass destruction and the illicit accumulation and trafficking of small arms and light weapons and their ammunition.

### 6.5.2. Key achievements and performance

The Common Foreign and Security Policy (CFSP) contributes directly to the achievement of Priority No 5 ‘*A Stronger Europe in the world*’ of the von der Leyen Commission in the area of Security and Defence. Taking into account the distinct, yet shared, responsibilities of the Council, the European External Action Service (EEAS) and the Service for Foreign Policy Instruments (FPI) in relation to the CFSP actions, the CFSP actions contribute to the support to:

- the preservation of stability through CSDP Missions and EUSR Mandates;
- the implementation and promotion of: 1) strategy on non-proliferation of weapons of mass destruction in order to increase security in this area (WMD); 2) strategy on combating illicit accumulation and trafficking of Small Arms and Light Weapons (SALW) as well as measures against illicit spread and trafficking of other conventional weapons; 3) EU’s policies in the field of conventional arms exports, in particular on the basis of Common Position CFSP/944/2008.

The CSDP Missions work in the area of civilian security sector reform, including police and rule of law, the fight against terrorism and organised crime, maritime capacity building and border management. There are three types of Missions: capacity building Missions, monitoring Missions and advisory Missions, and some of their work does indirectly contribute into building accountable Institutions.

As neither Missions nor EU Special Representatives are subject to external evaluation, the direct or indirect impact of their work towards these goals cannot be adequately assessed by the Commission.

**1. Overview****1.1. Challenges**

Rising vulnerability, inequalities, climate change and environmental degradation are all part of a new global reality that has been compounded by pandemics and growing migratory pressures. The 13 Overseas Countries and Territories (OCTs) are especially vulnerable to climate change and environmental degradation due to their geographical locations (all are islands in the Caribbean, Arctic, Antarctic, Pacific and Indian Oceans). At the same time, almost all are located in global biodiversity hotspots and – together with the Outermost Regions – account for the vast majority of EU biodiversity. Economic diversification, competitiveness, digital transformation and connectivity are further major challenges faced by the OCTs, several of which are remote, isolated islands. The OCTs' economies often rely on tourism, making them heavily dependent on external factors and therefore very fragile. Some regions, such as the Caribbean, are also facing migratory pressures due to the crisis in Venezuela.

The new Overseas Association Decision (OAD) provides an updated legal framework for supporting OCTs' actions in tackling these challenges and ensuring their economic and social development. For the first time, the OAD incorporates the formerly additional Greenland Decision, placing all OCTs firmly within the same instrument and under the same source of funding, the EU Budget (OCTs other than Greenland previously benefitted from the European Development Fund).

The OCTs have been associated with the EU since the Treaty of Rome. They are not sovereign countries, but maintain special constitutional links with 3 Member States: Denmark, France and the Netherlands. Cooperation with the OCTs is based on EU values and shared policy priorities, and OCTs are considered important EU 'ambassadors' in their regions.

## 1.2. Mission (general objectives)

The general objective of the OAD is to promote the economic and social development of all the OCTs and to establish close economic relations between them and the Union as a whole.

Furthermore, the aim of this Decision is to preserve the existing ties between the Union on the one hand, and Greenland and Denmark on the other acknowledging the geostrategic position of Greenland in the Arctic, and to preserve existing ties between the Union and the other OCTs, acknowledging their geostrategic positions in the Caribbean, the Indian Ocean, the Atlantic, the Antarctic and the Pacific.

The OCT association shall pursue this general objective by enhancing the OCTs' competitiveness, strengthening the OCTs' resilience, reducing their economic and environmental vulnerability and promoting cooperation between them and with other partners including Outermost Regions and countries in the OCT regions.

The new OAD will deliver:

- Unity of management having all the OCTs under the same source of financing will create synergies in programming and implementation;
- Consolidation of shared objectives;
- Simplification and coherence in the legal framework;
- Higher profile for the OCTs as a group.

The Union financial assistance allocated through the partnership should bring a European perspective to the development of OCTs and should contribute to strengthening the close and long-lasting mutual ties, while also consolidating the position of OCTs as advanced outposts of the Union.

The partnership between the EU and OCTs will facilitate consultations and policy dialogue on the objectives and areas of cooperation established through the OAD. In particular, it will define the framework providing the basis for broad cooperation and dialogue in areas of mutual interest.

## 1.3. Specific objectives

The association between the EU and the OCTs continues to be based on the political, trade and cooperation pillars. The specific objectives of the OAD are:

- to foster and support cooperation with OCTs, including in addressing their major challenges and reaching the Sustainable Development Goals;
- to support and to cooperate with Greenland in addressing its major challenges, such as raising the education level, and to contribute to the capacity of its administration to formulate and implement national policies.

Given the OCTs' geographical locations, cooperation between them and their neighbours should be pursued in the interests of all sides, with a particular focus on areas of common interest and the promotion of the Union's values and standards. The new OAD reinforces the provisions on strengthening cooperation with non-OCT neighbours and for the first time sets aside an earmarked envelope for this purpose.

Under the OAD, EU policy priorities linked to the Green Deal would be strengthened through: i) the horizontal spending target of [30 %] for climate change objectives, ii) its contribution to mainstreaming biodiversity action in the Union policies, and iii) the achievement of the overall ambition of providing [7,5 %] of annual spending under the MFF to biodiversity objectives in the year 2024 and 10 % of annual spending under the MFF to biodiversity objectives in 2026 and 2027. The OAD does not include horizontal spending targets for other cooperation areas.

Through the OAD, the EU could enhance support to the OCTs in addressing climate change, environment, biodiversity and clean energy as crucial areas of cooperation. It strives to ensure greater access of OCTs to information and communication technologies and services, including by policy and institution building to address the digital divide. Given their economic vulnerability and in the context of the COVID-19 pandemic, the EU will endeavour to support OCTs' economic diversification and develop their sustainable trade capacities, but also sustainable tourism as a mainstay of many OCTs' economies. Education, health, and food and nutrition security are likely areas of cooperation in the field of human development.

#### 1.4. Public intervention context

The Overseas Association Decision proposal is based on Articles 198 to 204 of the Treaty on the Functioning of the European Union (TFEU). Pursuant to Article 204 TFEU, these provisions apply to Greenland, subject to the specific provisions set out in Protocol No 34 to the TFEU.

The detailed rules and procedures of the association are laid down in Council decisions based on Article 203 of the TFEU, under which such acts are adopted through a special legislative procedure.

The detailed arrangements of the provisions in Part Four of the TFEU have to be made at Union level, as the purpose of the association — social and economic development and close economic ties between the OCTs and the Union as a whole — cannot be achieved via action at Member State level alone. Moreover, Member States would not be able to take action with regard to the OCT trade regime, as the EU alone is responsible for common trade policy (Part Five, Title II of the TFEU).

The approach towards cooperation with the OCTs contained in the Commission's legislative proposal respects the principles of partnership, complementarity and subsidiarity. It proposes that the EU financial assistance to OCTs be based on programming documents, for which the competent OCT authorities and the Commission would be jointly responsible and which would define the cooperation strategies between the Union and the OCTs.

Under Articles 198 and 199 of the TFEU, the association will continue to provide a comprehensive partnership comprising an institutional framework and trade arrangements and covering many areas of cooperation, as well as the basic principles governing Union financial assistance to OCTs.

Considering the specificities of the OCTs and their special relationship with the EU, a new legislative act for all OCTs that covers the political and legal framework and how cooperation should be implemented will ensure effectiveness, consolidation of shared objectives and coherence, as well as more visibility for the OCTs as a group. This proposal puts forward an approach that is flexible and tailored to the situation of each OCT.

In line with the principle of proportionality, the proposed Decision Regulation does not go beyond what is necessary to achieve its objectives.

#### 1.5. Actions

The proposal covers three pillars of actions: political, trade and cooperation aspects between the Union and the OCTs. It includes specific provisions guiding the partnership with Greenland, where required.

At the level of cooperation with OCTs:

- Unless otherwise specified, the new OAD will follow implementation provisions from the NDICI, via a referral clause.
- OCTs remain eligible for Union programmes (such as the humanitarian aid instrument, Horizon Europe and Erasmus) as a matter of principle, unless the rules of a specific programme preclude their participation.
- OCTs are to be eligible for the thematic part and rapid response actions of the NDICI.
- the OCTs will be eligible for InvestEU as a vehicle for investment financing;

Cooperation through the OAD takes place via three main types of actions:

- Geographic/bilateral cooperation with individual OCTs;
- Regional programmes benefitting OCTs in the same geographical region (Caribbean, Pacific, Indian Ocean), based on shared needs;

- Intra-regional programmes for cooperation between one or a group of OCTs with one or more non-OCT neighbours, who would participate with their own funds.

Additionally, the OAD sets aside a ‘reserve’/non-allocated fund for unforeseen circumstances such as natural disasters, emerging challenges such as migratory pressures, and new international priorities.

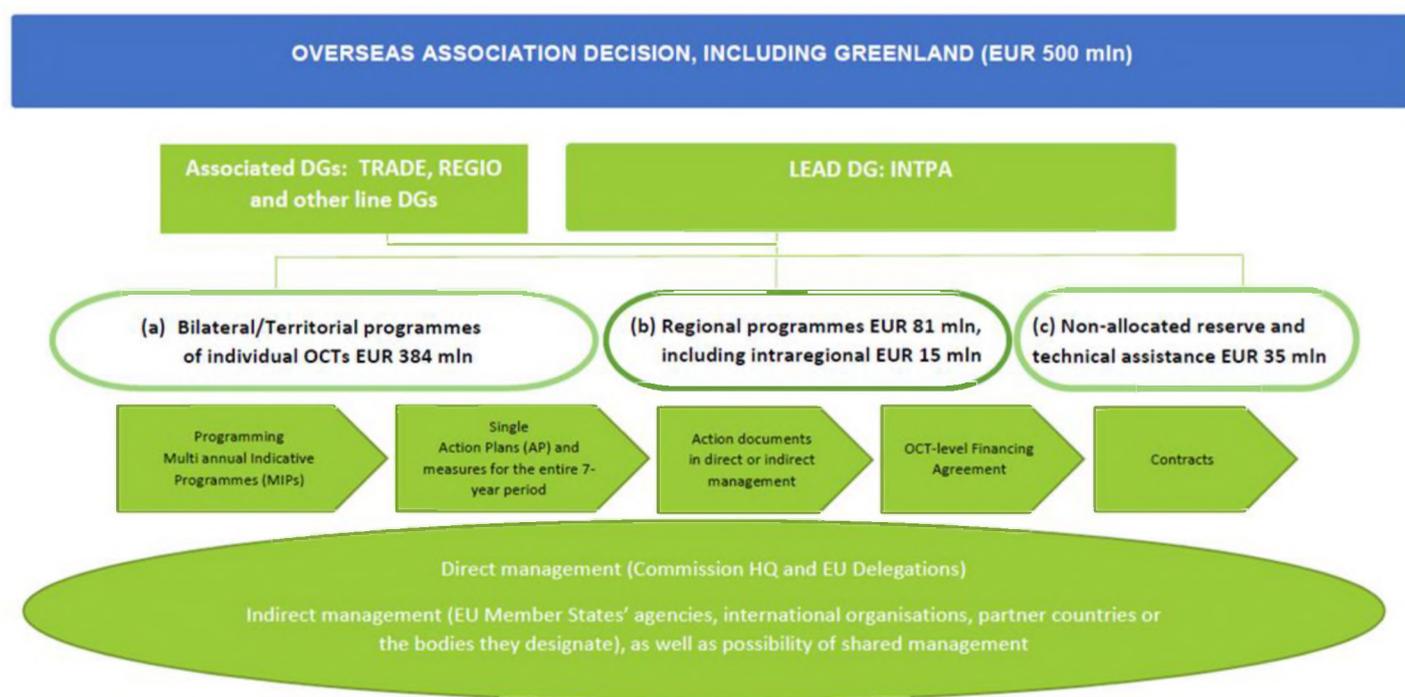

## 1.6. Delivery mode

The delivery mode shall be direct management by the Commission from Headquarters and/or through the Union Delegations, as well as indirect management by entities such as the EU Member States’ agencies or international organisations that ensure a level of protection of the EU’s financial interests equivalent to that under direct management. Indirect management may also be entrusted to partner countries or the bodies they designate. In case of contribution from other Union programmes, different set of rules can be applicable.

The lead service involved in implementing the OAD is DG INTPA, in cooperation with DG TRADE, DG REGIO and other line DGs as well as the EEAS, especially on external dimensions of internal policies like climate, environment, energy, health and digital.

For the sake of consistency and effectiveness, and unless otherwise specified, the OAD will apply the implementation, evaluation and monitoring provisions of the Neighbourhood, Development and International Cooperation Instrument (NDICI).

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Procedure 2018/0244/CNS COM (2018) 461: Proposal for a COUNCIL DECISION on the Association of the Overseas Countries and Territories with the European Union including relations between the European Union on the one hand, and Greenland and the Kingdom of Denmark on the other ('Overseas Association Decision')	2021 - 2027	500,0

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>67,0</b>	<b>69,0</b>	<b>70,0</b>	<b>71,4</b>	<b>72,9</b>	<b>74,3</b>	<b>75,4</b>	<b>500,0</b>

#### 1.8.4. Financial programming explanation

The financial programming is modified in order to reflect the planned use of the 2021 and 2022 funds for the up to six OCTs that will have their territorial AAPs adopted in 2022. Therefore, all the 2022 commitment appropriations are put on the 'Territorial' budget line.

This re-allocation of funds made in the year 2022 will be fully compensated in the years 2023-2027 by corresponding linear yearly increases on the lines 'Intra regional programmes', 'Technical Assistance', 'Non-allocated funds', 'Regional' and 'Greenland' budget lines and by yearly linear decreases on the 'Territorial' budget line, so that the total funds on each of these budget lines, at the end of 2027, remains the same as foreseen by the legislative proposal and the MFF agreement.

#### 1.9. Link with the 2014-2020 MFF

The mid-term review report (December 2017) on 10 external financing instruments, including the Greenland Decision and the 11th EDF for the other OCTs, concluded that the external financing instruments were 'fit for purpose'. However, both the report and the consultations conducted highlighted the need for increased flexibility, simplification, coherence and performance.

This has led to the proposal for a future Neighbourhood, Development and International Cooperation Instrument/NDICI, which would draw on lessons learned to help streamline the Union's external action architecture.

The Overseas Association Decision and the Greenland Decision could not be included in the new NDICI or in any other legal act subject to the ordinary legislative procedure. This is because they both have a specific adoption procedure: a Council Decision by unanimity, following consultation of the European Parliament. However, to streamline the number of programmes it has been proposed that the two Decisions be merged into a single Decision regrouping all OCTs, including Greenland under the new budget heading 6 'Neighbourhood and the World'.

As both Decisions were deemed 'fit for purpose', the guiding principle was to preserve what works well, while improving the partners' ability to deliver effectively on their policies and priorities. On the other hand, the Member States concerned have firmly insisted on retaining the structure and acquis of the current Overseas Association Decision.

With the 'budgetisation' of the European Development Fund in the 2021-2027 MFF, the EU budget will become the unified source of financing for all OCTs.

The EU can continue to provide value to OCTs where it is often the sole cooperation partner besides the Member State to which the OCT is linked. Through budget support as the primary implementation modality, it can ensure predictability of resources. Moreover, the EU has significant expertise and a recognised international reputation as a lead player in sustainable development in general, and in areas of cooperation most relevant to OCTs in particular.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

At the time of writing (March 2021), the OAD still needs to be adopted by the Council, the amount of the bilateral and regional envelopes defined and the Multiannual Indicative Programmes for the OCTs be put in place to allow commencing the implementation. However, indicatively three annual action plans are envisaged for the OCTs in 2021: (i) Greenland-education, (ii) institutional support to the OCT Association and (iii) a new technical cooperation facility.

In 2022, indicatively six Annual Action Plans are envisaged for bilateral programmes in OCTs.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	217 388 785	200 955 432
Implementation Carry-overs	0	697 115
Implementation total	217 388 785	201 652 547
total envelop*	217 812 467	

cumulative implementation rate	100%	93%
--------------------------------	------	-----

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

### **Cooperation with Greenland**

By the end of 2020, the programme has committed 100% of its total envelope and paid 93%. The support to Greenland is implemented via budget support. The total budget available was 216 million in programmable support and 1.8 million in administrative costs. Of the 216 million, around 5-6 million has been decommitted where the performance tranche could not be disbursed fully. This was the case for all years except 2019 and 2020.

Following the Council Decision 2014/137/EU of 14 March 2014 on relations between the European Union on the one hand, and Greenland and the Kingdom of Denmark on the other, the Commission agreed with the Government of Greenland the "Programming document for the sustainable development of Greenland 2014-2020" which was signed on 28 October 2014. The objectives and indicators follow those in the Council Decision, complemented by indicators on education, taken from the programming document.

The Financing Agreement for the 2020 programme to support Greenland's education sector was signed with the Government of Greenland on 11 December 2020 (GL/2020/042-530) for an amount of EUR 33,20 million. To effectively and rapidly support the Government of Greenland's response to the COVID-19 crisis in the education sector, the disbursement was front loaded through one fixed tranche of budget support for the full amount of the programme.

The Annual Work Plan 2020 was presented by the Government of Greenland and approved. This Annual Work Plan 2020 sets out the government's implementation milestones for the entire education sector in 2020. Subsequently, the fixed tranche for the 2020 programme was paid in December 2020.

The EU's 2019 education budget support programme to Greenland was still ongoing in 2020. The Annual Implementation Report 2019 was received from the Government of Greenland providing adequate proof of programme implementation. In addition to the fixed tranche under the 2020 education support programme the variable tranche for the 2019 education support programme was paid in December 2020 amounting to EUR 3.87 million (64.38 % of the total foreseen).

Due to COVID-19 Policy Dialogue Meetings could not be held physically, but through video conferences. This allowed for dialogue on the planned response to the COVID-19 crisis in Greenland and the progress with the reform implementation in the education sector. Greenland envisages to increase the compulsory education age limit from 16 to 18 years. The new reform will also create a cohesive and flexible education system based on 12 years of compulsory schooling, which in turn will create a basis for further education, both in Greenland and abroad. In addition, the Government implements reforms in teachers' education.

To further support the Government of Greenland response to the COVID-19 crisis, the Financing Agreement for support to the Greenland Education Programme 2019 will be amended in 2021 to mobilise additional COVID-19 support, utilising the remaining funds in the Financing Decision for 2019. An amount of EUR 2.14 million should thus be disbursed early in 2021 in addition to a remaining balance of EUR 3.97 million from the 2020 Education Support programme.

In December 2019 the Commission adopted the Capacity Facility Greenland with a budget of EUR 2.64 million. The Financing Agreement for this project was signed by the Government of Greenland on 18 December 2020. This project will broaden the EU cooperation in support to the sustainable and inclusive development of the Greenlandic society. It will cover three areas: evidence-based policies and quality management of interventions undertaken by the Government of Greenland, private sector development (support to a small and medium-sized (SME) hub), and strengthening Greenland's contribution to Arctic processes. EU assistance will take the form of targeted technical assistance, studies, seminars and supplies.

## **3. How is the programme performing ?**

### **3.1. Performance**

#### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### **3.1.3. Previous programme performance**

### **Cooperation with Greenland**

EU cooperation 2014-2020 with Greenland focused on education through budget support. EU budget support is a means of

delivering effective aid and durable results in support of EU partners' reform efforts and the sustainable development goals. It involves: (i) dialogue with a partner country or territory to agree on the reforms or development results that budget support can contribute to; (ii) an assessment of progress achieved; (iii) financial transfers to the treasury account of the partner country or territory once those results have been achieved; and (iv) capacity-development support. It is a contract based on a partnership with mutual accountability. In compliance with the EU financial regulation, the use of budget support is subject to certain conditions. Eligibility criteria have to be met before a contract can be signed and must be maintained during its implementation before payments are made.

With the Financing Agreement for the 2020 programme the Support to the Greenland Education Programme phase II through EU budget support has come to its completion. In total this cooperation provided the substantial amount of EUR 215 million from the EU to Greenland's education sector. The Government of Greenland will provide a comprehensive Implementation Report over the period 2014 – 2020.

Overall the programme has been successfully implemented, enabling the Government of Greenland to further develop and reform its education system.

The general objectives of the cooperation with Greenland have been largely met. The cooperation, especially with the key Ministries of Finance, Education, Industry and the Department of Foreign Affairs as well as with the relevant stakeholders in the Government of Denmark is good as witnessed by the Policy Dialogue meetings held twice a year in Greenland and Brussels respectively. The restrictions imposed by the COVID-19 pandemic made it impossible to hold meetings in Greenland and Brussels. However, video conferences were held during the year on specific topics maintaining the dialogue.

However, the programme has not yet resulted in the diversification of the Greenland economy, which is still very much depending in the Fisheries sector for economic development, trade and domestic revenue. This is mainly due to the lack of major (foreign) operational investments in the minerals sector with only two small mines having started operations in the past 3 years. Promising development of an Iron and of Rare Earth Minerals, mines have been held back by lack of investment capital caused by low world market prices for such minerals and the difficulties and expense to operate in an Arctic environment.

Still Greenland has witnessed persistent economic growth in the 5 years up to 2020. For 2020 a reduction of the economy is predicted to be around 2% due to restrictions because of the COVID-19 crisis and lower world market prices for fisheries products. Still Greenland achieved near full employment of the Greenlandic population, which is affecting the success of the Education support programme as High School graduates find employment opportunities more attractive than continuing their education in the Higher education system. Similarly, youngsters, especially men, can find employment in the booming fisheries sector after completing elementary school. Therefore, the level of 16 to 18 year teenagers outside the education system (VET or High School) remains disappointingly high at 58.9 %.

In the Annual Implementation Report 2019 (the latest progress report available to date), the performance of the Greenland Education Programme II is measured against an agreed set of indicators. The achievement rate was, however, lower compared to the previous year, with one target out of 5 indicators partially met (transition rate to education 1 year after elementary school) and one target not met (7th grade tests), while for 3 indicators the targets were surpassed (Number of completions in education, Transition rates to education 2 years after drop-out (high school to VET) and Expenditure on education as percentage of total public expenditure).

The Government of Greenland's increased focus on education and training since 2004 has been reflected in an increase in the budget for education and training from 14.8 % of the total Government budget in 2005 to 25.0 % in 2019, which amounted to around EUR 346.4 million in the 2018 budget and to 25.0 % in the budget for 2020, which amounted to EUR 342.1 million.

Budget Support contributes directly to reform efforts of a partner country or territory. Therefore, its performance is intrinsically linked to the results of such reforms.

The Government has in 2019 to a large extent focused on strengthening implementation of already ongoing initiatives. In 2019, one of the main priorities was a continued focus on initiatives to improve the quality of elementary education. The elementary school system has been the object of much attention, especially following the 2015 external evaluation 'The Primary School of Greenland' and the 2016 final evaluation of the Teacher Training Programme. As both evaluations pointed out, the policy goals of lifting the quality of the elementary school system had not been completely achieved, and further efforts were needed in order to provide children with a sound basis for lifelong learning. Among the activities undertaken in 2019 was the increased use of IT in elementary schools. In addition, the Agency for Education has focused on improving cooperation with the municipalities as both preschools and elementary schools remain a municipal responsibility. One of the main issues is recruitment and retention of personnel. Therefore, the Agency for Education has finalised a 'Strategy and Action Plan for professionals in day-care institutions' in 2018. The strategy has formed the basis for initiatives targeting recruitment and retention of staff in preschools during 2019 and will continue in 2020.

Furthermore, the Government concentrated on accessibility to education, including the introduction of distance learning for both a higher level of accessibility and a higher quality of education, especially for, but not limited to, the elementary and high school levels. The scattered population (population density lowest in the world: 0.028/km<sup>2</sup>) and limited infrastructure in Greenland remains a challenge for recruiting teachers for elementary schools in settlements and for students to move to cities with youth education institutions. Accessibility to education also covers a need for providing education opportunities for students who are

unable to follow regular in-class programmes due to a diagnosis such as autism. In 2019, the Government has therefore continued the trial distance learning high school programme (eGUX) and a trial high school programme for students with a diagnosis (GUX-S), both started in 2018.

In the Vocational Education and Training sector, the Government worked towards more coherence between the education programmes offered and the needs of the labour market. In 2019, the Ministry of Education therefore focused on developing new education programmes that better fit the labour market needs, one within technology management and two programmes targeting the fishing industry. However, the numbers of apprenticeships remain at a low level, despite improvements in the economy. In 2019, the Ministry of Labour worked on a bill that sets minimum requirements for the number of apprentices a company must have based on the amount of skilled workers they employ.

In terms of higher education, the Ministry of Education presented a new Law on Higher. The new legislation is, among other things, a continuation of the work towards implementing a procedure for quality development, in order to live up to international standards. The Government also welcomed in 2019 a new programme at the University of Greenland, who is now offering a Bachelor of Law with specific focus on the Greenlandic legal system.

Even though the education sector is experiencing an overall positive development, Greenland still faces challenges in terms of dropout and completion rates. A large group of children and young people still do not achieve the necessary skills in elementary school in order to continue straight to youth education and therefore must acquire these in other ways. In 2019, 37.5 % of the pupils leaving the elementary school progressed to further education (VET Educations or high school) within a year, and this rate needs to accelerate. The youth group (16 to 18 year) outside the education system is slowly decreasing (from 61.6 % in 2013 to 60.1 % in 2019), indicating that it is becoming more and more natural for young people to enrol in further education after completing the compulsory elementary school.

In light of the above, the Ministry of Education decided to start looking into possible long-term and preferably cross-cutting solutions to address these challenges. In 2017, the Government launched the preparatory work on creating a cohesive and flexible education system. The future structure of the education system – if approved by Parliament – will increase from 10 to 12 years of compulsory schooling, which in turn will create a natural basis for further education, both in Greenland and abroad. In addition to a wide range of new flexible educational opportunities, it will still allow the possibility of continuing straight to high school or vocational education after the 10th school year.

Future interventions should further develop how the EU supports the education sector in Greenland by focussing on factors that have shown to be bottlenecks in the achievement of indicators, such as the lack of teachers and the quality of teachers' training as well elementary education and the production of relevant skills and knowledge for Greenland's future sustainable economic development. In addition, future cooperation with Greenland should look to supporting the sustainable diversification of Greenland's economy by building on for example mineral resources or the potential for green energy, in order to provide high quality job opportunities for youth and to foster Greenland's resilience and economic self-sufficiency.

The Public Finance Management Reform Plan 2018-2020, a key element for Greenland to maintain its eligibility for budget support, is being implemented by the Ministry of Finance, with key achievements such as the adoption of the Public Procurement Law by the Greenland Parliament in June 2019 and the start of its implementation in 2020.

Activities related to the special objective 2 are mainly financed by the Government of Greenland directly without support from the EU. In December 2019 the Financing Decision for the Capacity Facility Greenland, budget EUR 2.64 million, was adopted by the Commission and the Financing Agreement signed with the Government of Greenland in 2020. The actions foreseen in this project will create results starting in 2021 and continue in 2022 and 2023.

### 3.2. Key achievements

25%	60.5%	70%	97.2%	91.2%
of the total Government budget was allocated to education and training in 2019, up from 15% in 2007	of 16 to 18 year-olds remained outside the education system in 2019, demonstrating that education challenges persist	of the students completing higher education are women and 30% are men, due the higher participation of men in the traditional occupations of hunting and fishing	of total exports were in the fisheries sector in 2019; fisheries remain a prominent feature in the economy of the country	of civil servants are (long-term) residents, ensuring the capacity of the Greenlandic administration to formulate and implement national policies

Whereas the Greenland Education Programme phase 1 (2007-2013) resulted in an increased capacity of the education system and a related improved general access to education, the emphasis during phase 2 (period 2014 – 2020) has been on:

- reducing the dropout rate, including in vocational education and training (VET), increasing the number students enrolling in education after dropping-out from 41.5% in 2013 to 45.1% in 2019 with a target of 50% in 2020;

- improving the quality of the education system, increasing the score of 7th grade test to 56.25 in 2019 with a target of 63 in 2020;
- the ability of the system to accommodate and include students who are in need of special attention;
- improvements in the transitions between different stages in the education system;
- from elementary school to high school or VET from 35.4% in 2013 to 37.5% in 2019 and targeted at 48% in 2020;
- from high school to higher education from 64.1% in 2013 to 50.9% in 2019 and targeted at 72% in 2020;
- reducing the number of the 16 – 18 year olds outside the education system from 61.6% in 2013 to 60.5% in 2019 and to 40% in 2020.

Participation of children in the elementary schools up to the age of 15 is compulsory in Greenland and in general full participation of boys and girls is achieved. Participation in further education is not equal with more women attending and graduating in all types of education. Whereas 54.5% of female teenagers between 16 and 18 years do not attend education, 63.0% of male teenagers do not attend. Of the pupils enrolled into Vocational and Training (VET) education, 49% are women while 54% of the VET graduates are women. The graduation rate in VET education is 54.3% for women and only 51.5% for men.

Of the pupils enrolling in Highschool 62% are women, while 60% of the graduates of the Highschools are women. The graduation rate in Highschools is 49.0% for women and 46.1% for men. From the graduates from the Highschools, 48.9% of women continue their education in Higher (=tertiary) education compared to 53.4% of men. Of all students enrolled in Higher education 71% are women and 29% men, while of the students completing their Higher education 70% are women and 30% are men.

These marked differences can partially be explained by the higher participation of men in the traditional occupations of hunting and fishing as well as their much higher employment in the industrial fisheries which is the most important economic sector in Greenland outside the government.

The Government spend some EUR 6.8 million on the replacement and expansion of dormitories, especially in the smaller towns and some EUR 7.53 million on the replacement and expansion of school buildings. These new dormitories and schools are built to strict Arctic building standards and are in general 50% more energy efficient than the wooden barracks they replace. In addition they can be heated with electricity which is generated sustainably in Greenland from hydro-electric resources, replacing fossil fuel based heating systems.

### 3.3. Evaluations, studies and reports

The Common Implementing Regulation (in Article 17) requires a mid-term review report of the EU's external financing instruments ('the instruments') to assess whether these instruments remain fit for purpose, with a view to ensuring the effective implementation of the EU's assistance. The mid-term review COM(2017) 720 final and the related staff working documents were published on 15 December 2017, concluding that the current set of instruments is still relevant and has proved to be sufficiently enabling.

A series of external evaluations took place in 2016-2017 on all the instruments.

