Other methodological comments	Networks can only be formally established as provided in Commission Implementing Decision 2014/287/EU setting out criteria for establishing and evaluating European Reference Networks and their Members. The implementing decision was adopted later than forecasted in 2013 (when the goals were defined in the Health programme) and therefore the milestones and goals should be adapted to reality. The establishment of ERNs is a complex procedure, which involves several steps and tools.

	The first call for ERN has been launched in the second half of 2016, the result was the establishment of 24 ERNs. Target reduced from 33 to 30 based on the SANTE strategic plan 2016-2020. Revised target more likely to be reached by the end of the Programme. Recent discussions in the Board of Member States and in the Coordinators group show that 3 more networks could be expected by the end of the Programme.

Other methodological comments	The difference with regard to 2018 is due to cleaning of duplicate records. The stabilisation of this indicator around 950, after reaching in 2017 the milestone set out for that year, can be explained by external factors linked with the ERNs' infrastructure and work procedures – first, Member States took much longer to endorse Affiliated Partners (which only joined during 2021) and secondly new members can only be accepted after a long assessment process (which is coming to an end in 2021).

## 6. The programme contribution to horizontal policies

### 6.1. Contribution to climate mainstreaming

Not applicable

### 6.2. Contribution to biodiversity mainstreaming

Not applicable

### 6.3. Contribution to clean air financing

Not applicable

## 6.4. Contribution to gender equality

### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.4.2. Key achievements and performance

DG SANTE has developed a questionnaire for all beneficiaries to be completed at the time of the interim and final report, operating grant recipients will only provide a final report and complete the questionnaire then. One question targets gender mainstreaming and how it was performed in the actions. DG SANTE can already report on the first data from the beneficiaries/reports for the operating grants (budget of EUR 4.6 million), whereas information from project grants and Joint Actions will only be available later.

As regards the operating grants, the first replies from recipients indicate that on average an amount of about 2 % of their budget, i.e. EUR 86.000, is spent to finance activities targeting the gender issue related to health.

## 6.5. Contribution to the sustainable development goals

### 6.5.1. Goals

#### *SDG 3 Ensure healthy lives and promote well-being for all at all ages*

The Health Programme contributes to EU efforts to achieve the Sustainable Development Goals in health and well-being by supporting actions to implement the EU's political commitments and legal obligations in health and work towards Sustainable Development Goal 3 on health. Examples of such support included funding for operating grants to NGOs. Specific Grant Agreements were signed with 15 NGOs in 2020.

Four direct grant agreements were also concluded with international organisations, as follows:

- Three direct grant agreements were signed with the OECD, on best practices implementation; on patient reported outcomes and on pharmaceutical products' accessibility.
- One direct grant agreement was signed with the Council of Europe to support the European Pharmacopeia work.

In order to maximise collective EU work towards the WHO's nine voluntary targets on non-communicable disease and the UN Sustainable Development Goals for health and well-being, DG SANTE works through the Steering Group on Health Promotion, Disease Prevention and Management of Non-Communicable Diseases (SGPP).

In 2019, mental health good practices identified by the Steering Group were selected for scale-up and transfer (Suicide Prevention in Austria, Mental healthcare delivery system reform in Belgium, and European Alliance Against Depression).

In 2020, the SGPP launched two joint actions with member state involvement, notably on mental health and on nutrition.

At the Steering Group's formal meeting in September 2020, anti-microbial resistance (AMR), cancer, and access and availability of medical products, followed by prevention of non-communicable diseases (NCDs) were identified as a priority area for population-level health interventions and best practices. After the priority assigned to prevention of NCDs, the next three priorities relate to risk factors on tobacco, environmental determinants of health (notably pollution) and obesity. For these four risk factors, a Best Practice call was published at the end of 2020 in the Best Practice Portal. In addition, a Best Practice call on Primary Care was opened.

Other projects on health promotion and disease prevention launched included projects on cardiovascular disease prevention; the prescription of physical activity; and on the promotion of whole grain consumption.

**1. Overview****1.1. Challenges**

COVID-19, declared a pandemic by the World Health Organization (WHO) on 11 March 2020, is leading to an unprecedented loss of life in the Union. Member States are adopting exceptional measures to limit the spread of the virus with unprecedented consequences for society and the economy. National healthcare systems in particular are under severe strain and Member States are faced with urgent and high needs for medical supplies, treatments and vaccines.

On 14 April 2020, the Council adopted Council Regulation (EU) 2020/521 activating emergency support under Council Regulation (EU) 2016/369 to finance expenditure necessary to address the COVID-19 pandemic. Unlike other programmes, the Emergency Support Instrument (ESI) is activated independently of the multiannual financial framework for the period 1 February 2020 to 31 January 2022. EUR 2 700 000 000 were mobilised under the 2020 budget. Furthermore, by 15 December 2020 the Member States made contributions of a total of EUR 750 000 000 as external assigned revenue. As many Member States faced a third wave of infections, including as a result of new variants emerging in the first quarter of 2021, the Commission proposed to reinforce the ESI in 2021 with an additional EUR 231 700 000 from the EU budget to finance actions such as the interoperability of digital green certificates, an EU waste water monitoring system, the further development of the passenger locator form exchange platform, and the purchase for donation to Member States of specialised tests for identifying variants.

## 1.2. Mission (general objectives)

The nature and consequences of the pandemic are large-scale and transnational, affecting all Member States given the quick spread of the virus and requiring a comprehensive response to allow the Union as a whole to address the crisis in a spirit of solidarity. Actions taken by the Member States alone, including with Union financial support under other Union instruments, are not adequate.

The general objective is to provide needs-based emergency support, complementing the efforts of Member States aimed at preserving life, preventing and alleviating human suffering, and maintaining human dignity, wherever the need arises as a result of the pandemic.

The Emergency Support Instrument provides added value by directly supporting the healthcare systems of Member States through targeted measures that can be deployed strategically and in a coordinated manner to deliver greater impact in mitigating the large-scale consequences of the pandemic.

## 1.3. Specific objectives

The legal base of the Emergency Support Instrument is designed to allow for a comprehensive and flexible response to the urgent, evolving and diverse needs during the pandemic. It therefore does not set out specific objectives but rather provides the EU with a broad toolbox to support Member States, with an indicative and non-exhaustive list of the actions which may be funded. In line with the legal base, the Commission cooperated closely with the Member States in the implementation of the instrument. The Commission regularly exchanged views with Member States on their needs and how these were being taken into account in programming, and informed them of the state of play of the actions to be financed by the instrument. This was done via written information, through the Permanent Representatives Committee (Coreper) and the Integrated Political Crisis Response (IPCR) meetings, as well as through dedicated meetings with Member States' contact points. The Health Security Committee and the Civil Protection Committee were also regularly engaged. This cooperation and exchange informed the choice of actions to be prioritised. The European Parliament was also kept informed.

## 1.4. Public intervention context

Article 5(1) TFEU provides for the EU to take measures to ensure that Member States coordinate their economic policies. The Emergency Support Instrument is based on Article 122(1) TFEU, which allows the Council, on a proposal from the Commission, to decide, in a spirit of solidarity between Member States, upon the measures appropriate to the economic situation, in particular if severe difficulties arise in the supply of certain products.

Under its legal base, the Emergency Support Instrument complements the efforts of Member States, in close cooperation and consultation with them, and only in exceptional circumstances where no other instrument available to Member States and to the Union is sufficient. The nature and consequences of the COVID-19 pandemic are large-scale and transnational and, therefore, require a comprehensive response. While the EU already benefits from other Union instruments to respond to different types of internal challenges, for example the measures provided for under the Union Civil Protection Mechanism (UCPM) established by Decision No 1313/2013/EU, rescEU or the Joint Procurement Agreement for medical equipment, these instruments are limited in scale and do not provide a sufficient response to address the exceptional and wide-ranging needs resulting from the pandemic.

The Union is better placed than Member States, acting alone and in an uncoordinated manner, to mobilise appropriate levels of financing and use them to implement operations of a potentially life-saving nature in an economic, efficient and effective manner by reason of its scale, speed of deployment or capacity to provide Union-level solutions to underpin cross-border cooperation. Given the unprecedented consequences of the pandemic for all citizens and all sectors of the economy and considering the need for rapid and efficient action as well as the complementarity of the emergency support provided, the instrument does not go beyond what is necessary to achieve its objective.

## 1.5. Actions

In line with the broad scope of possible interventions provided for by the legal base and its needs-based rationale, the Emergency Support Instrument is financing a strategically-chosen range of actions, reflecting the needs expressed by Member States during consultations with them, and focussed on response and increased preparedness and bringing fast, targeted and tangible impact with maximum EU added value. The following actions were allocated funding in 2020 (presented in the order in which they were authorised under the Financing Decision and its subsequent amendments):

1. **Mobility package:** providing support for the transport of essential medical cargo (including life-saving personal protective, testing and medical equipment (PPEs, ventilators, masks, medicines, etc.), medical teams and personnel including operating costs, and the transfer of patients).
2. **Facility for essential health-related products:** for the procurement and distribution to Member States of equipment, therapeutics, diagnostics and training.
3. **Vaccine instrument:** to fund Advanced Purchase Agreements with COVID-19 vaccine developers (procurement).

4. **Collection of COVID-19 convalescent plasma:** providing grants to increase the availability of plasma as a direct treatment for COVID-19 patients.
5. **Clinical testing of repurposed medicines to treat COVID-19 patients:** providing grants for generating clinical evidence to repurpose existing treatments.
6. **Increased testing capacity:** to train additional staff to perform sampling and analysis and provide additional testing facilities and capacities, implemented by the International Federation of the Red Cross.
7. **Federation gateway server for interoperability of tracing apps:** for the procurement of a digital platform connecting national tracing apps and grants to support Member States to connect to it.
8. **Disinfection robots for hospitals:** for the procurement and donation of ultraviolet (UV) disinfecting robots to hospitals throughout the Union.
9. **Medical capacities for the reception facilities and their host communities in Greece:** grant to the International Organisation for Migration and the Greek government for enhancing capacities of medical infrastructure to address COVID-19 related pressures.
10. **Pilot project to develop and test a common Passenger Locator Form exchange platform:** to allow the exchange of passenger information among national contact tracing authorities, implemented by the European Aviation Safety Agency (EASA).

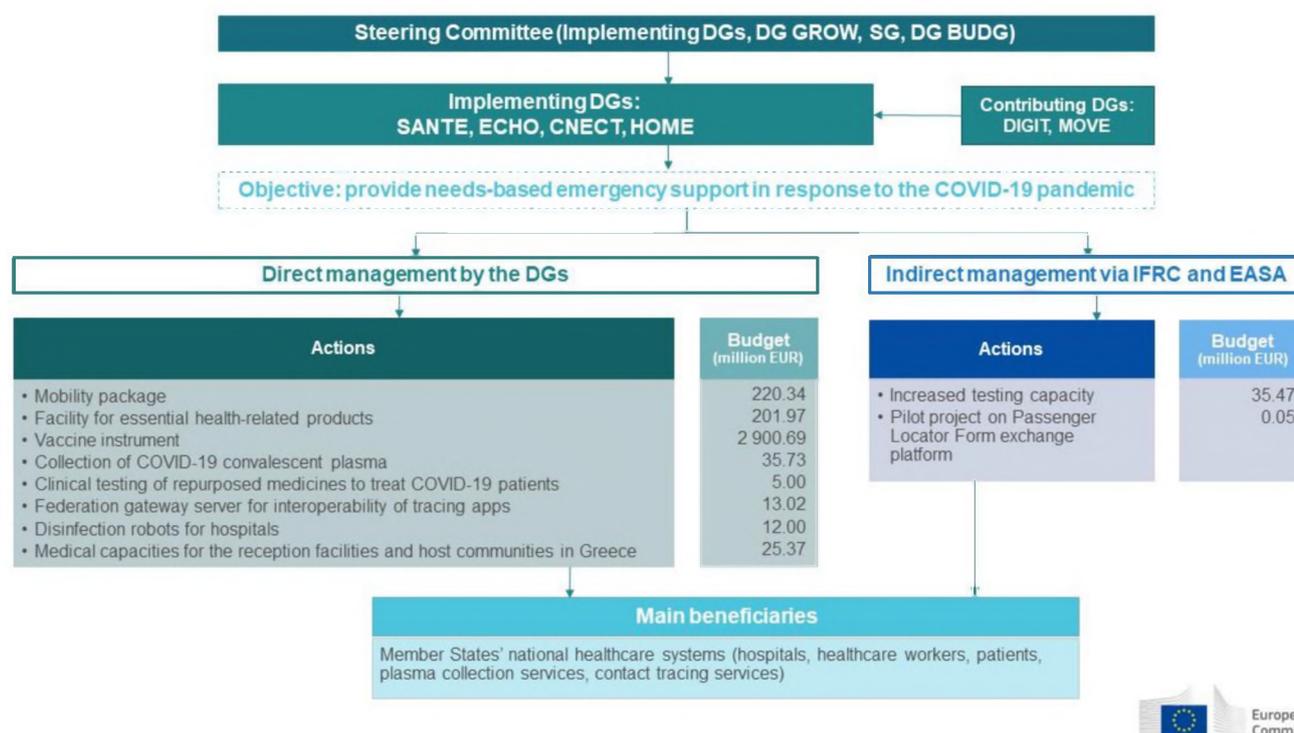

## 1.6. Delivery mode

The Emergency Support Instrument is centrally managed by the Commission and implemented very largely through direct management (grants (7%) and procurement (92%)), with around 1% of the funding being implemented through indirect management via the International Federation of the Red Cross and the European Union Aviation Safety Agency (EASA).

Given its broad scope, the authorising officers by delegation of five Commission departments (DGs SANTE (Health and Food Safety), GROW (Internal Market, Industry, Entrepreneurship and SMEs), ECHO (European Civil Protection and Humanitarian Aid Operations), HOME (Migration and Home affairs) and CNECT (Communications, Networks, Content and Technology) are co-delegated (type I). As a result of the selection of actions prioritised for funding, DG GROW is not implementing any of the budget. DGs DIGIT (Informatics) and MOVE (Mobility and Transport) also implement part of the budget for 2020 as concerns two actions, through cross sub-delegations.

A specific internal governance arrangement was put in place including a Steering Committee of the co-delegated authorising officers together with the SG (Secretariat- General) and DG BUDG (Budget) in order to provide strategic coordination of the instrument, in particular as concerns priority-setting and allocation of funding, without prejudice to the responsibilities of the authorising officers by co-delegation for the implementation of the funding allocated to them.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
	2021 - 2027	

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>156,2</b>							<b>156,2</b>

### 1.8.4. Financial programming explanation

Unlike other programmes, the Emergency Support Instrument is activated independently of the multiannual financial framework for a specific limited period of time to address the special needs of a particular crisis situation, in this case from 1 February 2020 to 31 January 2022. Voted budget appropriations of EUR 2 700 000 000 were made available from the Union budget 2020. The Member States used the possibility to contribute EUR 750 000 000 by 15 December 2020 as external assigned revenue in the context of the vaccines initiative.

## 1.9. Link with the 2014-2020 MFF

The Emergency Support Instrument was activated independently from the multiannual financing framework and spans both the 2014-2020 period and the 2021-2027 period.

## 1.10. Relevant websites providing more information

Information about the activation and use of the Emergency Support Instrument in the response to the COVID-19 pandemic is available at: [https://ec.europa.eu/info/live-work-travel-eu/coronavirus-response/emergency-support-instrument\\_en#general](https://ec.europa.eu/info/live-work-travel-eu/coronavirus-response/emergency-support-instrument_en#general)

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

There are no voted commitment appropriations in the Union budget 2021 for the Emergency Support Instrument. The voted payment appropriations for 2021 amount to EUR 90 000 000.

As many Member States faced a third wave of infections, including as a result of new variants emerging in the first quarter of 2021, the Commission proposed to reinforce the ESI in 2021 with an additional EUR 231 700 000 in commitment appropriations (EUR 75 500 000 as a budgetary transfer from the Solidarity and Emergency Aid Reserve (SEAR) and EUR 156 200 000 under Draft Amending Budget 2021/2). The objective of this reinforcement would be to support new actions in relation to the development of digital green certificates, waste water monitoring, and the further development of the passenger locator form exchange platform, as well as to fund the purchase for donation to Member States of specialised RT-PCR assays for identifying variants, and a reserve of EUR 100 000 000 for emerging needs.

The instrument expires on 31 January 2022 and hence no appropriations are requested for 2022.

## 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget*	2 700 000 000	2 231 227 697
Implementation total	2 700 000 000	2 231 227 697
total envelop	2 700 000 000	
cumulative implementation rate	100%	83%

(\*) The analysis of the budget and its implementation only focuses on 2020, when the instrument was used to tackle the COVID-19 crisis. The previous activations of the instrument in the 2014-2019 period, notably to tackle the migration crisis, are not taken into account here.

Financial execution for the instrument – both in terms of commitments and payments – is on track. The Emergency Support Instrument was activated for a limited period of time with voted commitment appropriations for the financial year 2020 in order to meet the urgent needs associated with a rapidly-evolving pandemic. The implementation rate for commitment appropriations in 2020 was 100% as concerns the EUR 2 700 000 000 voted budget credits. For the EUR 750 000 000 in external assigned revenue from Member States' contributions received by 15 December 2020, some EUR 416 600 000 remain to be committed. These funds will be used to further extend the portfolio of Advance Purchase Agreements with promising vaccine candidates so as to maximise the chances of benefiting from effective and safe vaccines, across a range of technological approaches, in the quantities necessary and in the timeliest manner. Negotiations are ongoing with two potential additional candidates.

As concerns payments, the initially voted budget credits of EUR 1 380 000 000 for 2020 proved inadequate, largely because the objective of the instrument is to provide emergency support and hence payments commitments are generally needed very shortly after contracts are signed. For example, for the urgent procurement and distribution of essential medical products, most payments needed to be made at the point of delivery of the products. Similarly, in relation to the advance purchase agreements with vaccine producers, payments had to be scheduled almost immediately after contracts were signed, given that these agreements provided upfront funding to secure access to the eventual vaccines and to support the companies concerned with the investment needed to scale up production to be able to deliver adequate quantities to cover Union citizens whilst also delivering on the Union's firm commitment to the wider global community.

In July 2020 the budgetary authority agreed to the Commission's request to transfer of an initial EUR 140 000 000 in payments appropriations from DG HOME's budget lines to the European Support Instrument. In September, the budgetary authority approved the Commission's proposal for Amending Budget 8/2020 which transferred an additional EUR 1 090 000 000 in payments credits to the instrument, bringing the total available payments credits to EUR 2 610 000 000. Of this some EUR 2 231 000 000 had been executed by the end of 2020, which represents an implementation rate of 85% of available credits.

Due to delays in the reception of relevant supporting documents or in the finalisation of the contracts, some payments initially foreseen in 2020 were postponed to 2021:

the second down payment of one of the vaccines advance purchase agreements where the technical report submitted in 2020 was not considered satisfactory;

in the framework of the reimbursement of cargo operations by the Member States, beneficiaries of larger grants have reported delays, as they must wait for a Certificate on Financial Statement prepared by an independent auditor and some grants were not paid in 2020 due to the need to review documents submitted for the final report;

the procurement of rapid antigen tests, for which specific contracts and donation agreements have been signed in the first quarter of 2021.

On top of these, several payments will be due in 2021 for other actions, including the interoperability of tracing applications, disinfection robots, the medical capacities for the reception facilities and their hosting communities on the Greek islands, as well as to cover the remaining commitments to be made under the vaccines initiative.

The 2021 voted payment appropriations (EUR 90 000 000) were not sufficient to honour all these outstanding commitments. Therefore, based on point (c) of the first subparagraph of Article 12(2) of Regulation (EU, Euratom) 2018/1046, some EUR 378 800 000 in payment appropriations was carried over in the context of the Commission decision on non-automatic carryover of appropriations 2020-2021. Most of the remaining payments are scheduled to be executed by end of 2021.

As concerns the externally assigned revenue from Member States' contributions, payments appropriations amounting to the equivalent of the remaining commitment appropriations remain to be executed. As these appropriations are intended for use in the vaccines initiative, for the reasons mentioned above, payments are expected to swiftly follow once the remaining advance purchase agreements are signed.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

The rationale for the Emergency Support Instrument is needs-based, in the context of a quickly-evolving pandemic. No performance framework or indicators are prescribed in the legal base since the instrument has been designed to be adaptable to emerging needs.

##### **3.1.2. Active programme performance**

The Emergency Support Instrument has proven its effectiveness in terms of quickly mobilising resources towards the needs identified in the context of the COVID-19 pandemic and therefore met its objective, which is to respond to the urgent, evolving and diverse needs of Member States in responding to the crisis. All funds made available in 2020 were effectively committed and 85% of payments were made in the course of the year. The flexibility enshrined in the legal base, together with the mandate given to the Commission to centrally manage the funding, in cooperation and consultation with Member States, allowed the prioritisation of those actions where collective action could generate the most added value, more timely interventions, or indeed outcomes that could not have been achieved by Member States acting individually.

The instrument is unique in terms of its activation over a limited time frame, its mandate to adapt flexibly to needs at a time of medical and scientific uncertainty, and its limited time span. It was deployed in a rapidly-evolving environment marked by uncertainties about the nature of the virus, the appropriate medical response, and both supply and demand. The breadth of scope and possible interventions also required policy choices in the context of a quickly-evolving epidemiological situation, also taking into account the limited EU competences in the health domain.

Particularly in the early phase of the crisis, there was a systemic lack of information about needs at both Union and national/sub-national level. To mitigate this, the work of the Clearing House for medical equipment, and in particular the results of the needs surveys and projections produced in that context, were fed into programming the instrument. The needs reported by Member States were also cross-referenced against the epidemiological methodology of the European Centre for Disease Prevention and Control, in order to ensure the equitable distribution of equipment and products for donation to Member States. The Commission regularly exchanged views with Member States on their needs and how these were being taken into account in programming, and informed them of the state of play of the actions to be financed by the instrument. This was done via written information, through Coreper and the Integrated Political Crisis Response (IPCR) meetings, as well as through dedicated meetings with Member States' contact points. The Health Security Committee and the Civil Protection Committee were also regularly engaged. This cooperation and exchange informed the choice of actions to be prioritised, in the absence of specific objectives in the legal base.

The major focus of the programme (over 86% of funding) has been on the vaccines initiative, which allowed the conclusion at an early stage of advance purchase agreements with pharmaceutical companies developing COVID-19 vaccines, providing the necessary investment to advance the scientific progress and production capacities, as a result of which 2.6 billion doses of ~~proven~~ COVID-19 vaccines were secured for Member States. The instrument provided the financial support to underpin Member States' agreement to a joint approach in this area, which: (a) allowed individual Member States who otherwise would have had different (or potentially zero) capacity to engage with developers of vaccines to secure supplies; (b) leveraged the scale offered by Union investment to reduce prices and obtain contractual conditions on issues such as liability and capacity increase which will mitigate Member States' risks going forward. At the same time, the advance purchase agreements funded by the instrument are by their nature risky investments. Whilst the Commission designed a portfolio of contracts with the most promising candidates across a wide range of technologies, there was no guarantee that individual vaccines would be successful and authorised in the EU, or that producers would be able to step up their production at the levels they had committed to. It cannot be excluded that the risk of having invested in a failed vaccine candidate materialises: this risk is mitigated in part by provisions in the advance purchase agreements requiring the reimbursement of part of the unused EU investment in any such case.

In line with its objectives, the instrument was deployed to meet urgent needs expressed by Member States in the context of tight supply and market uncertainty. The instrument delivered some 10 million masks to medical staff in the early phase of the crisis,

when the pressure on supplies of equipment was intense. A first batch of 1.5 million masks purchased and distributed to Member States did not meet the necessary quality standards and was destroyed; under the terms of the contract the supplier provided replacements, and a quality control contract was put in place to ensure the necessary standards were met before export of the replacement and future batches.

The programme also allowed all Member States to have access to the therapeutic remdesivir, the first EU-authorized medicine to treat COVID-19, at a time when national contracts with the sole producer were not on offer. The programme allowed the Union collectively to make necessary purchases which Member States acting alone were not able to access. The Emergency Support Instrument allowed the Union to respond to needs expressed by all Member States by delivering some 34 000 courses of the treatment, which at the time reflected the best available scientific evidence at the time, although this was subsequently challenged.

Also under the facility for essential health-related products, the instrument allowed the Union to procure over 21 million rapid antigen tests. First donations have been delivered to 12 Member States and further shipments will continue in the next months.

Under the mobility package, over 1,000 flights and 500 operations by road, rail and sea have been funded through 49 projects totalling EUR 150 000 000 in grants to support cargo transport of essential medical supplies (masks, ventilators, PPEs, medicines, etc.) into the EU at a time when Member States were confronted with both limited cargo transport availability and accordingly higher costs. Furthermore, some 283 medical personnel and around 34 have been transported across border to best ensure the deployment of available infrastructures and save lives.

Through the instrument, the Union was able to provide solutions to other common challenges, such as the development of interoperability between national tracing apps. The system went live in October 2020 and 16 national tracing apps are now connected. Grants to support Member States' connections have been provided to 13 Member States.

Working with the national branches of the International Federation of the Red Cross, the instrument ensured the stepping up of testing capacity across the seven Member States which expressed an interest. 3500 volunteers and professionals have been trained in testing techniques, and 75 mobile testing teams have been established. The action will continue to mid-September 2021.

The action to provide Intensive Care Unit (ICU) training has proved very successful. To date, 15 000 professionals in 750 hospitals across the EU have been trained in ICU skills (the initial goal was to train 10 000 personnel), and the Commission has been approached by third countries who would wish to join the training programme.

The instrument has also funded the supply of at least 200 UV disinfecting robots to hospitals across the Union, providing efficient and effective solutions to ensure the safety of healthcare environments and their staff. 31 robots were delivered to hospitals in 12 Member States as of 31 March 2021, and further monthly batches of 30 robots or more will be delivered as of April 2021 throughout 2021.

Whilst the instrument had only been operational since April 2020, the European Court of Auditors' review 01/2021 on the EU's initial contribution to the public health response, published on 18 January 2021, addressed the state of play of the instrument as of 30 June 2020 and noted the role of the instrument in complementing Member States' and other Union responses. The Court did not make recommendations but acknowledged that it was a challenge for the EU to complement rapidly the measures taken within its formal remit by additional actions, as public health is primarily a national competence. With regard to the Commission's financial support to vaccine development, the Court highlighted that the Commission mitigated the inherent risk linked to vaccine development by investing in a range of vaccine technologies and companies.

### 3.2. Key achievements

1,500	283	34 000	Over 21 million	10 million	15 000
cargo operations involving over 1,000 flights and 500 transports by road, rail and sea through 49 projects between April and September 2020, delivering medical supplies including life-saving personal protective, testing and medical	medical personnel and 34 patients transported according to needs during 2020	courses of the therapeutic remdesivir purchased and distributed to Member States from August to October 2020	rapid antigen tests purchased with deliveries started in February 2021	masks for healthcare workers distributed to Member States from July to October 2020	doctors and nurses trained to support and assist Intensive Care Units in 750 hospitals across the EU from August 2020

equipment					
-----------	--	--	--	--	--

2.6 billion	150	At least 200	16
doses of vaccines against COVID-19 secured for delivery once vaccines have proven safe and effective, with the potential for Member States to purchase more. Deliveries started in December 2020	local blood or plasma collection centres were awarded grants for blood-collection services to step up programmes for collecting plasma from recovered COVID-19 patients from January 2021	ultra-violet (UV) disinfecting robots, together with transport, installation and training of operating staff, started to be delivered on 26 February 2021. Monthly batches of 30 robots or more will be delivered throughout 2021	national tracing apps are linked into the European Federation Gateway Service for interoperability of tracing apps. The system went live in October 2020.

### 3.3. Evaluations, studies and reports

The Emergency Support Instrument was first activated in 2016-2019 in response to the refugee crisis in Greece and provided EUR 647 million of support. This activation was subject to an evaluation.

The key findings of the evaluation of the 2016 activation ([SWD\(2019\)97](#)) were that:

1. The activation of ESI should be accompanied by an obligation to develop an organisational framework outlining roles and responsibilities, tailored to each country of activation;
2. ESI should include an explicit requirement for the development of an overall exit strategy, as well as specific exit strategies by sector and at action level;
3. Further synergies with other funding mechanisms to complement emergency activities with longer-term actions should be sought systematically as part of any future activation;
4. Local partners should be more systematically involved in future ESI activations.
5. In any future activation, the ESI should continue to aim for cost-effectiveness among the different sectors targeted and by seeking further economies of scale.

Given the specific context and focus of the objectives of the first activation, the findings of the evaluation are of limited relevance to the present programme, with the exception of the action to be implemented as concerns the medical capacities for the reception centres and their host communities in Greece.

In this area, the first activation aimed to prevent and alleviate human suffering as a result of the emergency, and to restore and maintain the dignity of the affected populations. As regards healthcare, it focussed on emergency provision of primary health care, specialised healthcare (including mental health), psychosocial support and referral to hospital for people located in reception centres. The current action is complementary and builds upon the lessons learnt by providing structural investment to increase the capacity of local hospitals and within reception centres, geared towards the particular challenges related to the COVID-19 pandemic. The focus on structural investments increases the sustainability of the action, in line with the evaluation recommendations. Needs have been assessed jointly, consulting in a bottom-up approach with the local hospitals and Greek health partners, and the selection of partners for the grant ensures a combination of local involvement and relevant expertise. Finally, the action has been designed to be complementary to the funding for healthcare in the Greek migration reception system under the Asylum, Migration and Integration Fund.

More widely, notwithstanding the different circumstances and scope of the first and present activations of the instrument, findings 3 and 4 were taken into account in the selection and implementation of ESI actions under the current programme. Complementarity and synergies with other mechanisms was a key test in the selection of actions, for example: there was no other EU instrument available to finance Advanced Purchase Agreements with vaccine developers; as concerns support to the medical facilities in Greece, no other instrument had the legal scope to provide funding to enhance the overall capacity of the local infrastructure to address the needs of hosting communities as well as those in reception centres. Actions such as the direct donations of UV disinfecting robots were delivered in partnership with the beneficiary local actors, at the level of individual hospitals. The action to increase testing capacity was implemented through the International Committee of the Red Cross, which is working through its national and regional branches to deliver localised increased testing. The convalescent plasma collection action is delivering grants to 150 local blood or plasma donation centres.

## 5. Programme 2014-2020 - Key monitoring indicators

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

Not applicable

### **6.2. Contribution to biodiversity mainstreaming**

Not applicable

### **6.3. Contribution to clean air financing**

Not applicable

### **6.4. Contribution to gender equality**

Not applicable

### **6.5. Contribution to the sustainable development goals**

#### **6.5.1. Goals**

The Emergency Support Instrument contributes directly and in its entirety (some EUR 3.4 billion) to SDG 3: good health and well-being.

#### **6.5.2. Key achievements and performance**

The United Nations (UN) has acknowledged that COVID-19 is spreading human suffering, destabilising the global economy and upending the lives of billions of people around the globe, and that the pandemic provides a watershed moment for health emergency preparedness. The Emergency Support Instrument, deployed in response to the health crisis, supports the whole-of-government and whole-of-society response needed, matching the resolve of frontline health workers.

The Emergency Support Instrument provided 10 million masks for health workers in the early days of the crisis, and therapeutics to treat nearly 35 000 patients later. It has provided increased testing capacities and promoted the availability of treatments such as remdesivir and convalescent plasma. It has trained more than 15 000 professionals in 700 hospitals in intensive care skills. It has provided solutions to support the interoperability of tracing and warning apps across border, helping to break the chain of coronavirus infections and helping to save lives. . Most importantly, it has accelerated the development of vaccines and secured access to some 2 billion doses of vaccines for EU Member States and – through COVAX – the wider world.

## **1. Overview**

### **1.1. Challenges**

The European Union (EU) is at a crucial point in time where its relevance and success in the decades to come will be determined by its ability to remain competitive in the global economy and ensure high levels of employment, education and training, health, social inclusion and active participation in society. Ensuring EU's competitiveness, cohesion and resilience in the future means investing in its people: in their education and training, skills, creativity, potential to create businesses and to innovate, and in their health.

Furthermore, a number of challenges remain significant; despite improvements, tackling both unemployment and persistently high rates of poverty remains a priority throughout the EU. Social and employment issues are a primary concern of European citizens and an area where more is expected from the Union. Additional challenges that the Union faces are related to:

- shortfalls in skill levels;
- under-performance in active labour market policies and education systems;
- challenges arising from new technologies such as automation and the related new forms of work;
- social exclusion of marginalised groups, including Roma and migrants; and
- relatively low labour mobility.

### **1.2. Mission (general objectives)**

There is a need both for policy initiatives and for targeted supporting actions to address the above challenges. Therefore, the objective of the European Social Fund+ (ESF+) is to make the EU more social and inclusive by implementing the principles enshrined in the European Pillar of Social Rights<sup>1</sup> together with the Member States.

### **1.3. Specific objectives**

The European Pillar of Social Rights consists of 20 principles. They include education, training and life-long learning; active support to employment; inclusion of people with disabilities and access to essential services. The ESF+ specific objectives aim at implementing all the principles of the Pillar and thus target:

- a. Improving access to employment and activation measures for all jobseekers in the labour market, in particular youth through the implementation of the Youth Guarantee, long-term unemployed, disadvantaged groups and of inactive people, promoting self-employment and the social economy;
- b. Modernising labour market institutions and services to assess and anticipate skills needs and ensure timely and tailor-made assistance and support to labour market matching, transitions and mobility;
- c. Promoting a gender-balanced labour market participation, equal working conditions and a better work/life balance, including through access to affordable childcare and care for dependent people;

<sup>1</sup> [https://ec.europa.eu/info/european-pillar-social-rights/european-pillar-social-rights-20-principles\\_en](https://ec.europa.eu/info/european-pillar-social-rights/european-pillar-social-rights-20-principles_en)

- d. Promoting the adaptation of workers, enterprises and entrepreneurs to change, active and healthy ageing and a healthy and well-adapted working environment that addresses health risks;
- e. Improving the quality, inclusiveness, effectiveness and labour market relevance of education and training systems, including through validation of non-formal and informal learning, to support acquisition of key competences, including entrepreneurial and digital skills, and through the promotion of the introduction of dual-training systems and apprenticeships;
- f. Promoting equal access to and completion of quality and inclusive education and training, in particular for disadvantaged groups, from early childhood education and care through general and vocational education and training, and to tertiary level, as well as adult education and learning, including facilitating learning mobility for all and accessibility for persons with disabilities;
- g. Promoting lifelong learning, notably flexible upskilling and reskilling opportunities for all taking into account entrepreneurial and digital skills, better anticipating change and new skills requirements based on labour market needs, facilitating career transitions and promoting professional mobility;
- h. Fostering active inclusion with a view to promoting equal opportunities, non-discrimination and active participation, and improving employability, in particular for disadvantaged groups;
- i. Promoting socioeconomic integration of third country nationals, including migrants;
- j. Promoting the socioeconomic integration of marginalised communities such as Roma;
- k. Enhancing the equal and timely access to quality, sustainable and affordable services, including services that promote the access to housing and person-centred care, including healthcare; modernising social protection systems, including promoting access to social protection, with a particular focus on children and disadvantaged groups; improving accessibility including for persons with disabilities, effectiveness and resilience of healthcare systems and long-term care services;
- l. Promoting social integration of people at risk of poverty or social exclusion, including the most deprived and children;
- m. Addressing material deprivation through food and/or basic material assistance to the most deprived, including children, and providing accompanying measures supporting their social inclusion.

As the ESF+ is primarily directed to people, the ESF+ common indicators under shared management will mainly measure change in the participants' labour market situation. For example, one of the outputs will be the number of unemployed or inactive participants supported, and one of the results will be the number of people in employment upon leaving ESF+ support.

The Employment and Social Innovation strand of ESF+ targets structural changes. Its indicators will monitor analytical activities and will serve supporting evidence-based policy making, social experimentations, capacity-building and mutual learning activities, as well as job placements under the targeted mobility scheme.

#### **1.4. Public intervention context**

The ESF+ is the main instrument of the Union for investing in people's employment, education and skills, and social inclusion<sup>2</sup> to support economic, social and territorial cohesion in the EU.

The responsibility for employment and social policy lies primarily with the Member States. The European Union mostly supports and complements Member States' efforts by co-financing projects with ESF+ resources at national and regional level, therefore operating under shared competence.

The EU may also adopt minimum requirements in the form of directives, which enable EU Member States to adopt additional stricter provisions. Still, no financing is directly linked to the implementation of directives.

Besides ESF+, the Union can also mobilise the European Globalisation adjustment Fund for displaced workers, a special instrument aiming to support the workers on short term. The fund helps Member States to overcome the worst of the short-term shock of mass redundancy and so it is limited to a 24 months period.

<sup>2</sup> Articles 162 to 164 and 174 to 178 of the Treaty on the Functioning of the European Union.

### 1.5. Actions

EU resources are used to support investments in human capital through grants and financial instruments. For the ESF+ the regulatory proposal defines 13 specific objectives under the policy objective of ‘A more social and inclusive Europe - Implementing the European Pillar of Social Rights’.

The types of actions (e.g. vocational education and training, active labour market policies, capacity building of public employment services, social inclusion activities, distribution of food and goods) are selected by the Managing Authorities in the Member States and described in the national and regional programmes implemented under shared management.

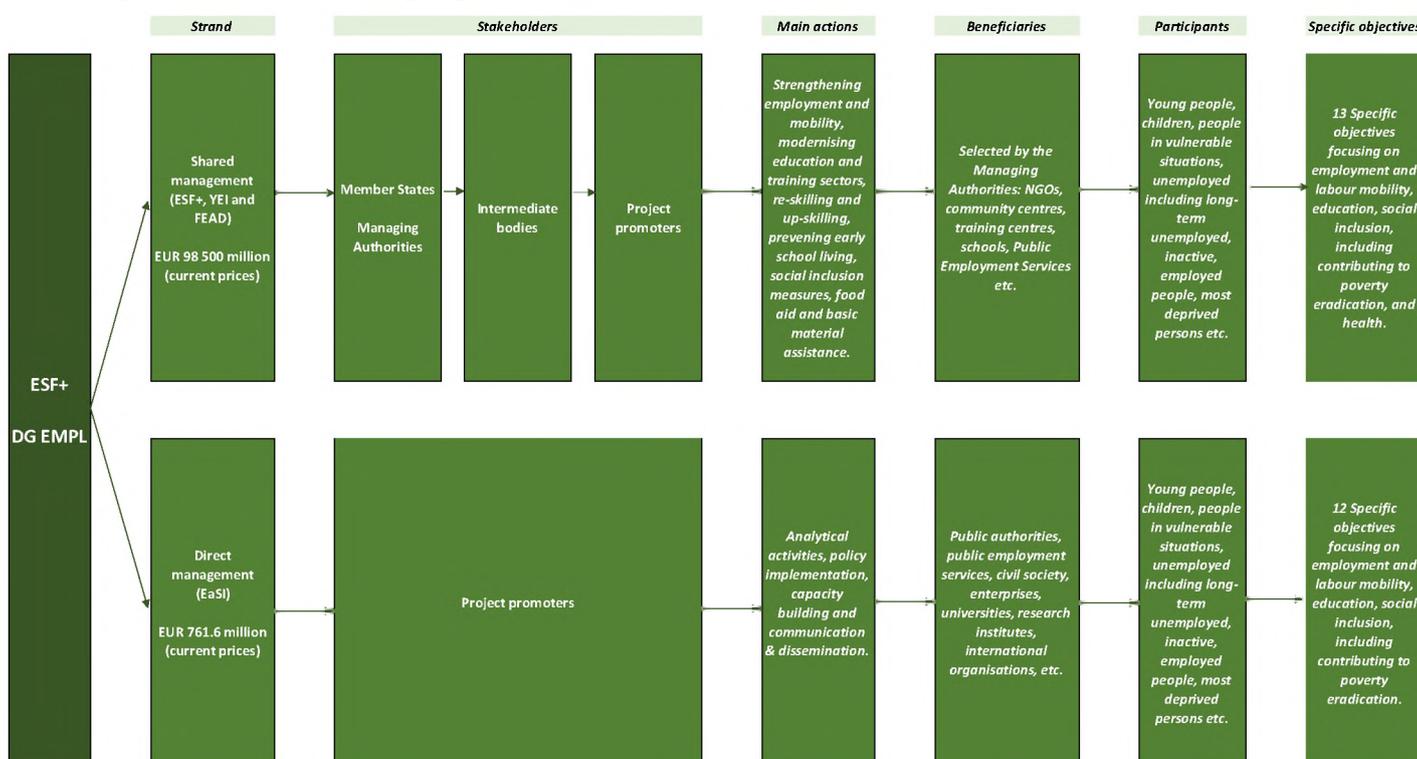

Activities under the Employment and Social Innovation strand are implemented under direct management mostly through grants and procurement, following the adoption of an annual work programme.

### 1.6. Delivery mode

Shared and direct management.

Lead DG: Employment, Social Affairs and Inclusion

### 1.7. Graphic overview of the programme structure

### 1.8. Legal basis and financial programming

#### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
	2021 - 2027	98 499,6

#### 1.8.2. Legal basis explanation

In addition to the ESF+ Regulation, the shared management strand of the ESF+, as part of the Cohesion policy, is mainly regulated by the Common Provisions Regulation (CPR). The rules on management, programming, implementation, monitoring and auditing to be applied are provided for in the CPR, whereas the specific objectives, fund-specific rules on the methods of implementation, programming, thematic concentration, eligibility, indicators and reporting are provided for in the ESF+ Regulation.

#### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total *</b>	<b>24 750,7</b>	<b>16 416,8</b>	<b>13 603,7</b>	<b>14 037,1</b>	<b>14 483,5</b>	<b>14 943,1</b>	<b>15 417,9</b>	<b>113 652,8</b>

REACT EU								
----------	--	--	--	--	--	--	--	--

\* These amounts take into account the contribution of ESF+ to the Just Transition Fund. The total does not include the financing under REACT EU.

#### 1.8.4. Financial programming explanation

The ESF+ is composed of two strands: the shared management strand encompassing the previous European Social Fund (ESF) and the Fund for European Aid to the most Deprived, and the direct management strand under which the Employment and Social Innovation programme is managed.

#### 1.9. Link with the 2014-2020 MFF

On 2 May 2018, the Commission adopted a proposal for the next multi-annual financial framework for 2021-2027, amended in 2020 in order to address the long-term challenges brought about by the COVID-19 pandemic. The proposal reflects the current social and economic context.

The ESF+ merges the following funds and programmes from the 2014-2020 programming period:

- the European Social Fund (ESF) and the Youth Employment Initiative (YEI);
- the Fund for European Aid to the Most Deprived (FEAD);
- the Employment and Social Innovation (EaSI) programme.

In the MFF 2014-2020 the above programmes were addressing similar policy objectives, but were implemented independently according to different sets of rules, making it difficult to establish synergies. In the MFF 2021-2027 these funds are merged into a single programme, so as to pool available resources to support integrated investments in people and avoid overlaps.

#### 1.10. Relevant websites providing more information

<https://ec.europa.eu/social/main.jsp?catId=325&langId=en>

The website provides an introduction to ESF, funding and objectives for the 2014-2020 period, who does what, monitoring and evaluation and latest news.

<https://ec.europa.eu/social/main.jsp?catId=1081&langId=en>

The website provides information on EaSI. Users can find information on the main objectives and activities with sub-pages for each of its axes, as well as information on monitoring and evaluation including useful links to the calls for proposals, news and publications.

Under the next programming period, the calls for proposals under the EaSI strand accompanied by some general information, news and information about the projects awarded can be found at:

<https://ec.europa.eu/info/funding-tenders/opportunities/portal/screen/programmes/esf>

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

The implementation of ESF+ 2021-2027 is expected to start in 2021 with the adoption of operational programmes for which a pre-financing of 0.5% will be paid. From 2022, on top of the 0.5% pre-financing payments, some interim payments are already expected for around 0.3% of the total ESF+ envelope, depending on the implementation on the ground.

As regards the ESF+ EaSI strand, some delays in the implementation of activities are expected in 2021 due to the entry into force of the regulation at the end of the first semester only. However, the Commission will anticipate all possible preparatory steps so that implementation can start as soon as possible, with calls being launched as early as possible. Therefore, this initial slow start is expected to be caught up in 2022 already. The level of payments is assessed to be similar to the one in 2015 for the 2014-2020 period.

REACT-EU will ensure a smooth transition between periods 2014-2020 and 2021-2027, providing swiftly for financial support to the Member States with a view to help them recover from the economic and social consequences of the COVID-19 crisis. In 2021, an initial pre-financing of 11% will be paid upon adoption of the related operational programmes (both ESF and FEAD) to help Member States put in place a quick and efficient delivery of recovery measures. From 2022 on, the Member States forecasts indicate that implementation will start swiftly with close to 20% of the financial envelope being declared to the Commission for reimbursement through interim payments. This would be on top of the payment of the annual pre-financing of 2%.

## 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

### European Social Fund

	Commitments	Payments
Implementation Voted budget	91 466 451 475	50 388 933 243
Implementation carry-overs	2 144 832 637	0
Implementation Recoveries and Repaid advances		6 160 209 569
Implementation total	93 611 284 112	56 549 142 812
total envelop*	93 630 576 028	
cumulative implementation rate	100%	60%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020.

Implementation of the ESF/YEI has progressed relatively well, though the impact of the COVID-19 crisis resulted in temporarily lower level of Member States expenditure declarations. A significant year-to-year decrease in amounts declared by the Member States was observed for the second quarter of 2020 when only EUR 1.5 billion was declared compared to EUR 2.1 billion during the second quarter 2019. Nevertheless, since mid-2020, the effects of the Coronavirus Response Investment Initiative (CRII and CRII+)<sup>3</sup> programme amendments and the higher flexibility provided started to positively impact financial implementation figures. At the end of 2020, 177 operational programme amendments covering 24 countries have been launched taking advantage of the new possibilities provided by the CRII packages to address the crisis. As regards the ESF, all areas of ESF support are concerned, namely protecting employment, promoting health and continued access to services, and allowing the continuation of education and training. DG EMPL has worked in close contact with the Managing Authorities to make sure that ESF/YEI resources were swiftly mobilized on the ground in order to allow for a prompt response to the crisis and a swift recovery. Managing Authorities have been supported through regular bilateral contacts with DG EMPL geographical units and through the dedicated Coronavirus Response Investment Initiative Platform.

By end-2020, the total Cohesion policy resources mobilised/reprogrammed to counter the crisis were worth EUR 19.7 billion. The Coronavirus Dashboard<sup>4</sup> on the Open data platform provides up-to-date information on these resources.

The European Structural and Investment Funds (ESIF) 2020 Summary Report<sup>5</sup> of the programmes' Annual Implementation Reports covering implementation up to end 2019 was published and was accompanied by an update and further development of the ESIF Open data platform<sup>6</sup>. This report underlines that, for all ESI Funds taken together, project selection (financing decided) amounted to EUR 570.6 billion (89% of total planned investment) by end 2019. This is a significant 17 percentage point increase compared to the situation at end-2018, confirming that the acceleration in project selection that started in 2016 continued in 2019. In terms of payments from the EU budget to the Member States, for all ESI Funds taken together a net total of EUR 182.2 billion was paid by end-2019 (39.5%, including pre-financing and interim payments of declared expenditure and deducting recoveries), which increased to EUR 253.7 billion until end-2020 (55%). This suggests that the rate of implementation has not slowed down in the exceptional circumstances of the crisis. More in particular, the ESF has now reached cruising speed and the difficulties related to implementation, such as the late start of operational programmes at the beginning of the period, have been addressed. Moreover, implementation progress and challenges are addressed in the ESF Technical Working Group and ESF Committee meetings, which take place five times a year and gather Commission officials, Member States representatives and representatives from the social partners. The main challenges identified were linked to a slow start of implementation and the high level of complexity associated with the management of the fund, as well as a greater need for active involvement of stakeholders and their representatives in all stages of projects. Discussions focused, among other aspects, on promoting the use of simplified cost options in ESF programmes, better involving social partners and all relevant stakeholders in the programming, implementation, and monitoring phases of the ESF programmes through sharing of best practices, for instance. These challenges will also be addressed in the next programming

<sup>3</sup> Between March and April 2020, the Commission adopted a series of amendments (the Coronavirus Response Investment Initiative and the Coronavirus Response Investment Initiative Plus) which allowed for an unprecedented redirection of Cohesion policy funds, including the ESF/YEI, to address the effects of the public health crisis. This allowed simplifying administrative procedures and reducing administrative burden for Member States.

<sup>4</sup> <https://cohesiondata.ec.europa.eu/stories/s/CORONAVIRUS-DASHBOARD-COHESION-POLICY-RESPONSE/4e2z-pw8r/>

<sup>5</sup> [http://ec.europa.eu/regional\\_policy/en/policy/how/stages-step-by-step/strategic-report/](http://ec.europa.eu/regional_policy/en/policy/how/stages-step-by-step/strategic-report/)

<sup>6</sup> <https://cohesiondata.ec.europa.eu/>

period, as the Commission legislative proposals aim to further simplify implementation. Moreover, DG EMPL desk officers responsible for leading the negotiations on the ESF+ programmes in the Member States will address all relevant challenges identified by the evaluations and the ESF Committee and Technical Working Group during ESF+ programming by discussing bilaterally with the authorities.

By end-2020, the ESF project selection rate stood at 99%. In 2020, nearly EUR 13.8 billion have been paid to the 2014-2020 ESF programmes (including pre-financing), lifting the absorption rate (interim payments made between 2014-2020 vs 2014-2020 allocation) to 43%. This is lower in comparison to the 2007-2013 programming period (by 13 percentage points), due to the lower level of expenditure declared by final beneficiaries. However, when considering the trend observed since the start of the current programming period, the level of ESF expenditure certified to the Commission remained high in 2020, which is a confirmation that a mature phase of implementation has been reached for the majority of programmes. Implementation has not been impacted by the COVID-19 health crisis, thanks to the effects of the CRII/CRII(+) programme amendments and the higher flexibility provided.

In regards to the Youth Employment Initiative (YEI), the mature phase of implementation continued in 2020. By the end of 2020, the total eligible cost of YEI operations selected for support was EUR 10.8 billion and more than EUR 6.6 billion had been declared by beneficiaries. By end 2020, nearly EUR 6 billion had been paid to the Member States in relation to YEI (including interim payments and initial and annual pre-financing).

Even though the differences among types of regions were significant in the early years of implementation, the figures reported in the Annual Implementation Reports 2019 suggest that these differences have almost entirely disappeared, with implementation of ESF/YEI picking up steam in Member States and regions that were lagging behind. Overall, the implementation has seen a positive trend across the EU, allowing the 187 ESF operational programmes to continue investing in promoting sustainable employment, social inclusion and investing in education and institutional capacity. However, some outliers still exist in Croatia and Romania. The Member States concerned had problems meeting the ex ante conditionalities at the start of the programming period, which continue to cascade into present-day delays. Moreover, both Member States indicate that their capacity to manage project calls and monitoring continues to face challenges (e.g. administrative and procedural issues, compliance with GDPR, delays at governance level due to a focus on preparations and not yet on attracting proposals etc.). Implementation weaknesses are regularly addressed bilaterally by DG EMPL's geo desk officers in the context of ESF implementation as well as ESF+ programming negotiations with Managing Authorities.

### **Simplified Cost Options (SCOs)**

Following the adoption of Delegated Regulation 2015/21957 in July 2015, the Commission adopted nine amendments of the regulation by end 2020. In total, 19 Member States and the UK benefit from the legal certainty of having their simplified cost methodology and amount defined in advance and also from the consequent reduction in the administrative burden associated with reduced documentation that needed to be retained for management verification. Since the start of the 2014-2020 programming period, the total ESF expenditure which has been reimbursed on the basis of unit costs and lump sums under Article 14(1) of the above regulation is approximately EUR 12 billion.

In 2018, the Commission also adopted EU-level SCOs under Article 14(1) of the ESF regulation for three new areas: training for the unemployed, employment-related counselling services, and training for employed people.

Furthermore, following a call for proposals, DG EMPL awarded two pilot Joint Action Plans (one in the Netherlands and one in Portugal) which started in January 2019. In response to the unforeseen consequences brought about by the COVID-19 outbreak, their implementation was extended from June 2020 to September 2020 for the Portuguese pilot and December 2020 for the Dutch pilot.

### **Information about financial instruments financed by the ESF**

As of end 2019, 10 Member States have included financial instruments in their operational programmes for the 2014-2020 period. Some Member States committed resources to financial instruments from their regional programmes such as Germany, Italy and Poland. All other committed resources were from national programmes.

---

<sup>7</sup> Commission Delegated Regulation (EU) 2015/2195 of 9 July 2015 on supplementing Regulation (EU) No 1304/2013 of the European Parliament and of the Council on the European Social Fund, regarding the definition of standard scales of unit costs and lump sums for reimbursement of expenditure by the Commission to Member States.

Most financial instruments' resources were committed under thematic objective 8 employment (76% of the total or over EUR 600 million of operational programmes' amount, as of the end of 2018). The remaining commitments were for thematic objective 9 social inclusion (10%) and thematic objective 10 education (14%).

As of the end of 2019, approximately EUR 88 million had been invested in final recipients or about 11% of operational programmes' resources committed to financial instruments (6% by the end of 2018, with an increase of about EUR 50 million in 2019).

In the new programming period 2021-2027, the potential and correct use of financial instruments will be a priority under the ESF+.

On the one hand, financial instruments cannot be taken as an alternative to ESF grants due to the specific nature of ESF activities (small projects, specific target groups, limited or no direct financial return on investment, etc., namely all elements that circumscribe per se the use of financial instruments). On the other hand, for a number of operations with financial viability, they represent a resource-efficient way of deploying Cohesion policy resources in pursuit of the Commission political objectives.

### Forthcoming implementation

Member States will submit their Annual Implementation Reports in 2021 with updated information as of end 2020. These will contain both quantitative and qualitative evidence on the implementation of the ESF.

Based on these reports, the four ESIF Directorate-Generals will prepare an Annual Summary Report to the attention of the European Parliament, the Council, the Economic and Social Committee and the Committee of the Regions. To accompany this report, DG EMPL, together with the other ESIF DGs, will also continue making relevant data available to all on the ESIF Open Data Platform.

In 2021, DG EMPL will continue providing technical and policy guidance on the operational programmes through the monitoring committees to ensure that the programmes are on track to deliver the expected results. DG EMPL will also continue to run the ESF Transnational Cooperation Platform and be actively involved in transnational cooperation activities. The evaluation for the new tender took place in Spring 2020 and the new contract was signed in July 2020 for a duration of 24 months. The contract will allow for the organisation and implementation of activities related to transnational cooperation between Member States' ESF Managing Authorities and other stakeholders until mid-2022. More specifically, the new Platform relies on four communities of practice on employment, education and skills; social inclusion; social innovation; and result-based management. Its aim is to foster mutual learning and good practice in all areas of ESF implementation and to pave the way for the 2021-2027 programming period and ESF+.

The implementation of the programmes should continue at cruising speed in 2021, reinforcing the positive trend observed in 2020.

Project selection rates and interim payment requests are expected to increase further. Moreover, DG EMPL will continue its work on the assessment of programme amendment requests submitted by Member States in order to ensure the policy and result-orientation of the ESF and YEI programmes.

The COVID-19 crisis is not expected to impact the level of interim payments in 2022.

### *Fund for European Aid to the most Deprived*

cumulative implementation rate	100%	63%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

Due to the COVID-19 pandemic, the deadline for submission of the 2019 FEAD Annual Implementation Reports was extended to the end of September 2020. According to these, the fund contributed substantially to alleviate the worst forms of poverty in the EU and to promote social inclusion for those at the margin of society. Despite its limited budget, the FEAD has shown that it successfully complements national efforts to address material deprivation and combat poverty and social exclusion. It notably addressed food deprivation, child poverty and homelessness.

In 2019, the FEAD successfully delivered assistance in 27 Member States, making good progress to achieve its objectives. The FEAD continues to be on track as regards physical and financial implementation, with a reach of 12.5 million people.

In regards to financial implementation of FEAD programmes, the total eligible public expenditure committed to FEAD support stood at EUR 608 million in 2019, remaining stable overall. At the end of 2019, the cumulative funds committed (for 2014-2019) amounted to nearly EUR 3.3 billion, or 74% of the total resources of the programmes (which include EU funds and national co-financing). An amount of EUR 478.5 million was paid to beneficiaries in 2019, comparable to previous years' level (EUR 501.2 million in 2018, EUR 412.8 million in 2017 and EUR 435.2 million in 2016). The overall profile of target groups remained stable. In 2019, about 49% of the end recipients were women (according to estimations of partner organisations), 30% children aged 15 or below, about 10% migrants, participants with a foreign background or minorities, 8% people aged 65 years or over, and 7% homeless people.

The financial information above is pre-crisis; the extent of the COVID-19 impact will be known in the coming years once the Member States submit their Annual Implementation Reports. Preliminary data indicate that in 2020, the COVID-19 outbreak temporarily resulted in lower Member States' expenditure declarations. During the second quarter of 2020, those represented EUR 51 million - less than half of the corresponding amount from 2019 (EUR 128 million). However, the situation improved in the second part of the year. Eventually, the total FEAD amount declared during 2020 was even slightly higher than the amount declared during 2019 (EUR 587 million eventually declared in comparison to EUR 573 million during 2019).

In 2020, the FEAD Regulation was amended to enable the fund to meet the COVID-19 pandemic related challenges, allowing additional flexibility and reducing administrative burden. This includes buying protective equipment for those delivering aid. Food and basic material assistance can now also be delivered through vouchers, lowering the risk of contamination.

The FEAD is well on track to reach its objectives. However, a few obstacles to implementation persisted, such as capacity issues of partner organisations, logistical challenges (eg. related to stock management) or legal difficulties (mainly related to the public procurement of the aid). These were tackled e.g. through the flexibility of the fund design and strong cooperation between Managing Authorities and partner organisations.

### **Forthcoming implementation**

In 2021 and 2022, the fund is expected to continue to support at least 12.5 million people per year among the target group of the most deprived. It might, however, reach even more people as the consequences of the COVID-19 crisis have been harsh on the population and households that were previously financially independent and might be in need of support to overcome the situation.

The year 2021 will be marked by the transition to the successor fund European Social Fund+ (ESF+), in which the FEAD will be merged.

In 2021, the FEAD Expert Groups are expected to be held as joint meetings with the ESF Technical Working Group meetings. Although the calendar is tentative, DG EMPL plans to hold four of these joint meetings.

--------------------------------	-----	-----

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

Since its launch in 2014, EaSI has provided financial support to promote high-quality and sustainable employment, adequate and decent social protection, social inclusion, poverty reduction and prevention and fair working conditions. It is managed directly by DG EMPL and is structured into three axes:

- Progress axis focuses on providing support to the policymaking and implementation process through production of policy evidence, organisation of information sharing and mutual-learning activities, funding social policy experimentation projects and providing capacity-building support to EU and national organisations;
- EURES axis aims to improve geographical labour mobility in the EU through making information on placements more transparent and accessible as well as funding the actual services for jobseekers and employers;
- Microfinance and social entrepreneurship (MF/SE) axis aims to improve access to finance for vulnerable people, micro- and social enterprises by providing funding for financial intermediaries and capacity building of relevant actors.
- EaSI creates added value to national policies, for instance with regard to the exchange of good practices, the social policy innovations, the cross-border partnerships, the support provided to social enterprises as well as regarding the provision of loans to vulnerable people.

The Programme focuses on key actions with high European added value such as:

1. Supporting the EU policy-making process and stronger EU policy-coordination/economic governance, for example in the context of the European Semester;
2. Focusing on the transnational dimension of employment and social situation, working conditions, health and safety at work issues;
3. Ensuring development and proper application of EU laws in the field of employment, working conditions, health and safety at work, and social protection;
4. Promoting EU governance, mutual learning, inclusive information sharing and dialogue to consolidate cooperation between Member States and achieve EU goals;
5. Making knowledge and expertise accessible at EU level through policy experimentation and transferring/up-scaling best practices;
6. Promoting workers' EU geographical mobility by developing services for the recruitment and placing of workers in employment (in particular young people and professionals) through the clearance at European level of vacancies and job applications;
7. Increasing the availability and accessibility of microfinance, and the support to social entrepreneurship.

As in previous years, PROGRESS concentrated in 2020 on gathering evidence through studies, analysis and EU statistics to shape policy developments. In connection to this, the axis fostered shared understanding of policy options and solutions by providing for high quality, inclusive and participatory policy debates. It also promoted the involvement of civil society through financial support for 23 key Union level NGOs via 23 operating grants.

In 2020, the EURES axis supported the European job mobility portal, training courses on EURES services, as well as horizontal support to the member organisations of the EURES network. Within this context, it continued financing cross-border partnerships supporting mobility for frontier workers in the cross-border regions along with targeted mobility schemes, following the preparatory action 'Your First EURES job'. The 13 EURES calls for proposals dealing with matters such as intra-EU mobility in general and targeted mobility schemes for youngsters and persons re-entering the labour market launched between 2014-2020 resulted in 105 contracts.

In general, the COVID-19 pandemic has given rise to extending deadlines allowing the applicants to duly prepare high quality and relevant proposals under the 2020 launched calls for proposals. This, subsequently, has caused some delays in the award of grants, to be finalised in 2021. Out of the seven calls under the work programme of 2020, six have been launched in 2020 and three have been awarded resulting in 32 agreements.

The COVID-19 pandemic also caused some delays in the implementation of projects. In the beginning of the pandemic, some projects postponed face-to-face meetings and study visits in the hope to hold these later on but, eventually, had to cancel or transform them into online events.

In order to support the organisations, notably those benefitting from an operating grant, the payments were processed more speedily. In addition, the use of e-signatories, acceptance of e-documents where in the past only hard copies were accepted, and relying more on ex post instead of ex ante verifications also contributed to swifter processing of invoices and payment requests. In addition, a specific call strengthening the role of the social partners in mitigating the economic and social impact of the COVID-19 crisis was introduced in the 2020 Work Programme and was launched in February 2021.

The EaSI Funded Instrument **under the MF/SE axis** is a EUR 200 million loan fund aiming at promoting microfinance and social entrepreneurship in EU Member States and other participating countries, by encouraging microfinance institutions and social enterprise lenders to increase funding for micro-enterprises as well as social enterprises as a means of supporting financial and social inclusion. The loan fund will provide senior and subordinated loans to microfinance institutions and social enterprise lenders in order to boost their lending capacity. The EU budget resources available to the EaSI Funded Instrument are set at EUR 67 million as a first-loss piece investment. The EU is the only equity-holder in the sub-fund. The European Investment Bank (EIB) and the European Investment Fund (EIF) will provide funding respectively under a senior loan facility of EUR 110 million and a mezzanine loan facility of EUR 23 million. In 2019, the Commission signed an initial commitment of EUR 48 million. In 2020, the Commission further committed EUR 19 million to the EaSI Funded instrument, increasing its overall equity participation in this loan fund to EUR 67 million, in line with Commission Decision C(2019)6570.

The COVID-19 outbreak slowed down the implementation of the fund; however, at the end of 2020, 3 transactions for an aggregate amount of EUR 19.2 million had been concluded and 10 additional transactions worth EUR 66 million were in the pipeline.

Under the Microfinance/Social Entrepreneurship axis, contracts worth of EUR 54.3 million were signed with microfinance intermediaries under the EaSI microfinance guarantee financial instrument in the period 2019-2020, which resulted in a total of 107 098 microloans worth of EUR 1.2 billion as at 30 September 2020.

The EaSI-Guarantee is implemented by the EIF. The Delegation Agreement between the Commission and the EIF was signed in 2015 with technical amendments in 2016 and further amendments in 2017 and 2018 allowing for an additional top-up of EUR 300 million from EFSI. A fifth amendment was signed in 2020 to introduce the COVID-19 support measures allowing for higher risk sharing. The main changes introduced were an increase in the ceiling of the guarantee rate from 80% to 90% for the COVID-19 support period final recipient loans, a one year extension of the guarantee coverage, a 6 months extension of the availability period for loan inclusions under existing guarantee agreements, lower risk retention for financial intermediaries and an increase of the maximum exposure in respect of a final recipient loan from EUR 25,000 to EUR 50,000 for the microfinance guarantee and for the social entrepreneurship guarantee from EUR 500,000 to EUR 1 million. The initial financial envelope EUR 96 million has been extended to a current financial envelope of EUR 131 million (out of which EUR 1 million committed for the Business Development Services Support pilot and on top of EUR 300 million from EFSI).

Regarding the social entrepreneurship strand of the EaSI guarantee financial instrument, in 2020 the Social Entrepreneurship Window welcomed new financial intermediaries from Germany and Portugal next to the already operational ones from Austria, Belgium, Croatia, Czech Republic, Denmark, Finland, France, Hungary, Ireland, Italy, Netherlands, Poland, Romania, Serbia, Slovakia, Spain and United Kingdom. As a result, the number of final recipient countries has increased further.

The EaSI capacity-building instrument with a financial envelope of EUR 45 million aims at building the institutional capacity of selected financial intermediaries in Europe for both microfinance and social entrepreneurship, primarily through equity and quasi-equity investments. Capacity building investments can be used for several purposes, depending on the intermediaries' needs (investment in branch expansion, scaling up of IT infrastructure and investment in human resources). This instrument is also implemented by the EIF. The EaSI Capacity Building Investments Window gained further traction in 2020, when the Commission signed an additional commitment of EUR 19 million. This instrument is demand-driven and there was already a pipeline of financial intermediaries applying for support. As a result, the overall financial envelope available for this instrument increased in 2020 to EUR 45 million. At the end of 2020, as a whole, 14 transactions for an aggregated amount of EUR 32 million were signed with financial intermediaries in 9 countries, out of which 8 in the EU and 1 in a candidate country (Serbia), and 2 transactions for an aggregated amount of EUR 6.5 million were already approved.

### **Forthcoming implementation**

EaSI will continue to support the implementation of the European Pillar of Social Rights, as part of the ESF+. Even though the implementation of the Pillar falls largely within the remit of Member States, the EU and notably the EaSI programme can play an important supporting role. The Pillar illustrates a shared commitment to foster equal opportunities, to improve access to the labour market, to fair working conditions and social inclusion, to supporting people in the face of changing realities of work and to achieving new and more rights for Europeans, priorities to be addressed by EaSI in the future.

For the Multiannual Financial Framework 2021-2027, support structures are being established, like EaSI National Contact Points in each country informing about EaSI calls, projects and results, to improve the participation in the EaSI strand and to assist in up-scaling, mainstreaming and/or replication of EaSI project results, for instance by using other funds (in particular ESF+).

As part of the 2020 work programme, grants will be awarded in 2021 under the EaSI calls for proposals on social innovation and national reforms will target social exclusion. This call aims at funding projects to test and implement innovative strategies encompassing, among others, integrated approaches covering active labour market reforms, social services and cash benefits on the one hand, and on the other hand, putting in place enabling factors to manage the successful transition into the labour market of the lower skilled persons. For the 2021-2027 programming, similar activities are expected to be programmed to support the effectiveness of employment and social policies through social experimentation and innovation. The EaSI strand will also keep on

supporting evidence-based policy making, notably through the funding of statistical data on working conditions, social protection and poverty, as well as various studies on e.g. the sources of inequalities and the social impact of other policies like climate change.

In the struggle against abuse and for a better enforcement, EaSI will continue to support the ongoing activities to enhance cooperation in tackling undeclared work under Decision (EU) 2016/344. The EaSI strand will also continue to support the implementation of EURES Regulation 2016/589. Actions to support targeted mobility schemes and cross-border cooperation will be stepped up, building on the experiences gained in the previous years. The support to the EURES network will no longer be funded under EaSI as the European Labour authority will take it over under the new MFF.

Concerning the MF/SE axis, the EaSI financial instruments (EaSI guarantee, Capacity-Building Investments Window and Funded Instrument) will continue to be implemented until the end of their implementation period. Therefore, the EaSI guarantee financial instrument will continue to implement the support measures which were introduced in 2020 in order to counter the impact of COVID-19 outbreak. However, under the new programming period, the corresponding financial instruments for micro-finance or social entrepreneurship will join InvestEU and will no longer be part of the ESF+ EaSI strand

As for EaSI technical assistance, framework contracts will continue to be used in the coming years, including the technical assistance for social enterprise finance providers. Following the first operations signed in 2018, new operations will be supported during 2021 and 2022. This capacity building component will remain in the ESF+ EaSI strand.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

ESF+ will support investment in job creation, education and training, as well as social inclusion, access to healthcare, and measures for eradicating poverty in the EU. As such, it will make a decisive contribution to mitigate the negative consequences of the COVID-19 crisis by promoting employment and reducing poverty levels, creating better opportunities for all, especially young people and children.

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the 2021-2027 programme will start producing outputs and results.

##### **3.1.3. Previous programme performance**

#### **European Social Fund**

With an overall budget of EUR 120.5 billion (EU + national share)<sup>8</sup>, the programme has recorded a positive trend in implementation, allowing Member States to continue investing in sustainable and quality employment, social inclusion, education and vocational training, and institutional capacity. Reported data has increased significantly in 2020 after some late reporting from Member States in previous years. The data available was submitted in 2020 by Managing Authorities through their Annual Implementation Reports 2019 and relates to the pre- COVID-19 crisis situation. Available data related to ESF financial implementation by end 2020 suggests that, thanks to the CRII/CRII(+) initiatives, the rate of implementation has not slowed down in the exceptional circumstances of the COVID-19 pandemic (see section 2.2).

Data from the latest Annual Implementation Reports show that the project selection rate increased steadily, reaching 85% at EU level by end-2019 (EU + national share), which means an increase of 16 percentage points compared to last year's reporting. Expenditure rates also steadily rose, reaching 39% at the EU level by end-2019. Though differences among types of regions were quite pronounced in the early years of implementation, these have almost entirely disappeared, both in terms of project selection rates and declared expenditure (see section 2.2).

The use of financial instruments also increased, with 10 Member States having included them in their operational programmes for 2014-2020 period by the end of 2019, mainly under thematic objective 8 employment (76%) with the remainder being committed under thematic objective 9 social inclusion (10%) and thematic objective 10 education (14%).

By end 2019, ESF/YEI actions helped 4.5 million participants find a job, while another 5.5 million participants gained a qualification, and 1.8 million were in education or training. Additionally, a total of 4.1 million disadvantaged participants achieved one of these positive results.

The ESF has been successfully promoting sustainable and quality employment (specific objective 1) by supporting 14 million participants under this thematic objective, by end 2019. This has steadily increased since 2016 and represents an improvement

<sup>8</sup> Not including the Youth Employment Initiative (YEI), which receives an EU contribution of EUR 8.9 billion.

compared to end-2018, when 10.73 million participants had been supported. The trend reflects the performance observed in the previous programming period: an acceleration in implementation and in the achievement of outputs and/or results typically takes place after the mid-term. Moreover, all Member States implemented projects/operations under this specific objective by end 2019, and these types of projects are usually relatively short interventions. Therefore, results/outputs are materializing faster. Another reason for this improvement is that by this time in the programming period the ESF programmes from the 2007-2013 period have been fully implemented and Managing Authorities now only focus on the implementation of the current ESF programmes. Under this objective, more than 4.1 million participants achieved positive results. These consist of people that found a job, gained a qualification or were able to improve their labour market position by means of ESF interventions. The total allocated ESF investments under thematic objective 8 amounts to EUR 39.8 billion for ESF 2014-2020 (EU + national co-financing), of which 83.1% has been committed (for selected operations) by the end of 2019. The project selection rate is relatively uniform in the Member States, showing an overall steady pace of implementation at the EU level (83.1% at end 2018).

In the field of social inclusion (specific objective 2), the ESF has been contributing to the EU2020 headline target of reducing poverty in the EU by targeting various specific groups, such as low-skilled, (long-term) unemployed, elderly, disabled and people with a migrant/foreign background. In order to ensure that a sufficient share of resources is allocated to promoting social inclusion and combating poverty, Article 4(2) of the ESF Regulation requests that at least 20% of the total ESF resources in each Member State shall be allocated to this thematic objective. Member States allocated a variety of interventions to this objective also evidenced by its highest allocated budget. This specific objective has been allocated a total of EUR 33.3 billion (EU + national co-financing), of which 82.7% had been selected for projects by the end of 2019. While this project selection rate shows that progress is relatively well underway, some differences persist. In Italy and Greece, for instance, the average project selection rate remained substantially below average (52.5% and 56.1% respectively). For Italy, the delays are partly due to complex governance of social inclusion measures as well as to low administrative capacity of local actors in implementing the measures. Moreover, several changes in the national legal framework on the antipoverty schemes also led to some delays in implementation. Nevertheless, it is worth noting that in the second half of 2020 several operational programmes increased and refocused the budget allocated to this specific objective by including anti-COVID 19 initiatives. Consequently, selection and payment rates are expected to increase significantly. Considerable improvement is also expected for Greece thanks to the inclusion of COVID-19 actions under this specific objective in 2020. DG EMPL geo desk officers are always in close bilateral contact with Managing Authorities to ensure all implementation challenges are effectively addressed. At EU level, by end 2019 social inclusion investments supported 8.6 million participants, which led to 2.3 million positive results, such as finding a job, gaining a qualification or other improvements in terms of one's position on the labour market. Moreover, 42% of all ESF participants supported by end 2019 were considered as part of disadvantaged groups. This value is above the target (40%) and has seen a slight increase since 2017. The indicator shows that the ESF is successfully reaching and supporting the most vulnerable groups, thus providing an important contribution to the headline target of lifting people out of the risk of poverty or social exclusion. The evaluation of ESF support for social inclusion finalised in 2020 showed that the provision of personalised support is costly and requires more intense training of providers. Yet, sufficient time and personalised support for participants are crucial to ensure needs are met and to generate the desired results. For these reasons, DG EMPL will continue promoting the use of long-term strategies on long-term unemployment, the implementation of more person-centred approaches, and advocate against the use of institutional care, also under the ESF+. Moreover, under the ESF+ Member States will have to allocate at least 25% of their ESF+ resources to promote social inclusion. DG EMPL will use evidence on costs from the current programming period and will continue advocating for personal support in the ESF+ programmes negotiations, because this approach has proven to be more effective in the long run. However, it is worth remembering that under shared management the final decision on how to use the resources on the ground lies with the Managing Authority.

With regard to education and training (specific objective 3), a total amount of EUR 37.8 billion (EU + national share together) was allocated, which makes it the ESF's second largest specific objective, slightly lower than the employment-related one. Implementation is relatively high across all regions, with a project selection rate by end 2019 of 91.5%. In terms of participation and target achievement rates, no substantial differences can be observed. For the first time since the start of the programming period, all Member States that programmed interventions under this objective now report participations. In total, 13.4 million participants were recorded for all operations in the field of education by end 2019, of which 4.7 million have reached an individual short-term result. This represents an improvement compared to 2018, when 9.1 million participants were reported under this specific objective. The increase in the rate of implementation and in the achievement of outputs and/or results is attributable to the same reasons as for specific objective 1. In terms of immediate results, more than 3.2 million participants gained a qualification with support of ESF investments with an education objective, while another 0.9 million participants were in education/training upon leaving the intervention. As could be expected for operations that focus on education, these results are higher than the results related to the number of participants that engaged in job searching or entered employment. In addition, 2.7 million participants recorded an improvement in their skills (not necessarily leading to a qualification). The conclusions of the evaluation on ESF support to education and training show that, compared to the other specific objectives, the lower percentage of the positive results after six months is an inherent result. The reason is that longer-term common result indicators are oriented towards employment and measure the extent to which the employment situation of participants has improved, while actions under specific objective 3 support mostly skills development and, to some extent, labour market relevance of education and training. Moreover, the lower success rates reported for low qualified adults, NEETs, and disadvantaged groups are due to the fact that, in order to effectively support these target groups, it is necessary to intervene ad hoc, which is typically more expensive. DG EMPL advocates for a more person-centred approach and an increased focus on the most vulnerable groups and on digital skills across all ESF programmes.

This is done through bilateral discussions between DG EMPL desk officers and Managing Authorities in the context of the ESF+ programming negotiations and ESF implementation, as well as in the ESF Committee and the Technical Working Groups.

Institutional capacity investments (specific objective 4) receive the lowest budget allocation with an overall EUR 4.5 billion. The implementation of these investments moves relatively in line with the other thematic objectives and reported a total of 82.4% of the allocated amounts as eligible costs by end 2019. This type of investments supported 51 726 projects targeting public administrations or public services at national, regional or local level. The number of projects supported has significantly increased since 2018 (27 644 projects supported). In terms of individual results, such interventions mainly contributed to public officials gaining a certain type of qualification (168 753), but most meaningful results in this area are procedural in kind, such as shorter time required for certain operations or specific positive results for organisations, public administrations, the judiciary, and civil society organisations such as implementation of certain IT systems, revision and/or simplification of procedures and increased regulatory scrutiny.

As regards investments in specific support to young NEETs (specific objective 5), on average 100% of the total budget was already reported as eligible costs by end 2019. In regards to outputs, by the end of 2019, a total of 3 million young people had benefitted from YEI support. At the EU level, participants are well balanced from a gender perspective, with an approximately equal share of men (51%) and women (49%) reached by the interventions. The immediate results of YEI support point to 2.1 million unemployed or inactive persons having completed a YEI intervention. Moreover, around 1.4 million were in education or training, had gained a qualification or were in employment, including self-employment at the end of the YEI-supported measure. These outputs and results indicate a positive trend in implementation and good progress in reaching the targets. The findings of the evaluation on ESF/YEI support to youth employment highlight, among other elements, that integrated pathways are needed in order to better support disadvantaged groups across all ESF programmes. This will be addressed in the ESF+, where there will be a specific focus on youth employment. Member States with a level of NEETs above the EU average should devote at least 12.5% of their ESF+ resources to help these young people find a qualification, or a good quality job. All other Member States must allocate an appropriate amount of their ESF+ resources to targeted actions to support youth employment measures. Moreover, under the ESF+, DG EMPL intends to support better outreach of NEETs, a person-centred approach and more inclusive measures.

Four thematic evaluations on ESF support between 2014-2018 (see section 3.3.) were carried out to pave the way to the ex post evaluation of the fund. The main conclusion is that the European Social Fund makes clear positive contributions to the spheres of employment, social inclusion and education. These benefits manifest on the individual, regional and European level:

- Between 2014-2018, approximately 22 million persons participated in ESF actions from which 52% were women. Of those participating, nearly 3.2 million persons have already found employment and 3.9 million have gained a qualification;
- A number of regions with fewer employment and educational opportunities have made progress in the development of their labour markets;
- ESF-funded operations could create an additional 327 000 jobs and increase the EU GDP by 0.33% through a renewed focus on improving the skills of workers and increasing overall labour productivity<sup>9</sup>.

Innovative measures and changes to systems have long-term positive impacts. Findings concerning individual employment and regional labour markets can help the management of the fund and recovery from the COVID-19 crisis. Current results suggest that supported operations are cost effective. Some elements that could increase the quality of results are:

- Active involvement of stakeholders and their representatives in all stages of projects – from planning to final delivery;
- Sufficient financial and staffing resources to deliver operations;
- ESF operations designed to contribute towards regional and national priorities.

These lessons are consistent with previous evidence, in particular the findings of the 2007-2013 ESF ex post evaluation and the discussions in the ESF evaluation partnership. As such, they have already been taken into account, to a significant extent, in the regulatory framework for the 2021-2027 programming period through, for instance, a stronger link of the fund with the challenges identified for each Member State in the context of the European Semester, and the ESF+ thematic concentration requirements, which will provide a clear focus on youth employment, social inclusion, support to the most deprived, child poverty, and capacity building of social partners and the civil society. The findings of the evaluations will also feed into programme negotiations and any impact assessment for future programming periods.

The main challenges encountered are linked to a slow start of implementation in the first years of the programming period and the high level of complexity associated with the management of the fund. These will be addressed in the next programming period as the Commission legislative proposals aim to further simplify implementation by facilitating the roll-over of existing designations of implementing authorities. Programming will also be simplified through simpler Partnership Agreements and programmes in content, including lighter procedures for programme amendments. The 2021-2027 rules will also allow for an increased focus on results and simpler ways to claim payments by making more extensive use of simplified cost options and financing not linked to

<sup>9</sup> The data mentioned come from the RHOMOLO study, conducted by the JRC, which fed the Commission Staff Working Document on Evaluation of the 2014-2018 ESF support to employment and labour mobility, social inclusion and education and training: <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:52021SC0010&from=en>

costs. This will further reduce the need for beneficiaries to document detailed costs for each operation and will allow both beneficiaries and programme authorities to better focus on the quality and intended results of the funded actions.

The COVID-19 pandemic has shown that special attention needs to be paid to vulnerable groups such as women, people at risk of poverty or social exclusion, NEETs, among others. They are the ones who had been hardest hit by the crisis and risk being left behind. The need to further support the development of digital skills across the EU also became evident. Member States should now focus on these target groups and priorities in the medium and long-term recovery through ESF, REACT-EU and ESF+ programming. The ESF+ regulation sets out thematic concentration requirements that will ensure an increased focus on actions promoting social inclusion, fighting poverty and developing the skills needed for the digital and green transition. It will also include a more ambitious requirement for investing in young people and addressing child poverty. Moreover, learning from the COVID-19 crisis, a derogation article was added to the ESF+ regulation setting out the possibility to adopt temporary measures to respond to possible future exceptional and unusual circumstances.

### **Fund for European Aid to the most Deprived**

FEAD is effectively providing much needed food and basic material assistance to a large number of most deprived, complemented by accompanying measures providing guidance and advice aiming at their social inclusion. During the 2014-2020 programming period, FEAD support was present in 27 Member States. Most Member States (23 out of 27) distributed food and/or basic material assistance and provided accompanying measures. Four Member States (Denmark, Germany, the Netherlands and Sweden) ran social inclusion programmes. In 2019, an estimated 12.2 million people benefited from FEAD food assistance (distributing almost 350 000 tonnes of food), over 800 000 received material assistance and around 30 000 benefited from social inclusion support. The annual reach of around 12.5 million persons among the most deprived is stable and, given the size of the budget, substantial.<sup>10</sup> FEAD is coherent with the Europe 2020 Strategy, by aiming to lift people out of poverty and social exclusion, as well as with the European Pillar of Social Rights, as it deals with its third broad area: fostering social inclusion and protection. It complements other EU funds, notably the ESF and the Asylum, Migration and Integration Fund (AMIF), by targeting other groups or providing complementary measures.

FEAD is also adaptable and responsive to emerging needs. All horizontal principles (gender and equal opportunities, respect of dignity, partnership) are relevant, but food waste reduction through donations could be improved, a topic that was addressed at the seventh FEAD Network Meeting on ‘preventing food waste through FEAD actions’.

FEAD is a means to free up financial resources of end recipients for other goods/services. A notable impact of FEAD in some countries is the increased capacity and professionalisation of partner organisations as well as of the organisations involved in the distribution of assistance.

The discontinuation of the FEAD would have significant consequences in many Member States such as Spain, France, Italy, Latvia, Luxembourg, Hungary, Austria, Slovakia and Finland where FEAD is, in some cases, the main food and material assistance provider. In addition, FEAD provides unique social inclusion services to target groups who would otherwise receive no comparable support.

Based on the Staff Working Document on the mid-term evaluation of FEAD<sup>11</sup>, stakeholders value and stress the need to preserve the fund specific aspects such as flexibility and generally the less stringent administrative requirements compared to the mainstream ESF programmes, along with the established networks and operational delivery modes. Low thresholds allow aid to be provided to persons not reached by the social services such as homeless, new or undocumented migrants or elderly people at risk of poverty. It also allows responding quickly to emerging needs and crisis situations.

The aid delivery is mostly based on NGOs relying on volunteers and generally cost-efficient. Much of the administrative burden stems from requirements imposed at Member States’ level, such as narrow definitions on eligibility. In the context of the FEAD evaluation partnership meetings, Member States are encouraged to follow the Regulation closely to avoid ‘gold plating’, and those Member States who implement the programme without adding excessive requirements are encouraged to share their experience.

Past evaluations suggest FEAD’s efficiency could be further improved by building the capacity of programme authorities and partners to implement FEAD. To do so, between 2017 and 2019, and with a view to further strengthening performance, 18 FEAD Network meetings were held, dedicated to various challenges of FEAD implementation including targeted outreach to the most deprived such as children, homeless and older people. A dedicated session took place in 2019 on monitoring and evaluation of FEAD. The meetings allowed participants to present case studies, share challenges and solutions on issues of common interest in the delivery of FEAD activities. In line with the Regulation, the Commission also hosted annual EU-level meetings in 2018 and 2019, steered by representatives of the partner organisations. These focused on the transition to a new phase of capacity building. In

<sup>10</sup> As in several Member States the same recipients receive both food and goods, this apparent overlap is being subtracted in the calculations to ensure a prudent reporting approach.

<sup>11</sup> <https://ec.europa.eu/social/main.jsp?langId=en&catId=89&newsId=9331&furtherNews=yes>

the next 18 months, mutual learning activities will replace the FEAD network meetings. These should help the 'FEAD Community' discuss the remaining implementation challenges and the opportunities of the upcoming ESF+ more effectively.

The FEAD Regulation was first amended in April 2020 as part of the CRII+ initiative, making it possible to use indirect delivery modes, e.g. vouchers or cards (to lower the risk of contamination) and to buy personal protective equipment for organisations delivering FEAD support. Moreover, the amendments strengthened liquidity in Member States, making it possible to provide 100% co-financing rate for one accounting year. By the end of 2020, 10 FEAD programmes had been amended: 6 to benefit from the 100% co-financing rate and 4 to introduce emergency measures to respond to the COVID-19 pandemic. Since July 2020, the effects of these programme amendments and the higher flexibility provided started to show the impact on financial implementation figures, with declared amounts higher in 2020 than 2019 (EUR 587 million declared in comparison to EUR 573 million during 2019).

A second amendment to the FEAD regulation was adopted at the end of 2020 as part of the Commission's recovery plan, i.e. REACT-EU. This amendment allows Member States to allocate additional funding to ESF, ERDF and FEAD programmes. Additional resources can provide top-ups to existing support, such as food and/or basic material assistance or social inclusion programmes. They should be in line with each Member State's specific needs, and take into account the increased number of the most deprived since the outbreak of the COVID-19 pandemic.

Preparatory work for REACT-EU programming is ongoing with marked discrepancies between Member States due e.g. to varying timing, the fact that not all Member States will allocate REACT-EU resources to FEAD, the degree to which the COVID-19 crisis has affected a given Member State and their administrative capabilities. However, given that in the case of FEAD the additional REACT-EU allocation will simply be a top-up to the existing allocation, REACT-EU programme amendments do not require complex preparations. Therefore, DG EMPL assumes that there are no other issues that could have an impact on programming work. Recent estimates from Managing Authorities in the Member States point to a total transfer of EUR 590 million of REACT-EU resources to the FEAD, in Belgium, Bulgaria, Germany, Estonia, France, Croatia, Italy, Latvia, Austria, Romania, Slovenia and Slovakia - according to the information shared so far with DG EMPL.

Following the Regulation requirements, Managing Authorities implementing food and/or basic material assistance operational programme (Operational Programme I) carried out a structured survey on end recipients in 2017. These surveys, together with the findings of an external evaluation<sup>12</sup>, and the results of the open public consultation were used for the Commission mid-term evaluation of FEAD and will feed into the negotiations for the 2021-2027 programmes.

In the new ESF+ regulation, ESF and FEAD objectives are merged in a single, integrated list. This is expected to simplify funding and increase synergy and complementarity between employment, education, social inclusion and support to the most deprived. It is worth noting that specific rules apply to the support to material deprivation in order to keep this support as streamlined as possible. Most Member States have already indicated their willingness to have separate ESF+ material deprivation programmes, as allowed by the ESF+ regulation.

### **Employment and Social Innovation programme**

Up to end 2020, the Commission has committed close to EUR 883 million out of which some EUR 330 million for grants for the implementation of all the programme's activities. The rest of the funds contributed to the EaSI goals through contracts under procurement, indirect management, notably financial instruments, and other actions or expenditure. Funding has targeted the modernisation of employment and social policies with the PROGRESS axis (55% of total 2014-2020 budget); job mobility with the EURES axis (19%); and access to micro-finance and social entrepreneurship with the Microfinance and Social Entrepreneurship axis (26%). Overall, the programme is therefore well on track to achieve the distribution of the EaSI funds over the whole period between its axes being at least 55% to the Progress axis; at least 18% to the EURES axis, and; at least 18% to the Microfinance and Social Entrepreneurship axis.

Activities included supporting the EU and national policy-making processes to promote a high level of quality employment, guaranteeing adequate and decent social protection, combating social exclusion and poverty, and improving working conditions. A high share of stakeholders (73%) agree that the Commission is an effective source of guidance and support for social and labour innovation (see 2017-2018 monitoring report), as well as for improving understanding and ownership of EU objectives and policies : more than 91% of participants of EaSI funded events declared that they gained a better understanding of EU policies and objectives as a result of participating in the event (87% in 2015-2016).

The programme has supported data collection, notably the Labour Force Survey, an important source of information about the situation and trends in the EU labour market; Classification of European Skills, Competences, Qualifications and Occupations (ESCO), EUROMOD, Mutual Information System on Social Protection (MISSOC) and European system of integrated social protection statistics (ESSPROS). It has contributed to key analysis such as the annual Employment and Social Developments in

<sup>12</sup> The external study was carried out by Metis GmbH in cooperation with Fondazione Giacomo Brodolini and Panteia B.V. and covered data reported by the Member States in their Annual Implementation Reports for the period 2014-2016. The contract was implemented during period of October 2016 and May 2018. It served as input for a Staff Working Document (FEAD mid-term evaluation)

Europe report and supported many sharing of good practice and mutual learning activities. According to the 2017-2018 monitoring report, 86% of stakeholders declared that they have already used or intend to use information acquired during the events for policymaking or advocacy purposes.

Overall, the integration of all EaSI horizontal issues remains high. Paying particular attention to vulnerable groups, such as young people, was seen as the most mainstreamed objective by EaSI stakeholders (78%). Equality between women and men and non-discrimination also remained well-integrated (76% agreed). The data also indicated a strong increase in mainstreaming disability and accessibility matters.

The programme also supported fair labour mobility through the EURES network and portal and the Electronic Exchange of Social Security Information (EESSI). Initiatives were geared to provide easier access to micro-finance and social entrepreneurship.

In the period 2014-2020, 52 calls for proposals were launched with 1 083 applications leading to 425 projects. Overall, these EaSI grant projects involved over 1 282 beneficiaries coming from all participating countries (58 from the candidate and potential candidate countries, 24 from the EEA countries, 30 from the UK and the rest from EU). Since a number of projects are follow-up projects involving the same beneficiaries and co-beneficiaries, the programme supported over 640 different organisations. In addition, the programme assisted 38 EU sector organisations via operating grants. Almost 32% of the grants awarded involve public authorities and their agencies, some 24% of the funds supported the Social Partners such as trade union organisations (15%) and employers' organisations (9%), and 24% went to Foundations/NGOs. The rest was for enterprises (9% for profit making and 2% for non-profit making) and higher education and research institutes (9%).

The EaSI calls addressed matters like development of tailored learning provision in the implementation of 'Upskilling Pathways'; enhancing administrative cooperation and access to information concerning posting of workers; social protection reforms; undeclared work; work-life balance; reforms in social services; Youth Guarantee offers; European Solidarity Corps pilot and integration into the labour market of third country nationals.

The efforts for scaling-up of projects are hindered by a lack of adequate follow-up in terms of promoting the projects and their results as well as insufficient opportunities for linking the promoters with stakeholders who can assist in their follow-up. For the next programming period, Competence Centres on Social Innovation, a database of Social Innovation projects to be published on the ESF+ website, next to the creation of National Contact Points to guide applicants and beneficiaries will be put in place. Also the move to the Funding and Tenders portal of the EaSI calls for proposals would mean that each project will have its own place to make its results available to a wider audience on Europa pages, beyond those consulting the projects' webpages. Furthermore, the incorporation of EaSI as a strand of ESF+ will mean that it will share its objectives and governance with the shared management strand, which could facilitate the uptake of EaSI projects by the ESF+ Managing Authorities for further support.

## PROGRESS axis

Much of EaSI-funded evidence fed directly into the key EU policy processes such as the European Semester, including its Annual Sustainable Growth Strategy, country-specific recommendations, employment guidelines and joint employment reports. The evidence generated by the programme also contributed to many other policy initiatives in employment and social affairs, for instance: 'New Skills Agenda for Europe', 'Youth Guarantee', the establishment of the European Labour Authority, 'Work-life balance initiative', 'Recommendation on Investing in children', 'Integration of long-term unemployed into the labour market', 'Social and labour market integration of migrants and refugees', and 'Active inclusion of people with disabilities', etc.

The EaSI performance monitoring reports (latest edition, covering 2017 and 2018)<sup>13</sup> indicate that national, regional and local policymakers as well as other stakeholders consider EaSI-supported evidence as sound and highly useful for policymaking and advocacy purposes<sup>14</sup>. More stakeholders than previously (73% in 2018 compared to 70% in 2017) declared that they have personally used or intend to use EaSI outputs. The EaSI Programme is considered strong in facilitating effective and inclusive information sharing, mutual learning and dialogue on the EU policies in the target fields. The opinion on the involvement of relevant policy- and decision-makers in the debate on EU employment and social policy and legislation remained positive among stakeholders. As many as 89% of EaSI stakeholders working at national, regional or local level of government institutions said that they feel a sense of collaboration between their organisation and the EU institutions (88% in 2017, 86% in 2015). The percentage is high for all groups of stakeholders, including key EU-level NGOs. In further support to this objective, EaSI also continued to provide EU and national organisations with financial support to increase their capacity.

<sup>13</sup> <https://ec.europa.eu/social/BlobServlet?docId=22431&langId=en>

<sup>14</sup> Overall, 86% of stakeholders declared that they have already used or intend to use information acquired during the events for policymaking or advocacy purposes. A high share of stakeholders (73%) agree that the Commission is an effective source of guidance and support for social and labour innovation. Furthermore, overall, 64% of stakeholders said that they have personally used or intend to use EU-funded social policy innovation for policymaking or implementation (49% in 2017; 62% in 2014). More than 91% of participants in EaSI-funded events declared that they gained a better understanding of EU policies and objectives as a result of participating in an EaSI-funded event (87% in 2015-2016). As many as 89% of EaSI stakeholders working at national, regional or local government institutions said that they feel a sense of collaboration between their organisation and the EU institutions (88% in 2017; 86% in 2015).

Moreover, the Commission's goal to support social policy innovations gained more visibility. A high share of stakeholders (73%) agree that the Commission is an effective source of guidance and support for social and labour innovation. Overall, 64% of stakeholders said that they have personally used or intend to use EU funded social policy innovation for policy making or implementation (49% in 2017, 62% in 2014).

As clearly appears in section 5, the Progress axis has already met if not even exceeded almost all its targets on key performance indicators.

In the 2021-2027 programming period, the ESF+ EaSI strand will continue to test new policy approaches at a small-scale through social experimentation methods and to serve as a basis for social innovation upscaling, mainstreaming and/or replication activities under shared management or other sources of funding. At the same time, the shared management part of ESF+ will also support social innovation to re-design delivery mechanisms for employment, skills, social inclusion. This implies a new focus on bottom-up approaches based on partnerships involving public authorities, the private sector and civil society (such as community-led local development). For this purpose, the ESF+ Regulation includes, as an incentive, an increased EU co-financing rate (95%) for social innovation actions under shared management. This incentive also covers the upscaling, mainstreaming and/or replication of social innovations developed elsewhere, like the EaSI strand of the ESF+. The transfer or upscaling, mainstreaming and/or replication of successful innovations will also be further promoted through transnational cooperation under indirect management. The new integrated governance between the strands should also help meet the challenge of scaling up and mainstreaming innovation. To that end, the to-be-created National Contact Points in the EaSI countries will support beneficiaries in promoting their results and applicants in preparing good quality applications.

### **EURES axis**

Furthermore, looking also at the EURES Performance Measurement System (PMS) in addition to the EaSI performance monitoring, it is obvious that EaSI has improved the transparency of labour market information. Even though the use of the EURES Job Mobility Portal was slightly uneven from one year to another, the number of registered users increased and the overall number of visitors remains very high. EURES acted not only as a catalyst for providing transparent labour market information, but also for effective recruitment and placing of workers through all its tools (i.e. the European Job Mobility Portal, the targeted mobility schemes and the EURES cross-border partnerships). The start of the pandemic in 2020 affected substantially the free movement of workers. Border closures and quarantine requirements put almost on halt the free movement of workers. Restriction and limitation adopted by Member States further put pressure on the perspective of labour mobility. This all led to a reduced interest in the cross border vacancies on the EURES portal. In addition, the 2020 edition of the Labour Mobility Report confirmed that in the past years labour mobility has continued to grow but at a much slower pace than in the previous years. This process also had a direct effect on the interest in the EURES portal. It is expected that once the situation with the pandemic stabilizes, the economic recovery will kick in and the need for workforce (including mobile one) will be present, hence we envisage an increase in traffic also on the EURES portal.

The EURES Targeted Mobility Scheme continues to deliver good results, mainly due to a better integration in the EURES overall service package, the improved methodology of the interventions as a result of more experience and better communication about the projects. While in 2020-2021 the reduced intra-EU mobility following the COVID-19 pandemic will have an impact on the placements, in medium-term this should not have a major impact. In 2020, the EURES Targeted Mobility Scheme carried on thanks to a project led by Germany and another led by Italy for an overall value of some EUR 13.6 million. In addition, the 'Your first EURES job' (Yfej) led by Italy, Germany and Sweden will end in 2021. From the start of the initiatives till the end of the first semester of 2020, Yfej and TMS together resulted in 14 602 job placements. Due to the COVID-19 pandemic the number of placements declined significantly, resulting in 842 placements in the first six months of 2020. The provided support included a contribution to the costs incurred with language courses, recognition of diplomas and qualifications, travel and subsistence costs related to job interviews, country and family relocation, and also assisting Small and Medium Enterprises (SMEs) to provide integration training for Yfej job finders.

In 2020, the 11 EURES cross-border partnerships supported by EaSI continued implementing their activities under projects ending on 31 December 2021. The goal of the EURES cross-border partnerships is to share information and advice with jobseekers and employers on cross-border job mobility, to offer concrete placement opportunities and to provide pre- and post-recruitment services. Pools of experts are available to support workers at each stage of their career and to answer any questions about the practicalities of working across the immediate geographic border. The partnerships also monitor the mobility flows across their respective borders, the development of the job market, and identify and address obstacles that hamper the free movement of workers within the regional cross-border job market. The partnerships usually involve EURES members and partners but also regional organisations not part of the EURES network. The latter can participate if they are organisations relevant within the regional job market, e.g. regional development organisations, universities, business associations, trade unions, chambers of commerce or social partners. In 2019 these CBPs achieved 3 691 matchings, while handling 30 942 job vacancies and 52 284 job applications. In the first half of 2020, the EURES cross-border partnerships had 31 300 contacts with workers and more than 5 700 contacts with employers. Almost 31 000 job vacancies were handled and at least 2 200 job seekers were successfully matched with

jobs.<sup>15</sup> Further services included the organisation of employers' breakfasts and cross-border job fairs, tax and social security advice on cross-border labour mobility, the development of a cross-border job app and the promotion of cross-border job services on social media.

As clearly appears in section 5, the EURES axis is expected to meet almost all its targets on key performance indicators.

### Microfinance/Social Entrepreneurship axis

EaSI continued to provide real added value to better access to and availability of microfinance, while the support for increasing the overall availability and access to finance for social enterprises has gained momentum. As at the end of September 2020, financial intermediaries from Albania, Austria, Belgium, Bulgaria, Croatia, Czech Republic, Estonia, Finland, France, Greece, Ireland, Italy, Latvia, Lithuania, Luxembourg, Montenegro, Netherlands, North Macedonia, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Turkey and United Kingdom participated in the Microfinance Window. As a result, under the EaSI guarantee, since the launch of the instrument in 2015 and until end of September 2020, up to 104 (102 currently active) contracts worth EUR 222.7 million were signed with microfinance intermediaries; this allowed them to support 97 271 microenterprises receiving 107 098 microloans worth EUR 1.2 billion, meaning that the average microloan amounted to around EUR 11 879.

In the same period (2015 to end September 2020), 3 337 social enterprises had received 4 077 loans from financial intermediaries established in Austria, Belgium, Croatia, Czech Republic, Denmark, Finland, France, Germany, Hungary, Ireland, Italy, Netherlands, Poland, Portugal, Romania, Serbia, Slovakia, Spain and United Kingdom. Approximately EUR 146.3 million of EU support leading to 39 signed contracts were used to provide EUR 490.9 million of funding for social enterprises, meaning that the average social enterprise loan amounted to EUR 120 429.

As a whole, the 141 currently active signed contracts under the microfinance and social entrepreneurship strands are expected to unlock around EUR 4 billion of financing for micro- and social enterprises.

Under the Advisory and technical assistance for microfinance, a wide range of support activities were offered to Microfinance Institutions (MFIs): in the period October 2019-October 2020, 12 MFIs have benefited from capacity-building tailored trainings and 14 MFIs from training courses on the implementation of the European Code of Good Conduct for microcredit provision. For the purpose of exchange and dissemination of good practices, 6 workshops, 6 peer-to-peer trainings, and 30 webinars were delivered. For the advisory and technical assistance for social enterprise finance providers, 25 intermediaries active in the social finance space have benefited from tailored trainings and workshops.

The downward trend concerning the proportion of beneficiaries that have created or further developed a business with EU microfinance that were unemployed or belonging to disadvantaged groups seems to be due to several factors. But the most important, the reporting has been altered since one final recipient could also fall under 4 disadvantaged categories (e.g. woman with a migrant background, unemployed with no formal education). The current reporting received from the EIF is not able to support this categorization. Therefore, it was decided to focus on the first part of the indicator being the proportion of beneficiaries that have created or further developed a business with EU microfinance that are unemployed. Furthermore, the target may have been set too high, without taking dully into account the reporting difficulties.

## 3.2. Key achievements

### European Social Fund

36.4 million	4.5 million	5.5. million	1.8 million	3 million
people were supported by the ESF and YEI actions by end 2019	people found a job (including as self-employed) thanks to ESF and YEI support by end 2019	people gained a qualification thanks to ESF and YEI support by end 2019	participants were in education or training thanks to ESF and YEI support by end 2019	young people benefitted from the YEI by end 2019

### Fund for European Aid to the most Deprived

12.2 million	> 800 000	30 000	2 million
--------------	-----------	--------	-----------

<sup>15</sup> Figures cover the timeframe from January – June 2019, collected under the EURES performance measurement system for EURES cross-border partnerships. The figures for the second half of 2019 are currently under analysis.

people benefited from FEAD food assistance in 2019	people received material assistance under FEAD in 2019	benefited from social inclusion support under FEAD in 2019	tonnes of food were distributed amongst end recipients between 2014-2019 from which 345 000 tonnes in 2019

74%	64%	14 602	30 942	EUR 1.2 billion	EUR 4 billion
of EaSI stakeholders declared they have used/will use EaSI outputs	of stakeholders declared in 2018 that they have/will use EU funded social policy innovation for policy making or implementation	job placements obtained from the start of the Targeted Mobility Schemes in 2015 and Your first EURES job until the end of the first semester of 2020	vacancies were handled in the first semester of 2020 by 11 EURES cross-border partnerships	worth of loans awarded to 97 271 microenterprises between 2014 and 2020 thanks to EUR 222.7 million of guarantees for 104 microfinance intermediaries	of financing for micro- and social enterprises is expected to be unlocked at the end of the borrowing period thanks to the 141 contracts under EaSI MF/SE

### **3.3. Evaluations, studies and reports**

#### **European Social Fund**

Four thematic evaluations on ESF support between 2014-2018 were finalised in 2020, namely:

- Evaluation of the ESF/YEI support to youth employment<sup>16</sup>;
- Evaluation of the ESF support to employment and labour mobility (Thematic Objective 8 excluding support to youth employment)<sup>17</sup>;
- Evaluation of ESF support to social inclusion (Thematic Objective 9)<sup>18</sup>; and
- Evaluation of ESF to education and training (Thematic Objective 10)<sup>19</sup>.

The findings of the Youth Employment evaluation support the new Youth Employment Package<sup>20</sup>, notably as regards the need to reach out to inactive/vulnerable/low skilled groups, to extend the guarantee up to 29 years and confirms that work experience or vocational training is key to increase employability. Other lessons to be considered by DG EMPL when negotiating the 2021-2027 programmes targeting youth employment are:

- An integrated pathway still seems to be the best approach to youth employment and individuals furthest away from the labour market who benefit greatly from tailored and intensive guidance and support;
- A too narrow definition of target groups may pose problems when adapting to specific situations or to changes in the context later on;
- Adopting innovative communication approaches helps overcome the challenge of reaching disadvantaged participants. For example, social media and outreach campaigns, liaison work with local communities, among others;
- Embedded communication strategies would help increasing the visibility of EU support, such as using social media more broadly and forging partnerships with schools, community organisations and frontline services. Increased visibility would also foster outreach.

The evaluation of ESF support to employment and labour mobility (thematic objective 8 excluding youth) shows:

- That the net effects of active labour market policies are particularly strong for women, those at a certain distance from the labour market, through integrated / individual-centred approaches;
- The need to better fight embedded gender stereotypes and strive for more holistic approaches to promote active ageing;

<sup>16</sup> <https://ec.europa.eu/social/main.jsp?catId=738&langId=en&pubId=8307&furtherPubs=yes>

<sup>17</sup> <https://ec.europa.eu/social/main.jsp?catId=738&langId=en&pubId=8330&furtherPubs=yes>

<sup>18</sup> <https://ec.europa.eu/social/main.jsp?catId=738&langId=en&pubId=8350&furtherPubs=yes>

<sup>19</sup> <https://ec.europa.eu/social/main.jsp?catId=738&langId=en&pubId=8346&furtherPubs=yes>

<sup>20</sup> <https://ec.europa.eu/social/main.jsp?langId=en&catId=89&newsId=9793&furtherNews=yes>

- The need for more data and evidence on labour mobility and support to structural changes is crucial.

The evaluation of ESF support for social inclusion (thematic objective 9) shows that:

- The provision of personalised support is costly and requires more intense training of providers. Yet sufficient time and personalised support for participants are crucial to ensure needs are met and to generate the desired results;
- A participatory approach to designing and implementing social inclusion interventions can also enhance the provision of individualised support. Cross-sectoral partnerships facilitate the effective engagement with the target group and generate greater effectiveness;
- More inclusive partnerships and outreach strategies promote the recruitment of participants leading to greater relevance of the intervention.

The evaluation of ESF support to education and training (thematic objective 10) shows that:

- Operations on early school leaving and lifelong learning have been the most successful ones, both in terms of direct results and of the potential for longer-term systemic change. The relative success of these priorities appears to be linked to their stronger alignment with national and regional strategic priorities;
- Although support to education and training has effectively addressed the needs of young people generally, success has been more mixed for low qualified adults, those not in education, employment or training (NEETs) and the hardest to reach disadvantaged groups. It calls for maintaining a strong focus on disadvantaged learners (and intensify it particularly in tertiary education);
- There is need to give a greater focus to other skills which are increasingly relevant, such as digitalisation of learning and distance learning.

### **Fund for European Aid to the Most Deprived**

The key findings of the latest evaluation (SWD(2019)148)<sup>21</sup> have been presented in the programme statement accompanying the draft budget 2020.

In 2022, Managing Authorities of FEAD operational programmes type I (i.e. providing food and/or basic material assistance and accompanying measures) shall carry out a structured survey on end recipients, to be reported to the Commission in 2023.

According to Article 18 of FEAD regulation, the Commission shall carry out an ex post evaluation to assess the effectiveness and efficiency of the fund and the sustainability of results obtained, as well as to measure the added value of the fund. This ex post evaluation shall be completed by 31 December 2024.

### **Employment and Social Innovation programme**

The key findings of the latest Mid-term evaluation of the EaSI programme<sup>22</sup> have been presented in the Programme Statements for Draft Budget 2020.

In 2020, preparatory work has been carried out so that the ex post evaluation of the programme can start in 2021 and deliver results by the end of 2022. As part of this evaluation, the Commission will launch a dedicated survey seeking the input of EaSI beneficiaries and stakeholders. In addition, a public consultation will feed in this exercise.

The 3rd EaSI performance monitoring report covering the activities 2017 and 2018 was published in March 2020<sup>23</sup>. The main conclusion from the EaSI performance monitoring for 2017-2018 and for 2015-2016 is that evidence generated by EaSI contributed to the key EU policy objectives and initiatives.

From the previous performance monitoring report, it is clear that the integration of all EaSI horizontal issues has slightly increased since 2015. EaSI stakeholders paid particular attention to vulnerable groups such as young people as the most mainstreamed objective (78% said that it is taken into account). Equality between women and men and non-discrimination also remained well-integrated (76% agreed with this opinion). The data also indicated a strong increase in mainstreaming disability and accessibility matters. The share of stakeholders considering that the latter issue was taken into account increased from 46% in 2015 to 71% at the beginning of 2019.

The next performance monitoring report on the period 2019-2020 will be published in the course of 2021. As for the previous performance monitoring reports, surveys will be held to obtain the views of stakeholders as well as organisations who were beneficiaries of EaSI grants, but also from persons who took part in events organised by projects using EaSI financing.

## 4. Programme 2021-2027 - Key monitoring indicators

### Specific Objective 1 :Policy area - Employment and labour mobility

#### Indicator 1:Participants in employment, including self-employment, upon leaving

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of participants (cumulative)
Cut-Off Date	31/12/2022
Data source	ESF+ Managing Authorities from the Member States.
Link to the objective	Improve workers' mobility and employment opportunities.
Link MFF 14-20 / MFF 21-27	The indicator was followed also in the 2014-2020 period.
Other methodological comments	For the estimation of result indicator targets, DG EMPL will use historical success rates reported by Member States in the current 2014-2020 programming period. The ESF result indicators refer to the outputs directly. E.g. 'participants in employment' can be expressed as a direct function of 'unemployed' and 'inactive' in percentages. The historical success rates are adjusted downwards or upwards, if necessary, on the basis of assumptions. E.g. in case it is expected that the macroeconomic environment will be less favourable in the EU labour market and job-placements will be more difficult due to, for instance, the COVID-19 crisis, the success rate will be adjusted downwards compared to the historical value. In line with the Common Provisions Regulation, the result indicators will not have milestones. First estimates will be available in the second semester of 2021 and adjusted in 2022, based on approved operational programmes.
Full metadata available at this address	
Justification of the trend	

#### Indicator 2:Unemployed, including long-term unemployed, participants reached

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of participants (cumulative)
Cut-Off Date	31/12/2022
Data source	ESF+ Managing Authorities from the Member States.
Link to the objective	Improve workers' mobility and employment opportunities.
Link MFF 14-20 / MFF 21-27	The indicator was followed also in the 2014-2020 period.
Other methodological comments	For the estimation of all EU-level output indicator targets, DG EMPL will use historical unit costs reported by Member States in 2014-2020 programming period. In line with Article 15 of the ESF+ Regulation, the baseline of the output indicators is 0. Their milestones at EU level will be estimated on the basis of historical trends. If the rate of implementation in time shows similar patterns over programming periods, the milestone will represent the same proportion of the target in the post 2021 programmes as in the 2014 programmes. First estimation will be available in the second semester of 2021 and adjusted in 2022.

### Indicator 5: Job placements effected as a result of recruitment and placement activity

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of effected job placements
Cut-Off Date	31/12/2021
Data source	EURES performance measurement system.
Link to the objective	Effect on labour mobility and access to employment.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The performance monitoring framework of the preceding Employment and Social Innovation programme 2014-2020 as well as the mid-term and (upcoming) ex post evaluations will form the basis for establishing a new performance framework with updated baselines, milestones and targets. The EURES performance measurement system that is based on a Commission implementing act, as foreseen under the EURES regulation, provides the necessary baseline, milestones and targets for the Targeted Mobility Scheme based on its ultimate objective: the number of placements. First estimations will be available in the second semester of 2021 and adjusted in 2022.
Full metadata available at this address	
Justification of the trend	

## 5. Programme 2014-2020 - Key monitoring indicators

### *Previous Program 1 : European Union Programme for Employment and Social Innovation (EaSI)*

**Specific Objective 1 :Support the development, implementation, monitoring and evaluation of the Union's instruments, policies (promoting a high level of quality and sustainable employment, guaranteeing adequate and decent social protection, combating social exclusion and poverty and improving working conditions) and relevant law and promote evidence-based policy-making, social innovation and social progress, in partnership with the social partners, civil society organisations and public and private bodies (PROGRESS Axis)**

### **Indicator 1: Declared gain of better understanding of EU policies and legislation**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
92%				> 85%			> 85%			Maintain results over 85%
	Actual Progress									Final
	91%		87%		91%					

Are we on track	On track
Indicator type	Result

Unit of measurement	Percentage of respondents
Cut-Off Date	31/12/2018
Data source	Bi-annual survey on PROGRESS.
Narrative	The Commission aims to maintain the results over 85%. As demonstrated, the performance of the programme per this indicator is in line with the target.
Methodology	Percentage of respondents agreeing to the statement.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement.
Other methodological comments	Data is reported bi-annually as part of the EaSI Programme Performance Monitoring report.
Full metadata available at this address	
Justification of the trend	The indicator is expected to reach its target, based on its evolution.

### Indicator 2: Active collaboration and partnership between government institutions of the EU and Member States

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
91%				> 85%			> 85%			Maintain results over 85%
	Actual Progress									Final
	86%		88%		89%					

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage of respondents
Cut-Off Date	31/12/2018
Data source	Bi-annual survey on PROGRESS.
Narrative	A large share of officials of national, regional and local institutions (89%) have indicated that they collaborate actively with the EU institutions. Another positive aspect is a stable increasing trend for this indicator over the past years. The Commission aims to maintain the results over 85%. The performance of the programme per this indicator is in line with the target. The percentage is high for all groups of stakeholders. In total, 89% feel a sense of collaboration between their organisation and the EU institutions. It is noteworthy that officials of EU institutions (91%) whose opinion of the state of collaboration within the EU institutional is indicative showed a positive opinion. A large share of employees/volunteers in European-level NGO networks also feel a sense of collaboration (88%) with EU institutions. As in 2014 and 2017, employees/volunteers in national NGOs feel a somewhat less sense of collaboration with EU institutions, in comparison with other stakeholder groups.
Methodology	Percentage of respondents agreeing to the statement.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement.
Other methodological comments	Data is reported bi-annually as part of the EaSI Programme Performance Monitoring report.
Full metadata available at this address	
Justification of the trend	The indicator is expected to reach its target, based on its evolution.

### Indicator 3: Declared use of social policy innovation in the implementation of social CSRs and the results of social policy experimentation for policy making

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2020
62%				64%			> 66%			> 66%
	Actual Progress									Final
	62%		49%		64%					

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage of respondents
Cut-Off Date	31/12/2018
Data source	Bi-annual survey on PROGRESS.
Narrative	In total, 64% of stakeholders declare that they have used or intend to use social policy innovations developed at the EU level for policymaking. The result is slightly higher than the baseline set in 2014 at 62%. Around 66% of stakeholders within the policy area of employment and also within the area of Social Protection and Social Inclusion (SPSI) have used or intend to use social and labour market policy innovation.
Methodology	Percentage of respondents agreeing to the statement.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement.
Other methodological comments	Data is reported bi-annually as part of the EaSI Programme Performance Monitoring report.

Full metadata available at this address	
Justification of the trend	The indicator is expected to reach its target, based on its evolution.

**Specific Objective 2 :Promote workers' voluntary geographical mobility on a fair basis and boost employment opportunities by developing high-quality and inclusive Union labour markets that are open and accessible to all, while respecting workers' rights throughout the Union, including freedom of movement (EURES Axis)**

**Indicator 1: Number of visits of the EURES platform**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
1,7	Actual Progress									Final
	1,4	1,4	1,4	1,2	0,9	0,7	0,5			

Are we on track	Deserves attention**
Indicator type	Output
Unit of measurement	Million (yearly)
Cut-Off Date	31/12/2020
Data source	Indicator measured by Matomo
Narrative	The data for 2019 and 2020 show a constant decrease in the number of unique visits as the conditions in the labour market improve all over Europe while unemployment and the number of jobseekers were decreasing until the COVID-19 crisis. Hence the target of 2 million has become too high, a more realistic target for 2020 would be 1 million.
Methodology	Monthly Average
Link MFF 14-20 / MFF 21-27	DG EMPL will not continue to report on this indicator in the period 2021-2027 in the Programme Statement.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Given the favourable economic situation in the period up to the COVID-19 pandemic the platform received less visits. This may increase as a result of the current crisis.

**Indicator 2: Number of youth job placements achieved or supported under the Preparatory Action Your First EURES Job (YFEJ) as well as under Targeted Mobility Schemes**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
1844	Actual Progress									Final
	3433	5053	5720	7606	10696	13661	14602			

Are we on track	On track
Indicator type	Output
Unit of measurement	Cumulative number of job placements
Cut-Off Date	31/12/2020
Data source	EURES Performance Measurement System
Narrative	Data on 2014 refer to results achieved under the Your first EURES job (YFEJ) preparatory action. Data on 2015 covers both the preparatory action and part of the activities under the YFEJ Targeted Mobility Scheme (transitional period). As from 2016, the indicators show a steady increase due to: a) the large size and long duration of the YFEJ projects and, b) the experience and increased delivery capacity of the implementing organisations. The number of job placements has changed for some previous years based on the confirmed annual figures for 2017 and 2018. The figure for 2020 covers the period 2014-first semester of 2020. The scheme is expected to achieve the 2020 target.
Methodology	Cumulative figures
Link MFF 14-20 / MFF 21-27	DG EMPL will not continue to report on this indicator in the period 2021-2027 in the Programme Statement.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The indicator is expected to reach its target, based on its evolution. The COVID-19 pandemic resulted in less placements.

**Indicator 3: Number of individual personal contacts of EURES advisers with jobseekers, job changers and employers**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
----------	------	------	------	------	------	------	------	------	------	--------

2013	Milestones								2020
1055936			1200000				1400000		1400000
	Actual Progress								Final
	947489	1058874	1131002	1524280	2479757	1071174	1315888		

Are we on track	On track
Indicator type	Output
Unit of measurement	Yearly number of contacts
Cut-Off Date	31/12/2020
Data source	EURES Performance Measurement System
Narrative	As from 2018, data collection is governed by the EURES Performance Measurement System (PMS) implemented on the basis of the EURES Regulation (EU)2016/589. Numbers of contacts are currently reported by EURES national coordination offices according to the Commission decision (EU)2018/170. The indicated number of individual personal contacts of EURES advisers for 2020 concerns only the first semester 2020 while the final figure will only be available in May 2021. The number is increasing thanks to the new EURES regulation entailing compulsory reporting of EURES advisers while in the past it was voluntary.
Methodology	
Link MFF 14-20 / MFF 21-27	DG EMPL will not continue to report on this indicator in the 2021-2027 Programme Statement.
Other methodological comments	2020: Data reported only for the first semester
Full metadata available at this address	
Justification of the trend	The indicator is expected to reach its target, based on its evolution.

**Specific Objective 3 :Promote employment and social inclusion by increasing the availability and accessibility of microfinance for vulnerable people who wish to start up a micro-enterprise as well as for existing micro-enterprises, and by increasing access to finance for social enterprises (Microfinance Axis)**

**Indicator 1: Number of businesses created or consolidated that have benefitted from EU support**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
EaSI Microfinance Guarantee										
2012	Milestones								2020	
			21000				41000			41000
	Actual Progress								Final	
		416	12743	25830	44780	69770	97271			
EaSI Social entrepreneurship Guarantee										
2012	Milestones								2020	
			500				1100			1100
	Actual Progress								Final	
			63	250	864	2020	3337			

Are we on track	On track
Indicator type	Output
Unit of measurement	Business, Micro-enterprises and Social enterprises taken together on cumulative basis.
Cut-Off Date	30/09/2020
Data source	2020 EASI Guarantee Financial Instrument Annual Operational Report, European Investment Fund.
Narrative	The milestones and targets have been based on the past experience with Progress Microfinance. There was no such support offered by the European Commission to social enterprises in the past.
Methodology	
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, this part of the EaSI programme will not be included in the ESF+ EaSI strand, therefore DG EMPL will not continue reporting on this indicator in the Programme Statement.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The target has been exceeded.

**Indicator 2: Proportion of beneficiaries that have created or further developed a business with EU microfinance that are unemployed or belonging to disadvantaged groups**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones								2020	
			0,45				0,5			0,5
	Actual Progress								Final	
		0,3030	0,1930	0,1690	0,1573	0,1395	0,12			

Are we on track	Deserves attention**
Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	30/09/2020
Data source	2020 EaSI Guarantee Financial Instrument Annual Impact Report, European Investment Fund.
Narrative	The indicator shows a downward trend over the 2016-2018 period in the proportion of recipients who were unemployed. This is explained by the 18.6% fall in EU unemployment in the same period since the indicator describes the proportion of beneficiaries who were unemployed. The higher 2015 figure is likely to be an outlier since it is based only on the 416 recipients that year (compare with 5 818 recipients in 2016) and the first agreement with a financial intermediary was only signed in October 2015.
Methodology	
Link MFF 14-20 / MFF 21-27	In the period 2021-27 this part of the EaSI programme will not be included in the ESF+ EaSI strand, therefore DG EMPL will not continue reporting on this indicator in the Programme Statement.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	As a result of the crisis caused by the COVID-19 pandemic the figure may increase, although it is not expected to reach the target.

### Previous Program 2 : European Social Fund (ESF)

## Specific Objective 1 :Promoting sustainable and quality employment and supporting labour mobility

### Indicator 1: Number of participants benefiting from ESF under this thematic objective

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2007-2013	Milestones									2023
21.7	14.6									17.3
	Actual Progress									Final
	0.45	1	4.1	7.41	10.73	14,0				

Are we on track	On track
Indicator type	Output
Unit of measurement	Million (cumulative)
Cut-Off Date	31/12/2019
Data source	Annual Implementation Reports from the Member States.
Narrative	'Number of participants' measures the number of participations per operation under the thematic objective 'Promoting sustainable and quality employment and supporting labour mobility'. Over the programming period, one person can participate in several ESF operations and be counted more than once. The indicator has been selected because it provides an accurate picture of the outreach of the programme. By end 2019, investments in sustainable and quality employment supported 14 million participants, which led to more than 4.1 million positive results. These positive results consist of people that found a job, gained a qualification or were able to improve their labour market position by means of ESF interventions.
Methodology	Note 1: Compared to the 2007-2013 period definitions on the number of participations have been clarified to prevent double reporting of participations by the same individual in several activities within a single operation and to exclude indirect participants such as those benefiting from change in a system. This change in the definition of 'participants' is one of the reasons for lower achievements. Note 2: Moreover, the cumulative achievement of the 2007-2013 programming period included a large amount of participants who were reported well after 2013. Note 3: In the current stage of the economic cycle, the labour market pulls people in employment without public support, and outreach in this thematic objective is more difficult. All these factors explain the downward revision of the target to 17.3 million participants, which is the extrapolation of the annual increases of the last two years. The adjustment was expected and made during the performance review stage.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement.
Other methodological comments	Data reliability: with a view to improving data reliability, the official platform for exchanging data on the programme implementation between Member States, SFC2014, has applied automatic validation rules, based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator is expected to reach its target, based on its evolution. The value has steadily increased since 2016 and represents an improvement compared to end-2018, when 10.73 million participants had been supported.

**Indicator 2:Participants (unemployed or inactive) in employment, including self-employment, upon leaving**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2023
0,14					0,24		0,24			0,24
	Actual Progress									Final
	0,077	0,1030	0,1650	0,1710	0,2417	0,2319				

Are we on track	On track
Indicator type	Result
Unit of measurement	Ratio
Cut-Off Date	31/12/2019
Data source	Annual Implementation Reports from the Member States.
Narrative	Baseline: Employment result estimate for participants in activities in 2007-2013 period. For the period 2014-20, success rates were reported for participants in all investment priorities until reporting year 2017. While reporting the absolute number of participants in employment for the whole ESF remains relevant and continues to be reported in the ESIF Open Data Platform, for reporting success rates (number of job placements compared to unemployed + inactive participants at entry to ESF) it is more relevant to report the value for the employment objective only. The break in the series starts from 2018 onwards.
Methodology	Employment results depend on the nature of investment priorities (IP) and interventions. For comparative purposes, in Employment, results for participations in 'Access to Employment' activities during 2007-2013 period were 28%, while for 'Human capital and Social Inclusion' activities employment results made up 10% and 26% of all reported results and correspondingly lower employment rates. However, especially in the education (TO10) and in the institutional capacity building (TO11) thematic objectives, and to a lesser extent, in social inclusion (TO9) too, placement into job is not among the typical, intended outcomes of the operations.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will continue reporting on this indicator in the Programme Statement.
Other methodological comments	Data reliability: with a view to improving data reliability, the official platform for exchanging data on the programme implementation between Member States, SFC2014, has applied automatic validation rules, based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator had already reached its target in 2018 and only slightly decreased in 2019. Moreover, based on the past programming period experience, the achievement of results linked to multiannual projects occurs late in the period.

**Specific Objective 2 :Promoting social inclusion, combating poverty and any discrimination****Indicator 1:Participants considered as part of disadvantaged groups that are reached by the ESF**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2023
0,201					0,40					0,40
	Actual Progress									Final
	0,398	0,431	0,404	0,40	0,4118	0,4203				

Are we on track	On track
Indicator type	Output
Unit of measurement	Ratio
Cut-Off Date	31/12/2019
Data source	Annual Implementation Reports from the Member States.
Narrative	Baseline: Average programming period 2007-2013: Disabled, Migrants, Minorities & Others. The indicator has been selected because disadvantaged groups are an important target group of the ESF. The values show that these groups have been significantly supported since the start of the programming period across all thematic objectives. More specifically, by end 2019, social inclusion investments supported 8.6 million participants, which reached a large variety of persons with different types of (vulnerable) personal backgrounds. Such investments led to 2.3 million positive results, such as finding a job, gaining a qualification or other improvements in terms of one's position on the labour market. This is an important achievement, especially when regarded in the context of the Europe 2020 headline target to lift at least 20 million people out of the risk of poverty or social exclusion.
Methodology	Target groups: Migrants, participants with a foreign background, minorities (including marginalised communities such as the Roma); Participants with disabilities; Participants who live in a single adult household with dependent children; Participants who live in jobless households; Other disadvantaged. These will be broken down by the different categories. Persons may cumulate several disadvantages.

	It should be noted that these indicators cover all actions under all thematic objectives.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will continue reporting on this indicator in the Programme Statement but the target group will include participants with a foreign background, minorities including participants from the Roma community, and third country nationals.
Other methodological comments	Data reliability: with a view to improving data reliability, the official platform for exchanging data on the programme implementation between Member States, SFC2014, has applied automatic validation rules, based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator has already reached its target and will continue its positive evolution. It has experienced a slight increase since 2017, which shows that the ESF is successfully supporting the most vulnerable groups.

### Indicator 2: Inactive participants engaged in job searching upon leaving

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2023
						16%				16%
	Actual Progress									Final
	1.40%	5.50%	6.80%	12.20%	16%	14.4%				

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage of inactive participants
Cut-Off Date	31/12/2019
Data source	Annual Implementation Reports from the Member States
Narrative	The indicator shows the percentage of inactive participants engaged in job searching after receiving support from the ESF. It has been selected because they are an important target group and helping them back into employment is a relevant outcome of a number of ESF operations.
Methodology	This indicator had not existed in the previous programming period. The evidence from the current programming period shows that the target has to be revised. Under-reporting has to be taken into account too in the interpretation of the achievement: in operations where the intended outcome is other than job-search, data on job-search may not be collected in some operations. Another element to be considered is that in many cases there may have been a change in the target groups and only those who are most difficult to reach have remained. Depending on the level of difficulty of the target group, the fluctuation of this success rate indicator is normal, as it is a cumulative figure since 2014. One contributing factor for a temporary decrease may also be the performance review in 2019, which provided a strong incentive to Member States to increase outputs. Proper analysis will be drawn after the ex post evaluation.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement; it will report on the number of participants engaged in job searching upon leaving.
Other methodological comments	Data reliability: with a view to improving data reliability, the official platform for exchanging data on the programme implementation between Member States, SFC2014, has applied automatic validation rules, based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator reached its target in 2018 and only slightly decreased in 2019. Based on the past programming period experience, the achievement of results linked to multiannual projects occurs late in the period and the project selection rate suggests that the target will be achieved.

### Indicator 3: Participants above 54 years of age.

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2007-2013	Milestones									2023
6.2%					6%	6%				6%
	Actual Progress									Final
	4,80%	5,50%	5,90%	6,30%	7,30%	8,25%				

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage of all ESF participants
Cut-Off Date	31/12/2019
Data source	Annual Implementation Reports from the Member States.
Narrative	The indicator shows the extent to which the ESF has been supporting participants above 54 years of age among all participants. It has been selected because it represents an important ESF target group.

Methodology	Note 1: Only a very limited number of operational programmes have targets set specifically for this category for the period 2014-2020. The target set for 2023 is therefore based on the results of the indicator 'Older people (55-64 years)' from the 2007-2013 programming period. Note 2: Based on the first three reporting by all MS on common indicators (AIR submitted in 2016, 2017 and 2018), the initial milestone and target are maintained. Note 3: The data reported in the table above is based on cumulative data. Overall, for the whole programming period, a share of 6% of all participants is expected to be above 54 years of age. This is reflected in the milestone and target for this indicator.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement; it will report on the number of participants 55 years of age and above reached
Other methodological comments	Data reliability: with a view to improving data reliability, the official platform for exchanging data on the programme implementation between Member States, SFC2014, has applied automatic validation rules, based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator has already reached its target and will continue its positive evolution, based on the project selection rate.

### Specific Objective 3 :Investing in education, training and vocational training for skills and life-long learning

#### Indicator 1: Number of participants benefiting from ESF under this thematic objective

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2023
23.8	15.9	15.9	15.9	15.9	15.9		18			18
	Actual Progress									Final
	0.18	0.52	1.9	4.5	9.1	13.4				

Are we on track	On track
Indicator type	Output
Unit of measurement	Million (cumulative)
Cut-Off Date	31/12/2019
Data source	Annual Implementation Reports from the Member States.
Narrative	In total, 13.4 million participants are recorded for all operations in the field of education, of which 4.7 million have reached an individual short-term result. More than 3.2 million participants gained a qualification with support of ESF investments with an education objective, while another 0.9 million participants were in education / training upon leaving the intervention.
Methodology	It should be noted that these indicators under this specific objective cover all actions under all thematic objectives, unless specified otherwise in the name of the indicator. Note 1: Due to the multiannual nature of the programme and the large annual variances, comparing to a full programming period is the most relevant indicator. Note 2: 'Number of participants' measures the number of participations per operation. Over the programming period, one person can participate in several ESF operations and be counted more than once. Compared to the 2007-2013 period, definitions on the number of participations have been clarified to prevent double reporting of participations by the same individual in several activities within a single operation and to exclude indirect participants such as those benefiting from change in a system. This change in the definition of 'participants' is one of the reasons for lower achievements.
Link MFF 14-20 / MFF 21-27	In the period 2021-27, DG EMPL will not continue reporting on this indicator in the Programme Statement.
Other methodological comments	Data reliability: with a view to improving data reliability, the official platform for exchanging data on the programme implementation between Member States, SFC2014, has applied automatic validation rules, based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator is expected to reach its target based on its evolution and the project selection rate. The 2019 value already represents a considerable increase compared to 2018, when 9.1 million participants were reported under this specific objective.

#### Indicator 2: Participants gaining a qualification upon leaving under this thematic objective

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2023
					0,48		0,23			0,23
	Actual Progress									Final

	0,188	0,204	0,211	0,223	0,2438	0,2395			
Are we on track	On track								
Indicator type	Result								
Unit of measurement	Ratio								
Cut-Off Date	31/12/2019								
Data source	Annual Implementation Reports from the Member States.								
Narrative	More than 3.2 million participants gained a qualification with support of ESF investments with an education objective, while another 0.9 million participants were in education / training upon leaving the intervention.								
Methodology	The target was revised based on the evidence of the 2016, 2017 and 2018 reporting years.								
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement; it will report on the number of participants gaining a qualification upon leaving under all ESF+ specific objectives.								
Other methodological comments	Data reliability: with a view to improving data reliability, the official platform for exchanging data on the programme implementation between Member States, SFC2014, has applied automatic validation rules, based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.								
Full metadata available at this address									
Justification of the trend	The indicator has already reached its target and will continue its positive evolution.								

### Specific Objective 4 :Enhancing institutional capacity of public authorities and stakeholders and efficient public administration

#### Indicator 1: Number of projects targeting public administrations or public services at national, regional or local level

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2023
185	900	900	900	900	900		2250			2250
	Actual Progress									Final
	0	31	3970	13017	27644	51726				

Are we on track	On track								
Indicator type	Output								
Unit of measurement	Projects (cumulative)								
Cut-Off Date	31/12/2019								
Data source	Annual Implementation Reports from the Member States.								
Narrative	The indicator has been selected because it reflects the extent of ESF action in the field. In terms of individual results, such institutional capacity interventions mainly contributed to public officials gaining a certain type of qualification (168 753), but most meaningful results in this area are procedural in kind, such as shorter time required for certain operations, or specific positive results for organisations, public administrations, the judiciary, and civil society organisations.								
Methodology	The overachievement of this indicator is mainly due to Italy, which accounts for 68% of all projects targeting public administrations or public services at national, regional or local level. This could be explained by different interpretations of the definition of this indicator. While some Member States will count one project even if this project covers several public administration, other Member States will count each public administration supported under one project.								
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement.								
Other methodological comments	Data reliability: with a view to improving data reliability, the official platform for exchanging data on the programme implementation between Member States, SFC2014, has applied automatic validation rules, based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.								
Full metadata available at this address									
Justification of the trend	The indicator has already reached its target. Moreover, the value has significantly increased since 2018.								

### Specific Objective 5 :Promoting specific support to young NEETs (15-24)

#### Indicator 1: Number of participants aged 15-24 benefiting from ESF

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2007-2013	Milestones									2023

23.1	15.5	15.5	15.5	15.5	15.5		20.3			20.3
	Actual Progress									Final
	0.33	0.72	3.1	6.6	11.3	16.4				

Are we on track	On track
Indicator type	Output
Unit of measurement	Million (cumulative)
Cut-Off Date	31/12/2019
Data source	Annual Implementation Reports from the Member States.
Narrative	The indicator measures the number of participations of individuals aged between 15 and 24 per operation under all thematic objectives. Over the programming period, one person can participate in several ESF operations and be counted more than once. This indicator has been selected because it represents the main ESF target group for this type of actions.
Methodology	It should be noted that the output indicator 1 cover participants benefitting from ESF under all thematic objective whilst the other indicators (2 to 5) refer exclusively to the YEI supported actions. In compliance with Article 16 of the ESF Regulation (EU) No 1304/2013, Member States may decide to extend the YEI target group to include young persons under the age of 30. Note 1: 'Number of participants' measures the number of participations per operation. Over the programming period, one person can participate in several ESF operations and be counted more than once. Compared to the 2007-2013 period definitions on the number of participations have been clarified to prevent double reporting of participations by the same individual in several activities within a single operation and to exclude indirect participants such as those benefiting from change in a system. This change in the definition of 'participants' is one of the reasons for lower achievements.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement; it will report on the number of young people aged 18-29 years reached.
Other methodological comments	Data reliability: with a view to improving data reliability, the official platform for exchanging data on the programme implementation between Member States, SFC2014, has applied automatic validation rules, based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator is expected to reach its target. The value has significantly increased since 2018 and has experienced a steady increase since 2016. Based on the past programming period experience, the achievement of outputs linked to multiannual projects occurs late in the period and the project selection rate suggests that the target will be achieved.

### Indicator 2: Unemployed participants who complete the YEI supported intervention

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
			750000				2100000			2100000
	Actual Progress									Final
	21163	144502	579759	1214269	1791955	1678527				

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of participants
Cut-Off Date	31/12/2019
Data source	Annual Implementation Reports from the Member States.
Narrative	The indicator shows that almost 1.7 million unemployed persons completed a YEI intervention, which amounts to over half the total participations (3 million participations counted for YEI interventions). The indicator has been selected because it represents one of the main intended outcomes of YEI operations.
Methodology	The target and the 2020 milestone have been reviewed downwards on the basis of the implementation results of the previous years. It is worth noting that youth unemployment rates have dropped, thus leading to a lower number of participants seeking support under the YEI. Moreover, YEI-supported participants are typically the farthest away from the labour market and therefore more difficult to be reached.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement.
Other methodological comments	Data reliability: with a view to improving data reliability, the official platform for exchanging data on the programme implementation between Member States, SFC2014, has applied automatic validation rules, based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator is expected to reach its target. Based on the past programming period experience, the achievement of results linked to multiannual projects occurs late in the period and the project selection

	rate suggests that the target will be achieved.
--	---

**Indicator 3: Unemployed participants in education/training, gaining a qualification or in employment, including self-employment, upon leaving the YEI supported intervention**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Other methodological comments	Data reliability: with a view to improving data reliability, the official platform for exchanging data on the programme implementation between Member States, SFC2014, has applied automatic validation rules, based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator is expected to achieve its target, as its value has been growing steadily since 2017. Moreover, based on the past programming period experience, the achievement of results linked to multiannual projects occurs late in the period and the project selection rate suggests that the target will be achieved.

### Previous Program 3 : Fund for European Aid to the Most Deprived

## General Objective 1 :To promote social cohesion, enhance social inclusion and therefore ultimately contribute to the objective of eradicating poverty in the Union in accordance with the Europe 2020 Strategy

### Indicator 1:People at risk of poverty or social exclusion

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
122,9							96,2			96,2
	Actual Progress									
	122,026	119,077	118,065	112,925	110,235	107535				

Are we on track	Deserves attention**
Indicator type	Impact
Unit of measurement	Number of people (cumulative)
Cut-Off Date	31/12/2019
Data source	EUROSTAT - [t2020_50] - People at risk of poverty or social exclusion
Narrative	This indicator corresponds to the sum of persons who are: at risk of poverty or severely materially deprived or living in households with very low work intensity. Persons are only counted once even if they are present in several sub-indicators. At risk-of-poverty are persons with an equivalised disposable income below the risk-of-poverty threshold, which is set at 60 % of the national median equivalised disposable income (after social transfers).
Methodology	Data for 2019 is estimated.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement.
Other methodological comments	FEAD addresses the worst forms of poverty but, due to the small size of the fund and its complementarity to other national and EU poverty reduction efforts, cannot be expected to lift people out of poverty on its own. Moreover, the economic conditions in the period after 2008 were not conducive to reaching this target. The EU 2020 poverty target was set as at least 20 million fewer than in 2008 (116.2 million people).
Full metadata available at this address	
Justification of the trend	Due to its relatively small size and the difficult economic conditions and growing inequalities experienced since 2008 notably, the FEAD alone is unlikely to reduce the number of People at risk of poverty or social exclusion, since it addresses the worst forms of poverty and is to be considered

jointly with national measures to reduce poverty more widely.
---

## Specific Objective 1 :Alleviating the worst forms of poverty in the Union by providing non-financial assistance to the most deprived persons

### Indicator 1: Number of persons receiving assistance from the Fund

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0	8	12,7	12,7	12,7	12,7	12,7	12,7			12,7
	Actual Progress									Final
	8,19	13,76	15,92	12,92	12,85	12,5				

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of persons receiving assistance from the Fund reported annually (in million).
Cut-Off Date	31/12/2019
Data source	Annual Implementation Reports from the Member States.
Narrative	The number of persons receiving assistance from the Fund represents the main result of the operations financed from the fund.
Methodology	FEAD is a new fund, hence with a baseline at 0. The figures used in the framework of the food assistance programme are established through a methodology which does not yield figures that could be comparable to the one of the new FEAD, thus they cannot be used as a baseline. In 2014, the Commission and the Member States agreed on a common set of output and result indicators on which the Member States report annually (in the Annual Implementation Reports) from 2015 to 2024 for both OP I type of programmes (food aid and/or basic material assistance) and OP II type of programmes (social inclusion support). The reporting is performed at programme level. In terms of target and milestones, there is no requirement in the FEAD performance framework for Member States. The Commission made an adjusted forecast of 12.7 million annually based on the actual performance between 2014-2017, as stated also in FEAD Mid-Term Evaluation.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The indicator is expected to achieve, if not surpass, its target. On average, the FEAD supported 12.7 million persons each year between 2014 and 2018 and almost 13 million in 2018 alone.

