

NEXT GENERATION TESTS

CATHY PEARSON (LINC) AND KATARINA SKACANIOVA (SCIC)

REMOTE TESTING IS.....

- in line with EU policies (greening and digitalisation)
 - resource efficient
 - a way to test more people by giving all eligible candidates the chance to sit the test
 - future (pandemic) proof
-
- **here to stay**

CURRENT ACCREDITATION SYSTEM : SAME

- tested for each language in the minimum profile
- SIM recorded 10-12 mins
- CONS live 6 mins
- fair tests, equal treatment
- evaluation criteria

CURRENT ACCREDITATION SYSTEM : NEW

- all tests done remotely (extended pilot till June 2023)
- no pre-selection
- cascade system of evaluation
- SIM then CONS
- SIM asynchronous, CONS synchronous

SIMULTANEOUS

- AssessmentQ
- candidates record all tests on the same day
- save speeches (up to 10 candidates can interpret the same speech)
- asynchronous evaluation is more flexible and can be done in quiet periods
- jury members interpret speech first – improved quality of evaluation
- each test is eliminatory – evaluation in cascade
- minimum accreditation profile

CONSECUTIVE

- Webex
- speaker and selection board in the room, candidate remote
- tests eliminatory
- results immediately orally, and later in writing

FUTURE TESTING

- different testing slots
- possibility to resit failed consecutive tests
- other ways to increase the pass rate
- change takes effort – but it is an investment in the future and the Next Generation