The mid-term review report of the cooperation under the Greenland Decision SWD (2017) 609 final was adopted by the Commission on 15 December 2017. This evaluation was partly informed by an independent external evaluation and is based on a wide-ranging consultation process, which included a three-month online Open Public Consultation, technical workshops, and interviews with stakeholders across the board. The main outcome of the evaluation was that the Greenland Decision had proven relevant and effective in pursuing and fulfilling its general and specific objectives and in reflecting its general principles as regards facilitating policy dialogue on global and Arctic issues. The Greenland Decision was seen as a valuable instrument for maintaining and strengthening the strong ties between Greenland and the Union, whose political relationship had very much evolved over the years. While it improved educational attainment and public finance management in Greenland, it has however had no significant immediate impacts in terms of diversifying the economy. An 'ex-post' evaluation of the Greenland Decision will be undertaken in 2023 and submitted to the Council and the European Parliament as required by Article 17 of the Common Implementation Regulation.

## 4. Programme 2021-2027 - Key monitoring indicators

**Specific Objective 1 :To foster and support cooperation with OCTs, including in addressing their major challenges and reaching the Sustainable Development Goals.**

**Indicator 1:For OCTs, except Greenland, exports of goods and services as % of GDP**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

## **5. Programme 2014-2020 - Key monitoring indicators**

### *Previous Program 1 : Cooperation with Greenland*

**General Objective 1 :The EU/Greenland partnership aims to preserve the close and lasting links between the partners, while supporting the sustainable development of the Greenlandic society.**

#### **Indicator 1:Percentage of trade balance in GDP**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2020
-0.161	-0.161	-0.161	-0.161	-0.161	-0.155	-0.155	-0.150			-0.150
	Actual Progress									Final
	-0.137	-0.096	-0.117	-0.027	-0.053	-0.064				

Are we on track	On track
Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2019
Data source	Statistics Greenland; www.stat.gl, data have been extracted from the Greenland in Figures 2019 (pamphlet provided by the Statistical Bureau of Greenland on an annual basis).
Narrative	For its long term development, Greenland has to become less dependent on the Block Grant from the Government of Denmark and grant from the EU and other donors. With the development of extractive industries and tourism, Greenland can achieve a positive trade balance.
Methodology	National Accounts
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	The baseline and targets for 2017 and 2020 have been recalculated by Statistics Greenland due to a change of methodology on their side.
Full metadata available at this address	
Justification of the trend	Regarding the ‘Percentage of trade balance in GDP’ indicator, no significant change in the trade balance for 2018 and 2019 is recorded, and for 2020 is forecasted, as only 2 small new mining activities have started up during 2018 and 2019. The reduction in the trade deficit for 2017 is incidental and caused by the continuing high exports of fish and fisheries products and a reduction in importation of machines and vehicles. As the economy of Greenland is small, individual events, like the delivery of construction equipment for the new harbour and the prison construction in 2016, can have important effects on the trade balance, which was elevated in 2016.

**Specific Objective 1 :To support and cooperate with Greenland in addressing its major challenges in particular the sustainable diversification of the economy, the need to increase the skills of its labour force, including scientists, and the need to improve the Greenlandic information systems in the field of Information and Communication Technologies.**

#### **Indicator 1:Completion rate at high school, VET and higher education**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0,511				0,540			0,600			0,600
	Actual Progress									Final
	0,489	0,493	0,516	0,508	0,507	0,538				

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/12/2019
Data source	Ministry of Education, Greenland, Annual Implementation Report, Greenland Education Programme
Narrative	With improvements in the quality of Education in Greenland the completion rates should increase.
Methodology	Estimating completion rate: enrolled students multiplied with transition rates between study years for older students.
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	The completion rate is a probability and will change each year as long as it covers students active in the education system. For earlier cohorts (where enrolled students in that year/cohort have all either dropped out or graduated) the rate is constant.
Full metadata available at this address	
Justification of the trend	This indicator is slowly improving and shows the results of the efforts improving the High School, VET and Tertiary Education. The target for 2020 will probably not be achieved, but this target is now considered to be too ambitious.

### Indicator 2: Share of age group outside education system

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0.616				0.570			0.400			0.400
	Actual Progress									Final
	0.635	0.590	0.565	0.601	0.574	0.605				

Are we on track	Deserves attention**
Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/12/2019
Data source	Ministry of Education, Greenland, Annual Implementation Report, Greenland Education Programme
Narrative	Reducing the number of pupils that do not continue their education after Elementary School will give more young people a chance to benefit from the economic development of Greenland.
Methodology	Number of students aged 16–18 active at a youth education or continuation school to population in GL age 16–18 and active students abroad age 16–18
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	More than 50% of the 16-18 year old population in Greenland is outside the Education system, therefore it is unlikely that the target of 40% in 2020 will be achieved. This indicates that the quality of Elementary Education is not improving enough to give pupils the necessary basis to continue their education after Elementary School. The Government is planning a comprehensive reform of the Elementary and Secondary Schools expanding amongst other the compulsory education to 6 to 18 years.

### Indicator 3: Percentage of fisheries in total exports

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0.898		0.910	0.910	0.910	0.890	0.850	0.830			0.830
	Actual Progress									Final
	0.910	0.894	0.874	0.952	0.924	0.973				

Are we on track	Deserves attention**
Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2019
Data source	Statistics Greenland; www.stat.gl, data have been extracted from the Greenland Figures in 2019 (pamphlet provided by the Statistical Bureau of Greenland on an annual basis).
Narrative	The Government of Greenland wants to diversify its economy by developing extractive industries and Tourism. This to reduce its reliance on Fisheries and Fish processing.
Methodology	Percentage of the fisheries sector in total exports. Fisheries: SITC rev. 3 code 03 - Fish (not marine mammals), crustaceans, mollusks and aquatic invertebrates, and preparations thereof. Amount of fish export to total export
Link MFF 14-20 / MFF 21-27	This indicator will be used to monitor the 2021-2027 MFF, using the same name.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	With regards to the Indicator 'Percentage of fisheries in total exports', no significant change in the

	percentage of fisheries in total exports for 2014 to 2019 was realised as no new mining activities were operating during those years. Two small mines started operating in 2018 and 2019, with however only a small economic effect on exports due to their small size. In fact, increased allowable catches and sustained high world market prices mean that fisheries will maintain its leading position in the economy in the near future.
--	---

**Specific Objective 2 :To contribute to the capacity of the Greenlandic administration to formulating and implementing national policies in particular in new areas of mutual interest as identified in the PDSO referred to in Article 4(1).**

**Indicator 1: Number of administrative staff completing training (participant days)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
1 350				1 500			1 500			1 500
	Actual Progress									Final
	1 484	1 467	1 972	2 466						

Are we on track	No data
Indicator type	Input
Unit of measurement	Number of staff training days
Cut-Off Date	31/12/2019
Data source	Ministry of Finance, but the Government has stopped reporting on this indicator.
Narrative	The indicator is to measure the efforts of the Government in upskilling its staff.
Methodology	Participants in a given course times the duration of the course in days. Sum of participant days over all courses organised through the Office for Human Resource Development.
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	The indicator only includes training of administrative staff organised through the Office for Human Resource Development in the Government. Decentralised training organised or contracted by the individual units of the Government is not included. Furthermore, training of administrative staff in the municipalities is not included. The indicator therefore systematically underestimates the actual upskilling of administrative staff.
Full metadata available at this address	
Justification of the trend	

**Indicator 2: Percentage of civil servants that are (long-term) residents in Greenland**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0.872										
	Actual Progress									Final
	0.878	0.880	0.877	0.876	0.934	0.912				

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	01/05/2020
Data source	Statistics Greenland; www.stat.gl, data have been extracted from the Greenland Figures in 2019 (pamphlet provided by the Statistical Bureau of Greenland on an annual basis).
Narrative	The civil servants with at least 5 years of residence in Greenland and the short term residents which were born in Greenland. Milestones and targets for indicator 2 have not been established as no specific support programme has been identified that influences this indicator directly. However, with a better educated population this indicator is indirectly influenced by the EU support to the education sector.
Methodology	Number of employees which are long-term residents (LTR) to total number of employees. LTR is defined as living in Greenland for 5 years. Furthermore, Greenlandic students studying abroad and returning to Greenland will be measured as long-term residents.
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Activities related to this objective are financed by the Government of Greenland directly without requiring support from the EU or financed from the project "Capacity Facility for Greenland" decided in 2019. The definitions of the 2 indicators were changed following the signature of the Programming Document for the Sustainable Development of Greenland (C(2014)6775) on 28/10/2014, leading to modification of the baselines. Indicator 2 measures the civil servants with at least 5 years of residence in Greenland and the short term residents which were born in Greenland. Milestones and targets for

indicator 2 have not been established as no specific support programme has been identified that influences this indicator directly. However, with a better educated population this indicator is indirectly influenced by the EU support to the education sector under Specific Objective 1. Data on this indicator are monitored and provided by Statistics Greenland.
---

## 6. The programme contribution to horizontal policies

### 6.1. Contribution to climate mainstreaming

#### 6.1.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
16,8	17,2	17,5	17,9	18,2	18,6	18,9	125,1

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.1.2. Explanation and justification on the financial contribution

The OCTs are especially vulnerable to climate change and environmental degradation due to their geographical locations and characteristics (all are islands in the Caribbean, Arctic, Antarctic, Atlantic and Pacific Oceans). Climate change, environment, oceans and energy are therefore crucial areas of EU-OCT cooperation.

The new Overseas Association Decision (OAD) sets a (non-binding) target aiming to dedicate 25/30 % (tbc) of its envelope (EUR 500 million) for the 2021-2027 period to climate-related actions. These include possible joint actions with non-OCT neighbours via a dedicated intra-regional envelope of EUR 15 million; the neighbouring partners would be expected to contribute their own funds.

It is not possible to predict the annual spending from the 2021-2027 Overseas Association Decision (OAD) at this moment when the programming exercise is just starting, given that the subjects of concrete 2021-2027 MIPs remain to be jointly decided with OCTs.

The amounts shown in the above table represent the estimated contribution of OCTs to the climate mainstreaming and were calculated as 25% of the yearly envelope of this programme. The amounts may be revised at a later stage, when the programming exercise will be more advanced.

For the Cooperation with Greenland in the period 2014-2020 the following updates can be presented.

#### Relevant objective/output

Relevant objective/output	Budget 2019	Budget 2020
EU support for the sustainable development of Greenland*	7,2	10,4
<b>Total</b>	<b>7,2</b>	<b>10,4</b>

#### Programming climate action

2014-2019						estimate	Total
2014	2015	2016	2017	2018	2019	2020	
6,0	5,9	6,8	6,9	7,2	7,2	10,4	50,4

(\*)The appropriations for the year 2014 have been reviewed to take account of the transfer to subsequent years of the allocations not used in 2014 (reprogramming exercise carried-out in 2015 in accordance with Article 19 of the Multiannual Financial Framework Regulation).

#### 6.1.3. Key achievements

Regarding the Greenland programme, for the budget year 2019, the last year over which data are currently available, the contribution is calculated at EUR 7.2 million on the basis of the following achievements in 2019:

- around 48% of the overall Greenland Education Programme II Budget is spent on building new and replacement school buildings and new dormitories replacing rented accommodations, equivalent to EUR 14.33 million in the budget year 2019,
- the current EU programme contributes 100% to the overall budget of the GEP,
- the EU contribution allows the heavy investments in the school buildings and housing (dormitories),

- most building activity under the GEP replaces old school buildings and especially old dormitories that the new buildings are 50% more energy efficient.

The ongoing 11<sup>th</sup> EDF all-OCT Thematic Programme and the Caribbean, Indian Ocean and Pacific regional programmes (EUR 97.8 million) are all dedicated to a mix of climate change, environment, resilience and sustainable energy, showing the vital importance of these areas to all OCTs. At bilateral level, several OCTs selected climate change/environment (Sint Maarten – EUR 7 million), sustainable energy (Sint Eustatius – EUR 2.45 million and Saba – EUR 3.55 million) and resilient infrastructures (Curaçao – EUR 16.95 million) as the priority sectors under the 11<sup>th</sup> EDF to promote their long-term sustainable development and welfare.

#### 6.1.4. Performance

The Overseas Association Decision defines a wide range of priority areas for cooperation with the OCTs, in pursuit of their economic and human development and achievement of the Sustainable Development Goals. In the 2014-2020 period, from this array of possible cooperation priorities, climate action emerged as the common denominator in all 3 OCT regional programmes (Caribbean, Indian Ocean, Pacific) and in the single all-OCT thematic programme. Moreover, 4 (of then 25) OCTs additionally opted for climate-related action in their bilateral cooperation programmes.

The Government of Greenland has used a big part of the extra finances becoming available for the budget of the Ministry of Education for the replacement and/or expansion of old school buildings and the building of extra dormitories, replacing rented accommodation and old (temporary barracks style) accommodations. All new buildings are constructed to a high, Arctic adapted, standard of construction and are much more energy efficient than the building that are replaced. In addition buildings are adapted to heating on electricity, which in Greenland is mainly (70%+) generated by hydropower in the larger population centres.

## 6.2. Contribution to biodiversity mainstreaming

### 6.2.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
5,0	5,2	5,2	5,4	5,5	5,6	5,7	37,6

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.2.2. Explanation and justification on the financial contribution

Almost all OCTs are located in global biodiversity hotspots and together with Outermost Regions account for the vast majority of EU biodiversity. The vital importance of biodiversity to OCTs is reflected in the (non-binding) target of 7.5 % of annual spending from the total 2021-2027 OAD budget (EUR 500 million) for biodiversity actions (tbc based on the outcome of the ongoing negotiations on the new OAD in the Council).

It is not possible to predict the annual spending from the 2021-2027 OAD at this stage, in general or related to biodiversity in particular. The programming exercise is just starting and it is impossible to know how many OCTs will opt for biodiversity-related cooperation under the OAD. The priorities of the 2021-2027 Multiannual Indicative Programmes remain to be jointly decided with OCTs. In terms of the biodiversity target, there is a risk that it might not be met if an insufficient number of OCTs opts for biodiversity, especially as cooperation with OCTs generally focuses on a single area/sector for the entire 7-year budgetary period.

The amounts shown in the above table therefore represent the *estimated* contribution of OCTs to the biodiversity mainstreaming and were calculated as 7.5 % of the yearly envelope of this programme. Due to the risk factors (target not yet confirmed, target non-binding, subjects of MIPs unknown at this stage), the amounts may be revised at a later stage, when the programming exercise is more advanced.

### 6.2.3. Key achievements

The on-going EDF 11<sup>th</sup> Caribbean, Indian Ocean and Pacific regional programmes as well as the BEST initiative have helped OCTs to improve protection and sustainable management of biodiversity and ecosystems as well as to reinforce cooperation on environmental actions. The Indian Ocean Regional Programme (EUR 4 million) is a good example that places the protection of biodiversity in the French Southern and Antarctic Lands (TAAF) at the core of its action.

### 6.2.4. Performance

The Overseas Association Decision defines a wide range of priority areas for cooperation with the OCTs, in pursuit of their economic and human development and achievement of the Sustainable Development Goals. In the 2014-2020 period, from this array of possible cooperation priorities, biodiversity emerged as one of the priorities in all 3 OCT regional programmes (Caribbean, Indian, Pacific). In particular, the Indian Ocean regional programme focuses on the French Southern and Antarctic Lands, which are home to exceptional biodiversity, highly diverse and complex ecosystems, and a high rate of endemism among flora and fauna.

### 6.3. Contribution to clean air financing

Not applicable

### 6.4. Contribution to gender equality

#### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.4.2. Key achievements and performance

While there was no specific target set in the 2014-2020 OAD concerning gender equality, care will continue to be taken to ensuring that all cooperation programmes include a focus on gender equality. Indeed, the new 2021-2027 OAD explicitly states that gender equality should be mainstreamed into all actions as a key contribution to the successful achievement of the SDGs.

For the Greenland programme, the contribution is estimated to be as follows.

Relevant objective/output	2018 (EUR Million)	2019 (EUR Million)	Budget 2020 (EUR Million)
EU support for the human development of Greenland*	3.4	8.8	12.49

For the Greenland Programme, based on the Implementation Report over 2019 (which is the latest report available to date), the following is achieved:

- around 50% of the children attending elementary school are female,
- 61.0% of the children completing further education are female (for 2019, female completion in high school, VET and higher education were respectively 60.0%, 54.0% and 70.0%),
- therefore overall 55% of the children benefitting from education in Greenland are female,
- around 53.33% of the overall Greenland Education Programme II Budget is spent on non-building activity equivalent to EUR 15.99 million,
- the current EU programme contributes 100% of the overall budget of the GEP II.

Overall girls and women perform much better in the Greenlandic Education system than boys and men. Partially this is due to a cultural bias in favour of traditional male activities like fishing and hunting. Partially this due to a thriving fisheries industry that absorbs much of the available workforce. But this is also due to a strong emphasis on gender issues in government policies, equal employment opportunities for women, especially in the education sector (where women are in the majority).

As Greenland is subject to the constitution of the Kingdom of Denmark, women's rights, equal opportunities and more general human rights are applied in Greenland.

### 6.5. Contribution to the sustainable development goals

#### 6.5.1. Goals

Not applicable

#### 6.5.2. Key achievements and performance

##### Introduction

The United Nations (UN) 2030 Agenda is a compass, aiming at achieving integrated policy-making and action to sustainable development. The objective of the association between the Union and the OCTs is, as defined in the Overseas Association Decision (OAD), to support the OCT's sustainable development as well as to promote the values of the UE in the wider world. Under this frame, the priority sectors of interventions of ongoing cooperation are education, environment, climate change and sustainable energy, connectivity, sustainable growth, tourism and social development/youth. They promote long-term sustainable economic development and welfare in OCTs. In the coming years, the Green Deal could emerge as a pivotal priority given the vulnerabilities of the OCTs as islands. This could include climate action, environment, biodiversity and energy transition, as well as digital technologies, circular economy and investments for sustainable growth and jobs, which are all very relevant areas for OCTs. In

addition, support to education (primary, secondary and tertiary as well as vocational training) will continue to contribute to OCT's sustainable development.

EU support to OCTs contribute to many areas of the 2030 Agenda, often interlinked, which can be illustrated by:

### **SDG 3 Good health and well-being**

To achieve good health, which is an essential component of the human development of each country/territory, complementary work and progress with others SDGs is required, including SDG 4 (education), SDG 5 (gender equality and women's empowerment) and SDG 10 (reducing inequalities). The bilateral programme (EUR 3.95 million) with Bonaire focuses on youth and contributes to implement SDGs 3, 4, 5 and 10. The overall objective of this budget support programme is that Bonaire's youth is healthier, more employable and enjoy improved living standards.

### **SDG 4 Quality education**

Access to quality education fosters equality and is an essential means of achieving sustainable growth and jobs. This is the rationale of EU cooperation with Greenland. This budget support programme (almost EUR 215 million) is the most substantial EU-OCT cooperation programme.

Higher education is an essential component of a strong and sustainable education system, and has therefore a direct impact on the development of every country/territory. SDG 4 will not be achieved without partnerships that include universities, which play a role in producing knowledge and innovation to address global challenges. Aruba's cooperation (EUR 13.05 million) aims at offering innovative STEM (Science, Technology, Engineering, and Mathematics) curricula in a consortium with European learning centres of excellence. This creates a pool of expertise for innovative sustainable solutions and establishes a local 'triple helix' platform to link academic training and research with the private sector's needs and the Government's policy objectives.

Through the Erasmus+ programme, the EU also supported OCTs in facilitating mobility of individuals, and reinforcing intercultural dialogue and understanding. OCT participation has more than doubled since 2018, in the number of both projects and beneficiaries. From 87 projects with 41 beneficiaries (total EUR 3.2 million) in 2018, participation grew to 177 projects and 95 beneficiaries (EUR 5.5 million) in 2020.

### **SDG 6 Clean water and sanitation**

As part of the broader EU support to access to water and sanitation, interventions related to the construction of waste water collection systems and also of treatment facilities contribute to delivery of SDG 6. It is therefore important to highlight the programme of Sint Maarten (EUR 7 million), which aims to enhance resilient public service infrastructures through the expansion of the sewerage network of the territory.

### **SDG 7 Affordable and clean energy**

Sustainable energy is key to achieving the 2030 Agenda and Paris Agreement targets and meeting the long-term objectives of the clean energy transition and decarbonisation process. The EU assistance to Saba (EUR 3.55 million) and Sint Eustatius (EUR 2.45 million) supported the development of the necessary policy and legal framework in the energy sector, providing further impetus to ensure access to sustainable energy.

### **SDG 8 Decent work and economic growth**

Bilateral programmes for French OCTs (for a total of EUR 105.7 million) contribute to the implementation of SDG 8. The EU support on employment (New Caledonia), sustainable tourism (French Polynesia and Saint Pierre et Miquelon) and digital (Wallis et Futuna) drive progress in ensuring sustained economic growth, full employment and decent work.

### **SDG 13 Climate action, SDG 14 Life below water and SDG 15 Life on land**

The OCTs are especially vulnerable to climate change and environmental degradation due to their geographical locations and characteristics. The all-OCT Thematic Programme and the Caribbean, Indian Ocean and Pacific regional programmes (for a total of EUR 97.8 million) are all dedicated to ensuring the sustainable use of natural resources, protecting biodiversity and supporting climate actions and resilience, showing the vital importance of these areas to all OCTs.

As an illustration of EU support to protect biodiversity, we can highlight the Indian Ocean Regional Programme (EUR 4 million) which aims at improving the surveillance and observation of terrestrial and marine ecosystems in the French Southern and Antarctic Lands, restoring ecosystems and reinforcing impact prevention mechanisms.

In addition, the BEST Initiative has helped OCTs to promote EU's environmental standards and provided an incentive for local actors to engage in environmental actions. All these programmes have therefore translated SDG 13, 14 and 15 into effective results on the ground and will prepare the work for the future.

The European Green Deal will provide further impetus to reinforce EU-OCT cooperation on environment and climate change as well as to incentivize solutions to these global challenges.

### **SDG 17 Partnerships for the goals**

Successful sustainable development requires partnerships. The 2019-2024 Commission took office with the mandate to ensure a stronger Europe in the World. The geopolitical Commission strives to advance EU strategic interests and objectives abroad and defends a rules- and values-based international order in an increasingly polarised world, through partnerships. The special relationship between the Union and the OCTs is based on the association of the OCTs with the Union, which constitutes a partnership. This principle of partnership is embedded in the Overseas Association and Decision, which is the framework for political and policy dialogue and cooperation on issues of common interest. The progress achieved so far shall be consolidated and reinforced in the coming period.

**1. Overview****1.1. Challenges**

The economic stability and prosperity of its neighbourhood are of key geo-strategic importance for the EU. In particular, all Member States of the EU have a strong interest to support neighbouring countries experiencing a balance-of-payments crisis or an

unprecedented economic shock (such as the COVID-19 pandemic), in order to minimize adverse macroeconomic and social spill overs. EU-level action is thereby justified as the benefits of prosperity, stability and security in the EU's neighbourhood flow to all EU Member States.

In its neighbourhood, the EU will make an important contribution to improved economic stability and resilience through the provision of Macro-Financial Assistance (MFA).

## 1.2. Mission (general objectives)

**MFA** is an EU financial instrument extended to partner countries in the enlargement and European Neighbourhood Policy regions that are experiencing a balance-of-payments crisis. Its primary objective is to help countries overcome acute economic crises and restore their economy on a sustainable growth path, which is to be achieved through economic adjustments and structural reforms that are included in the policy conditionality of the instrument. MFA is provided in conjunction to International Monetary Fund (IMF) financing.

*MFA* is part of the EU's toolkit for macroeconomic stabilisation, which includes also the Balance-of-Payment assistance mechanism for Member States outside the euro area, and the rescue mechanisms for the euro area created in response to the global financial crisis.

In the current COVID-19 crisis, *MFA* to neighbourhood and candidate countries will support external stabilisation and thereby provide authorities with policy space to implement measures to counter the economic fallout from the pandemic, while also encouraging the implementation of reforms.

## 1.3. Specific objectives

- **MFA fulfils a fundamental macroeconomic stabilisation function**, by addressing exceptional external financing needs faced by neighbouring countries and restoring their economy back to a sustainable path.
- **MFA provides a strong incentive for macroeconomic adjustment and policy reform** by means of strict conditionality, and supports the EU's accession, pre-accession and association agendas in the beneficiary countries.
- **MFA complements the other EU external instruments as well as resources made available by IFIs and other donors**, by helping to ensure that appropriate macroeconomic frameworks and sound economic policies are put in place in the beneficiary countries – which are preconditions for the success of other projects aiming at sustainable socio-economic development by the EU and the donors' community

## 1.4. Public intervention context

**Shared competences** (Article 4 of the TFEU): the EU and EU countries are able to legislate and adopt legally binding decisions on MFA. Throughout the MFF 2021-2027, MFA will continue to be granted on the basis of case-by-case Decisions adopted by Ordinary Legislative Procedure (OLP) under Article 209, 212 or 213 TFEU. In turn, the Union's operations and those of the Member States complement and reinforce each other. The MFA decision-making process will remain separate from the new Neighbourhood, Development and International Cooperation Instrument (NDICI), proposed by the Commission in June 2018 in the context of the MFF 2021-2027 package.

MFA complements EU assistance under the 'programmed' instruments (e.g. Instrument for Pre-Accession Assistance-II (2014-2020), now IPA-III (2021-2027)) and maximises its effectiveness by alleviating the risks of disruption of the regular EU cooperation framework whilst at the same time laying the basis for structural change and sustainable economic and social development of the beneficiary countries. MFA is also complementary to the other EU crisis response mechanisms (e.g. the Instrument contributing to Stability and Peace and humanitarian aid) and EIB lending. Furthermore, by complementing the resources made available by the International Financial Institutions (particularly the International Monetary Fund) and other donors, EU MFA contributes to the overall impact and effectiveness of the financial support agreed by the international donor community.

## 1.5. Actions

*MFA* provides financial support to partner countries facing a balance of payments crisis. The amount of MFA provided is calculated on the basis of the residual financing needs under an International Monetary Fund (IMF) programme, as assessed by DG ECFIN. MFA is predominantly provided in loans, or a mix of loans and grants (the precise mix in any specific assistance depends on criteria such as the receiving country's level of development and its debt sustainability/creditworthiness). For the loans, the EU passes on to the beneficiary country its own funding costs (namely, the interest rate it has to pay to raise funds by issuing bonds). This allows the countries receiving assistance to benefit from the low rates available to the EU as a top-rated borrower.

The Commission typically disburses MFA assistance in instalments strictly tied to the beneficiary country's progress with respect to:

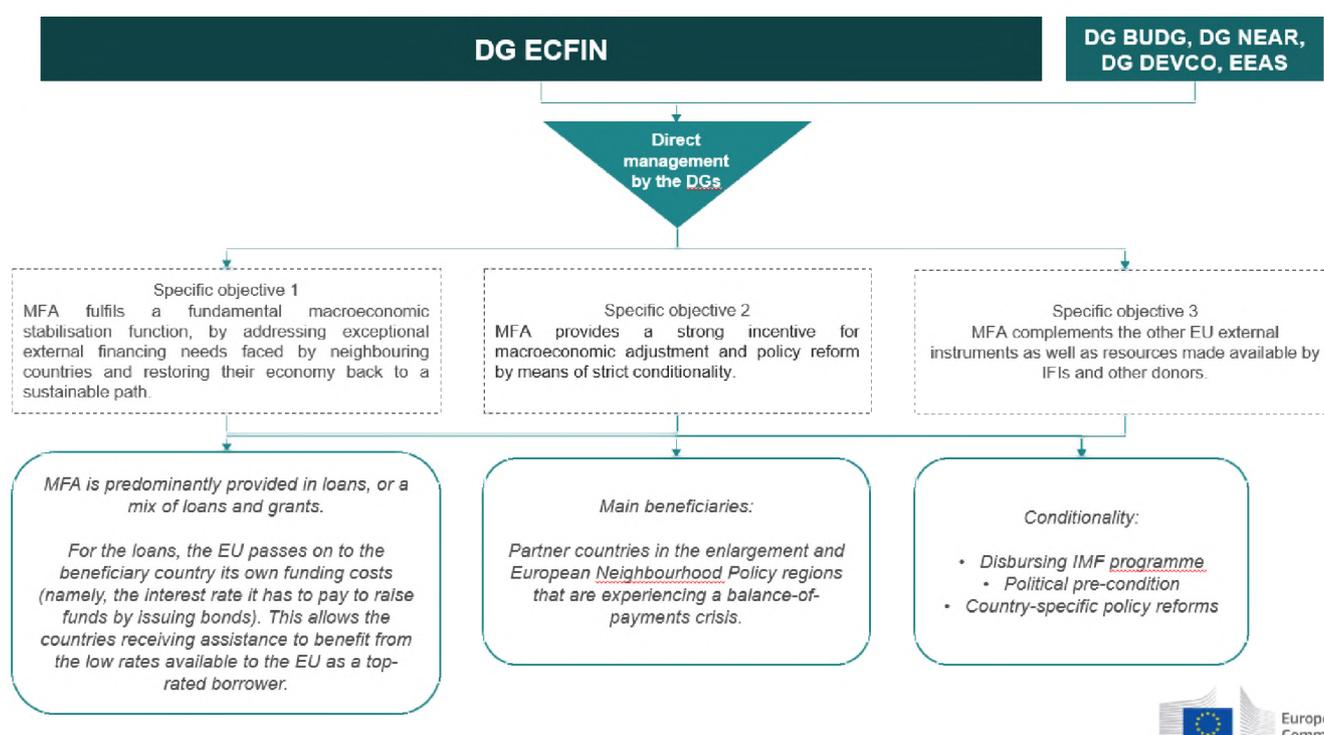

- macroeconomic and financial stabilisation and economic recovery;

- implementation of the agreed policy reforms, as outlined in the Memorandum of Understanding.
- sound progress with the IMF programme, and adherence to the respect for human rights, rule of law and effective democratic mechanisms (the so called 'political pre-condition').

## 1.6. Delivery mode

MFA is implemented in direct management, under the lead of DG ECFIN and with the participation of other Commission services and the EEAS.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

### 1.8.2. Legal basis explanation

MFA is exceptional in nature and is mobilised on the basis of case-by-case Decisions adopted by Ordinary Legislative Procedure (OLP) under Article 209, 212 or 213 TFEU.

In addition to the legal base mentioned above, the MFA loans will be provisioned by the new External Action Guarantee (EAG) within the proposed Regulation of the European Parliament and of the Council establishing the Neighbourhood, Development and International Cooperation Instrument (NDICI) (COM(2018) 460 final – **NB: Regulation still not adopted**). The EAG will be backed by the new Common Provisioning Fund.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>56,4</b>	<b>50,0</b>	<b>56,1</b>	<b>57,4</b>	<b>59,3</b>	<b>61,6</b>	<b>64,6</b>	<b>405,4</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

As MFA is not a programmable instrument, there is no direct link to a specific MFF. In the 2021-2027 MFF, MFA will continue to be governed by the ordinary legislative procedure, which requires the European Parliament and the Council to approve each specific programme. MFA loans will be guaranteed by the new External Action Guarantee (EAG) to be created by the NDICI. The

EAG will cover guarantees in the private, sovereign and sub-sovereign sector ('EFSD+'), MFA-loans as well as external Euratom loans. The EAG will be backed by the new Common Provisioning Fund, which will incorporate the existing Guarantee Fund for external actions as well as the other Guarantee Funds in the external as well as the internal EU domain. From the EAG total, an amount will be earmarked for MFA loans to be provisioned at a rate of 9%, the same rate as was the case under the 2014-2020 MFF. **[Note: The NDICI Regulation is not adopted yet. The final volume of operations under the EAG and those allocated to MFA are not yet final]** In the 2014-2020 MFF, a EUR 2 billion annual lending volume for MFA was agreed in the mid-term review of the 2014-2020 MFF, confirming the strong European value added and high leverage of the instrument. Additionally, MFA grants will continue to be provided to eligible countries with exceptionally high vulnerabilities..