## 6. The programme contribution to horizontal policies

### 6.1. Contribution to climate mainstreaming

#### 6.1.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
1 075,0	1 075,0	1 075,0	1 075,0	1 075,0	1 075,0	1 075,0	7 525,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.1.2. Explanation and justification on the financial contribution

At beginning of 2021, Member States' detailed programming intentions for 2021-2027 programmes are not yet known. As such, the 2021-2027 contribution of the ESF+ is currently calculated on the basis of historical values. These estimates will be reviewed every year with the most updated information available.

#### 6.1.3. Key achievements

##### European Social Fund

Relevant objective/output	Budget 2019 (million EUR)	Budget 2020 (million EUR)
Climate actions under ESF investment priorities	1 600	2 133

2014-2020 Programming (million EUR)	Total
-------------------------------------	-------

2014	2015	2016	2017	2018	2019	2020	(million EUR)
	22.5	135.9	383.7	1 201.9	1 600.0	2 133.0	5 477.0

Climate change expenditure within ESF can be tracked through the ESF secondary theme 01 'supporting the shift to a low-carbon, resource efficient economy' indicated in the Implementing Regulation (EU) No 215/2014. The intervention fields in Annex I of Regulation (EU) No 215/2014 match the ESF investment priorities defined in Article 3 of the ESF Regulation. Unlike for the ERDF categories of intervention which have the support to climate objectives as their primary objective one cannot establish ex ante an automatic link between one ESF investment priority and the impact on climate objectives.

Climate actions can be undertaken under the majority (if not all) of the ESF investment priorities (whether it is in the context of SME support, Vocational Education and Training systems, life-long learning, youth employment measures, etc.). It is for this reason that the Commission decided to use for the ESF an additional dimension to track climate change expenditure: the ESF secondary theme. All expenditure under the ESF secondary theme has a 100% coefficient.

For the programming period 2014-2020, Member States have earmarked in their operational programmes EUR 1.7 billion (EU allocation) for the shift to a low-carbon and resource efficient economy. This represents a conservative estimate based on Member States' declarations in their operational programmes.

Here, Member States set estimates for the EU share and not for the EU and national share together. However, reporting is done solely on the basis of total costs (EU and national share together). In order to follow the progress towards the target, the ESIF-related DGs have created a report that allows for the systematic application of the co-financing rate from the programmes to the information declared in the financial data. It provides a more accurate picture of the ESF contribution (EU only) to low-carbon, resource efficient economy and allowed for comparison with the amounts programmed.

The ESF contributes to climate action through support to a wide range of projects. For example, in Spain an ESF-funded project aimed at improving the professional and curricular skills of unemployed people in Madrid, Castilla-La Mancha, Murcia and Andalucía through quality training in areas related to the circular economy, and helped some of them to get a job. Participants took courses on waste management, gardening adapted to climate change, environmental monitoring, circular economy tools, environmental management systems, combined with numerous visits to companies and natural areas. Backed by EUR 97 278 from ESF, the project supported 1 500 participants between 2018 and 2020.

#### 6.1.4. Performance

##### **European Social Fund**

By end of December 2020, already more than EUR 3.9 billion of eligible ESF expenditure declared (EU share) was reported by Member States as having contributed to the shift to a low carbon, resource efficient economy. This represents 354% of the amount set in the operational programmes. In terms of projects selected, the EU share was already EUR 7.3 billion, which is significantly above the amount set in the programmes.

## 6.2. Contribution to biodiversity mainstreaming

### 6.2.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.2.2. Explanation and justification on the financial contribution

The ESF+ contributes to green skills and jobs and the green economy by:

1. Supporting the labour force by enhancing knowledge and skills and matching skills to develop, produce, use and apply new efficient and low-carbon technologies in a broad range of sectors.
2. Offering support to the labour force in order to alleviate any negative impact on employment as a result of shifting to a low-carbon and climate-resilient economy, i.e. jobs cuts in energy-intensive industries.

Through this type of investments, the programme may also partially support the development of biodiversity-relevant skills and jobs. However, the contribution of the ESF+ to biodiversity is only marginal, compared to the broader contribution to climate mainstreaming, and cannot be tracked.

### 6.3. Contribution to clean air financing

Not applicable

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.4.2. Key achievements and performance

##### **European Social Fund**

Gender mainstreaming is a horizontal principle of the ESI Funds. The Member States and the Commission must promote it throughout the preparation, implementation, monitoring and evaluation of the operational programmes. Moreover, under ESF, Member States have the obligation to programme targeted actions aimed at increasing the sustainable participation and progress of women in employment. In the period 2014-2020, the dual approach (i.e. gender mainstreaming and specific actions) is being pursued together with other requirements, such as a dedicated investment priority on gender equality and relevant general ex ante conditionalities. The strong emphasis of the ESF on gender equality has been maintained and even reinforced for the period 2021-2027.

The ESF has a dedicated investment priority for equality between men and women in all areas, including in access to employment, career progression, reconciliation of work and private life and promotion of equal pay for equal work. Member States have earmarked EUR 1.4 billion for 2014-2020 (EU share) under this priority.

Specific targeted actions can yet be programmed under any other ESF investment priority. Across all investment priorities, the indicative amount for targeted actions for gender equality captured through the ESF secondary theme in programmes was EUR 5.2 billion (EU share).

In their operational programmes, Member States set a target for the EU share and not for the EU and national co-financing. However, reporting is done solely on the basis of total costs (EU and national share together). In order to follow progression towards the target, the ESIF-related DGs have created a report that allows for the systematic application of the co-financing rate from the programmes to the information declared in the financial data. It provides a more accurate picture of the ESF contribution (EU only) to gender equality.

By end of December 2020, the volume of the projects supported under the dedicated gender equality investment priority (EU share) was EUR 916 million of declared EU eligible expenditure. In total, EUR 1.9 billion under the ESF have effectively been dedicated to projects for gender equality between 2014 and 2020 across all investment priorities (EU expenditure declared). In terms of selected projects, EUR 3.1 billion have been committed to gender equality projects across all investment priorities.

It is also important to underline that all ESF personal data (annex I ESF Regulation) is broken down by gender. The participation of women and men in ESF supported activities is almost equally distributed at EU level (48% men and 52% women). There are however some differences between Member States depending notably on the types of activities at stake. In terms of reporting, all personal data will continue to be broken down by gender (female, male, 'non binary') under the ESF+ shared management strand in the 2021-27 programming period.

The challenges and risks women typically face are addressed as follows through the ESF:

- At programming level: by involving all relevant stakeholders, including gender equality bodies, in the preparation of the partnership agreements and programmes. For the 2021-27 period, a specific enabling condition is also provided for and needs to be fulfilled throughout all the stages of implementation of ESF+ investments. Moreover, ESF+ specific objective (iii) clearly refers to the promotion of a gender-balanced labour market;
- At implementation level: by involving partners in monitoring committees notably to assist with a range of tasks such as approving the methodology and criteria used for the selection of operations, examining the implementation of the programmes and the fulfilment of enabling conditions.

The COVID-19 crisis has disproportionately affected the weakest in our society including women, in particular single mothers, the low skilled, those with a migrant background or with a disability as well as older women living in institutional care. Member States

have been invited to pay particular attention to the needs of those groups when programming the additional resources provided for through the funding instruments aiming to support the repair and recovery from the crisis, including REACT-EU and ESF+.

Implementing specific additional training measures for staff within the Managing Authority or providing targeted support and guidance to beneficiaries to sufficiently integrate a gender equality perspective in their projects are some of the specific actions taken to integrate the gender perspective in ESF programmes and projects. To support Member States in their efforts to mainstream gender equality at all stages of the programme, the European Community of Practice on gender mainstreaming, supported by the ESF, developed by end 2013 a gender mainstreaming standard<sup>24</sup> in view of the future programming period.

### **Fund for European Aid to the Most Deprived**

Article 5(11) of the FEAD Regulation obliges Member States to ensure that equality between men and women and the integration of the gender perspective are taken into account during the various stages of programme implementation.

In 2019, the overall profile of end recipients of FEAD support remained unchanged. As in previous years, just about half (49%) of all those supported - were women. In some Member States such as Hungary and Poland, women, notably pregnant ones are explicitly targeted. In Sweden, FEAD focuses on women's health. In the majority of cases, the most deprived individuals are identified on the basis of economic criteria, which prevent discrimination in access to aid based on gender, origin, religion or belief, disability or sexual orientation. This is, however, a general principle applied across the implementation of the programme and it is not relevant to produce estimates of budget contributions.

### **Employment and Social Innovation programme**

Horizontal objectives of the EaSI programme include promoting gender equality (including through gender mainstreaming and gender budgeting), paying particular attention to vulnerable groups, such as young people and ensuring non-discrimination on all grounds, promoting fair working conditions and sustainable work and combating long-term unemployment, ensuring adequate and decent social protection, and fighting social exclusion and poverty.

According to the EaSI Regulation, the programme should pursue these objectives in all its axes and actions and the projects should report on how they take these horizontal objectives into account in their activities). Furthermore, the EaSI Regulation stipulates that the monitoring of the EaSI Programme should include an assessment of how gender equality principles, gender mainstreaming and anti-discrimination measures, including accessibility issues, were integrated and applied into all EaSI activities.

In order to identify to what extent EaSI has been succeeding in mainstreaming horizontal principles in EaSI-supported activities, the following indicators are assessed:

- In the area of Social Protection and Social Inclusion, respondents to the EaSI Stakeholder Survey 2019 are mostly familiar with the following EU objectives: fighting poverty and social inclusion (84%), equality of treatment and opportunities regardless of gender, racial or ethnic origin, religion or belief, disability, age or sexual orientation (78%) and gender equality (77%) that are set in the EaSI Regulation;
- In the area of employment, respondents to the EaSI Stakeholder Survey 2019 are most familiar with active support to employment (83%), gender equality (82%) and tackling long-term unemployment (78%).

A large number of applicants for the EU microfinance and social entrepreneurship support are legal persons (enterprises). As these do not provide their social data (e.g. gender, age, employment), it is not possible to provide a complete picture of the outreach of the EU microfinance and social entrepreneurship support to vulnerable persons. Nevertheless, from the reports received around 30% of the beneficiaries were female. More specifically, under the EaSI guarantee microfinance financial instrument, out of a total of 97 271 final recipients, 69 045 have responded regarding their gender where 48 486 were male and 20 559 were female (30%).

## **6.5. Contribution to the sustainable development goals**

### **6.5.1. Goals**

Not applicable

### **6.5.2. Key achievements and performance**

### **European Social Fund and Fund for European Aid to the Most Deprived**

#### ***SDG 1 End poverty in all its forms everywhere***

Sustainable development is embedded in the ESF's and FEAD's mission. More specifically, the FEAD promotes social cohesion, enhances social inclusion and ultimately contributes to achieving the EU2020 poverty reduction target. The FEAD contributes to the specific objective of alleviating the worst forms of poverty by providing non-financial assistance to the most deprived. In all programmes, FEAD strives to offer pathways out of poverty to the most deprived, according to the target groups of the programme.

<sup>24</sup> <http://standard.gendecop.com/>

The main activity of a Bulgarian programme in Gabrovo is the provision of a daily lunch at a public dining facility, aiming to satisfy the basic food needs of 200 people from disadvantaged groups. In addition to food aid, the programme also provides weekly individual consultations and monthly group consultations with end recipients. Through these consultations, beneficiaries are provided with information on how to access health and education services, budget management and information on healthy and balanced diet. Personalised forms of support and assistance are also provided: long-term solutions are sought to sustainably lift the end recipients out of poverty. For example, many of the homeless have been offered public housing, were granted financial assistance for urgent needs, and were issued identification documents. Up until 2019, the programme activities have reached 367 people, 161 464 warm lunches were served to end users by 30 April 2019 in Gabrovo. Across the country, the same FEAD supported programme is currently implemented in 211 of the 265 municipalities in Bulgaria, in 278 soup kitchens. In 2018, the programme provided 11 500 000 warm lunches reaching to 50 800 end users. FEAD provides EUR 1.5 million for the ‘Warm lunch at home’ programme.

### ***SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture***

Both the ESF and FEAD contribute directly to ending hunger across the EU. Under FEAD, the vast majority of the fund is being allocated to food support, together with accompanying measures towards social inclusion. FEAD programmes take into account sustainability aspects, minimising food losses, avoiding food waste and promoting a balanced diet.

For example, the Latvian Red Cross organises various informative sessions under the name ‘10 simple habits in order to live a greener life’, promoting healthier, more eco-friendly lifestyles, including balanced diet, budgeting, time management, and eco-friendly daily routine, such as vegetarian days. During the lectures, participants learn easy daily habits that could lead to a more eco-friendly lifestyle. Almost 3 000 people participated in 483 educational activities organised by the Red Cross in 2018. Due to an expressed interest from the beneficiaries, the lectures on how to live a greener life were introduced in 2019. Up until 2019, 30 people have participated in lectures on a cleaner environment organised in Riga and Jurmala.

### ***SDG 3 Ensure healthy lives and promote well-being for all at all ages***

The ESF also contributes to ensuring healthy lives and promoting the well-being for all at all ages by investing in projects promoting job creation, quality employment, education, training and vocational training for skills and lifelong learning, and combating social inclusion and discrimination. For example, in Bavaria (Germany) an ESF-funded project provides employment support to refugees to restart their careers and rebuild their lives. Activities include skills development, as well as placement in work or training. By the end of 2020, 2 000 participants have enrolled in the project, which has a EUR 4 million budget and will run until 2022.

In Riga, St. John’s Ambulance, one of the 28 FEAD partner organisations in Latvia, provides food and basic material assistance packages, as well as ready meals, as well as accompanying measures to the most deprived. Among these, the ‘School of Life’ and ‘School of Life II’ projects aim to teach life skills to improve the well-being of the most deprived, supporting their transition out of poverty. Counselling and information sessions address the barriers of social exclusion (e.g. personal hygiene, maintaining a healthy lifestyle, cooking), encouraging participants to actively improve their daily routine and become more independent in solving personal social issues.

Since 2014, the ‘School of Life’ has targeted vulnerable groups such as the homeless, the unemployed and retired, single mothers and those with low incomes, providing them with the opportunity to learn life skills such as cooking, laundry, cleaning, childcare and budget management.

The ‘School of Life II’ project (running from April 2018 until 31 March 2021) has supported 172 participants by end 2020. In 2020, COVID-19 and lockdown measures strongly impacted the project, with only 13 participants accessing the measure.

### ***SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all***

ESF investments under the ‘education’ thematic objective contribute to ensuring inclusive and equitable quality education and promote lifelong learning opportunities for all. For example, in Belgium, thanks to ESF support, the Technocité Competence Centre helps job seekers develop new skills in the fields of ICT through qualifying and continuous training. Some EUR 3.6 million from the ESF have allowed teachers and students to pursue their courses focusing on topics such as cybersecurity, artificial intelligence, virtual reality, Internet of things, sound design. Since the start of the project, more than 9 000 persons have taken part in one of the 20 training courses organized by Technocité in these fields. The project will run until end 2021.

### ***SDG 5 Achieve gender equality and empower all women and girls***

Importantly, the ESF Regulation strongly reflects the EU’s commitment to eliminate inequalities between women and men following a combined approach of gender mainstreaming and specific activities for women in different fields. The principle of equality between the sexes is a key horizontal one of ESF programmes, thus contributing to achieving gender equality and empower all women and girls. For example in Latvia thanks to the ESF, support services for socio-economic inclusion are provided to persons at risk of social exclusion and discrimination, including women victims of gender-based violence. The project, which will be carried out until 2022, has received EUR 5.4 million from the ESF and has helped more than 1 000 people so far.

### ***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

ESF investment in the adaptation of workers and skilling is crucial, as jobs may be created, other jobs will be lost, and yet other jobs will require different skills as they are ‘greened’ in order to promote sustained, inclusive and sustainable economic growth, full

and productive employment and decent work for all (SDG 8) and make cities and human settlements inclusive, safe, resilient and sustainable (SDG 11). For example, thanks to the ESF in Sardinia, Italy, thousands of jobseekers have been taking training courses designed to help them find work in Europe's green and blue economy. With an ESF contribution of EUR 59 million, the project, which started in 2016, has supported around 10 000 participants so far.

### ***SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation***

ESF investments under Education Thematic Objective contribute to building resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation (SDG 9), by supporting the development of necessary skills in the transition to a low carbon economy. The transition will have consequences for the labour market, for employment, and for the skills required for the new 'green' jobs and the greening of existing jobs in the future. For example, in Spain the ESF-funded programme 'Empleaverde' aims to create green jobs, improve employability and support the creation of companies in the green and blue economies. Activities include the improvement of transversal skills, active job-search strategies, creation of networks and professional contacts, and development of emotional intelligence. With an ESF contribution of EUR 36 million, so far the programme has co-financed 339 projects, working with 500 organisations. It has supported 1 300 000 recipients and helped create 2 600 businesses.

### ***SDG 10 Reduce inequality within and among countries***

The ESF is the EU's main fund to reduce the gap in living standards between regions and between people and to promote economic and social cohesion across Europe thus aiming to reduce inequality within and among countries.

The FEAD finances specific actions to promote the social inclusion of the end recipients through dedicated outreach to specific target groups. In Germany, Denmark, the Netherlands and Sweden, where FEAD support funds social inclusion measures, the homeless and impoverished migrants are the primary target groups, thereby aiming to reduce inequalities and unequal access to social services.

For instance, the German 'Diakonisches Werk Gießen' provides guidance and supports the homeless by running the 'Living together - Housing First' (Zusammen leben - Housing First (ZuHauSE) project. ZuHauSE supports homeless people through the Housing First approach (i.e. unconditional housing provision as a first step into inclusion) with counseling and individual support funded by FEAD. The initiative links beneficiaries with housing agencies to ensuring priority housing for them and helps to re-learn how to live autonomously in a new home. This model is based on the principle that an apartment can serve as shelter and security, acting as a base upon which participants can, learn to cope with everyday life. By the end 2019, over the course of the first two rounds of the programme, over 412 people had received advice and successfully been reintegrated into society, out of 418 participants, thus accounting for a success rate above 99%. Some of them have developed well and stabilised psychologically, with some even finding regular work. Funding for the project has been allocated in three steps: first in 2016-2018 (EUR 316 529), then 2018-2019 (EUR 250 752). Faced with its success, the project has been extended from 2020 until June 2021 (EUR 188 064).

### ***SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable***

See under *SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all*

### ***SDG 12 Ensure sustainable consumption and production patterns***

The European Social Fund can support efforts to strengthen sustainable consumption and production patterns (SDG 12) and action to combat climate change and its impacts (SDG 13) at all stages of life from raising children's awareness in schools, to supporting trainings for green skills and green entrepreneurship and also social inclusion through green careers. For example thanks to ESF support in Germany young people living in former mining areas in North Rhine-Westphalia are provided with training opportunities to gain new skills to work in companies other than mining companies. The 'Kooperative Ausbildung an Kohlestandorten' (Cooperative training at coal sites – supporting young people in mining regions) is a programme running from 2008 until 2020. The aim is also to attract more businesses in the coal-transition areas, in order to provide young people in the region with a career perspective and to secure young skilled workers. In the current programming period 2014-2020 the programme was backed by EUR 7.7 million of ESF co-financing and has supported 1 300 participants.

### ***SDG 13 Take urgent action to combat climate change and its impacts***

See above.

### ***SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels***

The ESF contributes to promoting peaceful and inclusive societies for sustainable development, providing access to justice for all and build effective, accountable and inclusive institutions at all levels (SDG 16) through investment under the Institutional Capacity Thematic Objective. The ESF finances the strengthening of institutional capacity and the efficiency of public administration with a view to reforms, better regulation and good governance, especially in the economic, employment, education, social, environmental and judicial fields through measures mainly consisting of training for public institutions. For example in Malta, thanks to ESF support, public sector employees are encouraged to study the latest technologies in field of geomatics. This type of technology is an increasingly important tool for public services which can better inform policy and decision-making. With

an ESF contribution of EUR 713 000, the project running from 2018 to 2022 has supported 123 participants as at end December 2020.

## **Employment and Social Innovation programme**

### ***SDG 1 End poverty in all its forms everywhere***

Fighting poverty is at the heart of EaSI, which does this by analytical work as well as via projects. Such projects could seek to improve service provision, provide education and training, as well as hands-on support to bring people (back) to employment as one of the main means to bring them out of poverty. For example, HomeLab (Integrated Housing and Labour Services in the Social Rental Enterprise Model), an experimental three years project (2016-2019) co-funded by EaSI with some EUR 1.3 million was implemented in four EU countries (Hungary, Slovakia, Poland and the Czech Republic). Focusing on marginalised groups at risk of poverty and exclusion, the project established and institutionalised the Social Rental Enterprise model in five pilot locations, while creating adaptable and scalable models of integrated service provision in the field of housing provision, employment support, and social work.

### ***SDG 3 Ensure healthy lives and promote well-being for all at all ages***

The project 'Improving autonomy and global well-being through Adapted Physical Activity' funded by EaSI with some EUR 914 000 managed by the French Sport Initiative et Loisir Bleu Association seeks to improve the autonomy of people in need of long-term care. This two year project that started in 2020 is building on a proven French model that improved the health, autonomy and well-being of some 120 000 persons every week, creating 600 jobs.

### ***SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all***

As part of the promotion of high quality and sustainable employment, EaSI supported actions aiming at upskilling and reskilling the workforce, notably helping national authorities devise adequate policies through the Upskilling pathways calls.

EaSI also contributed to develop the multilingual classification system for skills, competences, qualifications and occupations, ESCO, that are relevant for the EU labour market and education and training.

EaSI supported with some EUR 270 000 the project E.QU.A.L. Enhancing Qualification of Adult Learners through the implementation of Upskilling pathways, led by the Italian Istituto Nazionale per l'Analisi delle Politiche Pubbliche (INAPP) geared to support relevant Italian national authorities in implementing upskilling pathways. The project team created an overview of the situation Italy, proposing criteria for the identification of priority groups, while further support national and regional stakeholders in devising such upskilling schemes by drawing on existing tools and resources. This project ended in 2019.

### ***SDG 5 Achieve gender equality and empower all women and girls***

This is achieved indirectly by the fact that EaSI, in pursuing its general objectives, aims to equally fulfil its horizontal objectives, one of them being targeted at promoting equality between women and men, including through gender mainstreaming and, where appropriate, gender budgeting.

The project 'RAISE UP - grass Root Actions, Innovative approaches and Stakeholders Engagement to tackle Undeclared work Propensity', led by the Italian trade union Federazione Lavoratori Agroindustriale, with participation of trade unions from Bulgaria and North Macedonia, supported by the EU with a grant of some EUR 350 000, is a good example. In this project that started in June 2017 and ended in December 2019, gender equality was a strong component, not only through cross-cutting issues, but in particular by deliberate and targeted activities concerning equal opportunities of women and men, as part of their overall work on social inclusion of vulnerable groups. The overall goal of RAISE UP was to develop responsible policies and measures tackling undeclared work in agriculture. Outreach campaign with transnational teams, education to increase awareness of labour rights and obligations for workers were important actions in this work. Moreover, in the Italian Apulia regions one information centre was created together with the Romanian Consulate, and other one was strengthened using a Bulgarian trade unionist, providing information and helping their nationals.

The project Regional Integration Accelerators (RIAC) launched in January 2018 ending in December 2020, led by the German agency 'Pro Arbeit from Kreis Offenbach' with EU co-financing of some EUR 2 027 203, pursued the goal of integrating refugees quickly into the labour market. This was done by creating decentralized units for the placement ('integration') of migrants and refugees into the labour market, who in cooperation with employers trained and guided the participants on the path to a concrete job perspective. Special attention was given to improving the employability of female refugees and asylum seekers.

Based on the reports received around 30% of the beneficiaries of the EU microfinance and social entrepreneurship support are female.

### ***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

EaSI work programmes contribute to the implementation of a number of legislative and non-legislative measures such as the proposal for a Council Recommendation on Integration of the long term unemployment, the New Skills Agenda for Europe, the Labour Mobility Package, the review of the EU Health and Safety Legislation, and to the European Pillar of Social Rights.

### ***SDG 10 Reduce inequality within and among countries***

For the continuation and expansion of the ROMACT capacity building programme, the Council of Europe received a grant of EUR 1 500 000 in 2020 to help local authorities implementing social investment strategies for most disadvantaged people, notably to address poverty and migration issues. This programme contributes to the implementation of several principles of the European Pillar of Social Rights, in particular the right to equal treatment and opportunities regarding employment, social protection, education, and access to goods and services available to the public.

***SDG 13 Take urgent action to combat climate change and its impacts***

As concerns, the climate dimension, two projects under the Microfinance/Social Entrepreneurship axis, out of which one operating grant have a specific 'green' component by developing the role of social enterprises in the circular economy.

The Helenos Fund, one of the first private equity funds for inclusive finance in Europe, was set up in 2018 thanks to the support from the Capacity Building Investment Window. Its mission is to strengthen the capital base of financial intermediaries targeting micro, small and social enterprises, by providing them with equity, subordinated and senior loans. The initiative relies on the evidence that inclusive finance does, in fact, provide people excluded from financial services with an opportunity to launch and develop micro- and social enterprises, thereby creating opportunities for them to become the leaders of tomorrow. Through seven investments so far, Helenos is already reaching 40 000 end-clients.

Another tool is the EaSI Advisory and technical assistance aimed at building the European microfinance market and facilitating access to EaSI financial instruments. Building on the experience of the fi-compass platform<sup>25</sup>, the EaSI Advisory and technical Assistance was launched in 2018 and includes targeted capacity building services to microfinance institutions through training; rating, institutional assessment and evaluation services to microfinance institutions; exchange and dissemination of good practices in the European microfinance sector and the European Code of Good Conduct for Microcredit Provision. This Code is a self-regulation tool promoted by the microfinance sector in order to uphold high ethical lending standards of microfinance institutions in the EU. The Code was first introduced as a pilot project in mid-2015. A revision of the European Code of Good Conduct for Microcredit Provision was published in June 2020. Since 2017, 51 microfinance institutions have received the award certifying compliance with the provisions of the Code.

## **1. Overview**

### **1.1. Challenges**

Erasmus+ is the EU's flagship programme to support and strengthen education, training, youth and sport in Europe. For over three decades, Erasmus+ and its predecessors have been offering opportunities to over 10 million youth, students and adults to study, train, gain work experience, and volunteer abroad, in Europe or beyond. At the same time, the programme raises awareness and promotes knowledge and understanding of the Union and of the European values.

In a fast-changing world – with rapid demographic, societal and technological changes - there is a clear need to provide individuals with the right set of knowledge, skills and competences, with a lifelong learning perspective, to make them more resilient and sustain current standards of living, support high rates of employment and foster social cohesion. Closing the skills and competences gap becomes a crucial challenge.

Inclusion is an overarching principle: The programme will improve access to the learning opportunities offered by rolling out dedicated inclusion measures covering all fields of education, training, youth and sport. Further, the promotion of social inclusion will improve outreach and increase participation rates of people with fewer opportunities. The programme will support more and better projects focussing on inclusion and diversity, opening doors to enhanced participation of newcomers and to small grassroots organisations, notably through the launch of dedicated actions that are simpler and more accessible.

Challenges include social exclusion, driven by family, social, and physical environments that can hinder access to quality education and the chances to successfully complete education and training programmes. Social exclusion is at the same time the result and the cause for education poverty, a vicious circle perpetuated from one generation to the next.

Learners with fewer opportunities remain over-represented among the low achievers on basic skills, show high rates of early schools-leavers and low higher education completion.

Another important challenge is a widespread lack of awareness and understanding of the EU's basic functioning, objectives, 'raison d'être', as well as of the EU's added value for its citizens. This can lead to misinformation and hinders the development of informed opinions on EU actions.

COVID-19 forced millions of Europeans to depend on digital tools to communicate with their loved ones, however, many lack the skills or material needed to stay connected and fully depend on solidarity actions.

Millions of Europeans also depend on distance and online learning and teaching. The crisis is revealing several challenges for educators and learners across sectors, including

- lack of distance learning systems,
- lack of adequate pedagogical methods and insufficient guidance and skills of educators and youth workers, e.g. in the context of delivering high quality online courses/content and to carry out on-line assessments,
- Providing online learning support and guidance, safeguarding equity.

The digital and green transitions require adequate means to deliver in an impactful manner. Schools, training institutions, universities, and youth/ sports organisations need to engage constructively and collectively, young people and the wider community on the changes needed for a successful transition.

Erasmus+ will enhance the knowledge of learners and young people and raise awareness regarding sustainability and environmental challenges.

## 1.2. Mission (general objectives)

The general objective of the Erasmus+ Programme is to support, through lifelong learning, the educational, professional and personal development of people in education, training, youth and sport, in Europe and beyond, thereby contributing to sustainable growth, quality jobs and social cohesion, to driving innovation, and to strengthening European identity and active citizenship. As such, the Programme shall be a key instrument for building a European Education Area, supporting the implementation of the European strategic cooperation in the field of education and training, with its underlying sectoral agendas, advancing youth policy cooperation under the Union Youth Strategy 2019-2027 and developing the European dimension in sport.

Within this context, the European added value of the programme is uncontested. The latest mid-term evaluation found that in the absence of the programme, the mobility of learners and staff, as well as European cooperation in the sectors covered by the programme, would be substantially reduced.

The programme will continue to strengthen its innovation dimension and promote transformation by rolling out initiatives such as the European Universities and the Centres of Vocational Excellence and the Erasmus+ Teacher Academies and by increasing investments in forward-looking study subjects.

To contribute to building a more digitally prepared Europe, the programme will support students, school pupils, young people, teachers, educators, youth workers and learners of all ages to adapt to digital ways of teaching and learning.

To make Erasmus+ greener, the programme will offer more opportunities for learners and organisations to develop knowledge and skills in sustainability related matters and to develop environmental-friendly approaches, while acting more sustainably.

## 1.3. Specific objectives

The Programme has the following specific objectives:

1. Promote learning mobility of individuals and groups, as well as cooperation, quality, inclusion and equity, excellence, creativity, and innovation at the level of organisations and policies in the field of education and training;
2. Promote non-formal and informal learning mobility and active participation among young people, as well as cooperation, quality, inclusion, creativity and innovation at the level of organisations and policies in the field of youth;
3. Promote learning mobility of sport staff, as well as cooperation, quality, inclusion, creativity and innovation at the level of sport organisations and sport policies.

## 1.4. Public intervention context

Pursuant to Article 6 of the Treaty on the Functioning of the European Union, the EU has the competence to carry out actions to support, coordinate or supplement the actions of the Member States in the field of education, vocational training, youth and sport.

In accordance with Article 165 of the Treaty on the Functioning of the European Union, Member States have the exclusive competence over the content of the teaching and the organisation of their education systems. The mission of the European Union in this field is to encourage cooperation among Member States and to support and supplement their actions where necessary.

To fulfil its mission and achieve its objectives, the EU supports Member States in their efforts to provide the best education and training for their citizens, setting joint goals and sharing good practices.

The Erasmus + programme is a cornerstone for the implementation of the priorities and activities set out in the European Education Area, Digital Education Action Plan and in the European Skills Agenda. The programme contributes to the European Pillar of Social Rights and is preparing Europe to face a green transition.

At Member State level, countries participating in the Erasmus+ programme continue implementing reforms of their education and training systems, in accordance with their needs, simultaneously benefiting from the policy support of the new European Education Area's framework.

In line with the Digital Education Action Plan priorities, the programme will develop accessible and high quality digital learning, foster the capacity of teachers, trainers, youth workers, etc. to use digital tools and content, and to test and promote distance/blended learning. The mobility and cooperation actions of the programme will provide an increased number of opportunities to build knowledge and help acquire and develop digital skills.

In line with the European Green Deal, the programme will support the green transition and sustainability of education and training systems, youth work and sport by providing incentives to green travel, resources for networking, and support to creative approaches.

Erasmus+ is also instrumental for the implementation of the European Skills Agenda that aims to support the development of the skills needed to ensure a prompt recovery and take full advantage of the opportunities provided by the green and digital transitions. The programme is also advancing youth policy cooperation under the Union Youth Strategy 2019-2027, while contributing to develop and foster the European dimension of sports.

## 1.5. Actions

The objectives of the Programme shall be pursued through the following three key actions:

1. Key action 1: Learning mobility
2. Key action 2: Cooperation among organisations and institutions
3. Key action 3: Support to policy development and cooperation

The objectives shall also be pursued through Jean Monnet actions, which support teaching, learning, research and debates on European Integration matters, including on the Union's future challenges and opportunities.

## 1.6. Delivery mode

The Erasmus+ programme is implemented under the leadership of the Directorate-General for Education, Youth, Sport and Culture (DG EAC), in co-operation with DG Employment Social Affairs and Inclusion (DG EMPL) for the parts of the programme which concern skills and qualifications policy, adult learning and vocational education and training.

The programme's activities are implemented through direct and indirect management. Direct management is used by the European Commission services in both DG EAC and the European Education and Culture Executive Agency (EACEA). The Erasmus+ National Agencies operate under indirect management, which brings the programme closer to its target audience, adapts to the diversity of national education systems, and offers the possibility to align the Erasmus+ activities with national priorities. DG EAC bears the overall responsibility for the supervision and coordination of the agencies in charge of implementing the Programme.

Some actions under Key Actions 2 and 3 in the fields of adult education, vocational education and training as well as skills and qualifications are partly or fully co-delegated to the Directorate-General for Employment, Social Affairs and Inclusion (DG EMPL). It is also foreseen to co-delegate certain actions under Key Action 3 related to multilingualism to the Directorate-General for Translation (DGT). In the implementation of certain international actions, DG EAC liaises with external action DGs, notably the Directorate-General for International Partnerships (DG INTPA) and the Directorate General for Neighbourhood and Enlargement Negotiations (DG NEAR) and the Delegations of the European Union in the third countries not associated to the Programme.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM (2018) 367: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing 'Erasmus': the Union programme for education, training, youth and sport and repealing Regulation (EU) No 1288/2013	2021 - 2027	24 574,0

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							
	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
<b>Total</b>	2 662,6	3366,7	3292,3	3474,8	3663,3	3858,0	4507,3	24825,1

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

Based on lessons learned from the previous programme, Erasmus+ 2021-2027 will be more inclusive and accessible, more forward-looking, more digital, simpler and greener, more international, while continuing to support lifelong learning and innovative education and training in Europe and beyond.

It will offer reinforced opportunities for transnational learning mobility and cooperation, including new mobility opportunities for school pupils, adult learners and sport staff. The programme will give more attention to fields that are strategic to Europe's knowledge creation and sustainable growth, by targeting mobility and cooperation projects in strategic forward-looking sectors (climate change, sustainability, clean energy, digitisation, artificial intelligence, bioscience, etc.) thus contributing to crucial skills development, increasing Europe's innovation capacity and tackling societal challenges.

## 1.10. Relevant websites providing more information

These websites offer an entry point to the programme opportunities and architecture and provide an overview of the funded projects results:

[https://ec.europa.eu/programmes/erasmus-plus/node\\_en](https://ec.europa.eu/programmes/erasmus-plus/node_en)  
[https://ec.europa.eu/programmes/erasmus-plus/projects\\_en](https://ec.europa.eu/programmes/erasmus-plus/projects_en)

In the field of sport, all updates concerning the policy framework and financing options are available at the following website:  
[https://ec.europa.eu/sport/node\\_en](https://ec.europa.eu/sport/node_en)

## **2. Where are we in the implementation ?**

### **2.1. Programme 2021-2027**

The new programme will be the cornerstone for the implementation of the ambitious policy agenda of the European Education Area, Digital Education Action Plan, European Skills Agenda, but also the EU Youth Agenda and the EU Work Plan for Sport. Erasmus+ has an estimated budget of around €26.2 billion<sup>1</sup> for the period 2021-2027, nearly doubling the funding compared to its predecessor programme (2014-2020), complemented by around €2.2 billion from EU external cooperation instruments<sup>2</sup>.

Out of this financial envelope, 70% will support mobility opportunities in a lifelong learning perspective. The remaining 30% will be invested in cooperation projects and policy development activities, allowing organisations to gain experience in international cooperation, strengthen their capacities, produce innovative approaches, exchange of good practices and network.

The new programme will not only be more inclusive and innovative, but will mobilise the education, training, youth and sport sectors for a rapid post-pandemic recovery and help steer the European Union's economic model towards more sustainability, with green and digital transitions as drivers of transformation. The inclusiveness dimension of the programme will make it more accessible to people with fewer opportunities and for smaller organisations and newcomers to the programme. This will be done through appropriate financial mechanisms, targeted communication and outreach measures, as well as actions that will offer enhanced flexibility adapted to the needs of staff and learners who face obstacles in participation, for example the new small-scale cooperation partnerships, flexible mobility formats (short term, group, or blended mobility).

Nevertheless, continuity remains the watchword. The new Erasmus+ builds largely on the success of the previous programme and retains all of its strengths - the integration into a single programme of all sectors of formal, informal and non-formal education and youth and sport, while providing opportunities for lifelong learning, as well as the articulation in three key actions.

The total programmed budget for Erasmus + in 2022 represents an amount of €3.37 billion, of which €3.12 billion corresponds to the adopted MFF 2021-2027 and €251.10 million as additional top ups. A further amount of €366.61 million will constitute the external instruments' contribution to the programme.

Under the new programme, main novelties include opportunities for mobility for school pupils and adult learners possible directly under Key Action 1. Furthermore, simplification measures – such as the extended use of simplified grants and the reinforced use of mobility accreditation processes (Charters) - will enhance the inclusiveness and accessibility of the programme.

In line with the Digital Education Action Plan in particular, but also the European Education Area, the renewed EU Youth Strategy, the Updated Skills Agenda and the digital dimension will be part of the programme's design, activities and underlying processes. Concretely, digital transformation incentives will be mainstreamed throughout all sectors and key actions, and dedicated initiatives will be supported. The digital dimension of the programme ranges along the following lines: mobility and cooperation projects, thematic priorities across the sectors, continued support to IT platforms, communities and tools, policy support, as well as digitalisation of the programme's implementation.

The Digital Education Action Plan 2021-2027 includes, among others, the following actions funded by Erasmus +: Launching a strategic dialogue with Member States in order to prepare a possible proposal for a Council Recommendation on the enabling factors for successful digital education; working on Council Recommendation on Online and Distance Learning for Primary and Secondary Education; creating a European Digital Education Content Framework and European Exchange Platform setting and; tackling disinformation and promoting digital literacy through education and training.

To promote green transition in line with the Green Deal, the programme will promote the integration of green practices in all projects and support measures, and will reinforce its support projects aimed at developing skills in various sectors related to sustainable development, environmental and climate issues. The programme will raise awareness and support the use of innovative practices to learners and educators across the sectors into real agents of change.

In 2022's programming (excluding the external dimension), indirect management (mainly through National Agencies) will represent around 78 % of the budget. As regards direct management, EACEA will implement around 19%, leaving 3 % to be implemented centrally by the Commission.

<sup>1</sup> The Erasmus+ programme budget is made of €24,574 billion in current prices as part of the new MFF (2021-2027) and an additional top-up of €1.7 billion in 2018 prices.

<sup>2</sup> Neighbourhood, Development and Cooperation Instrument (NDICI) and the Instrument for Pre-Accession (IPA III)

The implementation of the external component will have a slightly different breakdown, with indirect management representing 48% of the operational budget, and EACEA taking the remaining 52%.

## 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	14 958 067 916	13 945 031 541
Implementation carry-overs	0	7 031 130
Implementation total	14 958 067 916	13 952 062 671
total envelop*	14 958 095 673	
cumulative implementation rate	100%	93%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

With a total financial envelope of around €14.96 billion under Heading 1 and €1.7 billion under Heading 4 to support its strong international dimension, the implementation of Erasmus+ started successfully in 2014.

The programme is implemented under indirect management (approximately 78% through National Agencies) and direct management modes (20% through the Executive Agency for Education, Audiovisual and Culture and 2% mainly through DG EAC). Despite Heading 4 funds being only available at the end of 2014, delaying the launch of some international actions such as capacity building in higher education and international credit mobility, the programme was able to achieve a full budget absorption capacity.

The total C1 credits for the period 2014-2020 amounted to €14 958 095 673 and were implemented at 100%. During the same period, the total payments with C1 appropriations amounted to €13 952 062 671. The programme absorption capacity allowed to consume 100% of the available payment appropriations. The percentage indicated below (93%) corresponds to the ratio between the implemented payments and the implemented commitments.

## 3. How is the programme performing ?

### 3.1. Performance

#### 3.1.1. Introduction

Erasmus+ is not only one of the EU flagship programmes, it is also one of the best known by citizens. Over more than 30 years of existence, the programme has increased its scope, involving more and more citizens to reach about **940 000 individual mobility opportunities** in 2019 for a total of more than **10 million** mobility periods since 1987.

During the previous MFF covering 2014 to 2020, the programme has constantly exceeded its yearly targets in terms of the number of individual mobility periods. In terms of qualitative results, more than **94% of participants** declare that they have **increased their key competences**, with 96% stating that they have improved their language skills.

The ratio between requested and funded (**projects funding success rate**) ranges from 70% percent in Higher Education mobility projects down to 18% for cooperation projects in Youth (Erasmus+ annual report 2019). In other words, the funds allocated to the programme were far from being sufficient to finance all projects in the past, especially the cooperation projects (Key action 2).

In 2020, in the difficult context of COVID-19, the programme has proven its resilience and adaptability to a unique and unprecedented context.

The number of projects submitted showed a very small decrease, showing that the interest of the organisations remains intact.

Individual mobility was severely impacted, all flexibility measures legally permitted were put in place (extra funds allocation, specific support calls, support to individual participants and organisations, postponing of deadlines for calls and projects).

The future context of the year 2021 remains uncertain but the new Erasmus+ already builds on the lessons learnt to increase the implementation flexibility and prepare European Society for the future, including the new priorities of the Commission.

#### 3.1.2. Active programme performance

Building on the success of the programme in the period 2014-2020, Erasmus+ strengthens its efforts to increase the opportunities offered to more participants and to a wider range of organisations, focusing on its qualitative impact and contributing to more inclusive and cohesive, greener and digitally fit societies.

As the COVID-19 pandemic has shown, access to education is proving, more than ever, to be essential to ensuring a swift recovery, while **promoting equal opportunities for all**.

As part of this recovery process, the Erasmus+ programme takes its inclusive dimension to a new horizon by supporting opportunities for personal, socio-educational and professional development of people in Europe and beyond, with the aim of leaving no-one behind.

To increase the qualitative impact of its actions and ensure equal opportunities, the programme will reach out more and better to people of different ages and from diverse cultural, social and economic backgrounds.

It is at the heart of the programme to come closer to those with fewer opportunities, including people with disabilities and migrants, as well as European Union citizens living in remote areas or facing socio-economic difficulties. In doing so, the programme will also encourage its participants, in particular young people, to engage and learn to participate in civic society, raising awareness about European Union common values.

In order to implement this dimension, Erasmus+ will support easier access to funding for a wider range of organisations. To improve outreach to more participants with fewer opportunities, the programme will also set up a framework for those projects which intend to work on inclusion and diversity related issues.

Furthermore, **developing digital skills** and competences, and skills in forward-looking fields, such as combating climate change, clean energy, artificial intelligence, robotics, big data analysis, etc. is essential for Europe's future sustainable growth and cohesion.

The COVID-19 crisis shed light on the importance of digital education for the digital transformation that Europe needs. In particular, it emphasised the increased need to harness the potential of digital technologies for teaching and learning and to develop digital skills for all.

In line with the strategic priorities of the Digital Education Action Plan (2021-2027)<sup>3</sup>, the programme aims to support this endeavour to engage learners, educators, youth workers, young people and organisations in the path to digital transformation. The programme will focus on two strategic priorities: Fostering the development of a high performing digital ecosystem and; enhancing digital skills and competences for the digital transformation which include the setting up of a Digital Education Hub, Digital Opportunity Traineeships and digital pedagogy.

Physical mobility remains key to the success of the programme, yet blended intensive programmes, which allow for groups of higher education institutions to develop jointly blended mobility curricula and activities for students as well as academic and administrative staff, will be strongly supported.

The programme will be a key instrument for the building of knowledge, skills and attitudes on **climate change and sustainable development** both within the European Union and beyond.

It will increase the number of mobility opportunities in green forward-looking fields, which foster the development of competences, enhance career prospects and engage participants in subject areas, with special attention to rural development (sustainable farming, management of natural resources, soil protection, bio-agriculture) all of which are strategic for the sustainable growth of our planet. Moreover, Erasmus+, with mobility at its core, will **promote sustainable transport modes** and more responsible behaviour and will monitor the carbon footprint of beneficiaries.

The environment and the fight against global warming will become a horizontal priority for the selection of projects. **Priority will be given to projects aimed at developing competences in various environmental sustainability-relevant sectors**, including those within the framework of contribution from education and culture to sustainable development goals, developing green sectorial skills strategies and methodologies, future-oriented curricula that better meet the needs of individuals, as well as initiatives that support the planned approaches of the participating organisations regarding environmental sustainability.

Another challenge relates to the European-wide trends of limited participation in democratic life and low levels of knowledge and awareness about European matters and their impact on the lives of all European citizens. Many people are reluctant, or face difficulties, in actively engaging and participating in their communities or in the European Union's political and social life. Strengthening European identity and the participation of young people in democratic processes is of paramount importance for the European Union's future. This issue can also be targeted through non-formal learning activities, which aim at enhancing the skills and competences of young people as well as their active citizenship.

### 3.1.3. Previous programme performance

Erasmus+ is the EU programme in the fields of education, training, youth and sport, projecting a positive image of the Union, well beyond its borders.

The 2014-2020 Erasmus+ programme has built on the experience of previous programmes that have been, for the first time, brought together under the name of Erasmus+, bringing massive simplification of the transnational support for education and training, youth and sport. Through immersive learning experiences, Erasmus+ has contributed to developing skills and competences, while offering - over the last three decades - life-changing experiences to **10 million people** to study, train or learn

<sup>3</sup> [https://ec.europa.eu/education/education-in-the-eu/digital-education-action-plan\\_en](https://ec.europa.eu/education/education-in-the-eu/digital-education-action-plan_en)

abroad. Along the years, the programme has demonstrated an outstanding track record not only in terms of numbers, delivering constantly up to or above expectations across fields and actions, but also in terms of social impact.

After a learning exchange abroad, participants declare that they feel more prepared to take on new challenges, have better career prospects, and are more aware of the benefits the EU brings to their daily lives. The programme has not only contributed to building a stronger European identity, but also enhancing active citizenship as Erasmus+ participants are more likely to vote in the European elections than peers in their age group. The programme has had a concrete, positive effect on the professional, social, educational and personal development of the beneficiaries by improving employability, developing new knowledge, skills and competences, closing skills and competency gaps; improving the quality of education, helping confidence-building and independence, creating a greater open-mindedness and curiosity about new challenges, boosting innovation and entrepreneurship and enhancing tolerance and understanding towards other people.

The Erasmus+ programme has therefore proven to be an important contributor to preparing future generations of Europeans to evolve in a changing world of work, to contribute to tackling climate challenge, to be ready for the digital transformation of our societies, as well as to strengthen solidarity.

The programme has already exceeded its target of supporting 4 million learning mobilities.

With the capacity to **fully absorb funds** and an **error rate below 2%**, the programme is well placed to upscale further in the next Multiannual Financial Framework. Harmonized reporting tools, analytics and business intelligence support the steering of the programme in tight collaboration with the different stakeholders, in particular the Education and Culture Executive Agency and 60 National Authorities, present in the 27 Member States and 7 Partner Countries.

To respond to the emergency in the early days of the COVID-19 pandemic, maximum flexibility and support measures within the applicable legal framework were applied to the participants and beneficiary organisations to adapt to the extraordinary circumstances. These included amongst others:

- the activation of the **force majeure** clause in the grant agreements,
- the **extension of application deadlines**,
- the **extension of duration for on-going projects, supporting additional costs** up to the maximum amounts granted to projects under the applicable legal framework,
- further **flexibility towards blended activities** (i.e. combination of physical mobility and online learning activities allowing to conclude, complete or ensure continuity of learning activities).

Priorities were reshaped with the aim of protecting the beneficiaries and participants and to support Member States and third countries associated to the programme to communicate and exchange practices needed for the immediate response, but also in view of setting new and innovative policies in education and training, youth and sport.

As Erasmus+ mobilities are predominantly implemented through an indirect management mode. The coordination and guidance to the National Agencies in dealing with this unprecedented situation has been a top priority, reinforcing guidance to stakeholders and conveying in an aligned manner, essential information and supporting the affected organisations and participants:

- Dedicated online FAQs<sup>4</sup> were made available for all the participants to inform them on how the pandemic is affecting activities, what changes are taking place, and what support measures are available.
- Dedicated surveys<sup>5</sup> collected the views of mobility participants and higher education institutions on how the COVID-19 outbreak affected their projects and activities in the early stages of the crisis.
- Promoting and mobilising online platforms and initiating new campaigns.
  - The eTwinning community immediately started exploring how the variety of eTwinning tools could be usefully mobilised, including articles and stories on the public portal. Research indicates that many teachers engaged in eTwinning were better prepared to transition to teaching online.
  - The School Education Gateway made a specific contribution during the period of school-site closures with additional resources about online and distance learning.

**International actions** with partner countries were more severely affected by the COVID-19 pandemic than those already affected in Europe. Some reasons include the closing of borders, the disruption of air routes, the limited functioning of consulates and the difficulties to obtain visas. **Flexibility arrangements** for the participant **Higher Education Institutions and individuals** were put in place, students have been allowed to keep their Erasmus+ grants while completing their course through remote studying arrangements and/or in case they still have expenses linked to their stay in the destination country such as rent.

<sup>4</sup> [https://ec.europa.eu/programmes/erasmus-plus/resources/coronavirus-faq-participants\\_en](https://ec.europa.eu/programmes/erasmus-plus/resources/coronavirus-faq-participants_en)

<sup>5</sup> [https://ec.europa.eu/programmes/erasmus-plus/resources/documents/coronavirus-learning-mobilities-impact-survey-results\\_en](https://ec.europa.eu/programmes/erasmus-plus/resources/documents/coronavirus-learning-mobilities-impact-survey-results_en)

In addition, in August 2020, the Erasmus+ programme announced two new calls for proposals, each providing €100 million to respond to the educational challenges resulting from the COVID-19 pandemic.

- The call on **digital education readiness** supports projects in school education, vocational education and training, and higher education. It aims to enhance online, distance and blended learning, support teachers and trainers, and ensure inclusivity in digital learning opportunities, in line with the strategic objectives of shaping Europe's digital future as set in the European Commission's 'A Europe fit for the digital age' and the Digital Education Action Plan.
- The second call related to funding for partnerships for creativity support projects in the fields of youth, school education and adult education, aimed to develop skills and competences that encourage creativity, boost quality and innovation, while linking education, training and youth organisations with the cultural and creative sectors.

EACEA produced a study on the impact of the COVID-19 pandemics on the Erasmus Mundus Joint Masters Degrees action:

[https://www.eacea.ec.europa.eu/news-events/coronavirus-impact\\_en](https://www.eacea.ec.europa.eu/news-events/coronavirus-impact_en)

### 3.2. Key achievements

More than 2.6 million	More than 98 000 downloads	More than 280 higher education institutions	5 781	Nearly 2 million
European Student Cards were produced by higher education institutions/student card issuers	of the Erasmus+ Mobile App	involved in the European Universities initiative	institutions hold an Erasmus Charter for Higher Education	language assessments took place as part of preparation for Erasmus mobility

Over 1 million	670 986	More than 36 000	More than 900 000	15.6 million
Erasmus+ participants took an online language course as part of their mobility	teachers, headmasters and other school staff registered in eTwinning in 2014-2020.	school participations in school strategic partnerships	VET learner mobilities were awarded in the 2014-2020 programme period	number of Europeans participating to the European Week of Sport (23-30 September 2020)

More than 760 000	Nearly 290 000	39%	94%	400 000
young people involved in Youth Exchanges	youth workers involved in youth workers mobility activities	of participants in youth mobility activities with fewer opportunities	of participants in youth mobility activities having declared that they have increased skills	young people engaged in Youth Dialogue projects with decision makers

The main positive achievements and effects of the programme encompass the unique combination of actions targeted at the individual, organisation and system levels in education and training, youth and sport, the support for key competences, basic and transversal skills development, active citizenship, increased employability or career development, but also increased opportunities for networking and mutual learning for organisations involved. The programme is perceived as sufficiently flexible to allow for adaptation to emerging policy challenges, while its integrated architecture and management modes are considered appropriate and fit for purpose.

In particular, a cross-cutting priority over the past years was to ensure that the Erasmus+ programme was an important instrument for inclusion.

The programme also highlighted the key role of formal and non-formal education in the development of the values and attitudes underlying active citizenship, in line with the Paris Declaration, the Council Recommendation on Common values, Inclusive Education, and the European Dimension of Teaching.

Some key achievements include:

#### Education and training

- A two-year preparation by DG EAC with stakeholders made it possible for the College to adopt the Communication on achieving the European Education Area (EEA) by 2025 on 30 September.
  - o The Communication seeks to foster cooperation between Member States to further enrich the quality and inclusiveness of national education and training systems and to prevent the health crisis from creating structural barriers to learning and competence development and from impacting citizens' employment prospects and participation in society. The European Education Area, therefore, ties in with Next Generation EU, the EU's COVID-19 recovery plan to lead the Union out of the crisis and towards a modern and more sustainable Europe, fit to face the digital and green transitions.
- The European Universities initiative is paving the way for higher education transformation, by building the universities of the future. On 9 July 2020, the Commission announced 24 additional European Universities. Now, 41 European Universities gathering more than 280 higher education institutions across all parts of Europe are part of this flagship initiative, with the ambition to enhance the quality and attractiveness of European higher education and boost cooperation between institutions, their students and staff.
- European Student Card Initiative: This initiative aims at making it as easy as possible for students across Europe to be mobile. Through its two key components, the Erasmus+ Mobile App and the digitalisation of the student mobility management, the initiative constitutes a real revolution for the simplification of the way universities manage the student mobility. By the end of 2020, The Erasmus+ Mobile App, had been downloaded more than 98 000 times and more than 2 600 000 European Student Cards were produced by higher education institutions/student card issuers.
- Automatic recognition of qualifications: The Commission provides support to the Member States for putting in place the conditions that will make automatic mutual recognition possible by 2025. Throughout 2014-2020, the Erasmus+ programme has supported the National Academic Recognition Information (NARIC) through four restricted calls for proposals, funding 47 projects for a total of €4.4 million. Erasmus+ has also funded the set-up of a Technical Support Team for the NARIC network that will encourage the implementation of automatic recognition.
- In 2020, DG EAC continued the implementation of the Digital Education Action Plan 2018-2020. One of the main initiatives led by DG EAC in this context is the SELFIE self-reflection tool, which was further developed in the EU and Western Balkans and reached more than 850 000 users. Another important action is the Digital Education Hackathon, which took place on 12 and 13 November 2020 in more than 50 locations across 34 countries globally, engaging more than 2 000 participants from education stakeholders (schools, higher education institutions, research centres, innovation labs, private sector).
- In August 2020, the Erasmus+ programme announced two new calls for proposals, each providing €100 million to respond to the educational challenges resulting from the COVID-19 pandemic. Funding for digital education readiness will support projects in school education, vocational education and training, and higher education. It aims to enhance online, distance and blended learning, support teachers and trainers, and ensure inclusivity in digital learning opportunities. Funding for partnerships for creativity will support projects in the fields of youth, school education and adult education. It aims to develop skills and competences that encourage creativity and boost quality, innovation and recognition of youth work, and links education, training and youth with the cultural and creative sectors.
- The final call of Erasmus+ included the largest budget to date (€600 million) for international actions. It included additional budget for a number of geographic areas identified as political priorities (Africa, Western Balkans, Neighbourhood, etc.). With a 9% increase of the actions' budget compared to 2019, over 62 000 new short term academic mobilities were awarded to students and staff, which added up to previous years' awarded mobilities amounts to almost 270 000 for the whole programme period.
- In 2020 the Jean Monnet activities received a record number of applications. Out of 1 447 eligible proposals, with a budget available of some €16.5 million plus the external actions budget of €5 million, the Commission was able to select 400 of the best ranked applications for funding.

## Youth

- The EU Youth Strategy 2019-2027 was rolled out and adapted to take into account the major impact of COVID-19 on the youth sector. Exchanges with the youth stakeholders took place to find ways to mitigate the effects of the crisis. It also resulted in travel restrictions, which had a major impact on DiscoverEU. Both application rounds (planned in March and November) had to be cancelled in 2020. Travellers awarded under the 2019 November round got an extension of their travel period up until summer 2021. Youth Exchanges bring together young people from different countries to exchange and learn outside their formal educational system. The action enabled more than 763 000 young people to take part and acquire or further develop skills, competences and European values. Since the start of Erasmus+, Youth Worker Mobility has also offered opportunities for close to 240 000 youth workers to develop their key competences through transnational training courses and seminars, contact-making events, study visits and job shadowing.
- With an average mobility project grant of €25 000 and more than 200 000 organisations involved, the programme demonstrated its capacity to reach out and impact a large number of young participants and organisations working with them, through grassroots projects. Erasmus+ Youth puts also particular emphasis on promoting equal opportunities, inclusion and fairness and involving some 400 000 participants in youth mobility activities of which 39% had fewer opportunities.

- The programme financed projects promoting quality, innovation and recognition of youth work, as well as projects supporting empowerment and active citizenship of young people, thus contributing to the Youth Work Agenda and the EU Youth Strategy.
- In 2018, the programme successfully introduced 'European Youth Together', a new action to support the promotion and development of more structured cooperation between different youth organisations. Nearly 2 000 youth dialogue projects were also supported, promoting active participation of young people in democratic life and enabling more than 400 000 young people to engage with decision makers and around topics centred on the themes and priorities set under the EU Youth Strategy.
- The European Youth Portal offers European and national information and opportunities that are of interest to young people who are living, learning and working in Europe. It encourages participation of young people in democratic life notably via the EU Youth Dialogue and other initiatives to engage with young people to influence policymaking. The European Youth Portal was thoroughly revamped, with a view to adapting its layout to reflect today's user expectations. The revamp also included a new structure for content to be more easily accessible and to integrate material on European youth policy.
- In 2019, the ninth edition of the European Youth Week became a real corporate initiative for the first time, with an unprecedented involvement of other Commission DGs and some 120 000 young people across Europe involved. The event was held just before the European elections, focussing on the theme 'Democracy and me', youth participation in decision-making and young people's participation in society.

## Sport

- On 4 December 2020, the Council adopted the 4th EU Work Plan for Sport (1 January 2021 - 30 June 2024). This Resolution of the Council is the guiding document setting out the key priority areas, topics and deliverables in the field of sport that the EU Member States and the Commission should prioritise between 2021 and 2024. The key priority areas are: 1) Protect integrity and values in sport; 2) Socio-economic and environmental dimension in sport and; 3) Promotion of participation in sport and health-enhancing physical activity. With 2020's extenuating circumstances, the European Week of Sport was more necessary than ever before. Therefore, the European Commission created the #BeActiveAtHome campaign in May 2020 to help Europeans exercise and remain physically active. It was also an occasion to celebrate a #BeActive lifestyle together with the Western Balkans and Eastern Partnership countries and regions for the third time. In this context, the November 2020 online 'Expert Seminar on the European Week of Sport Beyond Borders' gathered participants from EU Member States, Erasmus+ Programme countries and eight countries and regions from the Western Balkans and Eastern Partnership, shared good practices and initiated discussions regarding EU funding opportunities and ways to adapt the sport sector to the constraints of the COVID-19 pandemic measures.
- For the sixth year, the European Week of Sport has tackled the inactivity crisis by encouraging Europeans to embrace a healthy and active lifestyle. This year set a new record with the participation of over 15.6 million Europeans in more than 32 600 events. The European Week of Sport was open to the participation of Eastern Partnership and Western Balkans countries and regions.
- In 2020, the #Beinclusive EU sport awards once again recognised sport organisations working with ethnic minorities, refugees, people with disabilities, youth groups at risk, or other groups that face challenging social circumstances. The #Beactive awards support projects and individuals dedicated to promoting sport and physical activity across Europe.

### 3.3. Evaluations, studies and reports

The Erasmus+ mid-term evaluation<sup>6</sup> and the evaluation of the predecessor programmes were published in 2018. Among the main findings were the fact that learners and staff mobility, as well as European cooperation in the sectors covered by the programme are substantially reinforced by the programme action. Erasmus+ contributes to social cohesion in the Union.

The programme also actively builds positive attitudes towards the European Union and contributes to the development of a European identity across all sectors funded, while improving knowledge and understanding of the EU through the Jean Monnet strand. The mid-term evaluation found a positive association between participation in the programme and the feeling of belonging to the EU across all sectors and all forms of participations. The current programme supports more disadvantaged young people than its predecessors - 11.5% of the total number of participants and up to one third in the Youth strand. Nevertheless, more needs to be done to reach out to the more vulnerable in society and to facilitate the participation of smaller-size organisations. The mid-term evaluation also recommended that procedures and IT management tools should be made easier to use to reduce the administrative burden on implementing bodies and beneficiaries.

These findings and recommendations have guided the programme implementation over the last few years, while constituting a solid basis for proposing new actions and ambitious measures for the future programme 2021-2027. The mid-term evaluation, complemented by the results of a broad public consultation, fed into the 2021-2027 Erasmus+ programme impact assessment<sup>7</sup>

The interim evaluation of the Erasmus+ 2021-2027 programme will be performed once there is sufficient information available about the implementation of the programme, and it will be accompanied by a final evaluation of the 2014-2020 programme. This

<sup>6</sup> [https://ec.europa.eu/programmes/erasmus-plus/resources/documents/evaluations\\_en](https://ec.europa.eu/programmes/erasmus-plus/resources/documents/evaluations_en)

<sup>7</sup> <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A52018SC0277>

evaluation is expected by the end of 2024. The interim evaluation of the programme will assess the overall effectiveness and performance of the programme, including the new initiatives, as well as the delivery of the inclusion and simplification measures.

The Education and Training Monitor on a yearly basis offers a comprehensive report on progress in education and training in Europe. With its international comparison and country analysis, the Monitor fuels the debate on priority themes for education and training and informs national education reform debates. The Monitor presents progress against mainly, but not only the quantitative indicators on education and training adopted under ET 2020 ('EU benchmarks'). The country profiles of the Monitor also feed in the analytical work under the European Semester process. The 8th Education and Training Monitor, with a specific thematic focus on teachers and teaching careers, was published on 26 September 2019. The ninth edition, scheduled for publication in late 2020, will have 'teaching and learning in a digital age' as its lead theme.

A range of studies in the area of quality and relevance of higher education were conducted. The study on enhancing relevance of higher education aimed to define relevance and unpick the different components of it in order for institutions to be able to address them. This study informed the initiation of the questionnaire for the European graduate survey and its findings also led to the design of another study on performance-based funding of higher education based on performance indicators related to the quality and relevance of higher education. A separate study on admission systems in higher education looked at the effect admission policies have on the success of students and the study on quality assurance systems provided an overview of policy developments in this area and fed into the Bologna communiqués, in addition to the regular Bologna Implementation Report.

In 2019, the results of two new Erasmus+ Impact studies were communicated and disseminated: Erasmus+ makes students more successful in their personal and professional lives, and Erasmus+ helps universities to become more innovative.

In the field of Youth, two studies were launched and finalised in 2019: one on the landscape of youth representation in the EU and another on removing obstacles to cross-border solidarity activities. Furthermore, the results of the Eurobarometer survey 'How do we build a stronger, more united Europe? The views of young people' was released in April 2019, showing that young people consider that protecting the environment and fighting climate change, along with education and training; and fighting poverty and social inequalities should be the top priorities for the EU in the years to come.

In 2020, ten different impact studies were produced for each of the Erasmus+ regions involved in the Capacity Building for Higher Education action since 2015: [https://www.eacea.ec.europa.eu/grants/2014-2020/erasmus/capacity-building-field-higher-education-2020\\_en](https://www.eacea.ec.europa.eu/grants/2014-2020/erasmus/capacity-building-field-higher-education-2020_en)

Moreover, two studies were financed to support evidence-based policy in the field of sport. The first study analysed the economic impact of COVID-19 on the sport sector in the EU and proved to be very important to support evidence-based policy making at both national and EU level. The second study produced a Mapping on intergenerational sport.

In 2020, in the field of higher education, a study mapped and analysed [student-centred learning and teaching practices](#), in order to provide guidance to higher education institutions for more inclusive and high-quality higher education. Another study analysed [community engagement trends, practices and policies in higher education](#). The arguments present in both studies are relevant to policymakers and university leaders developing plans for the recovery and development of higher education in the post-COVID-19 period. A third study investigated the road [towards a European approach to micro-credentials](#), proof of the learning outcomes that a learner has acquired following a short, transparently-assessed learning experience. Finally, another study scrutinized the impact of the COVID-19 pandemic on higher education (publication forthcoming).

Studies were also undertaken on gender equality: a study on [Gender differences in tertiary education](#) explained STEM participation, and an on-going study on Girls' career aspirations in STEM stresses the importance of providing support for co-design and co-delivery of guidance and mentorship programmes focusing on pathways to the job market, focusing on female students in engineering and ICT fields of study.

EACEA, with the support of the Eurydice network, published a study which presents the state of play and the lessons learned from the delivery of the Erasmus Mundus Joint Master Degrees (EMJMD) in the Erasmus+ Programme Countries.

## **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :Promote learning mobility of individuals and groups, as well as cooperation, quality, inclusion and equity, excellence creativity, and innovation at the level of organisations and policies in the field of education and training**

**Indicator 1: Number of participants in learning mobility activities in the Education and Training strand of the programme**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

Justification of the trend	

### Indicator 2: Number of participants in virtual learning activities under key action 1 of the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of participants (thousands, yearly)

Cut-Off Date	
Data source	Beneficiary Module and e-Grants.
Link to the objective	Erasmus+ should contribute to delivering on the Digital Education Action Plan and respond to the necessary digital transformation of education and training, youth and sport.
Link MFF 14-20 / MFF 21-27	This indicator is new
Other methodological comments	This indicator will report only on the blended mobility periods (having a share of virtual activities). It is consequently a subset of mobility periods already counted in the 'Number of participants' indicator. Number of users of online platforms (list to be revised annually) is not linked to blended mobility and is reported in another indicator under Key action 2.
Full metadata available at this address	
Justification of the trend	

### Indicator 3: Number of people with fewer opportunities taking part in activities under key action 1 of the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
HE

	Milestones									
	Actual Progress									Final
School										
	Milestones									
	Actual Progress									Final
Adult										
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of funded participants indicated as participants with fewer opportunities (thousands, yearly)
Cut-Off Date	
Data source	Beneficiary module and e-Grants
Link to the objective	Promote learning mobility of individuals and groups, as well as cooperation, quality, inclusion and equity, excellence, creativity and innovation at the level of organisations and policies in the field of education and training.
Link MFF 14-20 / MFF 21-27	Fewer opportunities was already a core performance indicator of the previous programme. Organisation of the Programme's activities has still to be defined and could lead to methodological changes in the calculation of this indicator.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 4: Share of participants that consider they have benefited from their participation in learning mobility activities under key action 1 of the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Percentage of participants providing a positive answer to survey (yearly)
Cut-Off Date	
Data source	Participant Survey

Link to the objective	The provision of Erasmus gives opportunities for learners and staff to declare the benefits which contribute to the skills to thrive in a society which is increasingly mobile, multicultural and digital.
Link MFF 14-20 / MFF 21-27	The formulation of the indicator has been revised from 'Percentage of participants declaring that they have increased their key competences' to the actual form. This creates a bias that will make comparison with previous programme difficult.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 5: Share of participants that consider they have an increased European sense of belonging after participation in activities under key action 1 of the Education and Training strand**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Percentage of participants providing a positive answer to survey (yearly)
Cut-Off Date	
Data source	Participant Survey
Link to the objective	The provision of Erasmus gives the opportunity for learners to get to know Europe and European projects better and thus increase their sense of belonging to a place which has provided them with learning and development opportunities.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 6: Number of organisations and institutions taking part in the Programme for the Education and training strand**

Are we on track	
Indicator type	Result
Unit of measurement	Number of funded participants indicated as participants with fewer opportunities (thousands, yearly)
Cut-Off Date	
Data source	Beneficiary module and e-Grants
Link to the objective	Promote non-formal and informal learning mobility and active participation among young people, as well as cooperation, quality, inclusion, creativity and innovation at the level of organisations and policies in the field of youth.
Link MFF 14-20 / MFF 21-27	Fewer opportunities was already a core performance indicator of the previous programme. Organisation of the Programme's activities has still to be defined and could lead to methodological changes in the calculation of this indicator.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 4: Share of participants that consider they have benefited from their participation in learning mobility activities under key action 1 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Percentage of participants providing a positive answer to survey (yearly)
Cut-Off Date	
Data source	Participant Survey
Link to the objective	Promote non-formal and informal learning mobility and active participation among young people. Provide young learners and staff with opportunities to be equipped with the skills to thrive in a society which is increasingly mobile, multicultural and digital.
Link MFF 14-20 / MFF 21-27	The formulation of the indicator has been revised from 'Percentage of participants declaring that they have increased their key competences' to the actual form. This creates a bias that will make comparison with previous programme difficult.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 5: Share of participants that consider they have an increased European sense of belonging after participation in activities under key action 1 of the Youth strand**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Percentage of participants providing a positive answer to survey (yearly)
Cut-Off Date	
Data source	Participant Survey
Link to the objective	Erasmus + gives learners the opportunities to get to know Europe and European projects better and thus increase their sense of belonging to a place which has provided them with learning and development opportunities.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 6: Number of organisations and institutions taking part in the Programme for Youth activities**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
KA1	Milestones									
	Actual Progress									Final
KA2	Milestones									
	Actual Progress									Final
KA3	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of organisations (thousands, yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary Module
Link to the objective	Promote cooperation, quality, inclusion, creativity and innovation at the level of organisations and policies in the field of youth.
Link MFF 14-20 / MFF 21-27	The number of organisations was monitored in the previous MFF (14-20). No methodological change is expected in the calculation, allowing continuity for the analysis.
Other methodological comments	

Full metadata available at this address	
Justification of the trend	

**Indicator 7: Share of organisations and institutions that consider they have developed high-quality practices as a result of their participation in key action 2 of the Youth strand**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Percentage of organisation providing a positive answer in their final report (yearly)
Cut-Off Date	
Data source	Beneficiary module and e-Grants
Link to the objective	Promote cooperation, quality, inclusion, creativity and innovation at the level of organisations and policies in the field of youth.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 8: Number of users of virtual cooperation platforms supported under key action 2 of the Youth strand**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of participants registered on an online platform
Cut-Off Date	
Data source	European Youth Portal. List will be revised annually.
Link to the objective	Promote non-formal and informal learning mobility and active participation among young people, as well as cooperation, quality, inclusion, creativity and innovation at the level of organisations and policies in the field of youth.
Link MFF 14-20 / MFF 21-27	New indicator. Based on lessons learned from the current programme, Erasmus+ 2021-2027 will be more inclusive and accessible, more forward-looking, more digital, simpler and greener, more international, while continuing to support lifelong learning and innovative education and training in Europe.
Other methodological comments	Indicator is currently under discussion, definition is not fully defined yet.
Full metadata available at this address	
Justification of the trend	

**Indicator 9: Number of newcomer organisations and institutions taking part in the Programme under key actions 1 and 2 of the Youth strand**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
KA1										
	Milestones									
	Actual Progress									Final
KA2										
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of organisations

Cut-Off Date	
Data source	Online Registration System, Project Management Module, PDM URF, e-Grants
Link to the objective	Inclusion is a clear objective. The programme aims at eliminating barriers for organisations with a lower organisational capacity to take-part, which never received funding from the programme or with little or no experience in transnational cooperation.
Link MFF 14-20 / MFF 21-27	New indicator. Based on lessons learned from the current programme, Erasmus+ 2021-2027 will be more inclusive and accessible
Other methodological comments	Indicator is currently under discussion, definition is not fully defined yet.
Full metadata available at this address	
Justification of the trend	

#### Indicator 10: Number of small-scale partnerships supported under key action 2 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of partnerships (thousands, yearly)
Cut-Off Date	
Data source	Online Registration System, Project Management Module, PDM URF, eGrants
Link to the objective	Erasmus+ 2021-2027 will offer simpler and more accessible Actions - Achievement of simplification of procedures.
Link MFF 14-20 / MFF 21-27	New indicator. Based on lessons learned from the current programme, Erasmus+ 2021-2027 will be more inclusive and accessible.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

#### Indicator 11: Share of organisations and institutions that consider that the procedures for taking part in the Programme are proportionate and simple for the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Percentage of organisation providing a positive answer to selected questions in their final report (yearly)
Cut-Off Date	
Data source	Project Management Module, e-Grants
Link to the objective	Higher share reflects the achievement of simplification of procedures through the grant management process.
Link MFF 14-20 / MFF 21-27	New indicator. Based on lessons learned from the current programme, Erasmus+ 2021-2027 will offer simpler and more accessible Actions.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

#### Indicator 12: Share of activities addressing climate objectives under key action 1 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Share of activities contributing to green priority (yearly)

Cut-Off Date	
Data source	Project Management Module, Beneficiary Module, e-Grants
Link to the objective	The Commission recalled that Erasmus+ remains instrumental in achieving the objectives for quality and inclusive education, training and lifelong learning, and in preparing Europe to face the digital and green transitions.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The methodological approach to assess contribution will address the structural difference between project types (mobility and cooperation) and management modes (Centralised actions and decentralised actions).
Full metadata available at this address	
Justification of the trend	

### Indicator 13: Share of projects addressing climate objectives under key action 2 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Share of projects contributing to green priority (yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary Module, e-Grants
Link to the objective	The Commission recalled that Erasmus+ remains instrumental in achieving the objectives for quality and inclusive education, training and lifelong learning, and in preparing Europe to face the digital and green transitions.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The methodological approach to assess contribution will address the structural difference between project types (mobility and cooperation) and management modes (Centralised actions and decentralised actions).
Full metadata available at this address	
Justification of the trend	

### Specific Objective 3 : Promote learning mobility of sport staff, as well as cooperation, quality, inclusion, creativity and innovation at the level of sport organisations and sport policies.

#### Indicator 1: Number of participants in learning mobility activities in the Sport strand of the programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of participants (thousands, yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary module and e-Grants
Link to the objective	The provision of Erasmus gives opportunities for staff to be equipped with the skills to thrive in a society which is increasingly mobile, multicultural and digital.
Link MFF 14-20 / MFF 21-27	All activities under KA1 for sport are new and will be introduced around 2023. Therefore there is no link with the previous MFF.
Other methodological comments	Estimations will be based on the forecasts provided by organisations during the application phase of the projects. Numbers will be refined once all projects are closed (between 2 to 4 years after the project starts).
Full metadata available at this address	
Justification of the trend	

#### Indicator 2: Number of participants in virtual learning activities under key action 1 of the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									

	Actual Progress										Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of participants (thousands, yearly)
Cut-Off Date	
Data source	Beneficiary module and e-Grants
Link to the objective	Erasmus+ should contribute to delivering on the Digital Education Action Plan and respond to the necessary digital transformation of education and training, youth and sport.
Link MFF 14-20 / MFF 21-27	The indicator is new. All activities under KA1 for sport are new and will be introduced around 2023.
Other methodological comments	This indicator will report only on the blended mobility periods (having a share of virtual activities).It is consequently a subset of mobility periods already counted in the 'Number of participants' indicator. Number of users of online platforms (list to be revised annually) is not linked to blended mobility and is reported in another indicator under Key action 2
Full metadata available at this address	Data will be available later in the MFF
Justification of the trend	

### Indicator 3: Number of people with fewer opportunities taking part in activities under key action 1 of the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									
										Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of funded participants indicated as participants with fewer opportunities (thousands, yearly)
Cut-Off Date	
Data source	Beneficiary module and eGrants
Link to the objective	Promote learning mobility of sport staff, as well as cooperation, quality, inclusion, creativity and innovation at the level of sport organisations and sport policies.
Link MFF 14-20 / MFF 21-27	All activities under KA1 for sport are new and will be introduced around 2023. Therefore there is no link with the previous MFF.
Other methodological comments	Data source, methodology and definition might be changed depending on final agreement on definition of the indicator (to be aligned across Erasmus+) i.e. awarded level or mobilities.
Full metadata available at this address	Data will be available later in the MFF
Justification of the trend	

### Indicator 4: Share of participants that consider they have benefited from their participation in learning mobility activities under key action 1 of the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									
										Final

Are we on track	
Indicator type	Impact
Unit of measurement	Percentage of participants providing a positive answer to survey (yearly)
Cut-Off Date	
Data source	Participant Survey
Link to the objective	The provision of Erasmus gives opportunities for learners and staff to declare the benefits which contribute to the skills to thrive in a society which is increasingly mobile, multicultural and digital.
Link MFF 14-20 / MFF 21-27	All activities under KA1 for sport are new and will be introduced around 2023. Therefore there is no link with the previous MFF.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 5: Share of participants that consider they have an increased European sense of belonging after participation in activities under key action 1 of the the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Impact
Unit of measurement	Percentage of participants providing a positive answer to survey (yearly)
Cut-Off Date	
Data source	Participant Survey
Link to the objective	The provision of Erasmus gives the opportunity for staff to get to know Europe and European projects better and thus increase their sense of belonging to a place which has provided them with learning and development opportunities.
Link MFF 14-20 / MFF 21-27	All activities under KA1 for sport are new and will be introduced around 2023. Therefore there is no link with the previous MFF.
Other methodological comments	
Full metadata available at this address	Data will be available later in the MFF
Justification of the trend	

### Indicator 6: Number of organisations and institutions taking part in the Programme for the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
KA1										
	Milestones									
	Actual Progress									Final
KA2										
	Milestones									
	Actual Progress									Final
KA3										
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of organisations (thousands, yearly)
Cut-Off Date	
Data source	Online Registration System, Project Management Module, PDM URF, eGrants
Link to the objective	An increase in the number of organisations demonstrates the achievement of inclusion, collaboration and synergies for providing opportunities for learning mobilities. An increase in the number of organisations demonstrates the achievement of collaboration and synergies for providing high quality education. Organisations which collaborate to create new policies, assess / develop existing policies and measure the inclusive implementation of the Programme.
Link MFF 14-20 / MFF 21-27	For KA1, this is an entirely new activity that will start around 2023. For KA2, this action is on track and will continue in the current MFF similarly as in the previous one. For KA3, the figures are on track and will remain stable throughout the MFF.
Other methodological comments	
Full metadata available at this address	For KA2 and KA3 all information is available
Justification of the trend	

### Indicator 7: Share of organisations and institutions that consider they have developed high-quality practices as a result of their participation in key action 2 of the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
-----------------	--

Indicator type	Impact
Unit of measurement	Percentage of organisation providing a positive answer in their final report (yearly)
Cut-Off Date	
Data source	Beneficiary module and e-Grants
Link to the objective	A high share of organisations demonstrates the achievement of increased innovation in education. The sharing of best practices ensures that high quality becomes ingrained in educational offerings.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	
Full metadata available at this address	Data will be available later in the MFF
Justification of the trend	

**Indicator 8: Number of newcomer organisations and institutions taking part in the Programme under key actions 1 and 2 of the Sport strand**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
KA1										
	Milestones									
	Actual Progress									Final
KA2										
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of organisations
Cut-Off Date	
Data source	Online Registration System, Project Management Module, PDM URF, e-Grants
Link to the objective	Inclusion is a clear objective. The programme aims at eliminating barriers for organisations with a lower organisational capacity to take-part, which never received funding from the programme or with little or no experience in transnational cooperation.
Link MFF 14-20 / MFF 21-27	For KA1, this is an entirely new activity that will start around 2023. For KA2, this action is on track and will continue in the current MFF similarly as in the previous one.
Other methodological comments	Indicator is currently under discussion, definition is not fully defined yet.
Full metadata available at this address	For KA1 and KA2 data will be available later in the MFF. For KA3 information is available.
Justification of the trend	

**Indicator 9: Number of small-scale partnerships supported under key action 2 of the Sport strand**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of partnerships (thousands, yearly)
Cut-Off Date	
Data source	Online Registration System, Project Management Module, PDM URF, e-Grants
Link to the objective	Erasmus+ 2021-2027 will offer simpler and more accessible Actions - Achievement of simplification of procedures.
Link MFF 14-20 / MFF 21-27	This action is on track and will continue in the current MFF similarly as in the previous one.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 10: Share of organisations and institutions that consider that the procedures for taking part in the Programme are proportionate and simple for the Sport strand**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									

	Actual Progress								Final

Are we on track	
Indicator type	Result
Unit of measurement	Percentage of organisation providing a positive answer to selected questions in their final report (yearly)
Cut-Off Date	
Data source	Project Management Module, e-Grants
Link to the objective	Higher share reflects the achievement of simplification of procedures through the grant management process.
Link MFF 14-20 / MFF 21-27	New indicator. Based on lessons learned from the current programme, Erasmus+ 2021-2027 will offer simpler and more accessible Actions.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

#### Indicator 11: Share of activities addressing climate objectives under key action 1 of the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Share of activities contributing to green priority (yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary Module, e-Grants
Link to the objective	The Commission recalled that Erasmus+ remains instrumental in achieving the objectives for quality and inclusive education, training and lifelong learning, and in preparing Europe to face the digital and green transitions.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The methodological approach to assess contribution will address the structural difference between project types (mobility and cooperation) and management modes (Centralised actions and decentralised actions).
Full metadata available at this address	
Justification of the trend	

#### Indicator 12: Share of projects addressing climate objectives under key action 2 of the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Share of projects contributing to green priority (yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary Module, e-Grants
Link to the objective	The Commission recalled that Erasmus+ remains instrumental in achieving the objectives for quality and inclusive education, training and lifelong learning, and in preparing Europe to face the digital and green transitions.
Link MFF 14-20 / MFF 21-27	New indicator

Full metadata available at this address	
Justification of the trend	

## **5. Programme 2014-2020 - Key monitoring indicators**

*Previous Program 1 : The Union Programme for Education, Training, Youth and Sport (Erasmus+)*

**General Objective 1 :The Programme shall contribute to the achievement of the objectives of the Europe 2020 strategy, including the headline education target; the objectives of the strategic framework for European cooperation in education and training ("ET 2020"), including the corresponding benchmarks; the sustainable development of partner countries in the field of higher education; the overall objectives of the renewed framework for European cooperation in the youth field (2010-2018); the objective of developing the European dimension in sport, in particular grassroots sport, in line with the Union work plan for sport; and the promotion of European values in accordance with Article 2 of the Treaty on European Union.**

**Indicator 1:Percentage of 18-24 year-olds with only lower-secondary education who are not enrolled in education or training**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020

Are we on track	No data
-----------------	---------

Indicator type	
Unit of measurement	Baseline: EU graduates qualified in a country other than the country in which they achieved their upper secondary diploma (degree mobility only).
Cut-Off Date	
Data source	The data collection needed for the indicator is under development through the European Statistical System. This work is coordinated by Eurostat.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Results 2016: 7.6% Credit Mobility and 3.1% Degree mobility. The data collection is based on Commission Regulation 912/2013. The first full data transmission on learning mobility of tertiary graduates (degree and credit mobility) was scheduled under this Regulation for November 2017 and published in 2018), referring to the academic year 2015/16. In 2018 data on credit mobility were published for the first time and included in the new estimates for the academic year 2015/16. Graduates which are credit mobile during their studies include graduates who participated in the Erasmus+ EU programme.
Full metadata available at this address	
Justification of the trend	

**Indicator 4: Percentage of 18-34 year-olds with an initial vocational education and training qualification who have had an initial vocational education and training-related study or training period (including work placements) abroad**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2011	Milestones									2020

	Actual Progress									Final
	3,10%									

Are we on track	No data
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	
Narrative	
Methodology	Weighted average for 16 EU Member States where data are available through a Eurostat pilot collection (BE, BG, EE, ES, IT, LV, LT, HU, NL, AT, PL, PT, RO, SI, SK, SE). The final results can only be provided when all the projects have been finalised.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Estimate on available data for annual participation in VET mobility under the Leonardo Da Vinci programme and from certain countries (SWD SEC (2011) 670 on the development of benchmarks on education and training for employability and on learning mobility). When the VET mobility indicator was adopted there was no European harmonised data source that could provide data for the indicator. Eurostat set up a Task Force and a pilot data collection on learning mobility via household surveys. However, the results had low reliability for some countries. Based on the pilot data collection and discussions with Member State authorities, the Commission has drawn the conclusion that it was worth exploring the use of administrative data and review the feasibility of using such data for the benchmark on VET mobility. The results of the feasibility study to be published in the end of 2019 should clarify whether administrative data are a reliable source for the benchmark.
Full metadata available at this address	
Justification of the trend	

**Indicator 5: Number of staff supported by the Programme, by country and by sector**

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of participants (thousands, yearly)
Cut-Off Date	24/02/2021
Data source	Detailed breakdown can be found in the Erasmus+ Annual Report.
Narrative	
Methodology	Calculation method has been improved in 2019 and is now based on realised mobility periods. All EU28 past values have been recalculated. Values covering recent year might not include all numbers: these will be updated once projects are closed.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	This data is extracted from actual mobility data. Impact of COVID 19 explains the drop for year 2020 as most mobility periods were cancelled or postponed. Projects deadlines have been extended and 2019/2020 numbers will be refreshed once projects are closed.

#### Indicator 7: Number and type of organisations and projects, by country and by action

Narrative	
Methodology	The number of participants is extracted from the forecasts provided by the organisations on project awarded.

Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The decrease in results observed in 2017 and 2018 is due to the transfer of funds for the volunteering activities to the new spending programme – European Solidarity Corps. The new regulation was adopted in October 2018. The number of participants is extracted from estimations provided by organisations and related to call years. In 2020 and in relation to COVID-19, organisations received more flexibility for the organisation of projects and forecasted less participants.

### Specific Objective 8 :to foster quality improvements in youth work, in particular through enhanced cooperation between organisations in the youth field and/or other stakeholders.

#### Indicator 1:The number of users of the Eurodesk network

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Indicator type	Result
Unit of measurement	Information enquiries answered through Euro desk network
Cut-Off Date	
Data source	
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In 2020 we see a decrease in numbers due to the impact of Covid-19. In 2019 this figure has significantly increased because of the European Solidarity Corps kick off which generated a lot of interest and enquiries across the network. In 2018, the Eurodesk network answered over 339 000 enquiries, had over 430 000 social media followers and received 12.1 million website visits. Over 3 600 trainings were held by Eurodesk for around 36 000 participants to further enhance knowledge of youth workers from all over Europe.
Full metadata available at this address	
Justification of the trend	

### Specific Objective 9 :to complement policy reforms at local, regional and national level and to support the development of knowledge and evidence-based youth policy as well as the recognition of non-formal and informal learning, in particular through enhanced policy cooperation, better use of Union transparency and recognition tools and the dissemination of good practices.

#### Indicator 1:Percentage of participants who have received a certificate 'for example a Youthpass', diploma or other kind of formal recognition of their participation in the Programme

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Justification of the trend	

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

#### **6.1.1. Tracking and estimates**

2021 estimates	2022-2027 programming	Total
----------------	-----------------------	-------

2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.1.2. Explanation and justification on the financial contribution

Erasmus+ is a powerful instrument to reach out to and engage with a wide spectrum of players in our society (schools, universities, VET providers, youth and sport organisations, NGOs, local and regional authorities, civil society organisations, etc.), contributing with its own instruments (mobility, cooperation, policy support) to reaching the Green Deal objectives, as well as the overall target of 30% climate spending in the EU budget.

Regarding the climate spending, the programme contribution will be monitored through dedicated indicators set in the legal basis in line with the programmes main objectives of skills, development and young people mobility. For these purposes, we will increase our efforts to monitor the share of activities addressing climate objectives under key action 1 and the share of activities addressing climate objectives under key action 2. Additional indicators will be developed in the context of a monitoring and evaluation framework.

Erasmus+, with mobility at its core, will strive for carbon-neutrality by promoting sustainable transport modes and more responsible behaviour. The European Year of Rail 2021 is an excellent platform to promote the efforts to green Erasmus+ and encourage participants to choose rail or other low-carbon means of transport.

Environment and fight against global warming will be a horizontal priority for the selection of cooperation projects. Projects will support the creation of networks and partnerships of various actors in the field of education, including schools and the local communities and industries, working together on raising awareness of environmental issues, teaching and practicing what is taught (for example social responsibility; waste reduction; clean transport etc.). Platforms such as eTwinning and EPAL will continue to produce support materials and facilitate the exchange of effective educational practices and policies on environmental and sustainability matters.

The Erasmus+ programme will help develop knowledge, skills and attitudes on climate change and sustainable development and support whole-institution approaches to education for environmental sustainability. The programme will increase the number of mobility opportunities in green forward-looking fields, i.e. those study periods abroad, traineeships, youth or classrooms exchanges, etc. which foster the development of competences, enhance career prospects and engage participants in subject areas, with special attention to rural development (sustainable farming, management of natural resources, soil protection, bio-agriculture) all of which are strategic for the sustainable growth of our planet.

### 6.1.3. Key achievements

- European Universities are now selected under Erasmus+; these are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. They will work on a challenge-based approach, meaning that students cooperate with academics, researchers and companies from various disciplines, and cities, regions, civil society organisation and countries to tackle big societal challenges, addressing sustainable development at large, including climate change.
- For example, the ENLIGHT European University will inter alia focus on the impact of climate change on regional ecosystems. ENLIGHT will use its local environments (cities and regions) across Europe as living laboratories for lifelong learning and research in this area.
- The aim of the youth workers training ‘Green living in the rural area’ is to empower youth workers and their organisations to support social and environmental responsibility, saving and optimising resources. The project trains youth workers to reuse and recycle materials and provide them with the competences to act as multipliers in their own organisations. The main objectives are to raise awareness of participants on sustainable development of rural areas and on reusing and recycling of materials; provide participants with knowledge, skills and competences regarding the reusing of wood and other materials for a tree-house construction; stimulate the spirit of entrepreneurship of the participants; encourage creativity, leadership skills, innovative attitude and environmental responsibility of participants, to act as multipliers of the knowledge acquired in the training course.
- Several Erasmus Mundus Joint Master Degrees work directly on Climate Change issues, for example the [Master of Urban Climate and Sustainability - MURCS 1.5](#) (€4.4 million) or the [EMJMD Renewable Energy in the Marine Environment REM+](#) (€3 million)
- Building on the success and lessons from MURCS, the aim of the new [Master of Urban Climate and Sustainability 1.5](#) (MURCS1.5) is to produce high calibre graduates to understand, assess and manage climate resilience in cities to live within a 1.5°C warmer world. MURCS1.5 will integrate three themes: science of nature-based solutions as the approach to mitigation, with circular economy as the driver for urban planning, with sustainability leadership as the management goal. The [Master in Renewable Energy in the Marine Environment \(REM+\)](#) is an MSc Joint Degree coordinated by the University of the Basque Country in partnership with the Norwegian University of Science and Technology, École Centrale de Nantes and the University College, Cork. The Programme has been tailored to meet companies' needs in the area of Offshore Renewable Energy, and will have an international orientation underpinned by the direct participation, as Associate Partners, of world-renowned Research Centres, SMEs, and Large enterprises within industry.

- [STEAM within the classroom: solving ecological problems in collaboration](#)
- The goal of the project is to develop the STEAM skills of students (13-17 year old) in exploring ecological problems.  
Objectives:
  1. Understand the experiences of the partner countries of the project and enable students to conduct joint research activities;
  2. Promote pupils to reveal themselves in social, natural and cultural fields, and develop environmental self-awareness;
  3. Improve foreign language skills and broaden the cultural outlook.

## 6.2. Contribution to biodiversity mainstreaming

Not applicable

## 6.3. Contribution to clean air financing

Not applicable

## 6.4. Contribution to gender equality

### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming					Total
	2022	2023	2024	2025	2026	
0,0	0,0					0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.4.2. Key achievements and performance

Provisions supporting gender equality through Erasmus+ have strong synergies with the transformative agenda for higher education institutions and the European Universities alliances.

Equality between men and women is a broad EU objective, and is explicitly stated in the Erasmus+ programme. Erasmus+ aims at promoting equity and inclusion by facilitating the access to participants with disadvantaged backgrounds and fewer opportunities compared to their peers whenever disadvantage limits or prevents participation in transnational activities for reasons such as social obstacles caused by discrimination on the basis of gender. The participation to date shows excellent gender balance for the participants.

In the field of Youth, Erasmus+ supports non-formal learning for young people and equips youth workers with the necessary competences to better work with them, with the objective to engage and empower young people to become active citizens, connect them to the European project as well as to help them acquire and develop competences for life and their professional future. Projects supported are particularly suitable to strengthen European values and breaking down prejudices and stereotypes, raise awareness about socially relevant topics such as gender equality and make young people actors of change.

In addition, Erasmus+ supports projects dealing with the issue of gender equality; e.g. focusing on changing mentalities through reflection and the exchange of best practices, sensitising children to gender and diversity and by developing new and innovative methods to break down barriers for young girls in science and technology education. Erasmus+ supported initiatives aimed at addressing the underrepresentation of women in the area of STEM education, contributed to reinforcing quality early childhood education and care through actions such as fighting gender stereotypes from an early age and addressing underrepresentation of men in this field. The youth strand of Erasmus+ activities contributes to the implementation of the EU Youth Strategy 2019-2027 with the objective 'Ensuring equality of all genders and gender-sensitive approaches in all areas of life of a young person'.

Erasmus+ has funded over 3 100 projects addressing gender equality in the period 2014-2020.

Erasmus+ has funded several Strategic Partnerships and Capacity building Projects on gender equality in STEM in higher education. In addition, forward-looking cooperation projects also focus on STEAM education, such as the project 'Innovating STE(A)M in Higher Education with Transdisciplinary Talent Programs', '[EU STEAM](#) Towards a European STE(A)M Platform' and '[ArtIST](#) Integrated Interdisciplinary Education Module on Art, Entrepreneurship, Innovation and Science'. The projects promote innovative and cross-disciplinary approaches to STEAM curricula and teaching in higher education. The common cross-cutting objectives of these projects are to: i) contribute to increasing the participation of girls and women in STEM fields of study and jobs and; ii) reinforce cooperation between schools, higher education institutions, non-academic partners and businesses.

The Youth mobility project 'Soul has no gender: Working together to promote gender equality and end violence towards women' brought together young people from different countries for the purpose of addressing human rights, gender equality and violence against women in their home communities. Young participants were given the opportunity to actively participate in non-formal activities and to engage in a dialogue about gender equality and gender roles in their social environment. Their perception of the

gender roles were challenged and they were provided with tools to combat gender discrimination, contribute to raise awareness and trigger behavioural changes around them.

In the field of sport, in addition to the regular activities, the programme contributed to cooperation with the Council of Europe, the United Nations Office on Drugs and Crime (UNODC), the World Health Organisation and the National Football Information Points (NFIP) network, with dedicated projects to tackle key issues such as gender equality, match-fixing and violence in sport.

The [Erasmus Mundus Master's Degree in Women's and Gender Studies](#) (GEMMA) has been funded with a total budget of €4.5 million.

[GEMMA Master's Degree in Women's and Gender Studies](#) provides high quality academic education and professional competencies in the areas of Women's Studies, Gender Studies and Equal Opportunities across Europe and beyond. It collects the best offer from the humanities, social sciences and health sciences, making it attractive to students worldwide and offering a wide range of options. GEMMA's mission is to form much needed gender experts who will be able to contribute to greater equality between men and women, taking into account the intersections of ethnicity, race, class and sexuality and contributing to citizenship in the broadest sense of the word. The consortium consists of six universities in Spain, Italy, Poland, Netherlands and UK.

The [Young Man Interested in Early Childhood Education \(YOMAI\)](#) project aims to make working with children, up to the age of 10 attractive to men to encourage them to start a job or training in early childhood education. The targeted professions are educators, teachers and social workers.

## 6.5. Contribution to the sustainable development goals

### 6.5.1. Goals

#### *SDG 1 End poverty in all its forms everywhere*

Through its activities to achieve social inclusion through education, Erasmus+ contributes to achieving Goal 1 of the SDGs, in particular its target of reducing at least by half the proportion of men, women and children of all ages living in poverty in all its dimensions according to national definitions.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 1, the European University of Post-Industrial Cities (UNIC European University) will focus its activities inter alia on post-industrial challenges and diversity, taking into account also the needs of socio-economical disadvantaged areas.

The [ASEAN Network for Green Entrepreneurship and Leadership \(ANGEL\)](#) aims to build the capacity necessary in eleven ASEAN Universities for balancing the high potential economic growth and innovation in partner countries. These partner countries lack capacities in green entrepreneurship as well as resolving entrenched issues and challenges in relation to poverty, low quality jobs in the informal sector, digital divide and leadership gaps.

#### *SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture*

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 2, the selected European University of Technology (EUT) will work on sustainable agriculture from a technological point of view.

Capacity Building for Higher Education (CBHE) project [Enhancing Food Safety in the Mediterranean](#) (FoSAMED) (€0.9 million) The [FoSaMed project](#) brings together Moroccan HEIs promoting inclusive education through curriculum development and teacher education on Food Safety. It aims to train teachers within the framework of a new Master on Food Safety, to enable students to develop and upgrade their knowledge and technical skills on food safety issues. This will allow them to acquire new methodological and technical abilities to face the upcoming challenges in the Food Industry sector. The project foresees training of teachers in four Moroccan HEIs, which will have upgraded food safety labs for hands-on training of teachers and students.

#### *SDG 3 Ensure healthy lives and promote well-being for all at all ages*

Through its education, training and sport activities, Erasmus+ promotes healthy habits and well-being, particularly among youth, hence contributing to SDG 3. The [Tartu Call for a healthy life style](#) sets out a roadmap for promoting healthy lifestyles in Europe, particular among children.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 3, the European University Alliance for Global Health (EUGLOH) will have a special focus on global health.

#### *SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all*

Much like the Sustainable Development Goal 4, the EU Strategic Framework for European Cooperation in Education and Training (ET 2020) is designed to support Member States in ensuring inclusive and equitable quality education and in promoting life-long learning opportunities for all. The ET 2020 priorities, adopted by the Council and Commission in November 2015, have a direct influence on the Erasmus+ Work Programmes. Erasmus + provides funding to support initiatives such as social inclusion through

education and training, addressing early school-leaving and underachievement in reading, mathematics and science; fostering employability of graduates and adult participation in learning, and enhancing democratic citizenship, social, civic and intercultural competences and common EU values.

On the international scene, the EU has an active policy supporting cooperation in education and training with third countries by promoting peer-to-peer learning and comparing education systems worldwide. In particular, the EU's Erasmus+ mobility and inter-university cooperation programme is an invaluable instrument for establishing lasting academic and cultural ties, also promoting the EU in partner countries. Overall Erasmus+ funding for third countries will support around 200 000 mobility exchanges of university students and staff, 1 000 capacity building in higher education projects and around 27 000 scholarships and teaching staff within Erasmus Mundus Joint Master Degrees, primarily for partner countries across the world. Support is also provided to higher education in Africa through the Joint Africa-EU Strategy.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 4, the EUNICE - European University for Customised Education will have a special focus on customised education and life-long learning for part-time and non-traditional students.

#### [Supporting Social and Emotional Competences of Pre-School Children from Disadvantaged or Culturally Different Environments.](#)

Pre-school and kindergarten classrooms are among the earliest social environments that a child encounters outside the family. For young children with different cultural backgrounds and social disadvantages, this transition can be a challenging one. Five partner organisations from four European countries have teamed up to develop and implement innovative methodology of inclusive pre-school education to support children with special needs, especially those coming from socially disadvantaged or culturally different environments.

[New didactical models for initial VET training of young disadvantaged persons to reduce drop out.](#) The NEW-D project set out to develop an innovative didactical model to be used in the VET training of disadvantaged young learners (the final beneficiaries of the project) - in order to keep them in or, even, to bring them back into initial VET.

[Teacher's training to the inclusion of the children of foreigners.](#) The aim to exchange inspiring experience for professionals of partner organisations, and create a common, practical, freely available tool for teachers/workers who have to adapt their teaching practice to include children of foreigners.

#### ***SDG 5 Achieve gender equality and empower all women and girls***

The Erasmus+ Programme aims at removing social obstacles for participation in it for people facing discrimination because of gender, among other reasons. Strategic partnerships in the field of Youth give priority to projects that promote the empowerment of all young people, with a special focus on access to rights, autonomy and participation. The promotion of gender equality and equal opportunities is a specific objective in the field of sport.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 5, the European Space University of Earth and Humanity (UNIVERSEH European University) will focus its activities inter alia on gender equality in the space sector.

[WEMag](#) aims to help reduce the obstacles to entrepreneurship for young educated women in Tunisia and Morocco by providing them with entrepreneurial knowledge, experience and access to networks for business purposes. Using a design-thinking approach, it will create a new, common University Course on entrepreneurship designed for women, including project-oriented action learning, online learning and an internship allowing them to discover the first steps of budding companies. This course will improve the knowledge, skills and competences of female students and recent graduates in Tunisia and Morocco for employability and business creation after formal education.

The [Giritech project](#) set itself the goal of supporting the participation of women in the field of Science, Technology, Engineering and Mathematics (STEM). The project focuses on peer learning activities, getting inspired by strategies from other countries and finding out which approaches from the partner countries might be suitable for others.

#### ***SDG 6 Ensure availability and sustainable management of water and sanitation for all***

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 6, INnoVations of REgional Sustainability: European University Alliance (Invest European University) will focus its activities sustainable regional development, inter alia on water, energy, food and environment nexus.

CBHE project [Inow Asia: Development of innovative multilevel formation programs for the new water leading professionals in South East Asia](#) (€0.9 million)

[Inow Asia](#) will transfer to participating EU HEIs the knowledge and experience available about the implementation of innovative master programmes on water resources management. The main idea is to jointly design an innovative training programme based on modular and flexible water resources combining the on-line and problem-based methodology to complement some of the existing postgraduate programs, and also to co-design and implement water-oriented living labs in the campus of each PC HEI. As a result,

a new generation of Asian leading professionals in the field of water will be incorporated into the water labour market, with a global view of the sector challenges, a strong background in sustainable water management, but with a specific approach to the local demands.

***SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all***

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 7, Ulysseus, an open to the world, persons-centred and entrepreneurial European University for the citizenship of the future will focus its activities inter alia on energy, transport, mobility and smart cities.

***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

All actions of the Erasmus+ Programme contribute to increase the employability of the young people that participate in it, as shown by several studies. This is achieved through a combination of several outcomes, e.g. the acquisition of new skills, increased autonomy, increased knowledge of foreign languages, etc. The emphasis on inclusion aims to ensure that all can reap these benefits irrespective of disadvantage.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 8, the European University of Post-Industrial Cities (UNIC European University) will focus its activities inter alia on post-industrial challenges and diversity, taking into account also the needs of socio-economical disadvantaged areas.

CBHE project [University Student Capacity Building: Towards Readiness for Sustainable Development-Oriented Regional Job Market](#) (€1 million)

The aim of the project is to develop a generation of globally-exposed higher education graduates, equipped with essential character, social and cognitive skills blended with academic competencies, with a higher degree of readiness for the fast-evolving community and job market, and who are capable to integrate effectively in multi-cultural, diverse eco-system. A pilot set of competence-tailored 35 short- and 10 long-term extracurricular activities & 'quests' are designed and programmed into the LMS & SIS of partner HEIs, along with 35 courses (120 ECTS) in Engineering and ICT restructured to align with SDGs in competency-based format, targeting the full envisioned picture of the future 'Global Citizen' possessing competencies that were clearly identified via an exhaustive gap analysis developed at the beginning of the project.

***SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation***

CBHE project [strENGtHening skills and training expertise for TunisiAN and MorroCan transition to industry 4.0 Era](#) (€0.8 million)  
This project focuses particularly on Production, Maintenance and Quality engineering processes, which represent key industrial business processes that need attention, investment and improvement. The overall objective is to contribute to strengthening the skills and training expertise of both Tunisian and Moroccan universities in the three targeted topics for inciting and assisting the Partner Countries (PC) transition to industry 4.0 era.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 9, the European Engineering Learning Innovation and Science Alliance (EELISA European University) will focus its activities inter alia on sustainable and smart industry.

***SDG 10 Reduce inequality within and among countries***

In general, the Erasmus+ Programme aims at promoting equity and inclusion by facilitating access to it to participants with disadvantaged backgrounds and fewer opportunities compared to their peers. More specifically in the field of Youth, an Inclusion and Diversity Strategy has been designed as a common framework to support the participation and inclusion of young people with fewer opportunities.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 10, the European Digital UniverCity (EDUC European University) will focus its activities inter alia on justice, inequality and inclusion.

***SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable***

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 11, the European Consortium of Innovative Universities (ECIU European University) will focus its activities specifically around SDG 11 on sustainable cities and communities.

CBHE project [Urban Resilience and Adaptation for India and Mongolia: curricula, capacity, ICT and stakeholder collaboration to support green & blue infrastructure and nature-based solutions](#) (€1 million)

The project aims to promote green and blue infrastructure and nature-based solutions (GBI&NBS) for resilient, climate-friendly and liveable cities in Indian and Mongolia through ICT-enhanced tertiary education linked to labour markets and wider stakeholder circles.

***SDG 12 Ensure sustainable consumption and production patterns***

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 12, The European University Alliance on Responsible Consumption and Production (Eureca-Pro) will focus its activities on responsible consumption and production.

CBHE project [Development of Higher Education Content Aimed to Support Industries for Sustainable Production of Qualitative Agri-food](#) (€0.9 million)

The project aims to modernise HE content for promotion of development of such national agro-food production systems, where farm-enterprises will apply internationally recognised good agricultural practices and sustainable agro-business management principles and approaches, thus increasing agro-food production industry effectiveness and competitiveness. The overall aim is to modernise agro-industry related higher education, thus promoting implementation and effective management of sustainable agro-food production systems in Kyrgyzstan and Uzbekistan.

***SDG 13 Take urgent action to combat climate change and its impacts***

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 13, the ENLIGHT European University will inter alia focus its activities on the impact of climate change on regional ecosystems. ENLIGHT will use its local environments (cities and regions) across Europe as living laboratories for lifelong learning and research in this area.

CBHE project [New Courses in Geospatial Engineering for Climate Change Adaptation of Coastal Ecosystems](#) (€0.8 million)

The youth mobility project 'Green Light' aims to raise awareness among young people on waste and to foster reflection about their shopping habit and focuses on environmental pollution, more specifically on the household waste recycling. The program draws attention to the importance of environmentally conscious lifestyle. The purpose is to show young people that a conscious consumption and creative waste management is easy to implement in daily habits. During the Youth Exchange, youngsters from four different countries learned about different countries waste-dealing politics, alternative energy utilizing equipment, and how to recycle using their creativity.

The project activities will deliver the following main results: developed and accredited innovative regional joint interdisciplinary MSc program (120 ECTS, 2-year duration) in the field of Maritime Environmental Protection and Management (MEP&M) in English language at Partner countries (PC) HEIs; enhanced human capacities in the field of MEP&M and e-learning methodology through tailored trainings at PC HEIs; enhanced technical capacities of PC HEIs through installed new e-learning platform; increased networking among PC HEIs, governmental institutions, Blue economy sector companies and NGOs in order to act regionally to prevent and cope with consequences of global climate change and local/regional marine pollution.

***SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development***

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 14, the European University for Smart Urban Coastal Sustainability (EU-CONEXUS) will focus its activities on blue Growth, bio-economy, environmental protection, sustainable tourism, Coastal civil engineering, Sustainable aquaculture and Marine biotechnology.

CBHE project [Building a Comprehensive Mechanism for Preserving Marine Ecosystems and Life from the negative consequences of Climate Change and the disposal of Plastic Debris](#) (€0.9 million)

The project involves the development of a comprehensive mechanism combining capacity building and institutional development for marine ecosystem monitoring, capitalizing on the relevant expertise and know-how from EU higher education institutions and organisations.

***SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss***

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 15, the 4EU+ European University will focus its activities inter alia on biodiversity and sustainable development.

CBHE project [Developing Curricula for biodiversity monitoring and conservation in Tanzania](#) (€0.8 m)

The project aims at building a network of HEIs and natural science museums in the EU and the three major Partner Country HEIs to implement state-of-the-art HE training so to boost capacity and curricula in biodiversity science, hence improving the country's HE offer. Impacts generated will include the activation of new course programmes to shape an increased number of future competitive biodiversity experts for relevant professional positions, increased research, scientific production, and biodiversity programmes that adopts international standards.

***SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels***

One of the aims as regards students, trainees, apprentices, young people and volunteers participating in any of the mobility activities supported under Erasmus+ is a more active participation in society.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 16, the European University in Social Science (CIVICA) will focus its activities inter alia on challenges to democracy in the 21 century.

CBHE project [The Academic Alliance for Reconciliation in the Field of Higher Education in Peace, Conflict Transformation, and Reconciliation Studies in the Middle East and North Africa](#) (€0.7 million)

The project aims at building capacity in the field of Higher Education (HE) in Peace, Reconciliation and Conflict Transformation Studies in the Middle East and North Africa (MENA) region. The aim and focus of the project are to reinforce the existing network of cooperating partners and to advance curriculum development in Peace, Conflict Transformation, and Reconciliation Studies as academic degree in HEI.

***SDG 17 Strengthen the means of implementation and revitalize the global partnership***

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 17, the Young Universities for the Future of Europe (YUFE) will focus its activities inter alia on European identity and responsibilities in a global world.

6.5. Contribution to the sustainable development goals.....	667

## **1. Overview**

### **1.1. Challenges**

The European Union is built on solidarity, a shared value which is strongly felt throughout our European society. Solidarity is a fundamental pillar of the European integration project, providing a clear compass to guide Europe's citizens, and especially the young ones, in their aspirations for a better EU.

Community needs can be addressed by involving younger generations in solidarity activities. Many young people wish to engage in such activities and organisations are looking for motivated youngsters to help their efforts. With the right support, these organisations could offer even more to communities.

The European Solidarity Corps was initially launched in 2018, building on the experience acquired with the European Voluntary Service (included in Erasmus+). The ex-ante<sup>1</sup> evaluation preparing the initial launch already identified some challenges.

One of the main challenges the programme has faced is **visibility**. Therefore improving the promotion and communication to access a more targeted audience will be one of the opportunities for the next programming period.

During the **transitional** phase there has been confusion among potential participants on the role of the European Solidarity Corps, especially in relation to the underlying programmes which were part of first phase, as well as the differences with regards to the European Voluntary Service (EVS), under Erasmus+ or other existing programmes (such as **EU Aid Volunteers**).

**Overlaps with National frameworks**, initiatives and schemes, such as civic service programmes or privately run initiatives have been a further challenge in terms of communicating the added benefit of the European Solidarity Corps.

**Improved and simpler procedures** is a factor to be addressed in the new programme, including improved access to e-forms and simplifying them to increase the offers by organisations.

### **1.2. Mission (general objectives)**

Against this background, the European Solidarity Corps engages young people and organisations, bringing them together to build a more inclusive society, supporting vulnerable people and responding to societal and humanitarian challenges. It offers an inspiring and empowering experience for young people who want to help, learn and develop themselves while at the same time providing a single entry point for solidarity activities across the EU and beyond.

The general objective of the programme is to enhance the engagement of young people and organisations in accessible and high-quality solidarity activities, primarily volunteering, as a means to strengthen cohesion, solidarity, democracy, European identity and active citizenship in the Union and beyond. It will address societal and humanitarian challenges on the ground, with a particular focus on the promotion of sustainable development, social inclusion and equal opportunities.

It enhances the European, cross-border dimension of solidarity, complementing existing national and regional public and private policies, programmes and activities without creating competition or substitution effects.

Actions to tackle socio-economic problem areas are primarily the responsibility of the Member States and regions and must be taken closest to the citizens at national and sub-national levels. The European Solidarity Corps addresses the role the EU has to play in identifying shared challenges, stimulating cooperation and transnational mobility, encouraging synergies, and promoting the sharing of good practices and mutual learning in addition to supporting a Europe-wide approach to social innovation, where there is clear value added for European solutions.

### **1.3. Specific objectives**

The European Solidarity Corps has the following specific objectives:

<sup>1</sup> <https://eur-lex.europa.eu/legal-content/EN/TXT/HTML/?uri=CELEX:52018SC0317&from=EN>

1. Provide young people, including those with fewer opportunities, with easily accessible opportunities for engagement in solidarity activities in the Union and beyond.
2. Improve and properly validate their competences as well as facilitate their continuous engagement as active citizens.

#### 1.4. Public intervention context

Pursuant to Article 6 of the Treaty on the Functioning of the European Union (TFEU), the EU has the competence to carry out actions to support, coordinate or supplement the actions of the Member States in the field of education, vocational training, youth and sport. As laid down in Article 4(4) of the TFEU However the EU furthermore has the competence to carry out activities and conduct a common policy, in the areas of development cooperation and humanitarian aid.

The exercise of that competence shall not result in Member States being prevented from exercising their competences.

The European Parliament and the Council, in accordance with the ordinary legislative procedure, shall establish the measures defining the framework within which the EU's humanitarian aid operations are to be implemented. The EU may conclude with third countries and competent international organisations any agreement helping to achieve the objectives referred to in Article 214(1) of the TFEU and in Article 21 of the TEU, without preventing Member States from negotiating in international bodies and concluding agreements.

Regarding the European Voluntary Humanitarian Aid Corps, the European Parliament and the Council, acting by means of regulations in accordance with the ordinary legislative procedure, shall determine the rules and procedures for the operation of the Corps. The other tools available in this policy area and used by the EU Institutions are the Commission initiatives to promote coordination with the actions of the Member States, in order to enhance the efficiency and complementarity of Union and national humanitarian aid measures. Moreover, the EU shall ensure that its humanitarian aid operations are coordinated and consistent with those of international organisations and bodies, in particular those forming part of the United Nations system.

#### 1.5. Actions

In order to achieve its objectives, the European Solidarity Corps implements its Actions structured into two strands:

Participation of young people in solidarity activities:

- Volunteering;
- Solidarity Projects.

Participation of young people in humanitarian aid related solidarity activities ('Volunteering under the European Voluntary Humanitarian Aid Corps'):

- Humanitarian Aid Volunteering projects.

Additionally, the European Solidarity Corps supports a series of activities and measures aiming at providing high-quality solidarity activities:

- Networking activities;
- Quality and Support measures.

#### 1.6. Delivery mode

The European Solidarity Corps is implemented under the leadership of the European Commission's Directorate-General for Education and Culture (DG EAC), which bears the overall responsibility for the supervision and coordination.

Activities are rolled out through direct management by DG EAC and the Education, Audio-visual and Culture Executive Agency, as well as through indirect management with the support of a network of National Agencies, which brings the programme closer to its target audience, adapts to the diversity of national education systems, and offers the possibility to align with national priorities.

Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the European Solidarity Corps programme and repealing [European Solidarity Corps Regulation] and Regulation (EU) No 375/2014 COM/2018/440 final - 2018/0230 (COD)	2021 - 2027	1 009,0

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							
	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
<b>Total</b>	<b>135,7</b>	<b>138,4</b>	<b>141,2</b>	<b>144,0</b>	<b>146,9</b>	<b>149,8</b>	<b>152,9</b>	<b>1 009,0</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The European Solidarity Corps builds on the achievements of more than 25 years of European programmes in the field of youth and solidarity, especially on the success of the European Voluntary Service implemented under the Erasmus+ Programme from 2014 to 2018, on the EU Aid Volunteers initiative and on the previous European Solidarity Corps running from 2018 to 2020.

### 1.10. Relevant websites providing more information

**European Youth Portal** ([https://europa.eu/youth/home\\_en](https://europa.eu/youth/home_en))

The website provides information on the opportunities offered by the European Solidarity Corps for both organisations and young people, project examples and testimonies as well as the necessary information and links to apply for funding.

**EU Aid Volunteers** ([https://ec.europa.eu/echo/what/humanitarian-aid/eu-aid-volunteers\\_en](https://ec.europa.eu/echo/what/humanitarian-aid/eu-aid-volunteers_en))

Stories about what volunteers are doing in the field have been published on this website (213 stories so far).

## 2. Where are we in the implementation ?

## 2.1. Programme 2021-2027

## 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

### European Solidarity Corps

The Programme started in 2018. During the period 2018-2020 the total C1 credits amounted to €352 197 999 and were implemented at nearly 100% (€351 955 306). During the same period, the total payments with C1 appropriations amounted to €262 384 598. The percentage indicated below (74%) corresponds to the ratio between the implemented payments and the implemented commitments.

The programme is implemented under indirect management (approximately 95% through National Agencies) and direct management modes (around 4.5% through the Executive Agency for Education, Audiovisual and Culture and 0.5% directly through DG EAC).

	Commitments	Payments
Implementation Voted budget	351 955 306	255 710 191

## 3. How is the programme performing ?

### 3.1. Performance

#### 3.1.1. Introduction

The European Union is built on solidarity, a shared value which is strongly felt throughout European society. Solidarity defines the European project and not only guides the European youth in their aspirations for a better Union but also provides the necessary unity to cope with current and future crises by holding a strong moral ground.

The European Solidarity Corps brings together young people to build a more inclusive society, supporting vulnerable people and responding to societal and humanitarian challenges. It offers an inspiring and empowering experience for young people who want to help, learn and develop and provides a single entry point for such solidarity activities throughout the Union and beyond.

The 2018-2020 European Solidarity Corps was created to merge several EU volunteering and solidarity traineeships/jobs schemes into one programme. The proposal for a Regulation was accompanied by an ex-ante evaluation, which demonstrated the need for a single EU programme acting as a "one stop shop" for all solidarity related opportunities for young people.

By extending its scope to cover volunteering activities in support of humanitarian aid operations, the European Solidarity Corps provides needs-based emergency aid and helps to deliver assistance, relief and protection where most needed. It thus helps addressing not only unmet societal needs in Europe but also humanitarian challenges in third countries.

The extended European Solidarity Corps also addresses current trends and new challenges that are of special interest to the post-2020 Multiannual Financial Framework. It directly contributes to reducing social divergences, as the projects contribute to address certain societal needs, while also providing an opportunity for young people to develop their skills, which will increase their employment prospects.

In particular, skills and competences development is at the core of the specific objective of the programme which is thus fully aligned with the way forward proposed in the Reflection Paper on the Social Dimension of Europe.

The activities of the European Solidarity Corps support the objectives of the EU Youth Strategy for 2019-2027<sup>2</sup> which encourages young people to become active citizens, agents of solidarity and positive change for communities across Europe, inspired by EU values and a European identity.

### 3.1.2. Active programme performance

The European Solidarity Corps 2021-2027 consolidates efforts to have one single entry point for young people ready to engage in solidarity. It brings together young people to build a more inclusive society, supporting vulnerable people and responding to societal and humanitarian challenges.

Building on the past experience, the programme implementation scheme is evolving to become more efficient and address issues noticed in the previous MFF (see challenges section page 1).

In order to address the issue of complicated procedures, the updated **Quality Label** (accreditation mechanism in the Corps) will provide a more streamlined and **simplified process** for organisations wishing to participate.

The Quality Label certifies that an organisation is able and willing to carry out high quality solidarity activities in compliance with the principles, objectives and quality standards of the European Solidarity Corps. Obtaining a Quality Label is a prerequisite for participation in Volunteering activities. All organisations who are awarded a Quality Label will be able to publish their opportunities in the European Solidarity Corps Portal and also to join other organisations in developing and providing opportunities for young people. The European Solidarity Corps Portal will thus act as a one-stop-shop for all: Participants can view and research accredited organisations and their offers; Organisations can use of the European Solidarity Corps Portal's database to search for and offer placements to potential participants.

This will create a simplified process for both the organisations and the participants.

The 'traineeships and jobs' strand tested in the first iteration of the Corps (2018-20) will be discontinued. This will permit the programme to **focus on volunteering**.

Moreover, EU Aid Volunteers, previously implemented as a separate programme is discontinued. Instead a new humanitarian aid strand is integrated into the European Solidarity Corps (2021-2027) to benefit from the scaling efficiencies already proven in the volunteering part of the Corps. For the first time, the European Solidarity Corps is **extending its scope** to cover volunteering activities in support of humanitarian aid operations

Volunteering, in the context of this programme, refers to a full-time unpaid activity that has a duration of up to 12 months and contributes to the achievement of the common good. This type of solidarity activity is undertaken through participating organisations that offer young people the opportunity to carry out a wide variety of activities, in a structured way. Volunteering also enables young people to acquire useful experience, skills and competences for their personal, educational, social, cultural, civic and professional development, thereby improving their employability and active citizenship.

Directing the focus to volunteering will help tackle the confusion which existed in relation to the role of the European Solidarity Corps in the previous programme period.

The new programme will provide opportunities where national schemes do not exist, avoiding overlapping, and will give National Agencies the opportunity to draw up funding strategies that clarify conditions for activities considered as complimentary to their national schemes.

The new European Solidarity Corps, furthermore, supports the European Union's political priorities and engages both organisations and young people in projects to help support them.

The programme promotes **inclusion and diversity**, and aims to provide all young people with equal access to European Solidarity Corps opportunities.

The Corps provides accessible and flexible formats of activities, additional financial support as well as a range of support measures (e.g. general and language training, insurance, support before and after solidarity activities, administrative assistance) to encourage the participation of young people with fewer opportunities and better cater for their specific needs. When designing their projects and activities, organisations need to have an inclusive approach and make use of the available mechanisms to involve a diverse range of participants with fewer opportunities.

<sup>2</sup> [https://europa.eu/youth/strategy\\_en](https://europa.eu/youth/strategy_en)

The programme aims to adopt **green practices** across all projects and activities, as well as to promote environmentally-sustainable and responsible behaviour among both participants and organisations. The Programme also supports projects and activities addressing the topic of environmental protection, sustainability and climate goals and aiming to protect, conserve and enhance natural capital, to raise awareness about environmental sustainability and to enable behavioural changes for individual preferences, consumption habits and lifestyles.

The European Solidarity Corps contributes to the **digital transition** by supporting projects and activities that work to boost digital skills, foster digital literacy, and develop an understanding of the risks and opportunities of digital technology. In line with the digital transformation and with its ambition to support the learning experience of young people, the European Solidarity Corps offers online training to all young people registered in the programme.

Additionally, the European Solidarity Corps promotes civic engagement and the **participation** of young people in democratic processes. With volunteering at its heart, the programme engages and empowers young people to be active in society and become true agents of change.

The Programme provides the flexibility to add annual priorities, thus contributing to unforeseen challenges such as addressing the impact of COVID-19 pandemic and recovery from it, particularly in the area of **health** improvement and support. The programme can mobilise volunteers to support projects addressing various health challenges.

The political agreement on the new Programme was reached in December 2020 and the first calls for proposals are foreseen to be launched in the first quarter of 2021. There is therefore, at this stage, no performance on which to report.

### 3.1.3. Previous programme performance

#### *European Solidarity Corps*

The European Solidarity Corps builds on the achievements of the European Voluntary Service and on the first phase of the European Solidarity Corps, launched in December 2016, whereby different Union programmes have been mobilised to offer volunteering, traineeship or job activities to young people across the EU.

In 2018, the first European Solidarity Corps Regulation<sup>3</sup> created a new, coherent framework for solidarity-related activities, with a dedicated budget of €375.6 million for 2018-2020. It offered new formats and tools, with a sustained commitment to quality, in order to reach out to more young people and provide them with a valuable experience.

Implemented by the same National Agencies as Erasmus+ under similar rules, the programme benefitted from the supportive measures implemented for its sibling programme. Measures successfully put in place improved the flexibility of the programme and provided support to the participants and the organisations.

Between the launch of the Corps and the end of 2020, almost a quarter of a million young people registered on the Portal of the European Solidarity Corps, which demonstrates an extremely high interest in the initiative.

In line with the objectives to be achieved:

- Providing young people, including those with fewer opportunities, with easily accessible opportunities for engagement in solidarity activities in the Union and beyond.
- Improving and properly validating their competences as well as facilitating their continuous engagement as active citizens.

The Programme has facilitated access to solidarity activities across Europe and beyond for tens of thousands of young people and provided them with the opportunity to constructively engage in and contribute to strengthening cohesion, solidarity and democracy in Europe, while developing their skills and competences.

The European Solidarity Corps proved particularly successful in providing opportunities to address horizontal priorities such as inclusion (with more than 30% of participants with fewer opportunities) or climate change (13% of projects supported under the European Solidarity Corps address climate action, environment and nature protection).

It offered support for projects revolving around a range of solidarity (in the form of individual or team volunteering, traineeships, jobs and solidarity projects) involving young people between 18 and 30 years of age.

Traineeships and Jobs represented the biggest novelty under the European Solidarity Corps. While specific efforts were dedicated to promotion, ensuring understanding of the opportunities, reaching out to the relevant stakeholders and training the potential applicants, the Action was faced with challenges and did not take up as expected and the number of projects and participants funded was lower than forecasted.

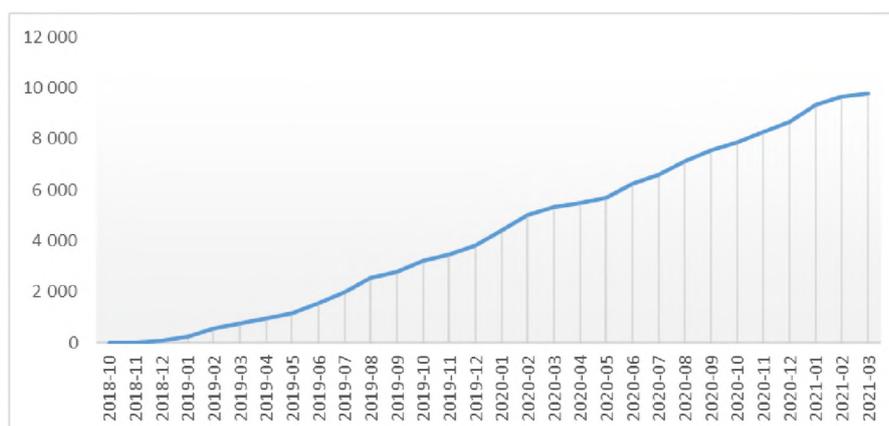

The performance targets had been designed with the expectation of a full three years of implementation over the period 2018-2020.

The short programme period (end of 2018-2020) impacted on the possibilities for successful outreach to an entirely new category of stakeholders (potential participating organisations) and the Traineeships & Job strand did not manage to carve out a niche in the relatively vast range of national or EU tools aimed at improving the employment prospects of young people. The employer/host

organisations were required to pay salaries/remuneration of trainees and the Programme only supported certain associated costs, e.g. mentoring, relocation costs etc., also to minimise the risk of job substitution.

Despite the difficulties the programme has faced, including the late adoption of the legal base in October 2018 and the impact of the COVID-19 pandemic in 2020, the projects continued to be contracted at a steady rate throughout 2019 and 2020, showing a continuous increase highlighting that interest from organisations remains stable.

**Cumulative number of projects contracted per month**

In terms of participation rates, the number of young people in volunteering projects doubled in 2019, reaching 8 293 actual participants. During the COVID-19 pandemic in 2020, nearly 3 000 volunteering participants took part in the programme activities despite restrictions, showing the programme resilience, adaptability, and capacity to contribute to a stronger and more cohesive Union. The European Solidarity Corps continued to provide relief where possible through, for example, volunteers giving elderly people a hand with food and medical shopping or fighting loneliness.

Still, some activities had to be suspended or cancelled and the duration of projects extended to enable those young people who were prevented from taking part due to the crisis to have another opportunity to do so. This also implies that a number of deployments funded by calls 2019 and 2020 might take place later than initially foreseen.

The success of the Corps in terms of the uptake by young people is also a testimony of its significance as by the end of 2020, nearly 280 000 youngsters from across the EU had registered for participation in the Corps. Based on the positive reception of the initiative by young people and other stakeholders in the solidarity sector, the European Commission proposed an extension of the Corps to the programming period 2021-27.

### ***EU Aid Volunteers Initiative***

The EU Aid Volunteers Initiative (EUAV) was managed by DG ECHO. The start of the EU Aid Volunteers implementation was delayed for about a year, due to the adoption of the Implementing Regulation in November 2014.

After the launch of the initiative, the uptake of this new programme was below expectations. For the period 2014-2020, the EUAV Initiative was allocated €141 million to finance the training of an initial target of 4 400 volunteers and the deployment of 4 000 volunteers, the provision of technical assistance and capacity building to participating organisations, and the implementation of communication and other support activities. By end of 2020, only 1 173 deployments were financed amounting to 29% of the initial target and 788 deployments have taken place, 1 065 volunteers completed the EU aid Volunteers training (20% of the target).

Due to the COVID-19 pandemic, some activities had to be suspended or cancelled and the duration of projects extended to enable organisations to have the opportunity to implement their project activities and to volunteers to be deployed at a later stage. The 2020 selection procedure has been cancelled by DG ECHO/EACEA, and the trainings, aiming at preparing volunteers for volunteering activities in the framework of projects selected in 2018 and 2019, have been kept on hold during most of 2020. Training (of around 500 EU Aid Volunteers) will be resumed as soon as the situation allows. This implies that a number of deployments will take place later than initially foreseen.

The EU Aid Volunteers initiative introduced a thorough certification mechanism that requires sending and hosting organisations to prove that they have procedures and policies in place to achieve the high volunteering standards of the programme. The certification mechanism had not existed during the pilot phase. Consequently, challenging targets were set in terms of certified organisations, volunteers trained and deployed, which did not materialise.

In the report on the Interim Evaluation (COM(2018) 496), the Commission acknowledged the need to improve consistency of the approach to volunteering in third countries with other EU volunteering schemes. Coherence and synergies with the European Voluntary Service and the European Solidarity Corps were to be sought, resulting in the creation of a **new humanitarian aid strand** in the new European Solidarity Corps (MFF 2021-2027) replacing the EU Aid Volunteers Initiative.

### 3.2. Key achievements

#### *European Solidarity Corps*

<b>280 000</b>	<b>55 000</b>	<b>41%</b>	<b>90%</b>
young people expressed interest in joining by registering with the Corps	opportunities for young people were created between October 2018 and December 2020	of participants involved so far are young people with fewer opportunities	of participants who finalised their activity declared being satisfied with their experience

The initiative was launched in December 2016. Since then, 279 348 young people have registered in the European Solidarity Corps Portal.

Since October 2018, the European Solidarity Corps has existed as an independent funding Programme. The calls created more than 55 000 opportunities for young people to engage in solidarity activities. Solidarity Projects – providing funding for young people to initiate and implement projects to tackle a social need in their local community – have raised high interest.

Thanks to specific support for young people with fewer opportunities and strong focus on reaching out to potential participants with this profile, 41% of the participants so far are young people with fewer opportunities.

Programme satisfaction rates are high: 90% of the participants who finalised their European Solidarity Corps activity and filled in their participant report declared being very or rather satisfied with their experience.

The European Youth Week gathered some 120 000 participants to over 1 000 events, carried out in 35 countries and organised by National Agencies, Eurodesks, Commission Representations, youth civil society and other partners. It provided a valuable opportunity to promote the EU Youth Strategy and the opportunities offered by the European Solidarity Corps.

The European Solidarity Network was successfully launched in March 2019 and will continue to expand and develop tools to help create a network of communities around the European Solidarity Corps.

#### *EU Aid Volunteers Initiative*

<b>1 173</b>	<b>200</b>
deployments financed throughout the overall period	organisations certified since 2017

As of September 2020, 1 173 deployments were financed and 788 had taken place, involving 705 volunteers (some of whom were deployed twice) and 1 065 volunteers had completed the EU Aid Volunteers training (24% of the target).

Overall, with regard to the certification of new sending and hosting organisations, the trend marginally increased with 63 organisations certified in 2017, 63 in 2018 and 74 in 2019.

Since the start of the initiative, the skills areas of volunteers most often requested for capacity building activities in third countries have been in communication (14%), disaster risk management (11%), project management (10%), finance and accounting (8%), monitoring and evaluation (6%), gender equality (6%), protection (5%), advocacy (5%) and community development (4%).

### 3.3. Evaluations, studies and reports

**European Solidarity Corps 2014-2020**

Since the European Solidarity Corps is largely based on the previous European Voluntary Service, which was implemented under Erasmus+, the Erasmus+ mid-term evaluation provides valuable insights. The main results highlight the effectiveness of Erasmus+ in developing skills and competences; its undisputable European added value; a high degree of coherence, in particular due to the pooling of programmes and the single brand name; and its efficiency and simplicity, underscoring the cost-effectiveness of mobility actions and the reduced management cost (less than half of similar national schemes). Further findings of the mid-term evaluation of the Erasmus+ Programme are available here: [https://ec.europa.eu/programmes/erasmus-plus/resources/documents/evaluations\\_en](https://ec.europa.eu/programmes/erasmus-plus/resources/documents/evaluations_en)

An *ex ante* evaluation for the European Solidarity Corps 2021-2027 was carried out and examined challenges that may appear because of the expansion of the scope of activities and the geographical scope, as well as those identified in implementing the former European Solidarity Corps and the EU Aid Volunteers. The evaluation underlined the need for the EU to tackle a number of major challenges, challenges addressed under the new extended European Solidarity Corps. The evaluation is available here: <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=SWD%3A2018%3A318%3AFIN>

In accordance with Regulation, an interim evaluation of the European Solidarity Corps 2021-2027 should be carried out no later than 31 December 2024 and be accompanied by a final evaluation of the 2018-2020 European Solidarity Corps Programme. The interim evaluation of the Programme shall assess the overall effectiveness and performance of the Programme, as well as the delivery of the inclusion measures.

**EU Aid Volunteers Initiative**

An interim evaluation was carried out in 2017. The study prepared by an external contractor, the report and staff working document on the interim evaluation of the EU Aid Volunteers initiative for the period mid-2014 to mid-2017 adopted by the Commission are published on the following website: [https://ec.europa.eu/echo/funding-evaluations/evaluations/thematic-evaluations\\_en](https://ec.europa.eu/echo/funding-evaluations/evaluations/thematic-evaluations_en). An ex-post evaluation of the initiative is foreseen in Regulation 375/2014 and shall be completed by 31 December 2021.

**4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :The specific objective of the Programme is to provide young people, including those with fewer opportunities, with easily accessible opportunities for engagement in solidarity activities in Europe and abroad while improving and properly validating their competences as well as facilitating their employability and transition into the labour market.**

**Indicator 1: Number of participants in solidarity activities**

Justification of the trend	

## **5. Programme 2014-2020 - Key monitoring indicators**

### *Previous Program 1 : EU Aid Volunteers initiative (EUAV)*

**General Objective 1 :To contribute to strengthening the Union's capacity to provide needs-based humanitarian aid aimed at preserving life, preventing and alleviating human suffering and maintaining human dignity and to strengthening the capacity and resilience of vulnerable or disaster-affected communities in third countries**

**Indicator 1: The number of people reached by humanitarian aid provided through the EU Aid Volunteers initiative and the average costs per person reached**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of people reached										
Milestones										2020
	0	17 500	25 000	30 000	17 500	42 500	50 000			50 000
Actual Progress										Final
	0	0			8 104					
Costs (in EUR) per person reached										
Milestones										2020
		845	716	733	751	631	550			550
Actual Progress										Final
	0	0			158					

Are we on track	
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The number of people reached by volunteers are based on the assumption that each volunteer reaches

	on average 50 persons (i.e. in 2015, 350 deployed volunteers would reach 50 persons each and therefore reach 17 500 people in total). The number indicated for the year 2018 – 8 104 persons - is the result of the first two deployment projects funded from the 2015 budget. These projects lasted 24 months and started to deploy volunteers from December 2015; the final reports from which the number 8 104 was retrieved were received end of 2018. The 2015 proposals foresaw the deployment of 44 volunteers (as indicated for the year 2015 in the programme statement). The actual deployment was in the end 55 volunteers (due to drop-outs and replacements). On average each of these volunteers reached about 147 persons (instead of 50 per volunteer as projected in the planning figures) and 8 104 in total.
Full metadata available at this address	
Justification of the trend	

### Specific Objective 1 :Contribute to increasing and improving the capacity of the Union to provide humanitarian aid.

#### Indicator 1: Number of EU Aid Volunteers deployed or ready for deployment with the required qualifications

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of EU Aid Volunteers trained ready for deployment with the required qualifications per year										
	Milestones									2020
		350	350	550	800	1 000	1 250			1 250
	Actual Progress									Final
			97	178	295	446	54			
Number of EU Aid Volunteers deployed per year:										
	Milestones									2020
		350	350	550	800	1 000	1 125			1 125
	Actual Progress									Final
			55	162	175	368	0			

Are we on track	Deserves attention**
Indicator type	Result
Unit of measurement	Number of EU Aid Volunteers (yearly)
Cut-Off Date	31/12/2020
Data source	EACEA Project Database (Pegasus)
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Final figures have been captured. This indicator will no longer be reported.
Other methodological comments	The number of volunteers trained depends on the number of planned deployments as provided in the applications to the call for proposals. In 2017, six proposals were received proposing 175 deployments. As a result, 295 candidate volunteers were trained in 2018 for deployments and for the reserve list to cater for dropouts and cancellations. The call for proposals for deployment 2018 resulted in the funding of eleven projects (up from 6 in 2017) proposing the deployment of 368 volunteers. This figure is far below the MFF targets as explained in section II Implementation Update. However, this represents an increase of 110% compared to the previous year and sustains an upward trend. The average duration of a deployment is 9 months (most deployments are either 6 or 12 months deployments, average is 9 months).
Full metadata available at this address	
Justification of the trend	Due to the outbreak of COVID-19 only one training cycle could be organised and deployments were put on hold.

#### Indicator 2: Number of EU Aid Volunteers who have completed their contract of deployment

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
	0	315	350	550	800	1 000	1 125			1 125
	Actual Progress									Final
	0	0	0	66	178	151	107			

Are we on track	Deserves attention**
Indicator type	Output
Unit of measurement	Number of EU Aid Volunteers (yearly)
Cut-Off Date	31/12/2020
Data source	EACEA Project Database (Pegasus)
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Final figures have been captured. This indicator will no longer be reported.

Other methodological comments	This indicator reflects the number of volunteers who stayed the whole duration of their contract and did not end their deployment earlier than planned. If volunteers drop out, organisations can fill the remaining volunteer months with reserve candidates. It is difficult to track in the course of a project which volunteers ended their contracts earlier, if other volunteers stayed longer in their placements instead or if reserve volunteers were recruited.
Full metadata available at this address	
Justification of the trend	This figure is based on final reports of 5 deployment projects (2015: 2 projects, 2016: 3 projects) Out of 193 EU Aid Volunteers, 107 completed their deployment contract.

### Indicator 3: Number of hosting and sending organisations participating in the EU Aid Volunteers initiative per year.

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
	100		115	110	115	75	120			120
	Actual Progress									Final
	88		41	179	73	58	0			

Are we on track	No data
Indicator type	Output
Unit of measurement	Number of organisations (yearly)
Cut-Off Date	31/12/2020
Data source	EACEA Project Database (Pegasus)
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Final figures have been captured. This indicator will no longer be reported.
Other methodological comments	This indicator reflects the work done in capacity building / technical assistance provided to organisations, which increases the capacity of the sector to provide humanitarian aid. The figure does not include the organisations active deployment projects. The lower figure in 2018 is due to a lower number of projects funded than planned in order to enable more deployments of volunteers (planned 250; result 368). Budget was therefore moved from the capacity building/technical assistance strand to the deployment strand and fewer projects than planned were funded.
Full metadata available at this address	
Justification of the trend	This is an annual figure relating to organisations selected through the calls for proposals. In 2020 no call for proposal was awarded and no new organisations selected to participate.