### 1.10. Relevant websites providing more information

The website on Macro-Financial Assistance is available at: [https://ec.europa.eu/info/business-economy-euro/economic-and-fiscal-policy-coordination/international-economic-relations/macro-financial-assistance-mfa-non-eu-partner-countries\\_en](https://ec.europa.eu/info/business-economy-euro/economic-and-fiscal-policy-coordination/international-economic-relations/macro-financial-assistance-mfa-non-eu-partner-countries_en)

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	89 524 730	69 357 331
Implementation carry-overs		
Implementation total	89 524 730	69 357 331
total envelop*	90 523 000	
cumulative implementation rate	99%	77%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

*Note: MFA is predominantly provided in the form of loans, underpinned by guarantees from the EU budget. The budget implementation figures listed in this fiche refer only to the small proportion of MFA implemented in the form of grants from the EU budget. MFA funds disbursed 2014-2020: loans: EUR 6 306.0 million; grants: EUR 68.0 million.*

MFA is predominantly provided in **loans**, underpinned by guarantees from the EU budget. During 2014-2020, around EUR 6 306.0 million of MFA funds were disbursed, out of which EUR 6 238.0 million were in loans, and EUR 68.0 million were in grants. During this period, the majority of MFA funds disbursed went to the Eastern neighbourhood (74%), followed by the Southern neighbourhood (23%) and the Western Balkans (3%).

In 2020, in the context of the COVID-19 pandemic, the EU adopted a EUR 3 billion MFA-package to ten enlargement and neighbourhood partners, to help them limit the economic fallout of the COVID-19 pandemic. The decision was adopted at record speed by the European Parliament and the Council on 25 May 2020. As part of this package, the EU agreed on MFA loans to be distributed as follows: the Republic of Albania (EUR 180 million), Bosnia and Herzegovina (EUR 250 million), Georgia (EUR 150 million), the Hashemite Kingdom of Jordan (EUR 200 million), Kosovo (EUR 100 million), the Republic of Moldova (EUR 100 million), Montenegro (EUR 60 million), the Republic of North Macedonia (EUR 160 million), the Republic of Tunisia (EUR 600 million) and Ukraine (EUR 1.2 billion). Information on the characteristics of the COVID-19 MFA package is provided in Section 3.1.3.

Implementation of the 10 COVID-19 MFA programmes has been progressing at different speeds. By end-2020, the Commission had disbursed the first instalment for seven out of the ten countries in three batches (Kosovo, Montenegro and North Macedonia in October 2020; Georgia, Moldova and Jordan in November 2020; and Ukraine in December 2020), for a total amount of EUR 1 035 million<sup>1</sup>. Implementation with the remaining three partners is progressing at different speeds, with Albania ready to receive the first instalment, while the MoUs (Memoranda of Understanding) with Bosnia and Herzegovina and Tunisia are still to be ratified and enter into force (as at 25 March 2021).

Concerning the **grants**, throughout the 2014-2020 period, the difference between the total of Commitment Appropriations (CA) and Payment Appropriations (PA) is predominantly explained by the fact that the third tranche of the MFA to Moldova, which

<sup>1</sup> This amount does not include the EUR 50 million that was also disbursed to Jordan in November 2020, but pertaining to the regular MFA-III Jordan (Decision 2020/33 of 15 January 2020).

included a grant element of EUR 20 000 000 was not paid out. The tranche was cancelled as not all conditions were met by the time the programme expired in July 2020.

In 2020, the following amounts of CA and PA were utilised from the MFA Budget line 01.030200:

- Aggregate annual amount of commitments: EUR 293 900
- Aggregate annual amount of payments: EUR 15 284 600

With regards to commitments, the total figure reflects commitments made in 2020 for (i) the operational assessments to Bosnia Herzegovina, Moldova, Tunisia and Jordan (ahead of the new MFA operations in the context of the COVID19-MFA package adopted in May 2020), and (ii) the META-evaluation of MFA operations throughout the period 2010-2020 (launched in 2020). There was no commitment with regard to the grant element of MFA operations in 2020.

With regard to payments, the total figure reflects the following payments made in 2020: (i) EUR 10 000 000 in grants were disbursed to Moldova in July 2020 (corresponding to the second tranche from Decision (EU) 2018/1565), as all conditions were met, (ii) EUR 5 000 000 in grants were disbursed to Georgia in November 2020 (corresponding to the second tranche from Decision (EU) 2018/598), as all conditions were met, (iii) the operational assessments to Bosnia Herzegovina, Moldova, Tunisia and Jordan (ahead of the new MFA operations in the context of the COVID19-MFA package adopted in May 2020), and (iv) the ex-post evaluation of MFA-III operation for Ukraine (completed in 2020, and will be published in Q1-2021).

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.3. Previous programme performance**

MFA has gained increasing prominence in the EU's external toolbox, aiming to address exceptional financing needs of countries that are geographically, economically and politically close to the EU. Since 1990, the EU has made available a number of MFA operations in candidate, potential candidate and neighbourhood countries, for a total amount of over EUR 16 billion. Since 2014, around EUR 6.3 billion have been disbursed and an additional EUR 2.4 billion have been authorised and are expected to be disbursed in 2021 (predominantly related to the COVID-19 MFA package adopted in May 2020).

Throughout 2014-2020, MFA has been instrumental in supporting partners in the eastern and southern neighbourhood faced with conflict and political transitions and, in turn, a deterioration of their economies and financial situation.

**In the eastern neighbourhood, MFA was particularly instrumental in helping Ukraine** to stabilise the macroeconomic situation and undertake the necessary reforms so as to bring the economy on a sustainable growth path. Indeed, since 2014, a total of EUR 4.4 billion was disbursed to Ukraine under five MFA operations. Under the COVID-19 MFA operation – adopted in 2020 for an amount of EUR 1.2 billion – another EUR 600 million are still available to Ukraine. In effect, MFA has proven to be an important tool to address an acute balance of payments crisis and support reforms in public finance management, anti-corruption, financial sector restructuring, trade and taxation and energy.

**In the southern neighbourhood, MFA was also instrumental in helping Tunisia** respond to the economic downturn it has faced following the 2011 revolution and the economic and political transition process that ensued. Indeed, since 2014, a total of EUR EUR 1.4 billion have been made available to Tunisia under three MFA operations (EUR 800 million disbursed to date). The MFA programmes helped redress Tunisia's fiscal and external balances, whilst having a considerable focus on policies to foster employment and provide financial support to the poorer sections of society. Additionally, in **Jordan**, a total of EUR 1.08 billion have been made available under the four MFA programmes since 2014 (EUR 630 million disbursed to date). The assistance has helped the country to deal with pressing economic and social issues arising from regional conflicts and the refugee flows from Syria and Iraq. More generally, the assistance helped Jordan to address immediate external and fiscal financing needs, whilst encouraging structural reforms and contributing to macroeconomic stability in a very challenging economic and regional context.

Furthermore, in 2020-2021, **MFA was instrumental in supporting non-EU partner countries during the COVID-19 pandemic**. Indeed, on 22 April 2020 the Commission adopted a proposal for a EUR 3 billion MFA package to 10 enlargement and neighbourhood partners to help them to limit the economic fallout of the coronavirus pandemic. The decision was adopted by the European Parliament and the Council on 25 May 2020. The MFA funds will be made available for 12 months in the form of loans on highly favourable terms to help these countries cover their immediate, urgent financing needs. Together with the International Monetary Fund's support, the funds can contribute to enhancing macroeconomic stability and creating space to allow resources to be allocated towards protecting citizens and mitigating the coronavirus pandemic's negative socio-economic consequences.

The independent *ex-post* evaluations carried out so far conclude that MFA operations do contribute, albeit sometimes modestly and indirectly, to the improvement of external sustainability, the macroeconomic stability and the achievement of structural reforms in the recipient country. In most cases, MFA operations had a positive effect on the balance of payments of the beneficiary country and contributed to relax their budgetary constraints. They also led to a slightly higher economic growth. (See more in Section 3.3)

Disbursement under the proposed MFA programmes is conditional on the fulfilment of political pre-conditions, good progress by the beneficiary country with the IMF programme and on the implementation of the policy measures agreed in the MoU. In turn, each disbursement of MFA reflects good progress by the beneficiary country in implementing the country-specific measures agreed with the EU.

MFA disbursements are sometimes delayed compared to initial expectations. External factors that might be impacting programme timelines include:

- The beneficiary country does not fulfil the political pre-conditions.
- The IMF Programme in the beneficiary country is off-track or expired.
- The implementation of agreed reforms are affected by capacity constraints and institutional weaknesses.
- Changes of government result in shifting policy priorities.

2020 was an exceptional year for the MFA instrument. The year was firstly characterised by the conclusion of three MFA operations: Ukraine MFA-IV, Georgia MFA-III and Moldova, as well as the adoption of a new, follow-up operation with Jordan (MFA-III). Furthermore, in the context of the COVID-19 pandemic, on 22 April 2020 the Commission adopted a proposal for a EUR 3 billion MFA package to 10 enlargement and neighbourhood partners to help them to limit the economic fallout of the coronavirus pandemic. The decision was adopted by the European Parliament and the Council on 25 May 2020.

The main characteristics of the COVID-19 MFA package include:

- The Decision covers several countries together under one MFA Decision in order to accelerate and facilitate the provision of financial assistance.
- Funds are available for 12 months (from the entry into force of the MoU) in the form of loans on highly favourable terms to help these partners cover their immediate, urgent financing needs. This is a shorter duration than what is usually the case for MFA operations (i.e. the usual 2,5 years) and reflect the need to make support available fast and in a more flexible manner.
- To be disbursed in two instalments, with the second instalment tied to the fulfilment of country-specific policy conditionality.
- Long maturity (c. 15 years).
- Very low interest rate.
- Subject to a disbursing IMF programme (Extended Fund Facility or Rapid Financing Instrument).

By end-2020, the EU had disbursed the first instalments of the MFA programmes to seven partners (on highly concessional terms), and stands ready to disburse the remaining instalments in 2021, once conditions are met. The MFA-package complements and builds upon the EUR 38 billion 'Team Europe' recovery-package, the EU's robust and targeted response to support partner countries' efforts in tackling the pandemic.

More details on past MFA operations, including under the current MFF, can be found in the Annual Report from the Commission to the European Parliament and the Council on the implementation of Macro-Financial Assistance to third countries, and related Staff Working Document.<sup>2</sup>

### 3.2. Key achievements

EUR 6.3 billion	EUR 4.4 billion	EUR 1.4 billion	EUR 1.1 billion	EUR 3 billion
in funds was disbursed from 2014 to 2020 to support the financial stability of EU partner countries.	in loans was disbursed to Ukraine under five MFA operations since 2014 in the context of the conflict in eastern Ukraine.	in loans was made available to Tunisia between 2014 and 2020 to support the country in responding to the economic downturn following the 2011 revolution and the economic and political transition process that ensued. EUR 800 million	in loans was made available to Jordan between 2014 and 2020 to support the country dealing with pressing economic and social issues arising from regional conflicts and the refugee flows from Syria and Iraq. ### 3.3. Evaluations, studies and reports

In line with the EU Financial Regulation and the corresponding MFA decisions, the Commission conducts ex post evaluations after completion of MFA programmes to assess their impact. This is normally carried out within two years from the end of the availability period defined in the legislative decision granting assistance. The objective is twofold: (i) to analyse the impact of MFA on the economy of the beneficiary country and in particular on the sustainability of its external position; (ii) to assess the added value of the EU intervention.

The evaluations carried out so far conclude that MFA operations do contribute, albeit sometimes modestly and indirectly, to the improvement of external sustainability, the macroeconomic stability and the achievement of structural reforms in the recipient country. In most cases, MFA operations had a positive effect on the balance of payments of the beneficiary country and contributed to relax their budgetary constraints. They also led to a slightly higher economic growth.

All evaluations highlight that an important attribute of the EU MFA versus alternative sources of financing is its highly concessional terms, i.e. relatively low interest rates, long maturity and long grace period. This generates fiscal space and contributes to public debt sustainability in the beneficiary countries.

The ex-post evaluations also confirm that previous MFAs were implemented efficiently, and were well coordinated with other EU programmes and with programmes of other donors (notably, the IMF and World Bank). Indeed, the EU's MFA complements and is conditional on the existence of an adjustment and reform IMF programme in the beneficiary country. MFA policy conditionality is separate from the IMF conditionality, but complementary and/or reinforcing. Recent experiences show that the presence of two independent but coordinated programmes reinforces the capacity of delivering results, through complementary conditionality and combined financial resources.

The evaluations also note the shortcomings] of each MFA operation, with the most common ones being the lack of visibility of the MFA operation, and in certain cases, the speed of the legislative approval process. The Commission will further consider the identified limitations in the upcoming MFA meta-evaluation launched in late-2020, and planned to be concluded in Q4-2021.

The most recent completed ex-post evaluations of MFA operations, in 2020, are:

- MFA I to Tunisia: *'The evaluation found that MFA-I was effective in helping to improve Tunisia's Balance of Payments, as well as supporting fiscal consolidation through highly concessional financial terms and policy conditions. The MFA covered around 11.3% of the residual financing gap for the period 2015-2016 and increased confidence in the Tunisian economy.'*<sup>3</sup>
- MFA III to Ukraine: *'The magnitude and favorable terms of the third MFA to Ukraine allowed for fiscal savings, necessary for the implementation of structural reforms. The ability of the EU to mobilise and coordinate an unprecedented amount of financial resources at a relatively quick speed was a key rationale for the intervention, in a time when Ukraine's financing need was still extremely high. MFA conditionality created a politically reinforcing effect that contributed to the mobilisation of Ukrainian authorities around crucial reforms. The programme also added value through its confidence-boosting effect on the private sector.'*<sup>4</sup>

Additionally, an MFA meta-evaluation was launched in 2020. The study will assess the principles and characteristics governing the MFA instrument aiming to provide input on how to improve the instruments' relevance, effectiveness, efficiency, value added and its ability to respond to the changing priorities of the EU external action. The study will also make suggestions on how to operationally improve MFA interventions. Finally, the study will consider the quality of MFA evaluations undertaken in the period 2010-2020 and explore ways of improving future evaluations.

All final reports of completed ex-post evaluations of MFA operations are published on [https://ec.europa.eu/info/evaluation-reports-economic-and-financial-affairs-policies-and-spending-activities\\_en](https://ec.europa.eu/info/evaluation-reports-economic-and-financial-affairs-policies-and-spending-activities_en)

*General note: Given the specificities of MFA, a precise assessment of its impact is difficult to make, as effects on macroeconomic variables over time cannot be uniquely attributed to MFA operations. In addition, as MFA is by nature a short-term crisis related instrument spanning over 2 to 3 years maximum, it is not possible to quantify its objectives in terms of indicators/milestones beyond the horizon of the MFA operations themselves or, at most, of the beneficiary countries' programmes agreed (or to be agreed) with the IMF. Therefore, for years going beyond the MFA operation or the IMF projections, the figures below reflect the latest data available.*

<sup>3</sup> External evaluation available at: [https://ec.europa.eu/info/evaluation-reports-economic-and-financial-affairs-policies-and-spending-activities/ex-post-evaluation-macro-financial-assistance-mfa-operation-tunisia\\_en](https://ec.europa.eu/info/evaluation-reports-economic-and-financial-affairs-policies-and-spending-activities/ex-post-evaluation-macro-financial-assistance-mfa-operation-tunisia_en)

<sup>4</sup> External evaluation and the accompanying Commission Staff Working Document will be published in Q1-2021.

#### **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :MFA fulfils a fundamental macroeconomic stabilisation function, by addressing exceptional external financing needs faced by neighbouring countries and restoring their economy back to a sustainable path.**

**Specific Objective 2 :MFA provides a strong incentive for macroeconomic adjustment and policy reform by means of strict conditionality, and supports the EU's accession, pre-accession and association agendas in the beneficiary countries.**

**Specific Objective 3 :MFA complements the other EU external instruments as well as resources made available by IFIs and other donors, by helping to ensure that appropriate macroeconomic frameworks and sound economic policies are put in place in the beneficiary countries – which are preconditions for the success of other projects aiming at sustainable socio-economic development by the EU and the donors' community.**

#### **5. Programme 2014-2020 - Key monitoring indicators**

*Previous FIN 1 : Financial Statement for the Macro Financial Assistance (MFA)*

**General Objective 1 :Restoring a sustainable external finance situation for countries facing external financing difficulties**

**Indicator 1:Official foreign exchange reserves in months of imports of goods and services.**

Not applicable

### **6.5. Contribution to the sustainable development goals**

#### **6.5.1. Goals**

***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

MFA is an emergency instrument mobilised on a case-by-case basis to help countries dealing with serious balance-of-payments difficulties. Its objective is to restore a sustainable external financial situation in partner countries, while encouraging economic adjustments and structural reforms aiming to return the beneficiary country's economy to a sustainable long-term path. Unlike other forms of EU financial support, it is not meant to provide regular financial support for economic and social development.

In its Joint Declaration on MFA of 2013, the Council and the European Parliament consider that “[...] *Macro-financial assistance should support the beneficiaries' commitment to common values shared with the Union, including democracy, the rule of law, good governance, respect for human rights, sustainable development and poverty reduction, and to the principles of open, rules-based and fair trade.*”

Hence, all MFA decision include specific objectives “*to strengthen the efficiency, transparency and accountability of the public finance management systems in the beneficiary country and promote structural reforms aimed at supporting sustainable and inclusive growth, employment creation and fiscal consolidation.*”

This is implemented through the conditionality attached to the disbursement of the MFA funds aimed at strengthening macro-economic and financial stability and focusing on: public finance management, financial sector governance, fight against corruption and money laundering, social safety net and labour market, energy sector reforms, and improving trade and business climate.

Accordingly, MFA programmes link to several SDGs, but are particularly focused on SDG 8 and SDG 16.

***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

Throughout 2014-2020, the majority of conditions attached to MFA programmes in the neighborhood (particularly the southern neighborhood) targeted SDG8. One example is that of the MFA-II to Tunisia. Through its conditionality, the MFA contributed to the launch of a new active labour market policy programme ("Contrat Dignité"), that aimed at reinserting into the labour market job seekers who have been unemployed for over two years. Between its official launch in March 2017 and the end of 2017, the programme was a success and received over 140 000 job seekers applications and 44 000 job offers from private enterprises, as a result of which 16 347 contracts have been signed (12 508 of them with women applicants). Another example is that of the MFAs to Jordan. The persistent commitments by Jordan to in all its MFAs to strengthen the social safety net and to promote labour market reforms (to reduce unemployment and raise participation rates, notably among women), have contributed directly to the attainment of SDG8. The focus on the short and medium-term social aspects is a relatively unique characteristic of the MFAs Jordan, with a high value added, as recognised by the ex-post evaluation report on MFA-I to Jordan<sup>5</sup>.

***SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels***

Throughout 2014-2020, a good number of conditions attached to MFA programmes in the neighborhood targeted SDG16. In the Eastern neighborhood, one example is that of the COVID-19 MFA to the Republic of Moldova. Through its conditionality, the MFA contributes to ensuring independence, impartiality and integrity of the judicial system in Moldova, in particular, by calling the authorities to adopt constitutional amendments that will strengthen the selection procedure of the lay members to the Superior Council of Magistracy, in line with recommendations by the Venice Commission and European standards. Another example is that of the MFAs to Ukraine. The persistent commitments by Ukraine in all its MFAs to improve the transparency and efficiency of the judicial system and the independence of institutions, most notably in the fight against corruption, have contributed to the attainment of SDG 16. In the Southern neighborhood, one example is that of the MFA-IV to the Hashemite Kingdom of Jordan. Through its conditionality, the MFA contributes to the national effort to fight and reduce corruption, in particular, by calling the authorities to adopt and enact amendments to the Illicit Enrichment Law, aiming to enhance the legal and institutional aspects of the system.

## **1. Overview**

### **1.1. Challenges**

For candidate countries and potential candidates, the path towards accession to the EU is a process of gradual and steady convergence with membership criteria and the values and principles of the European Union. This process is best represented by the continuous efforts made to strengthen the rule of law, to guarantee fundamental rights to all citizens and to build up functioning democratic institutions. This remains the biggest challenge that IPA will continue to pursue.

It will be also of utmost importance to address the socio-economic divide of the beneficiary countries vis-à-vis the EU. Especially the Western Balkans economies face structural problems linked to weak competitiveness, high unemployment and significant brain drain, all challenges that will be further compounded by the COVID-19 pandemic and its negative long-lasting effects on the social and economic tissue of the countries. These challenges will have to be addressed in a wider context where transition to a sustainable, socially just, resilient and climate neutral economy needs to be achieved as a global imperative and where digital transformation will continue to shape economies and societies, including those of the IPA beneficiary countries.

Given the backsliding by Turkey in reforms linked to the fundamental pillars of the enlargement strategy, IPA support has been significantly reduced in recent years. Within the framework of the 2016 EU-Turkey Statement, the European Union has delivered on its pledge to support Turkey in its refugee hosting efforts. During 2016-2019, the EU mobilised a total of EUR 6 billion in EU budget and Member State contributions for this particular purpose. In light of the evolution of bilateral relations, IPA III assistance will further strengthen the links between the political framework of our relations with Turkey and EU financial support and prioritise support to priority areas, notably civil society, people to people contact and non-state actors. Other areas of joint interest will also be supported, notably the continuing implementation of the EU Turkey Statement of 2016. Overall, strong political steer and well-defined conditionality will be crucial elements of programming IPA III assistance.

### **1.2. Mission (general objectives)**

The general objective of IPA III is to support the beneficiaries in adopting and implementing the political, institutional, legal, administrative, social and economic reforms required by those beneficiaries to comply with Union values and to progressively align to Union rules, standards, policies and practices with a view to Union membership, thereby contributing to their stability, security and prosperity. Current beneficiaries, listed in Annex I to the Regulation (EU) No X of the European Parliament and of the Council establishing the Instrument for Pre-Accession Assistance (IPA III), are: Albania, Bosnia and Herzegovina, the Republic of North Macedonia, Kosovo<sup>1</sup>, Montenegro, Serbia, and Turkey.

In line with the Commission's objectives, IPA III aims to support beneficiaries in spurring the long-term recovery underpinned by the twin green and digital transitions.

Reflecting the importance of tackling climate change and promoting sustainable development in line with the Union's commitments to implement the Paris Agreement and the Sustainable Development Goals (SDGs), IPA III contributes to mainstream climate action in the Union's policies and to the achievement of an overall target of 25 % of the EU budget expenditures supporting climate objectives. Actions under IPA III are expected to contribute 18 % of the overall financial envelope of the Programme to climate objectives.

In line with the approach outlined in the EU Gender Action Plan, (GAP III) 2021-2025, IPA III will mainstream gender equality and also continue ensuring girls' and women's physical and psychological integrity, promoting the economic and social rights and strengthening girls' and women's voice and participation with targeted actions.

### **1.3. Specific objectives**

The specific objectives of IPA III are:

- 1) To strengthen the rule of law, democracy, the respect of human rights, fundamental rights and international law, civil society and security as well as improve migration management including border management;
- 2) To reinforce the effectiveness of public administration and support structural reforms and good governance at all levels;
- 3) To shape the rules, standards, policies and practices of the IPA III beneficiaries in alignment to those of the Union and to reinforce reconciliation and good neighbourly relations, as well as people to people contacts and communication;
- 4) To strengthen economic and social development including through increased connectivity and regional development, agriculture and rural development and social and employment policies, to reinforce environmental protection, increase

<sup>1</sup> This designation here and throughout the Programme Statements is without prejudice to positions on status, and is in line with UNSCR 1244 and the ICJ Opinion on the Kosovo Declaration of Independence

resilience to climate change, accelerate the shift towards a low-carbon economy and develop the digital economy and society;

- 5) To support territorial and cross-border cooperation.

#### 1.4. Public intervention context

The IPA III supports implementation of the Enlargement policy based on the Article 49 of the Treaty on European Union, which provides that any European state which respects the values of respect for human dignity, freedom, democracy, equality, the rule of law and respect for human rights, including the rights of persons belonging to minorities, and that commits to promoting these values, may apply to become a member of the Union. A European state which has applied to join the Union can become a member only when it has been confirmed that it meets the membership criteria established at the Copenhagen European Council in June 1993 (the 'Copenhagen criteria'), and provided that the Union has the capacity to integrate the new member. The accession process is based on the principle of unanimity amongst the member states. The role of DG NEAR, on behalf of the Commission, is to support the preparation of the enlargement countries for accession to the European Union. As recalled in the Communication from the Commission 'Enhancing the accession process – A credible EU perspective for the Western Balkans' COM(2020) 57 final, the core objective of the European Union's engagement with the Western Balkans is to prepare them to meet all the requirements of membership. The revised enlargement methodology, endorsed by the Council in March 2020, builds on the four key principles of making the enlargement process more credible, subject to stronger political steer, more dynamic and predictable. The changes introduced in the programming process for IPA III are part and parcel of this revised enlargement methodology, which aim to increase the performance-based approach of the instrument and increase its efficiency in terms of delivery.

The specific instruments of the enlargement process, namely: the negotiating frameworks, the recommendations of the Enlargement Package, and the subsequent Council Conclusions, the Economic and Investment Plan for the Western Balkans, the Economic Reform Programmes (ERPs) and the policy guidance agreed annually in the joint conclusions, the conclusions of the meetings organised in the context of the (Stabilisation and) Association Agreements, and the national plan for the adoption of the *acquis*, all form the basis for identifying and guiding the fundamental reforms.

The IPA III is also implemented based on the Article 212 of the Treaty on the Functioning of the European Union, which stipulates that 'the Union shall carry out economic, financial and technical cooperation measures, including assistance, in particular financial assistance, with third countries other than developing countries'.

#### 1.5. Actions

Assistance under IPA III will be based on the IPA III Programming Framework (Article 7 of the Regulation (EU) No X of the European Parliament and of the Council establishing the Instrument for Pre-accession Assistance (IPA III)), a single document replacing the previous Indicative Strategy Papers. The draft IPA III Programming Framework reflects the specific objectives of the regulation and is focused on the priorities of the enlargement process, articulated in five thematic windows, which mirror the clusters of negotiating chapters as per the revised enlargement methodology:

- Window 1: Rule of law, fundamental rights and democracy;
- Window 2: Good governance, *acquis* alignment, good neighbourly relations and strategic communication;
- Window 3: Green agenda and sustainable connectivity;
- Window 4: Competitiveness and inclusive growth;
- Window 5: Territorial and cross border cooperation.

As in the previous pre-accession instruments, assistance will be deployed, to the benefit of the IPA III beneficiaries, through annual or multi-annual action plans at national or regional level or through horizontal initiatives targeting specific types of partners cross-cutting issues. In addition, a number of cross cutting themes, such as climate change, environmental protection, civil society, gender equality, rights based approach, will be mainstreamed and therefore can be implemented under the five windows.

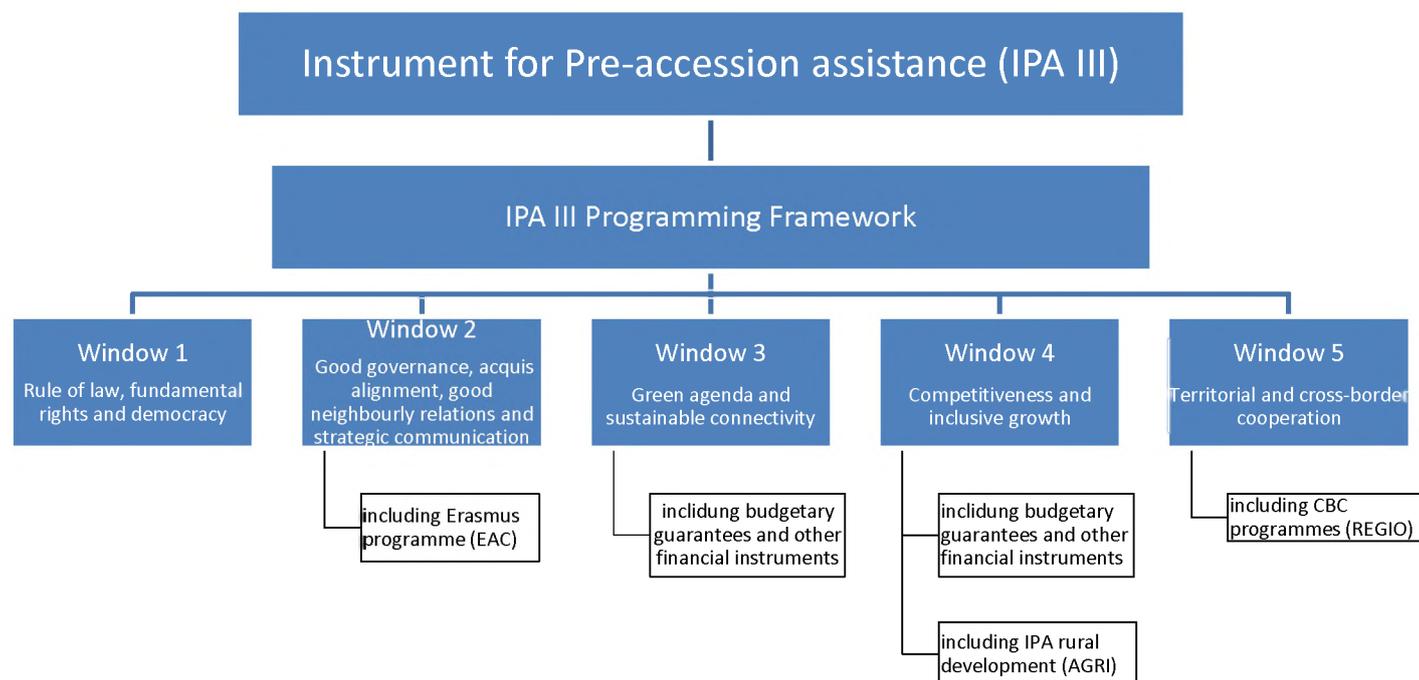

#### 1.6. Delivery mode

In terms of instruments and delivery modes, all types of financing foreseen in the Regulation are possible: from grants, procurement, budget support, contributions to EU Trust funds if relevant, to financial instruments and budgetary guarantees.

Assistance under IPA III is implemented mainly by DG NEAR with the full range of management modes in accordance with the Regulation (EU, Euratom) 2018/1046 on the financial rules applicable to the general budget of the Union. The management mode is defined during the formulation of the action. Cross-Border Cooperation programmes between IPA III beneficiaries and the Member States as well as other Interreg-IPA cooperation are implemented with shared management with DG REGIO lead, while IPA Rural Development programmes are implemented under indirect management by DG AGRI.

The selection of the management modes and of instruments and delivery modes is not linked to the content of a window and will be decided on a case by case basis.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Procedure 2018/0247/COD COM (2018) 465: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the Instrument for Pre-accession Assistance (IPA III)	2021 - 2027	14 161,5

### 1.8.2. Legal basis explanation

Regulation (EU) No X of the European Parliament and of the Council establishing the Neighbourhood, Development and International Cooperation Instrument

Regulation (EU) No X of the European Parliament and of the Council establishing 'Erasmus'

Regulation (EU) No X of the European Parliament and of the Council on the European Regional Development Fund and on the Cohesion Fund

Regulation (EU) No X of the European Parliament and of the Council on the European Social Fund Plus (ESF+)

Regulation (EU) No X of the European Parliament and of the Council establishing rules on support for strategic plans to be drawn up by Member States under the Common agricultural policy (CAP Strategic Plans) and financed by the European Agricultural Guarantee Fund (EAGF) and by the European Agricultural Fund for Rural Development (EAFRD) and repealing Regulation (EU) No 1305/2013 of the European Parliament and of the Council and Regulation (EU) No 1307/2013 of the European Parliament and of the Council

Regulation (EU) No X of the European Parliament and of the Council on specific provisions for the European territorial cooperation goal (Interreg) supported by the European Regional Development Fund and external financing instruments

In implementing the IPA III Regulation, consistency, synergies and complementarities with other areas of Union external action, with other relevant Union policies and programmes, as well as policy coherence for development will be ensured. In particular, IPA III will support the implementation of the external dimension of the European Green Deal. The new Gender Action Plan III (2021-2025) will guide our external action to pursue the EU's commitment to gender equality and women's empowerment in all EU external relations. IPA III will also promote, when relevant, beneficiaries' participation in the areas of relevance in appropriate Agencies, Facilities and Union Programmes. Assistance under IPA III will contribute to actions established under the Erasmus Regulation. It may be provided to the type of actions provided for under the European Regional Development Fund and the

Cohesion Fund, the European Social Fund Plus and the European Agricultural Fund for Rural Development. IPA III may also contribute to transnational and interregional cooperation programmes or measures that are established and implemented under the ETC Regulation and in which the beneficiaries listed in Annex I to this Regulation participate.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>1 901,4</b>	<b>1 940,5</b>	<b>1 979,6</b>	<b>2 019,6</b>	<b>2 059,7</b>	<b>2 101,7</b>	<b>2 144,6</b>	<b>14 147,1</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The Instrument for Pre-accession Assistance (IPA II) has been the catalyst for important reforms. IPA III builds on these achievements and ensures continuation in terms of objectives and priorities. The rationale behind the Commission's proposal is to improve alignment of IPA III assistance with the enlargement strategy.

There will be no major changes in the programming exercise from a beneficiary's perspective. However, IPA III will ensure a stronger performance-based approach, supporting those who commit to do more and faster while at the same time guaranteeing that no one is left behind. There will also be more focus on relevance and maturity at the Commission selection stage, with the aim of ensuring stronger linkages with your reform agenda as well as accelerating implementation and reducing backlog.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

IPA III will be sufficiently flexible to adapt to the evolving situation in Turkey and reflect developments in our relations with the country. The new instrument will increase steer from the Union, as its programming is proposed to be based on priorities rather than country envelopes. This allows rewarding performance and progress towards key priorities and increased flexibility to respond to the evolving needs of the partners in their path towards accession. Assistance under IPA III will be based on the IPA III Programming Framework (Article 7 of the IPA III Regulation), a single document replacing the previous Indicative Strategy Papers.

A draft IPA III Programming Framework has been prepared and the relevant internal and external stakeholders have been consulted. As a result, the document has been updated to reflect the latest policy developments. It also takes into account the ambitious objectives about economic investments contained in the Economic and Investment Plan for the Western Balkans and includes yearly indicative allocations per window.

Beneficiaries were asked to prepare Strategic Responses outlining how their sectoral strategies are in line with the recommendations of the enlargement process and how they will contribute to the objectives of the Programming Framework.

The authorities have been invited to submit action fiches (i.e. embryonic action documents) with their proposals for 2021 and 2022 programming by end June 2020. By early August 2020, all IPA beneficiaries had submitted their proposals. A first screening of IPA III action fiches for 2021 and 2022, has been carried out by Delegations and geographic units in order to reduce their number to a reasonable set of actions which can be further developed to become action documents.

In December 2020 the Commission notified to the IPA III beneficiaries the preliminary feedback of the policy relevance assessment. The second selection will then focus on technical maturity assessed against the actions documents and supporting documents. Only actions that are sufficiently technically mature (i.e. most preparatory activities have been finalised) will be considered ready for adoption. The complete view about budget allocation will be available only after holding this assessment. This will constitute a key step, covering all Actions to be adopted during the year.

The submission of Action Documents for programming 2021 together with the supporting documents for the maturity assessment and the draft Strategic Response Template is expected by 15 March 2021 at the latest. For programming 2022, with a view to

ensure adoption of Commission Financing Decisions by summer 2022, the Commission expects to receive the draft Action Documents, together with the relative supporting documents, by 15 May 2021.

DG REGIO, in close coordination with DG NEAR, has finalised its contribution to the future IPA III Programming Framework. The Window 5 of the IPA III Programming Framework will serve as the multi-annual strategy document with regard to external cross-border Interreg programmes supported by the ERDF and IPA. The final draft of this multi-annual strategy document was consulted with the IPA Committee, the IPA countries, the EU agencies and international organisations, the Civil Society Organisations and the International Financial Institutions in 2020.

## 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	12 771 680 013	5 643 151 269
Implementation Carry-overs	41 441 028	26 033 212
Implementation total	12 813 121 041	5 669 184 482
total envelop*	12 893 639 986	
cumulative implementation rate	99%	44%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

As of 31 December 2020, the Commission implemented 99% of the IPA II commitment appropriations and 44% of the payment appropriations.

While the actions in the enlargement region were implemented in the challenging external relations context characterised by the limited scope for predictability and reliability of planning, the implementation of IPA II appears to be on track. At the end of 2020, in average 4.2 years<sup>2</sup> were needed to pay the total costs of legal commitments, slightly more than the target of 4 years, however much less than in 2019 (5.5 years). In recent years, the Commission accelerated the implementation of the IPA II. The payment implementation increased from EUR 1 billion in 2018 to EUR 1.6 billion in 2020 and it is estimated to further increase in 2021 and 2022 allowing for payment of the total costs of taken commitments on time.

The EU budget is an investment budget and finances projects that run over a long period of time, in particular in external actions. The financing agreements with the beneficiary countries must be signed by the end of the year following the year in which the budgetary commitment was made, while contracts implementing these agreements must be signed within the following three years with varying implementation periods. In addition under IPA II part of the funds are implemented through multi-annual programmes with split commitments. There are also actions implemented with International Financial Institutions such as blending and guarantees, which have long implementation period (in average 7-8 and 10 years). Furthermore, the Commission entrusts the management of certain actions to the IPA II beneficiaries or other development partners (indirect management), while still retaining overall final responsibility for the budget execution.

The Commission has taken steps in the view of further streamlining the implementation of assistance in the enlargement region. The new IPA III Programming Framework is proposed - replacing the traditional country approach with thematic windows as the main vehicle for programming. This change will provide more flexibility and allow better alignment of the assistance with the policy objectives as well as stricter application of the maturity principles.

### The COVID-19 impact on implementation

In 2020, there was an increased need for payment appropriations due to the fact that the Commission immediately readjusted ongoing projects, re-oriented its programming for 2020, mobilised contingencies and savings, and speeded-up the implementation of contracts in support of all IPA II beneficiary countries in order to maximise its response to the consequences of COVID-19 outbreak. As part of the Team Europe, the Commission allocated EUR 1 billion for:

- urgent, short-term emergency response to the health crisis and the resulting humanitarian needs;
- strengthening health and water systems;
- addressing economic and social consequences.

Having above in mind, the implementation of actions in response to the COVID-19 is considered successful. Nevertheless, the overall pandemic situation had a limited impact on some procedures and procurements linked to individual contracts slowing them down, in particular those with reduced priority as a result of the re-orientation and re-programming exercises.

<sup>2</sup> The RAL absorption period is estimated by the key performance indicator K04 as the number of years needed to pay the total costs of legal commitments.

## Implementation status

In 2020, twelve programmes, six special measures, three support measures, one individual measure and eighteen amendments were adopted, in particular:

- Eleven annual action programmes (including three multi-country programmes)
- One civil society facility and media action programme;
- Two special measures on supporting Albania in post-earthquake reconstruction and rehabilitation;
- One special measure on supporting Bosnia and Herzegovina in managing the migration flows;
- One special measure on EU regional support to SMEs recovery following the COVID-19 pandemic;
- One special measure on COVID-19 impact mitigation in Bosnia and Herzegovina;
- One special measure on supporting Serbia in managing the migration flows;
- One support measure for the 2020 Audit Programme;
- One support measure to raise public awareness on EU enlargement and neighbourhood policies;
- One support measure for technical assistance for cross-border cooperation programmes between IPA II beneficiaries;
- One individual measure on supporting the Office of the High Representative in Bosnia and Herzegovina;
- Eighteen amendments to previous programmes and measures.

Total operational commitments for IPA II in 2020: EUR 1.6 billion (EUR 1.7 billion including the implementation made on recoveries, notably for agricultural programmes, is taken into account).

Total operational payments for IPA II in 2020: EUR 1.6 billion.

## **3. How is the programme performing ?**

### **3.1. Performance**

#### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### **3.1.3. Previous programme performance**

The candidate countries and potential candidates need to implement difficult and time-intensive reforms to make progress in the fundamental areas of the political accession criteria, including sustainable and far-reaching political and societal transformation. They also face challenges relating to advancing in the fundamental area of the economic criteria, which are interlinked with the political criteria.

The Instrument for Pre-accession Assistance (IPA II) is a unique programme that supports IPA II beneficiaries to advance with ambitious political and economic reforms and to progressively align to the European Union's rules, standards, policies and practices on their path towards EU membership. It fosters reforms in candidate countries and potential candidates through a combination of financial assistance and policy dialogue, preparing them for the rights and obligations that come with EU membership.

The programme is making progress towards achieving its overall objectives and some IPA indicators included below are on track to be achieved. For other indicators more work is needed. For instance, while there have been some improvements in the fulfilment of fundamental areas of the political criteria for enlargement countries, such as the rule of law, these good results are counterbalanced by the backsliding in Turkey (see below). However, the implementation of IPA II is reaching its peak (as explained in more detail section 2.2) and more results will be achieved in the coming years. At the same time, there is a large influence of external factors when it comes to the achievement of the IPA II overall objectives. For enlargement to become a reality, a firm commitment to the principle of 'fundamentals first' remains essential. Structural shortcomings persist in the enlargement countries, notably in the key areas of the rule of law and the economy.

Regional cooperation continues to be a cornerstone of our approach to the region and an essential element of the European perspective of the Western Balkans, connecting infrastructure, economies and people. In October 2020 the Economic and Investment Plan<sup>3</sup> and the Green Agenda for the Western Balkans<sup>4</sup> were adopted. The long-term recovery of the region will be supported through a green and digital transition, a renewed effort to foster economic regional integration within the region and with the EU, boosting economic growth and supporting the reforms required to move forward on the EU path. The Plan includes already

<sup>3</sup> Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions, An Economic and Investment Plan for the Western Balkans, COM(2020)641final

<sup>4</sup> Guidelines for the Implementation of the Green Agenda for the Western Balkans, SWD(2020) 223 final

a list of Flagship infrastructure projects in transport, energy, environment and digital infrastructure, which will be financed mainly through the Western Balkans Investment Framework.

Important milestones achieved in 2020 were also the organisation of the EU-Western Balkans Zagreb Summit in May 2020 and the Berlin Process Summit in Sofia in November 2020, which keep the enlargement process and the EU strong partnership with the Western Balkans on the political agenda at the highest level.

The main principles from IPA II will not change under IPA III. However, IPA III programming will be also built on a stronger performance-based approach, to be assessed on a yearly basis and closely linked to the revised enlargement methodology.

IPA III programming will also accelerate the projects' implementation by reducing the time gap between their selection and effective contracting. The actions will be selected based on their policy relevance, namely on their alignment with the Programming Framework and with the specific recommendations of the enlargement package for the countries. The second selection will then focus on technical maturity assessed against the actions documents and supporting documents. Only actions that are sufficiently technically mature (meaning, when most preparatory activities have been finalised) will be considered ready for adoption.

In line with the commitment to a merit-based enlargement process outlined in the revised enlargement methodology, the final selection of actions will also take into account the assessment of the performance of the IPA III beneficiaries in the enlargement agenda, their commitment to and progress in implementing reforms, with particular attention to key areas of the political accession criteria.

### Specific Objective 1: Support for political reforms.

Indicator 1 is particularly relevant since it shows the results of the enlargement policy, including financial assistance through the Instrument for Pre-accession Assistance, as regards two main fundamentals of the enlargement policy (i.e. the rule of law and fundamental rights and public administration reform). The Commission supports the candidate countries and potential candidates to address the core issues measured by these indicators. These indicators provide also greater transparency in the enlargement process and should facilitate greater scrutiny of reforms by all stakeholders. There are some example of good progress. For instance, in Albania, good progress has been made in justice reform with help of the EU assistance. Overall, the EU trained over 1200 judges, prosecutors and lawyers in the enlargement region on European standards and EU *acquis*.<sup>5</sup> Furthermore, to reinforce the effectiveness of public administration, structural reforms and good governance at all levels, almost 100 public policies were developed and or revised with EU support<sup>6</sup>.

In terms of progress recorded in the 2020 enlargement reports, candidate countries and potential candidates made 'some progress' (5 cases) and 'good progress' (5 cases) in areas linked to the political criteria. In Turkey there was backsliding in public administration reform, functioning of the judiciary and freedom of expression, and no progress in the fight against corruption. In terms of readiness, there were six cases of 'early stage of preparation' in these areas of functioning of judiciary (Bosnia and Herzegovina, Kosovo, Turkey), fight against organised crime (Kosovo), fight against corruption (Turkey) and freedom of expression (Turkey), and four cases of 'early stage/some level of preparation'. The 2020 reports noted improvements in the functioning of the judiciary in Albania, in the fight against corruption in North Macedonia and the fight against organised crime in Montenegro, all of which reached 'some level of preparation/moderately prepared'.

There was limited visible progress towards meeting the 2020 target under this indicator. The Commission put a particular emphasis on these areas in its Western Balkans Strategy of February 2018<sup>7</sup> and in its communication of February 2020 on a revised EU accession methodology<sup>8</sup>, which put an even stronger focus on these fundamental reforms.

During the IPA II period (2014-2020) significant milestones were reached. Bosnia and Herzegovina applied for EU membership in February 2016. The Commission adopted its Opinion on the EU membership application of the country in May 2019, identifying 14 key priorities for the country to fulfil in view of opening EU accession negotiations. In July 2018, the Commission confirmed that Kosovo has fulfilled all outstanding visa liberalisation benchmarks. Decision on Commission's proposal is pending in the EP and the Council. In March 2020, the European Council endorsed the decision to open accession negotiations with Albania and North Macedonia. Since December 2015, negotiations on 19 chapters were opened with Serbia, while two were provisionally closed. With Montenegro 30 chapters were opened since the start of accession negotiations in 2012.

**Specific Objective 2: Support for economic, social and territorial development, with a view to smart, sustainable and inclusive growth.** Candidate countries and the potential candidates made limited progress on meeting the economic criteria (indicator 1), according to the 2020 enlargement reports. In the area of functioning market economy, Serbia advanced to the level of moderately prepared/good level of preparation. Albania and Montenegro remained at a moderately prepared level, North

<sup>5</sup> See EU Results Framework indicators in the 2020 Annual Report on the implementation of the European Union's instruments for financing external actions in 2019.

<sup>7</sup> Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions; A credible enlargement perspective for and enhanced EU engagement with the Western Balkans; COM(2018) 65 final.

<sup>8</sup> Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions; Enhancing the accession process - A credible EU perspective for the Western Balkans; COM(2020) 57 final.

Macedonia at a good level of preparation and Turkey is considered to be well advanced. On competitiveness, North Macedonia, Montenegro and Serbia remained moderately prepared, while Albania remained at some level of preparation. In terms of cases of early stages of preparation, this indicator remained stable in 2020 compared to the baseline, with four cases, on functioning market economy and competitiveness in Bosnia and Herzegovina and Kosovo.

Overall, there was limited progress towards meeting the 2020 target for this indicator. The IPA II beneficiaries face challenges in advancing on the fundamental areas of economic criteria, which are interlinked with the political criteria. The Commission put a particular emphasis on these areas in its Western Balkans Strategy of February 2018, in its communication of February 2020 on a revised EU accession methodology, which put an even stronger focus on these fundamental reforms, as well as in the 2020 Economic and Investment Plan for the Western Balkans.

The 'Distance to frontier' indicator by the World Bank (indicator 2), which shows the distance of each economy to the highest performance observed across all economies, has met its milestone and target.

Indicator 3: 'Average of exports and imports of goods and services/ GDP – %' has seen growth albeit with fluctuations from year to year. This is a high level indicator and that European Commission activities only indirectly contribute to it. The milestone has already been achieved in 2017 for the Western Balkans. The latest (2019) score has also seen an improvement in both Western Balkans and Turkey. The target could theoretically still be achieved, but given the Covid pandemic, which peaked in early 2020 and continued throughout the year, it is unlikely that this will be the case.

The EU directly supported or sustained over 2700 jobs across the enlargement region, providing support for economic development. Furthermore and in order to strengthen trade and investment climate and productive capacities, the EU supported adoption of 59 quality schemes by economic operators. These schemes establish and implement standardisation, accreditation and conformity assessment services necessary to meet defined requirements by authorities or the market.

**Specific Objective 3: Strengthening of the ability of the beneficiary countries at all levels to fulfil the obligations stemming from Union membership by supporting progressive alignment with, and adoption, implementation and enforcement of, the Union *acquis*.**

The Commission assesses in the annual enlargement reports how well the countries are prepared to align to the EU *acquis* in each of its 33 chapters. The lowest assessment level is "early stage of preparation". The indicator shows in how many chapters the 7 candidate countries and potential candidates were considered to be at this lowest level. The decreasing trend means that the countries have overall progressed to a higher level of preparation. However, there have been differences between the countries. While the Western Balkans partners have generally improved their preparation since 2015 (the first year the assessment scale was introduced), Turkey has been backsliding. The 32 cases of early preparedness include the following: 14 cases in Bosnia and Herzegovina, 8 cases in Kosovo, 4 cases in Turkey, 3 in Albania, 2 in North Macedonia, 1 in Montenegro and none in Serbia. For a more detailed analysis and the summaries of the findings on readiness and progress of enlargement countries towards the alignment to the 33 *acquis* chapters, please refer to the 2020 country reports.

The progress in Montenegro was aided by using Technical Assistance and Information Exchange instrument of the European Commission (TAIEX) in order to support alignment of legislation in particular in environment (chapter 27), agriculture/food, veterinary/fisheries (chapters 11-13), but also electronic communication (ch. 10). TAIEX supports public administrations with regard to the approximation, application and enforcement of EU legislation as well as facilitating the sharing of EU best practices. It is largely needs-driven and delivers appropriate tailor-made expertise. Montenegro's small administration benefits greatly from its use. However, 2020 was a difficult year as TAIEX could provide mostly online support only.

In Albania, EURALIUS missions have supported Albanian institutions to bring the justice system closer to European standards. The ongoing EURALIUS V has a focus on supporting Albanian institutions to consolidate the justice system following the comprehensive justice reform. The team of international and national experts are working together with the main beneficiaries of the project, i.e. with Parliament, Ministry of Justice, High Judicial Council, High Prosecutorial Council, High Justice Inspector, Courts, Prosecution Offices, Justice Appointment Council, School of Magistrates, Justice Monitoring Commission, National Chamber of Advocates, National Chamber of Notaries and National Chambers of Bailiffs. This expertise has contributed to the country to carry out important reforms needed for the opening of accession negotiations.

In Kosovo, in the employment sector, the project "Support to Labour Inspectorate for fighting against undeclared work" support the transposition of both the EU directive on the minimum safety and health requirements for the use of work equipment as well as the EU regulation concerning the minimum safety and health requirements for the workplace.

In North Macedonia, a twinning project contributed towards the alignment of the national system with the EU and Schengen standards in the field of Integrated Border Management, with the development of roadmap for adoption of the Schengen-related *acquis*, upgrade of the Integrated Border Management legislation and development of the Schengen Action Plan.

IPA II rural development programmes (IPARD) have reached the target for Turkey and are making rapid progress towards the target for Western Balkans in relation to 'Number of economic entities progressively upgrading towards EU standards in agri-food sector' (second indicator under this objective). Progressively upgrading economic entities towards EU standards is both a political

and an economic priority in the agri-food sector. This results in mobilisation of efforts both in public and in private sectors. Intensive publicity campaigns follow each call for applications. Furthermore, the implementation of the programmes is in some countries accompanied with technical assistance measures. Finally, the demand for investment support to upgrade towards EU standards in the agri-food sector is high.

#### **Specific Objective 4: Strengthening regional integration and territorial cooperation involving the beneficiary countries, Member States and, where appropriate, non-EU countries.**

Regional cooperation continues to grow in prominence, as evidenced by 52% of the respondents in the Western Balkans ‘tend to agree’ that regional cooperation can contribute to the political, economic or security situation of their society. When coupled with those who ‘totally agree’, there is an overwhelming majority of respondents supportive of the role of regional cooperation. (77% in 2020, up from 74% in 2018)<sup>9</sup>.

Assistance is deployed in the form the multi-country/regional programmes, special measures, support measures, which in 2020 amounted to some EUR 667 million, including support to territorial cooperation programmes. Support in 2020 has continued to focus on three strands of connectivity: infrastructures, economies, and people of the region.

In 2020, the Covid-19 pandemic has deeply affected the work of the programming exercise in order to address the unprecedented challenges posed by the Covid-19 pandemic in the Western Balkans. Within months of the outbreak hitting Europe, the European Commission reoriented and reprogrammed EUR 475 million from the IPA 2019 and 2020 regional funds as part of the comprehensive EUR 3.3 billion EU financial support. This includes an Economic Reactivation Package, mobilised through International Financial Institutions (IFIs), and other relevant financing institutions from EU Member States as Team Europe, as well as a package of support to vulnerable groups and to the health sector, including access to vaccines. At the end of 2020, an additional EUR 3.5 million was allocated to support health.

With the endorsement of the 6th Connectivity Package in November 2020, the original connectivity pledge of EUR 1 billion in grants for investments, for the period 2015-2020, was fulfilled. It is expected that this amount will leverage investments for EUR 3.7 billion in the Western Balkans.

In terms of connecting people, the focus on young people continued – with the first thematic Youth Lab held in the Western Balkans region, discussing matters such as transition from the world of education and training to the world of work. A major new programme to improve the situation for returnees from the EU to the Western Balkans was approved., while the Regional Housing Programme continued to provide homes to refugees and persons displaced by conflicts in the region in the 1990s. Key projects such as Romacted, Roma Integration and Roma Education provide support to vulnerable Roma. Strategic engagement with civil society remained strong both in terms of financial support and policy dialogue. Rule of Law programmes continued to act in support of the reform agendas of Western Balkans partners. 2020 also saw continued commitment to the culture and creative sectors as key actors of change in the promotion of more resilient societies through 13 projects awarded under the Creative Europe Programme.

Regarding the only indicator under this specific objective, all cross-border cooperation (CBC) programmes were adopted except those blocked due to political reasons.

In reactions to emerging needs caused by the Covid-19 pandemic, some of the ongoing CBC projects provided an immediate response. As part of the ‘Microenterprise development project for women in the cross-border area’ project beneficiaries made protective masks, natural sanitizers and soaps, and distributed them to those in need in the border area of North Macedonia and Albania. ‘Skilled women’s workforce for better future’ project trained caregivers provided immediate assistance to elderly population during the lockdowns in the cross-border area of Serbia and Montenegro.

Other examples of CBC projects are addressing pollution, emergency situations and natural hazards (Montenegro-Albania programme); supporting water and waste management (Albania-Kosovo programme); vulnerable groups (women, elderly, youth, people with disabilities) and their successful inclusion into society; sustainable use of natural and cultural resources (Serbia-Montenegro programme); and enhancement of the regional tourism (Bosnia and Herzegovina-Montenegro programme).

The **Facility for Refugees in Turkey** continues to deliver much-needed assistance to refugees and host communities in Turkey in all the priority areas it covers, i.e. basic needs, education, healthcare, protection, socioeconomic support and municipal infrastructure. The Facility Steering Committee meets on a regular basis and follows, monitors and steers the implementation of the Facility. Six-monthly monitoring reports, which are publicly available, confirm that the Facility is continuing to achieve its goals. Under the Facility for Refugees, some EUR 65 million are being mobilised from savings and contingencies to respond to COVID-19 related needs among refugees.

The following concrete results have been achieved:

### Migration – Western Balkans

Intense migratory movements have continued to result in a large number of refugees and migrants present in the region, especially in Serbia and Bosnia and Herzegovina. Currently, there are approximately 20,000 migrants and refugees in the region. As of 17 February 2021, there were 5,838 hosted in reception facilities in Serbia and 6,162 in Bosnia and Herzegovina. In addition, it is estimated that thousands are present outside reception facilities, sleeping rough in both countries (between 1,300 – 1,700 in Serbia and some 1,600 in BiH). In BiH, the reception capacities remain insufficient and inadequate, due to the lack of effective coordination between levels of government and, in particular, the refusal of Republika Srpska and Croat-majority cantons to host reception centres, as well as the closure of existing reception facilities in the Una-Sana Canton. The winter brought a serious humanitarian situation, additionally compounded by the COVID-19 pandemic.

In Bosnia and Herzegovina over EUR 75 million of IPA funds (to which another EUR 1,25 million from ECHO emergency response were added) were allocated for emergency support to migration, since September 2018, in order to avoid a humanitarian crisis. The funds were implemented by IOM and were directed mostly towards the construction/reconstruction of seven Migrant and Refugee Accommodation Centres, the purchase of 562 containers for accommodation, 5900 bunk beds and more than 10,000 mattresses and bedding equipment. In addition, among other things, more than 8.2 million meals were provided to beneficiaries in the centres, with an additional 15,000 meals and drinking water distributed to migrants and refugees sleeping outside centres in make-shift camps and abandoned buildings in Una Sana Canton; 1.6 million non-food items were also distributed. Part of these funds contributed to strengthening the border, migration and asylum management capacities. Furthermore, as part of the COVID-19 response, one emergency tent facility in Lipa (Bihac) was established as preventive measures for up to 1 000 non-accommodated refugees and migrants, to reduce their vulnerability to the pandemic. In addition, since January 2020, an EU-funded senior expert

has been deployed at the Ministry of Security in Bosnia and Herzegovina to support coordination on migration management among authorities in Bosnia and Herzegovina.

Serbia has continued to make substantial efforts to meet essential needs of refugees and migrants passing through or remaining on its territory. COVID-19 pandemic has put 19 government reception facilities, designed to accommodate up to 6 000 people and temporary shelter for around 1 000 people, under additional strain. In 2020, the Commission has prepared an additional measure in a value of EUR 11.8 million to help Serbia cope with this unprecedented situation, bringing the total of EU special migration assistance provided since September 2015 to EUR 130 million. Apart from enhancing reception capacity of Serbia, the EU has been continuously supporting Serbian institutions to enable uninterrupted access to education for migrant children since 2015 through assistance to formal and non-formal education. 1 024 children and 58 local schools benefitted from assistance by creating an adequate environment for learning and inclusion of migrant children into the local context. This special assistance comes on top of EUR 78.6 million of regular EU support provided to Serbia since 2007 in the area of integrated border management and asylum.

### Migration – Turkey

Turkey currently hosts close to 4 million refugees and the EU is committed to assist Turkey in dealing with this challenge. The Facility for Refugees in Turkey, managing a total of EUR 6 billion, provides for a joint coordination mechanism, designed to ensure that the needs of refugees and host communities in Turkey, through over 100 projects providing the following results:

- Basic Needs – more than 1.8 million of the most vulnerable refugees are provided with monthly cash transfers under the Emergency Social Safety Net.
- Education - 660 000 refugee children were enrolled into school under the Facility for Refugees in Turkey from October to December 2020 and 365 new schools were in the process of being constructed as part of the support to the integration of Syrian children into the Turkish education system.
- Health – over 13 million primary healthcare consultations were carried out and over 4 million vaccination doses were provided to refugee infants and pregnant women so far. Furthermore, 179 migrant health centres are being provided with over 3 400 staff employed.

### Connectivity agenda

The Commission allocated EUR 1 billion for connectivity investment projects and technical assistance for both infrastructure investment projects and accompanying reform measures such as aligning and simplifying border crossing procedures, railway reforms, information systems, road safety and maintenance schemes, unbundling and third party access.

Up to the end of 2020, construction works started on 16 connectivity projects. The expected results of the 45 connectivity projects – once the infrastructure constructions are fully completed – include:

- 560 km of 400kV transmission lines;
- 176 km of gas pipeline;
- 327 km of railway lines & connected stations (e.g. 2 hours less between Belgrade and Sofia, as well as between Belgrade and Bar; 1 hour less between Pristina and Skopje);
- 208 km of motorways (e.g. 1 hour less between Sarajevo and Zagreb, as well as Niš and Pristina; 1/2 hour less between Pristina and Skopje);
- 2 cross-border bridges; 1 joint border railway station;
- Increase in intermodal transshipment capacities;
- 1 maritime port and 1 inland waterways port rehabilitated;
- Improved navigability on 40 km of waterway;
- 500 MW installed capacity and 1,380 GWh/y from hydropower.

### Private Sector Support

Under the **Western Balkans Investment Framework** private sector strand, an EUR 150 million Guarantee was programmed and launched at the end of 2019 to support private sector investments of up to EUR 1 billion contributing to boosting the region's competitiveness and job creation. The programme was reoriented and further amended during 2020 in the COVID-19 pandemic, to allow for the implementation of other actions in the field of health.

In **Turkey**, IPA II has continued to support investment and reforms, notably in the areas of institution and capacity building, socioeconomic development, employment, social policies, education, promotion of gender equality, human resources development, agriculture, rural development, energy, transport, regional development and territorial cooperation.