### Specific Objective 2 :Improvement of the skills, knowledge and competences of volunteers in the field of humanitarian aid and the terms and conditions of their engagement.

**Indicator 1: The degree of satisfaction of the EU Aid Volunteers trained and deployed, of the sending and hosting organisations with regard to the quality of the training, level of knowledge and competences of volunteers, the fulfilment and adequacy of the standards and procedures for management of candidate and EU Aid Volunteers (overall satisfaction rate out of 100%)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
	0	75%	80%	80%	85%	85%	85%			85
	Actual Progress									Final
	0	0	88%	90%	87%	88%	74%			

Are we on track	Deserves attention**
Indicator type	Result
Unit of measurement	Percentage of Participants answering positively to the relevant questions (yearly)
Cut-Off Date	31/12/2019
Data source	Participant Survey
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	A similar indicator will be captured as part of the European Solidarity Corps 2021 - 2027 "Degree of satisfaction of volunteers deployed in the humanitarian aid field and of participating organisations with regard to the effective humanitarian contribution of the activities on the ground". For the purposes of EU Aid volunteers, final figures have been captured. This indicator will no longer be reported.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	On the basis of all surveys submitted until the end of 2019.

### Specific Objective 3 :Building the capacity of hosting organisations and foster volunteering in third countries

#### Indicator 1: Number of third country staff and volunteers participating in the capacity building actions

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
	≥ 1450	≥ 300	≥ 700	≥ 700	≥ 600	≥ 550	≥ 550			≥ 550
	Actual Progress									Final
	0	0					18 580			

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of staff (yearly)
Cut-Off Date	31/12/2020
Data source	EACEA Project Database (Pegasus)
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Figures are provided only for the projects that ended in the respective year and figures do not relate to any (annual) target. Furthermore, projects provide the numbers per project activity but not for the project as a whole, which could lead to double counting.
Full metadata available at this address	
Justification of the trend	This figure is collected from final reports of 5 deployment and 16 capacity building / technical assistance projects that were available at the end of 2020.

### Specific Objective 4 :Communication of the Union's humanitarian aid principles as agreed in the European Consensus on Humanitarian Aid.

#### Indicator 1: Number, type and costs of information, communication and awareness-raising actions

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of communication and awareness-raising actions										
	Milestones									2020
	2	3	4	5	4	4	4			4
	Actual Progress									Final
	2	4	6	5	4	1	0			
Cost per action (in EUR)										
	Milestones									2020
	0	686 234	425 000	565 000	365 000	187 500	165 000			165 000
	Actual Progress									Final
		171 559	70 833	113 000	91 250	400 000	0			

Are we on track	No data
Indicator type	Output
Unit of measurement	Number of actions (yearly) Costs (yearly in EUR)
Cut-Off Date	15/12/2020
Data source	EACEA Project Database (Pegasus)
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Note that the indicated support measures budgets from 2016 include €265 000 for the maintenance of the EU Aid Volunteers platform.
Full metadata available at this address	
Justification of the trend	All events were cancelled due to the outbreak of the COVID pandemic

### Specific Objective 5 :Enhancement of coherence and consistency of volunteering across Member States in order to improve opportunities for Union citizens to participate in humanitarian aid activities and operations.

#### Indicator 1: Number of (newly) certified sending organisations applying the standards and procedures for deployment and management of European volunteers

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
		50	44	15	20	30	10			10
	Actual Progress									Final
		13	10	13	6	10	22			

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of newly certified organisations (yearly)
Cut-Off Date	31/12/2020
Data source	EACEA Project Database (Pegasus)
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Final figures have been captured. This indicator will no longer be reported.
Other methodological comments	The number reflects the certified sending organisations in 2020 (additionally, 66 new hosting organisations were certified in 2020 which brings the total number of certified organisations to 88). The certification mechanism is a requirement of the legislation. It seeks synergies with the Commission's partnership instruments in the humanitarian field and existing humanitarian standards, with the aim of administrative simplification. The certification takes into account the important specificities of the programme, notably the management of volunteer staff.
Full metadata available at this address	
Justification of the trend	This reflects the number of organisations certified (decision signed) in 2020.

### Previous Program 2 : European Solidarity Corps (ESC)

**Specific Objective 1 :to provide young people, with the support of organisations, with easily accessible opportunities for engagement in solidarity activities while improving their skills and competences for personal, educational, social, civic and professional development, as well as their employability and facilitating transition to regular employment**

#### Indicator 1:number of participants in volunteering

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
					8 400	24 600	28 900			61 900
	Actual Progress									Final
					3 103	9 318	13 490			

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of Participants (cumulative)
Cut-Off Date	15/01/2021
Data source	Eplus Link and Mobility Tool
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Reporting on this indicator will continue in the new Programme. Nevertheless, the Actions covered by the new Regulation (and thus scope of this indicator) are not fully aligned with this programme: Volunteering in humanitarian aid activities were added.
Other methodological comments	Due to late adoption of the regulation, only one call was launched in 2018 for projects starting as from 2019. Therefore, considering the limited number of results for 2018, for the purpose of this exercise, data is provided for both call years 2018-2019.
Full metadata available at this address	
Justification of the trend	There is another round for this call outstanding.

#### Indicator 2:number of participants in traineeships

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0							4 100			11 200

Unit of measurement	Percentage of Participants answering positively to the relevant questions (yearly)
Cut-Off Date	15/01/2021
Data source	Participant survey
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Reporting on this indicator will continue in the new Programme as 'Share of participants whose learning outcomes have been documented through a Union transparency and recognition tool'.
Other methodological comments	Recognition of learning is a key element in the Corps and the possibility to identify and document learning outcomes is offered to participants Based on the Question "Have you received a certificate, diploma or document that describes and validates the competences acquired during your European Solidarity Corps activity?" where the participants have answered strongly agree or rather agree.
Full metadata available at this address	
Justification of the trend	These are provisional figures as most of the projects funded in 2019 and 2020 are still ongoing (figures provided cover about 1% of granted projects and about 10% of granted participants). A meaningful comparison of results against milestones is, therefore, not yet possible.

**Indicator 3: number of organisations holding a quality label**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
							3 900			
	Actual Progress									Final
					398	1 083	2 438			

Are we on track	Deserves attention**
Indicator type	Result
Unit of measurement	Number of organisations (yearly)
Cut-Off Date	11/03/2021

Data source	European Youth Portal, Eplus Link and Mobility Tool
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Reporting on this indicator will continue in the new Programme.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Initial methodology to calculate milestone appeared to be not appropriate to correctly plan the number of organisations holding a Quality Label. Achieved number of organistaions is satisfactory.

#### Indicator 4: overall satisfaction rate of participants with regard to the quality of activities

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
						90%	90%			90%
	Actual Progress									Final
						88%	91%			

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage score of positive answers to the relevant questions (yearly)
Cut-Off Date	15/01/2021
Data source	Participant survey
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Reporting on this indicator will continue in the new Programme.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Feedback of participants is positive towards the quality of their experience. Based on the feedback from participants, questions in the participants reports on satisfaction regarding the Corps experience where the participants have answered strongly agree or rather agree

### Specific Objective 3 :to ensure that particular efforts are made to promote social inclusion and equal opportunities, in particular for the participation of young people with fewer opportunities, through a range of special measures such as appropriate formats of solidarity activities and personalised support

#### Indicator 1: number of participating young people with fewer opportunities

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
					25%	25%				0,25
	Actual Progress									Final
						32%	41%			

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of Participants
Cut-Off Date	01/03/2021
Data source	Eplus Link and Mobility Tool
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Actual participants are considered for actions ESC11, ESC13, ESC21 and ESC31. Final figures will be updated once all projects are finalised. These are provisional figures as most of the projects funded in 2018 and 2019 are still ongoing (figures provided cover about 1% of granted projects and about 10% of granted participants). A meaningful comparison of results against milestones is, therefore, not yet possible.
Full metadata available at this address	
Justification of the trend	The Corps offers inclusive formats and support measures to reach out to young people with fewer opportunities. The milestone has been set based on a target percentage of 25% (9 275) of the forecasted participants. While the percentage of participants with fewer opportunities is much higher in 2020 (41% 7 494 participants) the actual number of participants is lower because of the underperformance in traineeships and jobs.

## Specific Objective 4 :to contribute to European cooperation relevant to young people and to raise awareness of its positive impact

### Indicator 1:number of people supported directly or indirectly through solidarity activities

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Milestones										2020
							150 000			200 000
Actual Progress										Final
						5 419	646 200			

Are we on track	On track
Indicator type	Impact
Unit of measurement	Number of people impacted by the programme (cumulative)
Cut-Off Date	15/01/2021
Data source	Mobility Tool
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Considering the short duration of the European Solidarity Corps (end 2018-2020), targets for these indicators have been set over the entire programming period.
Full metadata available at this address	
Justification of the trend	The 2020 number covers projects closed in 2020 (including projects 2018 and 2019). In 2019, very few projects were closed due to the late start of the programme. The target was an estimate as the indicator also relies on beneficiaries' declarations (in final reports) in terms of indirectly supported.

## 6. The programme contribution to horizontal policies

### 6.1. Contribution to climate mainstreaming

#### 6.1.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.1.2. Explanation and justification on the financial contribution

Europe's future will be built by young people. The European Solidarity Corps can make a meaningful contribution to the Commission's commitment to tackling climate and environmental-related challenges. To contribute to the European Green Deal, the Programme aims at integrating green practices into all projects and activities as well as promoting environmentally sustainable and responsible behaviour among participants and participating organisations. Organisations and participants should thus have an environmental-friendly approach when designing and implementing their activities.

The Programme also supports projects and activities addressing the topic of environmental protection, sustainability and climate goals and aiming to protect, conserve and enhance natural capital, to raise awareness about environmental sustainability and to enable behavioural changes for individual preferences, consumption habits and lifestyles.

#### *European Solidarity Corps 2018-2020*

Since 2018, the European Solidarity Corps has supported more than 1 200 projects addressing climate action, environment and nature protection.

In the 'Climate Awareness' project in Sweden, volunteers help with organic food growing, restoring biodiversity and create edible landscapes in an ecovillage. They also run awareness raising activities.

'Urban Ecology' in Bulgaria focuses on raising awareness and offering sustainable models for environmental protection and a healthy lifestyle in Varna. Through the development of three different spaces, urban, rural and virtual, the project reaches out to the local community and make citizens aware of their own responsibility and contribution to the green footprint.

The solidarity project ‘Mare d’Inverno’ aims to recover a natural coastal area nearby the urban centres of Trani and Barletta in Italy. The project promotes environmental protection and works on placing pathways for cyclists and pedestrians, cleaning beaches and replanting native tree species.

### *EU Aid Volunteers Initiative*

The project ‘Forests’ that started in 2019, foresees the deployment of 27 EU Aid Volunteer to support forest management in Congo, Ghana, Guinea and Vietnam. Volunteers will conduct mapping studies to assess the vulnerability of forest-dependent communities taking into account effects of climate change (increasing of natural disasters) and will organise seminars with local actors to plan together intervention strategies. The contribution of the programme in the 2014-2020 period has been of EUR 6,1 million.

### *European Solidarity Corps 2014-2020*

Through the European Solidarity Corps, 18-30 year old young people can carry out volunteering activities, traineeships and jobs and run their own solidarity projects (small-scale initiatives run by young people themselves in their local community).

Climate action, environment and nature protection were increasingly popular Solidarity Corps topics representing 16% by the end of 2020 and showing an upward trend. Since 2018, €30,5 million were awarded to 1 200 projects addressing climate, environmental and nature protection involving 9 000 participants. The contribution of the "early ESC", i.e. the value of activities with a climate dimension in the European Voluntary Service under E+ in the years 2017-2018 – **27,8 million**

## **6.2. Contribution to biodiversity mainstreaming**

Not applicable

## **6.3. Contribution to clean air financing**

Not applicable

## **6.4. Contribution to gender equality**

### **6.4.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### **6.4.2. Key achievements and performance**

Gender equality is an important element of the European Solidarity Corps. Project promoters are invited to consider this when developing their project proposal and demonstrate how they will ensure gender balance among participants. The Corps also supports projects dealing with the issue of gender equality; e.g. focusing on changing mentalities, sensitising communities to gender and diversity, contributing to breaking down barriers for women’s access to employment.

The Inclusion and Diversity Strategy of the programme also contributes to implementing equal opportunities. In this framework, young people who are at a disadvantage compared to their peers because of discrimination, for instance against their gender, are considered priority participants (‘with fewer opportunities’) and focus in funding is put on projects supporting the strategy.

A specific topic on gender equality has been added for the European Solidarity Corps 2021-2027 that will enable to track the number of projects, involved participants and related funding, addressing this policy.

### *European Solidarity Corps 2018-2020*

The European Solidarity Corps supports a range of projects with a thematic coverage on gender equality.

The Solidarity Project ‘Change. Digital strategies for gender equality’ aims to train women in disadvantaged situations and attending the local ‘Women’s Counters’ on the use of digital technologies and to strengthen the network of solidarity between women of different ages. The project offers tools to address the issue of the gender gap in the digital environment.

The Solidarity Project ‘End of taboo. End violence.’ Addresses the topic of violence experienced by homeless women. With the support of European Solidarity Corps volunteers, workshops will be organised and tackle the topic of abuse of homeless women through arts. In the safe space of the community centre, homeless women will be able to share their personal stories and help them

cope with their emotions and look for solutions. The outcomes of the workshops will be authentic exhibitions full of impressions and positions towards violence.

The main objective of the project ‘YOUth impACT through Volunteering’ is to inform and change the attitudes of adolescents and youth from Bulgaria on topics related to human rights and healthy lifestyle (focusing on sexual and reproductive health and rights, including HIV / AIDS, gender equality, family planning, sexually transmitted infections, gender identity, etc.) as well as support the empowerment of young people, encouraging them to talk about their needs and to protect their rights. European Solidarity Corps volunteers will be supporting the workshops and awareness raising campaigns.

### ***EU Aid Volunteers Initiative***

Of all volunteers deployed so far, around 72% are female and 28% male.

## **6.5. Contribution to the sustainable development goals**

### **6.5.1. Goals**

#### ***SDG 1 End poverty in all its forms everywhere***

Through its activities to achieve social inclusion through solidarity activities, the European Solidarity Corps contributes to SDG 1, in particular its target of reducing at least by half the proportion of men, women and children of all ages living in poverty in all its dimensions according to national definitions.

Resilience aims at protecting vulnerable populations from the shocks and stresses that keep people in poverty, whilst providing services, livelihoods and opportunities to address the underlying causes of their vulnerability – to ‘leave no-one behind’. EU Aid Volunteers work together with volunteers in vulnerable communities to strengthen their resilience to disasters and to build local capacity.

#### ***SDG 3 Ensure healthy lives and promote well-being for all at all ages***

The European Solidarity Corps can play an important role in supporting the health and social care system, improving people’s experience of care, building stronger relationships between services and communities. Through its activities, it also aims at mobilising volunteers around key health challenges, such as those related to cancer, mental health and well-being overall.

#### ***SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all***

The European Solidarity Corps aims, amongst other things, at developing the skills and competences of participants for professional, social and civic development. In addition, given its strong focus on inclusion, this is also achieved for young people with fewer opportunities, including young people with disabilities.

#### ***SDG 5 Achieve gender equality and empower all women and girls***

The European Solidarity Corps aims at removing social obstacles for participation in it for people facing discrimination because of gender, among other reasons. It also supports projects dealing with the issue of gender equality; e.g. focusing on changing mentalities, sensitising communities to gender and diversity, contributing to breaking down barriers for women’s access to employment.

EU Aid Volunteers are for example recruited as gender experts to promote gender sensitivity and mainstreaming of gender considerations in disaster risk management in affected communities.

#### ***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

All the actions of the European Solidarity Corps contribute to increase the employability of the young people who participate, as shown by several studies. This is achieved through a combination of outcomes, e.g. the acquisition of new skills, increased autonomy, increased knowledge of foreign languages, etc. Additionally, solidarity projects can help further the entrepreneurial and innovative spirit of young participants. Finally, the emphasis on inclusion aims to ensure that all can reap these benefits irrespective of disadvantage.

#### ***SDG 10 Reduce inequality within and among countries***

Through its activities, the European Solidarity Corps aims to strengthen cohesion and solidarity. It supports projects and activities actively addressing the issue of inclusion in the society.

Special attention ensures that activities supported by the European Solidarity Corps are accessible to all young people, notably the most disadvantaged ones. To this end, special measures are in place to promote social inclusion, the participation of disadvantaged young people, as well as to take into account the constraints imposed by the remoteness of the outermost regions of the Union and the Overseas Countries and Territories. Similarly, the participating countries should endeavour to adopt all appropriate measures to remove legal and administrative obstacles to the proper functioning of the European Solidarity Corps. These include resolving, where possible, and without prejudice to the Schengen acquis and Union law on the entry and residence of third-country nationals, administrative issues that create difficulties in obtaining visas and residence permits.

***SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable***

Through its activities aiming at addressing societal challenges, the European Solidarity Corps supports efforts to sustainable development of urban areas, and to protect and safeguard Europe's cultural heritage.

***SDG 13 Take urgent action to combat climate change and its impacts***

The European Solidarity Corps can make a contribution to SDG 13. The Programme aims at integrating green practices into all projects and activities as well as promoting environmentally sustainable and responsible behaviour among participants and participating organisations. Organisations and participants should thus have an environmental-friendly approach when designing and implementing their activities.

The Programme also supports projects and activities addressing the topic of environmental protection, sustainability and climate goals and aiming to protect, conserve and enhance natural capital, to raise awareness about environmental sustainability and to enable behavioural changes for individual preferences, consumption habits and lifestyles.

## **1. Overview**

### **1.1. Challenges**

The European cultural and creative market continues to be fragmented along national and linguistic lines, which can cause market fragmentation. Continuing efforts are therefore required to ensure that the cultural and creative sectors fully benefit from the European single market and the digital single market in particular. The Creative Europe Programme therefore needs to accompany the Union's single market policies. This concerns, in particular, the new Copyright Directive and the revised Audiovisual and Media Services Directive, which aim to achieve a well-functioning market place for creators and right holders and to strengthen the capacity of European audiovisual players. The challenges of digital and green transformation, market fragmentation along national lines hampering production and distribution at European and global levels and artistic co-creation and innovation needs exchange and inspiration across borders to develop its potential.

### **1.2. Mission (general objectives)**

The general objectives of the Programme are:

- (a) to safeguard, develop and promote European cooperation on cultural and linguistic diversity and heritage;
- (b) to increase the competitiveness and the economic potential of the cultural and creative sectors, in particular the audiovisual sector.

### **1.3. Specific objectives**

The Specific Objectives of the Programme are:

- (a) enhancing artistic and cultural cooperation at the European level, in order to support the creation of European works and strengthen the economic, social and external dimension of and innovation and mobility in Europe's cultural and creative sectors;
- (b) promoting the competitiveness, scalability, cooperation, innovation, and sustainability, including through mobility, of the European audiovisual sector;
- (c) promoting policy cooperation and innovative actions supporting all strands of the programme, including the promotion of a diverse, independent and pluralistic media environment, and media literacy, thereby fostering freedom of artistic expression, intercultural dialogue and social inclusion.

To be effective, the Programme takes into account the specific nature and challenges of the different sectors, their different target groups and their particular needs through tailor-made approaches within a strand dedicated to the audiovisual sector, a strand dedicated to the other cultural and creative sectors and a cross-sectoral strand.

Thus the Programme covers the following strands:

- (a) 'CULTURE' covers cultural and creative sectors with the exception of the audiovisual sector;
- (b) 'MEDIA' covers the audiovisual sector;
- (c) 'CROSS SECTORAL strand' covers activities across all cultural and creative sectors.

### **1.4. Public intervention context**

Cultural and creative sectors (CCS) have intrinsic cultural and social value, expressing European identity and values and display economic value through an important contribution to jobs and growth with additional spill over effects on other sectors. In addition, the European Union promotes a free, diverse and pluralistic media environment. In this context, support is vital to protect cultural diversity and strengthen competitiveness.

It is therefore important that the Creative Europe Programme address the structural challenges of Europe's cultural and creative sectors, significantly exacerbated by the impacts of the COVID-19 pandemic. The cultural and creative sectors are recognised as one of the 14 main ecosystems of the European economy as part of the Recovery Plan for Europe. The Programme, together with other relevant EU funding programmes and Next Generation EU, shall support the short-term recovery and longer-term resilience and competitiveness. Additionally, there is an urgency to increase support to the European audiovisual industry because of competition in global audiovisual markets intensified by the deepening digital disruption shift.

Taking into account the Joint Communication 'Towards an EU strategy for international cultural relations', Creative Europe will support actions designed to have a clear Union impact on the global scene. Also, this Programme will contribute to mainstream climate actions in the Union's policies and to achieve an overall target of 25-30% of the Union budget expenditures supporting climate objectives.

The main EU added value comes from the strong transnational dimension of the Programme as already demonstrated in the Creative Europe programme 2014-2020. The multilateral transnational nature of Creative Europe provides a distinctive offer that is rarely matched by national funding, which tends to focus more on domestic activities and – and to a lesser extent – on bilateral transnational cooperation. This multilateral transnational focus is highly valued by stakeholders and beneficiaries as a unique element of Creative Europe. Only a few other existing international funds support transnational cooperation in the cultural and creative sectors at all and those that do are of significantly smaller scale.

Support to the cultural and creative sectors at European level needs to have a clear European added value, which is ensured, inter alia, through:

- (a) the transnational character of actions, which complement regional, national, international and other Union programmes and policies,
- (b) cross-border cooperation,
- (c) the economies of scale and growth and jobs which Union support fosters, creating a leverage effect for additional funds,
- (d) providing a more level playing field through the MEDIA strand by taking into account the specificities of the different countries.

The budgetary authority increased the budget of Creative Europe by over 80% on an EU 27 basis, in recognition of the value of the programme in addressing the unprecedented challenges faced by Europe's cultural and creative sectors.

The Creative Europe programme is based on Articles 167 and 173 of the Treaty on the Functioning of the European Union (TFEU) of which Article 167 specifies the Union's competences in the cultural field and calls for action by the European Union to contribute to the flowering of the cultures of the Member States, simultaneously respecting their national and regional diversity, bringing the common cultural heritage to the fore and, if necessary, to support and supplement Member State action in the area listed by this provision.

Article 173 TFEU states that the Union and the Member States shall ensure that the conditions necessary for the competitiveness of the Union's industry exist, including taking action to encourage an environment favourable to initiative and to the development of undertakings.

Other policy tools that will receive financing from Creative Europe and their legal bases:

- Decision No 1194/2011/EU of the European Parliament and of the Council of 16 November 2011 establishing a European Union action for the European Heritage Label]
- Decision No 445/2014/EU of the European Parliament and of the Council of 16 April 2014 establishing a Union action for the European Capitals of Culture for the years 2020 to 2033 and repealing Decision No 1622/2006/EC

## 1.5. Actions

The CULTURE strand supports:

- artistic cooperation projects
- sectorial networks of professional organisations
- platforms for the promotion of European artists and works
- mobility of artists and cultural and creative professionals
- internationalisation of operations by cultural and creative organisations
- promoting excellence in the form of awards
- sectorial support in the fields of music, books/editing, cultural tourism, architecture and fashion/design
- Special actions such as European heritage label and European capitals of Culture or support to cultural entities supporting young high potential artists or delivering direct cultural services to a large number of citizens.

The MEDIA strand supports:

- development and production of innovative audiovisual content (in particular films, TV series, video games, immersive content)
- distribution of non-national European works on all platforms
- training and mentoring for AV professionals
- audiovisual markets and networking of operators, including through promotion and B2B activities
- innovative tools networks and individual operators featuring a significant proportion of non-national European works: Video on Demand platforms, cinema theatres and festivals
- audience development, in particular the young
- Audiovisual policy dialogue and transnational exchange of experiences
- measures to contribute to more balanced gender participation

The CROSS SECTORAL strand supports:

- Cross-sectoral policy dialogue and cooperation
- A Creative Innovation Lab on collaboration between creative sectors on common challenges
- Programme Desks to promote the Programme in Member States

The news media sector through fostering pluralism, cross-border collaboration and promoting media literacy.

## 1.6. Delivery mode

The programme is managed jointly by DG EAC and DG CNECT and implemented by EACEA, DG EAC and DG CNECT. Blended support of financial instruments will be managed by the European Investment Fund. Audiovisual policy actions and some news media actions are implemented by DG CNECT. DG EAC manages directly policy actions, cultural prizes and special actions such as the European Capitals of Culture and the European Heritage Label. Cross-sectoral policy actions are implemented by DG EAC and DG CNECT.

The Culture and MEDIA administrative budget lines are implemented by DG EAC and DG CNECT respectively.

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM (2018) 366: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the Creative Europe programme (2021 to 2027) and repealing Regulation (EU) No 1295/2013	2021 - 2027	1 842,0

## 1.8.2. Legal basis explanation

## 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>306,4</b>	<b>401,0</b>	<b>235,0</b>	<b>239,7</b>	<b>244,5</b>	<b>294,4</b>	<b>254,6</b>	<b>1930,5</b>

## 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The aim of this initiative is to build on the achievements of the Creative Europe Programme's 2014-2020 and scale up efforts whilst increasing the intensity of support in key areas. The new programme has a wider scope as it also covers audiovisual policy and support to the news media sector

The mid-term evaluation of the programme outlined its achievements whilst addressing some shortcomings. Overall, the programme was effective and had a clear European added value. The launch of the ex-post evaluation of the programme is expected in 2021.

## 1.10. Relevant websites providing more information

**The Creative Europe website on Europa** ([https://ec.europa.eu/programmes/creative-europe/node\\_en](https://ec.europa.eu/programmes/creative-europe/node_en))

Contains information on the specific actions of the programme, provide links to the respective policy areas and to other EU programmes and information that could be interesting for the sector.

**The Creative Europe website run by EACEA** ([https://eacea.ec.europa.eu/creative-europe\\_en](https://eacea.ec.europa.eu/creative-europe_en))

Provides information on calls for proposals.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

**The work programme is planned to be adopted in April 2021 together with the delegation to EACEA. Most actions and calls will be launched thereafter.**

Creative Europe has an estimated budget of around €2.44 billion<sup>1</sup> for the whole period 2021-2027.

With a 50% budget increased compared to its predecessor programme (2014-2020), Creative Europe will invest in actions that reinforce cultural diversity and respond to the needs and challenges of the cultural and creative sectors. Its novelties will contribute to the recovery of these sectors, reinforcing their efforts to become more digital, greener, more resilient and more inclusive.

The programme is divided into three strands: Culture, MEDIA, and Cross-Sectoral. The three strands account respectively for 33%, 58%, and 9% of the Creative Europe budget.

In 2022, Creative Europe has a programmed budget of €401.03 million, of which €312.51 million correspond to the adopted MFF 2021-2027 and €88.52 million as additional top-ups.

In 2022's programming, EACEA will implement approximately 90% of the budget, while about 10% will be implemented in a centralised manner.

The **CULTURE** strand consists of the following actions:

- Horizontal actions covering all cultural and creative sectors: support to cultural **cooperation projects, networks** of professional organisations, **platforms** for the promotion of European artists and works, **individual mobility scheme**;
- **Sector-specific support** to complement horizontal actions in music, book & publishing, cultural heritage and architecture as well as other sectors; and
- **Special actions** to reward and promote excellence and creativity such as the **awards** for literature, music, architecture and cultural heritage, **European Capitals of Culture**, and the **European Heritage Label**.

The main **novelties** of the CULTURE strand include:

<sup>1</sup> The Creative Europe programme budget is made of €1.842 billion in current prices as part of the new MFF (2021-2027) and an additional top-up of €0.600 billion in 2018 prices.

- Stronger emphasis on European transnational **creation**, circulation of works, and **innovation** in the culture and creative sectors;
- Easier access to Creative Europe funding through **higher co-financing rates**;
- A tailor-made **mobility scheme** for artists and professionals; and
- Actions targeting **sector-specific needs** in music, literature, architecture, cultural heritage, design, fashion and cultural tourism.

The **MEDIA** supporting actions are divided into four thematic clusters:

- **Content**: encouraging collaboration and innovation in the creation and production of high-quality works.
- **Business**: promoting business innovation, competitiveness, scalability and talents to strengthen Europe's industry vis-à-vis global competitors.
- **Audience**: strengthening the accessibility and visibility of works for their potential audiences, through distribution channels and audience development initiatives.
- **Policy**: supporting policy discussion/exchange fora, studies and reports. Promoting awareness-raising activities.

The MEDIA strand will focus on:

- Encouraging **cooperation** both across the value chain and at EU level in order to **scale up audio-visual enterprises and European content globally**;
- Nurturing **talents**, wherever they come from, and broadening participation and collaboration across countries;
- Supporting the use of new technologies to ensure the full exploitation of the **digital transformation**; and
- Fostering the **greening** of the industry and including societal objectives such as **gender balance and diversity**.

The **CROSS-SECTORAL** strand will address:

- **Common challenges and opportunities** for the cultural and creative sectors; and
- For the first time, actions to support the **news media sector** by promoting media literacy, pluralism and media freedom.

The CROSS-SECTORAL strand's supporting actions will focus on:

- **Transnational policy cooperation**: promoting knowledge of the Programme and supporting the transferability of results.
- **Creative Innovation Labs**: promoting innovative approaches to content creation, access, distribution and promotion across cultural and creative sectors.

**News media**: supporting media literacy, quality journalism, media freedom and pluralism.

## 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	1 487 619 769	1 163 037 180
Implementation carry-overs	0	9 263 653
Implementation total	1 487 619 769	1 172 300 833
total envelop*	1 487 956 887	
cumulative implementation rate	100%	79%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

Creative Europe is the European Commission's framework programme for support to Europe's culture and audiovisual sectors. The programme is divided into two sub-programmes, Culture and MEDIA, and is supported by a cross-sectoral strand. Its objectives are to promote cultural and linguistic diversity and enhance the competitiveness of these sectors, by supporting small independent production and distribution companies in the audiovisual field as well as a wide range of operators in the cultural field.

The total C1 credits for the period 2014-2020 amounted to €1 487 956 887 and were implemented at nearly 100% (€1 487 619 769). During the same period, the total payments with C1 appropriations amounted to €1 172 300 833. The percentage indicated below (79%) corresponds to the ratio between the implemented payments and the implemented commitments.

Approximately 90% of the budget is implemented by EACEA, while approximately 10% is implemented in a centralised manner.

## 3. How is the programme performing ?

### 3.1. Performance

#### 3.1.1. Introduction

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### 3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### 3.1.3. Previous programme performance

The programme has progressed toward the achievement of its overall objectives, i.e. safeguarding and promoting cultural diversity and strengthening competitiveness. The measurement through key performance indicators shows in particular how diversity was strengthened by helping European content (films, music, books...) reach wider audiences and how Creative Europe played an important economic role in leveraging investment by acting as a guarantee for quality. The quality of received applications can generally be considered high and the success rate relatively low, given the restricted budget, with some schemes being more competitive than others. In 2020, the 7 most applied-for calls for proposals could not satisfy the needs of 293 high-quality projects (projects which received a score of above 75% of points during evaluation) due to budgetary constraints. The additional budget required to fund them would amount to over €23 million. Overall during 2014-2020 Creative Europe received 30 922 eligible proposals and awarded 13 009 grants. Given the positive track record of the programme its successor will be an evolution rather than a revolution, aiming to build on its strengths.

**The MEDIA Sub-programme** performed very well with respect to promoting European cultural and linguistic diversity, by supporting the development and distribution of hundreds of audiovisual works, thus helping them find their audiences. By supporting the development and distribution of about 25% of European films produced every year, MEDIA plays a significant role in creating a European ecosystem, which allows films to go beyond their domestic markets. MEDIA helped the audiovisual industry to grow by addressing different stages of audiovisual value creation chain:

- Fostering **talent and skills** at international level through supporting 261 training projects over 2014-2020 (47 in 2020 alone) which equipped over 16 000 professionals with content-related, business and technological skills (the latest available data accounts for 2 445 professionals trained in 2018). The successor programme will build on this success by increasing the focus of training on digital skills as well as greening and by extending mentoring for women professionals.
- Fostering **high quality, innovative content creation**. MEDIA supports the creation of films, TV series and video games (€32.8 million in 2020), which have the potential to travel, by helping them to achieve the quality needed to attract international audiences. It can be considered a success that a very high share of content created with the support of MEDIA are co-productions (83% of film and TV projects supported in development and production stages in 2019, which is the latest available data), as it is proven that they have bigger budgets, travel more broadly and attract bigger audiences. Considering the European market is fragmented and operating on a small-scale, increased average budgets and reach is a step towards market structuring. MEDIA is also present (through cascading grants to national funds) in the cooperation between filmmakers from the EU and developing countries (e.g. in 2019 – latest available data- 24 such co-productions were created with the help of MEDIA grants). The new Programme will take account of market developments by increasing support for innovative content such as high-quality TV series as well as immersive experiences. Co-productions will be further strengthened through a dedicated scheme for co-development.
- Increasing **circulation and cross-border access**. MEDIA makes an essential contribution to making European films available beyond their domestic markets (€64.3 million in 2020). It supports the theatrical release of several hundred films across borders every year. In 2020 this was achieved through 241 individual distributors active in all Member States and 33 Sales Agents specialised in non-national European films. Greater efficiency was achieved through streamlining the Distribution Automatic scheme, simplifying grant processing and reducing the number of annual transactions from approximately 1 000 to 300. Also, the distribution of around 20 films a year (22 in 2020) is coordinated on a pan-European basis to ensure that they obtain the scale effects of promotion. The grants for individual distributors allow them to maintain the European profile of their activities which in the years 2014-2018 – latest available numbers – attracted 207 million viewers in various types of cinemas. MEDIA also co-finances the growing Europa Cinemas network of cinema theatres (from 962 members in 2014 to 1 149 in 2019), which excel in the exhibition of European titles. Members of Europa Cinemas serve local communities as unique venues for film culture, animation and education.
- Increased **promotion** of European works (€14.3 million in 2020). MEDIA supports promotion activities in several ways: support to festivals to give visibility to newly released works; promotion of European works online, through innovative VOD services as well as cross-border collaboration between VOD platforms; audience development through education; promotion of European films at exhibitor conventions; facilitating access to and strengthening the visibility of European professionals in audiovisual markets and exhibitions, in Europe and beyond.
- Increased **promotion** of European works (€14.3 million in 2020). MEDIA supports promotion activities in several ways: support to festivals to give visibility to newly released works; promotion of European works online, through innovative VOD services as well as cross-border collaboration between VOD platforms; audience development through education; promotion of European films at exhibitor conventions; facilitating access to and strengthening the visibility of European professionals in audiovisual markets and exhibitions, in Europe and beyond.

The planning 2020 was disrupted by the COVID-19 pandemic, which meant cancelling many promotional events, but in 2019 the programme enabled 1 837 European audiovisual professionals to attend markets and festivals outside of the EU, where they could exhibit their works and ideas to almost 235 000 attendees. Additionally, in the EU, the 6 MEDIA-branded stands providing networking space for European audiovisual professionals, attracted over 42 000 attendees. The presence in markets is very important for the audiovisual sector, as it is where many business deals are struck. The successor programme will incentivise increased collaboration at European level through structured networks of festivals and VOD services, to promote innovation and scaling up.

MEDIA has also contributed to a level playing field for audiovisual companies applying for MEDIA grants coming from countries with different scale and level of development of an audiovisual industry. Measures were taken through the categorisation of participating countries into low, medium and high capacity groups and applying positive discrimination measures, including automatic points, in the selection of projects from countries in the low and medium groups. The measures were particularly effective in broadening the access for applicants from medium countries, but they raised concerns about unintended consequences in the evaluation of projects. Therefore the new Programme will continue to address the level playing field but the measures will be reviewed to avoid distortions of the principle of competition and ensure that positive discrimination is applied for the low capacity countries, where it is needed most.

**The Culture Sub-programme** is achieving key objectives such as encouraging transnational cooperation in the cultural field:

- More than 1 100 projects have been funded and more than 647 cooperation partnerships have been created between 3 760 organisations across Europe by the Creative Europe programme – culture strand.
- Simplifications of procedures, more guidance to applicants and increased budget have resulted in a **better access to Creative Europe support for smaller organisations**: more than 70% of the beneficiaries are small or medium size organisations.
- **The 3 main priorities of the programme have been met by funded projects**: circulation of artists and works, capacity building and especially audience development.
- **The platform scheme has been a success**. The scheme was introduced at the beginning of the programme to stimulate the transnational programming and promotion of European emerging artists: the number of supported platforms has grown from 5 in 2014 to 15 platforms in 2020.
- **Creative Europe (CE) support to networks has been an efficient capacity-building tool**: CE has supported nearly 30 European networks connecting more than 4 000 organisations across Europe with a view to disseminate good practices and innovations and structure the different culture and creative sectors.
- **The literary translation scheme has efficiently contributed to increasing the diversity of European literature** through the translation and promotion of more than 3 500 books. With more than 30 different ‘less represented’ languages, the scheme has a clear added value in comparison to the market dominated by translations from English. Finally, the programme demonstrated its ability to innovate and respond to the demand by testing a new mobility scheme for artists and professionals.

**The cultural and creative sectors were among the hardest hit by the COVID-19 pandemic crisis in 2020.** Due to this external shock, adaptations were essential and flexible measures introduced, for example transferring physical activities of projects online. In this way, despite COVID-19, Creative Europe was able to commit the entire budget and contribute to the recovery of the sector. MEDIA also provided additional support for the Europa Cinemas members suffering from forced closures and within Culture additional funding was made available for a translation scheme and the new instrument to support the (online and offline) circulation of performing art works. Nonetheless, the COVID-related restrictions meant that the Programme underperformed in some indicators, in particular the audiences of events based on physical presence.

### 3.2. Key achievements

401 million	3 679	2 338	3 760	3 500	2 057

On average 1 in 4 EU viewers of a non-national EU film is a guest of a	audiovisual works supported in the making in 2014-2020 (including 210 video games and 340 TV content works)	audiovisual professionals upskilled every year through trainings supported by MEDIA	organisations have collaborated in 647 cultural cooperation projects	European literature books from 40 different European languages have been translated and promoted to a large audience	films presented to audiences in cinemas in countries other than their country of production.

member of Europa Cinemas.					
---------------------------	--	--	--	--	--

### MEDIA Sub-programme

Data indicates that the circulation of films evolved positively over the period 2013-2018. In particular, the number of European films with more than five release markets (within the EU) increased to 351 in 2018 (up from 237 in 2013) and the number of films with more than 10 release markets increased to 142 (from 103 in 2013 and 130 in 2017). Thus, the support that MEDIA has consistently given to building a European audiovisual ecosystem has contributed to a positive impact. Furthermore, there has been an increase in the export of European films to global markets. In 2013, 566 films were exported, whereas by 2018 this had increased to 696, a rise of 22%. MEDIA has contributed to this growth through its support to the promotion of European cinema in global markets, including the US and Asia.

Many of the films supported by MEDIA receive the most globally significant professional recognition. In the years 2017-2019 they accounted for 147 awards and prizes at festivals in Cannes, Venice, Berlinale, San Sebastian and the European Film Academy awards, 3 Oscars and 1 Golden Globe. In 2020, despite the fact that due to the COVID-19 crisis many film premieres were delayed and festival competitions disrupted (notably the cancellation of Cannes), MEDIA-supported films still received recognition; 3 awards at Berlinale 2020 and 7 EFA awards (the *Danish film, Another Round* being the most acclaimed title). Oscar nominations were received for 8 films in 2021.

A good example of how MEDIA contributes to excellence in filmmaking on a European scale and with global potential is the case of *Cold War* (dir. Pawel Pawlikowski, PL-UK co-production). Its producers received a grant of €60 000 in 2014 to develop a slate of film projects, including the script of what would become the *Cold War*. Once the film started attracting positive reviews at festivals and first awards, its promotion campaign and wide distribution in the EU was supported with a €1.1 million in 2018. Its global box office in 2019 was estimated at around €18 million. From a different angle, the last 7 years were strongly marked by the proliferation and innovations in high quality TV series. This genre has a wider reach than any film in theatrical release. MEDIA has helped develop some of the most popular European TV series, watched on TV channels and on the most popular online platforms across the EU: including *The Bridge* in the first years of the Programme, *Babylon Berlin*, *Le Bureau des legends* and *Versailles*, *Find me in Paris*, *My Brilliant Friend* and *DNA*.

At the International level, European Film Promotion (EFP) activities, supported by MEDIA can be regarded as particularly successful in 2014-2019. EFP strengthens the global presence of the European industry. It hosts umbrella stands at the most important world film industry events (Sydney, Toronto Busan film festivals etc., and events in Los Angeles in the Oscars run-up) for European filmmakers.

MEDIA also took important steps forward in reaching wider audiences. In 2019 the 'Distribution Selective' scheme was restructured to promote more collaboration, coordinated distribution strategies, and thereby reach wider audiences by focusing on matching films with potential audiences across territories and sharing marketing material amongst distributors. These improvements have been successful in attracting many high quality proposals.

The directory of European films on VOD – Lumiere VOD Database, managed by European Audiovisual Observatory – conceived in 2017, as a flagship action of the Digital4Culture Strategy and has been supported by MEDIA. It is an online transparency tool providing updated data on online availability of European films across Member States. It contributes to the visibility of European films on the VOD market and thus helps their circulation and facilitates compliance with the revised Audiovisual Media Services Directive. By November 2020 the database covered 462 different catalogues (138 SVOD and 324 TVOD) in 46 countries accounting for 44 000 film titles and 12 650 series' seasons.

### CULTURE Sub-programme

**The European Year of Cultural Heritage (EYCH) has had a lasting legacy** in promoting and safeguarding cultural heritage on many levels. **The European Year of Cultural Heritage (EYCH) in 2018 was a success** with substantial funding made available for cultural heritage projects, encouraging people-centered, inclusive, and sustainable approaches. It was an unrivalled celebration of Europe's shared cultural heritage and values, as well as a wide mobilisation of heritage actors across Europe and beyond. **The Year was organised as a bottom-up initiative and attracted 12.8 million citizens to more than 13 000 events.**

The Commission's Cultural Heritage Expert Group maintains the spirit of cooperation and policy dialogue achieved during the European Year of Cultural Heritage. It comprises representatives from Member States, key stakeholders as well as a number of individual experts. The group provides the Commission with advice and expertise. It also serves as a platform for consultation and the exchange of information on cultural heritage policies in order to support the implementation of the **European Framework for Action on Cultural Heritage (EFACH)**. In line with EFACH, **many activities have been put in place to maintain the momentum** of the Year and harness its benefits. Over 60 actions of the EFACH respond to five pillars pertaining to inclusiveness, sustainability, resilience, innovation and global partnerships. They include Creative Europe funded actions such as joint EU-

UNESCO project on engaging youth and schools for heritage (€300 000), which, is coming to an end in April 2021 and will soon publish learning material on cultural heritage for schools. Another example of an action funded by Creative Europe as part of the EFAC is ‘Cultural Heritage in Action’, launched by the Commission in 2020 as a successor of ‘cultural heritage for cities and regions’. This is a peer-learning programme for local and regional policymakers to exchange knowledge on cultural heritage. It produced a first catalogue of 32 local and regional best practices on participatory governance of cultural heritage, adaptive reuse of built heritage and quality of interventions on cultural heritage.

Among the actions showcasing the richness and diversity of cultures in Europe as well as the common features they share, the **European Capitals of Culture (ECOCs) have a significant leverage effect** on long-term cultural, social and economic benefits to the cities which have held the title. From 2014 to 2020, the Melina Mercouri Prize was awarded to 14 cities as European Capitals of Culture. This cost-efficient leverage action (€1.5 million in the form of the Melina Mercouri Prize) stimulates huge culture-led investments by national, regional and local public authorities: as an example, the two 2018 ECOCs invested approximately €104.6 million in Leeuwarden (The Netherlands) and €26.5 million in Valetta (Malta). **One euro of public money invested in an ECOC project can generate up to €6 in return for the local economy** (as was for example the case in Mons, ECOC 2015) and overnight visitors increase on average by 12%. In Leeuwarden, overnight stays in hotels showed an increase from 0.8 million in 2017 to 2.1 million in 2018.

Another achievement is the **success of the new platform scheme introduced at the beginning of the 2014-2020 programme** to offer simplified mechanisms (support to third parties) to stimulate the circulation of artists and works. The sector has responded well to this new opportunity and the number of supported platforms increased from 5 in 2014 to 15 in 2020.

The **individual mobility scheme for artists and creative people has been a success**. Launched in 2018 as an experimental action the scheme gives artists and creative professionals more freedom to choose how to develop and build their career. The scheme called I-Portunus is managed by a consortium headed by the Goethe Institute and three other cultural organisations. Although new, it has been a **huge success with over 3 000 applications i.e. 10 times more than funding available and has received very positive feedback** from cultural organisations and artists who took part. A selection of 337 professionals were selected to go abroad (15-85 days) to develop international cooperations, co-produce, co-create, for their professional development and internationalise their careers. As a result of their mobility, 97% of the grantees said they acquired new skills/knowledge, 94% developed new audiences/outlets, 94% developed new co-productions/creations, and 49% received a job offer. This is a most impressive impact considering the limited financial support provided by the EU, e.g. only €1 500 to €3 400 per individual.

Following a decision by the European Parliament for a three-year **Preparatory Action on music** (2018-2020), with a budget of €7 million, DG EAC launched 12 calls: seven calls for proposals (professionalisation and training, distribution, education, small venues, co-creation, sustainable recovery) and; 5 calls for tenders (music export strategy, feasibility of a European music observatory, market gaps analysis, health and well-being of music creators, music export pilot). **The resulting projects and study reports will feed into the Commission’s integrated strategy for music** (Music Moves Europe initiative), including targeted support under Creative Europe via the new sectorial action from 2021/2022. The objective of Music Moves Europe is to support European diversity and talent, the competitiveness of the sector as well as increased access of citizens to music in all its diversity.

As part of the support for Special Actions, the Culture Sub-programme supported the organisation of **four European prizes** in the areas of music, literature, architecture and cultural heritage. All Prizes organised award ceremonies together with side events to celebrate their winners, gather stakeholders and attract media attention.

- **The Music Moves Europe Talent Awards.** By awarding young artists from all over Europe who reached audiences outside their own countries, the EU prize for popular and contemporary music puts a spotlight on Europe’s vibrant music scene. Since 2019, when the EBBA (European Border Breaker Awards) became the Music Moves Europe Talent Awards, the prize celebrated 28 artists (36 awards) who represent the sound of today and tomorrow. Among the award winners of the recent years were for instance Dua Lipa, Alice Merton, Rosalia or Lou and the Yakuza.
- **The European Heritage Awards is the most prestigious prize in the field** and contributes to a stronger public recognition of cultural heritage as a strategic resource for Europe’s society, economy and environment. It rewards each year up to 30 heritage achievements, which have the power of example. Since 2002, independent expert juries have selected 533 award-winning projects from 34 countries.
- **The European Union Prize for Literature.** With more than 135 authors rewarded showcasing 33 different European languages, the European Union Prize for Literature gives visibility to emerging European writers, encourages translations and promotes the diversity and excellence of European literature.
- **The EU Prize for Contemporary Architecture:** Three editions (2015, 2017, 2019) were organised during the lifetime of the programme: 1 158 works from 37 countries were nominated, among which 10% of transnational works (i.e. built by architects from a different CE country). An award ceremony, travelling exhibition and catalogue were produced by the Mies van der Rohe Foundation for each edition. A change of focus was noted with the 2017 and 2019 winners (renovation projects of post-war housing blocks) as they highlighted the contribution of transformative architecture to the circular economy, energy efficiency and sustainable development. The EU Mies Award was complemented by the launch in 2016 of the **Young Talent Architecture Award (YTAA)**, which rewards the best graduation projects from European architecture, urban planning and landscape schools. YTAA included a more international dimension from the start, with guest countries from Asia and Latin America participating. A stand-alone YTAA Asia edition was even organised in 2020. In total 14 students were awarded in 3 editions (2016, 2018, 2020). YTAA winners and finalists are celebrated in the Venice Architecture Biennale through an exhibition and award ceremony.

For all prizes, there is more focus is now being put on the support to the prize winners during the year, helping them to professionalise, access markets and raise visibility. While the award ceremonies remain an important milestone to attract visibility, efforts were made to increase their attractiveness and relevance within the respective creative sector even further.

### **Cross – sectoral strand**

In 2020, under Creative Europe's Cross-sectoral strand, the project '**Cultural and Creative Spaces and Cities**' (2018-2021, €1.5 million) continued the implementation of its activities: The wider context of cultural centres were explored for a **better use of public spaces for social regeneration through culture**. Cities and regional authorities were actively involved in the project and a series of urban labs and co-creation labs were organised to develop new ways of working together and involving 'creative commons'. Due to the COVID-crisis the remaining urban labs and other workshops took place virtually, including the project closing conference, which was held at the beginning of February 2021.

The Commission organised stakeholder consultations for post-2020 cross-sectoral action **Creative Innovation Labs** that aims to accelerate development by **integrating and cross-fertilizing innovation initiatives in creative fields**. The initiative was met with a large number of attendees and enthusiastic response from the sector, showing how needed it was. In order to prepare for the launch of the Labs a preparatory action Call for Proposals opened in 2019: Bridging culture and audiovisual through Digital. The €1.75 million budget Call received 61 eligible applications for the total of over €14.3 million. The applications came from a wide range of complementary sectors and countries and showed the appetite for such cross-sectorial calls, something that was also in evidence in a separate call on platform innovation.

The **Cultural and Creative Sectors Guarantee Facility (CCS GF)** under Creative Europe is a facility under which the European Commission through the European Investment Fund (EIF) provides guarantees and counter-guarantees on debt financing to Financial Intermediaries in order to improve access to finance to SMEs from cultural and creative sectors. These guarantees are very important as traditionally the financial sector was distrustful of CCS enterprises. As a result, for example in the audiovisual industry only 1-2% of budgets were coming from this much needed source of funding, making filmmakers more dependent on public subsidies. The CC GF was launched in July 2016 as the first financial instrument specifically targeting the CCS with an initial budgetary appropriation for CCS GF of €121 million from the Creative Europe budget. Its uptake exceeded expectations and the initial budget was twice topped-up. By the end of 2020, a total of 20 intermediaries in 12 countries signed an agreement. As of end-2020, debt financing of €824 732 024 (including €400 million in 2020) had been made available to 3 626 CCS SMEs (2 079 new ones in 2020).

## **3.3. Evaluations, studies and reports**

**1. Interim Evaluation** was performed in 2017. Its conclusions and recommendations summarised the main achievements of the Programme up to that moment and prompted the European Commission to make adjustments to address the indicated shortcomings in the next years. The Programme was evaluated overall positively. It concluded in particular that it effectively:

- enabled cooperation between unlikely partners from different geographic and sectoral areas (also through networks) creating a European ecosystem,
- helped the audiovisual partners in scaling up by encouraging co-productions,
- helped in building the demand for European audiovisual works, through increasing the circulation of works that would find it hard to travel otherwise and supporting the creation of popular genres specific to Europe, addressing the private financing gap by setting up the Guarantee Facility.

The evaluation identified the main following shortcomings:

- low budget, compared to the scale of the sectors, limiting the potential impact
- too high administrative burden in some schemes, compared to the value of the grants
- not enough flexibility in allowing for varied partnerships
- need to strengthen the monitoring

**2.** Regarding the improved framework of monitoring mentioned in the Interim Report, a Delegated Act supplementing the indicators from the legal base was adopted and the Programme started publishing yearly **Monitoring Reports**. The first – regarding 2017 – was prepared only for MEDIA and the 2018 and 2019 editions covered the whole programme. The Monitoring Reports present in-depth analysis of the programme's performance. They feature both quantitative as well as qualitative information on the implementation processes, outcomes and broader impact:

- 2017: <https://ec.europa.eu/digital-single-market/en/news/reaching-audiences-across-borders-media-launches-its-monitoring-report-2017>
- 2018: [https://ec.europa.eu/programmes/creative-europe/content/creative-europe-publishes-2018-monitoring-report\\_en](https://ec.europa.eu/programmes/creative-europe/content/creative-europe-publishes-2018-monitoring-report_en)
- 2019: [https://ec.europa.eu/programmes/creative-europe/content/european-commission-presents-creative-europe-monitoring-report-2019\\_en](https://ec.europa.eu/programmes/creative-europe/content/european-commission-presents-creative-europe-monitoring-report-2019_en)

3. The **European Audiovisual Observatory**, co-financed by Creative Europe, was commissioned to prepare studies (regular and ad-hoc) and briefing notes on the trends in the audiovisual industry. Among the most important works were:

- Tracking the production, promotion, circulation and availability of European audiovisual works (films and TV content). Different studies covered different dimensions of circulation: within the EU and in export; various exploitation windows, especially Video on Demand,
- Launching a directory of European films on VOD platforms (LUMIERE VOD),
- Updating MAVISE database and audiovisual media services database,
- Mapping the public funding criteria for audiovisual productions.
- Mapping the assessment of the nationality of audiovisual works.

4. Each year, **ex-post evaluations of the Capitals of Culture of the previous year are conducted**. For instance the external ex post evaluation conducted in 2019 has shown that the two title-holders in 2018 – Valletta (Malta) and to a higher degree Leeuwarden-Friesland (the Netherlands) – derived substantial economic, social and cultural benefits from the title.

5. The following studies have provided useful findings for stakeholders and policy makers.

- **Study on creative value chains in CCS:** published in May 2017, funded in the framework of the Guarantee Facility for CCS co-managed by Creative Europe and the European Investment Fund. The study has provided a mapping the creative value chains and contributed to a better understanding of the economy of culture in the digital age including existing market imperfections through the digital shift and the value gap.
- **Crowdfunding4Culture:** Crowdfunding, the practice of funding a project or organisation by raising monetary contributions from a large number of people, has been growing substantially in recent years. Thousands of people and organisations across Europe have raised funding through crowdfunding platforms, including cultural and creative projects. <https://www.crowdfunding4culture.eu/>

6. The European Commission cooperated with the Member States in the form of Open Method of Coordination, which concludes in publication of a concluding report.

- In 2018 it took the form of a toolkit European movies on the move: 10 actions for better circulation across Europe/ (<https://ec.europa.eu/digital-single-market/en/news/european-movies-move-ten-actions-better-circulation-across-europe>)

7. In 2018 MEDIA commissioned the preparation of the study of the effects and potential new methodology and measures to ensure Level Playing Field among countries with different audiovisual capacities

8. In 2020 the Work Programme foresaw a study on the Artificial Intelligence in the creative sectors, which is ongoing.

## **4. Programme 2021-2027 - Key monitoring indicators**

**GENERAL OBJECTIVE 1: to safeguard, develop and promote European cultural and linguistic diversity and heritage**

**Indicator 1: Number and scale of transnational partnerships created with the support of the Programme, including the country of origin of the beneficiary organizations**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of Partnerships (yearly)
Cut-Off Date	
Data source	Applications
Link to the objective	Collaboration increases competitiveness through allowing to scale-up for organisations and the circulation of content.
Link MFF 14-20 / MFF 21-27	New Indicator for 21-27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 2:Qualitative evidence of success stories in the field of artistic, business and technological innovation due to the programme support**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Result
Unit of measurement	Number of cases of good practices and excellence (yearly)
Cut-Off Date	
Data source	e-Grants
Link to the objective	The Cultural and Creative Sectors (CCS) have a value which lies in their symbolic influence on audiences and ability to innovate. The Programme has a much smaller scale compared to the size of the sector and measuring its impact is difficult. It is crucial that the Programme leverages its support to critical parts of the sector. This indicator monitors qualitative challenges tackled and changes that have been achieved within key areas of the CCS resulting from support of the Programme.
Link MFF 14-20 / MFF 21-27	New Indicator for 21-27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Specific Objective 1 :enhancing artistic and cultural cooperation at the European level, in order to support the creation of European works and strengthen the economic, social and external dimension of and innovation and mobility in Europe’s cultural and creative sectors****Indicator 1:Number and scale of transnational partnerships created with the support of the Programme**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
130	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of Partnerships (yearly)
Cut-Off Date	
Data source	e-Grants
Link to the objective	Enhance artistic and cultural cooperation at European level; support the creation of European works; strengthen the economic, social and external dimension of Europe’s cultural and creative sectors.
Link MFF 14-20 / MFF 21-27	Previous Indicator: 'the scale of international activities of cultural and creative organisations and the number of transnational partnerships created'. Reporting will continue on this indicator, which has been simplified to report on the number and size of transnational partnerships.
Other methodological comments	This composite indicator will combine the numbers and geographic origins of the partnerships created under all three strands of the programme to show the overall effect on internationalising and scaling-up the activity of CCS actors. The baseline figure for 2020 comprises 130 (COOP + PLAT) partnerships involving 635 beneficiary organisations (COOP + PLAT Coordinators + partners) and additional 274 associated partners.
Full metadata available at this address	
Justification of the trend	

**Indicator 2:Number of artists & cultural &/or creative players (geographically) mobile beyond national borders due to Programme support, by country of origin (including the proportion of women)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of participants (cumulative)
Cut-Off Date	
Data source	e-Grants
Link to the objective	Enhance artistic and cultural cooperation at European level; support the creation of European works; strengthen the economic, social and external dimension of Europe's cultural and creative sectors with an emphasis on innovation and mobility.

Justification of the trend	

**Indicator 5: The number of projects supported by the Programme involving third countries organisations**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									

Justification of the trend	
----------------------------	--

**Indicator 3: Number, budget and geographical origins of co-productions developed, created and distributed with the support of the Programme as well as co-productions with partners from countries with different audiovisual capacities; and number of audiovisual works in lesser used languages developed, and produced and distributed with the support of the Programme**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	
Indicator type	Output
Unit of measurement	Budget, number and countries of co-productions (yearly)
Cut-Off Date	
Data source	Applications and final reports from beneficiaries (e-Grants)
Link to the objective	Co-productions travel better than single-country productions. The design of a co-production entails an international marketing attitude. Budgets of co-productions are usually higher, and in the audiovisual sector the rule of the thumb is that the higher the budget, the greater the chance of recouping it. Therefore, co-productions contribute to increasing the competitiveness of producers by scaling-up and adopting customer-centric orientation. The countries defined in the Programme as 'Low Capacity' should especially increase their output of co-productions in order to increase the competitiveness of their industries. The Programme assists this goal, in addition to the expansion of film industries and cultural diversity in countries, which have more difficulties of manifesting their cultures in the form of films due to language barriers (there are few native speakers).
Link MFF 14-20 / MFF 21-27	New Indicator for 21-27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 4: Number of people reached by Business to Business promotional activities in major markets**

Indicator type	Result
Unit of measurement	Number of people (yearly)
Cut-Off Date	
Data source	Final reports from beneficiaries and contractors (e-Grants)
Link to the objective	Industry markets is where large share of audiovisual business deals are struck. This is why MEDIA supports these events. The activity of MEDIA in these events has three functions: 1) to support the market organisers so that the markets in Europe are attractive to filmmakers; 2) to support European filmmakers in facilitating their access to markets and; 3) raising awareness among filmmakers about the Programme's opportunities for them.
Link MFF 14-20 / MFF 21-27	New Indicator for 21-27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Specific Objective 3 :promoting policy cooperation and innovative actions supporting all strands of the programme, promoting a diverse, independent and pluralistic media environment, and media literacy, thereby fostering freedom of artistic expression, intercultural dialogue and social inclusion.**

**Indicator 1: Number and scale of transnational partnerships formed (composite indicator for creative innovation labs and news media actions)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										

	Actual Progress								Final

Are we on track	
Indicator type	Output
Unit of measurement	Number of partnerships (yearly)
Cut-Off Date	
Data source	e-Grants
Link to the objective	Collaboration increases competitiveness allowing organisations to scale-up in the cultural and creative sectors (CCS) which are usually small and micro organisations. Collaboration also widens the circulation of cultural content: co-produced cultural projects have a wider potential for public access. Further, collaboration increases the internationalisation of CCS organisation activities and facilitates creating European identity through closer bonds with content created in other Member States. The Cross-Sectoral collaboration allows for faster spreading of the most innovative and creative approaches and cross-fertilisation.
Link MFF 14-20 / MFF 21-27	New Indicator for 21-27
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Indicator 2: Number of events or activities promoting the Programme organised by the programme desks

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	No data
Indicator type	Impact
Unit of measurement	People (yearly, millions)
Cut-Off Date	
Data source	Special Eurobarometer 399 on Cultural Access and Participation (2013). The population used for extrapolating the number of people covers the EU-28 as well as CH, NO and IS i.e.: 516.8 million people.
Narrative	Milestone for 2017: To be assessed during mid-term evaluation on data until 2017.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	This indicator was too general and independent of the performance of the programme and therefore discontinued.
Full metadata available at this address	
Justification of the trend	This indicator has been discontinued. The 2017 mid-term evaluation did not collect the corresponding data as it was decided to prepare a proposal on supplementary indicators to Member States through a Commission Delegated Act. The indicator was too general and was rephrased as 'the number of people accessing European cultural and creative works generated by the Programme, including, where possible, works from countries other than their own' in the 2019 delegated act. The change was too late to start collecting meaningful data.

## General Objective 2 :to strengthen the competitiveness of the European cultural and creative sectors, in particular of the audiovisual sector, with a view to promoting smart, sustainable and inclusive growth

### Indicator 1:the cultural and creative sectors' level, change in and share of employment and share of gross domestic product

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Of the total European workforce										
2010	Milestones								2020

Of total European GDP										
2010	Milestones								2020	
3.3% - 4.5%				In view of economic crisis, to safeguard 2010 figures			4.8%			4.8%
	Actual Progress								Final	

Are we on track	No data
Indicator type	Impact
Unit of measurement	Percentage of total European workforce / Percentage of total European GDP
Cut-Off Date	
Data source	2018 <a href="https://ec.europa.eu/eurostat/statistics-explained/index.php?title=Culture_statistics_-_cultural_employment">https://ec.europa.eu/eurostat/statistics-explained/index.php?title=Culture_statistics_-_cultural_employment</a> -8.7 million persons
Narrative	
Methodology	Baseline: 3.3% of EU's active population (TERA consultants 2014, <a href="http://www.teraconsultants.fr/en/issues/The-Economic-Contribution-of-the-Creative-Industries-to-EU-in-GDP-and-Employment">http://www.teraconsultants.fr/en/issues/The-Economic-Contribution-of-the-Creative-Industries-to-EU-in-GDP-and-Employment</a> ). 3.8% of EU workforce (Ernst and Young France 2014, <a href="http://www.creatingeurope.eu/en/wp-content/uploads/2014/11/study-full-en.pdf">http://www.creatingeurope.eu/en/wp-content/uploads/2014/11/study-full-en.pdf</a> ).4.2% of EU GDP

	(TERA consultants 2014); 4.4% of EU GDP (Ernst and Young France 2014).
Link MFF 14-20 / MFF 21-27	Final figures have been captured. This indicator will no longer be reported.
Other methodological comments	This indicator was too general and independent of the performance of the programme and therefore discontinued.
Full metadata available at this address	
Justification of the trend	

### Specific Objective 1 :To support the capacity of the European cultural and creative sectors to operate transnationally and internationally

#### Indicator 1:the scale of international activities of cultural and creative organisations and the number of transnational partnerships created

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
7 000	Available as of 2017-18		310 from MEDIA and 426 from Culture sub-programme	7 600			8 000			8 000
	Actual Progress									Final
						530	657			

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of transnational partnerships (yearly, cumulative)
Cut-Off Date	31/12/2020
Data source	Selected and contracted projects
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Baseline: Latest known result at end 2012. This is a cumulative target. Partnerships involving 635 beneficiary organisations selected in 2020 (COOP + PLAT Coordinators + partners ) 130 (COOP + PLAT) and additional 274 associated partners. The calculation of this indicator has been revised to include only partnerships of more than 3 organisations.
Full metadata available at this address	
Justification of the trend	The number of partnerships has been growing with the growth of the budget and changes in guidelines to give more budget to 'smaller' partnerships made of 'smaller' organisations.

#### Indicator 2:the number of learning experiences and activities supported by the Programme which have improved the competences and increased the employability of cultural and creative players, including audiovisual professionals

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
140 000				190 000			240 000			240 000
	Actual Progress									Final

Are we on track	No data
Indicator type	Result
Unit of measurement	Number of Professionals with learning experiences (yearly)
Cut-Off Date	
Data source	Final reports of relevant MEDIA and culture schemes
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Art. 1, 2 c; Commission Delegated Regulation (EU) 2019/1974 of 17 May 2019 supplementing Regulation (EU) No 1295/2013 of the European Parliament and of the Council by establishing additional qualitative and quantitative performance indicators establishes the following new indicator that should replace the current one as soon as data are available: 'Number of participants in learning experiences and activities, supported by the programme, having improved their competences and increased their employability (including the proportion of women)'. Data have been collected only recently. Data will be significant for the indicator when a sufficient number of multi-annual projects (representing a representative sample of projects) have been closed.
Full metadata available at this address	
Justification of the trend	

**Specific Objective 2 :to promote the transnational circulation of cultural and creative works and transnational mobility of cultural and creative players, in particular artists, as well as to reach new and enlarged audiences and improve access to cultural and creative works in the Union and beyond, with a particular focus on children, young people, people with disabilities and under-represented groups**

**Indicator 1: MEDIA Sub-programme: the number of admissions for non-national European films in Europe and European films worldwide (10 most important non-European markets) in cinemas**

Unit of measurement	Percentage of audiovisual works
Cut-Off Date	31/12/2018
Data source	European Audiovisual Observatory (EAO) Yearbook Keytrends 2019/2020, p. 16
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The results have been severely disrupted by Brexit, therefore it is not possible to compare to the

	original target. Cinema Admissions: The unpublished calculations provided by EAO indicate the share of admissions to EU27 films in EU27 countries in 2014 was 33.5% and in 2018 (latest available) 29.1%. If UK is included the results in EU28 countries were 36.3% in 2014 and 39.8% in 2018. Digital Platforms: European works accounted for 30% of content on TVOD and 26% on SVOD (counting TV titles or seasons).
Full metadata available at this address	
Justification of the trend	This indicator has been discontinued. The 2017 mid-term evaluation did eventually not collect the corresponding data as it was decided to prepare a proposal on supplementary indicators to Member States through a Commission Delegated Act.

**Indicator 3: MEDIA Sub-programme: the number of people in the Member States accessing non-national European audiovisual works and the number of people in the countries participating in the Programme accessing European audiovisual works**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Indicator type	Result
Unit of measurement	EUR (billions, yearly)
Cut-Off Date	
Data source	Research by International Software Federation of Europe
Narrative	Baseline: in EU / Baseline: In five biggest markets
Methodology	
Link MFF 14-20 / MFF 21-27	

Other methodological comments	The turnover of the video-game sector is the best available data for this indicator. The number of video games produced in Europe is currently unavailable.
Full metadata available at this address	
Justification of the trend	This indicator has been discontinued. The 2017 mid-term evaluation did not collect the corresponding data as it was decided to prepare a proposal on supplementary indicators to Member States through a Commission Delegated Act.

**Indicator 5: Culture Sub-programme: the number of people directly and indirectly reached through projects supported by the Programme**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
					To be assessed in a Performance Monitoring Report to be published third quarter 2019		Increase of 5% in comparison to 2017 results			Increase of 5%
	Actual Progress									Final
				3,2	4		17			

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of People in Millions (yearly)
Cut-Off Date	31/12/2020
Data source	Reports from cooperation project beneficiaries (2014-2016). Creative Europe Culture Sub-Programme.
Narrative	No baseline, first known results (2017) were available in 2018. Target is an increase from baseline (2017)
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The actual figure for 2020 is an estimation based on average: A sample of 163 projects (funded under CE 2014-20) has given an average of 151 065 persons (tickets/admissions/visitors) reached directly and 385 468 reached online per project.
Full metadata available at this address	
Justification of the trend	The trend is proportional to the number of projects funded by year.

**Indicator 6: Culture Sub-programme: the number of projects addressed to children, young people and under-represented groups and the estimated number of people reached**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
					To be assessed in a Performance Monitoring Report to be published third quarter 2019		Increase of 7% in comparison to 2017 results			Increase of 7%
	Actual Progress									Final
				1.6	3.5					

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of Projects (yearly, millions)
Cut-Off Date	
Data source	Reports from cooperation project beneficiaries (2014-2016). Creative Europe Culture Sub-Programme.
Narrative	No baseline, first known results (2017) were available in 2018. Target is an increase from baseline (2017)
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In contrast to previous programmes, the design of the new application e-forms and final reports will make it possible under Creative Europe to collect this information for the four measures under the

	Culture Sub-programme
Full metadata available at this address	
Justification of the trend	Data will be significant for the indicator when a sufficient number of multi-annual projects (representing a representative sample of projects) have been closed.

**Specific Objective 3 :To strengthen the financial capacity of SMEs and micro, small and medium-sized organizations in the cultural and creative sectors in a sustainable way, while endeavouring to ensure a balanced geographical coverage and sector representation**

**Indicator 1:the volume of loans guaranteed in the framework of the Guarantee Facility, categorised by national origin, size and sectors of SMEs and micro, small and medium-sized organisations**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

#### **6.1.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.1.2. Explanation and justification on the financial contribution**

##### **6.1.3. Key achievements**

In the new 2021-27 programme environment, taking ecological concerns into account in terms of design and implementation will be considered a cross cutting issue for all funded projects, in order to reduce their impact on the environment. The environmental aspects will be assessed in the evaluation of the proposals.

In addition, to accelerate the green transition of the culture and creative sectors, the cooperation and network schemes of the culture stand will include an explicit “green deal” priority to encourage projects to explore, test and disseminate innovative greener practices.

In parallel to funding, policy actions such as studies, dialogues with stakeholders or coordination with Member States will be further developed. For instance, in accordance with the Work-plan for Culture 2019-2022, a new working group composed of Member States’ experts (Open Method of Coordination working group - OMC) is working on “Strengthening Cultural Heritage Resilience for Climate Change”. The group of experts is actively working on identifying and exchanging good practices and innovative measures for safeguarding cultural heritage in relation to climate change. The group is also examining the contribution cultural heritage can make to mitigating and combating climate change in line with the European Green Deal’s goals. The final report, including recommendations, will be published at the end of 2022.

While the previous MEDIA sub-programme indirectly addressed the ecological impact, the Commission has launched a preparatory study, in 2020, to identify the main challenges for the audiovisual industry (Philipp Gassmann, Greening the European Audiovisual Industry – the Best Strategies and their Costs). MEDIA will foster a climate neutral audiovisual and media sector (in line with the Media and Audiovisual Plan, Action 6), as well as aiming to meet the objective of contributing 30% of funds to the reduction of CO2 emissions applicable for all Commission programmes.

The strategy of the MEDIA Sub-Programme consists of a three-pillar approach:

- raising awareness through campaigns and policy activities;
- fostering exchanges via a structured cooperation forum to facilitate consultation with public and private stakeholders and;
- incentivising changes through the co-development of measurable objectives and their implementation via the programme. Harmonising the measurements of the ecological impact is instrumental in the context of the multiplication of CO2 calculators: Not only production, but all links of the audiovisual chain are at stake, including notably training of audiovisual professionals.

The overall contribution of Creative Europe 2014-2020 to fighting climate change was recognised by a European Parliament study in 2020 (Effective measures to green Erasmus+, Creative Europe and ESC). It found that 10.5% of the Creative Europe budget has been granted to projects which were climate-related. Thus Creative Europe has helped the culture and creative sector become increasingly aware of its role in fighting climate change and potential to have a ‘long-tail impact on the environment’.

The Culture Sub-programme has recently co-funded projects encouraging the sector to adopt **more environmental friendly practices** and business models. For instance, the project Creative climate Leadership, a €2 million pan-European, interdisciplinary programme, connects and enables a community of cultural leaders to take an active role in shaping an environmentally sustainable future for the European cultural sector. Other projects such as the cooperation project ‘ACT’ (Art, Climate, Transition) run by a 10 organisation consortium led by Theatre Rotterdam aims at **raising awareness and launching debates** on climate issues.

In line with the ongoing reflection on sustainability, an overarching priority for the new programme, MEDIA has already used the umbrella stands, as a showcase of sustainable practices in festivals. This was done by concrete measures on the stand building (suppliers, transportation), stand furniture (materials, re-use), as well as the consumptions (local suppliers, no plastic, flasks). The current activities will be assessed, in cooperation with the consultation forum that will be launched in 2020, with the ambition to go further.

## 6.2. Contribution to biodiversity mainstreaming

Not applicable

## 6.3. Contribution to clean air financing

Not applicable

## 6.4. Contribution to gender equality

### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.4.2. Key achievements and performance

In the 2021-2027 programme, **gender equality will be considered as a cross cutting issue**: all funded projects will consider equality in the design and implementation of their project and this aspect will be given attention in the evaluation of the proposals.

In addition, to accelerate practice changes in the culture and creative sectors, the cooperation scheme of the culture stand will include an **explicit inclusiveness priority** to encourage projects to explore, test and disseminate innovative gender equality practices.

The strategy for 2021-2027 in the audiovisual sector foresees further policy development by including gender activities in all European actions towards the AV sector. The focus of the strategy has moved from gender alone to the broader concept of diversity. In the next seven years MEDIA will:

- continue awareness raising (an ambitious campaign will be implemented in 2021) and data collection,
- pursue structured dialogue with the stakeholders and exchange of good practices,
- introduce support actions targeting women under MEDIA (in the skills scheme, through capacity building and mentoring),
- request Creative Europe applicants to show the actions taken in their companies in support of diversity and gender equality.

Equality between women and men is a fundamental EU value and a driver of more diverse content and connecting with wider audiences. The Commission has recognised the strategic importance of gender diversity to sustain a rich, highly creative audiovisual industry and cultural and creative sector as well as more open, inclusive and competitive societies. In recent years also the stakeholders in the audiovisual and other cultural and creative sectors became very aware of the challenges in this respect. In 2014-2020 progress was achieved though policy dialogue with stakeholders and Member States and funding of concrete actions and projects.

The Council’s Work Plan for Culture 2019-2022, implemented jointly by the EU Member States and the Commission, includes gender equality among its five priorities. It recommends corresponding actions in this field:

**Mapping the situation of women artists and cultural professionals in the EU:** The Commission has financed an EU-wide study on gender gaps in the cultural and creative sectors. It aims to analyse the specific challenges faced by women in the cultural and creative sectors and support policy making.

**Exchange of experience between the Member States:** The OMC experts' group on gender equality discussed gender gaps and their drivers in the CCS in the Member States and provided policy recommendations and concrete actions under the Creative Europe programme. The OMC group has published a report with recommendations to different stakeholders (policy makers, cultural institutions etc.) on how to achieve gender equality and foster the use of culture as means to promote equality and diversity. The challenges addressed will include data collection, gender stereotypes and gender violence, access to resources and to the labour market, gender pay gap and access to the leadership positions.

**Dialogue with the sector:** Key issues for gender equality were addressed in the Voices of Culture structured dialogue in 2019 as well as through an action plan with the audiovisual industry. The resulting report proposed targeted measures and initiatives.

**Project funding:** Several projects promoting gender equality have received co-funding under Creative Europe, and the new Creative Europe programme envisages strengthening the aspect of gender equality across the programme. For example, in 2019 the Live DMA network published a Diversity Roadmap which makes recommendations on diversity and gender equality in live music venues, clubs and festivals.

Over 2018-2019 a rich agenda was implemented in the **audiovisual** field. In close cooperation with 25 European audiovisual stakeholder organisations, an action plan was defined with a set of concrete measures. This focused on awareness-raising, collecting data, highlighting talented women, combating stereotypes, collecting and promoting good practices.

In particular, at the Cannes Film Festival in 2019, the European Commission launched the first edition of the Women on the Move day. European institutions, private and public organisations, and stakeholders from the audiovisual and film industries came together to put the spotlight on talented women and to take stock of the representation of women in the film sector. Collectif 50/50 – an organisation bringing together more than 800 key players – presented the Gender Parity Pledge which had already been signed by 47 festivals. The European Commission, represented by Creative Europe MEDIA, presented its new publication featuring an overview of good practices on gender implemented by the audiovisual industry and policy makers in the EU.

Furthermore, in 2019 research and studies were supported to target key issues. The European Audiovisual Observatory enriched the LUMIERE database of theatrical film releases by tagging the film director's gender, thus giving visibility to the gender balance behind the camera. In addition, Collective 50/50 undertook a study on gender disparity among film critics, who play an influential role on audiences and in shaping the careers of women professionals. The study was released at the 2020 Berlinale.

MEDIA has also been actively collecting data on the shares of women in key positions among the applications and grants awarded. This data shows that, overall, the Programme performs above industry averages. Nonetheless further efforts are needed: between 2014 and 2018, only 30% of applicants were women whereas the success rate in selection was above average. The share of women in applications in 2020 was 33.3% and 34.2% in grants. This shows there is no discrimination in the award of support, but that more can be done to encourage applications from women. The participation of women in MEDIA schemes is also uneven: over 50% of participants in training are women, but of 20 films chosen in the selective distribution support scheme, only six were directed by women.

In 2020 efforts were focused on preparing a robust strategy for 2021-2027 and an online awareness raising campaign was undertaken.

## **6.5. Contribution to the sustainable development goals**

### **6.5.1. Goals**

#### ***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

The programme contributes to the political priorities of the Commission, in particular relating to jobs, growth and investment and the European Digital Single Market by supporting the competitiveness of the cultural and creative sectors, in particular the audiovisual sector, through capacity building and skills development and through testing new business models in a rapidly evolving digital context. By allowing participation of non-EU cultural and creative operators and the participation of third countries, the programme also contributes to making the EU a stronger global actor. At another level, Creative Europe helps address current political and societal challenges through the power of culture to reach the hearts and minds of citizens and boost confidence in our shared European values.

#### ***SDG 17 Strengthen the means of implementation and revitalize the global partnership***

MEDIA supports co-production funds located in the EU aimed at cooperating with film institutions in developing countries. With the support from MEDIA in 2014-2020 they supported 114 co-productions between EU and developing countries partners in production and 83 in distribution.

## **1. Overview**

### **1.1. Challenges**

A working European area of Justice and effective national justice systems are necessary for a flourishing internal market and for upholding the common values of the EU. Promoting EU values also means protecting them and ensuring an environment respectful of the rule of law and the independence of the judiciary, where mutual recognition and mutual trust among Member States are enhanced. In this context, the following persisting challenges have been identified:

- Judicial cooperation in civil and criminal matters is insufficient and access to justice across Member States remains difficult. Tools for collecting comparative information about the quality, independence and efficiency of Member States' justice systems need to be improved. A major obstacle to mutual recognition and judicial cooperation is a lack of trust in other Member States' judicial systems. There is a need to simplify and digitise communications, access to procedures and legal information and connection to and between national systems in a cross-border context.
- The level of knowledge of EU acquis and EU instruments needs to be improved across the EU. However, national training providers tend to invest their scarce resources in trainings on national law rather than on EU law and in national training activities rather than cross-border ones.
- In the context of economic crises, persisting inequalities and challenges such as of migration put the fundamental rights and the EU fundamental values to the test. In some cases, the rule of law, access to justice, space for civil society and the independence of the judiciary are also challenged.

### **1.2. Mission (general objectives)**

The Justice programme (here below the Programme) will support the further development of an EU area of Justice based on EU's values, the rule of law, and mutual recognition and trust. It will facilitate access to justice and promote judicial cooperation in civil and criminal matters, and the effectiveness of national justice systems.

The challenges identified above are common to all Member States and have cross-border dimensions. While action at national level is important, individual Member States alone do not have sufficient leverage to tackle these challenges. It is through EU-funded initiatives that remaining inefficiencies related to judicial cooperation in civil and criminal matters and the incomplete implementation of EU law can best be tackled.

### **1.3. Specific objectives**

The Programme has the general objective of contributing to the further development of a European area of justice based on the rule of law, including independence and impartiality of the judiciary, on mutual recognition, mutual trust and judicial cooperation, thereby also strengthening democracy rule of law and fundamental rights.

The Programme has the following specific objectives:

- (a) (Judicial Cooperation) to facilitate and support judicial cooperation in civil and criminal matters, and to promote the rule of law independence and impartiality of the judiciary, including by supporting the efforts to improve the effectiveness of national justice systems, and the effective enforcement of decisions;
- (b) (Judicial Training) to support and promote judicial training, with a view to fostering a common legal, judicial and rule of law culture, as well as the consistent and effective implementation of the Union's legal instruments relevant in the context of this programme;
- (c) (Access to Justice) to facilitate effective and non-discriminatory access to justice for all, and effective redress, including by electronic means (e-justice), by promoting efficient civil, and criminal procedures and by promoting and supporting the rights of all victims of crime as well as the procedural rights of suspects and accused persons in criminal proceedings.

### **1.4. Public intervention context**

The Justice programme will support the further development of an EU area of Justice based on EU's values, the rule of law, and mutual recognition and trust. The Treaty on the Functioning of the European Union (TFEU) establishes the creation of an area of freedom, security and justice, with respect for fundamental rights and the different legal systems and traditions of the Member States. Hence, the competence of the EU in this area is shared with Member States. The creation of a common area requires transnational cooperation mechanisms and networking opportunities, which can typically not be achieved by Member States acting alone. As well as key principles such as mutual trust and mutual recognition of judicial and extra-judicial decisions can be supported more efficiently by action at EU level.

The Justice programme is a key player in the area of judicial training where the actual results demonstrate an improvement in the impact of the programme's actions in this field. In addition to this, the Commission recently launched the [new strategy on European judicial training for 2021-2024](#). In the area of victims' rights, the Commission will focus on the implementation of actions under the first-ever [EU Strategy on victims' rights](#) (2020-2025). Digitalization of justice system is another important objective as part of a new push for European democracy and in line with the political priority of a Europe fit for the digital age. The general objective for 2021-2022 is to tackle new initiatives identified in the European [e-Justice Strategy](#) and [Action Plan 2019-2023](#)<sup>1</sup>. This will be accomplished by introducing new features and enhancements to the e-Justice Portal, as well as supporting the implementation of e-Justice projects, insofar as project initiatives have a European dimension.

Consistency, complementarity and synergies exist in particular within the Justice, Rights and Values Fund with the Citizens, Equality, Rights and Values Programme (under its Union Values Strand) but also with the Digital Europe Programme and the Recovery and Resilience Facility in the area of digitalisation of justice. To a lesser degree, synergies can exist between the Programme and the Single Market Programme, Border management and Security, in particular the Asylum and Migration ('AMIF') and the Internal Security Funds, the Erasmus+ Programme, the Framework Programme for research and innovation, the Instrument for Pre-accession Assistance, and the LIFE Regulation.

## 1.5. Actions

The Justice programme supports a broad range of beneficiaries that play an important role to the development of an EU area of justice. This includes, primarily, members of the judiciary and judicial staff, but also public authorities, academia/research institutes, training bodies, as well as civil society and non-profit organisations.

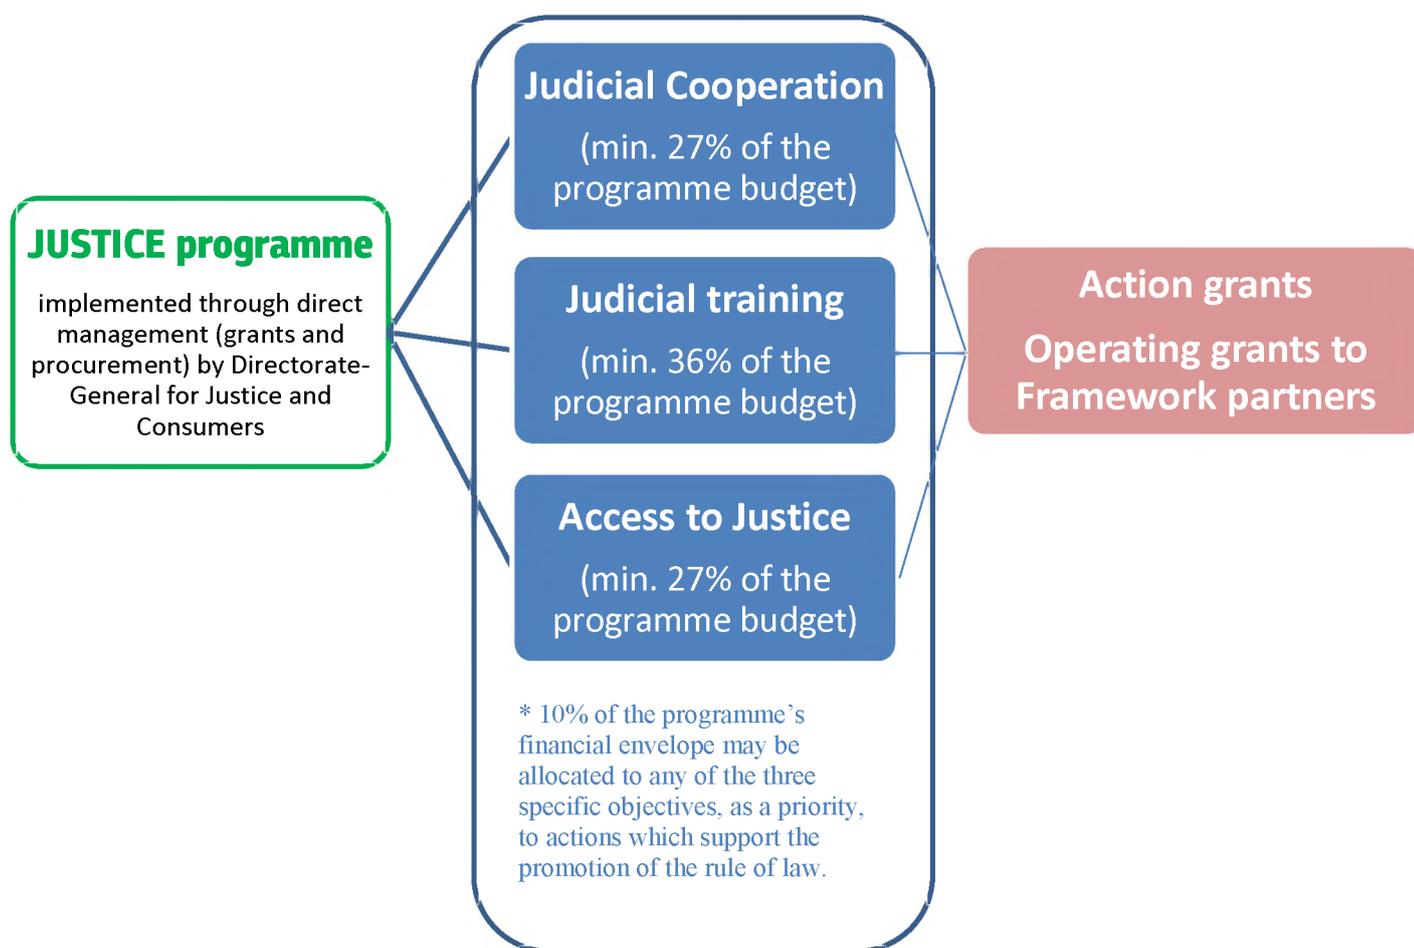

The Justice programme funds activities that ensure the full and consistent application of EU law and promote the smooth functioning of the EU area of justice. In particular, the following activities shall be eligible for funding:

- Awareness-raising, dissemination of information to improve the knowledge of Union policies and of Union law including substantive and procedural law, of judicial cooperation instruments, of the relevant case-law of the Court of Justice of the European Union, and of comparative law and of European and international standards, including the understanding of the interaction between different areas of law.
- Mutual learning through exchange of good practices among stakeholders to improve knowledge and mutual understanding of the civil and criminal law and the legal and judicial systems of the Member States, including the rule of law and access to justice, and through enhancing mutual trust.
- Analytical and monitoring activities to improve the knowledge and understanding of potential obstacles to the smooth functioning of a European area of justice, to improve the implementation of Union law and policies in the Member States.
- Training relevant stakeholders to improve the knowledge of Union law and policies, including inter alia substantive and procedural law, fundamental rights, the use of Union judicial cooperation instruments, the relevant case-law of the Court of Justice of the European Union, legal language and of comparative law.
- Information and Communication Technology (ICT) as well as e-justice tools development and maintenance, taking into account privacy and data protection, to improve the efficiency of judicial systems and their cooperation by means of information and communication technology, including the cross-border interoperability of systems and applications.
- Developing capacity of key European level networks and European judicial networks, including networks established by Union law to ensure the effective application and enforcement of Union law, to promote and further develop Union law, policy goals and strategies in the areas of the programme.
- Supporting civil society organisations and non-profit stakeholders active in the areas of the Programme to increase their capacity to react and advocate as well as to ensure adequate access for all citizens to their services, counselling and support activities, thereby also contributing democracy, the rule of law and fundamental rights.
- Enhancing knowledge of the programme and dissemination, transferability and transparency of its results and fostering citizen outreach, including by organizing forums for discussion for stakeholders.

## 1.6. Delivery mode

The programme will be implemented through direct management (grants and procurement). Directorate-General for Justice and Consumers is the lead DG for the programme implementation.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
COM (2018) 384: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the Justice programme	2021 - 2027	299,0

### 1.8.2. Legal basis explanation

Treaty on the Functioning of the European Union, and in particular, Article 81(1) and (2), Article 82(1)

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	46,4	43,6	42,2	41,8	41,8	41,7	41,4	299,0

### 1.8.4. Financial programming explanation

The programme's financial programming is linear. There are no contributions from other programmes.

## 1.9. Link with the 2014-2020 MFF

The 2021-2027 Justice programme ensures the continuation of the Programme, whilst reinforcing efforts to promote the rule of law. The only change compared to as the 2014-2020 Multiannual Financial Framework (MFF) concerns the drugs prevention policy area (4<sup>th</sup> specific objective of the Justice programme in 2014-2020), which will be implemented in the 2021-2027 MFF via the Internal Security Fund.

## 1.10. Relevant websites providing more information

Information on the Justice programme, its priorities, allocated budget, publication of calls of proposals, project results, news and useful links are all available on the Funding & tender opportunities portal: <https://ec.europa.eu/info/funding-tenders/opportunities/portal/screen/programmes/just>.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

#### Implementation status for financial year 2021 in commitment and in payment appropriations

The new Justice programme regulation is not adopted at the time of the request for appropriations for draft budget 2022 therefore there is no implementation at the moment for year 2021 in commitment and in payment appropriations.

#### Forthcoming implementation - appropriations requested for the financial year 2022 in commitment and in payment appropriations

The call planning under the programme assumes launching the 2021 calls in parallel to the adoption of the new Justice programme regulation and the Work programme for 2021-2022 in order to be as close as possible to the typical annual calendar and its corresponding implementation. The appropriations requested for commitments are according to the financial profile for year 2022. The level of payment appropriations requested for 2022 are at similar levels as those requested in previous years and above those of 2021; it is estimated that despite the delays in the adoption of the new Justice Regulation (leading to a delays in the start of implementation) and the slower rate in the implementation of 2021 and previous years' activities due to the COVID pandemic, as of 2022 we can return to a normal implementation rate.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	337 500 222	239 211 906
Implementation carry-overs	0	2 737 615
Implementation total	337 500 222	241 949 521
total envelop*	338 678 141	
cumulative implementation rate	100%	71%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

In years 2014-2017, the year N implementation gradually increased to approach Payment execution close to 70%. As of year 2018 the year N implementation gradually improved to reach Commitments execution close to 100% and Payments execution above 95%. In 2018 we put in place a plan to gradually increase the percentage of year N implementation of the programme. This included among others: the adoption of the work programme and publishing of the calls for proposals at the end of year N-1, a careful follow-up of the evaluation and granting planning, as well as, increased communication efforts on the funding opportunities under the programme. These measures were gradually introduced during the programming period and allowed to pass from a lower implementation rate in year N at the beginning of the period to a higher one in the last years of the programming period.

In financial year 2020, Commitments execution was 100% and Payments execution 96%.

		2020 Commitments final budget	2020 Commitments execution (no EFTA)	2020 Payments final budget	2020 Payments execution (no EFTA)
18 01 04 04	Support expenditure for the Justice programme - Anti-drugs	100.000,00	100.000,00 <b>100,00%</b>	100.000,00	11.801,00 <b>11,80%</b>
18 06 01	Supporting initiatives in the field of drugs policy	2.975.000,00	2.975.000,00 <b>100,00%</b>	2.315.993,59	2.315.993,59 <b>100,00%</b>
33 01 04 02	Support expenditure for the Justice programme	850.000,00	833.815,25 <b>98,10%</b>	850.000,00	520.651,63 <b>61,25%</b>

33 03 01	Supporting and promoting judicial training and facilitating effective access to justice for all	30.943.000,00	30.943.000,00 <b>100,00%</b>	36.289.850,00	35.180.796,00 <b>96,94%</b>
33 03 02	Facilitating and supporting judicial cooperation in civil and criminal matters	11.661.000,00	11.661.000,00 <b>100,00%</b>	13.990.000,00	13.231.726,08 <b>94,58%</b>
		<b>46.529.000,00</b>	<b>46.512.815,25</b> <b>99,97%</b>	<b>53.545.843,59</b>	<b>51.260.968,3</b> <b>95,73%</b>

For 2021, the Payments requested (not including the anti-drugs part of the programme – now part of the ISF) are 18,1 MEUR and are well below the level requested in previous years to take into account the late start in the implementation of the programme due to the delayed adoption of the MFF. The calculation for the requested Payment appropriations for 2022 takes into account a careful assessment of the expected programme implementation in 2021 as well as the impact of the COVID outbreak on the implementation of the completion lines.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.3. Previous programme performance**

The Justice programme overall has been successful so far and provided added value.

The outputs of the Justice Programme in 2014-2020 are closely linked to the Commission activity on preparing, supporting and ensuring the correct implementation of an important number of EU legal instruments in civil and criminal law, improving their enforcement and remedy capacities in Member States, and ensuring an adequate cross border and EU level cooperation.

The Justice Programme contributes to the development of a European area of justice based on mutual recognition and mutual trust, by supporting judicial cooperation and judicial training.

The Justice Programme has supported conformity check studies for EU legislation transposed in the EU Member States. It has equally successfully supported judicial networks and judicial training. Proper application of EU law is in fact a key element to allow EU citizens and business to benefit from EU law. This is achieved through both preventive actions (workshops, expert meetings, stakeholder dialogue, technical guidelines for national authorities and training of legal practitioners financed through the Programme) and infringement procedures.

The activities funded by the Programme resulted in better implementation of EU justice instruments (e.g. European Investigation Order, European Arrest warrant and surrender procedures, European Protection Order, European Account Preservation Order, family law) and faster proceedings through cooperation, dialogue, sharing of experience, exchange of information, training activities and harmonisation of practices. Analytical activities also helped monitor the correct implementation of existing EU legislation, prepare or accompany new legislation or respond to policy changes in the areas covered by the programme.

The Justice programme also supported activities related to the promotion of rule of law via all its instruments and spanning three specific objectives. Namely, action grants on judicial training offered training to the judiciary on the main principles and values stemming from the CJEU and European Court of Human Rights case law and international documents, but also action grants funded projects to improve the quality of national judicial systems. Operating grants have supported the co-operation with European networks in the field of judicial cooperation and in the field of access to justice directly feeding into the work of the rule of law report. Via the European Judicial Training Network (EJTN) operating grant, EJTN prioritised as part of its activities the topic of the rule of law by making it part of the human rights sub-working group of EJTN. The programme has also funded data collection necessary for the production of the annual report on the rule of law and the European Justice Scoreboard which evaluates and compares the effectiveness and efficiency of national judicial systems and which feeds into the European Semester. Funding has also facilitated the organisation of mutual exchanges of information between Member States, in particular through a network of national contact persons. Preparation has also started for the funding of follow-up (communication) activities to the 17 July 2019 Communication on "*Strengthening the Rule of Law within the Union – A blueprint for action*" which specifically refers to an annual rule of law event open to national stakeholders and civil society organisations and communication activities to promote a rule of law culture among the general public, and to promote awareness about the relevant CJEU case law and Council of Europe standards are in preparation.

The actions of the programme as far as the *Specific Objective 1: Judicial cooperation in civil and criminal matters* is concerned are on track to achieving their goals:

- The Programme has helped to improve the implementation and functioning of existing legislative cooperation instruments. This applies both to older instruments where the Programme allowed to identify shortcomings or problems in implementation and application, and more recent ones, where it allowed to equip practitioners with better knowledge on how to apply them. Through procurement actions, regular meetings gathering practitioners from Member States were organised, and compliance studies were financed. Action grants to cross-border projects and operating grants to key European networks and stakeholders have also contributed to making Member States work together better and improved mutual trust. In general, the financial tools offered by the Programme can be seen as a useful complement to the Commission's infringement powers. Moreover, the Justice Programme has also helped, through the identification of gaps and problems in the existing legal framework, through action grants, but also studies and expert meetings, to prepare new legislation proposed by the Commission (e.g. Regulation on mutual confiscation of freezing and confiscation orders, e-evidence package). It has demonstrated the necessary flexibility to allow the Commission to take action to react to events like terrorist attacks, or to fund activities on radicalisation in prisons, often in response to calls from Council or European Parliament. The Programme has also allowed to strengthen cooperation with international organisations such as the Council of Europe, e.g. on prison monitoring.
- The e-Evidence Digital Exchange System which enables secure electronic communication between the competent national authorities to obtain evidence in criminal matters, will become operational in the course of 2021 digitalising the European Investigation Order and Mutual Legal Assistance. The system will significantly facilitate and expedite cross-border cooperation in criminal matters. Initially, the system was due to become functional by the end of 2020. However, Member States needed additional time to test the system and to make all the necessary arrangements at administrative level. The COVID-19 pandemic had an impact on the possibility to deliver training on the system.
- The programme has supported the development of ICT tools with the purpose of enhancing access to information. Under ECRIS, the Electronic Criminal Records Information System, a decentralised IT system operated by the central authorities of the EU Member States, in 2020 the increase in the number of exchanges of information was more than tenfold compared to the 2012 baseline. The programme also supported projects implementing the needed adaptations of the national criminal records systems for the linking and exchange of fingerprints with the ECRIS-TCN central system.
- The Programme has contributed to the effective and coherent application of EU criminal law in the Member States, e.g. the Victim's Rights Directive (establishing minimum standards on the rights, support and protection of victims of crime) and the development and implementation of the measures related to the 2009 Roadmap on strengthening the procedural rights of suspects and accused persons in criminal proceedings. The activities financed aimed at capacity-building of professionals, multi-disciplinary cooperation, exchanges of good practices, dissemination and awareness-raising, etc.
- The Programme has also contributed to the effective, comprehensive and consistent implementation of Union law policies and in particular it has funded projects in the area of fight against radicalisation in prisons. Improving prison conditions has become a political priority at EU level because they affect the efficient operation of EU mutual recognition instruments such as the European Arrest Warrant (EAW), and because of the risk of radicalisation in prisons.

The Justice Programme has overall performed very well in achieving its goals as far as the *Specific Objective 2: Judicial training* is concerned. Training is an important instrument of the Programme with a view to fostering a common legal and judicial culture and effective access to justice in Europe. Training activities ranged from traditional courses and seminars, case studies and practice-oriented activities, to videoconferences and training based on e-learning resources. Other activities included conferences, compilation of guidelines and training methodologies, organisation of staff exchanges, public-private partnerships for innovation and support for main actors (key European networks in the area of judicial training). Under the 2014-2019 period, the Justice Programme gave a real boost to the support of cross-border judicial training at EU level. The funds dedicated to this specific objective represented an increase of 80 % in comparison with the previous programming period under the then Civil and Criminal Justice Programmes. This enabled the number of legal practitioners participating in supported cross-border training activities to increase exponentially. The overall number of participants in training projects supported by the Justice Programme (including those by the European Judicial Training Network (EJTN)) increased from 11 724 in 2014 to 18 358 in 2018. Under the EJTN's annual training programmes (also supported via the Justice Programme), the number of participants increased from 4 256 in 2014 to 6 567 in 2018, while the performance or 'cost-to-serve' ratio (i.e., the price per person for one training day offered in Europe) decreased from EUR 332 in 2014 to EUR 307 in 2018. Funds dedicated to judicial training were lower in 2020, less physical trainings were performed due to the COVID pandemic and also not all training activities were appropriate to be transformed to online ones (e.g. the ones including an important networking element); these reasons led to a drop in the number of judicial staff trained in 2020 (see the related indicator).

The actions of the programme as far as the *Specific Objective 3: Access to justice* is concerned are on track to achieving their goals to facilitate access to justice for all, including to promote and support the rights of victims of crime, while respecting the rights of the defence.

- The Programme has helped to improve the implementation and functioning of existing instruments on procedural rights and victims' rights. This applies both to older instruments, where the Programme allowed to identify shortcomings or problems in implementation and application, and more recent ones, where it allowed to equip practitioners and national authorities with better knowledge on how to apply them. Through procurement actions, regular meetings gathering practitioners from Member States were organised, and compliance studies were financed. Action grants to cross-border

projects and operating grants to key European networks and stakeholders have also contributed to making Member States work together better and improved mutual trust. The financial tools offered by the Programme can be seen as a useful complement to the Commission's infringement powers. Moreover, the Justice Programme has also helped, through the identification of gaps and problems in the existing legal framework, through action grants, but also studies and expert meetings, to prepare new legislative initiatives.

- e-Justice related actions have contributed in a tangible way towards achieving the goals of this Specific Objective. In particular:
  - The European e-Justice Portal, a one-stop shop for justice matters, contributes significantly to improving and facilitating the access to justice for citizens, businesses, national authorities, legal practitioners and the judiciary. Over the years, it has grown to cover more than 150 topics in a wide variety of areas. The Portal gives access to information on a number of EU cross-border proceedings, as well as national information such as sources of case law, information on judicial systems in the EU, rights of victims and defendants, training material and many others. Thanks to the continuous enhancements to the Portal, it now sees a gradual and steady increase in terms of annual visits (over 4.6 million hits were registered in 2020 compared to 4.3 million in 2019). Good examples of successful projects are the 'Find a lawyer' and 'Find a notary' search tools, the interconnection of the business and insolvency registers, the search engine for European and national case law (the ECLI Search Engine), etc. In the period 2014-2020, an important activity has been the modernisation of the interface of the e-Justice Portal, including new functionalities and online tools.
  - The e-Justice Action Grants supported delivering on the priorities in this domain, namely by supporting the implementation of the e-Justice Action Plans for the periods 2014-2018 and 2019-2023.
  - Relevant studies were conducted under the Justice Programme, aiming to support the implementation of the e-Justice Action Plans. The latest study focuses on the use of innovative technologies ('Legal Tech') in the justice field.
- In 2016, pursuant to the Council Conclusions from 9 June 2016 on the European Judicial Cybercrime, IT development activities have started towards the establishment of a common e-Evidence Digital Exchange system, enabling efficient and cheap electronic communication between the competent national authorities in the area of criminal procedural law. Work on this system took place in 2017-2019 while it is planned for the system to be operational in 2021, due to difficulties encountered by Member States during the year 2020, e.g. reduced training possibilities caused by the COVID-19 pandemic.

The COVID pandemic has had for sure an impact on the implementation of the programme in relation to funds awarded via action grants or operating grants however this cannot be fully assessed yet since reporting for this period will only be done later at project closure or final report time. Many of our beneficiaries converted activities such as trainings to online events as much as possible however much less funding is needed for such events which will result in recovering funds in upcoming years. In some cases activities have not been completely cancelled, just reduced in scope (e.g. the parts that were only meaningful in case of physical interaction have been delayed or cancelled in some cases). EJTN's case provides a clearer picture on the COVID impact, which is representative of the situation for other beneficiaries as well: when the pandemic hit in spring 2020, most stakeholders, including the training ones, postponed their events, mostly to the 2<sup>nd</sup> half of 2020, hoping that face-to-face activities could resume by then. Eventually this led to requesting changes or even amendments to the work programme to change the timeline of the activities and sometimes the duration of the project. The reason for wanting to postpone activities and not transforming them straight away into online ones is that certain activities were planned face-to-face, with a mutual trust building and/or networking component. So the training providers hoped to avoid having to organise the events online, as they are less efficient for that aspect of the objectives. In addition, as activities have to be advertised months in advance to attract justice professionals, the autumn was not enough to organise – even online – all the activities planned for the whole 2020. Some activities took place in early 2021 however we are receiving requests from some beneficiaries to start projects later than planned, in the hope that face-to-face activities will resume in autumn 2021.

### 3.2. Key achievements

4.1 million	10799	4.6 million	27
<u>Exchanges of information in 2020 in the European Criminal Records Information System (ECRIS)</u>	<u>Justice professionals were trained in 2019 through the Justice Programme's financial support to cross-border training activities and to the European Judicial Training Network (EJTN)</u>	<u>Hits on the e-Justice portal / pages addressing the need for information on cross-border civil and criminal cases</u>	<u>Victim Support Organisations with national coverage were established</u>

*Specific objective 1: Judicial cooperation in civil and criminal matters*

The Justice Programme finances the European Judicial Network (EJN) in civil and commercial matters, which strengthens cooperation between national judicial authorities. By improving the practical application and implementation of EU civil justice instruments <sup>(2)</sup>, EJN contributes to building bridges between the justice systems of the Member States and thereby creates mutual trust <sup>(3)</sup>. In civil justice, the family law instruments, the insolvency regulation, the European Account Preservation Order, the European Small Claims procedure and mediation in civil and commercial matters have been promoted through programme funding since 2014. That has contributed to raising awareness among the legal practitioners and the general public so as to enable their correct application.

Furthermore, the funding has been used to support the application of many EU legal instruments in judicial cooperation in criminal matters, such as the European Arrest Warrant (EAW), which with over 10 000 cases per year is the most successful EU instrument in criminal matters. The Electronic Criminal Records Information System (ECRIS), a decentralised IT system operated by the central authorities of the EU Member States has registered an increase in the number of exchanges of information. In 2020, the number of exchanges of information in ECRIS was 4 136 249 (with the record number of 4 179 614 in 2019) exceeding its 2020 target of 3 500 000.

Further to the Council Conclusions from 9 June 2016 on improving criminal justice in cyberspace, IT development activities are ongoing towards the establishment of a common e-Evidence Digital Exchange system, enabling secure electronic communication between the competent national authorities to obtain evidence in criminal matters. This system, is a first step to digitalise judicial cooperation procedures in criminal matters and uses e-Codex as a secure transmission channel, a system that was developed by several Member States through a grant from the Justice Programme. The e-Evidence Digital Exchange System will become operational in 2021 with additional improvements and developments planned for the 2021-2027 period.

Projects were funded via the Justice Programme to enhance the use of alternatives to imprisonment both in the pre-trial and post-trial stage and to improve detention conditions in the Member States. Funding has also focused on projects relating to the judicial responses to terrorism, notably on reinforcing the prevention of radicalisation, especially in prisons. Improving prison conditions has become a political priority also at EU level because they affect the efficient operation of EU mutual recognition instruments such as the European Arrest Warrant (EAW), and because of the danger of radicalisation in prisons. The Justice Programme has financed also the cooperation with the Council of Europe to set up a network of prison monitoring bodies and the SPACE report, an annual report on prison statistics, providing clear insights into the detention situations in the different Member States, which have a direct impact on judicial cooperation in criminal matters.

#### *Specific objective 2: Judicial training*

Record participation numbers were reached again, thanks to the financial support to networks and projects. More than 1 million justice professionals were trained on EU law between 2011 and 2018 <sup>(4)</sup>, partly with EU funds, thus surpassing the goal set by the 2011 European judicial training strategy two years ahead of the deadline. In 2019, 182 379 justice professionals (judges, prosecutors, court staff, lawyers, bailiffs and notaries) and their trainees took part in training activities on EU law or the national law of another Member State. Compared to the high record of 2018, where over 190 000 justice professionals received training on EU law, in 2019 there is a slight decrease in the total number of participants however, participation remained at a steady high level. In 2019, 10 799 justice professionals were trained through the Justice Programme's financial support via cross-border training activities and the European Judicial Training Network (EJTN). The European Judicial Training Network trained or facilitated the training of a record number of 7 349 judges and prosecutors, judicial trainers and trainees from all EU Member States. The training activities have been organised in an increasingly efficient manner – its 'cost-to-serve' ratio (i.e., the price per person for one training day offered in Europe) decreased every year from 630 EUR in 2007 to 307 EUR in 2018 thanks to improvements in its administrative and financial management. In 2019, the Justice Programme funded the creation of an awareness raising package on the European Public Prosecutor's Office, for the information of the legal practitioners and for re-use by their training providers <sup>(5)</sup>. The Justice Programme also funded the creation by the EJTN of judicial training material <sup>(6)</sup> and of a publication by practitioners and academics on the rule of law <sup>(7)</sup>.

#### *Specific objective 3: Access to justice*

The Justice Programme has contributed to the effective and coherent application of EU criminal law in the area of the rights of victims of crime, e.g. Council Directive 2004/80/EC relating to compensation to crime victims, Directive 2011/99/EU in the European Protection Order, Directive 2012/29/EU establishing minimum standards on the rights, support and protection of victims of crime, and Regulation (EU) 606/2013 on mutual recognition of protection measures in civil matters. Via the 2014-2020 annual

<sup>(2)</sup> A study feeding into the 2016 Commission Report on the activities of EJN-civil, found that 96 % of professionals felt that EJN was successful in facilitating judicial cooperation between judicial authorities. Also, to-date EJN-civil has contributed to the European e-Justice Portal with 10 695 individual pages of practical information on national laws of the Member States relevant to the civil and commercial law acquis through 22 public factsheets, as well as with 16 guides on EU law. During the study, 70 % of interviewees indicated that the practitioners' guides correspond to their needs and 60 % perceived their needs are met with the factsheets.

<sup>(7)</sup> 'Rule of Law in Europe – Perspectives from Practitioners and Academics': <http://www.ejtn.eu/News/Rule-of-Law-in-Europe-Perspectives-from-Practitioners-and-Academics/>

work programmes, 14.9 million euro were awarded to 50 projects aiming at capacity-building for professionals, multi-disciplinary cooperation, exchanges of good practices, dissemination and awareness-raising to give a few examples. Almost all of these projects involved cross-border cooperation. DG Justice and Consumer has also signed Framework Partnership and awarded operating grants to umbrella organisations that contribute to the implementation of the Victims' Rights Directive at European level, e.g. Victim Support Europe, the European Forum for Restorative Justice and more recently the Association of the European Network on Victims' Rights, which gathers national experts from Member States.

Similarly, the Justice Programme has supported the development and implementation of the measures related to the 2009 Roadmap on strengthening the procedural rights of suspects and accused persons in criminal proceedings (Directives on the right to interpretation and translation in criminal proceedings, on the right to information in criminal proceedings, on the right of access to a lawyer in criminal proceedings, on the strengthening of certain aspects of the presumption of innocence and of the right to be present at the trial in criminal proceedings, on procedural safeguards of children suspected or accused in criminal proceedings and on legal aid for suspects and accused persons in criminal proceedings). Via the 2014-2020 annual work programmes, 13.4 million euro were awarded to 40 projects aiming at capacity-building for professionals, mutual learning, exchanges of good practices, data collection, dissemination and awareness-raising, etc. Almost all of these projects involve cross-border cooperation.

DG Justice and Consumer has also signed Framework Partnership Agreements and awarded operating grants to judicial networks active at European level, e.g. European Network of Councils for the Judiciary, the Network of the Presidents of the Supreme Judicial courts of the European Union, the Association of the Councils of State and Supreme Administrative Jurisdictions. These networks are essential to promote the EU policy on rule of law and on justice reforms and to collect data on structural judicial independence, which is a precondition for effective access to justice. The data collected by the networks have been used in every EU Justice Scoreboard – an annual information tool with comparable data on the independence, quality and efficiency of national justice systems – since 2014.

The Justice Programme has also financed the cooperation between the European Commission and the Council of Europe's European Commission for the Efficiency of Justice (CEPEJ). CEPEJ collects data on the functioning of the justice systems of its members according to its well-established and recognised methodology. This data has enabled the European Commission to successfully expand the EU Justice Scoreboard which is an information tool that helps the EU achieve more effective justice.

The Justice Programme finances the maintenance and extension of the European e-Justice Portal<sup>(8)</sup>, a joint initiative between the Commission and the Council of the EU, which provides a host of multilingual informational content, as well as a number of electronic services, such as interconnections of national registers. Over time, the e-Justice Portal has evolved to offer increased and wider content, also incorporating results and tools developed under other projects funded via the Justice Programme, to become a one-stop shop for citizens, businesses, legal professionals and the judiciary. Since 2016, the Portal has been enhanced with a large-scale search engine for European and national case law (the ECLI Search Engine) and now provides a search functionality allowing decentralised lookups in Member States' business and commercial registers. In 2020, the number of hits by users – more than 4 million – showed close to a ten-fold increase compared to the 2012 baseline.

### 3.3. Evaluations, studies and reports

The key findings of the interim evaluation of the implementation of the Justice Programme 2014-2020 which started in 2017 and was completed in 2018<sup>(9)</sup> have been presented in the Programme Statement 2020. The ex-post evaluation of the programme assessing the long-term impact and the sustainability of the effects of the Programme will be completed in 2021.

The evaluation of the 2011-2020 European judicial training strategy was adopted in 2019<sup>(10)</sup>. It shows that the strategy has contributed to increasing knowledge on EU law while reinforcing mutual trust between legal practitioners. The evaluation shows that most of the objectives -to increase the number of training participants, of training activities and of exchanges and to improve the capacities of the networks and training providers - were overall achieved. Its main objective, that half of all EU legal practitioners should attend training on EU law between 2011 and 2020, was already reached in 2017. The evaluation shows that the strategy led to an almost doubling of EU funds available for training legal practitioners and significant improvements in the capacity of networks and training providers. In terms of stakeholders, EJTN is the main platform and promoter for the training and exchange of knowledge of the European judiciary. The success of the strategy is also due to streamlined efforts of the Network. The evaluation results confirm the need to better reach some categories of justice professionals (court staff, lawyers, bailiffs) and further focus on topics such as the rule of law, fundamental rights, judgecraft and legal terminology. The need for new objectives (for e.g. qualitative ones) was noted. The indispensable character of the EU intervention and its clear benefits were largely acknowledged; in particular, the increase in cross-border training activities and judicial exchanges could not have been achieved without an EU intervention.

Justification of the trend	

## 5. Programme 2014-2020 - Key monitoring indicators

### Previous Program 1 : Justice Programme

## General Objective 1 :to contribute to the further development of a European area of justice based on mutual recognition and mutual trust, in particular by promoting judicial cooperation in civil and criminal matters

### Indicator 1:Cumulative number of legal professionals receiving training (not only through the Programme) on EU law or law of another Member State, including Civil Justice, Criminal Justice and Fundamental Rights

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
239 000			420 000	490 000			800 000			800 000
	Actual Progress									Final
	371 000	494 753	638 000	820 199	1 023 919	1 206 298				1 206 298

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of legal professionals trained (cumulative)
Cut-Off Date	09/02/2021
Data source	EC DG JUST
Narrative	In 2011, the European Commission set a target that by 2020 half (800 000) of all justice professionals in the EU should attend training on EU law or on the national law of another Member State. This goal was already reached in 2017, two years ahead of schedule.
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	In the MFF 21/27 we report on the participants to training funded by the programme (this indicator is not anymore foreseen in the legal basis nor in the performance framework).
Other methodological comments	
Full metadata available at this address	
Justification of the trend	In 2019, the number of trained justice professionals remained at a remarkable high level: more than 182 000 justice professionals or 12.9% of all EU justice professionals received training on EU law or on the law of another Member State. This represents a 138% increase in comparison with 2011. As in previous years, we can see a steady upward trend in the numbers of practitioners trained on EU law. This trend applies in 2019 especially to judges, prosecutors and court staff's training and to bailiffs' continuous training. However, in comparison with 2018 - an exceptional year - the reported figures show a decrease in the numbers of practitioners trained on EU law, mainly explained by a decrease of lawyers' EU law training. The data for 2020 will be available by June 2021.

## Specific Objective 1 :to facilitate and support judicial cooperation in civil and criminal matters

### Indicator 1:Average time of the surrender procedure (time between the arrest and the decision on the surrender of the person sought) under the European Arrest Warrant in cases where the person consents to the surrender

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2005-2013	Milestones									2020
14-20					14		10			10
	Actual Progress									Final
	19	14	16	15	16					

Are we on track	No data
Indicator type	Result
Unit of measurement	Number of days (yearly)
Cut-Off Date	31/12/2018
Data source	EC DG JUST and Member States
Narrative	The result of 2018 of 16,4 days was above the milestone of 14 days for 2018 (and also above the target for 2020). According to Article 17(2) of the Framework Decision on the EAW, in cases where the requested person consents to his surrender, the final decision on the execution of the EAW should be taken within a period of 10 days after consent has been given (this is why we have set the 2020 target to 10 days).
Methodology	This indicator is calculated on the basis of statistics we receive from the Member States.
Link MFF 14-20 / MFF 21-27	We will not continue to report on this indicator (neither in the draft Regulation nor in the performance framework).
Other methodological comments	
Full metadata available at this address	
Justification of the trend	This indicator is calculated on the basis of statistics we receive from the Member States, however, there is no legal obligation for them to provide this data and, consequently, we do not have the full picture (22 Member States provided replies). In 2018, the surrender procedure lasted on average 16,41 days after the arrest (14,99 days in 2017). The highest averages reported in some Member States were higher than in 2017. In 2018, the highest was 43 days for Denmark (a few cases took a very long time

	to process, which considerably increased the average) and 38 days for Slovakia. However, on the low side, the average was still 1 day in Malta (as in 2017), 3.5 days in Luxemburg and 4 in Hungary (against respectively 1 and 2 days in 2017). Delays in some Member States might be explained by additional requests for information, as a result of case law of the CJEU, in particular after the Aranyosi judgment of 2016 on detention conditions, as well as the LM judgment on independence of the judiciary in 2018. The statistics for 2019 would be published in June/July 2020.
--	---

### Indicator 2: Number of exchanges of information in the European Criminal Records Information System (ECRIS)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
300000	Actual Progress									Final
	1250000	1811546	1978104	2571991	2963789	4179614	4136249			4136249

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of exchanges in the system
Cut-Off Date	31/12/2020
Data source	EC DG JUST
Narrative	This indicator measures the level of judicial cooperation in criminal matters, which contributes to providing citizens with a high level of safety.
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	We will continue to report in the next MFF 21/27.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	With 2019 being the record year, the actual results outperformed compared to the set milestones demonstrating an improvement in the impact of the programme's actions in this field. There is a consistently positive trend since: a) the number of bilateral ECRIS connections allowing to exchange data between Member States increases every year; b) Member States use the system more often, also in the context of non-criminal proceedings (more and more legal instruments include obligation to check certain information through ECRIS).

### Specific Objective 2 :to support and promote judicial training, including language training on legal terminology, with a view to fostering a common legal and judicial culture

#### Indicator 1: The number and percentage of members of the judiciary and judicial staff that participated in training activities, staff exchanges, study visits, workshops and seminars funded by the Programme

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number	Milestones									2020
	Actual Progress									Final
	11724	16123	13930	16439	18358	10799				
Percentage	Milestones									
	Actual Progress									Final
	0,0082	0,0099	0,0086	0,0102	0,0114	0,0067				

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Number and percentage of participants to training
Cut-Off Date	09/02/2021
Data source	EC DG JUST
Narrative	The indicator measures the number and percentage of members of the judiciary and judicial staff that participated in training activities, staff exchanges, study visits, workshops and seminars funded by the Programme including those organised by the European Judicial Training Network;
Methodology	Data collected from the grants applications and contracts
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	The percentage is the ratio between the number of supported participants and the total number of legal practitioners in the EU (Source of data: 2018 CEPEJ Report).
Full metadata available at this address	
Justification of the trend	The reversed trend in 2019 is due to less awarded projects for European judicial training and less

	planned number of participants per awarded project under the 2019 calls for proposals of the Justice programme in comparison with 2018. The data for 2020 (based on the action grant calls which include training activities) will be available by June 2021 following the preparation of the annual report on European judicial training.
--	--

### Specific Objective 3 :to facilitate effective access to justice for all, including to promote and support the rights of victims of crime, while respecting the rights of the defence

#### Indicator 1: Number of hits on the e-justice portal

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
441000	992250	1488375	2232563	2679075	3214890	3857868	4629442			4629442
	Actual Progress									Final
	1136849	1751180	1884600	2690574	2962558	4343547	4619548			4619548

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of hits on the portal
Cut-Off Date	11/02/2021
Data source	EC DG JUST
Narrative	The actual results outperformed compared to the set milestones demonstrating an improvement in the impact of the programme's actions in this field.
Methodology	Target: (+20% per year)
Link MFF 14-20 / MFF 21-27	We will continue to report on this indicator. In the draft Regulation "Number of hits on the e-Justice portal / pages addressing the need for information on cross-border civil and criminal cases". This indicator will address the need of information on cross-border civil matters as well as of the level of relevance of these e-pages favouring a larger and easier access to justice by citizens.
Other methodological comments	As of 2017, the data are obtained from a new tool for website statistics tracking, with a different calculation method. The targets for period 2014-2016 were adjusted to the new calculation method. The table above provides data according to different calculation methods.
Full metadata available at this address	
Justification of the trend	The number of hits on the e-Justice Portal has been increasing steadily over the years. The only divergence was registered in 2018, due to a change in the corporate system for gathering statistics. The new system was introduced in 2017 and registers hits based on a different algorithm, which resulted in a discrepancy of 20-30 %. The 2020 target is practically reached. Between 2020 and 2019, we don't have the estimated increase of +20%, however we are on track vs. the final target and comparison to the baseline 2012.

#### Indicator 2: Number of Victim Support Organisations with national coverage (implementation of Directive 2012/29/EU)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
10				27			27			27
	Actual Progress									Final
	20	22	22	27	27	27	27			27

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of victim organisations with national coverage
Cut-Off Date	21/12/2020
Data source	Fundamental Rights Agency report on Victims of crime in the EU: the extent and nature of support for victims.
Narrative	The indicators should be developed by the VSO and/or Member States and should include inter alia an appropriate geographical coverage of the country and a necessary training of the staff. The Victims' Rights Directive is not applicable to Denmark.
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	We will not report on this indicator. For the new MFF, the indicator will measure the number of Civil society organisations reached by support and capacity building activities.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The target to have at least one VSO in each Member State fulfilling the quality standards/indicator was reached in 2018 and there is no point of calculating the percentage after this date. We may consider the objective has already been reached.

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

#### **6.4.1. Tracking and estimates**

2021 estimates	2022-2027 programming					Total	
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.4.2. Key achievements and performance**

In all calls for proposals under the Justice Programme the projects shall seek to promote equality between women and men. This is required by the Article 5 of the Regulation (EU) 1382/2013 establishing a Justice Programme 2014-2020. When planning the project, the applicants should demonstrate in their proposal how this will be respected at implementation stage (gender mainstreaming aspects are considered while assessing the quality of the proposed action). Beneficiaries are required to detail in their final activity report the steps and achievements they made towards meeting this requirement.

Moreover, during proposal evaluation, the pool of evaluators is required to have a reasonable gender balance. Briefing material provided to the evaluators specifies that:

- *Gender mainstreaming* means integrating a gender perspective in the design, implementation, monitoring and evaluation of a project as appropriate. A project must not silence, stereotype, stigmatise, lay the blame or discriminate against men or women. On the contrary, measures should be pro-active and contribute to the equal empowerment of both genders, and ensure that they achieve their full potential, enjoy the same rights and opportunities. Gender mainstreaming goes beyond counting the number of women and men in a room. Rather, gender mainstreaming addresses the gender inequalities that are at the core of a project, policy or process, leading to more gender-sensitive actions.
- The project shall endeavour to build capacity within the project team and among stakeholders to ensure the continued integration of a gender perspective within the area of intervention after the project ends. In the delivery of project activities gender mainstreaming shall be ensured by:
  - Collecting sex disaggregated data to track gender equality results and assess gender impacts.
  - Monitoring access, participation, and benefits among women and men and incorporate remedial action that redresses any gender inequalities in project implementation.
  - Regularly reporting on how gender is mainstreamed and ensure that evaluations integrate gender-specific evaluation questions.

### **6.5. Contribution to the sustainable development goals**

#### **6.5.1. Goals**

*SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels*

Through the Justice Programme's financial support to cross-border training activities and to the European Judicial Training Network (EJTN), 10799 justice professionals participated in judicial training programmes in 2019 thereby fostering a common legal and judicial culture.

Under the Justice programme about 10 new projects promoting access to justice are awarded each year for a total budget of 3 - 3.5 million EUR.

## 1. Overview

### 1.1. Challenges

The EU aims at promoting peace and the well-being of its people. It is founded on the values of respect for human dignity, freedom, democracy, equality, the rule of law and respect for human rights, including the rights of persons belonging to minorities.

To live up to its vocation, the EU needs to remember and learn from its history and to involve people in strengthening democratic societies. Yet emerging movements challenge the idea of open, inclusive, cohesive and democratic societies and threaten the enjoyment of rights and civic participation. In this context, the Citizens, Equality, Rights and Values (CERV) Programme responds to persisting gaps and emerging challenges:

- Inequalities and discrimination on the grounds of sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation still persist. Data show that discrimination against LGBTI<sup>1</sup> people, Roma<sup>2</sup>, persons with disabilities<sup>3</sup>, elderly people or, on the ground of religion<sup>4</sup>, as well as violence against women<sup>5</sup> and children, in the society and in the labour market, still persist; racism, xenophobia and hate speech are often amplified by the use of social network and new technologies; sensitive social and societal issues related to religion and beliefs are rising up in parallel. Significant gender inequalities persist<sup>6</sup>.
- More needs to be done to raise citizens' awareness of the values of the EU and the benefits of EU citizenship, to increase knowledge of the EU, its history, cultural heritage and diversity and to encourage a higher level of political and societal participation ;
- The rights stemming from EU citizenship are still not fully implemented, thus hindering citizens' political and societal participation.
- Economic crises, rising inequalities and new or persisting challenges such as of migration, nationalism and populism have led some people to question the fundamental rights and the values on which the EU is founded, including the rule of law, access to justice, space for civil society and the independence of the judiciary.

These challenges could jeopardise democracy and fundamental rights. Furthermore, they are common to all Member States and have cross-border dimensions. While action at national level is important, individual Member States do not have sufficient leverage to tackle these challenges. Therefore, concerted efforts at EU level are required.

<sup>1</sup> [http://ec.europa.eu/justice/discrimination/files/thematic\\_factsheet\\_lgbt\\_en.pdf](http://ec.europa.eu/justice/discrimination/files/thematic_factsheet_lgbt_en.pdf)

<sup>2</sup> <http://fra.europa.eu/en/publication/2016/eumidis-ii-roma-selected-findings>

<sup>3</sup> In 2016, a majority of respondents to a public consultation considered that people with disabilities cannot fully participate in society, do not enjoy the same rights as other citizens and face discrimination. The results of this public consultation were analysed in the Commission Staff Working Document, "Progress Report on the implementation of the European Disability Strategy (2010-2020)", SWD(2017) 29 final of 2.02.2017.

<sup>4</sup> [http://ec.europa.eu/justice/fundamental-rights/files/factsheet\\_eurobarometer\\_fundamental\\_rights\\_2015.pdf](http://ec.europa.eu/justice/fundamental-rights/files/factsheet_eurobarometer_fundamental_rights_2015.pdf)

<sup>5</sup> One in three women in the EU have experienced physical and/or sexual violence since the age of 15.; Fundamental Rights Agency (2014), Violence against women: an EU-wide survey [http://fra.europa.eu/sites/default/files/fra-2014-vaw-survey-main-resultsapr14\\_en.pdf](http://fra.europa.eu/sites/default/files/fra-2014-vaw-survey-main-resultsapr14_en.pdf).

<sup>6</sup> The current context is characterised, for instance, by an unequal participation of women and men in the labour market.

## 1.2. Mission (general objectives)

CERV will be a key instrument of the EU to protect and promote rights and values as enshrined in the EU Treaties, the EU Charter of Fundamental Rights and in the applicable international human rights conventions.

In particular, it will support civil society organisations and other stakeholders active at local, regional, national and transnational level, encourage civic democratic participation, in order to sustain and further develop open, rights-based, democratic, equal and inclusive societies based on the rule of law.

## 1.3. Specific objectives

Programme objectives

1. The general objective of the Programme is to protect and promote rights and values as enshrined in the Treaties, the Charter and in the applicable international human rights conventions, in particular by supporting civil society organisations and other stakeholders active at local, regional, national and transnational level, and by encouraging civic and democratic participation, in order to sustain and further develop open, rights-based, democratic, equal and inclusive societies based on the rule of law.

2. Within the general objective set out in paragraph 1, the programme has the following specific objectives which correspond to strands:

- (-a) to protect and promote Union values (Union values strand),
- (a) to promote rights, non-discrimination, equality, including gender equality, and advance gender and non-discrimination mainstreaming; (Equality, Rights and Gender Equality strand),
- (b) to promote citizens engagement and participation in the democratic life of the Union and exchanges between citizens of different Member States and to raise awareness of the common European history (Citizens' engagement and participation strand),
- (c) to fight violence, including gender-based violence (Daphne strand).

Union values strand

Within the general objective set out in Article 2(1) and within the specific objective set out in point (-a) of Article 2(2), the Programme shall focus on protecting, promoting and raising awareness on rights by providing financial support to civil society organisations active at local, regional and transnational level in promoting and cultivating these rights, thereby also strengthening the protection and promotion of Union values and the respect for the rule of law and contributing to the construction of a more democratic Union, democratic dialogue, transparency and good governance.

Equality, Rights and Gender Equality strand

Within the general objective set out in Article 2(1) and within the specific objective set out in point (a) of Article 2(2), the Programme shall focus on:

- (a) promoting equality and preventing and combating inequalities and discrimination on grounds of sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation and respecting the principle of non-discrimination on the grounds provided for in Article 21 of the Charter;
- (b) supporting, advancing and implementing comprehensive policies
  - (i) to promote women's full enjoyment of rights, gender equality, including work-life balance, women's empowerment and gender mainstreaming;
  - (ii) to promote non-discrimination and its mainstreaming;
  - (iii) to combat racism, xenophobia and all forms of intolerance including homophobia, biphobia, transphobia and interphobia and intolerance on the basis of gender identity, both online and offline;
  - (iv) to protect and promote the rights of the child;
  - (v) to protect and promote the rights of persons with disabilities;
- (c) protecting and promoting Union citizenship rights and the right to the protection of personal data.

### Citizens engagement and participation strand

Within the general objective set out in Article 2(1) and within the specific objective set out in point (b) of Article 2(2), the Programme shall focus on:

- (a) supporting projects aimed at commemorating defining events in modern European history, including the causes and consequences of authoritarian and totalitarian regimes, and at raising awareness among European citizens, of their common history, culture, cultural heritage and values, thereby enhancing their understanding of the Union, its origins, purpose, diversity and achievements and of the importance of mutual understanding and tolerance;
- (b) promoting citizens and representative associations' participation in and contribution to the democratic and civic life of the Union by making known and publicly exchanging their views in all areas on Union action;
- (ba) promoting exchanges between citizens of different countries, in particular through town-twinning and networks of towns, so as to afford them practical experience of the wealth and diversity of the common heritage of the Union and to make them aware that these constitute the foundation for a common future;

### Daphne strand

Within the general objective set out in Article 2(1) and within the specific objective set out in point (c) of Article 2(2), the Programme shall focus on:

- (-a) preventing and combating at all levels all forms of gender-based violence against women and girls and domestic violence, also by promoting the standards laid down in the Council of Europe Convention on preventing and combating violence against women and domestic violence (the Istanbul Convention); and
- (a) preventing and combating all forms of violence against children, young people, as well as violence against other groups at risk, such as LGBTIQI persons and persons with disabilities;
- (b) supporting and protecting all direct and indirect victims of such violence, such as domestic violence exerted within the family or violence in intimate relationships, including children orphaned by domestic crimes, and supporting and ensuring the same level of protection throughout the Union for victims of gender-based violence.

In pursuing its mission, CERV targets the following specific objectives, which correspond to action strands:

1. CERV contributes to protecting and promoting Union values (Union Values strand) by providing financial support to civil society organisations active at local, regional and transnational level.
2. CERV aims to promote equality and rights (Equality, Rights and Gender Equality strand). In particular, it contributes to preventing and combating inequalities and discrimination on grounds of sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation. It supports the development of comprehensive policies to promote gender equality and anti-discrimination and their mainstreaming as well policies to combat racism and all forms of intolerance. Moreover, CERV contributes to protecting and promoting the rights of the child, the rights of people with disabilities, EU citizenship rights and the right to the protection of personal data;
3. CERV promotes citizens engagement and participation in the democratic life of the EU (Citizens' engagement and participation strand). In particular, CERV contributes to increasing citizens' understanding of the EU, its history, cultural heritage and diversity. In addition, it promotes exchange and cooperation between citizens of different countries as well as citizens' civic and democratic participation allowing citizens and representative associations to publicly exchange their views in all areas of EU action
4. It contributes to the fight against violence, including gender-based violence (Daphne strand). In particular, CERV contributes to preventing and combating all forms of violence against children, young people and women, as well as violence against other groups at risk. Furthermore, it contributes to supporting and protecting victims of such violence.

## 1.4. Public intervention context

The policy challenges identified and addressed by the CERV programme are common to all EU Member States and have cross-border dimensions. While action at national level is important, the single Member States do not have sufficient leverage to tackle these challenges. The promotion and protection of rights and values require transnational cooperation mechanisms and networking opportunities, which can typically not be achieved by Member States acting alone. In that respect, action at EU level is needed following the subsidiarity principle and the principle of shared competences between EU and Member States in the area of freedom, security and justice (Article 4 of the TFEU). In many areas, such as equality and non-discrimination or citizenship, individuals are protected by European legislation, but are not sufficiently aware about their rights. Only awareness raising actions, share of best practices and training at EU level can ensure that persons in all Member States are reached, that administrative structures/authorities are informed and that a consistent message is passed on. Moreover, Member States are not in the best position to ensure consistent interpretation and coherent application of legislative instruments throughout the EU. In the area of rights,

equality and, in particular, in combatting violence against women, there is EU-added value to work with national authorities and all stakeholders to find adequate solutions to remaining challenges at European level. EU funding is crucial to support civil society directly.

The programme will ensure consistency, complementarity and synergies with other funding programmes supporting policy areas with close links to each other, in particular with the Justice programme, Erasmus+ programme, the European Social Fund+ as well as with Creative Europe programme. Synergies will be explored and created with other European funding programmes, in the fields of employment and fight against social exclusion, youth, health, citizenship, justice, migration, security, research, innovation, external relations and sustainable development.

The programme supports the implementation of many Commission's strategic policy initiatives, such as the EU anti-racism action plan 2020-2025<sup>7</sup>; the LGBTIQ Equality Strategy 2020-2025<sup>8</sup>; the EU Roma strategic framework on equality, inclusion and participation<sup>9</sup>, the Gender Equality Strategy 2020-2025<sup>10</sup>, the forthcoming EU Strategy on combating antisemitism and fostering Jewish life; EU Strategy on the rights of the child and EU disability strategy. The programme is also fully in line with the political priorities of the Commission, as highlighted in the European democracy action plan<sup>11</sup>, Rule of Law report<sup>12</sup> and the Strategy to strengthen the application of the Charter of Fundamental Rights in the EU<sup>13</sup>.

## 1.5. Actions

CERV supports a wide range of organisations that play an important role at EU, national and local level for promoting and protecting EU values and rights.

This includes non-governmental organisations at local, national and transnational level as well as European networks, public administration including the equality and human rights bodies, national, regional and local authorities and institutions.

The CERV funds actions that:

- Increase awareness of rights, values and principles underpinning the EU as well as of EU culture, and history;
- Increase knowledge of EU law and policies as well as of potential obstacles to the exercise of rights and principles guaranteed by the EU Treaties, the EU Charter of Fundamental Rights, international conventions to which the EU has acceded, and secondary EU legislation;
- Increase capacity to act in order to better implement EU law instruments and policies in the Member States;
- Foster cross-border cooperation, exchange and debate, improving mutual knowledge, mutual understanding and enhancing mutual trust among all stakeholders.

Main activities supported by the programme are:

(a) awareness raising, promotion and dissemination of information to improve the knowledge of the rights and values and policies, within the areas and objectives covered by the Programme;

(b) mutual learning through the exchange of good practices among stakeholders to improve knowledge and mutual understanding;

(c) analytical monitoring activities to improve the understanding of the situation in Member States and at Union level in the areas covered by the Programme as well as to improve implementation of EU law, policies and Union values within Member States, such as activities to include for instance the collection of data and statistics; the development of common methodologies and, where appropriate, indicators or benchmarks; studies, research, analyses and surveys; evaluations; impact assessment; the elaboration and publication of guides, reports and educational material;

(d) training relevant stakeholders to improve their knowledge of the policies and rights in the fields covered by the Programme;

(e) information and Communication Technology (ICT) tools development and maintenance;

(e a) supporting civil society organisations and non-profit stakeholders active in the areas of the Programme to increase their capacity to react and to ensure adequate access for all citizens to their services, counselling and support activities;

(e b) supporting civil society organisations and non-profit stakeholders active in the areas of the Programme to carry out advocacy activities to promote rights, thereby also strengthening the protection and promotion of Union values and the respect of the rule of law and contributing to democratic dialogue, transparency and good governance, including in cases of shrinking space for civil society;

(f) strengthening awareness among citizens, especially young people, of European culture, cultural heritage, identity and history including with regard to totalitarian and authoritarian regimes and other defining moments of recent European history so as to

<sup>13</sup> [Strategy to strengthen the application of the Charter of Fundamental Rights in the EU](#)

strengthen remembrance and European citizens' commitment to the Union and to encourage tolerance, mutual understanding, intercultural dialogue and respect for diversity;

(g) bringing together citizens of different nationalities and cultures by giving them the opportunity to participate in town-twinning activities and civil society projects, thus creating the conditions for a stronger bottom-up approach and fostering civic and democratic engagement;

(h) encouraging and facilitating active and inclusive participation in the construction of a more democratic Union, as well as raising awareness on rights and values through support to civil society organisations;

(j) developing the capacity of European networks to promote and further develop Union law, values, policy goals and strategies;

(k) financing the technical and organisational support to implement Regulation [(EU)No 211/2011], replaced, as of 1 January 2020, by the Regulation (EU) 2019/788, thereby underpinning the exercise by citizens of the right to launch and support European citizens' initiatives;

(l) enhancing knowledge of the Programme and dissemination and transferability of its results and fostering outreach, including by setting up and supporting programme contact points;

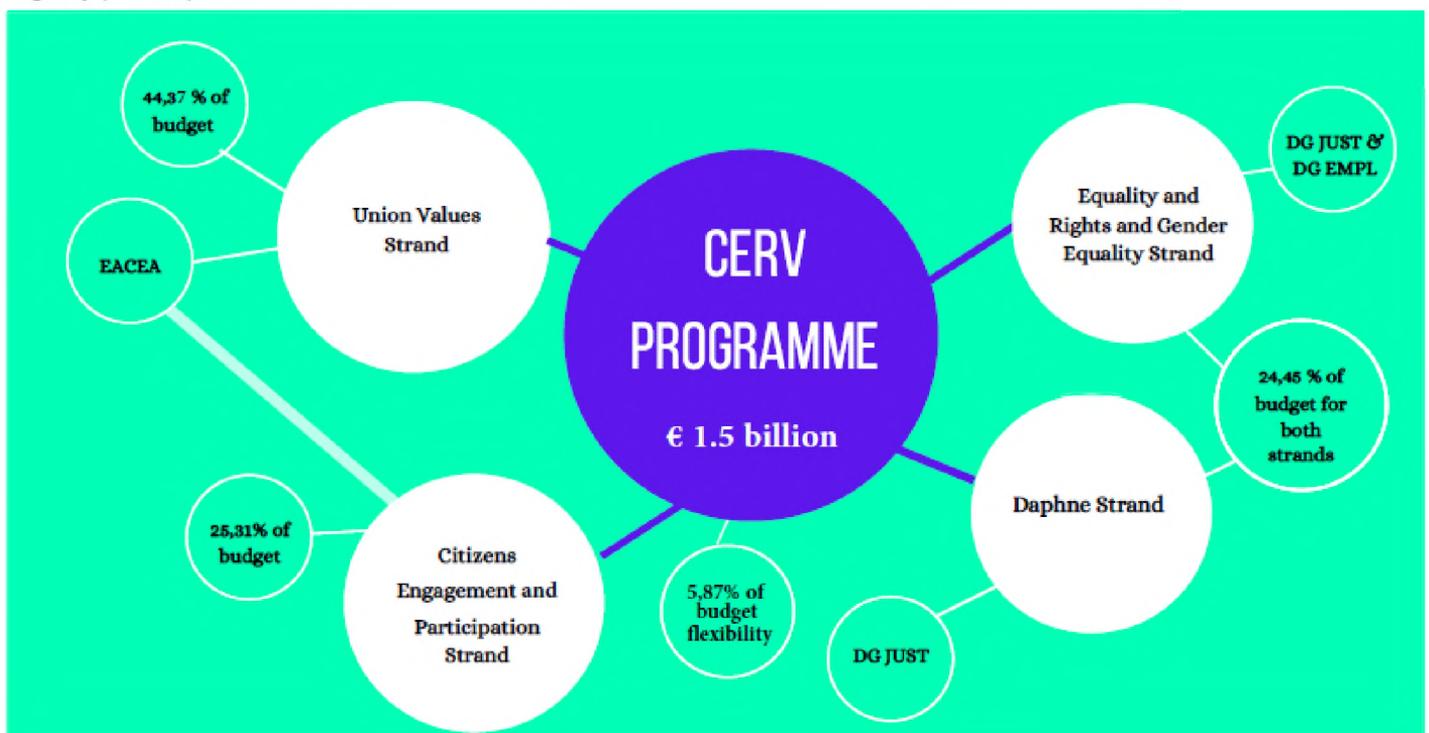

## 1.6. Delivery mode

The programme will be implemented through direct management by the Directorate-General for Justice and Consumers (DG JUST). In particular, the implementation of actions under the specific objective to protect and promote the rights of persons with disabilities will be managed by the Directorate-General for Employment, Social Affairs and Inclusion (DG EMPL). The Commission delegates powers to implement actions in the Citizens engagement and participation strand and in the Union values strand to the European Education and Culture Executive Agency (EACEA).

## 1.7. Graphic overview of the programme structure

# Citizens, Equality, Rights and Values Programme

The implementation of actions is directly managed by the Directorate-General of Justice and Consumers (DG JUST). In particular, the implementation of actions under the specific objective to promote and protect the rights of persons with disabilities is managed by the Directorate-General of Employment, Social Affairs and Inclusion (DG EMPL). The Commission delegates powers to implement actions in the Citizens engagement and participation strand and in the Union values stand to the European Education and Culture Executive Agency (EACEA).

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Procedure 2018/0207/COD COM (2018) 383: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the Rights and Values programme	2021 - 2027	648,3

### 1.8.2. Legal basis explanation

Programme	Legal Basis	Content
Citizens, Equality, Rights and Values programme	Art. 16(2) - Data protection Art. 19(2) - Non-discrimination Art. 21(2) - EU citizenship rights Art. 24 - European Citizens' Initiative Art. 167 - Culture Art.168 - Public health	In line with its legal basis, the CERV programme promotes equality and Union values, while combats discrimination and gender-based violence, empowering people so that they can enjoy the rights conferred on them by the Treaty on the Functioning of the European Union (TFEU), the Treaty on European Union (TEU), the Charter of Fundamental Rights of the European Union.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>97,2</b>	<b>209,4</b>	<b>91,8</b>	<b>92,1</b>	<b>92,2</b>	<b>92,2</b>	<b>91,5</b>	<b>766,3</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The 2021-27 CERV programme is the result of merging two former funding programmes<sup>14</sup>, namely the Rights, Equality and Citizenship programme and the Europe for Citizens programme, which had both a strong societal focus and were clearly related to the promotion of rights and EU values.

This grouping is expected to bring more visibility, simplification, and mutual reinforcement. While CERV increases the potential of the EU to promote and protect values by developing synergies between previous funding programmes, it acknowledges and maintains the specificities of the single policies. A novelty introduced in the programme is the new Union Values strand that will specifically provide support to civil society organisations active at local, regional and transnational level, strengthening the protection and promotion of Union values and the respect for the rule of law.

<a href="#">Budget line 07 06 04: Protect and promote Union values</a>	30 678 133	91 787 552

<sup>14</sup> In the Multiannual Financial Framework 2014-2020.

<b>TOTAL</b>	90 564 152	200 822 000
--------------	------------	-------------

### *Promote equality and rights*

The work programme envisages several calls for proposals to (i) promote equality, tackle discrimination and improve responses to racism and xenophobia in the form of hate speech and hate crime, both on- and offline; (ii) promote equal participation/representation of women and men in decision-making in politics/economics and tackle gender stereotypes; (iii) protect the rights of the child in response to the current situation and address the needs of children arising from the impact of Covid-19; (iv) support the implementation of the GDPR Regulation.

### *Promote citizens engagement and participation in the democratic life of the Union*

Calls for proposals are foreseen in this strand as well. In the area of European remembrance, the Commission will support projects aimed at commemorating defining events in modern European history, including the causes and consequences of authoritarian and totalitarian regimes and Holocaust remembrance. In the area of citizens participation, the Commission will promote citizens' civic and democratic participation, giving citizens and representative associations the possibility to participate in and contribute to the democratic and civic life of the Union. In the area of town-twinning and networks of towns, the Commission will promote exchanges between citizens of different countries, with the aim of reinforcing mutual understanding and tolerance and of giving them the opportunity to broaden perspectives and to develop a sense of European belonging and European identity.

### *Daphne*

Each year, a call for proposals will support activities on preventing and combating gender-based violence, including online violence. Violence against children will also be addressed, to contribute to the strengthening of child protection systems.

### *Protect and promote Union values*

Funds will support organisations which contribute to make our common values, rights and equality and rich diversity alive and vibrant. The ultimate objective is to nurture and sustain a rights-based, equal, open, pluralist, inclusive and democratic society. In particular, two calls for proposals are envisaged for the capacity building of civil society organisations.

## 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

### Cumulative implementation rate for the Rights, Equality and Citizenship programme for 2014-2020:

	Commitments	Payments
Implementation Voted budget	432 520 207	323 193 841
Implementation Carry-overs	0	2 160 239
Implementation total	432 520 207	325 354 080
total envelop*	435 301 100	
cumulative implementation rate	99%	75%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

### 99 % in CA and 75 % in PA

In years 2014-2017, the year N implementation gradually increased to approach Payment execution close to 70%. As of year 2018 the year N implementation gradually improved to reach Commitments execution is close to 100% and Payments execution above 95%. In 2018 we put in place a plan (see Ares(2020)1125176) to gradually increase the percentage of year N implementation of the programme. This included among others: the adoption of the work programme and publishing of the calls for proposals at the end of year N-1, a careful follow-up of the evaluation and granting planning, as well as, increased communication efforts on the funding opportunities under the programme. All these measures were only partially in place during the early years of the programme implementation which resulted for those years to a lower implementation rate in year N. These measures were gradually introduced during the programming period and allowed to pass from a lower implementation rate in year N at the beginning of the period to a higher one in the last years of the programming period.

In 2020, 98 % of commitment appropriations were implemented according to the final budget and covering all objectives of the Rights, Equality and Citizenship programme. 96 % of the payment appropriations were consumed, covering pre-financing and final payments on pre-2020 commitments still outstanding and 2020 commitments.

In 2021, the payment appropriations will be used to cover pre-financing on 2021 commitments and final payments on pre-2021 commitments still outstanding.

As regards 2022, the payment appropriations will be used to cover final payments on pre-2022 commitments still outstanding and pre-financings on 2022 commitments.

Due to the Covid-19 crisis, the deadline of all calls for proposals for action grants, originally planned for the course of the month of April 2020, was extended by two weeks, with the good result of having received a number of applications in line with past years. However, many individual beneficiaries of the REC programme contacted DG JUST to seek solutions to the COVID-crisis related difficulties such as the necessity to cancel or postpone long planned activities such as conferences, meetings, missions or launching events for studies undertaken under their EU grant. For all the cases, DG JUST found solutions to accommodate beneficiaries on a case-by-case basis and to ensure, via individual contract amendments, that their grant would continue despite the lockdown-related difficulty or impossibility to execute the work programmes as defined in the grant agreements. A total of 262 amendments were signed in 2020 compared to 96 in 2019.

### Cumulative implementation rate for the Europe for Citizens programme for 2014-2020:

	Commitments	Payments
Implementation Voted budget	195 291 160	156 634 931
Implementation Carry-overs	0	1 187 332
Implementation total	195 291 160	157 822 263
total envelop*	195 501 935	
cumulative implementation rate	100%	81%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

#### 100 % in CA and 81 % in PA

In 2020, 100 % of commitment appropriations were implemented by the EACEA according to the final budget and covering both strand of the Europe for Citizens programme. 100 % of the payment appropriations were consumed, covering pre-financing and final payments on pre-2020 commitments still outstanding and 2020 commitments.

In 2021, the payment appropriations will be used to cover pre-financing on 2021 commitments and final payments on pre-2021 commitments still outstanding.

As regards 2022, the payment appropriations will be used to cover pre-financing on 2022 commitments and final payments on pre-2022 commitments still outstanding.

The Europe for Citizens programme was affected by the COVID-19 crisis. By 9 April 2021, 271 amendment requests were submitted, most of them related to the extension of the eligibility period. This significant number of amendments signed following requests for extending the duration of contracts due to the COVID-19 crisis will mechanically lead to delayed budgetary execution of the corresponding payment credits.

## 3. How is the programme performing ?

### 3.1. Performance

#### 3.1.1. Introduction

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### 3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### 3.1.3. Previous programme performance

#### *Rights, Equality and Citizenship*

The Rights, Equality and Citizenship (REC) Programme provided around EUR 430 million in the period 2014-2020 in support of actions promoting justice and fundamental rights. These actions included trainings, seminars and mutual learning events, research

and studies, awareness raising and media campaigns to the ultimate benefit of EU citizens. The Programme succeeded in contributing to the further development of an area where equality and the rights of persons are promoted, protected and effectively implemented.

The REC Programme allowed for the implementation of policies that address essential needs in people's lives. It co-financed, since 2014 until 2020, more than 900 projects, to promote non-discrimination, the rights of the child, rights of persons with disabilities, EU citizenship rights and data protection, as well as to fight gender-based violence and intolerance. These projects supported trainings and capacity-building activities as crucial instruments to ensure that discrimination on the grounds of sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation was prohibited. The average contribution for a single project was around EUR 350.000, usually representing 80% of the total cost of the action. Belgium, Italy, Greece, Germany and Spain were the top participating country in the Programme.

During its period of implementation, more than 800 organisations across Europe received financial support from the Programme. Funding was distributed across different beneficiaries as 70% of the budget of the calls for proposals was granted to a one-time participation of an organisation. The beneficiaries were mostly civil society organisations and public authorities. Via trainings and the share of best practices, projects contributed to better implementation of existing EU legislation in the Member States, such as support for victims of hate crime and hate speech incidents as well as preventing and countering online hate speech. Through analytical studies, education and awareness raising activities, funded projects fostered the implementation of the code of conduct on countering illegal hate speech online agreed between the Commission and online platforms, as well as enhanced the understanding of the phenomenon and developed effective positive narratives.

Calls for proposals were in general highly successful, with a high number of applications received which in turn guaranteed a selection of good quality projects, for a full consumption of the budget available. In particular, three calls for proposals were outperforming, both in terms of quantity and quality: for actions to combat violence against women and children, to fight racism and to promote non-discrimination.

As evidenced by the interim evaluation report, the Programme has been relevant in contributing to the promotion of EU values, such as the respect for human dignity, fundamental rights, non-discrimination, tolerance, solidarity and gender equality and in reinforcing and supporting the development of a stronger EU citizenship. More than 80% of beneficiaries indicated that funding received was effective to a high extent, as the intervention strategy of the Programme was highly relevant in tackling and meeting the needs of its stakeholders and beneficiaries, e.g. in terms of knowledge development, training, awareness raising and structural support. In addition, over 70% of the Programme beneficiaries participating in the interim evaluation also considered that the Programme has been highly relevant and very effective in targeting the right policy areas and the most relevant target groups. In this context, the Programme provided support to legislative and policy processes for the EU accession to the Council of Europe Convention on preventing and combating violence against women, and supported the Commission's proposal for the women on boards Directive, funding trainings and awareness raising activities to improve gender balance in economic decision-making positions at all levels.

The Programme also supported 23-EU level network organisations that contributed to the promotion of justice, equality and fundamental rights across Europe. As umbrella networks, each representing between 10 and 600 grass-roots based organisations, they developed targeted communication campaigns, organized trainings and mutual learning activities, mobilizing activists to raise awareness on EU citizenship rights, to fight gender-based violence and strengthen data protection. For instance, networks were crucial in scaling-up the Programme funded awareness-raising campaign #SayNoStopVAW.

The main challenge for the last year of implementation of Rights, Equality and Citizenship Programme was ensuring the transition and visibility to the new Citizens, Equality, Rights and Values Programme (2021-2027). Another major challenge was the limited funds at disposal as compared to the increase of emerging needs from the ground. Overall, in these years, the Rights, Equality and Citizenship Programme has demonstrated its high EU added value both in its positive impact on participants and target groups and in its role as a complement to other EU funding instruments and policy initiatives. Projects were funded also by looking at the complementarity with other ongoing EU funded actions. In particular, the REC programme has shown a high added value as in absence of EU funding the projects carried out would not have taken place, due to lack of resources at national level. Interventions funded were seen as generating better results and more benefits than those funded through national/local interventions, mainly because their transnational dimension, the higher flexibility, and their higher quality and innovation as compared to projects funded at the national level. In the last year, due to the COVID-19 crisis, the Commission found solutions to accommodate REC beneficiaries on a case-by-case basis to ensure, via individual contract amendments, that their grant would continue despite the lockdown-related difficulty or impossibility to execute the work programmes as defined in the grant agreements.

### ***Europe For Citizens***

The Europe for Citizens programme played a positive overall role in encouraging civic participation and democratic engagement, while strengthening the sense of belonging together and supporting mutual understanding and identification with Europe, thereby helping to support the European integration process in the longer term. By working directly with citizens, the programme offered a forum for involving European citizens through a grassroots approach. In the area of European remembrance, the Europe for Citizens programme added value to the debates by encouraging exchange beyond national boundaries and promoting a European vision of history. Europe for Citizens offered a new approach through the development of activities linking remembrance with civic participation and democracy.

As evidenced by the mid-term evaluation, Europe for Citizens has successfully demonstrated its added value at EU level both in terms of its impact on participants and its complementary role to other EU funding programmes and policy initiatives in the fields of education, culture and EU citizenship. Aspects which have been identified for improvement mostly relate to increasing the programme's visibility, amending the monitoring indicators and strengthening the synergies with other relevant EU funding programmes and initiatives.

The analysis of the data obtained on the basis of indicators show that the Europe for Citizens programme achieved its objectives. In a challenging political, social and economic climate, the programme contributed to foster the civic engagement of citizens across Europe. It encouraged people to participate more actively in the development of the EU and promoted European fundamental values such as tolerance, solidarity and non-discrimination, through action and operating grants. A large number of projects directly addressed current political and societal issues such as migration, democracy and rule of law. The rise of Euroscepticism experienced over the years in the EU highlights the relevance of the programme and the need to encourage the development of a shared sense of European identity. Against this background, the programme offered a public forum giving people the opportunity to express their ideas about the future of Europe through a grassroots approach.

Through the European remembrance strand, the programme helped raise awareness of European historical memory and remembrance, including through the development of activities linking remembrance with civic participation and democracy in the broadest sense. In the area of town twinning, the programme achieved results by increasing and encouraging mutual understanding and friendship between citizens at a local level. Networks of towns complemented the traditional town twinning measure by offering towns and municipalities the opportunity to develop larger-scale projects with the aim of increasing their projects' impact and sustainability. The programme targeted civil society organisations through operating grants and civil society projects. The participation of stakeholder organisations in the programme influenced their perceptions of Europe. Most participating organisations noted positive effects on their knowledge of Europe and were committed to becoming more engaged with civil society.

In 2020, the Europe for Citizens programme was implemented all together in 33 eligible participating countries: 27 Member States and 6 other participating countries, i.e. Albania, Bosnia-Herzegovina, Montenegro, Serbia, Northern Macedonia and Kosovo.

Out of 1 761 applications received, 419 projects were selected, and around 1 250 000 participants were expected to be involved in the activities of the programme. The number of projects funded, as well as the number of participants that has been continuously increasing since 2014 suggests that the programme has contributed to the achievement of its general objectives.

For both strands, the available budget has been spent at a relatively even rate each year. The high number of direct and indirect participants reached by Europe for Citizens projects illustrates that the programmes has been effective at a relatively low cost. As regards sustainability of the programme's results, projects created long-lasting relationships between partners who in many cases continued to engage in further civic activities after the end of the project.

Since 2017, the 'Europe for Citizens' programme has greatly contributed to the implementation of the European Citizens' Initiative, fostering citizens' participation in the democratic life of the European Union. The programme has most notably supported the development and maintenance of the IT tools supporting the European Citizens' Initiative, as well the initiation and implementation of communication and guidance activities. The dedicated communication campaign to raise awareness of the European Citizens' Initiative led to a significant increase in the number of European citizens' initiatives compared to the years prior to the start of the campaign.

As indicated in section 2, the Europe for Citizens programme was affected by the COVID-19 crisis. This resulted in delays in implementing a certain number of projects. However, this should not impact the overall performance of projects. Where possible, projects changed their onsite events to online or hybrid meetings while staying in line with planned themes and content which impacted the schedule less heavily. For some projects however this was not an option and they had to delay the projects until sanitary conditions would allow for physical meetings in order to deliver quality results.

## 3.2. Key achievements

### *Rights, Equality and Citizenship*

31%	81%	27	96%	131
Percentage of women among non-executive directors on boards of listed companies (in 2020, from 16% in 2014)	Percentage of Europeans who consider themselves as well or very well informed of the rights they enjoy as citizens of the Union (in 2020, from 32% in 2014)	Number of Member States that set up structural co-ordination mechanisms with all stakeholders, including Roma, on the implementation of the National Roma	Percentage of people that consider that domestic violence against women is unacceptable (in 2018, from 84% in 2014)	Number of grants awarded to prevent and combat racism, xenophobia, homophobia and other forms of intolerance (in the period 2014-2020)

		Integration Strategies (in 2020)		
--	--	----------------------------------	--	--

*Specific Objective 1: to promote the effective implementation of the principle of non-discrimination on grounds of sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation, and to respect the principle of non-discrimination on the grounds, provided for in Article 21 of the Charter*

The Programme supported actions that aimed at promoting non-discrimination on the grounds of religion or belief, age, disability and sexual orientation, funding transnational activities and civil society organizations. It financed actions that supported the implementation of the LGBTI List of actions as well as numerous initiatives that promoted diversity management and contributed to the effective monitoring and enforcing of non-discrimination legislations. In particular, it also contributed to the promotion of Roma integration and fighting discrimination against Roma and antigypsyism through supporting the work of National Roma Platforms, National Roma Contact Points and civil society organizations active on the area of nondiscrimination and Roma integration. The Programme supported the activities of the European Network of Equality Bodies in order to strengthen the cooperation and exchange of information between the National Equality Bodies in promoting and protecting rights and implementing the EU anti-discrimination legislation, including Commission Recommendation on standards for equality bodies and to improve the collection of equality data.

The Programme financed more than 30 projects every year to combat discrimination on multiple grounds and promote equality. For instance, ‘TOY for Inclusion’, a project implemented in 2017-2018, has been successful in fostering social inclusion for Roma children and families, enhancing social cohesion and improving Roma children’s experience of transition to primary school. Eight community-based early childhood education and care play hubs were opened, building relationships between Roma and non-Roma young children and their families, where interaction is supported in safe play spaces across all generations. About 3.200 children took part in the play hub activities, out of which around 35% were of Roma origin, and about 80 workshops and info sessions were held, including parenting support, intergenerational activities, handcraft and toy-making.

*Specific objective 2: to prevent and combat racism, xenophobia, homophobia and other forms of intolerance*

Considering the worrying increase of intolerance in our societies, the Programme has helped advancing the Commission’s work on preventing and combating racism and xenophobia. It has served to strengthen the capacity of national authorities in improving responses to racist hate crime and hate speech online, as well as to better support victims. Since 2014, it has supported more than 135 projects that have contributed to preventing and countering racist speech online and racism in the media, fostering tolerance and mutual respect and dialogue. ‘Facing all the facts’, developed online training modules targeted at public authorities, ‘Good Practice Plus’ created a toolkit for law enforcement officials and prosecutors in the partner countries, and ‘EStAR’ successfully established a network of EU experts on victims’ support. The funded activities supported the protection of refugees and migrants against the surge of populism, extremism and intolerance.

In the last years of its implementation, the Programme contributed to the effective implementation of the Code of conduct on countering illegal hate speech online, as well as enhanced the understanding of the phenomenon and fostered positive narratives through education campaigns and awareness raising activities. Projects such as ‘INACH’ and ‘SCAN’ contributed actively to the Commission-led regular monitoring exercises on the implementation of the Code of conduct. The Programme assisted public authorities in developing a common methodology on collecting data on hate crime and hate speech. Ultimately, it supported the work of the Commission’s coordinators on combating Antisemitism and anti-Muslim hatred, with a view to increase resilience and empower individuals and communities, affected by manifestations of racism, xenophobia and other forms of intolerance.

*Specific objective 3: to promote and protect the rights of persons with disabilities*

The programme supported the implementation of the European Disability Strategy 2010-2020 and the preparation of the new strategy on the rights of persons with disabilities for the period 2021-2030. It notably aimed to help people with disabilities to travel more easily between EU countries (assessment of the European Disability Card) and raised awareness through the organisation of ad-hoc campaigns (for example on Discrimination in the workplace #EuvsDiscrimination) and annual events such as the European Day of Persons with Disabilities conference and the European Access City Award. The European Disability Card helps people with disabilities to travel more easily between EU countries, by putting in place a system of mutual recognition of disability status. The Card ensured an equal access to certain specific benefits, mainly in the areas of culture, leisure, sport and transport. By piloting this Card since 2016, the REC programme concretely contributed to a more equal and inclusive European Union.

Through the organisation of the Access City Award, the Programme recognised leading European cities in terms of accessibility, promoting cities that contribute(d) to improve accessibility following a ‘design-for all’ approach, so that everybody has equal access to all the resources and venues cities have to offer, regardless of their age or disability.

The Programme also provided every year operating grants to 7 major EU-level networks of disability organisations, such as the European Disability Forum and those organised by impairment groups, blind, deaf, etc. These networks implemented a wide range of activities, from awareness raising campaigns to building capacity to support the development of equality policies or disability indicators for data collection. In 2020, the Programme also awarded 3 action grants, funding EU-wide projects related to

employment, assistive technologies and persons with visual impairment. Overall, the Programme increased awareness and bettered the implementation of the rights of people with disabilities leading to a reduction of barriers, to their full participation in society and enjoyment of their rights.

*Specific objective 4: To promote equality between women and men and to advance gender mainstreaming*

Closing gender gaps and eliminating discrimination and inequalities are key to the advancement of gender equality. The Programme promoted gender equality on the basis of Strategic Engagement for Gender Equality 2016-2019, European Pact for Gender Equality (2011-2020) and in line with the gender pay gap action plan as well as the initiative on work-life balance for working parents and carers. Since 2014, it has supported more than 85 projects that contributed to narrowing gender gaps over the life cycle and ensured equal participation of women and men in public fora, in leadership positions, in politics and in the corporate sector. Funded projects fostered the implementation of EU gender equality policies, such as the Directive on work-life balance for parents and carers.

For instance, the project ‘WELP – Women’s Empowerment in Leadership Positions’ promoted gender balanced representation on corporate boards and high-level executive positions by empowering senior women at all levels, through activities improving their skills/knowledge. The project tracked the representation of women on the boards of the Euro 600 Index through the publication of an Index analysing and measuring progress or regress in these companies. Funding under this objective also aimed at tackling gender stereotypes in educational and career choices and addressing the unequal share of unpaid care work between women and men. In addition, the REC programme supported the annual activities of European Networks active in the area of equality between women and men. Within this frame, European Women’s Lobby undertook advocacy activities for the empowerment of women and girls and to reducing the gender inequalities in politics.

*Specific Objective 5: to prevent and combat all forms of violence against children, young people and women, as well as violence against other groups at risk, in particular groups at risk of violence in close relationships, and to protect victims of such violence*

Preventing and combating all forms of violence against women, young people and children – the most funded specific objective (known by the stakeholders as ‘Daphne’) has been a success for twenty years now, both in terms of its popularity and effectiveness of the funded actions. The protection and support standards for victims of violence have improved. This is observed indirectly through the higher reporting of violence in the Member States, the lower acceptance of violence in the society and better victims’ services in place.

The Programme has funded projects to raise awareness, to provide support services to victims, to support the activities of civil society organisations working on the ground. It has addressed all forms of violence, such as domestic violence, sexual violence, trafficking in human beings, stalking and traditional harmful practices such as female genital mutilation, as well as new emerging forms of violence such as cyber-bullying and online harassment. More than 30 grants were awarded every year. For example, the ‘We Go II Building Economic Independence: the way out of Intimate Partner Violence’ project aimed at supporting the economic empowerment of women survivors of intimate partner violence by strengthening the local and national support systems, exchanging European good practices and establishing cooperation networks between private and public stakeholders.

A social media campaign "#SayNoStopVAW" has been funded by the REC programme to raise awareness and take a clear stand against violence against women. The campaign’s dedicated website includes testimonials from funded projects, information material and contacts to national support services. Through the campaign, the Commission reached out to target groups and stakeholders both directly and through social media promotion. Overall, the funded projects helped protecting and supporting the most vulnerable victims of violence through developing empowerment and intervention programmes that equipped women and men with the tools to call out and stand up to violence as bystanders and become role models in the fight against gender-based violence. Perpetrators of violence were also supported through prevention programmes in order to prevent them from offending again.

*Specific objective 6: to promote and protect the rights of the child*

The Programme strongly promoted the rights of the child as well as the prevention of and responses to violence against children. Actions in the area of the rights of the child have supported the promotion of child-friendly justice and, in particular, the protection of vulnerable children (like children leaving foster care systems and children in conflict with the law), through capacity building activities for integrated child protection systems. For instance, the project ‘Promise II’ contributed to adopting Barnahus standards in providing support to child victims and witnesses of violence in many EU Member States. Funding for protecting the rights of the child was also focused on child participation in the EU democratic and political life. The Programme supported the design and the implementation of different mechanisms and structures that ensured the rights of children were considered in the decision-making process, particularly on issues that matter to them.

Thanks to its flexibility, the Programme could also adapt to respond to the challenging migration situation. In this context, protection of rights of unaccompanied and separated children in migration was promoted via various projects funded by the Programme focusing on capacity building for professionals working directly with children (e.g. lawyers) and through the project

‘Touchstone’ which aimed at establishing the European Guardianship Network. Additionally, a database of promising practices on the protection of children in migration was developed. These targeted actions improving the situation of children in migration followed the policies agreed in the 2017 Commission Communication and in the Council Conclusions on the protection of children during all phases of migration (identification, reception, implementation of procedural safeguards and durable solutions).

*Specific objective 7: to contribute to ensuring the highest level of protection of privacy and personal data*

Following the entry into application of the General Data Protection Regulation (GDPR) and the data protection Law Enforcement Directive, the Programme contributed to the implementation in Member States of these new legislations. In particular, the programme supported national data protection authorities in raising awareness among individuals and business stakeholders, and in facilitating compliance of small and medium-sized enterprises with the General Data Protection Regulation, via general communication campaigns in local languages, local seminars in capitals and smaller towns, publication of brochures, videos on websites and international conferences. Since 2016, the programme has supported 26 projects, which increased knowledge and understanding among business and general public about data protection rules. Targeted training sessions in different European Economic Area countries for lawyers, Data Protection Officers, and local public authorities’ representatives have been organised. A successful GDPR promotional campaign was launched in 2019, which resulted into 1.7 million visits to the GDPR Portal, representing 5.6 % of all visits to Commission websites. The Programme has also supported the EU data protection reform through studies on key aspects of the legislation, building a network of Member States’ experts, supporting the functioning of the network of national Data Protection Authorities.

*Specific objective 8: to promote and enhance the exercise of rights deriving from citizenship of the Union*

To promote and enhance the exercise of rights deriving from citizenship of the Union, the Programme supported more than 29 projects during the period 2014-2020. Funded projects increased awareness concerning the rights of Union citizenship and the associated EU common values, as well as fostered the successful inclusion and political participation of mobile EU citizens in civic and political life. The Programme funded the Network of Academics, which provided advice on related policies of EU citizenship, their implementation in EU Member States and third countries of relevance. To support the integrity of free and fair elections in Europe, the preservation of democratic institutions and foster citizens’ participation, the Programme provided regular support to the national cooperation networks, responsible for bringing together the national authorities and bodies involved in elections.

*Specific objective 9: see “Single Market Programme” Programme Statement*

#### **Europe For Citizens**

976 331	1 180 000	419	2378	28
The number of persons directly reached by the Programme in 2020	The number of persons indirectly reached by the Programme in 2020	The number of selected projects in 2020	The number of partner organisations involved in selected projects in 2020	European citizens’ initiatives were registered between 2018 and 2020

The Europe for Citizens programme played a positive overall role in encouraging civic participation and democratic engagement, while strengthening the sense of belonging together and supporting mutual understanding and identification with Europe, thereby helping to support the European integration process in the longer term. By working directly with citizens, the programme offered a forum for involving European citizens through a grassroots approach. In the area of European remembrance, the Europe for Citizens programme added value to the debates by encouraging exchange beyond national boundaries and promoting a European vision of history. Europe for Citizens offered a new approach through the development of activities linking remembrance with civic participation and democracy.

#### **Project examples**

Project Title: ‘Heart of Europe’ – One example of a network of towns

The project ‘Heart of Europe-network of towns promoting heart culture, solidarity and integration’ coordinated by the Slovenian organisation DRUSTVO ZA NARAVNO UCENJE Z DOZIVLJANJEMUMETNOSTI IN NARAVE GLEDALISCE KOLENC brought together 14 partners’ organizations from 8 countries. The project has involved more than 830 direct participants during 6 international events and over 2000 estimated indirect participants during the whole duration of the project. The event addressed the problems of youth unemployment, globalization, immigration, European citizenship, Euroscepticism and stigmatization of migrants. Through discussions, guided workshops, and presentations, possible strategies were presented to cope with youth unemployment to promote active volunteering and art. The most important achievement was the creation of eight permanent and sustainable international cultural heart points. In each participating country, creative centers (‘heart points’) were established. Partners of network explored different approaches of artistic expressions with the goal to contribute to common European identity and promote EU values as cultural diversity and mutual understanding.

Project title: AUGmented Europe – One example of a civil society project

The project “AUGmented Europe” coordinated by the Italian organisation “Meet digital Communication” in partnership with Latvian, German and Greek partner organisations used digital technologies to foster the active participation of youth in the political debate on the future of EU. It put into place ‘augmented spaces’ through traditional media content and social networking. This allowed young people to gather, share ideas and co-create joint scenarios with the aim of reaching a renewed sense of European belonging. Selected youngsters were trained to facilitate remote participation. The events focussed on European challenges (immigration and social inclusion, climate change, the growing of nationalisms and poverty) and aimed at releasing creative policy recommendations to tackle these challenges. A final event was meant to put the project’s results on stage simultaneously in 4 cities (Milan, Riga, Berlin, and Thessaloniki) involving the urban population, young people, citizens and policy makers.

Project Title: ‘1918: At the end of a war. The outcome of the First World War in seven European homelands’ – One example of a European remembrance project

‘1918: At the end of a war. The outcome of the First World War in seven European homelands’ carried out by the ‘Opladener Geschichtsverein von 1979 e.V. Leverkusen’ contributed to a deeper understanding of the meaning and consequences of war in general and the First World War in particular, at a local level as well as in a comparative perspective across Europe. It portrayed the end of the First World War and the new beginnings after the war in seven European regions, notably Jülich, Leverkusen and Schwedt (Germany), Bracknell (United Kingdom), Ljubljana (Slovenia), Raciborz (Poland) and Villeneuve d’Ascq (France). The results were presented in the exhibition in Leverkusen, accompanied by a diverse programme of lectures, discussions and guided tours. Additionally, the book ‘Kriegsenden in europäischen Heimatzen’ and the exhibition catalogue ‘The ends of the war in European homelands’ in English, German and French were published.

As of 2017 the Europe for Citizens programme provided support to boost the implementation of the European Citizens’ Initiative. The funding from the Europe for Citizens programme allowed to build the central system for online collection of signatures and operating the collaborative platform ‘European Citizens’ Initiative Forum’. The communication campaign, since 2018, has clearly contributed to the overall increase of registrations in the last 3 years (28 registrations between 2018 and 2020). Overall, 75 European citizens’ initiatives were registered since 2012 (until the end of 2019). In 2020, 5 new initiatives were registered. The number of registrations was lower than in 2019 (16), which probably was due to the COVID-19 pandemic. Two new successful initiatives were submitted to the Commission after having collected at least 1 million statements of support, bringing the total number of successful initiatives to 6.

### 3.3. Evaluations, studies and reports

#### *Rights, Equality and Citizenship*

The key findings of the latest evaluation (interim evaluation)<sup>15</sup> have been presented in the Programme Statements 2021. The implementation of the Programme in 2020 confirmed these findings, whereby the intervention of the programme is relevant to contributing to the promotion of relevant EU values, such as non-discrimination and gender equality. As evidenced by the interim evaluation, the Programme has been performing generally well with regard to its specific objectives in terms of effectiveness, efficiency, relevance, coherence/complementarity/synergies and EU added value. In particular, the Programme has demonstrated its high EU added value both in its positive impact on participants and target groups and in its role as a complement to other EU funding instruments and policy initiatives. The work on the ex-post evaluation of the Programme, assessing the results and its long-term impact commenced at the end of 2020 and it will be finalized within 2021.

#### *Europe For Citizens*

The key findings of the latest mid-term evaluation of the implementation of the Europe for Citizens programme 2014-2020 (SWD(2018)86 –see: [https://ec.europa.eu/home-affairs/news/europe-for-citizens-programme-results-mid-term-evaluation\\_en](https://ec.europa.eu/home-affairs/news/europe-for-citizens-programme-results-mid-term-evaluation_en) were already presented in the Programme Statement 2019.

The mid-term evaluation confirms the programme’s use in promoting civic participation, strengthening the sense of belonging together and supporting mutual understanding. The programme’s structure, with two strands and a cross-cutting measure on valorisation has proved to work efficiently and both operating and action grants have helped deliver the desired outcomes. Europe for Citizens has demonstrated its added value at EU level both in its impact on participants and its role as a complement to other EU funding programmes and policy initiatives in the field of education, culture and EU citizenship.

## **4. Programme 2021-2027 - Key monitoring indicators**

### **Specific Objective 1 :Protect and promote Union values**

#### **Indicator 1:People reached by training activities**

<sup>(15)</sup> [Report COM/2018/508](#) on the interim evaluation of the implementation of the Rights, Equality and Citizenship Programme 2014-2020  
Citizenship, Equality, Right and Values

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	No data
Indicator type	Output
Unit of measurement	Number of persons
Cut-Off Date	
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objectives of the programme. This indicator is useful to tell about : • the increase of knowledge of Union law and policies as well as of the rights and values underpinning the Union; • the increase of understanding of the situation in Member States and in participating countries;
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	This indicator will be broken down per sex whenever possible.
Full metadata available at this address	
Justification of the trend	

### Indicator 2: People reached by mutual learning and exchange of good practices activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	No data
Indicator type	Result
Unit of measurement	Number of persons
Cut-Off Date	
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objective of the programme. Mutual learning and exchanges of good practices between professional and citizens of participating countries will contribute to improving knowledge and understanding of Union law and policies, of potential obstacles to the exercise of rights and to promoting cross-border cooperation and enhancing mutual trust.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	This indicator will be broken down per sex whenever possible. All the core performance indicators which measure a number of persons participating in the funding activities are defined as results indicators. Indeed one of the aims of the programme is to raise awareness and increase cooperation therefore we consider that the number of the persons involved is a direct result of the programme.
Full metadata available at this address	
Justification of the trend	

### Indicator 3: People reached by awareness raising, information and dissemination activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	No data
Indicator type	Result
Unit of measurement	Number of persons
Cut-Off Date	
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objective of the programme. This indicator is useful to tell about the improved awareness of the public, the policy makers and the relevant practitioner of Union law and policies as well as of the rights, values and principles underpinning the Union.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	This indicator will be broken down per sex whenever possible. All the core performance indicators which measure a number of persons participating in the funding activities are defined as results indicators. Indeed one of the aims of the programme is to raise awareness and increase cooperation therefore we consider that the number of the persons involved is a direct result of the programme.

Full metadata available at this address	
Justification of the trend	

**Indicator 4: Civil society organisations reached by support and capacity building activities**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	No data
Indicator type	Output
Unit of measurement	Number of organisations
Cut-Off Date	
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objectives/strands of the programme. This indicator is useful to tell about the support dedicated to civil society organisations active in the areas of the programme at European, national regional and local level.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Specific Objective 2 : Promote rights, non-discrimination, equality, including gender equality, and advance gender and non-discrimination mainstreaming; (Equality, Rights and Gender Equality strand)****Indicator 1: People reached by training activities Support**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	No data
Indicator type	Output
Unit of measurement	Number of persons
Cut-Off Date	
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objectives of the programme. This indicator is useful to tell about : • the increase of knowledge of Union law and policies as well as of the rights and values underpinning the Union; • the increase of understanding of the situation in Member States and in participating countries.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	This indicator will be broken down per sex whenever possible.
Full metadata available at this address	
Justification of the trend	

**Indicator 2: People reached by mutual learning and exchange of good practices activities**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	No data
Indicator type	Result
Unit of measurement	Number of persons
Cut-Off Date	
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objective of the programme. Mutual learning and exchanges of good practices between professional and citizens of participating countries will contribute to Citizenship, Equality, Right and Values

	improving knowledge and understanding of Union law and policies, of potential obstacles to the exercise of rights and to promoting cross-border cooperation and enhancing mutual trust.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	This indicator will be broken down per sex whenever possible. All the core performance indicators which measure a number of persons participating in the funding activities are defined as results indicators. Milestones										
Actual Progress										Final

Are we on track	No data
Indicator type	Output
Unit of measurement	Number of organisations
Cut-Off Date	
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objectives/strands of the programme. This indicator is useful to tell about the support dedicated to civil society organisations active in the areas of the programme at European, national regional and local level.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Specific Objective 3 : Promote citizens engagement and participation in the democratic life of the Union and exchanges between citizens of different Member States and to raise awareness of the common European history (Citizens' engagement and participation strand)****Indicator 1: People reached by training activities**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Are we on track	No data
Indicator type	Output
Unit of measurement	Number of persons
Cut-Off Date	
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objectives of the programme. However, for specific objective “Citizens engagement and participation”, the indicator will only apply to civil society projects (see other methodological comments). This indicator is useful to tell about : • the increase of knowledge of Union law and policies as well as of the rights and values underpinning the Union; • the increase of understanding of the situation in Member States and in participating countries.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	This indicator will be broken down per sex whenever possible. Regarding specific objective “Citizens engagement and participation”, the indicator will be used to count participants in training activities implemented by civil society projects. Participants in town-twinning projects, network of town projects and remembrance and heritage initiatives will be counted using the indicator "people reached by mutual learning and exchanges of good practices activities". Activities undertaken by town-twinning projects, network of town projects and remembrance and heritage initiatives are indeed considered to be mutual learning.
Full metadata available at this address	
Justification of the trend	

### Indicator 2: People reached by mutual learning and exchange of good practices activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	No data
Indicator type	Result
Unit of measurement	Number of persons
Cut-Off Date	
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objective of the programme. Mutual learning and exchanges of good practices between professional and citizens of participating countries will contribute to improving knowledge and understanding of Union law and policies, of potential obstacles to the exercise of rights and to promoting cross-border cooperation and enhancing mutual trust.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	This indicator will be broken down per sex whenever possible. For specific objective “Citizens participation and engagement” it might be difficult and disproportionate for project beneficiaries of very small grants to collect sex disaggregated data. All the core performance indicators which measure a number of persons participating in the funding activities are defined as results indicators. Indeed one of the aims of the programme is to raise awareness and increase cooperation therefore we consider that the number of the persons involved is a direct result of the programme.
Full metadata available at this address	
Justification of the trend	

### Indicator 3: People reached by awareness raising, information and dissemination activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	No data
Indicator type	Result
Unit of measurement	Number of persons
Cut-Off Date	
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objective of the programme. However, for strand / specific objective “Citizens engagement and participation”, the indicator will only apply to civil society projects (see other methodological comments). This indicator is useful to tell about the improved awareness of the public, the policy makers and the relevant practitioner of Union law and policies as

	well as of the rights, values and principles underpinning the Union.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	This indicator will be broken down per sex whenever possible. Regarding specific objective "Citizens engagement and participation" this indicator will be used to count participants in awareness raising, information and dissemination activities civil society projects may organise. Participants in town-twinning projects, network of town projects and remembrance and heritage initiatives will be counted using the indicator "people reached by mutual learning and exchanges of good practices activities". Activities undertaken by town-twinning projects, network of town projects and remembrance and heritage initiatives are indeed considered to be mutual learning. All the core performance indicators which measure a number of persons participating in the funding activities are defined as results indicators. Indeed one of the aims of the programme is to raise awareness and increase cooperation therefore we consider that the number of the persons involved is a direct result of the programme.
Full metadata available at this address	
Justification of the trend	

#### Indicator 4: Civil society organisations reached by support and capacity building activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	No data
Indicator type	Output
Unit of measurement	Number of organisations
Cut-Off Date	
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objectives/strands of the programme. This indicator is useful to tell about the support dedicated to civil society organisations active in the areas of the programme at European, national regional and local level.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

#### Indicator 5: Transnational networks and initiatives focusing on European memory and heritage as a result of programme intervention

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	No data
Indicator type	Output
Unit of measurement	Number of "action" supported by it: • transnational networks of towns and town twinnings; • projects and organisations focusing on European memory and heritage. An action can be in the form of an action grant or an operating grant; it includes a set of activities.
Cut-Off Date	
Data source	EC DG JUST.
Link to the objective	This indicator is linked to the strand/specific objective "to promote citizens engagement and participation in the democratic life of the Union and exchanges between citizens of different Member States and to raise awareness of the common European history". Co-ordinated transnational mutual learning activities implemented by transnational networks of towns and town twinnings and by European memory and heritage initiatives are necessary to promote exchanges between citizens of different countries on the wealth and diversity of the common heritage of the Union and to make them aware that these constitute the foundation for a common future. The above-mentioned objectives can only be reached by enabling individual citizens, towns and citizens' associations to interact, build capacity and exchange experiences at a transnational level. Action at national and local levels alone would be insufficient and ineffective.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	This indicator will be calculated for strand/specific objective "Citizens engagement and participation" only.
Full metadata available at this address	
Justification of the trend	

**Specific Objective 4 :Fight violence, including gender-based violence (Daphne strand)****Indicator 1:People reached by training activities**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	No data
Indicator type	Output
Unit of measurement	Number of persons
Cut-Off Date	
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objectives of the programme. This indicator is useful to tell about : • the increase of knowledge of Union law and policies as well as of the rights and values underpinning the Union; • the increase of understanding of the situation in Member States and in participating countries.
Link MFF 14-20 / MFF 21-27	NA

Justification of the trend	

## 5. Programme 2014-2020 - Key monitoring indicators

### Previous Program 1 : Rights, Equality and Citizenship programme

**General Objective 1 :to contribute, to the further development of an area where equality and the rights of persons as enshrined in the Treaty on European Union, in the Treaty on the Functioning of the European Union, in the Charter of Fundamental Rights of the European Union and in the international human rights conventions to which the Union has acceded, are promoted, protected and effectively implemented**

#### Indicator 1: progress towards equal participation in the labour market

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Female employment rate 20-64 age group										
2012	Milestones									2020
				68%			71%			71%
62,4%	Actual Progress									Final
	63,50%	64,30%	65,30%	66,40%	67,6%	67,4%	66,1%			66,1%
Employment rate of people with disabilities										
2013	Milestones									2020
				50%			55%			55%
48,5%	Actual Progress									Final
	48,70%	47,40%	48,1%	50,6%	52%					52%
Gender pay gap										
2013	Milestones									2020
				15%			14%			14%
16,8%	Actual Progress									Final
	16,70%	16,30%	16,20%	16%	15%	14,1%				14,1%
Percentage of women among non-executive directors on boards of listed companies										
2011	Milestones									2020
				30%			40%			40%
16,2%	Actual Progress									Final
	20,20%	22,70%	26,10%	27,90%	29,30%	31,4%	31%			31%

Are we on track	On track
Indicator type	Impact
Unit of measurement	Percentage and rate
Cut-Off Date	08/02/2021
Data source	Eurostat, Eurostat European Union Statistics on Income and Living Conditions (EU SILC) 2018 and European Institute Gender Equality (EIGE), gender statistics database.
Narrative	Target: Female employment rate 20-64 age group: 75% (for both women and men), Europe 2020 headline target; 71% for women. Target: Employment rate of people with disabilities 55% for both women and men, Europe 2020 headline target. Target: Gender pay gap 14%, Europe 2020 headline target. Target: Percentage of women among non-executive directors on boards of listed companies, Europe 2020 headline target.
Methodology	Quantitative and qualitative methodology. For instance, gender pay gap is calculated as the difference in average gross hourly earnings between women and men. It is based on salaries paid directly to employees before income tax and social security contributions are deducted. Only companies of ten or more employees are taken into account in the calculations.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	Concerning the employment rate of people with disabilities, the Eurostat EU SILC 2018 report shows that for EU 28 in 2018: 52% employment rate for persons with disabilities as compared to 76.2% of those without disabilities and for EU 27 in 2018: 50.8% employment rate for persons with disabilities as compared to 75% of those without disabilities. It should be noted that persons with disabilities living in institutions are not included in these statistical data.
Full metadata available at this address	<a href="https://ec.europa.eu/eurostat/databrowser/view/LFSQ_ERGAN_custom_159206/default/table?lang=en">https://ec.europa.eu/eurostat/databrowser/view/LFSQ_ERGAN_custom_159206/default/table?lang=en</a> <a href="https://www.disability-europe.net/downloads/1046-edc-task-2-1-statistical-indicators-tables-eu-silc-2018">https://www.disability-europe.net/downloads/1046-edc-task-2-1-statistical-indicators-tables-eu-silc-2018</a> <a href="https://ec.europa.eu/eurostat/statistics-explained/index.php/Gender_pay_gap_statistics">https://ec.europa.eu/eurostat/statistics-explained/index.php/Gender_pay_gap_statistics</a> <a href="https://eige.europa.eu/gender-statistics/dgs/indicator/eustrat_segel619_eqldcsn_wmid_comp_compex/bar/year:2020-B1/geo:EU28_EU27_2020/EGROUP:COMP/NACE:TOT/POSITION:NON_EXEC/UNIT:PC/sex:W">https://eige.europa.eu/gender-statistics/dgs/indicator/eustrat_segel619_eqldcsn_wmid_comp_compex/bar/year:2020-B1/geo:EU28_EU27_2020/EGROUP:COMP/NACE:TOT/POSITION:NON_EXEC/UNIT:PC/sex:W</a>
Justification of the trend	There has been a moderate progress on the female employment rate 20-64 age group for the entire period of programme implementation. The progress was characterized by a steady increase until 2018 that was followed by a slight drop in the preceding years. Similarly, there has been an increase by more than 14% in the percentage of women among non-executive directors on boards of listed companies. However, there are not recent data on the progress of gender pay gap, the last available data indicate a narrowing of the gap by 1,8 %. Lastly, the progress on the employment rate of people with disabilities has been quite moderate.

### Indicator 2: percentage of Europeans who consider themselves as well or very well informed of the rights they enjoy as citizens of the Union

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010	Milestones									2020
32%				54%			51%			51%
	Actual Progress									Final
		42%		54%	55%		81%			81%

Are we on track	On track
Indicator type	Impact
Unit of measurement	Percentage of people out of total number of people interviewed
Cut-Off Date	31/07/2020
Data source	Flash Eurobarometer 485: Report EU citizenship and democracy (July 2020)
Narrative	Target: percentage of Europeans who consider themselves as well or very well informed of the rights they enjoy as citizens of the Union 51 %, Europe 2020 headline target.
Methodology	Combined qualitative and quantitative methods
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	Data from Flash Eurobarometer (2015) and are not included in the Standard Eurobarometer.
Full metadata available at this address	<a href="https://data.europa.eu/euodp/en/data/dataset/S2260_485_ENG">https://data.europa.eu/euodp/en/data/dataset/S2260_485_ENG</a>
Justification of the trend	Beyond the target. There has been a significant increase in the percentage of Europeans who consider themselves as well or very well informed of the rights they enjoy as citizens of the Union. The progress has been highly significant, surpassing the set target by 30%.

### Specific Objective 1 :to promote the effective implementation of the principle of non -discrimination on grounds of sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation, and to respect the principle of non-discrimination on the grounds provided for in Article 21 of the Charter

#### Indicator 1: Share of persons aware of their rights if they fall victims of discrimination

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
37%				55%			70%			70%
	Actual Progress									Final
		45%								

Are we on track	No data
Indicator type	Impact
Unit of measurement	Percentage of people out of total number of people interviewed
Cut-Off Date	31/12/2015
Data source	Flash Eurobarometer 2015
Narrative	Target: victims of discrimination
Methodology	Combined qualitative and quantitative methods, understanding of people's rights and discrimination.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	These data comes from a Flash Eurobarometer in 2015. A more recent Special Eurobarometer in 2019 details on the state of play of perceived levels of discrimination on grounds of religion or belief, age, disability, sexual orientation and ethnicity. However, there was no question about rights' awareness of victims of discrimination. <a href="https://ec.europa.eu/commfrontoffice/publicopinion/index.cfm/survey/getsurveydetail/instruments/special/surveyky/2251">https://ec.europa.eu/commfrontoffice/publicopinion/index.cfm/survey/getsurveydetail/instruments/special/surveyky/2251</a>

Are we on track	On track
Indicator type	Output
Unit of measurement	Euro
Cut-Off Date	08/02/2021
Data source	DG for Justice and Consumers, European Commission
Narrative	The indicator shows the level of funding requested by applicants and granted to the beneficiaries.
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	Yes, there is a continuation in reporting for this indicator.
Other methodological comments	In 2014, 2017 and 2019 restricted call for proposals for national authorities; in 2015, 2018 and 2020 open call for proposals. There was no call for proposals for action grants in 2016.
Full metadata available at this address	NA
Justification of the trend	The targets have been successfully reached.

### Specific Objective 5 :to prevent and combat all forms of violence against children, young people and women, as well as violence against other groups at risk, in particular groups at risk of violence in close relationships, and to protect victims of such violence

#### Indicator 1:Percentage of people that consider that domestic violence against women is unacceptable

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010	Milestones									2020
84%	Actual Progress									Final
			84%	90%			100%			100%
			96%		96%					96%

Are we on track	On track
Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	30/11/2016
Data source	Special Eurobarometer 449 (2016).
Narrative	The indicator shows the percentage of interviewed people that consider domestic violence against women as unacceptable.
Methodology	Survey to assess the perceptions of EU citizens about gender-based violence.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	Percentage of people that consider that domestic violence against women is unacceptable, Europe 2020 Headline.
Full metadata available at this address	<a href="https://data.europa.eu/euodp/en/data/dataset/S2115_85_3_449_ENG">https://data.europa.eu/euodp/en/data/dataset/S2115_85_3_449_ENG</a>
Justification of the trend	Target nearly reached.

#### Indicator 2:The number of applications and grants related to this specific objective

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Applications										
2014	Milestones									2020
0	Actual Progress									Final

Grants										
2014	Milestones									2020
0	Actual Progress									Final
	31	52	19	39	43	40	39			39

Are we on track	On track
Indicator type	Output
Unit of measurement	Nominal
Cut-Off Date	08/02/2021
Data source	DG for Justice and Consumers, European Commission
Narrative	The indicator shows the total number of applications submitted and grants awarded.
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	Yes, there is a continuation in reporting for this indicator. The new indicator will be the proportion of funded projects to the total number of applications.
Other methodological comments	NA
Full metadata available at this address	NA

Justification of the trend	The target for the number of grants awarded has been successfully reached. The number of applications has been stable in the past 5 years, since the migration to the e-grant system in 2016, ranging between 175-210. The target of 300 applications was set initially without due consideration to the migration to the e-grant system.
----------------------------	---

**Indicator 3: The level of funding requested by applicants and granted in relation to this specific objective**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Requested										
2014	Milestones									2020

	4 213 515	3 461 829	3 420 985	4 216 000	1 540 000	3 623 149	4 569 512			4 569 512

Are we on track	On track
Indicator type	Output
Unit of measurement	Euro
Cut-Off Date	08/02/2021
Data source	DG for Justice and Consumers, European Commission
Narrative	The indicator shows the level of funding requested by applicants and granted to the beneficiaries.
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	Yes, there is a continuation in reporting for this indicator.
Other methodological comments	NA
Full metadata available at this address	NA
Justification of the trend	The targets have been successfully reached and surpassed. In this particular case, the Commission has invested in communication with stakeholders with an ad-hoc conference in September 2019 on EU funding opportunities for rights of the child, explaining the high increase in the number of applications.

### Specific Objective 7 :to contribute to ensuring the highest level of protection of privacy and personal data

#### Indicator 1: Number of complaints received by data protection authorities from individuals relating to data protection

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
68 569				55 000			60 000			60 000
	Actual Progress									Final
					60 000					

Are we on track	No data
Indicator type	Impact
Unit of measurement	Nominal
Cut-Off Date	31/12/2020
Data source	EDPB – IMI database (managed by DG GROW)
Narrative	It shows the cross-border cases registered by the DPA of the Member States.
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	This indicator cannot be used, as data protection authorities in Member States have different methods of recording the number of complaints received from individuals, to the extent that e.g. Denmark was reporting 6 000 and Romania 25. For this reason, since the entry into force of GDPR in 2016, a more relevant indicator would be the number of cross-border cases recorded in the Internal Market Information System case register (the IMI was developed by the Commission as the IT platform to support cooperation and consistency procedures under the GDPR). In 2018, from 25 May to December: 213; in 2019: 553 and in 2020:626. In total, 1392 cases.
Full metadata available at this address	NA
Justification of the trend	Recent data indicate that there is an annual increase in the number of cross-border cases, meaning that more and more EU citizens are aware about their Data Protection rights.

#### Indicator 2: The number of applications and grants related to this specific objective

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Applications										
2014	Milestones									2020

			15	12		6	9			9
Grants										

2014	Milestones								2020
0						9			
	Actual Progress								Final
		6	9			4	7		7

Are we on track	On track
Indicator type	Output
Unit of measurement	Nominal
Cut-Off Date	08/02/2021
Data source	DG for Justice and Consumers, European Commission
Narrative	The indicator shows the total number of applications received and grants awarded.
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	Yes, there is a continuation in reporting for this indicator. The new indicator will be the proportion of funded projects to the total number of applications.
Other methodological comments	First call for proposals to support training activities on the data protection reform was launched in 2016. In 2016 and 2017 twice as much funding was available than in 2019 and 2020, in view of the entering into force of the GDPR. There was no call for proposals for action grants in 2018. More than 27 projects were financed for the period 2014-2020.
Full metadata available at this address	NA
Justification of the trend	There were no targets set for this indicator in 2020. There were received 9 applications in total, among which 7 were awarded.

### Indicator 3: The level of funding requested by applicants and granted in relation to this specific objective

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Requested

	6	0	5	3	4	4	4			4

Are we on track	On track
Indicator type	Output
Unit of measurement	Nominal
Cut-Off Date	08/02/2021
Data source	DG for Justice and Consumers, European Commission
Narrative	The indicator shows the total number of applications received and grants awarded.
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	Yes, there is a continuation in reporting for this indicator. The new indicator will be the proportion of funded projects to the total number of applications.
Other methodological comments	NA
Full metadata available at this address	NA

Justification of the trend	The target for the number of awarded grants has been nearly reached. The number of received applications has been lower than the target aimed for. This can be explained by the narrow policy area of work/intervention, "EU mobile citizens".
----------------------------	--

**Indicator 4: the level of funding requested by applicants and granted in relation to this specific objective**

Justification of the trend	The minimum funding threshold for the strand was 71. We received many applications of high quality which could not be funded due to lack of available budget especially under the Civil Society Call.

### Indicator 6: the percentage of first time applicants

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
40%	40%			-5% < 40% < 5%			-5% < 40% < 5%			-5% < 40% < 5%
	Actual Progress									Final
	40%	44%	53%	54%	66%		60%			60%

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	EACEA - Award decisions.
Narrative	Interest of the strand to new applicants
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	NA - This indicator is not foreseen in the new legal basis.
Other methodological comments	NA
Full metadata available at this address	NA
Justification of the trend	It should be noted that there are a certain number of resubmissions between round 1 and 2 of Town Twinning and Networks of Towns.

### Indicator 7: the number of transnational partnerships including different types of stakeholders

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
1,3	1,6			At least 2			At least 2			At least 2
	Actual Progress									Final
	1,6	1,8	2	2	2		2			2

Are we on track	On track
Indicator type	Result
Unit of measurement	Types of stakeholders
Cut-Off Date	31/12/2020
Data source	EACEA - Award decisions.
Narrative	Transnational partnerships are composed of at least two different types of stakeholders coming from two different countries.
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	NA - This indicator is not foreseen in the new legal basis.
Other methodological comments	NA
Full metadata available at this address	NA
Justification of the trend	This eligibility criterion for the strand remained unchanged for 2020 and required two different stakeholders per partnership. This criterion was met by applicants.

**Indicator 8: the number of networks of twinned towns**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
41	35			35			36			36
	Actual Progress									Final
	35	32	30	32	35	36	41			41

Are we on track	On track
Indicator type	Result
Unit of measurement	Number of networks of twinned towns
Cut-Off Date	31/12/2020
Data source	EACEA - Award decisions (Rounds 1 & 2)
Narrative	The number of grants awarded under of the EfC prothis action is based on the merit of the proposals and the budget available.
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	NA - This indicator is not foreseen in the new legal basis.
Other methodological comments	NA
Full metadata available at this address	<a href="https://eacea.ec.europa.eu/europe-for-citizens/selection-results_en">https://eacea.ec.europa.eu/europe-for-citizens/selection-results_en</a>
Justification of the trend	The number of grants awarded is slightly higher as the average grant requested is slightly lower than in previous years.

**Indicator 9: the number and quality of policy initiatives following-up on activities supported by the Programme at the local or European level**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				2			2			2
	Actual Progress									Final
				2	2	2	2			2

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of policy initiatives
Cut-Off Date	31/12/2020
Data source	EACEA - Final reports
Narrative	The number of policy related outputs produced by the projects based on the objectives and priorities of the Programme.
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	NA - This indicator is not foreseen in the new legal basis.
Other methodological comments	NA
Full metadata available at this address	NA
Justification of the trend	The trend is stable. Projects actively engage citizens and to some extent produce policy initiatives.

**Indicator 10: the geographical coverage of the activities**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

### **6.2. Contribution to biodiversity mainstreaming**

Not applicable

### **6.3. Contribution to clean air financing**

Not applicable

### **6.4. Contribution to gender equality**

#### **6.4.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
4,0	10,0						14,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.4.2. Key achievements and performance**

##### ***Rights, Equality and Citizenship***

As gender mainstreaming is enshrined in EU-level funded actions, the REC Programme envisaged specific actions to advance gender equality and was committed to promoting a gender mainstreaming approach.

First of all, the Programme had a dedicated specific objective for the promotion of equality between men and women and to the advancement of gender mainstreaming.

The Annual Work Programmes envisaged every year a call for action grants with targeted policy priorities on gender equality. In 2020, the priorities of calls for proposals focused on addressing gender equality and empowerment of women and girls through tackling gender stereotypes in education and early childhood care and in educational and career choices in a digitalised world. Following the Directive on work-life balance for parents and careers, the Programme also co-funded national governments' initiatives that aimed to increase the participation of women in the labor market and the take-up of family-related leave and flexible working arrangements. This was the aim of the call for proposal in 2019 to close gender gaps over the life cycle – work-life balance for women and men – a better sharing of care. Previous calls for proposals focused on: equal participation of women and men in leadership positions and work-life balance (2018); address gender gaps over the life-cycle (2017); prevent and combat violence against women (2016); promote good practices on gender roles and overcome gender stereotypes in education, training and in the workplace (2015); equal economic independence of women and men (2014).

In the period 2014-2020 the Programme's total contribution to the specific objective of gender equality has been of EUR 50 million, including grants and procurement activities (training seminars, studies and evaluations). It includes operating grants provided to the European Women's Lobby (€ 1 million per year).

The principles of gender mainstreaming were consistently referred to in the Annual Work Programmes, calling for all activities funded to support gender mainstreaming. In the description of the calls for proposals, the gender dimension was mentioned primarily in relation to the specific objective on gender equality as well as the specific objectives on non-discrimination and combatting violence against women. All the applicants had to demonstrate how they would mainstream gender equality perspective in the design, implementation, monitoring and evaluation of projects' activities. Similarly, gender mainstreaming was considered amongst the sub-criteria leading to the award of the grants. Finally yet importantly, during the process of evaluating proposals, the gender dimension was also considered to the extent of having an equal representation of women and men as evaluators.

## **6.5. Contribution to the sustainable development goals**

### **6.5.1. Goals**

#### ***SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all***

Through the specific objective on "non-discrimination", the Programme will support projects for the inclusion of all to quality education, including minority groups such as Roma youth, and organisations promoting lifelong learning opportunities at all ages.

#### ***SDG 5 Achieve gender equality and empower all women and girls***

The Programme in all its activities will support gender mainstreaming and the mainstreaming of non-discrimination objectives. In particular, the Programme has a specific objective "to promote women's full enjoyment of rights, gender equality, including work-life balance, women's empowerment and gender mainstreaming". Projects will fund activities to tackle gender stereotypes and address silent and intersectional discrimination, as well as awareness raising and other policy activities for the promotion of equal participation/representation of women and men in decision-making in politics and economics.

#### ***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

Via the Equality, Rights and Gender Equality strand, the Programme will support projects for equal access to work, equal participation in labour market and the elimination of barriers to career progression in all sectors. Focus will also be put on work-life balance and on equal sharing of unpaid household and care work for children, the elderly and other dependents, between men and women which remain pillars to the equal economic independence and participation and are intrinsically related to the achievement of gender equality.

#### ***SDG 10 Reduce inequality within and among countries***

The Programme, through transnational projects sharing good practices, trainings and awareness rising activities, will contribute to the reduction of inequalities and eliminating discrimination between EU citizens and among countries.

#### ***SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels***

Via the Citizens engagement and participation strand and the Union values strand, the Programme will promote inclusive society and the rule of law. Funds will support entities which contribute to make our common values, rights and equality and rich diversity alive and vibrant. Projects will nurture and sustain a rights-based, equal, open, pluralist, inclusive and democratic society. That includes a strong and empowered civil society that fosters people's democratic, civic and social participation and inclusiveness, and further develops the diversity of European society, based on our common values, history and memory.

## 6.5.2. Key achievements and performance

### *Rights, Equality and Citizenship*

#### ***SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all***

By promoting youth Roma integration in the funded activities of non-discrimination, the Programme contributed to the goal that all girls and boys have access to quality early childhood development, care and education. Through tackling gender stereotypes, the Programme contributed to the goal of creating education facilities that are child-friendly, accessible and gender-sensitive, providing thus safe, nonviolent, inclusive and effective learning environments for all.

#### ***SDG 5 Achieve gender equality and empower all women and girls***

Via actions funded under gender violence and gender equality calls for proposals, the Programme contributed to the goals to end all forms of discrimination against all women and girls and to eliminate all forms of violence against all women and girls. In particular, the Programme contributed to the goals to ensure women's equal opportunities for leadership at all levels and to adopt enforceable legislation for the promotion of gender equality.

The Programme also promoted diversity through the projects funded within the call for proposals to promote non-discrimination. In this regards, it strengthens equal opportunities financing the EU Platform of Diversity Charters, its annual forum and expert seminars, supporting peer network, share of good practises and tools for benchmarking, measuring and monitoring.

#### ***SDG 8 Decent work and economic growth***

The Programme contributed to the goal to achieve full and productive employment and decent work for all women and men, including for young people and persons with disabilities, and equal pay for work of equal value. It funded activities sharing best practises on work-life balance and supported persons with disability in terms of awareness raising, capacity building, monitoring of their situation in terms of employment and foster education. Learning opportunities were provided to legal and policy practitioners on legal instruments that serve to protect and promote employment of persons with disabilities.

#### ***SDG 10 Reduce inequality within and among countries***

The Programme ensured equal access for travellers with disabilities to a number of benefits in the areas of culture, leisure, sport and transport, thus contributing to the inclusion of people with disabilities in society, via funding the European Disability Card project. It also helped in monitoring the poverty situation of persons with disabilities through supporting the Academic Network of European Disability experts and exchange of good practices in the social protection field.

#### ***SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels***

Via the project Joint Programme on Access of Roma and Traveller Women to Justice (JUSTROM), the Programme supported the empowerment of Roma women through increasing their awareness about discrimination, complaint mechanisms, the justice system and human rights institutions/equality bodies. It also aimed to increase the number of cases of discrimination against Roma women admitted by human rights institutions, equality bodies and courts, as well as to enhance professional resources used at national level by the judiciary, law enforcement and NGOs/human rights advocates regarding the application of anti-discrimination standards Roma access to Justice.

The Programme financed projects focusing on a child-friendly justice, to support children before, during and after judicial proceedings and to provide capacity-building to judicial practitioners on individual assessments specified in EU law.

#### ***SDG 17 Strengthen the means of implementation and revitalize the global partnership***

Via the European network of academic experts in the field of disability, the Programme ensured the collection of essential data, analysis and monitoring on the situation of people with disabilities related to, among others, employment, education and poverty risk.

## 1. Overview

### 1.1. Challenges

In the next years, DG Communication will focus on:

- listening to citizens across all Member States developing opinions and making sure that their concerns and ideas are fed into policy-making;
- communicating on the Commission's policy priorities and headline ambitions, taking into account the post-COVID-19 economic and social context and highlighting the recovery plan and NextGenerationEU, implementing the European Green Deal, and making Europe fit for the digital age;
- engaging with citizens and the players using all available channels of the overarching media landscape citizens in all Member States in a clear and concise manner.

### 1.2. Mission (general objectives)

DG Communication, as a corporate communication service, brings Europe closer to its citizens by:

- **LISTEN** : providing intelligence to the College, Cabinets and Services
- **ADVISE** : ensuring coherence in Communication and domain leadership
- **ENGAGE** : reaching out and engaging with citizens.

### 1.3. Specific objectives

DG Communication has defined in its Strategic Plan 2020-2024 the following five Specific Objectives:

1. College and services use country specific intelligence, Eurobarometer results, media analysis and stakeholders'/citizens' feedback to inform political decision-making.
2. College receives strategic advice on communicating the political headline ambitions and on media landscapes in the Member States;
3. Corporate communication of the Commission's political headline ambitions is aligned across the Commission's departments,
4. Meaningful and tailored messages, focussed on the Commission's political headline ambitions, are communicated to citizens, media, multipliers and stakeholders;
5. Citizens engage with the EU through face-to-face events and online interactive platforms, such as the Conference on the Future of Europe, thus stimulating the sharing of EU values and interest in and ownership of EU topics.

### 1.4. Public intervention context

Communication interventions falls under the institutional prerogatives of the Commission

### 1.5. Actions

In the next years the Directorate-General for Communication will provide:

**1. Executive and corporate communication services:** providing executive services to the President and the College in support of their communication efforts and to the Spokesperson's Service and European Commission senior management by ensuring political and economic intelligence and media advice, and by feeding high quality country specific information and analysis from a variety of sources into the European Commission's decision making process. Furthermore, providing corporate communication products and services to the external communication domain of the European Commission.

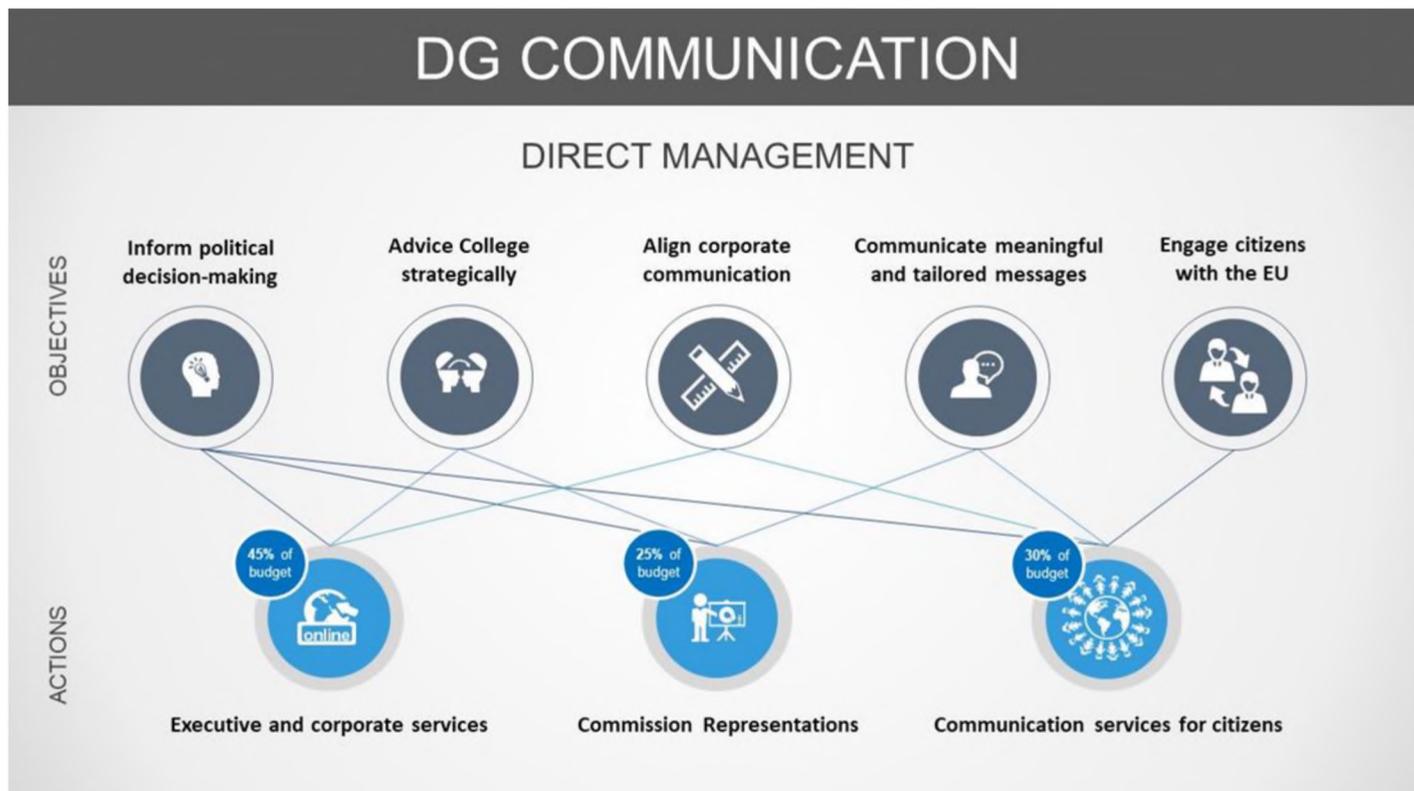

**2. Representations of the European Commission in the Member States:** acting as the official representatives of the Commission in the Member States and serving the interests of the whole Institution and the Union by connecting with national, regional and local authorities, media and stakeholders, and by reaching out to citizens in general.

**3. Communication services for citizens:** providing communication products and services directly addressed to citizens and ensuring that communication services for citizens are made available through simple, clear and understandable messages, either via a mix of channels and media (traditional and new) or by directly communicating with citizens and stimulating exchange and engagement face to face.

## 1.6. Delivery mode

DG Communication is the lead Directorate-General for implementing the above-described activities, implementation through direct management.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

### 1.8.2. Legal basis explanation

Tasks resulting from the European Commission's prerogatives at institutional level, as provided for in Article 58(2) of Regulation (EU, Euratom) 2018/1046 of the European Parliament and of the Council of 18 July 2018 on the financial rules applicable to the general budget of the Union, amending Regulations (EU) No 1296/2013, (EU) No 1301/2013, (EU) No 1303/2013, (EU) No 1304/2013, (EU) No 1309/2013, (EU) No 1316/2013, (EU) No 223/2014, (EU) No 283/2014, and Decision No 541/2014/EU and repealing Regulation (EU, Euratom) No 966/2012 (OJ L 193,30.7.2018 p. 1).

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	129,9	131,0	132,1	133,2	134,4	135,5	136,4	932,5

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

Throughout the MFF 2014-2020, DG Communication was under Title 16 of the Commission budget. Under the new MFF 2021–2027 communication activities are included within Heading 2 “Cohesion and Values” under the policy cluster 7 “Investing in people and values”.

## **2. Where are we in the implementation ?**

### **2.1. Programme 2021-2027**

The commitment appropriations for 2021 amounted to €106,689,800 as defined in the Directorate-General for Communication Work Programme 2021<sup>1</sup>. Their implementation is through direct (public procurement) management and grants.

Payment needs for 2021 and following years are estimated taking into account the average implementation rates of previous years, by budget line. Fresh commitments made on 2021 will implement payment appropriations between 30% and 60% of the amount committed – depending on the budget lines. The RAL (Reste à Liquider) carried over from previous years is implemented at around 80%.

### **2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations**

	Commitments	Payments
Implementation Voted budget	506 155 863	464 671 216
Implementation carry-overs	0	3 755 470
Implementation total	506 155 863	468 426 686
total envelop*	507 156 100	
cumulative implementation rate	100%	92%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

**The total expenditure of DG Communication for the period 2014-2020** was EUR 468,426,686 million (payments made). The commitments made amounted to EUR 507,156,100, with a budget implementation rate for commitments of 100% and 92% in payments.

This 92% is the percentage of payments implemented in 2014-2020 calculated against the commitments implemented in the same period. However, many commitments implemented in 2020 will be paid only in 2021 and 2022, as these budget lines work under dissociated credit rules. Taking this into account, the percentage of DG COMM will get higher in the next years, up to 96%. The difference up to 100% corresponds to the RAL decommitted during 2014-2020.

The method of calculation for payment appropriations is based on contract obligations. Payment needs are estimated taking into account recent average payment needs, by budget line. This includes both needs to cover commitments made during the current years and payments linked to commitments carried forward from previous years (“RAL”). Estimations include average de-commitment rates of 4.7% representing EUR 10,270,000 million during 2014-2020.

In 2020, DG Communication achieved 100% implementation of commitments, combining very close budget monitoring with structured internal redeployments between different communication activities. For example, as certain planned activities such as face to face events could not take place in the pandemic context, funds originally earmarked for face to face events were redeployed to communication activities on virtual communication channels.

## **3. How is the programme performing ?**

<sup>1</sup> C(2020)8492 dated 07.12.2020.

### 3.1. Performance

#### 3.1.1. Introduction

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### 3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### 3.1.3. Previous programme performance

In 2020, Europe was strongly impacted by the COVID-19 pandemic. The Commission proposed a strong and coordinated response to the health crisis as well as to the impact on Europe's economy and society. COVID-19 also posed challenges as regards performance, control, audit and assurance in relation to the 2020 EU budget. In an exercise coordinated at corporate level, all Commission services promoted the consistent and rigorous protection of the EU budget, ensuring that appropriate mitigating measures were put in place.

As regards DG Communication's specific actions, to name just a few examples of COVID specific communication activities included the Spokesperson's Service the non-interrupted daily press briefings, the corporate social media accounts, the dedicated Europa webpage, the Europe Direct Contact Centre replies to citizens' enquiries and the Representations' work on the ground, DG Communication continuously informed citizens and promoted the Commission's COVID-19 related messages on public health – including vaccines - and on EU political actions in response to the pandemic. At the same time, it coordinated the Corporate Communication Coronavirus Task Force, in view to maximise the Commission's outreach on COVID-19 action at EU, Member States, regional and local level, liaising also with other EU institutions.

When it comes to sound financial management, a set of emergency, DG Communication issued exceptional financial guidelines in order to adapt operations to rapidly evolving circumstances and to mitigate a number of risks. DG Communication was able to have a clearer understanding of the concrete impact of the its exceptional COVID-19 related measures on the ground with a specific survey among senior and middle managers, which did not provide evidence of substantial problems related to sound financial management in DG Communication.

As outlined in DG COMM's Strategic Plan 2016 – 2020 and the respective annual Management Plans 2016-2020, 'external factors and actions by other stakeholders are likely to enable or limit (the DG's) achievements'

Necessarily, the degree of control or influence of the Commission varies along the chain of communication actions and steps (of the intervention logic): whereas the Commission has full control over the outputs of its own actions, various external factors and players exert influence on the final outputs, results and impacts of EU action. This general observation applies to EU policy and law-making interventions, but it applies in particular to its communication actions.

Communication typically is a flanking measure, subject to externalities of two types. Firstly, communication actions and the perception of their effects are influenced by the content / substance of the dossiers which are supported by communication actions throughout the policy and decision-making process (legislation and enforcement as well as programmes / EU (co-)funding). Secondly, communication takes place in a complex environment of 27 national public spaces and an emerging European public space, all of those heavily influenced by, among others, the following factors (mutually influencing each other):

- International, national and regional political factors
- Level of trust in political institutions (international, national) and in media
- Media habits/practice/attitude
- Technological developments, notably in the information and communications technologies

With these important factors and constraints in mind, DG COMM has established 3 main key performance indicators and follows their evolution to measure the fulfilment of the general objective:

1. **Percentage of European Union citizens having a positive image of the European Union** (impact indicator of the overarching objective): 40 % in summer in 2020 target of  $\geq 50$  %
2. **Number of visitors to the EUROPA websites** (interinstitutional and Commission domains including the Representations' and Spokesperson's service): 305,028,564 in 2020 vs. a target of 250,000,000.
3. **Budget execution by commitments** (output indicator defined in Management Plan): 100 % for 2020 vs. a 100 % target.

In 2020, 40%<sup>2</sup> of European citizens have a positive image of the European Union, which is a 2% drop as compared to the 42% achieved in 2019. This indicator reacts sensitively to changes in the overall economic and social environment which was dominated

<sup>2</sup> External factors and actions by other stakeholders have strong influence on the value of this indicator. The degree of control or influence of the Commission varies along the chain of steps: whereas the Commission has full control over the outputs of its own actions, various external factors and players exert influence on the results and impacts of EU actions. This general observation applies to all EU policy and law-making interventions, but it pertains in particular to its communication actions.

by the effects of the COVID 19 crisis, hence the 2% decrease. On the other hand, the crisis considerably reinforced citizens' request for more information, which is reflected by a significant increase in visitors that have visited the Europa website.

The Europe Direct Contact Centre answered over 147,000 questions from citizens in 2020, representing a 19.5% increase compared to 2019. Some 22,000 (15%) of these questions related to the COVID-19 crisis and to the EU's response to it. The Contact Centre also continued to act as 'Brexit helpline' for citizens as part of the Commission's overall Brexit preparedness and readiness, handling over 4,000 Brexit-related enquiries (2.72% of the total number of enquiries).

The coherence, relevance and cost effectiveness of the Commission's web presence on Europa further improved through the strengthening of governance, better editorial and visual alignment of websites across the European Commission and increased standardisation of Information Technology solutions. In 2020, more than 300 million visitors visited the Europa website compared to 250 million in 2019.

In relation to future-oriented activities, the Commission needs to remain up to speed with the constantly evolving communications industry and media environment, anticipating trends and challenges, for example in the following fields:

- highly increase in digital and virtual communication. Due to the impossibility to organise face to face events due to Covid-19 crisis;
- innovative communication services such as social media, including in particular more localised social media messaging via representations;
- graphic design and multimedia productions, to comply with the increasing demand for attractive and visual media content;
- the increasing need for data analytics and fact-checking/rebuttals in the context of disinformation / fake news, to enhance the Commission's rebuttal and myth-busting capacity;

More details on specific objectives and indicators are found in the following sections.

### 3.2. Key achievements

DG Communication headquarters, together with the Spokesperson's Service and the Representations in the Member States, communicate with the media, stakeholders and citizens on European policies and their direct impact on citizens' daily activities. As per its Annual Activity Reports, the Directorate-General for Communication achievements in 2014 to 2020 are based on the general and specific objectives defined in its Strategic Plan 2014-2020.

The general overarching communication objective shared across the whole 'communication domain' of the Commission 2016 to 2020 was to ensure that 'citizens perceive that the EU is working to improve their lives and engage with the EU. They feel that their concerns are taken into consideration in the European decision-making process and they know about their rights in the EU'.

To reach this general objective, DG COMM defined a number of specific objectives depending on the client groups targeted. As detailed in DG COMM Strategic Plan 2016-2020 intervention logic, there are 3 main focus groups: 1) College, Cabinets and Services; 2) Line DGs, and 3) Citizens, media, multipliers and stakeholders.

Specific objectives per target group are then for example 'use of political reports, analysis and feed-back by the College and Cabinets' or 'Building a coherent web presence' or 'Citizens are in direct communication with the Commission' amongst others.

Examples of key achievements per specific objectives are detailed in the DG COMM Annual Activity Report and in this Programme Statement, as illustrated in the small selection below:

466 000 000	77 %	20 %	
to all Commission owned websites enrolled in Europa Analytics <sup>3</sup> .	Average satisfaction rate for the core website of the EU in 2020.	Overall growth in visits for the Europa domain including a 70% increase in visitors for the European Commission site in 2020.	

<sup>3</sup> +-390 websites.

<b>200</b>	<b>126</b>	<b>50</b>	
Press conferences organised by the <b>Spokesperson's Service</b> in 2020.	Midday briefings organised by the Spokesperson's Service.	Publication of news articles focusing on the messages and activities of the President of the Commission.	

<b>1 500</b>	<b>55 720</b>	<b>138 281</b>	
Number of <b>audiovisual products</b> provided to the College in 2020.	Number of TV uptakes from 'Europe by Satellite <sup>(4)</sup> ' (in minutes).	Number of items downloaded (Audio/Video/ Photo).	

<b>6 575</b>	<b>360</b>	<b>96.2%</b>	
Information Events organised by the <b>Europe Direct Information Centres</b> in 2020.	Events to increase awareness of the cohesion policy benefits in the regions.	Users who would recommend the Europe Direct Information Centre in 2020.	

<b>147 245</b>	<b>in 24</b>	<b>85%</b>	
Questions answered by the <b>Europe Direct Contact Centre</b> in 2020.	Official EU Languages	Satisfaction rate on queries answered in 2020.	

<sup>(4)</sup> The European Union's TV information service which provides EU related audiovisual material via satellite and online to media professionals.

<b>1 700 000</b>	<b>109</b>	<b>7 329 000</b>	
Visits to the <b>EU Learning corner in 2020</b> ,	Published factsheets	Number of readers / visits to publications and online materials for the general public and for young people in 2020.	

### 3.3. Evaluations, studies and reports

In 2020, DG Communication concluded the study, 'Study on Eurobarometer'. The key findings of this study were the following:

- The main focus of the study was to perform a global analysis of Eurobarometer activities within the Commission, benchmark Eurobarometer against other international surveys, show Eurobarometer's strengths and weaknesses and indicate successes and possible improvements.
- The main findings of the report include: 1) Eurobarometer's use in EU publications, Impact Assessments and academic literature is increasing over the years; 2) Eurobarometer is perceived as a trustworthy and reliable source of data within the Commission; 3) Eurobarometer is considered a unique tool in Europe in its combination of topics, timescales and geographical coverage.
- DG Communication is working on the study's recommendations, notably to improve:
  - the user friendliness and use of data (by improving the accessibility and dissemination of data through a new inter-institutional database and website as well as by adapting the format of the EB publications) and
  - internal coordination and cooperation among the Commission services (by making available more information on methodology and collection of data, by reassessing the DG Communication internal organisation and by using existing Commission-wide networks).

Concerning the forthcoming studies there are two on-going studies:

- 'Review of EC publications for citizens ' (December 2019-February 2021);
- 'Study on youth audience sub-segmentation' (May 2020- May 2021);

The planned studies to start in 2021 or later:

- 'Study on prizes and awards in the Commission' (June 2021 – December 2021);
- 'Study on target audience analysis 'A Europe Fit for the Digital Age' (2021- 2022);
- 'Study on Europe by satellite (2021-2022);
- 'Monitoring and evaluation of the communication actions under the NextGenerationEU umbrella' (February 2022- October 2024);
- 'Evaluation/Study on EC social media accounts' (2022 – 2023);
- 'Study on Europa site' (2022-2023);
- 'Evaluation/Study on the Europe Direct Contact Centre'(October 2023 – March 2024);
- 'Evaluation/Study on the Europe Direct Information Centres' (2023 - 2024);
- 'Evaluation/Study on EC Visitors' Centre and on Experience Europe RP14' (2024- 2025).
- 'Evaluation/Study on the joint strategy for the House of Europe (Before the EP elections of 2024);
- 'Evaluation/study - European Elections 2024' (June 2024 – August 2024);
- 'Evaluation/study of the corporate minimum requirements for communication and visibility under the long-term budget 2021-27' (2026 – 2026).

## 4. Programme 2021-2027 - Key monitoring indicators

**Specific Objective 1 :A modern, high-performing and sustainable European Commission (general objective)**

**Indicator 1:Positive and fairly positive views on the image for the European Union**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	Annual
Cut-Off Date	31/12/2020
Data source	EC Eurobarometer
Link to the objective	The indicator gives the share of positive and fairly positive views on the image of the European Union.
Link MFF 14-20 / MFF 21-27	Link to MFF 14/20 General Objective 1, Indicator 1: Percentage of EU citizens having a positive image of the EU
Other methodological comments	N/A
Full metadata available at this address	
Justification of the trend	N/A

### Specific Objective 2 :College and services use country specific intelligence, Eurobarometer results, media analysis and stakeholders'/citizens' feedback to inform political decision-making

**Indicator 1:Political reporting products provided by the Representations covering reactions in all Member States on EU topics**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of Reports - Annual
Cut-Off Date	31/12/2020
Data source	EC DG COMM, Political reporting tool
Link to the objective	This indicator is directly linked to Specific Objective 2
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	N/A
Full metadata available at this address	N/a
Justification of the trend	N/A

### Specific Objective 3 :College receives strategic advice on communicating the headline ambitions and on media landscapes in the Member States

**Indicator 1:Audio visual products provided to the College ( messages, interviews, statements, clips)**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of Audiviosual products - Annual
Cut-Off Date	31/12/2020
Data source	EC DG COMM, Survey
Link to the objective	This indicator is directly linked to Specific Objective 3
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	N/A
Full metadata available at this address	
Justification of the trend	N/A

### Specific Objective 4 :Corporate communication of the Commission's headline ambitions is aligned across the Commission's departments

**Indicator 1: Specific contracts concluded using Corporate Communication Framework Contracts**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of Contracts - Annual
Cut-Off Date	31/12/2020
Data source	EC DG COMM, Survey
Link to the objective	This indicator is directly linked to Specific Objective 4
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	N/A
Full metadata available at this address	
Justification of the trend	N/A

**Specific Objective 5 : Meaningful and tailored messages, focussed on the Commission's headline ambitions, are communicated to citizens, media, multipliers and stakeholders****Indicator 1: Target audience able to recall the messages of corporate campaigns**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

## **5. Programme 2014-2020 - Key monitoring indicators**

*Previous FIN 1 : Statement on Financial Intervention of the Communication Policy Area*

**General Objective 1 :Citizens perceive that the EU is working to improve their lives and engage with the EU. They feel that their concerns are taken into consideration in European decision making process and they know about their rights in the EU.**

**Indicator 1:Percentage of EU citizens having a positive image of the EU**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2020
0,39				0,32	0,34	0,36	0,50			0,50
	Actual Progress									Final
	0,39	0,37	0,35	0,40	0,43	0,42	0,40			0,40

Are we on track	Moderate progress
Indicator type	Impact
Unit of measurement	Percentage - Annual
Cut-Off Date	30/08/2020
Data source	EC Eurobarometer
Link to the objective	Direct link to General Objective 1
Link MFF 14-20 / MFF 21-27	Link to MFF 21/27 SP 1 , Indicator 1: Positive and fairly positive views on the image for the European Union
Other methodological comments	N/A
Full metadata available at this address	
Justification of the trend	The evolution from 43% to 40%, could be explained by the change in context brought by the pandemic and the anticipation of difficulties in the economy.

**Specific Objective 1 :A simple, clear, understandable message is communicated to citizens explaining the direct impact of EU policies on their lives.**

**Indicator 1:Percentage of the 100 top press releases consulted in EN with more than 10 000 online views**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
43%		60%		65%						
	Actual Progress									Final
		65%	100%	17%						

Are we on track	
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	Rapid reporting – DG COMM. Website reported data: As of 2017, data comes from a new web analytics tool(Europa Analytics) based on the open-source platform Piwik It provides more accurate reporting than the previous, older tool (SAS Analytics) and this is reflected in this year's reported data

	for all Europa websites. On average, the new corporate analytics tool records 60% less unique visitors and visits than the previous one. This is due mainly to document downloads and internal site searches being recorded as separate indicators in the tool (e.g. as 'downloads' and 'site searches'). See IPG: <a href="http://ec.europa.eu/ipg/services/analytics/faq_en.htm#section_3_5">http://ec.europa.eu/ipg/services/analytics/faq_en.htm#section_3_5</a>
Link to the objective	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Discontinued Indicator
Full metadata available at this address	
Justification of the trend	Since 2018 the statistical tool used by the Commission to track the online traffic was changed and this indicator was no longer in line with the reality of the Spokespersons' Service work. The current indicator "Percentage of the top 100 press releases consulted in English (EN) with more than 10 000 online views " was changed to "Number of online views of all press releases".

**Indicator 2: Number of multimedia productions downloads**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020

Data source	AV Analytics and Web Analytics.
Link to the objective	This indicator is directly linked to Specific Objective 1
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	N/A
Full metadata available at this address	
Justification of the trend	For 2019, the figures were low due technical issues related to the new Audiovisual portal. The data concerning photo items were missing for the period from March to December 2019, so the forecast was influenced by this issue. For 2020, the technical problem was solved and the final count is very close to the projected target announced in the programme statement (140,000). However, exact projections in the areas covered by this indicator are not possible due to the unpredictable nature of news. For 2020, the trend is positive and in line with changing media consumption patterns.

**Indicator 3: Satisfaction rate on queries replied by the EUROPE DIRECT Contact centre**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Link to the objective	This indicator is directly linked to Specific Objective 1
Link MFF 14-20 / MFF 21-27	Linked to MFF 21/27 SP 5; Indicator 2 : Users satisfied with the answers received from the Europe Direct Contact Centre.
Other methodological comments	N/A
Full metadata available at this address	
Justification of the trend	For 2020, the trend is on track / stable as confirmed by satisfaction surveys. The contractual target is 80%, which has been consistently met throughout the lifetime of the Centre. The rate is also heavily dependent on the content, not only on the service. Very complex projects, such as WiFi4EU, with a difficult implementation timeline (cancelled application, external IT issues) impacted significantly the overall Europe Direct Contact Centre satisfaction rate. The achieved rate is aligned to overall industry standards.

**Indicator 4: Percentage of visitors to the Commission very satisfied with the visits**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020

Full metadata available at this address	
Justification of the trend	Two internal “EB satisfaction questionnaires” were carried out: one for 2017/2018 projects (global satisfaction rate of 7,96/10) and one for 2019 projects (global satisfaction rate of 7,86/10). This means the situation is “stable” (79% as compared to 80%) as this evolution is not significant. The next review will be conducted at the end of 2021, grouping 2020 and 2021 surveys.

## **Overview**

### **Challenges**

*The presentation of the Common Agricultural Policy (CAP) in this section is a preview of the policy applicable from 2023 onwards according to the reform proposals currently under discussion by the co-legislators<sup>5</sup>. The text may be adapted according to the regulations finally adopted.*

EU agriculture and rural areas face developments that have significantly changed since the implementation of the last reform of the Common Agricultural Policy (2015):

- higher market-price uncertainty has replaced the high price/high volatility and high co-movement environment after the financial crisis;
- trade negotiations have moved from multilateral to bilateral and regional agreements;
- new EU international commitments on Climate Change and on Sustainable Development Goals added new dimensions to the challenges and opportunities facing the CAP.

The new European Green Deal reinforces the need to support the transition towards a knowledge-based fully sustainable agricultural sector.

In that context, EU's agriculture and rural areas face challenges related to:

- the economic health of the farm sector, both at the level of income and competitiveness, in the current uncertain global context;
- the need to preserve natural resources in a context of climate change (requiring action both regarding mitigation and adaptation); and
- the need to preserve the economic and social fabric for the EU's rural areas.

The CAP must be further modernised to meet these challenges, simplified to do so with a minimum of administrative burden, and made even more coherent with other EU policies to maximise its contribution to the Sustainable Development Objectives.

<sup>5</sup> Proposal for a Regulation of the European Parliament and of the Council establishing rules on support for strategic plans to be drawn up by Member States under the Common Agricultural Policy (CAP Strategic Plans) and financed by the European Agricultural Guarantee Fund (EAGF) and by the European Agricultural Fund for Rural Development (EAFRD) and repealing Regulation (EU) No 1305/2013 of the European Parliament and of the Council and Regulation (EU) No 1307/2013 of the European Parliament and of the Council (COM(2018) 392); Proposal for a Regulation of the European Parliament and of the Council on the financing, management and monitoring of the Common Agricultural Policy and repealing Regulation (EU) No 1306/2013 (COM(2018) 393); Proposal for a Regulation of the European Parliament and of the Council amending Regulations (EU) No 1308/2013 establishing a common organisation of the markets in agricultural products, (EU) No 1151/2012 on quality schemes for agricultural products and foodstuffs, (EU) No 251/2014 on the definition, description, presentation, labelling and the protection of geographical indications of aromatized wine products, (EU) No 228/2013 laying down specific measures for agriculture in the outermost regions of the Union and (EU) No 229/2013 laying down specific measures for agriculture in favor of the smaller Aegean islands (COM(2018) 394).

Europe needs a smart, resilient, sustainable and competitive agricultural sector in order to ensure the production of safe, high-quality, affordable, nutritious and diverse food for its citizens and a strong socio-economic fabric in rural areas. A modernised Common Agricultural Policy must enhance its European added value by reflecting a higher level of environmental and climate ambition and addressing citizens' expectations for their health, the environment and the climate.

### **Mission (general objectives)**

The global and cross-border nature of the challenges faced by the EU agricultural sector and rural areas requires a strong common policy at EU level.

EU Budget support from the European Agricultural Guarantee Fund (EAGF) and the European Agricultural Fund for Rural Development (EAFRD) aims to further improve the sustainable development of farming, food and rural areas and shall contribute to achieving the following EU objectives:

- foster a smart, resilient and diversified agricultural sector ensuring food security;
- bolster environmental care and climate action and to contribute to the environmental- and climate-related objectives of the Union;
- strengthen the socio-economic fabric of rural areas.

### **Specific objectives**

Ten key objectives will be the basis upon which the future common agricultural policy (CAP) strategic plans will be built and will be the cornerstone of a more results-oriented policy. The objectives are:

1. Support viable farm income and resilience across the Union to enhance food security;
2. Enhance market orientation and increase competitiveness, including greater focus on research, technology and digitalisation;
3. Improve the farmers' position in the value chain;
4. Contribute to climate change mitigation and adaptation, as well as sustainable energy;
5. Foster sustainable development and efficient management of natural resources such as water, soil and air;
6. Contribute to the protection of biodiversity, enhance ecosystem services and preserve habitats and landscapes;
7. Attract young farmers and facilitate business development in rural areas;
8. Promote employment, growth, social inclusion and local development in rural areas, including bio-economy and sustainable forestry;
9. Improve the response of EU agriculture to societal demands on food and health, including safe, nutritious and sustainable food, food waste, as well as animal welfare
10. Modernising the sector by fostering and sharing of knowledge, innovation and digitalisation in agriculture and rural areas, and encouraging their uptake

### **Public intervention context**

The common agricultural policy (CAP) is a genuinely European policy as Member States pool resources to operate a single European policy with a single European budget. The objectives of the CAP as laid out in Article 39 of the Treaty of the Functioning of the European Union (TFEU) are:

- to increase agricultural productivity;
- to ensure a fair standard of living for the agricultural community;
- to stabilise markets;
- to assure the availability of supplies;
- to ensure that supplies reach consumers at reasonable prices.

The Treaty objectives, together with horizontal policy clauses (e.g. on the protection of the environment, consumer protection and animal welfare), provide the framework for all EU initiatives and activities.

The CAP is financed through two funds:

- the European Agricultural Guarantee Fund (EAGF) and

- the European Agricultural Fund for Rural Development (EAFRD).

By its assurance and audit activities, the Directorate General for Agriculture and Rural Development (DG AGRI) verifies that the conditions under which controls and payments have been carried out by the Member States give reasonable assurance that the CAP expenditure has been effected in conformity with EU rules and, where it is not the case, exclude the expenditure concerned from EU financing.

DG AGRI contributes to the negotiation of international agreements impacting on agricultural policy (trade in agricultural products, quality policy, food security etc.), contributes to the implementation of such international agreements and manages the relations with third countries related to agriculture.

By its regulatory and enforcement actions, DG AGRI prepares legislative proposals, negotiates these with the other EU institutions and monitors their implementation to ensure a harmonised application. The DG manages various Commission regulations laying down detailed implementing rules as well as their adaptation over time. DG AGRI also deals with infringements, control of implementation of the acquis, complaints and Ombudsman inquiries.

## Actions

The implementation of the future Common Agricultural Policy will take place in the form of 27 different CAP Strategic Plans. These plans will be programming instruments where Member States will present their proposed interventions to achieve the EU specific objectives.

The interventions will include actions funded by both the EAGF and the EAFRD. CAP Strategic Plans will be assessed and formally adopted by the European Commission and, once established, Member States will periodically report on the progress made in the implementation using a system of common indicators.

The EAGF will fund the following types of interventions:

1. Direct Payments: a) Decoupled direct payments: the basic income support for sustainability; the complementary redistributive income support for sustainability; the complementary income support for young farmers; the schemes for the climate and the environment; b) Coupled direct payments
2. Sectorial interventions: a) fruit and vegetables sector; b) apiculture products sector; c) wine sector; d) hops sector; e) olive oil and table olives sector; f) other sectors.

The EAFRD will fund the following types of interventions:

- (a) environmental, climate and other management commitments; (b) natural or other area-specific constraints; (c) Area-specific disadvantages resulting from certain mandatory requirements; (d) investments; (e) installation of young farmers and rural business start-up; f) risk management tools; g) cooperation; h) knowledge exchange and information.

The implementation of the new CAP Strategic Plans is scheduled to begin as of 2023.

A number of EAGF schemes will continue to be financed outside the CAP strategic plans, i.e.: private and public storage measures, exceptional measures; school schemes; information and promotion measures and support for the outermost regions and smaller Aegean islands.

## Delivery mode

Shared management; DG AGRI is the leading DG.

Regulation (EU) 2020/2220 prolongs the current CAP regulations in 2021 and 2022, within the budgetary framework of Council Regulation (EU, Euratom) 2020/2093 of 17 December 2020 laying down the multiannual financial framework for the years 2021-2027.

The new CAP, which will apply as of 1 January 2023, has been designed to cope with the challenges identified for the period 2023-2027. The central elements of the CAP proposals are a new performance-based delivery model, focussing on results rather than on compliance and 27 national CAP strategic plans.

To support the elaboration of the CAP Strategic Plans, DG AGRI established a Structured Dialogue with Member States as well as prepared recommendations. DG AGRI, in close cooperation with other Commission services, coordinated the establishment of this Structured Dialogue and the adoption of the Recommendations<sup>6</sup>. As stated in the Farm to Fork Strategy<sup>7</sup>, the recommendations address the specific economic, environmental and social objectives of the future Common Agricultural Policy and in particular the ambition and specific targets of the Farm to Fork Strategy and the Biodiversity Strategy for 2030.

The recommendations describe the main challenges per Member State and how they can be addressed in their Strategic Plans to meet the objectives of a viable agricultural sector, producing in a sustainable way and maintaining the social fabric of the rural areas.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

#### *European Agricultural Fund for Rural Development (EAFRD)*

The EAFRD funding in budget years 2021 and 2022 will be implemented under the CAP transitional rules, agreed by the legislators at the end of 2020 (Regulation (EU) 2020/2220). The reform of the CAP, with the introduction of Member States' CAP Strategic Plans, is scheduled to be implemented as of 2023.

The total EAFRD budget request for 2022 amounts to EUR 12.7 billion in commitment appropriations and EUR 14.7 billion in payment appropriations, mainly to finance EAFRD support under the rural development programmes. A minor part of these amounts covers the technical assistance at the initiative of the Commission (EUR 30.3 million in commitment appropriations and EUR 25.2 million in payment appropriations).

For 2022, an additional amount stemming from the European Union Recovery Instrument will also be available for the EAFRD (EUR 5.7 billion in commitment appropriations).

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

#### Market related expenditure

Within the Common Market Organisation (CMO), sector-specific support programmes are operating at various points in their respective life cycles.

- For example, for the wine national support programmes, 2019-2023 is the third programming period since the reform in 2009. Support in the wine programmes is concentrated in restructuring of vineyards, investments and wine promotion.
- The apiculture programmes follow a three-year programming period. In 2020, the current programmes were in their first year of implementation (period 2020-2022<sup>8</sup>).

<sup>6</sup> [https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cap-strategic-plans\\_en](https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cap-strategic-plans_en)

<sup>7</sup> COM(2020) 381 final

<sup>8</sup> Commission Implementing Decision (EU) 2019/974 of 12 June 2019, OJ L 157, 14.6.2019.

- Support for producer organisations in the fruit and vegetables sector is implemented on the basis of annual plans. Operational programmes are implemented over several years.
- The support programmes to producers' and inter-branch organisations in the olive oil and table olives sector concern normally a three-year programming period (April 2018-March 2021). Three Member States (France, Greece and Italy) benefit of this support programme. The next programming period will start in April 2021 and run until December 2022, as agreed in the frame of the CAP transitional rules (Regulation (EU) 2020/2220).

The EU school fruit, vegetables and milk scheme, bringing together the former school fruit and school milk schemes under a single legal framework, applies since school year 2017/2018. All Member States participate in it<sup>9</sup> – in 2020, the UK continued to participate according to the Withdrawal Agreement.

In 2020, the Commission adopted a range of market intervention and exceptional measures to support the agricultural and food sectors most affected by the Covid-19 pandemic, i.e.:

- (1) [private storage aid](#) for dairy products (skimmed milk powder, butter and cheese) and meat products (beef, sheep and goat meat),
- (2) temporary derogation from certain EU competition rules, with the possibility for operators in the milk, flowers and potatoes sector to self-organise and implement market measures at their level and
- (3) flexibility for [market support programmes for wine, fruit and vegetables, table olives and olive oil, apiculture and the EU school fruit, vegetables and milk scheme](#).

### Direct payments

For direct payments, financial years 2014 and 2015 covered pre-reform schemes. In addition, in 2015 the EAGF covered already some elements of the 2013 CAP reform, including the convergence of the direct payments' aid levels between Member States ("external convergence"). As of financial year 2016, the new structure of direct payments has been financed. Beyond the compulsory elements of the new direct payments schemes, Member States have considerable flexibility in the implementation, following their main implementation choices made in 2014. These choices allow Member States to target support at their specific priorities.

The Commission services have since 2014 assisted Member States in preparing and implementing the reformed direct payments through, for example, guidance documents or discussions in expert group meetings. Implementation of the direct payments has steadily improved over the years. This implementation of the direct payments has been also accompanied by a green Declaration of Assurance from the European Court of Auditors for 2016 - the first year of implementation of the 2013 reform of the direct payments schemes. Direct payments have been free from material error since then.

For financial year 2021, transitional rules have been adopted to ensure the continuation of the system applicable since 2016. In particular, Member States have the possibility to take decisions in terms of the flexibility between the CAP pillars which was initially applicable until financial year 2020 only (see below). As regards the process of convergence of the basic payment per hectare in those Member States using the system of payment entitlements for which Member states had set targets up to 2020, it was ensured that this can also be continued, although such continuation is only optional for Member States.

### Forthcoming implementation

Taking into account the delay in the ongoing legislative procedure for the reform of the Common Agricultural Policy for the period post 2020 and in order to assure the continuity in granting income support to farmers and in supporting rural development measures in 2021 and 2022, the Commission presented two proposals containing the necessary transitional arrangements. These were adopted by the co-legislators during 2020, including a two-year transitional period:

- Regulation (EU) 2020/127 of the European Parliament and of the Council of 29 January 2020 amending Regulation (EU) No 1306/2013 as regards financial discipline as from financial year 2021 and Regulation (EU) No 1307/2013 as regards flexibility between pillars in respect of calendar year 2020;
- Regulation (EU) 2020/2220 of the European Parliament and of the Council of 23 December 2020 laying down certain transitional provisions for support from the European Agricultural Fund for Rural Development (EAFRD) and from the European Agricultural Guarantee Fund (EAGF) in the years 2021 and 2022 and amending Regulations (EU) No 1305/2013, (EU) No 1306/2013 and (EU) No 1307/2013 as regards resources and application in the years 2021 and 2022 and Regulation (EU) No 1308/2013 as regards resources and the distribution of such support in respect of the years 2021 and 2022.

### Justification of changes to the financial programming and/or to the performance information for market measures

<b>08 02 03 – Market-related expenditure outside the CAP Strategic Plans</b>	<b>(appropriations + EUR 43 million)</b>
Appropriations in 2021 budget:	2 618.1

<sup>9</sup> Greece started to implement the scheme as of school year 2018-2019.

Appropriations requested in 2022 DB:	2 661.1
--------------------------------------	---------

The estimated budgetary needs for market-related expenditure in 2022 are slightly higher than in budget 2021 (+ EUR 43 million). Estimated expenditure for the Member States' wine programmes and support to the fruit and vegetables sector represent around three-quarter of the requested appropriations for budget article 08 02 03. This budget article finances also support for the outermost regions (POSEI), smaller Aegean islands, agricultural information and promotion actions, beekeeping programmes as well as the school schemes, with 2022 budget needs for these schemes showing overall only a minor variation compared to 2021.

Owing to their perishable nature of the goods and their prices being relatively high, fruit and vegetables are immediately concerned by poor economic performance. Similarly, demand for EU dairy products depends substantially on increasing demand abroad. If this is reduced due to economic downturn, the fresh milk has to be processed into large quantities of storable butter and skimmed milk powder. This usually leads to steep price drops. Overall, the uncertainty regarding the outlook for most agricultural markets remains and especially the uncertainty due to Brexit and US sanctions play a role in the development of the export demand for EU agro-food products. For olive oil, a high production for one campaign together with very high stocks led to opening a private storage aid scheme in 2019. For dairy products (skimmed milk powder, butter, cheese), beef, and sheep and goat meat, private storage aid schemes were opened in 2020 in the context of the Covid-19 pandemic. However, no remaining expenditure is expected for these schemes in 2022. Moreover, outbreaks of Avian Influenza and African Swine Fever in some Member States might cause market disturbance in the affected areas. However, the Draft Budget 2022 includes no appropriations for market support measures related to outbreaks of animal diseases or any other exceptional situation.

As usual, the Commission will update its estimates in an Amending Letter to the Draft Budget 2022, which will then take into account latest market developments and perspectives, especially linked to the Covid-19 pandemic.

#### *Justification of changes to the financial programming and/or to the performance information for direct payments*

<b>08 02 05 – Direct payments</b>	<b>(appropriations - EUR 56 million)</b>
Needs in 2021 budget before financial discipline (incl. crisis reserve):	38 934
Needs in 2021 budget after financial discipline:	38 051
Appropriations in 2021 budget after financial discipline:	37 432
Estimated assigned revenue available in 2021 budget:	619
Amount of financial discipline in 2021 budget (incl. crisis reserve):	882.9

Needs in 2022 DB before financial discipline (incl. crisis reserve):	38 424
Needs in 2022 DB after financial discipline:	37 927
Appropriations requested in the 2022 DB after financial discipline:	37 376
Estimated assigned revenue available in 2022 DB:	551
Amount of financial discipline in 2022 DB (incl. crisis reserve):	497.3

The maximum amount of direct payments which a Member State may pay in a financial year is limited by the ceiling set in Annex III to Regulation (EU) No 1307/2013. For calendar year 2021 (financial year 2022), the initial total of Annex III amounted to EUR 38 364 million. By 19 February 2021, certain Member States<sup>10</sup> notified their decision to transfer amounts between direct payments and rural development, which overall resulted in a net decrease of EUR 619 million in the direct payment ceilings for calendar year 2021. The allocation of the national envelopes to the different schemes depends to a large extent on Member States' decisions. Within the changes due to the decrease in the overall amount, certain changes between schemes have occurred, reflecting Member States' implementation choices.

In financial year (FY) 2021, the financial discipline mechanism<sup>11</sup> must be applied both to set up the crisis reserve (EUR 487.6 million in current prices) and to respect the EAGF net ceiling for financial year 2021. In FY 2022, the financial discipline is only needed to establish the crisis reserve (EUR 497.3 million), reducing accordingly the budget needs for the direct payment budget items. The need for financial discipline will be re-assessed, as appropriate, in the context of the autumn Amending Letter to the Draft Budget 2022.

For direct payments (chapter 08 02 05), the 2022 budgetary needs after financial discipline decrease by EUR 124 million to an amount of EUR 37 927 million. However, requested appropriations for this article decrease by EUR 56 million, as significantly less assigned revenue is expected to be available to finance the Basic payment scheme (from EUR 619 million in FY 2021 to EUR 551 million in FY 2022). As a consequence, the requested appropriations amount to EUR 37 376 million in FY 2022, including appropriations for the crisis reserve (EUR 497.3 million under item 08 02 05 11).

<sup>10</sup> Croatia, Luxembourg, Hungary, Malta, Poland, Portugal and Slovakia notified transfers to rural development, while Czechia, Denmark, Germany, Greece, France, Latvia and the Netherlands notified transfers to direct payments. In addition, Bulgaria, Czechia, Denmark, Estonia, Ireland, Greece, Spain, Italy, Latvia, Hungary, the Netherlands, Poland, Portugal, Slovakia and Finland notified an amount for the estimated product of reduction of direct payments to be transferred to rural development.

<sup>11</sup> Article 26 of Regulation (EU) No 1306/2013

The needs after financial discipline for the Basic payment scheme are estimated at EUR 14 725 million, which is EUR 66 million less than in FY 2021. The needs after financial discipline for the Single area payment scheme (SAPS) amount to EUR 4 433 million, an increase by EUR 27 million compared to budget year 2021. Other schemes show minor changes compared to financial year 2021, reflecting the stabilisation in the execution of these schemes. For the Payment for agricultural practices beneficial for the climate and the environment, the needs keep stable at EUR 10 780 million after financial discipline, only EUR 2 million higher than in the 2021 budget. For the Redistributive payment, needs remain similar (+ EUR 2 million) at EUR 1 612 million after financial discipline and the needs for the young farmers scheme decrease by EUR 5 million at EUR 569 million. The Voluntary coupled support scheme decreases slightly by EUR 13 million at EUR 4 006 million. The Small farmers scheme is financed from the ceilings available for other schemes. Based on the experience with the execution in previous years showing a decreasing trend, the budget needs for this scheme are estimated at EUR 621 million, EUR 86 million lower than in 2021.

***Justification of changes to the financial programming and/or to the performance information for SO 7 (POSEI)***

***Market-related expenditure***

<b>08 02 03 01 – POSEI + Smaller Aegean Islands</b>	<b>(appropriations + EUR 5 million)</b>
Appropriations in 2021 budget:	224
Appropriations requested in 2022 DB:	229

***Direct payments***

<b>08 02 05 01 – POSEI + Smaller Aegean Islands</b>	<b>(appropriations + EUR 6 million)</b>
Appropriations in 2021 budget:	431
Appropriations requested in 2022 DB:	437

For the support to the outermost regions (POSEI) and smaller Aegean islands, the programmes are divided into two types of measures: specific supply arrangements financed under item 08 02 03 01 and support for the local products which are split into market aids (item 08 02 03 01) and direct payments (item 08 02 05 01).

The requested appropriations for DB2022 increase slightly as the Member States concerned notified only minor modifications of their programmes, the financial allocations of these programmes were kept unchanged as agreed in the frame of the CAP transitional rules and a lower rate of financial discipline will have to be applied in 2022 compared to 2021.

***Justification of changes to the financial programming and/or to the performance information for SO 8***

To assist Member States carrying out on the spot checks and/or the checks by monitoring on aid applications, satellite imagery acquired is made available to the national authorities allowing them to determine the area of agricultural parcels, to identify crops and verify their status. Compared to budget 2021, the costs for the acquisition of satellite images and data management for 2022 remain at EUR 10.5 million. In addition, for Draft Budget 2022, commitment appropriations (EUR 1.8 million) and payment appropriations (EUR 1.1 million) are requested for the administrative arrangement for related technical support needed to ensure and strengthen the quality and the technical implementation of the Integrated Administration and Control System (IACS) and the Land Parcel Identification System (LPIS) and the transition from CAPISA2 to CAPISA3.

***Justification of changes to the financial programming and/or to the performance information for SO 9***

Budget item 08 02 06 03 - EAGF operational technical assistance will also finance the communication efforts of the Commission in relation to the CAP. The overall needs for Draft Budget 2022 for communication are estimated at EUR 15.8 million. This includes EUR 4.0 million destined for grants to third party organisations. Other external communication actions in 2022 financed under this budget item, such as conferences, media activities, attendance in fairs, publications, web and social media activities, will focus on the relevance of the CAP in particular in relation with the growth, jobs and investments priority theme and will amount to EUR 4.4 million. The scope, choice and intensity of these communication actions will be in line with the 2022 External Communication Action Plan of the Directorate General for Agriculture and Rural Development.

In 2022 the EAGF will also contribute to the Corporate Communication Strategy of the Commission with around EUR 7.8 million, with the EAFRD contributing EUR 3.4 million (under budget item 08 03 02).

***Justification of changes to the financial programming and/or to the performance information for SO 10***

The **Farm Accountancy Data Network (FADN)** data are essential tools for the monitoring of agriculture income and business which are used for the evaluation and the impact analysis of the agricultural measures. They provide support to the decision-making process related to the CAP. The appropriations requested for 2022 for the FADN (EUR 16.7 million) are intended to finance the standard fee for FADN farm returns transmitted by the Member States (81 795 \* EUR 180) and the development and maintenance of the information system used for the collection, processing, analysis, publication and dissemination of the farm accountancy data and analysis results (EUR 1.9 million).

Information from **Farm Structure Surveys** is systematically used in extended impact assessments, evaluation and policy conception, particularly regarding the regional situation of specific sectors. The content of the surveys is regularly adapted to answer new needs for agricultural and rural development policy and other policies (in particular regional, social and environmental

policy). In 2022, EUR 20 million in commitment appropriations are needed for the agricultural census 2023-2026. Payment appropriation needs for 2022 are EUR 28.2 million to cover payments against the past and new commitments.

Under **restructuring of systems for agricultural surveys**, the Draft Budget 2022 includes EUR 2.3 million in commitment and payment appropriations for the MARS agro-meteorological system used for monitoring crops and forecasting yields of the main crops in Europe and its neighbourhood. Furthermore, EUR 3.0 million in payment appropriations is included for the LUCAS project for surveys gathering information on land cover, land use and landscapes, while EUR 3.6 million in payment appropriations is destined for the maintenance, development and use of modelling tools used by the Commission in its agricultural economic and policy analysis including MARS neighbourhood.

### ***European Agricultural Fund for Rural Development (EAFRD)***

	<b>Commitments</b>	<b>Payments</b>

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

### ***Implementation Status***

The implementation of the 2014-2020 rural development programmes (RDPs) remains at cruising speed. In 2020, Member States submitted their fifth Annual Implementation Reports (AIRs) on the implementation of the RDPs covering implementation until 31 December 2019.

For the 2014-2020 period, a number of initiatives were launched to improve efficiency and effectiveness of EAFRD expenditure:

- To facilitate the implementation of the EU funds, the EAFRD implementing regulation was already modified in April 2016. In addition, the EAFRD basic act was modified in 2017 through the so-called Omnibus Regulation<sup>12</sup>, amongst others to improve risk management tools for farmers, reduce administrative burden for beneficiaries and simplify conditions for financial instruments. Finally, the implementing regulation on administration and control systems (Regulation (EU) No 809/2014) was also modified in July 2017 to simplify control rules for non-area related measures.
- Simplified Cost Options (SCOs) are being increasingly used by Member States and regions in order to improve the efficiency and effectiveness of EAFRD support and to reduce the administrative burden. Currently around 76% of the RDPs are using at least one type of SCOs and the number is expected to increase. As an example, flat rates are used to cover indirect costs, unit costs for training activities or investments and lump sums for cooperation actions. Member States and regions are introducing more SCOs in the context of RDPs amendments and this trend is expected to continue. The Commission has greatly promoted the use of SCO through dedicated seminars and other networking activities.
- More than 30 workshops and capacity building events have been organised by the European Network for Rural Development since 2015 in order to share best practices and experience and to help stakeholders (including, among others, managing authorities, paying agencies, EU-wide organisations, local action groups, evaluators, etc.) to work together in a strategic manner and enhance the performance of rural development programmes. The timing and the content of the events has been specifically designed in agreement with the Commission services (in particular the Directorate General for Agriculture and Rural Development) according to the different stages of the programming cycle (e.g. defining selection criteria at the launching phase of the programmed, or addressing bottlenecks in RDP implementation in view of preparing for the Performance Review or starting the discussions on the CAP reform) and to better exploit the potential of the

<sup>12</sup> Regulation (EU) 2017/2393, OJL 350, p.15

programmes to deliver on specific issues of political relevance (e.g. generational renewal, Smart Villages, biodiversity or farm resilience).

- An increased awareness of implementation feasibility and possible errors is guaranteed through an ex-ante assessment of the rural development measures by Member States, aiming to ensure they are verifiable and controllable and taking into account the results of controls in the previous programming period.
- Regulation (EU) 1303/2013 was amended by Regulation (EU) 2020/558 of 23 April 2020 as a response to the COVID-19 outbreak. To facilitate the implementation of the EU funds and support final recipients affected by the Covid-19 health crisis the modified Common Provision Regulation allows the provision of a stand-alone working capital through EAFRD supported financial instruments. This has a significant positive implication with regards the demand for any of the instruments introducing this new possibility, reduces the administrative burden associated with control and monitoring of the instruments, and simplifies the conditions for financial instruments.
- Subsequently, Regulation (EU) 1305/2013 was also amended by Regulation (EU) 2020/872 as a response to the COVID-19 outbreak. In particular, an exceptional temporary measure was introduced aimed at providing relief to farmers or small-medium sized agri-businesses affected by COVID-19, and to ensure liquidity over the crisis period (max EUR 7 000 per farmer and max EUR 50 000 per SME). The EAFRD support for these measures is limited to a maximum of 2% of the total EAFRD contribution to the rural development programmes. As part of the CAP transitional rules, the implementation of this exceptional measure was subsequently prolonged until 30 June 2021 (with expenditure for this measure now eligible if paid by latest 31 December 2021).
- Under the technical assistance programme fi-compass, in total 34 cases of targeted coaching on financial instruments for EAFRD managing authorities were carried out over 2016-2020 of which 4 new were done in 2020. We undertook 4 EU-wide conferences with 561 attending participants in total. They formed part of the 22 conferences on EAFRD-supported financial instruments organised in the period 2015-2020. In 2020, a study assessing the gaps in financing agriculture and agro-food sectors in 24 Member States was published and the 24 national reports were disseminated. The activities related to dissemination of information were adapted to the new way of online working during the Covid-19 health crisis period and were provided through social media, specific brochures, websites, communication newsletters, etc.
- Considering the state of play in the discussions with the co-legislators on the future CAP and in order to ensure continuity in support to CAP beneficiaries in 2021 and 2022, Regulation (EU) 2020/2220 was adopted of 23 December 2020 providing certain transitional rules for the CAP for 2021-2022. This regulation aims to extend the rural development programmes by 2 years, whereby the extended programmes shall follow the existing legal framework, and adding the EAFRD allocation for the years 2021 and 2022 ('old rules – new money' principle). Furthermore, this transitional regulation also sets out the legal basis to introduce the part of the European Union Recovery Instrument earmarked to be implemented via the EAFRD into the rural development programmes. These additional financial resources shall be implemented through RDP measures that are directed at addressing the impact of the COVID-19 crisis.
- In addition, a regulation was adopted by the co-legislators end January 2020<sup>13</sup> to provide amongst others the flexibility for Member States to transfer funds between the CAP pillars for calendar year 2020.

### ***Programmes' implementation 2014-2020 (Common Strategic Framework), without pre-financing\****

Thematic objectives of the Common Strategic Framework	Commitments 2014-2020 EUR million (1)	Cumulative payments declared by Member-states at end 2020 (2)	(2)/(1)%
1. Strengthening research, technological development and innovation Outputs:	2,127.65	531.08	25.0%
2. Enhancing access to, use and quality of, information and communication technologies Outputs:	922.21	298.66	32.4%
3. Enhancing the competitiveness of the agricultural sector Outputs:	28,916.93	16,130.17	55.8%
4. Supporting the shift towards a low-carbon economy Outputs:	4,074.55	2,227.96	54.7%
5. Promoting climate change adaptation, risk prevention and management Outputs:	21,306.47	16,134.09	75.7%
6. Protecting the environment and promoting resource efficiency Outputs:	25,452.96	18,449.04	72.5%
7. Promoting sustainable and quality employment and supporting labour mobility Outputs:	2,303.25	990.53	43.0%

<sup>13</sup> Regulation (EU) 2020/127 of the European Parliament and of the Council of 29 January 2020 amending Regulation (EU) No 1306/2013 as regards financial discipline as from financial year 2021 and Regulation (EU) No 1307/2013 as regards flexibility between pillars in respect of calendar year 2020, [OJ L 27, 31.1.2020, p. 1-5](https://eur-lex.europa.eu/eli/reg/2020/127/oj)

Thematic objectives of the Common Strategic Framework	Commitments 2014-2020 EUR million (1)	Cumulative payments declared by Member-states at end 2020 (2)	(2)/(1)%
8. Promoting social inclusion and combating poverty Outputs:	11,792.63	5,461.02	46.3%
9. Investing in education, training and vocational training for skills and lifelong learning Outputs:	888.10	346.65	39.0%
<b>TOTAL</b>	<b>97,784.73</b>	<b>60,569.22</b>	<b>61.9%</b>

\*The above allocation of commitments into thematic objectives is indicative based on the Member States' programmes, situation at the end of 2020. The breakdown can be subject to changes due to possible modification of the RDPs. The cumulative amounts of payments declared by Member States are provided until Q3 2020. The cumulative payments **do not include pre-financing**, as they cannot be split per thematic objective. The amounts for Technical Assistance Measures and Discontinued Measures are not included as they do not contribute to any of the thematic objectives.

Overall, the Annual Implementation Reports screening for 2019 confirms a steady acceleration in spending levels compared to the first years of implementation. By end 2020, the budgetary commitments reached 100% of allocations for 2014-2020. Spending levels reached around 65% of total EAFRD resources for the same period (percentage of interim payments made to MS in comparison to total allocation). This is still a lower pace of implementation compared to the one reached at the equivalent point in time of the previous programming period (75%). This is due to the one year delay of the start several of the 2014-2020 rural development programmes. This implementation level for the EAFRD stands above the average implementation rate of other ESI Funds in terms of payments declared. The implementation rate should be assessed considering different factors. First, from the end of 2020, there remain still three years of the implementation period. Second, the overall level of commitment at EU level reached 100% until Q3 2020. Finally, in the case of rural development, a part of the expenditure is realised during the last years of implementation. The latter is mainly related to the late realisation of some investment projects, such as the ones for broadband development, which contribute to the relatively low implementation of thematic objective (TO) 2. The rather low execution rate of local development strategies (TOs 8 and 9) can be explained by a later implementation. Area related payments, generally associated with agri-environmental-climate commitments follow a more regular (annual) path, which explain the better implementation in TOs 5 and 6. For TO 1, the uptake and achievement of results is not yet fully in place. This is explained by the late start the measures chosen by MS, partially due to the need to adapt to the changes in the legal framework and the fact that some measures are new and have a longer project lifetime (e.g. cooperation projects and the new measure European Innovation Partnership for Agricultural Productivity and Sustainability).

#### Information about financial instrument(s) and trust fund(s) financed by the Programme

Financial instruments (FI) are a key tool for providing access to finance for the farming sector and the rural economy. They also allow, by leveraging with private capital and by their revolving nature, to complement the rural development budget. EAFRD already met the target of doubling the use of FIs as compared to the 2007-2013 programming period.

By end 2020, FIs supported by the EAFRD are programmed in 33 RDPs in thirteen Member States with a total EAFRD allocation of EUR 609 million. The amount declared to the Commission till end of 2020 equals to EUR 185 million. By end 2020, 19 Paying Agencies declared expenditure for FIs under RDPs.

Under the technical assistance programme *fi-compass*, in total 34 cases of targeted coaching on financial instruments for EAFRD managing authorities' were carried out over 2016-2020 of which 4 new were done in 2020. We undertook 4 EU-wide conferences with 561 attending participants in total. They formed part of the 22 conferences on EAFRD-supported financial instruments organised in the period 2015-2020. In 2020, a study assessing the gaps in financing agriculture and agro-food sectors in 24 Member States was published and the 24 national reports were disseminated. The activities related to dissemination of information were adapted to the new way of online working during the Covid-19 health crisis period and were provided through social media, specific brochures, websites, communication newsletters, etc. The Commission also continued the discussions with the Council and the EP on the new CAP proposal where FIs will continue to play an important part to foster investments in agriculture and rural areas, and which also introduced further legal and implementation simplifications.

Contributions were also made to the launch of the Just Transition Mechanism the Recovery and Resilience Fund as well as to the various work streams of InvestEU such as the Sustainability Proofing Guidelines (taxonomy), the Climate and Environmental Tracking, product fiches, etc.

#### Forthcoming implementation

As a result of the implementation of rural development programmes, the following targets, amongst others, are expected to be achieved at the level of the Union at the end of the programming period (target 2023 based on 2014-20 MFF allocations, as RDPs are not yet amended for the two-year transitional period): 28 million hectares of agricultural land concerned by commitments targeting biodiversity; 53% of the total rural population (147.5 million inhabitants) living in areas for which local development strategies are implemented by selected LEADER Local Action Groups (LAGs); investments in improved energy efficiency for more than 17 000 farms; support for about 176 000 young farmers to set up their businesses and for more than 320 000 farmers to

modernise and improve their production facilities. As for the rural business outside the farms gate, some 33 000 rural entrepreneurs are to receive support to develop their businesses.

The expected achievements, such as referred to above, depend on appropriate implementation rules for the EAFRD 2014-2020 expenditure, balancing purposeful policy framing and procedural simplification. The first effects on the simplification actions adopted through the Omnibus Regulation, namely regarding the use of simplified costs options and financial instruments as well as support for risk management could already be noticed in 2018: several Member States have requested to amend their rural development programmes in order to use these possibilities, while more and more Member States are extending the use of simplified cost options.

Throughout 2020 the majority of Member States amended their rural development programmes to include also short and long term responses to the COVID-19 pandemic. In many cases, this implied changes in the RDP strategies and respective adaptations to the target values in the indicator plan as well as financial reallocations.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.3. Previous programme performance**

###### ***European Agricultural Guarantee Fund (EAGF)***

The EAGF provides the funding for direct payments to farmers and market measures for the farming sector. As such, it is not a project that starts from the drawing table and finishes at the end of the MFF. It provides, year after year, stability and support to incomes for the farming sector or re-establishes stability following market disturbances.

In 2020, the Commission took a series of measures to support the European agricultural sector in view of the COVID-19 pandemic. This included amongst others several storage measures that allowed to stabilise certain markets affected by the pandemic. The continuous flow of direct payments provided a stable income for farmers in an uncertain and volatile business environment. Due to the trade agreement with the UK reached at the end of 2020, Brexit did not have any material effect, yet, on EU agricultural markets in 2020. There was no need to deploy any additional support measures under the EAGF for that purpose.

Farmers have to fulfil a number of legal and good agricultural and environmental conditions to be eligible for this income support. This gives an incentive to put farmers in the direction of a more sustainable way of working.

Overall, the EAGF is essential to provide stability for the farming sector and is an essential driver towards a sustainable future.

Following the outbreak of the Coronavirus, the European Union's agri-food sector is showing its resilience and continues to provide Europeans with high quality and safe food. Since the start of the pandemic, there has been no significant shortages in the food supply. Nonetheless, farmers and producers are facing difficulties and increasing pressure. Maintaining food security remains one of the priorities. Thus, the Commission has been in close contact with EU countries and sectoral organisations to closely monitor the situation on the agricultural markets. The Commission has issued practical advice and guidelines on the movement of goods and critical workers. The Commission also took a range of measures to support and stabilise agricultural markets, including private storage aid, authorisation for self-organisation of producers/operators and flexible use of market support programmes<sup>14</sup>. In 2020, an amendment to the rural development basic act was also adopted to provide exceptional temporary support under the European Agricultural Fund for Rural Development<sup>15</sup>. Finally, CAP procedures have been further simplified to guarantee that beneficiaries will continue to get the support they need during these challenging times.

#### **To promote a viable food production**

In order to promote a viable food production, one of the main objectives of the CAP is to ensure a fair standard of living for the agricultural community, in particular by increasing the individual earnings of farmers and agricultural employees engaged in agriculture. Agricultural factor income per full-time worker is increasing compared to 2013 levels (the agricultural factor income measured as index increased from 112 in 2013 to 123 in 2019) as well as the total factor productivity in the agricultural sector. However, agricultural income is lagging behind income compared to the rest of the economy and it is more volatile due to agricultural price volatility as well as variability of yields exacerbated by the effects of climate change.

A support study for the evaluation of the impact of CAP measures towards the general objective of 'viable food production' was published on 12 November 2020<sup>16</sup>. It confirms that direct payments allow farmers to better cope with the negative income effects caused by drops in agricultural prices, hence contribute to the stability of farms income. Yet, despite CAP direct support, a large share (74% in 2015) of farm labour does not reach the benchmark of the average national labour productivity. The study observed

<sup>14</sup> See OJ L 140, 4.5.2020, pages 1 to 39

<sup>15</sup> OJ L 204, 26.6.2020, p. 1–3

<sup>16</sup> [https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/products-and-markets/impact-cap-measures-towards-general-objective-viable-food-production\\_en](https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/products-and-markets/impact-cap-measures-towards-general-objective-viable-food-production_en)

that the CAP 2014-2020 allowed increasing efficiency, by better targeting support to farms which needed it most. However, the study argued that part of the expenditure (33% of total direct support in 2015) could be saved or redistributed more efficiently to farmers that need it most (i.e. farms that do not reach the reference benchmark). Furthermore, EU market prices are moving closer to world market prices meaning that EU farmers have become more competitive internationally while receiving non-trade distorting support. In addition, the evaluation study found that market measures helped to limit domestic prices volatility of most agricultural products. For most agricultural products concerned by market measures, volatility of domestic prices is lower than that of international prices.

Despite the positive performance of the agricultural sector, there are still important challenges that need to be addressed in the following years: farmers' income is still lagging behind salaries in the whole economy and remains dependent on direct support. On average for the last five years<sup>17</sup>, around 40% of the agricultural entrepreneurial income of the EU-farming community depends on direct support. Furthermore, a substantial part of the sector continues to face low profitability - due inter alia to the EU's high production standards, high costs of production factors and the fragmented structure of the primary sector. The crisis reserve, introduced in the 2013 reform, did not have to be called upon so far. This crisis reserve is financed each year from a cut in the direct payments to farmers (so-called financial discipline) and subsequently this cut is reimbursed to the farmers one year later. All market support measures adopted since 2014 were financed from existing EAGF availabilities and there was no need to activate the crisis reserve. The 2018 proposals for the CAP reform foresee a new agricultural reserve, financed under the EAGF ceiling and avoiding a yearly cut in direct payments and with a roll-over of the unused amounts to the next year. The agricultural reserve will finance all storage and exceptional measures, making it much more flexible and simpler reserve to address market disturbances.

In that context, the proposals for the CAP post-2020 will aim, among other objectives:

- to support viable farm income and resilience across the Union to enhance food security;
- to enhance market orientation and increase competitiveness, including greater focus on research, technology and digitalisation; and
- to improve the farmers' position in the value chain.

### **To promote a sustainable management of natural resources and climate action**

Greenhouse gas (GHG) emissions from agriculture have declined substantially between 1990 and 2010. However, the long-term decrease in greenhouse gas emissions from agriculture has slowed down in recent years. Since then, emission levels appear to be relatively stable but slightly increased in 2017. This is mainly due to an increase of the EU cattle herd, an augmented use of fertiliser as well as the farm management of cropland. The Commission services continue to monitor closely the evolution of this indicator and the future CAP will pay specific attention to it. The support study<sup>18</sup> of the evaluation of the impact of the CAP on climate change and GHG emissions assessed the impact of CAP measures on agriculture's GHG emissions and on the sector's ability to adapt to climate change. The study found that although the CAP has a strategic objective in respect of climate action, it lacks specific targets.

The support study of the evaluation of the impact of the CAP on water, published on 27 March 2020<sup>19</sup>, highlighted that Member States' implementation choices determine the extent to which the CAP measures and instruments meet the EU objective of sustainable management of water. Almost all farmers benefiting from the CAP support systematically implement cross-compliance and greening measures, which are considered effective in maintaining minimum practices beneficial for water. For the necessary adaptation of agriculture to climate change, greater attention should be paid to quantitative water issues, notably water savings.

The support study of the evaluation of the impact of the CAP on habitats, landscapes and biodiversity, published on 27 March 2020<sup>20</sup>, concluded that the presence of the CAP has raised Member States' ambition towards addressing biodiversity objectives as well as the level of funding. However, more could be done by Member States to ensure that their biodiversity priorities are well reflected in their CAP decisions. Member States have not sufficiently used the available CAP instruments and measures to protect semi-natural features, in particular grassland. This challenge is to be addressed in the future CAP, which will be mainly done via the Good Agricultural and Environmental Conditions (GAEC's), for example GAEC 1: 'maintenance of permanent grassland' and GAEC 9 that contains, for example, the conditions 'retention of landscape features' and 'a minimum share of agricultural land devoted to non-productive features or areas.'

Despite the positive contribution of the CAP to improve the environmental performance of the EU agricultural sector, substantial environmental challenges remain. The EU has committed itself to further deep cuts in greenhouse gas emissions; the key natural resources of soil, air and water are still under pressure in many areas; and the available indicators on farm and forest biodiversity still do not paint a rosy picture. European citizens expect the CAP to make a stronger contribution to care for the environment and climate. Furthermore, there is a need to improve the effectiveness and targeting of the policy. Taking these challenges into account, the future CAP has an explicit commitment to "aim higher" with regard to the environment and climate. At the same time, taking

<sup>17</sup> Please refer to Specific objective 4, indicator 1.

<sup>18</sup> [https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/evaluation-policy-measures/sustainability/evaluation-cap-climate-change-and-greenhouse-gas-emissions\\_en](https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/evaluation-policy-measures/sustainability/evaluation-cap-climate-change-and-greenhouse-gas-emissions_en)

<sup>19</sup> [https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/sustainability/impact-cap-water\\_en](https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/sustainability/impact-cap-water_en)

<sup>20</sup> [https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/sustainability/impact-cap-habitats-landscapes-biodiversity\\_en](https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/sustainability/impact-cap-habitats-landscapes-biodiversity_en)

into account the need for simplification, the current "greening measures" are replaced by a new green architecture based on the following three objectives:

- contribute to climate change mitigation and adaptation, as well as sustainable energy;
- foster sustainable development and efficient management of natural resources such as water, soil and air; and
- contribute to the protection of biodiversity, enhance ecosystem services and preserve habitats and landscapes.

The European Green Deal, and especially the Farm to Fork Strategy, aims to make the European food system more sustainable, amongst others by reducing the use and risk of chemical pesticides and the use of more hazardous pesticides, by reducing nutrient losses, the use of fertilisers and the sales of antimicrobials for farmed animals and in aquaculture. The Green Deal will set the ambition of the future CAP in this regard.

### To promote a balanced territorial development

Rural development policy through the CAP lifts the economic resilience of both the farm sector and non-agricultural businesses through support for setting up businesses, business development and diversification, building knowledge, making investments, establishing (and getting connected to) infrastructure and services (including in relation to ICTs), pursuing innovation and working with others in new ways. Among others, the employment rate in rural areas has increased and the gap with urban areas has disappeared. 68.9 % of the population aged 15 to 64 were in jobs in rural areas, an increase of 5.5 percentage points compared to 2013.

While many rural areas remain vibrant and continue to thrive, the impact of ageing and depopulation affects negatively some rural areas, notably those facing socio-economic decline. Demographic change presents a number of challenges for European society, not least for rural communities. Rural areas are a core part of our identity and our economic potential offering many opportunities that need support in order to be fully unleashed. These challenges and opportunities will be explored in the Long-Term Vision for Rural Areas.

### European Agricultural Fund for Rural Development (EAFRD)

The EAFRD allocates the largest share of public expenditure (EU funding plus national funding) to Specific objective 4 'restoring, preserving and enhancing ecosystems' and the targets set of 2023 to support land management practices beneficial for the biodiversity, water and soil have all been reached.

Measures specifically designed to address climate action (Specific objective 5) only represent a small share of the total public support of rural development. However, the number of planned hectares under management contracts to address the reduction of greenhouse gas emission has been reached, whereas for example investments in renewable energy (indicator 3) is lagging somewhat behind.

In general, investment type of measures take a longer time to be fully implemented compared to annual type of measures, which explains to a large extent the distance to the targets.

For example, the rural population, benefitting from (IT) infrastructure (SO6, indicator 5) is only at 22% of the target and knowledge transfer (SO1, indicator 1) is only at 21% of the target.

With the exception of indicator 3 of SO1 (number of participants trained) all indicators are assessed to be on track to reach their targets by 2023.

by end 2019				indicators % of target reached				
	planned, EUR billion	% of total	realised expenditure	1	2	3	4	5
<b>SO1</b>	cross cutting objective			<b>21%</b>	37%	41%		
<b>SO2</b>	30.75	20%	40%	55%	75%			
<b>SO3</b>	14.97	10%	39%	44%	33%			
<b>SO4</b>	68.18	45%	60%	<b>102%</b>	<b>99%</b>	<b>100%</b>		
<b>SO5</b>	10.2	7%	34%	55%	27%	26%	<b>110%</b>	94%
<b>SO6</b>	22.29	15%	30%	23%	113%	93%	58%	<b>22%</b>

Further progress has been made in terms of programme performance. For example, by end 2019, about 180 000 farms have been selected to receive financial support to restructure and modernise their holdings, and to achieve productivity gains. On climate and environmental actions in agriculture (e.g. carbon sequestration, reduction of greenhouse gases and ammonia emissions), good

progress has been made, in particular with farmers joining voluntary agri-environment-climate schemes to develop environmentally friendly farm management. The targets to reach by end of 2023 are: (i) 17% of EU agricultural land under management for biodiversity, (ii) 14% for better soil management, and (iii) 14% for better water management. In all three cases, over 99% of the targets have been reached.