The following exemplify recent achievements under IPA II:

- Capacities building activities have been funded in support to the role that local authorities can play in the EU accession process – as it was the case for the action on Local Administration Reform. In some cases, capacity building activities have been matched with network opportunities, to foster exchanges between EU and Turkey's local administrations in

areas relevant to the EU accession. In particular, the “EU – Turkey Town Twinning” project contributed to build contacts, dialogue and brought together 57 local administrations and NGOs from 19 Turkey provinces and 12 EU Members States, to share on wide range of areas such as education, environment, health, culture, tourism, energy, innovation, public administration.

- Through the Civil Society Facility flagship programme in Turkey is Sivil Düşün (‘Think Civil’) around 4.250 applications in diverse thematic areas were received, out of which over 1.130 actions were selected for implementation. Its help-desk offers assistance to applicants and potential applicants across Turkey with an average of over 2.000 requests per year. Since 2014, Sivil Düşün has also provided an effective platform for its beneficiaries to network and learn from each other through its CSO Forums, Info Days, trainings, round table and consultation meetings across Turkey. Over 5.000 participants benefitted from these thematic events and meetings. Sivil Düşün’s online and digital communication tools are strategically employed to boost the visibility of assistance offered, showcase the work it supports. The programme’s website has received a total of more than 1 million web page views throughout its history and its social media channels receive around 20,000 views each month. Lately, a Special Call for Support for civil society was launched to mitigate the impact of COVID-19 supporting over 200 CSOs across the country with a total budget of EUR 800,000.
- The CSF projects supported also media and freedom of expression. The press freedom campaign reached at least 350.000 people, ‘our rights’ campaign reached approximately 56.000 people, 1033 journalists received professional trainings nationwide, broadcast studios in Istanbul and Izmir press academies were used 109 times, editorial support was provided for 188 mostly unemployed journalists.
- Moreover, 155,4 km fast-track railway is being constructed as part of the Trans-European Transport (TEN-T) corridor within the construction of the Halkalı-Kapıkule railway line between Istanbul and the Bulgarian border, co-funded by the IPA contribution of EUR 275 million.
- The Commission continues to support the energy sector in Turkey, in particular the sector’s legislative, regulatory and technical alignment to the EU, including electricity and gas networks integration. As many as 80 Turkish municipalities and universities benefit from the project that promotes renewable energy (RE) and energy efficiency (EE).

### Western Balkans

In 2020 the enlargement process held on its principles and its values and the Commission has remained strongly committed to support the Western Balkans in meeting all the requirements for membership. The countries have made in general some progress on reforms and towards overcoming the legacy of the past. This includes supporting fundamental democratic, rule of law and economic reforms in the pursuit of a general alignment with core European values.

**Albania.** The EU financial assistance is making a substantial contribution to meet the political, economic and acquis-related criteria, in line with the European Commission's "fundamentals first" approach. IPA has in particular helped the country to deliver on key reforms necessary to advance on the European path with a view to opening accession negotiations, especially in the field of justice reform, for instance in the 'vetting' of judges and prosecutors, and in supporting the specialised structures against corruption and organised crime. The efforts to fight the impact of the COVID-19 pandemic were made in parallel to the work needed to respond to another major disaster - the earthquake of November 2019. The EUR 115 million pledge by the European Commission for the post-earthquake recovery has been translated into programmes reconstructing and repairing damaged schools and cultural heritage sites. The works in the first educational facility were completed in January 2021, allowing 1370 students and 51 teachers to benefit from a state of the art new school.

Some examples of results achieved by IPA II programmes:

- 416,5 km of the national road network have better pavement conditions comparing the baseline of year 2015 due to adequate maintenance programme included in IPA II support
- Over 400 civil society organisations, received financial support to increase citizen’s participation.
- Out of the total of 805 magistrates that have to undergo vetting, the vetting institutions have completed 350 vetting cases at first instance.
- Over 1000 people from Roma and Egyptian minorities employed through Active Labour Market Measures.

**Bosnia and Herzegovina.** The EU financial assistance continue to provide support to the country in implementing key sector reforms in order to meet the requirements of the accession process. IPA has also provided urgent and continuous support to deal with the migration crisis, guaranteeing continuity of assistance and services to the migrants on the territory. In 2020, IPA provided a quick response to the COVID-19 crisis and liberated resources immediately deployed in procurement of medical supplies (61 ventilators, 10 triage containers, 10 X-ray machines, 20 portable ultrasound machines, over 2M pieces of disposable equipment items, among other things) and in the economic recovery measures. As regards the latter support will be provided for continuation of business activities of MSMEs, entrepreneurs and farmers affected by the COVID-19 economic lock-down crisis, and for the development of start-ups by unemployed, women or persons which appertain to vulnerable groups (e.g.: minorities);

Some examples of results achieved by IPA II programmes:

- Financial Management and Control and Internal Audit strategies prepared at all levels of governance in BiH.
- 6 Courts and 3 Prosecutors Offices constructed, modernised and renovated.

- 160,000 people experienced a rise in standard of living by 38 infrastructure projects through rehabilitated schools, health centres, centres for social work, municipal buildings, courts, roads, bridges.
- EUR 30 million private sector investments triggered of which EUR 20 million in loan finance to SMEs.

**Kosovo.** The EU financial assistance continues to provide support in implementing key sector reforms to advance Kosovo on its European path. In 2020 significant reprogramming efforts were undertaken to respond to the emerging needs from the COVID-19 pandemic. Under IPA 2019, EUR 38.36 million was reprogrammed to support social and economic recovery. Under IPA 2020, an amount of about EUR 11.6 million was reprogrammed in order to make available EUR 6 million under the approximation facility for possible emergency use, and EUR 5.2 million for digitalisation that in principle will be focused on the economic recovery and resilience of Small and Medium Enterprises (SMEs).

Some examples of results achieved by IPA II programmes:

- 75 000 citizens connected to district heating in Pristina and Gjakova, reducing air pollution and increasing energy efficiency.
- 149 Kilometres of railway tracks rehabilitated along the trans-european route linking Budapest and Thessaloniki.
- 10 000 Rule of Law Professionals trained such as prosecutors, judges, barristers and lawyers.
- Over 12 500 Students benefiting from education infrastructure with 26 Kindergartens and School built.

**Montenegro.** EU financial assistance continues to contribute to the implementation of essential sector reforms in order to meet the requirements of the Accession process. Of note was the continuing importance of Rule of Law, Fundamental Rights, Public Administration Reform (PAR) and Economic Governance. In order to respond to the COVID-19 crisis and to support the authorities' measures a major reprogramming of EUR 53 Million was undertaken. EUR 3 million provision of emergency supplies (this covered a range of specialise equipment including 200,000 surgical masks and 510,000 - surgical caps) were supplied. In addition, an investment in EUR 9.5 million for medium to long term health capacity was committed, which in turn allows the authorities to focus their efforts in the immediate crisis. EUR 28 million of an overall EUR 40.5 million Budget Support programme was paid in November. This programme supports the national measures envisaged to address the social and economic crisis. To illustrate indicators linked to the second payment focus on having at least 100 small businesses (with 20% being women owned) benefitting directly from the Government's measures.

Some examples of results achieved by IPA II programmes:

- 75 monitoring stations for water and underground water levels, quantity and quality monitoring established.
- 200 Rule of Law professionals received training/support, 120 judges, state prosecutors and court advisors, and 80 police officers.
- 342 farmers were supported with agricultural grants to invest in setting up or improving physical facilities, processing and marketing of agricultural products.

**North Macedonia.** Financial assistance programmes continue to provide support to North Macedonia in making progress on the fundamental reforms in rule of law and home affairs, public finance and economic governance. Public investment policy of North Macedonia was significantly improved with the adoption of new legislation which enhanced compliance with the EU acquis and standards. The IPA II 2020 programming exercise focused on Justice and home affairs and good governance, and was further continued with the EUR 50 million Performance Reward used to address the COVID – 19 pandemic and its socio-economic effects. This includes EUR 40 million of budget support, of which EUR 32 million were disbursed before the end of the year.

Some examples of results achieved by IPA II programmes:

- Over 9,000 young people supported by the Youth Guarantee, in the three regions suffering with highest unemployment rates.
- 287 students with disabilities, enrolled in primary schools, benefit from the EU scholarship programme (2020/2021 school year). 282 Roma scholarships were provided to first and second grade students for the 2019/2020 and 2020/2021 school years.
- The Mountain Rescue Service was upgraded and equipped and saved 34 human lives during complex rescue operations.
- 120 SMEs were supported and 7,000 jobs were preserved, by EU loans, grants and technical assistance.
- The preservation of 241,755.42 Ha of protected areas improved and 2,000 people benefit from two new waste water treatment plants, that limits the negative impact of human activities in nature, overall promoting the sustainable use of resources.

**Serbia.** IPA financial assistance has continued supporting the EU accession process of Serbia and the implementation of essential sector reforms in order to meet the requirements of the Accession process. IPA has also provided urgent and continuous support to deal with the migration crisis, aggravated by the pandemic, guaranteeing continuity of assistance and services to the migrants on the territory. In 2020 IPA has been instrumental in dealing with the COVID-19 crisis, funding the transportation costs of 15 cargo planes carrying 720 tons of emergency medical supplies, directly purchasing and donating equipment to help Serbia tackle the public health crisis (e.g. 25 devices for monitoring, 50 respirators, 50 intensive care monitors, 2 Polymerase Chain Reaction test machines, 100 medical containers, 100 stationary oxygen concentrators), procuring 46 additional ambulances and special transportation vehicles, and 67 different types of freezers and refrigerators.. Assistance has been also provided to vulnerable groups particularly affected by the crisis, including distribution of food and hygiene packages to Roma and vulnerable women, and

improving the hygienic standards for migrants. In addition the EU has helped with the economic recovery addressing the needs of small and medium size enterprises and the tourism sector, with a focus on Serbia's less developed regions.

Some examples of results achieved by IPA II programmes:

- Thanks to a Court backlog reduction project there are 1.5 million less pending court cases compared to 2012.
- A total of 630 hectares of industrial zones equipped through nine economic infrastructure projects, with 780 jobs created. Direct assistance to 203 enterprises created of 422 new jobs 43% occupied by women.
- Support in 37 beneficiary local governments improved the lives of over 162,000 inhabitants who use reconstructed sports and cultural facilities, schools and kindergartens, health and social care institutions and community infrastructure.
- Support to at least 20 Roma settlements (1500 persons) for sustainable housing and improved living.
- 869 micro and small size enterprises have benefited from access to lending in the value of EUR 130.3 million.

### **Examples of successful IPA Multi-Country Programmes projects implemented in 2020:**

#### **Regional Energy Efficiency Programme (REEP)**

REEP has been transforming the market for energy efficiency (EE) in the region by driving and scaling up investments in private sector as well as in residential and public buildings. Despite the pandemic, significant achievements took place during 2020 under each Window: 1) Policy dialogue, legislative and project preparation support to energy service companies (ESCO); EE primary law and the ESCO contracts for street lightening were signed (North Macedonia and Serbia) and in Bosnia and Herzegovina, a feasibility study for the Vitez/Teslic district heating project was completed. (2) Intermediated Financing (through local banks): The first building refurbishment via credit line in Bosnia and Herzegovina was finalised with expected reduction of energy use by 45%. A EUR 12.6 million sub-loan was signed for 2,748 new projects. A new EBRD EUR 50 million Credit Line Facility with focus on the residential sector was approved. Additional EUR 18 million sub-loans (from KfW main loan) for 167 new projects were signed. A first EUR 50 million tranche of a EUR 100 million credit line for EE/RE loans to SMEs and municipalities was approved. Overall, CO2 savings of 12,833 t/year and primary energy savings of 36,851 MWh/year were achieved. (3) Direct Financing (private sector): Technical and environmental due diligence (EUR 100k in total) for two wind farms, in Kosovo (32 MW) and North Macedonia (34 MW) have been successfully completed. (4) Direct Lending (public sector): A EUR 8 million loan to improve the energy efficiency of 40 public buildings in Sarajevo was signed for which more than 26,000 children and patients will be directly benefitting. A tender for works was launched for refurbishment of the Zenica Cantonal Hospital.

#### **Support to Roma - ROMACTED regional project**

The regional engagement through IPA II is articulated around main areas including: evidence, capacity building, support to education and employment, cooperation with Civil Society Organisations and outreach. The 3rd edition of the Roma Award took place in 2019 and 4th edition is planned for 2021. The Council of Europe implements the ROMACTED regional project promoting good governance and Roma empowerment at local level by engaging with local authorities and stimulating the empowerment of local Roma communities in over 60 municipalities in the Western Balkans and Turkey. During COVID-19 crisis in 2020, it enabled immediate and direct access to the most vulnerable Roma across the region (1764 families received food packages or vouchers, 4000 hygiene kits were purchased and distributed for benefit of 1900 families). Additional resources were channelled to emergency responses to municipalities to fight COVID-19 in all the 61 municipalities of the programme.

#### **Erasmus+**

The focus on youth significantly increased from 2019 with the doubling of support for Erasmus+ to 66 million EUR. For the period 2014-2019 (2020 figures are still unavailable) for Partners in the regions (Albania, Bosnia and Herzegovina, Kosovo, Montenegro & Serbia 2014-2018), the following has taken place: Academic Exchanges (International Credit Mobility) - more than 37,000 students, researchers and staff participated in mobilities (with more than 23,000 students and staff from the Western Balkans coming to Europe); Erasmus Mundus Joint Master Degrees - 11 organisations from the Western Balkans involved, and 323 scholarships for Master students from the region provided; Capacity-Building in Higher Education - almost 700 instances of organisational and institutional participation recorded; Youth Mobility: Youth Exchanges: 12,032 participants from the Western Balkans, 8,030 participants to the Western Balkans, Youth Workers Mobility: 5,715 participants from the Western Balkans, 979 participants to the Western Balkans, and Volunteering Projects (individual or groups): 729 participants from the Western Balkans, 521 participants to the Western Balkans; Capacity Building Youth: 388 organisations participated in 238 projects that involved 39,297 individuals.

#### **Interreg IPA programmes**

Under Interreg, IPA funds contribute to cross-border (IPA CBC) and transnational cooperation programmes with the Member States. These programmes contribute to several important EU policy goals at the same time:

- on one hand, they allow border regions to work on common challenges and thus enhance territorial cooperation and cohesion on EU external borders
- they also simulate to a large extent the EU cohesion policy and thus support IPA countries in adopting reforms and prepare for membership

In the context of the COVID-19 outbreak, managing authorities for cooperation programmes set up more flexible rules for beneficiaries (e.g. extension of deadlines for implementation and completion of projects, reporting, coverage of expenditure linked to non-realised actions due to force majeure etc.). They also considered additional measures for possibility to allow for delayed submission and more flexibility at closure. Many projects and Interreg IPA programmes also have reported extra difficulties due to the closure of borders between countries, which complicates the cooperation between project partners on both sides of the border.

### 3.3. Evaluations, studies and reports

During 2020 five evaluations<sup>10</sup> were completed:

The Evaluation of the performance of EU Info Centres in the Enlargement and Neighbourhood regions (2011–2017) was launched to draw lessons learned and recommendations to improve the performance their activities in the enlargement region in line with the commitments taken by DG NEAR in the joint Action Plan on Strategic Communication in the Western Balkans and Turkey and to identify options for the potential establishment of EU Info Centres in the neighbourhood region.

The Evaluation of the EU's engagement with Civil Society in the enlargement, neighbourhood regions and Russia over the period 2007-2018 assessed and provided evidence on the results achieved by both targeted and mainstreamed support and through policy dialogue, multi-stakeholder fora and consultations involving civil society organisations.

The Evaluation of the EU's external action support in the area of gender equality and women's and girls' empowerment (2010-2018) assessed EU's external action contribution in the policy area of gender equality and women empowerment in Enlargement, Neighbourhood, Africa, Central Asia, South and South-East Asia & Pacific, Latin America and the Caribbean regions. Led by NEAR, it was done in close collaboration with DG INTPA. The evaluation has informed the definition of the EU Gender Action Plan (GAP III).

Evaluation of EU support to local authorities in enlargement and neighbourhood regions (2010-2018) provided an independent assessment of the contribution of EU external action to the achievement of the objectives and intended impacts of its policy towards local authorities in Enlargement and Neighbourhood regions.

Six strategic evaluations were under implementation during the reporting period (namely evaluations on migration, IPA-IPA CBC programmes and two country evaluations of Serbia and Montenegro). In addition, four new evaluations were launched in 2020 (on TAIEX, environment and climate change, cooperation with UN and country evaluation of North Macedonia).

## 4. Programme 2021-2027 - Key monitoring indicators

**Specific Objective 1 :To strengthen the rule of law, democracy, the respect of human rights, fundamental rights and international law, civil society and security as well as improve migration management including border management**

**Indicator 1:Composite indicator on the readiness of enlargement countries on political criteria**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Extent of readiness
Cut-Off Date	
Data source	European Commission
Link to the objective	The general objective of IPA III shall be to support the beneficiaries in adopting and implementing the political, institutional, legal, administrative, social and economic reforms required by those beneficiaries to comply with Union values and to progressively align to Union rules, standards, policies and practices with a view to Union membership, thereby contributing to their stability, security and prosperity. This indicator will allow measuring the state of play of where the enlargement beneficiaries stand in terms of their preparation for meeting one of the three accession criteria, the political one: stability of institutions guaranteeing democracy, the rule of law, human rights and

<sup>10</sup> These are strategic and independent evaluation studies, carried out following Better Regulation and OECD DAC criteria, however they did not lead to a stand-alone staff working document as per Better Regulation Guidelines.

	respect for and protection of minorities.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	This composite indicator is based on a careful analysis of the situation under each of the areas. Particular emphasis is given to the importance of implementation and track records of concrete results in each area. Accordingly, these aspects are given more weight than legal alignment and institutional framework in the overall assessment. These indicators have been introduced in the enlargement reports of 2015. Upcoming enlargement reports will provide an assessment of the areas, used for the preparation of this composite indicator. For further details, please see the Communication on the EU Enlargement Strategy.

## 5. Programme 2014-2020 - Key monitoring indicators

**Previous Program 1 : Instrument for Pre-accession Assistance (IPA II)****Specific Objective 1 :Support for political reforms.**

**Indicator 1:Composite indicator on the readiness of enlargement countries on fundamental areas of the political accession criteria. These areas are: Judiciary, Fighting organised crime, Freedom of expression, Fight against corruption and Public administration reform**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2015	Milestones									2020
5					Reduced number of cases					A majority of countries are moderately prepared in these areas
	Actual Progress									Final
		5	4	5	6	6				

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	
Cut-Off Date	20/08/2022
Data source	Annual enlargement country reports – European Commission
Narrative	Baseline: Five cases of early stage of preparation in these areas (i.e Albania on the Judiciary, Bosnia and Herzegovina on Public Administration Reform and Kosovo on the Judiciary, Fighting organised crime, and Fight against corruption).
Methodology	The data for 2020 should become available later during the year following the publication of the Enlargement package.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	This composite indicator aims at showing where the candidate countries and potential candidates stand in terms of their preparations for meeting five key areas of the political criteria, namely the functioning of the judiciary, fight against corruption, fight against organised crime, freedom of expression and public administration reform. In each of these areas, the state of play (i.e. the readiness) in the candidate countries and potential candidates is assessed according to the following five-tier standard assessment scale: Early stage – Some level of preparation - Moderately prepared - Good level of preparation – Well Advanced.
Full metadata available at this address	
Justification of the trend	

**Indicator 2:Weighted score based on 8 external sources**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Western Balkans										
2010	Milestones									2020
51,53				> 52						> 55
	Actual Progress									Final
	51,55	50,56	49,77	48,84	47,69	48,56				
Turkey										
2010	Milestones									2020
51,77				> 53						> 55
	Actual Progress									Final
	50,6	48,72	44,41	42,15	39,62	41,11				

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	Values: 1 (Worst) - 100 (Best).
Cut-Off Date	31/12/2020
Data source	Based on:- Corruption Index (Transparency International) - <a href="http://www.transparency.org/country-Control of Corruption (World Bank )">http://www.transparency.org/country-Control of Corruption (World Bank )</a> - <a href="http://web.worldbank.org">http://web.worldbank.org</a>
Narrative	
Methodology	Eight external sources are taken in three groups, each weighted one third 1. [Corruption Index (Transparency International) and Control of Corruption (World Bank)]; 2. Press Freedom (Reporters without Borders) and Freedom of Press (Freedom House); 3. Government Effectiveness (World Bank), Rule of Law (World Bank), Regulatory Quality (World Bank) and Voice and Accountability (World Bank)]The data for 2020 from most of the sources above will be available towards the end of the year.

Link MFF 14-20 / MFF 21-27	
Other methodological comments	It should be noted that the indicators are based mostly on perceptions and do not necessarily reflect the impacts made by the EU assistance and policy in these areas. There are also many external factors, which might influence overall scores (such as political instability, security situation, etc.). Therefore, these indicators are only subject to indirect influence by EU action.
Full metadata available at this address	
Justification of the trend	There is an improvement on this indicator based on the latest data (from 2019) in both Western Balkans and Turkey, it is unlikely to be enough to reach the target.

## Specific Objective 2 :Support for economic, social and territorial development, with a view to a smart, sustainable and inclusive growth.

**Indicator 1:Composite indicator on the readiness of candidate countries and potential candidates on fundamental areas of the economic criteria These areas are: functioning market economy and competitiveness in the EU**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2015	Milestones									2020
4					Reduced number of cases					A majority of candidate countries
	Actual Progress									Final
		4	4	4	4	4				

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	Number of candidate countries and potential candidates
Cut-Off Date	31/12/2020
Data source	Annual enlargement reports – European Commission.
Narrative	Baseline: Four cases of early stage of preparation in these areas (i.e. Bosnia and Herzegovina on functioning market economy and competitive pressures; Kosovo on functioning market economy and competitive pressures).
Methodology	The data for 2020 will be available later in the year following the publication of the Enlargement package.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	This composite indicator aims at showing where candidate countries and potential candidates stand in terms of their preparations for meeting key areas of the two economic criteria, namely the existence of a functioning market economy and the capacity to cope with competitive pressures and market forces within the Union. In each of these areas, the state of play (i.e. the readiness) is assessed according to the following five-tier standard assessment scale: Early stage – Some level of preparation - Moderately prepared - Good level of preparation – Well Advanced.
Full metadata available at this address	
Justification of the trend	Candidate countries and the potential candidates made limited progress on meeting the economic criteria, according to the 2020 enlargement reports. In the area of functioning market economy, Serbia advanced to the level of moderately prepared/good level of preparation. Albania and Montenegro remained at a moderately prepared level, North Macedonia at a good level of preparation and Turkey is considered to be well advanced. On competitiveness, North Macedonia, Montenegro and Serbia remained moderately prepared, while Albania remained at some level of preparation. In terms of cases of early stages of preparation, this indicator remained stable in 2020 compared to the baseline, with four cases, on functioning market economy and competitiveness in Bosnia and Herzegovina and Kosovo. Overall, there was limited progress towards meeting the 2020 target for this indicator. The IPA II beneficiaries face challenges in advancing on the fundamental areas of economic criteria, which are interlinked with the political criteria. The Commission put a particular emphasis on these areas in its Western Balkans Strategy of February 2018 and in its communication of February 2020 on a revised EU accession methodology, which put an even stronger focus on these fundamental reforms.

## Indicator 2:World Bank's "Distance to frontier" (Doing Business) score

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Western Balkans										
2010	Milestones									2020
59,63				70			72			72
	Actual Progress									Final
	68,66	68,63	70,97	72,31	72,54	71,95	72,75			
Turkey										
2010	Milestones									2020
65,30				71			73			73

	Actual Progress								Final
	69,96	67,3	67,98	69,14	74,33	75,25	76,80		

Are we on track	On track
Indicator type	Impact
Unit of measurement	1 (Worst) - 100 (Best).
Cut-Off Date	31/12/2020
Data source	<a href="http://www.doingbusiness.org/data/distance-to-frontier">http://www.doingbusiness.org/data/distance-to-frontier</a>
Narrative	The indicator shows the distance of each economy to the ‘frontier’, that means the highest performance observed on each of the indicators across all economies.
Methodology	
Link MFF 14-20 / MFF 21-27	Subject to the outcome of the negotiations among the co-legislators, this indicator will continue in the next MFF.
Other methodological comments	The indicator shows the distance of each economy to the “frontier”, that means the highest performance observed on each of the indicators across all economies: 1 (Worst) - 100 (Best). The last DB Report has updated the methodology: both baseline values have been slightly revised upward. Milestones and targets have been slightly adjusted accordingly.
Full metadata available at this address	
Justification of the trend	In the final year of measuring under this MFF, this indicator has been attained for both Western Balkans and Turkey.

### Indicator 3: Average of exports and imports of goods and services

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Western Balkans										
2010	Milestones									2020
				52%						55%
42,24%	Actual Progress									Final
	48,64%	52,76%	48,77%	52,76%	52,08%	54%				
Turkey										
2010	Milestones									2020
				32%						35%
20,46%	Actual Progress									Final
	25,02%	23,93%	23,45%	27,05%	30,08%	31%				

Are we on track	On track
Indicator type	Impact
Unit of measurement	As percentage of GDP
Cut-Off Date	
Data source	Eurostat
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The indicator shows the degree of economic convergence of candidate countries and potential candidates towards the European average. The projections are based on a hypothesis of growth rate of 1.9% in the EU area and 3.35% in both Western Balkans and Turkey. This is a high level indicator and that European Commission activities only indirectly contribute to it.
Full metadata available at this address	
Justification of the trend	The milestone has already been achieved in 2017 for the Western Balkans. The latest (2019) score has also seen an improvement in both Western Balkans and Turkey. The target could theoretically still be achieved, but the Covid pandemic, which peaked in early 2020 and continued throughout the year, should be taken into account.

### Indicator 4: GDP per capita (current prices-PPS) as percentage of EU level

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Western Balkans										
2010	Milestones									2020
				0,38			0,43			0,43
0,3265	Actual Progress									Final
	0,35	0,32	0,36	0,35	0,34	0,37				
Turkey										
2010	Milestones									2020
				0,60			0,65			0,65
0,49	Actual Progress									Final
	0,64	0,66	0,64	0,67	0,64	0,59				

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	Eurostat
Narrative	
Methodology	No data yet available for 2020 (Eurostat)
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The indicator shows the degree of economic convergence of candidate countries and potential candidates towards the European average. Data excludes Kosovo because there is no GDP data.
Full metadata available at this address	
Justification of the trend	

### Indicator 5: Number of economic entities benefitting from IPA II assistance performing modernisation projects in agri-food sector

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Western Balkans										
	Milestones									2023
				520						5 250
	Actual Progress									Final
					118	1 812	2 726			
Turkey										
	Milestones									2023
				120						1 200
	Actual Progress									Final
					335	1 086	1 460			

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Number of economic entities
Cut-Off Date	
Data source	Directorate-General for Agriculture and Rural Development
Narrative	IPA resources for modernisation and upgrading of farms and food companies are very limited compared to the sector size in respective candidate countries and potential candidates and therefore targets are set only for the supported projects financed from the budget and not for the sector.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	IPA resources for modernisations and upgrading of farms and food companies are very limited compared to the sector size in respective candidate countries and potential candidates and therefore targets are set only for the supported projects financed from the budget and not for the sector.
Full metadata available at this address	
Justification of the trend	The specific contracts in IPA II agriculture and rural development assistance are implemented in accordance with the N+3 rule, which means that a given budget allocation in this programme may actually be implemented (contracted and paid within a period of 3 years, following year N). The initial estimate of 5.250 will be implemented during the years 2018 - 2023. Targets are based on the information provided in country programmes, approved by the Commission decision for 7 years. Calculations of targets in the programmes are based on indicative financial allocations for the entire programming period. Should these allocations be revised, targets will have to be revised as well. This will be the case for Turkey, for which allocations have been significantly cut. Targets will be revised after the next programme modification, once reduced budget has been reflected in the programme. For Turkey, the initial estimate of 1.200 will be implemented during the years 2018 - 2023. This explains deviations in other relevant indicators, namely specific objective 2 - indicator 6 and specific objective 3 - indicator 2. In 2014-2017 no effective expenditure was made/projects implemented. Contracting and payments so far made only in North Macedonia and Turkey, forthcoming in Albania, Montenegro, and Serbia. These are cumulative values for the entire programming period. The target for budget year 2020 will be fully implemented as an output by the end of 2023 (N+3).

### Indicator 6: Overall investment in physical capital in agri-food and rural development implemented by beneficiaries of IPA II assistance

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Western Balkans

Indicator type	Impact
Unit of measurement	Number of cases of early stage of preparation in the 33 chapters in the enlargement region
Cut-Off Date	31/12/2020
Data source	Annual enlargement country reports – European Commission
Narrative	This composite indicator aims at showing where the candidate countries and potential candidates countries stand in terms of their preparations for fulfilling the obligations stemming from EU membership, including the alignment to the 33 acquis chapters. This composite indicator is based on a careful analysis of the situation under each of the 33 acquis chapters. Particular emphasis is given to the importance of implementation and track records of concrete results in each chapter. Annual enlargement reports provide a detailed assessment of these acquis chapters, used for the preparation of this composite indicator. For further details, please see the latest Communication on the EU Enlargement Strategy. These result indicators are particularly relevant for DG NEAR since they show the results of its enlargement policy including financial assistance through the Instrument for Pre-accession Assistance as regards the third criteria.
Methodology	The data for 2020 will be available later during the year following the publication of the enlargement package.
Link MFF 14-20 / MFF 21-27

Justification of the trend	According to the annual enlargement country reports, some progress has been recorded for the indicator linked to alignment with, and adoption, implementation and enforcement of, the Union acquis. The 30 cases of early preparedness include the following: 14 cases in Bosnia Herzegovina, 7 cases in Kosovo, 3 cases in Turkey, 3 in Albania, 2 in North Macedonia, 1 in Montenegro and none in Serbia. For a more detailed analysis and the summaries of the findings on readiness and progress of enlargement countries towards the alignment to the 33 acquis chapters, please refer to the 2020 country reports

**Indicator 2: Number of economic entities progressively upgrading towards EU standards in agri-food sector**

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

#### **6.1.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
296,9	321,9	328,4	354,7	381,8	389,6	418,5	2 491,8

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.1.2. Explanation and justification on the financial contribution**

Estimates reflect the OECD/DAC reporting methodology for the Rio-markers on climate change mitigation and climate change adaptation. The budget of interventions contributing to climate change is weighted 100 % if mitigation and/or adaptation are the ‘principal objective’ of the action and 40 % if mitigation and/or adaptation are a ‘significant objective’.