At the end of 2019, the European Innovation Partnership for Agricultural Productivity and Sustainability (EIP-AGRI) was supporting 7 730 interactive innovation projects, against an overall target at the end of the implementation period of more than 13 000 projects. Knowledge and innovation developed through the EIP-AGRI projects are shared through national innovation and rural networks and the EIP-AGRI network. By end 2019, nearly 1.5 million people had taken part in vocational training activities supported by the EAFRD. In the same period, 3.7 million people had benefitted from improved infrastructures for information and communication technologies, against an overall target of 16.8 million people by the end of 2023.

The implementation of area and animal-related support in 2014-2020 (e.g. related to environmental commitments and animal welfare) is well advanced. In this context, rules concerning the EAFRD payment deadlines to the beneficiaries were introduced as from calendar year 2019, in order to align with direct payments and with a view to ensure timely disbursement of the Union support to EAFRD beneficiaries. This is also expected to further facilitate the implementation of those commitments. Some delays are still observed in relation to measures that can take several years to be completed (long-term investments such as broadband, other infrastructures) or that are conditional to the implementation of a business plan, which can take up to five years to be 'completed' (business start-up). Significant progress in the implementation of those measures has been made in 2019 and is expected to increase further in the coming years.

The CAP measures on generational renewal have a positive impact on attracting and keeping young farmers in rural areas and improving employment, despite the difficulty to isolate the effects of individual CAP measures addressing generational renewal and the strong influence of external factors. However, these measures are often insufficient on their own, to address two main barriers to generational renewal: access to land and capital that depend mostly on national legal, social and fiscal policies.<sup>21</sup>

The 2018 proposal on the CAP Strategic Plans takes into account the main lessons learnt so far from the current rural development programming period, amongst others by reducing the level of prescription of the interventions and improving the synergies with the other instruments of the CAP (i.e. direct payments and sectoral programmes). The new CAP Strategic Plans will have to pay specific attention to attracting young farmers and will also promote employment, growth, social inclusion and local development in rural areas.

The rural development support will also provide a decisive input into the new call for enhanced environmental and climate actions linked to the green deal initiative. The future CAP plans will include the following types of interventions, funded by the EAFRD: (i) environmental, climate and other management commitments; (ii) compensation for natural or other area-specific constraints; (iii) area-specific disadvantages resulting from certain mandatory requirements; (iv) investments; (v) installation of young farmers and rural business start-up; (vi) risk management tools; (vii) cooperation; (viii) knowledge exchange and information.

### *Performance related to Specific Objective 1*

This Specific Objective aims at transferring knowledge and fostering innovation in rural areas, with a focus on the following areas:

- Fostering innovation, cooperation, and the development of the knowledge base in rural areas (Focus Area 1A);
- Strengthening the links between agriculture, food production, and forestry and research and innovation (Focus Area 1B);
- Fostering lifelong learning and vocational trainings in the agricultural and forestry sector (Focus Area 1C).

The specific objective is cross-cutting which is why no public expenditure has been attributed to it as such.

Indicator 1 (percentage of RDP expenditure planned for the three measures Knowledge transfer & information action, advisory services and cooperation) shows that by end 2019, 21% of the target planned for 2023 has been realised.

Indicator 2 (number of cooperation operations) shows that by end 2019, 37% of the target planned for 2023 has been achieved.

Indicator 3 (total number of participants trained) shows that by end 2019, 41% of the target planned for 2023 has been achieved.

The uptake and achievement of results is not yet fully in place. Part of this can be explained by the fact that cooperation and EIP-AGRI projects feed into this specific objective, which require a lot of preparatory work in the setting up phase, including the search for project partners. This leads to longer project lifetimes with reportable results emerging only at a later stage. Other factors explaining also the low implementation are the long administrative procedures that the Member States have put in place and which may discourage potential beneficiaries to apply, the lack of dissemination of information and publicizing of such measures, and in general, the fact that implementation of the related measures has started relatively late. Remedial actions have included the revision of the legal provisions governing the provision of advisory services to farmers and forestry holders, in 2017 (less stringent procedural requirements for the selection of advisors) and continuous dialogue with the Member States in view of correcting the

<sup>21</sup> See the summary of the support study for the evaluation of the impact of the CAP on generational renewal in the agricultural sector in the EAGF programme statement.

limiting factors mentioned above. Several seminars have been organised by the European Network for Rural Development in 2019 and 2020 to exchange good practices related to improved efficiency under these measures.

### *Performance related to Specific Objective 2*

Specific Objective 2 aims at improving farm viability and competitiveness, with a focus on

- improving the economic performance, restructuring and modernisation of supported farms in particular through increasing their market participation and agricultural diversification (Focus Area 2A)
- facilitating the entry of adequately skilled farmers into the agricultural sector and in particular, generational renewal (Focus Area 2B)

For the period 2014-2020, Member States planned EUR 30.75 billion of public expenditure for this specific objective, corresponding to 20% of the total rural development planned public expenditure. By end 2019, 40.3% of the planned public expenditure has been realised.

Indicator 1 (share of agricultural holdings received support for investments in restructuring and modernisation) shows that by end 2019, 55% of the target value planned for 2023 has been achieved.

Indicator 2 (share of agricultural holdings with support to business development/investments for young farmers) shows that by end 2019, 75% of the target value planned for 2023 has been achieved.

The level of achievement of the targets is relatively good. It should be noted that for investment operations, normally implementation takes several years. In general, investment support increases the economic performance and market participation of the supported farms. Investments may also imply environmental benefits. Support to the entrance of adequately skilled farmers, including young farmers, can have positive effects on farm viability, especially in relation to farm productivity and competitiveness.

Additionally, operations under this specific objective contribute positively to the market participation of primary producers, farm diversification, maintenance of employment in rural areas, generational renewal in agriculture, environmental benefits, improvement of working and living conditions of farmers.

### *Performance related to Specific Objective 3*

Specific Objective 3 aims at promoting food chain organisation, including processing and marketing of agricultural products, animal welfare and risk management in agriculture, with a focus on the following areas:

- Improving the competitiveness of primary producers by better integrating them into the agri-food chain through quality schemes, adding value to agricultural products, promotion in local markets and short supply-circuits, producer groups and organisations and inter-branch organisations (Focus Area 3A);
- Supporting farm risk prevention and management (Focus Area 3B).

For the period 2014 – 2020, Member States planned EUR 14.97 billion of public expenditure for this specific objective, which corresponds to 10% of the total rural development planned public expenditure. By end 2019, 39% of the planned public expenditure has been realised.

Indicator 1 (share of agricultural holdings receiving support for participating in quality schemes, local markets, short supply circuits, and producer groups/organisations) shows that by end 2019, 44% of the target value planned for 2023 has been achieved.

Indicator 2 (share of farms participating in risk management schemes) show that by end 2019, 33% of the target value planned for 2023 has been achieved. It is lower than expected, mainly due to the fact that this type of support is still relatively new in the Member States and needs some time to be fully managed. In order to facilitate the uptake of risk management schemes, some changes in the design of the instrument were introduced in 2017 and 2020.

Member States report several achievements, such as in terms of competitiveness of primary producers by better integration in the food supply chain and introduction of quality schemes, quality of food production, promotion of local markets and short supply, participation of farms in risk prevention and management schemes and prevention of risks from flooding.

Additionally, contributions to this specific objective come from LEADER, vocational trainings, cooperation projects (including EIP-AGRI operational groups), and farm advisory services on the increase of food quality and the creation of added value, as well as on developing the knowledge base on risk prevention in the agricultural and forestry sectors.

### *Performance related to Specific Objective 4*

Specific Objective 4 aims at restoring, preserving, and enhancing ecosystems related to agriculture and forestry, with a focus on the following areas:

- restoring, preserving, and enhancing biodiversity, including in Natura 2000 areas, and in areas facing natural or other specific constraints, and high nature value farming, as well as the state of European landscapes (Focus Area 4A)
- improving water management, including fertilisers and pesticide management (Focus Area 4B)
- preventing soil erosion and improving soil management (Focus Area 4C)

For the period 2014 – 2020, Member States planned EUR 68.18 billion of public expenditure for this specific objective, which corresponds to 45% of the total rural development planned public expenditure. By end 2019, 60% of the planned public expenditure has been realised.

Indicator 1a (percentage of agricultural land under management contracts to support biodiversity and/or landscapes) shows that by end 2019, 102% of the target value planned for 2023 has been achieved.

Indicator 2a (percentage of agricultural land under management contracts to improve water management) shows that by end 2019, 99% of the target value planned for 2023 has been achieved.

Indicator 3a (percentage of agricultural land under management contracts to improve soil management and/or prevent soil erosion) shows that by end 2019, 100% of the target value planned for 2023 has been achieved.

Member States report several achievements, such as in terms of agricultural and forest land covered with management contracts to enhance biodiversity and landscape, restoring, preserving, and enhancing biodiversity (e.g. Farmland Bird Index), improvement of water quality and management, especially through a better management of fertilisers and pesticides, prevention of soil erosion and improvement of soil management, and preservation of genetic species in grasslands and livestock.

### *Performance related to Specific Objective 5*

Specific Objective 5 aims at promoting resource efficiency and supporting the shift towards a low carbon and climate resilient economy in agriculture, food, and forestry sectors, with a focus on the following areas:

- Increasing efficiency in water use by agriculture (FA 5A)
- Increasing efficiency in energy use in agriculture and food processing (FA 5B)
- Facilitating the supply and use of renewable sources of energy, of by-products, waste and residues and other non-food raw material, for the purposes of the bio-economy (FA 5C)
- Reducing greenhouse gas and ammonia emissions from agriculture (FA 5D)
- Fostering carbon conservation and sequestration in agriculture and forestry (FA 5E)

For the period 2014 – 2020, the Member States planned EUR 10.2 billion of public expenditure under this specific objective, which corresponds to 7% of the total rural development planned public expenditure. By end 2019, 34% of the planned public expenditure has been realised.

Indicator 1 (share of irrigated land switching to more efficient irrigation systems) shows that by end 2019, 55% of the target value planned for 2023 has been achieved.

Indicator 2 (total investment for energy savings and efficiency) shows that by end 2019, 27% of the target value planned for 2023 has been achieved.

Indicator 3 (total investment in renewable energy production) shows that by end 2019, 26% of the target value planned for 2023 has been achieved.

Indicator 4a (percentage of livestock units concerned by investments in livestock management in view of reducing GHG and/or ammonia emissions) shows that by end 2019, 110% of the target value planned for 2023 has been achieved.

Indicator 4b (percentage of agricultural land under management contracts targeting to the reduction of GHG and/or ammonia emissions) shows that by end 2019, 99% of the target value planned for 2023 has been achieved.

Indicator 5 (share of agricultural and forest land under management contracts contributing to carbon sequestration and conservation) shows that by end 2019, 99% of the target value planned for 2023 has been achieved.

In general, indicators relating to area- or animal-based management commitments are closer to the targets than those relating to investment support, where uptake in general is, for the time being, lower than planned, due to the different nature of the respective

interventions (annual payments versus investment projects that can take some time to materialise). Implementation delays have been subject to continuous dialogue with the Member States.

### *Performance related to Specific Objective 6*

Specific Objective 6 aims at promoting social inclusion, poverty reduction and economic development in rural areas, with a focus on the following areas:

- Facilitating diversification, creation, and development of small enterprises, as well as job creation (Focus Area 6A)
- Fostering local development in rural areas (Focus Area 6B)
- Enhancing the accessibility, use and quality of information and communication technologies (ICT) in rural areas (Focus Area 6C).

For the period 2014-2020, Member States planned EUR 22.29 billion of public expenditure under this specific objective, which corresponds to 15% of the total rural development planned public expenditure. By end 2019, 30% of the planned public expenditure has been realised.

Indicator 1 (number of jobs created in supported projects) shows that by end 2019, 23% of the target value planned for 2023 has been achieved.

Indicator 2a (percentage of rural population covered by local development strategies) shows that by end 2019, 113% of the target value planned for 2023 has been achieved.

Indicator 2b (percentage of rural population benefitting from improved services/infrastructures) shows that by end 2019, 93% of the target value planned for 2023 has been achieved.

Indicator 2c (jobs created in supported LEADER projects) shows that by end 2019, 58% of the target value planned for 2023 has been achieved.

Indicator 3 (percentage of rural population benefitting from new or improved services/infrastructures) shows that by end 2019, 22% of the target value planned for 2023 has been achieved.

Member States report achievements in several fields such as diversification, creation and development of small enterprises, jobs creation and maintenance in rural areas, development and access to services and local infrastructure in rural areas, participation in local development strategies, employment opportunities created via local development strategies, and broadband expansion and better use of ICT in rural areas.

The indicator value for services/infrastructures (ICT) is low partly due to the fact that many of these projects are large and may require several years to be implemented.

## 3.2. Key achievements

### *European Agricultural Guarantee Fund (EAGF)*

6.1 million	500 000	79%	18.2 million	20%
Farmers benefitting from direct payments in 2019	farmers benefitting from the young farmers scheme in 2019	of the total EU agricultural area was subject to at least one "greening" obligation in 2019	beehives supported in 2019	Of children in the EU benefit from the school scheme in 2018/2019

### Market related expenditure

The EU no longer offers agricultural export refunds. However, with fairness and economic efficiency, the CAP strengthens the farm and agri-food sectors' ability to compete on overseas as well as domestic markets. European agriculture showed its resilience after the recent crises, finding alternative domestic markets and abroad (in particular in Asia and the US), as evidenced by the trade statistics.

Total export values reflect an increase in 2020 compared to 2019 (+ EUR 2.6 billion of agri-food exports, +1.4%) despite a difficult economic environment determined by the Covid-19 pandemic, Brexit and US punitive sanctions against certain EU agri-food exports. Exports of wheat increased significantly in 2020, from a value of EUR 5.5 billion in 2019 to EUR 7.2 billion in 2020, i.e. a gain in export sales by EUR 1.7 billion (+31% compared to 2019) thanks to the EU competitive position and good yields. Consequently, exports of wheat contributed to further increase of the EU net trade surplus by a value of EUR 6 billion in 2020. This confirms the competitiveness and resilience of the EU wheat sector in particular in a very difficult economic environment.

In 2019, the Commission reported on the implementation of the apiculture programmes in previous years<sup>22</sup>. The report shows that the uptake of the programmes remained high, showing their relevance. The number of beehives, one indicator of the impact of the EU support measures, continued its long-term increase, reaching approximately 17.5 million beehives in 2018. The latest available reporting by Member States on the number of beehives in 2019 (18.2 million hives) further confirms this upward trend. The increase is also reflected in the 16% growth of EU honey production between 2014 and 2018 to 280 000 tonnes (latest available figures).

The implementation of the EU school fruit, vegetables and milk scheme reached 20.2 million children in the 2017/2018 school year and 19.4 million in the 2018/2019 school year<sup>23</sup> or around 20% of the total number of children aged 0 to 18 in the EU. School children received more than 65.5 million kilos of fresh fruit or vegetables in the 2017/2018 school year and 71.2 million kilos in the 2018/2019 school year, as well as 178 million litres of milk in the 2017/2018 school year and 167.8 million litres in the 2018/2019 school year. They were involved in several educational measures - lessons, lectures or workshops; tasting classes; cooking workshops; school gardens; visits to farms, dairies, farmers' markets and similar activities.

### Direct payments

In claim year 2019 (corresponding to financial year<sup>24</sup> 2020), the fifth year of implementation of the reformed system, about 6.1 million farmers benefited from direct payments (-1.3% compared to previous year, in line with the average declining trend<sup>25</sup> in the total number of farmers). The total determined area (157.9 million hectares, relatively stable<sup>26</sup> since the entry into force of the 2013 CAP reform) covered about 88% of the EU Utilised Agriculture Area (179.1 million hectares).

In claim year 2019, the re-balancing of the distribution of direct payments between Member States (external convergence) continued as agreed in the frame of the 2014-2020 multiannual financial framework. For most Member States granting the basic payment based on entitlements<sup>27</sup>, it was the last year covered by their decisions taken in 2014 to move towards a flat rate value per entitlement at national or regional level (internal convergence). The various schemes allowing further targeting of the needs of certain categories of beneficiaries, in particular the young farmers, the small farmers and certain specific sectors or regions with structural problems, are fully in place. Where necessary, Member States have revised their decisions within the limits of the flexibility given by the current rules in order to adjust the modalities of implementation building on the experiences gained in previous years.

Direct Payment Schemes (Calendar year 2019/Financial year 2020)	Number of beneficiaries (in millions)	Determined area (in millions of hectares unless otherwise stated)
Basic Payment Scheme/Single Area Payment Scheme	4.6	151.0
Redistributive payment	2.0	36.8
Young farmers scheme	0.5	0.2
Small farmers scheme	1.5	3.7
Voluntary Coupled Support (hectares)	1.3	8.6
Voluntary Coupled Support (animals)	1.1	57.6(*)

<sup>22</sup> Report from the Commission to the European Parliament and the Council on the implementation of the apiculture programmes, [COM\(2019\)635](#) final of 17.12.2019

<sup>23</sup> Source: Member States monitoring reports sent by 31.1.2019 and by 31.1.2020, available at: [https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/market-measures/school-fruit-vegetables-and-milk-scheme/country\\_en](https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/market-measures/school-fruit-vegetables-and-milk-scheme/country_en). Selected data in agri food data portal, <https://agridata.ec.europa.eu/extensions/SchoolSchemeMonitoring/SchoolSchemeMonitoring.html>.

<sup>24</sup> The agricultural financial year covers expenditure paid and revenue received and entered in the accounts of the Funds budget by the paying agencies in respect of financial year "N" beginning on 16 October of year "N- 1" and ending on 15 October of year "N".

<sup>25</sup> The number of beneficiaries declines regularly (on average between -2.3% since 2012). This reflects the trend in the total number of farms (see for example <https://ec.europa.eu/agriculture/sites/agriculture/files/statistics/facts-figures/farm-structures.pdf>). The number of new farmers is always below the number of farmers exiting.

<sup>26</sup> Since the first year of application of the CAP reform, the determined area is relatively stable at 155-154 million ha. Before that it was around 147-148 million ha. The increase is related to the implementation of the reform, in particular the new allocation of entitlements covering more farmers and thus potentially more areas. Since 2015, the annual changes can be linked to different factors: areas found ineligible by audits excluded, entry of areas not yet declared, exit of other areas...

<sup>27</sup> Sweden had decided back in 2014 to reach the flat rate value for payment entitlements in claim year 2020.

(\*) Number of heads.

The 'greening' layer of direct payments accounts for 30 percent of Member States' annual direct payment ceilings and covers annual obligations beneficial for the environment and climate (crop diversification, maintenance of permanent grassland, and the dedication of five per cent of arable land to ecologically beneficial areas ("ecological focus areas" or EFAs). As of 2019, 79% of the total EU agricultural area was subject to at least one "greening" obligation.

Starting from 2018, the amendments of the "Omnibus Regulation" that covered for greening new optional criteria on ploughing up permanent grassland, simplification of certain EFA and crop diversification rules and the extension of the list of EFA types to some energy crops and land lying fallow for melliferous plants influenced the implementation of greening obligations<sup>28</sup>. Modifications of the delegated act for direct payments to take account of the newly introduced EFA types became applicable as of 2019.

### Common monitoring and evaluation framework

With the proposal on CAP Strategic Plans presented on 1 June 2018, the Commission has proposed to introduce the performance monitoring and evaluation framework (PMEF), which takes the place of the common monitoring and evaluation framework (CMEF). The PMEF is intended to help the CAP to move from compliance to results and therefore to explain the achievements of the CAP rather than just reporting on CAP compliance and implementation.

This new framework includes a set of output, result and impact/context indicators, each of which make a specific contribution to assessing the implementation of the CAP, its progress towards targets, its impacts and contribution to the common objectives. Whilst impact/context indicators will help assess the overall achievement of CAP general and specific objectives, result indicators will be used to monitor progress in implementation towards the specific objectives in the CAP Strategic Plans, also in view of undertaking, where needed, remedial actions. Finally, output indicators, which keep track of the implementation of the interventions in the CAP Plan, will be used primarily in the context of the performance clearance. A selection of these indicators are presented visually and interactively in the [dashboard by theme](#), including financing the CAP, environment and climate action, farming income support, climate change and air quality, market orientation, organic production, water quality and availability, soil quality, biodiversity, adding value, productivity and jobs and growth in rural areas. These dashboards were completed in 2020 with an attractive visualisation of [context indicators](#), including maps at regional level. In these dashboards, Member States can find already a large part of the information they need for the elaboration of their Strategic Plans.

By end 2021, a report to the European Parliament and the Council will present a more comprehensive assessment of the performance of the CMEF and the CAP.

### Simplification

Starting in 2015, a simplification exercise involving the Commission, Member States, other EU institutions and stakeholders has led to a series of changes to regulations and guidance documents to the benefit of Member States' administrations and farmers.

This concerned amongst others simplification in relation to voluntary coupled support, eligibility for the young farmers' payment in the case of farms managed jointly, and simplifications of the Integrated Administration and Control System (IACS) and a review of certain greening rules.

As from 2018, the Commission adopted legal provisions<sup>29</sup> and provided the technical guidance to enable Member States to take advantage of freely available satellite data (the Copernicus programme) to monitor areas claimed for aid as an alternative to carry out often costly on-the-spot checks. Several Member States have decided to introduce 'checks by monitoring' for part of the aid schemes and/or areas as from 2019. This choice of the monitoring approach will equally deliver on the assurance. The monitoring approach is expected to offer great potential for simplification of administrative and control-related tasks, but also for monitoring of the CAP's performance in a much wider sense.

In 2020, the Commission continued support to increase the uptake of new technologies with further technical guidance developed. In particular, the Commission provided documentation enabling quality assessment of the technological tools used for implementing 'checks by monitoring'.

In view of the COVID-19 pandemic, the Commission took a range of measures to support European agriculture and rural areas. In particular, Member States were allowed to pay increased advances in direct payments and rural development. For direct payments, the advances were exceptionally allowed to be disbursed before the finalisation of all checks. This aimed at improving cash flow of farms, since the agricultural sector suffered the consequences of the pandemic<sup>30</sup>. In parallel, national administrations benefited from a series of flexibilities in the execution of checks, relating to their timing and the possibility to use alternative sources of evidence.

<sup>28</sup> Providing Member States with an option not to classify grassland as 'permanent' if ploughed within a period of 5 years allows accommodating the diversity of agricultural systems across the Union. In 2018, eight MS decided to apply this option. Certain additional flexibility for farmers came from streamlined exemptions from crop diversification or EFA rules for farms with substantial shares of grasslands, fallow land, leguminous crops or crops under water. In turn, new EFA types broadened the choices that Member States may offer to farmers for meeting this requirement.

<sup>29</sup> Commission Implementing Regulation (EU) 2018/746 of 18 May 2018 amending Implementing Regulation (EU) No 809/2014 as regards modification of single applications and payment claims and checks, OJ L 125, 22.5.2018, p. 1.

<sup>30</sup> Commission Implementing Regulation (EU) 2020/531 of 16 April 2020 derogating in respect of the year 2020 from the third subparagraph of Article 75(1) of Regulation (EU) No 1306/2013 of the European Parliament and of the Council as regards the level of advance payments for direct payments and area-related and animal-related rural development measures and from the first subparagraph of Article 75(2) of that Regulation as regards direct payments, OJ L 119, 17.4.2020, p. 1.

The intensity of checks was also adjusted, whereby Member States could decide to apply a lower rate of on-the-spot checks, if the movement restrictions introduced during the pandemic prevented the normal workflow<sup>31</sup>.

For the EAGF support to the outermost regions and smaller Aegean islands, due to the measures put in place to address the pandemic of COVID-19, the rules were adapted to alleviate the conditions for the on-spot-checks for the year 2020.

### European Agricultural Fund for Rural Development (EAFRD)

The results and outputs achieved by the end of 2019 (latest figures available<sup>32</sup>) are fully representative of what is expected from the implementation. With programme implementation at cruising speed, the situation is likely to further improve in the next years, especially regarding operations linked to the creation of jobs, for which an improvement is already visible but more is expected in the coming years. The latter are operations that normally take more time to be completed and produce, with achievements materialising usually by the end of the programming period according to previous experience. Some positive results can already be pointed out, with 113% already achieved of the final target for rural population covered by local development strategies.

Key environmental and climate achievements in 2019 include:

3.8 million	766 000	17.7%	EUR 1 373 million	1 204 000	5.1 million
hectares of agricultural and forest land covered by management contracts contributing to carbon sequestration or conservation	hectares of irrigated land had switched to more efficient irrigation systems	of agricultural land were covered by management contracts contributing to biodiversity	investments in energy efficiency or renewable energy production reached	livestock units were concerned by investments in livestock management in view of reducing greenhouse gases or ammonia emissions	hectares were under land-management contracts targeting reduction of greenhouse gases or ammonia emissions

Key achievements regarding farm viability and competitiveness and knowledge transfer include (by 2019):

1.56%	1.08%	1.5 million
of the EU total agricultural holdings who received aid for investments support in restructuring and modernisation 2023 target is 2.83%	of the EU total holdings who received aid for a development plan for young farmers 2023 target is 1.44%	beneficiaries received vocational training in agriculture 2023 target is 3.6 million

Broadband access in rural areas continues to improve, with an increase of 50 percentage points in 8 years, but is still lagging behind urban areas. In 2019, 59% of rural households had next generation access compared to 86% of total EU households. There is a clear improvement on the previous year's results, though closing the connectivity gap of rural areas remains a challenge. The level of broadband access depends significantly on general developments in telecoms markets (and finance from other policy tools – including the European Regional Development Fund). The CAP plays its part by offering explicit support for setting up, expanding and improving broadband infrastructure, as well as for the provision of broadband internet access (i.e. improved connections to infrastructure), and access to e government. According to targets aggregated from the 2014-2020 RDPs, in the current programming period, the CAP will help 17 million people living in rural areas to benefit from improved access to ICT services and infrastructure. In 2020, DG AGRI continued to work closely with DG REGIO, CNECT and COMP to further develop the network of Broadband Competence Offices (BCOs) in Member States and their regions, as well as a Brussels-based Support Facility, contracted and managed by DG AGRI. By the end of 2019, the BCO network was comprised of 27 National and 92 Regional BCOs in the EU, plus 6 BCOs in the Western Balkan countries and one BCO in Norway. In 2020, DG AGRI continued its application of the rural proofing checklist in cases where MS requested programming changes to broadband funding. The handbook of best practices of rural broadband projects was approved. Given the situation with Covid, training activity switched successfully to virtual training while it was not possible to carry out missions on the spot.

### 3.3. Evaluations, studies and reports

The key findings of the following evaluations and studies were presented in the EAGF Programme Statement 2021:

<sup>31</sup> Commission Implementing Regulation (EU) 2020/532 of 16 April 2020 derogating in respect of the year 2020 from Implementing Regulations (EU) No 809/2014, (EU) No 180/2014, (EU) No 181/2014, (EU) 2017/892, (EU) 2016/1150, (EU) 2018/274, (EU) 2017/39, (EU) 2015/1368 and (EU) 2016/1240 as regards certain administrative and on-the-spot checks applicable within the common agricultural policy, OJ L 119, 17.4.2020, p. 3.

<sup>32</sup> Latest data are collected from the Annual Implementation Reports 2019 (submitted in 2020). The data on the implementation in 2020 will become available in the second half of 2021.

- Evaluation of marketing standards (contained in the CMO Regulation, the "breakfast directives" and CMO secondary legislation), published on 27 October 2020 (SWD(2020)230<sup>33</sup>)
- Study on the implementation of the conformity checks of the marketing standard in the olive oil sector throughout the EU, published on 19 January 2020<sup>34</sup>
- Study on civil dialogue groups (CDG) in policy making, published on 19 February 2020<sup>35</sup>.

Subsequently, further evaluations and studies were published.

**Commission staff working document on the evaluation of the CAP measures applicable to the wine sector**, published on 26 October 2020<sup>36</sup>. The evaluation concluded that the national support programmes play a key role in improving the competitiveness of EU wine producers and products, in particular increasing demand from third countries. The measures in these programmes are generally relevant to the needs of the sector, especially as they offer a range of tools that can be adapted to the various levels of development of EU local supply chains (i.e. restructuring and conversion, investment, and promotion). The following needs are not sufficiently addressed by the EU's wine policy: survival or adaptation of the smallest operators, better-trained workforce, renewal of businesses between generations, environmental issues, and adaptation to market demand for lower alcohol wines and sustainable products. There could also be a higher degree of coherence between the EU's wine policy and EU public health objectives but overall, the EU's wine policy is fully consistent with EU economic, social and CAP objectives.

**Study on improving crisis prevention and management criteria and strategies in the agricultural sector**, published on 30 January 2020<sup>37</sup>. The pilot project concluded that crisis prevention and management systems need to be flexible to cope with a wide variety of crises cases, and have to be integrated across farm, national and European levels. Effective coordination across all levels is essential. Crisis management often requires interactions at EU level, but national actors are key in implementing crisis management actions. Risk management tools constitute the first line of defence during a crisis as they provide the necessary liquidity support to affected producers and reduce the need for ad-hoc public aid. The slow uptake of insurance, mutual funds and income stabilisation tools across the sector is identified as a potential gap in effective crisis management responses. These risk management tools are key elements in an overall strategy to cope with extreme events, but are challenging to implement. Increased market orientation and globalisation may have rendered some crisis management instruments less efficient. Gains could be achieved by exploring new instruments and/or improving the implementation of existing ones. Crisis loans and flexible financial products could provide emergency liquidity and relief, and could complement or substitute volume management measures. Effective communication is a key dimension of crisis management as established communication channels and strategies can reduce the length of time required to bring full resolution of a crisis. In particular, market stabilisation requires timely and accurate production data notification from Member States (bottom up), as well as effective market observatories (top down).

**Evaluation support study on the CAP impact on habitats, landscape and biodiversity**, published on 27 March 2020<sup>38</sup>. The study concluded that the presence of the CAP has raised Member States' ambition towards addressing biodiversity objectives as well as the level of funding. However, the CAP's contribution and benefits are highly dependent on Member States' implementation choices and priorities. For certain Member States, their biodiversity priorities are not well reflected in their CAP decisions. The most effective measures for conserving semi-natural habitats are agri-environment-climate schemes, particularly tailored and targeted higher-level schemes, and the Natura 2000 measure, which can compensate land managers for the costs of mandatory conservation protection particularly within Natura 2000 areas. However, the impacts of agri-environment-climate schemes are often constrained by limited budgets and farmer uptake, and the Natura 2000 measure has been infrequently used by Member States. The study outcomes were however limited due to the absence of suitable monitoring data, for which it makes further recommendations. One evaluation Commission staff working document covering the CAP impact on biodiversity, water and soil will be published around June 2021.

**Evaluation support study on the impact of the CAP on water**, published on 27 March 2020<sup>39</sup>. The study assessed the CAP framework as effective for maintaining minimum practices beneficial for water quality; however, its effects on the quantitative aspects of water are rather contrasted. The effects of CAP instruments and measures on water were often difficult to assess due to lack of data. The analysis highlighted the importance of implementation choices by Member States, as only a few measures were actually supporting operations directly targeting water quality and quantity issues.

**Study on the economic value of EU quality schemes, geographical indications (GIs) and traditional specialities guaranteed (TSGs)**, published on 20 April 2020<sup>40</sup>. The study provides an update and comparison of the volume, value and trade of products registered as a protected designation of origin (PDO), protected geographical indication (PGI), geographical indication (GI) or traditional speciality guaranteed (TSG). The study provides a comparative analysis of these parameters against standard products

<sup>40</sup> [https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/products-and-markets/economic-value-eu-quality-schemes-geographical-indications-gis-and-traditional-specialities-guaranteed-tsgs\\_en](https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/products-and-markets/economic-value-eu-quality-schemes-geographical-indications-gis-and-traditional-specialities-guaranteed-tsgs_en)

and an assessment of EU-27 trade (in view of the UK's withdrawal from the Union). The study presents a rich set of data on the state of play and evolution between 2011-2017, such as:

- (i) 42% growth in the sales value of GI/TSG products since 2010, estimated at EUR 77.15 billion in EU28, which is 7% of all food and drinks in EU28 (7.3% in EU27), of which 51% generated by wine, 87% gathered by France, Italy, Germany, the UK and Spain, and with 5% of the most valuable designations (over EUR 100 million sales value) accounting for 73% of total sales value;
- (ii) estimated export value of GIs/TSGs at EUR 17.03 billion, representing 15.5% of the total EU exports of food and drinks to non-EU countries (of which 50% wine);
- (iii) 38% increase in the value premium of GIs since 2010, despite a marginal decline in the premium rate (from 2.14 to 2.07 over the same period).

**Preparatory action on EU plant and animal genetic resources in agriculture n°2**, published on 20 May 2020<sup>41</sup>. The preparatory action aimed at providing different categories of stakeholders with concrete examples to valorise the use of neglected breeds and varieties in an economically viable way. These concrete examples were delivered in twofold manner: (1) through the implementation of four valorisation projects in four different Member States (two focusing on animal genetic resources, two on plants) and; (2) the compilation of a compendium of 56 inspirational project examples. Based on these concrete examples and practical experiences gathered during the preparatory action a "user guide" for stakeholders was developed. This user guide, as the main operational output of the preparatory action, has the main function to provide guidance and encourage stakeholders to start similar valorisation projects. The overarching objective of this preparatory action was to raise awareness and interest of stakeholders in investing in neglected agricultural genetic resources (both plant and animal) and to inspire stakeholders to establish links and collaboration along the whole value chain. In order to support the implementation of the projects, disseminate and discuss the results, a communication campaign was set up and carried out throughout the whole preparatory action.

**Pilot project (study) on smart eco-social villages**, published on 29 May 2020<sup>42</sup>. The results of the pilot project are a contribution to the development of Smart Villages in the EU. A definition of "Smart Villages" has been proposed, i.e. communities in rural areas that use innovative solutions to improve their resilience, building on local strengths and opportunities. They rely on a participatory approach to develop and implement their strategy to improve their economic, social and/or environmental conditions, in particular by mobilising solutions offered by digital technologies. Smart Villages benefit from cooperation and alliances with other communities and actors in rural and urban areas. The initiation and the implementation of Smart Village strategies may build on existing initiatives and can be funded by a variety of public and private sources. The three main lessons that can be drawn are as follows: there is already a wide range of such initiatives in the EU rural areas; many smart villages share common features and appropriate policy framework.

**Evaluation support study on Synthesis of Rural Development Programmes (RDPs) ex-post evaluations of period 2007-2013**, published on 22 July 2020<sup>43</sup>. The study concludes that RDPs have been particularly successful in encouraging investments in skills building and training and in promoting competitiveness (albeit not resulting in the creation of more jobs or innovation) and successful in preserving the environment, and produced positive effects in all the domains considered under the areas for successful land management. The outcomes of the RDPs are overall consistent with the four rural development objectives/priorities to a limited to moderate extent. Overall, RDPs have contributed to addressing the social, economic and environmental needs in the programme area to a moderate extent, with some differences depending on the specific set of needs. The synthesis concluded that EAFRD funding via the RDPs ensured EU added value to a medium and variable extent, with differences per criteria.

**Evaluation support study on the impact of the EU agricultural promotion policy in internal and third countries markets**, published on 14 October 2020<sup>44</sup>. The study assessed the EU agri-food promotion policy as effective and efficient to boost competitiveness and consumption of EU products in and outside the EU. In particular, the evaluation study found that activities funded under the promotion policy contribute to increasing sales and consumption of the EU products promoted in target markets, although the quantitative extent of this is difficult to measure. The objectives of the policy are relevant to stakeholders' needs and address market challenges. No major inconsistencies exist with other EU policies, including health, climate, environmental and development policies. This evaluation will feed into an overall policy review planned for 2021, aimed at enhancing its contribution to sustainable production and consumption in line with the Commission's Farm to fork strategy's objectives. The evaluation Commission staff working document was published on 11 January 2021 (SWD(2020) 399)<sup>45</sup>.

**Evaluation support study on the impact of the CAP measures towards the general objective of viable food production**, published on 12 November 2020<sup>46</sup>. The study provides a generally positive judgement on the effectiveness, efficiency, relevance, coherence and EU added value of the relevant measures, but points towards room for improvement regarding the effectiveness of

<sup>41</sup> [https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/research-innovation-and-technology/preparatory-action-eu-plant-and-animal-genetic-resources-agriculture-ndeg2\\_en](https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/research-innovation-and-technology/preparatory-action-eu-plant-and-animal-genetic-resources-agriculture-ndeg2_en)

<sup>46</sup> [https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/products-and-markets/impact-cap-measures-towards-general-objective-viable-food-production\\_en](https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/products-and-markets/impact-cap-measures-towards-general-objective-viable-food-production_en)

coupled payments, decoupled direct payments and price stability tools, as well as the administrative and management efficiency of the greening payment and the active farmer clause. The study shows that CAP measures addressing viable food production have strongly supported farm income and that market measures helped to limit the volatility of domestic prices of most agricultural products. It is important to highlight that the study was subject to considerable limitations due to the short observation period and resulting lack of accurate, detailed and homogenous data. When complemented with more recent observations and complementary analysis, the study provides a good basis for the staff working document concluding the evaluation of the impact of the CAP measures towards the general objective ‘viable food production’, to be published around March 2021.

**Evaluation support study on mandatory country of origin labelling for certain meats**, published on 12 November 2020<sup>47</sup>. The study concludes that EU rules on the mandatory indication of the country origin for certain meats have proved to be an important piece of information for consumers while also being reliable. The regulation has been implemented without unnecessary burdens on the meat supply chain and the traceability systems are generally effective to ensure compliance with Regulation (EU) No 1337/2013. Cost increases, administrative burdens and traceability systems have been successfully minimised, so in this sense, the regulation is considered to be efficient. The objectives of the regulation are coherent with the objectives of other EU legislation, but there are some inconsistencies with respect to Regulation (EC) No 1760/2000 (beef), although these are not considered to be problematic (e.g. lack of mandatory indication of country of birth; exclusion from scope of meat sold loose at retail; derogation for minced meat and trimmings to use “EU/non-EU” rather than Member State provenance). The objectives of the regulation remain relevant and have an EU added value: the absence of EU legislation concerning country of origin labelling would lead to potentially significant negative impacts, and the presence of different national rules would hamper the smooth operation of the EU single market, increase difficulties for companies to navigate rules and would decrease consumer information.

### **ECA special reports**

Special report 13/2020: **Biodiversity on farmland: CAP contribution has not halted the decline**<sup>48</sup>

The European Court of Auditors (ECA) assessed whether the EU’s agricultural policy has helped to maintain and enhance farmland biodiversity and found that the formulation of the agriculture targets in the EU biodiversity strategy makes it difficult to measure progress; the way the Commission tracks biodiversity expenditure in the EU budget is unreliable; the impact of CAP direct payments is limited or unknown; and the Commission and Member States have favoured lower-impact rural development measures. The ECA recommends that the Commission improves the design of its next biodiversity strategy, enhances the contribution made to biodiversity by direct payments and rural development action, tracks biodiversity-related expenditure more accurately and develops reliable indicators that are suited to monitoring progress in farmland biodiversity.

Special report 15/2020: **Protection of wild pollinators in the EU**<sup>49</sup>

The ECA found that the Commission’s 2018 Pollinators Initiative had little effect on halting the decline of wild pollinators and that the initiative needed better management to achieve its objectives. In addition, the biodiversity and agricultural policies, and the pesticides legislation did not offer adequate measures for the protection of wild pollinators. The ECA makes recommendations to improve the protection of wild pollinators in the existing EU policies and legislation.

**Report of the European Court of Auditors on the performance of the EU budget – Status at the end of 2019**<sup>50</sup>

With respect to natural resources, the ECA found that the Commission’s 2019 reporting on the CAP’s performance presents an overly positive narrative and is not focusing on results. A key weakness is that the performance indicators for the 2014-2020 period are not based on a detailed intervention logic for providing CAP financial support. For example, direct payments to farmers have reduced farmers’ income volatility, but they are not targeted at helping farmers achieve a fair standard of living. Moreover, the CAP measures are found to have low impact in addressing climate change.

### **European Parliament – research for the AGRI Committee**

**The Green Deal and the CAP: policy implications to adapt farming practices and to preserve the EU’s natural resources**

The study provides an analysis of the potential consequences of the Green Deal and its associated strategies on agriculture as well as making recommendations aimed at strengthening the role and contribution of the future CAP to this matter. Key areas for EU action are identified as the strengthening of climatic and environmental dimension of the CAP and the need to extend the CAP in the framework of a more focused and global food policy.

**The upcoming Commission’s Communication on the long-term vision for rural areas - Context and preliminary analysis**

This in-depth analysis authored by the Policy Department for Structural and Cohesion Policies of the European Parliament provides a preliminary analysis of the upcoming Commission’s communication on a long-term vision for rural areas. It presents the key features of the communication and its implications for the CAP, takes stock of the current and future EU policy tools to support rural areas and provides background material on the economic, demographic, social and spatial challenges they are faced with. The analysis finds that the implications of the upcoming Rural Agenda for the CAP will be numerous and could possibly pave the way

<sup>47</sup> [https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/products-and-markets/mandatory-indication-country-origin-labelling-certain-meats\\_en](https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/products-and-markets/mandatory-indication-country-origin-labelling-certain-meats_en)

<sup>48</sup> <https://www.eca.europa.eu/en/Pages/DocItem.aspx?did=53892>

<sup>49</sup> <https://www.eca.europa.eu/en/Pages/DocItem.aspx?did=54200>

<sup>50</sup> <https://www.eca.europa.eu/en/Pages/DocItem.aspx?did=53900>

for a mid-term review of the CAP before 2024, which might include “rural axis” legislative actions as well as measures linked to the Farm to Fork strategy/Green Deal/Recovery Plan and corrective actions to the new CAP delivery system. The coordination between policies and in particular the coherence between the Cohesion Policy and the CAP rural development policy will be key to ensuring the implementation of the Rural Agenda and avoid overlaps.

## 5. Programme 2014-2020 - Key monitoring indicators

### Previous Program 1 : European Agricultural Guarantee Fund (EAGF)

#### General Objective 1 :To promote a viable food production

##### Indicator 1:Agricultural factor income

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									
111,77	Actual Progress									Final
	112,93	109,81	111,96	125	124	129	124			

Are we on track	On track
Indicator type	Impact
Unit of measurement	Index (2010=100)
Cut-Off Date	09/03/2020
Data source	Eurostat - economic accounts for agriculture (online data code: aact_eaa06)
Narrative	Results show a growing trend despite annual variations inevitable in the economy.
Methodology	<a href="https://agridata.ec.europa.eu/Qlik_Downloads/InfoSheetSectorial/infoC25.html">https://agridata.ec.europa.eu/Qlik_Downloads/InfoSheetSectorial/infoC25.html</a>
Link MFF 14-20 / MFF 21-27	C24 Agricultural factor income in PMEF
Other methodological comments	As the trend is more important than a comparison across countries, the index is preferred over the absolute values. Figure for 2020: first estimate.
Full metadata available at this address	<a href="https://ec.europa.eu/eurostat/cache/metadata/en/aact_esms.htm">https://ec.europa.eu/eurostat/cache/metadata/en/aact_esms.htm</a>
Justification of the trend	

##### Indicator 2:Agricultural productivity

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2005	Milestones									
100	Actual Progress									Final
	107	108.6	109.9	110.2	110.7					

Are we on track	On track
Indicator type	Impact
Unit of measurement	Index (3-year moving average)
Cut-Off Date	27/01/2021
Data source	DG AGRI calculation based on Eurostat data
Narrative	Total factor productivity is increasing in the EU primarily with the increase in labour productivity and land productivity. Increase in labour productivity is due to a continuous agricultural labour outflow but also significant improvements in labour conditions with the help of machinery and equipment.
Methodology	Total factor productivity (TFP) compares total outputs relative to the total inputs used in production of the output. As both output and inputs are expressed in term of volume indices, the indicator measures TFP growth. The TFP a composite indicator for land, capital and labour productivity growth. This is an index, in the first step 2005 is set at 100, then 3 year-averages are calculated to smoothen the effect of weather for instance on the indicator.
Link MFF 14-20 / MFF 21-27	The current CAP regulations continue to apply in 2021 and 2022 (Regulation (EU) 2020/2220). Only as of 2023 the new CAP Strategic Plans will enter into force.
Other methodological comments	<a href="https://ec.europa.eu/info/sites/info/files/food-farming-fisheries/key_policies/documents/context-indicator-fiches_en.pdf">https://ec.europa.eu/info/sites/info/files/food-farming-fisheries/key_policies/documents/context-indicator-fiches_en.pdf</a> Indicator C.27 - Total factor productivity in agriculture

Are we on track	On track
Indicator type	
Unit of measurement	%
Cut-Off Date	27/01/2021
Data source	DG Agriculture and Rural Development, based on European Commission, USDA, FAO, AHDB
Narrative	Apart from butter and to a certain extent skimmed milk powder and barley, the EU markets are more stable than world ones, thanks to a combination of agricultural and trade policy measures that encourage production to adapt to market signals, provide a safety net to farm income through direct payments, and encourage cooperation along the food chain, notably through the use of contracts. Butter prices started climbing up since 2017 (combined with declining skimmed milk powder (SMP) prices). The reason was not enough butter produced due to a drop in milk production. Prices started to go down in 2019 (at the same time as SMP stocks were released and SMP prices increased) when supply and demand were more balanced. As the variation is still taking into account those extreme years, the variability is justified. In 2020, there was a slight dip in butter and SMP prices due to Covid (in spring), but they stabilised and we can expect lower variability in the coming years.
Methodology	Price variability has been calculated using coefficient of variation. That is standard deviation of the prices in the reference year and two years back divided by mean of the prices in the same period.
Link MFF 14-20 / MFF 21-27	The current CAP regulations continue to apply in 2021 and 2022 (Regulation (EU) 2020/2220). Only as of 2023 the CAP reform will enter into force.

Indicator type	Impact
Unit of measurement	1000 m <sup>3</sup>
Cut-Off Date	24/02/2020
Data source	Eurostat – environment statistics - env_wat_abs
Narrative	Agriculture is a major user of water, primarily for irrigation in order to enhance the yield and quality of crops. It is therefore an essential driving force in the management of water use. Water abstraction in agriculture gives an indication of the pressure which agriculture exerts on available freshwater resources. The level and trend of this indicator depends on the characteristics of the agricultural sector, on the climatic conditions and on the efficiency with which the water is transported. There are many gaps in the data due to the voluntary nature of reporting, therefore it is not possible to assess the progress of the indicator towards the target.

455										Improved situation of primary producers in food chain
	Actual Progress									Final
	421,45	449,35	467,44	484,75	513,34					

Are we on track	On track
Indicator type	Result
Unit of measurement	EUR billion
Cut-Off Date	27/01/2021
Data source	Eurostat – National Accounts, Structural Business Statistics
Narrative	After a period of decline, the situation recently stabilised concerning the value added retained by primary producers. The CAP provides for measures to help improving the position of farmers in the food value chain, by supporting farmers' cooperation, encouraging the use of contracts and market transparency as well as supporting quality production with higher returns to farmers (e.g. organic, PGI, PDO). EU policies also regulate unfair trading practices that may penalise farmers as weaker operators within the food supply chain.
Methodology	The indicator looks at the structure of the food chain and calculates the share of the primary production (agriculture), processing sector and retail sector for the total value added generated by different participants of the food chain (primary production, food manufacturing, food distribution and food service activities).
Link MFF 14-20 / MFF 21-27	The current CAP regulations continue to apply in 2021 and 2022 (Regulation (EU) 2020/2220). Only as of 2023 the new CAP Strategic plans will enter into force.
Other methodological comments

Are we on track	On track
Indicator type	
Unit of measurement	
Cut-Off Date	27/01/2021
Data source	DG Agriculture and Rural Development, based on European Commission, USDA, World Bank, IGC, London International Financial Futures and Options Exchange, National sources (EU27).
Narrative	The indicator confirms that most of EU agricultural prices are close to the world prices, confirming the growing opening of the EU market, a dynamic that began with the 1992 CAP reform and was amplified by the 2003 CAP reform. Sugar, the latest sector to be reformed, is a case in point, with the impact of the reform of the sugar market being reflected in the gap being closed between the EU and the world prices. Yearly variations occur, and the situation is different depending whether the EU is a price maker or a price taker for a specific market.
Methodology	
Link MFF 14-20 / MFF 21-27	The current CAP regulations continue to apply in 2021 and 2022 (Regulation (EU) 2020/2220). Only as of 2023 the new CAP Strategic plans will enter into force.
Other methodological comments	The ratio between EU and World agricultural commodity prices has changed from the data presented in the previous Programme Statement due to a change of the reference price for pigmeat (US).
Full metadata available at this address	
Justification of the trend	

### Specific Objective 4 :To sustain farmers' income stability by providing direct income support

#### Indicator 1:Share of direct support in agricultural entrepreneurial income (family farm income)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									
40%										To maintain the ratio stable
	Actual Progress									Final
	41%	43%	43%	36%	38%	36%				

Are we on track	On track
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	EAGF Financial Report and EUROSTAT Economic Accounts for Agriculture
Narrative	The indicator looks at the ratio of direct payments to agricultural income. Direct payments stay more or less stable but agricultural income changes annually.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	PFfigures updated based on the latest updates from Eurostat. 2012: 44%, 2011: 42%
Full metadata available at this address	
Justification of the trend	

### Specific Objective 5 :To promote a more market oriented agriculture, by ensuring a significant level of decoupled income support

#### Indicator 1:Percentage of total direct payments which is decoupled

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
92,24%	Actual Progress									88,35%
	93,54%	92,69%	88,89%	88,87%	88,48%	88,55%	88,37%			Final

Are we on track	On track
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	Budget execution figures
Narrative	2012: 92.13%
Methodology	As from financial year 2016 the figures take into account that in accordance with the methodology for implementation of the Small farmers scheme, as chosen by the Member States, part of the expenditure under that scheme is "decoupled". Execution of the Budget 2020 provisional figures. The ratio has decreased with the introduction of voluntary coupled support in direct payments (first implemented in financial year 2016). It has remained fairly stable since then, with a slight decrease due to the progress in the execution of the scheme.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

### Specific Objective 6 :Contribute to the enhancement of the environmental performance of the CAP through the greening component of the direct payments. Contribute to the development of sustainable agriculture and to making the Common Agricultural Policy more compatible with the expectations of the society through the cross compliance system. Contribute to preventing soil erosion, maintaining soil organic matter and soil structure, ensuring a minimum level of maintenance and avoiding the deterioration of habitats, and protecting and managing water through the standards of good agricultural and environmental condition of land

#### Indicator 1:Percentage of CAP payments covered by cross compliance

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									
82,4%	Actual Progress									Maintain percentage
	83,50%	85,70%	81,60%	84,80%	82,70%	81,90%	81,3%			Final

Are we on track	On track
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	DG AGRI – Budget execution figures
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The percentage decreased slightly in 2020 (compared to 2019), because higher market expenditure reduced the proportion of EAGF measures covered by cross-compliance. Measures that are not falling under cross-compliance tend to have an increasing execution over the period and thus the % covered by cross-compliance is expected to decrease over the programming period. The ratio is stable for area-related measures.
Full metadata available at this address	
Justification of the trend	

#### Indicator 2:Opinion expressed by the public on cross compliance

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Support for the reduction of direct payments to farmers not complying with environmental rules										
2007	Milestones									
83%										Maintain the positive opinion
	Actual Progress									Final
	87%			88%						
Support for the reduction for non-compliance of animal welfare rules										
2007	Milestones									
84%										Maintain the positive opinion
	Actual Progress									Final
	87%			88%						
Support for the reduction of direct payments to farmers not respecting food safety rules										
2007	Milestones

Other methodological comments	
Full metadata available at this address	
Justification of the trend	

**Indicator 4: The ratio of permanent grassland within a Member State in relation to the total agricultural area**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Before 2015	Milestones									
Reference ratio:										Reference ratio should not decrease

										more than 5%
	Actual Progress									Final
Ratio has not decreased beyond the limit of 5%	1 MS communicated decline above threshold of 5%, triggering a reconversion obligation	2 MS communicated decline above threshold of 5%, triggering reconversion obligation	No MS with ratio falling below the limit of 5%	1 MS communicated decline above threshold of 5%, triggering reconversion obligation	No MS with ratio falling below the limit of 5%					

Are we on track	On track
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	MS annual notification (ISAMM – Information System for Agricultural Market Management and Monitoring)
Narrative	The maintenance of the ratio of permanent grassland means that there should not be, at national or regional level, a decrease by more than 5% of the current ratio of permanent grassland in relation to the total agricultural area by comparison with a reference ratio reflecting this ratio at a reference period. Data before 2019 for EU28.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In 2019, the data is available for 27 MS. As of 2019, the comparison ratio (rate of change compared to the reference) registered negative values in nine MS and 10 regions of the four MS with regional calculation but none exceeding the -5% threshold. However, in most cases the changes of MS'/regional annual ratios under greening and of the 'comparison ratio' resulted from a reallocation of permanent grassland (PG) areas within the terms of the ratio rather than their actual decrease. Instead, the figures reflected combined effects of an increase of/conversion to organic PG and, to a lesser extent, of decreasing PG under SFS (these areas are exempted from greening rules thus not counted within the reference/annual/comparison ratios). It was also affected by changes to agricultural areas. While some MS deemed such situations sufficient to adapt the reference ratio, others did not do it, resulting in lower or negative figures of 'comparison ratio'.
Full metadata available at this address	
Justification of the trend	

### Indicator 5: Share of area under greening practices

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2015	Milestones									
75%										Maintain the share
	Actual Progress									Final
		75%	77%	79%	79%	79%				

Are we on track	On track
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	MS annual notifications (ISAMM - Information System for Agricultural Market Management and Monitoring).
Narrative	The coverage depends on the areas under the direct payment system and on changes e.g. to the farm structure and farming system. The figures reflect the relatively stable share of areas under the greening.
Methodology	The share is calculated as total agricultural area for farms with at least one greening obligation on total agricultural area from Eurostat statistics revised by DG AGRI.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Provisional information based on communications from Member States, where the assessment of notifications remains to be completed in some cases. Data before 2019 for EU28.
Full metadata available at this address	
Justification of the trend	

**Specific Objective 7 :To promote local agricultural production and to ensure a fair level of prices for commodities for direct consumption and for processing by local industries in the Outermost Regions of the EU and in the Aegean Islands**

**Indicator 1:Support to the Local Production (SLP) to maintain/develop the agricultural production: Utilised agricultural area (variation with respect to the previous year)**

Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	MS Annual Reports
Narrative	The evolution of Utilised Agricultural Area in the outermost regions and the smaller Aegean islands shows a stable use, which is in line with the aims of the policy.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The Annual Implementation Report (AIR) transmitted by Member States in year N provides data corresponding to year N-1. The latest available results are 2019 data from the AIR transmitted in 2020. Yet, Spain's data are gathered late; the latest available data included in the 2020 AIR are from 2018. In addition, Portugal's farm structure data are collected every four or five years (data are available for 2013 and 2016), thus both former data and latest known data refer to year 2016.
Full metadata available at this address	
Justification of the trend	

**Indicator 2: Specific Supply Arrangements (SSA) to ensure the supply of essential products: SSA coverage rate (relation between quantities of products benefiting from SSA support and total quantities of the same products introduced in the respective outermost region)**

Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	MS Annual Reports
Narrative	Comparison of prices for the consumer of certain products/groups of products covered under the Specific Supply Arrangements with prices of similar products in their Member States. The objective is to ensure a fair price level for products essential for human consumption or for animal feed in the outermost regions and the smaller Aegean islands.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In their annual implementation reports (AIR) for 2019, the Member States have communicated data related to the common performance indicators, as requested by Annexes VIII and II to Regulations (EU) No 180/2014 and 181/2014 respectively. However, the provided data may not be fully in line with the requirements of these annexes and thus not mutually comparable. Therefore, these indicators shall be evaluated with due caution. Discussion with the Member States concerned is ongoing in order to improve the collection of these data. The French authorities changed the methodology used in their annual reports and data source to calculate this indicator, as a consequence the series of data for this indicator is no longer available. Data provided for Madeira refers to prices for foodstuffs in general (indicator 2b). Indicator 2b is compulsory in the AIR. PT communicates no separate data for Indicator 2a and 2b, so it was agreed to use the figure provided by PT under Indicator 2b "foodstuffs".
Full metadata available at this address	
Justification of the trend	

**Specific Objective 8 :To provide the Commission with reasonable assurance that Member States have put in place management and control systems in conformity with EU rules designed to ensure the legality and regularity of the underlying transactions financed by the EAGF, EAFRD, SAPARD and IPARD and, where this is not the case, to exclude the expenditure concerned from EU financing so as to protect the EU's financial interests**

**Indicator 1:Percentage of expenditure (EAGF+EAFRD) with statistics or 100 % check**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									
90%	Actual Progress									95%
		94%	98%	98%	98%	99%				Final

Are we on track	On track
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	CATS/COMBO database based on the Annual Declarations from the Paying Agency
Narrative	Percentage of expenditure (EAGF+EAFRD) with statistics or 100 % check (Art. 9(1) of Regulation (EU) No 809/2014)
Methodology	Data for Financial Year
Link MFF 14-20 / MFF 21-27	This indicator is a continuation from the period 2014-2020. This indicator will remain fully applicable and representative until FY 2022. In line with the CAP Post 2020 proposal, taking into account the transitional regulation, as of FY 2023 a gradually increasing amount of expenditure will not be covered by the obligation for the Member States to provide the control statistics. The use of this indicator for the future Programme Statements should therefore be carefully considered.
Other methodological comments	2020 not yet available, as 2020 Annual Declarations will only be received after 15.02
Full metadata available at this address	
Justification of the trend	The legislative framework provides for the obligation of the Member States to send control statistics for a major share of the CAP budget. Since FY2016, the target has been achieved. For a certain part of the schemes under market measures (ABB02), there is no requirement in the legislation for the Member States to provide control statistics. Given the decreasing trend of expenditure under ABB02 and the stable situation for ABB03 and ABB04, it is expected that the evolution of the indicator will remain stable.

### Specific Objective 9 :To inform and increase awareness of the CAP by maintaining an effective and regular dialogue with stakeholders, civil society, and specific target audiences

#### Indicator 1:Public awareness of CAP

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Percentage of Europeans who believe that agriculture and rural areas play important role for their future										
2015	Milestones									
94%										Maintain and if possible increase awareness of the CAP
	Actual Progress									Final
		95%		92%			95%			
Percentage that have heard about support that the EU gives farmers through its CAP										
2015	Milestones									
69%										Maintain and if possible increase awareness of the CAP
	Actual Progress									Final
		69%		67%			73%			

Are we on track	On track
Indicator type	Result
Unit of measurement	
Cut-Off Date	
Data source	Special Eurobarometer: European, agriculture and the CAP, Standard Eurobarometer
Narrative	The indicator shows the perception of the public about agriculture and public support to agriculture. There is a clear improvement for both indicators from the previous survey.
Methodology	Face to face interviews conducted following the methodology foreseen in DG COMM framework contract.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The plan is to conduct such Special EB surveys on Europeans, agriculture and the CAP every two years. The next one is foreseen in 2022.

Data source	Eurostat – Farm Structure Survey
Narrative	Results 2014-2017: 2014: Data of Farm Structure Survey 2013 delivered by Member States to Eurostat by December 2014. 2015: Data of Farm Structure Survey 2013 delivered by Member States to Eurostat by December 2014 and made available by Eurostat to users as from first quarter 2015. 2016 and 2017: Data of Farm Structure Survey 2013 have been published in the Eurostat database. The Farm Structure Survey 2016 has been carried out by Member States. Data are expected to be made available by Eurostat by the end of 2018. The legal framework for the 2020 agricultural census is under preparation.
Methodology	Linked to Eurostat methodology. Population of FSS 2016 is used for 2015-2018.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Results 2018-2020: 2018: The Farm Structure Survey 2016 was carried out by Member States. Eurostat has started to publish data from this survey in 2018 (to be completed in 2019). The new framework regulation for the 2020 agricultural census and farm surveys in 2023 and 2026 entered into force in 2018. 2019: Eurostat has published more data from the 2016 Farm Structure Survey. Grant agreements have been signed with Member States for the agricultural census 2020. Portugal started the census in October 2019. 2020: Agricultural census 2020 started in Member States, with most due to finish in 2020-2021. Eurostat will start publishing results in the second half of 2022. Member States adjusted to the Covid 19 pandemic.

## 6. The programme contribution to horizontal policies

### 6.1. Contribution to climate mainstreaming

#### 6.1.1. Tracking and estimates

##### *European Agricultural Guarantee Fund (EAGF)*

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
7 116,0	7 153,0	16 607,2	16 659,6	16 712,8	16 765,2	16 818,8	97 832,6

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

##### *European Agricultural Fund for Rural Development (EAFRD)*

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
8 784,0	6 931,0	4 843,6	4 843,6	4 843,6	4 843,6	4 843,6	39 933,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.1.2. Explanation and justification on the financial contribution

##### *European Agricultural Guarantee Fund (EAGF)*

During the CAP transitional period 2021 and 2022, the current tracking method continues to apply.

The climate action contribution is calculated accordingly: the payment for agricultural practices beneficial for the climate and the environment (budget article 08 02 05) is split into three equal tiers, in analogy to the three compulsory farming practices applicable. The tiers receive the following Rio marker:

- the Rio markers take into account the climate contribution of the three compulsory green direct payment obligations: 1st tier 0% (crop diversification), 2nd tier 40% (ecological focus area), 3rd tier 100% (permanent grassland);
- plus a Rio marker of 40% applied to 20% of the remaining direct payments taking into account cross-compliance (i.e. 8% of budget article 08 02 05 direct payments without payment for agricultural practices beneficial for the climate and the environment and without payments for the Small farmers scheme which are not subject to cross-compliance).

The estimates from financial years 2023 onwards correspond to the overall target of 40% foreseen to be applied to the EAGF amounts. The methodology and figures on climate mainstreaming will have to be fine-tuned on the basis of the CAP strategic plans that MS are scheduled to submit in the beginning of 2022 and whose implementation will begin as of 1 January 2023.

##### *European Agricultural Fund for Rural Development (EAFRD)*

Calculation<sup>51</sup> based on the value of commitments respectively for Budget 2021 and DB 2022 indicative annual allocation to focus areas based on all 118 adopted rural development programmes. This calculation does not take into account the impact of flexibility decisions of the Member States regarding the 2022 Rural Development envelopes [expected end February].

<sup>51</sup> In accordance with Annex II to Regulation (EU) No 215/2014 of 7 March 2014 laying down rules for implementing Regulation (EU) No 1303/2013 of the European Parliament and of the Council laying down common provisions on the European Regional Development Fund, the European Social Fund, the Cohesion Fund, the European Agricultural Fund for Rural Development and the European Maritime and Fisheries Fund and laying down general provisions on the European Regional Development Fund, the European Social Fund, the Cohesion Fund and the European Maritime and Fisheries Fund with regard to European Agricultural Fund for Rural Development (EAFRD)

The methodology for the calculation of the contribution to climate mainstreaming is the following: 100% of the annual commitments in the Priority Area 4 and Priority Area 5, plus 40% of the annual commitments in the focus area 3B and 6B.

The Commission's estimates of the overall climate contribution of both CAP funds are based on an EU wide agreed methodology. The method used by the Commission is sound, it has been prepared in a transparent and coordinated manner; it is based on Rio markers and it was communicated to the European Parliament and the Council. The tracking methodology for EAFRD is a reasonably reliable estimate for climate related expenditure and minimizes administrative burden. It currently represents 57.4% of EAFRD expenditure.

The tracking methodology has to remain stable during the transitional period 2021 and 2022.

### 6.1.3. Key achievements

Based on the EU climate tracking methodology, the CAP contribution to climate action is estimated at 26% for the period 2014-2020 (EUR 103 198 million), well above the 25% commitments: EUR 45 504 million for EAGF (15%) and EUR 57 694 million for EAFRD (58%). Because of its nature, the CAP has better addressed reduction of emissions from managed agricultural soils, increased carbon sequestration or protection of carbon stocks. The Good Agricultural and Environmental Conditions (GAECs) and the Greening measures play a major role in protecting permanent grasslands and the EU soil carbon stock. GAECs include obligations to keep a minimum soil cover, maintenance of soil organic matter through appropriate practices, including banning the burning of arable stubbles and appropriate land management. These measures also significantly contribute to improve adaptation of soils to changing climatic conditions. Greening practices cover crop diversification, maintenance of permanent grasslands and establishing Ecological Focus Areas (EFAs) on 5% of arable land. A number of measures have significant effects on adaptation and mitigation.

### 6.1.4. Performance

The CAP evaluation<sup>52</sup> includes a modelling estimation of a reduction in emissions by 4.6% compared to a baseline without CAP (in a scenario with medium emission reduction coefficients and based on the 2016 uptake of Pillar II measures, raising to 8.8% in the highest scenario). Pillar I (EAGF) contributes most to this reduction (19.8 million tonnes CO<sub>2</sub>eq corresponding to 3.5%), via greening and more specifically the protection of the environmentally sensitive permanent grasslands and the ecological focus areas. All actions also improve adaption of these areas to climate change. As regards Pillar II (EAFRD), the measures for which impact was quantifiable (i.e. investments in physical assets - measure 4, investments in forest area development - measure 8, agri-environment-climate - measure 10.1, organic farming - measure 11 and Natura 2000 payments - 12.1) have helped to reduce GHG emissions by ~6.4 million tonnes CO<sub>2</sub>eq/year. This corresponds to 1.1% of total emissions from agriculture based on 2016 measures uptake. The support to areas facing natural constraints prevents land abandonment and loss of grassland and thus protects carbon stocks in soil, which have a positive effects on the adaptation to climate change in these areas.

## 6.2. Contribution to biodiversity mainstreaming

### 6.2.1. Tracking and estimates

#### *European Agricultural Guarantee Fund (EAGF)*

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
5 354,0	5 373,0	5 397,3	5 414,4	5 431,7	5 448,7	5 466,1	37 885,2

(\*Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### *European Agricultural Fund for Rural Development (EAFRD)*

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
4 588,9	3 806,3	3 623,6	3 623,6	3 623,6	3 623,6	3 623,6	26 513,2

methodologies for climate change support, the determination of milestones and targets in the performance framework and the nomenclature of categories of intervention for the European Structural and Investment Funds.

<sup>52</sup> SWD in preparation.

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.2.2. Explanation and justification on the financial contribution

#### *European Agricultural Guarantee Fund (EAGF)*

During the CAP transitional period 2021 and 2022, the current tracking method continues to apply.

The contribution to biodiversity is calculated as follows:

- for the payment for agricultural practices beneficial for the climate and the environment (budget item 08 02 05 05) a Rio marker of 40% is applied;

- plus a Rio marker of 40% is applied to 10% of the remaining direct payments taking into account cross-compliance (i.e. 4% of budget article 08 02 05) without payments for agricultural practices beneficial for the climate and the environment and without payments for the Small farmers scheme which are not subject to cross-compliance.

The estimates for financial years 2023 onwards correspond to the global rate of years 2021 and 2022 (13%) applied to the EAGF amounts. An effective, transparent and comprehensive methodology on biodiversity mainstreaming is foreseen to be set out by the Commission, in cooperation with the European Parliament and the Council. The exact figures for biodiversity depend on the CAP strategic plans that MS will submit and whose implementation will begin as of 1 January 2023.

#### *European Agricultural Fund for Rural Development (EAFRD)*

Calculation based on the value of commitment respectively for Budget 2021 and Draft Budget 2022 indicative annual allocation to focus areas based on 118 rural development programmes. This calculation does not take into account the impact of flexibility decisions of the Member States.

The methodology for the calculation of the contribution to biodiversity is the following: 100% of the annual commitments in the Priority Area 4 with exception of the amounts for the areas facing natural constraints plus 40% of the annual commitments in the focus area 5E.

The tracking methodology has to remain stable during the transitional period 2021 and 2022.

The estimates from 2023 correspond to the extrapolation of average contribution of years 2021 and 2022 for the following years until 2027. An effective, transparent and comprehensive methodology on biodiversity mainstreaming will be set out by the Commission, in cooperation with the European Parliament and the Council. The exact figures for biodiversity depend on the CAP strategic plans that MS are expected to submit in early 2022 and with implementation to begin as of 1 January 2023.

### 6.2.3. Key achievements

Protecting biodiversity and strengthening the resilience of ecosystems are indispensable for achieving our sustainable growth objectives. As foreseen in the Commission Communication 'A budget for Europe 2020', financing the EU Biodiversity Strategy to 2020 and its objective was to halt and reverse the decline of biodiversity in the EU requires the mainstreaming of biodiversity throughout the EU budget, both within the EU via the main funding instruments and through external action funding.

Based on the EU tracking methodology, the CAP contribution to biodiversity is estimated at EUR 66 billion for the period 2014-2020.

### 6.2.4. Performance

The CAP for 2014-2020 plays an important role and provides a range of instruments that can contribute to supporting biodiversity. The cross-compliance system contributes to reaching ambitious biodiversity goals by linking some CAP payments to the respect of a set of environmental rules, and setting a baseline for other incentive measures supported by CAP funds. The wide area coverage and the compulsory nature of cross-compliance and greening measures amplify their positive effects. In addition, agri-environment-climate actions and organic farming as well as Natura 2000 payments are the main rural development measures contributing to biodiversity objectives and targets. They have significant effects in encouraging farmers to reaching ambitious biodiversity goals through the support for biodiversity-friendly agricultural practices such as maintaining existing semi-natural habitats and landscape features, or creating new habitats, which are very beneficial for biodiversity. More than 17% of EU agricultural land is under rural development management contracts supporting biodiversity and/or landscape through promoting management practices going beyond mandatory requirements and providing environmental public goods.

The potential of other relevant rural development measures should not be underestimated. In this context, the role of non-productive investments in establishing and/or restoring landscape features such as hedgerows, stonewalls, wetlands etc. can also

play an important role as well as measures for knowledge-building, innovation and co-operation. Training and provision of farm advice also play a significant role in promoting biodiversity relevant farming practices and approaches.

### 6.3. Contribution to clean air financing

#### *European Agricultural Fund for Rural Development (EAFRD)*

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
98,0	78,0						176,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

The contribution to clean air is calculated as follows:

40% of the expenditure of Focus Area 5B (energy efficiency) plus 40% of expenditure of Focus Area 5D (reducing greenhouse gases and ammonia emissions from agriculture).

### 6.4. Contribution to gender equality

#### *European Agricultural Fund for Rural Development (EAFRD)*

Rural development policy contributes to gender equality as the gender perspective is considered during the preparation and implementation of the RDPs. Under Priority 6 of the Rural Development Policy, the CAP supports social inclusion, poverty reduction and economic development in rural areas. Under this priority, the European Agricultural Fund for Rural Development (EAFRD) supports inter alia, the development of basic services in rural areas as well as for local initiatives; it finances the start-up of non-agricultural and agricultural activities and promotes the cooperation between local actors. This can help to address the special challenges that women sometimes face in rural areas and in the agricultural sector, such as the lack of quality basic services in some rural areas (such as childcare services, broadband, transports). Moreover, all rural development measures have the potential to contribute to gender equality to a various extent, e.g. by providing support to improve skills, facilitate business development, etc. Besides that, contribution to gender equality is specifically sought in the rural development policy through:

- the possibility to submit thematic sub-programmes for women in rural areas (although no Member State did so),
- the possibility to target rural development support to women through the application of selection criteria and,
- the obligation to respect an ex ante conditionality on gender equality.

It is currently not possible to establish accurate data on the portion of the CAP funding which goes to women as the data is not disaggregated by sex especially in the case of EAGF, direct payments and a number of the beneficiaries have a legal rather than natural identity.

The Commission enhanced gender dimension in the preparation of the Commission's proposal for the CAP Strategic Plans. It is important also to note that the proposals for the future CAP require Member States to establish a partnership that shall include relevant bodies including those responsible for gender equality and non-discrimination. Member States shall involve those partners in the preparation of the CAP Strategic Plans. Furthermore, under the new delivery model for the CAP, Member States will have greater flexibility to design their CAP interventions in line with their needs, but at the same time including gender issues, in respecting the EU Charter of the Fundamental rights. The Commission continuously invites Member States to consider gender in their SWOT analysis and address it in their needs assessment for the strategic plans. In the recommendations addressed to Member States as well as in the accompanying communication in the context of the European Green Deal and the Farm to Fork Strategy, the Commission asks Member States to give careful consideration of the specific needs of women in agriculture and rural areas in order to deliver on gender equality.

### 6.5. Contribution to the sustainable development goals

#### Goals

#### *SDG 1 End poverty in all its forms everywhere*

The CAP aims to ensure a **fair standard of living for farmers** – and more broadly, to **reduce poverty** in rural areas.

Relevant CAP tools include direct payments to farmers, market support instruments, and rural development support for job creation and training (agricultural and non-agricultural).

At global scale, with 80% of the very poor depending on agriculture for their livelihoods, the EU is facilitating responsible private investments in developing countries, notably in the agri-food sector to create growth and jobs and address root causes of irregular migration.

***SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture***

The CAP aims to help provide a stable (as well as safe and sustainably produced) supply of food at reasonable prices for consumers. Doing so for EU consumers contributes in itself to global food security. The EU makes a further contribution by supplying large amounts of food (worth around EUR 120 billion a year) according to global demand and without any export refunds, in contrast to previous decades.

Relevant CAP tools include direct payments and market instruments (to safeguard production potential against serious disruption), the EU School Scheme (which encourage healthy diets among schoolchildren), and various tools which foster the environmental aspect of sustainability (see SDG 15).

***Illustrative example***

The EU school scheme supports the distribution of fruit, vegetables and milk to schools across the European Union as part of a wider programme of education about European agriculture and the benefits of healthy eating. The consumption of fresh fruit and vegetables and of milk in the EU does not meet the international or national nutritional recommendations while that of processed food that is often high in added sugar, salt, fat or additives is on the rise. Unhealthy diets, together with low physical activity, result in overweight and obesity. This is why the EU takes action to help children follow a healthy diet and lead healthy lifestyles.

***SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all***

The CAP aims to improve knowledge transfer in the farm and forestry sectors and in rural areas overall, as a means of improving sustainability and productivity of agriculture and the economic, environmental and social conditions in rural areas.

Relevant tools include support through rural development programmes for training, coaching, workshops, demonstration projects, use of tailored advice etc. – for persons engaged in the agriculture, food and forestry sectors, as well as for land managers and SMEs operating in rural areas.

***SDG 6 Ensure availability and sustainable management of water and sanitation for all***

The CAP aims to foster sustainable management of natural resources. This explicitly includes the objectives of improving water management (including in terms of water quality) and making the farm sector more water-efficient.

Pertinent tools include the water-relevant components of cross-compliance and "greening" (see SDG 15 for further information), various payments through rural development programmes to make farming less intensive (especially agri-environment-climate measures), and support for investments in more efficient irrigation systems.

***SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all***

The CAP aims to increase efficiency of energy use in farming and food processing, as well as to facilitate the supply and use of renewable sources of energy.

Relevant tools include rural development support for investments in generating renewable energy (including on the farm) and in infrastructure for its distribution – with regard to biomass and other renewable sources (for solar, geothermal and wind power).

***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

The CAP aims to improve the viability of all types of agriculture in all regions, as well as to foster wider social inclusion and reduce poverty in rural areas.

Relevant tools include direct payments and market instruments (for the development of the farm sector, to which many other sectors are connected), the recent initiative to tackle unfair trading practices, as well as risk management tools and rural development support for business start-ups (for new young farmers and non-agricultural businesses) and investments in further business development.

***SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation***

The CAP aims to foster innovation in agriculture, forestry and rural areas, as well as to help provide what is needed for general economic development in rural areas (including access to IT services).

Relevant tools include rural development support for the development of new products, practices, processes and technologies in the agriculture, food and forestry sectors (especially through the European Innovation Partnership for Agricultural Productivity and Sustainability) as well as for broadband infrastructure, general small-scale infrastructure and training.

***Illustrative example***

The CAP offers explicit support for setting up, expanding and improving broadband infrastructure, as well as for the provision of broadband internet access (i.e. improved connections to infrastructure), and access to e government. According to targets

aggregated from the 2014-2020 rural development programmes, in the current programming period, the CAP will help 18 million people living in rural areas to benefit from improved access to ICT services and infrastructure.

### *SDG 12 Ensure sustainable consumption and production patterns*

One of the CAP's main objectives is to provide a stable, sustainably produced supply of safe food at affordable prices for consumers. This includes for examples an EU framework on organic farming, and the integration of environmental concerns, such as biodiversity, water management and use and climate change, into the CAP. The CAP is committed to sustainable use of natural resources and the environmentally-sound management of waste, also for food losses.

With regard to the key tools which help to ensure environmentally sustainable production, see SDG 15.

### *SDG 13 Take urgent action to combat climate change and its impacts*

The CAP aims to assist **climate change mitigation and adaptation**.

Relevant tools include those elements of cross-compliance and "greening" (see SDG 15) pertinent to climate change - as well as rural development support for a range of practices and investments that cut greenhouse gas and ammonia emissions from farming (e.g. through more climate-friendly equipment), fix carbon in the soil (e.g. through forest-planting) and make farming more climate-resilient (e.g. with less water-intensive cropping patterns).

### *SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss*

The CAP aims to ensure the **sustainable use of natural resources** – including in terms of biodiversity, soil, water and landscapes.

A wide range of tools are relevant. Within the system of direct payments to farmers, "cross-compliance" links payments to various basic environmental, public, animal and plant health and animal welfare standards. Beyond that, the "greening" layer of the system rewards farmers for implementing crop diversity, preserving permanent grassland and maintaining biodiversity-friendly zones or landscape features. Within rural development policy, various area-based payments help farmers to pursue organic farming, improve animal welfare, implement certain Natura 2000 requirements, farm sustainably in areas facing natural disadvantages (especially mountainous areas), and (through agri-environment-climate measures) make extra efforts to benefit soil, water, air and wildlife. Support for eco-friendly investments can cover resource-efficient technologies, establishment of landscape features, and various forest-related activities (planting, protection against fire and other natural threats etc.) Support for training, the use of advice, and innovation is also relevant.

#### *Illustrative example*

Recent production and market trends show the importance that organics has gained over the last decade. Organic farming responds to a specific consumer demand for sustainable food products, promoting more sustainable farming practices and contributing to the protection of the environment and improved animal welfare.

For the 2014-2020 period, the rural development support planned for organic farming amounts to EUR 11.2 billion.

The share of the EU's utilised agricultural area with organic farming has increased from 5.6% in 2012 to 7.5% in 2018 corresponding to an increase from 10.05 to 13.44 million hectare.

**1. Overview****1.1. Challenges**

As a global ocean actor and a major producer of seafood, the EU has a responsibility to protect and sustainably use the oceans and their resources. This is also in its socio-economic interest regarding the availability of food supplies, the competitiveness of the maritime economy and the livelihood of coastal communities.

In this respect, the European Maritime, Fisheries and Aquaculture Fund (EMFAF) for the 2021-2027 period supports the common fisheries policy (CFP), the EU maritime policy and the EU's international commitments for international ocean governance. Such support is an enabler for sustainable fisheries and the conservation of marine biological resources, for food security through the supply of seafood products, for the growth of a sustainable blue economy and for healthy, safe, secure, clean and sustainably managed seas and oceans. It also contributes to the achievement of Sustainable Development Goal 14 of the United Nations ('conserve and sustainably use the oceans, seas and marine resources'), to which the EU is committed.

## 1.2. Mission (general objectives)

The EMFAF supports the CFP, the EU maritime policy and the EU agenda for international ocean governance along the following four priorities:

1. Fostering sustainable fisheries and the restoration and conservation of aquatic biological resources;
2. Fostering sustainable aquaculture activities, and processing and marketing of fisheries and aquaculture products, thus contributing to food security in the Union;
3. Enabling a sustainable blue economy in coastal, island and inland areas, and fostering the development of fishing and aquaculture communities;
4. Strengthening international ocean governance and enabling seas and oceans to be safe, secure, clean and sustainably managed.

These are further explained in section 1.5. The EMFAF also contributes to the implementation to the European Green Deal, and in particular the Farm to Fork Strategy and the EU Biodiversity Strategy for 2030, including their external dimension, but also for the preparation of the future EU Strategy for Adaptation to Climate Change. For this purpose, the Commission is preparing a new approach for a sustainable blue economy, to replace the Blue Growth strategy from 2012. This new Communication will have a particular focus on the contribution of the blue economy to economic recovery (DG MARE 2021 management plan).

## 1.3. Specific objectives

The following Specific Objectives for the EMFAF are established under shared management, as defined in Annex II of the Regulation.

- Strengthening economically, socially and environmentally sustainable fishing
- Increasing energy efficiency and reducing CO2 emissions
- Promoting the adjustment of fishing capacity to fishing opportunities and contributing to a fair standard of living in cases of certain temporary cessation of fishing activities
- Fostering efficient fisheries control and reliable data for knowledge-based decision-making
- Promoting a level-playing field for fishing and aquaculture products produced in the outermost regions
- Contributing to the protection and restoration of aquatic ecosystems
- Promoting sustainable and economically viable aquaculture activities, in accordance with Article 34(1) of Regulation (EU) No 1380/2013
- Developing competitive, transparent and stable markets for fisheries and aquaculture products, as well as processing of these products, in accordance with Article 35 of Regulation (EU) No 1380/2013 and with Regulation (EU) No 1379/2013
- Strengthening sustainable sea and ocean management through the promotion of marine knowledge, maritime surveillance and/or coastguard cooperation
- Developing fishing and aquaculture communities in coastal and inland areas

Under direct management, the focus is rather at priority level. The areas to be supported are:

- Implementation of the CFP;
- Promotion of clean and healthy seas and oceans;
- Market intelligence;
- Maritime policy and development of a sustainable blue economy;
- European marine observation and data network;
- Maritime security and surveillance;
- International ocean governance.

## 1.4. Public intervention context

The EU has exclusive competence for the conservation of marine biological resources<sup>1</sup>, both in EU waters and in relation to the international obligations deriving from UNCLOS<sup>2</sup> and from other UN agreements to which the EU is a Party. The exclusive competence equally applies to the bilateral fisheries agreements signed with third countries. All these areas are regulated by the Common Fisheries Policy (CFP). The EMFAF helps Member States and thereby stakeholders to comply with the rules of the Common fisheries policy (CFP) being necessary for the attainment of the objectives of the policy, such as the sustainable management of fisheries. The EMFAF is directed at maintaining sustainable fisheries, aquaculture and processing sectors, as well as the local communities dependent on fisheries dependent areas. This is supported through innovation and diversification of activities to reduce environmental impacts and enhance protection and biodiversity while sustaining this important economic sector. The EMFAF supports the implementation of programmes designed by MS to support the specific needs of the sector in the MS.

## 1.5. Actions

Under priority 1, the EMFAF should ensure that fishing activities are environmentally sustainable in the long-term and managed in a way that is consistent with the objectives of achieving economic, social and employment benefits, and of contributing to the availability of food supplies. In particular, it aims to achieve and maintain sustainable fishing based on the Maximum Sustainable Yield and to minimise the negative impacts of fishing activities on the marine ecosystem. That support includes innovation and investments in low-impact, climate resilient and low-carbon fishing practices and techniques.

Under priority 2, the EMFAF may support the promotion of a sustainable aquaculture, and the promotion of marketing, quality and value added of fishery and aquaculture products, as well as the processing of these products.

Under priority 3, it may support actions that contribute to enabling sustainable blue economies in coastal, island and inland areas, and to fostering the sustainable development of fishing and aquaculture communities.

Under priority 4, the EMFAF may support actions to strengthen international ocean governance and enable safe, secure, clean and sustainably managed seas and oceans through the promotion of marine knowledge, maritime surveillance and coastguard cooperation.

Brexit has so far had a limited impact on programme planning and implementation. DG MARE will continue to monitor its effects and will respond as appropriate.

## 1.6. Delivery mode

As during the 2014-2020 programming period, the EMFAF will mainly be managed under shared management (87% of the budget allocation), where the Common Provision Regulation (CPR) for the European Structural and Investment Funds (ESIF) is applicable. Thus, the EMFAF shares common rules with other ESI funds, such as the European Regional Development Fund and European Social Fund Plus, sharing common objectives, principles and rules related to planning, programming, monitoring and reporting. The EMFAF further specifies details within this framework, including the common result indicators, types of interventions and climate coefficients which must be used when planning and reporting.

The remaining part of the financial envelope (13%) is implemented through direct or indirect management modes. The direct management part of the fund will be managed either directly by DG MARE or delegated to an Executive Agency. This will finance CFP related projects, market intelligence, scientific advice, sustainable blue economy and International Ocean Governance, as well as contributions to international organisations or to the functioning of the Advisory Councils. The budget under direct management shares the same set of common result indicators and principles as shared management to allow full and consistent reporting on the achievements of the EMFAF as a whole.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Procedure 2018/0210/COD COM (2018) 390: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on the European Maritime and Fisheries Fund and repealing Regulation (EU) No 508/2014 of the European Parliament and of the Council	2021 - 2027	6 108,0

### 1.8.2. Legal basis explanation

After 2½ years of negotiations following the adoption of the Commission's proposal for a future EMFF post 2020, the co-legislators reached political agreement on the EMFAF on 4 December 2020. The Regulation is expected to be adopted and enter into force in June 2021.

In addition to the legal basis mentioned above, the shared management strand of the EMFAF is regulated by the Common Provisions Regulation (CPR), which lays down common provisions on the European Regional Development Fund, the European Social Fund Plus, the Cohesion Fund, the Just Transition Fund, and the EMFAF. It also lays down financial rules for all the aforementioned Funds, plus the Asylum and Migration Fund, the Internal Security Fund and the Border Management and Visa Instrument.

The rules on management, programming, monitoring and auditing to be applied by the shared management strand of EMFAF are provided for in the CPR, whereas the rules for direct management are provided for in the EMFAF Regulation itself.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>760,7</b>	<b>971,9</b>	<b>940,4</b>	<b>907,3</b>	<b>819,5</b>	<b>835,9</b>	<b>848,3</b>	<b>6 084,0</b>

### 1.8.4. Financial programming explanation

### 1.9. Link with the 2014-2020 MFF

The EMFAF maintains the same overall range of support as the 2014-2020 EMFF. The structure has been simplified and streamlined, with increased commonalities with the common rules applied to other shared management funds set out in the Common Provisions Regulation. The EMFAF has a more flexible structure with the elimination of detailed and specific measures, giving Member States more flexibility provided that support falls under the scope of the Priorities and Specific Objectives, is not explicitly ineligible and is in accordance with applicable Union law. The monitoring and reporting structure has also been simplified to align with the core performance structure of the MFF, to cover both shared and direct management, to use fewer, more targeted common result indicators, and deliver more frequent reporting.

### 1.10. Relevant websites providing more information

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted Budget	6 340 548 211	2 802 866 050
Implementation carry-overs	28 169 090	3 962 144
Implementation Recoveries and Repaid advances		572 235 930
Implementation total	6 368 717 301	3 379 064 124
total envelop*	6 381 637 417	
cumulative implementation rate	100%	53%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

For 2019 (the most recent year for which complete, validated data are available), the pace of implementation was comparable to 2018. EUR 3.21 billion of EMFF funding was committed, corresponding to 56.5% of the total EMFF funding available. Payments to beneficiaries continued to advance and reached EUR 1.73 billion (or 30.5% of the total EMFF funding), with around one-third of all payments made in 2019. These sums concern approximately 47,000 operations.

At the end of 2020, as regards shared management, cumulative EMFF net payments to Member States totalled just over €2.4 billion. This represents 43% of the total amounts allocated to the programmes, and shows significant progress from the position at the end of 2019 (29%). This trend is comparable to that seen in the other ESI Funds, and signals that the measures introduced by the Commission to help Member States tackle the effects of the COVID-19 pandemic (described in detail in section 3.1 below) were broadly effective. Member States continued to submit payment claims, and n+3 decommitment levels were kept to manageable levels (€44 million at the end of 2020, with 4 Member States affected).

### **Comparison of implementation with the 2007-13 European Fisheries Fund (EFF) programming period**

The cumulative payment position is approximately fifteen percentage points lower than that for the corresponding point in the EFF payment cycle. Although COVID has undoubtedly put a brake on implementation, other factors that are likely to have had an influence include:

- Late adoption of the EMFF regulation in 2014, 5 months into the programming period (the EFF regulation was adopted in 2006, i.e. before the programming period had started);
- The process of designation of authorities for the EMFF, which was placed under the control of Member States (under the EFF, Member States could not implement until the Commission had completed its systems compliance assessments). However, the process of designation often took longer still, leading to a late start in programme implementation;
- Tighter de-commitment rules under the EFF: n+2, rather than n+3. This was a natural “accelerator” for implementation of the EFF.

### **Decommitment**

#### *Key reasons*

Only 4 Member States sought exemption from EMFF decommitments under Article 87 CPR. COVID 19 restrictions were cited, but only in general terms. The main reasons cited by MS were:

- Suspensions of administrative procedures (including public procurement), preventing grant decisions from being taken;
- Claims that beneficiaries did not submit payment applications (despite contracts being in place);
- Lack of means and general interruptions (without further elaboration).

Following discussions that took place on 8 February between Stock Taking Group representatives from REGIO, EMPL, MARE and AGRI, it was agreed that all services should be consistent in their approach when assessing such requests. To be acceptable, such requests must:

- fulfil the “force majeure” test (i.e. the circumstances were beyond the control of the person claiming force majeure, they were abnormal and unforeseeable, and could not have been avoided despite the exercise of all due care);
- clearly specify, and quantify, the direct consequences of the force majeure on the implementation of (part of) the programme (i.e. the amount that could not have been spent due to force majeure).

3 of the 4 requests were returned to Member States for additional information and clarifications.

#### *Measures taken to keep decommitments at a reasonable level*

MS are reminded each autumn in the Expert Group meeting of the n+3 decommitment risk, and geographical Units take all reasonable steps to encourage MS to submit claims in due time. Decommitments were comparable to previous years.

## **3. How is the programme performing ?**

### **3.1. Performance**

#### **3.1.1. Introduction**

2020 was an exceptionally challenging year for Member States and the Commission, primarily because of the COVID pandemic. A complete picture of the effects of the outbreak on financial absorption and programme performance will not be available until later this year, when Member States submit their Annual Implementation Reports (AIRs).

DG MARE continued to support the implementation of the fisheries and maritime policies, encouraging Member States to improve absorption of the EU funds, including for dedicated climate related actions, and to cater for the impact of the COVID-19 crisis. The fisheries and aquaculture sectors were among the most immediately affected by the economic disruption caused by the COVID-19 outbreak. A first package of support measures was adopted in March 2020 under the Coronavirus Response Investment Initiative and under a specific Temporary State aid framework. Additional specific measures for the fisheries and aquaculture sector became available under an amendment of the EMFF as part of a second package, adopted by the co-legislators in April 2020.

These packages feature a range of temporary and targeted measures to address the challenges faced by the seafood community, most notably support for the temporary cessation of fishing activities due to coronavirus, support to aquaculture farmers for the suspension of production and additional costs, and support to producer organisations for the storage of fishery and aquaculture products. Additional amendments to the EMFF Regulation allowed for more flexible reallocation of financial resources within the operational programmes of each Member State and a simplified procedure for amending operational programmes with respect to the introduction of the new measures, thereby reducing the administrative burden for all parties. Finally, the deadline for submission of the 2019 AIRs was extended to September 2020.

The Commission also responded to the collapse in Baltic cod stock by proposing a regulation (adopted in December 2020) to protect the communities most severely affected.

All these measures safeguarded the interest of the sector's objectives while helping to increase EMFF absorption.

### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

### **3.1.3. Previous programme performance**

**Programme performance in specific areas was as follows:**

#### Support to the fishing fleet

Member States committed EUR 280.6 million to operations linked to vessels. This accounts for 8.8% of the total EMFF funding committed. By the end of 2019, the EMFF had supported a total of 9 874 unique vessels (14.6% of the total active fleet). With an average of EUR 28 400 per vessel. This type of support helped improve health and safety conditions on-board, as well financing fishing gear innovations to reduce environmental impact and improve energy efficiency.

#### Small-scale coastal fisheries

The small-scale fishing sector is made up of smaller vessels and is particularly important as it typically represents micro and small enterprises operating in small coastal communities. To date, the EMFF has supported 4 547 such small-scale vessels, with an average contribution of EUR 17 800 per vessel.

#### Landing obligation and innovation

Discarding is the practice of returning unwanted catches to the sea, either dead or alive, because they are undersized, due to market demand, the fisherman has no quota or because catch composition rules impose this. The introduction of the landing obligation since the reform of the Common Fisheries Policy (CFP) of 2013 aims at gradually eliminating this wasteful practice of discarding. Member States committed EUR 116.7 million in EMFF support to facilitate implementation of the Landing Obligation, EUR 164.1 million in EMFF support to innovation. Nearly half of all the funding committed to innovation was related to aquaculture.

#### Natura 2000, biodiversity, and climate change

Member States committed EUR 336 million in EMFF support to measures directly or potentially supporting the Natura 2000 network, and EUR 1.4 billion for supporting operations in relation to protection and restoration of biodiversity and ecosystems. Overall, the EMFF contribution to climate change objectives by the end of 2019 was EUR 599 million, or 18.3% of the total EMFF funding committed to date.

#### Outermost regions

Spain, France and Portugal committed EUR 131 million to support the economic viability of operations in the outermost regions.

### **Programme performance overview**

Operations financed via shared management continue to help improve the sustainability of fishing and aquaculture, as well as to maintain and protect the natural environment, encourage innovation and adoption of new technology and increase cooperation and partnerships between businesses, thus contributing to the achievement of these objectives.

In fostering the implementation of the CFP, the Commission has been managing the fisheries conservation policy to achieve maximum sustainable yield (MSY) for fish stocks by 2020, which is demonstrated by a positive trend in the indicator on MSY levels. Recent economic data also show that sustainable fisheries pays off in terms of higher and stable yields, fleet profitability and jobs (see the indicators 'Profitability of the EU fishing fleet' and 'Fuel efficiency of fish capture'). Despite the overall improvement, there are areas such as the Mediterranean Sea and the Black Sea where most of the stocks remain exploited beyond sustainable levels. The Commission adopted and implemented concrete regional action plans to reverse the stocks situation and improve science and control. An example of this is the adoption of stand-alone fishing opportunities for both the Mediterranean and the Black Sea for the first time in December 2019. Besides, the Commission is further pursuing its efforts in the fight against illegal, unreported and unregulated (IUU) fishing, especially in the frame of negotiations on the proposed revision of the fisheries control system.

Finally, performance indicators for the 2021-2027 EMFAF have been adapted to take into account both shared and direct management; work is underway to develop an IT system that can gather the data with little effort.

### 3.2. Key achievements

#### Concrete examples of achievements

9 800 <sup>(1)</sup>	At least 100 000 <sup>(2)</sup>	47 000 <sup>(3)</sup>
Fishing vessels benefited from the EMFF between 2014 and 2019 (about 19% of the EU fleet). 46% of the vessels belonged to the small-scale coastal fishing fleet.	Fishermen and 442 000 members of producer organisations (31 000 from production and marketing plans and 411 000 from marketing measures) benefitted from the EMFF between 2014 and 2019. 53 500 employees of processing companies also benefitted from the EMFF between 2014 and 2019.	Operations were selected to receive funding under the EMFF between 2014 and 2019, almost 43 000 of them were addressed to SMEs or private persons.

EUR 164 million <sup>(4)</sup>	8 445 <sup>(5)</sup>	5 000 <sup>(6)</sup>
Was the contribution from the EMFF to support innovation and new technologies through 815 operations between 2014 and 2019.	Projects addressing environment and resources efficiency were selected between 2014 and 2019, with an EMFF contribution of EUR 1 312 million.	Operations were supported related to better management of Natura 2000 and other marine protected areas between 2014 and 2019, with an EMFF contribution of EUR 220 million. Of it, 55 operations with an EMFF contribution of EUR 8 million targeted other marine protected areas.

- (1) Total vessels in EU operations were taken from Infosys Standard Report (2014-2019) pg. 8. Number of vessels under SSCF was taken from EMFF implementation report December 2020, pg. 6 & 32. The total EU fleet figure is from the FAME SU SSCF periodic reports, Scoping Report, August 2020.
- (2) Source: Infosys reports as of 31/12/2019. Data regarding fishermen benefitting and members of producer organizations benefitting should be treated with caution as the values reported by MS are often subject to errors as double counting and over-reporting. Whereas, figures on employees in processing companies are less error prone
- (3) Source: Infosys reports as of 31/12/2019.
- (4) Source: EMFF implementation report December 2020, pg. 36.
- (5) Projects addressing environment and resources efficiency fall under TO6 "Preserving and protecting the environment and promoting resource efficiency". According to FAME and DG MARE correspondence related to ad-hoc request 201907 FAME communicated the following: "10 104 projects addressing environment and resources efficiency with an EMFF contribution of EUR 573.23 million." We are not aware of how the numbers of 14 893 projects and EUR 532 million were obtained. In line with EMFF implementation report of December 2020 based on Infosys reporting, the values for TO6 are as follows: 8 445 operations and EUR 1.312 billion of EMFF committed.
- (6) Reported values of N2000 areas and other MPAs in km2 by MS are prone to errors due to applying wrong measurement units and over-reporting. As a result, it is suggested to report only number of operations and EMFF committed. This approach was already applied in the EMFF implementation report 2019. In relation to Natura 2000 only directly contributing EMFF Articles were selected (Art.40.1 b-g and i, Art. 40.1.h, Art.54, Art.80.1.b).The following formulation was suggested: "In 5 018 operations, the MS committed EUR 220 million to directly support the Natura 2000 network or to other Marine Protected Areas."

### 3.3. Evaluations, studies and reports

No studies were conducted for the shared management component of the EMFF in 2020.

An interim evaluation of the direct management component of the EMFF was published in October 2020. It assessed the efficiency, effectiveness, relevance, coherence and added value of the measures managed under direct management. The results will be used to guide the implementation of the last year of the programme and its follow-up in 2021-2027.

The evaluation concluded that, overall, the direct management part of the EMFF is relevant to meeting the objectives of the EU's maritime and fisheries policies. It is effective and efficient in that the results could not have been achieved at a lower cost and would not have happened without EU financial support. The actions are coherent with other EU initiatives. Nevertheless, demonstrating this would have been easier if the results and impacts had been made available in a more structured way. Based on lessons learned with this evaluation, the Commission is considering taking remedial action as part of the EMFF follow-up in 2021. This will include analysing the longer-term impact, which was not possible here due to the short period during which the fund has been operational.

For the direct management component of the EMFF, the table below represents the situation in 2020, with a total of 13 new studies that were signed under CFP scientific advice and knowledge budget line (11 06 62 01). Some of them addressed the same topic in different sea-basins (split into lots) to better reflect the regional specificities of the matter under analysis. The topics covered by those studies are detailed below:

Study	Budget	Start date / duration
Ecosystem mapping in the Central Arctic Ocean (CAO) during the SAS-ODEN expedition	1 300 000 €	January 21 / 18 months
Improving environmental sustainability of deep sea fisheries with emphasis on the conservation of Vulnerable Marine Ecosystems (VMEs)	324 200 €	January 21 / 24 months
Overview of the effects of offshore wind farms on fisheries and aquaculture	129 650 €	June 2020 / 8 months
Study on the main impacts of the COVID-19 pandemic on the EU fishing and aquaculture sectors (2 lots)	99 930 €	August 2020 / 5 months
Study on state-of-the-art scientific information on the impacts of aquaculture activities in Europe (2 lots)	449 010 €	January 2021 / 8 months
Synthesis of the Landing Obligation Measures and Discard Rates for the Mediterranean and the Black Sea	249 345 €	November 2020 / 12 months
Study on ecosystem-based approaches applied to fisheries management under the Common Fisheries Policy	544 320 €	January 2021 / 24 months
Study on CFP Regionalisation (2 lots)	599 765 €	January 2021 / 12 months
Climate change and the Common Fisheries Policy: adaptation and building resilience to the effects of climate change on fisheries and reducing emissions of greenhouse gases from fishing (2 lots)	799 495 €	January 2021 / 12 months

#### **4. Programme 2021-2027 - Key monitoring indicators**

## Specific Objective 1 :Fostering sustainable fisheries and the conservation of marine biological resources

### Indicator 1:Businesses created

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

	Actual Progress									Final

Are we on track	No data
Indicator type	
Unit of measurement	Percentage of discarded catches
Cut-Off Date	
Data source	
Narrative	The EMFAF, as now agreed, will support innovation and investments that contribute to the full implementation of the landing obligation, as well as the development and implementation of conservation measures contributing to selectivity. It offers a higher aid intensity rate than the one that applies to other operations to investments in selective fishing gears, in the improvement of port infrastructures and in the marketing of unwanted catches. It also offers a maximum aid intensity rate of 100 % to the design, development, monitoring, evaluation and management of transparent systems for exchanging fishing opportunities between Member States ('quota swaps'), in order to mitigate the 'choke species' effect caused by the landing obligation. In addition, the new Technical Measures framework has established a modern and simplified mechanism to help the industry cope with the challenges of the CFP and the landing obligation.
Methodology	DG MARE has also been coordinating and aligning the different delegated regulations specifying the details of implementation of the landing obligation of the different sea basins, and participating in STECF and other stakeholders meetings on this topic. It has also set up a study on synthesis of landing obligation measures and discard rates.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The Commission closely monitors the implementation of the Landing Obligation and reports annually to the European Parliament and the Council based on information provided by Member States, the Advisory Councils and other relevant sources. However, information on discard quantities presented by Member States is scant and, based on the questionnaires. In parallel, the Commission adopted its post 2020 EMFF legislative proposal in June 2018 where it emphasised the need to facilitate the implementation of the Landing Obligation through the support of investments in selective fishing gears, in the improvement of port infrastructures and in the marketing of unwanted catches. The Commission has also emphasised the need for a more effective enforcement and control of the Landing Obligation in its recent proposal for a revision of the Control Regulation, by proposing that certain vessels are equipped with continuous recording electronic monitoring devices including Closed Circuit Televisions.
Full metadata available at this address	
Justification of the trend	

**Indicator 5: Value of aquaculture production in the EU**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2023
3,85							4,89			4,89
	Actual Progress									Final
	3,89	4,13	4,9	3,87	4,7					

Are we on track	Moderate progress
Indicator type	
Unit of measurement	EUR billion
Cut-Off Date	
Data source	<a href="https://ec.europa.eu/eurostat/databrowser/view/tag00075/default/table?lang=en">https://ec.europa.eu/eurostat/databrowser/view/tag00075/default/table?lang=en</a>
Narrative	Target: At least + 27% compared to the baseline 2013. Unit of measure: EUR billion.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	For the year 2017 there is a 2.25% increase of annual growth compared to previous year.
Full metadata available at this address	
Justification of the trend	Improvement is not sufficient to reach the milestone in 2020.

**Indicator 6: Relative value or volume of products placed on the market by Producers Organisations (POs), associations of POs or inter-branch organisations**

	Actual Progress									Final
	1 234	2 645	4 967	20 210	14 536	42 964	64 041			

Are we on track	On track
Indicator type	
Unit of measurement	Unique visitors per month to the central portal (since 2017 it represents the number of unique visitors).
Cut-Off Date	31/12/2020
Data source	VLIZ Matomo analytics since 2017 to 2020.
Narrative	The indicator of Unique visitors shows the progress of EMODnet (Central Portal). Since the data and data products in EMODnet are increasing and the size of data is very variant, depending on the parameter, the introduction of a more consistent indicator is preferable.
Methodology	
Link MFF 14-20 / MFF 21-27	DG MARE will continue reporting on this indicator for MFF 2021-2027.
Other methodological comments	This indicator has been changed since 2017. The actual progress (years 2017 to 2020) represent the unique visitors of EMODnet Central Portal. There is a steady to positive trend in the use of EMODnet.
Full metadata available at this address	<a href="https://piwik.vliz.be/">https://piwik.vliz.be/</a>
Justification of the trend	This indicator is not measured anymore. For the purpose of the strategic plan 2016-2020 this indicator was revised and replaced by 'Degree of use of the European Marine Observation and Data Network (EMODnet) in terms of unique visitors. The Unique visitors for EMODnet Central Portal were 64041 in 2020, while the overall EMODnet unique visitors across all portals were more than 414.000 in the same year.

**Indicator 2: Maritime Surveillance: Percentage of available cross-sectorial and/or cross-border data, as a percentage of the total information gap identified in the Impact Assessment on CISE (Common Information Sharing Environment)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
						10	12			12
	Actual Progress									Final
						10	12			

Are we on track	On track
Indicator type	
Unit of measurement	This indicator "Percentage of available cross-sectorial and/or cross-border data, as a percentage of the total information gap identified in the Impact Assessment on CISE (Common Information Sharing Environment) " is outdated and it has been changed. The new indicator starting 2019 is: Number of established nodes connecting Member States' authorities or EU Agencies to the CISE network. Unit of measurement (since 2019): a tally of the number of CISE nodes. Maritime security measured by the number of nodes connecting Member States' authorities or EU Agencies to the CISE (Common Information Sharing Environment).
Cut-Off Date	31/12/2020
Data source	European Maritime Safety Agency (EMSA) report.
Narrative	Maritime security measured by the number of CISE (Common Information Sharing Environment) connections/nodes. Explanation: This indicator measures the capacity of Member States and other institutions (cf. European agencies) to connect to CISE and share maritime surveillance data.
Methodology	A simple tally of the number of CISE nodes
Link MFF 14-20 / MFF 21-27	DG MARE will continue to report on this indicator in the MFF 2021-2027. In the next few months we will define new indicators in cooperation with the European Maritime Safety Agency to monitor the implementation of CISE.
Other methodological comments	In April 2019, CISE entered in a transitional phase to operations, managed by EMSA under a Grant Agreement signed with MARE. The full impact of CISE will be measured only as of 2023, when CISE is expected to become operational. N.B. Up to 2019 the previous indicator was measuring % changes in data exchange (which is outdated/irrelevant). The transitional phase of CISE has been extended to 2023. DG MARE working with EMSA will define new progress indicators for CISE in the coming months; these will indicate CISE progress retro-actively.

Actual Progress										Final
6	9	9	13	13	11	15				

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Please note that this indicator was changed in the 2020 MP / AAR to better reflect the situation. The amendment has been agreed by Unit E2. So from 2021, the indicator should be “Number of control action plans implemented within deadline (result indicator: Effectiveness of Member States fisheries control systems measured by the number of control action plans implemented within the deadline set)”.
Cut-Off Date	
Data source	
Narrative	Number of Member States under an action plan to overcome shortcomings in their fisheries control system with a target that no Member State is under an action plan, meaning that all Member States have an effective control system. Therefore from 2021 the result indicator should be the number of action plans implemented within deadline. Nevertheless, the implementation of an action plan can serve as a useful indicator for the effectiveness of Member States’ fisheries control systems. Therefore from 2021 the result indicator should be the number of action plans implemented within deadline.
Methodology	In addition, action plans have been used and are being used to also progressively go beyond the minimum requirements set in the legislations, thus not necessarily reflecting a situation of non-compliance, at least not for all actions. Each control action plan is established in agreement with the Member State concerned and contains a detailed and time-bound roadmap for the improvement of certain parts of the Member State's fisheries control system, based on the shortcomings identified during the verifications/inspections/audits performed. Hence, an update on the implementation of control action plans does not always give the full picture of the state of the fisheries control systems in a Member State. Besides, a control action plan only covers specific parts of the Member States' fisheries control systems. Consequently, the full implementation of a control action plan does not mean that the entire fisheries control system is effective.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	10 actions plans have been closed. It should be noted that the “number of action plans” may not be the ideal performance indicator and should not be viewed in isolation. Most importantly, the absence of action plans (which is the 2020 target) does not necessarily mean that the Member States’ fisheries control systems are satisfactory. This is because other instruments - such as infringements, EU pilots, etc. - also are used to address weaknesses. Besides, considering that audits of the MS systems are performed on a regular basis and that an action plan only covers specific part of the MS’ control system, the “zero”-target for 2020 does not appear realistic anymore. The 2020 target (no MS under an action plan) did not take into account the fact that certain actions would have taken longer than expected (notably those linked to IT development), nor the fact that more action plans could have been opened due to the increased auditing activity of DG MARE.

Justification of the trend	

**6. The programme contribution to horizontal policies****6.1. Contribution to climate mainstreaming****6.1.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
109,3	145,9	140,2	134,2	119,0	121,4	123,3	893,3

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

**6.1.2. Explanation and justification on the financial contribution**

Reflecting the importance of tackling climate change in line with the Union's commitments to implement the Paris Agreement, and the commitment to the United Nations Sustainable Development Goals, the actions under the EMFAF should contribute to the achievement of a 30 % target of all MFF expenditure spent on mainstreaming climate objectives and should contribute to the ambition of providing 7,5 % of annual spending under the MFF to biodiversity objectives in 2024 and 10 % of annual spending under the MFF to biodiversity objectives in 2026 and 2027, while considering the existing overlaps between climate and biodiversity goals.

The first EMFAF Programmes will be in place by the end of 2021. The calculation of the contribution to climate change is based on historical estimates as EMFAF programmes do not include specific climate change targets. Values achieved will be updated in future.

**6.1.3. Key achievements**

Climate: The programme has contributed EUR 0.97 billion in the 2014-2020 period.

**6.2. Contribution to biodiversity mainstreaming****6.2.1. Tracking and estimates**

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
84,1	112,3	107,8	103,3	91,6	93,4	94,8	687,3

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

## 6.2.2. Explanation and justification on the financial contribution

Reflecting the importance of tackling climate change in line with the Union's commitments to implement the Paris Agreement, and the commitment to the United Nations Sustainable Development Goals, the actions under the EMFAF should contribute to the achievement of a 30 % target of all MFF expenditure spent on mainstreaming climate objectives and should contribute to the ambition of providing 7,5 % of annual spending under the MFF to biodiversity objectives in 2024 and 10 % of annual spending under the MFF to biodiversity objectives in 2026 and 2027, while considering the existing overlaps between climate and biodiversity goals.

The first EMFAF Programmes will be in place by the end of 2021. The calculation of the contribution to biodiversity is based on historical estimates as EMFAF programmes do not include specific biodiversity targets. Values achieved will be updated in future.

## 6.2.3. Key achievements

Biodiversity: The programme has contributed EUR 0.86 billion in the 2014-2020 period.

## 6.3. Contribution to clean air financing

Not applicable

## 6.4. Contribution to gender equality

### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming					Total	
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.4.2. Key achievements and performance

This horizontal principle is enshrined in Article 6a(2) of the draft Common Provisions Regulation, viz.:

Member States and the Commission shall ensure that equality between men and women, gender mainstreaming and the integration of gender perspective are taken into account and promoted throughout the preparation, implementation, monitoring reporting and evaluation of programmes.

Furthermore, per Article 67(1) of the same Regulation, for the selection of operations, the managing authority shall establish and apply criteria and procedures which are non-discriminatory, transparent, ensure accessibility to persons with disabilities, gender equality and take account of the Charter of Fundamental Rights of the European Union and the principle of sustainable development and of the Union policy on the environment in accordance with Articles 11 and 191(1) of the TFEU.

These requirements apply equally to the EMFAF regulation.

## 6.5. Contribution to the sustainable development goals

### 6.5.1. Goals

### 6.5.2. Key achievements and performance

#### *SDG 1 End poverty in all its forms everywhere*

The EMFF contributes to SDG 1 (End poverty in all its forms everywhere), by: contributing to the improvements of the economic results of the EU fisheries sector, and to the improvements of the living standards of the coastal populations which depend on that sector; allowing operators to modernise their productive tools, to diversify their sources of income or to switch to alternative economic activities.

#### *SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture*

By promoting the conservation of the marine living resources and the protection of the marine ecosystem, the EMFF contributes to the sustainability of the production of the EU fisheries sector of healthy quality food, and thus to SDG 2 (End hunger, achieve food security and improved nutrition and promote sustainable agriculture) and SDG 3 (Ensure healthy lives and promote well-being for all at all ages).

***SDG 5 Achieve gender equality and empower all women and girls***

Please, see the section on gender mainstreaming above.

***SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development***

The main objective of the EMFF is to support the implementation of the Common Fisheries Policy (CFP) and the Integrated Maritime Policy (IMP), thereby contributing first and foremost to SDG 14 (Conserve and sustainably use the oceans, seas and marine resources for sustainable development). To date the EMFF has funded nearly 15,000 projects on preserving the marine environment and ensuring better resource efficiency. This has been supported with an EMFF contribution of EUR 532.42 million. The EMFF has also supported over 2000 operations related to better management of Natura 2000 areas, covering an area of at least 74 000 km<sup>2</sup>, and more than 1500 operations associated with other marine protected areas, covering an area of at least 704 055 km<sup>2</sup>.

The United Nations 2030 Agenda for Sustainable Development identified conservation and sustainable use of oceans as one of the 17 Sustainable Development Goals (SDG 14). The Union is fully committed to that goal and its implementation. In that context, it has committed to promote a sustainable blue economy which is consistent with maritime spatial planning, the conservation of biological resources and the achievement of good environmental status, to prohibit certain forms of fisheries subsidies which contribute to overcapacity and overfishing, to eliminate subsidies that contribute to illegal, unreported and unregulated fishing and to refrain from introducing new such subsidies. This outcome should result from the World Trade Organisation fisheries subsidies negotiation. In addition, in the course of World Trade Organisation negotiations at the 2002 World Summit of Sustainable Development and at the 2012 United Nations Conference on Sustainable Development (Rio+20), the Union has committed to eliminate subsidies contributing to fisheries overcapacity and overfishing.

**1. Overview**

## 1.1. Challenges

While 79% of all EU catches are taken in EU waters, 13% come from the international high seas, and 8% are caught in the exclusive economic zones (EEZs) within 200 nmi of the partner countries' waters. For the latter, it is essential that appropriate regulation mechanisms are put in place to ensure that catches are sustainable. EU fishing in the high seas for straddling and highly migratory stocks is regulated through regional fisheries management organisations (RFMOs), while in the waters of non-EU countries, EU fishing is preferably taking place through bilateral agreements negotiated by the European Union with partner countries named Sustainable Fisheries Partnership Agreements (SFPAs).

## 1.2. Mission (general objectives)

The EU negotiates, concludes and implements bilateral Sustainable Fisheries Partnership Agreements (SFPAs) between the European Union and third countries and pays compulsory annual budget contributions deriving from EU membership in international bodies, including various Regional Fisheries Management Organisations (RFMOs).

RFMOs are international bodies set up to promote the conservation and sustainability of straddling and highly migratory fish stocks. The EU is present in all of the world's oceans through its fleets and is obliged under the United Nations Convention on the Law of the Sea (UNCLOS) to cooperate with other parties by participating in these Organisations.

Within the framework of the SFPAs, the Commission maintains a political dialogue on fisheries related policies with third countries concerned, in coherence with the principles governing the Common Fisheries Policy (CFP) and the commitments under other relevant European policies. In addition, SFPAs provide a financial contribution whose aim is to support the sustainable development of the fisheries sector in the partner countries and contribute to better governance of their fisheries. That includes notably the improvement of scientific and technical knowledge of relevant fisheries, the contribution to control and surveillance and the fight against illegal, unreported and unregulated fishing (IUU fishing) and the support for better global governance of fisheries.

## 1.3. Specific objectives

To promote, through active involvement in RFMOs, the sustainable development for fisheries management and maritime governance in line with the Common Fisheries Policy objectives, and ensure that fishery resources are maintained above or restored above levels capable of producing maximum sustainable yield and the conservation of marine ecosystems. This includes the promotion of decisions based scientific advice and improved science in those organisations, action against IUU fishing, compliance with the existing rules and regular performance reviews in line with the Common Fisheries Policy objectives and the Ocean Governance communication. Consistent with the Green Deal objectives, RFMOs also promote the protection of the fragile ecosystems (Biodiversity Strategy) and ensure more sustainable food systems (Farm to Fork). Finally, RFMOs offer an opportunity to strengthen the role of the EU as a global actor.

To establish, through Sustainable Fisheries Agreements, a legal, economic and environmental governance framework for fishing activities carried out by Union fishing vessels in third country waters, in coherence with other EU policies. In particular, specific objectives pursued by SFPAs are:

- To give the European fleet access to fishing grounds under a clearer, uniform and more stable legal framework, offering greater legal certainty for European vessel owners, and contributing to their competitiveness;
- To foster scientific cooperation between the EU and its partner countries;
- To promote transparency and sustainability in the partner countries that also apply to other agreements between the partner countries concerned and other fleets present in their EEZ. This is therefore contributing to the sustainable management of fishing resources worldwide;
- To encourage improved governance and management of the local fisheries sector by supporting the monitoring, control and surveillance of national and foreign fleets' activities, contributing to the sustainable development of local fishing activities, and to the fight against illegal, unreported and unregulated (IUU) fishing.

## 1.4. Public intervention context

The fisheries policy is an exclusive competence of the European Union. The EU, represented by the Commission, plays an active role in 5 tuna and 12 non-tuna RFMOs and advisory bodies. The EU position in RFMOs is based on the principles and objectives of the CFP, the Ocean Governance communication, the Biodiversity the Farm to Fork strategies and the Council negotiating directives for each RFMO ('mandate') mirroring the CFP. The transposition into EU law of the provisions adopted by RFMOs is done through Regulations.

SFPAs are also negotiated by the Commission on behalf of the EU, in close cooperation with other EU Institutions. The Commission also ensures the monitoring of the implementation of SFPAs, in particular through regular Joint Committee meetings with partner third countries.

## 1.5. Actions

**SFPAs:** Under its exclusive competence of negotiating bilateral fisheries agreements the Commission negotiates, concludes and implements bilateral SFPAs between the European Union and third countries with the objective of contributing to a regulated framework for EU long-distance fishing fleet while ensuring a suitable exploitation of the third countries' relevant fisheries resources and supporting competitiveness of the Union's fishing fleet.

There are currently 12 active SFPAs, mostly in West Africa but also in the Indian and Pacific Oceans. In 2020 a new SFPA protocol with the Republic of Seychelles has started to be implemented. Moreover, negotiations have taken place in order to conclude new SFPAs with Greenland, Mauritania, Madagascar and Gabon.

Each SFPA is an exclusive Agreement: once in place, EU vessels can only fish under this SFPA, and cannot enter into private agreements with the partner country. The SFPA ensures a level playing field and establishes minimum standards for sustainable resource management as it includes provisions prohibiting the granting of more favourable conditions to other foreign fleets. There are currently around 200 vessels from 12 EU Member States are benefiting from the SFPAs.

Following the withdrawal of the United Kingdom from the EU in January 2021, the Commission has made a proposal for a Council Regulation to reallocate the fishing opportunities previously allocated to the UK in the SFPAs with Morocco and with Mauritania among interested Member States. Other SFPAs are unaffected by the Brexit.

**RFMOs and international organisations:** Given the exclusive competence of the EU for the conservation of marine living resources and international obligations deriving from the United Nations Convention on the Law of the Sea and the implementation of the United Nations Fish Stocks Agreement, to which the EU is a Party, the Commission pays compulsory annual contributions deriving from EU membership in international bodies. This includes various RFMOs where the EU has an interest and bodies set up by the United Nations Convention on the Law, namely the International Seabed Authority and the International Tribunal for the Law of the Sea. In line with the external dimension of the Common Fisheries Policy, the EU will promote better international fisheries and ocean governance, the sustainable management of international fish stocks, and defend EU economic and social interests within these organisations. Regarding the Brexit effects, after leaving the EU the United Kingdom has now acceded to a number of RFMOs. The Trade and Cooperation Agreement concluded between the EU and the UK, establishes that the Parties shall work together on conservation and trade-related aspects of fishery policies and measures, including in RFMOs, as appropriate, with the aim of promoting sustainable fishing.

## 1.6. Delivery mode

SFPA and RFMO agreements are managed under direct management. SFPAs consist of a part covering access rights, and other part on sectoral support which is devoted to sustainable development of the fisheries sector of the partner countries and enhancement of their overall fisheries governance capacity.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

### 1.8.2. Legal basis explanation

The 2013 CFP 'Basic' Regulation<sup>1</sup> refers to the Sustainable Fisheries Partnership Agreements (SFPAs)<sup>2</sup> specifically, in its title II, Articles 31 and 32. The Regulation provides that SFPAs with third countries should ensure that Union fishing activities in third country waters are based on the best available scientific advice and relevant information exchange, ensuring a sustainable exploitation of the marine biological resources, transparency as regards the determination of the surplus and, consequently, a management of the resources that is consistent with the objectives of the CFP. Those agreements provide for access to resources commensurate with the interests of the Union fleet in exchange for a financial contribution from the Union and contribute to the establishment of a high-quality governance framework.

According to the United Nations Convention on the Law of the Sea (UNCLOS), RFMOs are the responsible bodies for the sustainable management of straddling and highly migratory fish stocks. They play a critical role in promoting the preservation and restoration of marine ecosystems and biodiversity, while contributing to food security, fair, healthy and sustainable food systems, the fight against illegal, unreported and unregulated (IUU) fishing, as well as sustainable growth and jobs. RFMOs also offer an opportunity to increase the role of the EU as a global actor and to promote the same principles and standards as those applicable under Union law in the areas of the CFP and a level-playing field for Union operators in line with Article 28 of the basic regulation.

<sup>1</sup> [Regulation \(EU\) No 1380/2013](#) of the European Parliament and of the Council of 11 December 2013 on the Common Fisheries Policy, amending Council Regulations (EC) No 1954/2003 and (EC) No 1224/2009 and repealing Council Regulations (EC) No 2371/2002 and (EC) No 639/2004 and Council Decision 2004/585/EC

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>142,4</b>	<b>142,6</b>	<b>132,5</b>	<b>135,3</b>	<b>138,1</b>	<b>140,9</b>	<b>143,1</b>	<b>974,9</b>

### 1.8.4. Financial programming explanation

### 1.9. Link with the 2014-2020 MFF

During the new period 2021-2027, the Commission will continue to monitor carefully the implementation of the SFPAs and will put emphasis on appropriate reporting of activities financed under the SFPA sectoral support component, raising awareness on concrete actions achieved. The general objectives of the funding for the international dimension of the Common Fisheries Policy, as well as the Sustainable Fisheries Partnership Agreements for the new period does not substantially deviate from the 2014-2020. It seeks, however, to consolidate the achievements of the previous period (2014-2020) while it incorporates as much as possible into its actions the new priorities of the Commission for the 2014-2020 notably concerning climate change, the Biodiversity and the Farm to Fork strategies.

### 1.10. Relevant websites providing more information

<http://europa.eu/!mH87VG>

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	860 406 527	839 547 309
Implementation carry-overs*		
Implementation total	860 406 527	839 547 309
total envelop*	868 761 401	
cumulative implementation rate	99%	97%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

### **Fisheries Agreements – Compulsory Contributions to Regional Fisheries Management Organisations and Other International Organisations and Sustainable Fisheries Partnership Agreements (SFPA and RFMO)**

Cumulative implementation in CA at 31/12/2020 represents 99% of the total envelope for the period 2014-2020. This is due to timely signature of all protocols, in line with the budget forecasting.

Cumulative implementation in PA at 31/12/2020 represents 97% of the total envelope for the period 2014-2020. For some protocols, sectorial support payments have been executed later than the initial forecasting.

## 3. How is the programme performing ?

### 3.1. Performance

### 3.1.1. Introduction

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

### 3.1.2. Active programme performance

### 3.1.3. Previous programme performance

Overall, the EU has remained the key driver for progress in RFMOs and for increasing their performance with concrete proposals. The EU's voluntary contributions to the scientific advice of RFMOs played a key role in several RFMOs. The Commission continued to deliver on its commitment to achieve more sustainable fisheries worldwide: 88% of all conservation measures adopted in 2019 by RFMOs to which the EU is a member were in line with scientific advice. The 2020 target of 100% could not be achieved as the rate for that year was 74%.

Regarding the tuna and tuna-like stocks fished by the EU fleet in 2020, of the total commercial tuna catch worldwide, 87% came from stocks at 'healthy' levels of abundance. Out of 20 tuna and tuna-like stocks targeted by the EU fleet, 17 were fished at sustainable level. Additionally, fishing of one of tuna and tuna-like stocks is on its way to sustainability.

The outcomes regarding these two objectives account for the impact of the pandemic in the works of RFMOs and the fact that decisions are taken by consensus.

Due to the virtual format of the meetings in 2020, scientific bodies could not cover their full agendas and the main bodies of RFMOs resorted, in some cases, to a roll-over of existing measures based on the precautionary approach, which is by any means a conservative decision.

Concerning the fight against illegal, unreported and unregulated (IUU) fishing, there are currently listing procedures in place in all RFMOs. Almost all RFMOs have adopted port state measures. In addition to that, an increasing number of RFMOs have cross listing procedures and/or specific provisions to address the responsibility of nationals involved in illegal, unreported and unregulated fishing. The adoption of Catch Documentation Scheme measures during that period was put on-hold by RFMOs pending the completion of parallel work on guidelines by the FAO.

No further progress could be achieved in 2020, as the Covid-19 outbreak forced many RFMOs to postpone and move their annual meetings in 2020 to a virtual format and limit their agenda to decisions essential for the functioning of those organisations. As a result, many key decisions could not be adopted, also because the complexity of the discussions were not suitable for a virtual format. Once again, consensus is required in the decision making procedure set out in RFMOs and the EU is not the only actor involved. Nevertheless, it can be considered that, although improvements are always possible (e.g. measures against nationals involved in IUU fishing or cross-listing amongst RFMOs), all in all RFMOs have the proper tools to fight against IUU based on conservation measures that were many times proposed by the EU.

With a total number of 12 SFPAs protocols currently in place and the perspective to renew or conclude new SFPAs, the target objective of reaching 16 protocols in place in 2024 should be achieved. The main change in relation to the previous year relates to Liberia as the last Protocol expired on 8 December 2020 and negotiations for its renewal will not start until the "yellow card" in the framework of the IUU dialogue is withdrawn. This should be seen as a temporary reduction in the number of SFPAs and should not affect the achievement of the target as a new SFPA protocol has been agreed upon with Gabon offering new perspectives for the EU fleet. As for the take-up of fishing opportunities in the framework of SFPAs, which reflects the level of fishing activities within these bilateral agreements, the number of fishing opportunities for 2020 is actually relatively stable and in line with what could be observed over the previous years. One can even note an increase of the number of fishing opportunities for mixed agreements, which is most likely due to a good utilization rate of these agreements (Morocco, Mauritania, Guinea-Bissau and Greenland).

At the same time, SFPAs have also been contributing positively to the development of the fisheries sector in the partner countries and to better governance of their fisheries sector. A significant part of the total EU budget for SFPAs has been devoted to the concrete projects funded under sectoral support and related mostly to control and surveillance capacities, small port infrastructures, and the support to small-scale fishermen. At the same time, they contributed to eliminating illegal fishing and providing good framework conditions for local fishermen, thus also contributing to food security. Concrete projects financed include for example the supply of fishing equipment for small fishermen, including localisation and safety kits, the reinforcement of sanitary control capacity in ports, landing facilities with storage and ice facilities, financing the acquisition of patrol boats and their maintenance, training of fisheries inspectors and observers, etc.

Overall, the SFPAs have been successful in fostering better governance of fisheries at global level and contributing to the sustainable development of the fisheries sector in partner countries and hence globally. These agreements have also contributed to economic activity and job creation both in the EU and in partner countries. All RFMOs are equipped with the basic tools to fight against IUU fishing.

The number of fishing authorisations issued in the framework of the SFPAs in force remains high and has reached a total of 483 authorisations for 2020 (338 in mixed agreements and 145 in tuna agreements).

## 3.2. Key achievements

<b>74%</b>	<b>17</b>
of conservation measures adopted by RFMOs for the management of the stocks under their purview were in line with scientific advice.	out of 20 tuna and tuna-like stocks targeted by the EU fleet were fished at sustainable level and one is on its way to sustainability.

<b>15 000</b>	<b>70%</b>
jobs created and maintained through SFPAs in the EU (6 000 direct, 9 000 indirect)	of the tuna catches made in the context of SFPAs are processed in a partner country.

### 3.3. Evaluations, studies and reports

Not applicable for RFMOs.

A global evaluation of the implementation of the SFPAs has been launched end 2020 with the objective to provide with an overall analysis of the SFPAs features, content, implementation, results and impacts. The results of the evaluation should help the Commission to understand what has worked well, be considered of added value or a success and, what could have been improved. It will analyse the contribution of the SFPAs implementation to the EU policies, their contribution to the sustainable development of the partner countries and will include an in-depth analysis of the sectoral support performance and best practices.

## 4. Programme 2021-2027 - Key monitoring indicators

**Specific Objective 1 :To establish, through Sustainable Fisheries Agreements, a legal, economic and environmental governance framework for fishing activities carried out by Union fishing vessels in third country waters, in coherence with other EU policies.**

**Indicator 1:Sustainable Fisheries Agreements in force**

Cut-Off Date	
Data source	
Link to the objective	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The EU was a very active player in the fight against IUU during the period 2014-2020. In line with the final target, currently there are listing procedures in place in all RFMOs and almost all RFMOs have adopted port state measures. Our involvement in the promotion of measures to establish IUU cross-listing procedures and against nationals involved in IUU was particularly important, and, as a result, an increasing number of organisation have those measures in place. The adoption of CDS measures during that period was put on-hold by RFMOs pending the completion of parallel work on guidelines by the FAO. The Commission has planned its activities regarding SFPAs with the objective to renew and possibly increase the number of agreements in order to ensure the continuity of the fishing activity and of the partnership with third countries. The Covid-19 outbreak had forced many RFMOs to postpone and move their annual meetings in 2020 to a virtual format and limit their agenda to decisions essential for the functioning of those organisations. As a result, many key decisions could not be adopted, also because the complexity of the discussions were not suitable for a virtual format.

**Specific Objective 2 :To establish, through Sustainable Fisheries Agreements, a legal, economic and environmental governance framework for fishing activities carried out by Union fishing vessels in third country waters, in coherence with other EU policies****Indicator 1: Number of Sustainable Fisheries Agreements in force**

In addition, Protocols with Cook, Madagascar and Mauritania are well underway.

**6. The programme contribution to horizontal policies****6.1. Contribution to climate mainstreaming**

### 6.1.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
14,1	14,1	14,1	14,1	14,1	14,1	14,1	98,7

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.1.2. Explanation and justification on the financial contribution

The actions financed by the European Commission support the integration of climate change considerations in the management of the marine biological resources, and their ecosystems, both in RFMOs with the final objective of promoting their adaptation and resilience towards climate change, and at bilateral level, through SFPAs.

SFPAs: contribution to climate action represents 40% of the sectoral support.

RFMOs: contribution to climate action represents 40% of the total amount allocated to RFMOs.

### 6.1.3. Key achievements

Climate change considerations are, where appropriate and available, incorporated into the scientific and stock management discussions in RFMOs. They are also reflected in SFPAs, which refer to management decisions of RFMOs, and contribute to their implementation.

Climate: SFPAs have contributed with EUR 72.5 million in the 2014-2020 period.

Climate: RFMOs have contributed with EUR 13.7 million in the 2014-2020 period.

### 6.1.4. Performance

Although there seems to be progress on the enhancing climate change considerations in RFMOs and SFPAs, it is too early to assess performance for the current period.

## 6.2. Contribution to biodiversity mainstreaming

### 6.2.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
4,4	4,4	4,4	4,4	4,4	4,4	4,4	30,8

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.2.2. Explanation and justification on the financial contribution

The actions financed by the European Commission in RFMOs are consistent with the objectives of the EU Biodiversity Strategy to conserve marine stocks, prevent the loss of biodiversity and protect fragile ecosystems. In addition, actions supported through the sectoral support component of SFPAs, promote long-term resource conservation, good governance and the sustainable development of our partners' local fisheries sector, with a positive effect on biodiversity.

SFPAs: it is estimated that EUR 1 million per year concerns biodiversity (this is rather a conservative estimation).

RFMOs: 60% of the total amount concerns biodiversity.

### 6.2.3. Key achievements

87% of the total commercial tuna catch worldwide, including the tuna and tuna-like stocks fished by the EU fleet in 2020, are at 'healthy' levels of abundance. Out of 20 tuna and tuna-like stocks targeted by the EU fleet, 17 were fished at sustainable level. Additionally, fishing of one of tuna and tuna-like stocks is on its way to sustainability. Biodiversity is also taken into account in SFPAs as well which contribute to sustainable fishing, including through measures aimed at reducing by-catches of non-targeted species and marine mammals. In addition, part of sectoral support funds of SFPAs contribute to support actions contributing to biodiversity (e.g. creation and management of Maritime Protected areas, coral restoration, surveillance operations to fight illegal fishing).

Biodiversity: SFPAs have contributed EUR 7 million in the 2014-2020 period.

Biodiversity: RFMOs have contributed EUR 20.6 million in the 2014-2020 period.

#### 6.2.4. Performance

The action is performing satisfactorily although there is room improvement to reach a higher percentage of tuna and tuna-stocks management sustainably and an increased impact of SFPAs on biodiversity protection. We continue to work towards the achievement of more sustainable fisheries worldwide.

#### 6.3. Contribution to clean air financing

Not applicable

#### 6.4. Contribution to gender equality

##### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.5. Contribution to the sustainable development goals

##### 6.5.1. Goals

##### *SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture*

Sustainable Fisheries Partnership Agreements provide the guarantee that only surplus resources will be fished by EU fishing fleet operating in third country waters. They therefore contribute to the sustainable management of fisheries resources and to food security for local population dependent on fishing resources. This is being reinforced in some SFPAs through provisions regarding compulsory landings, or in-kind donation of fish which also contribute directly or indirectly to improved nutrition in developing countries.

Likewise, RFMOs play a key role in promoting a sustainable access to affordable sources of protein.

##### *SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development*

Sustainable Fisheries Partnership Agreements are a tool to help promote long-term resource conservation, good governance and the sustainable development of our partners' fisheries sector. In addition, thanks to the sectoral support, the scientific, administrative and technical capacity of local partners for the sustainable development of their fisheries is being reinforced, in coordination with development policy tools. SFPAs therefore contribute directly to the sustainable management of fisheries worldwide.

RFMOs promote have as their main mandate to promote the conservation and sustainable management of the stocks under their purview and their ecosystems.

## **1. Overview**

### **1.1. Challenges**

All current and future EU generations are affected by environmental and climate problems. These problems impact on citizens' health and quality of life, as well as the availability and status of natural resources, implying social and economic costs.

The EU confirmed its commitment to act with its multi-annual strategic general objective - the European Green Deal - a growth strategy that aims to transform the EU into a fair and prosperous society, with a modern, resource-efficient and competitive economy in which:

- (1) There are no net emissions of greenhouse gases in 2050;
- (2) Economic growth is decoupled from resource use;
- (3) The EU's natural capital is protected, conserved and enhanced;
- (4) The health and well-being of citizens is protected from environment-related risks and impacts.

Given the global challenges of climate change and environmental degradation require a global response, the EU will lead by example and continue to promote and implement ambitious environment, climate and energy policies across the world.

Action is needed to support environmental protection with respect to biodiversity, chemicals and health, water quality and management, waste management, ambient air quality, resource management, clean energy, climate change mitigation and adaptation.

In particular the EU agreed to make at least 30% of EU expenditure climate-related in the years 2021-2027 and to work towards the ambition of providing 7.5% of annual spending under the Multiannual Financial Framework (MFF) to biodiversity objectives in the year 2024 and 10% of annual spending under the MFF to biodiversity objectives in 2026 and 2027.

Ongoing challenges arising from public goods failure; imperfect information; negative externalities; government, institutional, regulatory or policy failure; eco-innovation failure; societal failure; infrastructure lock-in and investment failure need to be addressed.

### **1.2. Mission (general objectives)**

EU level intervention is needed:

- To achieve the shift towards a sustainable, circular, energy-efficient, renewable energy-based, climate-neutral and -resilient economy.
- To protect, restore and improve the quality of the environment, including the air, water and soil.
- To halt and reverse biodiversity loss and to tackle the degradation of ecosystems.

The LIFE programme occupies a niche between EU programmes for research and innovation and large development programmes. As such, LIFE bridges the gap between research and policy implementation, addressing the external factors related to environmental and climate innovations by testing and demonstrating practical solutions.

### 1.3. Specific objectives

The LIFE Programme aims to facilitate the shift towards a sustainable, circular, energy-efficient, renewable energy-based, climate-neutral and climate-resilient economy. LIFE will contribute to reduce GHG emissions and our vulnerability to the harmful effects of climate change to protect, to restore and improve the quality of the environment, including air, water and soil, and to halt and reverse biodiversity loss. Moreover, it will tackle the degradation of ecosystems, including through supporting the implementation and management of the Natura 2000 network, thereby contributing to sustainable development.

The LIFE Programme shall also support the implementation of general action programmes adopted in accordance with Article 192(3) TFEU. The LIFE Programme shall have the following specific objectives:

- (a) To develop, demonstrate and promote innovative techniques, methods and approaches for reaching the objectives of the Union legislation and policy on the environment (including nature and biodiversity), and on climate action (including the transition to renewable energy and increased energy efficiency). In addition, the programme will contribute to the knowledge base and to the application of best practice, in particular in relation to nature and biodiversity, including through the support of the Natura 2000 network;
- (b) To support the development, implementation, monitoring and enforcement of the relevant Union legislation and policy on environment, including nature and biodiversity, and on climate action and the transition to renewable energy and increased energy efficiency. This will be achieved by improving governance at all levels, in particular through enhancing the capacities of public and private actors, and involving civil society organisations;
- (c) To catalyse the large-scale deployment of successful technical and policy-related solutions for implementing the relevant Union legislation and policy on environment, including nature and biodiversity, and on climate action and the transition to renewable energy and increased energy efficiency. This will be achieved by replicating results, integrating related objectives into other policies and into public and private sector practices, and by mobilising investment and improving access to finance.

### 1.4. Public intervention context

Environment is an area of shared competence between the European Union and the Member States. The Union is therefore able to legislate and adopt binding acts. Its scope for action is limited by the principle of subsidiarity: the Union may act only when the objectives of an action cannot be sufficiently achieved at the Member States level, and could be better achieved at the Union level.

Articles 11 and 191 to 193 of the Treaty on the Functioning of the European Union (TFEU) define the scope of action of the Union.

The EU has some of the world's highest environmental standards, developed over decades. EU environmental legislation protect natural habitats and safeguards the health and wellbeing of people living in the EU, targeting clean air and water, proper waste disposal and management of toxic chemicals.

The EU formulates and implements environmental and climate policies and strategies, taking a leading role in international negotiations on environment climate. It is a party to numerous global, regional or sub-regional environmental agreements on a wide range of issues, such as nature protection and biodiversity, climate change, transboundary air or water pollution. It is committed to ensuring the successful implementation of the Paris Agreement and implementing the EU's Emissions Trading System (EU ETS). In this regard, EU countries have agreed to meet various targets in the years to come.

### 1.5. Actions

The financial envelope for the implementation of the LIFE Programme is implemented via four sub-programmes: (1) Nature and Biodiversity; (2) Circular Economy and Quality of Life; (3) Climate Change Mitigation and Adaptation; (4) Clean Energy Transition.

Funding can be mobilised via the following activities:

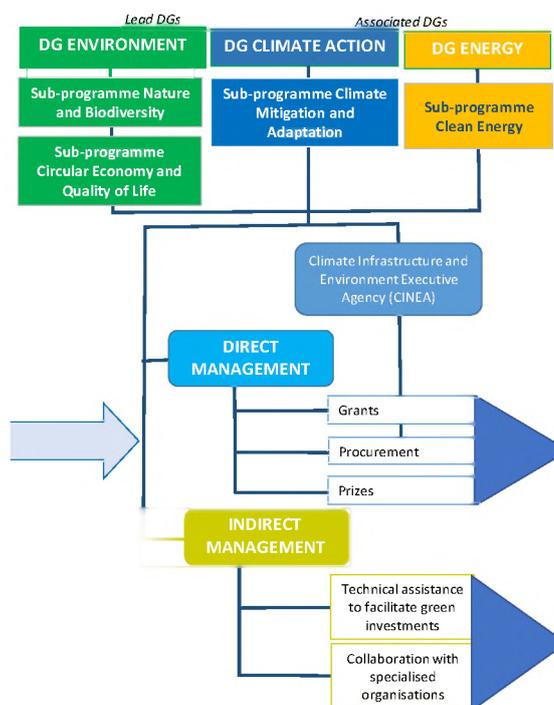

- Grants (which includes Strategic Nature Projects, Strategic Integrated Projects, Standard Action Projects, Technical Assistance Projects, Other Actions and Operating Grants);
- Procurement;
- Prizes;
- Blending operations.