Rio-markers apply to actions funded in all sectors; however, past trends indicate that actions that aim to directly tackle climate change tend to concentrate in the sectors of rural development, environment, energy and management of natural resources. These actions would primarily contribute to Specific Objective 4 of IPA III (to strengthen economic and social development including through increased connectivity and regional development, agriculture and rural development and social and employment policies, to reinforce environmental protection, increase resilience to climate change, accelerate the shift towards a low-carbon economy and develop the digital economy and society). However, climate-related expenditure might contribute also to achieving Specific Objective 3 (shape the rules, standards, policies and practices of the IPA III beneficiaries in alignment to those of the Union and to reinforce reconciliation and good neighbourly relations, as well as people to people contacts and communication) as well as Specific Objective 5 (support territorial and cross-border cooperation).

IPA III supports the beneficiaries in their efforts to align to the climate change and energy package and in the implementation of the external dimension of the European Green Deal. In particular, the actions will support the implementation of several priorities of the Economic and Investment Plan for the Western Balkans (clean energy, environment, transport) as well as the Green Agenda for the Western Balkans. The thematic window “Green Agenda and sustainable connectivity” will be the primary entry point for supporting action in the area of climate change, although actions under Window 4: Competitiveness and inclusive growth, Window 5: Territorial and cross border cooperation and Window 2: Good governance, EU acquis alignment, good neighbourly relations and strategic communication could also target climate change. This is in line with the “do no harm” principle and the alignment of EU external actions to the Green Deal and the Paris Agreement.

Support in the area of clean energy and smart transport is channelled to the beneficiaries in particular through financial instruments; in the first instance the Western Balkan Investment Framework (WBIF) and the Green for Growth Fund (GGF).

#### **6.1.3. Key achievements**

In the period 2014-2020, EUR 1605.8 million<sup>11</sup> (15.4% of IPA II operational commitments) were allocated to actions directly contributing to climate change action, mitigation and/or adaptation. Estimates reflect the OECD/DAC reporting methodology for the Rio-markers on climate change mitigation and climate change adaptation. The budget of interventions contributing to climate change is weighted 100 % if mitigation and/or adaptation are the ‘principal objective’ of the action and 40 % if mitigation and/or adaptation are a ‘significant objective’.

EU assistance in the field of climate change mitigation has significantly contributed to the reduction of GHG emissions. In 2019 (the only year for which figures are available), 798 693 tonnes of CO<sub>2</sub>eq were avoided by IPA beneficiaries thanks to EU support. Numerous climate and energy policies were drafted with the support of the EU, in order to align with the objectives of the Paris Agreement. For instance, Serbia drafted its Climate Law as well as its Climate Strategy.

<sup>11</sup> Reporting on 2020 is still ongoing.

#### 6.1.4. Performance

The European Commission has been supporting actions on climate change mitigation and adaptation both at the bilateral and regional level through dedicated actions. These include support to policy development and implementation, approximation to the EU energy and climate acquis, as well as technical assistance and investments for the clean energy transition and low carbon technologies in general. In addition to dedicated actions, environment and climate change considerations are mainstreamed in all areas of cooperation.

At the regional level, co-operation in the environment and climate area has been supported by the European Commission for more than a decade. Building on past experience, the Regional Implementation of Paris Agreement Project – RIPAP – was launched in 2017 to build capacity of the beneficiaries for the implementation of Paris Agreement and continue to enable regional cooperation through the exchange of information, best practices, experiences and awareness-raising activities. Several technical workshops, webinars and study visits were organised, focusing on national greenhouse gas (GHG) inventory systems, modelling systems and tools for preparing GHG emission projections, EU Emissions Trading System, data needs for modelling of energy system projections and priority GHG emission and removal categories. The project also organised three high-level meetings: the Regional Conference on the Implementation of Paris Agreement (Podgorica, Feb. 2018), EU-Serbia Talanoa Conference (Belgrade, May 2018) and Regional Talanoa Dialogue together with the Energy Community Secretariat (Vienna, Oct. 2018) with 164 participants.

In 2020, a new regional multi-annual project was launched to support IPA II beneficiaries in their transition towards the low emissions and climate-resilient economy. With a total budget of EUR 2 million, the action provides support to implementation of climate activities in line with the Beneficiaries' commitments or "Nationally Determined Contributions" (NDCs) and the provisions under the 2015 Paris Climate Agreement. This will be done through a series of activities covering mitigation and adaptation actions that will enable keeping the momentum created under the previous projects.

A new regional project in support of climate action and energy transition at the local level was also launched in 2020. The action extends the support provided by the Commission in the context of the Global Covenant of Mayors for Climate and Energy to Western Balkans and Turkey. It will support municipal authorities to translate their ambitions to reduce greenhouse gas (GHG) emissions into reality and enhance resilience to climate change impacts, while taking into account diversity on the ground. By joining the initiative, cities commit themselves to contribute to the EU's climate protection goals and to develop sustainable energy and climate plans.

Finally, in 2020, in line with the external dimension of the European Green Deal, the Green Agenda for the Western Balkans was adopted by the Commission in October, and endorsed by the leaders of the Western Balkans at the Sofia Summit in November 2020. The Green Agenda for the Western Balkans is based on continuous approximation with EU acquis, in line with numerous UN conventions, and international commitment such as Paris Agreement and Agenda 2030, and represents a true blueprint to guide action, both domestic and with international support. Climate action and clean energy transition are at the core of the Green Agenda, together with circular economy, depollution, sustainable food system and rural areas, and biodiversity.

At the bilateral level, several projects contribute to decarbonisation and enhancing resilience to the impacts of climate change, across a variety of sectors. The most important sector supporting mitigation is the energy sector, where energy efficiency and renewable energy projects contribute to enhancing access to energy and reducing energy poverty, while at the same time combating climate change. For instance, the first Energy Efficiency Fund in Kosovo\* is the main financing instrument to boost investments in energy efficiency measures in public buildings in Kosovo municipalities, thus also contributing to improving air quality in urban areas. The fund was established in 2019, with an initial capital of EUR 16 million (EU grant of EUR 10 million (IPA 2017), World Bank loan EUR 5 million, Kosovo grant EUR 1 million). This initial capital is sufficient to implement around 50 energy efficiency projects mainly in public buildings. The Fund will operate on revolving basis based on the concept prepared jointly by EU funded assistance, World Bank and Kosovo authorities. During the reporting period, the EU and the government of Kosovo signed an agreement to entrust the management of the Fund to the World Bank, and the first call for proposals addressed to municipalities was launched, attracting more than 100 project proposals. The selection of the projects to be financed is in progress. It is foreseen to extend the Fund to the residential sector.

When it comes to enhancing resilience to climate change, actions in the area of disaster risk reduction, environmental protection, and boosting nature based solutions all play an important role. In this regard, approximating the EU environment acquis is a significant contribution. For instance, in Montenegro, the EU acquis chapter in Environment was formally opened in December 2018. One of the on-going projects in the sector focuses on the implementation of the EU's Water Framework Directive. In practice, this is a result orientated project, building capacity of beneficiaries while supporting integrated planning. In 2020, water management plans and river basin management plans were established, thus addressing in an integrated manner the management of water resources, including for flood protection. The project also in terms of performance focused on a number of sub objectives, including the definition and delineation of water bodies, reference conditions and monitoring systems. This project, its outputs and outcomes in terms of achievement, have potentially huge positive outcomes for the country's citizens as well as the environment in Montenegro.

## 6.2. Contribution to biodiversity mainstreaming

### 6.2.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
50,1	51,1	52,2	59,1	60,3	82,0	83,7	438,5

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.2.2. Explanation and justification on the financial contribution

These actions would primarily contribute to Specific Objective 4 of IPA III (to strengthen economic and social development including through increased connectivity and regional development, agriculture and rural development and social and employment policies, to reinforce environmental protection, increase resilience to climate change, accelerate the shift towards a low-carbon economy and develop the digital economy and society). However, the principle of “do no harm” should also be applied under all Specific Objectives.

Biodiversity and ecosystem protection and restoration are key pillars of the Green Agenda for the Western Balkans. The thematic window “Green Agenda and sustainable connectivity” will be the primary entry point for supporting action in the area of ecosystems and biodiversity.

### 6.2.3. Key achievements

For the 2014-2020 period, EUR 281.5 million (2.7% of the IPA III operational commitments)<sup>12</sup> - whereas several other projects also contributed to the sustainable management of natural resources across sectors of intervention). This represents a significant increase over time – from EUR 23.4 million in 2015-2016 to EUR 105 million in 2019-2020, reflecting the increasing importance of biodiversity protection and sustainable management in the region.

Estimates reflect the OECD/DAC reporting methodology for the Rio-marker on bio-diversity. The budget of interventions contributing to climate change is weighted 100 % if biodiversity is the ‘principal objective’ of the action and 40 % if biodiversity is a ‘significant objective’.

In 2019, 28 000 ha of agricultural and pastoral ecosystems benefited from sustainable management practices introduced with EU support. At the country level, the EU also supported the establishment of protected areas: for instance, in North Macedonia, 241,755.42 ha of protected areas benefitted from improved management thanks to EU support, with an integrated approach to ecosystems, specific and their habitats

### 6.2.4. Performance

The EU’s immediate neighbourhood is of strategic importance for the EU. There can be no effective green transition without similar action in our immediate neighbourhood - with whom we share rivers, forests, seas and air. The EU Biodiversity Strategy for 2030 requires all of the EU neighbourhood countries on board, particularly those aspiring to EU membership.

Biodiversity and ecosystem conservation and restoration enjoy high-level political support in the Western Balkans and Turkey. For instance, three partners have joined the high ambition coalition on biodiversity: Albania, Bosnia and Herzegovina, and Montenegro.

Partner economies covered by enlargement and neighbourhood policies benefit from strong EU support through well-established policy and regulatory frameworks (i.e. linked to EU acquis and international conventions), as well as robust financial support and technical assistance. Through IPA II, significant assistance was provided on biodiversity.

In Turkey and Western Balkans –biodiversity hotspots - specific support is provided to approximate further with the EU’s acquis on nature, notably the EU Birds and Habitats Directive, as well as to prepare for the designation of Natura 2000 sites. Technical assistance targets, among others, management of protected areas, addressing invasive species and forestry management. Considerable progress has been made in terms of acquis alignment, but challenges remain to ensure its effective implementation, for instance with respect to illegal logging and the use of environmental impact assessment.

For instance, through the multi-annual programme on environment, the action “Improving the management of protected areas” (EUR 4 million) promotes the sustainable use of natural resources in North Macedonia. The project aims at improving the management of the protected areas in an inclusive, professional and sustainable way. The knowledge base was extended with a comprehensive analysis of the geodiversity and biodiversity of different sites, and the assessment of water resources’ quality. The EU funds supported the creation of modern and safe hiking and biking trails, an arboretum and botanical gardens of local endemic flora, a fully equipped training centres for speleologists. Over 300 collectors of forest products and herbs, operating in protected areas were trained on performing their activities with a respect and care to the environment. 3D virtual tours were created to promote the protected areas sites amongst scientists and tourists. The project was very successful in promoting the sustainable use of natural resources. It demonstrated, through practical examples, that nature protection and the economic development of communities can go hand in hand.

### 6.3. Contribution to clean air financing

Not applicable

<sup>12</sup> Reporting on 2020 is still ongoing.

## 6.4. Contribution to gender equality

### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.4.2. Key achievements and performance

The Commission is committed to the implementation of EU Gender Action Plan II, 2016-2020 (GAP II), as well as the promotion of gender equality and women's empowerment in international fora and agendas. The GAP was endorsed on October 26, 2015 by the Council which confirmed in its Conclusions that gender equality is at the core of European values and enshrined within the EU legal and political framework. A number of actions to address gender equality, such as the implementation of specific programs on gender equality, are undertaken: for example, IPA II funded 'Ending Violence against Women in the Western Balkans and Turkey: Implementing Norms, Changing Minds' (EUR 5 million) programme gives a particular focus to the most disadvantaged groups of women.

In 2019, gender commitments under IPA amounted to EUR 763,33million, an increase compare to 2018 (EUR 587 million).

Data reflect the OECD/DAC reporting methodology. The budget of marked actions is weighted 100 % if gender equality is marked as 'principal objective' and 40 % if it is marked as 'significant objective'. Gender markers apply to actions funded in all sectors respectively specific objectives.

Preventing and responding to violence against women and girls continued to be one of the EU's main priorities. In the Enlargement region, as part of the EU COVID-19 response, the project "Ending violence against women in the Western Balkan and Turkey: "Implementing Norms, Changing Minds, Phase II, received additional funding, bringing the total EU contribution to EUR 6.25 million. The Western Balkans and Turkey involved in the action have normative frameworks that better promote gender equality and non-discrimination against all women and girls. A total of 196 CSOs and CSO networks were directly supported by the programme are engaged in monitoring and reporting on CEDAW and the Istanbul Convention.

In the area of socio and economic development, in Albania, the EU supported the programme Social Inclusion (2020-2024) and topped up with 20,65M EUR to respond to the emergency measures targeting economic aid and support to employees of small and large businesses affected by Covid 19 taking into account gender as a cross cutting issue. 75,615 families were supported through measures related to economic aid financial assistance, 173,091 employees benefited from measures related to support to businesses affected by COVID 19.

## 6.5. Contribution to the sustainable development goals

### 6.5.1. Goals

Not applicable

### 6.5.2. Key achievements and performance

The Enlargement policy under the Multi-Annual Financial Framework 2021-2027 continues supporting the progress of candidate countries and potential candidates towards meeting the political and economic criteria for accession as well as their ability to align with, implement and enforce EU rules and regulations. As in 2014-2020, the new MFF has a strong focus on the fundamentals of the rule of law, human rights, public administration reform and economic governance. In addition, as a consequence of the COVID-19 and its disruptive effect on the socio-economic landscape of the enlargement countries, the new MFF strengthens its focus on economic recovery and social cohesion, namely supporting the implementation of the Economic and Investment Plan for the Western Balkans. The Plan aims at spurring the long-term recovery of the region, supporting a green and digital transition, boosting economic growth and supporting reforms to move forward on the EU path, including bringing the Western Balkans closer to the EU Single Market and the latest EU policy developments such as the European Green Deal.

### SDG 5 Achieve equality and empower all women and girls

Under IPAIL, programmes focusing on prevention and responding to violence against women and girls continued to be a priority in the Enlargement region. IPA support contributed to establishing comprehensive services to support gender-based violence survivors, discussing gender discriminatory norms and stereotypes and promoting positive masculinities.

The cooperation of the European Institute of Gender Equality (EIGE) with the EU candidate and potential candidate countries aimed to improve monitoring of gender equality progress using the Gender Equality Index. This gives more visibility to areas that need improvement and ultimately supports policy makers to design more effective gender equality measures.

Actions in support to Roma women have been implemented all over the enlargement region with special focus on education and employment. The third edition of the EU Award for Roma Integration in 2019 was dedicated to individual Roma women grassroots activists who brought significant changes to their communities. Out of 105 applications, 14 nominated Roma women were selected for their contributions to the inclusion, integration and empowerment of Roma in their communities and societies. Quality education and vocational training continued to be targeted actions, in the framework of Roma empowerment programmes and education and reintegration of returnees in Western Balkans.

### **SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all**

In the period 2014-2020, the 2018 strategy for the Western Balkans supported SDG 8 through the ‘flagship initiative to enhance support for socioeconomic development’. A recent example of support in this area in 2020, is the approval of the “Youth Lab” in the Western Balkans, a regional programme aiming to improve the situation for returnees from the EU to the Western Balkans.

Under the MFF 2021-2027, the Economic and Investment Plan facilitates through its new flagship initiatives increased investment and socio-economic development. A substantial investment package articulated around ten indicative investment flagships supports the development of connected, green, competitive and thriving economies in the Western Balkans, with an increasingly dynamic private sector and a stronger human capital development. The Economic and Investment Plan also aims at boosting private sector development and employment through its flagship initiatives 9 ‘private sector competitiveness’ and 10 ‘youth guarantee’.

Besides contributing to the achievement of SDG 8, the Plan also contributes to SDG 6 (clean water and sanitation), SDGs 7 (affordable and clean energy) and SDG 9 (industry, innovation and infrastructure).

### **SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation**

In the period 2014-2020, IPAII contributed to supporting sustainable infrastructure, inclusive industrialisation, and innovation. As an example, after the strong earthquake that affected Albania on 26 November 2019, the EU and other international partners supported the Albania to recover from the damages. One year later, the EU translated its EUR 115 million pledge into two programmes to help Albania recover from the shock and increase resilience to natural disasters. The EU4Schools programme has supported reconstructing and repairing education facilities damaged by the earthquake. Also, the EU4Culture programme has supported the rehabilitation of the cultural heritage sites gravely damaged by the earthquake, as well as economic activities to support tourism on these sites.

Equally, the EU4Schools programme has supported the rehabilitation of over 58 educational facilities, including primary and secondary schools, kindergartens, dormitories and VET schools in the 11 municipalities affected by the quake. The programme integrates accessibility with environmental protection, disaster risk reduction, and sustainability.

Under the MFF 2021-2021, the External Action Guarantee (EAG), named the ‘Western Balkans Guarantee Facility’ and financed by NDICI and IPA III, is key to tackle the COVID-19 hard socio-economic impact in the Western Balkans. The facility aims at modernising the economies in the region, supporting the necessary socio-economic reforms, reducing the development gap and supporting the twin green and digital transition. The Economic and Investment Plan also aims at facilitating increased investment in infrastructure, industrialisation and innovation through its flagship initiatives 1-3 (connecting East to West, North to South and coastal regions) and 8 (digital infrastructure).

### **SDG 13 Take urgent action to combat climate change and its impacts**

Under IPAII, support to the environment and fighting climate change, as part of the IPAII contribution to SDG 13, have been priorities in the Western Balkans. To illustrate progress in this area, in Montenegro the environment related EU acquis chapter was opened in December 2018, and there is a number of ongoing projects contributing for instance to the implementation of the EU’s Water Framework Directive. In practice, this is a result-orientated project, which is helping to establish water management plans and monitoring systems. The outcomes of this project are expected to have a positive impact that will benefit both Montenegro’s environment and its citizens.

Through the multi-annual programme on environment, the action “Improving the management of protected areas” promotes the sustainable use of natural resources in North Macedonia. EUR 4 million were invested in improving the management of the protected areas in an inclusive, professional and sustainable way.

The MFF 2021-2027 also supports the actions on the ‘Guidelines for the Implementation of the Green Agenda for the Western Balkans’, accompanying the ‘Economic and Investment Plan’. The Guidelines cover the alignment of the Western Balkans with the goals of the European Green Deal: (1) climate action, including decarbonisation, energy and mobility; (2) circular economy, addressing in particular waste, recycling, sustainable production and efficient use of resources; (3) biodiversity, aiming to protect and restore the natural wealth of the region; (4) fighting pollution of air, water and soil; and (5) sustainable food systems and rural areas. In addition, the Economic and Investment Plan, also contributes to SDGs 7 through the flagship initiatives 4 ‘renewable energies’, 5 ‘transition from coal’ and 6 ‘renovation wave’; and to SDG 6 through flagship initiative 7 ‘waste and water waste

management'. On their hand, the Guidelines also contribute to the achievement of SDGs 6 (clean water and sanitation), SDG 7 (affordable and clean energy), SDG 11 (sustainable cities and communities), SDG 12 (responsible consumption and production), SDG 14 (life below water) and SDG 15 (life on land).

Further programmes and projects contributing to SDG 13 should be either launched in 2021, or are currently being planned. There are strong donor coordination efforts in the region in the field of environment and climate change, and this is an important area of coordination with the European Investment Bank, the European Bank for Reconstruction and Development, the World Bank and KfW among others.

**SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels**

Under the MFF 2014-2020, the 2018 strategy for the Western Balkans provided a significant contribution to the achievement of SDG 16 through the 'flagship initiative to strengthen the rule of law; the 'flagship initiative to reinforce engagement on security and migration' and the 'flagship initiative to support reconciliation and good neighbourly relations'.

To illustrate support in this area, one example is the EU assistance to Albania in 2020, which has contributed to ensure ability of the country to deliver on key reforms necessary to advance on the European path. This includes support in the field of justice reform, notably in the 'vetting' of judges and prosecutors, and supporting the specialised structures against corruption and organised crime (SPAK and SPAK courts). In Bosnia and Herzegovina, in the area of Rule of Law IPAII supported the 'criminal justice chain', institutions, including law enforcement agencies, prosecutors and judges, for a more effective response to serious crimes.

Under the MFF 2021-2027, pursuing reforms in the area of rule of law, fundamental rights, democracy and security remains one of the most pressing issues for the Western Balkans and Turkey. It is also the key benchmark against which the partners' preparedness for becoming an EU Member State will be measured by the EU.

**1. Overview****1.1. Challenges**

Globalisation and technological change are likely to increase further the interconnectedness and interdependence of world economies. Labour reallocation is an integral and inevitable part of such economic change.

As the current benefits of globalisation are already unequally distributed among people and regions, causing a significant impact on those adversely affected, there is a danger that the ever faster evolving technological advances will further fuel these effects.

If the benefits of change are to be distributed fairly, offering assistance to displaced workers is of utmost importance. The Union continues to provide specific, one-off support to facilitate the re-integration into employment of displaced workers in areas, sectors, territories or labour markets suffering a shock of serious economic disruption.

## 1.2. Mission (general objectives)

The European Globalisation Adjustment Fund for Displaced Workers (EGF) aims at supporting socioeconomic transformations that are the result of globalisation and of technological and environmental changes by helping displaced workers and self-employed adapt to structural change. The EGF is an emergency fund that operates reactively. It contributes to the implementation of the principles defined under the European Pillar of Social Rights<sup>1</sup> and enhances social and economic cohesion among regions and Member States.

## 1.3. Specific objectives

The European Pillar of Social Rights consists of 20 principles structured around 3 categories: equal opportunities and access to the labour market, fair working conditions, and social protection and inclusion. It acts as an overarching guiding framework of the EGF, which can help setting the relevant principles into practice in the case of major restructuring events, and contribute to a greener, more digital and resilient Union.

The EGF's objective of improving participants' education/training and labour market situation has two dimensions: solidarity and promotion of decent and sustainable employment.

## 1.4. Public intervention context

The employment policies are a shared competence between the Union and the Member States<sup>2</sup>. The two parties shall work towards developing a coordinated strategy for employment and particularly for promoting a skilled, trained and adaptable workforce, and labour markets' responsiveness to economic change with a view to achieving economic, social and territorial cohesion in the EU. The Union shall contribute to a high level of employment by supporting and, if necessary, complementing Member State's action<sup>3</sup>.

In compliance with the principles of subsidiarity and proportionality<sup>4</sup>, funding from the Union budget concentrates on activities whose objectives cannot be sufficiently achieved by the Member States alone and where the Union intervention can bring additional value compared to action of Member States alone.

Therefore, the mobilisation of the EGF to co-finance measures to support redundant workers can be justified in case of major restructuring events that, by their scale and effects, cause a significant impact and can test the limits of what regular national labour market programmes are able to provide to assist displaced workers. Assistance from the EGF is always offered in addition to the efforts of the Member States at national, regional and local level. The EGF generates European added value by increasing the number, variety and intensity of services offered to even more dismissed workers and for a longer period of time than would be possible without EGF funding<sup>5</sup>.

The Multiannual Financial Framework and the Interinstitutional Agreement<sup>6</sup> between the European Parliament, Council and the European Commission determine the budgetary framework of the EGF. The objective, scope and conditions for the mobilisation are set out in the EGF Regulation<sup>7</sup>. For each eligible case, the EGF is mobilised jointly by the European Parliament and Council through a decision adopted in accordance with the provisions of the EGF Regulation and a transfer from the reserve budget line to the EGF operational budget line.

EGF's design shows a clear complementarity with the more preventive assistance offered by the European Social Fund+ (ESF+) which consists of multiannual programmes that support long-term goals such as the anticipation and management of changes and restructuring. Unlike ESF+, EGF is established to provide support in exceptional circumstances and outside a multiannual programming scheme. EGF and ESF+ measures are sometimes used by Member States to complement each other to provide both short and long-term solutions.

## 1.5. Actions

The EGF co-finances coordinated packages of personalised services designed to facilitate the re-integration of the targeted beneficiaries, in particular, the most disadvantaged among them, into employment or self employment. The main focus is on active labour market measures (e.g. training and retraining, job-search assistance, outplacement assistance, aid for self-employment or business start-ups). Assistance is granted for a limited period.

The EGF adds to existing mainstream restructuring assistance programmes and services of labour market actors without replacing existing resources.

<sup>6</sup> [https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:3201600512\(01\)&from=EN](https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:3201600512(01)&from=EN)

<sup>7</sup> <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=COM:2018:380:FIN>

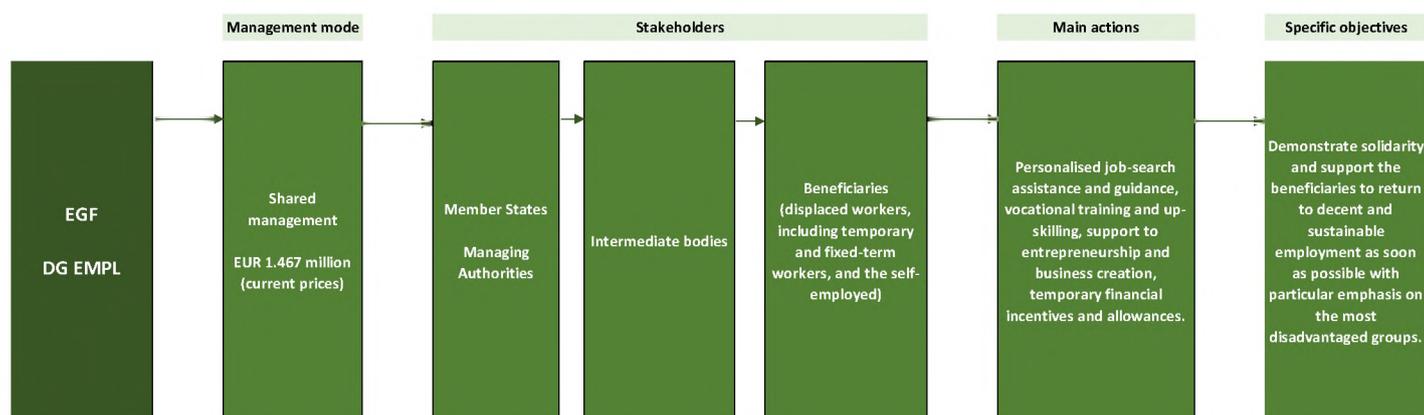

The main actions provided through EGF include personalised job-search assistance and guidance, vocational training and up-skilling, support to entrepreneurship and business creation, and temporary financial incentives and allowances.

## 1.6. Delivery mode

Shared management

Lead DG: Employment, Social Affairs and Inclusion

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/691 of the European Parliament and of the Council of 28 April 2021 on the European Globalisation Adjustment Fund for Displaced Workers (EGF) and repealing Regulation (EU) No 1309/2013 Regulation (EU) 2021/691 of the European Parliament and of the Council of 28 April 2021 on the European Globalisation Adjustment Fund for Displaced Workers (EGF) and repealing Regulation (EU) No 1309/2013	2021 - 2027	

### 1.8.2. Legal basis explanation

If specific actions prove necessary outside the Structural Funds and without prejudice to the measures decided upon within the framework of the other policies of the Union, Article 175(3) of the Treaty on the Functioning of the European Union allows the European Parliament and the Council to take action in accordance with the ordinary legislative procedure and after consulting the European Economic and Social Committee and the European Committee of the Regions.

In addition to the legal basis mentioned above, the Regulation of the European Parliament and of the Council on the European Globalisation Adjustment Fund (EGF) for 2014-2020 and the compromise text reached on the 2021-2027 EGF Regulation provide provisions on eligibility criteria, management, financial contribution, reporting, evaluation and auditing rules.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							
	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
<b>Total</b>	197,4	201,3	205,4	209,5	213,7	217,9	222,3	1 467,4

### 1.8.4. Financial programming explanation

The multiannual financial framework (MFF) 2021-2027 underlines the EGF's special character as an emergency relief instrument and maintains it as one of the special instruments outside the budgetary ceilings of the MFF. As such, the EGF does not have financial programming. The MFF Regulation adopted on 17 December 2020 sets an average annual ceiling of EUR 209.6 million (current prices) for the EGF for the 2021-2027 period.

## 1.9. Link with the 2014-2020 MFF

On 2 May 2018, the Commission adopted a proposal for the 2021-2027 multiannual financial framework, amended in June 2020. The proposal reflects the current social and economic context and provides a concrete response to the call from the European public for a more social Europe and for greater investment in people in the European Union.

The agreement reached by the co-legislators in December 2020 on the EGF regulation 2021-2027 will enable DG EMPL to continue providing timely assistance to displaced workers. The adoption of the regulation is expected in spring 2021.

Given that the purpose of the EGF is to rapidly provide financial support in situations of urgency, it remains outside the budgetary ceilings of the MFF. The EGF, if needed, can mobilise a maximum amount of EUR 1 467 million (in current prices) for the 2021-2027 period. To ensure that the EGF intervenes more effectively, is more inclusive and flexible to respond to current and future economic challenges (such as automation and digitalisation, the transition to low carbon economy etc.), the scope of the EGF has been extended to any type of major restructuring event (regardless the cause) and the threshold has been lowered from 500 in the 2014-2020 programming period to 200 displaced workers in the 2021-2027 period. Moreover, the EGF co-financing rate has been aligned with the highest ESF+ co-financing rate in the respective Member State.

### 1.10. Relevant websites providing more information

<https://ec.europa.eu/social/main.jsp?catId=326&langId=en>

*The website provides information on the objectives, measures and potential beneficiaries of the EGF. Users can also find the EGF Regulation, FAQ, contact persons in the EU countries and detailed information on all EGF applications. Furthermore, the website includes links to publications, news and events related to EGF.*

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

In 2021, the Commission will continue the assessment and adoption of proposals for mobilizing the EGF, following six applications (four of which are COVID-19 related) received at the end of 2020. The year 2021 will be also marked by the transition to the new Regulation, which will enable more workers to benefit from EGF and will co-finance the cost of support services at a higher rate in many Member States. Under the new rules, all reasons for restructuring, including the economic effects of the COVID-19 crisis, as well as larger economic trends like decarbonisation and automation, are eligible for support. This comes on top of other reasons like changing trade patterns or consequences of the financial and economic crisis for which workers could receive support from the EGF under the provisions of the previous Regulation.

In order to foster the exchange of best practices and discuss issues of common interest, the Commission organises EGF Contact Persons' meetings inviting the Member States' representatives responsible for managing the EGF cases in the respective countries. In 2021, this meeting will have to be organised remotely in the first semester and will mainly focus on the new EGF Regulation.

In 2021 and 2022, given the gravity of the socioeconomic consequences of the COVID-19 crisis, the EGF will provide continued support to workers who have lost their jobs as result of major restructuring events. It is expected that broadening the scope and lowering the threshold (enabling an application) of dismissed workers to 200, will make the fund more inclusive and more accessible, potentially triggering a higher number of applications from Member States than it would have under the 2014-2020 Regulation in the same circumstances.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	151 368 224	19 677 263
Implementation Carry-overs	8 334 000	9 799 742
Implementation Recoveries and Repaid advances		129 626 981
Implementation total	159 702 224	159 103 986
total envelop*	1 142 191 067	
cumulative implementation rate	14%	14%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

In 2020, seven applications were submitted by six Member States (Belgium, Estonia, Finland, Germany, the Netherlands and Spain), out of which four were submitted in relation to the repercussions of the global economic and financial crisis, and two under the trade related globalisation criterion. One application (from Spain) was adopted in 2020.

The COVID-19 crisis has led to considerable job losses, which may affect persons who have previously benefitted from EGF support and thus can impact the long-term re-integration results of the EGF. This trend was also confirmed by the final reports received in 2020, which showed that on average only 45% of beneficiaries, compared to 65% in 2019, have found a new employment following EGF implementation.

Furthermore, the restriction of movements and the ban on gatherings has had a significant impact on the implementation of ongoing EGF funding actions. A number of measures that required personal contact and could not be pursued online, as well as management and control activities, have had to be suspended. The principle of force majeure has been applied in two cases, which consisted in temporary suspension of deadlines set in the Regulation.

As a general rule, the cumulative implementation rate for EGF does not factor in the recoveries from pre-financing as the amounts are only known two years and a half after the pre-financing was paid. This means that the cumulative implementation rate shows the payments made by the Commission for the EGF cases from a cash perspective while the actual amount mobilized is less and only known at a later stage.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

The EGF contributes to smart, inclusive and sustainable economic growth and promotes sustainable employment in the Union by enabling it to demonstrate solidarity towards and to support workers made redundant and self-employed persons whose activity has ceased as a result of major restructuring. The fund contributes also to the implementation of the principles defined under the European Pillar of Social Rights and enhanced social and economic cohesion among regions and Member States.

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.3. Previous programme performance**

Between 2014 and 2020, funding from the EGF supported 55 168 targeted workers and 4 099 young people not in employment, education or training in 52 different economic sectors. According to the final reports on the implementation of the EGF cases received during the 2014-2020 period, on average 60% of the workers who have been assisted have taken up new employment following an intervention from the EGF. However, the reintegration rate in individual cases varied from 28% to 92%, depending on the economic sector and the area concerned, as it is influenced by the absorption capacities of local and regional labour markets. The rates are also influenced by the profile of the dismissed workers and the skill set sought on the local job market. Taking into consideration that the beneficiaries supported by EGF co-funded measures are usually among those facing the greatest difficulties on the labour market, these results are very encouraging. It is worth mentioning that while assessing the applications for the EGF funding, the Commission advises that the measures should reflect the prospected needs of the local or regional labour market. The quantitative information on the assistance given will be complemented with qualitative information from 2021 onwards as the agreement reached by the co-legislators in December 2020 on the 2021-2027 EGF Regulation will enable the collection of such information through beneficiary surveys to offer an overview of the EGF performance.

As a special instrument applied in unforeseen circumstances, the EGF is only mobilised if a Member State requests EGF funding. It helps Member States overcome the worst of the short-term shock of mass redundancy and so it is limited to a 24 months period. Therefore, the number of EGF applications has always been highly cyclical, following economic trends. It was observed that the highest number of applications was submitted in 2014 as a continuation of the 2008 global financial crisis, compared to the lowest in 2019, which reflected overall improvement of the economic situation in the Member States that facilitates the reintegration of workers into the labour market.

The end of the programming period and especially 2020 was impacted by the COVID-19 outbreak. A number of measures that required personal contact and couldn't be pursued online, as well as management and control activities have had to be suspended. The principle of force majeure has been applied in two cases, which consisted in temporary suspension of deadlines set in the

Regulation. The relatively lower (45%) than in the previous year (65%) average reintegration rate reported by the Member States in 2020, is a consequence of the challenging situation on the labour market caused by pandemic crisis.

In 2020, a contractor carried out a study, at the request of the Commission, supporting the ex post evaluation of the EGF<sup>8</sup> to assess to what extent the fund has attained its objectives during the 2014-2020 period. The final assessment will be published in the form of a Commission Staff Working Document by the end of 2021. The key findings of the study show that the results of the EGF are often better than what can be achieved by national support measures mainly because the EGF provides very targeted, tailored and individualized support to beneficiaries. On, average, the reintegration rate of EGF beneficiaries, which is the main indicator of the fund's effectiveness, is 60%. The effectiveness of the EGF in terms of helping workers returning to work is strongly influenced by external factors (i.e. local labour market demand). Therefore, the external evaluators pointed out that the success of the EGF should not be only measured by number of reintegrated workers but rather should consider the more long-lasting effects like new skills, qualifications, self-confidence and social networks gained from participation in EGF measures. However, more could be done to improve the visibility of the outcomes of EGF cases.

As to the added value of the EGF, the study shows that the fund clearly adds value over and above what could be achieved by Member States alone by: increasing the number and variety of services offered; helping a larger number of workers and self-employed; allowing experimentation with 'new' measures; and strengthening partnerships between stakeholders (e.g. governmental bodies and worker's organisations or training providers) that continue to exist after the end of the EGF co-financed measures.

According to the external evaluators, a faster decision-making process at EU level, and simplified application process requiring less evidence and statistics would help improving the efficiency of the fund and will lift a barrier that prevents some Member States from applying for EGF support.

These recommendations were identified already in the mid-term evaluation and have been taken into consideration in the compromised text for the 2021-2027 EGF Regulation where the scope was broadened and the administrative burden of having to demonstrate that job losses were caused by globalisation or a crisis were eliminated. Consequently, this simplification is expected to speed up the mobilisation of the EGF assistance and improve its efficiency.

Besides the simplification measures from the compromised text on 2021-2027 Regulation, the COVID-19 outbreak is expected to lead to an increase number of applications for EGF support in the coming years.

### 3.2. Key achievements

<b>55</b>	<b>55 168</b>	<b>4 099</b>	<b>EUR 175 220 016</b>	<b>60%</b>
<b>applications received, excluding those withdrawn or rejected, between 2014 and 2020</b>	<b>workers targeted between 2014 and 2020</b>	<b>young people not in employment, education or training targeted between 2014 and 2020</b>	<b>of EGF contribution requested by 12 Member States between 2014 and 2020</b>	<b>average of beneficiaries who found employment following EGF intervention between 2014 and 2020</b>

The overall aim of the EGF is to ensure that the largest possible number of beneficiaries find sustainable employment as soon as possible. The main sources of information on the results achieved by the EGF are the final reports submitted by the Member States, six months after the end of the implementation.

### 3.3. Evaluations, studies and reports

In 2020, in accordance with the EGF Regulation, the Commission contracted an external study supporting the ex post evaluation of the EGF<sup>9</sup>. The evaluation study assessed to what extent the EGF has attained its objectives during the 2014-2020 period. The aim of the evaluation was to scrutinise the effectiveness, sustainability, efficiency, coherence, relevance and EU added value of the fund.

The evidence base consisted of desk-based research, targeted surveys and in-depth interviews with EU and national level stakeholders and end beneficiaries of the Fund, and a public consultation.

<sup>8</sup> <https://ec.europa.eu/social/main.jsp?catId=738&langId=en&pubId=8371&furtherPubs=yes>

<sup>9</sup> idem

According to the external study findings, the EGF has been successful in providing support to and showing solidarity with workers, self-employed persons, and (in some cases) young persons (so called 'NEETs') affected by major restructuring events. The EGF allows Member States to provide better quality measures for more targeted beneficiaries and for longer than would be possible without EGF funding. The average re-integration rate across all EGF cases from 2014-2020 is around 60%, but ranges from a low of 18% to a high of 94% for different cases. The fund remains relevant and useful, although there is room to reconsider its scope in terms of whom it targets and under what circumstances; to simplify or shorten administrative procedures; and to better monitor the results of the interventions.

The final assessment will be published in the form of a Commission Staff Working Document by the end of 2021.

#### **4. Programme 2021-2027 - Key monitoring indicators**

##### **Specific Objective 1 :EGF common indicators: change in the participants education/training and labour market situation**

###### **Indicator 1: Total EGF beneficiaries in a given case**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of beneficiaries (cumulative)
Cut-Off Date	31/12/2021
Data source	Competent authority of the Member State, for a given case.
Link to the objective	Assistance in case of major restructuring events of unexpected nature, such as the economic crisis resulting from the COVID-19 pandemic.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The actions covered by the EGF are, by definition, not programmable because restructuring events giving rise to the redundancies are unexpected. Therefore, defining in advance how many mass redundancy events will take place in any given year and what would be the profile of beneficiaries is not possible for the EGF. The baseline can be set after all final reports from 2014-2020 programming period have been submitted to the Commission by the Member States (i.e. mid-2023). The historical success rate will not be adjusted in case the expected macroeconomic environment turns to be less favourable in the EU labour market and job-placements become more difficult, due to current or future crises. The indicator will not have milestones.

## 5. Programme 2014-2020 - Key monitoring indicators

### Previous Program 1 : European Globalisation Adjustment Fund (EGF)

**Specific Objective 1 :To contribute to smart, inclusive and sustainable economic growth and to promote sustainable employment in the Union by enabling the Union to demonstrate solidarity towards and to support workers made redundant and self-employed persons whose activity has ceased as a result of major structural changes in world trade patterns due to globalisation, as a result of a continuation of the global financial and economic crisis addressed in Regulation (EC) No 546/2009, or as a result of a new global financial and economic crisis**

### Indicator 1: Proportion of redundant workers reintegrated into employment following EGF supported measures

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
0,47				0,49			0,5			0,5
	Actual Progress									Final
	0,49		0,47		0,67	0,65	0,45			

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Percentage (yearly)
Cut-Off Date	31/12/2020
Data source	The results reported by the Member States in their final reports submitted to the Commission by calendar year.
Narrative	The decrease of reintegration rate results mostly from the economic downturn caused by the COVID-19 outbreak and the measures taken by the Member States to contain the virus.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The actual results, milestones and targets are yearly.

Full metadata available at this address	
Justification of the trend	The COVID-19 crisis has led to considerable job losses, which may affect persons who have previously benefitted from EGF support and thus can impact the long-term re-integration results of the EGF. This trend was also confirmed by the final reports received in 2020, which showed that on average only 45% of beneficiaries, compared to 65% in 2019, have found a new employment following EGF implementation.

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

#### **6.1.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.1.2. Explanation and justification on the financial contribution**

Not applicable

### **6.2. Contribution to biodiversity mainstreaming**

Not applicable

### **6.3. Contribution to clean air financing**

Not applicable

### **6.4. Contribution to gender equality**

#### **6.4.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.4.2. Key achievements and performance**

The EGF Regulation provides for the Commission and the Member States to ensure that equality between men and women and the integration of the gender perspective are integral parts of and promoted during all stages of the implementation of the financial contribution from the EGF. To that end, the Member States formally confirm the respect of this principle at the time of application where they provide gender-disaggregated information of the workers targeted for assistance. This is, however, a general principle applied across the implementation and final reporting of the EGF cases and it is not relevant to estimate budget contributions.

Between 2014 and 2016, the greatest number of redundant workers benefiting from EGF support came from sectors, which traditionally employ more men than women (motor vehicles, computer, electronic, machinery and construction of buildings). As a consequence, most workers made redundant and then targeted by the EGF applications were male (75% men vs. 25% women). However, since 2017, a significant number of redundancies took place in sectors with high numbers of employed women (retail trade, call centre, wearing apparel, financial services and tourism related activities) hence 57% of men and 43% of women were targeted by the EGF between 2017-2020. In 31% of all EGF cases women represent at least 40% of the dismissed/targeted workers and in 20% of cases they are representing more than 50%.

### **6.5. Contribution to the sustainable development goals**

#### **6.5.1. Goals**

Not applicable

#### **6.5.2. Key achievements and performance**

***SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all***

The EGF contributes to ensuring inclusive and equitable quality education and promote lifelong learning opportunities for all through tailor-made trainings that aim at upgrading and updating skills and which are among the core measures offered by EGF assistance. Long-term educational programmes are also eligible for EGF funding. For example, in 2017 ‘Ericsson’ case in Sweden 80 EGF beneficiaries have increased portfolio of education to choose from, ranging from one-off training to full university degrees. EGF funding enabled the provisions that would not have been procured via the Public Employment Services.

In the 2019 ‘Goodyear’ EGF case in Germany, 60% of the targeted workers had no suitable qualification and used to held elementary occupations (including a high number of people with migrant background). Backed by EGF with EUR 2 165 231, one third of 622 beneficiaries upskilled and improved their employment level. Overall, 58% of the workers had found a new job while other 5% were participating in upskilling measures for a longer duration (e.g. getting a vocational qualification), by the reporting date.

***SDG 5 Achieve gender equality and empower all women and girls***

The EGF is helping to achieve gender equality by providing support to all dismissed workers. However, it has been observed that the greatest number of redundant workers benefiting from EGF support came from sectors, which traditionally employ more men than women (motor vehicles, computer, electronic, machinery and construction of buildings). However, since 2017, a significant number of redundancies took place in sectors with high numbers of employed women (retail trade, call centre, wearing apparel, financial services and tourism related activities). For example, in the 2017 ‘Retail’ case in Finland 1 173 women (representing 80% of total beneficiaries) were helped by EGF. EUR 2.5 million were mobilised from the EGF to support the ICT and language training, job and career coaching and job-seeking training. Overall, 84% of the beneficiaries had found a new job at the end of the implementation period.

***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

As stipulated by the EGF Regulation, the aim of the fund is to contribute to smart, inclusive and sustainable economic growth and to promote sustainable employment in the EU by enabling the Union to demonstrate solidarity towards, and to support workers made redundant. Thus, sustainability and inclusiveness are among the core values of the EGF and the Member States when drawing their application and should favour measures aiming at reintegration into sustainable employment. They are invited to show how the measures are compatible with the shift towards a resource-efficient and sustainable economy.

Furthermore, EGF measures aim particularly at disadvantaged people, helping them to return to the labour market and obtain decent work. Job creation and fostering entrepreneurship are the focus of many EGF cases. The goal to achieve higher levels of economic productivity through diversification, technological upgrading and innovation is indirectly supported by improving and updating the skills of workers made redundant due to restructuring events, and by making them ready for future job market needs.

In NUTS 2 level regions where youth unemployment rates are at least 20%, the EGF may provide personalised services to NEETs. For example, in cases implemented between 2017 and 2019 in Belgium (‘Caterpillar’ case, 1 931 beneficiaries and EUR 1.6 million of EGF funding mobilised), and in Spain (Castilla y León mining of coal case, 396 beneficiaries and EUR 1 million of EGF funding mobilised), the support offered to the young people targeted provided them with assistance that they would not have received through national mainstream services.

***SDG 10 Reduce inequality within and among countries***

The EGF is an emergency fund and is only mobilised in redundancy events that have a significant impact on the regional economy. By offering upskilling measures to workers made redundant, the EGF helps regions to offer measures to make their workers ready for future labour market needs, thereby fostering economic growth.

Some EGF cases also include measures that improve labour mobility of displaced workers. For instance, in ‘Microsoft 2’ case in Finland (883 beneficiaries and EUR 3.5 million of EGF funding mobilised) implemented between 2017 and 2019 the measures offered to the dismissed workers supported labour mobility in cooperation with the European Job Mobility Portal (EURES) services (i.e. foreign job advertisements and the exchange of experiences in online meetings).

**1. Overview****1.1. Challenges**

The European Union Solidarity Fund (EUSF), created in 2002, is activated upon request of an eligible State when major or regional natural disasters eligible for EUSF aid occur, such as earthquakes, floods, droughts, forest fires, storms, etc. Eligibility is essentially determined by total direct damage, which must exceed a threshold specific to each Member State or country negotiating their accession to the EU. The threshold serves as a proxy to justify the activation of solidarity of all Member States. It is set at national level (“major disasters”) or at NUTS 2 regional level (“regional disasters”). The number and size of eligible disasters determine the amount of spending in a given year. The total annual budgetary allocation to the Fund laid down in the multiannual financial framework is a ceiling, rather than a spending target. The Fund is therefore not programmable as it entirely depends on the unpredictable occurrence, nature and magnitude of these disasters.

In the context of the EU response to the coronavirus outbreak, the scope of the EUSF has been extended as of 1 April 2020 to encompass major public health emergencies. The eligibility for the latter is determined at national level and based on specific thresholds.

## 1.2. Mission (general objectives)

Solidarity is one of the core values of the European Union and a guiding principle of the European integration process. The EUSF is a budgetary instrument designed to provide financial means expressing EU solidarity by contributing to post-disaster relief in Member States and accession countries confronted with devastating natural disasters and major public health emergencies.

## 1.3. Specific objectives

To grant financial assistance to Member States or countries negotiating their accession to the EU in the event of a major natural disaster or a major public health emergency with serious repercussions on living conditions, the natural environment or the economy for the financing of emergency operations undertaken by the public authorities in support of the affected population.

## 1.4. Public intervention context

## 1.5. Actions

The Fund can be used to (re-)finance public emergency and recovery operations from day one of the disaster or of the health emergency. In case of natural disaster, it can finance restoring basic infrastructure to working order, providing temporary accommodation and funding rescue services to help the population affected, securing of preventive infrastructure (e.g. dams/dykes) and cleaning-up operations. In case of health emergency, it can finance providing rapid assistance, including medical, to the affected population; protecting the population from the risk of being affected, including prevention, monitoring or control of the spread of diseases, combating severe risks to public health or mitigating their impact on public health.

The EUSF was set up with the aim of partly contributing to the expenditure linked to natural disasters or health emergencies. The Fund is limited in principle to non-insurable damage and does not compensate for private losses. Long-term action – such as economic redevelopment and prevention –, as well as, support to businesses and labour market or compensation of losses are not eligible for EUSF aid.

## 1.6. Delivery mode

The EUSF assistance is implemented through shared management (indirect management for countries negotiating their accession to the EU). However, in order to minimise the administrative burden on countries struggling with a serious disaster and to maximise the budgetary effect, there are no programming and no national co-financing requirements.

Financial assistance from the EUSF is mobilised from appropriations raised by the Council and the European Parliament over and above the normal EU budget appropriations. This ensures that in each case the aid comes as an expression of solidarity with the full backing of Member States and the Parliament, not just as an administrative act of the Commission. The Commission cannot activate the EUSF upon its own initiative.

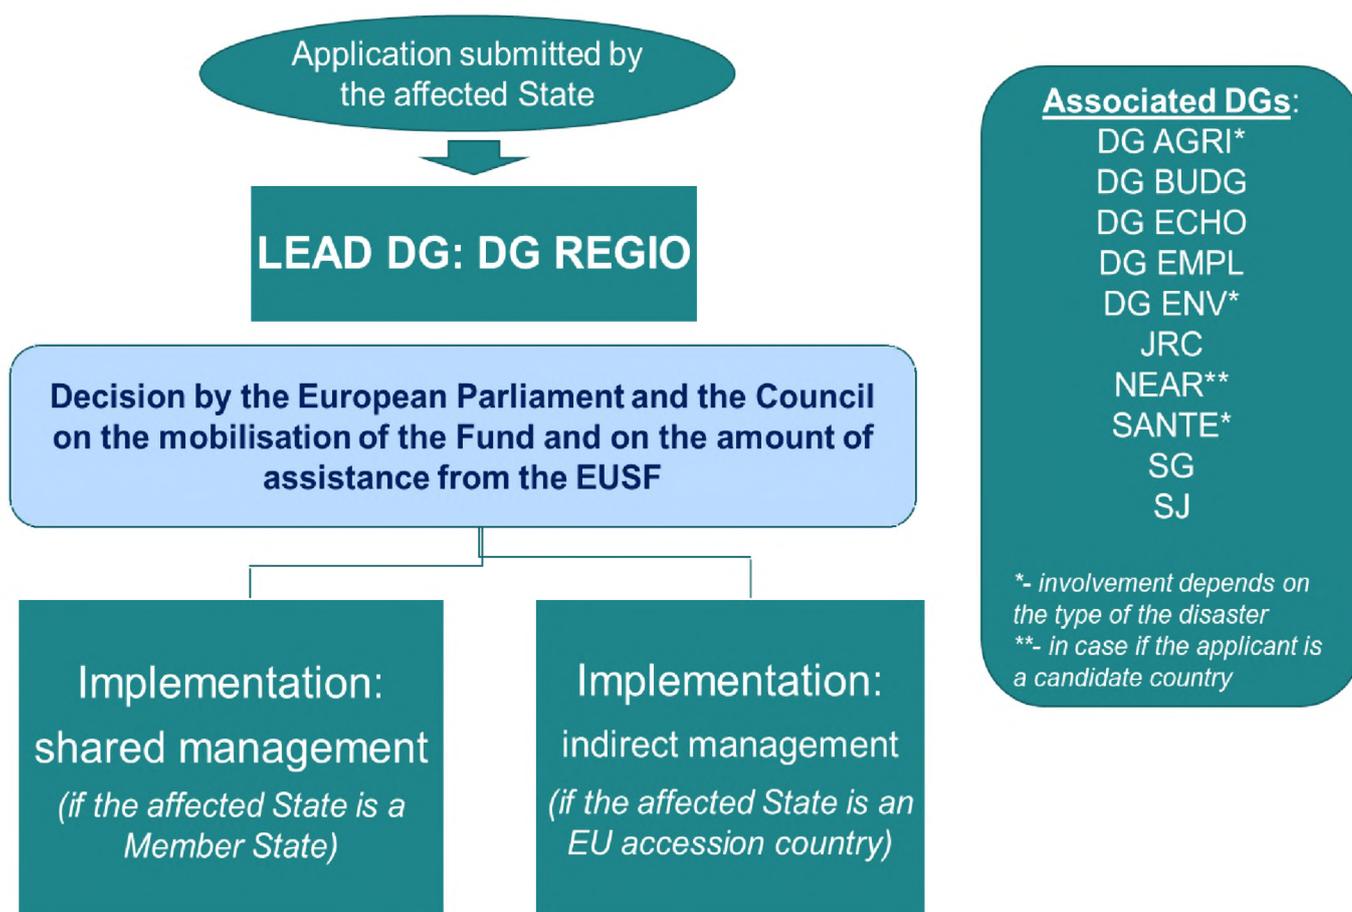

Once the appropriations become available in the EU budget, the Commission adopts a decision awarding the aid to the affected State, which receives it immediately and in a single instalment. Once the aid is paid out, the affected State is responsible for the implementation including the selection of operations and their audit and control. Emergency measures may be financed retroactively from day one of the disaster.

## 1.7. Graphic overview of the programme structure

Figure 1. Concise EUSF process

Figure 2. Graphic overview of the EUSF implementation structure and actors

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2020/461 of the European Parliament and of the Council of 30 March 2020 amending Council Regulation (EC) No 1012/2002 in order to provide financial assistance to Member States and to countries negotiating their accession to the Union that are seriously affected by a major public health emergency (OJ L 99, 31.3.2020, p. 9–12).	2021 - 2027	

### 1.8.2. Legal basis explanation

As part of the Coronavirus Response Investment Initiative (CRII), the Regulation (EU) 2020/461 of the European Parliament and of the Council of 30 March 2020 amended the EUSF Regulation by including major public health emergencies within the scope of the EUSF. Since 1 April 2020, EU Member States and accession countries can apply for support from the EUSF also for public health emergency reasons to alleviate the burden from the first response measures.

The Regulation (EU) 2020/461, amending the EUSF Regulation (EC) 2012/2002, increased the percentage of the advance payments from 10% to maximum 25% of the anticipated financial contribution from the EUSF, limited to a maximum amount of EUR 100 million (increased from the previous EUR 30 million).

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>98,0</b>	<b>50,0</b>	<b>50,0</b>	<b>50,0</b>	<b>50,0</b>	<b>50,0</b>	<b>50,0</b>	<b>398,0</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The EUSF is part of the special instruments in the MFF, outside of the EU budget. The maximum annual amount available under MFF 2014-2020 is EUR 500 million in 2011 prices.

### 1.10. Relevant websites providing more information

[https://ec.europa.eu/regional\\_policy/en/funding/solidarity-fund/](https://ec.europa.eu/regional_policy/en/funding/solidarity-fund/)

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

The multi-annual financial framework (MFF) Regulation for the period 2021-2027 has merged the EUSF and the Emergency Aid Reserve (EAR) in the Solidarity and Emergency Aid Reserve (SEAR). The maximum annual amount for the SEAR is EUR 1.20 billion (2018 prices), or EUR 1.27 billion in current prices in 2021.

In order to avoid early depletion of the annual allocation, in accordance with Article 9(4) of the MFF Regulation, 25% of the total 2021 allocation of SEAR (EUR 318.4 million) needs to be retained until 1 October 2021 and no transfer of unused funds can be conducted between the different components of SEAR prior to 1 September. In addition, until 1 September 2021, the maximum amount available for the EUSF is 50% of the overall SEAR amount available until 1 September 2021, i.e., EUR 477.5 million.

#### The EUSF implementation status

By the deadline of 24 June 2020, the European Commission had received **22 applications** (19 from Member States and three from accession countries) for financial contribution from the EUSF for major health emergency due to COVID-19.

All applications received were assessed in a single package to ensure consistent and equitable treatment. Given the unprecedented nature of the emergency dealt with and the important workload due to the simultaneous assessment of 22 applications, the Commission has set up a special Inter-service coordination group consisting from different Commission services in order to ensure better coordination and benefit from the specialised expertise of the different services. The Commission thoroughly looked into several aspects, such as the eligibility of the expenditure (including, analysing if the presented expenditure covered eligible operations and if the expenditure fell within the eligibility period), emergency nature of expenditure and direct link to the COVID-19 health emergency, the consistency of the overall assessment. Following a series of exchanges with the responsible national authorities to clarify issues regarding the eligibility of certain types of expenditure declared the Commission has finalised its assessment in February 2021.

As solidarity was the main justification for the creation of the EUSF, the Commission took the view that aid from the Fund should be progressive. The methodology for calculating the EUSF aid was set out in the 2002-2003 Annual Report on the EUSF and accepted by the European Parliament and the Council. In the case of major public health emergencies, the Commission will apply a similar method for determining aid amounts as for natural disasters: a country receives 2.5% of the total amount of eligible public expenditure up to the country specific threshold for major health emergencies, plus 6% of the part of the public expenditure exceeding the threshold. This was also communicated through the Commission's website<sup>1</sup>. As this calculation led to a total amount for all countries exceeding the available budget resources, the amounts per country were reduced on a pro rata basis.

As regards the EUSF applications submitted by Albania, Austria, Belgium, Croatia, Czechia, Estonia, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Montenegro, Portugal, Romania, Serbia and Spain related to the major public health emergency caused by the COVID-19 pandemic, the Commission services therefore propose to the budget authority to mobilise the following aid amounts:

In **February 2021**, the Commission launched the adoption of the Communication on the application for a financial contribution from the EUSF presented by twenty applicant countries (Albania, Austria, Belgium, Croatia, Czechia, Estonia, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Montenegro, Portugal, Romania, Serbia, Spain) in response to the major public health emergency caused by the COVID-19 pandemic in early 2020. After the adoption of the said Communication the Commission intends to submit a proposal for mobilisation of the financial contribution from the EUSF to the European Parliament and the Council in March 2021, mobilising the resources available while ensuring a fair distribution among the applicant countries.

In the last 2 months of 2020, **four new natural disaster applications** have been received by the Commission: two for Greece (Evia floods and cyclone Ianos), France (storm Alex) and Italy (storm Alex). The applications from Greece and France were considered eligible, while the one from Italy failed to reach the minimum threshold both for national and regional disaster and was rejected. In January 2021, Greece submitted **another eligible EUSF application** (earthquake in Samos). The respective implementation decisions to pay advances have been adopted (due to the budgetary constraints – only 10% of estimated total aid amount to each of four eligible applications).

<sup>1</sup> [https://ec.europa.eu/regional\\_policy/en/funding/solidarity-fund/covid-19](https://ec.europa.eu/regional_policy/en/funding/solidarity-fund/covid-19)

In February 2021, the Commission launched the adoption of the Communication on the applications for a financial contribution from the EUSF presented by Greece relating to the floods in Sterea Ellada, in August 2020, the damages caused by the Cyclone Ianos, in September 2020, the earthquake in islands of Samos, Icaria and Chios, in October 2020, and presented by France relating to the storm Alex in Provence-Alpes-Côtes d'Azur region, France, in October 2020.

After the adoption of communications to the College for both health emergency and natural disaster applications, BUDG will prepare the necessary Draft Amending Budget and a request for transfer of payment appropriations under Article 31 of Financial Regulation, with expected adoption by the Parliament and the Council by May or June.

## 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

SUM OF YEARLY BUDGET AMOUNTS 2014-2020	EUR 3 114.5 million
--	---------------------

EUSF can be activated in case of need and as such are not predictable and programmable. The instrument has a ceiling of EUR 500 million (2011 prices) per year, of which unused parts can be carried-over to the following year under specific conditions.

	Country	Total claimed public expenditure (EUR)	Total eligible public expenditure accepted by the EC (EUR)	major health emergency threshold (million EUR)	Potential aid amount (EUR)	Pro-rata aid amount (EUR)	Advance payment	balance payment (EUR)
1	Albania	54,998,000	54,755,654	38.852	1,925,519	905,271	0	905,271

## 3. How is the programme performing ?

### 3.1. Performance

#### 3.1.1. Introduction

##### *Applications for natural disasters - implementation status (2019-2020)*

The EUSF is activated upon request of an eligible State when major or regional natural disasters eligible for EUSF aid occur, such as earthquakes, floods, droughts, forest fires, storms, etc. Eligibility is essentially determined by total direct damage which must exceed a threshold specific to each Member State/country negotiating EU accession or region at NUTS level 2. The number and size of eligible disaster determines the amount of spending in a given year. The total annual budgetary allocation to the Fund that is laid down in the multi-annual financial framework (MFF) is a ceiling rather than a spending target. The EUSF is therefore not programmable, as it entirely depends on the unpredictable occurrence, nature and magnitude of these disasters.

In 2019, the Commission received four natural disaster applications:

<sup>2</sup> an amount of € 844,010 will be recovered from Croatia.

- The first application came from **Austria** regarding extreme weather conditions of 2018. Austria received the payment of the EUSF financial contribution amounting to EUR 8 154 899 in October 2019.
- The second application came from **Greece** regarding to the storm in Crete early 2019. Greece received the advance payment of the EUSF financial contribution amounting to EUR 455 252 in August 2019 and the balance payment amounting to EUR 4 097 265 in February 2020.
- The third application was submitted by **Portugal** regarding the hurricane Lorenzo in the Azores in 2019. Portugal received the advance payment of the EUSF financial contribution amounting to EUR 821 270 in late December 2019. The balance payment amounting to EUR 7 391 427 in July 2020.
- Finally, the fourth application in 2019 came from **Spain** regarding the extreme weather DANA which provoked floods in the regions of Valencia, Murcia, Castilla-La Mancha and Andalucía in September 2019. Spain received the advance payment of the EUSF financial contribution amounting to EUR 5 674 336 in early March 2020 and the balance payment of EUR 51 069 022 in November 2020.