### 1.6. Delivery mode

The budget of the LIFE programme is mainly implemented through direct management (grants, procurement and prizes). Indirect management can be used for specific activities, like support to programmes or activities of international organisations or other assimilated bodies. Indirect management has been used rarely in LIFE.

For the programme implementation under direct management, the Directorate-General for Environment (DG ENV) is the lead with support from the Directorate-General for Climate Action (DG CLIMA) and the Directorate-General for Energy (ENER). The new Climate, Infrastructures and Environment Executive Agency (CINEA) is entrusted with the management of the bulk of grants and some procurement activities mainly linked to project management.

### 1.7. Graphic overview of the programme structure

### 1.8. Legal basis and financial programming

#### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Procedure 2018/0209/COD COM (2018) 385: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing a Programme for the Environment and Climate Action (LIFE) and repealing Regulation (EU) No 1293/2013	2021 - 2027	5 432,0

#### 1.8.2. Legal basis explanation

The new LIFE programme for the period 2021-2027 includes the traditional ENV and CLIMA parts of the LIFE programme (2014-2020) and also the Clean Energy Transition programme of DG ENER. The programme will support a variety of actions to be materialised through grants (with Calls or with no Calls), procurement, and blending.

#### 1.8.3. Financial programming table

	Financial Programming (EUR million)							Total Programme
	2021	DB2022	2023	2024	2025	2026	2027	
<b>Total</b>	<b>738,5</b>	<b>708,0</b>	<b>728,3</b>	<b>755,2</b>	<b>788,0</b>	<b>830,1</b>	<b>876,0</b>	<b>5 424,2</b>

#### 1.8.4. Financial programming explanation

### 1.9. Link with the 2014-2020 MFF

The number of sub-programmes has increased from two (Environment; and Climate Action) to four (Nature and Biodiversity; Circular Economy and Quality of Life; Climate Change Mitigation and Adaptation; and Clean Energy Transition).

Clean Energy Transition incorporates a set of actions for capacity-building supporting sustainable energy, energy efficiency and renewable energy, which was previously funded under Horizon 2020 (until 2020).

A reinforced focus on nature and biodiversity is ensured.

Building on the Strategic Integrated Projects first launched under the 2014-2020 LIFE programme, the 2021-2027 LIFE programme will continue to support this project type (to a slightly greater scale than previously). A dedicated source of funding to support strategic nature projects has been introduced under the Nature and Biodiversity sub-programme.

Financial instrument operations will be managed under InvestEU, while the programme, based on the lessons learnt from the pilot experiences run between 2014 and 2020, will support capacity-building by providing, on pilot basis, technical assistance for facilitating green investments and for greening other investments.

Taking into account the excellent results obtained with the BEST (Biodiversity and Ecosystem Services in Territories of European Overseas) programme, LIFE will ensure its continuation by expanding the scope of its activities to Overseas Countries and Territories.

### **1.10. Relevant websites providing more information**

The main website for the LIFE Programme is: <https://ec.europa.eu/easme/en/life>

It provides information on the LIFE programme itself, funding opportunities, project management and links with the database including information on all LIFE projects (<https://ec.europa.eu/environment/life/project/Projects/index.cfm>), the best LIFE projects (<https://ec.europa.eu/easme/en/section/life/life-best-projects>) and publications (<https://ec.europa.eu/easme/en/section/life/life-programme-publications>).

## **2. Where are we in the implementation ?**

### **2.1. Programme 2021-2027**

The programme is on track as regards the 2014-2020 activities, for which implementation will go on during 2021. However, activities related to the 2021-2027 programme are expected to be delayed following the late adoption of the Multiannual Financial Framework (MFF) and, as a consequence, of the expected adoption of the LIFE Regulation in the first half of 2021.

The adoption of the LIFE Regulation 2021-2027 is expected in the second quarter of 2021. The Commission services are endeavouring to avoid delays in the implementation of the programme and the associated launch of the calls for proposals.

In 2021, the work for the preparation of the first multiannual work programme (which is well advanced) will be finalised before starting the implementation of commitments and payments.

The launch of the calls for proposals is expected to follow a similar pattern to previous years, although delays are possible. Beyond the annual routine management, the work will continue to incorporate priorities linked to the European Green Deal and the actions included in the roadmap.

Extensive work is ongoing to support the definition, implementation and evaluation of the following policies and legislation:

- EU strategy on adaptation
- The European Climate Pact
- Other pieces of climate legislation (i.e. the EU Emissions Trading System (EU ETS), the Effort Sharing Regulation, the Land Use, Land Use Change and Forestry Regulation, the CO2 standards for cars and vans Regulation (light-duty vehicles) to raise the EU's ambition on reducing net greenhouse gas emissions to at least 55% below 1990 levels
- Sustainable buildings
- Microplastics
- Clean air
- The Zero pollution action plan for water, air and soil
- Bathing Water Directive
- EU-wide Strategy for textiles
- EU Pollinators Initiative

- Environmental Noise Directive
- EU Biodiversity Strategy for 2030
- Co-operation with national judges in the field of environmental law

## 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	3 464 408 617	1 514 214 699
Implementation carry-overs	0	33 582 750
Implementation total	3 464 408 617	1 547 797 449
total envelop*	3 466 443 579	
cumulative implementation rate	100%	45%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The programme is on track as regards as the 2014-2020 activities, for which implementation will go on during 2021. Despite the pandemic, all the calls for proposals have been launched on time and the grant agreements concluded according to the initial schedule. Several measures have been introduced to support beneficiaries in this difficult situation (e.g., increase in pre-financing, extended deadlines for submission of offers, information support to prepare proposals). A specific call for proposals was launched to support environmental non-governmental organisations (NGOs) adversely affected by the pandemic, and also to mobilise and strengthen civil society participation in the implementation of the European Green Deal. As can be seen from the data below, the response exceeded expectations.

Following the calls for proposals for traditional projects launched in 2019, around 1 300 proposals were received leading to the financing of 147 (grant) projects, for which the grant agreements have been signed in 2020. More than 1 100 proposals were submitted under the sub-programme for Environment, including Resource Efficiency and Nature and Biodiversity, leading to the financing of 108 projects. In addition, there were around 170 for Climate Mitigation and Adaptation, with 39 projects being financed.

The call for proposals for traditional projects, which launched in 2020 and is ongoing, registered a strong increase in the number of the proposals received: more than 1500 for environment and more than 250 for climate mitigation and adaptation. The evaluation of these calls for proposals is underway at time of writing.

For the integrated projects, 30 proposals were received in 2019. This led to the financing of 12 additional integrated projects in 2020. The total LIFE financing of EUR 121 000 000 for these projects should facilitate the co-ordinated use of more than EUR 5 000 000 000 complementary funding. On the basis of the proposals received, for each euro financed by the LIFE programme, an additional EUR 43 of complementary funding is expected to be financed from other sources for the implementation of the targeted plans. Experience shows that the amount of additional funds mobilised by the integrated projects tends to increase during the project lifetime.

Following the call for proposals for integrated projects launched in 2020, a 43% increase in the number of proposals was registered, with the submission of 43 proposals. This confirmed the success of this project type.

For projects on resource efficiency and climate change mitigation, a high proportion of beneficiaries are from the private sector (50% and 46% respectively). Under these priority areas, the LIFE programme is more attractive to private companies than to public bodies or to civil society organisations.

Public sector organisations are the main beneficiaries of climate adaptation supports (57% of the total beneficiaries), and of nature and biodiversity projects (58% of the beneficiaries). In fact, private non-commercial organisations account for 31% of the total number of beneficiaries for biodiversity projects.

The cumulative implementation rate is in line with expectations. It reflects the experience acquired in the previous LIFE programmes, while taking into account a few novelties which have been introduced in the current programme (integrated projects and financial instruments).

The commitment rate shows that the implementation of the programme activities is on track. Currently there are about 900 ongoing projects, and only a limited number of these have been completed.

The payment rate reflects the project life cycle. This has an important impact given that the bulk of the budget is allocated to projects (81% of the budget according to the LIFE Regulation 2014-2020) which are mainly financed through grants.

In the 2014-2020 period, two additional elements have impacted on the payment rate. The first was the introduction, in the years 2014-2020, of integrated projects. These were conceived to support the full implementation of plans and strategies and last longer (around eight years) than other types of projects. The second factor was the implementation rate of the two pilot innovative financial instruments; the Natural Capital Financing Facility (NCFE), and the Private Finance for Energy Efficiency (PF4EE). The introduction of these instruments was slower and more challenging than expected.

At present very few projects financed under the predecessor programme LIFE+ 2007-2013 are still open.

### **Natural Capital Financing Facility**

The NCFE is intended to test the feasibility of providing loans for investments, which benefit biodiversity and climate adaptation within projects able to generate a return on investment and a revenue stream, which can be used for paying back the loan. At the end of 2020, 7 operations out of the 14 initially foreseen were financed. By end-2020, the NCFE Investments have reached around EUR 41 million, with 17 recipients benefiting from the support facility.

More operations are in the pipeline and the Commission is assessing the option of prolonging the NCFE's financing capacity as a stand-alone instrument within InvestEU. Alternatively, NCFE's financing role may be retained within the framework of InvestEU's existing financial products. This will enable investments in nature and biodiversity under the Sustainable Infrastructure window. The real demand for NCFE loans, despite the slow start-up, and the resulting deal flow, has demonstrated that there are specific challenges that any follow-up instrument to the NCFE will need to address. These are related in particular to the bankability of this category of project. They need specific assistance from an early stage of development, in terms of capacity building and/or technical advisory services, to support the proponents to transform good plans into bankable projects. In addition, early funding is required due to the relatively high transaction costs for these projects, allied to the opportunity to combine 'pure' biodiversity/climate adaptation projects with broader natural capital and circular economy projects. The lessons learned from NCFE's implementation is helping to frame the design of future support regimes for natural capital investments under LIFE.

### **Private Finance for Energy Efficiency**

The Private Finance for Energy Efficiency (PF4EE) aims to develop the capacity of intermediary banks to establish credit lines addressing energy efficiency investments. The instrument was scaled-up after its initial pilot phase, with additional funding amounting to EUR 25 million for the 2018-2020 period.

At the end of 2020, 11 collateral agreements with intermediary banks were signed (one of which cancelled) for a total targeted amount of EUR 73.5 million, of which EUR 36 million was actually deposited.

In total, 9 261 energy efficiency loans were signed, with 9 195 final recipients receiving a total of EUR 186 782 805. Total investments in energy efficiency measures based on the loans under PF4EE amount to EUR 263 802 231.

Options for its possible continuation under InvestEU with additional funding are under analysis.

## **3. How is the programme performing ?**

### **3.1. Performance**

#### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

#### **3.1.2. Active programme performance**

The LIFE programme continues to implement actions set in place mainly under the previous LIFE (for the period 2014-2020) while few projects still run from the period before. The LIFE Regulation under the current MFF is pending the final vote by the EP (due in the last week of April 2021) and is expected to be set in place, together with the LIFE Multiannual programme for the period 2021-2024, in June 2021.

#### **3.1.3. Previous programme performance**

The sub-programme for Environment has intervened:

- on nature and biodiversity by improving the conditions of over 247 wildlife species, and the status of 1.6 million ha of natural and semi-natural habitats;
- on - Environment and resource efficiency through a wide range of actions addressing, among others, circular economy, clean air, clean water and water savings;

The sub-programme for Climate Action has contributed to: a reduction in greenhouse gas emissions; and to the adoption of climate adaptation measures which increase society's resilience to climate change and reduce the associated impacts and costs.

The LIFE Programme should act as a catalyst for changes in policy development and implementation by providing and disseminating solutions and best practices to achieve environmental and climate goals, and by promoting innovative environmental and climate change technologies.

It is particularly difficult to quantify the catalytic effect of the programme. This notwithstanding, the current performance of the programme can be measured mainly in terms of expected results of the projects (grant-aided), which represent more than 81% of the overall budget.

Given the length of the award procedures and the time necessary for the project implementation (the projects are expected to last five years on average), the first anticipated results can be provided only for the year 2019. Related values for the output indicators are available also for 2020.

To measure the expected results of the programme on annual basis, LIFE projects are required to report on their outcomes using a dedicated Key Performance Indicators (KPI) web-tool. The information provided by the LIFE projects is verified by the external monitors, who are experts in the field and in the country of the project. The data at project level is then aggregated to provide a proxy of the performance at programme level.

The 2019-2020 data continue the previous indicators trend and largely confirm the results of the mid-term evaluation as regards as the effectiveness and the EU added value of the programme.

In particular the LIFE activities are currently exceeding the 2020 milestones related to 14 out of 21 indicators.

These overachievements could be linked to:

- An initial underestimation of the potential project results and/or;
- The high quality of projects, which are selected following a strong competition.

For four indicators the programme is on track to achieve the 2020 milestones. For only one indicator the 2020 milestone will probably not be reached: the number of water bodies covered by ongoing projects which progress towards or finalised projects which achieved an improved ecological status.

Data on two indicators – the number of stakeholders and citizens participating in awareness-raising activities in the framework of LIFE interventions and the percentage of increase in the participation of NGOs in consultations on EU environmental policy – are not available and collecting these data would not be cost-effective.

Results of the [annual report of the Court of Auditors on the implementation of the budget concerning the financial year 2018](#) (2019/C 340/01), were presented in the previous programme statements. No new Court of Auditors report on the budget performance of the LIFE programme was published.

### 3.2. Key achievements

247	1.7 million	10 million	25 000	1,6 million	2 500
wildlife species are being addressed by 108 LIFE projects through specific actions for improving their conditions	ha is the area in which the conservation status of natural and semi-natural habitats is being improved or maintained thanks to 110 LIFE projects	t/year of reduction of greenhouse gases emissions is targeted by 173 on-going LIFE projects	t/year of waste are being recycled in the framework of 139 LIFE projects which are improving waste management	people have already benefitted from a reduction of air emissions (cleaner air) thanks to 14 LIFE finished projects	sq km is the area in which 20 LIFE projects are improving the ecological status of water

The LIFE programme has a wide scope, encompassing: (1) nature and biodiversity; (2) climate action; (3) environment and resource efficiency; (4) support to governance at all levels and promote awareness-raising and exchange of best practices; (5) support to the design, update and evaluation of the environmental and climate legislation and policies; (6) contribution to implementation and enforcement of the environmental and climate legislation and policies; and (7) activities to improve the environmental and climate performance of the European Commission itself. At present around 220 projects across the different areas of intervention have ended and the related results have been or are being validated.

Therefore, while expected results based on aggregated value of the estimated project impact are available, actual achievements can be provided mainly on anecdotal basis.

(1) The impact of LIFE projects on **nature and biodiversity** are as follows:

- Improving the conditions of **over 247 wildlife species**, and **the status of 1.6 million ha of natural and semi-natural habitats**.

One example is the LIFE for safe grid project. It aims to ensure an increase of the globally-endangered Imperial eagle population (*Aquila heliaca*) in Bulgaria, by addressing the main cause of death of young Imperial eagles: electrocution by uninsulated electricity power line poles. To address this issue, a partnership was set up between the power company EP Yug (formerly EVN Bulgaria AD) and the Bulgarian Society for the Protection of Birds. Together, they planned and constructed 43 km of underground cables that replaced 70 km of hazardous overhead power lines in the most important Natura 2000 network sites for the Imperial eagle. Other project activities, which also included the capacity of key stakeholders (e.g., other

electricity line operators), involved electricity power line insulation within 26 Imperial eagle territories, representing 79% of the known breeding territories for the species, leading to a 10% increase in the population of Imperial eagle in Bulgaria.

Another example is the WOLFLIFE project that successfully developed a National Action Plan for the wolf (*Canis lupus*) in Romania. The plan, approved in July 2018 by the Romanian Minister for the Environment, includes effective wolf management and conservation strategies, as well as pioneering methods for estimating the national wolf populations. The project implemented diverse conservation actions for wolf populations in 18 Natura 2000 network sites. It helped positive attitude changes to reduce conflicts between livestock farmers and the wolf population through best practices and demonstration actions, such as the establishment of the Centre for the Reproduction, Care and Surveillance of Livestock Guarding Dogs (CRISCPS), including the setting-up of a kennel for the breeding of native dog breeds traditionally used by shepherds for farm protection. In addition, the project established training areas, accommodation space, and veterinary treatment facilities for the native dog breeds.

(2) LIFE projects on **climate action** are contributing to: (a) a reduction in greenhouse gas emissions; and (b) to the adoption of climate adaptation measures which increase society's resilience to climate change and reduce the associated impacts and costs.

(a) A total of 173 LIFE projects that target carbon dioxide (CO<sub>2</sub>) has the potential to decrease emissions by about 10.5 million t/year. Moreover, since the signature of the first collateral agreement, investments supported by the PF4EE are expected to generate primary energy savings of 336 Gwh/year and to reduce the level of CO<sub>2</sub> emissions by 87 222 tons of CO<sub>2</sub> by the end of the implementation period.

An example of projects on climate mitigation is ICEGREEN. It aims to demonstrate the technical feasibility, safety and commercial viability of innovative ice cream machines operating with very low Global Warming Potential (GWP) propane refrigerant. These replace the currently used hydrofluorocarbons (HFC) refrigerants, while complying with the new reference standards of the F-Gas Regulation. Compared to the current baseline, the expected CO<sub>2</sub> reduction is estimated at 99.95 %. The required certifications have been granted and the project co-ordinator, Nemox, has already produced 259 commercial machines. The project has received orders from customers in several countries and 1 879 units will be produced by January 2021. By 2023, Nemox plans to put onto the market 20 000 new ice cream machines fuelled with the alternative refrigerant, for a total saving of around 13 000 tons of CO<sub>2</sub>.

Another example is the LIFE RE Mida project. The project tested an innovative technique using microbial oxidation to reduce methane emissions in landfills. Methane has a high global warming potential, and it accounts for about 66% of waste-related emissions. The project developed full-scale biofilter and bio-windows in two pilot landfill sites. The solution is significantly low cost compared to business-as-usual practices. Key achievements include:

- 60-80 % reduction of methane emissions using biofilters and 70-98 % methane reduction using biowindows;
- The risk associated with emissions of carcinogen compounds was reduced on average by 72%, while the cumulative risk associated with emissions of hazardous non-carcinogen compounds was reduced on average by 90%;
- The solution tested the abatement of odorous compounds, thus improving the health and well-being of communities that live near landfills, as well as the working conditions of workers;
- Contributing to improving the national law on landfills. The project identified and addressed a policy barrier at national level: biofilters and biowindows were not allowed except for experimental sites. The project team with the support of DG Environment proposed a modification to the law which was accepted into a new Italian Law on Landfill published in September 2020;
- The new EU Methane strategy released in 2020 contains a reference to the LIFE RE Mida project as the best practice in the field.

(b) A total of 83 projects on climate adaptation are increasing **resilience to climate change** for at least 650 000 people<sup>1</sup> by adopting new processes and technologies developed to counter extreme weather events. Among the projects are two that take a novel approach to drainage systems:

- The LIFE AERFIT project is testing Fast High-Volume Infiltration (FHVI), an innovative solution for rainwater infiltration. With this technique, large quantities of rainwater can be infiltrated into the soil in a short period, helping to prevent flooding and replenishing groundwater in cities. In a FHVI system, rainwater flows into a drain which retains larger rubbish, such as leaves and litter. The water then runs into a well where it is purified by a filter. Next, it flows into a larger infiltration well, a long pipe that opens onto a permeable soil layer (e.g. sand). The rainwater enters the soil through holes at the end of this pipe. More info: <https://aerfit.eu/en/animatie-over-fhvi-techniek/>
- The LIFE Naturadapt project aims at integrating climate change adaptation into the management and protection of natural sites by developing methods, tools and services to carry out climate change vulnerability assessments and to develop adaptation plans for natural protected areas. The project also aims at facilitating access to knowledge on how protected sites should be managed. A methodological guide has been established and has been tested on 6 pilot sites and 15 sites in all Europe are now implementing the guidance. The project has developed online training courses respectively for professionals and the public. 21 vulnerability diagnoses and adaptation plans have been developed and are currently

<sup>1</sup> This is a conservative estimate, given this indicator was added to the KPI database only in 2019.

under implementation, contributing to the development of territorial adaptation strategies. On the policy side, the project contributed to the development of the National Strategy for Protected Areas in France, in June 2020.

(3) **LIFE projects on Environment and resource efficiency** include a wide range of actions addressing, among others, (a) circular economy, (b) clean air, (c) clean water and water savings:

(a) Several projects are facilitating the transition to the circular economy. These include projects that improve **waste management and energy efficiency**. Up to 139 projects are expected to reduce waste by improving recycling for a total of 25 000 t/year by project end. Meanwhile, finance was provided for 101 LIFE projects, which employed technology to significantly reduce **energy consumption**. **A total of 24 projects, which have already finished**, reported a reduction of energy consumption by about 11 000 MgWh/ year (which correspond to the consumption of about 3 000 households per year).

- For example the Citruspack project<sup>2</sup> is demonstrating a process that enables treated wastes from the citrus industry to be used in packaging of cosmetic products. This innovative process optimises waste management by recovering the natural fibres from the citrus peel and using this to reinforce biodegradable plastic packaging for juices. The pulp residues serve as a source of natural antioxidants, pectin or essential oils in cosmetic creams, replacing other compounds. Thus, the food, plastic and cosmetic sectors are integrated in a single waste recovery and reuse model. Juice bottles based on bio-based and eco-friendly bottles will have to comply with very serious technical requirements. In addition, creams with natural additives from these by-products will be fabricated. The packaging will also be reinforced with the same material as the bottles. One of the project partners was recognised with a corporate sustainability award in 2019. The Citruspack bottle was part of this success story.
- Another project is focused on fostering environmental sustainability throughout the entire production chain of Grana Padano cheese from farm to packaging. The project is actively building synergies with other LIFE projects (i.e. LIFE DOP on Parmigiano Reggiano) and has attracted media attention.<sup>3</sup> Crucially, this project has strong replication potential in the dairy sector, given that the operators of Comte cheese are active in the partnership. It could also be applied to other Protected Designation of Origin (PDO) products like meat and wine.

(b) A total of 54 projects are active in improving **air quality** by experimenting in innovative methods and techniques to decrease emissions of carbon monoxide (CO), ammonia, nitrogen oxide (NO<sub>x</sub>), particulate matter emissions (PM) and sulphur oxide (SO<sub>x</sub>).

- For example, the LIFE CLINSH project addresses the problem of high levels of emissions of the air pollutants NO<sub>x</sub> and PM<sub>10</sub> in Inland Waterway Transport (IWT). The project is expected to improve air quality in urban areas situated close to ports and inland waterways by accelerating IWT emissions reduction. The project is evaluating measures for emissions reduction in selected vessels over two years. In tandem, the project team will undertake air quality modelling for different scenarios to show the impact on NO<sub>x</sub> and PM<sub>10</sub> concentrations, a methodology that will provide input for the further development of a Clean Shipping Index (CSI). The methodology will be disseminated to policy-makers, ship owners and suppliers, and other decision-makers, and will help to improve the competitiveness of the inland navigation sector.

(c) Up to 20 projects are ameliorating the ecological status of water covering 2 500 sq km, while a further 13 projects aim to reduce freshwater consumption by one million of cubic meters per year.

- For example the project INADAR has successfully implemented an **innovative approach to dam rehabilitation** (at hydro power stations Offingen and Oberelchingen - Germany) **and the ecological improvement of riverbanks**. The project's construction of eco-beams has ensured efficient dam rehabilitation and raising, and led to a considerable ecological enhancement of the bank areas. The poor ecological situation of the river bank (concrete slabs) has been greatly improved ('good ecological status' in terms of the EU Water Framework Directive). The main outputs of the project are: lower costs for the hydro power operator, ecological enhancement in the river and at the river bank instead of damage in the adjacent alluvial forest, easier planning permission and legal compliance, as well as benefits for the local population and fishermen.
- The LIFE SouPLess project aims to demonstrate new systems for riverine plastic removal and an innovative software tool to predict movement and accumulation hotspots of plastic litter in rivers. It will develop a software package that predicts where plastic waste accumulates in rivers. It will then demonstrate new water treatment techniques for removing microplastics from the rivers. In the framework of its demonstration activities, the project is expected to collect some 100 tonnes of plastic waste from rivers, avoiding some 100 kg of toxic chemicals leaching out of it; to optimise a sustainable and cost-effective process for disposing of the plastic collected and to mitigate 125 to 250 tonnes of CO<sub>2</sub> by recycling more than half the plastic collected. In this way the project will support the EU Water

Framework Directive by tackling pollution in European water bodies and contribute to the Marine Strategy Framework Directive by reducing the amount of plastic waste making its way to the ocean.

(4) To support **environmental and climate governance at all levels** and promote **awareness-raising and information on climate and environment issues and the exchange of best practices**.

LIFE has empowered NGOs and citizens to take legal action when environmental laws are not being enforced by statutory bodies in Member States. Projects are giving ‘citizen enforcement’ a boost by sharing knowledge about rights of access to justice and bridging the gap between lawyers, judges, authorities and the public for better environmental governance. They are giving local authorities and regional administrations guidelines on air quality legislation and building capacity among NGOs to push for better enforcement.

- For example the LIFE-Food.Waste.StandUp project addressed food waste at different levels of the supply chain, from production to distribution, and final consumption, reducing all the associated environmental, economic and social costs. According to a recent report the amount of foodstuff annually wasted in Italy is valued at EUR 12.6 billion. LIFE-Food.Waste.StandUp raised awareness of surplus food management and food waste prevention among three key actors of the food supply chain: agri-food companies, food retailers and consumers. With the invaluable collaboration of Fondazione Banco Alimentare Onlus, which co-operated in the definition and development of content, several strategies and tools were designed. The ambitious aim of reaching all targets in the best possible way was achieved by adding to the traditional media (leaflets, articles, newsletters, etc.) more innovative channels such as a storytelling video in four episodes and the development of an app that helps consumers reduce food waste. See <http://www.lifefoodwastestandup.eu/en/video-collection>.

(5) LIFE non-grant activities play a unique role in the monitoring and evaluation of environmental and climate legislation and policies. These activities take the form of: (1) studies, (2) stakeholder consultation activities and information, (3) communication and awareness-raising activities. Projects financed by LIFE support the design of environmental and climate policies and legislation, while technical assistance and service contracts help complete all impact assessments and evaluations. These activities feed into better regulation. In 2020 the LIFE programme supported some of the key actions included in the roadmap of the European Green Deal, such as:

- The EU Biodiversity Strategy for 2030 adopted in May 2020 to protect nature and reverse the degradation of ecosystems. It includes, in particular, the establishment of a larger EU-wide network of protected areas on land and at sea. In addition, it involves the launch of an a comprehensive, ambitious and long-term EU nature restoration plan;
- The proposal of a European Climate Law<sup>4</sup> that will enshrine the goal of EU 2050 climate neutrality into legislation, providing predictability and making the transition towards a climate-neutral economy irreversible. The pace of emission reductions is mapped out from 2030 to 2050, showing what needs to be done, and at what speed. It includes the revised 2030 emissions reduction target of at least 55% as a stepping-stone to the 2050 climate neutrality goal.
- The plan to raise the EU's ambition on reducing net greenhouse gas emissions to at least 55% below 1990 levels by 2030. This is a substantial increase compared to the previous target of at least 40%. A comprehensive impact assessment and proposal<sup>5</sup> adopted in September 2020 show how all sectors of the economy and society can contribute. The proposal also sets out the policy actions required to achieve this goal.
- The Commission proposed a new Batteries Regulation which aims to ensure that batteries placed in the EU market are sustainable and safe throughout their entire life cycle. It includes mandatory requirements for all batteries (i.e. industrial, automotive, electric vehicle and portable) placed on the EU market, such as use of responsibly-sourced materials with restricted use of hazardous substances, minimum content of recycled materials, carbon footprint, performance and durability and labelling, as well as collection and recycling targets. This will contribute to the development of more sustainable and competitive battery industry across Europe and around the world.
- The proposal for the 8th Environmental Action Programme submitted in October 2020 confirms the vision to ensure well-being for all while staying within the planetary boundaries and calls for active stakeholder engagement at all levels of governance to ensure that EU climate and environment laws are effectively implemented. It forms the EU's basis for achieving the United Nation's **2030 Agenda** and its **Sustainable Development Goals**.
- The launch of the European Climate Pact in December 2020. This aims to engage citizens and all parts of society in climate action, by spreading awareness and supporting action. Furthermore, it invites people, communities and organisations to make climate-conscious choices. The ideas and views shared during an extensive consultation of stakeholders (i.e. live sessions, open public consultation, webinars, etc.) have shaped the Communication on Climate Pact, adopted on 9 December 2020<sup>6</sup>. The first European Climate Pact ambassadors have been selected, leading by example and engaging their communities in climate action. The Pact will also invite organisations and collectives to register their climate initiatives and turn them into climate action pledges. To increase the outreach of the Pact, DG CLIMA joined

<sup>4</sup> [Commission proposal for a Regulation: European Climate Law](#)

<sup>5</sup> [Stepping up Europe's 2030 climate ambition, COM\(2020\) 562 final](#)

<sup>6</sup> COM(2020)788final.

forces with global climate campaign Count Us In. A dedicated website was set up and LIFE is financing the Pact's secretariat, which will implement and co-ordinate the activities of the Pact.

- (6) In terms of support for the **implementation and enforcement of environment and climate legislation and policies**, the LIFE programme has a unique role by supporting the management of the timely and correct transposition, implementation and practical application of the acquis. This is achieved through enforcement, including infringement procedures, and more generally through compliance promotion. The latter includes targeted support actions addressed to the Member States in all sectors of the environmental acquis and incentives to lead by example. In this framework, LIFE supports, for example:
- The Environmental Implementation Review (EIR). EIR aims to support the delivery of the objectives of existing EU environmental policies and legislation, addressing the specific implementation gaps in EU environmental policy and law in each Member State. In addition, it provides new solutions complementary to legal enforcement, as well as addressing the underlying root (and often cross-sectoral) causes of gaps in EU environmental policy and law. EIR also aims to stimulate exchanges of good practices. The Commission is ready to accompany the Member States' own efforts with technical and financial support and, if necessary, with expertise underpinning structural reforms.
  - LIFE projects also support the capacity of a European network of environmental prosecutors to share information and develop best practice to tackle environmental crime. LIFE has developed strategic partnerships with organisations representing inspectors (IMPEL), judges, the police and other enforcement agencies, and shared information relating to environmental prosecutions throughout the EU and the rest of the world. Projects have provided training and handbooks, set up bird crime and poisoning databases and established networks of stakeholders to stop the illegal killing of protected species.
  - The assessment of area-specific MS implementation plans, such as for example the River Basin Management Plans prepared under the Water Framework Directive, the National Air Pollution Control Programmes, the MS reports submitted for the implementation of the Nitrates Directive or the Seveso Directive, and the support to the EU and Member States reports to international fora (COPs, UN, OECD), such as reporting on the implementation of the mandatory elements of the Nagoya Protocol (legislated via the ABS Regulation).
  - The operation of the EU emissions trading system (EU ETS), which is the main instrument to ensure a well-functioning EU carbon market. The Union registry serves to guarantee accurate accounting for all allowances issued under the EU ETS. The registry keeps track of the ownership of allowances held in electronic accounts, just as a bank has a record of all its customers and their money. LIFE is financing important measures positively affecting the confidentiality, integrity and/or availability of the system, thus protecting the financial interests of the Member States and the Union.
  - The better and earlier identification of the intrinsic properties of chemical substances for the protection of human health and the environment. This is done by the four processes of REACH, namely the registration, evaluation, authorisation and restriction of chemicals. In this framework LIFE also supports ongoing work to address the issue of endocrine disruptors, the action for the protection of animals used for scientific purposes, and to support the restriction of the use of certain hazardous substances.
  - The European Green Capital and European Green Leaf to reward cities, which are making efforts to improve the urban environment and move towards healthier and sustainable living areas. This promotes the implementation of the Green City Accord to mobilise cities that are ready to become environmental leaders in delivering EU environmental policy objectives in the areas of air quality, noise, water, waste management, nature and biodiversity.
- (7) At bilateral and multilateral level, LIFE also contributes to promoting, convincing and supporting non EU countries, to commit toward and to implement ambitious environmental and climate policies across the world. LIFE supports the EU leading role in international climate and environmental negotiations in the framework of a number of agreements to which the Union is party (for example in the framework of the Convention on Biological Diversity on biodiversity, or in the context of the Conference of the Parties [COP] to the UNFCCC<sup>7</sup>). At bilateral level the LIFE programme supports co-operation with non EU countries, particularly with advanced and emerging economies based on tailor-made approaches, towards the transition to global climate neutrality (e.g. with China, Japan, the USA, the EU neighbourhood, as well as G20 partners in Africa and Latin America) or circular economy (e.g. with China). It supports bilateral dialogues on international carbon markets to strengthen cooperation between carbon markets.
- (8) Last but not least, in 2020 LIFE also supported activities to improve the environmental and climate performance of the Commission itself, e.g. with a feasibility and scoping study to make the Commission climate neutral by 2030, as well as an analysis to improve the methodology for tracking biodiversity expenditures across the EU budget. This analysis will provide a forward-looking contribution towards the agreed increase of the climate mainstreaming target and the new biodiversity ambition. This is in line with the Commission approach to lead by example.

### 3.3. Evaluations, studies and reports

The key findings of the latest evaluation ([COM\(2017\) 642 final](#) – [SWD\(2017\) 356 final](#)) have been presented in the Programme Statement 2018.

<sup>7</sup> See [https://ec.europa.eu/environment/international\\_issues/agreements\\_en.htm](https://ec.europa.eu/environment/international_issues/agreements_en.htm) for lists of international agreements.

The impact assessment accompanying the Commission Proposal for the LIFE programme 2021-2027 (see [SWD\(2018\) 292 final](#)), takes stock from the existing programme to plan for further improvements.

Last year publications on the LIFE programme are available at <https://ec.europa.eu/easme/en/section/life/life-programme-publications> and include the following:

- Together for biodiversity - 2020
- Cherishing nature's services - 2020
- Peatlands for LIFE - 2020
- Protecting Europe's threatened invertebrates - 2020
- LIFE & Urban Resilience poster - 2020
- Bringing nature back through LIFE - The EU LIFE programme's impact on nature and society - October 2020
- LIFE and invertebrates: ex-post exercise 2019 summary report – 2020.

#### **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :Develop, demonstrate and promote innovative techniques, methods and approaches for reaching the objectives of the Union legislation and policy on environment, and on climate action, including the transition to renewable energy and increased energy efficiency, and to contribute to the knowledge base and to the application of best practice, in particular in relation to nature and biodiversity, including through the support of the Natura 2000 network;**

**Indicator 1: Number of projects that are developing, demonstrating and promoting innovative techniques and approaches to contribute to the shift towards a sustainable, circular, energy-efficient, renewable energy-based, climate-neutral and -resilient economy**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	No data									
Indicator type	Output									
Unit of measurement	Number of projects									
Cut-Off Date										
Data source	LIFE project database / E-grant									
Link to the objective	Link to Specific Objective 1: Contribute to the shift toward a clean, circular, energy efficient, low-carbon and climate resilient economy and in particular to "develop, demonstrate and promote innovative techniques, methods and approaches for reaching the objectives of the Union legislation and policy on environment and on climate action, including the transition to renewable energy and increased energy efficiency, and to contribute to the knowledge base"									
Link MFF 14-20 / MFF 21-27	It was not included in the indicators reported in previous programme statements. Data on this indicator in the period 2014-2020 are available.									
Other methodological comments	Taking into account the project life cycle and the delays in the start-up of the programme implementation, data will be available starting from 2024. Data are cumulative.

Justification of the trend	

## 5. Programme 2014-2020 - Key monitoring indicators

### Previous Program 1 : Programme for the Environment and Climate Action (LIFE)

**General Objective 1 :To contribute to the shift towards a resource-efficient, low-carbon and climate-resilient economy, to the protection and improvement of the quality of the environment and to halting and reversing biodiversity loss, including the support of the Natura 2000 network and tackling the degradation of ecosystems**

#### Indicator 1:Attributable environmental and climate improvements

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2020
0				80%			≥ 80%			≥ 80% of ongoing projects progress towards/of finalised projects achieved environmental and/or c
	Actual Progress									Final
	98%	88%	92%	95%	96.1%	97,5%				

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage of projects
Cut-Off Date	01/12/2020
Data source	Database of LIFE Key Performance Indicators (KPIs)
Narrative	The LIFE programme 2014-2020 has four objectives: (1) Help move towards a resource-efficient, low carbon and climate resilient economy, improve the quality of the environment and halt and reverse biodiversity loss; (2) Improve the development, implementation and enforcement of EU environmental and climate policy and legislation, and act as a catalyst for, and promote, the mainstreaming of environmental and climate objectives into other policies and practices;(3) Support better environmental and climate governance at all levels, including better involvement of civil society, NGOs and local actors; (4) Support the implementation of the 7th environmental action plan.This indicator monitors the percentage of projects that are producing results and, thus, contributing to all the LIFE objectives.
Methodology	This indicator monitors the percentage of LIFE projects which are registering an improvement in comparison with their respective baselines in the LIFE KPI database. Data are cumulative.
Link MFF 14-20 / MFF 21-27	Other indicators were selected for monitoring the performance of the programme in the period 2021-2027.
Other methodological comments	The frequency of up-date limits the comparability of the values across different years
Full metadata available at this address	
Justification of the trend	The data show an overachievement that could be linked to -- an initial underestimation of the potential project results and/or -- the high quality of projects, which are selected following a strong competition and/or - the fact that many projects are still under implementation and few projects already ended.

### Indicator 2:Percentage of the Natura 2000 network targeted by LIFE projects restored or brought to adequate management

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				10%			12%			12%
	Actual Progress									Final
	26%	28%	34%	37%	37,24%	40,32%				

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage of Natura 2000 sites
Cut-Off Date	01/12/2020
Data source	Database of LIFE Key Performance Indicators (KPIs)
Narrative	One of the objectives of the LIFE programme 2014-2020 is to contribute to improve the quality of the environment and halt and reverse biodiversity loss.
Methodology	Percentage of the Natura 2000 network targeted by on-going projects which are progressing towards restoration/ adequate management. Cumulated figures.Target: 12% of the Nature 2000 targeted by ongoing projects progress towards/of finalised projects achieved environmental and/or climate improvements
Link MFF 14-20 / MFF 21-27	This indicator was not retained as core performance indicators for the programme 2021-2027.
Other methodological comments	Values for this indicator are based on the assessment made by project coordinators on anticipated project results at the time of submission of the proposal and then up-dated during project implementation. Evaluation experts, monitors and project officers check the assessments.
Full metadata available at this address	
Justification of the trend	Annual changes in the value of the indicator reported at programme level will result from: - The growing total number of LIFE projects awarded for which anticipated results are aggregated - Revisions to anticipated results.

**Indicator 3:Percentage of surface and type of ecosystems targeted by LIFE projects restored**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Milestones										2020
0				10%			≥ 10% of ecosystem surfaces and type targeted by ongoing projects are progressing towards			≥ 10% of ecosystem surfaces and type targeted by ongoing projects are progressing towards
Actual Progress										Final
	45%	67%	63%	57%	55,3%	58,5%				

Are we on track	
Indicator type	Result
Unit of measurement	Percentage of surface and ecosystem type
Cut-Off Date	12/01/2020
Data source	Database of LIFE Key Performance Indicators (KPIs)
Narrative	The LIFE programme 2014-2020 contributes to improve the quality of the environment and halt and reverse biodiversity loss;
Methodology	Percentage of ecosystem surfaces and type targeted by ongoing projects and progressing towards improvement.
Link MFF 14-20 / MFF 21-27	This indicator has not been retained for the core performance indicator of the programme 2021-2027. The successor indicator for the MFF 2021-2027 is focused on the area of habitats which conservation status is improving
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Annual changes in the value of the indicator reported at programme level will result from: - The growing total number of LIFE projects awarded for which anticipated results are aggregated - Revisions to anticipated results. It is extremely difficult to identify the reasons of this overachievement. It could be linked to an initial underestimation of the potential project results (done in 2014), due to a lack of experience with LIFE indicators, and/or to the high quality of nature and biodiversity projects, which are selected following a strong competition or to an overestimate of the project anticipated results (many projects are still under implementation and few projects have already ended)

**Indicator 4:Percentage of types of habitats and of species targeted with improving conservation status**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Habitats										
Milestones										2020
0				10%			≥ 10% of types of habitats and of species targeted by ongoing projects are progressing towards			≥ 10% of types of habitats and of species targeted by ongoing projects are progressing towards
Actual Progress										Final
	51%	98%	99%	97%	98,380%	99,3%				
Species										
Milestones										2020
0				10%			≥ 10% of types of habitats and of species targeted by ongoing projects are progressing towards			≥ 10% of types of habitats and of species targeted by ongoing projects are progressing towards
Actual Progress										Final
	51%	34%	36%	32%	33,596%	36,7%				

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage of types of habitats and species
Cut-Off Date	01/12/2020
Data source	Database of LIFE Key Performance Indicators (KPIs)
Narrative	The LIFE programme 2014-2020 contributes to improve the quality of the environment and halt and reverse biodiversity loss;
Methodology	The reported percentages take into account the habitats and species - targeted by LIFE projects - which conservation status is considered to be improving as a result of the LIFE projects.
Link MFF 14-20 / MFF 21-27	Data on this indicator are still available under another form (areas of habitats and number of species which conservation status is improving as a result of LIFE projects), but it was not retained as core performance indicators for the programme 2021-2027
Other methodological comments	Percentage of types of habitats and of species targeted by ongoing/ finalised projects are progressing towards an improved conservation status.
Full metadata available at this address	
Justification of the trend	Annual changes in the value of the indicator reported at programme level will result from: - The growing total number of LIFE projects awarded for which anticipated results are aggregated - Revisions to anticipated results. It is extremely difficult to identify the reasons of this overachievement. It could be linked to an initial underestimation of the potential project results (done in 2014), due to a lack of experience with LIFE indicators, and/or to the high quality of nature and biodiversity projects, which are selected following a strong competition or to an overestimate of the project anticipated results (many projects are still under implementation and few projects have already ended)

**General Objective 2 :To improve the development, implementation and enforcement of Union environmental and climate policy and legislation, and to act as a catalyst for, and promote, the integration and mainstreaming of environmental and climate objectives into other Union policies and public and private sector practice, including by increasing the public and private sector's capacity**

**Indicator 1: Number of interventions developed or undertaken that implement plans, programmes or strategies pursuant to Union environmental or climate policy or legislation**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				27			70			70
	Actual Progress									Final
		15	23	37	47	59				

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of integrated projects
Cut-Off Date	01/12/2020
Data source	Database of LIFE projects (Butler)
Narrative	The LIFE programme 2014-2020 has the objective to contribute to improve the development, implementation and enforcement of EU environmental and climate policy and legislation, and to act as a catalyst for, and promote, the mainstreaming of environmental and climate objectives into other policies and practices;
Methodology	Although many LIFE interventions will implement plans, programmes or strategies pursuant to Union environmental or climate policy or legislation, integrated projects (IPs), which are new under the LIFE programme, are specifically designed for this and are therefore used as the reference de minimis indicator.
Link MFF 14-20 / MFF 21-27	Taking into account the experience acquired, it was decided to privilege the role of the successors of integrated projects for the implementation of environmental and climate legislation and policies and their catalytic effect in the core performance indicators for the LIFE programme 2021-2027.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The trend is on line with the estimates

**Indicator 2: Number of LIFE interventions (projects, measures, approaches) suitable for being replicated or transferred**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0	0			360			≥ 900			≥ 900
	Actual Progress									Final

	280	310	392	470	657	781			
Are we on track	On track								
Indicator type	Output								
Unit of measurement	Number of ongoing projects/of finalised projects implement replicable/transferable actions.								
Cut-Off Date	01/12/2020								
Data source	Database of LIFE Key Performance Indicators (KPIs)								
Narrative	LIFE 2014-2020 contributes to improve the development, implementation and enforcement of EU environmental and climate policy and legislation, and act as a catalyst for, and promote, the mainstreaming of environmental and climate objectives into other policies and practices;								
Methodology	Estimates of the projects that may anticipate the implementation of replicable/transferable actions.								
Link MFF 14-20 / MFF 21-27	The indicator was not been retained as core performance indicator for the LIFE programme 2021-2027								
Other methodological comments	Projects within the meaning of Articles 2 and 18 (a), (b), (c) and (h) Regulation No 1293/2013 will be specifically assessed for their potential replicability/transferability and are therefore used as the reference indicator. It is expected that 80% of these projects implement replicable/transferable actions. Number of ongoing/finalised projects implementing replicable/transferable actions.								
Full metadata available at this address									
Justification of the trend	We are on track. In 2021 the projects which call for proposals was launched in 2020 will be awarded. This should allow reaching the target.								

### Indicator 3: Number of interventions achieving synergies with or mainstreamed into other Union funding programmes, or integrated into public or private sector practice

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				27			70			70
	Actual Progress									Final
		15	23	37	47	59				

Are we on track	On track								
Indicator type	Output								
Unit of measurement	Number of Integrated Projects								
Cut-Off Date	01/12/2020								
Data source	Database of LIFE projects (Butler)								
Narrative	The LIFE Programme has the objective to improve the development, implementation and enforcement of EU environmental and climate policy and legislation, and to act as a catalyst for, and promote, the mainstreaming of environmental and climate objectives into other policies and practices.								
Methodology	Although all projects should to a certain degree promote synergies and integration into practice, integrated projects (IPs), which are new under the LIFE programme, are specifically designed for this and are therefore used as the reference indicator.								
Link MFF 14-20 / MFF 21-27	Taking into account the experience acquired, it was decided to privilege the role of the successors of integrated projects for the implementation of environmental and climate legislation and policies and their catalytic effect in the core performance indicators for the LIFE programme 2021-2027.								
Other methodological comments									
Full metadata available at this address									
Justification of the trend	The actual values are in line with the estimates								

### General Objective 3 :To support better environmental and climate governance at all levels, including better involvement of civil society, NGOs and local actors

#### Indicator 1: Number of interventions to ensure better governance, dissemination of information and awareness of environmental and climate aspects

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				420			800			800
	Actual Progress									Final
	122	252	324	496	648	731	792			

Are we on track	On track								
Indicator type	Output								
Unit of measurement	Number of governance projects								
Cut-Off Date	01/12/2020								
Data source	Database of LIFE projects (Butler)								

Narrative	One of the LIFE objective is to support better environmental and climate governance at all levels, including better involvement of civil society, NGOs and local actors;
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator will be used also for the LIFE Programme 2021-2027
Other methodological comments	Although all interventions contain an information, dissemination and/or awareness raising component, the interventions financed to "support better environmental and climate governance and information" (budget item 07 02 03 and 34 02 03), whether funded through grants or procurement, are specifically designed to address this objective and are therefore used as the reference indicator. They include the operating grants. The figures are cumulative and in 2017 include the European Solidarity Corps initiatives financed by LIFE.
Full metadata available at this address	
Justification of the trend	The programme is on track with the initial milestone and is expected to reach the target

## General Objective 4 :To support the implementation of the 7th Environment Action Programme

### Indicator 1: Number of interventions to support the implementation of the 7th Environment Action Programme

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
				1300			1700			1700
	Actual Progress									Final
		970	1305	1625	2089	2507	2704			

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of projects and other programme actions (e.g. prizes, procurement contract)
Cut-Off Date	01/12/2020
Data source	Database of LIFE projects (Butler) and database on the actions of the Annual Management Plan
Narrative	One of the objectives of the LIFE Programme 2014-2020 is to support the implementation of the 7th Environmental Action Programme. All types of LIFE interventions are supposed to contribute to the 7th Environmental Action Programme.
Methodology	This indicator monitors the number of LIFE interventions which are registering an improvement in comparison with their respective baselines.
Link MFF 14-20 / MFF 21-27	Other indicators were selected for monitoring the performance of the programme in the period 2021-2027.
Other methodological comments	All LIFE interventions, whether funded through grants, procurement or financial instruments, support the implementation of at least one of the priority objectives of the 7th Environment Action Programme. Figures include interventions over 100.000 EUR and are cumulative.
Full metadata available at this address	
Justification of the trend	The data show an overachievement that could be linked to an initial underestimation of the number of LIFE interventions and/or the number of interventions producing results -

## Specific Objective 1 :Contribute to a greener and more resource-efficient economy and to the development and implementation of EU environmental policy and legislation (Environment and Resource Efficiency priority area)

### Indicator 1: Number of water bodies covered by projects and thus progressing towards or having reached an improved ecological status

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				100			170			170
	Actual Progress									Final
	70	83	93	102	105	110				

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Water bodies are covered by ongoing projects which progress towards or finalised projects which achieved an improved ecological status
Cut-Off Date	01/12/2020
Data source	Database of LIFE Key Performance Indicators (KPIs)
Narrative	One of the objective of the LIFE Programme 2014-2020 is to help move towards a resource-efficient, low carbon and climate resilient economy, improve the quality of the environment and halt and reverse biodiversity loss

Methodology	LIFE contribution is calculated taking into account an estimated total of 138 000 water bodies and the fact that 43% of water bodies already achieved good ecological status according to the Commission Communication, A Blueprint to Safeguard Europe's Water Resources. COM(2012) 673 final of 14th November 2012. Number of water bodies covered by ongoing projects and progressing towards an improved ecological status.
Link MFF 14-20 / MFF 21-27	The indicator has been slightly modified to focus on the area of water bodies which ecological status is being improving
Other methodological comments	
Full metadata available at this address	
Justification of the trend	LIFE has a bottom up approach. The number of projects awarded depends from the number of proposals submitted and their quality. Only 20 on-going projects are focused on water quality. They are working to improve the ecological status of 248 km of rivers.

### Indicator 2: Population benefiting from improved air quality

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
				1000000			1400000			1400000
	Actual Progress									Final
	370000	842600	934000	1100000	1500000	1638500				

Are we on track	On track
Indicator type	Impact
Unit of measurement	Persons covered by ongoing projects which progress towards or finalised projects which achieved improved air quality.
Cut-Off Date	01/12/2020
Data source	Database of LIFE Key Performance Indicators (KPIs)
Narrative	One of the objectives if the LIFE programme 2014-2020 is to help move towards a resource-efficient, low carbon and climate resilient economy, improve the quality of the environment and halt and reverse biodiversity loss;
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator is part of the core performance indicators selected for monitoring the performance of the LIFE Programme 2021-2027
Other methodological comments	Number of persons covered by ongoing/ finalised projects which progress towards improved air quality.
Full metadata available at this address	
Justification of the trend	The programme performance is in line with the intial estimates

### Indicator 3: Percentage of regions covered by waste IPs and thus progressing towards or having reached adequate waste management

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				2%			3%			3%
	Actual Progress									Final
		1,8%	2,5%	2,5%	3,9%	4,3%				

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage of regions that are covered by waster IPs and progress towards or achieved adequate waste management.
Cut-Off Date	01/12/2020
Data source	Database of LIFE projects (Butler)
Narrative	One of the objective of the LIFE Programme 2014-2020 is to help move towards a resource-efficient, low carbon and climate resilient economy, improve the quality of the environment and halt and reverse biodiversity loss
Methodology	This indicator monitors the regions targeted by LIFE integrated projects where comprehensive Waste Management plans are being implemented.
Link MFF 14-20 / MFF 21-27	This indicator has not been retained as core performance indicator for the evaluation framework of the LIFE Programme 2021-2027
Other methodological comments	Four interated projects are focused on waste covering 12 regions, in which the project activities have started
Full metadata available at this address	
Justification of the trend	The trend is in line with the initial estimates.

### Indicator 4: Percentage of River Basin Districts (RBD) covered by IPs and thus progressing towards or having reached adequate management

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				3%			5%			5%
	Actual Progress									Final
		2%	4%	5%	8%	8,3%				

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage of RBD are covered by integrated projects that progress towards or have achieved adequate management.
Cut-Off Date	01/12/2020
Data source	Database of LIFE projects (Butler)
Narrative	One of the objective of the LIFE Programme 2014-2020 is to help move towards a resource-efficient, low carbon and climate resilient economy, improve the quality of the environment and halt and reverse biodiversity loss
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator has not been selected as core-performance indicator for the monitoring of the performance of the LIFE Programme 2021-2027
Other methodological comments	Percentage of RBD covered by integrated projects and progressing towards adequate management. Ten integrated projects, out of twelve integrated projects on water, are addressing the management of river basin districts and have started their activities.
Full metadata available at this address	
Justification of the trend	The data show an overachievement that could be linked to -- an initial underestimation of the potential project results and/or -- the high quality of integrated projects, and/or - the fact that all integrated projects are still under implementation and few projects already ended.

#### Indicator 5: Number of interventions to improve the knowledge base for Union environmental policy and legislation, and for assessing and monitoring factors, pressures and responses having an impact on the environment

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				300			680			680
	Actual Progress									Final
	120	285	382	462	588	681	777			

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of interventions (projects and other LIFE activities e.g. studies, prizes, etc)
Cut-Off Date	01/12/2020
Data source	Database of LIFE projects (Butler) and database on the actions of the Annual Management Plan
Narrative	One of the objective of the LIFE Programme 2014-2020 is to help move towards a resource-efficient, low carbon and climate resilient economy, improve the quality of the environment and halt and reverse biodiversity loss
Methodology	Estimated to be 100% of the interventions financed by the 07 02 01. Cumulative figures.
Link MFF 14-20 / MFF 21-27	This indicator has not been selected as core performance indicator for the evaluation framework of the LIFE Programme 2021-2027
Other methodological comments	The size of the interventions implies a difference in the values for this indicator.
Full metadata available at this address	
Justification of the trend	The trend is on line with the initial estimates.

#### Specific Objective 2 :Halting and reversing the biodiversity loss, including the support of the Natura 2000 network and tackling the degradation of ecosystems (Biodiversity priority area)

##### Indicator 1:Percentage of surface and type of ecosystems targeted by LIFE projects restored

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				10%			≥ 10%			≥ 10%
	Actual Progress									Final
	51%	67%	63%	57%	55%	58,5%				

Are we on track	On track
Indicator type	Result
Unit of measurement	Percentage of ecosystem surfaces and types targeted by ongoing projects progress towards/by

	finalised projects achieved improvement/restoration.
Cut-Off Date	01/12/2020
Data source	Database of LIFE Key Performance Indicators (KPIs)
Narrative	The LIFE programme 2014-2020 contributes to improve the quality of the environment and halt and reverse biodiversity loss.
Methodology	Percentage of ecosystem surfaces and type targeted by ongoing projects and progressing towards an improvement of their status.
Link MFF 14-20 / MFF 21-27	This indicator has not been retained for the core performance indicator of the programme 2021-2027. The successor indicator for the MFF 2021-2027 is focused on the area of habitats which conservation status is improving
Other methodological comments	Percentage of ecosystem surfaces and types targeted by ongoing projects and progressing towards improvement/ restoration. It is extremely difficult to identify the reasons of this overachievement. It could be linked to an initial underestimation of the potential project results and/or to the high quality of nature and biodiversity projects, which are selected following a strong competition.
Full metadata available at this address	
Justification of the trend	Annual changes in the value of the indicator reported at programme level will result from: - The growing total number of LIFE projects awarded for which anticipated results are aggregated - Revisions to anticipated results. It is extremely difficult to identify the reasons of this overachievement. It could be linked to an initial underestimation of the potential project results (done in 2014), due to a lack of experience with LIFE indicators, and/or to the high quality of nature and biodiversity projects, which are selected following a strong competition or to an overestimate of the project anticipated results (many projects are still under implementation and few projects have already ended)

### Indicator 2: Percentage of habitats targeted progressing towards or improving conservation status as a consequence of LIFE interventions

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				10%			≥ 10%			≥ 10%
	Actual Progress									Final
	46%	98%	99%	97%	98.38%	99,3%				

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage of habitats targeted by ongoing projects progress towards/of finalised projects achieved improved conservation status.
Cut-Off Date	01/12/2020
Data source	Database of LIFE Key Performance Indicators (KPIs)
Narrative	The LIFE programme 2014-2020 contributes to improve the quality of the environment and halt and reverse biodiversity loss.
Methodology	The reported percentage takes into account the habitats - targeted by LIFE projects - which conservation status is considered to be improving as a result of the LIFE projects.
Link MFF 14-20 / MFF 21-27	Data on this indicator are still available under another form (areas of habitats which conservation status is improving as a result of LIFE projects), but it was not retained as core performance indicators for the programme 2021-2027
Other methodological comments	Percentage of habitats targeted by ongoing projects and progressing towards improved conservation status.
Full metadata available at this address	
Justification of the trend	Annual changes in the value of the indicator reported at programme level will result from: - The growing total number of LIFE projects awarded for which anticipated results are aggregated - Revisions to anticipated results. It is extremely difficult to identify the reasons of this overachievement. It could be linked to an initial underestimation of the potential project results (done in 2014), due to a lack of experience with LIFE indicators, and/or to a different interpretation and/or to the high quality of nature and biodiversity projects, which are selected following a strong competition or to an overestimate of the project anticipated results (many projects are still under implementation and few projects have already ended)

### Indicator 3: Percentage of species targeted progressing towards or improving conservation status as a consequence of LIFE interventions

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
				0,10			0,10			0,10
	Actual Progress									Final
	0,66	0,34	0,36	0,32	0,33596	0,367				

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage of species targeted by ongoing projects progress towards/of finalised projects achieved improved conservation status.
Cut-Off Date	12/01/2020
Data source	Database of LIFE Key Performance Indicators (KPIs)
Narrative	The LIFE programme 2014-2020 contributes to improve the quality of the environment and halt and reverse biodiversity loss.
Methodology	The reported percentage monitors the species - targeted by LIFE projects - which conservation status is considered to be improving as a result of the LIFE projects.
Link MFF 14-20 / MFF 21-27	Data on this indicator are still available under another form (number of species which conservation status is improving as a result of LIFE projects), but it was not retained as core performance indicators for the programme 2021-2027
Other methodological comments	Percentage of species targeted by ongoing/ finalised projects are progressing towards an improved conservation status.
Full metadata available at this address	
Justification of the trend	Annual changes in the value of the indicator reported at programme level will result from: - The growing total number of LIFE projects awarded for which anticipated results are aggregated - Revisions to anticipated results. It is extremely difficult to identify the reasons of this overachievement. It could be linked to an initial underestimation of the potential project results (done in 2014), due to a lack of experience with LIFE indicators, and/or to the high quality of nature and biodiversity projects, which are selected following a strong competition or to an overestimate of the project anticipated results (many projects are still under implementation and few projects have already ended)

#### Indicator 4: Percentage of the Natura 2000 sites covered by nature IPs and thus progressing towards the implementation of prioritised actions frameworks

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				4%			6%			6%
	Actual Progress									Final
			12%	20%	23,4%	34%				

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage of the Natura 2000 sites are targeted by nature IPs and progress towards or achieved the implementation of prioritised actions frameworks.
Cut-Off Date	01/12/2020
Data source	Database of LIFE projects (Butler)
Narrative	One of the objectives of the LIFE programme 2014-2020 is to contribute to improve the quality of the environment and halt and reverse biodiversity loss.
Methodology	The indicator monitors percentage of the Natura 2000 sites targeted by LIFE integrated projects implementing prioritised action frameworkq
Link MFF 14-20 / MFF 21-27	This indicator was not retained as core performance indicators for the programme 2021-2027.
Other methodological comments	At present n.18 integrated projects (IPs) are supporting the implementation of Prioritized Action Frameworks developed in Belgium, Czech Republic, Finland, Hungary, Italy, Germany, Netherlands, Portugal, Slovenia, Spain, France, Lithuania, Sweden, Greece, Denmark, Estonia, Ireland and Cyprus pursuant to Article 8 of the Habitats Directive.
Full metadata available at this address	
Justification of the trend	At present n.23 integrated projects (IPs) are supporting the implementation of Prioritized Action Frameworks developed in Belgium, Czech Republic, Finland, Hungary, Italy, Germany, Latvia, Netherlands, Portugal, Slovenia, Slovakia Spain, France, Lithuania, Sweden, Greece, Denmark, Estonia, Ireland and Cyprus pursuant to Article 8 of the Habitats Directive. ; Source: Database of LIFE projects (Butler);

#### Indicator 5: Number of interventions to improve the knowledge base for Union nature and biodiversity policy and legislation and for assessing and monitoring factors, pressures and responses having an impact on nature and biodiversity

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				300			700			700
	Actual Progress									Final
	19	80	214	323	519	615	695			

Are we on track	On track
Indicator type	Output

Unit of measurement	Number of interventions (projects and other LIFE activities e.g. studies, prizes, etc)
Cut-Off Date	01/12/2020
Data source	Database of LIFE projects (Butler) and database on the actions of the Annual Management Plan
Narrative	One of the objectives of the LIFE programme 2014-2020 is to contribute to improve the quality of the environment and halt and reverse biodiversity loss.
Methodology	Estimated to be 100% of the interventions financed by the 07 02 02 plus the number of "Nature" projects and 1/3 of the operating grants financed under 07 02 03
Link MFF 14-20 / MFF 21-27	This indicator has not been selected as core performance indicator for the evaluation framework of the LIFE Programme 2021-2027
Other methodological comments	Cumulative figures
Full metadata available at this address	
Justification of the trend	The values are on line with the initial estimates

### Specific Objective 3 :Support better environmental governance and information at all levels (Environmental Governance and Information priority area)

#### Indicator 1: Number of stakeholders and citizens participating in awareness raising activities in the framework of LIFE interventions

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0							1 000 000			1 000 000
	Actual Progress									Final

Are we on track	No data
Indicator type	Output
Unit of measurement	Stakeholders or citizens
Cut-Off Date	
Data source	
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The data collected are not available in the form required by this indicator. The external study carried out for the mid term evaluation reported that almost 63 million individuals have visited the projects websites, with an average duration of the visits of about six minutes. A total of almost 271 thousand project documents and communication material has been downloaded by interested users. More than 48 thousand individuals, over 1,400 companies, and over 1,500 NGOs and 1,300 public bodies have been interviewed
Full metadata available at this address	
Justification of the trend	

#### Indicator 2: Number of interventions to support communication, management and dissemination of information in the field of environment and to facilitate knowledge sharing

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
				420			800			800
	Actual Progress									Final
	101	294	362	494	748	833	890			

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of interventions (projects and other LIFE activities e.g. studies, prizes, etc)
Cut-Off Date	01/12/2020
Data source	Database of LIFE projects (Butler) and database on the actions of the Annual Management Plan
Narrative	One of the objectives of the LIFE programme 2014-2020 is to support better environmental and climate governance at all levels, including better involvement of civil society, NGOs and local actors.
Methodology	Although all interventions contain an information, dissemination and awareness-raising element, governance and information interventions, whether funded through grants or procurement, are specifically designed to address this objective and are therefore used as de minimis value for this indicator
Link MFF 14-20 / MFF 21-27	This indicator has not been selected as core performance indicator for the evaluation framework of the LIFE Programme 2021-2027
Other methodological comments	The size of the interventions implies a difference in the values for this indicator.

Full metadata available at this address	
Justification of the trend	The trend is in line with the initial estimates.

### Indicator 3:Percentage of projects promoting and contributing to a more effective compliance with and enforcement of Union environmental law

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				5%			≥ 5%			≥ 5%
	Actual Progress									Final
		39%	42%	49%	57%	63,49%	67,87%			

Are we on track	On track
Indicator type	Output
Unit of measurement	Percentage of ongoing governance and information projects
Cut-Off Date	01/12/2020
Data source	Database of LIFE Key Performance Indicators (KPIs)
Narrative	One of the objective of the LIFE Programme 2014-2020 is to improve the development, implementation and enforcement of EU environmental and climate policy and legislation
Methodology	It is expected that information and governance projects focusing on enforcement and compliance promotion will significantly increase awareness of relevant public bodies and civil society, leading in some projects that progress towards or reach actual improvements. Cumulative figures.
Link MFF 14-20 / MFF 21-27	This indicator has not been selected as core performance indicator for the evaluation framework of the LIFE Programme 2021-2027
Other methodological comments	Although all interventions contain an information, dissemination and awareness-raising element, governance and information interventions, whether funded through grants or procurement, are specifically designed to address this objective and are therefore used as the reference indicator. Cumulative figures.
Full metadata available at this address	
Justification of the trend	The data show an overachievement that could be linked to an initial underestimation of the potential number of projects targeting compliance and enforcement of union environmental law

### Indicator 4:Percentage of increase in the participation of NGOs in consultations on EU environmental policy

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				12%			≥ 12 % increase			≥ 12 % increase
	Actual Progress									Final

Are we on track	No data
Indicator type	Result
Unit of measurement	Percentage of increase..
Cut-Off Date	
Data source	
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The consultations on EU environmental policy not always include data on the type of respondents/organisations. The collection of this kind of information would be extremely cumbersome and not cost effective, given the results could change significantly basing on the subject matter of the consultation. All NGO's funded by operating grants are expected to increase their participation in consultations on EU environmental policy. All the beneficiaries of NGO operating grants interviewed during the mid-term evaluation declared that their participation increased but were not able to provide a percentage. This indicator should be modified.
Full metadata available at this address	
Justification of the trend	

### Specific Objective 4 :Reduction of EU greenhouse gas emissions and development and implementation of EU climate policy and legislation (Climate Change Mitigation priority area)

#### Indicator 1:Number and coverage of climate change mitigation strategies or action plans developed or implemented through LIFE

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									
In 2012 less than 10%							Support dev.and/or impl.of at least 1 climate change mitigation strategy or action plan per MS			Support dev.and/or impl.of at least 1 climate change mitigation strategy or action plan per MS
	Actual Progress									Final

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of climate change mitigation strategies or action plans covering at least one region and supported by LIFE projects
Cut-Off Date	01/12/2020
Data source	Database of LIFE projects (Butler)
Narrative	One of the objective of the LIFE Programme 2014-2020 is to contribute to move towards a resource-efficient, low carbon and climate resilient economy
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator has not been selected as core performance indicator for the evaluation framework of the LIFE Programme 2021-2027
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The data show an overachievement that could be linked to the increasing attention that is being devoted to the need to have climate change mitigation plans and strategies

### Indicator 2: Tons of greenhouse gases reduced by new technologies, systems, methods or instruments and/or other best practice approaches developed and taken up following LIFE examples

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Reduction in tons of greenhouse gasses per project										
	Milestones									2020
				-20%			-20%			Relative reduction in tons of greenhouse gasses per project of at least 20%
	Actual Progress									Final
Percentage of project promoting innovative technologies and/or best practices										
	Milestones									2020
				80%			80%			80%
	Actual Progress									Final
	43%	53%	63%	68%	72,3%	82%				

Are we on track	On track
Indicator type	Result
Unit of measurement	(1) Average percentage of reduction of tons of greenhouse gas emissions for climate mitigation projects. (2) Percentage of the projects funded in climate change mitigation priority area 2014-2018 that promote innovative technologies and/or other best practice solutions for the reduction of greenhouse gas emissions.
Cut-Off Date	01/12/2020
Data source	Database of LIFE Key Performance Indicators (KPIs)
Narrative	One of the objective of the LIFE Programme 2014-2020 is to contribute to move towards a resource-efficient, low carbon and climate resilient economy
Methodology	On the reduction of Green house gasses per project, although currently 173 LIFE projects are expected to achieve a 10 million t/year reduction of greenhouse gases emissions, data on the percentages of reduction per project in comparison to the respective initial baselines are not available.
Link MFF 14-20 / MFF 21-27	This indicator has not been selected as core performance indicator for the evaluation framework of the LIFE Programme 2021-2027

Other methodological comments	
Full metadata available at this address	
Justification of the trend	The data are broadly in line with the initial estimates.

**Indicator 3: Number of interventions to improve the knowledge base for Union climate policy and legislation, and for assessing and monitoring factors, pressures and responses having an impact on the climate (cf. Article 14(b) Regulation 1293/2013)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Integrated projects

Justification of the trend	The trend is in line with the initial estimates.							

## 6. The programme contribution to horizontal policies

### 6.1. Contribution to climate mainstreaming

#### 6.1.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
445,7	430,0	441,3	455,5	471,7	492,1	512,7	3 249,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.1.2. Explanation and justification on the financial contribution

The LIFE-CLIMA programme will provide 100% of its allocated as a contribution to climate mainstreaming, supporting all the range of the needed action for climate mitigation and climate adaptation contributing 100% to the climate mainstreaming target. Furthermore, actions within the LIFE ENV, in particular those targeting the reduction of pollution and emissions, support the communication and promotional activities for the EU Green Deal as well as biodiversity related actions, will also bring benefits to climate mitigation and adaptation. They will thus be contributing to climate mainstreaming at a percentage of 40%, (based on the Rio markers applicable to climate mainstreaming).

#### 6.1.3. Key achievements

Relevant objective/output	Budget 2019	Budget 2020 - estimated	Budget 2020 - achieved
Contributing to the reduction of greenhouse gas emissions	73,1	85,9	75,7

Contributing to increased resilience to climate change	38,0	47,5	48,8
Support better climate governance and information	15,4	17,6	26,5
Contribute to a greener and more resource-efficient economy and to the development and implementation of EU environmental policy and legislation	48,7	50,3	52,4
Halting and reversing the biodiversity loss, including the support of the Natura 2000 network and tackling the degradation of ecosystems	69,2	71,6	81,8
<b>Total</b>	<b>244,4</b>	<b>272,9</b>	<b>285,2</b>

In the case of LIFE the contribution of the different activities to climate mainstreaming has been defined taking into account the expenditures under each budget article.

**Contributing to the reduction of greenhouse gas emissions:** Estimated to be the total operational budget for the priority areas climate change mitigation (budget article 34 02 01);

**Contributing to increased resilience to climate change:** Estimated to be the total operational budget for the priority areas climate change adaptation (budget article 34 02 02);

**Support better climate governance and information:** Estimated to be the total operational budget for the priority area climate governance and information (budget article 34 02 03);

**Contribute to a greener and more resource-efficient economy and to the development and implementation of EU environmental policy and legislation:** Estimated to be 40% of the projects financed under the priority area resource efficiency (budget article 07 02 01 total budget for 2019 is EUR 150,3 million, out of which EUR 121.8 million are devoted to projects. In 2020 the total budget materialised was EUR 151,7 million, out of which EUR 131,1 million were devoted to projects. A 40% of these operations is attributed to Climate mainstreaming.

**Halting and reversing the biodiversity loss, including the support of the Natura 2000 network and tackling the degradation of ecosystems :** Estimated to be 40% of the projects financed under the priority area nature and biodiversity (budget article 07 02 02 – total budget for 2019 is 213,6 million EUR, out of which EUR 173,0 million are devoted to projects. In 2020, final year of the MFF, the total amount materialised was EUR 221,2 million with EUR 204,6 million devoted to projects. A 40% of these operations is attributed to Climate mainstreaming.

The final column provides the implementation on Budget 2020 actually achieved, following the tracking included with the climate markers implemented already in 2020.

The results for the climate mainstreaming for the period 2014-2020 (figures of 2020 are the achieved commitment implementation) can be summarised below:

2014-2017				2018-2019 estimates		2020 – actual	Total
2014	2015	2016	2017	2018	2019	2020	
186,0	199,7	213,5	229,0	247,2	255,2	285,2	<b>1 615,8</b>

(\*)The appropriations for the year 2014 have been reviewed to take account of the transfer to subsequent years of the allocations not used in 2014 (reprogramming exercise carried-out in 2015 in accordance with Article 19 of the Multiannual Financial Framework Regulation).

#### 6.1.4. Performance

The outcomes of the projects from the previous LIFE implemented already or continued to be implemented, are being reported.

## 6.2. Contribution to biodiversity mainstreaming

### 6.2.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
346,3	332,2	343,8	360,2	381,3	409,1	441,1	2 614,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.2.2. Explanation and justification on the financial contribution

It is expected that the LIFE-ENV programme will provide 60% of its resources as a contribution to biodiversity, supporting the implementation of the Natura 200 network and projects targeting biodiversity protection. These actions will contribute 100% to the biodiversity mainstreaming target. Furthermore, the remaining actions of LIFE ENV, in particular those targeting the reduction of pollution and emissions, the support of communication and promotional activities, etc. will also bring benefits to biodiversity, thus contributing to it (at a percentage of 40% similarly to the Rio markers applicable to climate mainstreaming).

### 6.2.3. Key achievements

Relevant objective/output	Budget 2019	Budget 2020	Budget 2020 – achieved
Contribute to a greener and more resource-efficient economy and to the development and implementation of EU environmental policy and legislation	48,7	50,3	60,4
Halting and reversing the biodiversity loss, including the support of the Natura 2000 network and tackling the degradation of ecosystems	213,6	220,8	221,1
Support better environmental governance and information at all levels	7,0	8,0	10,7
Contributing to increased resilience to climate change	14,9	18,6	19,5
<b>Total</b>	<b>284,2</b>	<b>297,7</b>	<b>311,7</b>

In the case of LIFE the contribution of the different activities to biodiversity has been defined taking into account the expenditures under each budget article.

**Contribute to a greener and more resource-efficient economy and to the development and implementation of EU environmental policy and legislation:** Estimated to be 40% of the projects financed under the priority area resource efficiency (budget article 07 02 01 total budget for 2019 was EUR 150,3 million, out of which EUR 121.8 million were devoted to projects. In 2020 the total budget implemented was EUR 151,7 million (out of which EUR 131 million were devoted to projects);

**Halting and reversing the biodiversity loss, including the support of the Natura 2000 network and tackling the degradation of ecosystems:** Estimated to be the 100% total operational budget for the priority area nature and biodiversity (budget article 07 02 02); In 2020 the total budget implemented was EUR 122,2 million (out of which EUR 204,6 million were devoted to projects);

**Support better environmental governance and information at all levels:** Estimated to be 100% of the projects focused on nature and biodiversity financed under the priority area governance and information (budget article 07 02 03 - total budget for 2019 was EUR 48 million, out of which EUR 14 million were devoted to projects, out of which EUR 7 million were for projects focused on nature and biodiversity. In 2020, the final year of the MFF, the total amount allocated was EUR 53,6 million, out of which EUR 14,7 million were devoted to projects. Some EUR 10,7 million were devoted to nature and biodiversity, considering an equal split of this line between circular economy and biodiversity actions and then a 40% marker;

**Contributing to increased resilience to climate change :** Estimated to be 40% of the total operational budget for the priority areas climate change adaptation devoted to projects (budget article 34 02 02 - total budget for 2019 is EUR 41,5 million, out of which EUR 37,3 million are devoted to projects. The total budget for 2020, the final year of the MFF, was EUR 48,8 million (out of which EUR 47,8 million were devoted to projects). A 40% of these operations is attributed to Biodiversity mainstreaming.

The final column provides the implementation on Budget 2020 actually achieved, following the tracking included with the climate markers implemented already in 2020.

The results for the biodiversity mainstreaming for the period 2014-2020 (figures of 2020 are the achieved commitment implementation) can be summarised below:

2014-2017				2018-2019 estimates		2020 - actual	Total
2014	2015	2016	2017	2018	2019	2020	
195,1	217,1	227,6	242,8	265,6	282,6	311,7	1 742,5

(\*)The appropriations for the year 2014 have been reviewed to take account of the transfer to subsequent years of the allocations not used in 2014 (reprogramming exercise carried-out in 2015 in accordance with Article 19 of the Multiannual Financial Framework Regulation).

#### 6.2.4. Performance

The outcomes of the projects from the previous LIFE implemented already or continued to be implemented, are being reported.

### 6.3. Contribution to clean air financing

#### 6.3.1. Tracking and estimates

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### 6.3.2. Explanation and justification on the financial contribution

The table below provides a view of the expected contribution of the LIFE Programme to air quality and indicates the way in which it is calculated:

Action	Marker	LIFE Contribution (EUR)
LIFE projects focused on clean air	100%	84.242.292,00

LIFE projects contributing to clean air as a secondary benefit	40%	20.768.463,20
Total		105.010.755,20

The methodology for calculating air quality spending was defined at the beginning of 2020 based on Rio markers, with the intention to capture the contribution of the programme to “clean air”, thus encompassing actions towards increasing air quality and reducing air pollution).

The financing for air quality has to be assessed at project level as follows:

- LIFE spending for projects focused on clean air (100 %);
- LIFE expenditures for projects significantly contributing to clean air as secondary benefit (40 %) and
- other LIFE expenditures (0 %).

This is the second year that the contribution of the LIFE Programme to air quality is required, however there are limited data available on all the on-going 2014-2018 projects. In particular, data on projects focused on clean air are available for the 2014-2018 projects and data on projects having clean air as secondary benefit (40%) are not available for 2018 and cover only two projects in 2017.

As a consequence, the contribution of the LIFE programme to clean air which appears in the table is underestimated.

## 6.4. Contribution to gender equality

### 6.4.1. Tracking and estimates

2021 estimates	2022-2027 programming					Total	
2021	2022	2023	2024	2025	2026	2027	
0,0	0,0						0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

### 6.4.2. Key achievements and performance

Gender mainstreaming in LIFE has been developed at project level. The tracking methodology remained stable compared with previous years and is largely based on an existing OECD methodology (‘Rio markers’), adapted to provide for quantified financial data.

A gender dimension is taken into account in some specific areas of interventions of the LIFE Programme to identify how men and women relate to the environment in a different way, i.e. how the effects of hazardous chemicals and waste affect men and women. However, the LIFE programme does not include any specific gender equality objective.

In terms of action, in line with the Stockholm, Basel and Rotterdam Conventions, a gender dimension is taken into account to identify and highlight the different impacts of hazardous chemicals and wastes on men and women and to promote the consideration of gender issues in hazardous chemicals and waste management at the national and regional levels.

The contribution of the LIFE programme to the gender equality is not significant, given the related activities are components of multidimensional projects.

## 6.5. Contribution to the sustainable development goals

### 6.5.1. Goals

#### *SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture*

The LIFE programme contributes to the **SDG 2** because it supports the transition towards sustainable food systems along the whole value chain and encourages an environmentally friendly agriculture, in view of the protection, preservation and improvement in the quality of water, air and soil and the protection of bio-diversity.

A preliminary analysis of the projects financed through LIFE in the period 2014-2018 has identified nearly 140 projects relevant to agriculture and food systems. The majority of them relate to sustainable agricultural production. Other areas covered are food processing and food services, sustainable food consumption and reduced food loss and waste.

To improve resource efficiency in food production and reduce impact on water resources, LIFE is also promoting sustainable nutrients management in agriculture.

The project LIFE PRIORAT+MONTSANT demonstrated sustainable production techniques centred on increasing efficiency in resource use in winemaking, in particular the use of water, fertilizers and chemical biocides/pesticides in vineyards. 74 wineries and

31 winegrowers in the Priorat County (Spain) participated in the project, corresponding to an overall area of 1217 ha. Some project results include: a reduction in water consumption for irrigation of between 22% and 29% in the vineyards that followed strictly the project recommendations; 100% reduction in the use of chemical fertilisers in the targeted estates (nearly 120 ha) substituting pesticide with pheromone traps; the definition of a set of best practices regarding energy consumption and water use adapted to several types of wineries. The project also contributed to increasing consumer awareness on the environmental footprint of wine and in this context developed a tool to calculate the EU Product Environmental Footprint category rules for wine (PEFcrWine).

Another project, LIFE AMMONIA TRAPPING, worked on reducing ammonia emissions from livestock wastes (poultry litter and pig slurry) and from wastes treatment processes such as anaerobic digestion and composting, by using the gas permeable membrane technology that will recover the ammonia in the form of a nitrogen fertilizer. Project results so far are positive with a reduction of 51% of ammonia emissions at the level of the demonstrative pig farm.

Moreover, the National Emission Ceilings Directive for air pollutants, the Member States' targets to reduce Greenhouse Gas emissions as well as the proposal to integrate the land use sector into the EU 2030 Climate and Energy Framework are aimed at incentivising Member States to take additional sustainable action in their agriculture sectors.

As an example, project LIFE AGRI ADAPT demonstrated how three of the most important farming systems in the EU (arable, livestock and permanent crops) can become more climate-resilient through the implementation of feasible and sustainable adaptation measures. The project was implemented with partners in each of the four EU Climate Risk Regions: Southern, Western, Central and Northern Europe. Different adaptation measures were tested on 126 pilot farms across Europe and the conclusions were used to elaborate general proposals for key farming systems with positive crosscutting environmental benefits. In addition, the project developed 30 adaptation action plans for each of the four climatic regions, in Spain, France, Germany and Estonia.

Many LIFE projects also work on the interlink between nature protection and sustainable agriculture production, as much of the now threatened and protected habitats and species in Europe depend on the continuation of extensive and small-scale farming practices. Abandonment of such traditional practices is one of the main threats to the habitat types and species associated with them. Important conservation activities in these areas include restoring habitats, testing agri-environment measures, and introducing dedicated land use techniques such as extensive mowing and grazing regimes. LIFE projects, the Integrated Projects in particular, are a lever for mobilising further funding to ensure continued biodiversity-friendly management of agricultural landscapes.

For instance, the Integrated project LIFE NATUREMAN - The Farmer as a Manager of Nature: aiming at a favourable conservation status for Natura 2000 sites by making nature management a sound branch of farming, is focusing on preserving and protecting alkaline fens, petrifying springs and grassland in 11 Natura 2000 sites in Himmerland and Midtjylland. It will do this by purposefully working to make it economically interesting for agriculture to have natural areas with grazing or harvesting of biomass in the operation, thereby developing nature management a sound branch of farming. The initiatives in the project are determined in close cooperation between the Ministry of the Environment and Food, eight municipalities and the farming organizations.

Furthermore, LIFE is activating in reducing food waste. For example, the FLAW4LIFE project aimed to change food consumption habits and create an alternative market for 'ugly' (or not meeting the market distribution standard and less than perfect-looking) fruit and vegetables. It aimed to bring about the equal marketing of all quality fruit and vegetables regardless of their size, colour and shape. The project achieved this goal by replicating nationally an innovative methodology (called Fruta Feia or Ugly Fruit), which had been tested initially in Lisbon. Fruta Feia's methodology consist of buying weekly from local producers the small, big or misshaped products that they cannot sell in the regular market and then selling these products to Fruta Feia's associated consumers, who pick them up at the end of the day at fixed delivery points. During its implementation, the project avoided approximately 460 tonnes of waste annually. It resulted in 14.6 tonnes less fruit and vegetable waste per week (from a goal of 11.9 tonnes per week), increased farm efficiencies – saving 16 054 m<sup>3</sup> of water/week, 20 975 kWh/week of energy and 16 ha of arable soil – and reduced GHG emissions from transportation and decomposition by 13,021 kg CO<sub>2</sub> eq/week. First tested in Lisbon, the deliveries were rolled out to other cities (Porto, Gaia, Matosinhos, Braga, Amadora and Almada) and all those environmental benefits are sustainably maintained.

LIFE also indirectly contributes to promoting sustainable and organic agriculture by providing financial supports to the activities of non-governmental organizations active in this area, such as the International Federation of Organic Agriculture Movements EU Group (IFOAM EU Group) and Slow Food.

### ***SDG 3 Ensure healthy lives and promote well-being for all at all ages***

On **SDG 3**, taking into account that environmental stressors having significant impacts on health, LIFE complements Member States' action through legislation and other initiatives on environment related health problems, which are linked to air quality, industrial emissions, chemicals, waste and water.

Examples include the EU Biodiversity Strategy to 2030 or the rules on the sustainable use of pesticides which underline the link with health policy aspects.

The EU Chemicals Policy also covers regulation on persistent organic pollutants; trade in hazardous chemicals; fluorinated gases; and hazardous waste. The so-called "REACH" framework aims to improve the protection of human health and the environment from the risks that can be posed by chemicals, while enhancing the competitiveness of the EU chemicals industry.

LIFE is funding a number of projects working on improving air quality and specific air pollutants and to reduce the risks from chemicals.

For example, the Polish Integrated Project LIFE-IP MAŁOPOLSKA aims at the full implementation of the Małopolska Air Quality Plan (MAQP). The project estimates that through its actions it will reduce PM10 and PM2.5 emissions by about 25 000 kg/day and 21 000 kg/day respectively. It is worth noting that the project has a transnational approach assisting cooperation within the hotspot (southern Poland, Slovakia and the Czech Republic) by joint activities as well as exchange of experiences in the area of air quality improvement. In addition to the IP budget itself, the project will facilitate the coordinated use of €798 million complementary funding from the European Agricultural Fund for Rural Development (EAFRD), the ERDF, National and Regional Fund for Environmental Protection and Water Management, and national and private fund, as applicable.

The project LIFE Fit for REACH is working on the reduction of emissions by substitution of hazardous chemicals and resource efficiency. The project offers Baltic SMEs a full “chemicals management package”, including proposals on how to implement substitution as a core action to reduce environmental impacts and support in communicating this good environmental performance to the society. Amongst other activities, LIFE Fit for REACH will test and implement a set of complex measures in six companies which shall substitute some of the identified hazardous substances or increase the efficiency of the resource use and lead to reduction of emissions of these substances. It will also implement “low effort – low costs” measures to substitute hazardous substances or to introduce good chemicals management practices in additional 50-80 SMEs. The project is also helping Latvia’s largest producer of household chemicals to get “greener”.

### ***SDG 6 Ensure availability and sustainable management of water and sanitation for all***

The EU water policy is a cornerstone of the LIFE Programme and provides for a framework to address water protection and achieve good ecological status for inland surface waters, transitional waters, coastal waters and groundwater. It comprises regulation including on drinking water, bathing water and urban wastewater, prevention of pollution caused by nitrates, industrial emissions, pesticides and persistent organic pollutants.

The transition to a circular economy should also lead to greater resource efficiency for example by improving the conditions for water re-use in several sectors.

LIFE projects are working on sustainable management of water bodies. In particular, LIFE projects are reducing the water bodies affected by water pressures and risks. This is done through a variety of actions, like reducing pollution of aquatic bodies from contaminated water/fluids, removal of barriers within rivers, implementation of River Basin Management Plans, etc.

As a first example, LIFE Impetus demonstrated technical solutions for improving the removal of pharmaceuticals (PhCs) in urban wastewater treatment plants (WWTPs) that use conventional activated sludge (CAS) treatment. The project team performed extensive monitoring and field testing in two Portuguese CAS-WWTPs. Up to 908 wastewater (and 72 sludge) samples were analysed for 24 PhCs/hormones found in wastewater. The project also demonstrated improved control of PhCs in conventional wastewater treatment using an innovative technical solution based on powdered activated carbon (PAC) from renewable materials. This solution resulted in small extra cost investment, energy consumption or indirect greenhouse gas (GHG) emissions. In fact, costs of PAC addition to bioreactor were found to be lower than those of technology-intensive solutions particularly for low plant capacity. In turn, by maximising energy efficiency and improving treated water quality, cost savings potential from CAS-operation improvement were identified.

As another example, LIFE ECORKWASTE demonstrated the possible uses of a cork waste valorisation system. The cork was used as absorbent material in wetlands, for the elimination of organic compounds in winery wastewater treatment systems and as a substrate for energy valorisation in a gasification process. Through this improved wastewater treatment in long terms, the project aimed to alleviate the pressure on 850 km<sup>2</sup> of wetlands in the Llobregat Basin). The reduction in pressure included removal of several emerging pollutants at high rate (85% of phenol and 80% of hydrogen-sulphide) from the winery wastewater within the project duration (with initial values measured at 60 mg/year and 102 mg/year, respectively).

The German Integrated project Living River Lahn aims at achieving a good ecological status/potential of surface waters in the catchment area of the Lahn river in Germany. Among other activities, this project will identify sources of pollution and improve the water quality of the Lahn and its tributaries; prepare and implement measures for linear ecological connectivity for barrages and weirs, investigate the options for the creation of retention areas along the river and improved ecosystem services; re-establish natural water regulation wherever possible; and elaborate integrated pilot strategies and implementation plans on how to organise and finance inland waterways in order to achieve ‘good ecological status/potential’. The solutions identified by the project should be transferred to several other rivers in Germany, facing similar issues. In addition to the project budget itself, the project will facilitate the coordinated use of around €27 million of complementary funding from the European Agricultural Fund for Rural Development (EAFRD) and national funds.

### ***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

Through the new [Circular Economy Action Plan](#), LIFE addresses economic and environmental concerns by maximizing efficiency in the use of resources, and thus contributes to **SDG 8**. On 10 November 2020, the Commission adopted the first Action Plan’s

milestone: a proposal for a Regulation to modernise EU legislation on batteries. The aim is that batteries placed on the EU market are sustainable, circular, high-performing and safe all along their entire life cycle, that they are collected, repurposed and recycled, becoming a true source of valuable raw materials.

Moreover, the proposal for the 8<sup>th</sup> Environment Action Programme confirms that EU prosperity and healthy environment stem from an innovative, circular economy where nothing is wasted and where natural resources are managed in a sustainable way, and biodiversity is protected, valued and restored.

An example of how LIFE contributed to tackling marine litter pollution while promoting additional income for fishermen/women is the project LIFE LEMA. The project provided local administrations with a methodological guide and prediction tools for the efficient management of floating marine litter in the southeast waters of the Bay of Biscay. The project established statistical models to predict the movement and accumulation points of floating marine litter; developed a computer tool to integrate data on floating marine litter collection, detection and prediction methods; designed a management plan to prevent and reduce floating marine litter; and used innovative technologies to detect floating marine litter. Through its work, the project demonstrated marine litter collection actions that could provide fishermen/women with an additional source of income while reducing marine pollution. Quantitatively, the project achieved the collection of more than 40 tons of floating marine litter and another 40 tons of floating wood.

In addition, LIFE PSLOOP is aiming at enabling the recycling of construction waste containing polystyrene. The project's process for producing recycled polystyrene material is much more energy and resource efficient than the production of polystyrene from virgin raw materials. The project will construct a recycling plant to demonstrate this process on an industrial scale, aiming at 3000 tons/year of recycled polystyrene. In addition, the project aims to create a relevant value chain with recycling and collection companies by demonstrating a standard collection and pre-treatment system.

Another example is LIFE ECO TILES that managed to produce a new generation of roof tiles products made almost entirely (up to 70%) with recycled materials (Construction & Demolition Waste (CDW) and glass from urban and industrial waste). Three versions of tiles (5-10% of tile market) with up to 77% content of recycled CDW and glass waste, collected from exclusively local sources, through a network specifically created by the beneficiaries, were delivered. The project demonstrated up to 20% reduction in energy consumption, avoiding landfilling of CDW (31.25 kg per m<sup>2</sup> of tiles) and glass waste (between 33.10 and 34.56 kg per m<sup>2</sup> of tiles), and satisfactory quality and price results. Demonstrating sustainability, customers already ordered 2000 m<sup>2</sup> of tiles (recycling of about 60 t of CDW + 60 t of waste glass).

#### ***SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation***

The 2030 Climate and Energy Policy Framework strives for a competitive low-carbon and climate-resilient economy and the EU Strategy on Adaptation to Climate Change identifies resilient infrastructure as a priority action area under the strategic objective of mainstreaming adaptation measures.

The circular economy fosters eco-innovation and sustainability objectives.

LIFE is working on improving the climate resilience of infrastructures. In particular, more than 20 LIFE projects are aiming to increase the number of infrastructures targeted for climate resilience. Such infrastructures may include public, private and industrial buildings or services situated in urban or rural environments. These could range from large power generation plants, to water services, households or agricultural farms.

As an example, the LIFE DERRIS project successfully tested an innovative model of public-private partnership between insurers, public administrations and SMEs to increase urban resilience to climate change, including through risk reduction tools for SMEs. Such tools included a Climate Risk Assessment and Management Tool to help enterprises to identify adaptation measures that they should implement to enhance resilience, as well as company climate adaptation action plans that outlined numerous specific steps the participating companies could take to cope with floods, drought, high temperatures, high winds and other extreme weather events. During the project, 156 companies produced such plans and this number is expected to increase to 550 five years after the project-end.

#### ***SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable***

LIFE finances difference actions toward the improvement of the urban environment, such as

The Green City Accord is a movement of European mayors committed to making cities cleaner and healthier. It aims to improve the quality of life of all Europeans, and accelerate the implementation of relevant EU environmental laws. By signing the Accord, cities commit to addressing five areas of environmental management: air, water, nature and biodiversity, circular economy and waste, and noise.

The European Green Capital and the green Leaf award to reward cities, which are making efforts to improve the urban environment and move towards healthier and sustainable living areas. The award enables cities to inspire each other and share examples of good practices in situ.

Other environmental and climate policies and legislation are vital for sustainable urban development such as Noise Legislation, the EU's Biodiversity and Sustainable Building Strategies, Drinking Water and Urban Wastewater Treatment, the framework on energy performance of building, the strengthen of the resilience of urban settings through climate related risks.

Urban energy consumption generates about three quarters of global carbon emissions. Therefore, cities play a crucial role in terms of energy and climate policy (the Clean Air Package, Air Quality, etc.). The EU Covenant of Mayors for Climate and Energy is a bottom-up local and regional action for tackling in an integrated manner climate change mitigation and adaptation, and access to secure, sustainable and affordable energy.

Moreover, the circular economy package contributes to this SDG under many aspects, such as by addressing sustainable waste sorting and recycling and by shifting energy consumption onto more sustainable pathways.

LIFE is funding projects with direct impact on this topic. For example, LIFE-SOUNDLESS aimed at a sustainable and healthy future for urban areas through the demonstration of the effectiveness of innovative noise-reducing asphalt mixes using recycled waste materials, to mitigate noise pollution. The project also encouraged public bodies to integrate environmental factors into their calls for tender in street construction. By recycling and re-using waste from different industries, the project also helped with implementing waste management objectives. Concretely, the project achieved a reduction of noise levels by 6dB, as compared to the original situation, and 3dB, as compared to the reference asphalt mixture AC 16 surf.

Other examples include the Polish Integrated Project LIFE-IP MAŁOPOLSKA and LIFE IMPETUS mentioned above in SDG3 and SDG6 respectively. They also include the Maltese Integrated Project LIFE-IP-RBMP-Malta, which is working on the implementation of the 2<sup>nd</sup> River Basin Management Plan in Malta. The project aims at reducing domestic water demand by ~ 5% resulting in estimated impact of 3.5 million m<sup>3</sup> of water savings per year.

### ***SDG 12 Ensure sustainable consumption and production patterns***

In view of reaching **SDG 12**, resource efficiency and circular economy actions aim to decouple economic growth from resource use and environmental degradation. By covering the whole cycle from production and consumption to waste management, they are at the core of the LIFE actions under the priority areas Environment and Resource Efficiency.

Moreover, the 7<sup>th</sup> Environment Action programme had as a key objective to turn the Union into a resource-efficient, green, and competitive low-carbon economy. Another related key objective was to safeguard EU citizens from environment-related pressures and risks to health and wellbeing. These objectives have been taken up in the 8<sup>th</sup> EAP, currently discussed with the Council and the European Parliament.

Several LIFE projects are working on improving Waste Management.

The LIFE M3P project, for example, aimed to promote and develop industrial symbiosis by connecting SMEs to foster alternative uses of their waste streams. The objective was to close the loop by identifying and characterising industrial waste, and turning it into a resource (secondary raw material) for another industry. This was achieved through the development and use of a digital online platform – M3P (Material Match Making Platform) – at the European level. LIFE M3P demonstrated the feasibility of a more efficient use of raw materials, by the systematic application of eco-design techniques to facilitate the recovery and re-use of parts that would previously have become waste. Through the above activities, during its implementation, the project enabled a waste reduction of about 60 000 tons (10% reduction within the context of the project).

Another example is the French Integrated Project LIFE SMART WASTE supporting the implementation of a regional waste management plan. In particular the plan aims to reduce the production of household and similar waste by 10%. The project estimates an improvement of waste management by 320 thousand tonnes per year. In addition, by reinforcing the overall waste management framework, the project enhance businesses opportunities toward circularity.

### ***SDG 13 Take urgent action to combat climate change and its impacts***

Climate change mitigation and climate change adaptation are two priority areas of the LIFE programme. The 2015 Paris Agreement is a historically significant landmark in the global fight against climate change; a success for the world and a confirmation of the EU's path to a low-carbon and climate resilient economy. With the support of LIFE, ambitious 2030 targets have been set up to reduce greenhouse gas emissions, improve energy efficiency and increase the share of renewable energy. Now, the Commission's proposal for the first European Climate Law aims to write into law the goal set out in the European Green Deal – for Europe's economy and society to become climate-neutral by 2050. This means achieving net zero greenhouse gas emissions for EU countries as a whole, mainly by cutting emissions, investing in green technologies and protecting the natural environment.

The EU Emissions Trading System (ETS) is another key tool for cutting greenhouse gas emissions from large-scale facilities in the power and industry sectors, as well as the aviation sector.

The EU Strategy on Adaptation to Climate Change provides a framework and mechanisms to improve the preparedness of the EU for current and future impacts of climate change, thus contributing to a more climate-resilient society.

LIFE projects are aiming at reducing CO<sub>2</sub> emissions and promote renewable energy production.

As a practical example, LIFE METHAmorphosis demonstrated, at industrial-scale, two innovative waste treatment systems, one in an urban waste treatment plant, and the other in an agro-industrial waste treatment plants, to produce upgraded high quality bio-methane. The participating automotive sector tested the biofuel in passenger vehicles and heavy duty vehicles during thousands of kilometres driving. The car manufacturer SEAT aims to use the results for rolling out their bio-methane strategy, which has the potential of saving millions of tons of CO<sub>2</sub> emissions in the transport sector. The project estimates that 5 years after its end the two

prototypes could produce over 176 million kWh renewable biomass energy annually (translated to electricity, this value is close to the annual electricity consumption of 50 000 homes).

On a larger scale, the Belgian Integrated project BE-REEL! aims to create the conditions for the full implementation of the strategic housing renovation plans of Flanders and Wallonia regions in Belgium. The demonstration and pilot actions are estimated to lead to more than 8000 renovated dwellings. The direct GHG emission reductions due to all the project actions will amount to over 18 600 tonnes of CO<sub>2</sub> per year. In the long run, the goal of the strategies is to renovate all existing housing, achieving a reduction of 75-80% of CO<sub>2</sub> emissions and energy use by 2050 and to influence the low-emission strategies of all cities and communities in Flanders and Wallonia, as well as the Brussels Capital Region.

Nature is a vital ally in the fight against climate change. Restoring wetlands, peatlands and coastal ecosystems, or sustainably managing marine areas, forests, grasslands and agricultural soils, are essential for emission reduction and climate adaptation. Since its creation in 1992, the LIFE Programme financed hundreds of projects restoring natural habitats. For example LIFE has played a very important role for restoration peatlands in Europe. So far 363 projects to conserve and restore peatlands have been co-financed by LIFE, targeting the 13 habitat types of raised bogs, mires, fens and bog woodland. 28% of these projects focus primarily on peatlands, while others include peatland restoration and associated habitats as part of a larger landscape approach. Commonly applied restoration actions focus on rewetting by blocking outflow in drainage ditches, installing bunds, removing dikes and fragmenting infrastructure. Other actions include halting the pumping in polders, top-spoil removal and the elimination of woodland to reduce trees competing with peat forming vegetation. More information is available here; <https://op.europa.eu/en/publication-detail/-/publication/a3c16594-b42d-11ea-bb7a-01aa75ed71a1/language-en>

Another example of LIFE project demonstrating an approach for reduction of GHG in dairy production is LIFE Carbon Dairy - The main objective of the LIFE Carbon Dairy project was to promote a milk production approach that is capable of reducing GHG emissions by 20% over 10 years. To achieve this goal, the project aimed to: provide livestock farmers with tools to understand the issue so they can modify their technical choices to reduce GHG emissions and preserve carbon stored in soils; promote innovative livestock farming systems and associated practices; launch a national campaign to demonstrate to livestock farmers and agricultural advisers the feasibility of a 'climate roadmap' for milk production; and develop this 'roadmap' for milk production with carbon action plans adapted to each production system and a relevant partnership strategy implemented at the national level. See: [https://ec.europa.eu/environment/life/project/Projects/index.cfm?fuseaction=search.dspPage&n\\_proj\\_id=4699](https://ec.europa.eu/environment/life/project/Projects/index.cfm?fuseaction=search.dspPage&n_proj_id=4699)

#### ***SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development***

The EU's biodiversity strategy for 2030 is a comprehensive, ambitious and long-term plan to protect nature and reverse the degradation of ecosystems. The strategy contains specific commitments and actions to be delivered by 2030. One of this is the establishment a larger EU-wide network of protected areas on land and at sea.

At the same time, the Commission, with LIFE support, is working to a proposal for legally binding EU nature restoration targets. Restoring EU's ecosystems will help to increase biodiversity, mitigate and adapt to climate change, and prevent and reduce the impacts of natural disasters.

Moreover, to tackle marine litter and pollution, LIFE supports a wide set of instruments, including regulation on waste management and prevention, port reception facilities for ship generated waste and cargo residues.

LIFE is funding large Integrated Projects within the marine environment. One such example is the Spanish Integrated Project LIFE-IP INTEMARES working on an integrated, innovative and participatory management for Natura 2000 network in the Marine Environment. Its objective is to implement the Priority Action Framework for Natura 2000 in the Spanish marine Natura 2000 network and ensure its effective management. Through this approach, the project expects to ensure the maintenance or restoration of the favourable conservation status of priority habitats and species. To achieve this the project will improve critical knowledge for the management of the Natura 2000 network activities; improve monitoring of habitat types and species listed in the annexes of the Nature Directives for a better assessment of their conservation status; and provide information, training and adequate awareness to all stakeholders for achieving conservation targets in Natura 2000 sites. Furthermore, the project will promote sustainable tourism and employment related to the Natura 2000 network. It is worth noting that the project estimates that it will facilitate the coordinated use of €22 million complementary funding from EMFF, ESF and national funds.

Another example is the French Integrated Project LIFE IP - MarHa that aims to achieve or maintain a favourable conservation status for French marine habitats listed in Annex I of the Habitats Directive. To achieve this, the integrated project will ensure effective and transparent management of the sites; coordinated implementation of the Habitats Directive, Marine Strategy Framework Directive and Water Framework Directive, while incorporating the connection between land and sea; improved capacities and tools for implementing Natura 2000 policy; the integration of marine users and activities; and assessment of the conservation status of marine habitats on a biogeographical scale and monitoring devices for adaptive management. The project should also strive to achieve greater recognition by society of the marine Natura 2000 initiative as well as reinforcement of international cooperation.

#### ***SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss***

The protection, restoration, conservation and sustainable use of terrestrial, inland-water and mountain ecosystems represent a large share of the projects financed by the LIFE programme in particular in connection to the Natura 2000 network and the implementation of the Birds and Habitats Directives, as well as the EU Biodiversity Strategy and the EU Forest Strategy.

A study carried out in 2020 entitled “[Bringing nature back through LIFE](#)” presented the results and impacts of LIFE projects since the creation of the programme (1992) for the improvement of conservation status species and habitat groups, as well as the creation and management of the EU Natura 2000 network and other biodiversity aspects. Forest habitats are represented in 40% of the sampled projects, followed closely by grasslands with 35%. One quarter of these projects targets freshwater habitats (27%) and bogs, mires and fens (23%). Coastal and halophytic habitats are included in one out of seven projects (16%). Heathlands, sclerophyllous scrub and dunes are less commonly covered (12-13%). Rocky habitats are included in only 9% of all sampled projects.

The significant support provided to forest ecosystems reflects also the relative importance of this habitat group in the Natura 2000 network. In fact, over a third of the habitat types covered by the Habitats Directive are forests, making up 491,900 km<sup>2</sup> of area. Some 27% of the total forest area in the EU-28 is part of the Natura 2000 network. An example of project focusing on forest ecosystems is LIFEFORHAB that aims to improve the conservation status, and to increase the habitat coverage, of seven priority forest habitats listed in Annex I of the Habitats Directive, within six target Bulgarian Natura 2000 network sites, using technology that has not been used before in Bulgaria. To improve the forest conditions and their conservation status the project works on the gene pool of priority forest species and habitats. It identifies sources of propagating material from forest Natura 2000 areas throughout Bulgaria and establishes a high capacity operational production line for containerised seedlings. By the end of the project in 2021 more than 7 tonnes of seeds will be collected and processed from 50 forest species representative of 14 priority habitats, more than 860,000 containerised seedlings from priority forest species produced and more than 104 ha of priority forest habitats restored in the targeted Natura 2000 sites.

Another project is LIFE ALNUS that aims at a better understanding of conservation issues at the regional level, as well as improvement in management planning and habitat conservation in 24 SACs and 950 linear km of river areas – 485 km within Natura 2000 sites and 465 km along interconnecting water courses in three river basins in Catalonia. A visible improvement of the conservation status should be achieved in the mid-term through the improvement of the legal and physical protection of alluvial forests on more than 2,200 ha, through improvements at existing sites (some 130 ha), a proposed new Natura 2000 site (980 ha), and additional protection by supplementary legal action (about 1,100 ha). Far reaching direct conservation actions on the target alluvial forest habitat are implemented on 480 ha, including forestry measures and regulation of river use (280 ha), the creation of more than 300 small core habitat areas from which plants can expand to recover restored habitat areas, and the development of four demonstration sites (total 162 ha) to test possible solutions to the most complex problems threatening this habitat type.

The LIFE Programme also holds a rich portfolio of freshwater projects. The projects frequently target measures to restore hydromorphological functions, improve in-stream habitats, remove barriers, establish riparian zones, control invasive species and address pollution from land-based sources. In this area there are also a number of LIFE Integrated Projects.

- LIFE-IP Waters of Life - Protect and restore high ecological status waterbodies in Ireland
- LIFE IP CleanEST - Development of an integrated water management and its modern tools in Estonia - strategic choices for future
- GRIP on LIFE-IP - Using functional water & wetland ecosystems and their services as a model for improving green infrastructure and implementing PAF in Sweden
- FRESHABIT - Towards integrated management of freshwater Nature 2000 sites and habitats

For Wildlife species, on-going projects are expected to lead to an increase in the population of the species and/or to lead to increase in their site area or length. Originally, the LIFE Programme only funded projects targeting species that are listed in the annexes of the Habitats and Birds Directives. However, the 2014-2020 LIFE Programme went further and has opened its scope to species and habitats listed as threatened in the European Red Lists. LIFE BEETLES (LIFE18 NAT/PT/000864) is an example of project that targets three species endemic to the Azores classed as critically endangered on the IUCN Red list.

As an example, LIFE for Safe Flight aims to reinforce the red-breasted goose (*Branta ruficollis*) population globally by mitigating threats, including legal acts against hunting/poaching and removing power lines; raising awareness about the species and the threats it faces; as well as establishing monitoring schemes to protect it. Based on the above, the project is expected to increase the population of the red-breasted goose by about 15 000 individuals (27% increase against the baseline situation at the project's start) and increase its area of habitat by about 7 000 ha (1% increase).

LIFE also supports activities aimed at preventing and reducing wildlife crime across the EU. As referred in the publication ‘LIFE & wildlife crime’ until 2017, the Programme has invested more than €70 million in 43 LIFE projects that have targeted illegal activities connected to wildlife. Key achievements of implementing such LIFE activities include:

- monitoring and data collection with new satellite tagging technologies;
- database of incidents (potential to become pan-European);
- anti-poison detection and prevention patrols in almost all EU Mediterranean countries;
- anti-poison networks involving hunters and shepherds etc.;

- working with technology and people, often cross-border;
- getting the media involved – making people aware that wildlife crime is a crime;
- awareness-raising campaigns across MS;
- specialised awareness raising and training for statutory authorities, police, customs, public prosecutors, environmental lawyers and judges;
- strong and clear penalties, more routinely enforced.

An example is the project LIFE FOR DANUBE STURGEONS - Sustainable protection of lower Danube sturgeons by preventing and counteracting poaching and illegal wildlife trade, that targets sturgeons, the most threatened fish species worldwide. Of the five surviving sturgeon species in the Danube basin, the IUCN Red List categorises four as critically endangered and one as vulnerable. Population trends for all five are decreasing. Within the EU, the lower Danube and north-western Black Sea area is the only region still holding viable, naturally-reproducing sturgeon populations. The overall objective of the project is the survival and recovery of sturgeons in the entire lower Danube region and their long-term protection against illegal fishing and trade.

Another area covered by the LIFE Programme is Invasive Alien Species (IAS). Between 2014 and 2017 75 projects either exclusively targeted invasive alien species, or included actions to tackle IAS that were relevant to achieving the main conservation objectives of the project. In accordance with the EU IAS Regulation, LIFE projects have tackled eradication and management of IAS but have been increasingly including actions for the development of early warning and rapid response systems (EWRR), the identification of IAS entry or introduction pathways, and the active participation of stakeholders and citizen scientists in the identification and control of IAS.

An example of project dealing with IAS, LIFE ASAP implemented at the national scale in Italy, focused on prevention and early detection. It targeted stakeholders from the public sector, the commercial sector, NGOs, science, and private citizens. It offered an extensive training, capacity building, information and awareness raising campaign, attracting over 160 public bodies to the project. More than 500 technical personnel of public bodies, multipliers of the project, were trained. To better manage the pathways of intentional introduction and promote native species as alternatives to IAS, the project developed Codes of conduct for stakeholders (e.g. trade and use of flora and fauna, fishermen, hunters, pet shops, etc.). The formal acceptance of the Codes of Conduct by 36 botanic gardens and the Italian Botanic Society is an important result. Also, a brochure on gardening alternative species was produced. LIFE ASAP supported the adaptation of Italian legislation, including a Black list of IAS of Italian concern, to implement the EU IAS Regulation. In order to facilitate early detection and rapid response, a citizen science campaign was organised and a Smart-App was developed, so that the citizen scientists and trained public officials use it to report on the presence of IAS in Italy. The project is a reference for all issues related to the invasive species in Italy.

Finally, LIFE also contributes to the integration of ecosystem and biodiversity values into national and local planning and accounts. For instance, as part of the Integrated Project LIFE-IP 4 NATURA that will implement concrete conservation measures and apply legal instruments for habitats and species of community interest that are facing significant pressures and are threatened both on a national and multiregional scale in Greece, will implement a country-wide ecosystem services assessment and will develop natural capital accounting methodology. This will be applied in four case-study areas in each of the four regions participating in the project.

## 6.5.2. Key achievements and performance

### *SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture*

The LIFE programme supports this **SDG 2** because it encourages an environmentally friendly agriculture, in view of the protection, preservation and improvement in the quality of water, air and soil and the protection of bio-diversity.

To improve resource efficiency in food production and reduce impact on water resources, LIFE is also promoting sustainable nutrients management in agriculture.

Moreover, the National Emission Ceilings Directive for air pollutants, the Member States' targets to reduce Greenhouse Gas emissions as well as the proposal to integrate the land use sector into the EU 2030 Climate and Energy Framework are aimed at incentivising Member States to take additional sustainable action in their agriculture sectors.

As an example, project LIFE AGRI ADAPT aims to increase the resilience of EU agriculture to climate change by demonstrating sustainable best-practice adaptation measures with an ecosystem-based approach at farm level. The overall objective of the AgriAdapt project is to demonstrate that three of the most important farming systems in the EU (livestock, arable and permanent crops) will become more climate-resilient through the implementation of feasible and sustainable adaptation measures which also have positive crosscutting environmental benefits. To this end, different measures will be tested in 120 pilot farms across the four main EU Climate Risk Regions and the conclusions obtained will be used to elaborate General proposals for key farming systems. The project will also promote sustainable adaptation measures among farmers, farmers associations, technical consultants, food standard organisations and agricultural assurance companies.

Furthermore, LIFE is acting in reducing food waste. For example, LIFE project FLAW4LIFE aims at raising the consumers' awareness on the food waste issue and providing support to the farmers at the same time. In particular, the project is targeting the acceptance of 'ugly fruit' within the community. Through its approach, the project expects an increase of involved farmer's

productivity, with 157 farmers involved per year. As a result, total of 165 tons of waste were avoided during 2015, corresponding to 125.031 KgCO<sub>2</sub>eq.

### ***SDG 3 Ensure healthy lives and promote well-being for all at all ages***

On **SDG 3**, taking into account that environmental stressors having significant impacts on health, LIFE complements Member States' action through legislation and other initiatives on environment related health problems, which are linked to air quality, industrial emissions, chemicals, waste and water.

Examples include the 7th Environment Action Programme, the EU Biodiversity Strategy to 2020, or the rules on the sustainable use of pesticides which underline the link with health policy aspects.

The EU Chemicals Policy also covers regulation on persistent organic pollutants; trade in hazardous chemicals; fluorinated gases; and hazardous waste. The so-called 'REACH' framework aims to improve the protection of human health and the environment from the risks that can be posed by chemicals, while enhancing the competitiveness of the EU chemicals industry.

LIFE is funding a number of projects working on improving air quality and specific air pollutants and to reduce the risks from chemicals.

For example, the Polish Integrated Project LIFE-IP MAŁOPOLSKA aims at the full implementation of the Malopolska Air Quality Plan (MAQP). The project estimates that through its actions it will reduce PM<sub>10</sub> and PM<sub>2.5</sub> emissions by about 25 000 kg/day and 21 000 kg/day respectively. It is worth noting that the project has a transnational approach assisting cooperation within the hotspot (southern Poland, Slovakia and the Czech Republic) by joint activities as well as exchange of experiences in the area of air quality improvement. In addition to the IP budget itself, the project will facilitate the coordinated use of €798 million complementary funding from the European Agricultural Fund for Rural Development (EAFRD), the ERDF, National and Regional Fund for Environmental Protection and Water Management, and national and private fund, as applicable.

The project LIFE Fit for REACH is working on the reduction of emissions by substitution of hazardous chemicals and resource efficiency. The project offers Baltic SMEs a full 'chemicals management package', including proposals on how to implement substitution as a core action to reduce environmental impacts and support in communicating this good environmental performance to the society. Amongst other activities, LIFE Fit for REACH will test and implement a set of complex measures in six companies, which shall substitute some of the identified hazardous substances or increase the efficiency of the resource use and lead to reduction of emissions of these substances. It will also implement 'low effort – low costs' measures to substitute hazardous substances or to introduce good chemicals management practices in additional 50-80 SMEs. The project is also helping Latvia's largest producer of household chemicals to get 'greener'.

### ***SDG 6 Ensure availability and sustainable management of water and sanitation for all***

The EU water policy is a cornerstone of the LIFE Programme and provides for a framework to address water protection and achieve good ecological status for inland surface waters, transitional waters, coastal waters and groundwater. It comprises regulation including on drinking water, bathing water and urban wastewater, prevention of pollution caused by nitrates, industrial emissions, pesticides and persistent organic pollutants.

The transition to a circular economy should also lead to greater resource efficiency for example by improving the conditions for water re-use in several sectors.

LIFE projects are working on sustainable management of water bodies. In particular, LIFE projects are reducing the water bodies affected by water pressures and risks. This is done through a variety of actions, like reducing pollution of aquatic bodies from contaminated water/fluids, removal of barriers within rivers, implementation of River Basin Management Plans, etc.

As an example, LIFE ECORKWASTE will demonstrate the possible uses of a cork waste valorisation system. The cork will be used as absorbent material in wetlands, for the elimination of organic compounds in winery wastewater treatment systems or as substrate for energy valorisation in a gasification process. Through this improved wastewater treatment, the project aims to alleviate the pressure on 930 km<sup>2</sup> of wetlands in the Llobregat Basin (a decrease of approximately 3 % within the context of the project). The reduction in pressure includes removal of 90 % of both phenol and hydrogen-sulphide from the winery wastewater within the project duration (estimated at 50 mg/year and 82 mg/year, respectively).

The German Integrated project Living River Lahn aims at achieving a good ecological status/potential of surface waters in the catchment area of the Lahn river in Germany. Among other activities, this project will identify sources of pollution and improve the water quality of the Lahn and its tributaries; prepare and implement measures for linear ecological connectivity for barrages and weirs, investigate the options for the creation of retention areas along the river and improved ecosystem services; re-establish natural water regulation wherever possible; and elaborate integrated pilot strategies and implementation plans on how to organise and finance inland waterways in order to achieve 'good ecological status/potential'. The solutions identified by the project should be transferred to several other rivers in Germany, facing similar issues. In addition to the project budget itself, the project will facilitate the coordinated use of around €27 million of complementary funding from the European Agricultural Fund for Rural Development (EAFRD) and national funds.

***SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all***

Through the circular economy package and the plastic strategy, LIFE addresses economic and environmental concerns by maximizing efficiency in the use of resources, and thus contributes to **SDG 8**.

Moreover, the 7<sup>th</sup> Environment Action Programme confirmed that EU prosperity and healthy environment stem from an innovative, circular economy where nothing is wasted and where natural resources are managed in a sustainable way, and biodiversity is protected, valued and restored.

An example of how LIFE contributes to tackling marine litter pollution while promoting additional income for fishermen/women is the project LIFE LEMA. This project aimed to provide local administrations with a methodological guide and prediction tools for the efficient management of floating marine litter in the southeast waters of the Bay of Biscay. The project established statistical models to predict the movement and accumulation points of floating marine litter; developed a computer tool to integrate data on floating marine litter collection, detection and prediction methods; designed a management plan to prevent and reduce floating marine litter; and used innovative technologies to detect floating marine litter. Through its work, the project demonstrated marine litter collection actions that could provide fishermen/women with an additional source of income while reducing marine pollution. Quantitatively, the project achieved the collection of more than 40 tons of floating marine litter and another 40 tons of floating wood.

In addition, LIFE PSLOOP is aiming at enabling the recycling of construction waste containing polystyrene. The project's process for producing recycled polystyrene material is much more energy and resource efficient than the production of polystyrene from virgin raw materials. The project will construct a recycling plant to demonstrate this process on an industrial scale, aiming at 3000 tons/year of recycled polystyrene. In addition, the project aims to create a relevant value chain with recycling and collection companies by demonstrating a standard collection and pre-treatment system

***SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation***

The 2030 Climate and Energy Policy Framework strives for a competitive low-carbon and climate-resilient economy and the EU Strategy on Adaptation to Climate Change identifies resilient infrastructure as a priority action area under the strategic objective of mainstreaming adaptation measures.

The circular economy fosters eco-innovation and sustainability objectives.

LIFE is working on improving the climate resilience of infrastructures. In particular, 21 LIFE projects are working on increasing the number of infrastructures targeted for climate resilience. Such infrastructures may include public, private and industrial buildings or services situated in urban or rural environments. These could range from large power generation plants, to water services, households or agricultural farms.

As an example, the LIFE DERRIS project successfully tested an innovative model of public-private partnership between insurers, public administrations and SMEs to increase urban resilience to climate change, including through risk reduction tools for SMEs. Such tools included a Climate Risk Assessment and Management Tool to help enterprises to identify adaptation measures that they should implement to enhance resilience, as well as company climate adaptation action plans that outlined numerous specific steps the participating companies could take to cope with floods, drought, high temperatures, high winds and other extreme weather events. During the project, 156 companies produced such plans and this number is expected to increase to 550 five years after the project-end.

***SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable***

The 7<sup>th</sup> Environment Action Programme has as a horizontal priority objective to make the Union's cities more sustainable.

Other environmental and climate policies and legislation are vital for sustainable urban development such as Noise Legislation, the EU's Biodiversity and Green Infrastructure Strategies, Drinking Water and Urban Wastewater Treatment, the framework on energy performance of building, the strengthen of the resilience of urban settings through climate related risks.

Urban energy consumption generates about three quarters of global carbon emissions. Therefore, cities play a crucial role in terms of energy and climate policy (the Clean Air Package, Air Quality, etc.). The EU Covenant of Mayors for Climate and Energy is a bottom-up local and regional action for tackling in an integrated manner climate change mitigation and adaptation, and access to secure, sustainable and affordable energy.

Moreover, the circular economy package contributes to this SDG under many aspects, such as by addressing sustainable waste sorting and recycling and by shifting energy consumption onto more sustainable pathways.

LIFE is funding projects with direct impact on this topic. For example, LIFE-SOUNDLESS is aiming at a sustainable and healthy future for urban areas through the demonstration of the effectiveness of innovative noise-reducing asphalt mixes using recycled waste materials, to mitigate noise pollution. The project will also encourage public bodies to integrate environmental factors into their calls for tender in street construction. By recycling and re-using waste from different industries, the project will also help implement waste management objectives. Concretely, the project is aiming at a reduction of at least 6 dB in noise level compared with the current situation in the demonstration road sections.

Another example is LIFE IMPETUS which is working on improving current barriers for controlling and removing pharmaceutical compounds (PhC) in urban wastewater treatment plants with conventional activated sludge treatment. The project examined PhC concentration, control methods in urban waste-water treatment plants, bacterial antibiotic resistance and PhC bioaccumulation in

clams situated near the exit of the plants. In addition, the project tested at semi-industrial scale, a novel activated carbons material made of pine nuts for removal of PhC in waste-water plant processes. The project collected two years of data of PhC in 2 urban CAS-urban waste-water treatment plants (~ 9000 results) and isolated 7000 antibiotic-resistant colonies in raw and treated waste-water.

### ***SDG 12 Ensure sustainable consumption and production patterns***

In view of reaching **SDG 12**, resource efficiency and circular economy actions aim to decouple economic growth from resource use and environmental degradation. By covering the whole cycle from production and consumption to waste management, they are at the core of the LIFE actions under the priority areas Environment and Resource Efficiency.

Moreover, the 7th Environment Action programme has as a key objective to turn the Union into a resource-efficient, green, and competitive low-carbon economy. Another related key objective is to safeguard EU citizens from environment-related pressures and risks to health and wellbeing.

Several LIFE projects are working on improving Waste Management.

The LIFE M3P project, for example, aims to promote and develop industrial symbiosis by connecting SMEs to foster alternative uses of their waste streams. It aims to close the loop by identifying and characterising industrial waste, and turning it into a resource (secondary raw material) for another industry. This will be achieved through the use of a digital online platform – M3P (Material Match Making Platform) – at the European level. LIFE M3P will also demonstrate the feasibility of a more efficient use of raw materials, by the systematic application of eco-design techniques to facilitate the recovery and re-use of parts that would previously have become waste. Through the above activities the project aims at a waste reduction of about 60 000 tons (10 % reduction within the context of the project) during its implementation.

### ***SDG 13 Take urgent action to combat climate change and its impacts***

Climate change mitigation and climate change adaptation are two priority areas of the LIFE programme. The 2015 Paris Agreement is a historically significant landmark in the global fight against climate change; a success for the world and a confirmation of the EU's path to a low-carbon and climate resilient economy. With the support of LIFE, ambitious 2030 targets have been set up to reduce greenhouse gas emissions, improve energy efficiency and increase the share of renewable energy. Now, the Von Der Leyen Commission is proposing even more ambitious targets to be enshrined in the Climate Law Renewable energies and energy efficiency play an increasingly important role in tackling climate change.

The EU Emissions Trading System (ETS) is a key tool for cutting greenhouse gas emissions from large-scale facilities in the power and industry sectors, as well as the aviation sector.

The EU Strategy on Adaptation to Climate Change provides a framework and mechanisms to improve the preparedness of the EU for current and future impacts of climate change, thus contributing to a more climate-resilient society.

LIFE projects are aiming at reducing CO2 emissions and promote renewable energy production.

As a practical example, LIFE METHAmorphosis demonstrated, at industrial-scale, two innovative waste treatment systems, one in an urban waste treatment plant, and the other in an agro-industrial waste treatment plants, to produce upgraded high quality bio-methane. The participating automotive sector tested the biofuel in passenger vehicles and heavy duty vehicles during thousands of kilometres driving. The car manufacturer SEAT aims to use the results for rolling out their bio-methane strategy which has the potential of saving millions of tons of CO2 emissions in the transport sector. The project estimates that 5 years after its end the two prototypes could produce over 176 million kWh renewable biomass energy annually (translated to electricity, this value is close to the annual electricity consumption of 50 000 homes).

On a larger scale, the Belgian Integrated project BE-REEL! aims to create the conditions for the full implementation of the strategic housing renovation plans of Flanders and Wallonia regions in Belgium. The demonstration and pilot actions are estimated to lead to more than 8000 renovated dwellings. The direct GHG emission reductions due to all the project actions will amount to over 18 600 tonnes of CO2 per year. In the long run, the goal of the strategies is to renovate all existing housing, achieving a reduction of 75-80 % of CO2 emissions and energy use by 2050 and to influence the low-emission strategies of all cities and communities in Flanders and Wallonia, as well as the Brussels Capital Region.

### ***SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development***

The 7th Environment Action Programme sets the objective to protect the Union's natural capital to, inter alia, reduce the impact of pressures on marine waters, in order to achieve or maintain good environmental status.

The Birds and Habitats legislation complement the Marine Strategy Framework by protecting 5 % of the EU sea area through a network of Marine Protected Areas part of 'Natura 2000'.

Moreover, to tackle marine litter and pollution, LIFE supports a wide set of instruments, including regulation on waste management and prevention, port reception facilities for ship generated waste and cargo residues.

LIFE is funding large Integrated Projects within the marine environment. One such example is the Spanish Integrated Project LIFE-IP INTEMARES working on an integrated, innovative and participatory management for Natura 2000 network in the Marine Environment. Its objective is to implement the Priority Action Framework for Natura 2000 in the Spanish marine Natura 2000

network and ensure its effective management. Through this approach, the project expects to ensure the maintenance or restoration of the favourable conservation status of priority habitats and species. To achieve this the project will improve critical knowledge for the management of the Natura 2000 network activities; improve monitoring of habitat types and species listed in the annexes of the Nature Directives for a better assessment of their conservation status; and provide information, training and adequate awareness to all stakeholders for achieving conservation targets in Natura 2000 sites. Furthermore, the project will promote sustainable tourism and employment related to the Natura 2000 network. It is worth noting that the project estimates that it will facilitate the coordinated use of €22 million complementary funding from EMFF, ESF and national funds.

Another example is the French Integrated Project LIFE IP – MarHa that aims to achieve or maintain a favourable conservation status for French marine habitats listed in Annex I of the Habitats Directive. To achieve this, the integrated project will ensure effective and transparent management of the sites; coordinated implementation of the Habitats Directive, Marine Strategy Framework Directive and Water Framework Directive, while incorporating the connection between land and sea; improved capacities and tools for implementing Natura 2000 policy; the integration of marine users and activities; and assessment of the conservation status of marine habitats on a biogeographical scale and monitoring devices for adaptive management. The project should also strive to achieve greater recognition by society of the marine Natura 2000 initiative as well as reinforcement of international cooperation.

***SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss***

The environmental *acquis* provides a high level of protection in areas such as water quality and nature conservation, though the development and implementation of the Birds and Habitats Directives and of the Natura 2000 network.

The EU Forest Strategy has as one of its key principles global forest responsibility, promoting sustainable production and consumption of forest products.

The circular economy offers an opportunity for modernising the economy, making it more green and competitive. It also contributes to lower carbon dioxide emission levels and energy savings as well as decreased air, soil and water pollution. It focuses on resource efficiency and minimising waste and has a strong potential in terms of new jobs and growth and for stimulating sustainable consumption and production patterns.

LIFE is funding a significant number of project aiming at improving ecosystem health and wildlife species.

All 12 types of ecosystem are being addressed by on-going projects.

For Wildlife species, on-going projects are expected to lead to an increase in the population of the species and/or to lead to increase in their site area or length.

As an example, LIFE for Safe Flight aims to reinforce the red-breasted goose (*Branta ruficollis*) population globally by mitigating threats, including legal acts against hunting/poaching and removing power lines; raising awareness about the species and the threats it faces; as well as establishing monitoring schemes to protect it. Based on the above, the project is expected to increase the population of the red-breasted goose by about 15 000 individuals (27 % increase against the baseline situation at the project's start) and increase its area of habitat by about 7 000 ha (1 % increase).

**1. Overview****1.1. Challenges**

The Commission proposed in January 2020 a Just Transition Mechanism (JTM) as part of the European Green Deal Investment Plan, to make sure that no one and no region is left behind in the transition to a climate-neutral economy. The primary goal of the mechanism is to provide support to the most negatively affected regions and to help them to alleviate the socio-economic costs of the transition.

The transition towards climate-neutrality will provide opportunities, but it will also challenge regions and sectors differently. Two main challenges to be faced are expanding the **transition from fossil energy to other sectors** and **including the private sector**

**and civil society in the transition.** Some regions will face more challenges than others and not all will have the same capacity to deal with the costs of adjusting to the climate transition.

The first pillar of JTM is the Just Transition Fund (JTF). It aims at **alleviating the economic, environmental and social cost** of the transition towards climate neutrality, for the benefit of the territories that are most negatively affected by the transition, in line with the objective of achieving EU climate-neutrality by 2050 in an effective and fair manner. The Fund's support is focused on economic reconversion measures, reskilling of affected workers and job seeking assistance.

The second pillar of the Just Transition Mechanism is the dedicated just transition scheme under InvestEU. A portion of financing under InvestEU will be focused on just transition objectives to support economically viable investments by private and public sector entities. This pillar is not part of this programme statement (it is managed by another Directorate-General and subject to another statement).

The third pillar of the Just Transition Mechanism is the public sector loan facility. It will support projects that do not generate a sufficient stream of revenues to cover investment costs. Loans (provided by finance partners such as the EIB) will be combined with grants to provide public sector entities with resources to meet the development needs in the transition towards a climate neutral economy. Supported investments will cover a wide range from energy and transport infrastructure, district-heating networks, energy efficiency, as well as up- and re-skilling, training and social infrastructure, including social housing. Currently the regulation for the third pillar is still under negotiation.

While the Just Transition Fund will provide funding primarily in the form of grants, the two other financing streams (InvestEU scheme and public sector loan facility) planned as part of the Just Transition Mechanism will leverage public and private investment by backing investment projects of financial partners such as the EIB.

## **1.2. Mission (general objectives)**

The objective to support the people, economy and environment of territories facing economic and social transformation in their transition to a climate-neutral economy, cannot be sufficiently achieved by the Member States alone. Disparities between the levels of development of the various territories are significant as well as the backwardness of the least favoured territories; financial resources of the Member States and territories are limited. There is also a need for a coherent implementation framework covering several Union funds under shared management as well as technical assistance to support this very complex process. Those objectives can be better achieved at Union level.

### **Pillar I of the Just Transition Mechanism – Just transition Fund**

The JTF is established within the framework of cohesion policy, which is the main EU policy instrument to reduce regional disparities and to address structural change in Europe's regions –sharing cohesion policy's objectives in the specific context of the transition towards climate neutrality. It comes in addition to the substantial contribution of the EU's budget through all instruments directly relevant to the transition, notably the European Regional Development Fund ('ERDF'), the Cohesion Fund and the European Social Fund Plus ('ESF+'). The resources from the JTF should complement the other resources available under cohesion policy. It will concentrate resources on territories most negatively affected, with a specific governance mechanism, dedicated funding, limited scope of intervention and specific programming framework (Territorial Just Transition Plans, TJTP).

The primary focus of the Just Transition Fund is on the economic diversification of the territories most affected by the climate transition, reconversion of the territories concerned and the reskilling and active inclusion of their workers and jobseekers. Investments and actions supported from the JTF may include a wide variety of interventions from business support to reskilling of workers through interventions to enhance the circular economy or even rehabilitation of affected areas. The mix of actions will depend on the circumstances of the territory affected by the climate transition challenge, and on the adopted Territorial Just Transition Plans annex to the relevant Programmes.

In addition, a Just Transition Platform has been launched that serves as a communication point for sharing knowledge and good practice on the transition to a climate-neutral economy. The platform also provides technical and advisory support to the territories in the implementation of the Territorial Just Transition Plans and will develop project and expert data bases for the JTM.

### **Pillar III of the Just Transition Mechanism – Public Sector Loan Facility**

The public sector loan facility constitutes the third pillar of the Just Transition Mechanism. It aims at supporting the investments of public sector entities required to meet the development needs resulting from the transition challenges described in the Territorial Just Transition Plans.

In accordance with Article [3(1)] of the Public sector loan facility regulation, the general objective of the Facility is to address serious socio-economic challenges arising from the transition process towards a carbon neutral economy. The Facility shall benefit the Union territories identified in the territorial plans for equitable transition drawn up by the Member States in accordance with

Article 7 of the JTF Regulation. The exact wording of the general objective is discussed as part of the negotiations on the Regulation.

### 1.3. Specific objectives

#### Pillar I of the Just Transition Mechanism – Just transition Fund

In accordance with the second subparagraph of Article [4(1)] of CPR Regulation, the JTF shall contribute to the single specific objective of ‘enabling regions and people to address the social, employment, economic and environmental impacts of the transition towards the Union’s 2030 target for climate and a climate-neutral economy by 2050, based on the Paris Agreement’.

The aim of the JTF is to mitigate the adverse effects of the climate transition by supporting the most affected territories and workers concerned and to promote a balanced socio-economic transition. In line with the JTF specific objective, actions supported by the JTF should directly contribute to alleviate the impact of the transition by financing the diversification and modernisation of the local economy and by mitigating the negative repercussions on employment. The JTF shall support the investment for jobs and growth goal in all Member States.

#### Pillar III of the Just Transition Mechanism – Public Sector Loan Facility

In accordance with the Article [3(2)] of the Public sector loan facility Regulation the public sector loan facility will have the specific objective of increasing public sector investments, which address the development needs of regions identified in the Territorial Just Transition Plans, by facilitating the financing of projects that do not generate a sufficient stream of own revenues. The exact wording of the specific objective is discussed as part of the negotiations of the Regulation.

### 1.4. Public intervention context

To support Member States in the transition towards climate neutrality, the Commission proposed the Just Transition Mechanism (JTM) in January 2020. At the time being, the JTF Regulation has been approved by the co-legislators and the publication is to be expected in the first half of 2021. Where Member States want to make use of the possibility to receive support under pillars 2 or 3 of the Just Transition Mechanism, the Territorial Just Transition Plans shall set out the sectors and areas envisaged to be supported under those pillars. This means that access to the three pillars is unlocked by the Territorial Just Transition Plans.

JTF resources could be reinforced on a voluntary basis with complementary funding from the ERDF and the ESF+. The respective amounts transferred from the ERDF and the ESF+ should be consistent with the type of operations set out in the Territorial Just Transition Plans.

### 1.5. Actions

The JTF programming process, including the identification of the territories for intervention and corresponding actions, is subject to a dialogue between the Commission and each Member State. It is steered by the European Semester process. The territories identified need to be those that are most negatively affected based on the economic and social impacts resulting from the transition, in particular with regard to expected job losses and the transformation of the production processes of industrial facilities with the highest greenhouse gas intensity.

Taking into account the Commission’s analysis in that exercise, Member States are preparing one or more Territorial Just Transition Plans, providing an outline of the transition process until 2030, consistent with the National Energy and Climate Plans and the transition to a climate-neutral economy and identifying subsequently the most impacted territories that should be supported. For each of these territories, the Territorial Just Transition Plans will set out the social, economic and environmental challenges and give details on needs for economic diversification, reskilling and environmental rehabilitation as appropriate.

There are some general aspects that are relevant to a well-designed strategy, as outlined in the Territorial Just Transition Plans:

- understanding the needs of local and regional stakeholders,
- proximity of decision-makers to the most affected citizens,
- thorough understanding of the most pressing problems in the region and the ability to offer tailor-made solutions,
- clear vision of development,
- deep knowledge of the mechanisms of the regional economy,
- established leadership in regional development,
- complementarity to other public policies,
- ensuring the same implementation strategy in all regions,
- and allocation of decision-making power and responsibility for the transition.

In order to ensure the effectiveness of the Just Transition Fund, the support provided needs to be concentrated. The territories identified will therefore correspond to NUTS level 3 regions or could be parts thereof.

#### Pillar I of the Just Transition Mechanism – Just Transition Fund

The actions under JTF give a unique opportunity to fulfil the aims connected with the European Green Deal. The Commission services already included their preliminary views on the territories expected to be the most vulnerable to transition in a dedicated Annex D to the 2020 Country Reports.

The support in these regions from the JTF will be based on the Territorial Just Transition Plans and programmed under one or more priorities. The Territorial Just Transition Plans will be part of the programmes and will be adopted by the same Commission decision as the programme. Territorial Just Transition Plans have to be based on evidence and data to address the most pressing issues and must focus on measures that will facilitate sustainable long-term development of the affected regions. They need to include commitments on key climate and energy transition steps and must be in line with national energy and climate plans.

The plans should detail the challenges and needs of those territories (including island, insular areas and outermost regions), taking into account depopulation risks, and identify the type of operations needed to contribute to job creation at the level of the plan and in a manner that ensures the coherent development of climate-resilient economic activities. These need to be consistent with the transition to climate-neutrality and the objectives of the European Green Deal. Only investments in accordance with the Territorial Just Transition Plans should receive financial support from the JTF.

All supported activities in these regions should be pursued in full respect of the climate, and environmental and social commitments and priorities of the Union. The investments should support local economies through stimulating their endogenous growth potential in accordance with the respective smart specialisation strategies. The projects financed should contribute to a transition to a sustainable, climate-neutral and circular economy, including measures aiming at increasing resource efficiency.

Types of investments for which expenditure may be supported by the JTF if appropriately justified in the Territorial Just Transition Plans:

- Productive investments in SMEs, including microenterprises and start-ups, leading to economic diversification, modernisation and reconversion;
- Investments in the creation of new firms, including business incubators and consulting services; leading to job creation
- Investments in research and innovation activities, including by universities and public research institutions and fostering the transfer of advanced technologies;
- Investments in the deployment of technology as well as in systems and infrastructures for affordable clean energy, including storage technologies, and in-greenhouse gas emission reduction;
  - investments in renewable energy in accordance with the Renewable Energy Directive (EU) 2018/2001<sup>1</sup>, including the sustainability criteria set out therein, and in energy efficiency, including for the purposes of reducing energy poverty;
  - investments in smart and sustainable local mobility, including decarbonisation of the local transport sector and its infrastructure;
  - rehabilitation and upgrade of district heating networks with a view to improving energy efficiency of district heating systems and investments in heat production provided that they are supplied exclusively by renewable energy sources;
- Investments in digitalisation, digital innovation and digital connectivity;
- Investments in regeneration and decontamination of brownfield sites, land restoration and including where necessary green infrastructure and repurposing projects, taking into account 'polluter pays' principle;
- Investments in enhancing the circular economy, including through waste prevention, reduction, resource efficiency, reuse, repair and recycling;
- Upskilling and reskilling of workers;
- Job-search assistance to jobseekers;
- Active inclusion of jobseekers
- Technical assistance
- Other activities in the areas of education and social inclusion including, where duly justified, infrastructure for the purposes of training centres, child and elderly care facilities as indicated in Territorial Just Transition Plans in accordance with Article 7 of the JTF Regulation;
- Productive investments in enterprises other than SMEs may be supported provided that such investments have been approved as part of the Territorial Just Transition Plan. Such investments shall only be eligible where they are necessary for the implementation of the Territorial Just Transition Plan, where they contribute to the transition to a climate-neutral economy by 2050 and to related environmental targets, and where their support is necessary for job creation in the identified territory, and where they do not lead to relocation as required under Article 60 of the CPR Regulation

### **Pillar III of the Just Transition Mechanism – Public Sector Loan Facility**

The public sector loan facility will support public investments, through preferential lending conditions. These investments will benefit the territories most negatively affected by the climate transition as identified in the Territorial Just Transition Plans for the purpose of the Just Transition Fund.

<sup>1</sup> Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (recast) (OJ L 328/82, 21.12.2018, p. 82).

In this respect, the public sector loan facility will cover a wide range of investments, on condition that they contribute to meet the development needs in the transition towards a climate neutral economy, as described in the Territorial Just Transition Plans. The investments supported may cover energy and transport infrastructure, district heating networks, green mobility, smart waste management, clean energy and energy efficiency measures including renovations and conversions of buildings, support to transition to a circular economy, land restoration and decontamination, as well as up- and re-skilling, training and social infrastructure, including social housing. Infrastructure developments may also include solutions leading to their enhanced resilience to withstand disasters. Comprehensive investment approach should be favoured in particular for territories with important transition needs. Investments in other sectors could also be supported if they are consistent with the adopted Territorial Just Transition Plans.

## 1.6. Delivery mode

The JTF will be implemented through shared management in close cooperation with national, regional and local authorities and stakeholders. This will ensure ownership of the transition strategy and provide the tools and structures for an efficient management framework. Under the shared management mode, the co-legislators fix the legal framework and the overall funding and determine the allocations by Member States and category of region. The Commission adopts the programmes. As regards implementation, the Commission cooperates with Member States' administrations (at national, regional and local level), which are in charge of the operational implementation.

### **Pillar I of the Just Transition Mechanism – Just transition Fund**

JTF is a novelty and the delivery mode will only start after the JTF programmes at national or regional level are adopted and underpinned by a properly designed implementation strategy. The development and implementation of the Territorial Just Transition Plans is a long-term project. In order to ensure the undisturbed development and implementation of the territorial plans, it is crucial to adapt transitional and flexible approach towards governance mechanism

### **Pillar III of the Just Transition Mechanism – Public Sector Loan Facility**

The public sector loan facility will provide support in the form of grants provided by the Union combined with loans provided by a finance partner. The grant component of the public sector loan facility will be implemented through direct management by DG REGIO and the European Climate, Infrastructure and Environment Executive Agency (CINEA). The management of the facility will take the form of financing not linked to costs. This form of financing will help incentivise project promoters to participate and contribute to the achievement of the facility's objectives in an efficient way relative to the size of the loan.

The loan component will be provided by the European Investment Bank. The public sector loan facility may also be extended to other finance partners providing the loan component, where additional resources for the grant component become available or where it is required for the correct implementation.

## 1.7. Graphic overview of the programme structure

## Just Transition Mechanism - structure (Pillars I and III)

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
	2021 - 2027	8 452,8

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							
	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
Just Transition Fund *	1 137,0	1 159,7	1 182,9	1 206,6	1 230,7	1 255,3	1 280,5	8 452,8
Public Sector Loan Facility under the Just Transition Mechanism			50,0	50,0	50,0	50,0	50,0	250,0
<b>Total *</b>	<b>3 259,4</b>	<b>5 489,4</b>	<b>5 649,2</b>	<b>1 256,6</b>	<b>1 280,7</b>	<b>1 305,3</b>	<b>1 330,5</b>	<b>19 571,3</b>

\* These amounts do not take into account the contributions of ERDF and ESF+.

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The JTM is a new programme. The JTF is a new fund for 2021-2027 and the Public Sector Loan Facility is a new Union instrument. They are complementary to the cohesion policy funds and complete the allocations proposed under the new Multi-annual Financial Framework.

## 1.10. Relevant websites providing more information

The main website of the Just Transition Mechanism provides all the necessary details about the nature and structure of the Fund, its legal basis, news about the Fund and further practical guidance. The Cohesion Open Data Platform - <https://cohesiondata.ec.europa.eu> - provides data on investment financing and achievements under the ESI Funds 2014-2020 and the extension of coverage to the 2021-2027 programmes is already planned.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

#### Pillar I of the Just Transition Mechanism – The Just Transition Fund

Implementation will only start after the JTF programmes are adopted. The first programmes are expected to be adopted during 2021.

#### Pillar III of the Just Transition Mechanism – Public Sector Loan Facility

The first calls for proposals will be launched once a sufficient number of Territorial Just Transition Plans are adopted. The first calls for proposals are expected to be launched towards the end of 2021 and the first grant agreements are expected to be signed early 2023.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Not applicable

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Common output and result indicators, as set out in Annex III and, where duly justified in the Territorial Just Transition Plan, programme-specific output and result indicators, shall be established in accordance with [point (a) of the second subparagraph of Article 12(1)], [point (d)(ii) of Article 17(3)] and [point (b) of Article 37(2)] of Regulation (EU) [new CPR].

For output indicators, baselines shall be set at zero. The milestones set for 2024 and targets set for 2029 shall be cumulative. Targets shall not be revised after the request for programme amendment submitted pursuant to Article [14(2)] of Regulation (EU) [new CPR] has been approved by the Commission.

Where a JTF priority supports the activities referred to in points (h), (i) or (j) of Article 4(2), data on the indicators for participants shall only be transmitted where all the data relating to that participant, required in accordance with Annex III are available.

##### **3.1.2. Active programme performance**

As the fund is still comparatively young, there is not enough data regarding the Territorial Just Transition Plans so far. The Commission therefore lacks the basis on which to assess the different investment priorities and intensities.

##### **3.1.3. Previous programme performance**

Not applicable

#### **3.2. Key achievements**

Not applicable

#### **3.3. Evaluations, studies and reports**

As a key instrument of the Green Deal Investment Plan, the proposal for a Just Transition Fund, as the first pillar of the Just Transition Mechanism, has not been underpinned by dedicated ex-ante assessment. It is nonetheless embedded in the cohesion policy, pursuing similar objectives, for which the legal proposals have been built on a comprehensive set of evaluations and in-depth analyses. In addition, a JTF-related study (in 2022) will assess the outcome and impact of the establishment of Territorial Just Transitions Plans.

### **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :Enabling regions and people to address the social, employment, economic and environmental impacts of the transition towards the Union’s 2030 target for climate and a climate-neutral economy by 2050, based on the Paris Agreement**

**Indicator 1:Enterprises supported (of which: micro, small, medium, large)**

## **1. Overview**

### **1.1. Challenges**

The role of the EU budget has been pivotal in implementing the European Agenda on Migration (2015-2020). In this context, the EU has been supporting the management of asylum seekers and migrants, supporting legal migration and integration and managing effective returns. The EU budget has also been financing common measures for the effective control and surveillance of the Union's external borders to compensate the abolition of internal border controls.

However, the EU will continue to face major challenges in the area of migration in the 2021-2027 programming period. The regular reports compiled in the context of the delivery of the European Agenda on Migration confirmed the persisting need to reduce the incentives for irregular migration, to sustain efforts to save lives at sea and to secure the EU external borders, and to support actions for a strong common asylum policy and a new policy on legal migration. The new Asylum, Migration and Integration Fund (AMIF) will have a key role to play in responding to these challenges and supporting the full implementation of the European migration policy for the next seven years.

The challenges in the areas of asylum and migration are, by their nature, interlinked, transnational phenomena and cannot be adequately addressed by the Member States acting alone.

### **1.2. Mission (general objectives)**

The integrated management of the EU's external borders and the strengthening of the Common European Asylum System are the most effective ways to share these responsibilities and their financial implications between Member States fairly. EU funding in the area of integration of third country nationals is indispensable to increase the quality of support to newcomers in the early stages after their arrival. This is a crucial component to ensure their full inclusion in EU societies in the long- run, if they receive permanent protection.

The AMIF will aim to further increase the added value achieved in the previous programming period in terms of supporting actions with a transnational dimension. These actions aim at boosting national capacities and optimising procedures related to migration management, as well as enhancing solidarity and responsibility sharing between Member States, in particular through emergency assistance and the relocation mechanism as evidenced by the interim evaluation of the AMIF 2014-2020.

### **1.3. Specific objectives**

The AMIF contributes to an efficient management of migration flows and to the implementation, strengthening and development of the common policy on asylum, and the common immigration policy, in line with the relevant EU acquis and fully respecting the international obligations of the Union and the Member States arising from international instruments to which they are parties. In this context, it pursues the following objectives:

- to strengthen and develop all aspects of the common European asylum system, including its external dimension;
- to strengthen and develop legal migration to the Member States, in accordance with their economic and social needs and to promote and contribute to the effective integration and social inclusion of third-country nationals;
- to contribute to countering irregular migration and enhancing effective, safe and dignified return and readmission as well as to contribute to and to promote effective initial reintegration in third countries;
- to enhance solidarity and responsibility sharing between the Member States, in particular towards those most affected by migration and asylum challenges, including through practical cooperation.

### **1.4. Public intervention context**

The evolving migratory challenges addressed by the AMIF make it a key instrument in realising the Union's objective of constituting an area of freedom, security and justice under Article 67(2) of the Treaty on the Functioning of the European Union (TFEU), which is an area of **shared competence** between the EU and the Member States (Article 4 TFEU). The objectives of the AMIF support actions focusing on one or more target groups within the scope of Articles 78 and 79 TFEU, and in particular Article 78(2) and Article 79(2) and (4) thereof. Furthermore, the principle of solidarity and fair sharing of responsibility between the Member States, emphasised by the renewed AMIF, is established in Article 80 TFEU.

Since the overarching objective of the AMIF, namely to contribute to an effective management of migration flows in the Union, cannot be sufficiently achieved by the Member States acting alone and can be better achieved at Union level, the AMIF is based on the principle of subsidiarity as set out in Article 5 of the Treaty on European Union (TEU).

The AMIF is complemented by a range of other EU activities and instruments with an impact on developments in the policy area.

The New Pact on Migration and Asylum, adopted by the Commission in September 2020, covers all of the various elements needed for a comprehensive European approach on migration, asylum, integration, return, border management and cooperation with partner countries. It is accompanied by a number of legislative and non-legislative initiatives as well as proposals for other key actions.

Stronger cooperation with key partner countries in the area of migration is also essential. The Commission focuses on comprehensive, tailor-made partnerships with third countries on all aspects of migration. In that context, funding can be provided mainly by external instruments such as the NDICI.

## 1.5. Actions

The AMIF supports a broad range of actions in line with the principles highlighted in the New Pact on Migration and Asylum. This includes in particular:

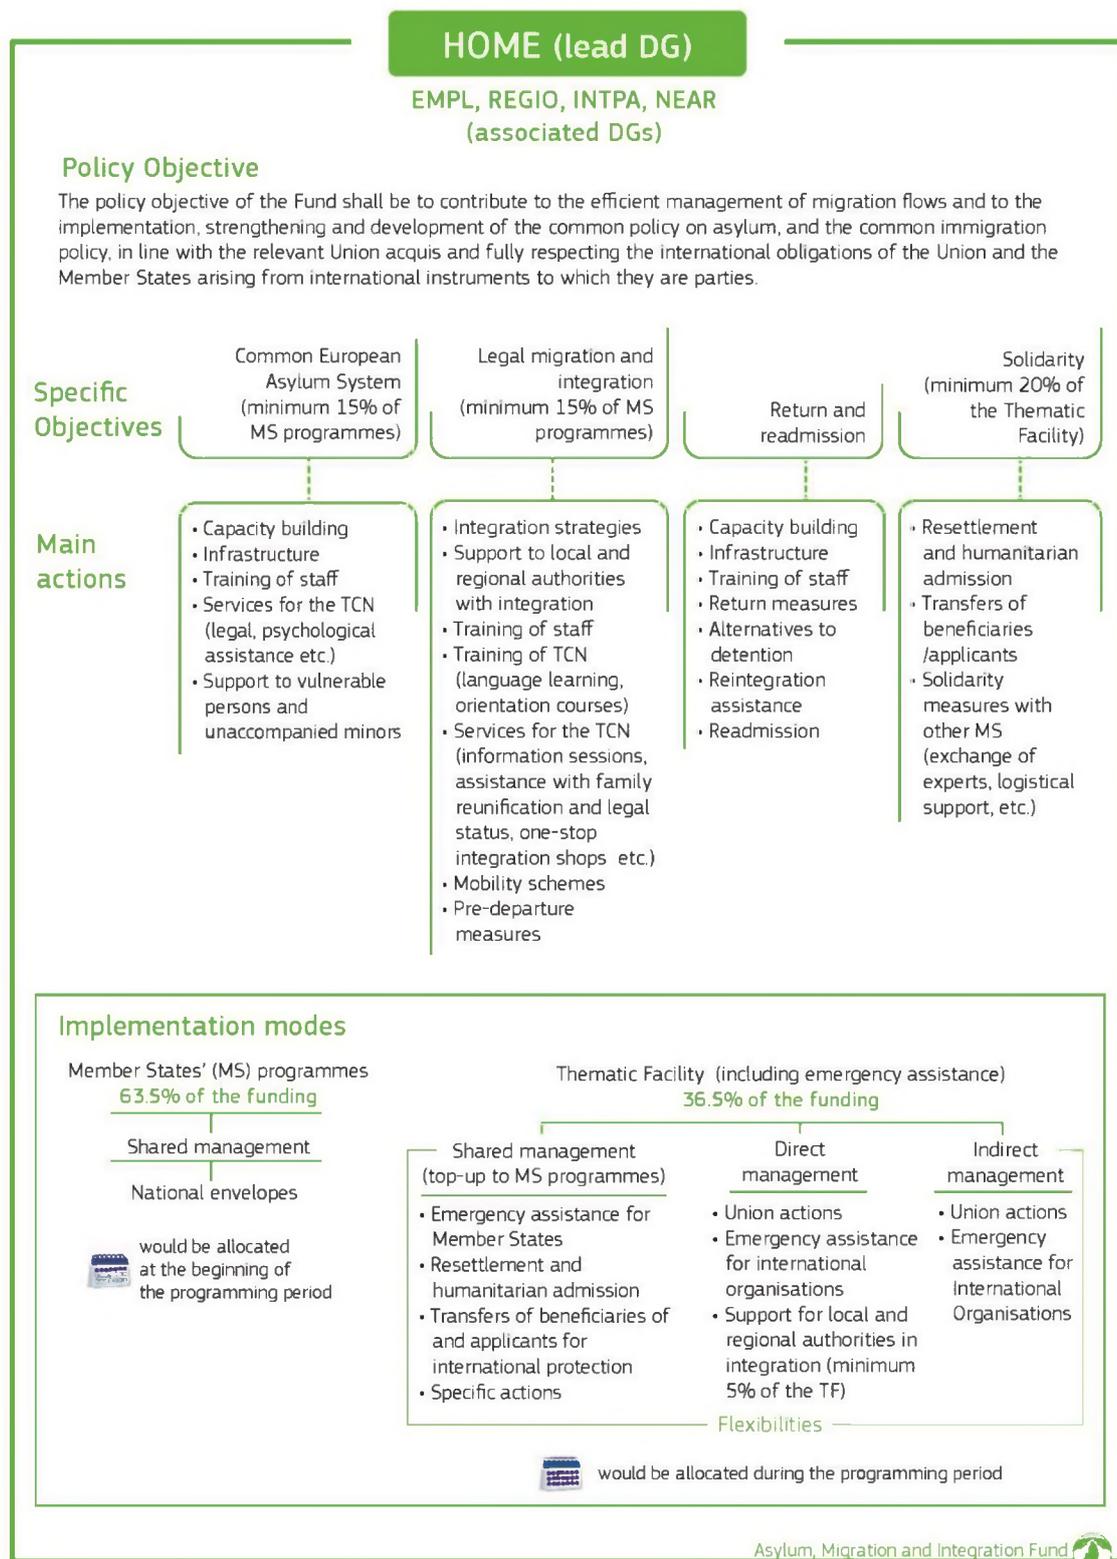

- ensuring a uniform application of the EU acquis and of the priorities related to the Common European Asylum System, legal migration and return;
- providing support and services consistent with the status and the needs of the person concerned, in particular the vulnerable groups;
- supporting resettlement, humanitarian admission and transfers of applicants for and beneficiaries of international protection;
- supporting the development and implementation of policies promoting legal migration, such as the development of mobility schemes to the EU and raising awareness of the appropriate legal channels for immigration;
- supporting integration measures such as tailored support in accordance with the needs of third-country nationals and integration programmes focusing on education, language and other training such as civic orientation courses and professional guidance preparing their active participation in and their acceptance by the receiving society.
- supporting infrastructures for the reception or detention of third country nationals, including the possible joint use of such facilities by more than one Member State;
- ensuring provision of legal remedies during the return procedures such as access to free legal aid;
- supporting the development and use of alternatives to detention;
- supporting an integrated and coordinated approach to return management at the EU and Member States' level, development of capacities for effective and sustainable return and reducing incentives for irregular migration;
- contributing to addressing key deficiencies and challenges for the Member States' return systems, identified during Schengen evaluations in the field of return, and requiring urgent action;
- supporting assisted voluntary return and reintegration;
- cooperation with third countries on asylum, legal migration, countering irregular migration and on effective return and readmission for the purpose of managing migration.

## 1.6. Delivery mode

The AMIF will be implemented under shared, direct or indirect management. The largest part of the resources (63.5% of the total budget) will be allocated to the Member States' programmes under shared management. The remaining part (36.5% of the total budget) will be allocated to a thematic facility to be used for specific actions (implemented by the Member States nationally or transnationally), Union actions (direct/indirect management), emergency assistance (shared, or direct or indirect management), transfers of beneficiaries of and applicants for international protection and resettlement (shared management) and the European Migration Network (direct management).

Technical assistance at the initiative of the Commission will be implemented by direct management. Since the AMIF is also covered by the Common Provisions Regulation, DG HOME closely coordinates with DG REGIO, EMPL and MARE. In relation to the external dimension, DG HOME closely coordinates with DG INTPA, NEAR and FPI.

## 1.7. Graphic overview of the programme structure

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
-------------	-----------------------	--------------------------------

COM (2018) 471: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the Asylum and Migration Fund	2021 - 2027	9 882,0
--	-------------	---------

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							
	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
<b>Total</b>	<b>873,3</b>	<b>1 099,5</b>	<b>1 318,8</b>	<b>1 401,4</b>	<b>1 686,3</b>	<b>1 705,6</b>	<b>1 797,2</b>	<b>9 882,0</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The 2021-27 AMIF builds on the successful implementation of and lessons learnt from the AMIF 2014-2020. In this regard, it further strengthens the external dimension by adding areas under pre-integration, return and reintegration, which could not be fully covered in the programming period. The New Pact on Migration and Asylum, published on 23 September 2020, confirms the importance of providing humanitarian legal pathways. The *Commission Recommendation on legal pathways to protection in the EU* calls on Member States to provide more places of admission for people in need of international protection through increasing their resettlement programmes but also through humanitarian admission and other complementary pathways.

It also ensures more flexibility in the implementation, by having a well-balanced mix of shared, direct and indirect management. This will also make it possible to steer the funds towards EU priorities as well as pressing challenges, which cannot always be predicted or planned for from the onset. Simplification is another important element of the new Fund, as common rules for programming, reporting and financial management for eight shared management funds<sup>1</sup> have been established and the Fund has been aligned with similar EU funding instruments. Finally, the common monitoring and evaluation framework has been further developed to ensure a strengthened performance orientation, as well as improved and more frequent reporting on the progress towards targets and milestones.

### 1.10. Relevant websites providing more information

On the Commission website, the reader will be able to see a description of the scope and the budget allocation of the Funds, illustrated by supportive visuals and info-graphics.

<https://webgate.ec.europa.eu/fpfis/wikis/pages/viewpage.action?pageId=608305737>

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

For the programming period 2021-2027, the Commission will this year support Member States in the preparation of their future programmes, to be adopted as soon as possible after the adoption of the legal basis for the financial period 2021-2027. The Commission will also prepare a 2021-2022 Work Programme for the Thematic Facility to ensure the programming of the funding for indirect/direct and shared management on top of the initial allocations for the Member States' programmes.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

<sup>1</sup> European Regional Development Fund, European Social Fund Plus, Just Transition Fund, European Maritime, Fisheries and Aquaculture Fund, Asylum, Migration and Integration Fund, Internal Security Fund, Instrument for Financial Support for Border Management and Visa.

\*based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

At the end of 2020, **for the national programmes only**, 63% of the total envelope of the fund has been paid, meaning that MS actually spent EUR 2.88 billion over the period 2014-2020 out of EUR 4.58 billion allocated under the National Programmes.

In 2017, **the national programmes** were substantially modified to include additional funding linked to resettlement (EUR 455.6 million), return (EUR 140.8 million) and measures implementing the EU Action Plan on the integration of third-country nationals (EUR 140 million), in particular those carried out by civil society organisations and local authorities in the context of Member States' Migrant Integration Strategy.

In 2018, the national programmes were again revised

- To include EUR 30 million and EUR 20 million to support respectively the integration of third-country nationals and the return of irregular migrants.
- To reflect the outcome of the mid-term review exercise carried out in accordance with article 15 'Mid-term review' of the Regulation laying down general provisions on AMIF and ISF.

In December 2018, the AMIF Regulation was amended to allow the reuse of the non-consumed resources for the two Council Decisions dating from 2015 on relocation and the Council Decision dating 2016 on legal admission for other Union migration priorities beyond 2018.

Furthermore, in 2019, the national programmes were revised to include additional resources of EUR 97.6 million for resettlements to be carried-out by the Member States in 2020 and 2021. The national programmes were revised again in 2020, and increased by EUR 77.9 million, to include additional funding for resettlement.

By 15 February (or 1 March upon justified request) 2021, Member States submitted their annual accounts covering the financial year 2020; together they have requested a total amount of EUR 626 million. By 31 March 2021, the Annual Implementation Reports for AMIF were submitted by Member States. Over the period 2014-2020, EUR 2.88 billion was actually spent by the MS, equivalent to an absorption rate of 63%.

Implementation in the year 2020 was marked by the effort to address the impact of the COVID-19 pandemic. Although, Member States largely managed to address the effects without any changes to the current budget, the pandemic led to some delays in project implementation and the procurement processes. The most affected types of intervention were those with actions where the final beneficiary needs face-to-face interaction with the target audience (asylum, integration, return, relocation, resettlement), those where NGOs and other organisations were prohibited to enter reception centres, the suspension of mental health services in the context of reception/asylum and the suspension of return flight operations.

Mitigating measures included an increase in the co-financing rates, an extension of the duration of projects where needed, adaptations or modifications of project content. Project expenditure related to the COVID-19 pandemic, such as online training platforms and hardware, the procurement of masks, the installation of protective measures (windows, etc.) or the cancellation costs of defaulted measures were accepted as eligible. Member States also put in place measures to protect the health of vulnerable persons in reception centres, beneficiaries of international protection and other Third Country Nationals housed in reception centres.

The implementation of AMIF will run until end-2022, and thus 2 years of implementation remain. Up to 2020, AMIF has attained an overall absorption rate of 63%, which can be considered overall satisfactory. In 2020, Member States have submitted EUR 626 million of payments to the Commission, similar to the level of the 2019 expenditure (EUR 583 million).

### **Trust Fund**

AMIF has been contributing to the EU Emergency Trust Fund for stability and addressing root causes of irregular migration and displaced persons in Africa. From 2017 to 2020, AMIF contributed EUR 135 million in order to address funding gaps identified especially for the North Africa window of the EUTF, and where needs relating to the root causes of migration are more pressing. For 2020, AMIF contributes with EUR 5.2 million. Between 2017 and December 2020, EUR 50 million were paid (out of EUR 135 million available). The assumption is that payments will be made until 2024 and will exhaust the totality of the EUR 135 million committed.

### **Emergency assistance**

The **emergency assistance** instrument provides financial assistance to Member States, International Organisations and (exceptionally) EU Agencies to address urgent and specific needs in the event of an emergency situation in a Member State, in particular in the areas of migration, border management and security. It is the Commission's main tool to provide strategic operational support of EU added value at short notice in the form of grants and contribution agreements. By end-December 2020, the total amount of AMIF emergency assistance allocated to Member States since 2015 had reached EUR 2 029 million. In 2020, 15 grants and contribution agreements were signed for a total of EUR 688.7 million, of which EUR 506.4 million for actions

implemented by two international organisations (UNHCR and IOM) for the benefit of Greece. Other grants signed in 2020 were for the benefit of Cyprus, Spain, Italy, Ireland, Finland and France., Malta

### **Emergency assistance in Greece**

Between 2015 and 2020, a total of approx. EUR 1.5 billion were allocated to Greece through emergency assistance grants. Nevertheless, the islands remain overcrowded and the reception capacities, both in the islands and in mainland, are stretched to the maximum.

In 2020, 13 840 arrivals have been recorded in Greece (9 048 by sea and 4 792 by land) compared to 70 142 arrivals recorded in the same period of 2019 (80% decrease). In 2021 so far, 1 420 arrivals have been recorded in Greece (761 by sea and 659 by land), compared to 8 942 in the same period of 2020 (84% decrease). In particular concerning the Aegean islands, 761 migrants have arrived so far in 2021, compared to 7 207 arrivals recorded in the same period of 2020 (89% decrease).

In 2020, 61 999 people have applied for asylum, while 2 150 transfers under Dublin III have taken place. In addition, under the Greek AMIF National Programme, 5 430 refugee children up to the age of 15 have received access to the national education scheme. The decrease in arrivals has created an opportunity to develop a more structural migration management scheme in Greece. The next programming period will focus on improving living conditions for the hosted population in the sites, including through the creation of 5 new Multi-Purpose Reception and Identification Centres in the five Eastern Aegean islands. In addition, specific attention will be paid to integration measures for recognized refugees and beneficiaries of international protection.

Due to the continuously increased arrivals, the Greek authorities, with the support from the Commission, needed and still need to further step up their efforts to address the shortcomings in migration management, in particular on the reception capacity and asylum processing sides. That is why it was necessary to further reinforce emergency funding for Greece in 2020 by means of a budget authority transfer, which covered, among others, a significant part of the reception needs in the mainland and in the islands, the protection of the unaccompanied minors through the provision of accommodation, guardianship and foster care services, as well as the access to the Greek Asylum Service, an Integration project and the Assisted Voluntary Return scheme.

### **Emergency assistance in Cyprus**

The migratory situation in the Eastern Mediterranean route also led to the granting of further emergency assistance to Cyprus. More specifically, in December 2019 the Commission awarded an emergency assistance grant of EUR 1.8 million under AMIF to strengthen the existing structures and operational capacity of the Social Welfare Services to cope with the rapidly increasing numbers of asylum seekers and unaccompanied minors. Another emergency assistance grant of EUR 3.6 million under AMIF was awarded in April 2020 to strengthen the existing structures and operational capacity of the Asylum Service and Civil Registry and Migration Department with additional staff and equipment, as well as with infrastructure for the Asylum Service.

Moreover, the Commission awarded in July 2020 another emergency assistance grant of EUR 1.2 million under AMIF to cover the needs for staff, office space and equipment of the Law Office of the Republic of Cyprus.

### **Emergency assistance in Malta**

Although there was a 33% decrease in the number of arrivals to Malta in 2020 (2 281) compared to 2019 (3 405), given its size, Malta consistently faces major challenges in the reception of those present on the island. In July 2019, the Commission awarded an emergency assistance grant under AMIF for the voluntary relocation of persons from Malta to EU Member States and Associated States of Relocation. The total amount granted, following an amendment to the grant agreement, was almost EUR 950 000.

A revision of the national programmes took place in 2020 in order to include the additional funding for resettlements to be carried-out by MS in 2020 and 2021.

### **Emergency assistance in Spain**

AMIF Emergency assistance in Spain focussed since 2018 on actions deployed by the national authorities to deal with the irregular migration flow to Southern Spain and the Canarias islands, for a total EUR 76 million AMIF funds allocated by end 2020. In 2020, arrivals by sea (40 106) increased by 54% compared to 2019. 23 023 of those were arrivals to the Canary Islands, almost 9 times more than in 2019, raising a serious challenge to the capacity to provide reception and ensure effective procedures for migrants. A project operated by the Ministry of Inclusion, Social Security and Migration was amended with an additional EUR 42 million EU funds support to set-in place six temporary sheltering capacity of an overall capacity of 7 200 persons in the Canarias islands.

### **Union actions**

In 2020, a large number of **Union actions projects** selected under the 2016 annual work programme was closed, while the rest and those selected under the 2017 and 2018 programmes were still running. The implementation of the Union actions have been impacted by COVID-19 pandemic, which resulted in impossible to foresee delays in projects implementation and hence the extensions of the numerous grant agreements. New grant agreements and contribution agreements were concluded for actions under the 2019 annual work programme and their implementation started in the end of 2020 or in early 2021. The AMIF 2020 work programme for **Union actions** was adopted on 26 June 2020 for a total envelope of EUR 101.8 million and the relevant calls will be finalised in 2021.

Grant agreements under the AMIF 2020 annual work programme for Union actions will be concluded in 2021 and the implementation of the actions will start as of early 2022. In continuation of previous years, they will cover the area of integration of

third-country nationals, for which six topics have been established in the annual work programme. It will also concern the asylum and migration policy, including the external dimension of this component to enhance third countries' capacity to provide that asylum-seekers and refugees receive effective protection, assistance and durable solutions (repatriation, local integration and/or resettlement) (Regional Development and Protection Programmes). Those will be the last grants to be concluded under the MFF 2014-2020. Those grants will be progressively phasing out until end 2025.

In October 2020 a single call for proposals covering themes such as developing and implementing local integration strategies, reducing obstacles and promoting access to basic services for third-country nationals, promoting participation of migrants in design and implementation of integration policies, promoting complementary pathways and further integration of people in need of protection, assistance, support and integration of victims of trafficking in human beings as well as migrant children's transition to adulthood, was published with a deadline of 16 February 2021. This call attracted a lot of interest with 377 applications received, which will be evaluated in the spring and summer of 2021.

Apart from the open call for proposals mentioned above, this work programme also supports the multilingual online information portal for prospective migrants – Infomigrant, the Regional Development and Protection Programmes in North Africa and in the Horn of Africa, the implementation of the Migration Partnership Facility, as well as procurements to support the Commission's activities.

The AMIF also continued to support the **European Migration Network (EMN)** and under the 2019-2020 work programme for the EMN, for an amount of EUR 18 million, financed grants for the National Contact Points for the period ending on 31 December 2020 as well as procurement actions to support the Network's activities.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.3. Previous programme performance**

Taking into account the volatile and challenging migration situation throughout the 2014-2020 period, it is important to stress that the AMIF is achieving its objectives. AMIF provides the financial means to push forward the EU's agenda on migration. The Commission works to establish a comprehensive approach on this agenda, developing legislative proposals to establish and improve common EU action, monitoring and enforcing the correct implementation of applicable rules by the Member States.

The AMIF focuses on the three areas identified in its acronym: Asylum, Migration and Integration. It encompasses several domains in the Asylum Systems, fighting Irregular migration, whether through awareness raising information campaigns explaining the risks of embarking on a dangerous irregular migration route, or through voluntary return. It also included Resettlement and Relocation schemes, Legal Migration, and integration of third-country nationals in the EU, with the creation networks of national, regional or local public entities. Whenever appropriate, AMIF has also drawn the focus on some vulnerable groups, such as integration of victims of trafficking of human beings, or providing support to children or unaccompanied minors, women.

Whereas in the first years a stronger focus was placed in the Asylum schemes, e.g. via resettlement and relocation, the latter years have focused increasingly on legal migration and integration addressing different target groups as well as establishing legal pathways at European level, complementing and developing Member States' efforts.

Overall, AMIF has generated important EU added value, despite the relatively small size of the funds in comparison with the important challenges imposed by the crisis that occurred during this period. The main benefit at EU level arises from the transnational dimension of certain actions but also the benefit of burden-sharing at EU level, supported in particular by the Emergency assistance and the relocation mechanism.

The European Court of Auditors (ECA) concludes in its Report on the performance of the EU budget – Status at the end of 2019, published on 13 November 2020, that the AMIF provided substantial support to help Member States face the costs and challenges of asylum and migration action, such as relocation and resettlement, migrant support schemes and funding to build and upgrade accommodation. The ECA stresses that this support is provided in a sensitive political context characterised by diverse Member State positions.

Sustainability, in the sense of investment targeting structural changes, has been thoroughly considered by AMIF both at programming and implementation stages of national programmes, and to a lesser extent in the Emergency assistance due to the nature of the actions. Overall, most of the innovative measures (e.g. simplified cost-options, multiannual programming) are considered particularly beneficial by beneficiaries and appear to have achieved simplification. Room for improvement appears to exist, especially in what concerns the internal coherence of the fund (among AMIF management modes) because there is little awareness among beneficiaries about the actions and projects realised within the AMIF framework. Similarly, the administrative

burden appeared to be the main factor that undermined the efficiency, including some control measures that appeared too stringent for the Member States even if AMIF has led to simplification relative to the past. Finally, the monitoring and evaluation system under AMIF in line with the Better Regulation guidelines needs further improvement, including in terms of definitions of its indicators and the collection of data. The European Court of Auditors identified room for improvement as regards data reliability. It specifically pointed out that information on EMAS funding is not covered by the performance indicators. Although the Court concluded that the information available points to the relevance of spending and its EU added-value, it stresses that the indicators defined do not provide evidence about economy and efficiency.

In terms of performance, for many of the indicators set in the AMIF, either the milestones have been exceeded or even the targets have been achieved.

### **Strengthening the Common European Asylum System (CEAS)**

According to Eurostat data, the number of asylum applications decreased by 33%.<sup>2</sup> At the end of 2020, in total 765 655 applications for international protection were still under consideration by the national authorities. The decrease was largely driven by Covid-19 and the related travel restrictions.

The Commission continued to make efforts to facilitate discussions on the legislative package to reform CEAS, but the European Parliament and the Council could not reach an agreement. To respond to the need for structural reform of EU migration policy and building on progress made in this field since 2016, the Commission put forward a New Pact on Migration and Asylum and a number of legislative proposals, adopted by the Commission in September 2020. The initiative covers all of the different elements needed for a comprehensive European approach to migration management based on solidarity and fair sharing of responsibility.

In the meantime, AMIF continued to provide the necessary emergency assistance to the Member States faced with migration pressure to improve their asylum systems and to reception capacities. Emergency assistance is the main tool of the Commission to provide strategic operational support of EU added value at short notice in the form of grants and contribution agreements. The interim evaluation of the Fund also confirmed the emergency assistance as being one of the main benefits at EU level. By the end of January 2021, the total amount of AMIF emergency assistance since 2015 reached over EUR 2 billion.

In this context, special attention was paid to the most vulnerable, particularly the unaccompanied minors due to the high number of unaccompanied children present in the Member States. For example, in 2020, the Commission supported Greece, through the allocation of EUR 30 million in Emergency Assistance, in the relocation of unaccompanied minors, families, sick children and beneficiaries of international protection.

Via **voluntary relocations**, 13 Member States and three associated countries have offered (via pledges) a safe space in their countries for 5 250 unaccompanied minors, severely ill children together with their families, vulnerable persons and recognised refugees from Greece. DG HOME is in the forefront, coordinating the relocation exercise. The voluntary relocation scheme started in March 2020 following the dramatic events at the Greek-Turkish land border. Initially, 11 Member States had pledged to receive around 2 500 unaccompanied minors and minors with severe medical conditions and their core family members. Following the fire at the Moria camp on 9 September 2020, two more Member States, as well as three associated countries joined the scheme. It was agreed to expand the scheme to vulnerable asylum seeking families, as well as beneficiaries of international protection. In 2020, 11 countries relocated 2 213 people, the remaining relocations, to fulfil the rest of the pledges, are taking place in 2021. Additionally, 30 vulnerable persons were relocated from Cyprus in 2020. The relocations could proceed at a relatively steady pace despite Covid-related restrictions.

As regards the AMIF national programmes, already in 2020, the Fund reached its targets in the field of **asylum**: 2 442 140 target group persons have received assistance since 2014 as compared to the target of 1.26 million. The number of persons trained in asylum-related topics largely exceeds the target, with more than 63 378 persons trained since 2014 as compared to a target of 25 205 persons. Targets are also exceeded for the number country-of-origin information products (achievement of 85 790 in comparison to a target of 72 246) and this is due to the activities of one Member State, which has produced far more products than initially planned.

Regarding the creation of new asylum reception capacity, fewer places were created in 2020 (4 128) and 2020 (3 893), than in 2017 (16 200). Due to the reduced number of asylum seekers, a number of Member States seem not to need to create new capacity with support from the Fund. Cumulatively, a total number of 36 346 places have been created with support provided under the national programmes, as compared to the target of 51 028 places. A Commission taskforce on migration management is working intensively, in close collaboration with the Greek authorities, EU Agencies and international organisations on the ground, to build new reception facilities in the Eastern Aegean.

Coordinated resettlement efforts, providing to persons in need of international protection a safe and legal way to reach the EU, have continuously increased since 2015 and were recognised as one of the 'Top 20 achievements of the Juncker Commission'.<sup>3</sup> Also in 2020, good progress was made on resettlement despite very difficult circumstances and disruptions caused by the Covid-19 pandemic. In total, 13 Member States welcomed 14 800 resettled migrants in 2020, mainly from Syria (about 9 000 persons), Sudan

<sup>2</sup> 471 630 in 2020 compared to 698 760 in 2019 and 1 282 690 in 2015.

<sup>3</sup> Communication from the Commission; Europe in May 2019: Preparing for a more united, stronger and more democratic Union in an increasingly uncertain world  
The European Commission's contribution to the informal EU27 leaders' meeting in Sibiu (Romania) on 9 May 2019, COM/2019/218 final, Annex III.

(1 200), and Eritrea, Somalia and the Democratic Republic of the Congo (about 1 000 each)<sup>4</sup>. Taking into account the success of the previous schemes and considering that the Recommendation on Resettlement (linked to the Pact) had not yet been adopted, a new **ad hoc resettlement scheme** was put in place for 2020–2021. The Commission put in place a new ad hoc resettlement scheme covering the year 2020 with a target of 20 000 persons. Responding to the Commission's call, Member States collectively pledged almost 30 000 resettlement places. This generous pledge – going beyond initial expectations – confirms the Member States' commitment to resettlement and their resolve to scale up safe and legal pathways to protection in Europe. The collective EU pledge for 2020 represents almost 50% of global pledges. The expansion of EU resettlement is in line with the UNHCR 3-year (2019-2021) Strategy and was welcomed by all stakeholders at the Global Refugee Forum last in December 2019.

Resettlement operations are an important part of the AMIF, with almost EUR 1.07 billion allocated to them under the national programmes in the 2014-2020 programming period, which constitute almost ¼ of the overall financial value for the Fund. This corresponds to 108 680 persons to be resettled, of which 77 463 persons have been reported in payment claims to the Commission up to 2020 included (71% implementation). Due to the delays in reporting, once the final accounts have been submitted in 2023, it is expected that also the latest resettlement scheme will reach a high implementation rate.

In terms of resettlement, in their accounts, Member States reported a total of 14 812 persons resettled in 2020 in comparison to 23 764 in 2019. This brings the number of resettled persons for the period 2014-2020 up to a total of 77 463. The Member States, which resettled most in 2020 were Sweden, followed by Germany, the Netherlands and France. Austria, Czech Republic, Estonia, Croatia, Hungary, Lithuania, Latvia, Malta and Slovenia did not resettle anybody in 2020. With the submission of the accounts in February 2021, ten reached an absorption rate of more than 70% with Sweden reaching an absorption rate of 100%. On the other end of the spectrum, there are seven Member States with an absorption rate below 30%, with four Member States with an absorption rate of 0%.

### Effective integration and legal migration

The gap between the employment rates of third-country nationals compared to EU nationals is used as an indicator to measure progress in integrating third country nationals in EU societies. The gap between the employment rates of third-country nationals compared to EU nationals has effectively increased from 13.1 percentage points in 2014 to 15.9 in 2020.

The Commission supports the Member States in their efforts to integrate third-country nationals, through the use of EU funding, some of which is provided by the AMIF, more is provided by the European Structural and Investment Funds.

The Commission continued to work closely with North African Countries on migration and security. By supporting in 2017-2020 the EU-Emergency Trust Fund for Africa under the Union actions with an overall amount of EUR 135 million, out of which EUR 5 million in 2020, the Commission contributed to shaping the strategic approach to countries of North Africa. Financial support to specific areas in Morocco contributed to reducing the number of irregular migrants on the Western Mediterranean route from roughly 57 000 in 2018 to roughly 41 800 in 2020. To build up or strengthen asylum and reception systems and to address protection needs in African countries, the Commission contracted in 2020 EUR 30 million through the Regional Development and Protection Programme (EUR 20 million for North Africa, and EUR 10 million for Horn of Africa), rolling out new actions in Algeria, Egypt, Libya, Mauritania, Morocco, Niger, Tunisia and Sudan.

Under the AMIF national programmes, more than 6.9 million persons have received integration assistance already surpassing the target of 2.6 million. Moreover, number of local, regional and national policy frameworks already exceed the target: 10 458 were already put in place as opposed to the target of 7 443.

However, measuring the number of persons who participated in pre-departure measures, gives results far below the target set (88 603 persons supported versus a target of 240 920). The data up to 2020 shows very uneven results in Member States. There are Member States exceeding their targets significantly, others remain at zero or are at a very early stages of fulfilling their targets. The reasons can vary from Member State to Member State: the target have been largely overstated, lack of pre-departure programmes, lack of target groups, efficiency of national administrations, etc. Furthermore, of the 62 cooperation projects foreseen by Member States, up to 2020, only 49 have been reported. Nevertheless, it should be noted, that, through Union Actions, the Commission has promoted cooperation projects between local and regional authorities through targeted calls for proposals.

In the period 2014–2020, EUR 830 million have been allocated under the Asylum, Migration and Integration Fund to support measures on integration and legal migration. In 2020, Member States reported expenditure for EUR 101 million, reaching a cumulative value of EUR 419 million (50% absorption rate).

In November 2020, the Commission adopted the Action plan on Integration and Inclusion 2021-2027, COM (2020) 758, highlighting the horizontal and sectoral priorities for integration including the use of the different funding sources. The plan sets out a strong framework to strengthen and step up integration and inclusion policies across the EU. The implementation of the actions presented in the action plan will be monitored, progress will be reported and actions adapted where needed.

### Effective return policies

For the asylum system to be credible, migrants with no right to stay in the EU need to be **returned**. However, return is seen as an area where further improvement should be made. Prospects of improvement depend both on better cooperation by third countries and on Member States' effectiveness in implementing returns. In this respect, Schengen evaluations in the field of return help to

<sup>4</sup> Data source: Member States' Annual Accounts for the financial year 2020 (16.10.2019–15.10.2020).

orient Member States on specific actions that have to be prioritised in order to achieve set objectives. Unsatisfactorily low return rates persist due to inefficient enforcement of existing instruments at EU and national level, and a common readmission policy that does not fully deliver. In 2018, the total return rate of irregular migrants of EU-27 was 33.5% (35.79% in 2018). The rate of effective return of EU-27 to third countries slightly decreased to 28.97% (31.95% in 2018).

This decrease is partially explained by the combination of a significant increase in return decisions issued (around 34 000 more than in 2018, in particular in some Member States; i.e. Greece, Czech Republic, France, Hungary, Slovenia, Finland and the Netherlands), that has not been matched by a similar trend in numbers of effected returns to third countries (around 9 000 less than in 2018). This trend prevailed for a number of important countries of return. Even the Western Balkans and Eastern Partnership countries, which traditionally pushed the average EU rate up with rates close to 100%, witnessed in 2019 (like in 2018) a decrease and influenced significantly the overall rate due to the high proportion of return decisions issued to their nationals out of total number of decisions.

Additional efforts are required to address key challenges to the effectiveness of returns through measures both in Member States and with third countries. Actions taken include the following:

- the Commission put forward a proposal for a recast of the Return Directive and will continue to push for its adoption;
- In 2020 with Frontex coordinated flights, 12 072 non-EU country nationals returned (24% decrease comparing with 2019), out of which:
  - 7 952 persons by charter flights to 28 destinations, 3 981 persons by scheduled flights to 83 destinations and 145 returned to TR under the EU-TR statement);
- the Commission will continue to negotiate and implement readmission agreements and informal arrangements with non-EU countries; Member States should make full use of the arrangements already in place.
- Enhance the Assisted Voluntary Return Programmes.

Under the EU-Turkey Statement, returns of Syrians to Turkey have continued, but at a very slow pace. In 2019, 30 Syrians were returned from the Greek islands to Turkey and 37 in 2020. In total, 2 140 persons were returned to Turkey between March 2016 and March of 2020 under the EU-Turkey Statement. However, on 16 March 2020, the Turkish authorities informed that they will not carry out any return operations for the time being due to measures related to the prevention of COVID-19 contamination.

In total, EUR 1 billion have been allocated to priorities in return (voluntary and forced) under the national programmes in 2014–2020 and EUR 577 million have been spent so far, reaching an absorption rate of 58%. In 2020, Member States declared payments of EUR 120 million to the Commission returning 39 966 persons.

The AMIF supported Member States in the return of 39 966 persons in 2020 significantly below the level of 2019, when 65 035 persons were returned with the support of the Fund. The 2020 data shows a decrease in both forced returns (20 816 persons in 2020 versus 35 982 in 2019) as well as voluntary returns (19 150 in 2020 versus 29 053 in 2019).

In their return activities Member States are encouraged to use the available support both from Frontex and through AMIF in a complementary way. AMIF contributed to the implementation of the national return strategies by providing Member States with the necessary assistance in different areas of the return policy: introducing assisted voluntary return and reintegration programmes, increasing detention capacity when insufficient and improving its conditions; ensuring the implementation of safeguards (e.g. free legal assistance), covering the costs of return operations in cases where Frontex could not offer support or where the Agency's assistance was not considered necessary by the Member States.

EU actions also support non-EU countries to improve their capacity to manage readmission processes effectively (identification, re-documentation) in their cooperation with Member States; such support is financed by the Readmission Capacity Building Facility under AMIF. There are 24 existing EU agreements and arrangements on readmission and the new Pact on Migration and Asylum will mobilise all EU policies, tools and instruments, to prioritise the effective implementation of these agreements, complete ongoing readmission negotiations, and explore options for new agreements.

#### ***Enhancing solidarity and responsibility-sharing between the Member States***

As the 2016 Commission proposal for the recast Dublin Regulation aiming, inter alia, at ensuring fair sharing of responsibilities between Member States by complementing the system with a corrective allocation mechanism, has not been adopted by the European Parliament and the Council, there has been a need for emergency measures to support the Member States facing unproportioned numbers of arrivals. Therefore, in addition to their national allocations, several Member States, notably Greece, Italy and Spain, benefit from the AMIF emergency assistance, allowing them to save more lives at sea, receive the arriving migrants in conditions, attaining better humanitarian standards, ensure basic healthcare as well as protection to vulnerable groups. The emergency assistance amounts granted up to end-December 2020 to Greece are EUR 1.515 billion and to Italy EUR 190 million.

In addition, since 2019, the Commission has been coordinating the voluntary relocation of asylum applicants disembarked in Italy and Malta after rescue operations in the Central Mediterranean to other Member States who are voluntarily showing solidarity. 2 634 applicants have been relocated so far from Italy and Malta with the support of EUR 3.2 million AMIF emergency funding. More relocations are due to take place in the following months, as rescues continue in the Central Mediterranean. In March 2020, following the dramatic events at the Greek-Turkish border and then the Moria campfire in September 2020, voluntary relocation started to be implemented also in Greece, with EUR 31.8 million AMIF support to put in place procedures for processing and

relocation. 2 213 of the most vulnerable applicants have already been relocated, out of the 5 250 places pledged by Member States and associated countries. Additionally, 30 vulnerable persons were relocated from Cyprus in 2020.

As the arrival of migrants continues across the Mediterranean, voluntary solidarity in the shorter-term can help build confidence among Member States by demonstrating that solidarity is still working on the ground as an important way to support migration management in particular in Member States most affected by migratory flows. It can also assist in showcasing how the different elements of solidarity listed in the Pact can provide meaningful support as a precursor to the legal proposals.

The funding to support the emergency relocation scheme was allocated in the 2016 Budget for a total number of persons of 160 000 persons. On expiry of the scheme, the Commission proposed the amendment of Article 18 of the AMIF Regulation to open up the possibility for Member States to use the remaining unused funds for the relocation (EUR 505 million) for other actions. This was agreed by the co-legislators (Regulation (EU) 2018/2000). Accordingly, through revision of national programmes in 2019, this funding has been reallocated to voluntary relocation (EUR 26 million) and resettlement (EUR 116 million), among other key priorities in the migration area and the remaining amount to other policy areas such as asylum, integration or return. The national programmes set out to relocate a total number of 38 703 persons. This target includes voluntary relocation. Up to 2020, in the annual accounts, Member States reported a total number of 32 256 relocated persons. This corresponds to a target achievement rate of almost 83%.

It is to be noted that the role of the emergency assistance tool within the future AMIF will remain important for the period 2021-2027 in order to address unforeseen events linked to the volatile migration situation.

The European Court of Auditors issued recommendations on the **strengthening of the management of the AMIF emergency assistance and national programmes**. They cover in particular strengthening the performance monitoring framework by monitoring and reporting the outcomes achieved by EMAS funded projects, ensuring that EMAS project contain output and outcome indicators with clean targets and baselines etc. In that respect, it should be noted that the indicators below are only encompassing national programmes projects (see comments below the tables)

### Lessons learnt

The new AMIF 2021-2027 provides financial resources to ensure a comprehensive approach to management of migration grounded on mutual trust, solidarity and fair sharing of responsibility among Member States and Union institutions, with the objective of ensuring a common sustainable Union policy on asylum and immigration. Lessons learned and incorporated into the design of the new AMIF include an allocation which reflects the different needs and pressures of Member States, and a thematic facility offering flexible funding for a number of priorities including support for solidarity and responsibility efforts between the Member States, specific attention to effective returns, and emergency assistance.

The main lessons learnt during the programming period 2014-2020 include:

*Insufficient cooperation, coordination and strategic steering in the implementation of the AMIF with other EU level initiatives:* This challenge was addressed by including eight shared management funds, including the AMIF, in a single legal framework. This allows for a closer coordination and cooperation of the shared management funds both at strategic level as well as at the level of implementation.

*A need for simplification:* in order to simplify and build on synergies, the rules applicable to the shared management funds will be aligned with rules applicable to the management of other Union Funds under shared management ('single rule book'). This provides better guidance on the management and control systems and audit requirements, and ensures that the eligibility rules under shared management make full use of simplified cost options (SCOs).

*Insufficient flexibility to respond to changing needs during the programming period:* This challenge was addressed in two ways. Firstly, Member States will be provided with around 52.9% to Member States programmes. An additional share of 10.6% of the total budget will be allocated at mid-term (technical adjustment of the distribution key subject to financial performance according to which a Member State should have submitted payment claims covering at least 10% of the initial amount of payment appropriations). Secondly, a financial envelope of 36.5% should be managed through the thematic facility, which will periodically provide funding for a number of priorities defined in Commission financing decisions. This facility in particular offers flexibility in the management of the instrument by allowing the disbursement of funds to the technical assistance at the initiative of the Commission and the following components of the thematic facility: support for specific actions, providing additional funding for dedicated actions of high EU added value, through the Member States' national programmes; support for Union actions, managed through direct and indirect management; and emergency assistance.

*The third main challenge was the need to strengthen the performance monitoring in terms of quality and frequency of the fund in general.* In order to address this challenge, the Commission proposed greatly improved performance monitoring with more regular and reliable data setting out common output and result indicators. In cooperation with the Member States, the Commission services will develop definitions for each of these indicators. This will ensure a common understanding of each indicator across all Member States and programmes. Moreover, it will not only greatly contribute to improving data quality, it will also enhance data comparability. Member States will be required to develop this performance framework for each of its programmes and underpin it by methodological considerations. The managing authority, in its yearly management declaration and as part of the annual assurance package, will have to confirm the reliability of submitted data relating to indicators and the progress of the programme. The annual performance review will be an occasion for a policy dialogue with the Member States on issues of programme

implementation and performance. In particular, the annual performance reports will provide qualitative information on programme implementation going beyond the quantitative data submitted for the indicators. It will complement the bi-yearly transmission of structured data and strengthen the performance review process. In the context of the performance framework, Commission services will hold at least two meetings with Member States during the programming period. All data required for monitoring progress in programme implementation will be transmitted electronically. Twice a year, Member States will transmit to the Commission structured data on the common output and result indicators. Thus, the Commission services will have a much more updated picture of programme performance than in the current period. In addition, the AMIF programmes will now also use the open data platform, which had been established in the current programming period for the European Structural and Investment Funds. It will allow stakeholders to access almost real time data on programme implementation. This is an important novelty for the HOME funds, which in the current period do not publish data on the open data platform.

Moreover, Member States are now required to set up a system of electronic data exchange between beneficiaries and managing authorities, and between different authorities of the management and control system. This requirement builds on the current Common Provisions Regulation, which did not cover the 2014-2020 AMIF, and further develops certain aspects of data collection. It is thus a novelty for the HOME funds in general. Beneficiary and project information, as well as the performance reports will be published on a dedicated website run by the managing authority. This will give greater visibility to achievements and allow better communication.

### 3.2. Key achievements

<i>2014-2020 cumulative number</i>	<i>Explanation of the number</i>
2 442 140	Number of target group persons provided with assistance through projects in the field of reception and asylum systems supported under the Fund
36 346	Capacity (i.e. number of places) of new reception accommodation infrastructure set up in line with the common requirements for reception conditions set out in the Union acquis and of existing reception accommodation infrastructure improved in accordance with the same requirements as a result of the projects supported under the Fund and percentage in the total reception accommodation capacity
63 378	Number of persons trained in asylum-related topics with the assistance of the Fund
85 790	Number of country-of-origin information products and fact-finding missions conducted with the assistance of the Fund
77 463	Number of persons resettled with support of the Fund
88 603	Number of target group persons who participated in pre-departure measures supported under the Fund
6 924 718	Number of target group persons assisted by the Fund through integration measures in the framework of national, local and regional strategies
10 458	Number of local, regional and national policy frameworks/measures/tools in place for the integration of third-country nationals and involving civil society and migrant communities, as well as all other relevant stakeholders, as a result of the measures supported under the Fund
29 620	Number of persons trained on return-related topics with the assistance of the Fund
129 326	Number of returnees who received pre or post return reintegration assistance co-financed by the Fund
316 463	Number of returnees whose return was co-financed by the Fund
35 131	Number of monitored removal operations co-financed by the Fund
32 256	Number of applicants and beneficiaries of international protection transferred from one Member State to another with support of the Fund

The Asylum, Migration and Integration Fund remained in 2020 a key source of financial assistance to cope with increased migratory flows and reception of asylum seekers.

In 2020, 353 653 **asylum seekers** received assistance from the programme (2019 – 377 768).

The Commission also supports Member States in their efforts to integrate third country nationals. In 2020, 959 222 third-country nationals have received integration assistance (compared to 971 385 in 2019). This assistance covered, among others, language and civic orientation training, preparatory actions to facilitate access to the labour market and capacity building.

Coordinated **resettlement efforts**, providing to persons in need of international protection a safe and legal way to reach the EU, have continuously increased since 2015 (14 812 in 2020 compared to 23 764 in 2019) and were recognized as one of the ‘Top 20 achievements of the Juncker Commission’.

Resettlement operations are an important part of the AMIF, with almost EUR 1 billion allocated to them in the 2014-2020 programming period, which constitute almost  $\frac{1}{4}$  of the overall financial value for the Fund. This corresponds to 101 116 persons to be resettled, of which 77 463 persons have been reported in payment claims to the Commission up to 2020 included. Reporting will continue until 2023 and it is therefore expected that the implementation rate will rise significantly.

Taking into account the success of the implementation of the ‘50 000’ scheme and the delays in the adoption of the Union Resettlement Framework by the co-legislators, the Commission has put in place a new ad hoc resettlement scheme covering the year 2020 with a target of 20 000 persons. Responding to the Commission’s call, Member States collectively pledged almost 30 000 resettlement places. This generous pledge – going beyond initial expectations – confirms the Member States’ commitment to resettlement and their resolve to scale up safe and legal pathways to protection in Europe. The collective EU pledge for 2020 represents almost 50% of global pledges. The expansion of EU resettlement is in line with the UNHCR 3-year (2019-2021) Strategy was welcomed by all stakeholders at the Global Refugee Forum in December 2019.

In order to reduce incentives for irregular migration, the Fund contributed in 2020 to the return of 39 966 persons (both voluntary and forced), which was significantly below the level of 2019, when 65 035 persons were returned. This corresponds to EUR 120 million in payments declared by the Member States in 2020 to the Commission. In particular, through the financial support given to the Member States for the Assisted Voluntary Returns and Reintegration Programmes, 19 150 persons have been returned voluntarily in 2020. Among return related projects, it is important to mention the ERRIN project run by the Netherlands in cooperation with other Member States, which contributed to assistance with voluntary return of 11 000 persons to 17 third countries, with a perspective of 20 000 persons until June 2021. The EU funding for this project will be extended until 1 July 2022 for two purposes: (1) to allow for reaching the target of 25 000 persons and (2) to prepare for the transition of the network activities to the European Border and Coast Guard Agency (EBCGA).

In 2020, 11 097 of the returned migrants received pre or post return reintegration assistance co – financed by the fund. The return operations organised by the Member States complement the return operations organised by the European Border and Coast Guard Agency. In 2020 with Frontex coordinated flights, 12 072 non-EU country nationals returned (24% decrease comparing with 2019), out of which: 7 952 persons by charter flights to 28 destinations, 3 981 persons by scheduled flights to 83 destinations and 145 returned to Turkey under the EU-TR statement. In total between March 2016 and March 2020, 2 140 persons were returned to Turkey.

It is worth recalling that the Agency can only assist Member States to implement enforceable return decisions issued by competent national authorities.

AMIF also provided, together with the United Nations Refugee Agency and the Greek Ministry of Migration and Asylum, over EUR 91.5 million to meet accommodation needs and over EUR 115 million for the cash based intervention project on the Greek mainland and the islands. On an annual basis, 27 000 places are being provided under the ESTIA (Emergency Support to Integration and Accommodation) scheme and more than 96 000 asylum seekers are receiving cash assistance. Moreover, in cooperation with the International Organisation for Migration (IOM) provided over EUR 124 million to meet accommodation needs of approximately 30 000 asylum seekers in 32 sites in the mainland. In 2020, the Fund also provided, together with international partner organisations, nearly EUR 20 million for the protection of children in Greece, and ensure access to schools and basic education. Until end-2020, approximately 1 500 places have been made available in shelters for unaccompanied children in the mainland and more than 12 000 children are estimated to have attended education at public schools.

### **Examples of success stories under shared management**

#### **Germany**

Terre des hommes Deutschland is running the project ‘Child-oriented reception of unaccompanied minors through qualification, knowledge and networking’ for a total EU Contribution of EUR 576 224. It was conceived in response to the increasing number of unaccompanied minors (UM) arriving in Germany since 2015, who were applying for asylum and the resulting high number of requests for advice, networking and training (pedagogical and legal, in particular) by all people involved in assisting UM, in particular employees of youth welfare institutions and social services, guardians, judges. The goal of the project is to improve the quality in assisting UM through specific education and training of relevant stakeholders involved with the reception and asylum procedures of UM. The project also enhances the networking among these stakeholders, thereby supporting the exchange of expertise on matters relating to child welfare and legal aid and representation for UM.

#### **Sweden**

The project ‘Stadsdelsmors’, for a total EU Contribution of EUR 513 991, is running from 2016 till 2020 and it aims to break down social isolation and increase the participation of a particular target group of third country nationals in society, namely those who are living in social exclusion (legally resident third-country nationals or those who are in the process of acquiring legal residence). The

project is developed in close exchange with similar projects in other European and Schengen countries (Denmark, Norway and Germany). The aim is that the target group should have access to social and professional networks in order to extend their networks and social health and this is realised *inter alia* through the provision of information on social issues in easy Swedish. Until now, 1512 persons were helped in the context of this project.

### Greece

Under the AMIF National Programme, Greece launched in February 2020 a call of EUR 10 million public contribution (EUR 7.5 million EU contribution) to subsidize the operation of **Semi-independent Living apartments (SILs)** for unaccompanied minors aged above 16 years old. The call was intended to cover the period until the end of 2022. The main purpose of this action is to support unaccompanied minors through personalized care and protection in the context of semi-autonomous living with a hosting framework that aims at their gradual autonomy.

The main goal of the action is to meet the basic needs of minors and to provide support services with a view to their protection, social inclusion and gradual autonomy. The specific model of hospitality promotes the support and empowerment of unaccompanied adolescents for the transition to adulthood, their gradual integration into the local community and the strengthening of the possibility of self-preservation. The current call covers 500 accommodation places.

### Italy

In the context of its AMIF national programme, Italy attached particular attention to the **social integration of young migrants**. The project “Piano Regionale Multi-Azione CASPER II” (EU contribution: EUR 1.3 million) supported the promotion of young and second-generation migrants’ social inclusion by tackling early school drop-out and performance gap. It fostered integration paths through the establishment of an integrated system of territorial services for the provision of qualified information, the promotion of participation in the socio-economic and cultural life of the host society and the reinforcement of associations of migrants. The project, which is ongoing since October 2018, has so far achieved important results such as:

- support to over 400 minors for their integration in the national education system;
- 35 vulnerable migrants assisted by the medical and social services;
- 74 third-country nationals assisted with the procedures linked to their residence permit (particularly important in light of the recent important legislative changes in this domain);
- 90 media workers trained in communication in the field of migration;
- 11 migrants associations supported in the implementation of integration paths.

Another milestone of Italy’s activities under its AMIF national programme is the **assisted voluntary return and reintegration** in the migrants’ country of origin. For example, project ERMES 3 (EU contribution: EUR 0.5 million) builds upon three pillars of activities: a) dissemination of information in Italy; b) support to pre-departure phase in Italy and support to development of reintegration plan as well as c) assistance upon arrival and up to 6-months long support period in the country of return. The project concerns measures for the AVRR of 300 third-country nationals to their home countries by end of 2021. Two Italian NGOs, namely *Centro Informazione e Educazione allo Sviluppo/CIES ONLUS* and *Comitato Internazionale per lo sviluppo dei popoli/CISP*, jointly manage the project.

### Examples of success stories under emergency assistance

AMIF emergency assistance funding played an important role in supporting front line Member States facing increased numbers of arrivals. Below some successful examples of this funding:

### Greece

To address this situation, the Commission has awarded towards International Organisations and Greek authorities a number of emergency assistance projects in order to alleviate the situation. EUR 125 million were granted to IOM to run the project for Site Management Support for the provision of accommodation and related services in 32 camps in the mainland for approximately 28 000 places. The project lasted the whole of 2020, and was extended until the end of March 2021. Furthermore, in March 2020 the Commission awarded 91.5 million in the Emergency Support to Integration and Accommodation (ESTIA) programme, for the year period 1 January 2020 to 31 December 2020. The project was implemented jointly by the Greek Ministry of Migration and Asylum and the United Nations Refugee Agency (UNHCR) and provided approximately 25 000 places in apartments and adequate shelters on the mainland and several islands for most vulnerable cases. During 2020, the programme was successfully transitioned from UNHCR to the Greek authorities, in line with the aim to maintain and enhance reception capacity in Greece by ensuring adequate and appropriate accommodation for vulnerable asylum seekers, in line with the EU Directive on Reception Conditions.

Moreover, in July 2019, the Commission awarded to the International Organisation for Migration (IOM) the HELIOS project, which is a pilot integration project composed of three different components: education, accommodation and employability. The beneficiaries enrolled (beneficiaries of international protection), have the obligation to attend language courses and simultaneously, with the assistance of IOM and its partners, find apartments for rent. For the period from 16 July until the end of January 2021, **25 541** were enrolled to HELIOS project and received support for independent living and 10 319 beneficiaries received rental subsidies upon finding independent housing. The aim is that in the next phase the beneficiaries will be able to integrate into the labour market. The amount of the project reaches EUR 57 million and the end of the project is scheduled for the end of February 2021 (the project is expected to be continued under ESF+ for the programming period 2021-2027).

In addition, since April 2020, the Relocation from Greece project is being implemented by IOM (in cooperation with UNHCR, UNICEF and EASO). The project amounts EUR 30 million and the end of the project is 30 April 2021. Until 22 January 2021, **2 269 beneficiaries have been relocated** (586 unaccompanied minors, 388 beneficiaries of international protection and 1 295 member of families with sick persons).

### Italy

Italy has received AMIF emergency assistance to improve the performance of its asylum procedures through the provision of asylum experts, interim administrative staff, IT equipment, inter-cultural mediation and other services to assist with the registration and processing of asylum applications. Under two on-going EMAS projects, for a total amount of EU contribution of EUR 22.3 million, the Ministry of Interior receives support to implement the procedure for the recognition of international protection: 289 resources, among which inter-cultural mediators, legal and administrative officers, are deployed at the Immigration Offices at the local Questure and Air Borders offices to assist Police Officers in the immediate registration of asylum requests. The administrative activity at Police Offices, offices of the Territorial Commissions and of the National Commission has been simplified to reduce, for example, the average time dedicated to the analysis of requests and for first instance decisions.

Other successful EMAS actions were the project (EUR 0.7 million) for the humanitarian evacuation of up to 700 vulnerable migrants stranded in Libya to Italy with the support of UNHCR, as well as the project on assisted voluntary return and reintegration carried out with IOM (EUR 6 million) and the project (EUR 9 million) supporting emergency health assistance to vulnerable migrants hosted in Italy's reception system.

EUR 30.2 million of AMIF emergency assistance were deployed in 2020 to implement a pilot project to tackle the problem of migrant labour exploitation in Southern Italy. The project aims to eradicate the social emergency by providing appropriate housing, transportation, health and social assistance to victims of labour exploitation. Following the outbreak of the COVID pandemic and the immediate risks on the target population, in May 2020 anti-COVID prevention measures were put in place by the Italian Red Cross and NGO Intersos at the "Casa Sankara", where several hundred migrants were transferred from informal settlements.

Moreover, in August 2020 IOM received from the Commission EUR 2.2 million AMIF emergency assistance to carry out activities necessary for the voluntary relocation of 2 200 asylum seekers from Italy to other EU countries and Schengen Associated States. A total of 286 relocation transfers have been completed successfully through the project until 31/1/2021, in close cooperation with the Italian Ministry of Interior and the Commission.

### Malta

In addition, throughout 2020 a number of MS, continued voluntary relocation supported by the AMIF emergency funding. For instance, in January 2020, the Commission extended the emergency support to the International Organization for Migration (IOM) under AMIF for the voluntary relocation of up to 1 000 persons from Malta to EU Member and Associated States of Relocation until end of February 2021 for an EU contribution of nearly EUR 1 million. By the end of 2020, a total of 600 persons had been assisted in their relocation. The project is expected to be extended until end of May 2021 in order to carry out relocations from the remaining open pledges (estimated 260 persons) without additional funding awarded. Due to the ongoing pandemic the project also covered unforeseen COVID-19 related costs such as protective equipment, COVID testing, charter flights etc.

### Union actions

Examples of AMIF funded Union actions can be found in the Snapshots and Factsheets published by the Commission at the following links:

[https://ec.europa.eu/home-affairs/publications/amif-more-snapshot-e-book\\_en](https://ec.europa.eu/home-affairs/publications/amif-more-snapshot-e-book_en)

and

[https://ec.europa.eu/home-affairs/publications/amif-factsheet-compilation\\_en](https://ec.europa.eu/home-affairs/publications/amif-factsheet-compilation_en)

In 2020, under 2019 AMIF call, five new projects have been selected and awarded touching for the first time upon the area of complementary pathways, for a total amount of EUR 3.8 million euro under the topic "Fostering the integration of persons in need of protection through private sponsorship schemes". Such schemes, with strong involvement of local communities and civil society organisations, allow to strengthen capacities at local level to provide adequate support for integration. AMIF has also the external dimension – under 2019 AMIF call, six new projects have been selected and awarded in 2020 under the topic "Awareness raising and information campaigns on the risks of irregular migration in selected third countries and within Europe." These projects, paired with a recurring support via a direct award grant for a consortium of leading EU public media led by France Médias Monde for the multilingual online information portal for prospective migrants Infomigrant, are part of the broader approach to prevent irregular migration and in particular migrant smuggling. The main goal is to provide potential migrants with trusted, factual, balanced information on the risks of irregular migration – during the journey (dangers of migrating irregularly) and after arrival (living in the EU irregularly and return). A total budget of EUR 6.5 million euro was allocated to these actions.

### **Examples of success stories under direct management:**

Migrant women often find it harder to integrate into European society than migrant men do. This is down to the fact that these women tend to be charged with taking care of the entire family and as a result miss out on finding a job and integrating socially.

The 2016 action plan on integration showed that there was an urgent need for better measures to improve female migrant integration across the EU. Examples of good practice could feed back into government policy, helping to improve their lives in Europe. Urbagri4Women was a 2-year project that helped integrate migrant women into the labour market and society by

encouraging them to participate in various urban farming initiatives. The women's entrepreneurial spirit resulted in urban rehabilitation, which has in turn brought economic, environmental and social benefits. The project covered seven Member States: Austria, Cyprus, France, Greece, Italy, Portugal and the UK with a budget of 0.6 million EUR. The project promoted social inclusion, female empowerment and served to rehabilitate the abandoned or decaying urban areas. The local communities actively participated with more than 200 cultural organisations, educational establishments and businesses providing practical support.

The results of this project will feed into future national and European policy designed to help and integrate migrant women. From a wider angle, previously barren urban areas have been regenerated and transformed into areas with economic, environmental and social benefits.

### 3.3. Evaluations, studies and reports

The key findings of the latest Interim evaluation of the Asylum, Migration and Integration Fund 2014-2017 (SWD (2018) 340 final <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:52018SC0339&from=EN>) have been presented in the Programme Statements DB2020.

By 31 December 2023, the Member States will provide an ex-post evaluation report on the effects of actions under their national programmes and by 30 June 2024 the Commission will present an ex-post evaluation report on the effects of the legal bases.

At the same time, DG HOME implements the **Action Plan** following the internal audit findings on the monitoring and reporting on the implementation and performance of National Programmes. In particular, DG HOME has strengthened its processes for monitoring the National Programmes and increased its efforts to improve the reliability of performance data reported by the Member States in their Annual Implementation Reports submitted annually. More attention will be given to the consistency of data reported by the Member States. Together with the Member States, DG HOME will develop common definitions for each common indicator set out in the Fund Regulation.

Moreover, the European Court of Auditors issued recommendations on the strengthening of the management of the AMIF emergency assistance and national programmes. They cover in particular strengthening the performance monitoring framework by monitoring and reporting the outcomes achieved by EMAS funded projects, ensuring that EMAS project contain output and outcome indicators with clean targets and baselines etc.

While the Commission started implementing the ECA's recommendations already under the ongoing programmes, the main structural recommendations will be put in place in the context of the next MFF, including on performance reporting on EMAS projects.

## 4. Programme 2021-2027 - Key monitoring indicators

### Specific Objective 1 :Strengthen and develop all aspects of the common European asylum system, including its external dimension

#### Indicator 1: Number of participants who consider the training useful for their work

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track	
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	
Link to the objective	
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020, Member States do not monitor this indicator
Other methodological comments	The metadata is not yet available for any of the indicators of the active programme due to the delay in the adoption of the legal basis. The Commission intends to engage in a thorough consultation of the Member States in order to establish a sound common understanding on the metadata.
Full metadata available at this address	
Justification of the trend	

#### Indicator 2: Number of participants who report three months after the training activity that they are using the skills and competences acquired during the training

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									

	Actual Progress									Final

Are we on track	
Indicator type	
Unit of measurement	
Cut-Off Date	
Data source	
Link to the objective	
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020, Member States do not monitor this indicator
Other methodological comments	The metadata is not yet available for any of the indicators of the active programme due to the delay in the adoption of the legal basis. The Commission intends to engage in a thorough consultation of the Member States in order to establish a sound common understanding on the metadata.

Justification of the trend	

## **5. Programme 2014-2020 - Key monitoring indicators**

### *Previous Program 1 : Asylum, Migration and Integration Fund*

**General Objective 1 :to contribute to the efficient management of migration flows and to the implementation, strengthening and development of the common policy on asylum, subsidiary protection and temporary protection and the common immigration policy, while fully respecting the rights and principles enshrined in the Charter of Fundamental Rights of the European Union**

**Indicator 1:Effectiveness of return policy as reflected by the ratio between the number of irregular migrants returned to their country of origin compared to return decisions issued**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022
39.2%				Increased ratio						Increased ratio
	Actual Progress									Final
	31.91%	33.85%	45.15%	35.67%	31.95%	28.97%				

Are we on track	On track
Indicator type	
Unit of measurement	Ratio
Cut-Off Date	01/04/2021
Data source	Eurostat
Narrative	
Methodology	The indicator measures the number of third country nationals who have been returned to third countries.
Link MFF 14-20 / MFF 21-27	This indicator is not included in the core performance indicators for the MFF 2021-2027.
Other methodological comments	Extract from Eurostat on 15/02/2021. Data are revised on a continuous basis according to the most recently updated data provided by the countries. For accuracy purposes, the indicator should be called: 'Effectiveness of return policy as reflected by the ratio between the total number of irregular migrants returned compared to return decisions issued'. All data, including historical data, refers to EU-27
Full metadata available at this address	
Justification of the trend	In light of the declining return rate, the Pact includes measures for stepping up returns, notably by closing loopholes between asylum and return procedures – including at the external borders by means of a border procedure – through the recast Return Directive and the amended proposal for an Asylum Procedure Regulation. The Pact announces a new strategy to reinforce voluntary return and reintegration, foresees the appointment of a Return Coordinator who will be supported by a High-Level Network which will provide technical support and bring together the strands of the EU return policy. Moreover, the implementation of the European Border and Coast Guard Agency (Frontex) mandate on returns and measures for enhancing cooperation with third countries will further contribute to returns.

### **Indicator 2:Ratio voluntary/forced return**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2022
45.5%				Increased						Increased ratio
	Actual Progress									Final
	58.4%	86.8%	133%	136%	109.2%	100.2%				

Are we on track	On track
Indicator type	
Unit of measurement	Ratio
Cut-Off Date	01/04/2021
Data source	Eurostat
Narrative	This indicator is not included in the AMIF Regulation.
Methodology	The number of voluntary returns divided by the number of enforced returns.

Link MFF 14-20 / MFF 21-27	This indicator is not included in the core performance indicators for the MFF 2021-2027.
Other methodological comments	Please note that not all MS report this indicator. Also, some MS do not report it every year so the figures are not fully comparable. It will become obligatory to report this breakdown from reference year 2021.
Full metadata available at this address	
Justification of the trend	The Commission has always promoted the voluntary return as a preferred option for being more dignified concerning potential returnees. The Pact announces a new strategy to reinforce voluntary return and reintegration. Moreover, the implementation of the European Border and Coast Guard Agency (Frontex) mandate on returns implies also an increase of the support that the Agency is able to provide to MS in the field of Assisted Voluntary Returns including through the takeover of the European Return and Reintegration Network (ERRIN)

### Indicator 3: Difference in employment rates of third-country national (TCN) compared to that of EU nationals

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Points of difference										
2013	Milestones									2022
13.2	Actual Progress									Decrease
	13.1	13.7	14.9	15.1	14.3	13.9	15.9			Final
Employment rate of Third-country nationals										
2013	Milestones									2022
	Actual Progress									Final
	55.7%	56.0%	55.9%	57.0%	58.8%	60.0%	57.4%			
Employment rate of EU nationals										
2013	Milestones									2022
	Actual Progress									Final
	68.8%	69.7%	70.8%	72.1%	73.1%	73.9%	73.3%			

Are we on track	Deserves attention**
Indicator type	
Unit of measurement	Percentage points and percentages respectively
Cut-Off Date	01/04/2021
Data source	Eurostat
Narrative	
Methodology	The gap in percentage points in the EU27 between the employment rate of EU27 citizens aged 20 to 64 and the employment rate of non-EU27 citizens aged 20 to 64
Link MFF 14-20 / MFF 21-27	This indicator is not included in the core performance indicators for the MFF 2021-2027
Other methodological comments	In line with Eurostat methodology, the employment rate for EU nationals is no longer calculated on the basis of EU28 but based on EU27. Data for previous years now also reflect the employment rate for EU27.
Full metadata available at this address	
Justification of the trend	Integration is a long term process and results of funding cannot be seen in the short term. This indicator is used to measure progress in integrating third country nationals in EU societies. In 2020, the gap increased with 2% to 15.9. The reason for this is that extra-EU workers are particularly vulnerable to forced shutdowns such as those provoked by the COVID19 crisis, being more frequently employed in non-teleworkable occupations (e.g. cleaners and helpers), on temporary contracts and belonging more to the bottom of the income distribution than native workers. This is based on an analysis carried out by JRC on the issue of employment rates of non-EU workers <a href="https://publications.jrc.ec.europa.eu/repository/bitstream/JRC120730/online.pdf">https://publications.jrc.ec.europa.eu/repository/bitstream/JRC120730/online.pdf</a>

### Indicator 4: Convergence of recognition rates for international protection by Member States for asylum applicants from the same third country

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022
	Actual Progress									Lower (increased convergence)
	24	24.2	28.3	25.3	22.4	28.1	24.2			Final

Are we on track	On track
Indicator type	

Unit of measurement	Decisions of the Member States' determining authorities on the applications for international protection of Afghan nationals, annual.
Cut-Off Date	
Data source	Calculations based on Eurostat data
Narrative	This indicator aims to measure the harmonisation of rules and practices in the EU regarding asylum procedures. This is done by using a proxy: the ratio between the number of Afghan nationals who are granted international protection at first instance in the Member States and the number of first instance decisions concerning Afghan nationals. The target is to reach a lower standard deviation than in 2014. Notwithstanding progress achieved in the development of the Common European Asylum System, there are still significant disparities between the Member States, and in 2019 the standard deviation increased compared to 2014. The New Pact on Migration and Asylum aims to further harmonise rules and practices in the EU and decrease the deviation.
Methodology	The standard deviation of the recognition rate of Afghan nationals, calculated among a pre-defined group of ten Member States that took the highest number of first instance decisions on asylum applications from Afghan nationals in the period from 2016-2018. To get the recognition rate, the number of positive decisions (refugee status and subsidiary protection, not including humanitarian status) granted in first instance for Afghan nationals are divided by the total number of decisions in first instance relating to this nationality.
Link MFF 14-20 / MFF 21-27	This indicator will continue to be reported. However, it is not included in the list of core performance indicators for the MFF 2021-2027
Other methodological comments	Under the previous methodology (considering Member States taking at least 100 decisions), the number and range of Member States considered varies from year to year, distorting the calculation.
Full metadata available at this address	
Justification of the trend	The objective to be reached is to have more streamlined asylum decisions across Member States' determining authorities, meaning that if e.g. an Afghani national makes an application for international protection in Member State X, he should have a similar outcome on his application were it made in Member State Y. Although the EU asylum acquis integrates this objective as an important one, and some convergence is starting to show, Member State practices still result in some divergence. With the New Pact on Asylum and Migration, adopted in September 2020, as well as instruments such as practical guidance developed by EASO, it is expected that further convergence will emerge; and time is needed for its impact to be visible. However, it can be concluded that the indicator is on track, as the elements for convergence are in place.

### Specific Objective 1 :to strengthen and develop all aspects of the Common European Asylum System, including its external dimension

#### Indicator 1: Number of target group persons provided with assistance through projects in the field of reception and asylum systems supported under the Fund

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
				643350						1263700
	Actual Progress									Final
	155246	396734	898859	1351630	1710719	2088487	2442140			

Are we on track	On track
Indicator type	
Unit of measurement	Number of persons, milestones and target are cumulative, actual results are cumulative
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will report on the following indicators: Number of participants supported; of which number of participants who received legal assistance; of which number of participants benefiting from other types of support, including information and assistance throughout the asylum procedure; of which number of vulnerable participants assisted; These indicators are, however not included in the list of core performance indicators.
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	The values are reflecting the crisis in 2016 and the current situation in migration flows which is decreasing.

#### Indicator 2: Capacity (i.e. number of places) of new reception accommodation infrastructure set up in line with the common requirements for reception conditions set out in the Union acquis and of existing reception accommodation infrastructure

**improved in accordance with the same requirements as a result of the projects supported under the Fund and percentage in the total reception accommodation capacity**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
				25389						51028
	Actual Progress									Final
	1533	3068	8668	24868	28325	32453	36346			

Are we on track	On track
Indicator type	
Unit of measurement	Milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year. Availability of Data: Based on latest data submitted by Member States as of 31/03/2020, reflecting the current situation on migration flow which is decreasing. It appears that the Member States are reducing the capacity of new reception accommodation infrastructure, likely linked to the reduced number of asylum seekers in some countries.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will report data on the following indicators: Number of newly created places in reception infrastructure in line with Union acquis; of which number of newly created places for unaccompanied minors; Number of renovated/refurbished places in reception infrastructure in line with Union acquis; of which number of renovated/refurbished places for unaccompanied minors. These indicators are not included in the list of core performance indicators. The following indicators are included in the list of core performance indicators. Number of persons placed in alternatives to detention; of which number of unaccompanied minors placed in alternatives to detention of which number of families placed in alternatives to detention.
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	Values increased as of 2017 when implementation picked up. Still away from the 2022 target due to delays in procurement and refurbishment projects in a number of MS.

**Indicator 3: Number of persons trained in asylum-related topics with the assistance of the Fund, and that number as a percentage of the total number of staff trained in those topics**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of persons trained in asylum-related topics with the assistance of the Fund										
	Milestones									2022
0	0			12 603						25 205
	Actual Progress									Final
	0	1 826	7799	22898	39752	54048	63378			
Percentage of persons trained in asylum-related topics with the assistance of the Fund of the total number of staff trained in those topics										
	Milestones									2022
0%	0%			28%						56%
	Actual Progress									Final
	0%	4.75%	9.33%	14%	16.66%	18.22%	19.23%			

Are we on track	On track
Indicator type	
Unit of measurement	Milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will report on the Number of participants in training activities. This indicator is, however not included in the list of core performance indicators. The following indicators for the period MFF 2021-2027 are included in the list of core performance indicators: Number of participants who consider the training useful for their work; Number of participants who report three months after the training activity that they are using the skills and competences acquired during the training
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement
Full metadata available at this address	

Justification of the trend	Initial target slightly underestimated, more personnel resources had to be trained on asylum-related topics. Percentage however is underachieved showing that resources other than the AMIF fund were also used to train the personnel.
----------------------------	---

#### Indicator 4: Number of country-of-origin information products and fact-finding missions conducted with the assistance of the Fund

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
0	0			36 123						72 246
	Actual Progress									Final
	0	11 799	22 659	34 711	49 867	66 214	85 790			

Are we on track	On track
Indicator type	
Unit of measurement	Milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Member States will not monitor this indicator in MFF 2021-2027
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement
Full metadata available at this address	
Justification of the trend	The indicator is on track and in line with increased efforts to improve asylum procedures in the recent years.

#### Indicator 5: Number of projects supported under the Fund to develop, monitor and evaluate asylum policies in Member States

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
				72						132
	Actual Progress									Final
	2	41	57	68	70	83	89			

Are we on track	On track
Indicator type	
Unit of measurement	Milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Member States will not monitor this indicator in MFF 2021-2027
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement
Full metadata available at this address	
Justification of the trend	Progress is slow and target still away. The delay in adopting the EU migration pact possibly contributed to this trend. Achievement of the target by 2022 appears ambitious but not unrealistic

#### Indicator 6: Number of persons resettled with support of the Fund

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2022
0	7362			30139						108860
	Actual Progress									Final
	0	3766	16189	24844	38887	62651	77463			

Are we on track	On track
Indicator type	
Unit of measurement	Milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	15/02/2021
Data source	Provided in the accounts submitted by Member States on 15/2 each year.
Narrative	

Methodology	
Link MFF 14-20 / MFF 21-27	Member States will continue to monitor this indicator in MFF 2021-2027
Other methodological comments	Although Member States report resettlement data also in their Annual Implementation Report, the Commission has decided to use the resettlement data provided by the Member States in their annual accounts for this purpose. It appears that the resettlement data submitted in the annual accounts is up to date and thus provides an accurate and updated picture of resettlement.
Full metadata available at this address	
Justification of the trend	Member States are committed to resettlement which is shown by the gradually increasing number of pledges and the very good implementation rates (almost 90% for the “50 000 scheme” in 2018-2019). In 2020, the implementation of the pledges was disrupted by the COVID-19 pandemic. Despite these difficulties, 14 812 people were resettled in the EU in 2020.

**Specific Objective 2 :to support legal migration to the Member States in accordance with their economic and social needs, such as labour market needs, while safeguarding the integrity of the immigration systems of Member States, and to promote the effective integration of third-country nationals**

**Indicator 1: Number of target group persons who participated in pre-departure measures supported under the Fund**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
0	0			120 460						240 920
	Actual Progress									Final

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Member States will continue to monitor this indicator in the MFF 2021-2027
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year’s programme statement.
Full metadata available at this address	
Justification of the trend	Underachieved. Member States often opt to provide comparable support after arrival. Hence, when setting this ambitious target, this approach may not have been known.

**Indicator 2: Number of target group persons assisted by the Fund through integration measures in the framework of national, local and regional strategies**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
				1312031						2618062
	Actual Progress									Final
	51456	120210	1561763	2916841	4954111	5925496	6924718			

Are we on track	On track
Indicator type	
Unit of measurement	Milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027 Member States will report the following indicators: Number of participants in language courses who have improved their proficiency level in the host-country language upon leaving the language course by at least one level in the Common European Framework of Reference for Languages or national equivalent; Number of participants who report that the activity was helpful for their integration; Number of participants who applied for their qualification / skills acquired in a third country to be recognised / assessed; Number of participants who applied for a long-term status.
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year’s programme statement.

Full metadata available at this address	
Justification of the trend	Overachieved. In general MS made consistent efforts to implement actions under SO2. Top ups were allocated in 2017 and 2018

**Indicator 3: Number of local, regional and national policy frameworks/measures/tools in place for the integration of third-country nationals and involving civil society and migrant communities, as well as all other relevant stakeholders, as a result of the measures supported under the Fund**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022

Unit of measurement	Number of projects, milestones and target are cumulative, actual results are cumulative
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will not monitor this indicator
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	On track. In 2020 Commission offered support to MS for improving return policies and operations

### Specific Objective 4 :to enhance solidarity and responsibility-sharing between the Member States, in particular with those most affected by migration and asylum flows, including through practical cooperation

#### Indicator 1: Number of applicants and beneficiaries of international protection transferred from one Member State to another with support of the Fund

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
0				16000						38703
	Actual Progress									Final
	0	34	5175	24523	31375	32069	32256			

Are we on track	On track
Indicator type	
Unit of measurement	Number of persons, milestones and target are cumulative, actual results are cumulative
Cut-Off Date	15/02/2021
Data source	Provided in the annual accounts sent by Member States on 15 February each year.
Narrative	
Methodology	This indicator monitors relocation operations under the two Council decisions of September 2015 as well as under ad hoc voluntary operations. It should be noted that the number of persons relocated under the two 2015 Council decisions is 34,708 persons, reported by Greece and Italy. It includes relocations to Schengen associated countries.
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member states will continue to monitor this indicator, which is included in the list of core performance indicators
Other methodological comments	Although Member States report resettlement data also in their Annual Implementation Report, the Commission has decided to use the data provided by the Member States in their annual accounts for this purpose. It appears that the data submitted in the annual accounts provides an up-to-date and accurate picture.
Full metadata available at this address	
Justification of the trend	On track - transfers are taking place under both shared and direct management. Increased disembarkations in frontline MS since 2018 increased the demand for pledges and actual persons transferred

#### Indicator 2: Number of cooperation projects with other Member States on enhancing solidarity and responsibility sharing between the Member States supported under the Fund

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
0				3						6
	Actual Progress									Final
	0	0	0	0	1	3	5			

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Number of projects, milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will not monitor this indicator

Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	Moderate progress, reflecting the current situation on migration flow which is decreasing.

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

Not applicable

### **6.2. Contribution to biodiversity mainstreaming**

Not applicable

### **6.3. Contribution to clean air financing**

Not applicable

### **6.4. Contribution to gender equality**

#### **6.4.1. Tracking and estimates**

2021 estimates	2022-2027 programming					Total
	2022	2023	2024	2025	2026	
0,0	0,0					0,0

(\*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million).

#### **6.4.2. Key achievements and performance**

The AMIF Regulation (Regulation (EU) No 516/2014), covering the previous programming period, stipulates that eligible actions need to take account of the human rights-based approach to the protection of migrants, refugees and asylum seekers and should, in particular, ensure that special attention is paid to, and a dedicated response is provided for, the specific situation of vulnerable persons, in particular women, unaccompanied minors and other minors at risk. Support for third country national victims of trafficking is ensured on this ground.

*The new AMIF regulation for the MFF 2021-2027, which is politically agreed, but still needs to be adopted (late June/early July) stipulates under article 6 about gender equality and non-discrimination. The Member States and the Commission must ensure the integration of the gender perspective and that gender equality and gender mainstreaming are taken into account and promoted throughout the preparation, implementation, monitoring, reporting and evaluation of programmes and projects supported under the Fund. Moreover, the Member States and the Commission must take appropriate steps to exclude any form of discrimination prohibited by Article 21 of the Charter. The AMIF will apply a horizontal expenditure tracking methodology in order to assess impacts of gender mainstreaming in the AMIF.*

### **6.5. Contribution to the sustainable development goals**

#### **6.5.1. Goals**

##### ***SDG 1 End poverty in all its forms everywhere***

AMIF supports the most vulnerable groups by providing material aid, providing assistance in housing, means of subsistence, health, psychological and social care including through adapting reception centres and services to the most vulnerable groups such as unaccompanied minors.

Under the national programme of Romania, a project 'My place' financed between 2017 and 2019 aimed at providing a bridge for the integration of beneficiaries of international protection and third-country nationals in Romania. The general objective of the project was to support the socioeconomic and cultural integration of beneficiaries of international protection and third-country nationals into Romanian society through an integrated approach by providing the necessary information and services and by enhancing the active collaboration and involvement of the authorities/institutions, the private sector and other entities with relevance to the field of migrant integration. The target group was beneficiaries of international protection and third-country nationals with the right of residence on the Romanian territory (long- or short-term residence permit), in need of support with accommodation and integration in a specific region. The project's aim was to provide assistance to a group of at least 150 migrants receiving some form of protection in Romania, or granted refugee status or subsidiary protection, along with some 109 third-country nationals or stateless persons with the right of residence in Romania.

***SDG 10 Reduce inequality within and among countries***

AMIF makes a meaningful contribution to safe migration by supporting information campaigns on legal migration channels to the EU, legal migration through resettlement and family reunification and by promoting mobility schemes to EU such as circular or temporary migration schemes. AMIF also contributes to social inclusion of third country nationals by supporting their integration, active participation in the society and their acceptance in the receiving society through for instance, actions focusing on civic orientation and training, including language trainings to newcomers, or promoting meaningful contact and constructive dialogue between third country nationals and the receiving society.

The project ‘Stadsdelsmammor 2.0’ (‘neighbourhood mothers 2.0’) financed between 2016 and early 2020 under the Swedish national programme was a project in the city of Helsingborg in southern Sweden. Helsingborg, like most major cities in Sweden, is characterised by great challenges of segregation and polarisation. The ‘neighbourhood mothers’ method was based on an existing need to reach those residents who were the most socially isolated. For many years, there has been an upward trend in societal disparities, for example between the economic and social resources of residents in different residential areas. The project aimed at reducing social and economic gaps by engaging local newly arrived mothers and creating meeting places and social activities for them, while at the same time contributing to city development.

**6.5.2. Key achievements and performance*****SDG 1 End poverty in all its forms everywhere***

AMIF supports the most vulnerable groups by providing material aid, providing assistance in housing, means of subsistence, health, psychological and social care including through adapting reception centres and services to the most vulnerable groups such as unaccompanied minors.

***SDG 10 Reduce inequality within and among countries***

AMIF makes a meaningful contribution to safe migration by supporting information campaigns on legal migration channels to the EU, legal migration through resettlement and family reunification and by promoting mobility schemes to EU such as circular or temporary migration schemes. AMIF also contributes to social inclusion of third country nationals by supporting their integration, active participation in the society and their acceptance in the receiving society through for instance, actions focusing on civic orientation and training, including language trainings to newcomers, or promoting meaningful contact and constructive dialogue between third country nationals and the receiving society.

## **1. Overview**

### **1.1. Challenges**

The effective management and protection of EU external borders is a prerequisite for ensuring the safe area for the free movement of persons and goods within the Union. The achievement of an internal area without borders brings important benefits, both to European citizens as well as to businesses. The significance of the Schengen area makes it even more necessary to strengthen efforts aiming to safeguard its integrity, especially in times of challenges posed by migratory pressure, and reinforce it so that it can address serious cross-border crime and ensure a high level of internal security within the EU. Customs services help to safeguard the financial interests of the Union and of the Member States and, in their role as guardians of the external EU border for goods, also protect the public against terrorist, health, environmental and other threats.

The challenges in the areas of the management of the external borders and common visa policy cannot be adequately addressed by the Member States acting alone. The abolition of internal border controls must be accompanied by common measures for the effective control and surveillance of the Union's external borders as well as a common asylum and migration policy. At the same time, customs services, as gatekeeper for the passage of goods across the EU external borders, play a central role in protecting the external border of the internal market, safeguarding the financial interests of the Union, protecting the public, enabling the free flow of goods inside the market and managing the trade flows into the EU.

This is necessary to preserve the European Union as an area without internal border controls, preventing and addressing any secondary movements as well as ensuring the integrity of the single market. EU funding in this area is indispensable to ensure strong and effective integrated border management while safeguarding the free movement of persons and goods in the EU.

### **1.2. Mission (general objectives)**

The Integrated Border Management Fund (IBMF) will address these challenges through its two instruments, namely the instrument for financial support for customs control equipment (CCEI) and the instrument for financial support for border management and visa policy (BMVI).

In particular, the mission of the newly established CCEI is to provide financial support to Member States customs administrations for the purchase, maintenance and upgrade of relevant state-of-the-art customs control equipment that should also be secure, safe, and environmental-friendly and will be deployed at for Border Crossing Points (BCPs) and customs laboratories. It is the first funding instrument dedicated entirely to strengthening Member States' capacities to perform customs controls and comes as a response to the long-standing calls by the Member States for a structured solution to provide national customs administrations with adequate and effective technical equipment for controlling goods entering and leaving the EU.

The CCEI supports actions, which aim to deliver on the Commission's Political Guidelines by equipping the Customs Union with a stronger framework that will allow it to better protect EU citizens and the single market. CCEI is in full compliance with the Union's commitments on fundamental rights, as it contributes to guaranteeing a high level of security in the EU and aiming to provide vital and reinforced support to the Member States to secure the common external borders of the Union. EU funding is the mechanism, which gives effect to the financial implications of this principle.

BMVI's mission is to provide support to Member States, to ensure strong and effective European integrated border management at the external borders, thereby contributing to ensuring a high level of internal security within the Union, while safeguarding the free movement of person within it and fully respecting the relevant Union *acquis* and the international obligations of the Union and the Member States arising from the international instruments to which they are party. Article 80 TFEU states that the common policies on asylum, migration and external borders are based on the principle of solidarity and fair sharing of responsibilities between Member States. EU funding through the BMVI is the mechanism, which gives effect to the financial implications of this principle.

### **1.3. Specific objectives**

CCEI's mission is operationalised through:

- \* Its general objective to support the customs union and customs authorities to protect the financial and economic interests of the Union and its Member States, to ensure security and safety within the Union and to protect the Union from unfair and illegal trade while facilitating legitimate business activity.
- \* Its specific objective to contribute to adequate and equivalent results of customs controls through the transparent purchase, maintenance and upgrade of relevant, state-of-the-art, such as secure, safe and environmental-friendly, and reliable customs control equipment, thereby supporting the customs authorities acting as one to protect the interests of the Union.

BMVI's mission is operationalised through the pursuit of the following specific objectives:

- \* To support effective European integrated border management at the external borders, implemented by the European Border and Coast Guard, as a shared responsibility of the European Border and Coast Guard Agency and of the national authorities responsible

for border management, to facilitate legitimate border crossings, to prevent and detect illegal immigration and cross-border crime and to effectively manage migratory flows.

\* To support the common visa policy to ensure a harmonised approach with regard to the issuance of visas and to facilitate legitimate travel, while helping prevent migratory and security risks.

#### 1.4. Public intervention context

EU powers regarding customs policy are of **exclusive** competence as per Article 3 TFEU. The Customs Union means that the customs authorities of all 27 EU countries work together as if they were one. They apply the same tariffs to goods imported into their territory from the rest of the world, and apply no tariffs internally. Customs administrations are involved in the implementation and enforcement of EU legislation on import and export from and to non-EU countries.

The Customs Control Equipment instrument has the general objective to support the customs union and customs authorities to protect the financial and economic interests of the Union and its Member States, to ensure security and safety within the EU and to protect it from illegal trade while facilitating legitimate business activity. The CCEI supports the Member States to purchase, maintain and upgrade customs control equipment that will enable them to improve the performance of the customs union and to contribute to adequate and equivalent results of customs controls. It will thus contribute to improving the performance of the customs union with a view to the long-term aim of harmonised application of customs controls by the Member States.

The IBMF is complemented by a range of other EU activities and instruments with an impact on developments in the policy area.

EU powers regarding common policy on border management are **shared** with the Member States. While Article 71 TFEU facilitates cooperation among Member States to strengthen internal security, Member States retain the competence to exercise law-enforcement power when they enforce measures adopted pursuant to EU provisions on operational cooperation and border control (Article 72 TFEU) and on national security (Article 4(2) TEU) to engage in forms of administrative cooperation in matters of national security (Article 73 TFEU).

#### 1.5. Actions

For the CCEI, this includes in particular actions supporting the purchase, maintenance and upgrade of customs controls equipment that has one or more of the following customs control purposes:

- \* non-intrusive inspection;
- \* indication of hidden objects on humans;
- \* radiation detection and nuclide identification;
- \* analysis of samples in laboratories;
- \* sampling and field analysis of samples;
- \* handheld search;
- \* other types of innovative non-intrusive detection technology equipment.<sup>1</sup>

The BMVI supports a broad range of actions, in line with the European Agenda on Migration and the Security Union Strategy. This includes, in particular, the following actions:

- \* support the capabilities of the Member States acting as national components of the European Border and Coast Guard
- \* Support of large-scale IT systems and their interoperability;
- \* Support of training, exchange of information, innovation and studies;

---

<sup>1</sup> Not part of the original proposal, proposed by Council and supported by the European Parliament, therefore highly likely to remain in the final text if adopted

- \* Support for infrastructure and equipment;
- \* Deployment of experts and immigration liaison officers

## 1.6. Delivery mode

The Commission implements the actions under CCEI under direct management. The lead Directorate General is DG TAXUD. For the purposes of the CCEI, DG TAXUD closely cooperates with OLAF, in relation to the Anti-Fraud programme managed by the latter. Cooperation with other Commission services managing funding programmes that might have an impact on the actions that the CCEI will finance is also envisaged.

The BMVI is implemented under shared, direct or indirect management. The largest part of the resources (initially 57.5% of the total BMVI budget) will be allocated to the Member States' programmes under shared management. The remaining budget will be allocated to a thematic facility<sup>2</sup> to be used for specific actions (implemented by the Member States nationally or transnationally), EU actions (direct/indirect management), and emergency assistance (shared, direct or indirect management). The lead Directorate General is DG HOME

Since the BMVI is also covered by the Common Provisions Regulation, there will be close cooperation between the Commission services DG HOME, REGIO, EMPL and MARE. Close cooperation and coordination will be ensured between the two DGs managing the IBMF's instruments, DG TAXUD and DG HOME, e.g. by regular interservice meetings between the two Directorates, to provide for consistency in their implementation. In relation to the external dimension, DG HOME closely coordinates with DGs INTPA and NEAR.

## 1.7. Graphic overview of the programme structure

Instrument for Border Management and Visa (BMVI)

---

<sup>2</sup> Thematic facility covers 42.5% of the total BMVI funding when including the additional amount of EUR 1.141 billion to the European Council conclusions of 17-21 July 2020 agreed between the European Parliament, the Council and the Commission.

**HOME (lead DG)**

**TAXUD, EMPL, REGIO, INTPA, NEAR**  
(associated DGs)

**Policy Objective**

Ensuring strong and effective European integrated border management at the external borders while safeguarding the free movement of persons within it, and fully respecting the relevant Union acquis and the international obligations of the Union and the Member States arising from international instruments to which they are party.

**Specific Objectives**

Support effective European integrated border management

Support the Common Visa policy (minimum 10% of MS programmes)

**Main actions**

- Development of national component of European Border and Coast Guard
- Large scale IT systems
- Interoperability of EU information systems
- Inter-agency cooperation
- Infrastructure and equipment
- Training, Innovation and studies
- Deployment of experts and immigration liaison officers

- Large scale IT-systems
- Interoperability of EU information systems
- Training of staff
- Consular cooperation
- Improving visa application processing

**Implementation modes**

Member States' (MS) programmes  
**57.5% of the funding**

Shared management

would be allocated at the beginning of the programming period

Thematic Facility (including emergency assistance)  
**42.5% of the funding**

Shared management (top-up to MS programmes)      Direct management      Indirect management

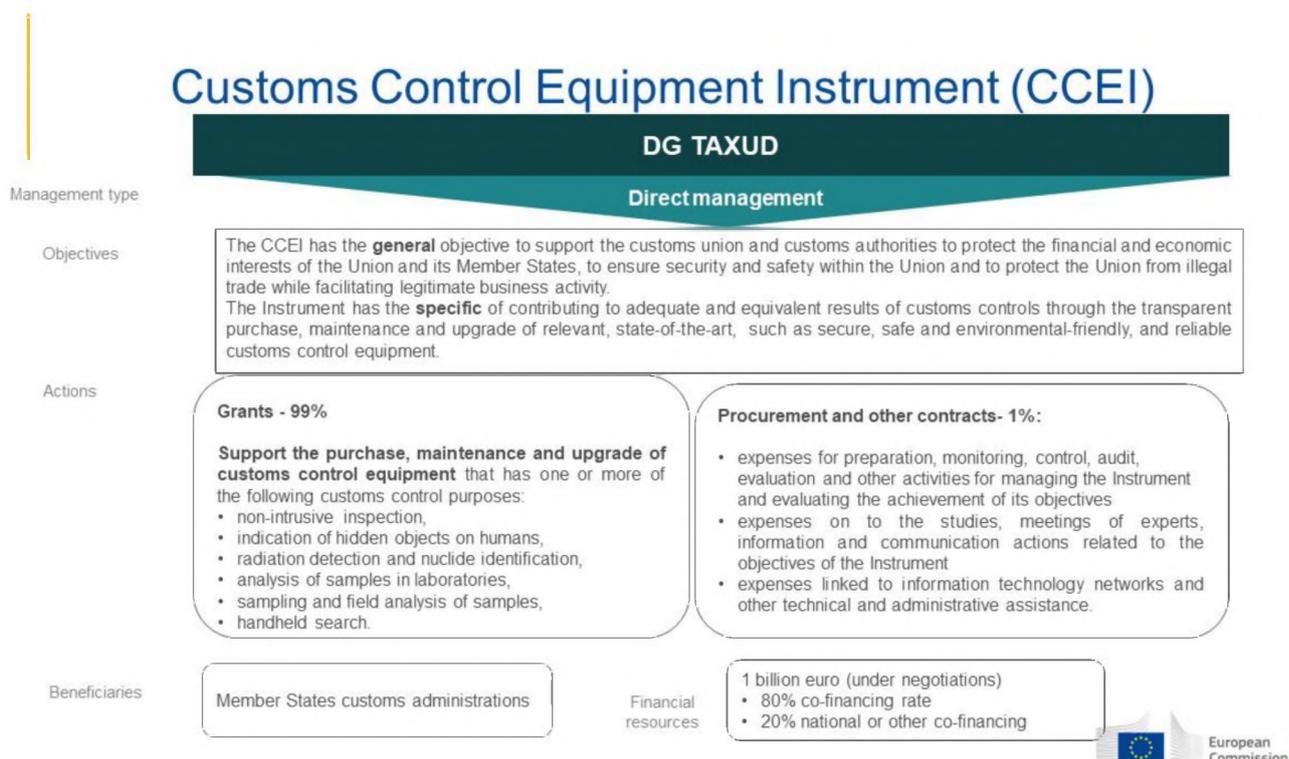

Flexibilities would be allocated during the programming period

**Beneficiaries**

Constituent elements of the European Border and Coast Guard, i.e. national authorities of Member States responsible for border management, including coast guards to the extent that they carry out border control tasks, the national authorities responsible for return and the European Border and Coast Guard Agency (Frontex) Other state and federal authorities, in charge of carrying out implementing tasks related to European integrated border management and the common visa policy of the EU, local public bodies, non-governmental organisations, international organisations, Union agencies, private and public law companies, networks, education and research organisations.

## Customs Control Equipment Instrument (CCEI)

## 1.8. Legal basis and financial programming

## 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
	2021 - 2027	5 241,0
	2021 - 2027	1 006,4

## 1.8.2. Legal basis explanation

Legal basis	Period of application	Reference amount (EUR million)
Regulation (EU) 2021/XXX (CCEI)	2021-2027	
Regulation (EU) 2021/XXX (BMVI)	2021-2027	6 165 528

The legal basis of the CCEI is the Regulation of the European Parliament and of the Council Establishing, as part of the Integrated Border Management Fund, the instrument for financial support for customs control equipment. The draft Regulation is currently (February 2021) under negotiations with the co-legislators.

## 1.8.3. Financial programming table

	Financial Programming (EUR million)							
	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
Border Management and Visa Instrument	398,0	646,1	726,2	766,0	902,0	811,0	890,2	5209.5
Customs Control Equipment	135,5	138,2	141,0	143,8	146,6	149,6	151,8	1 006,4
<b>Total</b>	<b>533,5</b>	<b>784,3</b>	<b>867,2</b>	<b>909,8</b>	<b>1048,6</b>	<b>1030,6</b>	<b>1042,0</b>	<b>6215.9</b>

## 1.8.4. Financial programming explanation

2021-2027 programme	2021	2022
Commitment appropriations	135 403 000	138 111 000
Payment appropriations	32 887 000	103 620 000

The Customs Control Equipment Instrument is a brand new programme with a total budget of EUR 1 005 832 000. There is no financial data of a predecessor programme that can be used for precise calculation of payment appropriations. It is expected that the bulk of payments of the initial 2021 grant agreements will only take place in 2022 and beyond.

BMVI

2021-2027 programme	2021	2022
Commitment appropriations	398 014 000	642 173 000
Payment appropriations	67 805 000	193 615 000

### 1.9. Link with the 2014-2020 MFF

The Commission proposal for the CCEI comes as a response to the long-standing calls by the Member States for a structured solution providing national customs administrations with adequate technical equipment to control goods crossing the EU's external borders. It is a newly established instrument that forms part of the EU Multiannual-financial framework for the first time.

The BMVI builds on the lessons learned during the programming period 2014-2020 such as the need to ensure sufficient cooperation, coordination and strategic steering between the HOME funds and other relevant EU funds, and the need to increase flexibility to address unforeseen needs. The BMVI addressed these challenges to facilitate the steering of the funds towards Union priorities, as well as towards pressing, yet unforeseeable challenges. Simplification is another important element of the new Fund, with the establishment of common rules for programming, reporting and financial management and the alignment of the Fund with similar EU funding instruments. Finally, a common monitoring and evaluation framework has been further developed to ensure a strengthened performance orientation, as well as improved and more frequent reporting on the progress towards targets and milestones.

### 1.10. Relevant websites providing more information

On DG HOME website, the reader will be able to see a description of the scope and the budget allocation of the Funds, illustrated by supportive visuals and info-graphics.

<https://webgate.ec.europa.eu/fpfis/wikis/display/WEBRAT/Integrated+Border+Management+Fund>

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

For the BMVI, due to the delays in the adoption of the legal basis for 2021-2027 and time needed for the programming procedure in shared management, it is expected that shared management programmes may only be formally approved by late 2021 or early 2022.

Other implementation measures will concern direct and indirect management (Union Actions) through the Thematic Facility. These actions and priorities include according to initial planning among others innovative methods for assessing the impacts of future border control systems, support for national components of the EBCG Standing Corps, EU-wide secure, interoperable Communication for all security practitioners (including Border and Coast Guard), campaigns on EES, ETIAS and SIS and ILO Network.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Given that the CCEI is a newly established programme, the information under this section is not relevant to it.

For 2014-2020, actions concerning the management of external borders and a common visa policy are financed under the Internal Security Fund (ISF) – Borders and Visa instrument.

#### Internal Security Fund 2014-2020

	Commitments	Payments
Implementation Voted budget	3 837 540 702	2 169 944 722
Implementation carry-overs	61 948 970	8 032 263

Implementation Recoveries and Repaid advances		110 991 748
Implementation total	3 899 489 672	2 288 968 733
total envelop*	3 942 653 977	
cumulative implementation rate	99%	58%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The table above presents the cumulative implementation rate of the Internal Security Fund 2014-2020 both strands: Border and Visa and Police.

#### Shared management

After an initial delay in the adoption of the legal bases of the Home Affairs Funds by the co-legislators, all ISF Member State national programmes were adopted in 2015 with their implementation reaching a cruising speed in 2017.

The four Schengen Associated Countries (SAC), Switzerland, Norway, Iceland and Liechtenstein, also participate in the ISF-Borders and Visa instrument. The process regarding the participation of SAC has been successfully finalised.

Since 2017, the ISF national programmes have been revised on several occasions:

- for ISF-Borders and Visa, to include in 2017 an additional EUR 76 million and in 2018, EUR 128.7 million for the purchase of equipment to be put at the disposal of the EBCG Agency during joint operations;
- in addition, still in 2018, to include an overall amount of EUR 192.3 million allocated equally to all the Member States participating in the ISF-Borders and Visa instrument to cover certain costs for the implementation of the Entry/Exit System (EES): each Member State received a top-up to their national programme of EUR 6 million;
- in 2018, to include an additional overall amount of EUR 158.6 million (EUR 128 million foreseen in article 6(1)c) of the ISF-Borders & Visa regulation plus EUR 30.6 million as contribution from three SAC), through the revision of the national programmes;
- in 2019, to include an overall amount of EUR 212.4 million allocated to all the Member States participating in the ISF-Borders & Visa instrument, to cover costs related to the adoption of European Travel Information and Authorisation System (ETIAS) and the recast of the SIS II Regulations, as well other substantial costs incurred with the development of border management IT systems. Of the total amount, EUR 96.5 million was allocated for ETIAS, EUR 36.8 million for the SIS-recast, and EUR 79 million, funded from the SAC contribution to ISF-Borders & Visa, for IT systems in general;
- in 2020, to include an overall amount of EUR 78.9 million to seven Member States for support to border control activities, in particular in those Member States confronted with high migratory pressure at the external borders.

As regards the **Internal Security Fund – Borders and Visa**, for the period 2014-2020, EUR 2.42 billion were allocated to the national programmes of the Member States. Up to 2020, Member States have actually spent EUR 1.32 billion equivalent to an absorption rate of 54.55%.

In terms of overall performance of the Fund, for many of the indicators set in the Regulation, either the milestones have been exceeded or even the targets have already been achieved. The implementation of ISF-Border and Visa will run until end-2022, and thus two years of implementation remain. Up to 2020, ISF-Borders and Visa has attained an absorption rate of 54.55% which can be considered overall satisfactory, given that the Fund is implemented mainly through long-term projects for heavy equipment or development of relevant large scale IT systems and the fact the national programmes were reinforced considerably with funding over period 2017-2020. In 2020, the Member States have submitted EUR 386.63million of payments to the Commission, higher than the level of 2019 expenditure (EUR 313.11 million). The payments are broken down as follows: EUR 241.15 million in the area of border management, EUR 91.24 million for operating support, EUR 29.35 million for the Special Transit Scheme in Lithuania, EUR 17.52 million for common visa policy and EUR 7.36 million for technical assistance.

In the latest Annual Implementation Reports concerning 2020, Member States mostly reported that the COVID-19 pandemic did report delays in project implementation due to e.g. delays in public procurement procedures, travel restrictions, hiring processes of staff, construction works due to lockdown and other restrictions related to COVID-19. Training activities were particularly negatively affected by the travel restrictions imposed in the course of the COVID-19 pandemic. Mitigating measures included the extension of duration of projects, increasing the co-financing rates for some projects.

In order to strengthen external border checks and to close existing information gaps, including those necessary to detect identity fraud, the co-legislators adopted in May 2019 **the interoperability package**<sup>3</sup>, which encompasses SIS II, Eurodac, VIS as well as

<sup>3</sup> Regulation (EU) 2019/817 of the European Parliament and of the Council of 20 May 2019 on establishing a framework for interoperability between EU information systems in the field of borders and visa and amending Regulations (EC) No 767/2008, (EU) 2016/399, (EU) 2017/2226, (EU) 2018/1240, (EU) 2018/1726 and (EU) 2018/1861 of the European Parliament and of the Council and Council Decisions 2004/512/EC and 2008/633/JHA

the Entry/Exit System and ETIAS, allowing the front line law enforcement officers, border guards and migration officials to make the best use of existing information systems in a timely manner, thus contributing to improving internal security and border management. The Fund's resources are, *inter alia*, being used to support its implementation to meet the politically agreed timeline of end 2023.

Evaluation of the Schengen Information System and adoption of three new regulations on the operational and use of the Schengen Information System at the end of 2018 [SIS Recast]. Those new regulation are being implemented in different stages, with requirement for the work to be accomplished by the end of 2021. One of the elements of the package is the deployment of a fingerprint search functionality of SIS in Member States, for which EU funding was used.

Following the information received in the 2020 Annual Accounts and Annual Implementation Reports for ISF – Borders and Visa, the implementation of the Funds has gained further momentum, notably as regards the absorption of the extra allocations provided for IT systems in late 2018 (EES) and late 2019 (ETIAS, SIS-recast and IT systems in general). The implementation of those IT systems has reached a critical phase, most of the developments have to be completed by the end of 2021 and the use of these extra allocations will reflect the progress of the different projects. It is also anticipated that actions such as purchase of equipment, which implies heavy procurement procedures (e.g. automated border surveillance systems or equipment to be put at the disposal of Frontex), will be mature enough for the equipment to be delivered and become operational by the end of 2022. In the course of 2021, Member States will need to prepare the **integration of their national systems for the Schengen Information System, including SIRENE, to the interoperability infrastructure and ETIAS**. This is not a new policy initiative but the consequence of an ongoing policy initiative.

The Commission intends to steer the Member States even more to enhance the implementation of the programme in its final phase, among others through the (virtual) participation to national monitoring committee meetings, bilateral discussions, monitoring visits, messages at political level, etc.

For the period 2014-2020, the ISF – Borders and Visa committed 413.63 million for EMAS.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

As the implementation of the CCEI has not started yet, information on it under this section is not relevant.

The Performance and Measurement framework (PMF) to establish the indicators and intervention logic is currently being developed. It is based on a PMF study carried out by a contractor and finalised in December 2020 and is expected to be finalised in Q2 2021.

##### **3.1.2. Active programme performance**

Given that the CCEI is a newly established programme, the information under this section is not relevant to it.

##### **3.1.3. Previous programme performance**

Taking into account the difficult situation at the borders due to migration pressure as well as the continuous security challenges, it is important to stress that until the end of 2020, ISF-Borders and Visa has proven an efficient fund getting closer to its set objectives – ensuring an efficient protection of the EU's external borders and a high level of security in the Union.

The instrument for border and visa policy builds on the investment and achievements made with the support of the predecessors: the External Borders Fund, the Internal Security Fund - Borders and Visa. The fund has supported overall EU policies in the area of external border management and visas, such as the uniform implementation of the Schengen acquis, Eurosur, the purchase of the border management equipment for the use by the European Border and Coast Guard Agency, the common visa policy and the relevant IT systems for Home affairs. Support under direct management has mainly contributed to the relevant supporting studies for the IT system, relevant evaluation mechanisms scheme, some transnational projects in the area of buying and employing the operational equipment and trainings.

##### ***Strengthening the protection of EU's external borders and supporting a common visa policy***

The protection of the external border and supporting a common visa policy are closely intertwined objectives. Therefore, the section will first present achievements at the level of the fund overall and then present the achievements at the level of individual specific objectives.

In 2020, the Commission worked to address the root causes of irregular migration and strengthen the protection of EU's external borders. With support of the Commission activities and funding, the total number of detected irregular border crossings decreased further in 2020 to 125 000 compared to 142 000 in 2019.

As pointed out in the impact assessment,<sup>4</sup> the **ISF-Borders and Visa** is making a crucial contribution to the application of the Schengen acquis. The Commission has considerably invested in the effective control of the external borders through the information systems at EU level and their interoperability (SIS II, VIS, Eurodac, EES and ETIAS), providing to border guards and police officers with relevant information. The Fund has also contributed to the reinforcement of Member States' authorities component for border management which act as the national components of the European Border and Coast Guard, mainly through funding their technical capabilities and infrastructure.

In addition, the European Border Surveillance System (Eurosur) funded from the ISF-Borders and Visa provides further support to border authorities and helps to strengthen the external borders security. Even though each of these systems created for a specific purpose, all together at EU level, have facilitated the sharing of information among but also within the Member States.

As regards information technology systems, for the Schengen Information System and the Visa Information System it can be said that Member States have extensively used the Fund's resources to cover their needs in this area, including for operating support. For the latest Information Technology systems such as the Entry Exit System and the European Travel Information and Authorisation System Member States still need a lot of support to be able to use the funds properly. Time is however short in particular for the Entry Exit System that will enter into operation in the second quarter of 2022. The European Travel Information and Authorisation System will enter into operation by end 2022. The full implementation of all Information Technology systems and their interoperability should be in place by the end of 2023. As the systems are not yet fully operational, it is too early to provide a comprehensive assessment of the efficiency of the related EU funding. Special attention will be paid to the use of funds also in this area, to ensure that all funding made available through the ISF National Programmes will be duly absorbed by December 2022.

Member States have received additional support ('top-up') from the ISF – Borders and Visa for the development of the Schengen Information System. Funding is also provided for the maintenance and evolution of the national systems for Schengen Information System and the Supplementary Information Request at National Entries (SIRENE) Bureaux.

The Fund is also fostering a better use of resources by increasing the capacity of Member States through e.g. specialised training of border guards or study visits to undertake border surveillance and by developing consular cooperation between Member States. After a slow start of actions consisting of the purchase of border surveillance equipment subject to heavy procurement procedures, the implementation of the ISF - Borders and Visa programme is in full swing.

### **Supporting a common visa policy**

In 2020, Member States have implemented projects for a value of EUR 17.53 million under the specific objective "Support a common visa policy" and EUR 91.24 million under the specific objective "Operating Support".

Between 2014 and 2020, a total of 430 consular cooperation activities have developed with the help of the Instrument. The trend shows that the cumulative values reported by Member States have steadily been increasing and have already exceeded the set milestones and targets. The forms of consular cooperation include co-locations, common application centres, representations and others. The trend towards more cooperation between Member States is correlated with savings in this area and the need to achieve economies of scale in consular support.

However, Member States are still not achieving the milestones and are significantly below the targets for training of staff in the area of visa and border management. No particular reasons for lower numbers of trained staff nor the number of training courses can be identified from the individual programmes or reports. It is possible that the training needs on the Member States side have decreased or that other funding than ISF – Borders and Visa was used to accomplish the trainings or that due to changing priorities the funding had to be shifted elsewhere. Up to 2020, 4 322 persons have been trained in the area of visa policy, which is far below the target of 11 365 persons. As pointed out above, training activities, were the most negatively affected by the COVID-19 pandemic. Consequently, the number of persons trained decreased to 433 in 2020 compared to 1 224 in 2019.

With the support of the Instrument, a total of 759 specialised posts in third countries were supported by the Instrument. This is largely due to the fact that cooperation with third countries in the area of border management and tackling irregular migration has taken a flight in the past years. This coincides with the trend of deploying increasing numbers of ILOs and other specialised staff to third countries. This explains the target has been exceeded.

A total number of 2 680 of consulates were developed or upgraded with the help of the Instrument. With this number, the target set for 2022 (923) has already been overachieved. In principle, the number of consulates in third countries is not necessarily increasing, but it is possible that Member States have reported a variety of expenditure under this indicator (even for small scale upgrades of consulates).

### **Strengthening the EU external borders**

---

<sup>4</sup> SWD(2018)347, 12.6.2018.

In 2020, Member States have implemented projects for a value of EUR 241.15 million in view of strengthening the EU external borders.

In the area of border management, 29 903 border guards have been trained up to 2020, also below the target of 34 603. Data at Member State level shows different degrees in the delivery of training to staff on border management topics as compared to the target: some Member States have already attained their targets or are 80% above the target, while others are yet to report projects for trainings.

In total up to 2020, the instruments supported the development or upgrade of 33 516 border control (checks and surveillance actions) infrastructure and means, which is well above the target of 19 902. Training of staff activities are relatively unpredictable, whereas the number of infrastructure for border management to be upgraded can be planned more easily, which is visible from the trend, i.e. the achieved values are more aligned with the target.

It should also be noted that the number of incidents reported by Member States to the European Situational Picture is largely below the target set in the national programmes (with 95 169 incidents reported up to 2020 as compared to the target of 157 593). This actually represents a positive trend as it matches the situation on the ground with a significant decrease in the irregular border crossings observed since the peak of the migration crisis in 2015.

### **Lessons learnt**

*Insufficient cooperation, coordination and strategic steering in the implementation of the ISF with other EU level initiatives:* This challenge was addressed by including eight shared management funds, including the HOME funds, in a single legal framework. This allows for a closer coordination and cooperation of the shared management funds both at strategic level as well as at the level of implementation.

A need for simplification: in order to simplify and build on synergies, the rules applicable to the shared management funds will be aligned with rules applicable to the management of other Union Funds under shared management ('single rule book'). This provides better guidance on the management and control systems and audit requirements, and ensures that the eligibility rules under shared management make full use of simplified cost options (SCOs).

*Insufficient flexibility to respond to changing needs during the programming period:* This challenge was addressed in two ways. Firstly, Member States will initially be provided with around 47.9% to Member States programmes. An additional share of 9.6% of the total budget will be allocated at mid-term (technical adjustment of the distribution key subject to financial performance according to which a Member State should have submitted payment claims covering at least 10 % of the initial amount of payment appropriations). Secondly, a financial envelope of 42.5% will be managed through the thematic facility, which will periodically provide funding for a number of priorities defined in Commission financing decisions. This facility in particular offers flexibility in the management of the instrument by allowing the disbursement of funds to the technical assistance at the initiative of the Commission and the following components of the thematic facility: support for specific actions, providing additional funding for dedicated actions of high EU added value, through the Member States' national programmes; support for Union actions, managed through direct and indirect management; and emergency assistance.

*The third main challenge was the need to strengthen the performance monitoring in terms of quality and frequency of the data.* In order to address this challenge, the Commission proposed greatly improved performance monitoring with more regular and reliable data setting out common output and result indicators. In cooperation with the Member States, the Commission services will develop definitions for each of these indicator. This will ensure a common understanding of each indicator across all Member States and programmes. Moreover it will this not only greatly contribute to improving data quality, it will also enhance data comparability. Member States will be required to develop this performance framework for each of its programmes and underpin it by methodological considerations. The managing authority, in its yearly management declaration and as part of the annual assurance package, will have to confirm the reliability of submitted data relating to indicators and the progress of the programme. The annual performance review will be an occasion for a policy dialogue with the Member States on issues of programme implementation and performance. In particular, the annual performance reports will provide qualitative information on programme implementation going beyond the quantitative data submitted for the indicators. It will complement the biyearly transmission of structured data and strengthen the performance review process. In the context of the performance framework, Commission services will hold at least two meetings with Member States during the programming period. All data required for monitoring progress in programme implementation will be transmitted electronically. Twice a year, Member States will transmit to the Commission structured data on the common output and result indicators. Thus, the Commission services will have a much more updated picture of programme performance than in the current period. In addition, the HOME programmes will now also use the open data platform, which had been established in the current programming period for the European Structural and Investment Funds. It will allow stakeholders to access almost real time data on programme implementation. This is an important novelty for the HOME funds, which in the current period do not publish data on the open data platform.

Moreover, Member States are now required to set up a system of electronic data exchange between beneficiaries and managing authorities, and between different authorities of the management and control system. This requirement builds on the current CPR regulation, which did not cover the HOME funds, and further develops certain aspects of data collection. It is thus a novelty for the HOME funds. Beneficiary and project information, as well as the performance reports will be published on a dedicated website run by the managing authority. This will give greater visibility to achievements and allow better communication.

### 3.2. Key achievements

Given that the CCEI is a newly established programme, the information under this section is not relevant to it.

<i>Cumulative number for 2014-2020</i>	<i>Explanation of the number</i>
Number of hits in SIS: 209 178 Total number of alerts: 93 419 371 Ratio: 0.22%	Number of hits in the Schengen Information Systems in relation to the total number of alerts. The number of hits dropped as a consequence of travel restrictions imposed under the Covid-19 crisis.
430	Cumulative number of consular cooperation activities developed with the help of the Instrument.
759	Cumulative number of specialised posts in third countries supported by the Instrument.
33 516	Number of border control (checks and surveillance) infrastructure and means developed or upgraded with the help of the Instrument

#### Shared management

Following several reinforcements between 2017-2020, the total allocation to the national programmes under the **Internal Security Fund – Borders and Visa** instrument now reaches EUR 2.42 billion.

A lot of progress was reached in protecting the EU external borders through **building new and strengthening the existing IT systems and technologies**, increasing internal security and facilitating regular border crossings.

#### Examples of national programme success stories

##### **Bulgaria**

To protect an important part of the EU external border the ISF Borders and Visa has been supporting Bulgaria in the establishment and development of the Integrated Surveillance System at the Bulgarian-Turkish border with funding amounting to EUR 26.3 million. This is an example of a big action funded through various management modes – the national programme contributed EUR 6 million, EUR 26 million was provided from the emergency assistance envelope of ISF Borders and Visa and under Union Actions EUR 0.3 million. The surveillance system covers the main part of the 274 km Bulgarian-Turkish border from the Black Sea coast to the Bulgarian-Greek border, and includes stationary and mobile surveillance equipment. The Integrated Surveillance System will continue to be supported also under the new Border Management and Visa Instrument.

##### **Germany**

Another good example is the “Document and Visa advisors” project implemented by the German Bundespolizei (Federal Police) since 2015, with a total of 4 consecutive projects and a total allocated EU contribution of EUR 11.2 million. The project funds the posting of currently 53 Bundespolizei officers in 33 locations in 25 third countries, where they work to prevent travelling into the EU without valid documents, by training and advising personnel of visa offices (German and from other EU-MS or SAC) and airlines employees on the assessment of the authenticity of documents presented by visa applicants or travellers.

##### **Greece**

During 2020, Greece initiated the important project of extending the integrated border surveillance system in the Evros area using a number of autonomous automated border surveillance facilities at key points of the border between Turkey and Greece. After completion – estimated for 2022 – this will ensure the transmission of accurate information regarding the entire length of the border in real time to the staff dedicated to the control of the external borders at the Operations Centres. The project is implemented by the Hellenic Police Headquarters and the EU contribution amounts to EUR 11.24 million.

#### Direct management

On 10 September 2019, the Commission awarded EUR 6.9 million to the International Organization for Migration (IOM) within the framework of the Internal Security Fund - Borders and Visa Emergency Assistance. The project awarded has concluded all the necessary construction works for the creation of a new Reception and Identification Centre (RIC) in Samos, with approximately 1 400 places and will integrate the upcoming Multi-purpose RIC making a total capacity of 5 000 places. The conclusion of the Project is only pending on the final necessary tests on the functioning of the water and treatment and sewage disposal to hand it over to the Greek authorities until June 2021.

On 22 June 2020, the Commission awarded one emergency assistance project amounting to a total of EUR 10.75 million within the framework of the Internal Security Fund – Borders and Visa to the European Development Programmes Division (EDPD), a Division of the Greek Ministry of Citizen Protection. The project - implemented by the Hellenic Police – aims to address the unpredictable migration flows and their impact at the Evros region and the eastern Aegean borders with human resources reinforcement. This will help to increase the control and the management of reception and registration tasks as well as the security in the first reception centres on the islands. The grant also envisages the reinforcement of the Greek border authorities with vehicles, operational equipment and non-food items (NFIs).

**Croatia** completed in November 2019 an ISF-Borders and Visa emergency assistance grant of EUR 6.8 million, which contributed to the strengthening of the management of the external border by supporting costs incurred with overtime work and the deployment of 370 border police officers, running costs for operational vehicles and purchasing protective items/materials for border police officers. Furthermore, the emergency assistance grant supported activities relating to the monitoring of border control at the external borders of Croatia, such as controls by the Border Police Directorate, revision/development of standard operating procedures, training and awareness raising activities carried out by trainees of the Ministry of the Interior and non-governmental/international organisations. The Commission continued and expanded such support in December 2019 by awarding a new ISF-Borders and Visa emergency assistance grant of EUR 11.35 million which foresaw the increase of the number of border police officers deployed to 500, and in addition support for the running costs of the surveillance equipment, as well as the continuation of the activities relating to monitoring border control. This project ended on 30 November 2020.

Between 2015 and 2017 the Commission provided considerable emergency assistance (EUR 80.8 million) to Italy to support a variety of border activities. EU funding supported the strengthening of border surveillance of the second longest coastal boards of the EU. *Inter alia*, it helped the enhancement of the Italian air-naval system for controlling borders and surveillance of migrant arrivals, refitting of boats and helicopters and support to Search And Rescue operations at sea and in the air. The general aims were both the improvement of the capacity of border surveillance and the safety and rescue of human lives at sea.

In **Spain**, emergency assistance (EUR 15.7 under ISF – Borders and Visa) mainly funded actions related to tackling irregular migration in Southern Spain. A new ISF – Borders and Visa project was selected in 2020, to help the national police to acquire necessary equipment (IT equipment, scanners and software) in view of an efficient registration of the irregular migrants in the EURODAC database.

On 19 December 2018, the Commission awarded an emergency assistance grant of EUR 3.15 million under ISF Borders to the Ministry of Interior of **Cyprus**, in order to support needs for staff, equipment and consumables for operating the ‘Pournara’ First Reception Centre. The project was completed in January 2021.

### **Union actions**

Examples of ISF funded Union actions can be found in the Snapshot published by the Commission at the following link: [https://ec.europa.eu/home-affairs/e-library/multimedia/publications/20190909\\_snapshot-2019-eu-asylum-migration-integration-internal-security-fund\\_en](https://ec.europa.eu/home-affairs/e-library/multimedia/publications/20190909_snapshot-2019-eu-asylum-migration-integration-internal-security-fund_en)

During 2019, **31 announced and 3 unannounced Schengen evaluation** visits as well as 4 revisits and 1 thematic evaluation were carried out under the Schengen evaluation mechanism<sup>5</sup> to verify the correct application of the Schengen acquis in all relevant policy fields, including management of the external border, common visa policy, return, police cooperation, the Schengen Information System and data protection as well as the absence of border control at the internal borders. The mission expenditure, trainings and equipment necessary for the implementation of the mechanism are supported by the Union actions under the Internal Security Fund-Borders. Following these evaluations, the Commission reported in October 2019 that Croatia had taken the measures needed to ensure that the necessary conditions for the full application of Schengen rules and standards were met. In December 2019, the Schengen evaluation of Slovakia marked the successful completion of the first five-year multiannual evaluation programme (2015-2019) of the Schengen Member States managed by the Commission. The five-year report on the functioning of the Schengen Evaluation and Monitoring Mechanism was adopted on 25 November 2020 (COM(2020) 779 final). The new evaluation cycle started in 2020. Due to the COVID-19 pandemic, only 15 out of 29 scheduled announced evaluations were conducted, while the outstanding ones were rescheduled for 2021 and 2022.

### **3.3. Evaluations, studies and reports**

<sup>5</sup> OJL 295, 6.11.2013, p. 27.

The key findings of the latest Interim evaluations of the Internal Security Fund - Borders and Visa 2014-2017<sup>6</sup> and of the Internal Security Fund - Police<sup>7</sup> have been presented in the Programme Statements DB2020.

By 31 December 2023, the Member States will provide an ex-post evaluation report on the effects of actions under their national programmes and the Commission will present by 30 June 2024 an ex-post evaluation report on the effects of the legal bases.

At the same time, the Commission is implementing the Action Plan following the internal audit findings on the monitoring and reporting on the implementation and performance of National Programmes. In particular, the Commission has strengthened its processes for monitoring the National Programmes and increased its efforts to improve the reliability of performance data reported by the Member States in their Annual Implementation Reports submitted annually. More attention will be given to the consistency of data reported by the Member States. The Commission will provide guidance to the Member States with a view to ensure common understanding of the indicators established in the Fund and to establish better links with information provided in the accounts.

Moreover, the European Court of Auditors (ECA) issued recommendations on the strengthening of the management of the ISF emergency assistance and national programmes. They cover in particular strengthening the performance monitoring framework by monitoring and reporting the outcomes achieved by projects funded by emergency assistance, ensuring that such projects contain output and outcome indicators with clean targets and baselines etc.

While the Commission started implementing the ECA's recommendations already under the ongoing programmes, the main structural recommendations will be put in place in the context of the next MFF.

A PMF study on the funding programmes managed by DG TAXUD was carried out in 2020 and finalised in December 2020. In designing the PMF on the CCEI the Commission will aim to take into account, to the extent possible, the recommendations provided by the contractor in this report.

#### **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :Supporting effective European integrated border management at the external borders implemented by the European Border and Coast Guard as a shared responsibility of the European Border and Coast Guard Agency and of the national authorities responsible for border management, to facilitate legitimate border crossings, to prevent and detect illegal immigration and cross-border crime and to effectively manage migratory flows**

**Indicator 1: Number of persons who have applied for international protection at the border crossing points**

Are we on track	On track
Indicator type	
Unit of measurement	Number of crossings
Cut-Off Date	
Data source	<a href="https://frontex.europa.eu/along-eu-borders/migratory-map/">https://frontex.europa.eu/along-eu-borders/migratory-map/</a>
Narrative	
Methodology	Cumulative numbers over the years
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Number of persons refused entry by border authorities' will be monitored in the MFF 2021-2027. The data will be provided by the Member States in their annual performance report.
Full metadata available at this address	
Justification of the trend	A forecast is difficult to make because of the high volatility of the relevant external factors, including the political situation in the main third countries of transit and origin of irregular migration, the migration crisis due to the war in Syria, and the evolution of the COVID pandemic). These factors are very difficult to predict and control. For instance, an unexpected event in a third country (e.g. a conflict or revolution) may constitute a push factor for third country nationals to migrate to the EU. The full lifting of border restriction measures introduced for the COVID-19 pandemic may lead to an

	increase of migratory flows in the medium term. The deep socio-economic impact of the pandemic in the third countries may also be factor at play in the increase of migration flows. In addition, the better availability of vaccines in the EU as opposed to third countries may constitute an additional pull factor, given that vaccine doses are likely to be generally available in receiving countries of migration, less so in countries of origin. Finally, several ongoing crisis situations in third countries (e.g. in Syria, Ethiopia or Libya) may lead to future flows towards the EU. Please note that the number refers to crossings and not to persons as the same persons may have been detected and counted more than once when crossing different external borders
--	--

### Specific Objective 1 :Supporting a common visa policy to facilitate legitimate travel, provide a high quality of service to visa applicants, ensure equal treatment of third-country nationals and tackle illegal immigration

**Indicator 1:Cumulative number of consular cooperation activities developed with the help of the Instrument. Broken down in co-locations, common application centres, representations, others**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022
0				73						146
	Actual Progress									Final
	14	59	104	177	268	399	430			

Are we on track	On track
Indicator type	
Unit of measurement	Number of consular cooperation, actual results, milestones and target are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator will not be monitored in MFF 2021-2027. However, cooperation in visa processing will be monitored through the following indicator: 'Number of initiated / improved forms of cooperation set up among Member States in visa processing'
Other methodological comments	The cumulative number provides a cumulative picture without providing insight into the type of cooperation activities developed. Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	The trend shows that the cumulative values reported by Member States have steadily been increasing and have already exceeded the set milestones and targets. The forms of consular cooperation include co-locations, common application centres, representations and others. The trend towards more cooperation between Member States is correlated with savings in this area the need to achieve economies of scale in consular support.

**Indicator 2:Cumulative number of staff trained and number of training courses in aspects related to the common visa policy with the help of the Instrument**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

0				92 137						184 273
	Actual Progress									Final
		173	2 446	5 456.5	8 333.5	10 872.8	12385.8			

Are we on track	Deserves attention**
Indicator type	
Unit of measurement	Actual results, milestones and target are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	The indicator is based on hours of training delivered. In the Annual Implementation Report, the

	Responsible Authority will indicate the cumulative amount of hours of training delivered during the financial year. In general, the duration of the training courses is limited to the hours spent for training purposes hence it is a good practice to take out lunch breaks if these last an hour or more. However, there is no need to deduct also the shorter breaks. If a person attends several course s/he is counted each time because s/he acquires different knowledge.
Link MFF 14-20 / MFF 21-27	Training remains an important area of support of the BMVI. Therefore, number of participants in training as well as the number of participants who report three months after the training activity that they are using the skills and competences acquired during the training will be monitored
Other methodological comments	Under the sub-indicator, it is not clear whether Member States provided data on whole courses, on training days or training hours. Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	The COVID 19 pandemic certainly had an effect on the limited number of training conducted in 2020. Apart from that there are no particular reasons for lower numbers of trained staff nor the number of training courses that can be identified from the individual programmes. It is possible that the training needs on the Member States side have decreased, that other funding than ISF-B was used to accomplish the trainings or that due to changing priorities the funding had to be shifted elsewhere.

### Indicator 3: Cumulative number of specialised posts in third countries supported by the Instrument. Broken down by ILOs, others

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
30				198						395
	Actual Progress									Final
	0	31	234	388	529	610	759			

Are we on track	On track
Indicator type	
Unit of measurement	Actual results, milestones and target are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Indicators under MFF 2021-2027 will continue to monitor the number of staff deployed to consulates in third countries with a specific focus on number of staff deployed for visa processing, as well as the number of joint liaison officers deployed to third countries
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement. The table above only shows the total number of specialised posts and not the breakdown.
Full metadata available at this address	
Justification of the trend	Cooperation with third countries in the area of border management and tackling irregular migration has taken a flight in the past years. This coincides with the trend of deploying increasing numbers of ILOs and other specialised staff to third countries. The set milestones and targets have been exceeded.

### Indicator 4: Percentage and number of consulates developed or upgraded with the help of the Instrument out of the total number of consulates

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022
0				462						923
	Actual Progress									Final
	2	36	352	700	1300	2353	2680			

Are we on track	On track
Indicator type	
Unit of measurement	Number
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, indicators will monitor the support setting up new or upgrading consulates outside the Schengen area, including the consulates, which upgraded to enhance client-friendliness for Visa applicants
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data

	retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	The ISF-B has more than expected (looking at the milestones and targets) been used to develop or upgrade consulates. In principle the number of consulates in third countries is not necessarily increasing, but it is possible that Member States have reported a variety of expenditure under this indicator (even for small scale upgrades of consulates).

**Specific Objective 2 :Supporting integrated border management to ensure, on one hand, a uniform and high level of control and protection of the external borders, and on the other hand, the smooth crossing of the external borders in conformity with the Schengen acquis, while guaranteeing access to international protection for those needing it, in accordance with the obligations contracted by the Member States in the field of human rights**

**Indicator 1: Number of staff trained and number of training courses in aspects related to border management with the help of the Instrument**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Staff										
2013	Milestones									2022
0				17 302						34 603
	Actual Progress									Final
	43	2 303	5 414	8 260	13 279	15 979	29 903			
Courses										
2013	Milestones									2022
0				167 162						334 323
	Actual Progress									Final
	34	382.5	10 261.5	28 887.5	49 262.55	88 882.5	130 664			

Are we on track	Deserves attention**
Indicator type	
Unit of measurement	Actual results, milestones and target are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	The indicator is based on hours of training delivered. In the Annual Implementation Report, the Responsible Authority will indicate the cumulative amount of hours of training delivered during the financial year. In general, the duration of the training courses is limited to the hours spent for training purposes hence it is a good practice to take out lunch breaks if these last an hour or more. However, there is no need to deduct also the shorter breaks. If a person attends several course s/he is counted each time because s/he acquires different knowledge.
Link MFF 14-20 / MFF 21-27	Training remains an important area of support of the BMVI. Therefore, number of participants in training as well as the number of participants who report three months after the training activity that they are using the skills and competences acquired during the training will be monitored
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	There are no particular reasons for lower numbers of trained staff nor the number of training courses that can be identified from the individual programmes. It is possible that the training needs on the Member States side have decreased, that other funding than ISF-B was used to accomplish the trainings or that due to changing priorities the funding had to be shifted elsewhere.

**Indicator 2: Number of border control (checks and surveillance) infrastructure and means developed or upgraded with the help of the Instrument. Broken down by infrastructure, fleet (air, land, sea borders), equipment, others**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Milestones										
				10577						19902
Actual Progress										
	348	1159	7091	10697	22352	27727	33516			

Are we on track	On track
Indicator type	
Unit of measurement	Actual results, milestones and target are cumulative.

Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	a) Infrastructures are non-moveable objects, such as buildings. Equipment are moveable objects and should hence not be counted here. In the case of IT system, large-scale IT infrastructures are considered as infrastructure, small IT equipment are considered as equipment. b) The indicators should be counted until the end of the eligibility period (period covered: 1 Jan 2014 to 31.12.2022).c) All equipment should be counted, not high value investments only. d) Only the number of infrastructure should be counted, not the upgrades. Under this indicator it is possible to report border crossings where infrastructure will be replaced/upgraded as well as means (including e.g. replacement of vehicles, drug detectors et.). Member States can use both interpretations for the purpose of annual implementation reports as this indicator is broken down in sub-categories to measure, among others, infrastructure and means.
Methodology	The most important is to ensure consistency throughout the years. Member States were advised that methodology/interpretation used to set your targets during the programming phase should be the same used to report data.
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027 indicators will continue to monitor the number of facilities for border crossing points constructed / upgraded
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	Differently from the training of staff, that is more unpredictable, the number of infrastructure for border management to be upgraded can be planned more easily and it is visible from the trend that the data on the indicators is more or less aligned with the set milestone and target.

**Indicator 3: Number of border crossings of the external borders through ABC gates supported from the Instrument out of the total number of border crossings**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
										357233078
	Actual Progress									Final
	0	7225887	18782564	34639176	55527805	99117387	107074849			

Are we on track	On track
Indicator type	
Unit of measurement	
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, an indicator will monitor the number of border crossings through Automated Border Control gates and e-gates
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	The number of border crossing points through ABC gates is continuously growing. The peculiar thing about this indicator is the fact that the Fund cannot contribute to the number of border crossings as such. Instead, this indicator aims at showing that the ABC gates will contribute to a smoother crossing of the external borders – which is the case; an increasing number of border crossings is taking place through the ABC gates co-financed with the Fund.

**Indicator 4: Number of national border surveillance infrastructure established/further developed in the framework of EUROSUR. Broken down by National Coordination Centres, Regional Coordination Centres, Local Coordination Centres, other types of coordination centres**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
19	30			30						30
	Actual Progress									Final
	30	30	30	30	30	30	30			

Are we on track	On track
Indicator type	
Unit of measurement	
Cut-Off Date	31/12/2014

Data source	Eurosur Regulation. The 19 MS having external borders to the east and to the south were required by the Eurosur Regulation to set up their NCCs by December 2013. All the NCCs were set up by December 2014.
Narrative	The indicator was set up to monitor the setting up of national coordination centres stipulated by the Eurosur Regulation.
Methodology	The Regulation stipulates only one national coordination centre per Member State
Link MFF 14-20 / MFF 21-27	This indicator will be not be monitored in MFF 2021-2027 as the target is already implemented. However, an indicator will be established to monitor the number of initiated / improved forms of cooperation of national authorities with the Eurosur National Coordination Centre (NCC).
Other methodological comments	The indicator reports the number of National Coordination Centres (1 NCC per Member State), which during these years were gradually upgraded and received more competencies. We consider setting up more relevant than the further developing of the NCCs. The data provided by Member States in the Annual Implementation reports is not presented here.
Full metadata available at this address	
Justification of the trend	There is no trend to be reported because the data remained stable.

**Indicator 5: Number of incidents reported by Member States to the European Situational Picture. Broken down by illegal immigration, including incidents relating to a risk to the lives of migrants, cross-border crime, crisis situations**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
				78 797						157 593
	Actual Progress									Final
	9309	16 780	26 790	36 638	50 133	73 345	95169			

Are we on track	Deserves attention**
Indicator type	
Unit of measurement	Number of incidents, actual results, milestones and target are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, this indicator will be discontinued as the link with the support of the fund is rather weak.
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	This indicator is not linked to the Fund, but is rather a number collected by MS that is reported in the ISF-B annual implementation report for information purposes. The numbers depend on the pressure at the border and cannot be planned in advance.

## **6. The programme contribution to horizontal policies**

### **6.1. Contribution to climate mainstreaming**

Not applicable

### **6.2. Contribution to biodiversity mainstreaming**

Not applicable

### **6.3. Contribution to clean air financing**

Not applicable

### **6.4. Contribution to gender equality**

Not applicable

### **6.5. Contribution to the sustainable development goals**

#### **6.5.1. Goals**

##### ***SDG 10 Reduce inequality within and among countries***

All actions funded under the Border Management and Visa Instrument, including those carried out in third countries, should be implemented in full compliance with the rights and principles enshrined in the Union acquis, the Charter of Fundamental Rights of the European Union, and should be in line with the international obligations of the Union and the Member States arising from international instruments to which they are party, in particular by ensuring compliance with the principles of non-discrimination and non-refoulement.

The Border Management and Visa Instrument is committed to the horizontal approach of the EU budget in which equality between women and men, as well as rights and equal opportunities for all, and the mainstreaming of these objectives should be taken into account and promoted throughout the preparation, implementation and monitoring of relevant programmes.

In the broader context, in order to receive payments from the Commission, Member States programmes for HOME funds will have to comply with the number of horizontal enabling conditions, one of which concerns the effective application and implementation of the EU Charter of Fundamental Rights, including the equality of men and women. The horizontal enabling conditions have to remain fulfilled throughout the entire programming period and MS have to report on their application to the programme monitoring committee and the Commission.

The BMVI facilitates orderly, safe, regular and responsible migration and mobility of people, including through the implementation of planned and well-managed migration policies.

### ***SDG 13 Take urgent action to combat climate change and its impacts***

In line with the Union's commitments to work towards achieving the United Nations Sustainable Development, the CCEI Regulation commits to contributing to the achievement of the Union's goal of spending at least 30% of the total amount of Union budget on supporting climate objectives and of the Union's ambition to spend 7.5% of the annual Union budget on biodiversity in 2024 and 10% in both 2026 and 2027, while considering the existing overlaps between climate and biodiversity goals.

### ***SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels***

The policy objective of the Border Management and Visa Instrument is to develop and implement a strong and effective European integrated border management at the external borders, thereby contributing to ensuring a high level of internal security within the Union, while safeguarding the free movement of persons within it, and fully respecting the relevant Union acquis and the international obligations of the Union and the Member States arising from international instruments to which they are party.

The Fund facilitates legitimate travel, while preventing irregular migration and security risks, was identified as one the main objectives of the Union's approach presented in the Commission's Communication on *A New Pact on Migration and Asylum*<sup>8</sup>.

A project financed under the Slovak ISF programme aims at training officers of the Border and Foreign Police in English, Russian and Ukrainian. The will help police officers to communicate in English, Russian and Ukrainian with third-country citizens. The project started in 2017 and will be finalised in 2021.

**1. Overview**

## 1.1. Challenges

Over recent years, security threats have intensified and diversified in Europe. They have come in the form of terrorist attacks, new types of serious and organised crime, as well as cybercrime. Security has an inherent cross-border dimension and therefore a strong, coordinated EU response is required. Beyond internal security challenges, Europe faces complex external threats that no Member State can meet on its own.

## 1.2. Mission (general objectives)

While terrorist and other serious and organised crime networks increasingly operate across borders/in a globalised manner, Member States remain with a responsibility towards their citizens to deliver public security, in full compliance with EU fundamental rights, but the EU can support these actions. In this regard, the Treaties envisage the need to ensure a high level of security, including through preventive measures and through coordination and cooperation between police, judicial and other competent authorities.

The Internal Security Fund is set up to contribute to a high level of security in the Union through facilitating cross-border cooperation and exchange of information between Member States' competent authorities, in particular by enabling the interoperability of the different security-relevant EU information systems and by facilitating joint operational actions, as well as by providing support for trainings, for the construction of essential security-relevant facilities, and for maintaining and upgrading the infrastructure necessary for the collection and processing of passenger name record (PNR) data. It aims at intensifying cross-border operational cooperation in relation to the prevention, detection and investigation of cross-border crime and at supporting efforts aimed at strengthening the capabilities to prevent such crime, including terrorism, in particular through increased cooperation between public authorities, civil society and private partners from across the Member States.

## 1.3. Specific objectives

There are three specific objectives:

1. To improve and facilitate the exchange of information among and within competent authorities of the Member States and relevant Union bodies, and where relevant, with third countries and international organisations;
2. To improve and intensify cross-border cooperation, including joint operations among and within Member States' competent authorities in relation to terrorism and serious and organised crime with a cross-border dimension;
3. To support the strengthening of the Member States' capabilities in relation to preventing and combating crime, terrorism radicalisation as well as managing security-related incidents, risks and crises, including through increased cooperation between public authorities, the relevant Union agencies, civil society and private partners across the Member States.

## 1.4. Public intervention context

The evolving security challenges addressed by the ISF make it a key instrument in realising the Union's objective of constituting an area of freedom, security and justice under Article 67(3) of the Treaty on the Functioning of the European Union (TFEU), which is an area of **Shared Competence** between the EU and the Member States (Article 4, TFEU). The ISF shall support measures to promote and support the action of Member States in the field of crime prevention, joint training and police and judicial cooperation in criminal matters in line with Articles 84 and 87 TFEU.

The Commission in 2020 put forward the "New way forward on Internal Security", the specific Home Affairs related part of the Security Union Strategy. It focuses on three priority areas: organised crime; terrorism and radicalisation; and fighting crimes in a digital age. At the end of 2020, the Commission presented a new Counter-Terrorism Agenda for the EU, which sets the way forward for actions to counter terrorism at EU level, including measures to tackle terrorism financing and to better protect public spaces and critical entities. The Commission is currently working on an evaluation of the Directive on combating terrorism to assess the added value of the Directive, including its impact on fundamental rights and freedoms, the rule of law, and the level of protection and assistance provided to victims of terrorism.

Other important instruments in this policy area are directives such as Directive on combating money laundering, the Advance Passenger Information Directive, and the Directive on the freezing and confiscation of the proceeds of crime. The Commission monitors their effective implementation by Member States. Other actions at EU level cover inter alia EU police cooperation, the Prüm framework (exchange of DNA, fingerprint and vehicle registration data), anti-corruption measures.

Since the overarching objective of the ISF, namely to contribute to ensuring a high level of security in the Union, cannot be sufficiently achieved by the Member States acting alone and can be better achieved at Union level, the ISF is based on the principle of subsidiarity as set out in Article 5 of the Treaty on European Union (TEU).

## 1.5. Actions

The Fund shall in particular support:

- setting up, adapting and maintaining IT systems and communication networks contributing to the achievement of the objectives of this Regulation, training on the use of such systems, testing and improving the interoperability components and data quality of such systems;

- actions supporting the set-up and development of effective and coordinated cooperation to anticipate and respond to cross-border crime and terrorism.
- monitoring of the implementation of Union law and Union policy objectives in the Member States in the area of security information systems, including data protection, privacy and data security;
- implementing or facilitating the implementation of the EU Policy Cycle / EMPACT<sup>1</sup> activities and operational actions;
- actions supporting an effective and coordinated response to crisis linking up existing sector-specific capabilities, expertise centres and situation awareness centres, including those for health, civil protection, terrorism and cybercrime;
- actions developing innovative methods or deploying new technologies with a potential for transferability to other Member States, especially projects aiming at testing and validating the outcome of Union-funded security research projects;
- actions that improve resilience to emerging threats including trafficking via online channels, hybrid threats, malicious use of unmanned aerial systems and chemical, biological, radiological and nuclear threats;
- support to thematic or cross-theme networks of specialised national units and national contact points to improve mutual confidence, exchange and dissemination of know-how, information, experiences and best practices, pooling of resources and expertise in joint centres of excellence;
- education and training of staff and experts of relevant law enforcement and judicial authorities and administrative agencies taking into account operational needs and risk analyses, and in cooperation with CEPOL and, when applicable, the European Judicial Training Network including on prevention policies with special emphasis on fundamental rights training;
- cooperation with the private sector, for instance in the fight against cybercrime, in order to build trust and improve coordination, contingency planning and the exchange and dissemination of information and best practices among public and private actors including in the protection of public spaces and critical infrastructure;
- actions empowering communities to develop local approaches and prevention policies, and awareness-raising and communication activities among stakeholders and the general public on Union security policies;
- equipment, means of transport, communication systems and essential security-relevant facilities;
- cost of staff involved in the actions that are supported by the Fund or actions requiring involvement of staff for technical or security-related reasons.

## 1.6. Delivery mode

The Internal Security Fund will be implemented under shared, direct and indirect management. The largest part of the resources (70% of the total budget) will be allocated to the national programmes under shared management. The remaining part will be allocated to a Thematic Facility to be used for specific actions (implemented by the Member States nationally or transnationally), Union actions (direct/indirect management) and emergency assistance (shared, direct or indirect management). Technical assistance at the initiative of the Commission will be implemented by direct management.

The Union actions will be designed in the new tool, Thematic Facility, as a part of the overall strategy for the implementation of the Home Affairs budget, keeping the necessary links with the Member States' programming of the three Home Affairs Funds and other EU Programmes. They will follow clear and well identified needs and priorities for funding.

The lead DG is DG HOME. Since the ISF is also covered by the Common Provisions Regulation, DG HOME closely coordinates with DG REGIO, EMPL and MARE. In relation to the external dimension, DG HOME closely coordinates with DG INTPA, NEAR and FPI. It also coordinates with RTD and CNECT.

## 1.7. Graphic overview of the programme structure

(associated DGs)

### Policy Objective

Contribute to ensuring a high level of security in the Union, in particular by preventing and combating terrorism and radicalisation, serious and organised crime, and cybercrime, and by assisting and protecting victims of crime as well as by preparing for, protecting against and effectively managing security related incidents, risks and crises within the scope of this Regulation

### Implementation modes

Member States' (MS) programmes

**70% of the funding**

Shared management

would be allocated at the beginning of the programming period

Thematic Facility (including emergency assistance)

**30% of the funding**

Shared management (top-up to MS programmes)    Direct management    Indirect management

Flexibilities

would be allocated during the programming period

### Beneficiaries

State/Federal Police, Customs and other specialised law enforcement services (including national cybercrime units, anti-terrorism and other specialised units), local public bodies, non-governmental organisations, international organisations, Union agencies, private and public law companies, networks, Research Institutes and Universities

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Procedure 2018/0250/COD COM (2018) 472: Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL establishing the Internal Security Fund	2021 - 2027	1 931,0

### 1.8.2. Legal basis explanation

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							
	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
<b>Total</b>	<b>175,6</b>	<b>227,1</b>	<b>282,8</b>	<b>289,9</b>	<b>320,9</b>	<b>331,4</b>	<b>303,2</b>	<b>1 931,0</b>

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

In the period 2014-2020, the support for police cooperation was financed through the police instrument of the Internal Security Fund, which also included an instrument for border management and visa. In the MFF 2021-2027, the Internal Security Fund is fully supporting police cooperation.

The policy objective of the Fund remains the same but with a new viewpoint taken on the specific objectives of the Fund. In particular, the specific objectives in the 2014-2020 period were focused on crime and crisis whereas the new objectives are more horizontal in nature. Its scope has been enlarged as it also includes the non-health related demand side of drugs, taking over a part of the drugs component of the former Justice programme.

The implementation modalities of the Fund will also remain the same – a split between shared and direct management;

## 1.10. Relevant websites providing more information

On the Commission website the reader will be able to see a description of the scope and the budget allocation of the Funds, illustrated by supportive visuals and info-graphics.

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

For programming period 2021-2027, the Commission will this year support Member States in the preparation of their future programmes, to be adopted as soon as possible after the adoption of the legal basis for the financial period 2021-2027. The Commission will also prepare a 2021-2022 Work Programme for the Thematic Facility to ensure the programming of the funding for indirect/direct and shared management on top of the basic allocations for the national programmes.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	3 837 540 702	2 169 944 722
Implementation carry-overs	61 948 970	8 032 263
Implementation Recoveries and Repaid advances		110 991 748
Implementation total	3 899 489 672	2 288 968 733
total envelop*	3 942 653 977	
cumulative implementation rate	99%	58%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The table above presents the cumulative implementation rate of the Internal Security Fund 2014-2020 both strands: Border and Visa and Police.

For the period 2014-2020, for the ISF-Police, EUR 751.56 million were allocated to the national programmes of the Member States. Up to 2020 MS spent EUR 503 million equivalent to an absorption rate of 66.93%, which can be considered satisfactorily. By 31 March 2021, the 2020 Annual Implementation Reports for ISF were submitted by Member States.

In 2017, the ISF-Police national programmes received a top-up of EUR 70 million for the Passenger Name Record (PNR) and EUR 22 million for information exchange and interoperability of information systems.

Information exchange projects under ISF P include on the one hand the inter-connection of national databases and IT tools of different national police entities, and on the other hand the connection of national databases and IT tools with their EU equivalents in view of cross-border exchange of structured data on crime. The data exchanged is for example in relation to the Prüm Decisions, to step up cross-border cooperation to combat terrorism and cross-border crime by fast and efficient data exchange of DNA analysis files, automated fingerprint identification systems and vehicle registration data. Other examples of data exchange projects could be related to the Passenger Name Record system, the Schengen Information System, the Europol Information System, the Interpol Stolen and Lost Travel Documents database, or related to the exchange of forensic data on the chemical composition of seized drugs, firearms, explosives, economic and financial crime related information, trafficking in human beings, environmental crime etc. Projects are also about better information exchange, namely finding technical solutions to filter results and to improve data quality.

The co-legislators adopted in May 2019 **the interoperability package**<sup>2</sup> to close existing information gaps. The law enforcement component of this package allows police authorities to perform identity checks in the territory of the Member States by querying the Central Identity Repository (CIR). CIR includes data from five central EU information systems: EES, VIS, ETIAS, Eurodac and ECRIS-TCN. Projects eligible under ISF P include for instance the purchase of software and hardware to query the CIR, thus allowing law enforcement officers to make the best use of existing information systems in a timely manner and contribute to improve internal security.

In the latest Annual Implementation Reports concerning 2020, Member States mostly reported that the COVID-19 pandemic did lead to delays in project implementation due to e.g. delays in public procurement procedures, travel restrictions, difficulties in the hiring processes of staff, construction works due to lockdown and other restrictions related to COVID-19. Training activities were particularly negatively affected by the travel restrictions imposed in the course of the COVID-19 pandemic. Mitigating measures included extension of duration of projects, increasing the co-financing rates for some projects.

### **Direct and indirect management**

In 2020, **ISF-Police emergency assistance** was made available to address urgent and specific needs. To support Member States, the overall amount granted since 2014 amounts to EUR 12 million.

In 2020, most of the **Union actions projects** selected under the 2016 annual work programme were closed, while the remaining and those selected under the 2017 and 2018 programmes continue running. The implementation of the Union Actions have been significantly impacted by the COVID-19 pandemic, which resulted in delays in projects' implementation and extensions of the numerous grant agreements. New grant agreements were concluded for actions under the 2019 annual work programme and their implementation has started in the end of 2020 or in early 2021. Data on the grant agreements concluded in 2020 have been inserted in the output tables per Specific Objective.

The ISF 2020 work programme for Union actions in the area of police cooperation was adopted on 27 July 2020 for a total amount of EUR 98.6 million and then amended twice, notably increased to EUR 115.1 million. The work programme includes EUR 1 million for emergency assistance. The calls for proposals planned under the work programme were published and invitation of the beneficiaries of direct award of grants identified under the work programme to submit the grant applications is scheduled to be finalised in the first half of 2021. Actions implemented through procurement are ongoing.

Under ISF Police, no supplementary funding was provided since 2017. The Commission intends to steer the Member States even more to enhance the implementation of the programme, among others through the participation to national monitoring committee meetings, bilateral discussions, monitoring visits, messages at political level, etc.

Grant agreements under the ISF 2020 annual work programmes for Union actions will be concluded in 2021 and the implementation of the actions will start. Those will be the last grants to be concluded under the MFF 2014-2020. They will be progressively phasing out until end 2025.

## **3. How is the programme performing ?**

### **3.1. Performance**

<sup>2</sup> Regulation (EU) 2019/817 of the European Parliament and of the Council of 20 May 2019 on establishing a framework for interoperability between EU information systems in the field of borders and visa and amending Regulations (EC) No 767/2008, (EU) 2016/399, (EU) 2017/2226, (EU) 2018/1240, (EU) 2018/1726 and (EU) 2018/1861 of the European Parliament and of the Council and Council Decisions 2004/512/EC and 2008/633/JHA

Regulation (EU) 2019/818 of the European Parliament and of the Council of 20 May 2019 on establishing a framework for interoperability between EU information systems in the field of police and judicial cooperation, asylum and migration

### 3.1.1. Introduction

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

### 3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

### 3.1.3. Previous programme performance

#### Internal Security Fund: Police strand

The majority of security threats, which the EU is facing are cross-border by nature. Taking into account the continuous security challenges, it is important to stress that until the end of 2020, ISF-Police has proven an efficient fund getting closer to its general objective to contribute to a high level of security in the Union. In particular, the interim evaluation concluded that the Fund has been shown to be flexible enough to respond to the changing needs which emerged as a consequence of the security crises. This assessment was carried over into the impact assessment on which the new ISF is based.<sup>3</sup>

The ISF supports overall EU policies in the area of internal security, e.g. on police cooperation, preventing and combatting crime (including counterterrorism), protection of people and critical infrastructures and combatting drugs smuggling. Through Union actions, transnational projects and projects of particular EU interest are being financed. The needs of both policy and its stakeholders evolve continually. Therefore, the (bi)annual programming for Union actions offers a unique chance to align the actions to most urgent and important needs identified on the ground (e.g. recently with a special focus on fighting cyber criminality and protection of places of worship), as well as allowing continuity, for example where it comes to financing various projects of European Police Networks.

In terms of overall performance of the Fund, for many of the indicators set in the Regulation, the targets have been either achieved or exceeded. The implementation of ISF will run until end-2022, and thus 2 years of implementation remain. Up to 2020, ISF-Police has attained an absorption rate of 66.93%, which can be considered overall satisfactory. In 2020, the Member States have submitted EUR 82.75 million of payments to the Commission.

#### Crime prevention, combating cross-border, serious and organised crime including terrorism and enhancing the capacity of Member States and the Union for managing effectively security-related risks and crises

The EU Security Union Strategy presented in 2020, sets out the strategic framework for the period 2020–2025 and aims at the closing of information gaps, building digital and electoral resilience, denying terrorists the means to act and addressing radicalisation. These policy priorities will steer the implementation of the remaining part of the 2014-2020 ISF programmes and the new ISF 2021-2027. By focusing on EU policy priorities, the EU added value of ISF funding will be strengthened.

Driven by the needs of national authorities working on keeping citizens safe, the EU-level support has focused on legislative and operational measures where joint action can have an impact on the security of Member States. The ISF-Police instrument provides the financial means to implement such measures. Where necessary, additional funding was provided to the Member States in order to advance EU policies, i.e. EUR 70 million for the Passenger Name Record (PNR) and EUR 22 million for interoperability of information systems. In order to **strengthen mutual trust and information sharing between national authorities** (for instance for law enforcement) the fund finances 21 **European networks** through grants in the area of security which allow for regular meetings, exchanges of best practices etc. For example, in 2020, the Commission took further steps to support the work of the Radicalisation Awareness Network and continued to support the exchanges on radicalisation at national, regional and local levels, notably through the signature of two new framework contracts. In 2020, the Commission increased support to develop approaches for disengagement and reintegration programmes, in particular by launching a call for proposals addressing this priority.

In addition, Member States have also continued to organise expert meetings, workshops, seminars, conferences, publications, websites and online consultations organised, with 796 such events organised in 2020, and almost reaching the cumulative target (2647 in total since 2014 versus the target of 892).

The Fund also supports **joint investigations teams (JITs) and the European Multidisciplinary Platform Against Criminal Threats (EMPACT)**. Member States reported a total number 287 JITs and EMPACT operational activities funded by the ISF-P between 2014 and 2020. Moreover, the ISF Police finances the set-up of the **national Passenger Name Record (PNR) systems**, allowing national law enforcement authorities to exchange information on suspect air passengers.

However, Member States are still not achieving the milestones and are significantly below the targets for training of law enforcement officials. For instance, up to 2020, 36 771 persons have been trained on cross-border related issues (in 2020, 13 431 persons trained as compared to the 8 070 in 2019). Data at Member State level shows different degrees in the delivery of training to staff on border management topics as compared to the target: some Member States have already attained their targets or are 80% above the target, while others are yet to report projects for training. It seems that some Member States have also set very high targets.

Up to 2020, Member States have submitted expenditure to the Commission for an amount of EUR 503 million, equivalent to an absorption rate of 66.93%. In 2020, they have implemented projects for a value of EUR 64.97 million in the area of crime prevention and EUR 13 million in the area of assessment and management of risk.

#### Lessons learnt

<sup>3</sup> SWD(2018)347, 12.6.2018.

The new ISF 2021-2027 provides financial resources with the objective to contribute to ensuring a high level of security in the Union, in particular by preventing and combating terrorism and radicalisation, serious and organised crime, and cybercrime and, by assisting and protecting victims of crime as well as by preparing for, protecting against and effectively managing security related incidents, risks and crises. Lessons learned and incorporated into the design of the new ISF include an allocation which reflects the different needs and pressures of Member States, and a thematic facility offering flexible funding for a number of priorities including support for solidarity and responsibility efforts between the Member States.

The main lessons learnt during the programming period 2014-2020 include:

*Insufficient cooperation, coordination and strategic steering in the implementation of the ISF with other EU level initiatives:* This challenge was addressed by including eight shared management funds, including the ISF, in a single legal framework. This allows for a closer coordination and cooperation of the shared management funds both at strategic level as well as at the level of implementation.

*A need for simplification:* in order to simplify and build on synergies, the rules applicable to the shared management funds will be aligned with rules applicable to the management of other Union Funds under shared management ('single rule book'). This provides better guidance on the management and control systems and audit requirements, and ensures that the eligibility rules under shared management make full use of simplified cost options (SCOs).

*Insufficient flexibility to respond to changing needs during the programming period:* This challenge was addressed in two ways. Firstly, Member States will be provided with around 58.3 % to Member States programmes. An additional share of 11.7% of the total budget will be allocated at mid-term (technical adjustment of the distribution key subject to financial performance according to which a Member State should have submitted payment claims covering at least 10 % of the initial amount of payment appropriations). Secondly, a financial envelope of 30% should be managed through the thematic facility, which will periodically provide funding for a number of priorities defined in Commission financing decisions. This facility in particular offers flexibility in the management of the instrument by allowing the disbursement of funds to the technical assistance at the initiative of the Commission and the following components of the thematic facility: support for specific actions, providing additional funding for dedicated actions of high EU added value, through the Member States' national programmes; support for Union actions, managed through direct and indirect management; and emergency assistance.

*The need to strengthen the performance monitoring in terms of quality and frequency of the fund in general.* In order to address this challenge, the Commission proposed greatly improved performance monitoring with more regular and reliable data setting out common output and result indicators. In cooperation with the Member States, the Commission services will develop definitions for each of these indicators. This will ensure a common understanding of each indicator across all Member States and programmes. Moreover, it will not only greatly contribute to improving data quality it will also enhance data comparability. Member States will be required to develop this performance framework for each of its programmes and underpin it by methodological considerations. The managing authority, in its yearly management declaration and as part of the annual assurance package, will have to confirm the reliability of submitted data relating to indicators and the progress of the programme. The annual performance review will be an occasion for a policy dialogue with the Member States on issues of programme implementation and performance. In particular, the annual performance reports will provide qualitative information on programme implementation going beyond the quantitative data submitted for the indicators. It will complement the biyearly transmission of structured data and strengthen the performance review process. In the context of the performance framework, Commission services will hold at least two meetings with Member States during the programming period. All data required for monitoring progress in programme implementation will be transmitted electronically. Twice a year, Member States will transmit to the Commission structured data on the common output and result indicators. Thus, the Commission services will have a much more updated picture of programme performance than in the current period. In addition, the ISF programmes will now also use the open data platform, which had been established in the current programming period for the European Structural and Investment Funds. It will allow stakeholders to access almost real time data on programme implementation. This is an important novelty for the HOME funds, which in the current period do not publish data on the open data platform.

Moreover, Member States are now required to set up a system of electronic data exchange between beneficiaries and managing authorities, and between different authorities of the management and control system. This requirement builds on the current Common Provisions Regulation, which did not cover the ISF, and further develops certain aspects of data collection. It is thus a novelty for the HOME funds in general. Beneficiary and project information, as well as the performance reports will be published on a dedicated website run by the managing authority. This will give greater visibility to achievements and allow better communication.

### **Justice programme: Drugs initiatives**

The actions of the programme as far as the *Specific Objective 4: Drugs initiatives* is concerned are achieving their goals.

Several projects have been financed through the Justice Programme over the last years, which have lasting impact on the drug situation in the EU. A very good example are the different wastewater examination programmes. These allow checking of what drugs are being taken in a certain area, which then helps the drug services in the area to adapt their offers if needed. This analysis has become a standard test, also used by the European Monitoring Centre for Drugs and Drug Addiction for their data collection.

Drugs trafficking is typically a cross-border and Union-wide challenge that the Programme aims to address. Programme activities support initiatives in the field of drugs policy as regards judicial cooperation and crime prevention aspects, in so far as they are not

covered by the Internal security fund for financial support for police cooperation, preventing and combating crime, and crisis management or by the Health for Growth Programme. In parallel to the legislative work, the key focus within the drugs-related objective was on expanding the knowledge base on the phenomenon of New Psychoactive Substances (NPS), and in particular on identification methods and protocols, enhancing cross-border cooperation within the EU in this area and exploring the area of epidemiology of use of New Psychoactive Substances. In addition, an emphasis was put on strengthening the capacity of civil society organisations to contribute to the implementation of the EU Drug Strategy 2013-2020 and its Action Plan.

Illicit drugs are a complex social and health problem that affects millions of people in the EU and globally. More drugs being available in Europe year-by-year, overdose deaths increasing, new marketplaces becoming available, and Europe has a growing role in synthetic drug production. The current EU Drugs Strategy, EU Action Plan on Drugs and corresponding EU financial instruments set out a balanced, integrated and evidence-based approach to drugs, which joins law enforcement and public health considerations.

The key focus within the drugs-related objective continues to be on expanding the knowledge base on the phenomenon of New Psychoactive Substances, and in particular on identification methods and protocols, enhancing cross-border cooperation within the EU in this area and exploring the area of epidemiology of use of New Psychoactive Substances. In addition, an emphasis was put on strengthening the capacity of civil society organisations to contribute to the implementation of the EU Drug Strategy and its current Action Plan.

The two indicators, which are used to measure effects of the Programme related to this specific objective demonstrate stability in the impact of the programme's actions in this field however there are deviations compared to the targets set at the beginning of the programming period. This is due to programme related factors but can be also explained by external factors/context:

- The first indicator concerns the number of New Psychoactive Substances assessed (including through testing, if necessary) to enable the EU or the Member States to take appropriate action to protect consumers, depending on the type and level of risk that they may pose when consumed by humans. The indicator is based on the actual number of New Psychoactive Substances (NPS) detected and notified to the European Union Early Warning System Network. The data is provided by the European Monitoring Centre for Drugs and Drug Addiction (EMCDDA). Changes of this indicator as compared with previous years should be interpreted with caution – ideally, we would prefer to see zero NPS reported, as ideally, there would be no illicit NPS on the market whatsoever. On the other hand, many of the newly reported substances – while fewer in number – are more dangerous, cause addiction more rapidly, and present more serious environmental harms. When the milestones were defined at the beginning of the programming period, the situation on what concerns the NPS was very different from what we see today. The number of detected NPS was much higher – of around 100 per year, and we were at the beginning of setting regulatory and law enforcement response to this emerging issue. Now, we see a lower number of detected substances overall, which explains the difference from the milestone and target; figures continued to decline in 2014-2019, with 47 NPS newly reported substances in 2020. As the detection as well as legal and law enforcement response to the challenge improved substantially since 2014, we see a corresponding change on the illicit market for NPS. This explains the difference from the milestones and final targets on this indicator.
- The second indicator concerns the percentage of problem opioid users that are in drug treatment (substitution treatment (OST) and other treatment) across the EU. The proportion provides only partial information as such, as it is based on the overall figure of problem opioid users. The increase or decrease of this indicator should be interpreted based on a more detailed narrative: there were 1.3 million of high-risk opioid users, of which 660 000 received treatment, according to the latest available information – based on the latest available data provided by the European Drug Report 2020. The number of opioid users who received substitution treatment was 654 000 in 2019, 628 000 in 2018, 630 000 in 2017, 644 000 in 2016, 700 000 in 2015 and 700 000 in 2014 while the total number of problem/high risk opioid users was around 1.3 million across the reporting period. As compared to 2019, the number of opioid users who received treatment in 2020 increased by about 6 000.<sup>4</sup> When this indicator was first set, the situation on what concerns the illicit opioids was different from what we see today. Europe has experienced different waves of heroin addiction, and in many Member States we now observe an ageing, stable group of problematic opioid drug users. On what concerns the availability of substitution treatment, one has to consider emerging threats of other illicit substances, such as cocaine and NPS, which absorbed much of limited public resources allocated to counter the challenge of illicit drugs; therefore, limiting resources available to substitution treatments for problematic opioid users.

### 3.2. Key achievements

#### 2014-2020 period

<i>Cumulative number for the period 2014-2020</i>	
287	Number of joint investigation teams (JITs) and European Multidisciplinary Platform against Criminal Threats (EMPACT) operational projects supported by the Instrument, including the participating Member States and authorities.

<sup>4</sup> Source: [https://www.emcdda.europa.eu/system/files/publications/13236/TDAT20001ENN\\_web.pdf](https://www.emcdda.europa.eu/system/files/publications/13236/TDAT20001ENN_web.pdf)  
Internal Security Fund (ISF)

466	Number of projects in the area of crime prevention
102	Number of projects supported by the Instrument, aiming to improve law enforcement information exchange which are related to Europol data systems, repositories or communication tools. Broken down by type of crime (Art. 83 TFEU)
406	Number and tools put in place and/or further upgraded with the help of the Instrument to facilitate the protection of critical infrastructure by Member States in all sectors of the economy
108.3	Number of projects relating to the assessment and management of risks in the field of internal security supported by the Instrument
2 647	Number of expert meetings, workshops, seminars, conferences, publications, websites and online consultations organised with the help of the Instrument. Broken down by relating to critical infrastructure protection, and relating to crisis and risk management

### ***Internal Security Fund: Police strand***

#### **Shared management**

Following a reinforcement in 2017, the total allocation for the **Internal Security Fund – Police** equals EUR 751.56 million.

In 2020, the Fund (Police part) significantly contributed to **enhancing exchanges of information and cooperation among national authorities**. With the support of the ISF – Police, 36 771 law enforcement officers have received training on cross-border related topics with a strong focus on terrorism (7 659 officers trained) and organized crime (7 879 officers trained).

A good example of how the Fund enhances exchange of information between police and other law enforcement authorities, is found under the National Programme of **Germany**. Through several activities over a number of years, the Programme supports the “Police Information and Analysis Network” (PIAV) for EUR 32 million (with 17 beneficiaries). The initiative consists of a number of projects implemented at Federal and Land level to improve police data exchange and information management by connecting all federal and regional police authorities in one system.

In the same vein, the establishment of **national PNR systems** and development of national Passenger Information Units were also supported by the Fund in all Member States with EUR 70 million in top-ups to the national programmes in 2017.

Moreover, ISF Police allowed to support actions implementing the **joint investigation teams (JIT)**. ISF Police also allowed to support activities of the **European Multidisciplinary Platform Against Criminal Threats (EMPACT)**, which led to tangible operational results and many achievements in various fields, such as training and capacity building, prevention, cooperation with non-EU partners, fighting online crime, arresting high-value targets<sup>5</sup>.

According to Europol Te-Sat report figures, in 2019 the number of **terrorist attacks** fell to 119 (compared to 129 in the previous year) and the number of terrorist related deaths increased by 10 in 2019 (compared to an increase of 13 in 2018).

#### **Examples of national programme success stories**

##### **Italy**

Under the Police component of its ISF national programme, in 2020 Italy completed the implementation of project **Strengthening of the information and operational capacity of the Anti-Mafia Investigation Directorate in relation to the functioning of the European anti-mafia network @ ON**. Through this project, the Italian Ministry of Interior acquired highly sophisticated hardware and software to fight crimes such as money laundering, corruption, weapons, drugs and waste smuggling. The project also enabled the MoI to enhance exchange of information with other MS and Europol, particularly in the framework of Europol-led coordination mechanisms such as the Operational Network/@ON established by the JHA Council Resolution of 4 December 2014.

#### **Direct management**

##### **Examples of success stories under emergency assistance:**

In **Spain**, the emergency funds (EUR 52 million for the years 2018 and 2019) mainly funded actions related to illegal migration. Under the ISF - Police, a software to detect terrorism activities in the internet and social media, as well as automatic number plate equipment have been acquired and used by the police.

##### **Union actions**

Examples of ISF funded Union actions can be found in the Factsheets and Snapshots published by the Commission at the following link: [https://ec.europa.eu/home-affairs/publications/snapshot-action-europe-eu-projects-enhance-security-and-effectively-manage-migration\\_en](https://ec.europa.eu/home-affairs/publications/snapshot-action-europe-eu-projects-enhance-security-and-effectively-manage-migration_en) and [https://ec.europa.eu/home-affairs/publications/isfp-and-just-drugs-factsheet-compilation\\_en](https://ec.europa.eu/home-affairs/publications/isfp-and-just-drugs-factsheet-compilation_en).

To date there are **21 European networks** which are financed via direct grants under Union Actions for ISF-Police. The networks carry out activities with specific characteristics that require a particular type of body on accounts of its technical competence, its

<sup>5</sup> EMPACT results in 2019: <https://data.consilium.europa.eu/doc/document/ST-7623-2020-INIT/en/pdf>

EMPACT results in 2018: <https://www.consilium.europa.eu/en/infographics/fight-against-organised-crime-2018-results/>

high degree of specialisation or its administrative powers and that do not fall within the scope of calls for proposals. The networks support co-operation between authorities across borders and carry out activities such as trainings and simulations, cooperation meetings, while producing together guidance manuals and operational tools. Without EU support, these cross-border activities are unlikely to materialise as they would be wholly dependent on the willingness of individual Member States to pay for the activity at European level, including notably the travel expenses of representatives of other countries involved. For example, in order for the European police cooperation to thrive in a world where crime is transnational, the network activities need to be financed on a regular basis by the EU. The networks also provide useful fora for exchange of good practices, the testing of new methods and tools and exchanges of views with experienced practitioners on the relevance of new policies. They are crucial players and act as mediators between policy making and project development.

In addition to these established networks, Union actions support transnational projects selected through **calls for proposals**, for example:

In 2019, a grant agreement was signed to support EU Member States law enforcement authorities to work with law enforcement authorities along African migratory routes towards the EU to enhance the criminal justice response to migrant smuggling through more effective investigations and prosecutions. During 2020, the implementation of this project started, despite the challenges caused by the COVID-19 pandemic. In addition, during 2020 three grant agreements were signed with consortia of competent authorities in Member States to establish a Common Operational Partnership with third countries to prevent and fight against migrant smuggling along migratory routes towards the EU. The selected projects include a project with The Gambia, a project setting up a network of existing Common Operational Partnerships in West and Central Africa and a project with Turkey and Western Balkan countries.

In 2020, two important calls under ISF-Police to enhance the protection of places of worship and other public spaces were published and the evaluation of the proposals completed in less than three months. The Commission will grant EUR 23 million to Member States and religious communities to enhance the protection of places of worship and other public spaces from terrorist threats, as part of the new Counter-Terrorism Agenda for the EU. Nine of them will receive EUR 20 million worth of funds and will involve entities from 20 Member States. These projects will focus on the protection of places of worship belonging to different faith communities (churches, synagogues, mosques); the protection of other types of public spaces such as public transport systems and major sports venues; and the detection of threats by detection dogs. Finally, EUR 3 million will fund a project to test solutions countering possible threats posed by drones. The Commission organised a conference on the protection of public places and places of worship on 25 March 2021 to present some of the selected projects to the public.

**CERBERUS** stands for "Child Exploitation Response by Beating Encryption and Research to Unprotect Systems". It is a 2017 project selected under the ISFP-2017-AG-CYBER call and financed 90% by ISF Police Union Actions with a total budget of some EUR 2.6 Million, running from February 2019 until the end of January 2021. In 2020, the project provided the fundamentals that allowed the French Gendarmerie to crack the EncroChat network, a Europe-based communications network and service provider used (exclusively) by organised crime groups.

As an immediate operational impact, a joint investigation between European law enforcement authorities thereafter made it possible to intercept, share and analyse millions of messages (+/-120 million) that were exchanged between criminals to plan serious crimes.

At a joint press conference on 2 July 2020, French and Dutch law enforcement and judicial authorities, Europol and Eurojust presented the impressive results of this joint investigation team to dismantle EncroChat. For an important part, EncroChat messages were read by law enforcement in real time, over the shoulder of the unsuspecting senders between April and July 2020. By January 2021, this European wide investigation has grown into the largest law enforcement operation Europol ever coordinated.

### 3.3. Evaluations, studies and reports

#### **Internal Security Fund: Police strand**

The key findings of the latest Interim evaluations of the Internal Security Fund - Borders and Visa 2014-2017<sup>6</sup> and of the Internal Security Fund - Police<sup>7</sup> have been presented in the Programme Statements DB2020.

By 31 December 2023, the Member States will provide an ex-post evaluation report on the effects of actions under their national programmes and the Commission will present by 30 June 2024 an ex-post evaluation report on the effects of the legal bases.

At the same time, the Commission is implementing the Action Plan following the internal audit findings on the monitoring and reporting on the implementation and performance of National Programmes. In particular, the Commission has strengthened its processes for monitoring the National Programmes and increased its efforts to improve the reliability of performance data reported by the Member States in their Annual Implementation Reports submitted annually. More attention will be given to the consistency of data reported by the Member States. The Commission will provide guidance to the Member States with a view to ensure

common understanding of the indicators established in the Fund and to establish better links with information provided in the accounts.

Moreover, the European Court of Auditors issued recommendations on the strengthening of the management of the ISF (both Border and Visa and Police strands) emergency assistance and national programmes. They cover in particular strengthening the performance monitoring framework by monitoring and reporting the outcomes achieved by EMAS funded projects, ensuring that EMAS projects contain output and outcome indicators with clean targets and baselines etc.

While the Commission started implementing the ECA's recommendations already under the ongoing programmes, the main structural recommendations will be put in place in the context of the next MFF.

#### **Justice programme: Drugs initiatives**

Concerning the *Drugs initiatives* objective, assessment of the conformity of the transposition into national law of Council Framework Decision 2004/757/JHA and its amendments was launched in 2020. The Council Framework Decision 2004/757/JHA of 25 October 2004 lays down minimum provisions on the constituent elements of criminal acts and penalties in the field of illicit drug trafficking. The assessment is intended to support the Commission in making an informed decision on what actions may be necessary to ensure that the Member States comply with their obligations under this legislation, including, if appropriate, legal action.

## **4. Programme 2021-2027 - Key monitoring indicators**

### **Specific Objective 1 :Better information exchange**

#### **Indicator 1: Number of ICT systems made interoperable in the Member States/with security relevant EU and decentralised information systems/with international databases**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Justification of the trend	

## **5. Programme 2014-2020 - Key monitoring indicators**

### *Previous Program 1 : Internal Security Fund*

#### **General Objective 1 :To contribute to ensuring a high level of security in the Union**

#### **Indicator 2:Volume of terrorism in the EU expressed by the number of failed, foiled or completed terrorist attacks in the EU**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Attacks										
2012	Milestones									2022
152				170						120
	Actual Progress									Final
	226	211	142	205	129	119				
Deaths										
2012	Milestones									2022
7				0						0
	Actual Progress									Final
	4	119	261	329	342	352				

Are we on track	On track
Indicator type	
Unit of measurement	Number of terrorist attacks
Cut-Off Date	31/12/2019
Data source	Annual EU Terrorism Situation & Trend Report (Te-Sat) produced by Europol in June each year.
Narrative	

Methodology	The Directive (EU) 2017/541 on combating terrorism and replacing Council Framework Decision (2002/475/JHA) and amending Decision (2005/671/JHA) define terrorist offences, as well as offences related to terrorist groups or offences linked to terrorist activities. The notion of terrorist offence is a combination of: objective elements (murder, bodily injuries, hostage taking, extortion, committing attacks, threat to commit any of the above, etc.); and subjective elements (acts committed with the objective of seriously intimidating a population, destabilising or destroying structures of a country or international organisation or making a government abstain from performing actions). A terrorist group as a structured group of two or more persons, established over a period of time and acting in concert to commit terrorist offences. Data relate to criminal preparatory acts as offences linked to terrorist activities - examples include public provocation to commit a terrorist offence.
Link MFF 14-20 / MFF 21-27	This indicator will not be reported by the Member States in the context of the data reporting requirements as the link to the support of the ISF is very weak. Europol will continue to collect this data
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Following a series of deadly terrorist attacks in 2015 and 2016 (incl. in Paris, Brussels and Nice), the EU and its Member States stepped up their efforts in fight against terrorism. Actions have been implemented or proposed which include preventing and combatting radicalisation and terrorist financing, protecting public spaces and restricting the use of Chemical, Biological, Radiological, Nuclear and Explosive (CBRN-E) materials, improving the controls on explosives precursors. As a result, the number of deaths related to terrorism significantly decreased in the past two reporting years (2018 and 2019).

### Specific Objective 3 :Crime prevention, combating cross-border, serious and organised crime including terrorism, and reinforcing coordination and cooperation between law enforcement authorities and other national authorities of Member States

**Indicator 1: Cumulative number of joint investigation teams (JITs) and European Multidisciplinary Platform against Criminal Threats (EMPACT) operational projects supported by the Instrument, including the participating Member States and authorities. Broken down by Leader (Member State), Partners (Member State), participating authorities, participating EU Agency (Eurojust, Europol), if applicable**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022
0	Actual Progress									216
	6	6	7	114	202	253	287			Final

Are we on track	On track
Indicator type	
Unit of measurement	Number of JITs, actual results, milestones and target are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	As the main principle, data should be reported only by the leaders of JITs and EMPACT projects therefore double counting should be avoided. Data on participating authorities include authorities from both leading and participating countries. The partners are the participating countries but the participating authorities should be indicated on the top of that.
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will report on the total number of cross-border operations, on the number of joint investigation teams as well as on EU policy cycle operational actions.
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	Overall, MS are well on track to achieve the target. No particular issues to report.

**Indicator 2: Cumulative number of law enforcement officials trained on cross-border-related topics with the help of the Instrument, and the duration of their training (person days). Broken down by type of crime (Art. 83 TFEU), and horizontal area of law enforcement**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Officials trained	Milestones									2022
2013	Actual Progress									128 110
0	Actual Progress									Final

	283	1 109	2 172	7 975	15 270	23 340	36 771			
Person days										
2013	Milestones									2022
0	99 038									198 075
	Actual Progress									Final
	142	4 822	16 209	44 602,96	70 207,23	94 210,73	124 781,35			

Are we on track	Moderate progress
Indicator type	
Unit of measurement	Number of participants, actual results, milestones and target are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year
Narrative	
Methodology	Member States could chose the structure of data reporting by types of crime or horizontal area of crime, without double counting of outputs. The outputs can relate to any cross-border, serious and organised crimes, beyond those indicated in Article 83 TFEU• In principle, the structure should be kept for the entire eligibility period. If the focus areas of trainings change substantially during it, the structure of their reporting will be impacted a) The unit of measurement established by the basic acts is "persons/days". For instance - 20 officers x 5 days = 100 person days b) Double counting in the same operations should be avoided. The main topics/policy area should be identified if the training related to many issues.
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will continue to report on the number of participants in training activities. In addition, they will report on the number of participants who considered the training useful for their work as well as on the number of participants who report three months after leaving the training that they are using the skills and competences acquired during the training
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	Overall, MS are lagging behind with the provision of training in terms of numbers of persons trained. However, in terms of numbers of person days, the delay is far less. Target achievement appears within reach. In terms of backlog of persons trained, this may be due to a backlog in reporting for these indicator values, with some MS still waiting for a project to be finalised before reporting indicator values. In addition, the situation deteriorated as of March 2020 with the outbreak of COVID, which became a real obstacle to the provision of training. MS had to get organised to go virtual, which in addition is not possible for all types of training. For the training days, it appears that Member States focus more on longer training activities than initially planned.

### Indicator 3: Number and financial value of projects in the area of crime prevention. Broken down by type of crime (Art. 83 TFEU)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number										
	Milestones									2022
0	189									375
	Actual Progress									Final
	5	34	136	251	359	428	466			
Financial value										
	Milestones									2022
0	130000000									260436836
	Actual Progress									Final
	1621577	18983299	59551467	164755939	266200860	318718579	351630768			

Are we on track	On track
Indicator type	
Unit of measurement	Number of projects and financial value, actual results, milestones and target are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year
Narrative	
Methodology	Instruction to the Member States: On the breakdown of type of crime: If the project deals with multiple types of crime, the primary type of crime/the most important (financial value, operational importance) should be selected. If two or more crime types are the main focus, please categorise under one of these. Cybercrime/computer crime only includes cyber offences (i.e. attacks against information systems). It does not include other activities such as drug trafficking where elements such as the sale, payment, or organisation/logistics take place online.
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will continue to report on the indicator 'number of projects to prevent crime'

Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement. Under this indicator, Member States provided decimal numbers. In the above table, we report rounded numbers. Reporting decimals under this indicator suggests that there is an issue with the reliability of data.
Full metadata available at this address	
Justification of the trend	Targets exceeded. Importance of crime prevention increased. Progressive increase of the indicator value as the projects implementation advances.

**Indicator 4: Number of projects supported by the Instrument, aiming to improve law enforcement information exchange which are related to Europol data systems, repositories or communication tools. Broken down by type of crime (Art. 83 TFEU)**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
0				67						134
	Actual Progress									Final
	10	14	27	56	78	90	102			

Are we on track	On track
Indicator type	
Unit of measurement	Number of projects, actual results, milestones and target are cumulative.
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year
Narrative	
Methodology	Member States were invited to preferably classify the actions by the Europol tools and services. Member States allowed to add amounts if they wish so but amount only informs about the share of the fund used for this project. Impact or result indicators were considered more relevant than amount. Tool is meant as any working aid developed that contributes to or assists authorities/operators in performing their mission such as manual, guidance, IT applications etc.
Link MFF 14-20 / MFF 21-27	In order to monitor the improvement of information exchange, the Member States will report on the following indicator: Number of administrative units that have set up new or adapted existing information exchange mechanisms/procedures/tools/guidance for exchange of information with other Member States/EU agencies/international organisations/third countries
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	This indicator is on track. At the beginning of the programming period, MS possibly prioritise the inter-connection of national databases and IT tools as a first step towards connection to the EU Europol data systems. However, in the second half of the period, Member States are increasingly focusing on relevant projects.

**Specific Objective 4 :Enhancing the capacity of Member States and the Union for managing effectively security-related risks and crises, and preparing for and protecting people and critical infrastructure against terrorist attacks and other security-related incidents**

**Indicator 1: Number and tools put in place and/or further upgraded with the help of the Instrument to facilitate the protection of critical infrastructure by Member States in all sectors of the economy**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
			1	239						478

Are we on track	On track
Indicator type	
Unit of measurement	Number, actual results, milestones and target are cumulative
Cut-Off Date	31/03/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Member States will report on the following indicator in the MFF 2021-2027: Number of critical infrastructure/public spaces with new/adapted facilities protecting against security related risks

Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement. Under this indicator, Member States provided decimal numbers. In the above table, we report rounded numbers. Reporting decimals under this indicator suggests that there is an issue with the reliability of data.
Full metadata available at this address	
Justification of the trend	Some MS understood the definition of critical infrastructure protection (CIP) in a much wider sense, also including public spaces. Though it is correct that the ISF-P can in theory also be used to finance certain activities related to the physical protection of critical infrastructure, these are very limited amounts of funding and their use is further restricted by the focus on security. Resilience of critical infrastructures goes much further than security, however, and is therefore better covered by other complementary EU funding sources which include in their scope resilience against natural disasters, technological accidents, hybrid threats, business continuity, disaster mitigation strategies, etc.

**Indicator 2: Cumulative number of projects relating to the assessment and management of risks in the field of internal security supported by the Instrument**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022

Justification of the trend	Well on track.

**Previous Program 2 : Justice Programme**

**Specific Objective 4 :to support initiatives in the field of drugs policy as regards judicial cooperation and crime prevention aspects closely linked to the general objective of the Programme, insofar as they are not covered by the Internal Security Fund or by the Health for Growth Programme**

**Indicator 1: Number of new psychoactive substances assessed (including through testing, if necessary) to enable the EU or the Member States to take appropriate action to protect consumers, depending on the type and level of risk that they may pose when consumed by humans**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
68				86			95			95
	Actual Progress									Final
	101	100	66	52	55	53	47			47

Are we on track	On track
Indicator type	Result
Unit of measurement	See section “other methodological comments” below.
Cut-Off Date	31/12/2020
Data source	See section “other methodological comments” below.
Narrative	See section “other methodological comments” below.
Methodology	See section “other methodological comments” below.
Link MFF 14-20 / MFF 21-27	Efforts co-funded by the anti-drugs chapter of the Justice Programme will be mainly continued by demand-reduction relevant efforts co-funded by the Health Programme in 2021-2027. Complementary security-focused measures will be funded by the Internal Security Fund in 2021-2027.
Other methodological comments	The indicator is based on the actual number of New Psychoactive Substances detected and notified to the European Union Early Warning System Network. The data is provided by the European Monitoring Centre for Drugs and Drug Addiction (EMCDDA), an EU Agency based in Lisbon. Changes of this indicator as compared with previous years should be interpreted with caution – ideally we would prefer to see zero NPS substances reported, as ideally, there would be no illicit NPS on the market whatsoever. On the other hand, many of the newly reported substances – while fewer in number – are more dangerous, cause addiction more rapidly, and present more serious environmental harms.
Full metadata available at this address	NA
Justification of the trend	Despite the lower number of dangerous illicit New Psychoactive Substances (NPS), as compared to the baseline situation from 2012, the number of substances assessed does enable to EU and the Member States to take appropriate action to protect consumers, depending on the type and level of risk that they may pose when consumed by humans. It is important to highlight that the fact that we do not achieve the milestone should be considered as a good result: the fewer new psychoactive substances are on the market, the better. See also section “other methodological comments” above.

**Indicator 2: Percentage of problem opioid users that are in drug treatment**

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2011	Milestones									2020

	Actual Progress									Final
	50%	50%	50%	50%	50%	48%	50%	51%		

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	See section “other methodological comments” below.
Cut-Off Date	31/12/2020
Data source	<a href="https://www.emcdda.europa.eu/system/files/publications/13236/TDAT20001ENN_web.pdf">https://www.emcdda.europa.eu/system/files/publications/13236/TDAT20001ENN_web.pdf</a>
Narrative	See section “other methodological comments” below.
Methodology	See section “other methodological comments” below.
Link MFF 14-20 / MFF 21-27	Efforts co-funded by the anti-drugs chapter of the Justice Programme will be mainly continued by demand-reduction relevant efforts co-funded by the Health Programme in 2021-2027. Complementary security-focused measures will be funded by the Internal Security Fund in 2021-2027. The indicator, however will no longer be monitored. Instead, Member States will report on the following drug-related indicator: ‘Quantity of illicit drugs seized in the context of cross-border operations by type of product’.
Other methodological comments	The estimated percentage of problem opioid users in substitution treatment (OST) across the EU. The indicator reflects the proportion of problematic opioid users that are in drug treatment. The proportion provides only partial information as such, as it is based on the overall figure of problem opioid users. The increase or decrease of this indicator should be interpreted based on a more detailed narrative: there were 1.3 million of high-risk opioid users, of which 660 000 received treatment, according to the latest available information (based on the latest available data provided by the European Drug Report

	2020). According to EMCDDA reports the number of opioid users who received substitution treatment: 654 000 in 2019, 628 000 in 2018, 630 000 in 2017, 644 000 in 2016, 700 000 in 2015 and 700 000 in 2014 while the total number of problem/high risk opioid users was around 1.3 million across the reporting period.
Full metadata available at this address	<a href="https://www.emcdda.europa.eu/system/files/publications/13236/TDAT20001ENN_web.pdf">https://www.emcdda.europa.eu/system/files/publications/13236/TDAT20001ENN_web.pdf</a>
Justification of the trend	Moderate progress, in line with the details provided in the section “other methodological comments” above. There are numerous factors to be taken into account. The percentage of clients in treatment for opioid-related problems is a minimum value, not accounting for opioid clients registered as polydrug users. There are also different ways of counting “treatment” entry in some Member States, e.g. in some Member States opioid users who go to a mobile substitution facility are not counted as number of people, but number of substitution drugs given; and therefore the numbers are not included in the overall number of users in treatment. Also, in some countries opioid substitution treatment is not “accepted” politically, but still organised by NGOs, but not counted.

### **6.5. Contribution to the sustainable development goals**

#### **6.5.1. Goals**

*SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels*

By supporting the fight against crime and terrorism, the ISF contributes to fighting and preventing organised crime and tackling radicalisation terrorist ideas and beliefs, while at the same time guaranteeing fundamental rights and values. As such it supports, the development of modern police and law enforcement authorities working together to contribute towards a more peaceful and inclusive society.

‘Keeping people safe’ is a project, initiated in 2019 in IE which aims to combat intolerance and radicalisation and create positive relationships with community-based stakeholders form a key part of the project. To achieve this, one aspect of the project was the hosting of a conference that was attended by over 220 Garda diversity officers and regional inspectors, tackling themes such as combating radicalisation and intolerance, diversity in policing and hate crime. Over the course of 2 days, the conference saw 14 specialist speakers from across the diversity spectrum.

‘Change of viewpoint’ project in DE, implemented between 2016 and 2019 aimed to introduce lasting measures for de-radicalisation, the prevention of radicalisation, and the protection of the citizen against politically motivated crime, with the emphasis on work in and with the social media. The project is intended to enable members of the public more easily to recognise extreme right-wing propaganda, to offer alternative sources of information, to generate a better exchange of information by means of networking between public authorities and players in civil society, and to step up de-radicalisation measures in social networks.

**1. Overview****1.1. Challenges**

The decommissioning of a nuclear installation such as a power plant or research reactor is the final step in its lifecycle. It starts with shutdown, then it proceeds with removal of nuclear materials, decontamination, dismantling and demolishing until the environmental restoration of the site. The aim of nuclear decommissioning is the progressive removal of hazards inherently

associated with the concerned installations. The corresponding phasing out of the necessary safety measures and associated costs is stepwise in nature, mainly because the removal of major batches of radioactive materials is obtained over several stages.

At this point in time, the decommissioning operator in Ignalina (Lithuania) is focusing on dismantling activities. Dismantling and decontamination works are well advanced in the turbine hall and auxiliary buildings. In addition, the key safety-related project to remove the spent nuclear fuel from the Chernobyl type reactor buildings is now nearly completed. However, important technical and financial challenges remain: never before has a large power reactor with a graphite core been dismantled. The removal of the graphite is planned for after 2027. The focus of the programme over the 2021-2027 period will be the preparation of this key task. While the funds dedicated by the EU and Lithuania cover the activities planned under this MFF, they are not sufficient to ensure the completion of the decommissioning programme until 2038.

## 1.2. Mission (general objectives)

The general objective of the Programme is to assist Lithuania in implementing the decommissioning of the Ignalina Nuclear Power Plant, with specific emphasis on managing the safety challenges in respect thereof, while creating knowledge with regard to the nuclear decommissioning process and the management of radioactive waste resulting from the decommissioning activities.

## 1.3. Specific objectives

The specific objective of the programme is to carry out the dismantling and decontamination of the equipment and reactor shafts of the Ignalina Nuclear Power Plant in accordance with the decommissioning plan, including the management of radioactive waste resulting from the decommissioning activities, and to continue with the safe management of the decommissioning and legacy waste.

The programme will assist with activities included in the decommissioning plan submitted by Lithuania, in particular the following:

- a) dismantling and decontamination of the reactor shafts' top and bottom zones and equipment in accordance with the decommissioning plan;
- b) the design for the dismantling and decontamination of the reactor shafts' central zones (graphite cores). This objective is to be accomplished before 2027, when the relevant authorisations will be granted to carry out the actual dismantling and decontamination, which is scheduled to occur after 2027;
- c) safe management of the decommissioning and legacy waste up to interim storage or to disposal (depending on the waste category), including the completion of the waste management infrastructure where necessary. This objective is to be accomplished in accordance with the decommissioning plan;
- d) implementation of the building demolition programme;
- e) obtaining the decommissioning licence once Unit 1 and Unit 2 of the Ignalina Nuclear Power Plant are defueled;
- f) downgrading of radiological hazards.

Furthermore, knowledge and experience gained and lessons learnt under the programme with regard to the decommissioning process shall be disseminated among Union stakeholders, thus enhancing the EU added value of the programme.

## 1.4. Public intervention context

The decommissioning of a nuclear installation such as a power plant or research reactor is the final step in its lifecycle. It involves activities from shutdown and removal of nuclear material to the environmental restoration of the site. The whole process is complex and lengthy (typically 20 to 30 years), and it is carried out with the highest safety standards.

In accordance with its Act of Accession to the Union, Lithuania anticipated the shutdown of the two nuclear reactors in Ignalina within the agreed deadlines (2004 and 2009). The Union committed to provide financial support for the decommissioning, in accordance with approved plans, while keeping the highest level of safety.

The Council Directives 2014/87/Euratom and 2011/70/Euratom, establish the ultimate responsibility of Member States for the safety of nuclear installations and for the safe management of spent fuel and radioactive waste. That principle of national responsibility, as well as the principle of prime responsibility of the licence holder for the safety of its installations, include the decommissioning operations.

Lithuania has appointed a Programme Coordinator responsible for overseeing the programming, coordination and monitoring of the Ignalina decommissioning programme. The decommissioning operator, as the licence holder, is responsible for implementing the decommissioning programmes under the supervision of the Programme Coordinators. The decommissioning operator in Lithuania is the Ignalina Nuclear Power Plant (INPP).

**1.5. Actions**

The actions to be funded by the Ignalina programme are within the scope of the decommissioning plan presented to the Commission. The actions focus on activities related to the delivery of the general and specific objectives and with the highest EU added value, i.e. removal of radiological hazards and creation and dissemination of relevant knowledge. When preparing the multiannual work programme, the Commission, in close cooperation with Lithuania, will consider distributing the available funds as per the priorities identified in the legal basis.

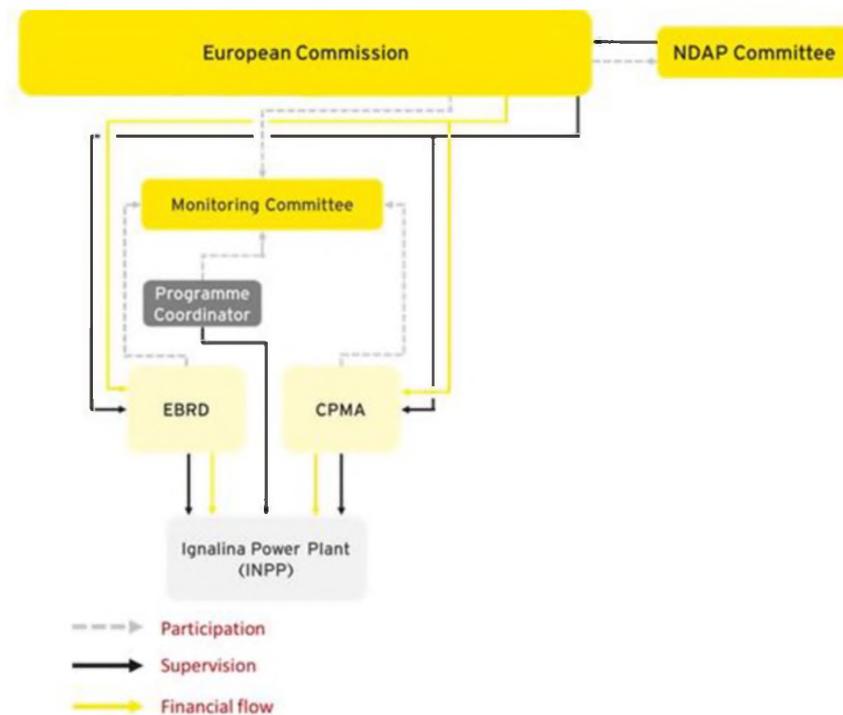

**1.6. Delivery mode**

Indirect Management entrusted to the EBRD (European Bank for Reconstruction and Development) and CPMA (Central Project Management Agency – national agency in Lithuania).

The Directorate-General for Energy manages directly a limited fraction of the funds for preparatory, monitoring, control, audit and evaluation activities.

**1.7. Graphic overview of the programme structure**

Graphic overview Ignalina NDAP structure:

**1.8. Legal basis and financial programming**

**1.8.1. Legal basis**

Legal Basis	Period of application	Reference Amount (EUR million)
-------------	-----------------------	--------------------------------

Procedure 2018/0251/NLE COM (2018) 466: Proposal for a COUNCIL REGULATION establishing the nuclear decommissioning assistance programme of the Ignalina nuclear power plant in Lithuania (Ignalina programme); and repealing Council Regulation (EU) No 1369/2013	2021 - 2027	552,0
---	-------------	-------

### 1.8.2. Legal basis explanation

When joining the European Union in 2004, Lithuania committed to close and proceed with the decommissioning of its Chernobyl type nuclear reactors at Ignalina. The Union declared its willingness to provide financial assistance to Lithuania for the decommissioning of the nuclear power plant in accordance with its decommissioning plans.

### 1.8.3. Financial programming table

### 1.9. Link with the 2014-2020 MFF

The decommissioning of the Ignalina nuclear power plant (LT) has received EU support since 2001 under various instruments. The EU assistance in the MFF 2021-2027 is the continuation of the long-term programme scheduled over the period 2001-2038.

During the MFF 2014-2020, the Ignalina programme progressed steadily towards the decommissioning end state, in accordance with its decommissioning plan, whilst maintaining the highest level of safety. The process will continue in the MFF 2021-2027 and a new objective will be pursued: the dissemination of knowledge to all EU Member States on the decommissioning process. The activities funded in the period 2021-2027 will be subject to a EU co-financing rate of 86%. This rate was not explicitly set previously.

### 1.10. Relevant websites providing more information

[https://ec.europa.eu/energy/topics/nuclear-energy/decommissioning-nuclear-facilities\\_en](https://ec.europa.eu/energy/topics/nuclear-energy/decommissioning-nuclear-facilities_en)

<https://www.iae.lt/en/activity/decommissioning-projects/155>

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

With the completion of the Interim Spent Fuel Storage Facility, the transfer of spent-fuel assemblies from the reactor buildings (units 1 and 2) to the new facility started in September 2016. By the end of 2020, 98% of the spent fuel had been removed from the reactor buildings and transferred to dry safe storage. The removal and decontamination of equipment in the turbine hall is coming to an end.

The next step, the dismantling of the Ignalina reactors is a first-of-a-kind challenge: never before has a large power reactor with a graphite core been dismantled. In a first phase (2020 to 2027), the decommissioning operator will remove all equipment around and on top of the reactor shaft. The subsequent removal of the graphite from the shaft is being prepared with an optioneering study and detailed design of the preferred solution and a facility for the temporary storage of irradiated graphite waste.

New radioactive waste processing and storage facilities have been completed during the period 2014-2020. They are now operational. The construction of the landfill facility for very low-level waste was completed and the procurement procedure of the near surface repository for low-level waste is under-way. With those two facilities, the decommissioning operators in Ignalina will have all the tools it needs for the management, storage and disposal of the radioactive waste under the decommissioning plan.

In accordance with the updated performance baseline, the programme completion date remains for 2038. The selection of the technical solution for the dismantling of the reactor graphite cores will be decisive for the confirmation of the programme end-date and overall funding needs after 2027.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	450 814 650	100 164 951
Implementation carry-overs		
Implementation total	450 814 650	100 164 951
total envelop*	450 818 000	
cumulative implementation rate	100%	22%

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

Including the payments made during the period 2014-2020 on the previous MFF commitments, the total of payments made for the Ignalina NDAP programme is EUR 430 058 299, which represent 95.5% of the committed amount for the same period (EUR 450 448 000). Therefore, the rhythm of payments has been aligned with the commitments during the period 2014-2020. Decommissioning projects are, in many cases, highly complex from the procurement and implementation point of view and extend on a long period of time. This explains the inherent interval between the commitments and the payments of the programme, and that most of the payments during the 2014-2020 period were related to commitments from the previous period. The figures in the table above are expressed in EUR million.

The cost of work carried out since 2014 is within budget.

COVID-19 crisis affected the progress at the site, which meant temporary furlough for some staff and limited access by foreign experts and contractors. Measures to ensure that activities could continue safely included physical distancing, use of additional protective equipment and testing. These measures significantly reduced the short-term impact on project milestones. The EU continued to support the salaries of the workers in these difficult times.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.3. Previous programme performance**

The general objective of the Ignalina programmes in the period 2014-2020 was to assist the Member State concerned in implementing the steady process towards the decommissioning end state of units 1 and 2 of the Ignalina nuclear power plant in accordance with its decommissioning plan, whilst maintaining the highest level of safety.

For the Ignalina programme, the situation in 2014 was:

- Unit 1 reactor core was defueled, Unit 2 reactor core was partially defueled;
- the spent fuel ponds in units 1 and 2 were loaded to maximum capacity;
- facilities for waste management treatment and storage were being constructed;
- start of dismantling works in turbine hall of unit 1.

The first specific objective for the period 2014-2020 (dismantling and decontamination of the equipment and reactor shafts in accordance with the decommissioning plan, and to continue with the safe management of the decommissioning and legacy waste) is being achieved ahead of schedule. The reactor core of unit 2 has been fully emptied of its spent fuel in 2018; by the end of 2020 all undamaged spent fuel assemblies had been transferred to the new safe storage facility and the transfer of damaged fuel assemblies had started. The removal of spent fuel assemblies from the Unit 1 and 2 spent fuel ponds has reached 109% of the cumulative planned amount in 2020 and 98% of the final target.

The second specific objective, safely maintaining the reactor units has been consistently achieved. No incidents were registered during the period 2014-2020.

Activities related to the third specific objective (performing dismantling in the turbine hall and other auxiliary buildings and safely managing the decommissioning waste in accordance with a detailed waste management plan) have progressed well. The dismantling operations in the 800 meters long turbine hall have been completed and it is proceeding as planned in auxiliary buildings. The lower than planned quantity of dismantled equipment is due to the overestimation of the material inventory: there is simply less material to dismantle in reality than in the plan.

Construction works at the interim spent fuel storage facility and the solid radioactive waste management facility are complete. The facilities started operation in 2016 and in 2017 respectively. The design of the near-surface repository for low- and intermediate-level short-lived waste has been completed and the procurement procedure for its construction has been launched in 2020. Construction of the landfill facility for very low-level short-lived waste was completed; formal acceptance of the facility is planned in 2021 with the first loading campaign to follow soon after.

#### **3.2. Key achievements**

43 730	98%	191	42 703	0
--------	-----	-----	--------	---

tonnes of material were dismantled from the turbine hall by 2020, a task completed in August 2019. The large hall is now used to store and process materials from other buildings.	of spent-fuel assemblies were safely stored vs. a target of 90% by 2020.	new storage casks were delivered by February 2020, a year ahead of schedule.	m <sup>3</sup> of radioactive waste were processed and stored from the turbine hall and auxiliary buildings by the end of 2020 vs a target of 42 314 m <sup>3</sup> .	incidents were observed over the period 2014-2020.  Maintaining the highest level of safety is part of the general objective of the Ignalina programme.

### 3.3. Evaluations, studies and reports

#### Nuclear Decommissioning Assistance Programme (NDAP)

The Commission, in close cooperation with the Member States, has launched an *ex post* evaluation on the effectiveness and efficiency of the Nuclear Decommissioning Assistance Programme for the period 2014 to 2020.

The evaluation will rely on existing reports on the progress of the technical and financial implementation of the programme.

The following studies are underway or recently finished:

- study to support the *ex post* evaluation of the nuclear decommissioning assistance programme 2014-2020;
- safety culture maturity of the NDAP operations, supporting the *ex post* evaluation 2014-2020;
- development and try-out of an on-site process for sharing knowledge created in the frame of the NDAP;
- gap analysis of Earned Value Management Systems in use by operators under the NDAP.

The following evaluations, studies and reports have been published in the past years:

- Progress report period 2010-2014 [COM(2015) 78];
- Progress report 2015 and previous years [COM(2016) 405];
- Progress report 2016 and previous years [COM(2017) 328];
- Mid-term evaluation [COM(2018) 468];
- Progress report 2018 and previous years [COM(2019) 215];
- Progress report 2019 and previous years [COM(2020) 82];
- support to the ex post evaluation of the NDAP Energy window 2007-2013 [ISBN 978-92-76-08716-8];
- support to the mid-term evaluation of the NDAP [ISBN 978-92-76-08717-5, 978-92-76-08789-2];
- assessment of the robustness of the NDAP financing plans and of the relevance and feasibility of the detailed decommissioning plans [ISBN 978-92-76-08798-4].

The results of the NDAP mid-term evaluation and of the latest report on NDAP from the European Court of Auditors were communicated in the Draft Budget 2019.

## **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :To carry out the dismantling and decontamination of the equipment and reactor shafts of the Ignalina Nuclear Power Plant in accordance with the decommissioning plan, including the management of radioactive waste resulting from the decommissioning activities, and to continue with the safe management of the decommissioning and legacy waste.**

**Indicator 1:Radioactive waste management: quantity and type of waste safely stored or disposed of, with annual objectives by type, meeting the milestones of the Programme.**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Short lived very low waste (Class A) – disposed of										
Milestones										
Actual Progress										
										Final
Short lived low and intermediate level waste (Class B and C) – disposed of										
Milestones										

Unit 2 reactor core is partially defueled. (See narrative)				Spent Fuel Storage Facility	defueled		fuel from Unit 1			oning Plan 2014
	Actual Progress									Final
			Start commissioning Interim Spent Fuel Storage Facility		Unit 2 reactor core fully defueled		Start of transferring damaged fuel from Unit 1			

Are we on track	On track
Indicator type	Result
Unit of measurement	Info on achieved milestones (yearly)
Cut-Off Date	31/12/2020
Data source	National authorities, implementing bodies, decommissioning operator
Narrative	This is a general overview of the implementation of the Ignalina Detailed Decommissioning Plan, based on the main milestones to be achieved during the period 2014-2020 (e.g. defueling of Unit 2, start of transferring damaged fuel from Unit 1). Baseline 2014: - Unit 1 reactor core is defueled, unit 2 reactor core is partially defueled. - The spent fuel ponds in units 1 and 2 are loaded to maximum capacity. - Facilities for waste management treatment and storage are being constructed.- Start of dismantling works in turbine hall of unit 1. Please refer to Detailed Decommissioning Plan 2014 for the target 2020. The planned completion date for the decommissioning of Ignalina units 1 and 2 is 2038.
Methodology	Data and information obtained from Monitoring Reports provided by National Authorities every 6 months.
Link MFF 14-20 / MFF 21-27	Updated indicators are defined for the period 2021-2027.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	By December 2020, the Ignalina programme has started transferring damaged fuel from Unit 1, following the commissioning of trials of damaged fuel handling equipment in Unit 1.

### Specific Objective 1 :Defueling of the reactor core of unit 2 and the reactor fuel ponds of units 1 and 2 into the dry spent fuel storage facility

#### Indicator 1:Cumulative number of unloaded fuel assemblies

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Removal of spent fuel assemblies from Units 1 and 2 spent fuel ponds										
2014	Milestones									2022
Unit 1 reactor core defueled	0	0	0	3519	7159	10799	13984	15461	15630	15630
	Actual Progress									Final
	0	0	267	3519	7796	12255	15243			
Removal of spent fuel assemblies from Unit 2 reactor core										
2014	Milestones									2019
Unit 2 reactor core partially defueled into the spent fuel ponds	0	0	0	454	908	1134	1134			1134
	Actual Progress									Final
	0	0	0	887	1134	1134	1134			1134

Are we on track	On track
Indicator type	Result
Unit of measurement	Spent fuel assemblies (cumulative)
Cut-Off Date	31/12/2020
Data source	National authorities, implementing bodies, decommissioning operator
Narrative	Safe storage of spent fuel from the operation of the nuclear power plant and the ability to safely handle and store radioactive waste produced during dismantling works are key prerequisites for the decommissioning activities.
Methodology	Data and information obtained from Monitoring Reports provided by National Authorities every 6 months, and the monthly report from the implementing body.
Link MFF 14-20 / MFF 21-27	The completion of this task is scheduled for 2022 and no progress indicator is defined for the period 21-27.
Other methodological comments	The removal of spent fuel assemblies could not start before the commissioning of the Interim Spent

	Fuel Storage Facility.
Full metadata available at this address	
Justification of the trend	The objective of removing spent fuel assemblies from Unit 2 reactor core (1 134 spent fuel assemblies) was achieved in 2018. Both reactors Units 1 and 2 are completely defueled. The removal of spent fuel assemblies from the Unit 1 and 2 spent fuel ponds has progressed ahead of schedule and reached up to 15 273 assemblies by December 2020 i.e. 109% of the cumulative planned amount in 2020 and 98% of the total amount planned for 2022 (15 630 assemblies).

## Specific Objective 2 :Safely maintaining the reactor units

### Indicator 1: Number of registered incidents

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2020
Safe maintenance performed without incidents	0	0	0	0	0	0	0			0
	Actual Progress									Final
	0	0	0	0	0	0	0			0

Are we on track	On track
Indicator type	Output
Unit of measurement	Number of incidents (yearly), as defined by Regulation (EU) No 1369/2013
Cut-Off Date	31/12/2020
Data source	National authorities, decommissioning operator
Narrative	The general objective of the Ignalina programme is to assist the Member State concerned in implementing the steady process towards the decommissioning end state of units 1 and 2 of the Ignalina nuclear power plant in accordance with its decommissioning plan, whilst maintaining the highest level of safety.
Methodology	Data and information obtained from Monitoring Reports provided by National Authorities every 6 months.
Link MFF 14-20 / MFF 21-27	The Council Regulations (EU) 2021/101 sets as objective the downgrading of the radiological hazards but does not define a related key monitoring indicator for the period 2021 - 2027.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	No incidents were observed on the period 2014-2020. The installation has been operated with the highest level of safety as highlighted by the absence of registered incidents since this indicator is reported.

## Specific Objective 3 :Performing dismantling in the turbine hall and other auxiliary buildings and safely managing the decommissioning waste in accordance with a detailed waste management plan

### Indicator 1: Type and number of auxiliary systems dismantled and the quantity and type of safely conditioned waste

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Dismantled equipment (tonne)										
2014	Milestones									2020
Dismantled equipment (tonne):	5650	12669	25916	29268	34900	40658	47277	51981	55695	47277
	Actual Progress									Final
	5790	16922	23530	30291	34415	39767	43730			
Primary processed waste (m3)										
2014	Milestones									2020
Primary processed waste (m³):	4700	5800	14872	15372	25392	35234	42314	49303	55327	42314
	Actual Progress									Final
	5637	10756	14649	19615	26969	33894	42703			

Are we on track	On track
Indicator type	Output
Unit of measurement	Dismantled equipment (tonne) and Primary processed waste (m³) – (Cumulative)
Cut-Off Date	31/12/2020
Data source	National authorities, implementing bodies, decommissioning operator
Narrative	The dismantling in the turbine hall and other auxiliary buildings and safely managing the decommissioning waste in accordance with a detailed waste management plan are part of the Ignalina Detailed Decommissioning Plan.
Methodology	Data and information obtained from Monitoring Reports provided by National Authorities every 6

	months.
Link MFF 14-20 / MFF 21-27	The completion of this task is scheduled for 2025 and no specific indicator is defined for the period 21-27. More generally, the quantity and type of waste safely stored or disposed of by all activities is being monitored.
Other methodological comments	The difficulty with indicators based on quantity of waste is that less than expected waste could be due to a slower execution but also to a better decontamination and sorting. In the case of Ignalina, there is simply less material to dismantle in reality than in the plan.
Full metadata available at this address	
Justification of the trend	The overall performance is satisfactory. The amounts of equipment dismantled and the overall quantity of radioactive waste processed and stored reached respectively 93% and 101% of the cumulative planned amounts by end of 2020. The lower than planned quantity of dismantled equipment is due to the overestimation of the material inventory.

## 1. Overview

### 1.1. Challenges

The decommissioning of a nuclear installation such as a power plant or research reactor is the final step in its lifecycle. It starts with shutdown, then it proceeds with removal of nuclear materials, decontamination, dismantling and demolishing until the environmental restoration of the site. The aim in nuclear decommissioning is the progressive removal of hazards inherently associated with the concerned installations. The corresponding phasing out of the necessary safety measures and associated costs is stepwise in nature, mainly because the removal of major batches of radioactive materials is obtained over several stages.

At this point in time, the decommissioning operators of the **Nuclear Decommissioning Assistance Programme (NDAP)** in Bohunice (Slovakia) and Kozloduy (Bulgaria) are carrying out decontamination and dismantling. In Bohunice the programme has advanced the most and is at the stage of dismantling in the reactor building, while in Kozloduy dismantling is well advanced in the auxiliary buildings and has started in the reactor buildings.

The **Decommissioning of Nuclear Facilities and Management of Radioactive Waste Programme (D&WMP)** is involved in the nuclear research installations of the Joint Research Centre (JRC). They are located at four sites: Ispra (Italy), Geel (Belgium), Karlsruhe (Germany) and Petten (the Netherlands). Nuclear *research* installations at JRC sites are subject to the regulatory framework and supervision in the *host* country.

The implementation of the D&WM programme at the JRC-Ispra site has focused on the design and building of several waste handling and interim storage installations for waste sorting, characterisation, decontamination, material "clearance" from radiological control, and condition and temporary storage of radioactive waste until adequate radioactive waste interim long-term storage facilities or waste disposal facilities are available in Italy.

The other JRC nuclear research installations, located in Petten, Geel and Karlsruhe, are still in operation. Decommissioning of the related operating facilities will not start before their shutdown. Waste management and pre-decommissioning activities are carried out including the dismantling of out-of-use equipment from past research work and for the removal off-site (including transfer of ownership) of obsolete nuclear spent fuel and nuclear materials.

### 1.2. Mission (general objectives)

The general objective of the Programme is to provide funding for the decommissioning of nuclear facilities and the management of radioactive waste, in line with the needs identified in the respective decommissioning plan.

On the basis of the current needs for the period from 1 January 2021 to 31 December 2027, the Programme, in addition to creating knowledge with regard to the nuclear decommissioning process and the management of radioactive waste resulting from the decommissioning activities, aims in particular to:

- (a) assist Bulgaria and Slovakia in implementing the Kozloduy programme and the Bohunice programme respectively, including with regard to the management and storage of radioactive waste in line with the needs identified in the respective decommissioning plan, with specific emphasis on managing the safety challenges in respect thereof;
- (b) support the JRC decommissioning and waste management programme.

This Programme is the continuation of the Nuclear Decommissioning Assistance Programmes in Bulgaria and Slovakia, and this last EU assistance will help bring both sites to their planned end state.

The Decommissioning of Nuclear Facilities and Management of Radioactive Waste Programme (D&WMP) was formally launched in 1999 to eliminate historical and future liabilities at all nuclear sites of the JRC and will proceed under this programme.

The decommissioning of nuclear facilities and the management of the arising waste under a common instrument aim to take advantage of **synergies and knowledge sharing** with a view to ensure dissemination of knowledge and return of experience in all relevant areas such as research and innovation, regulation, training, and to develop potential Union synergies.

### 1.3. Specific objectives

The specific objectives of the programme are as follows:

- (a) to carry out the activities included in the Kozloduy and Bohunice respective decommissioning plans, the dismantling and decontamination of Units 1 to 4 of the Kozloduy Nuclear Power Plant and Units 1 and 2 of the Bohunice VI Nuclear Power Plant, including associated systems, structures and components and auxiliary buildings, the safe management of radioactive waste in line with the needs identified in the respective decommissioning plans, and human resources support; and to pursue the release of Units 1 to 4 of the Kozloduy Nuclear Power Plant and Units 1 and 2 of the Bohunice VI Nuclear Power Plant from regulatory controls;
- (b) to support the decommissioning plan and to carry out the activities in accordance with the national law of the host Member State for the dismantling and decontamination of the Commission's nuclear installations at the JRC sites, to carry out the safe management of associated radioactive waste and, when appropriate, to prepare the optional transfer of the related nuclear liabilities from the JRC to the host Member State;
- (c) for the JRC to develop ties and exchanges among Union stakeholders on nuclear decommissioning, with a view to ensuring the dissemination of knowledge and the sharing of experience in all relevant areas, such as research and innovation, regulation and training, and developing potential Union synergies.

#### 1.4. Public intervention context

The decommissioning of a nuclear installation such as a power plant or research reactor is the final step in its lifecycle. It involves activities from shutdown and removal of nuclear material to the environmental restoration of the site. The whole process is complex and lengthy (typically 20 to 30 years), and it is carried out with the highest safety standards.

In accordance with their respective Act of Accession to the Union, Bulgaria anticipated the shut down of units 1 to 4 in Kozloduy Nuclear Power Plant and Slovakia of units 1 and 2 in Bohunice VI Nuclear Power Plant. The Union committed to provide financial support for the decommissioning, in accordance with approved plans, while keeping the highest level of safety. With the financial support provided under the MFF 2021-2027 bringing both Kozloduy and Bohunice programmes to completion, the Union will have fulfilled its commitment.

The Council Directives 2014/87/Euratom and 2011/70/Euratom, establish the ultimate responsibility of Member States for the safety of nuclear installations and for the safe management of spent fuel and radioactive waste. That principle of national responsibility, as well as the principle of prime responsibility of the licence holder for the safety of its installations, include the decommissioning operations.

Each Member State has appointed a Programme Coordinator responsible for overseeing the programming, coordination and monitoring of the respective decommissioning programme. In each concerned MS, the decommissioning operator, as the licence holder, is responsible for implementing the decommissioning programme under the supervision of the Programme Coordinator. The decommissioning operators are the State Enterprise for Radioactive Waste (SERAW) in Bulgaria, and the Nuclear and Decommissioning Company (Jadrová a vyrad'ovacia spoločnosť or JAVYS) in Slovakia.

The JRC was established under the Euratom Treaty and site agreements were signed during the period 1960-1962 between the Community, Germany, Belgium, Italy and the Netherlands. In the cases of Italy and the Netherlands, national nuclear installations were transferred to the Community. An infrastructure geared to nuclear research and comprising new installations was put in place at the four sites. Some of those installations are still in use today, while others have been shut down, in some instances more than 20 years ago, and have mostly become obsolete.

On the basis of the Euratom Treaty the JRC has to manage its nuclear liabilities and decommission its installations once they have been definitively shut down. The D&WM programme relates to all JRC nuclear installations at the sites of Ispra, Karlsruhe, Petten and Geel, either already shutdown or staying in operation.

#### 1.5. Actions

The actions to be funded under the Kozloduy programme and the Bohunice programme are within the scope of the respective decommissioning plans presented to the Commission. The actions focus on activities related to the delivery of the general and specific objectives and with the highest EU added value, i.e. removal of radiological hazards and creation and dissemination of relevant knowledge.

During the 2021-2027 period, Ispra will be the main site for the decommissioning and waste management activities of the JRC. The gradual shift from safe conservation and pre-decommissioning to relatively large decommissioning and waste management tasks will continue, enabled by the relevant authorisations and licenses released by the safety authority and by the start of the operation of new supporting facilities. By 2024, all waste treatment facilities in Ispra should be ready for operation. In Karlsruhe, the requalification and removal of legacy low-level waste and glove boxes and the optimisation of spent fuel inventories will

continue. In Petten, a multi-year campaign to dispose of the nuclear material/waste batches owned by JRC will be launched. Contacts with Dutch counterparts, aiming at defining an effective frame for the future decommissioning of the High Flux Reactor, will continue. In Geel, an effort to reduce/optimize the inventories of nuclear materials owned by the JRC and to remove waste will be implemented in agreement with the licensing authority.

## **1.6. Delivery mode**

### **Kozloduy (BG) - NDAP**

Indirect Management entrusted to EBRD (European Bank for Reconstruction and Development).

### **Bohunice (SK) - NDAP**

Indirect Management entrusted to EBRD (European Bank for Reconstruction and Development) and the SIEA (Slovak Innovation and Energy Agency – national agency in Slovakia).

The Commission has selected the EBRD as entrusted entity for the NDAP since 2001. On the proposal of the Slovak authorities, the Bohunice programme funding is also channelled through a national implementation channel, the Slovak Innovation and Energy Agency (SIEA).

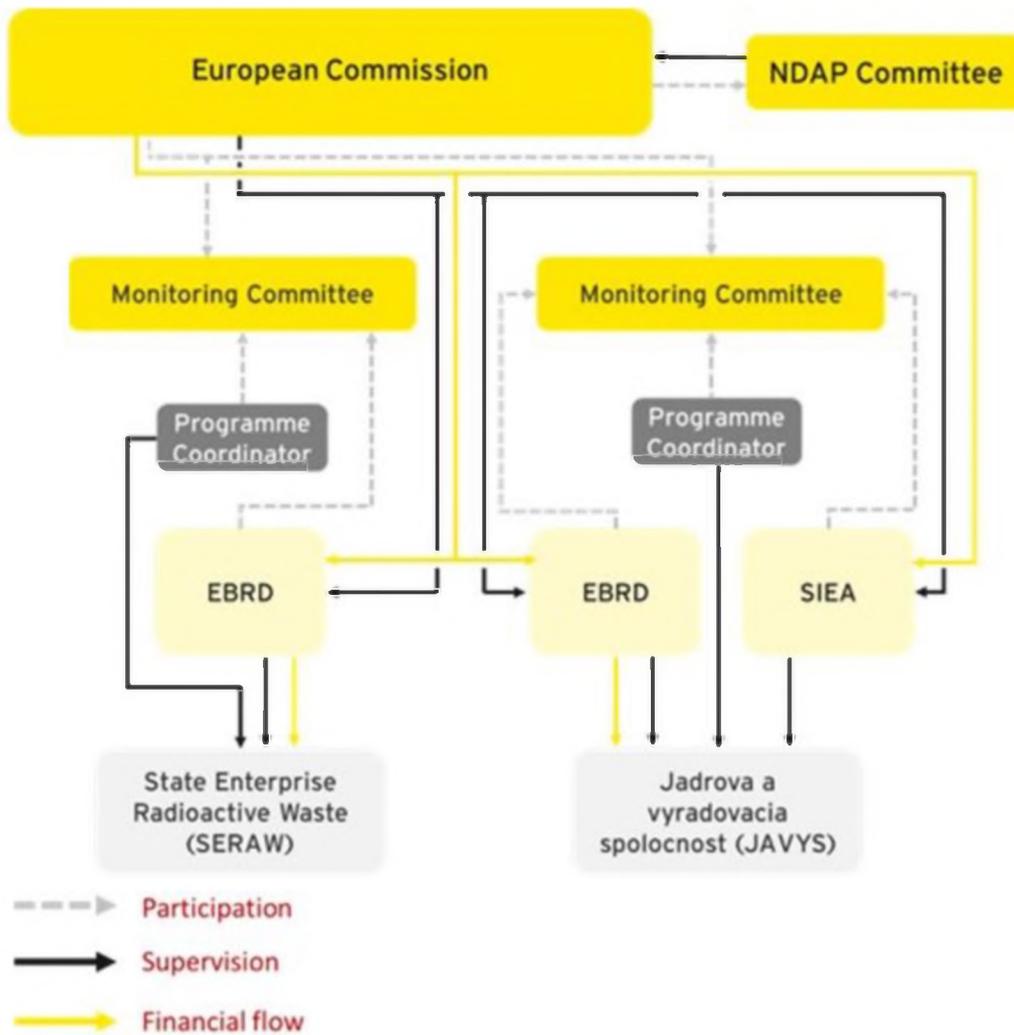

The Directorate-General for Energy is the lead DG for the implementation of the programme. It manages directly a limited fraction of the funds for preparatory, monitoring, control, audit and evaluation activities.

### **JRC (BE, DE, IT, NL) - D&WM programme**

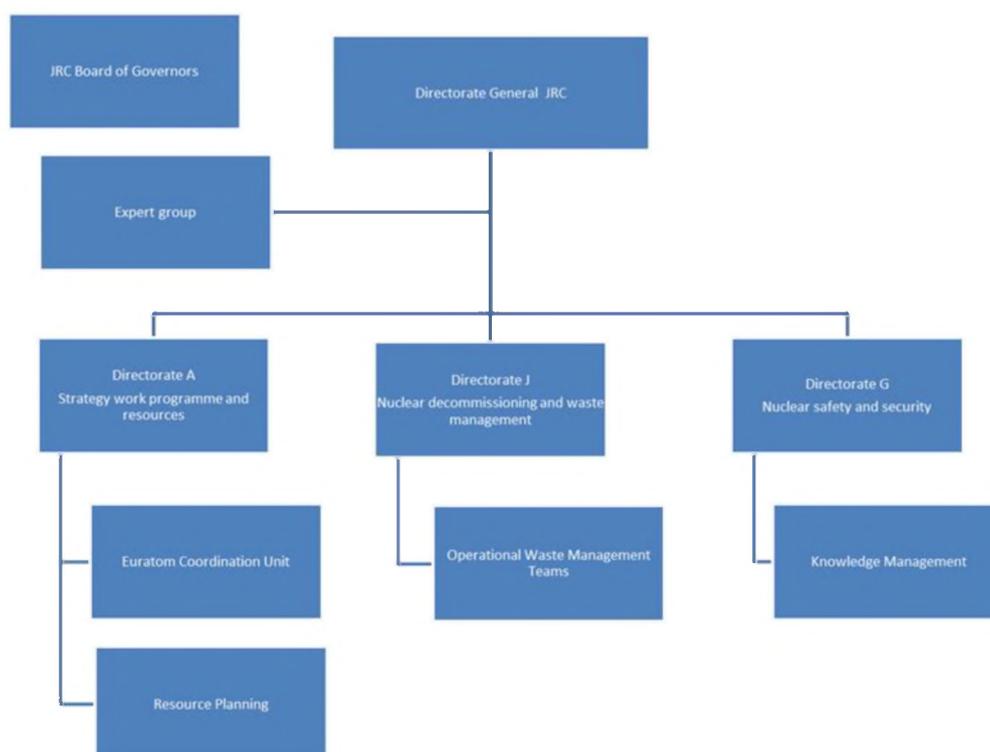

Direct Management by JRC.

## **1.7. Graphic overview of the programme structure**

Graphic overview of NDAP structure (BG, SK):

A new Directorate for Nuclear Decommissioning and Waste Management has been established with the mission of implementing the JRC Decommissioning and Nuclear Waste Management (D&WM) programme in line with the identified needs.

## 1.8. Legal basis and financial programming

### 1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Procedure 2018/0252/NLE COM (2018) 467: Proposal for a COUNCIL REGULATION establishing a dedicated financial programme for decommissioning of nuclear facilities and management of radioactive waste, and repealing Council Regulation (Euratom) No 1368/2013	2021 - 2027	466,0

### 1.8.2. Legal basis explanation

When Bulgaria and Slovakia joined the European Union, they committed to close and proceed with the decommissioning of six Soviet-designed, first generation nuclear reactors at two nuclear power plant sites. The Union declared its willingness to provide financial assistance to the concerned Member States for the decommissioning of Kozloduy units 1 to 4 and Bohunice V1 units 1 and 2 in accordance with their respective decommissioning plans.

On the basis of Article 8 of the Euratom Treaty and in line with Article 7 of Council Directive 2011/70/Euratom the JRC has managed its historical nuclear liabilities and decommissions its shut-down nuclear installations in accordance with the respective national legislation. Accordingly, the JRC decommissioning and waste management programme was launched in 1999.

JRC decommissioning programme concerns the nuclear decommissioning and radioactive waste management of the nuclear installations at the JRC sites, namely JRC-Geel in Belgium, JRC-Karlsruhe in Germany, JRC-Ispira in Italy and JRC-Petten in the Netherlands.

### 1.8.3. Financial programming table

	Financial Programming (EUR million)							
	2021	DB2022	2023	2024	2025	2026	2027	Total Programme
<b>Total</b>	<b>69,2</b>	<b>43,9</b>	<b>57,2</b>	<b>62,3</b>	<b>70,5</b>	<b>73,1</b>	<b>89,8</b>	<b>466,0</b>

### 1.8.4. Financial programming explanation

Legal basis	Period of application	Reference amount (EUR million)

Council Regulation (Euratom) 2021/100 of 25 January 2021 establishing a dedicated financial programme for the decommissioning of nuclear facilities and the management of radioactive waste, and repealing Regulation (Euratom) No 1368/2013, OJ L 34, 1.2.2021, p. 3–17  <a href="https://eur-lex.europa.eu/eli/reg/2021/100">https://eur-lex.europa.eu/eli/reg/2021/100</a>	2021-2027	466

### 1.9. Link with the 2014-2020 MFF

The decommissioning of Bohunice (SK) and Kozloduy (BG) has received EU support since 2001 under various instruments. The co-funding in the MFF 2021-2027 is the last to complete the programme.

During the MFF 2014-2020, the Kozloduy and Bohunice programme progressed steadily towards the decommissioning end state, in accordance with their respective decommissioning plans, whilst maintaining the highest level of safety. The process will continue in the MFF 2021-2027 and a new objective will be pursued: the dissemination of knowledge to all EU Member States on the decommissioning process. The activities funded in the period 2021-2027 will be subject to a maximum EU co-financing rate of 50%. This rate was not explicitly set previously.

The JRC decommissioning programme was previously performed under direct management under a different financial instrument. It was launched in 1999<sup>1</sup> as an activity with separate ad-hoc budget line. Since the beginning, the Commission is regularly reporting to the Council and the European Parliament on its progress and status<sup>2</sup>. Moreover, JRC reports on an annual basis on the mid-term targets and the progress achieved (JRC Management Plan, JRC Activity Report).

## **2. Where are we in the implementation ?**

### **2.1. Programme 2021-2027**

The Kozloduy programme has prepared for the decontamination and dismantling of the reactors main pipes, pumps and valves (also reusing equipment and experience from the Bohunice programme). The programme progressed dismantling in the auxiliary buildings. The plasma melting facility, a first-of-its-kind facility for the high-performance volume reduction of radioactive waste, is now in industrial operation. In parallel, construction works are underway for the National Disposal Facility, i.e. the low and intermediate level waste surface repository, which will receive large quantities of radioactive waste from 2024. In accordance with the updated performance baseline, the programme completion date remains 2030.

The Bohunice programme has entered the last phase of the decommissioning process. The dismantling of the large components in the reactor building is underway. After the removal of all steam generators, the decommissioning operator initiated the segmentation and packaging of the reactor pressure vessels, i.e. where the nuclear core was enclosed. The decommissioning operator has initiated a thorough review of the scheduling of the remaining tasks, which will result in a modification in the end-date of the programme, currently foreseen in 2025.

The nuclear Decommissioning and Waste Management Programme of JRC entails a complex set of specific activities and projects with related objectives. Different levels of advancement/implementation characterize the situation at the four nuclear sites of JRC. In Ispra, where most of the nuclear facilities ceased to operate before 1999 and where there is a well-established organizational structure since the launch of the programme, the objectives include safe conservation, pre-decommissioning, decommissioning and waste management targets covering a variety of obsolete large installations and waste batches. For the other sites the objectives are to a large extent focused on legacy waste management, dismantling of obsolete equipment and relatively small facilities, and on the definition of plans and teams to implement future decommissioning and waste management activities. Due to the fact that in Karlsruhe, Petten and Geel most nuclear facilities are in operation performing nuclear R&D in the frame of the EURATOM Research and Training programme, no decommissioning of large installations is being implemented yet. In the future (between 2020 and 2060), significant decommissioning activities will need to be implemented also at the JRC sites in Karlsruhe, Geel and Petten.

During the 2021-2027 period, JRC Ispra (IT) will be the main site for the decommissioning and waste management activities of the JRC. The gradual shift from safe conservation and pre-decommissioning to relatively large decommissioning and waste management tasks will continue, enabled by the relevant authorisations and licenses released by the safety authority and by the start of the operation of new supporting facilities. By 2024, all waste treatment facilities in Ispra should be ready for operation. In Karlsruhe (DE), the requalification and removal of legacy low-level waste and glove boxes and the optimisation of spent fuel inventories will continue. In Petten (NL), a multi-year campaign to dispose of the nuclear material/waste batches owned by JRC will be launched. Contacts with Dutch counterparts, aiming at defining an effective frame for the future decommissioning of the High Flux Reactor, will continue. In Geel (BE), an effort to reduce/optimize the inventories of nuclear materials owned by the JRC and to remove waste will be implemented in agreement with the licensing authority.

### **2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations**

	<b>Commitments</b>	<b>Payments</b>
Implementation Voted budget	<b>518 422 657</b>	<b>266 095 980</b>
Implementation carry-overs		
Implementation total	<b>518 422 657</b>	<b>266 095 980</b>
total envelop*	<b>518 442 000</b>	
cumulative implementation rate	<b>100%</b>	<b>51%</b>

\* based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

The figures relate only to the past implementation of the Kozloduy and Bohunice programmes. The JRC decommissioning programme was performed under a different financial instrument and is not reported here. Including the payments made during the period 2014-2020 on the previous MFF commitments, the total of payments made for the Kozloduy and Bohunice programmes is

EUR 858,528 million, which represents 165,8% of the committed amount for the same period (EUR 517,892 million). Therefore, the rhythm of payments has been aligned with the commitments during the period 2014-2020. Decommissioning projects are, in many cases, highly technical from the procurement and implementation point of view, and extend on a long period of time. This explains the inherent interval between the commitments and the payments of the programme, and that most of the payments during the 2014-2020 period were related to commitments from the previous period. The figures in the table above are expressed in EUR million.

The cost of the work carried out since 2014 is within budget.

Progress at these two sites was affected by the COVID-19 crisis, which affected the supply chain of equipment and meant limited access by foreign experts and contractors to the sites. Measures to ensure that activities could continue safely significantly reduced the short-term impact on project milestones.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.2. Active programme performance**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.3. Previous programme performance**

The Decommissioning of Nuclear Facilities and Management of Radioactive Waste Programme (D&WMP) was previously managed under another instrument and its performance subject to a different framework. Therefore its past performance is not reported here.

The general objective of the Kozloduy and Bohunice programmes in the period 2014-2020 was to assist the Member States towards the decommissioning end state of Kozloduy units 1 to 4 (Bulgaria) and Bohunice VI units 1 and 2 (Slovakia), whilst maintaining the highest level of safety.

For the Kozloduy programme, the situation in 2014 was:

- preparatory works had started for the decontamination and dismantling activities in turbine halls and auxiliary buildings;
- the dismantling of large components and equipment in the reactor buildings had not started;
- the facilities for the treatment and conditioning of waste were being put in place.

The first specific objective for the period 2014-2020 (performing dismantling in the turbine halls of units 1 to 4 and in auxiliary buildings) has been achieved with the decontamination and dismantling activities in the turbine halls completed in 2019.

Progress towards the second specific objective (dismantling of large components and equipment in the reactor buildings of units 1 to 4) was significant. Dismantling activities inside the reactor building Units 1-2 have started in 2015 and a total of 948 systems and equipment have been dismantled in the reactor buildings of units 1 to 4, which is 79% of the target at the end of 2020. The activity had started at a slower pace than planned but recovered steadily over the years. However the COVID-19 pandemic impeded the approval process by the nuclear regulator during the last year.

Activities related to the third specific objective (safely managing the decommissioning waste in accordance with a detailed waste management plan) have progressed well but some aspects stayed slightly below expectations. At the end of 2020, the quantity of material released from regulatory control (free release) has reached 39 320 tonnes i.e. 90% of the target. The COVID-19 pandemic worsened the production rate. At the same date, the production of final waste packages (i.e. Reinforced-Concrete Containers) for legacy waste and decommissioning waste was about 106% of the target in end 2020.

The plasma melting facility (a first-of-its-kind high-temperature incineration facility for volume reduction of radioactive waste) produces a waste form that is particularly stable and safe. The project was launched in 2009 and reached the operational stage in 2019. The first three operational campaigns demonstrated that it could reduce the volume of waste by a factor of 50.

Construction of the near-surface repository for low- and intermediate-level waste (National Disposal Facility) started in 2017. The large earth works are completed and the foundations have been laid down. The construction works do not imply any radiation or nuclear safety risk, however activities were suspended from December 2019 to June 2020 following a fatal accident on the building site. This project is critical to the progress of decommissioning in the MFF 2021-2027 and to meet the planned end-date in 2030.

For the Bohunice programme, the situation in 2014 was:

- dismantling of V1 turbine hall had started;

- dismantling of external buildings (phase 1) had started;
- preparation of decontamination of V1 primary circuits had started;
- stage 1 decommissioning waste management had started.

The first specific objective for the period 2014-2020 (dismantling in the turbine hall and auxiliary buildings of reactor V1) has been achieved. The dismantling in the turbine halls has been completed in 2018. An important landmark has been removed in 2018 with the demolition of the four cooling towers. Eventually the dismantling of the auxiliary buildings was completed in 2019.

The progress towards the second specific objective concerning the dismantling of large components and equipment in the V1 reactor buildings deserves attention. Important milestones have been achieved with the dismantling of the Auxiliary Building Systems, Spent Fuel Pools and contaminated tanks in 2018; the transfer of the 12 steam generators, each made of 145 tonnes of steel, to the former turbine hall in 2019 and the transportation of the reactor pressure vessel and other activated components to pools reconfigured as underwater cutting workshops. However, previous milestones have been merged with the project 'Nuclear Steam Supply System' (original target date 2020) which has been rescheduled to the end of 2022.

Activities related to the third specific objective (safely managing the decommissioning waste in accordance with a detailed waste management plan) have progressed well but stayed slightly below expectations. By December 2020 the quantity of material released from regulatory control (free release) has reached 134 124 tonnes, i.e. 90% of the target. The production of hazardous waste and radioactive waste remained slightly under plan. This is the consequence of the lower than planned quantity of material to be removed from the site and also from slower operations due to the COVID-19 restrictions.

To date the work has been realised on or below budget. The analysis of the critical path until the end of the programme is showing that there are important challenges to complete the programme within the planned end date (2025).

### 3.2. Key achievements

29 448	134 124	392
tonnes of metals were originated from the dismantling of the turbine hall in Kozloduy programme by end 2020.	tonnes of conventional recyclable material dismantled by end 2020 in the Bohunice programme.  This material was transported to the recycling facilities outside Bohunice decommissioning site.	reinforced-concrete containers of radioactive waste produced in the Kozloduy programme by end 2020.  The production of final waste packages (i.e. reinforced-concrete containers) for legacy waste and decommissioning waste was 106% of the target by end 2020.

### 3.3. Evaluations, studies and reports

#### Nuclear Decommissioning Assistance Programme (NDAP)

The Commission, in close cooperation with the Member States, has launched an *ex post* evaluation on the effectiveness and efficiency of the Nuclear Decommissioning Assistance Programme for the period 2014 to 2020.

The evaluation will rely on existing reports on the progress of the technical and financial implementation of the programme.

The following studies are underway or recently finished:

- study to support the *ex post* evaluation of the nuclear decommissioning assistance programme 2014-2020;
- safety culture maturity of the NDAP operations, supporting the *ex post* evaluation 2014-2020;
- development and try-out of an on-site process for sharing knowledge created in the frame of the NDAP;
- gap analysis of Earned Value Management Systems in use by operators under the NDAP.

The following evaluations, studies and reports have been published in the past years:

- Progress report period 2010-2014 [COM(2015) 78];
- Progress report 2015 and previous years [COM(2016) 405];
- Progress report 2016 and previous years [COM(2017) 328];
- Mid-term evaluation [COM(2018) 468];
- Progress report 2018 and previous years [COM(2019) 215];
- Progress report 2019 and previous years [COM(2020) 82];

- support to the ex post evaluation of the NDAP Energy window 2007-2013 [ISBN 978-92-76-08716-8];
- support to the mid-term evaluation of the NDAP [ISBN 978-92-76-08717-5, 978-92-76-08789-2];
- assessment of the robustness of the NDAP financing plans and of the relevance and feasibility of the detailed decommissioning plans [ISBN 978-92-76-08798-4].

The results of the NDAP mid-term evaluation and of the latest report on NDAP from the European Court of Auditors were communicated in the Draft Budget 2019.

#### Decommissioning of Nuclear Facilities and Management of Radioactive Waste Programme (D&WMP)

The following evaluations, studies and reports are underway or recently finished:

- IAS audit report: IAS.C4-2017-JRC-002 Draft audit report on nuclear decommissioning and waste management programme (D&WMP) implementation in DG JRC;
- The organisational structure for the JRC nuclear decommissioning programme: an ex-ante assessment – Final report March 2019;
- Ares(2017)6208486 Budget requirements to implement the JRC Decommissioning & Waste Management Programme (D&WMP) strategy;
- Ares(2017)620848 Manpower needs to implement the JRC Decommissioning & Waste Management Programme (D&WMP) strategy;
- Ares(2017)3518519 Strategy for Decommissioning & Waste Management Programme (D&WMP) of JRC.

The following evaluations, studies and reports have been published in the past years:

- IAS audit report IA – 11 – 03 (206) Decommissioning – risk and project management at the Ispra site;
- Expert group reviews reported in CircaBC;
- Communication from the Commission to the Council and the European Parliament: Decommissioning of nuclear installations and waste management. Nuclear liabilities arising out of the activities of the Joint Research Centre (JRC) carried out under the Euratom Treaty (SEC/2004/621).

## **4. Programme 2021-2027 - Key monitoring indicators**

**Specific Objective 1 :To carry out the activities included in the respective decommissioning plans, the dismantling and decontamination of Units 1 to 4 of the Kozloduy Nuclear Power Plant and Units 1 and 2 of the Bohunice V1 Nuclear Power Plant, including associated systems, structures and components and auxiliary buildings, the safe management of radioactive waste in line with the needs identified in the respective decommissioning plans, and human resources support; and to pursue the release of Units 1 to 4 of the Kozloduy Nuclear Power Plant and Units 1 and 2 of the Bohunice V1 Nuclear Power Plant from regulatory controls.**

**Indicator 1:(Kozloduy) Radioactive waste management: quantity and type of waste safely stored or disposed of, with annual objectives by type, meeting the milestones of the Programme**

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

Are we on track	On track
Indicator type	Result
Unit of measurement	Licence for nuclear decommissioning (yearly)
Cut-Off Date	31/12/2020
Data source	National authorities, Implementing bodies, decommissioning operator
Narrative	Obtaining a decommissioning licence is a compulsory requirement for the nuclear decommissioning of Kozloduy and Bohunice. Baseline Kozloduy programme (2014): - Preparatory works have started for the decontamination and dismantling activities in turbine halls and auxiliary buildings. - Dismantling of large components and equipment in the reactor buildings not yet started. - Facilities for the treatment and conditioning of waste are being put in place. Baseline Bohunice programme (2014): - Dismantling of V1 turbine hall has started. - Dismantling of external buildings (Phase 1) has started. - Preparation of decontamination of V1 primary circuits has started. - Stage 1 decommissioning waste management has started
Methodology	
Link MFF 14-20 / MFF 21-27	Over the period 21-27, indicators monitor the dismantling and decontamination of the reactors' buildings and components.
Other methodological comments	-
Full metadata available at this address	
Justification of the trend	The licences for decommissioning were issued at the time planned (or even before).

## Specific Objective 1 :(Kozloduy) Performing dismantling in the turbine halls of units 1 to 4 and in auxiliary buildings

### Indicator 1: Number and type of systems dismantled

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Systems dismantled										
2014	Milestones									2020
Systems dismantled	28	55	82	110	135	141	141			141
	Actual Progress									Final
				85	107	141	141			141
Metal dismantled										
2014	Milestones									2020
Metal dismantled	5 772	11 544	17 316	23 088	28 088	29 448	29 448			29 448
	Actual Progress									Final
	4 854	10 901	16 697	18 968	27 430	29 448	29 448			29 448

Are we on track	On track
Indicator type	Result
Unit of measurement	Numbers of systems dismantled from target, and tonnes of metal (cumulative)
Cut-Off Date	31/12/2020
Data source	National authorities, Implementing bodies, Decommissioning operator
Narrative	Performing dismantling in the turbine halls of units 1 to 4 and in auxiliary buildings is part of the Detailed Decommissioning Plan (last update on 2017) for the Kozloduy programme. The completion of the dismantling of equipment in the turbine hall has been achieved in 2019, a year earlier than scheduled.
Methodology	Data is based on the Monitoring Report provided by the national authority every six months.
Link MFF 14-20 / MFF 21-27	Metal dismantled will also be reported in a new indicator for the period 2021-2027.

Other methodological comments	
Full metadata available at this address	
Justification of the trend	The total target of 141 systems were dismantled and the overall objective has been achieved (Units 1-4 turbine hall fully dismantled). The initial target value was updated (141 instead of 160) as 19 support systems have to remain in operation to support decommissioning operation. The total quantity to be dismantled equipment has been re-evaluated to 29 448 tonnes of metals (instead of 33 216 tonnes), as it is the final amount that was originated from the dismantling of the Turbine Halls. The final target is lower than the original planned target established prior 2014 using data available at that time.

## Specific Objective 2 :(Kozloduy) Dismantling of large components and equipment in the reactor buildings of units 1 to 4

### Indicator 1: Number and type of systems and equipment dismantled

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2020
0	0	200	400	600	800	1000	1200			1200
	Actual Progress									Final
	0	147	299	326	525	723	948			

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Number of dismantled large components and equipment in the reactor buildings of units 1 to 4 (cumulative)
Cut-Off Date	31/12/2020
Data source	National authorities, Implementing bodies, decommissioning operator
Narrative	Dismantling of large components and equipment in the reactor buildings of units 1 to 4 is part of the Detailed Decommissioning Plan of Kozloduy Programme.
Methodology	Data is based on the Monitoring Report provided by the national authority every six months.
Link MFF 14-20 / MFF 21-27	There is a specific indicator for the period 2021-2027 for the dismantling and decontamination in the reactors' buildings in accordance with the decommissioning plan.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Dismantling activities inside the reactor building Units 1-2 have started. The activity had started at a slower pace than planned but recovered steadily over the years. There was an underestimation of time needed for regulatory approval caused by the implementation of a procedure never used before for authorisation of activities associated to decommissioning and waste management. Furthermore, the COVID-19 pandemic has also impeded the approval process by the nuclear regulator.

## Specific Objective 3 :(Kozloduy) Safely managing the decommissioning waste in accordance with a detailed waste management plan

### Indicator 1: The quantity and type of safely conditioned waste

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Free release of materials										
2014	Milestones									2020
Free release of materials	5 762	11 318	19 998	23 998	31 054	38 054	43860			43860
start	Actual Progress									Final
	4 791	7 923	15 954	18 827	28 725	34 678	39 320			
Treatment of historical radioactive waste										
2014	Milestones									2020
Treatment of historical radioactive waste	30	51	231	249	290	320	370			370
	Actual Progress									Final
	30	51	231	249	289	324	392			

Are we on track	Moderate progress
Indicator type	Result
Unit of measurement	Quantity and type of materials processed (tonnes, containers) – (cumulative)
Cut-Off Date	31/12/2020
Data source	National authorities, Implementing bodies, Decommissioning operator
Narrative	Safely managing the decommissioning waste in accordance with a detailed waste management plan is

	part of the Kozloduy Detailed Decommissioning Plan.
Methodology	Data is based on the Monitoring Report provided by the national authority every six months.
Link MFF 14-20 / MFF 21-27	There will be a specific indicator for the period 2021-2027 for the safe management of the decommissioning and radioactive waste and of activated materials and dismantling materials.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	At the end of 2020, the quantity of material released from regulatory control (free release) has reached 39 320 tonnes i.e. 90% of the target. The COVID-19 pandemic worsened a systematic underproduction rate caused by the lack of available materials to be processed. At the same date, the production of final waste packages (i.e. Reinforced-Concrete Containers) for legacy waste and decommissioning waste was about 106% of the target in end 2020.

### Specific Objective 4 :(Bohunice) Performing dismantling in the turbine hall and auxiliary buildings of reactor V1

#### Indicator 1: Number and type of systems dismantled

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2020
Auxiliary Circuit System for Secondary Circuit - Phase 2	Electricity production system	Secondary Circuit Cooling System				Control System for Consumption of Electricity				All systems in the turbine hall and auxiliary buildings of reactor V1 dismantled
	Actual Progress									Final
Auxiliary Circuit System for Secondary Circuit - Phase 1 dismantled	Auxiliary Circuit System for Secondary Circuit - Phase 2 dismantled	Electricity production, Auxiliary Circuit, Normal and Emergency Electric Power Supply Systems	Secondary Circuit Cooling System dismantled			Control System for Consumption of Electricity dismantled				All systems in the turbine hall and auxiliary buildings of reactor V1 dismantled

Are we on track	On track
Indicator type	Result
Unit of measurement	Number and type of systems dismantled (yearly)
Cut-Off Date	31/12/2020
Data source	National authorities, Implementing bodies, Decommissioning operator
Narrative	Dismantling in the turbine hall and auxiliary buildings of reactor V1 is part of the Bohunice Detailed Decommissioning Plan.
Methodology	Data is based on the Monitoring Report provided by the national authority every six months.

Other methodological comments	
Full metadata available at this address	
Justification of the trend	Dismantling in the turbine halls and auxiliary buildings was completed in 2019

### Specific Objective 5 :(Bohunice) Dismantling of large components and equipment in the V1 reactor buildings

#### Indicator 1: Number and type of systems and equipment dismantled

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2022
Dismantling in reactor building not started			Primary Circuit Equipment Insulation		Auxiliary Building Systems / Parts of Spent Fuel Pools and			External Pipeline Systems	Nuclear Steam Supply System	Nuclear Steam Supply System

					Other Contaminated Tanks– Part 1					
Actual Progress										Final
			Primary Circuit Equipment Insulation dismantled		Auxiliary Building Systems / SFP and contaminated tanks dismantled					

Are we on track	Deserves attention**
Indicator type	Result
Unit of measurement	Information on achieved milestones in dismantling of large components and equipment in the V1 reactor buildings (Yearly)
Cut-Off Date	31/12/2020
Data source	National authorities, Implementing bodies, Decommissioning operator
Narrative	Dismantling of large components and equipment in the V1 reactor buildings is part of the Bohunice Detailed Decommissioning Plan.
Methodology	Data is based on the Monitoring Report provided by the national authority every six months.
Link MFF 14-20 / MFF 21-27	There is a specific indicator for the period 2021-2027 for the dismantling and decontamination in the reactors' buildings in accordance with the decommissioning plan.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Previous milestones have been merged with the project 'Nuclear Steam Supply System' (original target date 2020) which has been rescheduled to the end of 2022. This indicator is linked to the successful dismantling of radiologically contaminated components of the main reactor systems. Dismantling has started in the reporting period January to June 2020 and major milestones have been achieved with the start of the size reduction of the reactor vessel and the steam generators. The target "external pipeline systems" was re-scheduled, with a new completion date in August 2021. The tasks within the project for the dismantling of the Reactor Coolant System Large Components were re-ordered to reflect the actual material logistics, interfaces and prioritization of specific activities with the overall objective to reduce the programme implementation time.

## Specific Objective 6 :(Bohunice) Safely managing the decommissioning waste in accordance with a detailed waste management plan

### Indicator 1:Quantity and type of safely conditioned waste

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Conventional waste produced										
2014	Milestones									2020
Conventional waste produced	23 151	74 632	74 752	86 298	146 152	147 617	149 297			149 297
	Actual Progress									Final
	23 151	74 093	74 751	86 298	130 624	131 736	134 124			
Hazardous waste produced										
2014	Milestones									2020
Hazardous waste produced	54	180	183	4 608	4 611	4 618	4 813			4 813
	Actual Progress									Final
	54	174	182	4 608	4 617	4 617	4 623			
Radioactive waste produced										
2014	Milestones									2020
Radioactive waste produced	387	909	1 440	1 608	2 003	4 026	6 474			6 474
	Actual Progress									Final
	387	909	1 440	1 608	1 953	3 331	5 520			

Are we on track	Moderate progress
Indicator type	Output
Unit of measurement	The quantity (tonnes) and type of safely conditioned waste (cumulative)
Cut-Off Date	31/12/2020
Data source	National authorities, Implementing bodies, Decommissioning operator
Narrative	Safely managing the decommissioning waste in accordance with a detailed waste management plan is part of the Detailed Decommissioning Plan (Bohunice). In 2020 decommissioning activities at Bohunice V1 produced a total of 2 388 tonnes of conventional recyclable material. In addition,

	dismantling activities in the controlled area produced 2 189 tonnes of material: of these, 732 tonnes were decontaminated and recycled as non-radioactive material.
Methodology	Data is based on the Monitoring Report provided by the national authority every six months.
Link MFF 14-20 / MFF 21-27	There is a specific indicator for the period 2021-2027 for the safe management of the decommissioning and radioactive waste and of activated materials and dismantling materials.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	By 31 December of 2020 the quantity of material released from regulatory control (free release) has reached 134 124 tonnes, i.e. 90% of the target by end 2020. The slowdown of the conventional waste production results from the impact of covid-19 and of the lower than planned quantity of material to be removed from the site.

**1. Overview****1.1. Challenges**

The European defence sector is essential for Europe's future. It plays a key role in ensuring the EU's strategic sovereignty and its capacity to act as a security provider. The sector nevertheless faces challenges that put into question the preservation of its

competitiveness and its technological edge. These may weaken the technological advantage of the sector and hamper its ability to develop defence systems crucial for the security of the Union and its Member States. More particularly, these challenges are:

- For over more than a decade, defence spending by EU Member States has been subject to significant cuts that have particularly affected defence Research and Development (R&D). Despite increases in defence spending in recent years, R&D is still lagging behind. Defence Research & Technology (R&T) for instance amounts to only 0.9% of defence expenditures against a target of 2% agreed between EU Member States.<sup>1</sup>
- The costs of defence systems are raising and include a high proportion of R&D costs. Combined with limited spending, this increasingly puts the development of new high-end defence systems beyond the capacity of individual EU Member States.
- Cooperation in the defence sector remains very weak. European collaborative equipment expenditures stand at only 17.8% of defence equipment spending against a benchmark of 35%. Only 7.3% of defence research is collaborative, against a target of 20%. EU defence industry and markets remain fragmented along national borders with unnecessary duplications often present despite limited investments.

## 1.2. Mission (general objectives)

These challenges and trends provide strong reasons for intervention at the EU level to foster collaboration, overcome fragmentation and foster the competitiveness and the technological sovereignty of the European defence industry.

## 1.3. Specific objectives

The European Defence Fund (EDF), being based on the Treaty on the Functioning of the European Union, and in particular Article 173(3), Article 182(4), Article 183 and the second paragraph of Article 188, will support both collaborative defence research and development actions. Rules adapted to the specificities of respectively defence research and development are foreseen. The Fund aims at providing consistent support throughout the full R&D cycle. It will thus ensure consistency and help bridge the “valley of death” between research and development that entails important technical and financial risks, often preventing the maturation of promising new defence technologies and their effective integration in the development of new defence systems.

By supporting, through the EU budget, collaborative defence research and development, the EDF will help build an integrated defence industrial base across the EU. It seeks to foster open and dynamic supply-chains that include SMEs and new entrants. The Fund will enhance the competitiveness, efficiency and innovation capacity of the European defence technological and industrial base, which contributes to the Union strategic autonomy and freedom of action. Furthermore, by requiring common technical requirements, it will improve interoperability of developed products and technologies for the Member States, which are the end-users.

## 1.4. Public intervention context

The EDF was launched as the cornerstone of the European Defence Action Plan and goes hand in hand with the Union’s initiatives towards a more integrated European Defence Market, in particular the Directive on transfers of defence-related products within the Union and the Directive on defence and security procurement. By encouraging cooperation, the EU can help maximise the output and quality of Member States' investment in defence. The European Defence Fund will bring EU added value by incentivising joint research on and development of products and technologies in the area of defence to increase the efficiency of public expenditure and contribute to the EU's operational autonomy. The EDF should complement rather than substitute national funding already used for this purpose. It should act as an incentive for Member States to cooperate and invest more in defence.

## 1.5. Actions

The European Defence Fund will provide financial support primarily in the form of grants. In principle, only actions undertaken in cooperation between at least three entities from at least three different Member States will be eligible.

Cross-border participation of SMEs and mid-caps will be further strengthened by the bonus system and the relevant award criterion with regard to participation of SMEs foreseen by the new European Defence Fund Regulation, as well as by the introduction of dedicated project categories in the work programmes.

To enhance the innovation capacity of the sector and the emergence of new products and technologies, the EDF will also support disruptive defence technologies and take into account their specificities such as increased risk of project failure and the potential of attracting non-traditional players to the defence sector.

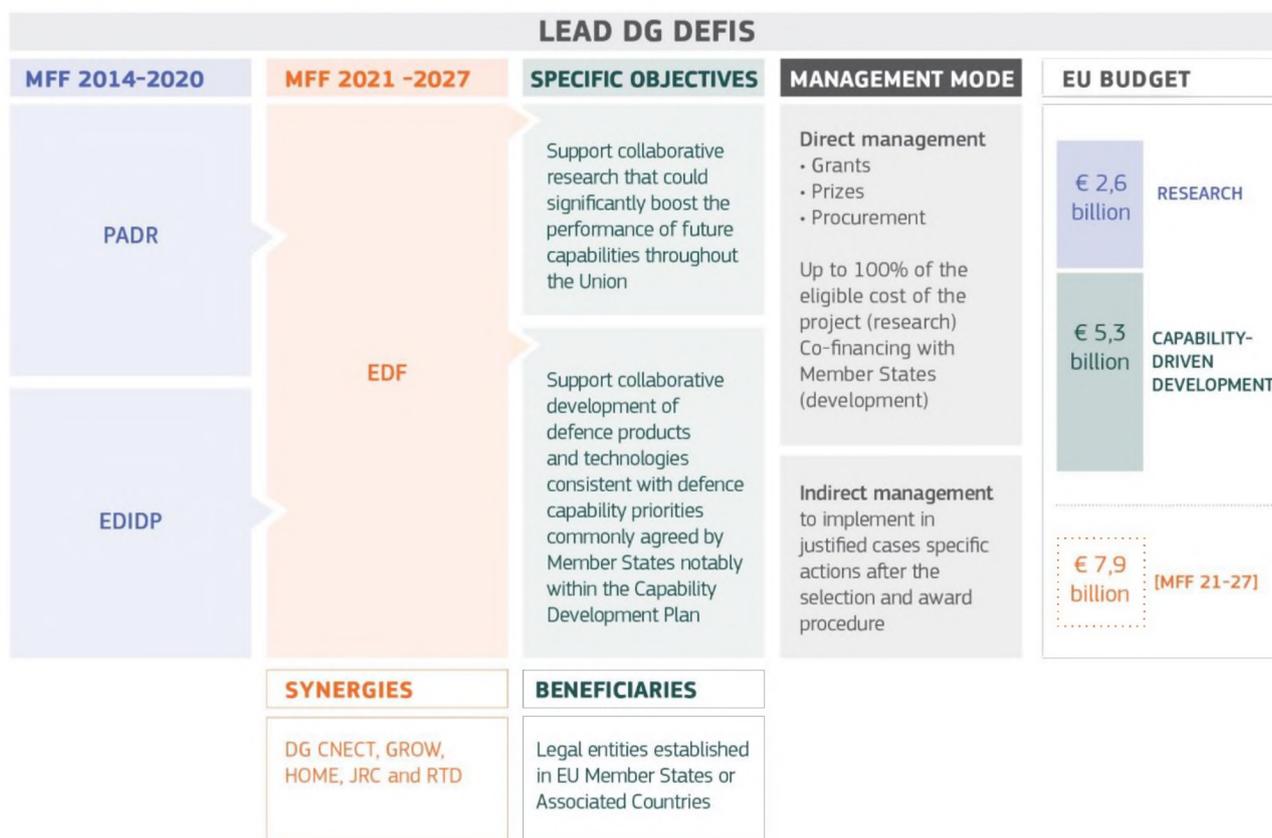

## 1.6. Delivery mode

The programme will be implemented through direct management by the Directorate General for Defence Industry and Space. On an ad-hoc basis and if justified, specific actions may be implemented in indirect management.

<sup>1</sup> Council Recommendation of 15 October 2018 concerning the sequencing of the fulfilment of the more binding commitments undertaken in the framework of the permanent structured cooperation (PESCO) and specifying more precise objectives (2018/C 374/01).

## 1.7. Graphic overview of the programme structure

### 1.8.4. Financial programming explanation

## 1.9. Link with the 2014-2020 MFF

The EDF will build and expand on the experience acquired through two small-scale pre-cursor programmes implemented under the 2014-2020 MFF:

- The Preparatory Action on Defence Research (PADR) which supported collaborative defence research projects with an overall budget of EUR 90 million over 2017-2019;
- The European Defence Industrial Development Programme (EDIDP), which supports collaborative defence development actions with an overall budget of EUR 500 million over 2019-2020.

The design of the European Defence Fund (EDF) largely builds on the architecture of these two pre-cursor programmes, the PADR in a research window and the EDIDP in a development window, but it will be implemented as one single Fund. As an example of such integrated approach, EDF harmonises the eligibility and award criteria for funding projects. The EDF will lead to better exploitation of the defence research results, bridging the gap between the research and the development phases, and promoting all forms of innovation, including support to disruptive technologies for defence. The recently adopted Action Plan on Synergies between civil, defence and space industries will also help to identify and foster the uptake of results generated in the civil programmes in a defence context and vice versa.

Several activities have been tested under the PADR and the EDIDP and are being further adapted to the defence sector specificities in order to be used more extensively in the EDF. Examples include the ethics review for both research and development actions, improving the efficiency of the project management (e.g., by more systematic use of lump sums to finance the projects), and reducing the administrative burden for applicants, e.g., by organising calls for proposals in two stages, starting with the evaluation of short outline proposals. Together with supporting measures (setting up an information network in the Member States, organising or contributing to information and brokerage events), this should encourage, in particular, SMEs and entities not yet involved in defence-specific R&D to participate even more in the programme. In the EDF, open calls for innovative and future-oriented defence solutions, which are exclusively accessible for SMEs will be organised under the research and the development window.

## 1.10. Relevant websites providing more information

[https://ec.europa.eu/defence-industry-space/eu-defence-industry\\_en](https://ec.europa.eu/defence-industry-space/eu-defence-industry_en)

## 2. Where are we in the implementation ?

### 2.1. Programme 2021-2027

The first work programme of the new European Defence Fund is expected to be adopted no later than May 2021 and will be followed by a call for proposals (EDF will be implemented under direct management in 2021). Since the tentative deadline for the submission of proposals is planned in December 2021, the grant agreements will be signed during the second half of 2022. In this context, it is expected to fully consume the commitment and payment appropriations of the year.

### 2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

	Commitments	Payments
Implementation Voted budget	499 999 957	176 489 826
Implementation carry-overs	0	1 632 362
Implementation total	499 999 957	178 122 188
total envelop*	500 000 000	
cumulative implementation rate	100%	36%

\*based on the total financial programming 2014-2020 = cumulative total of annual last adopted budgets 2014-2020

During the last MFF, the EDIDP programme (2019-2020) committed EUR 500 million, thus achieving 100% cumulative implementation rate. The first grants of the programme, resulting in the call for proposals of the year 2019, were signed in 2020. The pre-financing payments to these grants account for almost the total payment appropriations used until now, i.e. EUR 178 million, which represents 36% rate of payment execution for the programme. It is expected that, with the signature of the second (and last) round of the grants in 2021 and the associated pre-financing payments, the payment appropriations execution rate for EDIDP will considerably increase by the end of 2021.

In order to support the defence industry during the COVID-crisis, DG DEFIS decided to increase the pre-financing level of the proposals awarded under EDIDP 2019 call to up to 90% of the maximum grant, which had an impact on the rate of payment execution of the programme. DG DEFIS also decided to extend the submission deadline for the EDIDP 2020 calls until December 2020, which might delay the start of the projects. This however has no impact on the financial implementation of the programme in 2020.

Both the PADR and EDIDP were fully implemented during the COVID-19 crisis by signing the grant agreements and pre-financing all the projects retained for funding. However, it had a substantial impact on the procedures and the working arrangements of the staff involved in the evaluations and grant agreement preparations. The crisis continues to affect the currently on-going evaluations of the 2020 EDIDP calls and the preparation of the first work programme.

### **3. How is the programme performing ?**

#### **3.1. Performance**

##### **3.1.1. Introduction**

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

##### **3.1.2. Active programme performance**

The EDF Programme is designed to target the problems of the defence sectors identified in SWD (2018) 345 and its annexes accompanying the legislative proposal of the EDF.

Given that the Programme is in its early days of implementation, no implementation report is available. In the same vein, given that the indicators are set at the level of funded projects and no projects have been selected yet for funding, at this stage of implementation, it is not yet possible to report how the Programme is progressively delivering in addressing the identified problems.

##### **3.1.3. Previous programme performance**

The Preparatory Action on Defence Research (PADR) has significantly contributed to foster collaborative defence research and technological development in Europe. The core of the PADR is a small-scale research programme with competitive calls for proposals defined in close consultation with the Member States. The main objectives of the PADR programme are: 1.) *Test mechanisms to prepare, organise and deliver EU-funded cooperative defence research*; 2.) *Improve competitiveness and innovation of the European defence industry*; 3.) *Stimulate cooperation amongst research & technological development actors across Europe*.

In the yearly PADR work programmes, the Commission adopts the calls for proposals. The implementation of the Preparatory Action on Defence Research (PADR) is ongoing, in total 10 calls for proposals were published in 2017, 2018 and 2019. This resulted in the selection for funding of 18 projects. Although, most of the projects are still ongoing, yet we can still draw the following initial conclusions:

- Calls attracted applicants previously not active in defence research.
- Funded projects included the participation of SMEs in 15 consortia.
- The PADR brought together stakeholders mainly from the private sector (64%), as well as research centres (23%) and academia (7%), roughly one-fifth of all applicants in the selected proposals are small or medium-size enterprises (22% SMEs).
- In the PADR 2019 call, the Commission launched for the first time an “open” call on “future disruptive technologies for defence” with the objective of cutting-edge and high-risk/high-impact research that could lead to a disruptive impact in a defence context. This resulted in the selection for funding of three promising projects.

Projects funded by the PADR cover a broad range of technological readiness levels, from proof of concept to demonstration in relevant environment. They also addressed different levels of system integration, from research on components to integration of multiple assets, such as the project OCEAN 2020, grouping 43 partners across the supply chain. The number of applications following the PADR 2019 calls on disruptive technologies showed a large interest of stakeholder; e.g. following the open call, three projects were funded out of more than 50 proposals received. In the framework of the preparatory action, reporting about the action’s performance is not included in the working programme statements. Nevertheless, the PADR will contribute to EDF indicators by setting several of the programme’s baselines, together with data from the EDIDP.

The EDIDP Programme is designed to target the defence sectors problems identified in ex-ante evaluation SWD (2017) 228<sup>2</sup> and its annexes accompanying the legislative proposal of the EDIDP. The evaluation identified following EU defence industry problems where the EDIDP creation could support the change: 1.) *low investments in innovative defence programmes*; 2.) *fragmentation of the defence industry and limited cooperation between undertakings*. Both problems can pose in longer terms substantial risks for the competitiveness of the EU defence industry. Based on the evaluation and intense discussion with the Member States, the EDIDP Working Programme was designed to foster the competitiveness, efficiency and innovation capacity of the European defence industry, to support and leverage cooperation and to ensure that results from the research phase are better exploited in the next phases of the development. Progress on reaching these long-term objectives is reflected in the proposed quantitative milestones (see below).

<sup>2</sup> <https://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=SWD:2017:0228:FIN:EN:PDF>

Implementation of the EDIDP is in progress. Following competitive calls for proposals in the years 2019, 16 projects have been selected for funding. After comparison of EDIDP milestones with results of the 2019 EDIDP calls, following initial conclusions can be drawn:

- Due to the substantial oversubscription (only 16 out of 40 received proposals could be retained for funding), the total budget allocated to the 2019 EDIDP calls could be fully consumed.
- The EDIDP calls have boosted cooperation between the Member States and their undertakings, which is clear on exceeding of assumed milestones. The calls for proposals were tailored in close cooperation with the Member States to meet their needs in terms of defence systems and technologies needed for their defence capabilities. This approach paid off, leading to larger consortia populated by entities established in more Member States than anticipated. At the same time, 80% of the 2019 EDIDP budget is allocated to EDIDP projects, which have a link to PESCO projects, i.e., joint projects initiated by Member States. The Regulation promoted such links by awarding a "PESCO-bonus" to such projects to increase the EU funding rate.
- The EDIDP Regulation has also focused on supporting the SMEs, i.e. the European defence industry's critical part. The planned number of SMEs involved in projects was surpassed by close to 40% (83 SMEs participated against a proposed milestone of 60). The EDIDP 2019 Work Programme included a call that was open to consortia composed of SMEs only, in which 21 SMEs received funding. However, 3 out of 4 SMEs receiving EDIDP funding, participate in projects resulting from the thematic calls. The Regulation promoted this involvement by awarding an increase in the EU funding rate for projects that invest in cross-border cooperation with SMEs.
- The share of the projects funded that involve prototyping (i.e. specifically sensitive phase of the project development) was surpassed by 6%, indicating that more than half of the funded projects contain activities related to advanced stages in developing defence systems or technologies.

Following the calls for proposals for the year 2020, 63 proposals have been received (an increase of more than 50% compared to 2019 EDIDP calls) and their evaluation is in progress. The evaluation results will be available in the second half of 2021.

After the finalisation of the first calls at the end of 2020, the impact evaluation of the initiatives foreseen in the EDIDP Regulation will be possible based on a first analysis of the governmental and industrial stakeholders' responses. Moreover, the retrospective evaluation of the EDIDP will be aligned with the interim evaluation of the European Defence Fund 2021-2027 and take place after at least four years of the beginning of the implementation of the latter.

### 3.2. Key achievements

EDIDP		
500 million	26 Member States	37%
is the budget allocated to the EDIDP to support - together with the Member States - the development of defence systems and technologies to be integrated in commonly agreed capabilities.	are countries of origin of the companies participating in proposals submitted to EDIDP calls in 2019.	is the rate of SMEs participating in selected proposals in the consortium during 2019 EDIDP calls.
PADR		
90 million	26 Member States	889 entities
is the budget allocated to support joint defence research projects following calls for proposals published between 2017 and 2019 under the PADR.	and Norway are countries of establishment of entities involved in PADR proposals submitted between 2017 and 2019.	submitted 127 proposals in response to PADR calls between 2017 and 2019, of which 22% applicants were SMEs, 23% research centres and 7% from the academia, while the remainder were large industrial stakeholders.

### 3.3. Evaluations, studies and reports

On 13 June 2018, the Commission adopted the proposal of the programme accompanied by a SWD (2018) 345<sup>3</sup>, which analysed the objectives and the challenges (problems and problem drivers) and offered options as to how to tackle the identified problems. The SWD highlighted the need for an EU initiative aimed at supporting the competitiveness and innovation capacity of the European defence industrial base that will allow strengthening European strategic autonomy and reducing dependencies for key defence competencies and capabilities.