In 2020, the Commission received nine natural disaster applications, namely:

- The application from **Italy** regarding the extreme weather damages in late 2019 causing severe damage from flooding and landslides and culminating in the flooding of Venice. Italy received the payment of the EUSF financial contribution amounting to EUR 211 707 982 in October 2020.
- The application from **Austria** following the extreme weather events of November 2019. The south-western parts of Austria suffered from severe flooding, in particular in Carinthia and Eastern Tyrol. Austria received the payment of the EUSF financial contribution amounting to EUR 2 329 777 in August 2020.
- The application from **Spain** following the damage caused by storm Gloria in January 2020. However, the application failed to reach the applicable thresholds. The damage caused by storm Gloria in the six regions taken together remained considerably below 1.5% of the weighted regional GDP of the affected regions. Moreover, the damage did not reach the 1.5% threshold in any of the six regions individually. Thus, **the application was rejected**.
- The application from **Croatia** following the devastating earthquake that hit the city of Zagreb and its surroundings on 22 March 2020. Croatia received the advance payment of the EUSF financial contribution amounting to EUR 88 951 877 in early August 2020 – this was the highest advance payment ever paid out under the EUSF. The balance payment amounting to EUR 594 788 646 was paid in December 2020. The total assistance to Croatia under the EUSF amounts to EUR 683 740 523 - the second highest amount ever paid by the Fund for emergency and recovery operations after a natural disaster.
- The application from **Poland** regarding the floods in the Podkarpackie province in June 2020. Poland received the payment of the EUSF financial contribution amounting to EUR 7 071 280 in December 2020.
- The application from **Greece** regarding the floods in the region of Sterea Ellada of August 2020.
- The application from **Greece** regarding relating to the damages caused by the Mediterranean Cyclone Ianos in September 2020.
- The application from **France** relating to the damages caused by the storm Alex in October 2020.
- Application from **Italy** relating to the damages caused by the storm Alex in regions Piedmont, Liguria and Valled'Aosta in October 2020. However, the application failed to reach the threshold both for national and regional disaster, therefore **it was rejected**.

The Commission has started assessment of the two applications from Greece and applications from France and Italy (all received in the last months of 2020) but the decisions regarding the possible awarding of the EUSF assistance will be taken in 2021.

For each case, following the adoption of the mobilisation decision by the budgetary authority and prior to making the payment, the Commission adopts an implementing decision addressed to the beneficiary State, specifying the conditions for the use of the money (with indicative amounts per measure). Spending is limited to the four types of eligible emergency and recovery operations laid down in the EUSF Regulation. Eligibility starts however from the first occurrence of the damage and costs (for emergency and recovery operations) taken before the Commission's decision may therefore be eligible for the intervention too. After the end of the 18 months implementation period, the beneficiary State has six months to present a report on the implementation of the financial contribution from the Fund with a statement justifying the expenditure incurred. It should be noted that the EUSF was not set up with the aim of meeting all the costs linked to natural disasters. The Fund is limited in principle to non-insurable damage and does not compensate for private losses. Long-term action – such as lasting reconstruction, economic redevelopment and prevention – are not eligible for EUSF aid. In most of the above cases, the beneficiary States decided to dedicate EUSF aid for the restoration of public infrastructure.

### *The EUSF applications in relation to the major public health emergency caused by the COVID-19 pandemic in 2020*

In December 2019, a pneumonia epidemic of unknown origin was reported to the WHO from Wuhan, China. This was later identified as a new strain of coronavirus that had not been previously known in humans - Coronavirus disease 2019 (COVID-19). On 30 January 2020, the WHO declared an epidemic emergency of international scale due to the new coronavirus epidemic. In

2020 as part of the Coronavirus Response Investment Initiative (CRII), the EUSF Regulation was amended<sup>3</sup> by including major public health emergencies within the scope of the EU solidarity principle.

Since 1 April 2020, EU Member States and accession countries can apply for support from the EU Solidarity Fund also for public health emergency reasons to alleviate the burden from the first response measures, such as provision of medical assistance and purchase of medical equipment, support to vulnerable groups, measures to contain the spreading of the disease, strengthening preparedness and others.

Subsequently, by the deadline of 24 June 2020 the Commission received 22 applications for a financial contribution from the EUSF. Overall, 19 EU Member States (Austria, Belgium, Croatia, Czechia, Estonia, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Poland, Portugal, Romania, Slovenia and Spain) and three accession countries (Albania, Montenegro and Serbia) requested assistance in response to the major public health emergency caused by the COVID-19 pandemic in early 2020.

In 2020, based on its preliminary assessment, the Commission paid in total the amount of EUR 132 736 830 in advance payments to Germany, Ireland, Greece, Spain, Croatia, Hungary, and Portugal. The seven Member States were the only ones making specific request and entitled to receive advance payments, in line with Article 4(2)(a) of the amended EUSF Regulation<sup>4</sup>.

All applications received were assessed in a single package to ensure consistent and equitable treatment. Given the unprecedented nature of the emergency dealt with and the important workload due to the simultaneous assessment of 22 applications, the Commission has set up a special Inter-service coordination group consisting from different Commission services in order to ensure better coordinated and benefit from the specialised expertise of the different services. The Commission thoroughly looked into several aspects, such as the eligibility of the expenditure (including, analysing if the presented expenditure covered eligible operations and if the expenditure fell within the eligibility period), emergency nature of expenditure and direct link to the COVID-19 health emergency, the consistency of the overall assessment. Following series of exchanges with the responsible national authorities to clarify issues regarding the eligibility of certain types of expenditure declared the Commission is finalising the assessment. The Commission intends to submit a proposal for financial contribution to the European Parliament and the Council in the first quarter of 2021, mobilising the resources available while ensuring a fair distribution among the applicant countries.

### 3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

### 3.1.3. Previous programme performance

#### **Applications for natural disasters - implementation status (2019-2020)**

Members States and regions are increasingly confronted with natural disasters, which often appear to be linked to climate change. In 2020, the EU Solidarity Fund (EUSF) continued to offer them vital support, adding to financial relief but also a clear and tangible sign of European solidarity to the populations affected.

**In 2020 more than EUR 969 million** of the EUSF assistance were awarded to 6 Member States and paid out in order to help them finance emergency and recovery operations after the natural disasters which affected those countries. Furthermore, support from the EUSF helps to increase the Member States' and regions' resilience and preparedness to address the consequences of these natural disasters.

In 2019, the Commission received four natural disaster applications out of which **for three applications the payments were done in 2020:**

- The application from **Greece** regarding to the storm in Crete early 2019 received the advance payment of the EUSF financial contribution amounting to EUR 0.5 million in August 2019 and the balance payment amounting to **EUR 4.1 million in February 2020**.
- The application submitted by **Portugal** regarding the hurricane Lorenzo in the Azores in 2019 received the advance payment of the EUSF financial contribution amounting to EUR 0.8 million in late December 2019. The balance payment amounting to **EUR 7.4 million in July 2020**.
- The application from **Spain** regarding the extreme weather DANA which provoked floods in the regions of Valencia, Murcia, Castilla-La Mancha and Andalucía in September 2019: Spain received the advance payment of the EUSF financial contribution amounting to **EUR 5 674 336 in early March 2020** and the balance payment of **EUR 51 069 022 in November 2020**.

In 2020, the Commission received **nine natural disaster applications**, namely:

<sup>3</sup> Regulation (EU) 2020/461 of the European Parliament and of the Council of 30 March 2020.

<sup>4</sup> Council Regulation (EC) No 2012/2002 of 11 November 2002 establishing the European Union Solidarity Fund (OJ L 311, 14.11.2002, p. 3) as amended by Regulation (EU) No 661/2014 of the European Parliament and the Council of 15 May 2014 (OJ L 189, 27.6.2014, p. 143) and by Regulation (EU) No 461/2020 of the European Parliament and the Council of 30 March 2020 (OJ L 99, 31.3.2020, p. 9).

- The application from **Italy** regarding the extreme weather damages in late 2019 causing severe damage from flooding and landslides and culminating in the flooding of Venice. Italy received the payment of the EUSF financial contribution amounting to **EUR 211.7 million in October 2020**.
- The application from **Austria** following the extreme weather events of November 2019. The south-western parts of Austria suffered from severe flooding, in particular in Carinthia and Eastern Tyrol. Austria received the payment of the EUSF financial contribution amounting to **EUR 2.3 million in August 2020**.
- The application from **Spain** following the damage caused by storm Gloria in January 2020. However, the application failed to reach the applicable thresholds. The damage caused by storm Gloria in the six regions taken together remained considerably below 1.5% of the weighted regional GDP of the affected regions. Moreover, the damage did not reach the 1.5% threshold in any of the six regions individually. Thus, **the application was rejected**.
- The application from **Croatia** following the devastating earthquake that hit the city of Zagreb and its surroundings on 22 March 2020. Croatia received the advance payment of the EUSF financial contribution amounting to **EUR 89 million in early August 2020** – this was the highest advance payment ever paid out under the EUSF. The balance payment amounting to **EUR 594.8 million was paid in December 2020**. The total assistance to Croatia under the EUSF amounts to EUR 683.7 million - the second highest amount ever paid by the Fund for emergency and recovery operations after a natural disaster.
- The application from **Poland** regarding the floods in the Podkarpackie province in June 2020. Poland received the payment of the EUSF financial contribution amounting to **EUR 7.1 million in December 2020**.
- The application from **Greece** regarding the floods in the region of Sterea Ellada of August 2020.
- The application from **Greece** regarding relating to the damages caused by the Mediterranean Cyclone Ianos in September 2020.
- The application from **France** relating to the damages caused by the storm Alex in October 2020.
- Application from **Italy** relating to the damages caused by the storm Alex in regions Piedmont, Liguria and Valled'Aosta in October 2020. However, the application failed to reach the threshold both for national and regional disaster, therefore **it was rejected**.

### **The EUSF applications in relation to the major public health emergency caused by the COVID-19 pandemic in 2020**

In December 2019, a pneumonia epidemic of unknown origin was reported to the WHO from Wuhan, China. This was later identified as a new strain of coronavirus that had not been previously known in humans - Coronavirus disease 2019 (COVID-19). On 30 January 2020, the WHO declared an epidemic emergency of international scale due to the new coronavirus epidemic. In 2020 as part of the Coronavirus Response Investment Initiative (CRII), the EUSF Regulation was amended<sup>5</sup> by including major public health emergencies within the scope of the EU solidarity principle.

Since 1 April 2020, EU Member States and accession countries can apply for support from the EU Solidarity Fund also for public health emergency reasons to alleviate the burden from the first response measures, such as provision of medical assistance and purchase of medical equipment, support to vulnerable groups, measures to contain the spreading of the disease, strengthening preparedness and others.

Subsequently, by the deadline of 24 June 2020 the Commission received 22 applications for a financial contribution from the EUSF. Overall, 19 EU Member States (Austria, Belgium, Croatia, Czechia, Estonia, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Poland, Portugal, Romania, Slovenia and Spain) and three accession countries (Albania, Montenegro and Serbia) requested assistance in response to the major public health emergency caused by the COVID-19 pandemic in early 2020.

In 2020, based on its preliminary assessment, the Commission paid in total the amount of EUR 132.7 million in advance payments to Germany, Ireland, Greece, Spain, Croatia, Hungary, and Portugal. The seven Member States were the only ones making specific request for an advance payment and entitled to receive advance payments, in line with Article 4(2)(a) of the amended EUSF Regulation<sup>6</sup>. The EUSF Regulation envisages the possibility to ask for advance payments only for EU Member States.

For details on the assessment of the EUSF applications regarding the major public health emergency caused by the COVID-19 pandemic – see section 2.1.

### **3.2. Key achievements**

In 2020, the Commission awarded and paid out the EUSF contribution amounting to **EUR 969.8 million for six affected applicant States** relating to the **natural disasters** occurred in 2019 and 2020: namely hurricane Lorenzo in Portugal (regional disaster), extreme weather in Spain (regional disaster), extreme weather in Italy (major disaster), extreme weather in Austria (neighbouring state natural disaster), earthquake in Croatia and floods in Poland (regional disaster).

For the natural disasters, the EUSF contribution is determined by awarding 2.5 % for the part of total direct damage up to the ‘major disaster’ threshold and 6 % for the part of the damage exceeding the threshold; accordingly, for regional disasters and disasters accepted under the ‘neighbouring country’ provision, the EUSF contribution is 2.5 % of total direct damage.

EUR 969 805 617	31	6
The amount of the EUSF awarded and the contribution paid out for 6 affected applicant States related to the <b>natural</b> disasters occurred in 2019 and 2020	New EUSF application received in 2020: - 9 <u>natural disaster applications</u> ; - 22 <u>major public health emergency applications</u> .	Applications relating to the <b>natural</b> disasters assessed and the assistance from the EUSF awarded

In addition, in 2020, based on its preliminary assessment, the Commission paid in total the amount of **EUR 132.7 million in advance payments** to Germany, Ireland, Greece, Spain, Croatia, Hungary, and Portugal in relation to their applications for assistance in response to the major public health emergency caused by the COVID-19 pandemic in early 2020.

**NOTE:** The established indicators (including financial data) are reported on the year when the awarded EUSF amount has been paid. Therefore the information on the advance payments for COVID-19 health emergency has not been included in the table regarding the key achievements.

The overall impact of the EUSF is targeted on the affected population. However as, by its nature, the EUSF cannot follow the programme approach, it is usually not possible to identify the specific part of the population or areas covered by the EUSF intervention alone as most emergency and recovery operations are substantially covered by the beneficiary State's own budget.

### 3.3. Evaluations, studies and reports

An in-depth ex-post evaluation to assess the financial assistance provided by EUSF over the period 2002-2016 was completed in 2019 (SWD (2019)187). The purpose of the ex-post evaluation was to assess the implementation and performance of the financial assistance provided by the EUSF over the period 2002-2016. The evaluation confirmed the effectiveness of the Fund and the positive effects of synergies between the EU Solidarity Fund and other EU policy instruments for disaster risk management. It further concluded that the EUSF brings clear EU added value as a toolkit for disaster intervention and that consideration should be given to policy actions that increase the potential for the Fund to intervene.

[https://ec.europa.eu/regional\\_policy/sources/docgener/evaluation/pdf/eusf\\_2002\\_2016/eusf\\_2002\\_2016\\_swd\\_en.pdf](https://ec.europa.eu/regional_policy/sources/docgener/evaluation/pdf/eusf_2002_2016/eusf_2002_2016_swd_en.pdf)

## 4. Programme 2021-2027 - Key monitoring indicators

**Specific Objective 1 :Grant financial assistance to Member States or countries negotiating their accession to the EU in the event of a major natural disaster or a major public health emergency**

**Indicator 1:Population of the EUSF supported countries and regions**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track

**1. Overview****1.1. Challenges**

To meet the objective of a climate-neutral EU by 2050, and the EU target of a net domestic reduction in greenhouse gas emissions of at least 55% by 2030 compared to 1990, there is a need to support and incentivize innovative and low-carbon technologies.

The challenge is to enable EU companies to get in pole position developing, deploying and commercialising low-carbon solutions.

Low-carbon technology demonstration projects are inherently high-risk endeavours and struggle to attract the required capital. Yet they have potentially vast positive beneficial effects, well beyond the individual company or Member State that finances them or carries them out, which warrants public support at the EU level. In addition, the *IF* is funded from revenues arising directly from EU policies, i.e. from the auctioning of EU ETS allowances.

## 1.2. Mission (general objectives)

*IF* aims at catalysing funding for highly innovative technologies and flagship projects in all Member States that can yield significant emission reductions by:

- Creating the right financial incentives to invest now in the next generation of technologies needed for the EU's low-carbon transition; and
- Boosting growth and competitiveness by empowering EU companies with a first-mover advantage to become global technology leaders.

The ultimate goal is to help businesses and industry invest in clean technologies, thus boosting economic growth, creating local future-proof jobs and reinforcing Europe's technological leadership on a global scale.

## 1.3. Specific objectives

*IF*'s objectives are to:

1. support projects with highly innovative technologies, processes or products, that are sufficiently mature and have a significant potential to reduce greenhouse gas emissions;
2. offer financial support tailored to market needs and risk profiles of eligible projects, while attracting additional public and private resources;
3. ensuring that *IF*'s revenues are managed in accordance with the objectives of the EU Emission Trading System.

## 1.4. Public intervention context

Under the Treaty of Lisbon, environment policy is a shared competence between the Union and the Member States (Article 4 TFEU). Article 191 of the Treaty on the Functioning of the European Union (TFEU) makes combating climate change an explicit objective of EU environmental policy. The Innovation Fund is established by the EU Emission Trading System (EU ETS) Directive (Directive 2003/87/EC) and the Commission Delegated Regulation 2019/856 (see section 1.8 below).

Member States actively participate in the implementation of the Innovation Fund. They are consulted on key decisions (e.g. decisions to launch call for proposals, maximum amount for the PDA, list of pre-selected projects, etc.). If requested by the Commission, Member States will also advise and assist the Commission in setting general orientations for the Innovation Fund, as well as in addressing problems in the implementation of a project.

## 1.5. Actions

*IF* supports highly innovative technologies by sharing their risk with project promoters via:

(a) Grants through calls for large and small-scale projects focusing on:

- innovative low-carbon technologies and processes in energy-intensive industries, including products substituting carbon-intensive ones;
- carbon capture and utilisation;
- construction and operation of carbon capture and storage;
- innovative renewable energy generation;
- energy storage.

(b) Contributions to blending operations under the Union investment support instrument; and

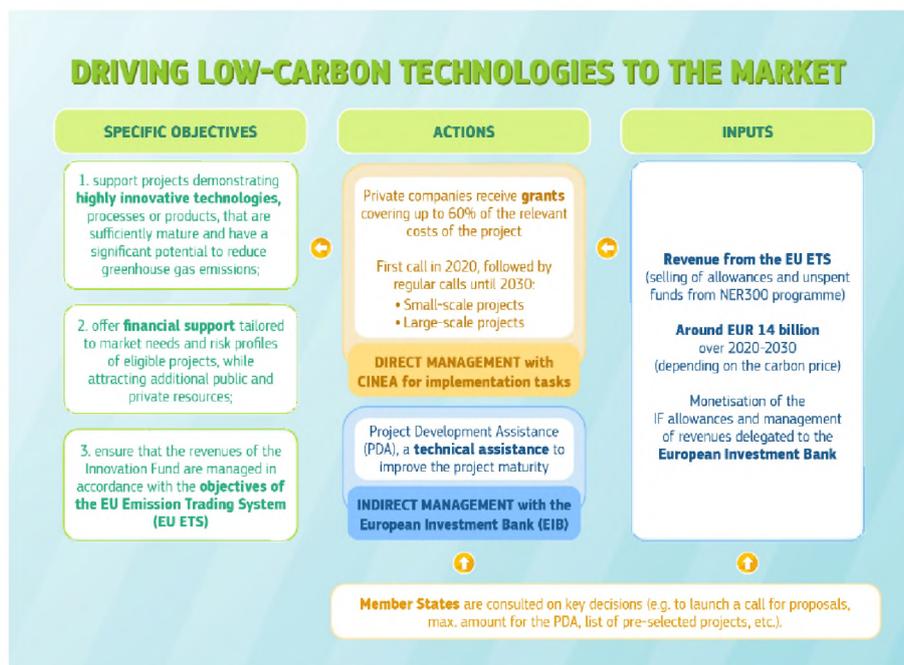

(c) Prizes and procurement.

*IF* resources may contribute to InvestEU Financial Instruments, to provide debt or equity financing to clean-tech innovative projects.

## 1.6. Delivery mode

*IF* is implemented in direct management by the Directorate-General for Climate Action (DG CLIMA), with the assistance of the European Climate, Infrastructure and Environment Executive Agency (CINEA) to whom the implementation of the grant component of the programme is delegated. Some activities are implemented in indirect management, through the European Investment Bank, for the management of the Project Development Assistance support and the channelling of *IF* resources via financial instruments. The monetisation of the Innovation Fund allowances and the management of the Innovation Fund revenues have also been delegated to the European Investment Bank.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
	2020 - 2027	

### 1.8.2. Legal basis explanation

Legal basis	Period of application	Reference amount (EUR million)
Directive (EU) 2018/410 amending Directive 2003/87/EC to enhance cost-effective emission reductions and low-carbon investments	2020-2030	N/A
Commission Delegated Regulation 2019/856 of 26 February 2019 supplementing Directive 2003/87/EC of the European Parliament and of the Council with regard to the operation of the Innovation Fund	2020-2030	N/A

The revised EU Emissions Trading System (Directive (EU) 2018/410) is providing the revenues for the Innovation Fund from the auctioning of 450 million allowances from 2020 to 2030, as well as any unspent funds from the NER300 programme.

The revised EU ETS Directive defines the basic elements of the Innovation Fund, such as its size, scope, maximum funding rate (i.e. the maximum support that can be given to a project), and disbursement rules. It stipulates that the Innovation Fund will be endowed with the revenues from the auctioning of at least 450 million allowances from 2020 to 2030, and any unspent revenues from the second call of the predecessor programme, the NER 300, which translates into around EUR 14 billion (at carbon price of €30/tCO<sub>2</sub>)

The rules on the operation of the Innovation Fund are set out in Commission delegated regulation 2019/856, with the definition of relevant costs and funding rate, disbursement of grants, project selection procedure, monetisation of allowances, and governance arrangements.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>								

#### 1.8.4. Financial programming explanation

#### 1.9. Link with the 2014-2020 MFF

IF builds on its predecessor, the off-budget fund NER 300 programme, but it is open to projects from energy-intensive industries, has a larger grant coverage, provides support in more flexible ways, and—following recommendations from the Court of Auditors—has a streamlined governance and simplified decision-making.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

DG CLIMA worked closely with INEA, which manages the IF grants since June 2020, to prepare the timely onboarding of the programme, including the delegation package and the Memorandum of Understanding. Despite the COVID-19 outbreak, DG CLIMA successfully performed all preparatory tasks for the timely launch of the first two calls in 2020.

A first call for proposals was launched in July 2020, amounting to €1 billion and addressing large-scale projects. It registered very high interest, with a high amount of proposals received (i.e. 311 project proposals received). The two-stage evaluation of the proposals started on time and will continue in 2021.

A second call for proposals was launched in December 2020, amounting to €100 million and addressing small-scale projects. It will be opened for submission of applications until 10 March 2021.

DG CLIMA actively engaged with stakeholders and organised a series of technical workshops preparing for the calls for proposals, and dedicated webinars to answer applicants' questions when the calls were open. In September 2020, financiers and industry representatives gathered virtually during the 1<sup>st</sup> clean tech virtual conference, to exchange views on what makes an innovative clean tech project attractive for financiers, how to balance profitability and innovativeness, how to structure the financing of innovative clean tech projects, and what added value the Innovation Fund can bring to investors and project promoters. A second virtual conference focused on how the call for small-scale projects under the Innovation Fund can help innovative clean tech projects take off and reach the market.

On the revenue side, the implementation is making good progress. A contribution agreement was signed in January 2021 between the EU and the EIB ensuring that the monetisation of the allowances set aside for the Innovation Fund is carried out in accordance with the Auctioning Regulation and the revenues of the Innovation Fund are managed in accordance with the objectives of the ETS Directive. An initial letter of commitment was signed by both the EIB and the EC enabling the auctioning of 50 million emission allowances in 2020 yielding 1 333 823 005 EUR (or an average realised carbon price of 26,68 EUR/ton CO<sub>2</sub>). In addition, 746 627 156 EUR of unspent revenues from the second call of the predecessor programme, the NER 300 were transferred to the Innovation fund since 2020.

## 3. How is the programme performing ?

### 3.1. Performance

#### 3.1.1. Introduction

The Innovation Fund is the successor to the funding programme for innovative low-carbon energy demonstration projects from EU ETS revenues – the so-called NER 300 programme. The experience with the NER 300 implementation provided valuable insights for the design of the Innovation Fund, in particular through:

- Recommendations made by the European Court of Auditors ([ECA special report N° 24/2018](#)).
- The NER 300 lessons learnt study
- Several workshops and consultations hold with stakeholders and experts to share their experiences with the NER 300 implementation

The IF builds on the lessons learned from NER300 programme such as challenging investment conditions (low carbon price), lack of public and private financing in the early stages, the programme's rigid design, complex project selection and decision-making and generally low maturity of projects.

It is too early to report on the performance of the Innovation Fund since first calls for proposals were launched in 2020. However, the first call is promising, with a number of proposals received exceeding expectations, including many good quality proposals. Although the evaluation is still ongoing, the Commission expects that flexibility clause allowing for a 20% top-up of the initial call budget will be fully used, also because the IF revenues exceed expectations.

### 3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

### 3.1.3. Previous programme performance

## 3.2. Key achievements

## 3.3. Evaluations, studies and reports

## 4. Programme 2021-2027 - Key monitoring indicators

**Specific Objective 1 :Support projects demonstrating highly innovative technologies, processes or products that are sufficiently mature and have a significant potential to reduce greenhouse gas emissions**

**Indicator 1:Absolute GHG emissions avoidance planned/achieved**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Reduction of GHG emissions (in tons of CO2 eq.) [cumulative ]
Cut-Off Date	
Data source	CINEA database
Link to the objective	The IF aims at supporting projects with a significant potential to reduce greenhouse gas emissions
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 2:Level of financial maturity of supported projects**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	% of projects reaching financial close within 4 years from the grant agreement [cumulative]
Cut-Off Date	
Data source	CINEA database
Link to the objective	The IF aims at supporting highly innovative technologies, processes or products that are sufficiently mature
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 3: Level of operational maturity of supported projects

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	% of projects entering into operation [cumulative]
Cut-Off Date	
Data source	CINEA database
Link to the objective	The IF aims at supporting highly innovative technologies, processes or products that are sufficiently mature
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 4: Events to increase knowledge on the cleantech solutions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of knowledge sharing events per year [annual]
Cut-Off Date	
Data source	CINEA database
Link to the objective	The IF aims at supporting highly innovative technologies, processes or products that are sufficiently mature
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 5: Participants to knowledge events on the cleantech solutions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of participants [annual]
Cut-Off Date	
Data source	CINEA database
Link to the objective	The IF aims at supporting highly innovative technologies, processes or products that are sufficiently mature

Other methodological comments	
Full metadata available at this address	
Justification of the trend	

## Specific Objective 2 :To offer financial support tailored to market needs and risk profiles of eligible projects, while attracting additional public and private resources

### Indicator 1:Sufficient support provided for grants

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Number of projects supported										
	Milestones									
	Actual Progress									Final
Funding committed to projects										
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of projects supported [cumulative]; funding committed to projects [cumulative]
Cut-Off Date	
Data source	CINEA database
Link to the objective	Offer financial support tailored to market needs and risk profiles of eligible projects, while attracting additional public and private resources
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 2:Investments mobilised

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Investments mobilised by the IF grants										
	Milestones									
	Actual Progress									Final
Investments mobilised via Financial Instruments										
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Total volume of clean-tech investments mobilised by the IF grants [cumulative]; Total volume of clean-tech investments, induced by support channelled via Financial Instruments [cumulative]
Cut-Off Date	
Data source	CINEA database (IF); InvestEU database (Financial Instruments)
Link to the objective	Offer financial support tailored to market needs and risk profiles of eligible projects, while attracting additional public and private resources
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	

Full metadata available at this address	
Justification of the trend	

**Specific Objective 3 :To ensure that the revenues of the Innovation Fund are managed in accordance with the objectives of the EU Emission Trading System (EU ETS) in terms of technology pathways and geographical coverage**

**Indicator 1:Technology sectors covered**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of sectors covered [cumulative]
Cut-Off Date	
Data source	CINEA database
Link to the objective	Ensuring that the revenues of the Innovation Fund are managed in accordance with the objectives of the EU Emission Trading System (EU ETS)
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 2:Geographically balanced locations**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of Member States covered [cumulative]
Cut-Off Date	
Data source	CINEA database
Link to the objective	Ensuring that the revenues of the Innovation Fund are managed in accordance with the objectives of the EU Emission Trading System (EU ETS)
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

## **5. Programme 2014-2020 - Key monitoring indicators**

### **6. The programme contribution to horizontal policies**

#### **6.1. Contribution to climate mainstreaming**

##### **6.1.1. Tracking and estimates**

2020-2021 estimates		2022-2027 programming						Total
2020	2021	2022	2023	2024	2025	2026	2027	
	0,0	0,0						0,0

(\*Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

##### **6.1.2. Explanation and justification on the financial contribution**

**6.1.3. Key achievements**

The Innovation Fund is a key funding instrument for delivering the EU's economy-wide commitments under the Paris Agreement and its objective to be climate neutral by 2050, as recognised in the European Green Deal Investment Plan. The Innovation Fund focuses on highly innovative technologies and big flagship projects within Europe that can bring on significant emission reductions. As such, the IF's contribution towards climate objectives is significant (i.e. 100% according to the 'Rio markers').

**6.2. Contribution to biodiversity mainstreaming**

Not applicable

**6.3. Contribution to clean air financing**

Not applicable

**6.4. Contribution to gender equality**

Not applicable

**6.5. Contribution to the sustainable development goals**

Not applicable

## **Getting in touch with the EU**

### **In person**

All over the European Union there are hundreds of Europe Direct information centres. You can find the address of the centre nearest you at: [https://europa.eu/european-union/contact\\_en](https://europa.eu/european-union/contact_en)

### **On the phone or by email**

Europe Direct is a service that answers your questions about the European Union. You can contact this service:

- by freephone: 00 800 6 7 8 9 10 11 (certain operators may charge for these calls),
- at the following standard number: +32 22999696 or
- by email via: [https://europa.eu/european-union/contact\\_en](https://europa.eu/european-union/contact_en)

## **Finding information about the EU**

### **Online**

Information about the European Union in all the official languages of the EU is available on the Europa website at: [https://europa.eu/european-union/index\\_en](https://europa.eu/european-union/index_en)

### **EU publications**

You can download or order free and priced EU publications at: <https://publications.europa.eu/en/publications>.

Multiple copies of free publications may be obtained by contacting Europe Direct or your local information centre (see [https://europa.eu/european-union/contact\\_en](https://europa.eu/european-union/contact_en)).

### **EU law and related documents**

For access to legal information from the EU, including all EU law since 1952 in all the official language versions, go to EUR-Lex at: <http://eur-lex.europa.eu>

### **Open data from the EU**

The EU Open Data Portal (<http://data.europa.eu/euodp/en>) provides access to datasets from the EU. Data can be downloaded and reused for free, for both commercial and non-commercial purposes.

Find out more about the EU's financial programming  
and budget by visiting our website regularly:
