CEPEJ(2023)17 rev1

Part 1

**EUROPEAN COMMISSION FOR THE EFFICIENCY OF JUSTICE (CEPEJ)**

# **Study on the functioning of judicial systems in the EU Member States**

## **Facts and figures from the CEPEJ questionnaires 2012 to 2022**

Study prepared under the authority of the Working Group on the evaluation of judicial systems  
(CEPEJ-GT-EVAL)  
for the attention of the European Commission (Directorate General Justice)

### **Part 1 - Data tables per indicator for all EU member States**

The information and views set out in this study are those of the authors and do not necessarily reflect the official opinion of the Commission. The Commission does not guarantee the accuracy of the data included in this study. Neither the Commission nor any person acting on the Commission's behalf may be held responsible for the use which may be made of the information contained therein.

# Executive summary

## English version

Since 2012 The European Commission has requested the European Commission for the Efficiency of Justice (CEPEJ) of the Council of Europe, to conduct a study aimed at analysing the situation of the judicial systems in the EU member States based on the specific methodology developed and used by CEPEJ for evaluating the functioning of the judicial systems of Council of Europe member States.

This study is based on collecting, processing and analysing data and comments provided by member States through:

- selected data among those collected for the CEPEJ evaluation cycles (years of reference of the data: 2012, 2014, 2016, 2018, 2020 and 2022) .
- and specific questionnaires (for years of reference 2013, 2015, 2017, 2019, and 2021)

This study will constitute one of the sources used by the European Commission for the “EU justice Scoreboard”.

## Structure of the study

Following the last proposed technical specifications provided in the framework of the contract No JUST/2020/JACC/PR/RULE/0159 CEPEJ/European Commission, the study, based on 2022 data and also presenting the evolution in relation to 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020 and 2021 data, is structured in two main parts:

- the first part examines the judicial systems in the European Union (EU) member States providing data tables per indicator for all member States;
- the second part contains country profiles for each EU member state separately, with a contextual analysis.

## Main elements

The study, through the 8 indicators, provides an overview of the functioning of the justice public service based on the elements, selected by the European Commission and which, according to the CEPEJ, are constitutive of the effectivity and quality of judicial systems.

## Human resources

Different categories of judges (professional, occasional, non-professional) can serve the justice system. The 2022 study focuses on professional judges sitting in courts and the European Union average for this category of judges is 22,2 judges per 100 000 inhabitants (the median is 22,9 judges per 100 000 inhabitants). The lowest number of professional judges per 100 000 inhabitants is 3.3 and the highest is 42,4. The average value have slightly increased between 2020 and 2021.

It can be noted that compared with the previous cycle, the number of judges per 100 000 inhabitants increased for more than 1% in 9 member States, whereas it decreased by more than 1% in only three states which confirms the mentioned trend of increased average value. The remaining countries have reported smaller changes in numbers which can be interpreted as a normal fluctuation of human resources within a system.

This number depends considerably on the organisation of the judicial system and the existence of occasional judges, non-professional judges or even *Rechtspfleger*.

The existence alongside professional judges of competent staff with defined functions and a recognised status is essential for the quality and efficiency of a judicial system. A distinction is made between the five types of non-judge staff:

- the "Rechtspfleger" function),
- the non-judge staff whose function is to assist judges directly,
- the staff responsible for administrative matters,
- the technical staff,
- and other types of non-judge staff that fall outside of all the categories mentioned above.

The analysis of data provided by the member States shows different trends for the average and median values. Since 2012, the average number of non-judge staff per 100 000 inhabitants has increased by +2,7% while the median decreased by -5%. Compared with the last cycle, the average and median values showed the same increasing tendency of +1,5%. The European Union median of the non-judge staff per 100 000 inhabitants is 59,4 with lowest as 24,3 and highest as 161,4.

It is worth noting that 12 countries reported to have staff with "Rechspfleger" functions (or equivalent) among non-judge staff.

In this cycle, for the third time, the CEPEJ Study for the EU Justice Scoreboard includes prosecution services. The diversity in activities of the prosecution services are evident and the number of prosecutors per 100 000 inhabitant varies in European Union from minimum 2,7 to maximum 24,3 with an average of 11,7 and median of 11,1 prosecutors per 100 000 inhabitants. Compared to the previous cycle, both the average and median values increased by +2,4% and +2,8% respectively.

The prosecutors are assisted in their work by non-prosecutor staff attached to the prosecutors' offices. Their number varies largely in the Member States from 0,6 to 45,8 non-prosecutor staff per 100 000 inhabitants with an average 15,1 and median 14,4. Compared to the previous cycle, the average and median values increased slightly by +1,1% and +0,2% respectively).

Regarding salaries of judges and public prosecutors, it could be noted that their absolute amounts vary largely from state to state depending on mostly on the economic situation and GDP per capita levels. However, almost all states demonstrated increasing tendency from 2018 onwards, showing 18% increase on average for judges and very similar level for public prosecutors (19,5% for salaries on the beginning of career and 17% at the supreme court level on the end of career). When placed in national context, the judges at the beginning of career on average earn 2,2 average annual salaries in their respective countries, whereas this ratio is a bit lower for public prosecutors (1,8). Similar difference is identified for judges and prosecutors at the highest level where highest salary in the Supreme Court is on average 4,2 times higher than average salary, whereas public prosecutors of the corresponding level earn 3,6 average salaries.

## **Lawyers**

The average number of lawyers per 100 000 inhabitants in the EU member States has generally had an upward trend since 2013. Between 2021 and 2022, the same trend has continued as average value has increased by +4,7% while median value increased by 7,9%.

Even if the southern States seem to have larger bars (number of lawyers per 100 000 inhabitants), the wide dispersal of values, also verifiable with the number of lawyers per professional judge, is also likely to indicate a considerable heterogeneity within the tasks actually carried out by qualified persons and persons entitled to plead in accordance with national law, to act on behalf of his clients, to practice law, to take part in judicial proceedings or to advise and to represent their clients in legal matters (Definition of the lawyers' legal practice in accordance with the Recommendation Rec(2000)21 of the Committee of Ministers, Council of Europe).

## **Judicial organisation**

*The study distinguishes three types of courts:*

- courts of general jurisdiction that deal with any issues which are not attributed to specialised courts – their enumeration is made as legal entities for first, second and third instance
- specialised courts of first instance and those of higher instances (second and/or third instance combined), also considered as legal entities
- courts, at all levels and of first instance, as geographic locations

Since 2012, 14 countries have reduced their number of geographical locations, 2 have same number and 10 increased it. Between the last two cycles, 4 countries increased and 4 countries reduced number of courts' geographic locations.

The geographical locations per 100 000 inhabitants has decreased in most of the member States (the median was 1,71 per 100 000 inhabitants in 2012; 1,44 in 2015 and 1,46 in 2022 which is -14,7% decrease). The average shows a smaller decrease of -3%. (

As regards the distribution of the disputes between legal entities, all the EU member States except Czech Republic and Hungary have specialised courts of first instance.

The most frequent types of specialised courts in EU states are those that deal with administrative cases (exist in 87,5% of countries), labour legislation (46%) and commercial cases (42%).

Significant number of countries have also other not mentioned specialised courts (46%). While majority of countries have few types of specialised courts there are some that have many specialised courts for different matters like Spain and Portugal but also Austria, Cyprus, France and Italy. France, Portugal, Malta and Cyprus also have large number of specialised courts of 1st instance compared with all courts of 1st instance (83%, 75%, 64% and 63% respectively). There are few more countries with many different types of specialised courts, but they qualified them as “Other” so they cannot be easily compared with other systems.

This year for the third time the data on higher instances specialised courts was collected. Expectedly, their number is smaller than the 1st instance. Few countries have many specialised courts dealing with different cases on higher instances. In most of the other countries that have higher instance specialised courts, they concern administrative matters (19 countries). There are also some higher instance military courts as well. There are also 4 countries that have specialised courts on 1st instance but no specialised courts on higher instances. .

### **ADR - Alternative Dispute Resolution measures**

In various European countries, the use of alternative dispute resolution (ADR) measures is now widely accepted among the public and legal professionals. It contributes to the improvement of effectiveness of justice by providing courts users There are different types of ADR in the member countries:

*Mediation: refers to a voluntary trial in a non-binding private dispute settlement in which an impartial and independent third party assists the parties in facilitating discussions aiming to resolve their difficulties and to reach an agreement.*

Court-related mediation: within this type of mediation, there's always an intervention of a judge and of a prosecutor who facilitates, advises, decides and/or approves the procedure.

Conciliation: the main objective of a conciliator is to reconcile, most of the time he/she will do so by seeking for concessions. He/she may make suggestions to the parties aimed to settle a dispute. The conciliator has more power and plays a more proactive role in comparison with the mediator.

Arbitration: the parties choose a neutral third party - an arbitrator whose final decision is binding. The parties may present evidence and testimonies to the arbitrators. Sometimes, several arbitrators are appointed to work as a court.

Arbitration is most widely used for commercial disputes settlements because it provides a greater confidentiality.

Court-related mediation exists in all States, essentially in civil and commercial spheres. However, only 19 states have It could be noted that the median number of accredited or registered mediators per 100 000 inhabitants has strongly increased since 2012 (from 9,5 in 2012 to 17 in 2021). This may indicate an intent of the member States to support the policies of enhancement of ADR through increase number of trained mediators.

In this cycle, for the first time, the CEPEJ Study for the EU Justice Scoreboard includes data on notaries. Regarding the status of notaries in EU, it is important to note that in 22 states notaries are holders of public offices who exercise a public function and are appointed by the State. Thus, they are a subject of supervision by public authorities (for instance the Ministry of Justice) and exercise their functions in a regulated environment. The number of notaries per 100 000 inhabitant varies in European Union from minimum 2,6 to maximum 74 with an average of 12,2 and median of 7,6 notaries per 100 000 inhabitants.

### **System for measuring and evaluating the functioning of courts**

The majority of countries use national level quality standards for in courts and public prosecution services. The number of countries that defined these standards is above half of the EU members (15 states).

Regarding different modalities of monitoring that are intended to review the day-to-day activity of courts through data gathering and statistical analyses, they appear in all In EU countries. Many fields of courts activity are being monitored particularly case flow data, courts' decisions and efficiency indicators. monitoring.

Looking at the level of individual judges and public prosecutors, it could be noted that quantitative performance targets are defined for each judge in 9 countries, whereas 6 countries have these targets set for public prosecutors. Out of these countries, only one doesn't envisage sanctions if the targets are not met by judges and prosecutors, while others have a possibility to impose different sanctions with or without disciplinary procedure, such as warning by court president, temporary salary reduction, reflection in the individual assessment or other sanctions. Regarding Individual evaluation of the public prosecutors' work, quantitative evaluation exists in 10 countries whereas qualitative evaluation is used in 20 states.

## **Performance of the courts and public prosecution services**

One of the essential components of the proper functioning of courts is related to the respect of the fair trial principle within a reasonable time (Article 6 of the European Convention on Human Rights). This principle should be taken into account whenever analysing the workload of the court, the length of procedures and the specific measures to reduce the length of delays in proceedings and to improve the efficiency.

The CEPEJ has chosen to develop efficiency court indicators on the European level.

The first indicator is the Clearance Rate (CR) which indicates the capacity of the courts and judicial system to deal with the inflow of new cases.

The second indicator is the calculated Disposition Time (DT). This ratio between pending cases and resolved cases (in days) shows the theoretical duration for a court to solve all the pending cases.

When analysing the efficiency of the courts it is important to look at both indicators together and its evolution over time.

However, interpreting and comparing 2022 data with numbers from different cycles should be done with caution, due to the specific situation caused by the COVID-19 pandemic in 2020 and to some extent in 2021. This is why further observations are required to fully understand tendencies on both EU and individual countries' level.

### **Civil and commercial litigious cases**

Looking at the CR for first instance civil and commercial litigious cases, it should be noted that almost every year since 2012 the EU median has been equal or over 100%. The only exception is year 2020 when CR reached 98% as the impact of COVID-19 measures affected the work of courts the most during this year. In 2022 EU median is above 100% but decreased compared to the previous year (from 102,5% in 2021 to 100,5% in 2022). Comparing individual countries' data for 2022 and 2021, most of them (18) show decreased CRs which in line with the mentioned trend. The largest decreases registered in Romania (-6 percentage points), Denmark, France, Italy, Poland and Slovenia (-5 percent points each). On the other side, five countries experience improvements of the CR with more notable increases in Greece and Malta (with 11 and 9 percentage points respectively) and extreme rise in Croatia by 64 percentage points. To understand fully this comparison between the cycles, we need to look if the number of incoming and resolutions-of-the-notary.html ic authority. This is the reason why only Hungarian citizens can be appointed public notaries and this is why some elements of the notaries' obligations are similar to those of judges. Namely, the appointment is only possible as a result of an open selection procedure, and it is restricted to the jurisdiction of the local court; in case of notary's absence, a substitute may only be ass

As regards the Disposition Time, there are not such clear trends. 13 member states increased their DT compared to 2021. More specifically, 2 countries increased it by more than 10%, 6 countries from 5-10%, 5 countries from 0-5%. On the other hand, 9 countries decreased their DT, 3 of them by more than 10%, 3 between 5% and 10% and 3 by less than 5%. The average and median numbers have not demonstrated large fluctuations but also show different tendencies. The average DT decreased by -3,4% and median DT increased by 2,2%. Considering such diverse results, no general trends can be identified and individual countries' DT variations should be observed and contextualised with evolution of the number of cases.

### **Administrative law cases**

Compared with other categories of first instance cases in EU, administrative cases generally have highest Disposition Time of 356 days on average. For example, they still take notably longer time than the civil and commercial cases that need 282 days on average in 2022. However, it is evident that average DT decreased significantly for these cases when we compare the results with previous years, 400 days in 2021 and 411 days in 2020.

The number of countries that decreased their Disposition Time for administrative cases is 15, whereas 10 countries increased disposition time. 8 countries decreased the DT significantly (more than 10%), such as Cyprus, Latvia and Malta. 7 decreased moderately and 10 increased DT among which some significantly (above 10% increase) such as Belgium and Hungary.

Increased Clearance Rate is identified in 16 countries among which Cyprus, Latvia, Malta, and Slovak Republic had above +10 percent points increase. CR decreased in 9 countries, out of which significantly (above 10 percent points) only in 2, Austria and Belgium.

This analysis shows that majority of states have demonstrated favourable developments in 2022 regarding administrative cases, since more than half of states have decreased their DT and increased their CR. However, more efforts will be required in future years to continue shortening the disposition time and come closer to DT levels of civil and criminal cases.

### **Criminal law cases**

This is the third year in which criminal cases will be reported as part of this study. Consequently, the focus will be only on 2022, 2021 and 2020 data without comparison with previous data.

Looking at the efficiency indicators for the first instance criminal cases, it is immediately notable that CR was not very high in 2022 as EU average is 97,4% while median was on a borderline level of 100%. This situation is almost identical as in 2021. However, this still represents a significant improvement compared to 2020 when average value for the whole European Union was 92,9% whereas median was at the level of 95,2%. Furthermore, in 2020 only three countries achieved CR over 100% while in 2021 and 2022 half of the EU member States reached this level. At the end, it is important to note that 17 countries improved their CR while seven decreased its level in 2022 which leads to a conclusion that CR is continuously improving and getting on a more satisfactory level.

Regarding Disposition time, the situation seems to be more favourable than in Civil and commercial litigious and administrative law cases. The situation seems to be almost identical to the last year. In 2022 the average is 162 and median 136 days whereas in 2021 the average value was 161 days and median was at the level of 134 days. The improvements are visible also on the individual countries' DTs as 15 states reduced it while only 7 countries rose its level. The maximum values were again observed in Malta (527 days) and Italy (355 days) but both states showed significant improvements compared to 2021 and 2020. The lowest DT was recorded in Estonia (36 days) and Hungary (44 days) same as last year.

Although the CR and DT in criminal cases show clear improvements after year 2020 that was the most affected by the global pandemic, the situation should still be monitored. The level of CR lower than 100% was reported in almost half of the states which might lead to backlog formation and corresponding increase of DT in the future years. Therefore, affected states should put efforts to prevent such negative developments. Also, countries with very high DT should continue reducing it toward average or median EU levels in future years.

### **Public prosecutors: Total number of 1st instance criminal cases**

This is the third year in which public prosecutors' cases will be reported as part of this study. Consequently, the focus will be only on 2022, 2021 and 2020 data without comparison with previous data.

During 2022, the average value of cases received by public prosecution services in the European Union was 3,2 cases per 100 inhabitants. The number of cases processed was at approximately same level. The similar tendency was recorded for average numbers in 2021 and 2020 but with slightly lower values. The identified tendency of median showed slightly higher number for resolved cases compared with incoming (2,9 for incoming and 3,0 for resolved). The median values were also lower than average numbers probably because the average was affected by the very large number of cases reported for some of the countries, such as Luxembourg with 9,9 incoming and Denmark with 7,9 processed cases.

Out of processed cases, there were 3 discontinued cases per 100 inhabitants and 0,5 cases brought to court (median values).

Looking at the individual countries, it is interesting to note that out of 21 systems that provided relevant data, 7 states have more processed than received cases, whereas in 13 states received outnumbered processed cases which might potentially lead to accumulation of backlogs in the respective prosecution services. Comparing the number of processed cases as percentage of received cases over the last two cycles, it could be concluded that only one state managed to improve this ratio. Analysis of these two indicators implies decrease in efficiency of public prosecution services during 2022 compared with 2021.

### **The information and communication technology (ICT) in courts**

While initially acting as a simple support tool for productivity, the information and communication technology (ICT) is always one of the major levers for improvement of the efficiency of courts. The increasing role of the ICT in assisting strategic decision making and improving productivity and efficiency, is indeed based on the extraordinary possibilities of the automation of tasks and the inevitable general technological progress.

The questions related to ICT in this cycle was reworked completely and it now consist of 38 question that include deployment and usage rate of different tools used in courts. For the needs of this study EC has selected four questions related to two different tools: writing assistance tools and recording of court hearings.

The data show that only 2 countries in EU do not have writing assistance tools, one country did not manage to reply to this question, while in the others these tools are very present and majority of the countries (from 58% to 69%) reported 95-100% deployment rate on these tools in all three matters. Collection of information on usage rate is a complement on the deployment rate collected in previous cycles. For this tool it shows quite high usage rate and 39% to 52% of the countries reported 95-100% usage rate for the three civil and commercial, administrative, and criminal matter. Functionalities of the writing assistance tools are predominantly templates, which is true for all countries but quite many also have automatically generated text, electronic signature, and speech to text features. Only Latvia has automatic suggestion of decision for all matter while Luxembourg has for criminal matter only.

For the recording of court hearings, it's worth noting that more countries (9) are not having or are not able to provide reply on deployment and usage rate as well as functionalities of these tools. For those that have provided information on this tool it should be noted that deployment rate is higher for civil and for criminal matter and slightly lower for administrative.

As for functionalities, for example for civil matter 18 countries use audio recording and only 5 also video of hearings. Situation is similar for criminal but much less countries seem to record hearings in administrative matter. In some countries the recording is systematic for all hearings. This is the case in 10 countries in civil, 8 in administrative and 9 in criminal matter.

### **Version française**

Depuis 2012, la Commission européenne a demandé à la Commission européenne pour l'efficacité de la justice (CEPEJ) du Conseil de l'Europe de réaliser une étude ayant pour objet l'analyse de la situation des systèmes judiciaires dans les Etats membres de l'UE, basée sur la méthodologie propre développée et utilisée par la CEPEJ dans le cadre de l'évaluation du fonctionnement des systèmes judiciaires des Etats membres du Conseil de l'Europe.

Cette étude s'appuie sur la collecte, le traitement et l'analyse des données et commentaires communiqués par les Etats membres au travers de :

- données sélectionnées parmi les données collectées dans le cadre de cinq cycles d'évaluation (données des années de référence 2012, 2014, 2016, 2018, 2020 et 2022)
- et de questionnaires spécifiques (pour les années de référence 2013, 2015, 2017, 2019 et 2021).

Cette étude sera l'une des sources utilisées par la Commission Européenne pour rédiger le « Tableau de bord de la justice dans l'UE ».

### **Structure du rapport**

Conformément à la dernière proposition technique rédigée dans le cadre du contrat No JUST/2020/JACC/PR/RULE/0159 CEPEJ/Commission Européenne, l'étude porte sur les données de 2022 et leurs évolutions par rapport aux données de 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020 et 2021. Elle est divisée en deux parties :

la première décrit les systèmes judiciaires des Etats membres de l'Union européenne (UE) à l'aide de tableaux de données par indicateur pour tous les Etats membres ;

la seconde contient des fiches par pays, qui réalisent une analyse contextualisée pour chaque Etat membre de l'UE.

### **Principaux éléments**

L'étude, au travers de 8 indicateurs, dresse un état des lieux relatif au fonctionnement du service public de la justice sur la base des éléments sélectionnés par la Commission Européenne parmi ceux qui, d'après la CEPEJ, sont principalement constitutifs de l'efficacité et de la qualité des systèmes judiciaires.

### **Ressources humaines**

Plusieurs catégories de juges (professionnels, occasionnels, non professionnels) peuvent contribuer au système judiciaire. L'étude 2022 se concentre sur les juges professionnels siégeant dans les tribunaux et la moyenne de l'Union Européenne pour cette catégorie de juges s'élève à 22,2 juges pour 100 000 habitants (la médiane est de 22,9 juges pour 100 000 habitants). Le nombre le plus faible de juges professionnels pour 100 000 habitants est de 3,3 et le plus élevé de 42,4. La moyennes a légèrement augmenté entre 2020 et 2021.

On peut noter que, par rapport au cycle précédent, le nombre de juges pour 100 000 habitants a augmenté de plus de 1% dans 9 Etats membres, alors qu'il n'a diminué de plus de 1% que dans trois pays, ce qui confirme la tendance mentionnée de l'augmentation de la valeur moyenne. Les autres pays ont fait état de variations moins importantes, ce qui peut être interprété comme une fluctuation normale des ressources humaines au sein d'un système.

Ce nombre dépend considérablement de l'organisation du système judiciaire et de l'existence de juges occasionnels, de juges non professionnels ou même de Rechtspfleger.

L'existence aux côtés des juges professionnels d'un personnel compétent avec des fonctions définies et un statut reconnu est une condition essentielle pour la qualité et l'efficacité d'un système judiciaire.

Une distinction est opérée entre cinq types de personnels non-juges :

- la fonction de "Rechtspfleger",
- le personnel non-juge dont la fonction est d'assister directement les juges,
- les personnes responsables de tâches administratives,
- le personnel technique,
- les personnels non-juges n'entrant dans aucune de ces catégories.

L'analyse des données fournies par les États membres montre des tendances différentes pour les valeurs moyennes et médianes. Depuis 2012, le nombre moyen de personnel non-juge pour 100 000 habitants a augmenté de 2,7% alors que la médiane a diminué de 6,4%. Par rapport au dernier cycle, les valeurs médiane et moyenne montrent la même tendance à l'augmentation de 1,5%. La médiane de l'Union européenne du personnel non-juge pour 100 000 habitants est de 59,4 avec un minimum de 22,3 et un maximum de 164.

Il convient de noter que 12 pays ont indiqué l'existence parmi les personnels non-juge des fonctions de "Rechtspfleger" (ou équivalent).

Pour ce cycle, pour la troisième fois, l'étude de la CEPEJ pour le tableau de bord de la justice de l'UE inclut les services des ministères publics. La diversité des activités des ministères publics est évidente et le nombre de procureurs pour 100 000 habitants varie dans l'Union européenne d'un minimum de 2,7 à un maximum de 24,3 avec une moyenne de 11,7 et une médiane de 11,1 procureurs pour 100 000 habitants. Par rapport au cycle précédent, la valeur moyenne, tout comme la médiane, ont augmenté respectivement de 2,4% et 2,8%.

Les procureurs sont assistés dans leurs fonctions par du personnel non-procureur attaché aux ministères publics. Leur nombre varie considérablement de 0,6 à 45,8 personnels non-procureurs pour 100 000 habitants avec une moyenne de 15,1 et une médiane de 14,4. Par rapport au cycle précédent, les valeurs moyenne et médiane ont légèrement augmenté (respectivement de 1,1% et 0,2%).

## **Avocats**

Le nombre moyen d'avocats pour 100 000 habitants dans les États membres de l'UE a généralement connu une tendance à la hausse depuis 2013, et cette tendance s'est confirmée entre 2020 et 2021 avec une valeur moyenne en augmentation de 4,7% tandis que la valeur médiane a augmenté de 7,9%.

Même si les Etats du sud paraissent avoir des barreaux plus importants (nombre d'avocats pour 100 000 habitants), la forte dispersion des valeurs, également vérifiable avec le nombre d'avocats par juge professionnel, est également susceptible de révéler une grande hétérogénéité dans les tâches effectivement exercées par des personnes qualifiées et habilitées conformément au droit national à plaider, à agir au nom de ses clients, à pratiquer le droit, à ester en justice ou à conseiller et représenter leurs clients en matière juridique (Définition de l'activité d'avocat au regard de la Recommandation Rec(2000)21 du Comité des Ministres du Conseil de l'Europe).

## **Organisation judiciaire**

L'étude distingue trois types de tribunaux :

- les tribunaux de droit commun compétents dans toutes les matières pour lesquelles la compétence n'a pas été attribuée à une juridiction spécialisée – leur dénombrement est effectué en tant qu'entités juridiques pour les première, seconde et troisième instance
- les tribunaux spécialisés de première instance et d'instances supérieures (seconde et/ou troisième instance combinées), compris également comme entités juridiques

- les tribunaux, tous niveaux confondus et de première instance, en tant qu'implantations géographiques

Depuis 2012, 14 pays ont réduit leur nombre d'implantations géographiques, 2 ont conservé le même nombre, tandis que 10 pays ont augmenté ce nombre. Entre les deux derniers cycles, 4 pays ont augmenté et 4 pays ont réduit le nombre d'implantations géographiques.

Le nombre d'implantations géographiques pour 100 000 habitants a diminué dans la plupart des Etats membres (la médiane était de 1,71 tribunaux pour 100 000 habitants en 2012, 1,44 en 2015 et 1,46 en 2022, ce qui représente une baisse de 14,7 %). La moyenne montre une légère diminution de 3%.

En ce qui concerne la répartition des contentieux entre entités juridiques, tous les Etats membres de l'Union Européenne, à l'exception de la République tchèque et de la Hongrie, disposent de tribunaux de première instance spécialisés.

Le type de tribunaux spécialisés existants le plus souvent dans les Etats Membres de l'UE sont ceux qui traitent des affaires administratives (qui existent dans 87,5% des pays), de la législation de travail (46%) et des affaires commerciales (42%).

Un nombre significatif de pays dispose également d'autres tribunaux spécialisés non mentionnés (46%). Alors que la majorité des pays ont peu de types de tribunaux spécialisés, certains ont de nombreux tribunaux spécialisés dans différentes matières comme l'Espagne et le Portugal mais aussi l'Autriche, Chypre, la France et l'Italie. La France, le Portugal et Malte ont également un grand nombre de tribunaux spécialisés de 1ère instance par rapport à l'ensemble des tribunaux de 1ère instance (83%, 75%, 64 % et 63% respectivement). Il existe quelques autres pays avec de nombreux types différents de tribunaux spécialisés, mais ils les ont qualifiés d'"autres", de sorte qu'ils ne peuvent pas être facilement comparés à d'autres systèmes.

Cette année, pour la troisième fois, les données sur les tribunaux spécialisés d'instances supérieures ont été collectées et, bien sûr, leur nombre est inférieur à celui de la première instance. Peu de pays disposent d'un grand nombre de tribunaux spécialisés traitant de différentes affaires au niveau des instances supérieures. Dans la plupart des autres pays qui disposent de tribunaux spécialisés au niveau des instances supérieures, ceux-ci traitent de questions administratives (19 pays). Il existe également des tribunaux militaires au niveau d'instances supérieures. Il y a également 4 pays qui ont des tribunaux spécialisés en première instance mais pas de tribunaux spécialisés au niveau des instances supérieures.

### **Mesures alternatives au règlement des litiges (ADR - alternative dispute resolution)**

Dans différents pays européens, l'utilisation des mesures alternatives au règlement des litiges (ADR) est maintenant largement acceptée par le public et les professionnels du droit. Ces mesures contribuent à l'amélioration de l'efficacité de la justice en fournissant aux usagers des alternatives à une procédure judiciaire régulière.

Il existe différents types d'ADR dans les pays membres :

La médiation: il s'agit d'un procès volontaire, non contraignant de règlement des litiges privés dans lequel un tiers impartial et indépendant aide les parties à faciliter la discussion afin de les aider à résoudre leurs difficultés et de parvenir à un accord

La médiation conduite ou renvoyée par le tribunal : dans ce type de médiation, il y a toujours intervention d'un juge, d'un procureur qui facilite, conseille, décide ou/et approuve la procédure.

La conciliation: le principal objectif du conciliateur est de concilier, la plupart du temps en recherchant des concessions. Il/Elle peut proposer aux parties des suggestions pour le règlement d'un litige. Par rapport au médiateur, le conciliateur a plus de pouvoir et il est davantage proactif.

L'arbitrage: les parties choisissent un tiers impartial - un arbitre, dont la décision définitive est contraignante. Les parties peuvent présenter des preuves et des témoignages devant les arbitres. Parfois, il y a plusieurs arbitres désignés qui travaillent en tant que juridiction. L'arbitrage est le plus souvent utilisé pour la résolution des litiges commerciaux car il offre une plus grande confidentialité.

La médiation conduite ou renvoyée par le tribunal existe dans tous les Etats, essentiellement en matière civile ou commerciale. Toutefois, seuls 19 États ont des médiateurs accrédités/enregistrés et peuvent fournir leur nombre.

Il convient de noter que la médiane du nombre de médiateurs agréés ou enregistrés pour 100 000 habitants a fortement augmenté depuis 2012 (de 9,5 en 2012 à 17 en 2021). Cela peut indiquer une intention des États membres de soutenir les politiques de renforcement des ADR par l'augmentation du nombre de médiateurs formés.

Dans ce cycle, pour la première fois, l'étude de la CEPEJ pour le tableau de bord de la justice de l'UE inclut des données sur les notaires. En ce qui concerne le statut des notaires dans l'UE, il est important de noter que dans 22 Etats, les notaires sont des titulaires de charges publiques qui exercent une fonction publique et sont nommés par l'Etat. Ils sont donc soumis au contrôle des autorités publiques (par exemple le ministère de la justice) et exercent leurs fonctions dans un environnement réglementé. Le nombre de notaires pour 100 000 habitants varie dans l'Union Européenne entre un minimum de 2,6 et un maximum de 74, avec une moyenne de 12,2 et une valeur médiane de 7,6 notaires pour 100 000 habitants.

### **Système pour mesurer et évaluer le fonctionnement des tribunaux**

La majorité des pays utilisent des normes de qualité au niveau national dans les tribunaux et les services des ministères publics. Le nombre de pays ayant défini ces normes est supérieur à la moitié des Etats membres de l'UE (15 États).

En ce qui concerne les différentes modalités de suivi destinées à examiner l'activité quotidienne des tribunaux par le biais de la collecte de données et d'analyses statistiques, elles existent dans tous les pays de l'UE. De nombreux domaines de l'activité des tribunaux font l'objet d'un suivi, en particulier les données sur les flux d'affaires, les décisions des tribunaux et les indicateurs d'efficacité.

Si l'on considère le niveau des juges et des procureurs individuellement, on peut noter que des objectifs quantitatifs de performance sont définis pour chaque juge dans 9 pays, tandis que 6 pays fixent ces objectifs pour les procureurs. Parmi ces pays, un seul n'envisage pas de sanctions si les objectifs ne sont pas atteints par les juges et les procureurs, tandis que les autres ont la possibilité d'imposer différentes sanctions avec ou sans procédure disciplinaire, telles que l'avertissement par le président du tribunal, la réduction temporaire du salaire, la prise en compte dans l'évaluation individuelle ou d'autres sanctions.

En ce qui concerne l'évaluation individuelle du travail des procureurs, l'évaluation quantitative existe dans 10 pays, tandis que l'évaluation qualitative est utilisée dans 20 États.

### **Performance des tribunaux et services du ministère public**

Un des éléments essentiels du bon fonctionnement des tribunaux est lié au respect du principe fondamental du procès équitable dans un délai raisonnable (Article 6 de la Convention Européenne des Droits de l'Homme). Ce principe doit être pris en compte lors de l'analyse de la charge de travail du tribunal, de la durée des procédures et des mesures spécifiques pour réduire la durée des retards dans les procédures et améliorer l'efficacité.

La CEPEJ a choisi de développer des indicateurs d'efficacité des tribunaux au niveau européen.

Le premier indicateur est le taux de variation du stock d'affaires pendantes (Clearance Rate-CR) qui montre la capacité du tribunal et du système judiciaire à faire face au flux d'affaires nouvelles.

Le second indicateur est la durée estimée d'écoulement du stock. Ce ratio entre les affaires pendantes et les affaires terminées (en jours) indique la durée théorique pendant laquelle un tribunal doit résoudre toutes les affaires pendantes.

Lorsque l'on analyse l'efficacité des tribunaux, il est important d'examiner les deux indicateurs ensemble et leur évolution dans le temps.

Toutefois, l'interprétation et la comparaison des données 2022 avec celles de différents cycles doit être faite avec prudence, en raison de la situation spécifique causée par la pandémie de COVID-19 en 2020 et, dans une certaine mesure, en 2021. C'est pourquoi des observations supplémentaires sont nécessaires pour comprendre pleinement les tendances au niveau de l'UE et des pays individuels.

### **Affaires civiles et commerciales contentieuses**

Si l'on examine le Clearance rate (CR) des affaires civiles et commerciales de première instance, il convient de noter que la médiane de l'UE est égale ou supérieure à 100 % presque chaque année depuis 2012. La seule exception est l'année 2020, où le CR a atteint 98 %, car c'est au cours de cette année que l'impact des mesures COVID-19 a le plus affecté le travail des tribunaux. En 2022, la médiane de l'UE est supérieure à 100% mais diminue par rapport à l'année précédente (de 102,5 % en 2021 à 100,5 % en 2022). Si l'on compare les données des différents pays pour 2022 et 2021, la plupart d'entre eux (18) affichent des diminutions des CR, ce qui correspond à la tendance mentionnée. Les plus fortes diminutions étant enregistrées en Roumanie (-6 points de pourcentage), au Danemark, en France, Italie, Pologne et Slovénie (-5 points de pourcentage chacun). Cinq pays connaissent par ailleurs une amélioration de leur CR, avec une augmentation plus notable en Grèce et à Malte (avec 11 et 9 points de pourcentage respectivement).

Pour mieux comprendre cette comparaison entre les cycles, nous devons examiner si le nombre d'affaires nouvelles et terminées a augmenté ou diminué au cours de ces deux années. Les données montrent que dans 18 pays, les affaires terminées ont diminué plus ou augmenté moins que les affaires nouvelles, ce qui a entraîné la baisse mentionnée du CR. Les valeurs médianes montrent une tendance similaire : les affaires nouvelles ont augmenté de 8,4 % par rapport à 2021, mais la médiane des affaires terminées n'a augmenté que de 1,4 %, ce qui a entraîné la baisse du CR par rapport à 2021.

En ce qui concerne le Disposition Time (DT), il n'existe pas de tendance aussi marquée. 13 États membres ont vu leur DT augmenter par rapport à 2021. Plus précisément, 2 pays ont connu une augmentation de plus de 10%, 6 pays de 5 à 10%, 5 pays de 0 à 5%. Par ailleurs, 9 pays ont vu leur DT diminuer, dont 3 de plus de 10%, 3 entre 5% et 10% et 3 de moins de 5%. Les valeurs moyennes et médianes n'ont pas connu de grandes fluctuations, mais montrent également des tendances différentes. Le DT moyen a diminué de 3,4 % et le DT médian a augmenté de 2,2 %. Compte tenu de la diversité des résultats, aucune tendance générale ne peut être identifiée et les variations du DT de chaque pays doivent être observées et mises en contexte avec l'évolution du nombre d'affaires.

### **Affaires de droit administratif**

Par rapport aux autres catégories d'affaires de première instance au sein de l'UE, les affaires administratives présentent en général le DT le plus élevé, soit 356 jours en moyenne. Elles sont par exemple nettement plus longues que les affaires civiles et commerciales, qui nécessitent 282 jours en moyenne en 2022. Il est cependant évident que le DT moyen a diminué de manière significative pour ces affaires si l'on compare les résultats avec les années précédentes, 400 jours en 2021 et 411 jours en 2020.

Le nombre de pays qui ont diminué leur DT pour les affaires administratives est de 15, tandis que 10 pays ont augmenté ce DT. 8 pays ont diminué le DT de manière significative (plus de 10%), comme Chypre, la Lettonie et Malte. 7 ont diminué modérément et 10 ont augmenté le délai de traitement, dont certains de manière significative (augmentation supérieure à 10%), comme la Belgique et la Hongrie.

L'augmentation du Clearance Rate peut être identifiée dans 16 pays parmi lesquels Chypre, la Lettonie, Malte et la République slovaque qui ont enregistré une augmentation de plus de +10 points de pourcentage.

Le Clearance Rate a diminué dans 9 pays, et de manière significative (plus de 10 points de pourcentage) seulement dans 2 d'entre eux, l'Autriche et la Belgique.

Cette analyse montre que la majorité des États ont évolué favorablement en 2022 en ce qui concerne les affaires administratives, puisque plus de la moitié d'entre eux ont diminué leur DT et augmenté leur CR. Toutefois, des efforts supplémentaires seront nécessaires dans les années à venir pour continuer à réduire les DT et se rapprocher des niveaux des DT des affaires civiles et pénales.

### **Affaires de droit pénal**

Il s'agit de la troisième année pour laquelle des affaires pénales seront examinées dans le cadre de cette étude. Par conséquent, l'accent sera mis uniquement sur les données de 2022, 2021 et 2020 sans comparaison avec les données précédentes.

Si l'on examine les indicateurs d'efficacité pour les affaires pénales de première instance, on remarque d'emblée que le CR n'était pas très élevé en 2022, la moyenne de l'UE étant de 97,4 % tandis que la médiane se situait à la limite de 100 %. La situation est quasiment identique à celle de 2021. Toutefois, cela représente tout de même une amélioration significative par rapport à 2020, où la valeur moyenne pour l'ensemble de l'Union européenne était de 92,9 % alors que la médiane se situait au niveau de 95,2 %. En outre, en 2020, seuls trois pays ont atteint un CR de 100 % ou plus, alors qu'en 2021 et 2022, la moitié des États membres de l'UE ont atteint ce niveau. Enfin, il est important de noter que 17 pays ont amélioré leur CR alors que sept États l'ont diminué en 2022, ce qui permet de conclure que le CR s'améliore continuellement et atteint un niveau plus satisfaisant.

En ce qui concerne le DT, la situation semble être plus favorable que pour les affaires civiles et commerciales et de administratives. La situation semble quasiment identique à celle de l'année dernière. En 2022, la moyenne est de 162 jours et la médiane de 136 jours, alors qu'en 2021, la valeur moyenne était de 161 jours et la médiane de 134 jours. Les améliorations sont également visibles sur les DT des différents pays, puisque 15 États les ont réduits tandis que 7 pays seulement les ont augmentés. Les valeurs maximales ont de nouveau été observées à Malte (527 jours) et en Italie (355 jours), mais ces deux pays ont enregistré des améliorations significatives par rapport à 2021 et 2020. Le DT le plus faible a été enregistré en Estonie (36 jours) et en Hongrie (44 jours), comme l'année dernière.

Bien que les CR et DT des affaires pénales s'améliorent clairement après l'année 2020 qui a été la plus touchée par la pandémie mondiale, la situation doit encore être surveillée. Un niveau de CR inférieur à 100 % a été signalé dans près de la moitié des États, ce qui pourrait entraîner la création d'arriérés et une augmentation correspondante du DT dans les années à venir. Par conséquent, les États concernés doivent s'efforcer de prévenir de telles évolutions négatives. De même, les pays présentant un niveau de DT très élevé doivent continuer à le réduire pour atteindre les niveaux moyens ou médians de l'UE dans les années à venir.

### **Procureurs publics : Nombre total d'affaires pénales de première instance**

Il s'agit de la troisième année au cours de laquelle les affaires des procureurs seront traitées dans le cadre de cette étude. Par conséquent, l'accent sera mis uniquement sur les données de 2022, 2021 et 2020 sans comparaison avec les données précédentes.

En 2022, la valeur moyenne des affaires reçues par les services du ministère public dans l'Union européenne était de 3,2 affaires pour 100 habitants. Le nombre d'affaires traitées se situait approximativement au même niveau. La tendance identifiée de la valeur médiane montre un nombre légèrement plus élevé d'affaires terminées que d'affaires nouvelles (2,9 pour les affaires nouvelles et 3,0 pour les affaires terminées). Les valeurs médianes étaient également inférieures aux nombres moyens, probablement parce que la moyenne était affectée par le très grand nombre d'affaires indiqués pour certains pays, tels que le Luxembourg avec 9,9 cas entrants et le Danemark avec 7,9 cas traités.

Parmi les affaires traitées, il y a eu 3 affaires classées pour 100 habitants (valeur médiane) et 0,5 affaire portée devant le tribunal (valeur médiane).

Si l'on considère les pays individuellement, il est intéressant de noter que sur les 21 systèmes qui ont fourni des données pertinentes, 7 États ont plus d'affaires traitées que d'affaires nouvelles, tandis que dans 13 États, les affaires nouvelles étaient plus nombreuses que les affaires traitées, ce qui pourrait potentiellement conduire à l'accumulation d'arriérés dans les services de poursuite respectifs. En comparant le nombre d'affaires traitées en pourcentage des affaires nouvelles au cours des deux derniers cycles, on peut conclure que seulement un État a réussi à améliorer ce ratio. L'analyse de ces deux indicateurs suggère une diminution de l'efficacité des services du ministère public en 2022 par rapport à 2021.

### **L'utilisation des technologies de l'information et de la communication (TIC) dans les tribunaux**

Alors qu'elles agissaient initialement comme un simple outil de soutien à la productivité, les technologies de l'information et de la communication (TIC) constituent toujours l'un des principaux leviers d'amélioration de l'efficacité des tribunaux. Le rôle croissant des TIC dans l'aide à la prise de décision stratégique et l'amélioration de la productivité et de l'efficacité, repose en effet sur les possibilités extraordinaires de l'automatisation des tâches et l'inévitable progrès technologique général.

Les questions relatives aux TIC dans ce cycle ont été complètement remaniées et consistent maintenant en 38 questions qui incluent le taux de déploiement et le taux d'utilisation des différents outils utilisés dans les tribunaux. Pour les besoins de cette étude, la Commission européenne a sélectionné quatre questions relatives à deux outils différents : les outils d'assistance à la rédaction et l'enregistrement des audiences.

Les données montrent que seuls 2 pays de l'UE ne disposent pas d'outils d'assistance à la rédaction, un pays n'a pas pu répondre à cette question, alors que dans les autres pays, ces outils sont très présents et la majorité des pays (de 58% à 69%) ont déclaré un taux de déploiement de 95-100% de ces outils dans les trois matières. Les informations collectées sur le taux d'utilisation sont un complément de celles concernant le taux de déploiement collectées pour les cycles précédents. Pour cet outil, le taux d'utilisation est assez élevé : 39 à 52 % des pays ont déclaré un taux d'utilisation de 95 à 100 % pour les trois catégories suivantes : affaires civiles et commerciales, affaires administratives et affaires pénales. Les fonctionnalités des outils d'aide à la rédaction sont principalement des modèles, ce qui est vrai pour tous les pays, mais un grand nombre d'entre eux disposent également de textes générés automatiquement, de la signature électronique et de la conversion automatique de la voix en texte. Se general implementing legislation. The office of a notary is incompatible with entrepreneurial activities or other gainful activity, except for the management of the

En ce qui concerne l'enregistrement des audiences, il convient de noter que davantage de pays (9) n'ont pas ou ne sont pas en mesure de fournir des réponses sur le taux de déploiement et d'utilisation, ainsi que sur les fonctionnalités de ces outils. Pour ceux qui ont fourni des informations sur cet outil, il est notable que le taux de déploiement est plus élevé pour les affaires civiles et pénales et légèrement inférieur pour les affaires administratives. En ce qui concerne les fonctionnalités, pour les affaires civiles, 18 pays utilisent l'enregistrement audio et seulement 5 l'enregistrement vidéo des audiences. La situation est similaire en matière pénale, mais beaucoup moins de pays semblent enregistrer les audiences en matière administrative. Dans certains pays, l'enregistrement est systématique pour toutes les audiences. C'est le cas dans 10 pays en matière civile, 8 en matière administrative et 9 en matière pénale.

# Methodology

The methodology used for this study completely follows CEPEJ methodology for its biennial evaluation using a questionnaire for evaluating judicial systems. This Scheme is filled by the CEPEJ's national correspondents, whose responses are statistically processed and analysed by the Secretariat of the CEPEJ.

Such inter-governmental work requires permanent dialogue and full transparency with the member states of the Council of Europe.

- **Data collection, validation and analysis**

Numbers indicated between brackets following the letter Q refer to the questions of the CEPEJ questionnaire.

From a methodological point of view, and with a commitment to quality, consistency and comparability of the data supplied, data collection is primarily responsibility of the CEPEJ's national correspondents. The national correspondents are the unique interlocutors of the Secretariat when collecting new data. States providing such data are liable for the quality of data used in the survey.

According to CEPEJ methodology, an extensive work is carried out by the CEPEJ Secretariat to verify the quality of the data submitted by the correspondents. This quality check process requires a certain time in order to guarantee the reliability of the quantitative and qualitative data to be finally presented to European Commission.

The reference year for the last data collection is 2022. As for previous cycles, wherever data is not possible to obtain notation NA (not available) is used. Only in exceptional cases and only for questions that are used for standardisation, CEPEJ can accept previous cycle data. This data is population, GDP per capita and average annual salary.

The study itself is based on 2022 data as well on previous cycles (every year, starting with 2012) wherever evolution and trends are presented. "

The selected ICT questions for this cycle are new but limited to only few and the answers are presented in its original form without calculating an index.

- **The quality of data**

The reader should bear in mind and always interpret statistical figures presented (including in the country fiches) in the light of their attached narrative comments which allow to contextualise the data and give more information on each specific judicial system.

The CEPEJ has chosen to process and present only the data which offered a high level of quality and accountability: it decided to disregard figures which were too different from one country to another or from one exercise to another without sufficient explanations, or when they did not present sufficient guarantees of reliability. For some issues covered by this study, no data could be provided. This could mean that none were available, that the data could not be collected as such or that no data meeting these requirements had been provided within the deadline set.

- The following abbreviations have been used in this study:

NA: data not available;

NAP: data non applicable;

CR: Clearance Rate;

DT: Disposition Time.

## Methodological disclaimer

1) The data analysed have been provided by the member states and/or have then been validated during quality control process finalised mid December 2023. Amendments provided by member states after the delivery of this study may appear in future reports, as CEPEJ's database is regularly updated. This also explains why previous cycle data updated on the day of this delivery, may not always fully coincide with the data published in previous CEPEJ reports and studies (even sometimes replacing data with "NA").

The validation has been made according to CEPEJ's methodology. However, the full reliability of data depends mostly on the data providers. It should be kept in mind that the accuracy of some entries was confirmed by national correspondents without specific explanation on potential discrepancies.

2) Some data cannot be compared with previous data since the questionnaire was modified between the different evaluation cycles, this is signalled in comments or footnotes under the concerned tables.

3) It should also be noted that the minimum, maximum, average and median values in certain tables are calculated with quantified data (excluding answers "NA" or "NAP").

4) Certain indicators as well as variations might appear as outliers only because of small absolute numbers. This could be the case of small countries, In this case the indicator or variation is not considered as relevant.

5) The CEPEJ works in full transparency vis-à-vis the member states as regards the purpose of the data collection exercise. According to CEPEJ methodology, only the final version of the study can be disseminated, after possible comments from the member states. Before the final version of the study, all the data collected remains confidential. When using data provided by the CEPEJ in public reports, European Commission should always mention "Source: CEPEJ data". If CEPEJ data are presented together with other data, the source of the different data must be clearly mentioned.

# General data

## Comments provided by the national correspondents

Question 001. Number of inhabitants (if possible on 1 January of the reference year +1)

Question 003. Per capita GDP (in €) in current prices for the reference year

Question 004. Average gross annual salary (in €) for the reference year

Question 005. Exchange rate of national currency (non-Euro zone) in € on 1 January of the reference year +1:

### Austria

**Q004 (General Comment):** Since the 2010 evaluation, the provided figure corresponds to the average gross income including taxes and social expenses borne by the employee, but not employer's contribution for social insurance. This is in line with the figures given in question 132 (gross annual salary of judges and prosecutors).

**Q004 (2022):** Source: Statistik Austria

**Q004 (2019):** 2018 data has been communicated, pending 2019 data.

### Belgium

**Q001 (2022):** source : Statbel - <https://statbel.fgov.be/fr/themes/population/structure-de-la-population>

**Q001 (2021):** source Statbel: [https://www.ibz.rrn.fgov.be/fileadmin/user\\_upload/fr/pop/statistiques/population-bevolking-20220101.pdf](https://www.ibz.rrn.fgov.be/fileadmin/user_upload/fr/pop/statistiques/population-bevolking-20220101.pdf)

**Q001 (2020):** La source : Statbel

**Q001 (2016):** Number of inhabitants 1/1/2017

**Q003 (2017):** Gross domestic product at market prices

**Q004 (2021):** The average gross annual salary is 44022,8 euros, source National Bank of Belgium.

**Q004 (2020):**

Answer provided based on the latest data published by the National Accounts (April 2021).

**Q004 (2019):** Average gross annual salary for employees (both full-time and part-time).

**Q004 (2016):** Average gross salary for a full-time employee (without exceptional bonuses and vacation pay)

### Bulgaria

**Q001 (2022):** Data provided by National Statistical Institute

The number of population as of 01.01.2023 (31.12.2022) is calculated based on the data of the Census of population 2021 and the data of natural and mechanical movement of the population.

**Q003 (2021):** Preliminary estimates. We confirm the nominal growth of 11.57% for the indicator GDP per capita in current prices for 2021 (preliminary data) compared with 2020. The result is based on an increase in nominal GDP and a decrease in the average annual population.

**Q003 (2020):** The data per capita GDP (in €) in current prices for 2020 will be available after 15.12.2021.

**Q003 (2018):** NSI data

**Q003 (2016):** No explanation.

**Q004 (2021):** Preliminary data.

The minimum wage in the country has been risen with 6.6%. In section "Human health and social work activities" the average annual wage increased with 25.7% due to additional wage payments related with the health crisis. In section "Education" there was an increase of the teachers' wages and salaries and the increase in the section was 17.0%. High growth rate of wages and salaries in 2021 compared to 2020 (17.7%) was recorded in "Accommodation and food service activities" as the section started to recover after 2020 lockdowns.

**Q004 (2018):** NSI data

**Q004 (2016):** No explanation.

**Q005 (2019):** BGN 1= EUR 0,51129  
EUR 1= BGN 1, 9558

**Q004 (2022):** will be explained later

**Q004 (2021):** Average monthly gross salary for 2021 for person in paid employment in legal entities in the Republic of Croatia is available at web page of the Croatian Bureau of Statistics (<https://podaci.dzs.hr/2021/en/10583>).

This monthly gross salary (9599 Croatian Kuna) has been multiplied by 12 and then divided by Croatian Kuna / Euro average annual medium exchange rate published by the Croatian National Bank (7,52418 Croatian Kuna for 1 Euro; this information is available at <https://www.hnb.hr/temeljne-funkcije/monetarna-politika/tečajna-lista/tečajna-lista>.)

**Q005 (2022):** On 1 January 2023 Croatia adopted the Euro and became the 20th member of the euro area. On 12 July 2022 the Council of the European Union formally approved Croatia's accession to the euro area and determined a Croatian kuna conversion rate of 7.53450 per euro.

**Q005 (2021):** In other words, 7,52045 Croatian Kuna for 1 Eur (medium exchange rate for January 1th 2022). This exchange rate was published on the web page of the Croatian National Bank (available at <https://www.hnb.hr/temeljne-funkcije/monetarna-politika/tečajna-lista/tečajna-lista>).

## Cyprus

**Q001 (2022):** The data is provisional (01/01/2023).

**Q001 (2020):** The number is provisional.

**Q001 (2018):** this is the number on 1st January 2019

**Q003 (2022):** The latest number was published on 20 October 2023.

The increase is due to inflation (8.4% compared to 2021).

**Q003 (2016):** Per Capita GDP (current prices)

Total GDP (current prices)

The revised figures provided by the statistical service are

Per Capita GDP (current prices) Total GDP (current prices 2015 20.931 euro 17.742,0 million euro

2016 21.282 euro 18.122,5 million euro

## Czech Republic

**Q003 (2022):** The GDP is constantly growing + the impact of the exchange rate

**Q003 (2016):** The Czech economy is doing well + the exchange rate.

**Q004 (2022):** The gross salary is constantly growing + the impact of the exchange rate

**Q004 (2021):** The gross salary is constantly growing.

**Q004 (2020):** The gross salary is constantly growing.

**Q004 (2019):** Positive trends in Czech economy and the exchange rate have had an influence on the rise of average gross annual salary (in €).

**Q004 (2016):** The Czech economy is doing well + the exchange rate.

**Q005 (2021):** Czech Statistical Office

Czech National Bank

## Denmark

**Q001 (2019):** Number of inhabitants pr. 1. januar 2020.

## Germany

**Q001 (2022):** Number of inhabitants as of 31 December 2022

**Q001 (2014):** The data for 2013 and 2014 is the same reference. Because no significant difference has been expected for the year 2014, 2013 data is provided in the frame of the present evaluation.

**Q001 (2012):** The information refers to the number of inhabitants on 31 December 2012 determined on the basis of the 2011 census.

**Q003 (2022):** The national accounts (published by the Federal Statistical Office) are revised in the summer of each year on the basis of newly available statistical information. These revisions usually concern the last four years. The revisions have been stronger than usual, especially from 2020 onwards. This is mainly due to the higher uncertainty in the estimates in the years affected by the Corona pandemic.

**Q003 (2016):** The circumstances have changed since the last campaign.

**Q003 (2014):** The data for 2013 and 2014 is the same reference. Because no significant difference has been expected for the year 2014, 2013 data is provided in the frame of the present evaluation.

**Q004 (2022):** The figure represents the average gross annual salary of employees working in full time including special payments (without special payments: 50 805 EUR)

Special payments are any payments outside of the regular remuneration. Typical examples of such payments are Christmas bonuses/end-of-the year bonuses, holiday bonuses, payments for jubilees, bonuses for the fulfilment of target agreements.

**Q004 (2021):** The figure represents the average gross annual salary of employees working in full time including special payments (without special payments: 49 202 EUR)

Special payments are any payments outside of the regular remuneration. Typical examples of such payments are Christmas bonuses/end-of-the year bonuses, holiday bonuses, payments for jubilees, bonuses for the fulfilment of target agreements.

**Q004 (2020):** figure represents the average gross annual salary of employees working in full time

**Q004 (2019):** With regard to this question, no data are available for 2019. The data from 2018 have therefore been included.

**Q004 (2018):** With regard to this question, no data are available for 2018. The data from 2017 have therefore been included.

**Q004 (2016):** The circumstances have changed since the last campaign

## Greece

**Q001 (2022):** Estimated population on 01-01-2021. The estimated population for the year 2022 will be published after the end of February 2024.

**Q001 (2021):** Estimated population on 01-01-2021. The year 2022 will be published after 01-01-2023.

**Q003 (2022):** GDP per capita 2022: 19548\*(provisional data). Here is the relevant link.:<https://www.statistics.gr/el/statistics/-/publication/SEL33/>

**Q003 (2021):** GDP per capita in euros at current prices for the year 2021: 17.013\* provisional figures.

**Q003 (2020):** Provisional data

**Q003 (2019):** The competent authority for this data (see Hellenic Statistical Authority) provides the relevant numbers. The numbers cannot be evaluated by the Hellenic Ministry of Justice

**Q003 (2018):** The data provided correspond to 2017. The data for 2018 will be available on summer 2020 ([http://www.statistics.gr/news-announcements/-/asset\\_publisher/oj6VK3PQ0oCe/content/nws-gdp-oct](http://www.statistics.gr/news-announcements/-/asset_publisher/oj6VK3PQ0oCe/content/nws-gdp-oct)).

**Q003 (2017):** Data published on October 17, 2018.

**Q004 (2022):** Our service has the data of the structure and distribution of Remuneration Survey in enterprises on the structure of remuneration of employees(having a dependent employment relationship) in enterprises by Sector (B-S branches), excluding X (Public Administration and Defense, compulsory Social Security) based on the NACE Rev. 2. The survey is conducted on a four-year basis. Therefore, the latest available figures are of the year 2018. The results of the survey will be published in late 2024 to early 2025.

**Q004 (2021):** Our service has the data of the structure and distribution of Remuneration Survey in enterprises on the structure of remuneration of employees(having a dependent employment relationship) in enterprises by Sector (B-S branches), excluding X (Public Administration and Defense, compulsory Social Security) based on the NACE Rev. 2. The survey is conducted on a four-year basis. Therefore, the latest available figures are of the year 2018. The results of the survey will be published in late 2024 to early 2025.

**Q004 (2020):** The data come from the Survey of the Structure and Distribution of Remuneration in Greece for the year 2018, from which the sector X is excluded (Public Administration and Defense, Compulsory Social Security) based on the classification of activities NACE Rev. 2 and relate to the average annual gross earnings in euros. Data is available by gender. The only one available at the moment.  
Men 19 234 Average Women 15 947 Average

**Q004 (2019):** The competent authority for this data (see Hellenic Statistical Authority) provides the relevant numbers. The competent authority did not provide any numbers for this section.

**Q004 (2016):** The data provided correspond to those of 2014, since the statistics on this point are carried out every four years. Therefore, they are not absolutely accurate.

## Hungary

**Q001 (2022):** Comments Main indicators of population and vital events on the website of the Hungarian Central Statistical Office:

[https://www.ksh.hu/stadat\\_files/nep/en/nep0001.html](https://www.ksh.hu/stadat_files/nep/en/nep0001.html)

<https://www.cso.ie/en/releasesandpublications/er/pme/populationandmigrationestimatesapril2018/>

**Q001 (2017):** Figure of 4729500 as at April 2017. The population number for 2017 based on the GDP figure below for 2017 is 4,793. Taken from Population and Migration Estimates April 2017 release date 28 September 2017.  
<https://www.cso.ie/en/releasesandpublications/er/pme/populationandmigrationestimatesapril2017/>

**Q001 (2016):** The population number for 2016 based on the GDP figure below for 2016 is 4,673,700 Taken from Population and Migration Estimates April 2016 release date 23 August 2016.  
<http://www.cso.ie/en/releasesandpublications/er/pme/populationandmigrationestimatesapril2016/>

**Q003 (2022):** Year 2022 GDP at Current Market Prices per head of population. GDP per person is calculated from Year 2022 GDP at Current Market Prices datum value of €506,282 million divided by 5,100,200, the Estimated Population for Year 2022 (Persons in April)

**Q003 (2021):** ANA 2021 Table 1.2 – Main Aggregates, 2016-2021 refers  
<https://www.cso.ie/en/media/csoie/releasespublications/documents/ep/annualnationalaccounts/2021/P-ANA2021TBL1.2.xlsx>.

**Q003 (2020):** (See Sources)The 3rd block of data in NIE 2020 Table A shows data Per head of population. GDP at Current Market Prices for reference year 2020 per NIE2020 = €372,869 million. Population 2020 = 4,977,400. The National Income and Expenditure data are subject to potential revision each year (i.e. please note that Ireland does not operate a five-year benchmark revisions policy unlike certain other EU Member States and other countries internationally. It is CSO Ireland policy to incorporate all revisions and updates to the annual national accounts on an annual basis, whenever a new series of annual results are being published. This applies both to routine changes involving the use of more final data and to the less frequent revisions resulting from any major methodological developments. In the past, such major methodological revisions would also have been incorporated in the historic backdata estimates [back to year 1995] published at the same time.).

**Q003 (2019):** Comments Taken from Table A of the National Income and Expenditure 2019 release of 20 July 2020  
<https://www.cso.ie/en/statistics/nationalaccounts/nationalincomeandexpenditureannualresults/>  
The 3rd block of data shows data at Per head of population.  
GDP @ current Market prices per NIE2019 = € million 356,051  
Population 2019 = 4,921,000 The National Income and Expenditure data each year is subject to revisions.

**Q003 (2018):** Taken from Table A of the National Income and Expenditure 2018 release of 11 July 2019  
<https://www.cso.ie/en/statistics/nationalaccounts/nationalincomeandexpenditureannualresults/>  
The 3rd block of data shows data at Per head of population.  
GDP @ current Market prices per NIE2018 = € million 324,328  
Population 2018 = 4,857,000 The National Income and Expenditure data each year is subject to revisions.

**Q003 (2017):** GDP per capita @ current market prices for 2017 = €61,369  
Taken from the National Income and Expenditure Annual Results 2017. Release date 14 July 2018. Table A. (main aggregates). <https://www.cso.ie/en/releasesandpublications/ep/p-nie/nie2017/>  
The National Income and Expenditure data each year is subject to revisions

**Q003 (2016):** Taken from the National Income and Expenditure Annual Results 2016.

The National Income and Expenditure data each year is subject to revisions.

The following is an extract from the National Income and Expenditure 2016 methodology note

...The estimates for 2016 are based upon indicators for the different aggregates and must be regarded as tentative. The provisional nature of the estimates for 2014 and 2015 must also be borne in mind. In particular, the estimates for the year 2016 must be regarded as preliminary. Many of the inquiries upon which the basic compilations rest are incomplete and to the extent that figures given for 2014 and 2015 are still partly subject to revision, projections for the year 2016 are also affected. While no guarantee can be given that published figures will remain unaltered as inquiries proceed and as sources and methods are reviewed, it is expected that any changes made in future in relation to years earlier than 2011 will have a relatively insignificant effect on the year-to-year trend in these data. ...

See Link to the National Income and Expenditure 2016 methodology note on the CSO website

<http://www.cso.ie/en/media/csoie/methods/nationalincomeandexpenditureannualresults/NIE2016MethodologyNote.pdf>

The GDP figure increased significantly in 2015. The scale of increase was unprecedented. Therefore the GDP per capita increased. Please see link to the Press Statement of 12 July 2016

[http://www.cso.ie/en/media/csoie/newsevents/documents/pr\\_GDPexplanatorynote.pdf](http://www.cso.ie/en/media/csoie/newsevents/documents/pr_GDPexplanatorynote.pdf)

**Q004 (2018):** Taken from Earnings and Labour Costs Annual 2018 release of 11 June 2019

<https://www.cso.ie/en/releasesandpublications/er/elca/earningsandlabourcostsannualdata2018/>

**Q004 (2016):** Average annual earnings increased by 1.1% to €36,919 in 2016, from €36,519 in 2015.

Taken from CSO release of 29 June 2017 - Earnings and Labour Costs Annual 2016. See link

<http://www.cso.ie/en/releasesandpublications/er/elca/earningsandlabourcostsannualdata2016/>

**Q005 (2021):** Ireland Exchange Rate against USD averaged 0.987 (EUR/USD) in Aug 2022, compared with 0.983 EUR/USD in the previous month.

## Latvia

**Q001 (2022):** Population at the beginning of the year, 01.01.2023

**Q001 (2021):** Data on 01.01.2022.

**Q001 (2020):** The data is on 01.01.2021.

**Q001 (2019):** Data are on 01.01.2020.

**Q001 (2017):** 01.01.2017.- 1 950 116

01.01.2018.- 1 934 379

**Q001 (2016):** On 2016 1st January - 1 968 957

On 2017 1st January - 1 950 116

**Q003 (2022):** Starting from 2020, an increase in GDP per capita is observed in Latvia, which is influenced by two factors: a decrease in the population and a moderate increase in GDP.

**Q003 (2021):** The data provided by the Central Statistical Bureau.

The data for 2020 is a little bit different from that number provided in 2021 for 2020. In the Central Statistical Bureau home page the GDP in current prices for 2020 is 15497.

**Q004 (General Comment):** After 2012, the minimum monthly salary increased, which had an effect on the average gross annual salary.

**Q004 (2022):** The average wage in Latvia continues to rise for several years in a row. In 2022, the increase in average wages was influenced by several factors: the lifting of the restrictions of COVID-19, which boosted economic activity, a low unemployment rate, which created the conditions for a small increase in wages.

**Q004 (2021):** The data provided by the Central Statistical Bureau.

**Q004 (2020):** The data provided by the Central Statistical Bureau.

**Q004 (2016):** on 2016

## Lithuania

**Q001 (2020):** <https://osp.stat.gov.lt/statistiniu-rodikliu-analize?hash=5b7fa09d-7ace-4909-89d9-b8a8897da5ba#/>

**Q003 (2022):** Changes in wages were affected from 2022 January 1 as the minimum monthly salary was increased, the basic salary of state politicians, judges, state officials, civil servants and employees of budgetary institutions was increased, the procedure for calculating the amount of tax-free income was changed.

**Q003 (2020):** [http://appsso.eurostat.ec.europa.eu/nui/show.do?dataset=nama\\_10\\_pc&lang=en](http://appsso.eurostat.ec.europa.eu/nui/show.do?dataset=nama_10_pc&lang=en)

**Q004 (2022):** Changes in wages were affected from 2022 January 1 as the minimum monthly salary was increased, the basic salary of state politicians, judges, state officials, civil servants and employees of budgetary institutions was increased, the procedure for calculating the amount of tax-free income was changed.

It should be noted that from 2019 January 1 the rates of state social insurance contributions paid by the employer and the employee have been changed. gross wages indexed 1.289 times.

**Q004 (2021):** From the 1st January, 2021 the minimum monthly salary was increased, the base salary of state politicians, judges, state officials, civil servants and employees of budgetary institutions was increased, the procedure for calculating the amount of tax-free income was changed and other reasons.

<https://osp.stat.gov.lt/informaciniai-pranesimai?articleId=9732032>

**Q004 (2020):** Annual salary growth has been affected by the increase in the minimum monthly salary since the beginning of the reference year, the base salary of state politicians, judges, state politicians, judges, civil servants, civil servants and employees of budgetary institutions, changes in the procedure for calculating tax-free income and other reasons.

**Q004 (2019):** The increase in wages in 2019 was caused by changes in the tax system: an increase in the basic salary of politicians, judges, civil servants, civil servants and employees of budgetary institutions, an increase in the minimum monthly salary, a revision of the new salary system for civil servants, a change in the procedure for calculating exemptions and other reasons.

**Q004 (2018):** The state budget and salary increased due to the growth of the economy.

**Q004 (2016):** The state budget and salary increased due to the growth of the economy (after recovering from crisis before).

**Q005 (2017):** Lithuania is in an Euro zone.

**Q005 (2016):** Lithuania is in an Euro zone.

## Luxembourg

**Q001 (2022):** Total population as of 31st December 2022. Source:

**Q001 (2020):** Total population as of January 1, 2021. Source:

<https://statistiques.public.lu/fr/actualites/population/population/2021/04/20210401/index.html>

**Q001 (2019):** Total population on 01.01.2020

([https://statistiques.public.lu/stat/TableViewer/tableView.aspx?ReportId=12858&IF\\_Language=fra&MainTheme=2&FldrName=1](https://statistiques.public.lu/stat/TableViewer/tableView.aspx?ReportId=12858&IF_Language=fra&MainTheme=2&FldrName=1))

**Q001 (2018):** Total population at the date of 31.12.2018

**Q003 (2022):** Per capita gross domestic product at market prices published by the National Institute of Statistics and Economic Studies of the Grand Duchy of Luxembourg (STATEC)

([https://lustat.statec.lu/vis?pg=0&lc=en&df\[ds\]=release&df\[id\]=DF\\_E2105&df\[ag\]=LU1&df\[vs\]=1.0&pd=2015%2C&dq=.A](https://lustat.statec.lu/vis?pg=0&lc=en&df[ds]=release&df[id]=DF_E2105&df[ag]=LU1&df[vs]=1.0&pd=2015%2C&dq=.A)).

**Q003 (2017):** the gdp is 3.2% percent higher than in 2016. see also <https://www.cbs.nl/nl-nl/achtergrond/2018/19/de-nederlandse-economie-in-2017>.

**Q003 (2016):** The per capita GDP is calculated by dividing total GDP by the average population ( $=[\text{population on jan 1st current year} + \text{population on jan 1st next year}]/2$ ). Note: the explanatory notes say anything on how to calculate per capita GDP.

**Q004 (General Comment):** These are provisional numbers; definitive numbers (available next year) may differ slightly from those provided here. The data specifies 'reward per working year' as salary. This reward consists of salary (gross salary, including taxes and social contributions/premiums), rewards like holiday stipends, payment in kind, expense allowances tied in with work (e.g. travel allowances), and social premiums for the employer (payments for lawful and contractual social security, like pension contributions)

**Q004 (2020):** These are provisional numbers and the definitive numbers (available in 2022) may differ slightly from these provided here. The data specifies 'reward per working year' as salary. The reward consists of salary (gross salary, as it includes taxes and social contributions/premiums), rewards like holiday stipends, payment in kind, expense allowances that tie in with work (like travel allowances that cover costs to and from work), and social premiums that are for the employer (payments for lawful and contractual social security, like pension contributions).

**Q004 (2019):** The Statistics Bureau only had numbers for 2018. 2019 data was not available at the moment of data collection.

**Q004 (2018):** This is average salary of all employees; the number includes money that employers pay for pension plans, social security (money that is paid directly to employees). The statistic does not include the income of people who are not employees (people without work, employers).

**Q004 (2016):** Compared to previous questionnaires (before 2014) these figures have been adjusted according to new rules of the european system of national accounts (illegal activities are now included)

## Poland

**Q001 (2016):** Source: Concise Statistical Yearbook of Poland 2017

**Q003 (2016):** Source: Concise Statistical Yearbook of Poland 2017

**Q004 (2021):** data source - Central Statistical Office  
The wage increases linked to economic changes.

**Q004 (2016):** NA

**Q005 (2022):** 1 euro=4,6889 pln

**Q005 (2021):** 1 euro=4,59 pln

**Q005 (2020):** 1 euro = 4.6148 PLN

**Q005 (2016):** Source: National Bank of Poland

## Portugal

**Q004 (2022):** This value is for year 2021.

Data for 2022 is still not available.

**Q004 (2016):** In the present questionnaire we used another "concept" of gross anual salary that we believe is closer to the objectives of this question.

We opted for the category of "payments and salaries" instead of "remunerations" of the national budget because "remunerations" also includes social contributions by the employer which constitute wage costs and not salary.

## Romania

**Q001 (2022):** Usually resident population of Romania on January 1st 2023 - provisional data

**Q001 (2020):** Usually resident population of Romania on January 1st -provisional data

**Q001 (2019):** provisional data

**Q001 (2018):** Provisional data (which will be completed when the National Institute of Statistics will finalize population data).The revised data will be available in the TEMPO database of the National Institute of Statistics ([www.insse.ro](http://www.insse.ro)).

**Q001 (2017):** Provisional data which will be completed when the National Institute of Statistics will finalize population data.

**Q001 (2016):** Provisional data which will be completed when the National Institute of Statistics will finalize population data - (19638309 -as communicated in September 2017).

Update:

After reviewing/completing of population data by the National Institute of Statistics, in accordance with the methodology of calculation, the revised data are as follows- for January 1, 2015, the number of inhabitants (as revised) is 19875542; for January 1, 2016, the number of inhabitants (final data) is 19760314; for January 1, 2017, the number of inhabitants (final data) is 19644350.

Methodological explanations:

Reference moments for statistically determining the usual resident population are January 1st and July 1st, t year. The data on usual resident population at the moment of January 1st, t year are available on August (provisional data) and on January, t+1 year (final data). Usual resident population represents all persons of Romanian nationality, foreign or stateless who have their usual residence in Romania. Usual residence is the place where a person normally spends the daily period of rest, regardless of temporary absences for purposes of recreation, holidays, visits to friends and relatives, business, medical treatment or religious pilgrimage. The usual residence may be the same as the domicile or may differ from it, for the persons who choose to establish their usual residence in a locality other than the locality of domicile in the country or abroad. It is considered having their usual residence in a specific geographic area just people who have lived in that usual residence for a continuous period of at least 12 months prior to reference moment. The resident population includes the persons who immigrated to Romania but excludes the persons who emigrated from Romania. In order to carry out international comparisons, it will be used only the usual resident population, calculated according to European regulations (Regulation no. 1260/2013 of the European Parliament and of the Council on European demographic statistics and Regulation no. 205/2014 laying down uniformed conditions for the implementation of Regulation no. 1260/2013 on European demographic statistics as regards breakdowns of data, deadlines and data revisions). For the period between the last two censuses (2002-2011 period), data refers to usual resident population, re-estimated under comparability conditions with final results of the Population and Housing Census of 2011. After January 1st, 2012, the usual resident population on January 1st was estimated according to the usual residence criterion, using the components method.

The revised data are available in the TEMPO database of the National Institute of Statistics ([www.insse.ro](http://www.insse.ro)).

**Q003 (2022):** provisional data

**Q003 (2021):** Definitive data should be available in September 2023.

**Q003 (2020):** provisional data

**Q003 (2019):** provisional data

**Q003 (2017):** Provisional data provided by NIS

**Q003 (2016):** Provisional data

**Q003 (2014):** For the 2012 and 2014 evaluations, was used the resident population on 1 July of each year, estimated in terms of comparability with the final results of the Population and Housing Census – 2011.

**Q003 (2012):** For the 2012 and 2014 evaluations, was used the resident population on 1 July of each year, estimated in terms of comparability with the final results of the Population and Housing Census – 2011.

**Q004 (General Comment):** At national level, the average gross annual salary is not calculated and included in the official statistical reports made annually by the National Institute of Statistics. Thus, the SMBA was calculated on the basis of the monthly average gross salary at an average monthly value of the euro calculated by the National Bank of Romania for the reference year concluding in the average gross annual salary (as the sum of monthly average salary).

**Q004 (2022):** The difference can be explained based on salary increases and an upward trend can be observed continuing from 2018.

**Q004 (2020):** The difference can be explained based on salary increases, and an upward trend can be observed continuing from 2018.

**Q004 (2018):** At national level, the average gross annual salary is not calculated and included in the official statistical reports made annually by the National Institute of Statistics. Thus, the SMBA was calculated by request by the National Institute of Statistics on the basis of the monthly average gross salary at an average annual value of the euro calculated by the National Bank of Romania for the reference year 2018

According to the provisions of the national legislation in force (GEO no. 79/2017 with subsequent amendments and completions), the social insurance contributions, respectively those of social health insurance that fell to the employer, were transferred to the employee's responsibility and, starting with 2018, are fully supported by the employee, being reflected in the gross amount of the earning.

Consequently, the indicator "monthly gross average wage" produced and disseminated from 2018 is no longer comparable with the previous data series.

These legal provisions do not influence the data comparability for the series of "average monthly net earnings."

*Question 071. Do you monitor the number of pending cases and cases that are not processed within a reasonable timeframe (backlogs) for:*

*Question 072. Do you monitor waiting time during judicial proceedings?*

*Question 083. Are there quantitative performance targets defined for each judge (e.g. the number of resolved cases in a month or year)?*

*Question 083-1. Who is responsible for setting these targets for each judge?*

*Question 083-1-1. What are the consequences for a judge if these targets are not met?*

*Question 083-2. Are there quantitative performance targets defined for each public prosecutor (e.g. the number of decisions in a month or year)?*

*Question 083-3. Who is responsible for setting these targets for each public prosecutor?*

*Question 083-3-1. What are the consequences for a prosecutor if these targets are not met?*

*Question 120. Is there a system of individual evaluation of the public prosecutors' work?*

*Question 120-1. Please specify the frequency of this evaluation:*

### Austria

**Q070 (General Comment):** .

**Q070 (2022):** satisfaction of court staff: only supreme administrative court

**Q070 (2017):** "other": e.g. certain kinds of decisions, clearance rate (annually)

**Q072 (2016):** Supreme administrative Court: Statistic of incoming cases, number of decisions delivered, number of postponed cases, length of proceedings (timeframes) and age of cases

**Q083 (2018):** There are no specific targets given to the Judges, which are seen as a conflict with the Independence of Courts.

**Q083 (2016):** Provincial Administrative Courts: Maximum 150 cases a year per judge (average value).

Federal Finance Court:

No performance targets, which are seen in conflict with the independence. However based on a continuous transparent controlling the possibility of benchmarking exists. In addition regular dialogues with the judges regarding their performance are held.

**Q083-1 (General Comment):** No specific targets are formulated in respect of judges.

**Q083-1 (2016):** Answer counts only for the administrative courts.

For the other courts, no performance targets, which are seen as a conflict with the independence of courts.

**Q083-3 (2018):** There are no specific targets given to public prosecutors.

**Q120 (General Comment):** In the Austrian judicial system we have diverse and multifaceted statistic products, which are an important basis for the management of justice. The statistics are regularly compiled by the Federal Computing Center and serve to control the deployment of personnel, but also for the supervision that is necessarily linked to the parties' right to a fair trial.

The work of the public prosecutors is continuously and systematically reviewed on a quantitative level (i.e. number of completed cases, duration of proceedings). In this way, major deviations from the average can be identified. If a public prosecutor shows too many delays in proceedings or excessively long proceedings, this can lead to disciplinary proceedings or even a reduction in their job description. The assessment is carried out by the heads of the senior public prosecutors' offices. There is no systematic qualitative assessment of the work of the public prosecutors.

## **Belgium**

### **Q066 (2021):**

The College of Courts and Tribunals and its support service are working on the implementation of a quality system at the national level; there is no declination at the local level yet, but this project is in full evolution. Within the framework of the law of 14 February 2014 and the College's action plans (2018 and 2020), a quality system will be implemented in respect of judges. The intention is therefore to introduce an integrated framework of quality, internal control and (internal) audit models to replace the executive's existing ex ante control and monitoring systems.

**Q067 (2021):** The College of Courts and Tribunals is working on the implementation of a quality system. This system is based on international scientific references and will be broken down into ten or so themes that constitute the management modules of an organisation. These management modules cover all aspects of an organisation, including organisational management, process management, human resources management, organisational culture, information and communication, financial management, facility management and information and communication technologies. The College of Courts and Tribunals and the steering committees work together to develop their maturity in these different areas.

**Q070 (2021):** In 2021, the College of Courts and Tribunals has started a project to make a central inventory of the backlog in the courts and tribunals using indicators such as length of proceedings, number of pending cases, Disposition time, backlogs.

**Q070 (2017):** There are ad hoc systems for monitoring activities within the courts. There is a central service responsible for the collection of statistics which ensures the annual publication of statistics. The Central Statistical Service is developing a uniform and coordinated policy, but there is (as yet) no central system for regular monitoring of activities.

**Q070 (2016):** There are ad hoc systems for monitoring activities within the courts. There is a central service responsible for the collection of statistics which ensures the annual publication of statistics. But there is no (yet) central system for regular monitoring of activities.

**Q071 (2016):** There are ad hoc evaluation systems within the courts. But there is no central or coordinated system.

**Q072 (2021):** Public Prosecutor's Office: Monitoring mechanism via dashboards for the public prosecution services.

**Q072 (2020):** Monitoring mechanism via dashboards for prosecution services.

**Q083-3 (2021):** To underline the consistency between Q 83-2 and Q 83-3: these are not quantitative targets.

## **Bulgaria**

**Q066 (General Comment):** Supreme Judicial Council: According to the answers of SJC the competent bodies in these matters are:

The Inspectorate to the SJC:

- checks the organization of the initiation and movement of judicial, prosecutorial and investigative cases, as well as the closing of cases within the established terms and in case of violations, signals the administrative head of the relevant body of the judiciary and the relevant College of the Supreme Judicial Council
- sends signals, proposals and reports to other state bodies, including the competent bodies of the judiciary;
- examines applications against violation of the right to examine and resolve cases within reasonable time.

The Judges' College of the SJC:

- annually analyses and reports the degree of workload of the bodies of the judiciary;
- requests and summarizes every 6 months information from the courts about their activity;
- resolves questions about the organization of the activity of the relevant system of judicial authorities;
- adopts rules for the allocation of cases between the judges who consider cases allocated according to Art. 9, para. 3, in order to equalize their total workload;
- determines the number of judicial officers according to the degree of workload on the proposal of or after agreement with the administrative heads of the bodies of the judiciary, and may open new and lays off positions.

The Plenary of the SJC:

- on the proposal of one of the Colleges, after coordination with the administrative heads of the bodies of the judiciary, determines the number of judges, prosecutors and investigators in all courts, prosecutor's offices and investigative departments according to the degree of workload;
- hears and accepts the annual reports of the bodies of the judiciary under Art. 84, item 16 of the Constitution.

.....

According to the answers of The Prosecutor's office of the Republic of Bulgaria:

The legal regulation is in Art. 84, item 16 of the Constitution of the Republic of Bulgaria, according to which the Parliament hears and accepts the annual report of the Prosecutor General submitted by the SJC and Art. 30, para. 2, item 4 of the Judicial System Act, according to which the Plenum of the SJC hears and accepts this annual report.

Approved by the Prosecutor General/ chief prosecutor is the Directive on the control activity of the Prosecutor's Office, aimed at ensuring the exact and uniform application of the laws in the performance of the functional duties of the prosecutors and investigators. The Directive regulates the conditions, order and procedures for carrying out control activities through audits, checks and analyzes of the work of the prosecutor's offices, the National Investigation Service, as well as individual prosecutors and investigators, outside of the institutional and official verification of the legality of their acts.

**Q066 (2021):** Please see the General Comments

**Q066 (2020):** Judiciary system Act:

Article. 198 (1) The criteria for the appraisal of a judge, prosecutor or an investigating magistrate shall be:

1. legal knowledge and skills of applying it;
2. skill of analysing legally relevant facts;
3. skill of making optimum working arrangements;
4. efficiency and discipline;
5. compliance with the rules of ethical behaviour.

(2) In the course of the appraisal under Paragraph (1) the following indicators shall be taken into account:

1. keeping deadlines;
2. number of instruments upheld and reversed and the grounds for this;
3. the results of inspections carried out by the Inspectorate with the Supreme Judicial Council,
4. the overall caseload of the respective judicial district and judicial authority, as well as the workload of the appraised judge, prosecutor or investigating magistrate compared to other judges, prosecutors or investigating magistrates in the same judicial authority.

(4) The time served by the judge, prosecutor or investigating magistrate as a permanent trainer at the National Institute of Justice shall also be included in the appraisal period. The evaluation of the work performance as a trainer shall be given by the Managing Board.

(5) The time served by the judge, prosecutor or investigating magistrate as an European Delegated Prosecutor shall also be included in the appraisal period. The evaluation of the results of their work under Regulation (EU) 2017/1939 shall become part of their appraisal.

Article. 199. (1) A judge shall be appraised under the following specific criteria:

1. complying with the schedule for conduct of court hearings;
2. skill of conducting a court hearing and drawing up a record of proceedings;
3. administrating cases and appeals, preparing for a court hearing;
4. number of appealed judicial instruments from among the appealable judicial instruments, appealed judicial instruments upheld, judicial instruments reversed or invalidated, in whole or in part, and the grounds for it; the ability to reason and justify judicial instruments and to analyse evidence shall be subject to evaluation.

(2) A prosecutor shall be appraised under the following specific criteria:

1. skills of planning and structuring steps in pre-trial and trial proceedings;
2. complying with the written instructions and orders of the superior prosecutor;
3. ability to make working arrangements and direct the investigating authorities and the teams participating in pre-trial proceedings;
4. number of unappealed prosecutorial instruments, including warrants to terminate and suspend criminal proceedings, number of final judicial instruments rendered on instruments submitted by the prosecutor appraised, as well as the final judicial instruments returning cases for the rectification of procedural breaches, and the reasons for this, number of appeals granted, the prosecutorial instruments upheld, modified and reversed upon an instance and on official review.

**Q067 (2020):** The Supreme Judicial Council, through its Commission for Attestation/Appraisal and Competitions at the Judges College/Chamber of the Supreme Judicial Council and the Commission for Attestation/Appraisal and Competitions at the Prosecutorial College/Chamber, are the bodies that perform an objective assessment of the professional, business and moral qualities of magistrates.

**Q070-1 (General Comment):** .

**Q070-1 (2018):** "Other": percentage of returned cases

**Q071 (General Comment):** The duration of the court proceedings initiated by the Prosecutor's Office of the Republic of Bulgaria is monitored, as in case of excessive delay there is a possibility to request acceleration of these proceedings through the procedure under Chapter 26 of the PPC.

**Q083-3-1 (2022):** But there is a quantitative evaluation of the work of a prosecutor which reflects in the individual assessment` - please see Q 120

**Q120 (General Comment):** Supreme Judicial Council: Criteria on which the assessment is based: the criteria are general (relevant to the activity of each judge, prosecutor, and investigator); specific (relevant only to the position held – judge, prosecutor, or investigator), and additional (relevant only to administrative heads and their deputies).

Authority competent to carry out the assessment: the assessment is accepted by the Prosecutor's College of the Supreme Judicial Council.

Purposes for which the evaluation results are used: when participating in a competition for promotion or transfer in position; when participating in a procedure for the selection of an administrative head; for appointment to the position of deputy of the administrative head; on promotion to a higher rank; on secondment; for participation in the composition of a Permanent Appraisals Commission to the Appellate Prosecutor's Offices; participation in a competition committee.

Prosecutor's Office of RB: Such a system exists. According to Art. 196 of the Judicial System Act the evaluation is carried out in advance, in order to acquire irreplaceability, periodic and extraordinary attestation of the magistrates, and the criteria for the same are defined in Art. 198 of the Judicial System Act: legal knowledge and skills; ability to analyze legally relevant facts; ability to optimally organize work; expediency and discipline; compliance with the rules of ethical conduct. Attestation also takes into account the following indicators: compliance with deadlines; number of confirmed and canceled acts and the reasons for this; the results of the inspections of the Inspectorate at the Supreme Judicial Council; the overall workload of the relevant judicial authority, as well as the workload of the assessed judge, prosecutor or investigator compared to other judges, prosecutors or investigators from the same judicial authority.

**Q120-1 (General Comment):** Quantitative evaluation of the work of the prosecutors is carried out by applying the Rules for measuring the workload of the prosecutor's offices and the individual workload of each prosecutor and investigator, adopted by the Prosecution College/collegium of the SJC. It is possible to display the data according to the indicators provided for in the Rules in real time, both for the prosecutor's office as a whole, as well as for individual prosecutor's offices and for each specific prosecutor.

Quantitative data on the workload are taken into account in the appraisal procedure of a specific prosecutor, in the course of which an assessment of his work is carried out, both in terms of quantitative indicators and also regarding the quality of the performed activity according to the results achieved.

Prosecutors are assessed in accordance with Ordinance No. 3 of February 23, 2017 of the Supreme Judicial Council on the indicators and Methodology for Assessment and the Criteria for Reporting the Workload Degree of Prosecutors and Investigators and of Administrative Heads and Their Deputies (promulgated SG No. 21 /10.03.2017).

Attestation is carried out:

1. in advance - for a three-year period from the appointment to the position of prosecutor or investigator - when participating in a competition or when being offered a promotion;
2. to acquire irreplaceability - upon completion of 5 years of experience as a prosecutor or investigator;
3. periodically - for a 5-year period from the attestation of irreplaceability of a prosecutor and investigator, of an administrative head and of a deputy administrative head;
4. extraordinary - in the cases under Art. 197, para. 5 of the Judicial System Act.

Junior prosecutors and junior investigators are not assessed in advance, and a report on their work is prepared by the mentor in the second year of their appointment.

## Croatia

**Q066 (General Comment):** According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15, 67/18), the president of the court evaluates the work of every judge according to Framework Criteria for the work of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework Criteria for the work of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

According to the State Attorney Office Act (Official Gazette, No. 67/18), State Attorneys' and Deputy State Attorneys' performance is evaluated every three years according to the following criteria: achieved results in resolving cases (based on the number of cases assigned to work on the basis of the Framework Criteria for the Work of Deputy State Attorneys and the average work results of county or municipal state attorney's offices for the previous three-year period), the quality of decisions and the justified use of legal remedies, proper performance of the state attorney's duty - observance of deadlines during the procedure, other activities of the State Attorney and the Deputy State Attorney, experience in performing the duty of state attorney and compliance of conduct with the Code of Ethics of State Attorneys and Deputy State Attorneys. The Framework criteria are adopted by the Minister in charge of judicial affairs, with the prior opinion of the Chief State Attorney of the Republic of Croatia.

**Q066 (2022):** According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15, 67/18, 126/19, 130/20, 21/22, 60/22), the president of the court evaluates the work of every judge according to Framework Criteria for the work of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework Criteria for the work of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice with the prior opinion of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

According to the State Attorney Office Act (Official Gazette, No. 67/18, 21/22), State Attorneys' and Deputy State Attorneys' performance is evaluated every three years according to the following criteria: achieved results in resolving cases (based on the number of cases assigned to work on the basis of the Framework Criteria for the Work of Deputy State Attorneys and the average work results of county or municipal state attorney's offices for the previous three-year period), the quality of decisions and the justified use of legal remedies, proper performance of the state attorney's duty - observance of deadlines during the procedure, other activities of the State Attorney and the Deputy State Attorney, experience in performing the duty of state attorney and compliance of conduct with the Code of Ethics of State Attorneys and Deputy State Attorneys. The Framework criteria are

**Q066 (2018):** According to the Courts Act (Official Gazette, number 28/13, 33/15, 82/15), the president of the court evaluates the work of every single judge according to Framework for the workload of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework for the workload of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

**Q066 (2017):** According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15), the president of the court evaluates the work of every single judge in his/her court for the previous year on the basis of the following standards: the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework for the workload of judges, result of work in different kinds of cases in absolute numbers and percentages, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

**Q070 (2019):** As regards "number of appeals", from 2019 we are able to get this data from our case management system.

**Q083 (2020):** According to the Courts Act (Official Gazette No. 28/13, 33/15, 82/15, 67/18) , the Minister in charge for Justice, upon the proposal of the General Assembly of the Supreme Court of the Republic of Croatia, adopts the Framework criteria for the work of judges.

**Q083-1 (General Comment):** According to the Courts Act, the Minister of Justice, upon the proposal of the General Session of the Supreme Court of the Republic of Croatia, adopts the Framework criteria for the workload of judges.

**Q083-1-1 (2022):** According to the Courts Act (Official Gazette No. 28/13, 33/15, 82/15, 67/18, 126/19, 130/20, 21/22, 60/22) the president of the court in which the judge performs judicial duty determines by decision for the previous calendar year whether the judge has fulfilled his duties as a judge according to the prescribed criteria. If the president of the court determines that the judge, without justifiable reason, did not make the number of decisions determined by the Framework Criteria for the work of judges in a one-year period or that he performed his judicial duties improperly, he is obliged to initiate disciplinary proceedings against such a judge, in accordance with the State Judicial Council Act. Disciplinary proceedings against the president of the court are initiated by the president of the immediately higher court. According to the State Judicial Council Act (Official Gazette No. 116/10, 57/11, 130/11, 13/13, 28/13, 82/15, 67/18, 126/19, 80/22) disciplinary penalties may be imposed for committed disciplinary offences: rebuke, a fine of up to one third of the salary earned in the previous month in a period of one to three months, a fine of up to one third of the salary earned in the previous month in a period of four to six months, a fine of up to one third of the salary earned in the previous month in a period of seven to twelve months or dismissal from duty. If the president of the court determines that, due to justified reasons, the judge did not make the number of decisions determined by the Framework Criteria for the work of judges in a one-year period, he is obliged to state in the explanation of the decision what justified reasons are in question and submit the decision immediately to the president of the higher court. Against the decision of the president of the court, which determines whether the judge has fulfilled his duties as a judge, the judge can submit an objection to the president of the court within three days of receiving the decision. The president of the court is obliged to decide on the objection within eight days. The president of the court can reject the complaint or accept it and make a new decision. If the objection is rejected, the judge has the right to appeal to the president of the immediately higher court within eight days from the delivery of the decision on the objection. The president of the immediately higher court can make a decision confirming the decision of the president of the court or accept the appeal and make a new decision. Against this decision, the judge has no right to declare legal remedies.

**Q083-3 (2022):** According to the State Attorney Office Act (Official Gazette No. 67/18, 21/22) , the Minister in charge for Justice, with the prior opinion of Prosecutor General, adopts the Framework criteria for the work of public prosecutors (Deputy State Attorneys).

**Q083-3 (2020):** According to the State Attorney Office Act (Official Gazette No. 67/18) , the Minister in charge for Justice, upon the proposal of Prosecutor General, adopts the Framework criteria for the work of public prosecutors (Deputy State Attorneys).

**Q083-3 (2018):** According to the State Attorney's Act, the Minister of Justice, upon the proposal of Prosecutor General, adopts the Framework criteria for the work of public prosecutors.

**Q083-3-1 (2022):** According to the State Attorney Council Act (Official Gazette No. 67/18, 126/19, 80/22) if the number of resolved cases and actions taken in a one-year period is, without justifiable reason, less than 80% of the average of the state attorney's office in which he holds office, Deputy state attorney is disciplinary liable for disciplinary offence of irregular performance of duty.

**Q120 (2022):** According to the State Attorney Office Act (Official Gazette, No. 67/18, 21/22), State Attorneys' and Deputy State Attorneys' performance is evaluated every three years according to the following criteria: achieved results in resolving cases (based on the number of cases assigned to work on the basis of the Framework Criteria for the Work of Deputy State Attorneys and the average work results of county or municipal state attorney's offices for the previous three-year period), the quality of decisions and the justified use of legal remedies, proper performance of the state attorney's duty - observance of deadlines during the procedure, other activities of the State Attorney and the Deputy State Attorney, experience in performing the duty of state attorney and compliance of conduct with the Code of Ethics of State Attorneys and Deputy State Attorneys. The Framework criteria are adopted by the Minister in charge of judicial affairs, with the prior opinion of the Chief State Attorney of the Republic of Croatia.

## Cyprus

**Q066 (General Comment):** Quality standards are applied in practice

**Q066 (2017):** Quality standards are applied in practice

**Q066 (2016):** There are no written standards but in practice there are quality standards.

**Q066 (2015):** In practice there are quality standards

**Q066 (2014):** In practice there are quality standards

**Q120-1 (2021):** the assessment is carried out by the AG the Deputy AG and the head of Department as part of their annual evaluation

## Czech Republic

**Q083 (General Comment):** Quantitative performance targets exist but they are not strictly binding.

**Q083 (2018):** Quantitative performance targets exist but they are not strictly binding.

**Q120 (2022):** The Head of Public Prosecutor's Office monitors e.g. the number of appeals, the number of returned cases etc.

**Q120-1 (2018):** The individual assessment of the public prosecutors' work takes place at least once every two years.

## Denmark

**Q066 (2019):** No, we use quantitative measures. Quality is usually measured as length of time to finalize a case.

**Q066 (2016):** No, we use quantitative measures. Quality is measured as length of time to finalize a case.

**Q066 (2015):** The only standards are objective standards for example acceptable timeframes to finalize a case.

**Q067 (2019):** As above

**Q067 (2018):** The public prosecution is not part of Danish Court Administration.

**Q067 (2017):** Because judges are independent, we do not interfere with a judge decision. However, there is always the possibility to appeal a court decision if either of the parties disagree with the verdict.

**Q067 (2016):** As above.

**Q070 (2021):** Danish Court Administration is typically not doing this. A responsible court follows their cases though.

**Q070 (2020):** We value independence high. Therefore Danish Court Administration does not evaluate the performance or productivity of individual judges. We follow overall productivity and case flow though as that is used to allocate resources and to find the court most in need of vacant judge positions.

**Q070 (2019):** Courts are followed yearly in a yearly report. District courts receive monthly a report about case flow, pending cases, backlogs, weighted cases and the time it takes to finalize cases.

**Q070 (2017):** In Denmark we have a management system which information is updated monthly for the district courts where the points above are shown. For the High Courts and the Supreme Court, the case flow is not followed so often and in a so detailed way, but there are also much fewer cases. "Other": activity in terms of weighted cases and also pending cases

**Q070 (2016):** The so called "weighted cases" are measured in order to have a measure for the activity.

**Q070-1 (2022):** - The prosecution makes monthly reports to the Ministry of Justice on data regarding number of cases, clearance rate, etc.

- Disposition time is measured indirectly through a report that measures all steps in a criminal case from arrest to imprisonment. There

is no direct measure of disposition time, but it can be read from this report.

- The prosecution makes a biannual survey on the satisfaction of the prosecution staff.

**Q070-1 (2021):** The prosecution makes quarterly reports to the Ministry of Justice on data regarding number of cases, percentage of conviction etc.

Disposition time is measured indirectly through a report that measures all steps in a criminal case from arrest to imprisonment. There is no direct measure of disposition time, but it can be read from this report. The prosecution makes a biannual survey on the satisfaction of the prosecution staff.

**Q070-1 (2020):** The methodology of replying changed in this question.

The prosecution makes quarterly reports to the Ministry of Justice on data regarding number of cases, clearance rate, etc. Disposition time is measured indirectly through a report that measures all steps in a criminal case from arrest to imprisonment. There is no direct measure of disposition time, but it can be read from this report. Therefore we find it more correct to check this option. Satisfaction of the prosecution staff has always been measured but not by the ministry of justice. Therefore it was not checked last time. However, it is measured, and we therefore find it correct to check this option. The prosecution makes an annual survey on the satisfaction of the prosecution staff.

**Q071 (2021):** Danish Court Administration is typically not doing this. A responsible court follows their cases though.

**Q071 (2020):** Danish Court Administration is not doing it as a general thing. If a specific court needs help, Danish Court Administration can work out list of pending cases and list them according to age to give the court a tool to locate cases that need attention.

**Q072 (2021):** Danish Court Administration is typically not doing this. A responsible court follows their cases though. The individual courts may work out list of pending cases or warning lists when to act on a case.

**Q072 (2020):** Danish Court Administration is typically not doing this. A responsible court follows their cases though.

**Q072 (2018):** We monitor the overall time from the courts receive a case until it is finalized, but not what happen in between. The same goes for the prosecution

**Q083 (General Comment):** Judges are independent. Therefore measuring is done focusing on case-flows and economic indicators without identifying the individual judge.

**Q083 (2022):** The judges are independent. Therefore measuring is done focusing on case-flows and economic indicators.

**Q083 (2018):** There are no such targets from the side of Danish Court administration, but quantitative performances are used to re-allocate resources so the court in most need of resources in case of a vacant judge position also gets the vacant position.

**Q083-1 (General Comment):** Judges are independent. Therefore measuring is done focusing on case-flows and economic indicators.

**Q083-1 (2018):** NA as per answer 083.

**Q083-2 (General Comment):** There is a productivity target for the prosecution as a whole, but not for each public prosecutor.

**Q120 (2020):** Public prosecutors go through intensive education for the first three years of them being recruited and this evaluation is structured centrally with HR at the Attorney Generals office. During that period they are individually being assessed through exams and through working with mentors. Thus they are continuously being assessed both centrally through exams as well as locally through the daily work that the mentor sees. Later in the career the assessment is not structured in such a way but all through their career the prosecutors are evaluated through their daily work and how they perform in court.

**Q120-1 (2021):** More frequent during the first three years of their career. Less frequent after that.

**Q120-1 (2020):** See response to 120: More frequent during the first three years of their career. Less frequent after that.

## Estonia

**Q066 (General Comment):** Estonia has developed a quality system consisting of 3 parts. The first part contains the quality standards (good practice) for the management of the court that describe activities related to the chairman of the court. The second part contains the quality standards for the administration of courts and is focused on the different roles of the parties involved in the administration of courts: directors, Ministry of Justice, Council for the Administration of Courts. The third part contains quality standards for the court proceedings and is addressed to all the judges. All of the three parts of the quality standards have been discussed and approved by the Council for Administration of Courts, respectively in 2012, 2013 and 2015.

**Q070 (General Comment):** The scope of the monitoring system is extended to the results of proceedings; the categories of cases; the number of decisions appealed and revoked, fully or partially. The waiting time and the 'age' of pending (not solved) cases are also monitored. It is worthy of mention that every year all the courts and the Ministry of Justice enter into an agreement according to which courts should aim to carry out structural changes and to make changes in case-flow management that will ultimately ensure efficient proceedings. The content of the agreement has changed since 2017. The goals are more general and the same for all the courts (except The Supreme Court).

**Q070 (2017):** See previous general comments.

**Q070 (2016):** see general comments

**Q072 (General Comment):** There are reminders in the CMS after certain period.

## Finland

**Q066 (General Comment):** There are no quality standards covering the whole judiciary in Finland. Instead there are several quality projects going on, for example the Quality Project of the Administrative Courts, which started in 2020 and concerns all administrative courts in Finland. The Rovaniemi Court of Appeal Quality Projects have produced quality benchmarks, which evaluate the quality of the adjudication in courts of law. Last assessment was conducted in 2020.

**Q066 (2021):** Prosecution Services' system quality improvement project is underway.

**Q066 (2020):** Prosecution Services' system quality improvement project is underway.

**Q066 (2015):** There is a Quality Project of the courts in the jurisdiction of the Court of Appeal of Rovaniemi. (The jurisdiction of the Court of Appeal of Rovaniemi is the northernmost of the six appellate jurisdictions in Finland.) In 1999, the courts in the jurisdiction of the Court of Appeal of Rovaniemi launched a project for improvement of quality in adjudication. The quality project covers both civil cases and criminal cases. The objective of the quality project is to develop the functioning of the courts further and further so that the proceedings meet the criteria of a fair trial, that the decisions are well reasoned and justified, and that the services of the courts are affordable to the individual customers. The main working method consists of systematic discussions among the judges and also between the judges and stakeholders. The development work is steered by the development committee of the quality project. Normally four working groups for quality are set up for each year. The membership consists of judges from each of the District Courts in the appellate jurisdiction, members of the Court of Appeal, and referendaries of the Court of Appeal. Also prosecutors, private attorneys, public legal aid attorneys and heads of pre-trial investigation may serve as members in the working groups for quality. Each working group for quality is tasked to deal with one of the development themes which have been selected. The reports of the working groups are presented at the Quality Conference, they are discussed, and quality objectives based on the reports are set for the following year. The Report of Quality, containing the final reports, is published every year.

There is also a quality project of the courts in the jurisdiction of the Court of Appeal of Helsinki. Quality Project consists of working methods of two kind: cooperation with the University of Helsinki and working groups. Working groups for quality are set up for each year. The membership consists of judges from District Courts, members of the Court of Appeal, referendaries of the Court of Appeal, prosecutors and lawyers. Each working group for quality is tasked to address to one of the development themes which have been selected. The reports of the working groups are presented at the conference called 'Day of Jurisdiction'.

In addition there is a cooperation project between administrative courts. Some topics of the project have related to the quality standards. The reports of the project have discussed the matters like the factors of quality at administrative courts and the collection of information on quality.

It is also worth mentioning that on 15 October 2009, the presidents of Finnish Courts of Appeal proposed that the Finnish Association of Judges should begin work on drafting ethical guidelines for judges. A working group was set and the draft on ethical principles was discussed widely. The principles were formally released at the Judge Day event held in Helsinki on 12 October 2012.

**Q070 (General Comment):** All courts keep statistics of the mentioned court activities in the operational case management systems. The National Courts Administration can access these figures through a reporting system.

**Q070 (2019):** satisfaction of court staff is monitored with job satisfaction surveys which are taken every second year

**Q070-1 (2021):** "Backlogs": cases that have been pending for longer than a year are monitored

**Q070-1 (2020):** "Backlogs": cases that have been pending for longer than a year are monitored.

**Q072 (2021):** Within the courts, the time the case is pending in a court is monitored.

Prosecution services: The time between police investigation and prosecutor's decision (the time the case is pending in the prosecution service) is monitored.

**Q072 (2020):** Within the courts, the time the case is pending in a court is monitored.

**Q072 (2018):** Within the courts, the time the case is pending in a court is monitored.

**Q083 (General Comment):** A court can decide whether it sets quantitative performance targets for each judge. There are targets set for each judge in some courts.

**Q083 (2016):** It is up to each court to decide. In some courts there are targets set for each judge.

**Q083-1 (General Comment):** The National Courts Administration negotiates annually with each court in order to set targets and objectives for the court for the next year. An allocation of permanent staff and possible additional temporary judges or other staff is decided upon these negotiations but within the state budget. Timeframe (length of proceedings) targets are also set. Possible issues and problems with developing the activities of the court are also discussed. Finally, the appropriation to cover the annual costs of the court operations is agreed. A minutes of the negotiation is written and it includes the targets, objectives and estimated workloads for the court for the next year. The chief justices of the courts can then apply this results-based management system in their respective courts as they see appropriate.

**Q083-1-1 (General Comment):** See general comments to Q 83-1

## France

**Q066 (General Comment):** Standards of quality developed for the public administration are utilised within the judicial system. The charter of administrations thus establishes the rules for welcoming litigants in all courts and may lead to certification. There are also local initiatives aimed at implementing a 'quality system' based on certification by an external body, which consist of establishing procedures describing the process of reception, organisation of work, and management of a case. As regards administrative justice: the rate of annulment and reformulation of jurisdictional decisions must be kept below 15% and the backlog of cases older than two years below 7.5% of the total caseload.

**Q066 (2022):** It is challenging to distinguish between patterns in automatically generated texts, with France preferring the use of the concept of framework. The OARM, a tool to assist magistrates in drafting, provides a library of pre-written paragraphs and standard decisions that allow magistrates to start from these elements and then adapt them to each case they handle. The JAF bible includes frameworks and paragraphs related to disputes handled by family court judges.

**Q066 (2021):** Quality standards developed for public administration are used in the judicial system. The charter of the administrations thus sets the rules for the reception of litigants in all courts and can lead to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consists in establishing procedures describing the reception process, the organisation of work and the management of a case.  
Source DSJ

**Q066 (2020):** "If yes, please specify: Quality standards developed for public administration are used in the judicial system. The charter of the administrations thus sets the rules for the reception of litigants in all the courts and can lead to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consist in establishing procedures describing the reception process, the organization of work and the management of a case. With regard to administrative justice: the rate of annulment and reversal of jurisdictional decisions must be kept below 15% and the stock of cases older than two years below 7.5% of the total stock."

**Q066 (2019):**  
Quality standards developed for public administration are used in the judicial system. The charter of administrations thus sets out the rules for the reception of litigants in all courts and may give rise to certification. There are also local initiatives to set up a "quality system" based on certification by an external body, which consists of establishing procedures describing the process of reception, work organisation and management of a case.  
Administrative justice: the rate of annulment of court decisions must be kept below 15% and the number of cases pending for more than two years.

**Q066 (2016):** Quality standards developed for public administration are used in the judicial system. The charter of the administrations determines the rules for the reception of litigants in all courts and may give rise to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consists in establishing procedures describing the process of reception, organisation of work and management of a case.

**Q067 (2021):** Source DSJ

**Q067 (2020):** The answer is no for the administrative justice.

**Q067 (2014):** 2010: State prosecutors draw an annual report on the activity, management of their public prosecution office and on the enforcement of the law, as well as an annual report concerning the measures of custody and the condition of the custody facilities.

**Q067 (2012):** 2012: in French law on the judicial organisation, there is no statutory or regulatory requirement providing specialised staff in courts responsible for quality norms.

However, as part of the maintenance dialog to have operational resources, each court fills a document for the Ministry of Justice, comprising informations such as the number of handled cases, pending cases, the number of judges and administrative staff, as well as the performance objectives to reach. This document is not available on the intranet to all of the staff. Only agents of the Ministry in charge of the maintenance dialog have access to these figures thanks to appropriate softwares.

**Q070 (2021):** Source DSJ and Council of State

**Q070 (2020):** Judicial and administrative jurisdictions combined.

**Q070 (2019):** Civil and criminal justice: After the deployment of innovative applications, satisfaction questionnaires are sent to users in the courts (heads of courts, directors of registries, judges and registry officials) in order to improve change support actions and the implementation.

In addition, with regard to victims, the Ministry of Justice will conduct a satisfaction survey in the second half of 2019 among victims of criminal offences who resort to victim support associations. The results of this survey, similar to a previous survey conducted in 2011, could be published in 2020. Likewise, the Ministry of Justice is attentive to citizens' views on the way they are received in the courts. For several years now, surveys have been conducted on the reception in the courts by a service provider pretending being a litigant. In 2018, an online survey, coupled with a face-to-face survey, was conducted in seven 1st instance courts "tribunaux de grande instance" among litigants appearing in these courts. In 2019, the satisfaction survey will be carried out in all "tribunaux de grande instance" via an online survey accessible by internet address or QR code. Finally, a national survey is also under way on the reception of litigants in the courts in the specific context of the implementation of social centres within the "tribunaux de grande instance" and the integration within these courts of the three separate courts that previously dealt with these types of litigation. The survey, carried out among court staff, aims to assess the difficulties encountered by persons presenting themselves at the reception desk and to identify any corrections that could be included in the texts.

The reply to the question encompasses replies from administrative justice and civil and criminal justice.

**Q070 (2018):** The coverage rate of cases as well as the structure of civil or criminal litigation are used by the courts.

In addition, other indicators usefully complete the analysis: .

Share of decisions on the merits in completed cases (civil activity).

Share of referrals in completed cases (civil activity).

Theoretical time to sell off the stock.

Average age of the stock.

Percentage of cases over 12 months in stock (civil activity).

**Q070 (2017):** The number of cases referred is an indicator used only by administrative courts.

The courts have business applications to monitor their civil and criminal activities. At national level, data from these applications is

from these applications are collected automatically via infocentres, reprocessed and cross-referenced, then in the form of tables or graphs. These reports can be generated on a monthly basis, except for certain activity data (court of appeal).

These reports can be generated on a monthly basis, except for certain activity data (criminal courts, juvenile court judges, enforcement of sentences), for which reports are generated annually.

These infocentres enable the courts to monitor statistics and manage their activity. They enable the central administration to They enable the central administration to prepare management dialogues from a performance perspective.

**Q070 (2016):** The number of cases subject to referral is an indicator used only by administrative courts.

Courts have business applications to monitor their civil and criminal activities. At national level, data from these applications are collected automatically via info-centres, processed and cross-referenced, and then presented in the form of tables or graphs. These refunds can be generated monthly, except for certain activity data (assize court, juvenile judges, enforcement of sentences), for which the refunds are annual.

These info-centres enable courts to carry out a statistical follow-up and to monitor their activities. They allow the central administration to prepare management dialogues from a performance perspective.

**Q070 (2015):** The number of cases being referred is used only by administrative courts.

The rate of coverage of cases is used by judicial courts.

The state of stocks by age group is used by administrative courts.

**Q070 (2014):** 2013, 2014, the category "others" includes:

- the coverage rate of cases (used by judicial courts)

- the state of the stocks per age group (used by administrative courts)

It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts.

**Q070 (2013):** 2013, 2014, the category "others" includes:

- the coverage rate of cases (used by judicial courts)

- the state of the stocks per age group (used by administrative courts)

It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts.

**Q070 (2012):** 2010, 2012: the category "others" includes the state of the stocks per age group. It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts

**Q070-1 (2021):** Source DSJ

**Q070-1 (2020):** Judicial jurisdiction.

**Q071 (2021):** Source DSJ and Council of State

**Q071 (2020):** No further indication.

**Q071 (2016):** In civil matters, courts of first instance (TGI), labour courts (conseils de prud'hommes) and courts of appeal can measure their stock on the basis of business applications or data returns carried out by info-centers.

The identification of cases not processed within a reasonable time is easier through business applications that offer dashboards breaking down cases in stock by age group.

In criminal matters, first instance courts (TGI) can use the Cassiopée business application to record cases in stock at the registry and the number of unedited judgments. The situation of cases in stock at the registry office cannot be measured via the info-centre, which only allows establishing the number of cases registered with the Public Prosecutor's Office and the Correctional Service.

**Q072 (2021):** Source DSJ, the reply concerns the civil and criminal justice.

**Q072 (2020):** Answer for the court.

**Q083 (2022):** A valid response for administrative jurisdictions.

**Q083 (2016):** Individual quantitative objectives are established only with regard to administrative judges by the respective court president.

**Q083-1 (General Comment):** For administrative jurisdictions, there are individual quantitative objectives. This is not the case for judicial jurisdictions, where the indicators target functions (non-specialised chambers, investigation, juvenile cases, public prosecution) and court clerks. Thus, a set of objectives and indicators are detailed at national level in the annual documents presented to Parliament (Annual Performance Plan and Annual Performance Report), including a number of indicators measuring the 'efficiency' of civil servants and magistrates with an average performance level to achieve (targets). These ratios are very general.

**Q083-2 (2021):** source DSJ

**Q120 (2022):** The assessment of the public prosecutor's magistrate provided for by statutory order No. 58-1270 of 22 December 1958 aims to determine the professional value of the magistrate. It must reflect his legal and technical professional skills, his level of commitment, assess his abilities to exercise a specific function and identify training needs within his career path. The assessment is established by the Attorney General near the Court of Appeal or Prosecutor near the Superior Court of Appeal for magistrates from their jurisdiction. Considered as a moment for exchange, this evaluation should highlight both the skills that were mobilized by the magistrate and areas where improvement could be made. It contributes to better situate his activity within service organization and operation while specifying missions related to its functions highlighting its professional potential.

For magistrates, evaluation offers a privileged opportunity to take stock of their activities, consider developments in their professional practice and regularly position themselves relative to their career goals.

For evaluators it should enable them detect each individual's potential so as contribute towards efficient human resource management.

**Q120 (2021):** source DSJ

**Q120-1 (General Comment):** Article 12-1 of the Decree of 22 December 1958 establishes the principle of evaluating the professional activity of each magistrate every two years. An assessment must also be conducted when applying for promotion.

**Q120-1 (2022):** Article 12-1 of the ordinance of December 22, 1958 establishes the principle of evaluating the professional activity of each magistrate every two years. An evaluation must also be conducted when applying for advancement on the promotion list.

## **Germany**

**Q066 (General Comment):** Due to judicial independence, there are no national level quality standards.

**Q066 (2022):** Due to judicial independence, there are no national level quality standards.

**Q066 (2013):** For 2010, 2012 and 2013, no information was provided from Mecklenburg-Western Pomerania and Thuringia. Four Landers replied "Yes", while the remaining Landers answered "No".

In Baden-Württemberg, the performance of each court is compared against the others in regard to number and duration of proceedings. Key performance indicators on performance ability of the courts are ascertained and compared at the Lander level.

A comprehensive quality management system has been introduced in Schleswig-Holstein at all courts and public prosecution offices. All of the accessible areas of the court administration are subject to quality management. Judicial independence and the professional independence of Rechtspfleger present natural constitutional and statutory boundaries that must always be considered.

In Brandenburg, a quality management system seeks to guarantee that quality demands that are statutorily prescribed, self-imposed, or demanded by users of the system are fulfilled with an optimal use of resources. These last years, a number of strategies have been implemented for ensuring quality in the justice system by means of cost and performance accounting, a controlling system, budgeting of personnel costs, benchmark procedures, balanced scorecard, the EFQM Model, various instruments for personnel and organisation development, calculation of personnel requirements, optimisation of business processes, surveys of attorneys, citizens, and employees, and evaluation instruments both for individual judicial and public prosecution work as well as for the courts and public prosecution offices as organisational units. The increased use of modern technology (e.g. Internet) has opened up the possibility for the justice system to reach a large number of citizens and, thus, to offer court users the best possible service. Likewise, the continuous expansion of electronic legal transactions offers new opportunities for improvement in the quality of the justice system with regard to the performance characteristics public accessibility and public service. However, the developments and models named are not uniformly established in the Lander. In Lower Saxony, a quality strategy was developed through the surveys AgiL (performance comparison of local courts) and LiVE (performance comparison of regional courts). This is based on the assumption that it is possible to compare courts by the collection of data. Following the comparison, an analysis is conducted to determine the reasons for which better numbers are achieved at one court location over another. These are then discussed in expert groups and measures are developed to promote those tools that seem likely to succeed for the duties at all court locations. The surveys do not serve to evaluate individual employees but rather to uncover structures that promote performance, which can then be transposed. This quality management concept takes place together with judicial councils and personnel representatives.

**Q067 (2022):** Due to judicial independence, there are no national level quality standards.

**Q067 (2021):** Due to judicial independence, there are no national level quality standards.

**Q067 (2020):** Due to judicial independence, there are no national level quality standards.

**Q070 (General Comment):** The Federal Statistical Office collects key figures on court performance (incoming cases, resolved cases, pending cases on the beginning and the end of a year) from the federal states. The Federal Statistical Office processes and publishes the data once per year for the civil, criminal, family, administrative, labour, social and financial courts.

**Q070 (2022):** The monitoring activities no. 1-4 were selected by all respondent federal states and the activities no. 5 and 9-13 were selected by the majority of the federal states.

A minority of the federal states (as in previous years) reported the following "other" monitoring activities: statistics on the nature of resolution (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.), number of main-trial days, participation of interpreters and experts. (While the situation has not changed since the last cycle, the option "other" was not selected this time for the purpose of methodological consistency with the answers to other questions in this section). One federal state has not yet replied.

**Q070 (2021):** The monitoring activities no. 1-4 were selected by all Länder, the activities no. 5 and 9-13 were selected by most Länder and the activities under "other" were only mentioned by a some Länder (5).

**Q070 (2020):** The monitoring activities mentioned under "other" were reported only by some of the Länder.

**Q070 (2019):** Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

**Q070 (2018):** Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

**Q070 (2016):** other: Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

**Q070 (2014):** In 2014, some of the Landers did mention a monitoring system concerning other court activities, namely statistics on the nature of resolution (e.g. in civil matters cases are dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

**Q070 (2013):** In 2013, seven Landers communicated information on their regular monitoring system. For example, Baden-Württemberg referred to calculation of the specific personnel requirements on a mathematical-analytical basis. Bavaria mentioned the type of proceedings, form of decision, etc. for courts of labour and social jurisdiction and workload, ratio of part-time employees; average age of employees, training and sick days, duration of proceedings in months, ratio of appeals for courts of general jurisdiction. In Brandenburg, the number of pending cases and the ratio of terminated proceedings as against incoming cases are monitored.

**Q070 (2012):** For 2010 and 2012, five Landers did not provide any reply. Seven Landers communicated detailed information on their regular monitoring system of courts' activity. Among the main other monitored parameters are the deadlines for the drafting of judgments (Bavaria), the number of pending cases and the ratio of terminated proceedings as against incoming cases (Brandenburg), the nature of resolution – cases dealt with by contentious judgment, by acknowledgment, by settlement etc. (Hamburg), cases allocated among staff, i.e. caseload quota (Hesse); finance benchmarks, item costs, standardized deployment of person hours related to product (Saxony-Anhalt).

**Q070-1 (General Comment):** The Federal Statistical Office collects key figures on the public prosecution offices' performance (incoming cases, resolved cases, pending cases on the beginning and the end of a year) from the federal states and publishes the data once per year.

**Q070-1 (2022):** The monitoring activities no. 1-4 were selected by all respondent federal states and the activities 5 and 10 to 12 were selected by the majority of the federal states. A minority of the federal states also monitors the costs of the judicial proceedings.

One federal state has not yet replied.

**Q070-1 (2021):** The monitoring activities no. 1-5 and 1-12 were selected by most Länder, the activity no. 9 (monitoring of costs) was selected by some (5) Länder.

**Q070-1 (2020):** A few Länder answered that they have also been monitoring productivity and costs.

**Q071 (2022):** The majority of the respondent federal states monitor pending cases and backlogs. Two federal states could not provide an answer, one federal state has not yet replied.

**Q071 (2021):** Four of the Länder could not provide an answer. The remaining Länder monitor pending cases and backlogs for all of the case categories mentioned above.

**Q071 (2020):** The majority, but not all of the Länder have reported to monitor pending cases and backlogs.

**Q071 (2018):** In 2018, Länder have monitored the number of pending cases and the backlogs.

**Q072 (2022):** One federal state monitors waiting time with respect to the ordinary courts. A minority of 3 federal states monitor waiting time with regard to the public prosecution services. The vast majority of the federal states does not monitor waiting time.

**Q072 (2021):** Courts: One of the Länder reported that waiting times are monitored with respect to ordinary courts.

Public Prosecution: While the majority of the Länder answered "no", a small minority of 3 Länder answered "yes".

**Q083 (General Comment):** There are no quantitative performance targets because this might interfere with judicial independence as defined by article 97 of the Basic Law for the Federal Republic of Germany ("Judges shall be independent and subject only to the law.").

**Q083 (2022):** Of the respondent 15 federal states, 14 reported that there are no quantitative performance targets for judges. One federal state has not yet replied.

**Q083-1 (2020):** There are no quantitative performance targets for each judge

**Q083-2 (2022):** Out of 15 respondent federal states, 14 reported that there are no quantitative performance targets for public prosecutors. One federal state has not yet replied.

**Q083-2 (2021):** The vast majority of the Länder selected "no", 2 of the Länder answered "yes".

**Q083-3 (2021):** There are no quantitative performance targets for each public prosecutor. The 2 Länder that have quantitative performance targets answered, that the prosecutor General is responsible for setting these targets.

**Q083-3 (2020):** There are no quantitative performance targets for each public prosecutor

**Q120 (2022):** Out of 15 respondent federal states, 12 reported that there is a quantitative evaluation of the public prosecutors' work and 12 reported that there is a qualitative evaluation (one federal state has not yet replied).

The assessment is generally carried out by the direct superior and is based on different criteria such as specialised knowledge, expression, cooperation, leadership skills, negotiating skills, etc. The results are mostly used for decisions about promotions.

**Q120 (2021):** The vast majority of the Länder answered "yes", 3 answered "no".

## Greece

**Q066 (General Comment):** Quality standards are set by the Code of Organization of Courts and Status of Judicial Officers (Law 1756/1988).

**Q066 (2022):** According to Law 4938/2022 (art.104) of the organization of court and tribunals code.

**Q066 (2021):** Most of the measures taken recently in Greece aim at speeding up administrative justice. However, the law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

**Q066 (2017):** Most of the measures taken recently in Greece aim at speeding up Justice. However the Law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

**Q067 (2021):** It depends on the court, the answer was changed from yes to no although there are judicial services that have answered positively the majority have answered no.

**Q067 (2017):** The Law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

**Q070 (General Comment):** According to Law 4938/2022 (art. 99-104), supreme judges appointed as inspectors for two year's term, redact every year general reports on the operation of each court and prosecutor's office in their district and recommend the necessary measures for the proper functioning of the service.

**Q070 (2022):** Many courts have chosen the option number of Appeals but not all. The Council of State has additionally selected the options number of Appeals and ratio of Appeals. The General Commission of the State for ordinary administrative courts has additionally selected the options number of Appeals and clearance rate.

According to Law 4938/2022 (art. 99-104), supreme judges appointed as inspectors for two year's term, redact every year general reports on the operation of each court and prosecutor's office in their district and recommend the necessary measures for the proper functioning of the service.

Regarding administrative courts, this task is fulfilled by the General Commission of the State for ordinary administrative courts. In the near future we hope to be able to use a business intelligence program, in order to extract composite statistical data without contacting any court.

[E-mail: g-epitropia-d-d@otenet.gr]

**Q070 (2019):** The Greek government has introduced a new system for organizing and evaluating the planning and implementation of public sector actions and projects, which introduces among others, monitoring court activities. (L. 4622/2019 art. 49 foll.)

**Q070 (2017):** Regarding Administrative Courts, this task is fulfilled by the General Commission of the State for ordinary administrative courts. In the near future there will be a possibility for the General Commission of the state to use a business intelligence program, in order to extract composite statistical data without contacting any court [E-mail: g-epitropia-d-d@otenet.gr]

**Q070-1 (2022):** It is noted that the clearance rate was not selected by all prosecutors' offices, in addition several prosecutors' offices but not all have chosen the option of percentage of convictions and acquittals.

**Q072 (General Comment):** The waiting time during court procedures is monitored annually through the inspection process. The interval between the adjudication of the case and the issuance of the decision is watched, so that the judge does not have much pending and there is a quick delivery of justice.

**Q072 (2018):** There is a monitoring system regarding the length of the judicial procedure, but it does not include such kind of information.

**Q072 (2016):** There is a monitoring system regarding the length of the judicial procedure, but it does not include such kind of information.

**Q083 (General Comment):** The Head of each court is responsible for the assignment of the cases between judges of his/her competence. In this sense, he/she is aware of the quantitative performance of judges.

**Q083 (2022):** Every administrative judge is charged each year with a specific number of cases to carry out, stipulated by an internal Regulation, according to a model adopted by the General Commission of the State.

**Q083 (2020):** Every administrative judge is charged each year with a specific number of cases to carry out, stipulated by an internal Regulation.

**Q083 (2018):** Every judge is charged each year with a specific number of cases to carry out, stipulated by an internal Regulation.

**Q083 (2016):** Every judge is charged each year with a specific number of cases to carry out, stipulated by an internal Regulation.

**Q083-2 (2022):** There is, however, as far as possible an equal distribution of cases between them by the Head of the Service (Prosecution Service) and the obligation of the public prosecutor to process the cases assigned to him in the time frames provided for each case.

**Q083-3 (2022):** The answer chosen is in accordance with the answers of the majority of the prosecutors' offices.

**Q083-3-1 (2022):** NAP: No targets are set

**Q120 (2022):** The question was answered by the prosecutor's office of the Supreme Court.

**Q120-1 (2022):** The question was answered by the prosecutor's office of the Supreme Court.

## Hungary

**Q066 (General Comment):** Second instance courts have to prepare a note on the decision and the trial procedure of the first instance court, based on professional criteria in every case. In this note, the court of appeal has to examine: the application of substantive, procedural and administrative regulations; the preparation of the hearings; the quality of the judges trial leading practice; if the coercive measures were well founded; if the hearings were set timely; if the ruling was transcribed in time; if the decision was edited correctly. The conclusions are summarized and judges of first instance courts are informed about them at least once a year.

Furthermore, the departments of the Supreme Court (Kúria) responsible for examining the judicial practice evaluates the practice of the courts and regularly inform judges about their experience.

**Q070 (General Comment):** Among others:

- individual judge's statistics, - statistics on the reasons of the postpone of the trials,
- number of trial days in cases, - number of tried cases per day,
- pending cases of an individual judge / court,
- the time frame of pending cases
- number of appealed cases,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

**Q070 (2022):** - statistics on the reasons of the postpone of the trials,

- number of trial days in cases, - number of tried cases per day,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

**Q070 (2021):** - statistics on the reasons of the postpone of the trials,

- number of trial days in cases, - number of tried cases per day,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

**Q070 (2020):** - statistics on the reasons of the postpone of the trials,

- number of trial days in cases, - number of tried cases per day,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

**Q070 (2019):** Other:

- statistics on the reasons of the postpone of the trials,
- number of trial days in cases, - number of tried cases per day,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

**Q070 (2018):** Other:

- statistics on the reasons of the postpone of the trials,
- number of trial days in cases, - number of tried cases per day,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

**Q070 (2015):** Among others:

- individual judge's statistics,
- statistics on the reasons of the postpone of the trials,
- number of trial days in cases,
- number of tried cases per day,
- pending cases of an individual judge / court,
- the time frame of pending cases
- number of appealed cases,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

**Q070 (2014):** In 2013 and 2014, among other are quoted individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of tried cases per day, the number of pending cases of an individual judge/court, the time frame of pending cases, the number of appealed cases, the subject of incoming/resolved/pending cases, the ratio of litigious and non-litigious cases. Cases that are pending over 2 or 5 years have a separated statistical report every month, as well as cases in which there were no actions taken in the last 30 days by the court.

**Q070 (2013):** In 2013 and 2014, among other are quoted individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of tried cases per day, the number of pending cases of an individual judge/court, the time frame of pending cases, the number of appealed cases, the subject of incoming/resolved/pending cases, the ratio of litigious and non-litigious cases. Cases that are pending over 2 or 5 years have a separated statistical report every month, as well as cases in which there were no actions taken in the last 30 days by the court.

**Q070 (2012):** In 2010 and 2012, a reference is made to individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of resolved cases, the number of cases scheduled within one day, the number of pending cases of an individual judge.

**Q070-1 (2022):** The public prosecution services are led in a hierarchical structure. Leaders perform their duties at a national and regional level, as well as at the level of each organizational unit. It is up to the decision of the leader who exercises the employer's rights to determine how the activities (performance, quality) of the prosecution office should be evaluated and on the basis of what indicators in order to manage the organizational unit effectively. The set of indicators may vary from year to year, depending on the circumstances. Therefore, more than one answer could be given to the given question.

For example, the performance of individual prosecutors or officers may be assessed at the level of an organizational unit; a staff satisfaction survey may be conducted; or a target analysis based on client satisfaction may be carried out.

The clearance rate could also be considered as a reference point and is actually monitored by the public prosecution services.

However, statistics are produced at the level of the prosecution services and at the regional level on a calendar year basis.

Therefore, those decisions on the termination of prosecution proceedings which are made at the end of a year, but become final only in the following year, can only be taken into account in the next year. The number of indictments and the number of finally closed cases that are closed because of finally closed court cases in the years after the indictment may also differ from the number of indictments on an annual basis. Therefore, the "clearance rate" – as a reference point – is a difficult criterion to follow.

At the national level, the Prosecutor General is required to present a report to Parliament. This report does not focus on the performance of individual public prosecutors; instead, it assesses the performance of the public prosecution service as a whole and according to a breakdown of organizational units. In our 2023 response, we tried to take this into account and, in this respect, we have indicated that primarily the indicators indicated were taken into account. Compared to our previous response in 2020, there was no change in terms of the fact that the clearance rate had been taken into account, even if it was not the primary evaluation criterion.

**Q070-1 (2021):** The BTM system (Criminal Justice Activity Indicator System) is available for the Prosecution Service of Hungary. This system regularly monitors prosecution activities (performance and quality), however, it does not contain any information about the number of incoming cases, length of proceedings, number of resolved cases, backlogs etc.

**Q071 (General Comment):** Judges have to report those cases on a monthly basis that are pending for more than 2 years. The president of the court can order a fast-track procedure for a case based on the report.

**Q071 (2018):** Judges have to report those cases on a monthly basis that are pending for more than 2 years. The president of the court can order a fast-track procedure for a case based on the report.

**Q072 (General Comment):** The administrative office of the court reports those cases to the president in which there was no judicial activity in the last 30 days.

**Q072 (2022):** It was not possible to give an unambiguous answer to this question because of the reasons given in point 70-1. There are several possible "waiting times" in court proceedings which can be monitored. The length of proceedings can be and is monitored by the public prosecution services at the organizational, regional and local levels to different extents. As there was no substantive change in this respect, our reply is modified as follows, in line with the previous answer. If the question refers to the judicial recess, the answer is "yes"; it is monitored by those who exercise the employer's rights, mainly for the purpose of granting a leave of absence.

**Q072 (2018):** The administrative office of the court reports those cases to the president in which there was no judicial activity in the last 30 days.

**Q083 (General Comment):** Since 1999, there is a national regulation adopted by the central administration body of the courts that regulates – among other things – how many trial days should a judge have per year. Every court has an internal regulation for judges, defining how many hearings shall they have at a trial day and how many cases shall they hear at a monthly basis. This regulation is adopted by the president of the court, taking into consideration the opinion of the judicial council. The president of the NOJ has to give his/her consent for the regulation.

**Q083-1 (General Comment):** The courts' organizational and operational rules provide for the number of hearing days a judge should have in a month and the number of cases a judge should monthly hear. These rules are issued by the president of the court after the judicial council expressed an opinion on them. The judicial council is a self-governing organ of the courts, consisting of judges who are elected by their peers. The rules are approved by the president of the National Office for the Judiciary.

**Q083-2 (2022):** Quantitative performance targets have not yet been set. The public prosecution services were in the process of installing a new specialized IT system (IIDR), which was originally planned to affect internal prosecution statistics too. However, it has not been introduced. The planned system is currently under revision, so it is not possible to provide information on how and when it will be introduced and whether quantitative performance targets will be set.

**Q083-2 (2021):** For the time being, no performance targets are in place, but the development of such targets is in progress.

**Q120 (2022):** The person exercising the employer's rights assesses a prosecutor's work every eight years. The purpose of assessment based on the examination of case files is to assess the quality of the prosecutor's professional activities, to evaluate his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. In accordance with Section 50 (1) of the Prosecution Employment Status Act, prosecutors, with the exception of the Prosecutor General and the Deputy Prosecutor General, shall be assessed before the expiry of the fixed term of the first prosecution appointment, while in the case of a first appointment for an indefinite term, before the expiry of a period of three years following the appointment, and thereafter every eight years, provided that they worked under the supervision of the assessor or his/her deputy for minimum one year during the assessment period. Prosecutors do not need to be assessed during the six years preceding the completion of the applicable old-age pension age. In addition to cases mentioned above, a prosecutor shall also be assessed if requested by the assessor, provided that two years have elapsed since the previous assessment, circumstances have emerged that indicate the prosecutor's professional ineligibility or the necessity to alter the evaluation of the previous assessment. The purpose of assessment is to assess the quality of the prosecutor's professional activities, to evaluate his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. The assessment may only feature duly supported, factual findings. In the event of an ineligible grade, upon the disclosure of the result of the assessment, the prosecutor shall be called upon to resign his/her office within thirty days. If despite the call the prosecutor does not resign his/her office, his/her prosecution service employment shall be terminated by exempting him/her from office. In accordance with Sections 13/A-13/F of Instruction 4/2012. (I. 6.) of the Prosecutor General on specific questions regarding the status of employees of the Prosecution Service, a case file examination shall be carried out as a basis for the assessment which is due to follow with regard to the prosecutor appointed to a prosecution office subordinated to the Office of the Prosecutor General prior to the time when the assessment is due. Such a case file examination shall not be carried out for senior head prosecutors. Case file examinations shall discover the examined prosecutor's practice regarding the application of substantive and procedural law during at least a one-year period prior to the case file examination, or since the prosecutor's latest assessment – or in absence of an assessment – since the time of his/her appointment at the most. The case file examination and its evaluation shall be done by a prosecutor (hereinafter: examiner prosecutor) who works at the prosecution office directly superior to the prosecution office where the examined prosecutor is appointed to and who works in the same field of prosecutorial activity or expertise as the examined prosecutor. The examiner prosecutor shall be designated by the directly superior prosecution office or at the Office of the Prosecutor General by the head of the organizational unit in the prosecution service that is competent in view of the examined prosecutor's duties.

**Q120-1 (2021):** Under Section 50 (1) of Act on Prosecutors, prosecutors shall be assessed on a regular basis, with the exception of the Prosecutor General and the Deputy Prosecutors General. In case of the first appointment, which is for a definite term, the prosecutor shall be assessed by the end of that term. In case of appointment to prosecutor for an indefinite term, the prosecutor shall be assessed within 3 years following the appointment; then the assessment shall be carried out every 8 years.

Prosecutors do not need to be assessed within the period of six years before reaching retirement age.

Besides the above, prosecutors shall be assessed if they request so, provided that at least 2 years have elapsed since the last assessment, or in the occurrence of any circumstance which suggests professional inadequacy, or which necessitates the amendment of the results of the last assessment. The assessment procedure involves examination of case files, as set out in Sections 13A to 13F of the Prosecutor General's Order No. 4/2012.

**Q120-1 (2018):** The evaluation system is defined by Articles 50-52 of the Act on the Legal Status of Prosecutors. The purpose is to assess the quality of the prosecutor's activities, his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. Prosecutors, with the exception of the Prosecutor General and the Deputy Prosecutor General, are assessed before the expiry of the fixed term of the first appointment, while in the case of a first appointment for an indefinite term, before the expiry of a period of 3 years following the appointment, and thereafter every 8 years. Prosecutors need not be assessed during the 6 years preceding the completion of the applicable old-age pension age. A prosecutor shall also be assessed if: requested by the prosecutor; circumstances have emerged that indicate the prosecutor's professional ineligibility or the necessity to alter the evaluation of the previous assessment; in the extraordinary proceeding to be completed without delay, s/he fails to meet the deadline extended by the superior prosecutor. The assessment is the duty of the person exercising the employer's rights. The official work of prosecutors assigned to the Ministry is evaluated by the Minister responsible for justice in accordance with the rules applicable to government officials. As a result, prosecutors may be awarded the following grades: excellent, suitable for promotion; excellent and fully eligible; eligible; eligible, subsequent assessment required; ineligible. In the event of an ineligible grade, the prosecutor shall be called upon to resign his/her office within thirty days. If the prosecutor is awarded a grade "eligible, subsequent assessment required", the person exercising the employer's rights identifies the deficiencies and irregularities and states the main criteria of the desired changes which shall be reviewed prior to the next assessment (within 2 years). A prosecutor shall be awarded an ineligible grade upon the next assessment if he/she fails to obtain an eligible grade. S/he may request a court of law to quash any erroneous or untrue finding.

## Ireland

**Q066 (2021):** With effect from October 1 2022, a statutory system providing for investigation and adjudication of complaints in relation to judicial conduct has been commenced pursuant to Judicial Council Act 2019.

**Q067 (2021):** Secretary of Judicial Council and Judicial Conduct Committee of that Committee investigate and adjudicate complaints.

**Q070 (2022):** These are not new or recently introduced monitoring options.

**Q070 (2014):** 2014: Since 2014 Ireland introduced a monitoring system for the length of proceedings and it is now capable of calculating average length of proceedings in first instance jurisdictions.

**Q070-1 (2022):** Information is published in Part 2 and Part 4 of ODPP Annual Report 2021 (<https://www.dppireland.ie/app/uploads/2023/02/AR2021eng.pdf>).

**Q070-1 (2020):** information is published in Annual Report available at: <https://www.dppireland.ie/app/uploads/2020/10/AR-2019-eng.pdf>

**Q070-1 (2018):** Information is published in Annual Report available at [https://www.dppireland.ie/filestore/documents/AR2017\\_\[eng\].pdf](https://www.dppireland.ie/filestore/documents/AR2017_[eng].pdf)

**Q071 (2022):** N/A

**Q071 (2020):** NAP

**Q071 (2018):** NAP

**Q071 (2016):** NAP

**Q083-1 (2018):** NAP

**Q083-1 (2016):** NAP

**Q083-2 (2022):** Allocation of files happens in some divisions but not all, and not all prosecutors are assigned a specific number of files per week. Additionally, targets can be influenced by external factors such as: the number of investigation files received, or the availability of court dates in order to process cases. The main reason why prosecutors are not assigned a set number of files is because the size and complexity of files can vary significantly.

**Q083-2 (2021):** Prosecutors in our directing division are allocated a specific number of files per week. Decisions must be issued within a designated time frame and this is monitored by our case management system

**Q083-2 (2018):** Work is demand led by number of files submitted by external investigating agencies

**Q083-3 (2022):** Unit Heads assign a number of files to each Prosecutor depending on ability or grade. This might not mean that “targets” are set. The targets for the Office are ultimately greatly impacted by external factors like the amount of investigation files that are submitted to the office, the availability of court dates to process cases and the fact that the size and complexity of files varies. A Prosecutor’s ability to progress their caseload is very much impacted by these factors so within this Office we don’t usually reference “targets”.

**Q120 (2022):** A Prosecutor’s performance is individually assessed through PMDS (Performance Management and Development System). PMDS assesses how a jobholder’s work performance, career and development needs are managed. It links the management of individual performance to the objectives of the Office, as set out in the Strategy of Statement and Business Plan. PMDS seeks to strike a balance between the needs of the organisation and the development needs of those who work in it. It recognises the need for continual change and improvement and for the involvement of staff in bringing this about. Individual prosecutors are responsible for carrying out their own goal setting and assessment. The PMDS form is then reviewed and assessed by the prosecutor’s manager.

**Q120-1 (2021):** Performance Management System

**Q120-1 (2018):** Prosecutors working in-house are required to participate in Public service wide Performance Management and Development System (PMDS).

## Italy

**Q066 (General Comment):** In Italy there is not a strict quality system as such. However, there is a regular monitoring system in place which tracks the performance of court activities.

**Q070 (General Comment):** Within the framework of the National Recovery and Resilience Plan (PNRR), the Ministry of Justice has introduced an additional monitoring system specifically designed for PNRR purposes, in order to keep track of a series of KPIs related to the efficiency of the Italian courts.

**Q072 (2018):** Waiting time is monitored only for Administrative Justice.

**Q083 (General Comment):** Law n.71 of 17 June 2022 has recently modified article 2 of Legislative Decree n.109, 23 February 2006, regarding disciplinary responsibility of professional magistrates. The amendment has introduced specific disciplinary offences regarding the conduct of the magistrate who does not cooperate in reaching the goals laid in the 'Program for the management of civil and criminal proceedings' (in Italian 'Programma di Gestione'), which is disciplined by art37 of Decree-Law II. 98 of 6 of July 2011 and regularly approved by each Court.

**Q083 (2020):** Quantitative performance targets are set in terms of length and timeframe of proceedings. Judges who fail to meet certain requirements may face disciplinary proceedings.

**Q083 (2018):** Quantitative performance targets are set in terms of length and timeframe of proceedings. Judges who fail to meet certain requirements may face disciplinary proceedings.

**Q083 (2016):** Quantitative performance targets are set in terms of length and timeframe of proceedings. Judges who fail to meet certain requirements may face disciplinary proceedings.

**Q083-1-1 (2022):** Disciplinary sanction as provided by the Legislative Decree no 109 of 23rd February 2006, regarding disciplinary responsibility of professional magistrates.

**Q083-2 (General Comment):** Law n.71 of 17 June 2022 has recently modified article 2 of Legislative Decree n.109, 23 February 2006, regarding disciplinary responsibility of professional magistrates. The amendment has introduced specific disciplinary offences regarding the conduct of the magistrate who does not cooperate in reaching the goals laid in the 'Program for the management of civil and criminal proceedings' (in Italian 'Programma di Gestione'), which is disciplined by art37 of Decree-Law II. 98 of 6 of July 2011 and regularly approved by each Court.

**Q083-3-1 (2022):** Disciplinary sanction as provided by the Legislative Decree no 109 of 23rd February 2006, regarding disciplinary responsibility of professional magistrates.

**Q120 (General Comment):** The assessment procedure applies to both judges and public prosecutors. Every four years, the High Council for the Judiciary (CSM) conducts a professional appraisal based on the professional skills of judges/prosecutors. The professional status of both judges and prosecutors is organized into 7 different levels. Several criteria are taken into consideration: independence, impartiality, balance, professional capacity, work capacity, diligence and commitment. The assessment is based on a number of acts and documents that describe all the professional aspects of the magistrate to be evaluated. The most significant are:

- "self report" where the magistrate illustrates all the elements that he/she believes are necessary or useful to be considered for the purpose of his/her appraisal;
- a random sample of acts and documents produced by the magistrate during the evaluation period;
- an "informative report" prepared by a superior of the magistrate;
- the statistics concerning activity of the magistrate: the number of provisions drafted, the processing times of the proceedings, the time for filing the documents (even in comparison with the other magistrates of the office);
- work related publications, if any;
- reports from the lawyers' council, if any.

**Q120-1 (2022):** Every four years

## Latvia

**Q066 (General Comment):** In January 15, 2020 the "Visitors service standards of the district (city) courts and regional courts" were approved. This document summarizes the general principles related to functions such as judicial reception and providing with information. The standards help court staff to raise their professionalism and understand the court visitors servicing values.

**Q066 (2022):** The reply is partly "yes" because according to the Law on Judicial Power Section 27.1., a Chief Judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (standard of time periods for adjudication of matters) prior to the beginning of each calendar year, in co-operation with court judges. This standard shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and other basic principles related to the guarantee of fair trial. A Chief Judge of a court shall approve the standard and supervise the actual time periods of examining matters in a court. He/she shall submit information to the Board of Justice regarding the approved standard until 1 February of each year. In January 15, 2020 the "Visitors service standards of the district (city) courts and regional courts" were approved. This document summarizes the general principles related to functions such as judicial reception and providing with information. The standards help court staff to raise their professionalism and understand the court visitors servicing values.

**Q066 (2021):** Partly yes, according to the Law on Judicial Power Section 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year.

**Q066 (2020):** Partly yes, according to the Law on Judicial Power Section 27.1. the Court President before the beginning of each calendar year, shall plan and determine the objectives of the court work in relation to average time periods for the examination of cases in a court (the standard of time periods for the examination of cases) in cooperation with court judges. The standard of time periods for the examination of cases shall be determined by taking into account the court resources and the necessity to ensure the right of a person to the examination of a case in a reasonable time period and in conformity with other basic principles for the examination of cases. The Court President shall submit the standard case examination time limits for approval to the Judicial Council until 1 February of each year.

**Q066 (2019):** In January 15, 2020 the "Visitors service standards of the district (city) and regional court" is adopted. This document defines the procedure by which the employee of the district (city) and regional court shall ensure the servicing of the court visitor, the participant in the proceedings, its representative (hereinafter - customer) (the acceptance of the client, the provision of information and communication in person, by telephone and by electronic means) and basic customer service values, general principles and basic rules for customer service.

**Q066 (2017):** According to the Law on Judicial Power Art 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year. First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

**Q066 (2016):** Partly yes, according to the Law on Judicial Power Section 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year.

First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

**Q066 (2015):** Since 2008 courts apply 'The visitors service standards of the district (city) courts and regional courts'. This courts visitor's service standard summarizes the general principles of judicial reception and providing with information. Standard helps court staff to raise their professionalism and understand the court visitors servicing values. On 2015 May 18 Council of Justice approved guidelines on communication of the court system. The aim of the guidelines is to promote the effective functioning of the judiciary and promote the public confidence in the judiciary, creating a positive Court's image and enhance its' authority in society.

**Q066 (2014):** In 2014, for the first time, standards of time periods for adjudication of matters were submitted to the Board of Justice.

**Q070 (General Comment):** Implemented business intelligence solution allows monitor all the mentioned court activities very closely.

Satisfaction of court staff and users is being evaluated by regular questionnaires in courts.

**Q070 (2022):** The indicators "productivity of judges and court staff" and "number of appeals" are taken into account when assessing the professional activity of a judge, because the objective of the assessment of the professional activities of a judge is to promote the continuous professional growth of a judge throughout his or her career, thereby improving the quality of the work of the judge and the court. An Annual evaluation of court staff is also carried out, which is essential for high-quality work of courts.

**Q070 (2017):** Decision stability (proportion of decisions appealed in higher instance)

**Q070 (2016):** Decision stability (proportion of decisions appealed in higher instance)

**Q071 (2018):** We have created a specific tool for this purpose that is available also in public from <https://dati.gov.lv/>

**Q072 (2022):** "Within the courts": On an irregular basis, the Ministry of Justice and the Council of Justice analyze the number of days (period) from the initiation or receipt of the case in court to the moment when the case review is started.

**Q083-1 (General Comment):** According to the Law on Judicial Power, when adjudicating, judges are independent and are subject only to the law. Therefore, judges set targets by themselves. However, the President of the court monitors the workload of the judges in the court as a whole, assigning cases to another judge if necessary.

**Q083-2 (General Comment):** The prosecutor provides a monthly report on the statistical indicators of his or her work. In addition, the statistical indicators of the individual work of the public prosecutor (statistical indicators for the monitoring of the investigation, prosecution, maintenance of the State prosecution and other functions of the public prosecutor) are also analysed during the process of assessing the professional activities of prosecutors (not less than once every five years).

**Q120 (General Comment):** Evaluation is carried out by the Attestation Commission of Prosecutors. During the evaluation of a public prosecutor the following indicators of the quality of performance of the functions are assessed: supervision, criminal prosecution, maintenance of state prosecution in court, as well as the protection of state and individual rights. An assessment of professional competences is also carried out. The results are generally used to evaluate professional performance and suitability for the position. In the case of a negative opinion, the Commission can determine specific tasks that must be performed to eliminate the deficiencies found in prosecutor's professional activity or to improve his/her professional activity.

**Q120-1 (General Comment):** The assessment of the professional activities of prosecutors have been commenced and is operational from 1 January 2014, within which the professional activities of prosecutors are assessed on a regular basis (not less than once every five years).

**Q120-1 (2020):** Not less than once every five years

## Lithuania

**Q070 (General Comment):** All of these data are recorded in the Lithuanian Court Information System (LITEKO), as well as other data, related to the case, it's process and the parties to the proceedings.

**Q072 (2022):** Within the courts: through an administrative supervision mechanism.

**Q072 (2020):** courts: through administrative supervision mechanism

**Q083-2 (2018):** The quantitative performance targets are defined for the Prosecutor General's Office and 5 regional Prosecutor's Offices, but not for individual public prosecutors.

**Q083-3 (2018):** The quantitative performance targets are defined for the Prosecutor's Offices, but not for individual public prosecutors.

**Q120 (2022):** The service, qualifications of the prosecutors and their suitability for the position are assessed by the Prosecutors' Assessment Commission.

The Commission is composed of seven members (four prosecutors and three persons (non-prosecutors) of impeccable reputation, nominated by the President of the Republic, the Speaker of the Seimas, and the Prime Minister) for a period of three years.

The Commission assesses data on the procedural and non-procedural performance and professional qualities of the prosecutor, and, in the case of the evaluation of the chief prosecutor (or deputy), also on the administrative performance.

**Q120-1 (General Comment):** According to Article 33 of the Law on Prosecution Service, evaluation of prosecutor's individual performance, qualification and suitability is carried out by the Attestation Commission. Performance of a prosecutor who has received a positive evaluation after his/her internship, is thereafter evaluated every five years during the regular evaluation of the service. The extraordinary evaluation can be carried out by decision of the Prosecutor General: at the request of the public prosecutor him/herself, if at least half a year has passed since his/her last evaluation; in the case the prosecutor is applying for a higher position, or to the same or an equivalent post after the expiry of the term of appointment; if three years have passed since the last evaluation of his/her service; if the prosecutor's performance has repeatedly been deficient, giving rise to reasonable doubts as to his/her suitability for the position in question.

**Q120-1 (2022):** The Commission carries out regular and extraordinary assessments of the service.

Regular service assessments are carried out:

1. at the end of the prosecutor's traineeship;
2. every five years.

An extraordinary service assessment may be carried out:

1. at the reasoned request of the prosecutor, if at least half a year has elapsed since the last assessment;
2. when, at the end of his/her term of office, the prosecutor seeks appointment to a higher, the same or an equivalent post, provided that three years have elapsed since the last service assessment;
3. in cases where it is established that the prosecutor's performance has repeatedly been deficient, giving rise to reasonable doubts as to his suitability for the post in question.

## Luxembourg

**Q070 (General Comment):** No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request of the competent authorities.

**Q070 (2017):** ??? (see comments to parent campaign)

**Q070 (2016):** No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

**Q070 (2015):** By using the newly implemented statistical tools, the information ticked in addition to last year's questionnaire can now be retrieved by the statistical service on an as needed basis at least for criminal cases. Identical markers are being implemented for civil and commercial cases and will available in a foreseeable future.

**Q070 (2014):** 2014: There is no regular monitoring system. However, new statistical tools are implemented and can provide monitoring elements when necessary without daily measurement current affairs.

**Q071 (2018):** New systems of monitoring have been implemented since 2016 (JUCIV for the civil law cases and JANGA for administrative law cases)

**Q071 (2016):** No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

**Q072 (2014):** According to 2014 data, the newly set up statistical tools, as well as the courts' CMS, allow an "as needed" check of the waiting time.

**Q083-1 (2018):** NAP

**Q083-2 (2018):** NAP

**Q083-3 (2018):** NAP

## Malta

**Q066 (General Comment):** There exists a Code of Ethics for the members of the Judiciary which, though not providing for the organisation and quality of the judicial work, does lay upon the members of the Judiciary certain obligations which are important in ensuring the transparency and independence of the judicial process.

**Q066 (2017):** There exists a Code of Ethics for the members of the Judiciary which, though not providing for the organisation and quality of the judicial work, does lay upon the members of the Judiciary certain obligations which are important in ensuring the transparency and independence of the judicial process.

**Q066 (2016):** There exists a Code of Ethics for the Judiciary which, though not providing for the organisation and quality of judicial work, does lay upon the members of the Judiciary, certain obligations which are important in ensuring the transparency and independence of the judicial process.

**Q067 (2018):** There are general quality standards that apply to the public sector, but not specific quality standards that monitor the implementation of quality standards within the judiciary or the prosecution services.

**Q070 (2022):** Other: Age of the pending caseload.

**Q070 (2019):** Other: age of pending caseload

**Q070 (2017):** other: clearance rate

**Q070 (2015):** The monitoring of court activities also takes place through the ongoing analysis of the Clearance Rate and Disposition Time of the various courts. This data is also being published online on a monthly basis. The category "other" refers to the monitoring of the Clearance Rate and Disposition Time of all civil courts, boards and tribunals. This exercise was started in 2015.

**Q070 (2014):** In 2014, the court administration was monitoring length of proceedings through the number of incoming and resolved cases, as well as through the pending caseload. The age of civil cases was another parameter that was being assessed.

On the occasion of the 2014 exercise, it has been indicated that since 2015, Malta started computing the Disposition Time and Clearance Rate of all the civil and criminal courts. By the end of 2015, for the civil courts, this information will be made available online.

**Q070-1 (2022):** The Office of the Attorney General has embarked on a data management process that is seeing more information being collected in respect of the efficiency parameters of the Office. This explains why in this evaluation cycle, the categories of 'Backlog' and 'Productivity of Prosecutors and prosecutors staff' have been marked.

**Q070-1 (2021):** The Attorney General is collecting data on length of proceedings and using it to monitor efficiency. This exercise will be refined in the coming months within the scope of an ongoing project addressing the re-engineering of processes within the Office of the AG.

**Q070-1 (2018):** The Office of the AG does hold a record of the number of incoming cases and terminated cases, but these are not as yet organised into official performance indicators.

**Q072 (2016):** In Malta, there is no formal monitoring system. However, an "informal" monitoring used to take place. It falls mostly within the remit of the Chief Justice and the respective members of the judiciary.

**Q083 (General Comment):** The administration of the case load is left in the hands of the individual judge and magistrate together with the Chief Justice who assigns the particular duties to each judge and magistrate.

**Q083 (2016):** The administration of the case load is left in the hands of the individual judge/ magistrate together with the Chief Justice who assigns the particular duties to each judge and magistrate.

**Q083-1 (2018):** NA

**Q083-3 (2018):** NA

**Q120-1 (2022):** It is up to the discretion of the Attorney General to carry out such evaluation but it has been carried out at least once annually.

**Q120-1 (2021):** The work of public prosecutors is constantly monitored by the Deputy AG and the AG herself. The monitoring is not scheduled at specific annual intervals but it is ingrained in the daily work processes in the Office.

**Q120-1 (2020):** The work of public prosecutors is constantly monitored by the Deputy AG and the AG herself. The monitoring is not scheduled at specific annual intervals but it is ingrained in the daily work processes in the Office.

**Q120-1 (2018):** The work of public prosecutors is constantly monitored by the Deputy Attorney General (in charge of the criminal field) and the Attorney General. The monitoring is not scheduled at specific annual intervals, but is ongoing and ingrained in the daily work processes of the Office.

## Netherlands

**Q066 (General Comment):** There are quality standards that are measured by annual statistical figures per individual court. Examples are the scores of customer satisfaction surveys, the percentage of cases judged by three instead of one judge, and case processing times (the so-called 'Kengetallen gerechten'). The Team Judicial Quality (TJK, Team Juridische Kwaliteit) studies topics in a thematic manner, on a structural basis. A team of public prosecutors participates in TJK and assesses the judicial work of colleagues in a structured and systemic way. There is often a baseline assessment, as well as a follow-up, sometimes a second follow-up. The assessment framework is adjusted if necessary. See also [www.tweedekamer.nl/kamerstukken/detail?id=2018D52900&did=2018D52900](http://www.tweedekamer.nl/kamerstukken/detail?id=2018D52900&did=2018D52900). There are professional standards too, developed to show what 'good justice' entails. These standards are publically available on the website of the Judiciary. See <https://www.rechtspraak.nl/Organisatie-en-contact/Rechtspraak-in-Nederland/Rechters/Paginas/De-professionele-standaarden-van-de-rechters.aspx>.

**Q066 (2019):** There is a so-called Team Judicial Quality (Team Juridische Kwaliteit), which studies topics in a theme-wise manner. This is part of the program 'Programma OM Strafvordering 2020'. A team of public prosecutors participates in TKJ and assesses the judicial work of colleagues in a structured and systematic way. There is often a first assessment (baseline) and a first follow-up assessment, and sometimes even a second follow-up. If necessary, the assessment framework is adjusted.

**Q067 (General Comment):** Courts: there are staff members (policy officers) within the offices that coordinate the quality in that office.

Public prosecution: At the head office of the public prosecution (Parket-General), there is personnel responsible for producing, implementing, evaluating and auditing quality measures. These are the TJK (as mentioned in Q66), Team Processes and Information (standard processes and procedures) and the Scientific Bureau OM (national guidelines and policy regulations).

**Q067 (2017):** yes

**Q070 (2020):** There is an annual publication that includes the appeal ratio for some case types. To call it 'monitoring' would be a bit too much, but it is annually checked and reported on.

Incoming cases and length of proceedings have not previously been mentioned, but these are monitored.

**Q071 (General Comment):** The public prosecution logically only monitors criminal law cases, the courts monitor all types of cases.

**Q071 (2021):** Public prosecution only monitors criminal law cases, the courts monitor all.

**Q072 (General Comment):** Waiting time can be monitored through registration in the court system.

Agreements are made across the justice chain on timeframes in which particular caseloads (sexual offences, youth cases, and specific traffic violations) should be handled. These agreements are monitored.

Government (the Second Chamber) is annually informed on the agreements via factsheet. Additionally, timeframe agreements were reached within the public prosecution on the speed with which penal orders are to be issued, the terms in which an objection is to be judged and the speed with which the first decision with attachment is to be taken.

**Q072 (2020):** Within the courts: Registration in the court system gives the opportunity to monitor waiting time.

Within the public prosecution services: Across the justice chain, agreements have been made on the timeframes in which particular caseloads (sexual offences, youth cases and specific traffic violations) should be handled. These agreements are monitored. Annually, the government (Second Chamber) is informed on this via the factsheet 'Strafrechtketen'. Besides this, timeframe-agreements have been reached within the public prosecution on speed with which penal orders are to be issued, terms in which an objection is to be judged and the speed with which the first decision with attachment is to be taken (eerste beslissing bij beslag).

**Q072 (2013):** All steps and dates are recorded in information systems of the court. But this registration does not show 'waiting times' as such.

**Q083 (2016):** There is a planning and control cycle (3 times per year) which involves financial/accounting evaluation but also visits ('bestuurlijke overleggen'), there is once per year an accountant check of the annual report (per court and for total of 19 district courts, 5 general appeal courts and 2 specialised courts (Trade and Industry Tribunal (CBb) and Central Appeals Tribunal (CRvB)), and once every 4 years there is a round of visitations.

**Q083-1 (2018):** NAP

**Q083-1 (2016):** The planning and control cycle is done by The Council for the Judiciary, on a court level (not at individual judge level). Targets for each individual judge are not imposed by The Council for the Judiciary.

**Q083-2 (General Comment):** There is no national policy on targets for every prosecutor. An office could choose to set targets for their prosecutors (see next question), but these may vary across offices.

**Q083-2 (2020):** There is no national policy on targets for every prosecutor. An office (parket) could choose to set targets for their prosecutors (see next question), but this may vary across offices.

**Q083-3 (General Comment):** There is no national policy on targets for every prosecutor. An office could choose to set targets for their prosecutors (see next question), but these may vary across offices.

**Q120 (General Comment):** The public prosecution has a team Judicial Quality at the General Office that studies the quality of the criminal proceedings of the public prosecution. As part of these studies and assessments, a pool of prosecutors has been compiled, and they study the work of other public prosecutors. This is an assessment of an office, not of individual prosecutors. The results of these studies are used for quality enhancement trajectories. The studies are repeated periodically.

**Q120 (2020):** The public prosecution has a team Judicial Quality at the General Office (Parket Generaal) that studies the quality of the criminal proceedings of the public prosecution. As part of these studies and assessments, a pool of prosecutors has been compiled, and they study the work of other public prosecutors. The results of these studies are used for quality enhancement trajectories. The studies are repeated periodically.

**Q120-1 (General Comment):** A regular cycle of individual assessments exists, based on certain competencies a public prosecutor should possess. The extent to which the public prosecutor possesses these competencies is assessed in performance and assessment reviews. Furthermore, each prosecutor has to obtain a certificate implying they are 'fit for trial', that they have the necessary skills to represent the public prosecution at trial.

## Poland

**Q066 (General Comment):** The Ministry of Justice collects statistical data sent by common courts concerning their current activity, and also evaluates annual information on the activity of courts, prepared by presidents of courts of appeal about the activity of courts within the area of appeals, within the scope of tasks entrusted to them. In addition, the Minister of Justice convenes a meeting with presidents of courts of appeal at least once a year to discuss issues related to exercising supervision. Within the framework of that evaluation, a multifaceted analysis of collected statistical data is conducted, inter alia, an indicator of stability of jurisprudence, an indicator of control over the inflow of court cases or time of adjudication in incoming cases. However, no legal provision defines specific quality standards for individual indicators, concerning organisational quality and/or justice quality policy, to be formulated for the justice system as a whole.

**Q066 (2016):** The most important indicator comes from evaluation of judgements through second instance procedure. In this purpose "judgement stability" ratio are in use as a ratio of judgements reversed or annulled in procedure of appeal.

**Q067 (General Comment):** Inspection departments operate in the appellate and regional courts. The task of the judges working in these departments is to perform on behalf of the president of the court activities in the scope of supervision over the administrative activity of the courts in the area of the operation of a given appellate or district court. Supervision consists in taking actions to improve the office of the courts or increase the efficiency and level of work organization culture in the courts. For this purpose, visits of departments in courts or surveys of recognized cases of a given category are carried out, the secretariats of departments in the courts are controlled.

Activities in the scope of administrative supervision can not enter the field in which judges and assessors are independent.

**Q070 (2017):** Supervision covers only the administrative activities of the courts. There are the internal supervision exercised by the presidents of the courts and the external supervision exercised by the Minister of Justice within the narrow scope specified in the law.

**Q070 (2016):** Supervision covers only the administrative activities of the courts. There are the internal supervision exercised by the presidents of the courts and the external supervision exercised by the Minister of Justice within the narrow scope specified in the law.

**Q070-1 (2021):** In 2021, following the implementation of the new central ICT system PROK-SYS, which provides for a modern reporting system, the possibility of obtaining data on a wide range of activities of all organisational units of the prosecution offices was created. The system provides a solution for generating types of reports on the costs of proceedings. This allows for daily supervision of the activities of the prosecution offices from every level, including the central level. Prior to 2021, data on the costs of proceedings were only collected locally.

**Q072 (General Comment):** Public Prosecution services

The issue of the duration of pre-trial proceedings is defined in the Code of Criminal Procedure, in Article 310 § 1 and § 2 and Article 325i § 1. Article 310 § 1 and § 2 states that the investigation shall be completed within 3 months. In justified cases the investigation period may be extended by a specified period of time by the public prosecutor supervising the investigation or the public prosecutor directly superior to the public prosecutor leading the investigation, but not longer than one year. In particularly justified cases a competent public prosecutor superior to the prosecutor supervising or leading the investigation may extend the investigation by a specified period of time.

Article 325i § 1 states that an investigation should be completed within 2 months. The prosecutor may extend this period to 3 months, and in particularly justified cases – to a longer specified period of time.

The authority empowered to order the extension of an investigation or an inquiry by a specified period of time shall monitor such proceedings with respect to their proper conduct in view of their possible length and shall assess the validity of the procedural steps taken or to be taken.

The request for the extension of an investigation or an inquiry must include the steps that need to be taken in the further course of the proceedings and indicate the reasons why they have not yet been taken.

Courts:

The presidents of the courts, in exercising internal administrative supervision over the administrative activity of the courts, control the taking of actions by judges within appropriate time limits; direct control is also exercised by the presidents of the divisions. Monitored also within the framework of management control and analysis of annual information on activities of courts operating within the area of appellate courts prepared by presidents of courts of appeal

**Q072 (2021):** \* courts -The presidents of the courts, exercising internal administrative supervision over the administrative activity of the courts, control the taking of actions by the judges in due time; direct control is also exercised by the presidents of the divisions. Monitoring also takes place within the framework of the external administrative supervision of the Minister of Justice over the administrative activity of common courts within the framework of management control and analysis of annual information on the activity of courts operating on the territory of courts of appeal prepared by presidents of courts of appeal.

\*prosecutors - In the course of pre-trial proceedings, the public prosecutor commissioning other bodies to carry out procedural actions or appointing experts to prepare an opinion shall each time set a deadline for their implementation. If the entrusted activities are not carried out in time, the prosecutor makes an enquiry as to the reasons for the delay and the deadline for carrying out the activities. The course of pre-trial proceedings is monitored both in terms of internal service supervision and external service supervision, in order to ensure their proper dynamics.

At the trial stage, if a hearing is postponed without a date being set, the prosecutor's office makes timely enquiries as to whether the reasons preventing it from being scheduled have ceased.

**Q072 (2018):** In the mode of external and internal administrative supervision over the administrative activity of courts by analyzing the results of the courts or departments and monitoring the efficiency of individual cases in the case of detected lengthiness.

**Q083 (General Comment):** In general there are not any quantitative performance targets defined for each judge but for certain cases the law imposes timeframe for performing specific action or handling specific matters. President of the court sets the performance target with using statistically calculated indicators of average performance that court and individual judge is expected to achieve.

**Q083-1 (General Comment):** .

**Q083-1 (2016):** For certain cases the law imposes timeframe for performing specific action or handling specific matters. President of court sets the performance target with using statistically calculated indicators of average performance that court and individual judge is expected to achieve.

**Q083-3 (2022):** If one were to consider that this question, is linked to question 83-2 on quantitative objectives, then the answer is NAP. Which is not to say that the efficiency of a prosecutor is not subject to any assessment by superiors. Indeed, it is the task of prosecutors exercising a managerial function to ensure the proper and efficient performance of official tasks in the units and organisational units entrusted to them, in particular to ensure the efficiency of the proceedings conducted by the prosecutors subordinate to them. Executives are therefore obliged to have knowledge of, inter alia, the number of proceedings conducted by their subordinate prosecutors, the number of proceedings completed by them, the number of protracted proceedings and to react to cases of, for example, protracted proceedings.

**Q083-3 (2020):** Individual goals are set by prosecutors themselves in a way that enables them to carry out their duties effectively

## Portugal

**Q066 (General Comment):** Law on the organisation of the judicial system (Law 62/2013 of 26 August) sets out that the High Council for the Judiciary and the Prosecutor-General, in liaison with the member of Government responsible for the justice, establish, within their respective competences, the strategic objectives for first instance courts for a three year period. These entities are also responsible for setting, every year, the strategic objectives of first instance courts for the following judicial year. Taking into account the results obtained in the previous year and the strategic objectives formulated for the subsequently year, the president of the court and the public prosecutor coordinator, after hearing the judiciary administrator, articulate proposals for the procedural objectives for each court. For instance, the Prosecutor General's Directives and Instructions define good practices of functional performance at national level and their compliance may be viewed an indicator of the quality of the work developed (example, Directive 5/2019, on acting in cases of domestic violence (<https://dre.pt/home/-/dre/126870404/details/maximized> - text in Portuguese).

In addition to Directives and Instructions, the performance assessment system for prosecutors is based on quality criteria/performance parameters, as a rule, uniformly applied at national level.

**Q066 (2021):** For instance, the Prosecutor General's Directives and Instructions define good practices of functional performance at national level and their compliance may be viewed an indicator of the quality of the work developed (example, Directive 5/2019, on acting in cases of domestic violence (<https://dre.pt/home/-/dre/126870404/details/maximized> - text in Portuguese).

In addition to Directives and Instructions, the performance assessment system for prosecutors is based on quality criteria/performance parameters, as a rule, uniformly applied at national level.

**Q066 (2020):** For instance, the Prosecutor General's Directives and Instructions define good practices of functional performance at national level and their compliance may be viewed an indicator of the quality of the work developed (example, Directive 5/2019, on acting in cases of domestic violence (<https://dre.pt/home/-/dre/126870404/details/maximized> - text in Portuguese).

In addition to Directives and Instructions, the performance assessment system for prosecutors is based on quality criteria/performance parameters, as a rule, uniformly applied at national level.

**Q067 (General Comment):** The High Council of the Public Prosecution Service has "inspectors" ("inspectores") who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

**Q067 (2022):** The High Council of the Public Prosecution Service has "inspectors" ("inspectores") who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

**Q067 (2021):** The High Council of the Public Prosecution Service has "inspectors" ("inspectores") who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

**Q067 (2020):** The High Council of the Public Prosecution Service has "inspectors" ("inspectores") who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

**Q070 (2022):** Users satisfaction is monitored through surveys and indirectly by the consulting body of each court that includes members of the community. The appeal ratio is only monitored in the context of judges evaluation.

**Q070 (2020):** we included "satisfaction of users" because one of the tasks of the president judge of the court is to monitor and evaluate the activity of the court, in particular the quality of the justice service provided to citizens, taking into account particular complaints or responses to satisfaction questionnaires. "Article 94 of Law 62/2013, 26th August, on the judicial organization"

**Q070 (2019):** In this evaluation cycle we included "satisfaction of users" because one of the tasks of the president judge of the court is to monitor and evaluate the activity of the court, in particular the quality of the justice service provided to citizens, taking into account particular complaints or responses to satisfaction questionnaires. "Article 94 of Law 62/2013, 26th August, on the judicial organization"

**Q070 (2017):** Scheduling; delays of judges and sections.

**Q070 (2016):** Scheduling; delays of judges and sections.

**Q070 (2015):** Scheduling: time delays of judges and sections of the court.

**Q070-1 (2020):** We included "clearance rate" and "disposition time" because one of the tasks of the public prosecutor coordinator is to monitor and evaluate the activity of the public prosecutors services, including the efficiency of procedures. Article 101 of Law 62/2013, 26th August on judicial organization.

**Q072 (General Comment):** Through SITAF and CITIUS (case management systems for administrative and tax courts and judicial courts, respectively) it is possible to check waiting times during judicial proceedings. The Portuguese Code of Criminal Procedure establishes no binding timeframes for criminal investigations. At a national level, within the public prosecution services, there is only monitoring of the judicial proceedings time during on criminal investigations, with reference to this timeframe.

At a local level, some other proceedings (such as the initial intervention of public prosecutors on protection of adults with some incapacity, requesting accompanying measures – under the legal framework of the accompanied adult [Regime Jurídico do Maior Acompanhado]) are also monitored on time duration.

**Q072 (2022):** The waiting period is monitored in the quarterly monitoring of all judicial courts. The Court President reports to the council the number of cases that are waiting procedural movement for more than 1, 2, 3 or 4 months.

**Q072 (2021):** Because of the Covid-19 pandemic, the courts were asked for specific elements on the steps taken in the Courts. Also, the procedural laws (e.g. civil and criminal) provides that the registry shall send to the President of the Court, on a monthly base, information detailing the cases in which three months have elapsed since the expiration of the deadline set for the performance of the judge's own act.

**Q072 (2018):** Through SITAF and CITIUS (case management systems) it is possible to check waiting times during judicial proceedings.

**Q083 (General Comment):** Taking into account the results obtained in the previous year and the strategic objectives formulated for the following year, the president of the court and the coordinating prosecutor, after hearing the judicial administrator, articulate, for the following year, proposals for objectives of a procedural nature (management or administrative) for the district and for the courts of extended territorial jurisdiction, as well as for the Public Prosecution Offices located there, which have to be ratified respectively by the Judicial High Council and the Attorney General's Office.

The procedural objectives of the district shall refer, in particular, to the number of completed cases and the time of their duration, taking into account, among other factors, the nature of the process or the value of the case, considering the human resources and the means related to the functioning of the district and based, namely, on the established procedural reference values.

The procedural objectives of the district may not impose, limit or condition the decisions to be rendered in specific cases, either on the merits of the matter, or on the option for the procedural form understood as more appropriate.

The procedural objectives of the district must be reflected in the objectives established annually for judicial officers and be considered in the respective assessment.

The procedural objectives of the district must be considered in the evaluation criteria of the magistrates, defined by the respective Councils.

**Q083-2 (General Comment):** Yes for some District Prosecution's Office and No at a national level. At national level, only reference values are fixed for the purpose of placing prosecutors. Also at a national level, the fact that a prosecutor has finished more proceedings than those that he/she started is a general criterion of evaluation and compliance with general objectives, in the qualitative individual assessment of the public prosecutors' work.

**Q083-3 (2020):** The local hierarchically superior public prosecutor can set individual targets for each public prosecutor. The High Council of the Public Prosecution Service only sets reference values for the purpose of placing prosecutors and establishing how many prosecutors are needed for a particular Public Prosecution Office.

**Q120 (General Comment):** The prosecutors are evaluated periodically in time lapses between 3 to 5 years. The evaluation is held by the Prosecutors Superior High Council and it evaluates the quality of the work held by all prosecutors. A higher ranked prosecutor does the evaluation and produces a report that is sanctioned by the Prosecutors Superior High Council.

## Romania

**Q066 (General Comment):** There are no formal standards for quality established for the whole judiciary. However, informal standards are being used (such as training, quality of the reasoning, assessment of the activity of the judges, assessment of the good reputation of the judges etc.).

More precisely, the activity of courts is evaluated and monitored periodically, on the basis of certain statistical data/performance indicators, such as those presented at question 70. The evaluation is achieved by verifications carried out by inspectors of the Judicial Inspection of the SCM, by elaborating periodical reports. The schedule and thematic of those verifications are approved every year by the SCM.

At organizational level, there are no quality standards established for courts. It may be considered that such standards exist at individual level, for each judge, by the indicators for the evaluation of professional activity.

**Q066 (2012):** In the frame of the 2012 exercise, a reference was made to the “Court Optimisation Project” financed by the World Bank, implemented from October 2011 to March 2013. The final recommendation included the introduction of Key Performance Indicators (KPIs), such as the clearance rate, the number of cases older than one year, the number of cases solved within 1 year, and the comparative measurement system.

**Q070 (General Comment):** Since 2012, the category “other” subsumes the length of administrative procedures, the number of final convictions, legal aid, suspended cases etc.

**Q070 (2022):** ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

**Q070 (2021):** ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

**Q070 (2020):** ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

**Q070 (2019):** ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

**Q070 (2017):** - e.g. suspended cases

**Q070 (2016):** - suspended cases etc.

**Q071 (2022):** STATIS - statistics monitoring application including for court's efficiency assessment

**Q071 (2021):** STATIS - statistics monitoring application including for court's efficiency assessment

**Q071 (2020):** STATIS - statistics monitoring application including for court's efficiency assessment

**Q072 (2022):** There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**Q072 (2021):** There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**Q072 (2020):** There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**Q072 (2018):** There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**Q072 (2016):** There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**Q072 (2014):** According to 2014 data, there are statistical reports developed by Statis IT application monitoring the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc. More precisely, in 2014, the Superior Council of Magistracy has established a working group that has analyzed several national and international documents on the efficiency of the courts and has developed a set of indicators that are used to make an overall assessment of the efficiency of courts, sections and, if needed panels of judges. These indicators were implemented and used in the Statis application.

**Q083-1 (2016):** There are no formal standards for quality established for the whole Judiciary. However, informal standards are being used (such as training, quality of the reasoning, assessment of the activity of the judges, assessment of the good reputation of the judges etc.)

**Q120 (2022):** According to Article 87 of Law No 303/2022 -The individual professional evaluation of judges and prosecutors involves analysing and noting of the criteria and indicators for assessing the professional performance of judges and prosecutors, indicators which concern, in particular, the quality of the activity, the efficiency, the integrity and the obligation to continue vocational training, and in the case of judges and prosecutors appointed to senior positions, the manner of carrying out the managerial duties. (2) Professional evaluation of judges and prosecutors aims to establish the level of their professional competence and also to improve professional performance, increase the efficiency of the activity of courts and prosecutor's offices and public trust in judicial authority, maintain and consolidate the of the quality of the judicial system

**Q120-1 (2022):** Legislation on the statute of judges and prosecutors was replaced by Law no. 303/2022

**Q120-1 (2020):** According to the provisions of art. 39 of the Law no. 303/2004, amended and republished in 2018, judges and prosecutors are being periodically evaluated under the observance of the professional and performance criteria. The evaluation shall envisage the quality of their activity, efficiency, integrity as well as the fulfillment of the obligation to take part in in-service professional training and on managerial activity for those judges and prosecutors in leadership positions. The periodical evaluation shall be first carried out by the end of the first 2 years of activity after the entering in profession and shall be continued every 3/4/5 years depending on the seniority in profession (5-10 years, 10-15 years, over 15 years of seniority).

**Q120-1 (2018):** similar to judges, see Q114, 114.1 and the additional comments

## **Slovak Republic**

**Q066 (General Comment):** Internal revision of the court is a type of control of the court and judges, which aims to check the current state of the judiciary, to identify the causes of shortcomings in the performance of the judiciary and to propose measures to eliminate them.

**Q066 (2020):** Internal revision of the court is a type of control of the court and judges, which aims to check the current state of the judiciary, to identify the causes of shortcomings in the performance of the judiciary and to propose measures to eliminate them.

**Q066 (2014):** There is a system to evaluate the overall functioning of courts with respect to the Manifesto of the Government of the Slovak Republic for the period of 2010-2014:

[http://www.vlada.gov.sk/data/files/855\\_the-manifesto-of-the-government-of-the-slovak-republic-for-the-period-of-2010-2014.pdf](http://www.vlada.gov.sk/data/files/855_the-manifesto-of-the-government-of-the-slovak-republic-for-the-period-of-2010-2014.pdf)

**Q067 (General Comment):** Judicial Council, Council of Prosecutors and disciplinary commissions.

**Q067 (2020):** Judicial Council, Council of Prosecutors and disciplinary commissions.

**Q067 (2019):** Judicial Council, Council of Prosecutors and disciplinary commissions

**Q070 (General Comment):** The category “other” encompasses: the number of cases according to types of disputes, the results of the cases

(reconciliation, dismissals, full satisfaction, partial satisfaction, etc.). Statistical data of the Ministry of Justice of the Slovak Republic are

detailed and regularly collected and published in a yearbook which is publicly accessible at the website of the Analytical centre of MoJ

<https://www.justice.gov.sk/Stranky/Informacie/Analyticke-centrum.aspx>

<http://web.ac-mssr.sk/statisticka-rocenka-2018/>. Data on the activity of the courts are published every month in interactive Dashboard on the <http://web.ac-mssr.sk/dashboard/>.

**Q083-3 (2022):** Prosecutors do not have quantitative performance targets within a certain period, but at the same time they have responsibility for their work, and therefore the hierarchically superior public prosecutor is responsible for observing the duties and goals of each prosecutor.

## **Slovenia**

**Q066 (General Comment):** The Supreme Court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). A special office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies on the level of entire judiciary and individual courts. Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

The 2013 amendment to the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. Since 2015, the Supreme Court has been adopting the timeframes for different types of procedures as well as for different procedural phases for next year (as a part of the Criteria for quality of work).

As for public prosecution, the criteria for quality of work are defined in the Prosecution Policy (adopted by the Prosecutor General), while the quantitative aspects of work are defined in the Criteria for evaluating the performance of the state prosecutor's offices adopted by the State Prosecutorial Council.

**Q066 (2015):** The Supreme Court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). The system was awarded with Special mention in the 2012 Crystal Scales of Justice Competition and was defined as "Inspiring example" in the EC document Quality of Public Administration - A Toolbox for Practitioners - <http://ec.europa.eu/social/main.jsp?catId=738&langId=sl&pubId=7757>.

A special office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies on the level of entire judiciary and individual courts.

Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

The 2013 amendment to the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. In 2015 the Supreme Court adopted the timeframes for different types of procedures as well as for different procedural phases for 2016 (as a part of the Criteria for quality of work).

**Q066 (2014):** 2014 A dedicated office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies at the level of entire judiciary and individual courts level.

Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The recent amendment of the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. Since the amendment was adopted in the middle of 2013, the first Annual report of Supreme Court will be for 2014 (to be published in 2015).

Consequently, only 2015 will be the (first) year to formally adopt the aforementioned Criteria.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

**Q066 (2013):** 2013 According to the priorities for the whole judiciary, set by the Supreme Court in the „Opening of the judicial year“ document for judicial year 2013, specific areas were monitored and the standards determined for the following areas:

1. Management of courts
2. Solving of oldest unresolved cases
3. Business process – Time management of judicial procedures and the reform of civil enforcement procedure
4. Disburdening the judges
5. Levelling of human resources

**Q066 (2012):** 2012: The Supreme court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). The system was awarded with Special mention in the 2012 Crystal Scales of Justice Competition and was defined as Inspiring example in the EC document Quality of Public Administration - A Toolbox for Practitioners – <http://ec.europa.eu/social/main.jsp?catId=738&langId=sl&pubId=7757>.

**Q067 (General Comment):** The Office for Court Management Development at the Supreme Court promotes the improvement in leadership and management of courts and the increase in effectiveness and efficiency. It is responsible for the preparation of different reports and analysis regarding work of courts and the promotion of best practices. The Department for the Organization and Development of Management of the Supreme State Prosecutor's Office of the Republic of Slovenia is responsible for monitoring the implementation of the Prosecution Policy and the Criteria for the Success of Prosecution of State Prosecutor's Offices.

**Q070 (General Comment):** In Slovenia there is a regular monitoring system in a form of collecting data on court statistics. Court statistics are collected and published four times a year by the Ministry of Justice. They include the data on the number of judges and court staff, number of incoming, resolved and pending cases, age of unresolved cases, length of proceedings, average time to resolve a case, type of decision, court backlogs, legal remedies and time to issue a court decision. Besides that, the data on court activities are automatically on national level, thus statistical analysis are made possible. All courts have access to a wide range of special reports, generated in the Court management information system. Reports include detailed information on court activities (for example length of specific phases of a court proceeding, top 20 oldest cases in certain area of law, etc.), human resources, court performance indicators (the critical indicators are marked red for unsatisfactory performance and green when meeting the standards) that provide guidance to presidents and directors of courts. The business intelligence system that creates priority reports derives the data from the Data warehouse of the Supreme Court. The same source is used for Court statistics publications by the Ministry of Justice. Each court is able to access the above mentioned reports at any moment, while some data are quarterly collected and published on national level (as prescribed by the Court rules).  
The satisfaction surveys are performed and results published bi-annually.

**Q070 (2015):** The data on court activities are automatically collected on national level, thus statistical analysis is made possible.

All courts have access to a wide range of special reports, generated in the Court management information system. Reports include detailed information on court activities (e.g. length of specific phases of a court proceeding, top 20 oldest cases per legal area etc.), human resources, court performance indicators (the critical indicators are marked red for unsatisfactory performance and green when meeting the standards) that provide guidance to presidents and directors of courts. These additional data available to court management officials are the reason, why we put check before "other elements".

The business intelligence system that creates priority reports derives the data from the Data warehouse of the Supreme Court. The same source is used for Court statistics publications by the Ministry of Justice.

Each court is able to access the above mentioned reports at any moment, while some data are quarterly collected and published on national level (as prescribed by the Court rules).

**Q070-1 (General Comment):** The BI tools that use data gathered in information system of the State Prosecutor's Office provide the heads of prosecution offices with up-to-date overview of the performance of state prosecutors and the functioning of the office. Heads can customize the level and content of information presented to them for the purpose of making quantitative data supported decisions on allocation of work among prosecutors, control of the case-flow.

**Q070-1 (2022):** "other": percentage of different types of decisions, value of proceeds of crime under freezing order, pronounced criminal sanctions...

**Q070-1 (2020):** "Other": percentage of different types of decisions, value of proceeds of crime under freezing order, pronounced criminal sanctions...

**Q072 (General Comment):** In accordance with the Prosecution Policy adopted in 2017, cases in which a final court decision at first instance has not been adopted within 3 years of filing a written charge with the court, are monitored in particular.

**Q083 (General Comment):** Since 2016, the Criteria on the work abilities does not include standards for the minimal expected number of solved cases (however the number of resolved cases is still monitored).

**Q083 (2018):** Since 2016, the Criteria on the work abilities does not include standards for the minimal expected number of solved cases (however the number of resolved cases is still monitored).

**Q083 (2016):** Since 2016, the Criteria on the work abilities does not include standards for the minimal expected number of solved cases (however the number of resolved cases is still monitored).

**Q083-1 (General Comment):** See Q114.

**Q083-2 (General Comment):** .

**Q083-3 (General Comment):** .

**Q120 (General Comment):** On the proposal of the State Prosecutor General, State Prosecutorial Council adopts Criteria for the assessment of state prosecutors' performance. They define quality and quantity indicators. The quantitative criteria define expected time for the resolution of cases and for typical procedural acts. The performance of the evaluated prosecutor is compared to other prosecutors at his/her office concerning the number of assigned, resolved and unresolved cases, number of attendances at the court hearings, conviction rate, pronounced sanctions and number of logged appeals. Head of state prosecutor's office as competent authority for the matters of state prosecution administration can alert the public prosecutor to his duty to meet the targets.

Regular individual assessment of the public prosecutors' work is carried out every three years. The assessment can also be carried out on demand of the State Prosecutorial Council, head of prosecutor's office, Minister or the prosecutor himself. In first three years after the appointment for the state prosecutor the assessment is carried out every single year.

**Q120-1 (General Comment):** Regular individual assessment of the public prosecutors' work is carried out every three years. The assessment can also be carried out on demand of the State Prosecutorial Council, head of prosecutor's office, Minister or the prosecutor himself. In first three years after the appointment for the state prosecutor the assessment is carried out every single year.

**Q120-1 (2018):** Every three years

## Spain

**Q066 (2015):** Every three months each Court sends statistics to the Council for the Judiciary with complete information about the activity of the Court.

**Q067 (2015):** Every three months each Court sends statistics to the Council for the Judiciary with complete information about the activity of the Court.

**Q070 (General Comment):** The category "other" encompasses: number of enforcement procedures, number of decisions appealed, number of rogatory letters issued, received and resolved, aid between courts, pending writings, form of termination of trials, etc.

**Q070 (2017):** The category "other" includes many other data such appeals, aid between courts, pending writings, etc.

**Q070 (2016):** The category "other" includes many other data such appeals, aid between courts, pending writings, enforcement proceedings, form of termination of trials, etc.

**Q083 (General Comment):** In accordance with the Agreement of November 29, 2018, of the Plenary of the General Council of the Judiciary, which approves Regulation 2/2018, on the remuneration regime of the Judicial and Prosecution Careers, in relation to variable remuneration for objectives, it corresponds to the Plenary of the Council of the Judiciary to approve the system for the determination of the performance objectives of each destination of the Judicial Career

**Q083-3 (General Comment):** In accordance with Royal Decree 432/2004, of March 12, which regulates the variable complement by objectives of the members of the Prosecution service, the State Attorney General, at the proposal of the Prosecution Inspection, after hearing the Prosecutor Council and prior the report from the Ministry of Justice, will determine for each annual period the objectives whose fulfillment will lead to the perception of the variable remuneration.

**Q120 (2021):** SOURCES: Royal Decree 432/2004, of March 12, which regulates the variable complement by objectives of the members of the Prosecution service.

Agreement of November 29, 2018, of the Plenary of the General Council of the Judiciary, by which Regulation 2/2018 is approved, regulating the remuneration regime Judicial career

*Question 071. Do you monitor the number of pending cases and cases that are not processed within a reasonable timeframe (backlogs) for:*

*Question 072. Do you monitor waiting time during judicial proceedings?*

*Question 083. Are there quantitative performance targets defined for each judge (e.g. the number of resolved cases in a month or year)?*

*Question 083-1. Who is responsible for setting these targets for each judge?*

*Question 083-1-1. What are the consequences for a judge if these targets are not met?*

*Question 083-2. Are there quantitative performance targets defined for each public prosecutor (e.g. the number of decisions in a month or year)?*

*Question 083-3. Who is responsible for setting these targets for each public prosecutor?*

*Question 083-3-1. What are the consequences for a prosecutor if these targets are not met?*

*Question 120. Is there a system of individual evaluation of the public prosecutors' work?*

*Question 120-1. Please specify the frequency of this evaluation:*

### Question 066

#### Belgium

##### (2021):

The College of Courts and Tribunals and its support service are working on the implementation of a quality system at the national level; there is no declination at the local level yet, but this project is in full evolution. Within the framework of the law of 14 February 2014 and the College's action plans (2018 and 2020), a quality system will be implemented in respect of judges. The intention is therefore to introduce an integrated framework of quality, internal control and (internal) audit models to replace the executive's existing ex ante control and monitoring systems.

#### Bulgaria

**(General Comment):** Supreme Judicial Council: According to the answers of SJC the competent bodies in these matters are:  
The Inspectorate to the SJC:

- checks the organization of the initiation and movement of judicial, prosecutorial and investigative cases, as well as the closing of cases within the established terms and in case of violations, signals the administrative head of the relevant body of the judiciary and the relevant College of the Supreme Judicial Council

- sends signals, proposals and reports to other state bodies, including the competent bodies of the judiciary;
- examines applications against violation of the right to examine and resolve cases within reasonable time.

The Judges' College of the SJC:

- annually analyses and reports the degree of workload of the bodies of the judiciary;
- requests and summarizes every 6 months information from the courts about their activity;
- resolves questions about the organization of the activity of the relevant system of judicial authorities;
- adopts rules for the allocation of cases between the judges who consider cases allocated according to Art. 9, para. 3, in order to equalize their total workload;
- determines the number of judicial officers according to the degree of workload on the proposal of or after agreement with the administrative heads of the bodies of the judiciary, and may open new and lays off positions.

The Plenary of the SJC:

- on the proposal of one of the Colleges, after coordination with the administrative heads of the bodies of the judiciary, determines the number of judges, prosecutors and investigators in all courts, prosecutor's offices and investigative departments according to the degree of workload;
- hears and accepts the annual reports of the bodies of the judiciary under Art. 84, item 16 of the Constitution.

.....

According to the answers of The Prosecutor's office of the Republic of Bulgaria:

The legal regulation is in Art. 84, item 16 of the Constitution of the Republic of Bulgaria, according to which the Parliament hears and accepts the annual report of the Prosecutor General submitted by the SJC and Art. 30, para. 2, item 4 of the Judicial System Act, according to which the Plenum of the SJC hears and accepts this annual report.

Approved by the Prosecutor General/ chief prosecutor is the Directive on the control activity of the Prosecutor's Office, aimed at ensuring the exact and uniform application of the laws in the performance of the functional duties of the prosecutors and investigators. The Directive regulates the conditions, order and procedures for carrying out control activities through audits, checks and analyzes of the work of the prosecutor's offices, the National Investigation Service, as well as individual prosecutors and investigators, outside of the institutional and official verification of the legality of their acts.

**(2021):** Please see the General Comments

**(2020): Judiciary system Act:**

Article. 198 (1) The criteria for the appraisal of a judge, prosecutor or an investigating magistrate shall be:

1. legal knowledge and skills of applying it;
2. skill of analysing legally relevant facts;
3. skill of making optimum working arrangements;
4. efficiency and discipline;
5. compliance with the rules of ethical behaviour.

(2) In the course of the appraisal under Paragraph (1) the following indicators shall be taken into account:

1. keeping deadlines;
2. number of instruments upheld and reversed and the grounds for this;
3. the results of inspections carried out by the Inspectorate with the Supreme Judicial Council,
4. the overall caseload of the respective judicial district and judicial authority, as well as the workload of the appraised judge, prosecutor or investigating magistrate compared to other judges, prosecutors or investigating magistrates in the same judicial authority.

(4) The time served by the judge, prosecutor or investigating magistrate as a permanent trainer at the National Institute of Justice shall also be included in the appraisal period. The evaluation of the work performance as a trainer shall be given by the Managing Board.

(5) The time served by the judge, prosecutor or investigating magistrate as an European Delegated Prosecutor shall also be included in the appraisal period. The evaluation of the results of their work under Regulation (EU) 2017/1939 shall become part of their appraisal.

Article. 199. (1) A judge shall be appraised under the following specific criteria:

1. complying with the schedule for conduct of court hearings;
2. skill of conducting a court hearing and drawing up a record of proceedings;
3. administrating cases and appeals, preparing for a court hearing;
4. number of appealed judicial instruments from among the appealable judicial instruments, appealed judicial instruments upheld, judicial instruments reversed or invalidated, in whole or in part, and the grounds for it; the ability to reason and justify judicial instruments and to analyse evidence shall be subject to evaluation.

(2) A prosecutor shall be appraised under the following specific criteria:

1. skills of planning and structuring steps in pre-trial and trial proceedings;
2. complying with the written instructions and orders of the superior prosecutor;
3. ability to make working arrangements and direct the investigating authorities and the teams participating in pre-trial proceedings;
4. number of unappealed prosecutorial instruments, including warrants to terminate and suspend criminal proceedings, number of final judicial instruments rendered on instruments submitted by the prosecutor appraised, as well as the final judicial instruments returning cases for the rectification of procedural breaches, and the reasons for this, number of appeals granted, the prosecutorial instruments upheld, modified and reversed upon an instance and on official review. (2) An investigating

## Croatia

**(General Comment):** According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15, 67/18), the president of the court evaluates the work of every judge according to Framework Criteria for the work of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework Criteria for the work of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

According to the State Attorney Office Act (Official Gazette, No. 67/18), State Attorneys' and Deputy State Attorneys' performance is evaluated every three years according to the following criteria: achieved results in resolving cases (based on the number of cases assigned to work on the basis of the Framework Criteria for the Work of Deputy State Attorneys and the average work results of county or municipal state attorney's offices for the previous three-year period), the quality of decisions and the justified use of legal remedies, proper performance of the state attorney's duty - observance of deadlines during the procedure, other activities of the State Attorney and the Deputy State Attorney, experience in performing the duty of state attorney and compliance of conduct with the Code of Ethics of State Attorneys and Deputy State Attorneys. The Framework criteria are adopted by the Minister in charge of judicial affairs, with the prior opinion of the Chief State Attorney of the Republic of Croatia.

**(2022):** According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15, 67/18, 126/19, 130/20, 21/22, 60/22), the president of the court evaluates the work of every judge according to Framework Criteria for the work of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework Criteria for the work of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice with the prior opinion of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

According to the State Attorney Office Act (Official Gazette, No. 67/18, 21/22), State Attorneys' and Deputy State Attorneys' performance is evaluated every three years according to the following criteria: achieved results in resolving cases (based on the number of cases assigned to work on the basis of the Framework Criteria for the Work of Deputy State Attorneys and the average work results of county or municipal state attorney's offices for the previous three-year period), the quality of decisions and the justified use of legal remedies, proper performance of the state attorney's duty - observance of deadlines during the procedure, other activities of the State Attorney and the Deputy State Attorney, experience in performing the duty of state attorney and compliance of conduct with the Code of Ethics of State Attorneys and Deputy State Attorneys. The Framework criteria are

**(2018):** According to the Courts Act (Official Gazette, number 28/13, 33/15, 82/15), the president of the court evaluates the work of every single judge according to Framework for the workload of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework for the workload of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

**(2017):** According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15), the president of the court evaluates the work of every single judge in his/her court for the previous year on the basis of the following standards: the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework for the workload of judges, result of work in different kinds of cases in absolute numbers and percentages, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

## **Cyprus**

**(General Comment):** Quality standards are applied in practice

**(2017):** Quality standards are applied in practice

**(2016):** There are no written standards but in practice there are quality standards.

**(2015):** In practice there are quality standards

**(2014):** In practice there are quality standards

## **Denmark**

**(2019):** No, we use quantitative measures. Quality is usually measured as length of time to finalize a case.

**(2016):** No, we use quantitative measures. Quality is measured as length of time to finalize a case.

**(2015):** The only standards are objective standards for example acceptable timeframes to finalize a case.

## Estonia

**(General Comment):** Estonia has developed a quality system consisting of 3 parts. The first part contains the quality standards (good practice) for the management of the court that describe activities related to the chairman of the court. The second part contains the quality standards for the administration of courts and is focused on the different roles of the parties involved in the administration of courts: directors, Ministry of Justice, Council for the Administration of Courts. The third part contains quality standards for the court proceedings and is addressed to all the judges. All of the three parts of the quality standards have been discussed and approved by the Council for Administration of Courts, respectively in 2012, 2013 and 2015.

## Finland

**(General Comment):** There are no quality standards covering the whole judiciary in Finland. Instead there are several quality projects going on, for example the Quality Project of the Administrative Courts, which started in 2020 and concerns all administrative courts in Finland. The Rovaniemi Court of Appeal Quality Projects have produced quality benchmarks, which evaluate the quality of the adjudication in courts of law. Last assessment was conducted in 2020.

**(2021):** Prosecution Services' system quality improvement project is underway.

**(2020):** Prosecution Services' system quality improvement project is underway.

**(2015):** There is a Quality Project of the courts in the jurisdiction of the Court of Appeal of Rovaniemi. (The jurisdiction of the Court of Appeal of Rovaniemi is the northernmost of the six appellate jurisdictions in Finland.) In 1999, the courts in the jurisdiction of the Court of Appeal of Rovaniemi launched a project for improvement of quality in adjudication. The quality project covers both civil cases and criminal cases. The objective of the quality project is to develop the functioning of the courts further and further so that the proceedings meet the criteria of a fair trial, that the decisions are well reasoned and justified, and that the services of the courts are affordable to the individual customers. The main working method consists of systematic discussions among the judges and also between the judges and stakeholders. The development work is steered by the development committee of the quality project. Normally four working groups for quality are set up for each year. The membership consists of judges from each of the District Courts in the appellate jurisdiction, members of the Court of Appeal, and referendaries of the Court of Appeal. Also prosecutors, private attorneys, public legal aid attorneys and heads of pre-trial investigation may serve as members in the working groups for quality. Each working group for quality is tasked to deal with one of the development themes which have been selected. The reports of the working groups are presented at the Quality Conference, they are discussed, and quality objectives based on the reports are set for the following year. The Report of Quality, containing the final reports, is published every year.

There is also a quality project of the courts in the jurisdiction of the Court of Appeal of Helsinki. Quality Project consists of working methods of two kind: cooperation with the University of Helsinki and working groups. Working groups for quality are set up for each year. The membership consists of judges from District Courts, members of the Court of Appeal, referendaries of the Court of Appeal, prosecutors and lawyers. Each working group for quality is tasked to address to one of the development themes which have been selected. The reports of the working groups are presented at the conference called 'Day of Jurisdiction'.

In addition there is a cooperation project between administrative courts. Some topics of the project have related to the quality standards. The reports of the project have discussed the matters like the factors of quality at administrative courts and the collection of information on quality.

It is also worth mentioning that on 15 October 2009, the presidents of Finnish Courts of Appeal proposed that the Finnish Association of Judges should begin work on drafting ethical guidelines for judges. A working group was set and the draft on ethical principles was discussed widely. The principles were formally released at the Judge Day event held in Helsinki on 12 October 2012.

## France

**(General Comment):** Standards of quality developed for the public administration are utilised within the judicial system. The charter of administrations thus establishes the rules for welcoming litigants in all courts and may lead to certification. There are also local initiatives aimed at implementing a 'quality system' based on certification by an external body, which consist of establishing procedures describing the process of reception, organisation of work, and management of a case. As regards administrative justice: the rate of annulment and reformulation of jurisdictional decisions must be kept below 15% and the backlog of cases older than two years below 7.5% of the total caseload.

**(2022):** It is challenging to distinguish between patterns in automatically generated texts, with France preferring the use of the concept of framework. The OARM, a tool to assist magistrates in drafting, provides a library of pre-written paragraphs and standard decisions that allow magistrates to start from these elements and then adapt them to each case they handle. The JAF bible includes frameworks and paragraphs related to disputes handled by family court judges.

**(2021):** Quality standards developed for public administration are used in the judicial system. The charter of the administrations thus sets the rules for the reception of litigants in all courts and can lead to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consists in establishing procedures describing the reception process, the organisation of work and the management of a case.  
Source DSJ

**(2020):** "If yes, please specify: Quality standards developed for public administration are used in the judicial system. The charter of the administrations thus sets the rules for the reception of litigants in all the courts and can lead to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consist in establishing procedures describing the reception process, the organization of work and the management of a case. With regard to administrative justice: the rate of annulment and reversal of jurisdictional decisions must be kept below 15% and the stock of cases older than two years below 7.5% of the total stock."

### **(2019):**

Quality standards developed for public administration are used in the judicial system. The charter of administrations thus sets out the rules for the reception of litigants in all courts and may give rise to certification. There are also local initiatives to set up a "quality system" based on certification by an external body, which consists of establishing procedures describing the process of reception, work organisation and management of a case.  
Administrative justice: the rate of annulment of court decisions must be kept below 15% and the number of cases pending for more than two years.

**(2016):** Quality standards developed for public administration are used in the judicial system. The charter of the administrations determines the rules for the reception of litigants in all courts and may give rise to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consists in establishing procedures describing the process of reception, organisation of work and management of a case.

## Germany

**(General Comment):** Due to judicial independence, there are no national level quality standards.

**(2022):** Due to judicial independence, there are no national level quality standards.

**(2013):** For 2010, 2012 and 2013, no information was provided from Mecklenburg-Western Pomerania and Thuringia. Four Landers replied “Yes”, while the remaining Landers answered “No”.

In Baden-Württemberg, the performance of each court is compared against the others in regard to number and duration of proceedings. Key performance indicators on performance ability of the courts are ascertained and compared at the Lander level.

A comprehensive quality management system has been introduced in Schleswig-Holstein at all courts and public prosecution offices. All of the accessible areas of the court administration are subject to quality management. Judicial independence and the professional independence of Rechtspfleger present natural constitutional and statutory boundaries that must always be considered.

In Brandenburg, a quality management system seeks to guarantee that quality demands that are statutorily prescribed, self-imposed, or demanded by users of the system are fulfilled with an optimal use of resources. These last years, a number of strategies have been implemented for ensuring quality in the justice system by means of cost and performance accounting, a controlling system, budgeting of personnel costs, benchmark procedures, balanced scorecard, the EFQM Model, various instruments for personnel and organisation development, calculation of personnel requirements, optimisation of business processes, surveys of attorneys, citizens, and employees, and evaluation instruments both for individual judicial and public prosecution work as well as for the courts and public prosecution offices as organisational units. The increased use of modern technology (e.g. Internet) has opened up the possibility for the justice system to reach a large number of citizens and, thus, to offer court users the best possible service. Likewise, the continuous expansion of electronic legal transactions offers new opportunities for improvement in the quality of the justice system with regard to the performance characteristics public accessibility and public service. However, the developments and models named are not uniformly established in the Lander. In Lower Saxony, a quality strategy was developed through the surveys AgiL (performance comparison of local courts) and LiVE (performance comparison of regional courts). This is based on the assumption that it is possible to compare courts by the collection of data. Following the comparison, an analysis is conducted to determine the reasons for which better numbers are achieved at one court location over another. These are then discussed in expert groups and measures are developed to promote those tools that seem likely to succeed for the duties at all court locations. The surveys do not serve to evaluate individual employees but rather to uncover structures that promote performance, which can then be transposed. This quality management concept takes place together with judicial councils and personnel representatives.

## Greece

**(General Comment):** Quality standards are set by the Code of Organization of Courts and Status of Judicial Officers (Law 1756/1988).

**(2022):** According to Law 4938/2022 (art.104) of the organization of court and tribunals code.

**(2021):** Most of the measures taken recently in Greece aim at speeding up administrative justice. However, the law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

**(2017):** Most of the measures taken recently in Greece aim at speeding up Justice. However the Law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

## Hungary

**(General Comment):** Second instance courts have to prepare a note on the decision and the trial procedure of the first instance court, based on professional criteria in every case. In this note, the court of appeal has to examine: the application of substantive, procedural and administrative regulations; the preparation of the hearings; the quality of the judges trial leading practice; if the coercive measures were well founded; if the hearings were set timely; if the ruling was transcribed in time; if the decision was edited correctly. The conclusions are summarized and judges of first instance courts are informed about them at least once a year.

Furthermore, the departments of the Supreme Court (Kúria) responsible for examining the judicial practice evaluates the practice of the courts and regularly inform judges about their experience.

## Ireland

**(2021):** With effect from October 1 2022, a statutory system providing for investigation and adjudication of complaints in relation to judicial conduct has been commenced pursuant to Judicial Council Act 2019.

## Italy

**(General Comment):** In Italy there is not a strict quality system as such. However, there is a regular monitoring system in place which tracks the performance of court activities.

## Latvia

**(General Comment):** In January 15, 2020 the "Visitors service standards of the district (city) courts and regional courts" were approved. This document summarizes the general principles related to functions such as judicial reception and providing with information. The standards help court staff to raise their professionalism and understand the court visitors servicing values.

**(2022):** The reply is partly "yes" because according to the Law on Judicial Power Section 27.1., a Chief Judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (standard of time periods for adjudication of matters) prior to the beginning of each calendar year, in co-operation with court judges. This standard shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and other basic principles related to the guarantee of fair trial. A Chief Judge of a court shall approve the standard and supervise the actual time periods of examining matters in a court. He/she shall submit information to the Board of Justice regarding the approved standard until 1 February of each year. In January 15, 2020 the "Visitors service standards of the district (city) courts and regional courts" were approved. This document summarizes the general principles related to functions such as judicial reception and providing with information. The standards help court staff to raise their professionalism and understand the court visitors servicing values.

**(2021):** Partly yes, according to the Law on Judicial Power Section 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year.

**(2020):** Partly yes, according to the Law on Judicial Power Section 27.1. the Court President before the beginning of each calendar year, shall plan and determine the objectives of the court work in relation to average time periods for the examination of cases in a court (the standard of time periods for the examination of cases) in cooperation with court judges. The standard of time periods for the examination of cases shall be determined by taking into account the court resources and the necessity to ensure the right of a person to the examination of a case in a reasonable time period and in conformity with other basic principles for the examination of cases. The Court President shall submit the standard case examination time limits for approval to the Judicial Council until 1 February of each year.

**(2019):** In January 15, 2020 the "Visitors service standards of the district (city) and regional court" is adopted. This document defines the procedure by which the employee of the district (city) and regional court shall ensure the servicing of the court visitor, the participant in the proceedings, its representative (hereinafter - customer) (the acceptance of the client, the provision of information and communication in person, by telephone and by electronic means) and basic customer service values, general principles and basic rules for customer service.

**(2017):** According to the Law on Judicial Power Art 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year. First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

**(2016):** Partly yes, according to the Law on Judicial Power Section 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year.  
First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

**(2015):** Since 2008 courts apply 'The visitors service standards of the district (city) courts and regional courts'. This courts visitor's service standard summarizes the general principles of judicial reception and providing with information. Standard helps court staff to raise their professionalism and understand the court visitors servicing values.  
On 2015 May 18 Council of Justice approved guidelines on communication of the court system. The aim of the guidelines is to promote the effective functioning of the judiciary and promote the public confidence in the judiciary, creating a positive Court's image and enhance its' authority in society.

**(2014):** In 2014, for the first time, standards of time periods for adjudication of matters were submitted to the Board of Justice.

## Malta

**(General Comment):** There exists a Code of Ethics for the members of the Judiciary which, though not providing for the organisation and quality of the judicial work, does lay upon the members of the Judiciary certain obligations which are important in ensuring the transparency and independence of the judicial process.

**(2017):** There exists a Code of Ethics for the members of the Judiciary which, though not providing for the organisation and quality of the judicial work, does lay upon the members of the Judiciary certain obligations which are important in ensuring the transparency and independence of the judicial process.

**(2016):** There exists a Code of Ethics for the Judiciary which, though not providing for the organisation and quality of judicial work, does lay upon the members of the Judiciary, certain obligations which are important in ensuring the transparency and independence of the judicial process.

## Netherlands

**(General Comment):** There are quality standards that are measured by annual statistical figures per individual court. Examples are the scores of customer satisfaction surveys, the percentage of cases judged by three instead of one judge, and case processing times (the so-called 'Kengetallen gerechten'). The Team Judicial Quality (TJK, Team Juridische Kwaliteit) studies topics in a thematic manner, on a structural basis. A team of public prosecutors participates in TJQ and assesses the judicial work of colleagues in a structured and systemic way. There is often a baseline assessment, as well as a follow-up, sometimes a second follow-up. The assessment framework is adjusted if necessary. See also [www.tweedekamer.nl/kamerstukken/detail?id=2018D52900&did=2018D52900](http://www.tweedekamer.nl/kamerstukken/detail?id=2018D52900&did=2018D52900). There are professional standards too, developed to show what 'good justice' entails. These standards are publically available on the website of the Judiciary. See <https://www.rechtspraak.nl/Organisatie-en-contact/Rechtspraak-in-Nederland/Rechters/Paginas/De-professionele-standaarden-van-de-rechters.aspx>.

**(2019):** There is a so-called Team Judicial Quality (Team Juridische Kwaliteit), which studies topics in a theme-wise manner. This is part of the program 'Programma OM Strafvordering 2020'. A team of public prosecutors participates in TKJ and assesses the judicial work of colleagues in a structured and systematic way. There is often a first assessment (baseline) and a first follow-up assessment, and sometimes even a second follow-up. If necessary, the assessment framework is adjusted.

## Poland

**(General Comment):** The Ministry of Justice collects statistical data sent by common courts concerning their current activity, and also evaluates annual information on the activity of courts, prepared by presidents of courts of appeal about the activity of courts within the area of appeals, within the scope of tasks entrusted to them. In addition, the Minister of Justice convenes a meeting with presidents of courts of appeal at least once a year to discuss issues related to exercising supervision. Within the framework of that evaluation, a multifaceted analysis of collected statistical data is conducted, inter alia, an indicator of stability of jurisprudence, an indicator of control over the inflow of court cases or time of adjudication in incoming cases. However, no legal provision defines specific quality standards for individual indicators, concerning organisational quality and/or justice quality policy, to be formulated for the justice system as a whole.

**(2016):** The most important indicator comes from evaluation of judgements through second instance procedure. In this purpose "judgement stability" ratio are in use as a ratio of judgements reversed or annulled in procedure of appeal.

## Portugal

**(General Comment):** Law on the organisation of the judicial system (Law 62/2013 of 26 August) sets out that the High Council for the Judiciary and the Prosecutor-General, in liaison with the member of Government responsible for the justice, establish, within their respective competences, the strategic objectives for first instance courts for a three year period. These entities are also responsible for setting, every year, the strategic objectives of first instance courts for the following judicial year. Taking into account the results obtained in the previous year and the strategic objectives formulated for the subsequently year, the president of the court and the public prosecutor coordinator, after hearing the judiciary administrator, articulate proposals for the procedural objectives for each court. For instance, the Prosecutor General's Directives and Instructions define good practices of functional performance at national level and their compliance may be viewed an indicator of the quality of the work developed (example, Directive 5/2019, on acting in cases of domestic violence (<https://dre.pt/home/-/dre/126870404/details/maximized> - text in Portuguese).

In addition to Directives and Instructions, the performance assessment system for prosecutors is based on quality criteria/performance parameters, as a rule, uniformly applied at national level.

**(2021):** For instance, the Prosecutor General's Directives and Instructions define good practices of functional performance at national level and their compliance may be viewed an indicator of the quality of the work developed (example, Directive 5/2019, on acting in cases of domestic violence (<https://dre.pt/home/-/dre/126870404/details/maximized> - text in Portuguese)). In addition to Directives and Instructions, the performance assessment system for prosecutors is based on quality criteria/performance parameters, as a rule, uniformly applied at national level.

In addition to Directives and Instructions, the performance assessment system for prosecutors is based on quality criteria/performance parameters, as a rule, uniformly applied at national level.

## Romania

**(General Comment):** There are no formal standards for quality established for the whole judiciary. However, informal standards are being used (such as training, quality of the reasoning, assessment of the activity of the judges, assessment of the good reputation of the judges etc.).

More precisely, the activity of courts is evaluated and monitored periodically, on the basis of certain statistical data/performance indicators, such as those presented at question 70. The evaluation is achieved by verifications carried out by inspectors of the Judicial Inspection of the SCM, by elaborating periodical reports. The schedule and thematic of those verifications are approved every year by the SCM.

At organizational level, there are no quality standards established for courts. It may be considered that such standards exist at individual level, for each judge, by the indicators for the evaluation of professional activity.

**(2012):** In the frame of the 2012 exercise, a reference was made to the "Court Optimisation Project" financed by the World Bank, implemented from October 2011 to March 2013. The final recommendation included the introduction of Key Performance Indicators (KPIs), such as the clearance rate, the number of cases older than one year, the number of cases solved within 1 year, and the comparative measurement system.

## Slovak Republic

**(General Comment):** Internal revision of the court is a type of control of the court and judges, which aims to check the current state of the judiciary, to identify the causes of shortcomings in the performance of the judiciary and to propose measures to eliminate them.

**(2020):** Internal revision of the court is a type of control of the court and judges, which aims to check the current state of the judiciary, to identify the causes of shortcomings in the performance of the judiciary and to propose measures to eliminate them.

**(2014):** There is a system to evaluate the overall functioning of courts with respect to the Manifesto of the Government of the Slovak Republic for the period of 2010-2014:

[http://www.vlada.gov.sk/data/files/855\\_the-manifesto-of-the-governmentof-the-slovak-republic-for-the-period-of-2010-2014.pdf](http://www.vlada.gov.sk/data/files/855_the-manifesto-of-the-governmentof-the-slovak-republic-for-the-period-of-2010-2014.pdf)

## Slovenia

**(General Comment):** The Supreme Court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). A special office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies on the level of entire judiciary and individual courts. Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

The 2013 amendment to the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. Since 2015, the Supreme Court has been adopting the timeframes for different types of procedures as well as for different procedural phases for next year (as a part of the Criteria for quality of work).

As for public prosecution, the criteria for quality of work are defined in the Prosecution Policy (adopted by the Prosecutor General), while the quantitative aspects of work are defined in the Criteria for evaluating the performance of the state prosecutor's offices adopted by the State Prosecutorial Council.

**(2015):** The Supreme Court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). The system was awarded with Special mention in the 2012 Crystal Scales of Justice Competition and was defined as "Inspiring example" in the EC document Quality of Public Administration - A Toolbox for Practitioners - <http://ec.europa.eu/social/main.jsp?catId=738&langId=sl&pubId=7757>.

A special office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies on the level of entire judiciary and individual courts.

Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

In 2015 the Supreme Court adopted the timeframes for different types of procedures as well as for different procedural phases for 2016 (as a part of the Criteria for quality of work).

**(2014):** 2014 A dedicated office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies at the level of entire judiciary and individual courts level. Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports. The recent amendment of the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. Since the amendment was adopted in the middle of 2013, the first Annual report of Supreme Court will be for 2014 (to be published in 2015). Consequently, only 2015 will be the (first) year to formally adopt the aforementioned Criteria. The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

**(2013):** 2013 According to the priorities for the whole judiciary, set by the Supreme Court in the „Opening of the judicial year“ document for judicial year 2013, specific areas were monitored and the standards determined for the following areas:

1. Management of courts
2. Solving of oldest unresolved cases
3. Business process – Time management of judicial procedures and the reform of civil enforcement procedure
4. Disburdening the judges
5. Levelling of human resources

**(2012):** 2012: The Supreme court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. ## Spain

**(2015):** Every three months each Court sends statistics to the Council for the Judiciary with complete information about the activity of the Court.

## Question 067

## Belgium

**(2021):** The College of Courts and Tribunals is working on the implementation of a quality system. This system is based on international scientific references and will be broken down into ten or so themes that constitute the management modules of an organisation. These management modules cover all aspects of an organisation, including organisational management, process management, human resources management, organisational culture, information and communication, financial management, facility management and information and communication technologies. The College of Courts and Tribunals and the steering committees work together to develop their maturity in these different areas.

## **Bulgaria**

**(2020):** The Supreme Judicial Council, through its Commission for Attestation/Appraisal and Competitions at the Judges College/Chamber of the Supreme Judicial Council and the Commission for Attestation/Appraisal and Competitions at the Prosecutorial College/Chamber, are the bodies that perform an objective assessment of the professional, business and moral qualities of magistrates.

## **Denmark**

**(2019):** As above

**(2018):** The public prosecution is not part of Danish Court Administration.

**(2017):** Because judges are independent, we do not interfere with a judge decision. However, there is always the possibility to appeal a court decision if either of the parties disagree with the verdict.

**(2016):** As above.

## **France**

**(2021):** Source DSJ

**(2020):** The answer is no for the administrative justice.

**(2014):** 2010: State prosecutors draw an annual report on the activity, management of their public prosecution office and on the enforcement of the law, as well as an annual report concerning the measures of custody and the condition of the custody facilities.

**(2012):** 2012: in French law on the judicial organisation, there is no statutory or regulatory requirement providing specialised staff in courts responsible for quality norms. However, as part of the maintenance dialog to have operational resources, each court fills a document for the Ministry of Justice, comprising informations such as the number of handled cases, pending cases, the number of judges and administrative staff, as well as the performance objectives to reach. This document is not available on the intranet to all of the staff. Only agents of the Ministry in charge of the maintenance dialog have access to these figures thanks to appropriate softwares.

## **Germany**

**(2022):** Due to judicial independence, there are no national level quality standards.

**(2021):** Due to judicial independence, there are no national level quality standards.

**(2020):** Due to judicial independence, there are no national level quality standards.

## **Greece**

**(2021):** It depends on the court, the answer was changed from yes to no although there are judicial services that have answered positively the majority have answered no.

**(2017):** The Law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

### **Ireland**

**(2021):** Secretary of Judicial Council and Judicial Conduct Committee of that Committee investigate and adjudicate complaints.

### **Malta**

**(2018):** There are general quality standards that apply to the public sector, but not specific quality standards that monitor the implementation of quality standards within the judiciary or the prosecution services.

### **Netherlands**

**(General Comment):** Courts: there are staff members (policy officers) within the offices that coordinate the quality in that office.

Public prosecution: At the head office of the public prosecution (Parket-General), there is personnel responsible for producing, implementing, evaluating and auditing quality measures. These are the TJQ (as mentioned in Q66), Team Processes and Information (standard processes and procedures) and the Scientific Bureau OM (national guidelines and policy regulations).

**(2017):** yes

### **Poland**

**(General Comment):** Inspection departments operate in the appellate and regional courts. The task of the judges working in these departments is to perform on behalf of the president of the court activities in the scope of supervision over the administrative activity of the courts in the area of the operation of a given appellate or district court. Supervision consists in taking actions to improve the office of the courts or increase the efficiency and level of work organization culture in the courts. For this purpose, visits of departments in courts or surveys of recognized cases of a given category are carried out, the secretariats of departments in the courts are controlled.

Activities in the scope of administrative supervision can not enter the field in which judges and assessors are independent.

### **Portugal**

**(General Comment):** The High Council of the Public Prosecution Service has “inspectors” (“inspectores”) who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

**(2022):** The High Council of the Public Prosecution Service has “inspectors” (“inspectores”) who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

**(2021):** The High Council of the Public Prosecution Service has “inspectors” (“inspectores”) who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

**(2020):** The High Council of the Public Prosecution Service has “inspectors” (“inspectores”) who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

### **Slovak Republic**

**(General Comment):** Judicial Council, Council of Prosecutors and disciplinary commissions.

**(2020):** Judicial Council, Council of Prosecutors and disciplinary commissions.

**(2019):** Judicial Council, Council of Prosecutors and disciplinary commissions

## **Slovenia**

**(General Comment):** The Office for Court Management Development at the Supreme Court promotes the improvement in leadership and management of courts and the increase in effectiveness and efficiency. It is responsible for the preparation of different reports and analysis regarding work of courts and the promotion of best practices. The Department for the Organization and Development of Management of the Supreme State Prosecutor's Office of the Republic of Slovenia is responsible for monitoring the implementation of the Prosecution Policy and the Criteria for the Success of Prosecution of State Prosecutor's Offices.

## **Spain**

**(2015):** Every three months each Court sends statistics to the Council for the Judiciary with complete information about the activity of the Court.

## **Question 070**

## **Austria**

**(General Comment):** .

**(2022):** satisfaction of court staff: only supreme administrative court

**(2017):** "other": e.g. certain kinds of decisions, clearance rate (annually)

## **Belgium**

**(2021):** In 2021, the College of Courts and Tribunals has started a project to make a central inventory of the backlog in the courts and tribunals using indicators such as length of proceedings, number of pending cases, Disposition time, backlogs.

**(2017):** There are ad hoc systems for monitoring activities within the courts. There is a central service responsible for the collection of statistics which ensures the annual publication of statistics. The Central Statistical Service is developing a uniform and coordinated policy, but there is (as yet) no central system for regular monitoring of activities.

**(2016):** There are ad hoc systems for monitoring activities within the courts. There is a central service responsible for the collection of statistics which ensures the annual publication of statistics. But there is no (yet) central system for regular monitoring of activities.

## **Croatia**

**(2019):** As regards "number of appeals", from 2019 we are able to get this data from our case management system.

## **Denmark**

**(2021):** Danish Court Administration is typically not doing this. A responsible court follow their cases though.

**(2020):** We value independence high. Therefore Danish Court Administration does not evaluate the performance or productivity of individual judges. We follow overall productivity and case flow though as that is used to allocate resources and to find the court most in need of vacant judge positions.

**(2019):** Courts are followed yearly in a yearly report. District courts receives monthly a report about case flow, pending cases, backlogs, weighted cases and the time it takes to finalize cases.

**(2017):** In Denmark we have a management system which information is updated monthly for the district courts where the points above are shown. For the High Courts and the Supreme Court, the case flow is not followed so often and in a so detailed way, but there are also much fewer cases. "Other": activity in terms of weighted cases and also pending cases

**(2016):** The so called "weighted cases" are measured in order to have a measure for the activity.

## **Estonia**

**(General Comment):** The scope of the monitoring system is extended to the results of proceedings; the categories of cases; the number of decisions appealed and revoked, fully or partially. The waiting time and the 'age' of pending (not solved) cases are also monitored. It is worthy of mention that every year all the courts and the Ministry of Justice enter into an agreement according to which courts should aim to carry out structural changes and to make changes in case-flow management that will ultimately ensure efficient proceedings. The content of the agreement has changed since 2017. The goals are more general and the same for all the courts (except The Supreme Court).

**(2017):** See previous general comments.

**(2016):** see general comments

## **Finland**

**(General Comment):** All courts keep statistics of the mentioned court activities in the operational case management systems. The National Courts Administration can access these figures through a reporting system.

**(2019):** satisfaction of court staff is monitored with job satisfaction surveys which are taken every second year

## **France**

**(2021):** Source DSJ and Council of State

**(2020):** Judicial and administrative jurisdictions combined.

**(2019):** Civil and criminal justice: After the deployment of innovative applications, satisfaction questionnaires are sent to users in the courts (heads of courts, directors of registries, judges and registry officials) in order to improve change support actions and the implementation.

In addition, with regard to victims, the Ministry of Justice will conduct a satisfaction survey in the second half of 2019 among victims of criminal offences who resort to victim support associations. The results of this survey, similar to a previous survey conducted in 2011, could be published in 2020. Likewise, the Ministry of Justice is attentive to citizens' views on the way they are received in the courts. For several years now, surveys have been conducted on the reception in the courts by a service provider pretending being a litigant. In 2018, an online survey, coupled with a face-to-face survey, was conducted in seven 1st instance courts "tribunaux de grande instance" among litigants appearing in these courts. In 2019, the satisfaction survey will be carried out in all "tribunaux de grande instance" via an online survey accessible by internet address or QR code. Finally, a national survey is also under way on the reception of litigants in the courts in the specific context of the implementation of social centres within the "tribunaux de grande instance" and the integration within these courts of the three separate courts that previously dealt with these types of litigation. The survey, carried out among court staff, aims to assess the difficulties encountered by persons presenting themselves at the reception desk and to identify any corrections that could be included in the texts.

The reply to the question encompasses replies from administrative justice and civil and criminal justice.

**(2018):** The coverage rate of cases as well as the structure of civil or criminal litigation are used by the courts.

In addition, other indicators usefully complete the analysis: .

Share of decisions on the merits in completed cases (civil activity).

Share of referrals in completed cases (civil activity).

Theoretical time to sell off the stock.

Average age of the stock.

Percentage of cases over 12 months in stock (civil activity).

**(2017):** The number of cases referred is an indicator used only by administrative courts.

The courts have business applications to monitor their civil and criminal activities. At national level, data from these applications is

from these applications are collected automatically via infocentres, reprocessed and cross-referenced, then in the form of tables or graphs. These reports can be generated on a monthly basis, except for certain activity data (court of appeal).

These reports can be generated on a monthly basis, except for certain activity data (criminal courts, juvenile court judges, enforcement of sentences), for which reports are generated annually.

These infocentres enable the courts to monitor statistics and manage their activity. They enable the central administration to They enable the central administration to prepare management dialogues from a performance perspective.

**(2016):** The number of cases subject to referral is an indicator used only by administrative courts.

Courts have business applications to monitor their civil and criminal activities. At national level, data from these applications are collected automatically via info-centres, processed and cross-referenced, and then presented in the form of tables or graphs. These refunds can be generated monthly, except for certain activity data (assize court, juvenile judges, enforcement of sentences), for which the refunds are annual.

These info-centres enable courts to carry out a statistical follow-up and to monitor their activities. They allow the central administration to prepare management dialogues from a performance perspective.

**(2015):** The number of cases being referred is used only by administrative courts.

The rate of coverage of cases is used by judicial courts.

The state of stocks by age group is used by administrative courts.

**(2014):** 2013, 2014, the category "others" includes:

- the coverage rate of cases (used by judicial courts)

- the state of the stocks per age group (used by administrative courts)

It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts.

**(2013):** 2013, 2014, the category "others" includes:

- the coverage rate of cases (used by judicial courts)
- the state of the stocks per age group (used by administrative courts)

It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts.

**(2012):** 2010, 2012: the category "others" includes the state of the stocks per age group. It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts

## Germany

**(General Comment):** The Federal Statistical Office collects key figures on court performance (incoming cases, resolved cases, pending cases on the beginning and the end of a year) from the federal states. The Federal Statistical Office processes and publishes the data once per year for the civil, criminal, family, administrative, labour, social and financial courts.

**(2022):** The monitoring activities no. 1-4 were selected by all respondent federal states and the activities no. 5 and 9-13 were selected by the majority of the federal states.

A minority of the federal states (as in previous years) reported the following "other" monitoring activities: statistics on the nature of resolution (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.), number of main-trial days, participation of interpreters and experts. (While the situation has not changed since the last cycle, the option "other" was not selected this time for the purpose of methodological consistency with the answers to other questions in this section). One federal state has not yet replied.

**(2021):** The monitoring activities no. 1-4 were selected by all Länder, the activities no. 5 and 9-13 were selected by most Länder and the activities under "other" were only mentioned by a some Länder (5).

**(2020):** The monitoring activities mentioned under "other" were reported only by some of the Länder.

**(2019):** Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

**(2018):** Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

**(2016):** other: Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

**(2014):** In 2014, some of the Landers did mention a monitoring system concerning other court activities, namely statistics on the nature of resolution (e.g. in civil matters cases are dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

**(2013):** In 2013, seven Landers communicated information on their regular monitoring system. For example, Baden-Württemberg referred to calculation of the specific personnel requirements on a mathematical-analytical basis. Bavaria mentioned the type of proceedings, form of decision, etc. for courts of labour and social jurisdiction and workload, ratio of part-time employees; average age of employees, training and sick days, duration of proceedings in months, ratio of appeals for courts of general jurisdiction. In Brandenburg, the number of pending cases and the ratio of terminated proceedings as against incoming cases are monitored.

**(2012):** For 2010 and 2012, five Landers did not provide any reply. Seven Landers communicated detailed information on their regular monitoring system of courts' activity. Among the main other monitored parameters are the deadlines for the drafting of judgments (Bavaria), the number of pending cases and the ratio of terminated proceedings as against incoming cases (Brandenburg), the nature of resolution – cases dealt with by contentious judgment, by acknowledgment, by settlement etc. (Hamburg), cases allocated among staff, i.e. caseload quota (Hesse); finance benchmarks, item costs, standardized deployment of person hours related to product (Saxony-Anhalt).

## Greece

**(General Comment):** According to Law 4938/2022 (art. 99-104), supreme judges appointed as inspectors for two year's term, redact every year general reports on the operation of each court and prosecutor's office in their district and recommend the necessary measures for the proper functioning of the service.

**(2022):** Many courts have chosen the option number of Appeals but not all. The Council of State has additionally selected the options number of Appeals and ratio of Appeals. The General Commission of the State for ordinary administrative courts has additionally selected the options number of Appeals and clearance rate.

According to Law 4938/2022 (art. 99-104), supreme judges appointed as inspectors for two year's term, redact every year general reports on the operation of each court and prosecutor's office in their district and recommend the necessary measures for the proper functioning of the service.

Regarding administrative courts, this task is fulfilled by the General Commission of the State for ordinary administrative courts. In the near future we hope to be able to use a business intelligence program, in order to extract composite statistical data without contacting any court.

[E-mail: g-epitropia-d-d@otenet.gr]

**(2019):** The Greek government has introduced a new system for organizing and evaluating the planning and implementation of public sector actions and projects, which introduces among others, monitoring court activities. (L. 4622/2019 art. 49 foll.)

**(2017):** Regarding Administrative Courts, this task is fulfilled by the General Commission of the State for ordinary administrative courts. In the near future there will be a possibility for the General Commission of the state to use a business intelligence program, in order to extract composite statistical data without contacting any court [E-mail: g-epitropia-d-d@otenet.gr]

## Hungary

**(General Comment):** Among others:

- individual judge's statistics, - statistics on the reasons of the postpone of the trials,
- number of trial days in cases, - number of tried cases per day,
- pending cases of an individual judge / court,
- the time frame of pending cases
- number of appealed cases,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

**(2014):** In 2013 and 2014, among other are quoted individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of tried cases per day, the number of pending cases of an individual judge/court, the time frame of pending cases, the number of appealed cases, the subject of incoming/resolved/pending cases, the ratio of litigious and non-litigious cases. Cases that are pending over 2 or 5 years have a separated statistical report every month, as well as cases in which there were no actions taken in the last 30 days by the court.

**(2013):** In 2013 and 2014, among other are quoted individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of tried cases per day, the number of pending cases of an individual judge/court, the time frame of pending cases, the number of appealed cases, the subject of incoming/resolved/pending cases, the ratio of litigious and non-litigious cases. Cases that are pending over 2 or 5 years have a separated statistical report every month, as well as cases in which there were no actions taken in the last 30 days by the court.

**(2012):** In 2010 and 2012, a reference is made to individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of resolved cases, the number of cases scheduled within one day, the number of pending cases of an individual judge.

## **Ireland**

**(2022):** These are not new or recently introduced monitoring options.

**(2014):** 2014: Since 2014 Ireland introduced a monitoring system for the length of proceedings and it is now capable of calculating average length of proceedings in first instance jurisdictions.

## **Italy**

**(General Comment):** Within the framework of the National Recovery and Resilience Plan (PNRR), the Ministry of Justice has introduced an additional monitoring system specifically designed for PNRR purposes, in order to keep track of a series of KPIs related to the efficiency of the Italian courts.

## **Latvia**

**(General Comment):** Implemented business intelligence solution allows monitor all the mentioned court activities very closely.

Satisfaction of court staff and users is being evaluated by regular questionnaires in courts.

**(2022):** The indicators "productivity of judges and court staff" and "number of appeals" are taken into account when assessing the professional activity of a judge, because the objective of the assessment of the professional activities of a judge is to promote the continuous professional growth of a judge throughout his or her career, thereby improving the quality of the work of the judge and the court. An Annual evaluation of court staff is also carried out, which is essential for high-quality work of courts.

**(2017):** Decision stability (proportion of decisions appealed in higher instance)

**(2016):** Decision stability (proportion of decisions appealed in higher instance)

## **Lithuania**

**(General Comment):** All of these data are recorded in the Lithuanian Court Information System (LITEKO), as well as other data, related to the case, it's process and the parties to the proceedings.

## **Luxembourg**

**(General Comment):** No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request of the competent authorities.

**(2017):** ??? (see comments to parent campaign)

**(2016):** No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

**(2015):** By using the newly implemented statistical tools, the information ticked in addition to last year's questionnaire can now be retrieved by the statistical service on an as needed basis at least for criminal cases. Identical markers are being implemented for civil and commercial cases and will available in a foreseeable future.

**(2014):** 2014: There is no regular monitoring system. However, new statistical tools are implemented and can provide monitoring elements when necessary without daily measurement current affairs.

#### **Malta**

**(2022):** Other: Age of the pending caseload.

**(2019):** Other: age of pending caseload

**(2017):** other: clearance rate

**(2015):** The monitoring of court activities also takes place through the ongoing analysis of the Clearance Rate and Disposition Time of the various courts. This data is also being published online on a monthly basis. The category "other" refers to the monitoring of the Clearance Rate and Disposition Time of all civil courts, boards and tribunals. This exercise was started in 2015.

**(2014):** In 2014, the court administration was monitoring length of proceedings through the number of incoming and resolved cases, as well as through the pending caseload. The age of civil cases was another parameter that was being assessed. On the occasion of the 2014 exercise, it has been indicated that since 2015, Malta started computing the Disposition Time and Clearance Rate of all the civil and criminal courts. By the end of 2015, for the civil courts, this information will be made available online.

#### **Netherlands**

**(2020):** There is an annual publication that includes the appeal ratio for some case types. To call it 'monitoring' would be a bit too much, but it is annually checked and reported on. Incoming cases and length of proceedings have not previously been mentioned, but these are monitored.

#### **Poland**

**(2017):** Supervision covers only the administrative activities of the courts. There are the internal supervision exercised by the presidents of the courts and the external supervision exercised by the Minister of Justice within the narrow scope specified in the law.

**(2016):** Supervision covers only the administrative activities of the courts. There are the internal supervision exercised by the presidents of the courts and the external supervision exercised by the Minister of Justice within the narrow scope specified in the law.

#### **Portugal**

**(2022):** Users satisfaction is monitored through surveys and indirectly by the consulting body of each court that includes members of the community. The appeal ratio is only monitored in the context of judges evaluation.

**(2020):** we included "satisfaction of users" because one of the tasks of the president judge of the court is to monitor and evaluate the activity of the court, in particular the quality of the justice service provided to citizens, taking into account particular complaints or responses to satisfaction questionnaires. "Article 94 of Law 62/2013, 26th August, on the judicial organization"

**(2019):** In this evaluation cycle we included "satisfaction of users" because one of the tasks of the president judge of the court is to monitor and evaluate the activity of the court, in particular the quality of the justice service provided to citizens, taking into account particular complaints or responses to satisfaction questionnaires. "Article 94 of Law 62/2013, 26th August, on the judicial organization"

**(2017):** Scheduling; delays of judges and sections.

**(2016):** Scheduling; delays of judges and sections.

**(2015):** Scheduling: time delays of judges and sections of the court.

## Romania

**(General Comment):** Since 2012, the category "other" subsumes the length of administrative procedures, the number of final convictions, legal aid, suspended cases etc.

**(2022):** ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

**(2021):** ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

**(2020):** ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

**(2019):** ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

**(2017):** - e.g. suspended cases

**(2016):** - suspended cases etc.

## Slovak Republic

**(General Comment):** The category "other" encompasses: the number of cases according to types of disputes, the results of the cases (reconciliation, dismissals, full satisfaction, partial satisfaction, etc.). Statistical data of the Ministry of Justice of the Slovak Republic are detailed and regularly collected and published in a yearbook which is publicly accessible at the website of the Analytical centre of MoJ <https://www.justice.gov.sk/Stranky/Informacie/Analyticke-centrum.aspx> <http://web.ac-mssr.sk/statisticka-rocenka-2018/>. Data on the activity of the courts are published every month in interactive Dashboard on the <http://web.ac-mssr.sk/dashboard/>.

## Slovenia

**(General Comment):** In Slovenia there is a regular monitoring system in a form of collecting data on court statistics. Court statistics are collected and published four times a year by the Ministry of Justice. They include the data on the number of judges and court staff, number of incoming, resolved and pending cases, age of unresolved cases, length of proceedings, average time to resolve a case, type of decision, court backlogs, legal remedies and time to issue a court decision. Besides that, the data on court activities are automatically on national level, thus statistical analysis are made possible. All courts have access to a wide range of special reports, generated in the Court management information system. Reports include detailed information on court activities (for example length of specific phases of a court proceeding, top 20 oldest cases in certain area of law, etc.), human resources, court performance indicators (the critical indicators are marked red for unsatisfactory performance and green when meeting the standards) that provide guidance to presidents and directors of courts. The business intelligence system that creates priority reports derives the data from the Data warehouse of the Supreme Court. The same source is used for Court statistics publications by the Ministry of Justice. Each court is able to access the above mentioned reports at any moment, while some data are quarterly collected and published on national level (as prescribed by the Court rules).  
The satisfaction surveys are performed and results published bi-annually.

**(2015):** The data on court activities are automatically collected on national level, thus statistical analysis is made possible.

All courts have access to a wide range of special reports, generated in the Court management information system. Reports include detailed information on court activities (e.g. length of specific phases of a court proceeding, top 20 oldest cases per legal area etc.), human resources, court performance indicators (the critical indicators are marked red for unsatisfactory performance and green when meeting the standards) that provide guidance to presidents and directors of courts. These additional data available to court management officials are the reason, why we put check before "other elements".

The business intelligence system that creates priority reports derives the data from the Data warehouse of the Supreme Court. The same source is used for Court statistics publications by the Ministry of Justice.

Each court is able to access the above mentioned reports at any moment, while some data are quarterly collected and published on national level (as prescribed by the Court rules).

## Spain

**(General Comment):** The category "other" encompasses: number of enforcement procedures, number of decisions appealed, number of rogatory letters issued, received and resolved, aid between courts, pending writings, form of termination of trials, etc.

**(2017):** The category "other" includes many other data such appeals, aid between courts, pending writings, etc.

**(2016):** The category "other" includes many other data such appeals, aid between courts, pending writings, enforcement proceedings, form of termination of trials, etc.

## Question 070-1

### Bulgaria

**(General Comment):** .

**(2018):** "Other": percentage of returned cases

### Denmark

**(2022):** - The prosecution makes monthly reports to the Ministry of Justice on data regarding number of cases, clearance rate, etc.

- Disposition time is measured indirectly through a report that measures all steps in a criminal case from arrest to imprisonment. There

is no direct measure of disposition time, but it can be read from this report.

- The prosecution makes an biannual survey on the satisfaction of the prosecution staff.

**(2021):** The prosecution makes quarterly reports to the Ministry of Justice on data regarding number of cases, percentage of conviction etc.

Disposition time is measured indirectly through a report that measures all steps in a criminal case from arrest to imprisonment. There is no direct measure of disposition time, but it can be read from this report. The prosecution makes a biannual survey on

the satisfaction of the prosecution staff.

**(2020):** The methodology of replying changed in this question.

The prosecution makes quarterly reports to the Ministry of Justice on data regarding number of cases, clearance rate, etc.

Disposition time is measured indirectly through a report that measures all steps in a criminal case from arrest to imprisonment.

There is no direct measure of disposition time, but it can be read from this report. Therefore we find it more correct to check this option. Satisfaction of the prosecution staff has always been measured but not by the ministry of justice. Therefore it was not checked last time. However, it is measured, and we therefore find it correct to check this option. The prosecution makes an annual survey on the satisfaction of the prosecution staff.

## **Finland**

**(2021):** "Backlogs": cases that have been pending for longer than a year are monitored

**(2020):** "Backlogs": cases that have been pending for longer than a year are monitored.

## **France**

**(2021):** Source DSJ

**(2020):** Judicial jurisdiction.

## **Germany**

**(General Comment):** The Federal Statistical Office collects key figures on the public prosecution offices' performance (incoming cases, resolved cases, pending cases on the beginning and the end of a year) from the federal states and publishes the data once per year.

**(2022):** The monitoring activities no. 1-4 were selected by all respondent federal states and the activities 5 and 10 to 12 were selected by the majority of the federal states. A minority of the federal states also monitors the costs of the judicial proceedings.

One federal state has not yet replied.

**(2021):** The monitoring activities no. 1-5 and 1-12 were selected by most Länder, the activity no. 9 (monitoring of costs) was selected by some (5) Länder.

**(2020):** A few Länder answered that they have also been monitoring productivity and costs.

## **Greece**

**(2022):** It is noted that the clearance rate was not selected by all prosecutors' offices, in addition several prosecutors' offices but not all have chosen the option of percentage of convictions and acquittals.

## Hungary

**(2022):** The public prosecution services are led in a hierarchical structure. Leaders perform their duties at a national and regional level, as well as at the level of each organizational unit. It is up to the decision of the leader who exercises the employer's rights to determine how the activities (performance, quality) of the prosecution office should be evaluated and on the basis of what indicators in order to manage the organizational unit effectively. The set of indicators may vary from year to year, depending on the circumstances. Therefore, more than one answer could be given to the given question.

For example, the performance of individual prosecutors or officers may be assessed at the level of an organizational unit; a staff satisfaction survey may be conducted; or a target analysis based on client satisfaction may be carried out.

The clearance rate could also be considered as a reference point and is actually monitored by the public prosecution services. However, statistics are produced at the level of the prosecution services and at the regional level on a calendar year basis.

Therefore, those decisions on the termination of prosecution proceedings which are made at the end of a year, but become final only in the following year, can only be taken into account in the next year. The number of indictments and the number of finally closed cases that are closed because of finally closed court cases in the years after the indictment may also differ from the number of indictments on an annual basis. Therefore, the "clearance rate" – as a reference point – is a difficult criterion to follow.

At the national level, the Prosecutor General is required to present a report to Parliament. This report does not focus on the performance of individual public prosecutors; instead, it assesses the performance of the public prosecution service as a whole and according to a breakdown of organizational units. In our 2023 response, we tried to take this into account and, in this respect, we have indicated that primarily the indicators indicated were taken into account. Compared to our previous response in 2020, there was no change in terms of the fact that the clearance rate had been taken into account, even if it was not the primary evaluation criterion.

**(2021):** The BTM system (Criminal Justice Activity Indicator System) is available for the Prosecution Service of Hungary. This system regularly monitors prosecution activities (performance and quality), however, it does not contain any information about the number of incoming cases, length of proceedings, number of resolved cases, backlogs etc.

## Ireland

**(2022):** Information is published in Part 2 and Part 4 of ODPP Annual Report 2021 (<https://www.dppireland.ie/app/uploads/2023/02/AR2021eng.pdf>).

**(2020):** information is published in Annual Report available at: <https://www.dppireland.ie/app/uploads/2020/10/AR-2019-eng.pdf>

**(2018):** Information is published in Annual Report available at [https://www.dppireland.ie/filestore/documents/AR2017\\_\[eng\].pdf](https://www.dppireland.ie/filestore/documents/AR2017_[eng].pdf)

## Malta

**(2022):** The Office of the Attorney General has embarked on a data management process that is seeing more information being collected in respect of the efficiency parameters of the Office. This explains why in this evaluation cycle, the categories of 'Backlog' and 'Productivity of Prosecutors and prosecutors staff' have been marked.

**(2021):** The Attorney General is collecting data on length of proceedings and using it to monitor efficiency. This exercise will be refined in the coming months within the scope of an ongoing project addressing the re-engineering of processes within the Office of the AG.

**(2018):** The Office of the AG does hold a record of the number of incoming cases and terminated cases, but these are not as yet organised into official performance indicators.

## Poland

**(2021):** In 2021, following the implementation of the new central ICT system PROK-SYS, which provides for a modern reporting system, the possibility of obtaining data on a wide range of activities of all organisational units of the prosecution offices was created. The system provides a solution for generating types of reports on the costs of proceedings. This allows for daily supervision of the activities of the prosecution offices from every level, including the central level. Prior to 2021, data on the costs of proceedings were only collected locally.

## Portugal

**(2020):** We included "clearance rate" and "disposition time" because one of the tasks of the public prosecutor coordinator is to monitor and evaluate the activity of the public prosecutors services, including the efficiency of procedures. Article 101 of Law 62/2013, 26th August on judicial organization.

## Slovenia

**(General Comment):** The BI tools that use data gathered in information system of the State Prosecutor's Office provide the heads of prosecution offices with up-to-date overview of the performance of state prosecutors and the functioning of the office. Heads can customize the level and content of information presented to them for the purpose of making quantitative data supported decisions on allocation of work among prosecutors, control of the case-flow.

**(2022):** "other": percentage of different types of decisions, value of proceeds of crime under freezing order, pronounced criminal sanctions...

**(2020):** "Other": percentage of different types of decisions, value of proceeds of crime under freezing order, pronounced criminal sanctions...

## Question 071

### Belgium

**(2016):** There are ad hoc evaluation systems within the courts. But there is no central or coordinated system.

### Bulgaria

**(General Comment):** The duration of the court proceedings initiated by the Prosecutor's Office of the Republic of Bulgaria is monitored, as in case of excessive delay there is a possibility to request acceleration of these proceedings through the procedure under Chapter 26 of the PPC.

### Denmark

**(2021):** Danish Court Administration is typically not doing this. A responsible court follow their cases though.

**(2020):** Danish Court Administration is not doing it as a general thing. If a specific court needs help, Danish Court Administration can work out list of pending cases and list them according to age to give the court a tool to locate cases that need attention.

### France

**(2021):** Source DSJ and Council of State

**(2020):** No further indication.

**(2016):** In civil matters, courts of first instance (TGI), labour courts (conseils de prud'hommes) and courts of appeal can measure their stock on the basis of business applications or data returns carried out by info-centers.

The identification of cases not processed within a reasonable time is easier through business applications that offer dashboards breaking down cases in stock by age group.

In criminal matters, first instance courts (TGI) can use the Cassiopée business application to record cases in stock at the registry and the number of unedited judgments. The situation of cases in stock at the registry office cannot be measured via the info-centre, which only allows establishing the number of cases registered with the Public Prosecutor's Office and the Correctional Service.

## **Germany**

**(2022):** The majority of the respondent federal states monitor pending cases and backlogs. Two federal states could not provide an answer, one federal state has not yet replied.

**(2021):** Four of the Länder could not provide an answer. The remaining Länder monitor pending cases and backlogs for all of the case categories mentioned above.

**(2020):** The majority, but not all of the Länder have reported to monitor pending cases and backlogs.

**(2018):** In 2018, Länder have monitored the number of pending cases and the backlogs.

## **Hungary**

**(General Comment):** Judges have to report those cases on a monthly basis that are pending for more than 2 years. The president of the court can order a fast-track procedure for a case based on the report.

**(2018):** Judges have to report those cases on a monthly basis that are pending for more than 2 years. The president of the court can order a fast-track procedure for a case based on the report.

## **Ireland**

**(2022):** N/A

**(2020):** NAP

**(2018):** NAP

**(2016):** NAP

## **Latvia**

**(2018):** We have created a specific tool for this purpose that is available also in public from <https://dati.gov.lv/>

## **Luxembourg**

**(2018):** New systems of monitoring have been implemented since 2016 (JUCIV for the civil law cases and JANGA for administrative law cases)

**(2016):** No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

## Netherlands

**(General Comment):** The public prosecution logically only monitors criminal law cases, the courts monitor all types of cases.

**(2021):** Public prosecution only monitors criminal law cases, the courts monitor all.

## Romania

**(2022):** STATIS - statistics monitoring application including for court's efficiency assessment

**(2021):** STATIS - statistics monitoring application including for court's efficiency assessment

**(2020):** STATIS - statistics monitoring application including for court's efficiency assessment

## Question 072

### Austria

**(2016):** Supreme administrative Court: Statistic of incoming cases, number of decisions delivered, number of postponed cases, length of proceedings (timeframes) and age of cases

### Belgium

**(2021):** Public Prosecutor's Office: Monitoring mechanism via dashboards for the public prosecution services.

**(2020):** Monitoring mechanism via dashboards for prosecution services.

### Denmark

**(2021):** Danish Court Administration is typically not doing this. A responsible court follow their cases though. The individual courts may work out list of pending cases or warning lists when to act on a case.

**(2020):** Danish Court Administration is typically not doing this. A responsible court follow their cases though.

**(2018):** We monitor the overall time from the courts receive a case until it is finalized, but not what happen in between. The same goes for the prosecution

### Estonia

**(General Comment):** There are reminders in the CMS after certain period.

### Finland

**(2021):** Within the courts, the time the case is pending in a court is monitored.

Prosecution services: The time between police investigation and prosecutor's decision (the time the case is pending in the prosecution service) is monitored.

**(2020):** Within the courts, the time the case is pending in a court is monitored.

**(2018):** Within the courts, the time the case is pending in a court is monitored.

### France

**(2021):** Source DSJ, the reply concerns the civil and criminal justice.

**(2020):** Answer for the court.

## **Germany**

**(2022):** One federal state monitors waiting time with respect to the ordinary courts. A minority of 3 federal states monitor waiting time with regard to the public prosecution services. The vast majority of the federal states does not monitor waiting time.

**(2021):** Courts: One of the Länder reported that waiting times are monitored with respect to ordinary courts.  
Public Prosecution: While the majority of the Länder answered "no", a small minority of 3 Länder answered "yes".

## **Greece**

**(General Comment):** The waiting time during court procedures is monitored annually through the inspection process. The interval between the adjudication of the case and the issuance of the decision is watched, so that the judge does not have much pending and there is a quick delivery of justice.

**(2018):** There is a monitoring system regarding the length of the judicial procedure, but it does not include such kind of information.

**(2016):** There is a monitoring system regarding the length of the judicial procedure, but it does not include such kind of information.

## **Hungary**

**(General Comment):** The administrative office of the court reports those cases to the president in which there was no judicial activity in the last 30 days.

**(2022):** It was not possible to give an unambiguous answer to this question because of the reasons given in point 70-1. There are several possible "waiting times" in court proceedings which can be monitored. The length of proceedings can be and is monitored by the public prosecution services at the organizational, regional and local levels to different extents. As there was no substantive change in this respect, our reply is modified as follows, in line with the previous answer.

If the question refers to the judicial recess, the answer is "yes"; it is monitored by those who exercise the employer's rights, mainly for the purpose of granting a leave of absence.

**(2018):** The administrative office of the court reports those cases to the president in which there was no judicial activity in the last 30 days.

## **Italy**

**(2018):** Waiting time is monitored only for Administrative Justice.

## **Latvia**

**(2022):** "Within the courts": On an irregular basis, the Ministry of Justice and the Council of Justice analyze the number of days (period) from the initiation or receipt of the case in court to the moment when the case review is started.

## **Lithuania**

**(2022):** Within the courts: through an administrative supervision mechanism.

**(2020):** courts: through administrative supervision mechanism

### **Luxembourg**

**(2014):** According to 2014 data, the newly set up statistical tools, as well as the courts' CMS, allow an "as needed" check of the waiting time.

### **Malta**

**(2016):** In Malta, there is no formal monitoring system. However, an "informal" monitoring used to take place. It falls mostly within the remit of the Chief Justice and the respective members of the judiciary.

### **Netherlands**

**(General Comment):** Waiting time can be monitored through registration in the court system.

Agreements are made across the justice chain on timeframes in which particular caseloads (sexual offences, youth cases, and specific traffic violations) should be handled. These agreements are monitored.

Government (the Second Chamber) is annually informed on the agreements via factsheet. Additionally, timeframe agreements were reached within the public prosecution on the speed with which penal orders are to be issued, the terms in which an objection is to be judged and the speed with which the first decision with attachment is to be taken.

**(2020):** Within the courts: Registration in the court system gives the opportunity to monitor waiting time.

Within the public prosecution services: Across the justice chain, agreements have been made on the timeframes in which particular caseloads (sexual offences, youth cases and specific traffic violations) should be handled. These agreements are monitored. Annually, the government (Second Chamber) is informed on this via the factsheet 'Strafrechtketen'. Besides this, timeframe-agreements have been reached within the public prosecution on speed with which penal orders are to be issued, terms in which an objection is to be judged and the speed with which the first decision with attachment is to be taken (eerste beslissing bij beslag).

**(2013):** All steps and dates are recorded in information systems of the court. But this registration does not show 'waiting times' as such.

### **Poland**

**(General Comment):** Public Prosecution services

The issue of the duration of pre-trial proceedings is defined in the Code of Criminal Procedure, in Article 310 § 1 and § 2 and Article 325i § 1. Article 310 § 1 and § 2 states that the investigation shall be completed within 3 months. In justified cases the investigation period may be extended by a specified period of time by the public prosecutor supervising the investigation or the public prosecutor directly superior to the public prosecutor leading the investigation, but not longer than one year. In particularly justified cases a competent public prosecutor superior to the prosecutor supervising or leading the investigation may extend the investigation by a specified period of time.

Article 325i § 1 states that an investigation should be completed within 2 months. The prosecutor may extend this period to 3 months, and in particularly justified cases – to a longer specified period of time.

The authority empowered to order the extension of an investigation or an inquiry by a specified period of time shall monitor such proceedings with respect to their proper conduct in view of their possible length and shall assess the validity of the procedural steps taken or to be taken.

The request for the extension of an investigation or an inquiry must include the steps that need to be taken in the further course of the proceedings and indicate the reasons why they have not yet been taken.

**Courts:**

The presidents of the courts, in exercising internal administrative supervision over the administrative activity of the courts, control the taking of actions by judges within appropriate time limits; direct control is also exercised by the presidents of the divisions. Monitored also within the framework of management control and analysis of annual information on activities of courts operating within the area of appellate courts prepared by presidents of courts of appeal

**(2021):** \* courts -The presidents of the courts, exercising internal administrative supervision over the administrative activity of the courts, control the taking of actions by the judges in due time; direct control is also exercised by the presidents of the divisions. Monitoring also takes place within the framework of the external administrative supervision of the Minister of Justice over the administrative activity of common courts within the framework of management control and analysis of annual information on the activity of courts operating on the territory of courts of appeal prepared by presidents of courts of appeal.

\*prosecutors - In the course of pre-trial proceedings, the public prosecutor commissioning other bodies to carry out procedural actions or appointing experts to prepare an opinion shall each time set a deadline for their implementation. If the entrusted activities are not carried out in time, the prosecutor makes an enquiry as to the reasons for the delay and the deadline for carrying out the activities. The course of pre-trial proceedings is monitored both in terms of internal service supervision and external service supervision, in order to ensure their proper dynamics.

At the trial stage, if a hearing is postponed without a date being set, the prosecutor's office makes timely enquiries as to whether the reasons preventing it from being scheduled have ceased.

**(2018):** In the mode of external and internal administrative supervision over the administrative activity of courts by analyzing the results of the courts or departments and monitoring the efficiency of individual cases in the case of detected lengthiness.

## Portugal

**(General Comment):** Through SITAF and CITIUS (case management systems for administrative and tax courts and judicial courts, respectively) it is possible to check waiting times during judicial proceedings.

The Portuguese Code of Criminal Procedure establishes no binding timeframes for criminal investigations. At a national level, within the public prosecution services, there is only monitoring of the judicial proceedings time during on criminal investigations, with reference to this timeframe.

At a local level, some other proceedings (such as the initial intervention of public prosecutors on protection of adults with some incapacity, requesting accompanying measures – under the legal framework of the accompanied adult [Regime Jurídico do Maior Acompanhado]) are also monitored on time duration.

**(2022):** The waiting period is monitored in the quarterly monitoring of all judicial courts. The Court President reports to the council the number of cases that are waiting procedural movement for more than 1, 2, 3 or 4 months.

**(2021):** Because of the Covid-19 pandemic, the courts were asked for specific elements on the steps taken in the Courts. Also, the procedural laws (e.g. civil and criminal) provides that the registry shall send to the President of the Court, on a monthly base, information detailing the cases in which three months have elapsed since the expiration of the deadline set for the performance of the judge's own act.

**(2018):** Through SITAF and CITIUS (case management systems) it is possible to check waiting times during judicial proceedings.

## Romania

**(2022):** There are statistical reports developed by an IT application called Stasis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**(2021):** There are statistical reports developed by an IT application called Stasis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**(2020):** There are statistical reports developed by an IT application called Stasis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**(2018):** There are statistical reports developed by an IT application called Stasis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**(2016):** There are statistical reports developed by an IT application called Stasis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**(2014):** According to 2014 data, there are statistical reports developed by Stasis IT application monitoring the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc. More precisely, in 2014, the Superior Council of Magistracy has established a working group that has analyzed several national and international documents on the efficiency of the courts and has developed a set of indicators that are used to make an overall assessment of the efficiency of courts, sections and, if needed panels of judges. These indicators were implemented and used in the Stasis application.

## Slovenia

**(General Comment):** In accordance with the Prosecution Policy adopted in 2017, cases in which a final court decision at first instance has not been adopted within 3 years of filing a written charge with the court, are monitored in particular.

## Question 083

### Austria

**(2018):** There are no specific targets given to the Judges, which are seen as a conflict with the Independence of Courts.

**(2016):** Provincial Administrative Courts: Maximum 150 cases a year per judge (average value).

Federal Finance Court:

No performance targets, which are seen in conflict with the independence. However based on a continuous transparent controlling the possibility of benchmarking exists. In addition regular dialogues with the judges regarding their performance are held.

### Croatia

**(2020):** According to the Courts Act (Official Gazette No. 28/13, 33/15, 82/15, 67/18) , the Minister in charge for Justice, upon the proposal of the General Assembly of the Supreme Court of the Republic of Croatia, adopts the Framework criteria for the work of judges.

#### **Czech Republic**

**(General Comment):** Quantitative performance targets exist but they are not strictly binding.

**(2018):** Quantitative performance targets exist but they are not strictly binding.

#### **Denmark**

**(General Comment):** Judges are independent. Therefore measuring is done focusing on case-flows and economic indicators without identifying the individual judge.

**(2022):** The judges are independent. Therefore measuring is done focusing on case-flows and economic indicators.

**(2018):** There are no such targets from the side of Danish Court administration, but quantitative performances are used to re-allocate resources so the court in most need of resources in case of a vacant judge position also gets the vacant position.

#### **Finland**

**(General Comment):** A court can decide whether it sets quantitative performance targets for each judge. There are targets set for each judge in some courts.

**(2016):** It is up to each court to decide. In some courts there are targets set for each judge.

#### **France**

**(2022):** A valid response for administrative jurisdictions.

**(2016):** Individual quantitative objectives are established only with regard to administrative judges by the respective court president.

#### **Germany**

**(General Comment):** There are no quantitative performance targets because this might interfere with judicial independence as defined by article 97 of the Basic Law for the Federal Republic of Germany ("Judges shall be independent and subject only to the law.").

**(2022):** Of the respondent 15 federal states, 14 reported that there are no quantitative performance targets for judges. One federal state has not yet replied.

#### **Greece**

**(General Comment):** The Head of each court is responsible for the assignment of the cases between judges of his/her competence. In this sense, he/she is aware of the quantitative performance of judges.

**(2022):** Every administrative judge is charged each year with a specific number of cases to carry out, stipulated by an internal Regulation, according to a model adopted by the General Commission of the State.

**(2020):** Every administrative judge is charged each year with a specific number of cases to carry out, stipulated by an internal Regulation.

**(2018):** Every judge is charged each year with a specific number of cases to carry out, stipulated by an internal Regulation.

**(2016):** Every judge is charged each year with a specific number of cases to carry out, stipulated by an internal Regulation.

## Hungary

**(General Comment):** Since 1999, there is a national regulation adopted by the central administration body of the courts that regulates – among other things – how many trial days should a judge have per year. Every court has an internal regulation for judges, defining how many hearings shall they have at a trial day and how many cases shall they hear at a monthly basis. This regulation is adopted by the president of the court, taking into consideration the opinion of the judicial council. The president of the NOJ has to give his/her consent for the regulation.

## Italy

**(General Comment):** Law n.71 of 17 June 2022 has recently modified article 2 of Legislative Decree n.109, 23 February 2006, regarding disciplinary responsibility of professional magistrates. The amendment has introduced specific disciplinary offences regarding the conduct of the magistrate who does not cooperate in reaching the goals laid in the 'Program for the management of civil and criminal proceedings' (in Italian 'Programma di Gestione'), which is disciplined by art37 of Decree-Law II. 98 of 6 of July 2011 and regularly approved by each Court.

**(2020):** Quantitative performance targets are set in terms of length and timeframe of proceedings. Judges who fail to meet certain requirements may face disciplinary proceedings.

**(2018):** Quantitative performance targets are set in terms of length and timeframe of proceedings. Judges who fail to meet certain requirements may face disciplinary proceedings.

**(2016):** Quantitative performance targets are set in terms of length and timeframe of proceedings. Judges who fail to meet certain requirements may face disciplinary proceedings.

## Malta

**(General Comment):** The administration of the case load is left in the hands of the individual judge and magistrate together with the Chief Justice who assigns the particular duties to each judge and magistrate.

**(2016):** The administration of the case load is left in the hands of the individual judge/ magistrate together with the Chief Justice who assigns the particular duties to each judge and magistrate.

## Netherlands

**(2016):** There is a planning and control cycle (3 times per year) which involves financial/accounting evaluation but also visits ('bestuurlijke overleggen'), there is once per year an accountant check of the annual report (per court and for total of 19 district courts, 5 general appeal courts and 2 specialised courts (Trade and Industry Tribunal (Cbb) and Central Appeals Tribunal (CRvB)), and once every 4 years there is a round of visitations.

## Poland

**(General Comment):** In general there are not any quantitative performance targets defined for each judge but for certain cases the law imposes timeframe for performing specific action or handling specific matters. President of the court sets the performance target with using statistically calculated indicators of average performance that court and individual judge is expected to achieve.

## Portugal

**(General Comment):** Taking into account the results obtained in the previous year and the strategic objectives formulated for the following year, the president of the court and the coordinating prosecutor, after hearing the judicial administrator, articulate, for the following year, proposals for objectives of a procedural nature (management or administrative) for the district and for the courts of extended territorial jurisdiction, as well as for the Public Prosecution Offices located there, which have to be ratified respectively by the Judicial High Council and the Attorney General's Office.

The procedural objectives of the district shall refer, in particular, to the number of completed cases and the time of their duration, taking into account, among other factors, the nature of the process or the value of the case, considering the human resources and the means related to the functioning of the district and based, namely, on the established procedural reference values.

The procedural objectives of the district may not impose, limit or condition the decisions to be rendered in specific cases, either on the merits of the matter, or on the option for the procedural form understood as more appropriate.

The procedural objectives of the district must be reflected in the objectives established annually for judicial officers and be considered in the respective assessment.

The procedural objectives of the district must be considered in the evaluation criteria of the magistrates, defined by the respective Councils.

## Slovenia

**(General Comment):** Since 2016, the Criteria on the work abilities does not include standards for the minimal expected number of solved cases (however the number of resolved cases is still monitored).

**(2018):** Since 2016, the Criteria on the work abilities does not include standards for the minimal expected number of solved cases (however the number of resolved cases is still monitored).

**(2016):** Since 2016, the Criteria on the work abilities does not include standards for the minimal expected number of solved cases (however the number of resolved cases is still monitored).

## Spain

**(General Comment):** In accordance with the Agreement of November 29, 2018, of the Plenary of the General Council of the Judiciary, which approves Regulation 2/2018, on the remuneration regime of the Judicial and Prosecution Careers, in relation to variable remuneration for objectives, it corresponds to the Plenary of the Council of the Judiciary to approve the system for the determination of the performance objectives of each destination of the Judicial Career

## Question 083-1

### Austria

**(General Comment):** No specific targets are formulated in respect of judges.

**(2016):** Answer counts only for the administrative courts.

For the other courts, no performance targets, which are seen as a conflict with the independence of courts.

### Croatia

**(General Comment):** According to the Courts Act, the Minister of Justice, upon the proposal of the General Session of the Supreme Court of the Republic of Croatia, adopts the Framework criteria for the workload of judges.

## Denmark

**(General Comment):** Judges are independent. Therefore measuring is done focusing on case-flows and economic indicators.

**(2018):** NA as per answer 083.

## Finland

**(General Comment):** The National Courts Administration negotiates annually with each court in order to set targets and objectives for the court for the next year. An allocation of permanent staff and possible additional temporary judges or other staff is decided upon these negotiations but within the state budget. Timeframe (length of proceedings) targets are also set. Possible issues and problems with developing the activities of the court are also discussed. Finally, the appropriation to cover the annual costs of the court operations is agreed. A minutes of the negotiation is written and it includes the targets, objectives and estimated workloads for the court for the next year. The chief justices of the courts can then apply this results-based management system in their respective courts as they see appropriate.

## France

**(General Comment):** For administrative jurisdictions, there are individual quantitative objectives. This is not the case for judicial jurisdictions, where the indicators target functions (non-specialised chambers, investigation, juvenile cases, public prosecution) and court clerks. Thus, a set of objectives and indicators are detailed at national level in the annual documents presented to Parliament (Annual Performance Plan and Annual Performance Report), including a number of indicators measuring the 'efficiency' of civil servants and magistrates with an average performance level to achieve (targets). These ratios are very general.

## Germany

**(2020):** There are no quantitative performance targets for each judge

## Hungary

**(General Comment):** The courts' organizational and operational rules provide for the number of hearing days a judge should have in a month and the number of cases a judge should monthly hear. These rules are issued by the president of the court after the judicial council expressed an opinion on them. The judicial council is a self-governing organ of the courts, consisting of judges who are elected by their peers. The rules are approved by the president of the National Office for the Judiciary.

## Ireland

**(2018):** NAP

**(2016):** NAP

## Latvia

**(General Comment):** According to the Law on Judicial Power, when adjudicating, judges are independent and are subject only to the law. Therefore, judges set targets by themselves. However, the President of the court monitors the workload of the judges in the court as a whole, assigning cases to another judge if necessary.

## Luxembourg

**(2018):** NAP

**Malta**

**(2018):** NA

**Netherlands**

**(2018):** NAP

**(2016):** The planning and control cycle is done by The Council for the Judiciary, on a court level (not at individual judge level). Targets for each individual judge are not imposed by The Council for the Judiciary.

**Poland**

**(General Comment):** .

**(2016):** For certain cases the law imposes timeframe for performing specific action or handling specific matters. President of court sets the performance target with using statistically calculated indicators of average performance that court and individual judge is expected to achieve.

**Romania**

**(2016):** There are no formal standards for quality established for the whole Judiciary. However, informal standards are being used (such as training, quality of the reasoning, assessment of the activity of the judges, assessment of the good reputation of the judges etc.)

**Slovenia**

**(General Comment):** See Q114.

**Question 083-1-1****Croatia**

**(2022):** According to the Courts Act (Official Gazette No. 28/13, 33/15, 82/15, 67/18, 126/19, 130/20, 21/22, 60/22) the president of the court in which the judge performs judicial duty determines by decision for the previous calendar year whether the judge has fulfilled his duties as a judge according to the prescribed criteria. If the president of the court determines that the judge, without justifiable reason, did not make the number of decisions determined by the Framework Criteria for the work of judges in a one-year period or that he performed his judicial duties improperly, he is obliged to initiate disciplinary proceedings against such a judge, in accordance with the State Judicial Council Act. Disciplinary proceedings against the president of the court are initiated by the president of the immediately higher court. According to the State Judicial Council Act (Official Gazette No. 116/10, 57/11, 130/11, 13/13, 28/13, 82/15, 67/18, 126/19, 80/22) disciplinary penalties may be imposed for committed disciplinary offences: rebuke, a fine of up to one third of the salary earned in the previous month in a period of one to three months, a fine of up to one third of the salary earned in the previous month in a period of four to six months, a fine of up to one third of the salary earned in the previous month in a period of seven to twelve months or dismissal from duty. If the president of the court determines that, due to justified reasons, the judge did not make the number of decisions determined by the Framework Criteria for the work of judges in a one-year period, he is obliged to state in the explanation of the decision what justified reasons are in question and submit the decision immediately to the president of the higher court. Against the decision of the president of the court, which determines whether the judge has fulfilled his duties as a judge, the judge can submit an objection to the president of the court within three days of receiving the decision. The president of the court is obliged to decide on the objection within eight days. The president of the court can reject the complaint or accept it and make a new decision. If the objection is rejected, the judge has the right to appeal to the president of the immediately higher court within eight days from the delivery of the decision on the objection. The president of the immediately higher court can make a decision confirming the decision of the president of the court or accept the appeal and make a new decision. Against this decision, the judge has no right to declare legal remedies.

## Finland

**(General Comment):** See general comments to Q 83-1

## Italy

**(2022):** Disciplinary sanction as provided by the Legislative Decree no 109 of 23rd February 2006, regarding disciplinary responsibility of professional magistrates.

## Question 083-2

## Denmark

**(General Comment):** There is a productivity target for the prosecution as a whole, but not for each public prosecutor.

## France

**(2021):** source DSJ

## Germany

**(2022):** Out of 15 respondent federal states, 14 reported that there are no quantitative performance targets for public prosecutors. One federal state has not yet replied.

**(2021):** The vast majority of the Länder selected "no", 2 of the Länder answered "yes".

## Greece

**(2022):** There is, however, as far as possible an equal distribution of cases between them by the Head of the Service (Prosecution Service) and the obligation of the public prosecutor to process the cases assigned to him in the time frames provided for each case.

### **Hungary**

**(2022):** Quantitative performance targets have not yet been set. The public prosecution services were in the process of installing a new specialized IT system (IIDR), which was originally planned to affect internal prosecution statistics too. However, it has not been introduced. The planned system is currently under revision, so it is not possible to provide information on how and when it will be introduced and whether quantitative performance targets will be set.

**(2021):** For the time being, no performance targets are in place, but the development of such targets is in progress.

### **Ireland**

**(2022):** Allocation of files happens in some divisions but not all, and not all prosecutors are assigned a specific number of files per week. Additionally, targets can be influenced by external factors such as: the number of investigation files received, or the availability of court dates in order to process cases. The main reason why prosecutors are not assigned a set number of files is because the size and complexity of files can vary significantly.

**(2021):** Prosecutors in our directing division are allocated a specific number of files per week. Decisions must be issued within a designated time frame and this is monitored by our case management system

**(2018):** Work is demand led by number of files submitted by external investigating agencies

### **Italy**

**(General Comment):** Law n.71 of 17 June 2022 has recently modified article 2 of Legislative Decree n.109, 23 February 2006, regarding disciplinary responsibility of professional magistrates. The amendment has introduced specific disciplinary offences regarding the conduct of the magistrate who does not cooperate in reaching the goals laid in the 'Program for the management of civil and criminal proceedings' (in Italian 'Programma di Gestione'), which is disciplined by art37 of Decree-Law II. 98 of 6 of July 2011 and regularly approved by each Court.

### **Latvia**

**(General Comment):** The prosecutor provides a monthly report on the statistical indicators of his or her work. In addition, the statistical indicators of the individual work of the public prosecutor (statistical indicators for the monitoring of the investigation, prosecution, maintenance of the State prosecution and other functions of the public prosecutor) are also analysed during the process of assessing the professional activities of prosecutors (not less than once every five years).

### **Lithuania**

**(2018):** The quantitative performance targets are defined for the Prosecutor General's Office and 5 regional Prosecutor's Offices, but not for individual public prosecutors.

### **Luxembourg**

**(2018):** NAP

### **Netherlands**

**(General Comment):** There is no national policy on targets for every prosecutor. An office could choose to set targets for their prosecutors (see next question), but these may vary across offices.

**(2020):** There is no national policy on targets for every prosecutor. An office (parket) could choose to set targets for their prosecutors (see next question), but this may vary across offices.

#### Portugal

**(General Comment):** Yes for some District Prosecution's Office and No at a national level. At national level, only reference values are fixed for the purpose of placing prosecutors. Also at a national level, the fact that a prosecutor has finished more proceedings than those that he/she started is a general criterion of evaluation and compliance with general objectives, in the qualitative individual assessment of the public prosecutors' work.

#### Slovenia

**(General Comment):** .

#### Question 083-3

#### Austria

**(2018):** There are no specific targets given to public prosecutors.

#### Belgium

**(2021):** To underline the consistency between Q 83-2 and Q 83-3: these are not quantitative targets.

#### Croatia

**(2022):** According to the State Attorney Office Act (Official Gazette No. 67/18, 21/22) , the Minister in charge for Justice, with the prior opinion of Prosecutor General, adopts the Framework criteria for the work of public prosecutors (Deputy State Attorneys).

**(2020):** According to the State Attorney Office Act (Official Gazette No. 67/18) , the Minister in charge for Justice, upon the proposal of Prosecutor General, adopts the Framework criteria for the work of public prosecutors (Deputy State Attorneys).

**(2018):** According to the State Attorney's Act, the Minister of Justice, upon the proposal of Prosecutor General, adopts the Framework criteria for the work of public prosecutors.

#### Germany

**(2021):** There are no quantitative performance targets for each public prosecutor. The 2 Länder that have quantitative performance targets answered, that the prosecutor General is responsible for setting these targets.

**(2020):** There are no quantitative performance targets for each public prosecutor

#### Greece

**(2022):** The answer chosen is in accordance with the answers of the majority of the prosecutors' offices.

#### Ireland

**(2022):** Unit Heads assign a number of files to each Prosecutor depending on ability or grade. This might not mean that “targets” are set. The targets for the Office are ultimately greatly impacted by external factors like the amount of investigation files that are submitted to the office, the availability of court dates to process cases and the fact that the size and complexity of files varies. A Prosecutor’s ability to progress their caseload is very much impacted by these factors so within this Office we don’t usually reference “targets”.

#### **Lithuania**

**(2018):** The quantitative performance targets are defined for the Prosecutor’s Offices, but not for individual public prosecutors.

#### **Luxembourg**

**(2018):** NAP

#### **Malta**

**(2018):** NA

#### **Netherlands**

**(General Comment):** There is no national policy on targets for every prosecutor. An office could choose to set targets for their prosecutors (see next question), but these may vary across offices.

#### **Poland**

**(2022):** If one were to consider that this question, is linked to question 83-2 on quantitative objectives, then the answer is NAP. Which is not to say that the efficiency of a prosecutor is not subject to any assessment by superiors. Indeed, it is the task of prosecutors exercising a managerial function to ensure the proper and efficient performance of official tasks in the units and organisational units entrusted to them, in particular to ensure the efficiency of the proceedings conducted by the prosecutors subordinate to them. Executives are therefore obliged to have knowledge of, inter alia, the number of proceedings conducted by their subordinate prosecutors, the number of proceedings completed by them, the number of protracted proceedings and to react to cases of, for example, protracted proceedings.

**(2020):** Individual goals are set by prosecutors themselves in a way that enables them to carry out their duties effectively

#### **Portugal**

**(2020):** The local hierarchically superior public prosecutor can set individual targets for each public prosecutor. The High Council of the Public Prosecution Service only sets reference values for the purpose of placing prosecutors and establishing how many prosecutors are needed for a particular Public Prosecution Office.

#### **Slovak Republic**

**(2022):** Prosecutors do not have quantitative performance targets within a certain period, but at the same time they have responsibility for their work, and therefore the hierarchically superior public prosecutor is responsible for observing the duties and goals of each prosecutor.

#### **Slovenia**

**(General Comment):** .

## Spain

**(General Comment):** In accordance with Royal Decree 432/2004, of March 12, which regulates the variable complement by objectives of the members of the Prosecution service, the State Attorney General, at the proposal of the Prosecution Inspection, after hearing the Prosecutor Council and prior the report from the Ministry of Justice, will determine for each annual period the objectives whose fulfillment will lead to the perception of the variable remuneration.

## Question 083-3-1

### Bulgaria

**(2022):** But there is a quantitative evaluation of the work of a prosecutor which reflects in the individual assessment` - please see Q 120

### Croatia

**(2022):** According to the State Attorney Council Act (Official Gazette No. 67/18, 126/19, 80/22) if the number of resolved cases and actions taken in a one-year period is, without justifiable reason, less than 80% of the average of the state attorney's office in which he holds office, Deputy state attorney is disciplinary liable for disciplinary offence of irregular performance of duty.

### Greece

**(2022):** NAP:No targets are set

### Italy

**(2022):** Disciplinary sanction as provided by the Legislative Decree no 109 of 23rd February 2006, regarding disciplinary responsibility of professional magistrates.

## Question 120

### Austria

**(General Comment):** In the Austrian judicial system we have diverse and multifaceted statistic products, which are an important basis for the management of justice. The statistics are regularly compiled by the Federal Computing Center and serve to control the deployment of personnel, but also for the supervision that is necessarily linked to the parties' right to a fair trial.

The work of the public prosecutors is continuously and systematically reviewed on a quantitative level (i.e. number of completed cases, duration of proceedings). In this way, major deviations from the average can be identified. If a public prosecutor shows too many delays in proceedings or excessively long proceedings, this can lead to disciplinary proceedings or even a reduction in their job description. The assessment is carried out by the heads of the senior public prosecutors' offices. There is no systematic qualitative assessment of the work of the public prosecutors.

### Bulgaria

**(General Comment):** Supreme Judicial Council: Criteria on which the assessment is based: the criteria are general (relevant to the activity of each judge, prosecutor, and investigator); specific (relevant only to the position held – judge, prosecutor, or investigator), and additional (relevant only to administrative heads and their deputies).

Authority competent to carry out the assessment: the assessment is accepted by the Prosecutor's College of the Supreme Judicial Council.

Purposes for which the evaluation results are used: when participating in a competition for promotion or transfer in position; when participating in a procedure for the selection of an administrative head; for appointment to the position of deputy of the administrative head; on promotion to a higher rank; on secondment; for participation in the composition of a Permanent Appraisals Commission to the Appellate Prosecutor's Offices; participation in a competition committee.

Prosecutor's Office of RB: Such a system exists. According to Art. 196 of the Judicial System Act the evaluation is carried out in advance, in order to acquire irreplaceability, periodic and extraordinary attestation of the magistrates, and the criteria for the same are defined in Art. 198 of the Judicial System Act: legal knowledge and skills; ability to analyze legally relevant facts; ability to optimally organize work; expediency and discipline; compliance with the rules of ethical conduct. Attestation also takes into account the following indicators: compliance with deadlines; number of confirmed and canceled acts and the reasons for this; the results of the inspections of the Inspectorate at the Supreme Judicial Council; the overall workload of the relevant judicial authority, as well as the workload of the assessed judge, prosecutor or investigator compared to other judges, prosecutors or investigators from the same judicial authority.

### **Croatia**

**(2022):** According to the State Attorney Office Act (Official Gazette, No. 67/18, 21/22), State Attorneys' and Deputy State Attorneys' performance is evaluated every three years according to the following criteria: achieved results in resolving cases (based on the number of cases assigned to work on the basis of the Framework Criteria for the Work of Deputy State Attorneys and the average work results of county or municipal state attorney's offices for the previous three-year period), the quality of decisions and the justified use of legal remedies, proper performance of the state attorney's duty - observance of deadlines during the procedure, other activities of the State Attorney and the Deputy State Attorney, experience in performing the duty of state attorney and compliance of conduct with the Code of Ethics of State Attorneys and Deputy State Attorneys. The Framework criteria are adopted by the Minister in charge of judicial affairs, with the prior opinion of the Chief State Attorney of the Republic of Croatia.

### **Czech Republic**

**(2022):** The Head of Public Prosecutor's Office monitors e.g. the number of appeals, the number of returnig cases etc.

### **Denmark**

**(2020):** Public prosecutors go through intensive education for the first three years of them being recruited and this evaluation is structured centrally with HR at the Attorney Generals office. During that period they are individually being assessed through exams and through working with mentors. Thus they are continuously being assessed both centrally through exams as well as locally through the daily work that the mentor sees. Later in the career the assessment is not structured in such a way but all through their career the prosecutors are evaluated through their daily work and how they perform in court.

### **France**

**(2022):** The assessment of the public prosecutor's magistrate provided for by statutory order No. 58-1270 of 22 December 1958 aims to determine the professional value of the magistrate. It must reflect his legal and technical professional skills, his level of commitment, assess his abilities to exercise a specific function and identify training needs within his career path. The assessment is established by the Attorney General near the Court of Appeal or Prosecutor near the Superior Court of Appeal for magistrates from their jurisdiction. Considered as a moment for exchange, this evaluation should highlight both the skills that were mobilized by the magistrate and areas where improvement could be made. It contributes to better situate his activity within service organization and operation while specifying missions related to its functions highlighting its professional potential.

For magistrates, evaluation offers a privileged opportunity to take stock of their activities, consider developments in their professional practice and regularly position themselves relative to their career goals.

For evaluators it should enable them detect each individual's potential so as contribute towards efficient human resource management.

**(2021):** source DSJ

### **Germany**

**(2022):** Out of 15 respondent federal states, 12 reported that there is a quantitative evaluation of the public prosecutors' work and 12 reported that there is a qualitative evaluation (one federal state has not yet replied).

The assessment is generally carried out by the direct superior and is based on different criteria such as specialised knowledge, expression, cooperation, leadership skills, negotiating skills, etc. The results are mostly used for decisions about promotions.

**(2021):** The vast majority of the Länder answered "yes", 3 answered "no".

### **Greece**

**(2022):** The question was answered by the prosecutor's office of the Supreme Court.

### **Hungary**

**(2022):** The person exercising the employer's rights assesses a prosecutor's work every eight years. The purpose of assessment based on the examination of case files is to assess the quality of the prosecutor's professional activities, to evaluate his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. In accordance with Section 50 (1) of the Prosecution Employment Status Act, prosecutors, with the exception of the Prosecutor General and the Deputy Prosecutor General, shall be assessed before the expiry of the fixed term of the first prosecution appointment, while in the case of a first appointment for an indefinite term, before the expiry of a period of three years following the appointment, and thereafter every eight years, provided that they worked under the supervision of the assessor or his/her deputy for minimum one year during the assessment period. Prosecutors do not need to be assessed during the six years preceding the completion of the applicable old-age pension age. In addition to cases mentioned above, a prosecutor shall also be assessed if requested by the prosecutor, provided that two years have elapsed since the previous assessment, circumstances have emerged that indicate the prosecutor's professional ineligibility or the necessity to alter the evaluation of the previous assessment. The purpose of assessment is to assess the quality of the prosecutor's professional activities, to evaluate his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. The assessment may only feature duly supported, factual findings.

In the event of an ineligible grade, upon the disclosure of the result of the assessment, the prosecutor shall be called upon to resign his/her office within thirty days. If despite the call the prosecutor does not resign his/her office, his/her prosecution service employment shall be terminated by exempting him/her from office. In accordance with Sections 13/A-13/F of Instruction 4/2012. (I. 6.) of the Prosecutor General on specific questions regarding the status of employees of the Prosecution Service, a case file examination shall be carried out as a basis for the assessment which is due to follow with regard to the prosecutor appointed to a prosecution office subordinated to the Office of the Prosecutor General prior to the time when the assessment is due. Such a case file examination shall not be carried out for senior head prosecutors. Case file examinations shall discover the examined prosecutor's practice regarding the application of substantive and procedural law during at least a one-year period prior to the case file examination, or since the prosecutor's latest assessment – or in absence of an assessment – since the time of his/her appointment at the most. The case file examination and its evaluation shall be done by a prosecutor (hereinafter: examiner prosecutor) who works at the prosecution office directly superior to the prosecution office where the examined prosecutor is appointed to and who works in the same field of prosecutorial activity or expertise as the examined prosecutor. The examiner prosecutor shall be designated by the directly superior prosecution office or at the Office of the Prosecutor General by the head of the organizational unit in the prosecution service that is competent in view of the examined prosecutor's duties.

## Ireland

**(2022):** A Prosecutor's performance is individually assessed through PMDS (Performance Management and Development System). PMDS assesses how a jobholder's work performance, career and development needs are managed. It links the management of individual performance to the objectives of the Office, as set out in the Strategy of Statement and Business Plan. PMDS seeks to strike a balance between the needs of the organisation and the development needs of those who work in it. It recognises the need for continual change and improvement and for the involvement of staff in bringing this about. Individual prosecutors are responsible for carrying out their own goal setting and assessment. The PMDS form is then reviewed and assessed by the prosecutor's manager.

## Italy

**(General Comment):** The assessment procedure applies to both judges and public prosecutors. Every four years, the High Council for the Judiciary (CSM) conducts a professional appraisal based on the professional skills of judges/prosecutors. The professional status of both judges and prosecutors is organized into 7 different levels. Several criteria are taken into consideration: independence, impartiality, balance, professional capacity, work capacity, diligence and commitment. The assessment is based on a number of acts and documents that describe all the professional aspects of the magistrate to be evaluated. The most significant are:

- "self report" where the magistrate illustrates all the elements that he/she believes are necessary or useful to be considered for the purpose of his/her appraisal;
- a random sample of acts and documents produced by the magistrate during the evaluation period;
- an "informative report" prepared by a superior of the magistrate;
- the statistics concerning activity of the magistrate: the number of provisions drafted, the processing times of the proceedings, the time for filing the documents (even in comparison with the other magistrates of the office);
- work related publications, if any;
- reports from the lawyers' council, if any.

## Latvia

**(General Comment):** Evaluation is carried out by the Attestation Commission of Prosecutors. During the evaluation of a public prosecutor the following indicators of the quality of performance of the functions are assessed: supervision, criminal prosecution, maintenance of state prosecution in court, as well as the protection of state and individual rights. An assessment of professional competences is also carried out. The results are generally used to evaluate professional performance and suitability for the position. In the case of a negative opinion, the Commission can determine specific tasks that must be performed to eliminate the deficiencies found in prosecutor's professional activity or to improve his/her professional activity.

## Lithuania

**(2022):** The service, qualifications of the prosecutors and their suitability for the position are assessed by the Prosecutors' Assessment Commission.

The Commission is composed of seven members (four prosecutors and three persons (non-prosecutors) of impeccable reputation, nominated by the President of the Republic, the Speaker of the Seimas, and the Prime Minister) for a period of three years.

The Commission assesses data on the procedural and non-procedural performance and professional qualities of the prosecutor, and, in the case of the evaluation of the chief prosecutor (or deputy), also on the administrative performance.

## Netherlands

**(General Comment):** The public prosecution has a team Judicial Quality at the General Office that studies the quality of the criminal proceedings of the public prosecution. As part of these studies and assessments, a pool of prosecutors has been compiled, and they study the work of other public prosecutors. This is an assessment of an office, not of individual prosecutors. The results of these studies are used for quality enhancement trajectories. The studies are repeated periodically.

**(2020):** The public prosecution has a team Judicial Quality at the General Office (Parket Generaal) that studies the quality of the criminal proceedings of the public prosecution. As part of these studies and assessments, a pool of prosecutors has been compiled, and they study the work of other public prosecutors. The results of these studies are used for quality enhancement trajectories. The studies are repeated periodically.

## Portugal

**(General Comment):** The prosecutors are evaluated periodically in time lapses between 3 to 5 years. The evaluation is held by the Prosecutors Superior High Council and it evaluates the quality of the work held by all prosecutors. A higher ranked prosecutor does the evaluation and produces a report that is sanctioned by the Prosecutors Superior High Council.

## Romania

**(2022):** According to Article 87 of Law No 303/2022 -The individual professional evaluation of judges and prosecutors involves analysing and noting of the criteria and indicators for assessing the professional performance of judges and prosecutors, indicators which concern, in particular, the quality of the activity, the efficiency, the integrity and the obligation to continue vocational training, and in the case of judges and prosecutors appointed to senior positions, the manner of carrying out the managerial duties. (2) Professional evaluation of judges and prosecutors aims to establish the level of their professional competence and also to improve professional performance, increase the efficiency of the activity of courts and prosecutor's offices and public trust in judicial authority, maintain and consolidate the of the quality of the judicial system

## Slovenia

**(General Comment):** On the proposal of the State Prosecutor General, State Prosecutorial Council adopts Criteria for the assessment of state prosecutors' performance. They define quality and quantity indicators. The quantitative criteria define expected time for the resolution of cases and for typical procedural acts. The performance of the evaluated prosecutor is compared to other prosecutors at his/her office concerning the number of assigned, resolved and unresolved cases, number of attendances at the court hearings, conviction rate, pronounced sanctions and number of logged appeals. Head of state prosecutor's office as competent authority for the matters of state prosecution administration can alert the public prosecutor to his duty to meet the targets.

Regular individual assessment of the public prosecutors' work is carried out every three years. The assessment can also be carried out on demand of the State Prosecutorial Council, head of prosecutor's office, Minister or the prosecutor himself. In first three years after the appointment for the state prosecutor the assessment is carried out every single year.

## Spain

**(2021): SOURCES:** Royal Decree 432/2004, of March 12, which regulates the variable complement by objectives of the members of the Prosecution service.

Agreement of November 29, 2018, of the Plenary of the General Council of the Judiciary, by which Regulation 2/2018 is approved, regulating the remuneration regime Judicial career

## Question 120-1

## Bulgaria

**(General Comment):** Quantitative evaluation of the work of the prosecutors is carried out by applying the Rules for measuring the workload of the prosecutor's offices and the individual workload of each prosecutor and investigator, adopted by the Prosecution College/collegium of the SJC. It is possible to display the data according to the indicators provided for in the Rules in real time, both for the prosecutor's office as a whole, as well as for individual prosecutor's offices and for each specific prosecutor.

Quantitative data on the workload are taken into account in the appraisal procedure of a specific prosecutor, in the course of which an assessment of his work is carried out, both in terms of quantitative indicators and also regarding the quality of the performed activity according to the results achieved.

Prosecutors are assessed in accordance with Ordinance No. 3 of February 23, 2017 of the Supreme Judicial Council on the indicators and Methodology for Assessment and the Criteria for Reporting the Workload Degree of Prosecutors and Investigators and of Administrative Heads and Their Deputies (promulgated SG No. 21 /10.03.2017).

Attestation is carried out:

1. in advance - for a three-year period from the appointment to the position of prosecutor or investigator - when participating in a competition or when being offered a promotion;
2. to acquire irreplaceability - upon completion of 5 years of experience as a prosecutor or investigator;
3. periodically - for a 5-year period from the attestation of irreplaceability of a prosecutor and investigator, of an administrative head and of a deputy administrative head;
4. extraordinary - in the cases under Art. 197, para. 5 of the Judicial System Act.

Junior prosecutors and junior investigators are not assessed in advance, and a report on their work is prepared by the mentor in the second year of their appointment.

## Cyprus

**(2021):** the assessment is carried out by the AG the Deputy AG and the head of Department as part of their annual evaluation

## Czech Republic

**(2018):** The individual assessment of the public prosecutors' work take place at least once every two years.

## Denmark

**(2021):** More frequent during the first three years of their career. Less frequent after that.

**(2020):** See response to 120: More frequent during the first three years of their career. Less frequent after that.

## France

**(General Comment):** Article 12-1 of the Decree of 22 December 1958 establishes the principle of evaluating the professional activity of each magistrate every two years. An assessment must also be conducted when applying for promotion.

**(2022):** Article 12-1 of the ordinance of December 22, 1958 establishes the principle of evaluating the professional activity of each magistrate every two years. An evaluation must also be conducted when applying for advancement on the promotion list.

**(2021):** source DSJ

## Greece

**(2022):** The question was answered by the prosecutor's office of the Supreme Court.

## Hungary

**(2021):** Under Section 50 (1) of Act on Prosecutors, prosecutors shall be assessed on a regular basis, with the exception of the Prosecutor General and the Deputy Prosecutors General.

In case of the first appointment, which is for a definite term, the prosecutor shall be assessed by the end of that term. In case of appointment to prosecutor for an indefinite term, the prosecutor shall be assessed within 3 years following the appointment; then the assessment shall be carried out every 8 years.

Prosecutors do not need to be assessed within the period of six years before reaching retirement age.

Besides the above, prosecutors shall be assessed if they request so, provided that at least 2 years have elapsed since the last assessment, or in the occurrence of any circumstance which suggests professional inadequacy, or which necessitates the amendment of the results of the last assessment. The assessment procedure involves examination of case files, as set out in Sections 13A to 13F of the Prosecutor General's Order No. 4/2012.

**(2018):** The evaluation system is defined by Articles 50-52 of the Act on the Legal Status of Prosecutors. The purpose is to assess the quality of the prosecutor's activities, his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. Prosecutors, with the exception of the Prosecutor General and the Deputy Prosecutor General, are assessed before the expiry of the fixed term of the first appointment, while in the case of a first appointment for an indefinite term, before the expiry of a period of 3 years following the appointment, and thereafter every 8 years. Prosecutors need not be assessed during the 6 years preceding the completion of the applicable old-age pension age. A prosecutor shall also be assessed if: requested by the prosecutor; circumstances have emerged that indicate the prosecutor's professional ineligibility or the necessity to alter the evaluation of the previous assessment; in the extraordinary proceeding to be completed without delay, s/he fails to meet the deadline extended by the superior prosecutor. The assessment is the duty of the person exercising the employer's rights. The official work of prosecutors assigned to the Ministry is evaluated by the Minister responsible for justice in accordance with the rules applicable to government officials. As a result, prosecutors may be awarded the following grades: excellent, suitable for promotion; excellent and fully eligible; eligible; eligible, subsequent assessment required; ineligible. In the event of an ineligible grade, the prosecutor shall be called upon to resign his/her office within thirty days. If the prosecutor is awarded a grade "eligible, subsequent assessment required", the person exercising the employer's rights identifies the deficiencies and irregularities and states the main criteria of the desired changes which shall be reviewed prior to the next assessment (within 2 years). A prosecutor shall be awarded an ineligible grade upon the next assessment if he/she fails to obtain an eligible grade. S/he may request a court of law to quash any erroneous or untrue finding.

## Ireland

**(2021):** Performance Management System

**(2018):** Prosecutors working in-house are required to participate in Public service wide Performance Management and Development System (PMDS).

## Italy

**(2022):** Every four years

## Latvia

**(General Comment):** The assessment of the professional activities of prosecutors have been commenced and is operational from 1 January 2014, within which the professional activities of prosecutors are assessed on a regular basis (not less than once every five years).

**(2020):** Not less than once every five years

## Lithuania

**(General Comment):** According to Article 33 of the Law on Prosecution Service, evaluation of prosecutor's individual performance, qualification and suitability is carried out by the Attestation Commission. Performance of a prosecutor who has received a positive evaluation after his/her internship, is thereafter evaluated every five years during the regular evaluation of the service. The extraordinary evaluation can be carried out by decision of the Prosecutor General: at the request of the public prosecutor him/herself, if at least half a year has passed since his/her last evaluation; in the case the prosecutor is applying for a higher position, or to the same or an equivalent post after the expiry of the term of appointment; if three years have passed since the last evaluation of his/her service; if the prosecutor's performance has repeatedly been deficient, giving rise to reasonable doubts as to his/her suitability for the position in question.

**(2022):** The Commission carries out regular and extraordinary assessments of the service.

Regular service assessments are carried out:

1. at the end of the prosecutor's traineeship;
2. every five years.

An extraordinary service assessment may be carried out:

1. at the reasoned request of the prosecutor, if at least half a year has elapsed since the last assessment;
2. when, at the end of his/her term of office, the prosecutor seeks appointment to a higher, the same or an equivalent post, provided that three years have elapsed since the last service assessment;
3. in cases where it is established that the prosecutor's performance has repeatedly been deficient, giving rise to reasonable doubts as to his suitability for the post in question.

## Malta

**(2022):** It is up to the discretion of the Attorney General to carry out such evaluation but it has be carried out at least once annually.

**(2021):** The work of public prosecutors is constantly monitored by the Deputy AG and the AG herself. The monitoring is not scheduled at specific annual intervals but it is ingrained in the daily work processes in the Office.

**(2020):** The work of public prosecutors is constantly monitored by the Deputy AG and the AG herself. The monitoring is not scheduled at specific annual intervals but it is ingrained in the daily work processes in the Office.

**(2018):** Thework of public prosecutors is constantly monitored by the Deputy Attorney General (in charge of the criminal field) and the Attorney General. The monitoring is not scheduled at specific annual intervals, but is ongoing and ingrained in the daily work processes of the Office.

## Netherlands

**(General Comment):** A regular cycle of individual assessments exists, based on certain competencies a public prosecutor should possess. The extent to which the public prosecutor possesses these competencies is assessed in performance and assessment reviews. Furthermore, each prosecutor has to obtain a certificate implying they are 'fit for trial', that they have the necessary skills to represent the public prosecution at trial.

## Romania

**(2022):** Legislation on the statute of judges and prosecutors was replaced by Law no. 303/2022

**(2020):** According to the provisions of art. 39 of the Law no. 303/2004, amended and republished in 2018, judges and prosecutors are being periodically evaluated under the observance of the professional and performance criteria. The evaluation shall envisage the quality of their activity, efficiency, integrity as well as the fulfillment of the obligation to take part in in-service professional training and on managerial activity for those judges and prosecutors in leadership positions. The periodical evaluation shall be first carried out by the end of the first 2 years of activity after the entering in profession and shall be continued every 3/4/5 years depending on the seniority in profession (5-10 years, 10-15 years, over 15 years of seniority).

**(2018):** similar to judges, see Q114, 114.1 and the additional comments

## Slovenia

**(General Comment):** Regular individual assessment of the public prosecutors' work is carried out every three years. The assessment can also be carried out on demand of the State Prosecutorial Council, head of prosecutor's office, Minister or the prosecutor himself. In first three years after the appointment for the state prosecutor the assessment is carried out every single year.

**(2018):** Every three years

# Indicator 1: Systems for measuring and evaluating the performance of courts and prosecution services

## Comments provided by the national correspondents

### organised by question no.

*Question 066. Are quality standards determined for the judicial system at national level (are there quality systems for the judiciary and/or judicial quality policies)?*

*Question 067. Do you have specialised personnel entrusted with implementation of these national level quality standards?*

*Question 070. Do you regularly monitor court activities (performance and quality) concerning:*

*Question 070-1. Do you regularly monitor public prosecution activities (performance and quality) concerning:*

*Question 071. Do you monitor the number of pending cases and cases that are not processed within a reasonable timeframe (backlogs) for:*

*Question 072. Do you monitor waiting time during judicial proceedings?*

*Question 083. Are there quantitative performance targets defined for each judge (e.g. the number of resolved cases in a month or year)?*

*Question 083-1. Who is responsible for setting these targets for each judge?*

*Question 083-1-1. What are the consequences for a judge if these targets are not met?*

*Question 083-2. Are there quantitative performance targets defined for each public prosecutor (e.g. the number of decisions in a month or year)?*

*Question 083-3. Who is responsible for setting these targets for each public prosecutor?*

*Question 083-3-1. What are the consequences for a prosecutor if these targets are not met?*

*Question 120. Is there a system of individual evaluation of the public prosecutors' work?*

*Question 120-1. Please specify the frequency of this evaluation:*

### Question 066

#### Belgium

##### (2021):

The College of Courts and Tribunals and its support service are working on the implementation of a quality system at the national level; there is no declination at the local level yet, but this project is in full evolution. Within the framework of the law of 14 February 2014 and the College's action plans (2018 and 2020), a quality system will be implemented in respect of judges. The intention is therefore to introduce an integrated framework of quality, internal control and (internal) audit models to replace the executive's existing ex ante control and monitoring systems.

#### Bulgaria

**(General Comment):** Supreme Judicial Council: According to the answers of SJC the competent bodies in these matters are:

The Inspectorate to the SJC:

- checks the organization of the initiation and movement of judicial, prosecutorial and investigative cases, as well as the closing of cases within the established terms and in case of violations, signals the administrative head of the relevant body of the judiciary and the relevant College of the Supreme Judicial Council
- sends signals, proposals and reports to other state bodies, including the competent bodies of the judiciary;
- examines applications against violation of the right to examine and resolve cases within reasonable time.

The Judges' College of the SJC:

- annually analyses and reports the degree of workload of the bodies of the judiciary;
- requests and summarizes every 6 months information from the courts about their activity;
- resolves questions about the organization of the activity of the relevant system of judicial authorities;
- adopts rules for the allocation of cases between the judges who consider cases allocated according to Art. 9, para. 3, in order to equalize their total workload;
- determines the number of judicial officers according to the degree of workload on the proposal of or after agreement with the administrative heads of the bodies of the judiciary, and may open new and lays off positions.

The Plenary of the SJC:

- on the proposal of one of the Colleges, after coordination with the administrative heads of the bodies of the judiciary, determines the number of judges, prosecutors and investigators in all courts, prosecutor's offices and investigative departments according to the degree of workload;
- hears and accepts the annual reports of the bodies of the judiciary under Art. 84, item 16 of the Constitution.

.....

According to the answers of The Prosecutor's office of the Republic of Bulgaria:

The legal regulation is in Art. 84, item 16 of the Constitution of the Republic of Bulgaria, according to which the Parliament hears and accepts the annual report of the Prosecutor General submitted by the SJC and Art. 30, para. 2, item 4 of the Judicial System Act, according to which the Plenum of the SJC hears and accepts this annual report.

Approved by the Prosecutor General/ chief prosecutor is the Directive on the control activity of the Prosecutor's Office, aimed at ensuring the exact and uniform application of the laws in the performance of the functional duties of the prosecutors and investigators. The Directive regulates the conditions, order and procedures for carrying out control activities through audits, checks and analyzes of the work of the prosecutor's offices, the National Investigation Service, as well as individual prosecutors and investigators, outside of the institutional and official verification of the legality of their acts.

**(2021):** Please see the General Comments

**(2020): Judiciary system Act:**

Article. 198 (1) The criteria for the appraisal of a judge, prosecutor or an investigating magistrate shall be:

1. legal knowledge and skills of applying it;
2. skill of analysing legally relevant facts;
3. skill of making optimum working arrangements;
4. efficiency and discipline;
5. compliance with the rules of ethical behaviour.

(2) In the course of the appraisal under Paragraph (1) the following indicators shall be taken into account:

1. keeping deadlines;
2. number of instruments upheld and reversed and the grounds for this;
3. the results of inspections carried out by the Inspectorate with the Supreme Judicial Council,
4. the overall caseload of the respective judicial district and judicial authority, as well as the workload of the appraised judge, prosecutor or investigating magistrate compared to other judges, prosecutors or investigating magistrates in the same judicial authority.

(4) The time served by the judge, prosecutor or investigating magistrate as a permanent trainer at the National Institute of Justice shall also be included in the appraisal period. The evaluation of the work performance as a trainer shall be given by the Managing Board.

(5) The time served by the judge, prosecutor or investigating magistrate as an European Delegated Prosecutor shall also be included in the appraisal period. The evaluation of the results of their work under Regulation (EU) 2017/1939 shall become part of their appraisal.

Article. 199. (1) A judge shall be appraised under the following specific criteria:

1. complying with the schedule for conduct of court hearings;
2. skill of conducting a court hearing and drawing up a record of proceedings;
3. administrating cases and appeals, preparing for a court hearing;
4. number of appealed judicial instruments from among the appealable judicial instruments, appealed judicial instruments upheld, judicial instruments reversed or invalidated, in whole or in part, and the grounds for it; the ability to reason and justify judicial instruments and to analyse evidence shall be subject to evaluation.

(2) A prosecutor shall be appraised under the following specific criteria:

1. skills of planning and structuring steps in pre-trial and trial proceedings;
2. complying with the written instructions and orders of the superior prosecutor;
3. ability to make working arrangements and direct the investigating authorities and the teams participating in pre-trial proceedings;
4. number of unappealed prosecutorial instruments, including warrants to terminate and suspend criminal proceedings, number of final judicial instruments rendered on instruments submitted by the prosecutor appraised, as well as the final judicial instruments returning cases for the rectification of procedural breaches, and the reasons for this, number of appeals granted, the prosecutorial instruments upheld, modified and reversed upon an instance and on official review. (2) An investigating

## Croatia

**(General Comment):** According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15, 67/18), the president of the court evaluates the work of every judge according to Framework Criteria for the work of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework Criteria for the work of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

According to the State Attorney Office Act (Official Gazette, No. 67/18), State Attorneys' and Deputy State Attorneys' performance is evaluated every three years according to the following criteria: achieved results in resolving cases (based on the number of cases assigned to work on the basis of the Framework Criteria for the Work of Deputy State Attorneys and the average work results of county or municipal state attorney's offices for the previous three-year period), the quality of decisions and the justified use of legal remedies, proper performance of the state attorney's duty - observance of deadlines during the procedure, other activities of the State Attorney and the Deputy State Attorney, experience in performing the duty of state attorney and compliance of conduct with the Code of Ethics of State Attorneys and Deputy State Attorneys. The Framework criteria are adopted by the Minister in charge of judicial affairs, with the prior opinion of the Chief State Attorney of the Republic of Croatia.

**(2022):** According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15, 67/18, 126/19, 130/20, 21/22, 60/22), the president of the court evaluates the work of every judge according to Framework Criteria for the work of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework Criteria for the work of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice with the prior opinion of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

According to the State Attorney Office Act (Official Gazette, No. 67/18, 21/22), State Attorneys' and Deputy State Attorneys' performance is evaluated every three years according to the following criteria: achieved results in resolving cases (based on the number of cases assigned to work on the basis of the Framework Criteria for the Work of Deputy State Attorneys and the average work results of county or municipal state attorney's offices for the previous three-year period), the quality of decisions and the justified use of legal remedies, proper performance of the state attorney's duty - observance of deadlines during the procedure, other activities of the State Attorney and the Deputy State Attorney, experience in performing the duty of state attorney and compliance of conduct with the Code of Ethics of State Attorneys and Deputy State Attorneys. The Framework criteria are

**(2018):** According to the Courts Act (Official Gazette, number 28/13, 33/15, 82/15), the president of the court evaluates the work of every single judge according to Framework for the workload of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework for the workload of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

**(2017):** According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15), the president of the court evaluates the work of every single judge in his/her court for the previous year on the basis of the following standards: the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework for the workload of judges, result of work in different kinds of cases in absolute numbers and percentages, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

## **Cyprus**

**(General Comment):** Quality standards are applied in practice

**(2017):** Quality standards are applied in practice

**(2016):** There are no written standards but in practice there are quality standards.

**(2015):** In practice there are quality standards

**(2014):** In practice there are quality standards

## **Denmark**

**(2019):** No, we use quantitative measures. Quality is usually measured as length of time to finalize a case.

**(2016):** No, we use quantitative measures. Quality is measured as length of time to finalize a case.

**(2015):** The only standards are objective standards for example acceptable timeframes to finalize a case.

## Estonia

**(General Comment):** Estonia has developed a quality system consisting of 3 parts. The first part contains the quality standards (good practice) for the management of the court that describe activities related to the chairman of the court. The second part contains the quality standards for the administration of courts and is focused on the different roles of the parties involved in the administration of courts: directors, Ministry of Justice, Council for the Administration of Courts. The third part contains quality standards for the court proceedings and is addressed to all the judges. All of the three parts of the quality standards have been discussed and approved by the Council for Administration of Courts, respectively in 2012, 2013 and 2015.

## Finland

**(General Comment):** There are no quality standards covering the whole judiciary in Finland. Instead there are several quality projects going on, for example the Quality Project of the Administrative Courts, which started in 2020 and concerns all administrative courts in Finland. The Rovaniemi Court of Appeal Quality Projects have produced quality benchmarks, which evaluate the quality of the adjudication in courts of law. Last assessment was conducted in 2020.

**(2021):** Prosecution Services' system quality improvement project is underway.

**(2020):** Prosecution Services' system quality improvement project is underway.

**(2015):** There is a Quality Project of the courts in the jurisdiction of the Court of Appeal of Rovaniemi. (The jurisdiction of the Court of Appeal of Rovaniemi is the northernmost of the six appellate jurisdictions in Finland.) In 1999, the courts in the jurisdiction of the Court of Appeal of Rovaniemi launched a project for improvement of quality in adjudication. The quality project covers both civil cases and criminal cases. The objective of the quality project is to develop the functioning of the courts further and further so that the proceedings meet the criteria of a fair trial, that the decisions are well reasoned and justified, and that the services of the courts are affordable to the individual customers. The main working method consists of systematic discussions among the judges and also between the judges and stakeholders. The development work is steered by the development committee of the quality project. Normally four working groups for quality are set up for each year. The membership consists of judges from each of the District Courts in the appellate jurisdiction, members of the Court of Appeal, and referendaries of the Court of Appeal. Also prosecutors, private attorneys, public legal aid attorneys and heads of pre-trial investigation may serve as members in the working groups for quality. Each working group for quality is tasked to deal with one of the development themes which have been selected. The reports of the working groups are presented at the Quality Conference, they are discussed, and quality objectives based on the reports are set for the following year. The Report of Quality, containing the final reports, is published every year.

There is also a quality project of the courts in the jurisdiction of the Court of Appeal of Helsinki. Quality Project consists of working methods of two kind: cooperation with the University of Helsinki and working groups. Working groups for quality are set up for each year. The membership consists of judges from District Courts, members of the Court of Appeal, referendaries of the Court of Appeal, prosecutors and lawyers. Each working group for quality is tasked to address to one of the development themes which have been selected. The reports of the working groups are presented at the conference called 'Day of Jurisdiction'.

In addition there is a cooperation project between administrative courts. Some topics of the project have related to the quality standards. The reports of the project have discussed the matters like the factors of quality at administrative courts and the collection of information on quality.

It is also worth mentioning that on 15 October 2009, the presidents of Finnish Courts of Appeal proposed that the Finnish Association of Judges should begin work on drafting ethical guidelines for judges. A working group was set and the draft on ethical principles was discussed widely. The principles were formally released at the Judge Day event held in Helsinki on 12 October 2012.

## France

**(General Comment):** Standards of quality developed for the public administration are utilised within the judicial system. The charter of administrations thus establishes the rules for welcoming litigants in all courts and may lead to certification. There are also local initiatives aimed at implementing a 'quality system' based on certification by an external body, which consist of establishing procedures describing the process of reception, organisation of work, and management of a case. As regards administrative justice: the rate of annulment and reformulation of jurisdictional decisions must be kept below 15% and the backlog of cases older than two years below 7.5% of the total caseload.

**(2022):** It is challenging to distinguish between patterns in automatically generated texts, with France preferring the use of the concept of framework. The OARM, a tool to assist magistrates in drafting, provides a library of pre-written paragraphs and standard decisions that allow magistrates to start from these elements and then adapt them to each case they handle. The JAF bible includes frameworks and paragraphs related to disputes handled by family court judges.

**(2021):** Quality standards developed for public administration are used in the judicial system. The charter of the administrations thus sets the rules for the reception of litigants in all courts and can lead to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consists in establishing procedures describing the reception process, the organisation of work and the management of a case.  
Source DSJ

**(2020):** "If yes, please specify: Quality standards developed for public administration are used in the judicial system. The charter of the administrations thus sets the rules for the reception of litigants in all the courts and can lead to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consist in establishing procedures describing the reception process, the organization of work and the management of a case. With regard to administrative justice: the rate of annulment and reversal of jurisdictional decisions must be kept below 15% and the stock of cases older than two years below 7.5% of the total stock."

### **(2019):**

Quality standards developed for public administration are used in the judicial system. The charter of administrations thus sets out the rules for the reception of litigants in all courts and may give rise to certification. There are also local initiatives to set up a "quality system" based on certification by an external body, which consists of establishing procedures describing the process of reception, work organisation and management of a case.  
Administrative justice: the rate of annulment of court decisions must be kept below 15% and the number of cases pending for more than two years.

**(2016):** Quality standards developed for public administration are used in the judicial system. The charter of the administrations determines the rules for the reception of litigants in all courts and may give rise to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consists in establishing procedures describing the process of reception, organisation of work and management of a case.

## Germany

**(General Comment):** Due to judicial independence, there are no national level quality standards.

**(2022):** Due to judicial independence, there are no national level quality standards.

**(2013):** For 2010, 2012 and 2013, no information was provided from Mecklenburg-Western Pomerania and Thuringia. Four Landers replied “Yes”, while the remaining Landers answered “No”.

In Baden-Württemberg, the performance of each court is compared against the others in regard to number and duration of proceedings. Key performance indicators on performance ability of the courts are ascertained and compared at the Lander level.

A comprehensive quality management system has been introduced in Schleswig-Holstein at all courts and public prosecution offices. All of the accessible areas of the court administration are subject to quality management. Judicial independence and the professional independence of Rechtspfleger present natural constitutional and statutory boundaries that must always be considered.

In Brandenburg, a quality management system seeks to guarantee that quality demands that are statutorily prescribed, self-imposed, or demanded by users of the system are fulfilled with an optimal use of resources. These last years, a number of strategies have been implemented for ensuring quality in the justice system by means of cost and performance accounting, a controlling system, budgeting of personnel costs, benchmark procedures, balanced scorecard, the EFQM Model, various instruments for personnel and organisation development, calculation of personnel requirements, optimisation of business processes, surveys of attorneys, citizens, and employees, and evaluation instruments both for individual judicial and public prosecution work as well as for the courts and public prosecution offices as organisational units. The increased use of modern technology (e.g. Internet) has opened up the possibility for the justice system to reach a large number of citizens and, thus, to offer court users the best possible service. Likewise, the continuous expansion of electronic legal transactions offers new opportunities for improvement in the quality of the justice system with regard to the performance characteristics public accessibility and public service. However, the developments and models named are not uniformly established in the Lander. In Lower Saxony, a quality strategy was developed through the surveys AgiL (performance comparison of local courts) and LiVE (performance comparison of regional courts). This is based on the assumption that it is possible to compare courts by the collection of data. Following the comparison, an analysis is conducted to determine the reasons for which better numbers are achieved at one court location over another. These are then discussed in expert groups and measures are developed to promote those tools that seem likely to succeed for the duties at all court locations. The surveys do not serve to evaluate individual employees but rather to uncover structures that promote performance, which can then be transposed. This quality management concept takes place together with judicial councils and personnel representatives.

## Greece

**(General Comment):** Quality standards are set by the Code of Organization of Courts and Status of Judicial Officers (Law 1756/1988).

**(2022):** According to Law 4938/2022 (art.104) of the organization of court and tribunals code.

**(2021):** Most of the measures taken recently in Greece aim at speeding up administrative justice. However, the law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

**(2017):** Most of the measures taken recently in Greece aim at speeding up Justice. However the Law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

## Hungary

**(General Comment):** Second instance courts have to prepare a note on the decision and the trial procedure of the first instance court, based on professional criteria in every case. In this note, the court of appeal has to examine: the application of substantive, procedural and administrative regulations; the preparation of the hearings; the quality of the judges trial leading practice; if the coercive measures were well founded; if the hearings were set timely; if the ruling was transcribed in time; if the decision was edited correctly. The conclusions are summarized and judges of first instance courts are informed about them at least once a year.

Furthermore, the departments of the Supreme Court (Kúria) responsible for examining the judicial practice evaluates the practice of the courts and regularly inform judges about their experience.

## Ireland

**(2021):** With effect from October 1 2022, a statutory system providing for investigation and adjudication of complaints in relation to judicial conduct has been commenced pursuant to Judicial Council Act 2019.

## Italy

**(General Comment):** In Italy there is not a strict quality system as such. However, there is a regular monitoring system in place which tracks the performance of court activities.

## Latvia

**(General Comment):** In January 15, 2020 the "Visitors service standards of the district (city) courts and regional courts" were approved. This document summarizes the general principles related to functions such as judicial reception and providing with information. The standards help court staff to raise their professionalism and understand the court visitors servicing values.

**(2022):** The reply is partly "yes" because according to the Law on Judicial Power Section 27.1., a Chief Judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (standard of time periods for adjudication of matters) prior to the beginning of each calendar year, in co-operation with court judges. This standard shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and other basic principles related to the guarantee of fair trial. A Chief Judge of a court shall approve the standard and supervise the actual time periods of examining matters in a court. He/she shall submit information to the Board of Justice regarding the approved standard until 1 February of each year. In January 15, 2020 the "Visitors service standards of the district (city) courts and regional courts" were approved. This document summarizes the general principles related to functions such as judicial reception and providing with information. The standards help court staff to raise their professionalism and understand the court visitors servicing values.

**(2021):** Partly yes, according to the Law on Judicial Power Section 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year.

**(2020):** Partly yes, according to the Law on Judicial Power Section 27.1. the Court President before the beginning of each calendar year, shall plan and determine the objectives of the court work in relation to average time periods for the examination of cases in a court (the standard of time periods for the examination of cases) in cooperation with court judges. The standard of time periods for the examination of cases shall be determined by taking into account the court resources and the necessity to ensure the right of a person to the examination of a case in a reasonable time period and in conformity with other basic principles for the examination of cases. The Court President shall submit the standard case examination time limits for approval to the Judicial Council until 1 February of each year.

**(2019):** In January 15, 2020 the "Visitors service standards of the district (city) and regional court" is adopted. This document defines the procedure by which the employee of the district (city) and regional court shall ensure the servicing of the court visitor, the participant in the proceedings, its representative (hereinafter - customer) (the acceptance of the client, the provision of information and communication in person, by telephone and by electronic means) and basic customer service values, general principles and basic rules for customer service.

**(2017):** According to the Law on Judicial Power Art 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year. First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

**(2016):** Partly yes, according to the Law on Judicial Power Section 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year.

First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

**(2015):** Since 2008 courts apply 'The visitors service standards of the district (city) courts and regional courts'. This courts visitor's service standard summarizes the general principles of judicial reception and providing with information. Standard helps court staff to raise their professionalism and understand the court visitors servicing values.

On 2015 May 18 Council of Justice approved guidelines on communication of the court system. The aim of the guidelines is to promote the effective functioning of the judiciary and promote the public confidence in the judiciary, creating a positive Court's image and enhance its' authority in society.

**(2014):** In 2014, for the first time, standards of time periods for adjudication of matters were submitted to the Board of Justice.

## Malta

**(General Comment):** There exists a Code of Ethics for the members of the Judiciary which, though not providing for the organisation and quality of the judicial work, does lay upon the members of the Judiciary certain obligations which are important in ensuring the transparency and independence of the judicial process.

**(2017):** There exists a Code of Ethics for the members of the Judiciary which, though not providing for the organisation and quality of the judicial work, does lay upon the members of the Judiciary certain obligations which are important in ensuring the transparency and independence of the judicial process.

**(2016):** There exists a Code of Ethics for the Judiciary which, though not providing for the organisation and quality of judicial work, does lay upon the members of the Judiciary, certain obligations which are important in ensuring the transparency and independence of the judicial process.

## Netherlands

**(General Comment):** There are quality standards that are measured by annual statistical figures per individual court. Examples are the scores of customer satisfaction surveys, the percentage of cases judged by three instead of one judge, and case processing times (the so-called 'Kengetallen gerechten'). The Team Judicial Quality (TJK, Team Juridische Kwaliteit) studies topics in a thematic manner, on a structural basis. A team of public prosecutors participates in TJQ and assesses the judicial work of colleagues in a structured and systemic way. There is often a baseline assessment, as well as a follow-up, sometimes a second follow-up. The assessment framework is adjusted if necessary. See also [www.tweedekamer.nl/kamerstukken/detail?id=2018D52900&did=2018D52900](http://www.tweedekamer.nl/kamerstukken/detail?id=2018D52900&did=2018D52900). There are professional standards too, developed to show what 'good justice' entails. These standards are publically available on the website of the Judiciary. See <https://www.rechtspraak.nl/Organisatie-en-contact/Rechtspraak-in-Nederland/Rechters/Paginas/De-professionele-standaarden-van-de-rechters.aspx>.

**(2019):** There is a so-called Team Judicial Quality (Team Juridische Kwaliteit), which studies topics in a theme-wise manner. This is part of the program 'Programma OM Strafvordering 2020'. A team of public prosecutors participates in TKJ and assesses the judicial work of colleagues in a structured and systematic way. There is often a first assessment (baseline) and a first follow-up assessment, and sometimes even a second follow-up. If necessary, the assessment framework is adjusted.

## Poland

**(General Comment):** The Ministry of Justice collects statistical data sent by common courts concerning their current activity, and also evaluates annual information on the activity of courts, prepared by presidents of courts of appeal about the activity of courts within the area of appeals, within the scope of tasks entrusted to them. In addition, the Minister of Justice convenes a meeting with presidents of courts of appeal at least once a year to discuss issues related to exercising supervision. Within the framework of that evaluation, a multifaceted analysis of collected statistical data is conducted, inter alia, an indicator of stability of jurisprudence, an indicator of control over the inflow of court cases or time of adjudication in incoming cases. However, no legal provision defines specific quality standards for individual indicators, concerning organisational quality and/or justice quality policy, to be formulated for the justice system as a whole.

**(2016):** The most important indicator comes from evaluation of judgements through second instance procedure. In this purpose "judgement stability" ratio are in use as a ratio of judgements reversed or annulled in procedure of appeal.

## Portugal

**(General Comment):** Law on the organisation of the judicial system (Law 62/2013 of 26 August) sets out that the High Council for the Judiciary and the Prosecutor-General, in liaison with the member of Government responsible for the justice, establish, within their respective competences, the strategic objectives for first instance courts for a three year period. These entities are also responsible for setting, every year, the strategic objectives of first instance courts for the following judicial year. Taking into account the results obtained in the previous year and the strategic objectives formulated for the subsequently year, the president of the court and the public prosecutor coordinator, after hearing the judiciary administrator, articulate proposals for the procedural objectives for each court. For instance, the Prosecutor General's Directives and Instructions define good practices of functional performance at national level and their compliance may be viewed an indicator of the quality of the work developed (example, Directive 5/2019, on acting in cases of domestic violence (<https://dre.pt/home/-/dre/126870404/details/maximized> - text in Portuguese).

In addition to Directives and Instructions, the performance assessment system for prosecutors is based on quality criteria/performance parameters, as a rule, uniformly applied at national level.

**(2021):** For instance, the Prosecutor General's Directives and Instructions define good practices of functional performance at national level and their compliance may be viewed an indicator of the quality of the work developed (example, Directive 5/2019, on acting in cases of domestic violence (<https://dre.pt/home/-/dre/126870404/details/maximized> - text in Portuguese)). In addition to Directives and Instructions, the performance assessment system for prosecutors is based on quality criteria/performance parameters, as a rule, uniformly applied at national level.

**(2020):** For instance, the Prosecutor General's Directives and Instructions define good practices of functional performance at national level and their compliance may be viewed an indicator of the quality of the work developed (example, Directive 5/2019, on acting in cases of domestic violence (<https://dre.pt/home/-/dre/126870404/details/maximized> - text in Portuguese). In addition to Directives and Instructions, the performance assessment system for prosecutors is based on quality criteria/performance parameters, as a rule, uniformly applied at national level.

## Romania

**(General Comment):** There are no formal standards for quality established for the whole judiciary. However, informal standards are being used (such as training, quality of the reasoning, assessment of the activity of the judges, assessment of the good reputation of the judges etc.).

More precisely, the activity of courts is evaluated and monitored periodically, on the basis of certain statistical data/performance indicators, such as those presented at question 70. The evaluation is achieved by verifications carried out by inspectors of the Judicial Inspection of the SCM, by elaborating periodical reports. The schedule and thematic of those verifications are approved every year by the SCM.

At organizational level, there are no quality standards established for courts. It may be considered that such standards exist at individual level, for each judge, by the indicators for the evaluation of professional activity.

**(2012):** In the frame of the 2012 exercise, a reference was made to the "Court Optimisation Project" financed by the World Bank, implemented from October 2011 to March 2013. The final recommendation included the introduction of Key Performance Indicators (KPIs), such as the clearance rate, the number of cases older than one year, the number of cases solved within 1 year, and the comparative measurement system.

## Slovak Republic

**(General Comment):** Internal revision of the court is a type of control of the court and judges, which aims to check the current state of the judiciary, to identify the causes of shortcomings in the performance of the judiciary and to propose measures to eliminate them.

**(2020):** Internal revision of the court is a type of control of the court and judges, which aims to check the current state of the judiciary, to identify the causes of shortcomings in the performance of the judiciary and to propose measures to eliminate them.

**(2014):** There is a system to evaluate the overall functioning of courts with respect to the Manifesto of the Government of the Slovak Republic for the period of 2010-2014:

[http://www.vlada.gov.sk/data/files/855\\_the-manifesto-of-the-governmentof-the-slovak-republic-for-the-period-of-2010-2014.pdf](http://www.vlada.gov.sk/data/files/855_the-manifesto-of-the-governmentof-the-slovak-republic-for-the-period-of-2010-2014.pdf)

## Slovenia

**(General Comment):** The Supreme Court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). A special office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies on the level of entire judiciary and individual courts. Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

The 2013 amendment to the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. Since 2015, the Supreme Court has been adopting the timeframes for different types of procedures as well as for different procedural phases for next year (as a part of the Criteria for quality of work).

As for public prosecution, the criteria for quality of work are defined in the Prosecution Policy (adopted by the Prosecutor General), while the quantitative aspects of work are defined in the Criteria for evaluating the performance of the state prosecutor's offices adopted by the State Prosecutorial Council.

**(2015):** The Supreme Court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). The system was awarded with Special mention in the 2012 Crystal Scales of Justice Competition and was defined as "Inspiring example" in the EC document Quality of Public Administration - A Toolbox for Practitioners - <http://ec.europa.eu/social/main.jsp?catId=738&langId=sl&pubId=7757>.

A special office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies on the level of entire judiciary and individual courts.

Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

The 2013 amendment to the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. In 2015 the Supreme Court adopted the timeframes for different types of procedures as well as for different procedural phases for 2016 (as a part of the Criteria for quality of work).

**(2014):** 2014 A dedicated office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies at the level of entire judiciary and individual courts level. Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports. The recent amendment of the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. Since the amendment was adopted in the middle of 2013, the first Annual report of Supreme Court will be for 2014 (to be published in 2015). Consequently, only 2015 will be the (first) year to formally adopt the aforementioned Criteria. The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

**(2013):** 2013 According to the priorities for the whole judiciary, set by the Supreme Court in the „Opening of the judicial year“ document for judicial year 2013, specific areas were monitored and the standards determined for the following areas:

1. Management of courts
2. Solving of oldest unresolved cases
3. Business process – Time management of judicial procedures and the reform of civil enforcement procedure
4. Disburdening the judges
5. Levelling of human resources

**(2012):** 2012: The Supreme court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). The system was awarded with Special mention in the 2012 Crystal Scales of Justice Competition and was defined as Inspiring example in the EC document Quality of Public Administration - A Toolbox for Practitioners – <http://ec.europa.eu/social/main.jsp?catId=738&langId=sl&pubId=7757>.

## Spain

**(2015):** Every three months each Court sends statistics to the Council for the Judiciary with complete information about the activity of the Court.

## Question 067

## Belgium

**(2021):** The College of Courts and Tribunals is working on the implementation of a quality system. This system is based on international scientific references and will be broken down into ten or so themes that constitute the management modules of an organisation. These management modules cover all aspects of an organisation, including organisational management, process management, human resources management, organisational culture, information and communication, financial management, facility management and information and communication technologies. The College of Courts and Tribunals and the steering committees work together to develop their maturity in these different areas.

## **Bulgaria**

**(2020):** The Supreme Judicial Council, through its Commission for Attestation/Appraisal and Competitions at the Judges College/Chamber of the Supreme Judicial Council and the Commission for Attestation/Appraisal and Competitions at the Prosecutorial College/Chamber, are the bodies that perform an objective assessment of the professional, business and moral qualities of magistrates.

## **Denmark**

**(2019):** As above

**(2018):** The public prosecution is not part of Danish Court Administration.

**(2017):** Because judges are independent, we do not interfere with a judge decision. However, there is always the possibility to appeal a court decision if either of the parties disagree with the verdict.

**(2016):** As above.

## **France**

**(2021):** Source DSJ

**(2020):** The answer is no for the administrative justice.

**(2014):** 2010: State prosecutors draw an annual report on the activity, management of their public prosecution office and on the enforcement of the law, as well as an annual report concerning the measures of custody and the condition of the custody facilities.

**(2012):** 2012: in French law on the judicial organisation, there is no statutory or regulatory requirement providing specialised staff in courts responsible for quality norms. However, as part of the maintenance dialog to have operational resources, each court fills a document for the Ministry of Justice, comprising informations such as the number of handled cases, pending cases, the number of judges and administrative staff, as well as the performance objectives to reach. This document is not available on the intranet to all of the staff. Only agents of the Ministry in charge of the maintenance dialog have access to these figures thanks to appropriate softwares.

## **Germany**

**(2022):** Due to judicial independence, there are no national level quality standards.

**(2021):** Due to judicial independence, there are no national level quality standards.

**(2020):** Due to judicial independence, there are no national level quality standards.

## **Greece**

**(2021):** It depends on the court, the answer was changed from yes to no although there are judicial services that have answered positively the majority have answered no.

**(2017):** The Law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

### **Ireland**

**(2021):** Secretary of Judicial Council and Judicial Conduct Committee of that Committee investigate and adjudicate complaints.

### **Malta**

**(2018):** There are general quality standards that apply to the public sector, but not specific quality standards that monitor the implementation of quality standards within the judiciary or the prosecution services.

### **Netherlands**

**(General Comment):** Courts: there are staff members (policy officers) within the offices that coordinate the quality in that office.

Public prosecution: At the head office of the public prosecution (Parket-General), there is personnel responsible for producing, implementing, evaluating and auditing quality measures. These are the TJQ (as mentioned in Q66), Team Processes and Information (standard processes and procedures) and the Scientific Bureau OM (national guidelines and policy regulations).

**(2017):** yes

### **Poland**

**(General Comment):** Inspection departments operate in the appellate and regional courts. The task of the judges working in these departments is to perform on behalf of the president of the court activities in the scope of supervision over the administrative activity of the courts in the area of the operation of a given appellate or district court. Supervision consists in taking actions to improve the office of the courts or increase the efficiency and level of work organization culture in the courts. For this purpose, visits of departments in courts or surveys of recognized cases of a given category are carried out, the secretariats of departments in the courts are controlled.

Activities in the scope of administrative supervision can not enter the field in which judges and assessors are independent.

### **Portugal**

**(General Comment):** The High Council of the Public Prosecution Service has “inspectors” (“inspectores”) who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

**(2022):** The High Council of the Public Prosecution Service has “inspectors” (“inspectores”) who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

**(2021):** The High Council of the Public Prosecution Service has “inspectors” (“inspectores”) who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

**(2020):** The High Council of the Public Prosecution Service has “inspectors” (“inspectores”) who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

### **Slovak Republic**

**(General Comment):** Judicial Council, Council of Prosecutors and disciplinary commissions.

**(2020):** Judicial Council, Council of Prosecutors and disciplinary commissions.

**(2019):** Judicial Council, Council of Prosecutors and disciplinary commissions

## **Slovenia**

**(General Comment):** The Office for Court Management Development at the Supreme Court promotes the improvement in leadership and management of courts and the increase in effectiveness and efficiency. It is responsible for the preparation of different reports and analysis regarding work of courts and the promotion of best practices. The Department for the Organization and Development of Management of the Supreme State Prosecutor's Office of the Republic of Slovenia is responsible for monitoring the implementation of the Prosecution Policy and the Criteria for the Success of Prosecution of State Prosecutor's Offices.

## **Spain**

**(2015):** Every three months each Court sends statistics to the Council for the Judiciary with complete information about the activity of the Court.

## **Question 070**

## **Austria**

**(General Comment):** .

**(2022):** satisfaction of court staff: only supreme administrative court

**(2017):** "other": e.g. certain kinds of decisions, clearance rate (annually)

## **Belgium**

**(2021):** In 2021, the College of Courts and Tribunals has started a project to make a central inventory of the backlog in the courts and tribunals using indicators such as length of proceedings, number of pending cases, Disposition time, backlogs.

**(2017):** There are ad hoc systems for monitoring activities within the courts. There is a central service responsible for the collection of statistics which ensures the annual publication of statistics. The Central Statistical Service is developing a uniform and coordinated policy, but there is (as yet) no central system for regular monitoring of activities.

**(2016):** There are ad hoc systems for monitoring activities within the courts. There is a central service responsible for the collection of statistics which ensures the annual publication of statistics. But there is no (yet) central system for regular monitoring of activities.

## **Croatia**

**(2019):** As regards "number of appeals", from 2019 we are able to get this data from our case management system.

## **Denmark**

**(2021):** Danish Court Administration is typically not doing this. A responsible court follow their cases though.

**(2020):** We value independence high. Therefore Danish Court Administration does not evaluate the performance or productivity of individual judges. We follow overall productivity and case flow though as that is used to allocate resources and to find the court most in need of vacant judge positions.

**(2019):** Courts are followed yearly in a yearly report. District courts receives monthly a report about case flow, pending cases, backlogs, weighted cases and the time it takes to finalize cases.

**(2017):** In Denmark we have a management system which information is updated monthly for the district courts where the points above are shown. For the High Courts and the Supreme Court, the case flow is not followed so often and in a so detailed way, but there are also much fewer cases. "Other": activity in terms of weighted cases and also pending cases

**(2016):** The so called "weighted cases" are measured in order to have a measure for the activity.

## **Estonia**

**(General Comment):** The scope of the monitoring system is extended to the results of proceedings; the categories of cases; the number of decisions appealed and revoked, fully or partially. The waiting time and the 'age' of pending (not solved) cases are also monitored. It is worthy of mention that every year all the courts and the Ministry of Justice enter into an agreement according to which courts should aim to carry out structural changes and to make changes in case-flow management that will ultimately ensure efficient proceedings. The content of the agreement has changed since 2017. The goals are more general and the same for all the courts (except The Supreme Court).

**(2017):** See previous general comments.

**(2016):** see general comments

## **Finland**

**(General Comment):** All courts keep statistics of the mentioned court activities in the operational case management systems. The National Courts Administration can access these figures through a reporting system.

**(2019):** satisfaction of court staff is monitored with job satisfaction surveys which are taken every second year

## **France**

**(2021):** Source DSJ and Council of State

**(2020):** Judicial and administrative jurisdictions combined.

**(2019):** Civil and criminal justice: After the deployment of innovative applications, satisfaction questionnaires are sent to users in the courts (heads of courts, directors of registries, judges and registry officials) in order to improve change support actions and the implementation.

In addition, with regard to victims, the Ministry of Justice will conduct a satisfaction survey in the second half of 2019 among victims of criminal offences who resort to victim support associations. The results of this survey, similar to a previous survey conducted in 2011, could be published in 2020. Likewise, the Ministry of Justice is attentive to citizens' views on the way they are received in the courts. For several years now, surveys have been conducted on the reception in the courts by a service provider pretending being a litigant. In 2018, an online survey, coupled with a face-to-face survey, was conducted in seven 1st instance courts "tribunaux de grande instance" among litigants appearing in these courts. In 2019, the satisfaction survey will be carried out in all "tribunaux de grande instance" via an online survey accessible by internet address or QR code. Finally, a national survey is also under way on the reception of litigants in the courts in the specific context of the implementation of social centres within the "tribunaux de grande instance" and the integration within these courts of the three separate courts that previously dealt with these types of litigation. The survey, carried out among court staff, aims to assess the difficulties encountered by persons presenting themselves at the reception desk and to identify any corrections that could be included in the texts.

The reply to the question encompasses replies from administrative justice and civil and criminal justice.

**(2018):** The coverage rate of cases as well as the structure of civil or criminal litigation are used by the courts.

In addition, other indicators usefully complete the analysis: .

Share of decisions on the merits in completed cases (civil activity).

Share of referrals in completed cases (civil activity).

Theoretical time to sell off the stock.

Average age of the stock.

Percentage of cases over 12 months in stock (civil activity).

**(2017):** The number of cases referred is an indicator used only by administrative courts.

The courts have business applications to monitor their civil and criminal activities. At national level, data from these applications is

from these applications are collected automatically via infocentres, reprocessed and cross-referenced, then in the form of tables or graphs. These reports can be generated on a monthly basis, except for certain activity data (court of appeal).

These reports can be generated on a monthly basis, except for certain activity data (criminal courts, juvenile court judges, enforcement of sentences), for which reports are generated annually.

These infocentres enable the courts to monitor statistics and manage their activity. They enable the central administration to They enable the central administration to prepare management dialogues from a performance perspective.

**(2016):** The number of cases subject to referral is an indicator used only by administrative courts.

Courts have business applications to monitor their civil and criminal activities. At national level, data from these applications are collected automatically via info-centres, processed and cross-referenced, and then presented in the form of tables or graphs. These refunds can be generated monthly, except for certain activity data (assize court, juvenile judges, enforcement of sentences), for which the refunds are annual.

These info-centres enable courts to carry out a statistical follow-up and to monitor their activities. They allow the central administration to prepare management dialogues from a performance perspective.

**(2015):** The number of cases being referred is used only by administrative courts.

The rate of coverage of cases is used by judicial courts.

The state of stocks by age group is used by administrative courts.

**(2014):** 2013, 2014, the category "others" includes:

- the coverage rate of cases (used by judicial courts)

- the state of the stocks per age group (used by administrative courts)

It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts.

**(2013):** 2013, 2014, the category "others" includes:

- the coverage rate of cases (used by judicial courts)
- the state of the stocks per age group (used by administrative courts)

It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts.

**(2012):** 2010, 2012: the category "others" includes the state of the stocks per age group. It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts

## Germany

**(General Comment):** The Federal Statistical Office collects key figures on court performance (incoming cases, resolved cases, pending cases on the beginning and the end of a year) from the federal states. The Federal Statistical Office processes and publishes the data once per year for the civil, criminal, family, administrative, labour, social and financial courts.

**(2022):** The monitoring activities no. 1-4 were selected by all respondent federal states and the activities no. 5 and 9-13 were selected by the majority of the federal states.

A minority of the federal states (as in previous years) reported the following "other" monitoring activities: statistics on the nature of resolution (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.), number of main-trial days, participation of interpreters and experts. (While the situation has not changed since the last cycle, the option "other" was not selected this time for the purpose of methodological consistency with the answers to other questions in this section). One federal state has not yet replied.

**(2021):** The monitoring activities no. 1-4 were selected by all Länder, the activities no. 5 and 9-13 were selected by most Länder and the activities under "other" were only mentioned by a some Länder (5).

**(2020):** The monitoring activities mentioned under "other" were reported only by some of the Länder.

**(2019):** Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

**(2018):** Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

**(2016):** other: Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

**(2014):** In 2014, some of the Landers did mention a monitoring system concerning other court activities, namely statistics on the nature of resolution (e.g. in civil matters cases are dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

**(2013):** In 2013, seven Landers communicated information on their regular monitoring system. For example, Baden-Württemberg referred to calculation of the specific personnel requirements on a mathematical-analytical basis. Bavaria mentioned the type of proceedings, form of decision, etc. for courts of labour and social jurisdiction and workload, ratio of part-time employees; average age of employees, training and sick days, duration of proceedings in months, ratio of appeals for courts of general jurisdiction. In Brandenburg, the number of pending cases and the ratio of terminated proceedings as against incoming cases are monitored.

**(2012):** For 2010 and 2012, five Landers did not provide any reply. Seven Landers communicated detailed information on their regular monitoring system of courts' activity. Among the main other monitored parameters are the deadlines for the drafting of judgments (Bavaria), the number of pending cases and the ratio of terminated proceedings as against incoming cases (Brandenburg), the nature of resolution – cases dealt with by contentious judgment, by acknowledgment, by settlement etc. (Hamburg), cases allocated among staff, i.e. caseload quota (Hesse); finance benchmarks, item costs, standardized deployment of person hours related to product (Saxony-Anhalt).

## Greece

**(General Comment):** According to Law 4938/2022 (art. 99-104), supreme judges appointed as inspectors for two year's term, redact every year general reports on the operation of each court and prosecutor's office in their district and recommend the necessary measures for the proper functioning of the service.

**(2022):** Many courts have chosen the option number of Appeals but not all. The Council of State has additionally selected the options number of Appeals and ratio of Appeals. The General Commission of the State for ordinary administrative courts has additionally selected the options number of Appeals and clearance rate.

According to Law 4938/2022 (art. 99-104), supreme judges appointed as inspectors for two year's term, redact every year general reports on the operation of each court and prosecutor's office in their district and recommend the necessary measures for the proper functioning of the service.

Regarding administrative courts, this task is fulfilled by the General Commission of the State for ordinary administrative courts. In the near future we hope to be able to use a business intelligence program, in order to extract composite statistical data without contacting any court.

[E-mail: g-epitropia-d-d@otenet.gr]

**(2019):** The Greek government has introduced a new system for organizing and evaluating the planning and implementation of public sector actions and projects, which introduces among others, monitoring court activities. (L. 4622/2019 art. 49 foll.)

**(2017):** Regarding Administrative Courts, this task is fulfilled by the General Commission of the State for ordinary administrative courts. In the near future there will be a possibility for the General Commission of the state to use a business intelligence program, in order to extract composite statistical data without contacting any court [E-mail: g-epitropia-d-d@otenet.gr]

## Hungary

**(General Comment):** Among others:

- individual judge's statistics, - statistics on the reasons of the postpone of the trials,
- number of trial days in cases, - number of tried cases per day,
- pending cases of an individual judge / court,
- the time frame of pending cases
- number of appealed cases,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

**(2022):** - statistics on the reasons of the postpone of the trials,  
- number of trial days in cases, - number of tried cases per day,  
- the subject of incoming / finished / pending cases,  
- the ratio of litigious and non-litigious cases,

- the subject of incoming / finished / pending cases,  
- the ratio of litigious and non-litigious cases,  
- cases that are pending over 2 or 5 years have a separated statistical report every month  
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

**(2019): Other:**  
- statistics on the reasons of the postpone of the trials,  
- number of trial days in cases, - number of tried cases per day,  
- the subject of incoming / finished / pending cases,  
- the ratio of litigious and non-litigious cases,  
- cases that are pending over 2 or 5 years have a separated statistical report every month  
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

**(2018): Other:**  
- statistics on the reasons of the postpone of the trials,  
- number of trial days in cases, - number of tried cases per day,  
- the subject of incoming / finished / pending cases,  
- the ratio of litigious and non-litigious cases,  
- cases that are pending over 2 or 5 years have a separated statistical report every month  
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

**(2015): Among others:**  
- individual judge's statistics,  
- statistics on the reasons of the postpone of the trials,  
- number of trial days in cases,  
- number of tried cases per day,  
- pending cases of an individual judge / court,  
- the time frame of pending cases  
- number of appealed cases,  
- the subject of incoming / finished / pending cases,  
- the ratio of litigious and non-litigious cases,  
- cases that are pending over 2 or 5 years have a separated statistical report every month  
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

**(2014):** In 2013 and 2014, among other are quoted individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of tried cases per day, the number of pending cases of an individual judge/court, the time frame of pending cases, the number of appealed cases, the subject of incoming/resolved/pending cases, the ratio of litigious and non-litigious cases. Cases that are pending over 2 or 5 years have a separated statistical report every month, as well as cases in which there were no actions taken in the last 30 days by the court.

**(2013):** In 2013 and 2014, among other are quoted individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of tried cases per day, the number of pending cases of an individual judge/court, the time frame of pending cases, the number of appealed cases, the subject of incoming/resolved/pending cases, the ratio of litigious and non-litigious cases. Cases that are pending over 2 or 5 years have a separated statistical report every month, as well as cases in which there were no actions taken in the last 30 days by the court.

**(2012):** In 2010 and 2012, a reference is made to individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of resolved cases, the number of cases scheduled within one day, the number of pending cases of an individual judge.

## **Ireland**

**(2022):** These are not new or recently introduced monitoring options.

**(2014):** 2014: Since 2014 Ireland introduced a monitoring system for the length of proceedings and it is now capable of calculating average length of proceedings in first instance jurisdictions.

## **Italy**

**(General Comment):** Within the framework of the National Recovery and Resilience Plan (PNRR), the Ministry of Justice has introduced an additional monitoring system specifically designed for PNRR purposes, in order to keep track of a series of KPIs related to the efficiency of the Italian courts.

## **Latvia**

**(General Comment):** Implemented business intelligence solution allows monitor all the mentioned court activities very closely.

Satisfaction of court staff and users is being evaluated by regular questionnaires in courts.

**(2022):** The indicators "productivity of judges and court staff" and "number of appeals" are taken into account when assessing the professional activity of a judge, because the objective of the assessment of the professional activities of a judge is to promote the continuous professional growth of a judge throughout his or her career, thereby improving the quality of the work of the judge and the court. An Annual evaluation of court staff is also carried out, which is essential for high-quality work of courts.

**(2017):** Decision stability (proportion of decisions appealed in higher instance)

**(2016):** Decision stability (proportion of decisions appealed in higher instance)

## **Lithuania**

**(General Comment):** All of these data are recorded in the Lithuanian Court Information System (LITEKO), as well as other data, related to the case, it's process and the parties to the proceedings.

## **Luxembourg**

**(General Comment):** No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request of the competent authorities.

**(2017):** ??? (see comments to parent campaign)

**(2016):** No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

**(2015):** By using the newly implemented statistical tools, the information ticked in addition to last year's questionnaire can now be retrieved by the statistical service on an as needed basis at least for criminal cases. Identical markers are being implemented for civil and commercial cases and will available in a foreseeable future.

**(2014):** 2014: There is no regular monitoring system. However, new statistical tools are implemented and can provide monitoring elements when necessary without daily measurement current affairs.

#### **Malta**

**(2022):** Other: Age of the pending caseload.

**(2019):** Other: age of pending caseload

**(2017):** other: clearance rate

**(2015):** The monitoring of court activities also takes place through the ongoing analysis of the Clearance Rate and Disposition Time of the various courts. This data is also being published online on a monthly basis.

The category "other" refers to the monitoring of the Clearance Rate and Disposition Time of all civil courts, boards and tribunals. This exercise was started in 2015.

**(2014):** In 2014, the court administration was monitoring length of proceedings through the number of incoming and resolved cases, as well as through the pending caseload. The age of civil cases was another parameter that was being assessed. On the occasion of the 2014 exercise, it has been indicated that since 2015, Malta started computing the Disposition Time and Clearance Rate of all the civil and criminal courts. By the end of 2015, for the civil courts, this information will be made available online.

#### **Netherlands**

**(2020):** There is an annual publication that includes the appeal ratio for some case types. To call it 'monitoring' would be a bit too much, but it is annually checked and reported on.

Incoming cases and length of proceedings have not previously been mentioned, but these are monitored.

#### **Poland**

**(2017):** Supervision covers only the administrative activities of the courts. There are the internal supervision exercised by the presidents of the courts and the external supervision exercised by the Minister of Justice within the narrow scope specified in the law.

**(2016):** Supervision covers only the administrative activities of the courts. There are the internal supervision exercised by the presidents of the courts and the external supervision exercised by the Minister of Justice within the narrow scope specified in the law.

#### **Portugal**

**(2022):** Users satisfaction is monitored through surveys and indirectly by the consulting body of each court that includes members of the community. The appeal ratio is only monitored in the context of judges evaluation.

**(2020):** we included "satisfaction of users" because one of the tasks of the president judge of the court is to monitor and evaluate the activity of the court, in particular the quality of the justice service provided to citizens, taking into account particular complaints or responses to satisfaction questionnaires. "Article 94 of Law 62/2013, 26th August, on the judicial organization"

**(2019):** In this evaluation cycle we included "satisfaction of users" because one of the tasks of the president judge of the court is to monitor and evaluate the activity of the court, in particular the quality of the justice service provided to citizens, taking into account particular complaints or responses to satisfaction questionnaires. "Article 94 of Law 62/2013, 26th August, on the judicial organization"

**(2017):** Scheduling; delays of judges and sections.

**(2016):** Scheduling; delays of judges and sections.

**(2015):** Scheduling: time delays of judges and sections of the court.

## Romania

**(General Comment):** Since 2012, the category "other" subsumes the length of administrative procedures, the number of final convictions, legal aid, suspended cases etc.

**(2022):** ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

**(2021):** ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

**(2020):** ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

**(2019):** ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

**(2017):** - e.g. suspended cases

**(2016):** - suspended cases etc.

## Slovak Republic

**(General Comment):** The category "other" encompasses: the number of cases according to types of disputes, the results of the cases (reconciliation, dismissals, full satisfaction, partial satisfaction, etc.). Statistical data of the Ministry of Justice of the Slovak Republic are detailed and regularly collected and published in a yearbook which is publicly accessible at the website of the Analytical centre of MoJ <https://www.justice.gov.sk/Stranky/Informacie/Analyticke-centrum.aspx> <http://web.ac-mssr.sk/statisticka-rocenka-2018/>. Data on the activity of the courts are published every month in interactive Dashboard on the <http://web.ac-mssr.sk/dashboard/>.

## Slovenia

**(General Comment):** In Slovenia there is a regular monitoring system in a form of collecting data on court statistics. Court statistics are collected and published four times a year by the Ministry of Justice. They include the data on the number of judges and court staff, number of incoming, resolved and pending cases, age of unresolved cases, length of proceedings, average time to resolve a case, type of decision, court backlogs, legal remedies and time to issue a court decision. Besides that, the data on court activities are automatically on national level, thus statistical analysis are made possible. All courts have access to a wide range of special reports, generated in the Court management information system. Reports include detailed information on court activities (for example length of specific phases of a court proceeding, top 20 oldest cases in certain area of law, etc.), human resources, court performance indicators (the critical indicators are marked red for unsatisfactory performance and green when meeting the standards) that provide guidance to presidents and directors of courts. The business intelligence system that creates priority reports derives the data from the Data warehouse of the Supreme Court. The same source is used for Court statistics publications by the Ministry of Justice. Each court is able to access the above mentioned reports at any moment, while some data are quarterly collected and published on national level (as prescribed by the Court rules).  
The satisfaction surveys are performed and results published bi-annually.

**(2015):** The data on court activities are automatically collected on national level, thus statistical analysis is made possible.

All courts have access to a wide range of special reports, generated in the Court management information system. Reports include detailed information on court activities (e.g. length of specific phases of a court proceeding, top 20 oldest cases per legal area etc.), human resources, court performance indicators (the critical indicators are marked red for unsatisfactory performance and green when meeting the standards) that provide guidance to presidents and directors of courts. These additional data available to court management officials are the reason, why we put check before "other elements".

The business intelligence system that creates priority reports derives the data from the Data warehouse of the Supreme Court. The same source is used for Court statistics publications by the Ministry of Justice.

Each court is able to access the above mentioned reports at any moment, while some data are quarterly collected and published on national level (as prescribed by the Court rules).

## Spain

**(General Comment):** The category "other" encompasses: number of enforcement procedures, number of decisions appealed, number of rogatory letters issued, received and resolved, aid between courts, pending writings, form of termination of trials, etc.

**(2017):** The category "other" includes many other data such appeals, aid between courts, pending writings, etc.

**(2016):** The category "other" includes many other data such appeals, aid between courts, pending writings, enforcement proceedings, form of termination of trials, etc.

## Question 070-1

### Bulgaria

**(General Comment):** .

**(2018):** "Other": percentage of returned cases

### Denmark

**(2022):** - The prosecution makes monthly reports to the Ministry of Justice on data regarding number of cases, clearance rate, etc.

- Disposition time is measured indirectly through a report that measures all steps in a criminal case from arrest to imprisonment. There

is no direct measure of disposition time, but it can be read from this report.

- The prosecution makes an biannual survey on the satisfaction of the prosecution staff.

**(2021):** The prosecution makes quarterly reports to the Ministry of Justice on data regarding number of cases, percentage of conviction etc.

Disposition time is measured indirectly through a report that measures all steps in a criminal case from arrest to imprisonment. There is no direct measure of disposition time, but it can be read from this report. The prosecution makes a biannual survey on

the satisfaction of the prosecution staff.

**(2020):** The methodology of replying changed in this question.

The prosecution makes quarterly reports to the Ministry of Justice on data regarding number of cases, clearance rate, etc.

Disposition time is measured indirectly through a report that measures all steps in a criminal case from arrest to imprisonment.

There is no direct measure of disposition time, but it can be read from this report. Therefore we find it more correct to check

this option. Satisfaction of the prosecution staff has always been measured but not by the ministry of justice. Therefore it was

not checked last time. However, it is measured, and we therefore find it correct to check this option. The prosecution makes an

annual survey on the satisfaction of the prosecution staff.

## **Finland**

**(2021):** "Backlogs": cases that have been pending for longer than a year are monitored

**(2020):** "Backlogs": cases that have been pending for longer than a year are monitored.

## **France**

**(2021):** Source DSJ

**(2020):** Judicial jurisdiction.

## **Germany**

**(General Comment):** The Federal Statistical Office collects key figures on the public prosecution offices' performance (incoming cases, resolved cases, pending cases on the beginning and the end of a year) from the federal states and publishes the data once per year.

**(2022):** The monitoring activities no. 1-4 were selected by all respondent federal states and the activities 5 and 10 to 12 were selected by the majority of the federal states. A minority of the federal states also monitors the costs of the judicial proceedings.

One federal state has not yet replied.

**(2021):** The monitoring activities no. 1-5 and 1-12 were selected by most Länder, the activity no. 9 (monitoring of costs) was selected by some (5) Länder.

**(2020):** A few Länder answered that they have also been monitoring productivity and costs.

## **Greece**

**(2022):** It is noted that the clearance rate was not selected by all prosecutors' offices, in addition several prosecutors' offices but not all have chosen the option of percentage of convictions and acquittals.

## Hungary

**(2022):** The public prosecution services are led in a hierarchical structure. Leaders perform their duties at a national and regional level, as well as at the level of each organizational unit. It is up to the decision of the leader who exercises the employer's rights to determine how the activities (performance, quality) of the prosecution office should be evaluated and on the basis of what indicators in order to manage the organizational unit effectively. The set of indicators may vary from year to year, depending on the circumstances. Therefore, more than one answer could be given to the given question.

For example, the performance of individual prosecutors or officers may be assessed at the level of an organizational unit; a staff satisfaction survey may be conducted; or a target analysis based on client satisfaction may be carried out.

The clearance rate could also be considered as a reference point and is actually monitored by the public prosecution services. However, statistics are produced at the level of the prosecution services and at the regional level on a calendar year basis.

Therefore, those decisions on the termination of prosecution proceedings which are made at the end of a year, but become final only in the following year, can only be taken into account in the next year. The number of indictments and the number of finally closed cases that are closed because of finally closed court cases in the years after the indictment may also differ from the number of indictments on an annual basis. Therefore, the "clearance rate" – as a reference point – is a difficult criterion to follow.

At the national level, the Prosecutor General is required to present a report to Parliament. This report does not focus on the performance of individual public prosecutors; instead, it assesses the performance of the public prosecution service as a whole and according to a breakdown of organizational units. In our 2023 response, we tried to take this into account and, in this respect, we have indicated that primarily the indicators indicated were taken into account. Compared to our previous response in 2020, there was no change in terms of the fact that the clearance rate had been taken into account, even if it was not the primary evaluation criterion.

**(2021):** The BTM system (Criminal Justice Activity Indicator System) is available for the Prosecution Service of Hungary. This system regularly monitors prosecution activities (performance and quality), however, it does not contain any information about the number of incoming cases, length of proceedings, number of resolved cases, backlogs etc.

## Ireland

**(2022):** Information is published in Part 2 and Part 4 of ODPP Annual Report 2021 (<https://www.dppireland.ie/app/uploads/2023/02/AR2021eng.pdf>).

**(2020):** information is published in Annual Report available at: <https://www.dppireland.ie/app/uploads/2020/10/AR-2019-eng.pdf>

**(2018):** Information is published in Annual Report available at [https://www.dppireland.ie/filestore/documents/AR2017\\_\[eng\].pdf](https://www.dppireland.ie/filestore/documents/AR2017_[eng].pdf)

## Malta

**(2022):** The Office of the Attorney General has embarked on a data management process that is seeing more information being collected in respect of the efficiency parameters of the Office. This explains why in this evaluation cycle, the categories of 'Backlog' and 'Productivity of Prosecutors and prosecutors staff' have been marked.

**(2021):** The Attorney General is collecting data on length of proceedings and using it to monitor efficiency. This exercise will be refined in the coming months within the scope of an ongoing project addressing the re-engineering of processes within the Office of the AG.

**(2018):** The Office of the AG does hold a record of the number of incoming cases and terminated cases, but these are not as yet organised into official performance indicators.

## Poland

**(2021):** In 2021, following the implementation of the new central ICT system PROK-SYS, which provides for a modern reporting system, the possibility of obtaining data on a wide range of activities of all organisational units of the prosecution offices was created. The system provides a solution for generating types of reports on the costs of proceedings. This allows for daily supervision of the activities of the prosecution offices from every level, including the central level. Prior to 2021, data on the costs of proceedings were only collected locally.

## Portugal

**(2020):** We included "clearance rate" and "disposition time" because one of the tasks of the public prosecutor coordinator is to monitor and evaluate the activity of the public prosecutors services, including the efficiency of procedures. Article 101 of Law 62/2013, 26th August on judicial organization.

## Slovenia

**(General Comment):** The BI tools that use data gathered in information system of the State Prosecutor's Office provide the heads of prosecution offices with up-to-date overview of the performance of state prosecutors and the functioning of the office. Heads can customize the level and content of information presented to them for the purpose of making quantitative data supported decisions on allocation of work among prosecutors, control of the case-flow.

**(2022):** "other": percentage of different types of decisions, value of proceeds of crime under freezing order, pronounced criminal sanctions...

**(2020):** "Other": percentage of different types of decisions, value of proceeds of crime under freezing order, pronounced criminal sanctions...

## Question 071

### Belgium

**(2016):** There are ad hoc evaluation systems within the courts. But there is no central or coordinated system.

### Bulgaria

**(General Comment):** The duration of the court proceedings initiated by the Prosecutor's Office of the Republic of Bulgaria is monitored, as in case of excessive delay there is a possibility to request acceleration of these proceedings through the procedure under Chapter 26 of the PPC.

### Denmark

**(2021):** Danish Court Administration is typically not doing this. A responsible court follow their cases though.

**(2020):** Danish Court Administration is not doing it as a general thing. If a specific court needs help, Danish Court Administration can work out list of pending cases and list them according to age to give the court a tool to locate cases that need attention.

### France

**(2021):** Source DSJ and Council of State

**(2020):** No further indication.

**(2016):** In civil matters, courts of first instance (TGI), labour courts (conseils de prud'hommes) and courts of appeal can measure their stock on the basis of business applications or data returns carried out by info-centers.

The identification of cases not processed within a reasonable time is easier through business applications that offer dashboards breaking down cases in stock by age group.

In criminal matters, first instance courts (TGI) can use the Cassiopée business application to record cases in stock at the registry and the number of unedited judgments. The situation of cases in stock at the registry office cannot be measured via the info-centre, which only allows establishing the number of cases registered with the Public Prosecutor's Office and the Correctional Service.

## **Germany**

**(2022):** The majority of the respondent federal states monitor pending cases and backlogs. Two federal states could not provide an answer, one federal state has not yet replied.

**(2021):** Four of the Länder could not provide an answer. The remaining Länder monitor pending cases and backlogs for all of the case categories mentioned above.

**(2020):** The majority, but not all of the Länder have reported to monitor pending cases and backlogs.

**(2018):** In 2018, Länder have monitored the number of pending cases and the backlogs.

## **Hungary**

**(General Comment):** Judges have to report those cases on a monthly basis that are pending for more than 2 years. The president of the court can order a fast-track procedure for a case based on the report.

**(2018):** Judges have to report those cases on a monthly basis that are pending for more than 2 years. The president of the court can order a fast-track procedure for a case based on the report.

## **Ireland**

**(2022):** N/A

**(2020):** NAP

**(2018):** NAP

**(2016):** NAP

## **Latvia**

**(2018):** We have created a specific tool for this purpose that is available also in public from <https://dati.gov.lv/>

## **Luxembourg**

**(2018):** New systems of monitoring have been implemented since 2016 (JUCIV for the civil law cases and JANGA for administrative law cases)

**(2016):** No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

## Netherlands

**(General Comment):** The public prosecution logically only monitors criminal law cases, the courts monitor all types of cases.

**(2021):** Public prosecution only monitors criminal law cases, the courts monitor all.

## Romania

**(2022):** STATIS - statistics monitoring application including for court's efficiency assessment

**(2021):** STATIS - statistics monitoring application including for court's efficiency assessment

**(2020):** STATIS - statistics monitoring application including for court's efficiency assessment

## Question 072

### Austria

**(2016):** Supreme administrative Court: Statistic of incoming cases, number of decisions delivered, number of postponed cases, length of proceedings (timeframes) and age of cases

### Belgium

**(2021):** Public Prosecutor's Office: Monitoring mechanism via dashboards for the public prosecution services.

**(2020):** Monitoring mechanism via dashboards for prosecution services.

### Denmark

**(2021):** Danish Court Administration is typically not doing this. A responsible court follow their cases though. The individual courts may work out list of pending cases or warning lists when to act on a case.

**(2020):** Danish Court Administration is typically not doing this. A responsible court follow their cases though.

**(2018):** We monitor the overall time from the courts receive a case until it is finalized, but not what happen in between. The same goes for the prosecution

### Estonia

**(General Comment):** There are reminders in the CMS after certain period.

### Finland

**(2021):** Within the courts, the time the case is pending in a court is monitored.

Prosecution services: The time between police investigation and prosecutor's decision (the time the case is pending in the prosecution service) is monitored.

**(2020):** Within the courts, the time the case is pending in a court is monitored.

**(2018):** Within the courts, the time the case is pending in a court is monitored.

### France

**(2021):** Source DSJ, the reply concerns the civil and criminal justice.

**(2020):** Answer for the court.

## **Germany**

**(2022):** One federal state monitors waiting time with respect to the ordinary courts. A minority of 3 federal states monitor waiting time with regard to the public prosecution services. The vast majority of the federal states does not monitor waiting time.

**(2021):** Courts: One of the Länder reported that waiting times are monitored with respect to ordinary courts.  
Public Prosecution: While the majority of the Länder answered "no", a small minority of 3 Länder answered "yes".

## **Greece**

**(General Comment):** The waiting time during court procedures is monitored annually through the inspection process. The interval between the adjudication of the case and the issuance of the decision is watched, so that the judge does not have much pending and there is a quick delivery of justice.

**(2018):** There is a monitoring system regarding the length of the judicial procedure, but it does not include such kind of information.

**(2016):** There is a monitoring system regarding the length of the judicial procedure, but it does not include such kind of information.

## **Hungary**

**(General Comment):** The administrative office of the court reports those cases to the president in which there was no judicial activity in the last 30 days.

**(2022):** It was not possible to give an unambiguous answer to this question because of the reasons given in point 70-1. There are several possible "waiting times" in court proceedings which can be monitored. The length of proceedings can be and is monitored by the public prosecution services at the organizational, regional and local levels to different extents. As there was no substantive change in this respect, our reply is modified as follows, in line with the previous answer.

If the question refers to the judicial recess, the answer is "yes"; it is monitored by those who exercise the employer's rights, mainly for the purpose of granting a leave of absence.

**(2018):** The administrative office of the court reports those cases to the president in which there was no judicial activity in the last 30 days.

## **Italy**

**(2018):** Waiting time is monitored only for Administrative Justice.

## **Latvia**

**(2022):** "Within the courts": On an irregular basis, the Ministry of Justice and the Council of Justice analyze the number of days (period) from the initiation or receipt of the case in court to the moment when the case review is started.

## **Lithuania**

**(2022):** Within the courts: through an administrative supervision mechanism.

**(2020):** courts: through administrative supervision mechanism

### **Luxembourg**

**(2014):** According to 2014 data, the newly set up statistical tools, as well as the courts' CMS, allow an "as needed" check of the waiting time.

### **Malta**

**(2016):** In Malta, there is no formal monitoring system. However, an "informal" monitoring used to take place. It falls mostly within the remit of the Chief Justice and the respective members of the judiciary.

### **Netherlands**

**(General Comment):** Waiting time can be monitored through registration in the court system.

Agreements are made across the justice chain on timeframes in which particular caseloads (sexual offences, youth cases, and specific traffic violations) should be handled. These agreements are monitored.

Government (the Second Chamber) is annually informed on the agreements via factsheet. Additionally, timeframe agreements were reached within the public prosecution on the speed with which penal orders are to be issued, the terms in which an objection is to be judged and the speed with which the first decision with attachment is to be taken.

**(2020):** Within the courts: Registration in the court system gives the opportunity to monitor waiting time.

Within the public prosecution services: Across the justice chain, agreements have been made on the timeframes in which particular caseloads (sexual offences, youth cases and specific traffic violations) should be handled. These agreements are monitored. Annually, the government (Second Chamber) is informed on this via the factsheet 'Strafrechtketen'. Besides this, timeframe-agreements have been reached within the public prosecution on speed with which penal orders are to be issued, terms in which an objection is to be judged and the speed with which the first decision with attachment is to be taken (eerste beslissing bij beslag).

**(2013):** All steps and dates are recorded in information systems of the court. But this registration does not show 'waiting times' as such.

### **Poland**

**(General Comment):** Public Prosecution services

The issue of the duration of pre-trial proceedings is defined in the Code of Criminal Procedure, in Article 310 § 1 and § 2 and Article 325i § 1. Article 310 § 1 and § 2 states that the investigation shall be completed within 3 months. In justified cases the investigation period may be extended by a specified period of time by the public prosecutor supervising the investigation or the public prosecutor directly superior to the public prosecutor leading the investigation, but not longer than one year. In particularly justified cases a competent public prosecutor superior to the prosecutor supervising or leading the investigation may extend the investigation by a specified period of time.

Article 325i § 1 states that an investigation should be completed within 2 months. The prosecutor may extend this period to 3 months, and in particularly justified cases – to a longer specified period of time.

The authority empowered to order the extension of an investigation or an inquiry by a specified period of time shall monitor such proceedings with respect to their proper conduct in view of their possible length and shall assess the validity of the procedural steps taken or to be taken.

The request for the extension of an investigation or an inquiry must include the steps that need to be taken in the further course of the proceedings and indicate the reasons why they have not yet been taken.

Courts:

The presidents of the courts, in exercising internal administrative supervision over the administrative activity of the courts, control the taking of actions by judges within appropriate time limits; direct control is also exercised by the presidents of the divisions. Monitored also within the framework of management control and analysis of annual information on activities of courts operating within the area of appellate courts prepared by presidents of courts of appeal

**(2021):** \* courts -The presidents of the courts, exercising internal administrative supervision over the administrative activity of the courts, control the taking of actions by the judges in due time; direct control is also exercised by the presidents of the divisions. Monitoring also takes place within the framework of the external administrative supervision of the Minister of Justice over the administrative activity of common courts within the framework of management control and analysis of annual information on the activity of courts operating on the territory of courts of appeal prepared by presidents of courts of appeal.

\*prosecutors - In the course of pre-trial proceedings, the public prosecutor commissioning other bodies to carry out procedural actions or appointing experts to prepare an opinion shall each time set a deadline for their implementation. If the entrusted activities are not carried out in time, the prosecutor makes an enquiry as to the reasons for the delay and the deadline for carrying out the activities. The course of pre-trial proceedings is monitored both in terms of internal service supervision and external service supervision, in order to ensure their proper dynamics.

At the trial stage, if a hearing is postponed without a date being set, the prosecutor's office makes timely enquiries as to whether the reasons preventing it from being scheduled have ceased.

**(2018):** In the mode of external and internal administrative supervision over the administrative activity of courts by analyzing the results of the courts or departments and monitoring the efficiency of individual cases in the case of detected lengthiness.

## Portugal

**(General Comment):** Through SITAF and CITIUS (case management systems for administrative and tax courts and judicial courts, respectively) it is possible to check waiting times during judicial proceedings.

The Portuguese Code of Criminal Procedure establishes no binding timeframes for criminal investigations. At a national level, within the public prosecution services, there is only monitoring of the judicial proceedings time during on criminal investigations, with reference to this timeframe.

At a local level, some other proceedings (such as the initial intervention of public prosecutors on protection of adults with some incapacity, requesting accompanying measures – under the legal framework of the accompanied adult [Regime Jurídico do Maior Acompanhado]) are also monitored on time duration.

**(2022):** The waiting period is monitored in the quarterly monitoring of all judicial courts. The Court President reports to the council the number of cases that are waiting procedural movement for more than 1, 2, 3 or 4 months.

**(2021):** Because of the Covid-19 pandemic, the courts were asked for specific elements on the steps taken in the Courts. Also, the procedural laws (e.g. civil and criminal) provides that the registry shall send to the President of the Court, on a monthly base, information detailing the cases in which three months have elapsed since the expiration of the deadline set for the performance of the judge's own act.

**(2018):** Through SITAF and CITIUS (case management systems) it is possible to check waiting times during judicial proceedings.

## Romania

**(2022):** There are statistical reports developed by an IT application called Stasis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**(2021):** There are statistical reports developed by an IT application called Stasis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**(2020):** There are statistical reports developed by an IT application called Stasis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**(2018):** There are statistical reports developed by an IT application called Stasis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**(2016):** There are statistical reports developed by an IT application called Stasis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

**(2014):** According to 2014 data, there are statistical reports developed by Stasis IT application monitoring the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc. More precisely, in 2014, the Superior Council of Magistracy has established a working group that has analyzed several national and international documents on the efficiency of the courts and has developed a set of indicators that are used to make an overall assessment of the efficiency of courts, sections and, if needed panels of judges. These indicators were implemented and used in the Stasis application.

## Slovenia

**(General Comment):** In accordance with the Prosecution Policy adopted in 2017, cases in which a final court decision at first instance has not been adopted within 3 years of filing a written charge with the court, are monitored in particular.

## Question 083

### Austria

**(2018):** There are no specific targets given to the Judges, which are seen as a conflict with the Independence of Courts.

**(2016):** Provincial Administrative Courts: Maximum 150 cases a year per judge (average value).  
Federal Finance Court:

No performance targets, which are seen in conflict with the independence. However based on a continuous transparent controlling the possibility of benchmarking exists. In addition regular dialogues with the judges regarding their performance are held.

### Croatia

**(2020):** According to the Courts Act (Official Gazette No. 28/13, 33/15, 82/15, 67/18) , the Minister in charge for Justice, upon the proposal of the General Assembly of the Supreme Court of the Republic of Croatia, adopts the Framework criteria for the work of judges.

#### **Czech Republic**

**(General Comment):** Quantitative performance targets exist but they are not strictly binding.

**(2018):** Quantitative performance targets exist but they are not strictly binding.

#### **Denmark**

**(General Comment):** Judges are independent. Therefore measuring is done focusing on case-flows and economic indicators without identifying the individual judge.

**(2022):** The judges are independent. Therefore measuring is done focusing on case-flows and economic indicators.

**(2018):** There are no such targets from the side of Danish Court administration, but quantitative performances are used to re-allocate resources so the court in most need of resources in case of a vacant judge position also gets the vacant position.

#### **Finland**

**(General Comment):** A court can decide whether it sets quantitative performance targets for each judge. There are targets set for each judge in some courts.

**(2016):** It is up to each court to decide. In some courts there are targets set for each judge.

#### **France**

**(2022):** A valid response for administrative jurisdictions.

**(2016):** Individual quantitative objectives are established only with regard to administrative judges by the respective court president.

#### **Germany**

**(General Comment):** There are no quantitative performance targets because this might interfere with judicial independence as defined by article 97 of the Basic Law for the Federal Republic of Germany ("Judges shall be independent and subject only to the law.").

**(2022):** Of the respondent 15 federal states, 14 reported that there are no quantitative performance targets for judges. One federal state has not yet replied.

#### **Greece**

**(General Comment):** The Head of each court is responsible for the assignment of the cases between judges of his/her competence. In this sense, he/she is aware of the quantitative performance of judges.

**(2022):** Every administrative judge is charged each year with a specific number of cases to carry out, stipulated by an internal Regulation, according to a model adopted by the General Commission of the State.

**(2020):** Every administrative judge is charged each year with a specific number of cases to carry out, stipulated by an internal Regulation.

**(2018):** Every judge is charged each year with a specific number of cases to carry out, stipulated by an internal Regulation.

**(2016):** Every judge is charged each year with a specific number of cases to carry out, stipulated by an internal Regulation.

## Hungary

**(General Comment):** Since 1999, there is a national regulation adopted by the central administration body of the courts that regulates – among other things – how many trial days should a judge have per year.

Every court has an internal regulation for judges, defining how many hearings shall they have at a trial day and how many cases shall they hear at a monthly basis. This regulation is adopted by the president of the court, taking into consideration the opinion of the judicial council. The president of the NOJ has to give his/her consent for the regulation.

## Italy

**(General Comment):** Law n.71 of 17 June 2022 has recently modified article 2 of Legislative Decree n.109, 23 February 2006, regarding disciplinary responsibility of professional magistrates. The amendment has introduced specific disciplinary offences regarding the conduct of the magistrate who does not cooperate in reaching the goals laid in the 'Program for the management of civil and criminal proceedings' (in Italian 'Programma di Gestione'), which is disciplined by art37 of Decree-Law II. 98 of 6 of July 2011 and regularly approved by each Court.

**(2020):** Quantitative performance targets are set in terms of length and timeframe of proceedings. Judges who fail to meet certain requirements may face disciplinary proceedings.

**(2018):** Quantitative performance targets are set in terms of length and timeframe of proceedings. Judges who fail to meet certain requirements may face disciplinary proceedings.

**(2016):** Quantitative performance targets are set in terms of length and timeframe of proceedings. Judges who fail to meet certain requirements may face disciplinary proceedings.

## Malta

**(General Comment):** The administration of the case load is left in the hands of the individual judge and magistrate together with the Chief Justice who assigns the particular duties to each judge and magistrate.

**(2016):** The administration of the case load is left in the hands of the individual judge/ magistrate together with the Chief Justice who assigns the particular duties to each judge and magistrate.

## Netherlands

**(2016):** There is a planning and control cycle (3 times per year) which involves financial/accounting evaluation but also visits ('bestuurlijke overleggen'), there is once per year an accountant check of the annual report (per court and for total of 19 district courts, 5 general appeal courts and 2 specialised courts (Trade and Industry Tribunal (Cbb) and Central Appeals Tribunal (CRvB)), and once every 4 years there is a round of visitations.

## Poland

**(General Comment):** In general there are not any quantitative performance targets defined for each judge but for certain cases the law imposes timeframe for performing specific action or handling specific matters. President of the court sets the performance target with using statistically calculated indicators of average performance that court and individual judge is expected to achieve.

## Portugal

**(General Comment):** Taking into account the results obtained in the previous year and the strategic objectives formulated for the following year, the president of the court and the coordinating prosecutor, after hearing the judicial administrator, articulate, for the following year, proposals for objectives of a procedural nature (management or administrative) for the district and for the courts of extended territorial jurisdiction, as well as for the Public Prosecution Offices located there, which have to be ratified respectively by the Judicial High Council and the Attorney General's Office.

The procedural objectives of the district shall refer, in particular, to the number of completed cases and the time of their duration, taking into account, among other factors, the nature of the process or the value of the case, considering the human resources and the means related to the functioning of the district and based, namely, on the established procedural reference values.

The procedural objectives of the district may not impose, limit or condition the decisions to be rendered in specific cases, either on the merits of the matter, or on the option for the procedural form understood as more appropriate.

The procedural objectives of the district must be reflected in the objectives established annually for judicial officers and be considered in the respective assessment.

The procedural objectives of the district must be considered in the evaluation criteria of the magistrates, defined by the respective Councils.

## Slovenia

**(General Comment):** Since 2016, the Criteria on the work abilities does not include standards for the minimal expected number of solved cases (however the number of resolved cases is still monitored).

**(2018):** Since 2016, the Criteria on the work abilities does not include standards for the minimal expected number of solved cases (however the number of resolved cases is still monitored).

**(2016):** Since 2016, the Criteria on the work abilities does not include standards for the minimal expected number of solved cases (however the number of resolved cases is still monitored).

## Spain

**(General Comment):** In accordance with the Agreement of November 29, 2018, of the Plenary of the General Council of the Judiciary, which approves Regulation 2/2018, on the remuneration regime of the Judicial and Prosecution Careers, in relation to variable remuneration for objectives, it corresponds to the Plenary of the Council of the Judiciary to approve the system for the determination of the performance objectives of each destination of the Judicial Career

## Question 083-1

### Austria

**(General Comment):** No specific targets are formulated in respect of judges.

**(2016):** Answer counts only for the administrative courts.

For the other courts, no performance targets, which are seen as a conflict with the independence of courts.

### Croatia

**(General Comment):** According to the Courts Act, the Minister of Justice, upon the proposal of the General Session of the Supreme Court of the Republic of Croatia, adopts the Framework criteria for the workload of judges.

## Denmark

**(General Comment):** Judges are independent. Therefore measuring is done focusing on case-flows and economic indicators.

**(2018):** NA as per answer 083.

## Finland

**(General Comment):** The National Courts Administration negotiates annually with each court in order to set targets and objectives for the court for the next year. An allocation of permanent staff and possible additional temporary judges or other staff is decided upon these negotiations but within the state budget. Timeframe (length of proceedings) targets are also set. Possible issues and problems with developing the activities of the court are also discussed. Finally, the appropriation to cover the annual costs of the court operations is agreed. A minutes of the negotiation is written and it includes the targets, objectives and estimated workloads for the court for the next year. The chief justices of the courts can then apply this results-based management system in their respective courts as they see appropriate.

## France

**(General Comment):** For administrative jurisdictions, there are individual quantitative objectives. This is not the case for judicial jurisdictions, where the indicators target functions (non-specialised chambers, investigation, juvenile cases, public prosecution) and court clerks. Thus, a set of objectives and indicators are detailed at national level in the annual documents presented to Parliament (Annual Performance Plan and Annual Performance Report), including a number of indicators measuring the 'efficiency' of civil servants and magistrates with an average performance level to achieve (targets). These ratios are very general.

## Germany

**(2020):** There are no quantitative performance targets for each judge

## Hungary

**(General Comment):** The courts' organizational and operational rules provide for the number of hearing days a judge should have in a month and the number of cases a judge should monthly hear. These rules are issued by the president of the court after the judicial council expressed an opinion on them. The judicial council is a self-governing organ of the courts, consisting of judges who are elected by their peers. The rules are approved by the president of the National Office for the Judiciary.

## Ireland

**(2018):** NAP

**(2016):** NAP

## Latvia

**(General Comment):** According to the Law on Judicial Power, when adjudicating, judges are independent and are subject only to the law. Therefore, judges set targets by themselves. However, the President of the court monitors the workload of the judges in the court as a whole, assigning cases to another judge if necessary.

## Luxembourg

**(2018):** NAP

**Malta**

**(2018):** NA

**Netherlands**

**(2018):** NAP

**(2016):** The planning and control cycle is done by The Council for the Judiciary, on a court level (not at individual judge level). Targets for each individual judge are not imposed by The Council for the Judiciary.

**Poland**

**(General Comment):** .

**(2016):** For certain cases the law imposes timeframe for performing specific action or handling specific matters. President of court sets the performance target with using statistically calculated indicators of average performance that court and individual judge is expected to achieve.

**Romania**

**(2016):** There are no formal standards for quality established for the whole Judiciary. However, informal standards are being used (such as training, quality of the reasoning, assessment of the activity of the judges, assessment of the good reputation of the judges etc.)

**Slovenia**

**(General Comment):** See Q114.

**Question 083-1-1****Croatia**

**(2022):** According to the Courts Act (Official Gazette No. 28/13, 33/15, 82/15, 67/18, 126/19, 130/20, 21/22, 60/22) the president of the court in which the judge performs judicial duty determines by decision for the previous calendar year whether the judge has fulfilled his duties as a judge according to the prescribed criteria. If the president of the court determines that the judge, without justifiable reason, did not make the number of decisions determined by the Framework Criteria for the work of judges in a one-year period or that he performed his judicial duties improperly, he is obliged to initiate disciplinary proceedings against such a judge, in accordance with the State Judicial Council Act. Disciplinary proceedings against the president of the court are initiated by the president of the immediately higher court. According to the State Judicial Council Act (Official Gazette No. 116/10, 57/11, 130/11, 13/13, 28/13, 82/15, 67/18, 126/19, 80/22) disciplinary penalties may be imposed for committed disciplinary offences: rebuke, a fine of up to one third of the salary earned in the previous month in a period of one to three months, a fine of up to one third of the salary earned in the previous month in a period of four to six months, a fine of up to one third of the salary earned in the previous month in a period of seven to twelve months or dismissal from duty. If the president of the court determines that, due to justified reasons, the judge did not make the number of decisions determined by the Framework Criteria for the work of judges in a one-year period, he is obliged to state in the explanation of the decision what justified reasons are in question and submit the decision immediately to the president of the higher court. Against the decision of the president of the court, which determines whether the judge has fulfilled his duties as a judge, the judge can submit an objection to the president of the court within three days of receiving the decision. The president of the court is obliged to decide on the objection within eight days. The president of the court can reject the complaint or accept it and make a new decision. If the objection is rejected, the judge has the right to appeal to the president of the immediately higher court within eight days from the delivery of the decision on the objection. The president of the immediately higher court can make a decision confirming the decision of the president of the court or accept the appeal and make a new decision. Against this decision, the judge has no right to declare legal remedies.

## Finland

**(General Comment):** See general comments to Q 83-1

## Italy

**(2022):** Disciplinary sanction as provided by the Legislative Decree no 109 of 23rd February 2006, regarding disciplinary responsibility of professional magistrates.

## Question 083-2

## Denmark

**(General Comment):** There is a productivity target for the prosecution as a whole, but not for each public prosecutor.

## France

**(2021):** source DSJ

## Germany

**(2022):** Out of 15 respondent federal states, 14 reported that there are no quantitative performance targets for public prosecutors. One federal state has not yet replied.

**(2021):** The vast majority of the Länder selected "no", 2 of the Länder answered "yes".

## Greece

**(2022):** There is, however, as far as possible an equal distribution of cases between them by the Head of the Service (Prosecution Service) and the obligation of the public prosecutor to process the cases assigned to him in the time frames provided for each case.

### **Hungary**

**(2022):** Quantitative performance targets have not yet been set. The public prosecution services were in the process of installing a new specialized IT system (IIDR), which was originally planned to affect internal prosecution statistics too. However, it has not been introduced. The planned system is currently under revision, so it is not possible to provide information on how and when it will be introduced and whether quantitative performance targets will be set.

**(2021):** For the time being, no performance targets are in place, but the development of such targets is in progress.

### **Ireland**

**(2022):** Allocation of files happens in some divisions but not all, and not all prosecutors are assigned a specific number of files per week. Additionally, targets can be influenced by external factors such as: the number of investigation files received, or the availability of court dates in order to process cases. The main reason why prosecutors are not assigned a set number of files is because the size and complexity of files can vary significantly.

**(2021):** Prosecutors in our directing division are allocated a specific number of files per week. Decisions must be issued within a designated time frame and this is monitored by our case management system

**(2018):** Work is demand led by number of files submitted by external investigating agencies

### **Italy**

**(General Comment):** Law n.71 of 17 June 2022 has recently modified article 2 of Legislative Decree n.109, 23 February 2006, regarding disciplinary responsibility of professional magistrates. The amendment has introduced specific disciplinary offences regarding the conduct of the magistrate who does not cooperate in reaching the goals laid in the 'Program for the management of civil and criminal proceedings' (in Italian 'Programma di Gestione'), which is disciplined by art37 of Decree-Law II. 98 of 6 of July 2011 and regularly approved by each Court.

### **Latvia**

**(General Comment):** The prosecutor provides a monthly report on the statistical indicators of his or her work. In addition, the statistical indicators of the individual work of the public prosecutor (statistical indicators for the monitoring of the investigation, prosecution, maintenance of the State prosecution and other functions of the public prosecutor) are also analysed during the process of assessing the professional activities of prosecutors (not less than once every five years).

### **Lithuania**

**(2018):** The quantitative performance targets are defined for the Prosecutor General's Office and 5 regional Prosecutor's Offices, but not for individual public prosecutors.

### **Luxembourg**

**(2018):** NAP

### **Netherlands**

**(General Comment):** There is no national policy on targets for every prosecutor. An office could choose to set targets for their prosecutors (see next question), but these may vary across offices.

**(2020):** There is no national policy on targets for every prosecutor. An office (parket) could choose to set targets for their prosecutors (see next question), but this may vary across offices.

## Portugal

**(General Comment):** Yes for some District Prosecution's Office and No at a national level. At national level, only reference values are fixed for the purpose of placing prosecutors. Also at a national level, the fact that a prosecutor has finished more proceedings than those that he/she started is a general criterion of evaluation and compliance with general objectives, in the qualitative individual assessment of the public prosecutors' work.

## Slovenia

**(General Comment):** .

## Question 083-3

## Austria

**(2018):** There are no specific targets given to public prosecutors.

## Belgium

**(2021):** To underline the consistency between Q 83-2 and Q 83-3: these are not quantitative targets.

## Croatia

**(2022):** According to the State Attorney Office Act (Official Gazette No. 67/18, 21/22) , the Minister in charge for Justice, with the prior opinion of Prosecutor General, adopts the Framework criteria for the work of public prosecutors (Deputy State Attorneys).

**(2020):** According to the State Attorney Office Act (Official Gazette No. 67/18) , the Minister in charge for Justice, upon the proposal of Prosecutor General, adopts the Framework criteria for the work of public prosecutors (Deputy State Attorneys).

**(2018):** According to the State Attorney's Act, the Minister of Justice, upon the proposal of Prosecutor General, adopts the Framework criteria for the work of public prosecutors.

## Germany

**(2021):** There are no quantitative performance targets for each public prosecutor. The 2 Länder that have quantitative performance targets answered, that the prosecutor General is responsible for setting these targets.

**(2020):** There are no quantitative performance targets for each public prosecutor

## Greece

**(2022):** The answer chosen is in accordance with the answers of the majority of the prosecutors' offices.

## Ireland

**(2022):** Unit Heads assign a number of files to each Prosecutor depending on ability or grade. This might not mean that “targets” are set. The targets for the Office are ultimately greatly impacted by external factors like the amount of investigation files that are submitted to the office, the availability of court dates to process cases and the fact that the size and complexity of files varies. A Prosecutor’s ability to progress their caseload is very much impacted by these factors so within this Office we don’t usually reference “targets”.

#### **Lithuania**

**(2018):** The quantitative performance targets are defined for the Prosecutor’s Offices, but not for individual public prosecutors.

#### **Luxembourg**

**(2018):** NAP

#### **Malta**

**(2018):** NA

#### **Netherlands**

**(General Comment):** There is no national policy on targets for every prosecutor. An office could choose to set targets for their prosecutors (see next question), but these may vary across offices.

#### **Poland**

**(2022):** If one were to consider that this question, is linked to question 83-2 on quantitative objectives, then the answer is NAP. Which is not to say that the efficiency of a prosecutor is not subject to any assessment by superiors. Indeed, it is the task of prosecutors exercising a managerial function to ensure the proper and efficient performance of official tasks in the units and organisational units entrusted to them, in particular to ensure the efficiency of the proceedings conducted by the prosecutors subordinate to them. Executives are therefore obliged to have knowledge of, inter alia, the number of proceedings conducted by their subordinate prosecutors, the number of proceedings completed by them, the number of protracted proceedings and to react to cases of, for example, protracted proceedings.

**(2020):** Individual goals are set by prosecutors themselves in a way that enables them to carry out their duties effectively

#### **Portugal**

**(2020):** The local hierarchically superior public prosecutor can set individual targets for each public prosecutor. The High Council of the Public Prosecution Service only sets reference values for the purpose of placing prosecutors and establishing how many prosecutors are needed for a particular Public Prosecution Office.

#### **Slovak Republic**

**(2022):** Prosecutors do not have quantitative performance targets within a certain period, but at the same time they have responsibility for their work, and therefore the hierarchically superior public prosecutor is responsible for observing the duties and goals of each prosecutor.

#### **Slovenia**

**(General Comment):** .

## Spain

**(General Comment):** In accordance with Royal Decree 432/2004, of March 12, which regulates the variable complement by objectives of the members of the Prosecution service, the State Attorney General, at the proposal of the Prosecution Inspection, after hearing the Prosecutor Council and prior the report from the Ministry of Justice, will determine for each annual period the objectives whose fulfillment will lead to the perception of the variable remuneration.

## Question 083-3-1

### Bulgaria

**(2022):** But there is a quantitative evaluation of the work of a prosecutor which reflects in the individual assessment` - please see Q 120

### Croatia

**(2022):** According to the State Attorney Council Act (Official Gazette No. 67/18, 126/19, 80/22) if the number of resolved cases and actions taken in a one-year period is, without justifiable reason, less than 80% of the average of the state attorney's office in which he holds office, Deputy state attorney is disciplinary liable for disciplinary offence of irregular performance of duty.

### Greece

**(2022):** NAP:No targets are set

### Italy

**(2022):** Disciplinary sanction as provided by the Legislative Decree no 109 of 23rd February 2006, regarding disciplinary responsibility of professional magistrates.

## Question 120

### Austria

**(General Comment):** In the Austrian judicial system we have diverse and multifaceted statistic products, which are an important basis for the management of justice. The statistics are regularly compiled by the Federal Computing Center and serve to control the deployment of personnel, but also for the supervision that is necessarily linked to the parties' right to a fair trial.

The work of the public prosecutors is continuously and systematically reviewed on a quantitative level (i.e. number of completed cases, duration of proceedings). In this way, major deviations from the average can be identified. If a public prosecutor shows too many delays in proceedings or excessively long proceedings, this can lead to disciplinary proceedings or even a reduction in their job description. The assessment is carried out by the heads of the senior public prosecutors' offices. There is no systematic qualitative assessment of the work of the public prosecutors.

### Bulgaria

**(General Comment):** Supreme Judicial Council: Criteria on which the assessment is based: the criteria are general (relevant to the activity of each judge, prosecutor, and investigator); specific (relevant only to the position held – judge, prosecutor, or investigator), and additional (relevant only to administrative heads and their deputies).

Authority competent to carry out the assessment: the assessment is accepted by the Prosecutor's College of the Supreme Judicial Council.

Purposes for which the evaluation results are used: when participating in a competition for promotion or transfer in position; when participating in a procedure for the selection of an administrative head; for appointment to the position of deputy of the administrative head; on promotion to a higher rank; on secondment; for participation in the composition of a Permanent Appraisals Commission to the Appellate Prosecutor's Offices; participation in a competition committee.

Prosecutor's Office of RB: Such a system exists. According to Art. 196 of the Judicial System Act the evaluation is carried out in advance, in order to acquire irreplaceability, periodic and extraordinary attestation of the magistrates, and the criteria for the same are defined in Art. 198 of the Judicial System Act: legal knowledge and skills; ability to analyze legally relevant facts; ability to optimally organize work; expediency and discipline; compliance with the rules of ethical conduct. Attestation also takes into account the following indicators: compliance with deadlines; number of confirmed and canceled acts and the reasons for this; the results of the inspections of the Inspectorate at the Supreme Judicial Council; the overall workload of the relevant judicial authority, as well as the workload of the assessed judge, prosecutor or investigator compared to other judges, prosecutors or investigators from the same judicial authority.

## **Croatia**

**(2022):** According to the State Attorney Office Act (Official Gazette, No. 67/18, 21/22), State Attorneys' and Deputy State Attorneys' performance is evaluated every three years according to the following criteria: achieved results in resolving cases (based on the number of cases assigned to work on the basis of the Framework Criteria for the Work of Deputy State Attorneys and the average work results of county or municipal state attorney's offices for the previous three-year period), the quality of decisions and the justified use of legal remedies, proper performance of the state attorney's duty - observance of deadlines during the procedure, other activities of the State Attorney and the Deputy State Attorney, experience in performing the duty of state attorney and compliance of conduct with the Code of Ethics of State Attorneys and Deputy State Attorneys. The Framework criteria are adopted by the Minister in charge of judicial affairs, with the prior opinion of the Chief State Attorney of the Republic of Croatia.

## **Czech Republic**

**(2022):** The Head of Public Prosecutor's Office monitors e.g. the number of appeals, the number of returnig cases etc.

## **Denmark**

**(2020):** Public prosecutors go through intensive education for the first three years of them being recruited and this evaluation is structured centrally with HR at the Attorney Generals office. During that period they are individually being assessed through exams and through working with mentors. Thus they are continuously being assessed both centrally through exams as well as locally through the daily work that the mentor sees. Later in the career the assessment is not structured in such a way but all through their career the prosecutors are evaluated through their daily work and how they perform in court.

## **France**

**(2022):** The assessment of the public prosecutor's magistrate provided for by statutory order No. 58-1270 of 22 December 1958 aims to determine the professional value of the magistrate. It must reflect his legal and technical professional skills, his level of commitment, assess his abilities to exercise a specific function and identify training needs within his career path. The assessment is established by the Attorney General near the Court of Appeal or Prosecutor near the Superior Court of Appeal for magistrates from their jurisdiction. Considered as a moment for exchange, this evaluation should highlight both the skills that were mobilized by the magistrate and areas where improvement could be made. It contributes to better situate his activity within service organization and operation while specifying missions related to its functions highlighting its professional potential.

For magistrates, evaluation offers a privileged opportunity to take stock of their activities, consider developments in their professional practice and regularly position themselves relative to their career goals.

For evaluators it should enable them detect each individual's potential so as contribute towards efficient human resource management.

**(2021):** source DSJ

### **Germany**

**(2022):** Out of 15 respondent federal states, 12 reported that there is a quantitative evaluation of the public prosecutors' work and 12 reported that there is a qualitative evaluation (one federal state has not yet replied).

The assessment is generally carried out by the direct superior and is based on different criteria such as specialised knowledge, expression, cooperation, leadership skills, negotiating skills, etc. The results are mostly used for decisions about promotions.

**(2021):** The vast majority of the Länder answered "yes", 3 answered "no".

### **Greece**

**(2022):** The question was answered by the prosecutor's office of the Supreme Court.

### **Hungary**

**(2022):** The person exercising the employer's rights assesses a prosecutor's work every eight years. The purpose of assessment based on the examination of case files is to assess the quality of the prosecutor's professional activities, to evaluate his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. In accordance with Section 50 (1) of the Prosecution Employment Status Act, prosecutors, with the exception of the Prosecutor General and the Deputy Prosecutor General, shall be assessed before the expiry of the fixed term of the first prosecution appointment, while in the case of a first appointment for an indefinite term, before the expiry of a period of three years following the appointment, and thereafter every eight years, provided that they worked under the supervision of the assessor or his/her deputy for minimum one year during the assessment period. Prosecutors do not need to be assessed during the six years preceding the completion of the applicable old-age pension age. In addition to cases mentioned above, a prosecutor shall also be assessed if requested by the prosecutor, provided that two years have elapsed since the previous assessment, circumstances have emerged that indicate the prosecutor's professional ineligibility or the necessity to alter the evaluation of the previous assessment. The purpose of assessment is to assess the quality of the prosecutor's professional activities, to evaluate his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. The assessment may only feature duly supported, factual findings.

In the event of an ineligible grade, upon the disclosure of the result of the assessment, the prosecutor shall be called upon to resign his/her office within thirty days. If despite the call the prosecutor does not resign his/her office, his/her prosecution service employment shall be terminated by exempting him/her from office. In accordance with Sections 13/A-13/F of Instruction 4/2012. (I. 6.) of the Prosecutor General on specific questions regarding the status of employees of the Prosecution Service, a case file examination shall be carried out as a basis for the assessment which is due to follow with regard to the prosecutor appointed to a prosecution office subordinated to the Office of the Prosecutor General prior to the time when the assessment is due. Such a case file examination shall not be carried out for senior head prosecutors. Case file examinations shall discover the examined prosecutor's practice regarding the application of substantive and procedural law during at least a one-year period prior to the case file examination, or since the prosecutor's latest assessment – or in absence of an assessment – since the time of his/her appointment at the most. The case file examination and its evaluation shall be done by a prosecutor (hereinafter: examiner prosecutor) who works at the prosecution office directly superior to the prosecution office where the examined prosecutor is appointed to and who works in the same field of prosecutorial activity or expertise as the examined prosecutor. The examiner prosecutor shall be designated by the directly superior prosecution office or at the Office of the Prosecutor General by the head of the organizational unit in the prosecution service that is competent in view of the examined prosecutor's duties.

## Ireland

**(2022):** A Prosecutor's performance is individually assessed through PMDS (Performance Management and Development System). PMDS assesses how a jobholder's work performance, career and development needs are managed. It links the management of individual performance to the objectives of the Office, as set out in the Strategy of Statement and Business Plan. PMDS seeks to strike a balance between the needs of the organisation and the development needs of those who work in it. It recognises the need for continual change and improvement and for the involvement of staff in bringing this about. Individual prosecutors are responsible for carrying out their own goal setting and assessment. The PMDS form is then reviewed and assessed by the prosecutor's manager.

## Italy

**(General Comment):** The assessment procedure applies to both judges and public prosecutors. Every four years, the High Council for the Judiciary (CSM) conducts a professional appraisal based on the professional skills of judges/prosecutors. The professional status of both judges and prosecutors is organized into 7 different levels. Several criteria are taken into consideration: independence, impartiality, balance, professional capacity, work capacity, diligence and commitment. The assessment is based on a number of acts and documents that describe all the professional aspects of the magistrate to be evaluated. The most significant are:

- "self report" where the magistrate illustrates all the elements that he/she believes are necessary or useful to be considered for the purpose of his/her appraisal;
- a random sample of acts and documents produced by the magistrate during the evaluation period;
- an "informative report" prepared by a superior of the magistrate;
- the statistics concerning activity of the magistrate: the number of provisions drafted, the processing times of the proceedings, the time for filing the documents (even in comparison with the other magistrates of the office);
- work related publications, if any;
- reports from the lawyers' council, if any.

## Latvia

**(General Comment):** Evaluation is carried out by the Attestation Commission of Prosecutors. During the evaluation of a public prosecutor the following indicators of the quality of performance of the functions are assessed: supervision, criminal prosecution, maintenance of state prosecution in court, as well as the protection of state and individual rights. An assessment of professional competences is also carried out. The results are generally used to evaluate professional performance and suitability for the position. In the case of a negative opinion, the Commission can determine specific tasks that must be performed to eliminate the deficiencies found in prosecutor's professional activity or to improve his/her professional activity.

## Lithuania

**(2022):** The service, qualifications of the prosecutors and their suitability for the position are assessed by the Prosecutors' Assessment Commission.

The Commission is composed of seven members (four prosecutors and three persons (non-prosecutors) of impeccable reputation, nominated by the President of the Republic, the Speaker of the Seimas, and the Prime Minister) for a period of three years.

The Commission assesses data on the procedural and non-procedural performance and professional qualities of the prosecutor, and, in the case of the evaluation of the chief prosecutor (or deputy), also on the administrative performance.

## Netherlands

**(General Comment):** The public prosecution has a team Judicial Quality at the General Office that studies the quality of the criminal proceedings of the public prosecution. As part of these studies and assessments, a pool of prosecutors has been compiled, and they study the work of other public prosecutors. This is an assessment of an office, not of individual prosecutors. The results of these studies are used for quality enhancement trajectories. The studies are repeated periodically.

**(2020):** The public prosecution has a team Judicial Quality at the General Office (Parket Generaal) that studies the quality of the criminal proceedings of the public prosecution. As part of these studies and assessments, a pool of prosecutors has been compiled, and they study the work of other public prosecutors. The results of these studies are used for quality enhancement trajectories. The studies are repeated periodically.

## Portugal

**(General Comment):** The prosecutors are evaluated periodically in time lapses between 3 to 5 years. The evaluation is held by the Prosecutors Superior High Council and it evaluates the quality of the work held by all prosecutors. A higher ranked prosecutor does the evaluation and produces a report that is sanctioned by the Prosecutors Superior High Council.

## Romania

**(2022):** According to Article 87 of Law No 303/2022 -The individual professional evaluation of judges and prosecutors involves analysing and noting of the criteria and indicators for assessing the professional performance of judges and prosecutors, indicators which concern, in particular, the quality of the activity, the efficiency, the integrity and the obligation to continue vocational training, and in the case of judges and prosecutors appointed to senior positions, the manner of carrying out the managerial duties. (2) Professional evaluation of judges and prosecutors aims to establish the level of their professional competence and also to improve professional performance, increase the efficiency of the activity of courts and prosecutor's offices and public trust in judicial authority, maintain and consolidate the of the quality of the judicial system

## Slovenia

**(General Comment):** On the proposal of the State Prosecutor General, State Prosecutorial Council adopts Criteria for the assessment of state prosecutors' performance. They define quality and quantity indicators. The quantitative criteria define expected time for the resolution of cases and for typical procedural acts. The performance of the evaluated prosecutor is compared to other prosecutors at his/her office concerning the number of assigned, resolved and unresolved cases, number of attendances at the court hearings, conviction rate, pronounced sanctions and number of logged appeals. Head of state prosecutor's office as competent authority for the matters of state prosecution administration can alert the public prosecutor to his duty to meet the targets.

Regular individual assessment of the public prosecutors' work is carried out every three years. The assessment can also be carried out on demand of the State Prosecutorial Council, head of prosecutor's office, Minister or the prosecutor himself. In first three years after the appointment for the state prosecutor the assessment is carried out every single year.

## Spain

**(2021): SOURCES:** Royal Decree 432/2004, of March 12, which regulates the variable complement by objectives of the members of the Prosecution service.

Agreement of November 29, 2018, of the Plenary of the General Council of the Judiciary, by which Regulation 2/2018 is approved, regulating the remuneration regime Judicial career

## Question 120-1

## Bulgaria

**(General Comment):** Quantitative evaluation of the work of the prosecutors is carried out by applying the Rules for measuring the workload of the prosecutor's offices and the individual workload of each prosecutor and investigator, adopted by the Prosecution College/collegium of the SJC. It is possible to display the data according to the indicators provided for in the Rules in real time, both for the prosecutor's office as a whole, as well as for individual prosecutor's offices and for each specific prosecutor.

Quantitative data on the workload are taken into account in the appraisal procedure of a specific prosecutor, in the course of which an assessment of his work is carried out, both in terms of quantitative indicators and also regarding the quality of the performed activity according to the results achieved.

Prosecutors are assessed in accordance with Ordinance No. 3 of February 23, 2017 of the Supreme Judicial Council on the indicators and Methodology for Assessment and the Criteria for Reporting the Workload Degree of Prosecutors and Investigators and of Administrative Heads and Their Deputies (promulgated SG No. 21 /10.03.2017).

Attestation is carried out:

1. in advance - for a three-year period from the appointment to the position of prosecutor or investigator - when participating in a competition or when being offered a promotion;
2. to acquire irreplaceability - upon completion of 5 years of experience as a prosecutor or investigator;
3. periodically - for a 5-year period from the attestation of irreplaceability of a prosecutor and investigator, of an administrative head and of a deputy administrative head;
4. extraordinary - in the cases under Art. 197, para. 5 of the Judicial System Act.

Junior prosecutors and junior investigators are not assessed in advance, and a report on their work is prepared by the mentor in the second year of their appointment.

## Cyprus

**(2021):** the assessment is carried out by the AG the Deputy AG and the head of Department as part of their annual evaluation

## Czech Republic

**(2018):** The individual assessment of the public prosecutors' work take place at least once every two years.

## Denmark

**(2021):** More frequent during the first three years of their career. Less frequent after that.

**(2020):** See response to 120: More frequent during the first three years of their career. Less frequent after that.

## France

**(General Comment):** Article 12-1 of the Decree of 22 December 1958 establishes the principle of evaluating the professional activity of each magistrate every two years. An assessment must also be conducted when applying for promotion.

**(2022):** Article 12-1 of the ordinance of December 22, 1958 establishes the principle of evaluating the professional activity of each magistrate every two years. An evaluation must also be conducted when applying for advancement on the promotion list.

**(2021):** source DSJ

## Greece

**(2022):** The question was answered by the prosecutor's office of the Supreme Court.

## Hungary

**(2021):** Under Section 50 (1) of Act on Prosecutors, prosecutors shall be assessed on a regular basis, with the exception of the Prosecutor General and the Deputy Prosecutors General.

In case of the first appointment, which is for a definite term, the prosecutor shall be assessed by the end of that term. In case of appointment to prosecutor for an indefinite term, the prosecutor shall be assessed within 3 years following the appointment; then the assessment shall be carried out every 8 years.

Prosecutors do not need to be assessed within the period of six years before reaching retirement age.

Besides the above, prosecutors shall be assessed if they request so, provided that at least 2 years have elapsed since the last assessment, or in the occurrence of any circumstance which suggests professional inadequacy, or which necessitates the amendment of the results of the last assessment. The assessment procedure involves examination of case files, as set out in Sections 13A to 13F of the Prosecutor General's Order No. 4/2012.

**(2018):** The evaluation system is defined by Articles 50-52 of the Act on the Legal Status of Prosecutors. The purpose is to assess the quality of the prosecutor's activities, his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. Prosecutors, with the exception of the Prosecutor General and the Deputy Prosecutor General, are assessed before the expiry of the fixed term of the first appointment, while in the case of a first appointment for an indefinite term, before the expiry of a period of 3 years following the appointment, and thereafter every 8 years. Prosecutors need not be assessed during the 6 years preceding the completion of the applicable old-age pension age. A prosecutor shall also be assessed if: requested by the prosecutor; circumstances have emerged that indicate the prosecutor's professional ineligibility or the necessity to alter the evaluation of the previous assessment; in the extraordinary proceeding to be completed without delay, s/he fails to meet the deadline extended by the superior prosecutor. The assessment is the duty of the person exercising the employer's rights. The official work of prosecutors assigned to the Ministry is evaluated by the Minister responsible for justice in accordance with the rules applicable to government officials. As a result, prosecutors may be awarded the following grades: excellent, suitable for promotion; excellent and fully eligible; eligible; eligible, subsequent assessment required; ineligible. In the event of an ineligible grade, the prosecutor shall be called upon to resign his/her office within thirty days. If the prosecutor is awarded a grade "eligible, subsequent assessment required", the person exercising the employer's rights identifies the deficiencies and irregularities and states the main criteria of the desired changes which shall be reviewed prior to the next assessment (within 2 years). A prosecutor shall be awarded an ineligible grade upon the next assessment if he/she fails to obtain an eligible grade. S/he may request a court of law to quash any erroneous or untrue finding.

## Ireland

**(2021):** Performance Management System

**(2018):** Prosecutors working in-house are required to participate in Public service wide Performance Management and Development System (PMDS).

## Italy

**(2022):** Every four years

## Latvia

**(General Comment):** The assessment of the professional activities of prosecutors have been commenced and is operational from 1 January 2014, within which the professional activities of prosecutors are assessed on a regular basis (not less than once every five years).

**(2020):** Not less than once every five years

## Lithuania

**(General Comment):** According to Article 33 of the Law on Prosecution Service, evaluation of prosecutor's individual performance, qualification and suitability is carried out by the Attestation Commission. Performance of a prosecutor who has received a positive evaluation after his/her internship, is thereafter evaluated every five years during the regular evaluation of the service. The extraordinary evaluation can be carried out by decision of the Prosecutor General: at the request of the public prosecutor him/herself, if at least half a year has passed since his/her last evaluation; in the case the prosecutor is applying for a higher position, or to the same or an equivalent post after the expiry of the term of appointment; if three years have passed since the last evaluation of his/her service; if the prosecutor's performance has repeatedly been deficient, giving rise to reasonable doubts as to his/her suitability for the position in question.

**(2022):** The Commission carries out regular and extraordinary assessments of the service.

Regular service assessments are carried out:

1. at the end of the prosecutor's traineeship;
2. every five years.

An extraordinary service assessment may be carried out:

1. at the reasoned request of the prosecutor, if at least half a year has elapsed since the last assessment;
2. when, at the end of his/her term of office, the prosecutor seeks appointment to a higher, the same or an equivalent post, provided that three years have elapsed since the last service assessment;
3. in cases where it is established that the prosecutor's performance has repeatedly been deficient, giving rise to reasonable doubts as to his suitability for the post in question.

## Malta

**(2022):** It is up to the discretion of the Attorney General to carry out such evaluation but it has be carried out at least once annually.

**(2021):** The work of public prosecutors is constantly monitored by the Deputy AG and the AG herself. The monitoring is not scheduled at specific annual intervals but it is ingrained in the daily work processes in the Office.

**(2020):** The work of public prosecutors is constantly monitored by the Deputy AG and the AG herself. The monitoring is not scheduled at specific annual intervals but it is ingrained in the daily work processes in the Office.

**(2018):** Thework of public prosecutors is constantly monitored by the Deputy Attorney General (in charge of the criminal field) and the Attorney General. The monitoring is not scheduled at specific annual intervals, but is ongoing and ingrained in the daily work processes of the Office.

## Netherlands

**(General Comment):** A regular cycle of individual assessments exists, based on certain competencies a public prosecutor should possess. The extent to which the public prosecutor possesses these competencies is assessed in performance and assessment reviews. Furthermore, each prosecutor has to obtain a certificate implying they are 'fit for trial', that they have the necessary skills to represent the public prosecution at trial.

## Romania

**(2022):** Legislation on the statute of judges and prosecutors was replaced by Law no. 303/2022

**(2020):** According to the provisions of art. 39 of the Law no. 303/2004, amended and republished in 2018, judges and prosecutors are being periodically evaluated under the observance of the professional and performance criteria. The evaluation shall envisage the quality of their activity, efficiency, integrity as well as the fulfillment of the obligation to take part in in-service professional training and on managerial activity for those judges and prosecutors in leadership positions. The periodical evaluation shall be first carried out by the end of the first 2 years of activity after the entering in profession and shall be continued every 3/4/5 years depending on the seniority in profession (5-10 years, 10-15 years, over 15 years of seniority).

**(2018):** similar to judges, see Q114, 114.1 and the additional comments

## Slovenia

**(General Comment):** Regular individual assessment of the public prosecutors' work is carried out every three years. The assessment can also be carried out on demand of the State Prosecutorial Council, head of prosecutor's office, Minister or the prosecutor himself. In first three years after the appointment for the state prosecutor the assessment is carried out every single year.

**(2018):** Every three years

Due to clarifications in the methodology, in 2020 the number of courts of different instances that operate in the same site are separately counted.

Belgium: Starting from 2020, a new methodology of presentation of data is used as to the distinction between 1st instance courts of general jurisdiction and 1st instance specialised courts

Cyprus: The Supreme Court is the 2nd instance and highest instance court in the country

Italy: Before 2014 only courts financed by Ministry of justice were included

Latvia: Different presentation of number of specialised courts in 2015. In reality there is one administrative court with 5 court houses

Luxembourg: The methodology of presentation of data concerning 1st instance specialised courts was improved in 2020

Slovak Republic: Starting from 2020, the number of administrative courts is excluded from the count of specialised courts, since they are part of general courts of appeal

Spain: As general rule, the first instance courts - legal entities are unipersonal courts - one judge is considered one court.

Table 2.3a Number of all courts as geographic locations from 2012 to 2022 (Q44)

Due to clarifications in the methodology, in 2020 the number of courts of different instances that operate in the same site are separately counted.

**Cyprus:** The Supreme Court is the 2nd instance and highest instance court in the country

**Ireland:** As of 2020, the methodology used to count the number of courts – geographic locations changed to fully align it with the CEPEJ definitions.

**Italy:** Before 2014 only courts financed by Ministry of justice were included.

Due to clarifications in the methodology, in 2020 the number of courts of different instances that operate in the same site are separately counted.

Croatia: in 2019, misdemeanor courts were merged into municipal courts.

Ireland: As of 2020, the methodology used to count the number of courts – geographic locations changed to fully align it with the CEPEJ definitions.

# Indicator 2: The judicial organisation

Question 042.

Question 043.

Question 044.

#### Austria

**Q042 (2022):** In 2022 in Austria, the number of courts considered as legal entities is 152. Namely, there are 133 courts of general jurisdiction and 19 specialised courts. Among the 133 legal entities of general jurisdiction, 128 act at first instance, 4 at second instance and one at third instance. More precisely, the 115 District courts and the 13 Regional courts of general jurisdiction intervene as first instance courts. It is noteworthy that the 7 other regional courts that have specialised jurisdiction are not taken into consideration here, but are counted as specialised first instance courts (*infra*). It is to be mentioned that the peculiarity of the 20 Austrian Regional courts is that even though these are first instance courts, some of them are also competent in respect of appeals against District courts' decisions. The 4 Higher Regional Courts have appeal competence in respect of all civil and criminal cases.

The Supreme court is the highest instance court in civil and criminal matters.

**Q042 (2020):** In 2020 in Austria, the number of courts considered as legal entities is 152. Namely, there are 133 courts of general jurisdiction and 19 specialised courts. Among the 133 legal entities of general jurisdiction, 128 act at first instance, 4 at second instance and one at third instance. More precisely, the 115 District courts and the 13 Regional courts of general jurisdiction intervene as first instance courts. It is noteworthy that the 7 other regional courts that have specialised jurisdiction are not taken into consideration here, but are counted as specialised first instance courts (*infra*). It is to be mentioned that the peculiarity of the 20 Austrian Regional courts is that even though these are first instance courts, some of them are also competent in respect of appeals against District courts' decisions. The 4 Higher Regional Courts have appeal competence in respect of all civil and criminal cases.

The Supreme court is the highest instance court in civil and criminal matters.

**Q042 (2014):** From January 1st 2013 to July 1st, 2014 a number of district courts merged. In 2014, there are 129 first instance district courts which is less than 132 (number communicated for 2013) but still not complying with the aim of 115.

**Q043 (General Comment):** As a rule every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. six in Vienna (civil cases, criminal cases, commercial cases [2 x], labour and social welfare cases, administrative cases) and two in Graz (civil cases, criminal cases); Since there are special courts for civil law cases in Vienna and Graz, which cannot be selected individually here, and because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts does not correspond to the total number of specialised courts.

One commercial court in Vienna, both courts (in Vienna and Graz) specialised on civil cases and both courts (in Vienna and Graz) specialised on the enforcement of criminal sanctions also act as second instance courts.

**Q043 (2022):** As a rule every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. six in Vienna (civil cases, criminal cases, commercial cases [2 x], labour and social welfare cases, administrative cases) and two in Graz (civil cases, criminal cases); Since there are special courts for civil law cases in Vienna and Graz, which cannot be selected individually here, and because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts does not correspond to the total number of specialised courts.

One commercial court in Vienna, both courts (in Vienna and Graz) specialised on civil cases and both courts (in Vienna and Graz) specialised on the enforcement of criminal sanctions also act as second instance courts.

**Q043 (2021):** As a rule every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], labour and social welfare cases) and two in Graz (civil cases, criminal cases); Because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts does not correspond to the total number of specialised courts. One commercial court in Vienna, both courts (in Vienna and Graz) specialised on civil cases and both courts (in Vienna and Graz) specialised on the enforcement of criminal sanctions also act as second instance courts.

**Q043 (2020):** As a rule every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], labour and social welfare cases) and two in Graz (civil cases, criminal cases);

Because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts does not correspond to the total number of specialised courts.

One commercial court in Vienna, both courts (in Vienna and Graz) specialised on civil cases and both courts (in Vienna and Graz) specialised on the enforcement of criminal sanctions also act as second instance courts.

**Q043 (2019):** On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialized, i.e. eight in Vienna (civil cases, criminal cases, commercial cases [2x], employment- and social welfare cases, administrative cases) and two in Graz (criminal cases, remaining cases). There is also a regional administrative court in every federal state (9 in total). Because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts equals nineteen.

**Q043 (2018):** On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], employment- and social welfare cases) and two in Graz (criminal cases, remaining cases)

**Q043 (2017):** On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], employment- and social welfare cases) and two in Graz (criminal cases, remaining cases)

**Q043 (2016):** On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], employment- and social welfare cases) and two in Graz (criminal cases, remaining cases)

**Q044 (2020):** For this cycle, data on geographic locations is presented in respect of different locations for different instances, in compliance with the methodology developed in the Explanatory Note. The variation observed with previous cycles is only of a methodological nature.

**Q044 (2016):** It is planned to reduce the number of courts by 3 in 2018 (-1) and 2019 (-2)

## Belgium

**Q042 (General Comment):** The reform of the Justices of the peace, involving a reduction in geographical establishments, was consolidated by the law of 25th December 2017. The implementation of the reform took place between 2016 and 2019.

1.1 General jurisdiction courts of first instance : 13 first-instance courts, 162 Justices of the peace, 11 assize courts (one per province and two in Brussels), and 15 police courts.

1.2 General jurisdiction appellate courts : There are five appellate courts ; however, the 13 first-instance courts also act as appellate jurisdictions with regard to decisions made by the justices of the peace.

Vertical coherence within the table is not ensured, since the total counts for each category did not account for those instances where a single court has dual jurisdiction (first and second instance).

For this current assessment cycle (2020 data), both justices of the peace and police court figures are included under general courts. In previous cycles, they were categorized as specialized first-instance jurisdictions. As from year-end-2020, data includes all eleven assize courthouses too.

Given that Council of State acts both at first instance level and on appeal, it has been accounted for under both columns Q43 but only once within total column Q42.

**Q042 (2022):** 1.2. The courts of general jurisdiction at the second instance – legal entities : only the 5 courts of appeal have been mentioned here, but the 13 lower courts also have jurisdiction to hear appeals from decisions of the Justices of the peace.

**Q042 (2021):** 1.1 First instance courts of general jurisdiction: 13 first instance courts, 162 Justices of the peace, 11 Assize courts (one per province and two in Brussels) and 15 Police courts.

1.2 Second instance courts of general jurisdiction: 5 Courts of appeal (the 13 first instance courts that rule as appeal courts on the decisions of the Justices of the peace are taken into consideration only within line 1.1).

As for the previous evaluation round (2020 data), Justices of the peace and Police courts are counted as courts of general jurisdiction. Before 2020, they were categorized as specialized courts of first instance. As of 2020, the 11 Assize courts are also included in the data. Insofar as the Council of State (Conseil d'Etat) intervenes both in first instance and on appeal, it has been taken into account in both columns of Q43, but only once in the total of Q42.2.

It is worth mentioning that the Assize courts are not structural entities (they are not permanent); they are organised within the Courts of appeal. The Assize court is constituted whenever the Investigation Chamber of the respective Court of appeal (Chambre des mises en accusation) refers a case to that court - the Assize court.

All courts in Belgium (except the Court of cassation) are grouped into 49 legal entities (steering committees).

**Q042 (2020):** "1.1 First instance Courts of general jurisdiction: 13 first instance courts, 162 justices of the peace, 11 assize courts (one per province and two in Brussels) and 15 police courts. "Second instance Courts of general jurisdiction": 13 courts of first instance that rule as appeal courts on the decisions of the justices of the peace and 5 appeal courts.

Vertical consistency in the table is not ensured, as the 13 courts of first instance with dual jurisdiction (1 and 2 instances) have been counted only once in the totals.

For the current evaluation round (2020 data), justices of the peace and police courts are counted as general courts. In previous cycles, they were categorized as specialized courts of first instance. As of 2020, the 11 assize courts are also included in the data. Insofar as the Conseil d'Etat intervenes both in first instance and on appeal, it has been taken into account in both columns of Q43, but only once in the total of Q42.2."

**Q042 (2017):** The law of 25 December 2017 amended the number of cantons of justices of the peace from 187 to 162. The implementation of this reform will take place until 2019.

**Q042 (2016):** A reform of the justices of the peace is under way, leading to a reduction in the number of hearing locations.

**Q042 (2014):** Following a reform of the judicial map, the number of legal entities decreased: from 27 to 13 first instance courts, from 27 to 9 labour courts, from 27 to 9 commercial courts, and from 34 to 15 police courts.

**Q043 (General Comment):** In Belgium, the following courts do not exist - insolvency courts, family courts, juvenile courts, insurance and / or social welfare courts, rent and tenancies courts, enforcement of criminal sanctions courts, courts specialised in fight against terrorism or in internet related disputes. These case categories are within the competence of company courts (insolvency, insurances), first instance courts (family, juveniles, enforcement of sentences), labour courts (safety in work).

As for the previous evaluation round (2020 data), Justices of the peace and Police courts are counted as courts of general jurisdiction. Before 2020, they were categorized as specialized courts of first instance.

Administrative courts: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen.

Six courts of first instance have chambers specialised in enforcement of criminal sanctions. The designation "enforcement court" is used, but in reality, it is a specialized chamber. All first instance courts (13) have a specialized family and youth section. The designation "family court" is used, but in reality, it is a specialized section.

**Q043 (2021):** In Belgium, the following courts do not exist - insolvency courts, family courts, juvenile courts, insurance and / or social welfare courts, rent and tenancies courts, enforcement of criminal sanctions courts, courts specialised in fight against terrorism or in internet related disputes. These case categories are within the competence of company courts (insolvency, insurances), first instance courts (family, juveniles, enforcement of sentences), labour courts (safety in work).

As for the previous evaluation round (2020 data), Justices of the peace and Police courts are counted as courts of general jurisdiction. Before 2020, they were categorized as specialized courts of first instance.

**Q043 (2020):**

For the current evaluation round (2020 data), justices of the peace and police courts are counted as general courts. In previous cycles, they were categorized as specialized courts of first instance.

**Q043 (2019):** Other: 162 justices of the peace and 15 police courts. Administrative courts: Council of State, Council for Aliens Litigation, de Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen (these courts are under the authority of the Minister for Home Affairs and the Flemish Regional Government, and not the Minister of Justice).

Six courts of first instance have specialized chambers for the application of sentences. The denomination 'court for the enforcement of sentences' is used, but in reality it is a specialized chamber.

All the courts of first instance (13) have a special family and youth section. The denomination 'family court' is used, but in reality it is a specialized section.

**Q043 (2017):** Others: justices of the peace and police courts. The law of 25 December 2017 amended the number of cantons of justices of the peace from 187 to 162 (162 justices of the peace and 15 police courts).

Administrative courts: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.

Five courts of first instance have specialized chambers for the enforcement of sentences. Despite the term used in their respect - "court for the enforcement of sentences", those are specialised chambers.

All courts of first instance (13) have a specialised family and youth section. The term "family court" is used, but these are also specialised sections.

**Q043 (2016):** Other: justices of the peace and police courts

Administrative courts: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.

Five courts of first instance have specialized chambers for the enforcement of sentences. The name "court for the enforcement of sentences" is used, but in reality it is a specialized chamber.

All courts of first instance (13) have a specialized family and youth section. The name "family court" is used, but in reality it is a specialized section.

**Q043 (2015):** Other: justices of the peace and police courts

Administrative courts: the Council of State, the Council of the Litigation of Foreigners, Milieuhandhavingscollege, de Raad voor Vergunningsbetwistingen en de Raad voor Verkiezingsbetwistingen.

**Q043 (2014):** The other specialised courts are 15 police courts and 187 justices of peace. Family courts are a section within the 13 first instance courts. The administrative courts (the Council of State, the Alien Litigation Council, "(Vlaamse)Raad voor Vergunningsbetwistingen", "het (Vlaamse) Milieuhandhavingscollege") are not part of the judicial system administered by the Ministry of Justice. Following a reform of the judicial map, the number of labour, commercial and police courts was reduced.

**Q044 (General Comment):** Having taken account the number of buildings housing the courts: 225 buildings in which all our premises are located. In Eupen, the court of first instance combines the court of first instance, the labor court and the commercial court, resulting in a total of 8 for both labor courts and commercial courts (Law of February 14th, 2014).

**Q044 (2020):** Deduction made on the basis of the number of buildings in which the courts are housed: 225 buildings in which all our premises are housed. In Eupen, the first instance courts combines the court of first instance, the labour court and the company court, which gives 8 for the labour and company courts ( Law of 14 February 2014)

**Q044 (2016):** A reform of the justices of the peace is under way: 1. a reduction in the number of geographical settlements 2. expansion of their jurisdiction by increasing the amount of claims.

The reform of the cantons (justices of the peace) was launched in 2016 and resulted in the law of 25 December 2017 which formally amended or abolished the cantons. The amendments come into force over 1.5 years.

**Q044 (2014):**

According to 2014 data, a change in the number of seats of the justices of the peace is ongoing. Similarly, from 1 April 2014, the statutory number of courts has been decreased for commercial, labour and police first instance courts while keeping the existing geographical seats.

## Bulgaria

**Q042 (General Comment):** There are the following courts in Bulgaria: District Courts- 113- The District Court is the main court of first instance. It has jurisdiction over all cases except those which are statutorily assigned to another court. It deals with civil, criminal and administrative-criminal cases. The decisions of the district courts are subject to appeal before the respective Regional court. Provincial/Regional Courts- 28- The Provincial Courts act as courts of first and second instance. As courts of first instance, they examine a precisely defined category of cases involving significant sums or substantial societal interest. When acting as a second (appellate) instance, they re-examine decisions taken by the district courts. Administrative Courts- 28, Courts of Appeals - 5, Military Courts - 3 - The Military courts consider criminal cases of crimes committed by servicemen or officials of the Interior Ministry at first instance. Military Court of Appeal - 1 Supreme Court of Cassation - 1 Supreme Administrative Court - 1

**Q042 (2022):** Regional/ Provincial courts are courts of first instance for a certain category of cases and courts of second instance for another category of cases. In this case, they are included in the number of courts of second instance with general jurisdiction, the decisive indicator used is the number of incoming cases.

**Q042 (2020):** Judiciary System Act

Article 65

All courts are legal entities funded by the budget and shall be represented by the administrative head or another designated person. In the discharge of the functions of administrative head, orders, instructions and rules shall be issued in accordance with the statutory competence. The general assembly, the plenum of the Supreme Cassation Court and the Plenum of the Supreme Administrative Court shall be bodies of the respective court, which rule only in the cases specified in the law, give opinions, adopt rules and decisions by open ballot and a majority of more than half of the judges present.

**Q042 (2019):** There are the following courts in Bulgaria: District Courts- 113- The District Court is the main court of first instance. It has jurisdiction over all cases except those which are statutorily assigned to another court. It deals with civil, criminal and administrative-criminal cases. The decisions of the district courts are subject to appeal before the respective Regional court.

Provincial/Regional Courts- 28- The Provincial Courts act as courts of first and second instance. As courts of first instance, they examine a precisely defined category of cases involving significant sums or substantial societal interest. When acting as a second (appellate) instance, they re-examine decisions taken by the district courts.

Administrative Courts- 28

Specialized Criminal Court -1

Courts of Appeals - 5

Specialized Court of Appeal - 1

Military Courts - 3 - The Military courts consider criminal cases of crimes committed by servicemen or officials of the Interior Ministry at first instance.

Military Court of Appeal - 1

Supreme Court of Cassation - 1

Supreme Administrative Court - 1

**Q042 (2018):** 42.1. District Court - 113

The District Court is the main court of first instance. It has jurisdiction over all cases except those which are statutorily assigned to another court. It deals with civil, criminal and administrative-criminal cases. The decisions of the district courts are subject to appeal before the respective Regional court.

Provincial/ regional courts- 28

The provincial courts act as courts of first and second instance. As courts of first instance, they examine a precisely defined category of cases involving significant sums or substantial societal interest. When acting as a second (appellate) instance, they re-examine decisions taken by the district courts.

Military first instance courts- 3

Military courts consider criminal cases of crimes committed by servicemen or officials of the Interior Ministry at first instance.

**Q043 (General Comment):** Administrative Courts- 28

Supreme Administrative Court - 1

Military Courts - 3

Military Court of Appeal - 1

**Q043 (2022):** •Previous cycles the category “other specialised courts” encompasses the Specialized Criminal Court of Republic of Bulgaria and Specialized Criminal Court of Appeal. In the State Gazette, no. 32 of 26.04.2022, the Law on Amendments and Supplements to the Law on the Judiciary/ Judiciary System Act was promulgated, which closed the specialized court and prosecutor's office.

**Q043 (2021):** The category “other specialised courts” encompasses the Specialized Criminal Court of Republic of Bulgaria, established in 2011, situated in Sofia and treated as a Provincial/Regional Court. Its jurisdiction covers criminal cases of a general nature for crimes carried out throughout the Republic of Bulgaria. Its competence is determined on the basis of the subject of the case and not the quality of the perpetrator. The Criminal Procedure Code exhaustively enumerates cases within the competence of this Court, namely crimes committed by organized criminal groups, or on behalf of them and following their decision.

**Q043 (2020):** The category “other specialised courts” encompasses the Specialized Criminal Court of Republic of Bulgaria, established in 2011, situated in Sofia and treated as a Provincial/Regional Court. Its jurisdiction covers criminal cases of a general nature for crimes carried out throughout the Republic of Bulgaria. Its competence is determined on the basis of the subject of the case and not the quality of the perpetrator. The Criminal Procedure Code exhaustively enumerates cases within the competence of this Court, namely crimes committed by organized criminal groups, or on behalf of them and following their decision.

**Q043 (2019):** The cases under the jurisdiction of Specialized Criminal Court are specified in Art. 411a of the Penal Procedure Code

**Q043 (2018):** The category “other” encompasses the Specialized Criminal Court of Republic of Bulgaria (see the general comment).

**Q043 (2017):** Specialized Criminal Court

**Q043 (2016):** 'Other specialised 1st instance courts' - 1 Specialized Criminal Court.

**Q044 (2022):** Sofia District Court has two buildings where hearings are held.

**Q044 (2018):** Proposals for amendments to the Code of Administrative Procedure and Code of Civil Procedure to change the jurisdiction of the district and administrative courts with a view to regulating their workload. A model for the optimization of the judicial map at the level of district courts will be developed in implementation of a project under the Operational Program "Good Governance" 2014-2020.

**Q044 (2016):** Proposals for amendments to the Administrative Procedure Code and the Code of Civil Procedure are intended to reform the jurisdiction of regional and administrative courts in order to regulate their workload. Within the implementation of a project under "Good governance" Operational Programme 2014-2020 a model for optimization of the judicial map on regional courts level will be developed.

## Croatia

**Q042 (General Comment):** The reform of judicial map implemented in 2015 decreased the number of Misdemeanour Courts from 63 to 22. Therefore, in accordance with the Act on Territorial Jurisdiction and Seats of Courts (Official Gazette, No. 128/14) in force, there are currently 22 Misdemeanour Courts in function. On the 1st of January 2019. new Courts Areas and Seats Act came into force. From the organizational aspect, the most important organizational measure was the merging of misdemeanor courts into municipal courts, and few municipal courts were reopened after 2015. That is why we have now less first instance specialized courts than in 2018. and more courts of general jurisdiction (22 courts which were in 2018. plus 8 courts which were reopened after the new law came into force).

**Q042 (2020):** On the 1st of January 2019. new Courts Areas and Seats Act came into force. From the organizational aspect, the most important organizational measure was the merging of misdemeanor courts into municipal courts, and few municipal courts were reopened after 2015. That is why we have now less first instance specialized courts than in 2018. and more courts of general jurisdiction (22 courts which were in 2018. plus 8 courts which were reopened after the new law came into force).

**Q042 (2019):** On the 1st of January 2019. new Courts Areas and Seats Act came into force. From the organizational aspect, the most important organizational measure was the merging of misdemeanor courts into municipal courts, and few municipal courts were reopened after 2015. That is why we have now less first instance specialized courts than in 2018. and more courts of general jurisdiction (22 courts which were in 2018. plus 8 courts which were reopened after the new law came into force).

**Q042 (2016):** There was a reform of judicial map implemented in 2015 in which the number of Misdemeanour Courts has decreased from 63 to 22. Therefore, in accordance with the Act on Territorial Jurisdiction and Seats of Courts (Official Gazette, No. 128/14) in force, there are currently 22 Misdemeanour Courts in function.

**Q042 (2014):** In 2014, according to the Act on Territorial Jurisdiction and Seats of Courts, there are 67 first instance courts but the Municipal Court in Novi Zagreb is not in function while the Municipal Criminal Court in Zagreb is a specialized court counted in Q42.2. Accordingly, there are 65 actually functioning first instance courts of a general jurisdiction.

**Q042 (2013):** For 2013, the Ministry of Justice added to the number of geographic locations all offices of a specific court that are located outside of the seat of the court, in which judicial activities are undertaken. The number of courts did not increase in 2013. Also, 66 municipal courts (65 municipal courts and 1 Municipal Criminal Court in Zagreb) were in function out of total 67 first instance courts prescribed by the Act on Territorial Jurisdiction and Seats of Courts. The Municipal Court in Novi Zagreb is still not in function.

**Q043 (General Comment):** No comment.

**Q043 (2022):** will be explained later

**Q043 (2020):** In Croatian Judicial system there is a higher instances of 3 specialized courts: commercial, administrative and other (misdemeanour).

**Q043 (2019):** One criminal and two misdemeanour courts. After the reorganization of courts in 2019 we do not have 22 misdemeanour courts. Only two courts specialized only for misdemeanor cases were left in two largest cities (Zagreb and Split). Third specialized court is court in Zagreb specialized only for criminal cases.

**Q043 (2018):** Other specialised 1st instance courts are Misdemeanour courts and Municipal Criminal Court in Zagreb.

**Q043 (2017):** 23 other specialised 1st instance courts are 22 Misdemeanour courts and 1 Municipal Criminal Court in Zagreb

**Q043 (2016):** According to the Act on the Jurisdiction and Seats of Courts (Official Gazette 128/14) as of 1 April 2015 the number of municipal courts has been reduced, as of 1 July 2015 reduced the number of misdemeanour courts has been reduced and as of 1 April 2015 a new commercial court has been established. Other specialised 1st instance courts are 22 Misdemeanour courts and a Municipal Criminal Court in Zagreb.

**Q044 (2020):** The reorganisation of judicial map that started in 2015 in which the number of municipal and misdemeanour courts as well as the number of municipal state attorneys' offices has been reduced continued in 2019 with the merger of municipal and misdemeanour courts into municipal courts.

The reasons for the merger were a significant decrease in the number of misdemeanour cases and overburdened municipal courts with civil cases. In the new judicial map, instead of 46 municipal and misdemeanour courts, there are now 34 municipal courts - all misdemeanour and municipal courts were merged in the same cities except in 2 largest cities, Zagreb and Split, in which specialised municipal courts for misdemeanour cases were retained, and due to geographical specificities and size of certain municipal courts they were separated and new municipal courts were established (10). Also, a new commercial court was established in Dubrovnik. The aim of this new judicial map with new courts in the network and increased jurisdiction of permanent services is to increase the efficiency of the courts, improve access to court services, ensure even distribution of the workload of judges, shorten the length of court proceedings, reduce the number of unresolved cases in municipal courts, and ensure optimisation and easier management of human resources in courts.

**Q044 (2018):** The reorganisation of judicial map that started in 2015 in which the number of municipal and misdemeanour courts as well as the number of municipal state attorneys' offices has been reduced continued in 2019 with the merger of municipal and misdemeanour courts into municipal courts.

The reasons for the merger were a significant decrease in the number of misdemeanour cases and overburdened municipal courts with civil cases. In the new judicial map, instead of 46 municipal and misdemeanour courts, there are now 34 municipal courts - all misdemeanour and municipal courts were merged in the same cities except in 2 largest cities, Zagreb and Split, in which specialised municipal courts for misdemeanour cases were retained, and due to geographical specificities and size of certain municipal courts they were separated and new municipal courts were established (10). Also, a new commercial court was established in Dubrovnik. The aim of this new judicial map with new courts in the network and increased jurisdiction of permanent services is to increase the efficiency of the courts, improve access to court services, ensure even distribution of the workload of judges, shorten the length of court proceedings, reduce the number of unresolved cases in municipal courts, and ensure optimisation and easier management of human resources in courts.

**Q044 (2016):** There is a new judicial reform in plan in which the misdemeanour courts will be merged with municipal courts (both 1st instance courts).

**Q044 (2014):** According to the new Act on Territories and Seats of Courts (Official Gazette 128/14), that entered into force on the 1st of April 2015, a further rationalization of the network of municipal (from 67 to 24) and misdemeanour courts (from 63 to 22) and the establishment of an additional commercial court (8 instead of 7) are to be carried out from 1st of April and 1st of July.

As well, the new Act introduces changes regarding the territorial jurisdiction with regard to dealing with appeals. In criminal cases, any county court can decide on appeals lodged against judgments, while only few county courts may decide on appeals in land, labor and family matters.

## Cyprus

**Q042 (2020):** Cyprus has a two-tier system, therefore the Supreme Court is the second, highest and final instance court. The data for Supreme Court in this question are included in the highest instance courts, but the case flow data of the Supreme Court are included in the second instance cases - questions 97 and 98.

**Q042 (2017):** x

**Q042 (2014):** The number of courts changed in 2014. Instead one labour court in the district of Nicosia, there are 3 separate courts in different districts. This applies as well as for rent and tenancies court. One more family court was also established. The Assize court deals with serious criminal offences only.

**Q043 (2022):** Administrative Court for International Protection

**Q043 (2021):** other specialised courts are the Assize courts and the Administrative Court of International Protection.

In 2021 a law was enacted (law 55/21) providing for the establishment of a juvenile court in each district of the Republic. Family, Labour and rent control courts have been established in one more district.

**Q043 (2020):** 5 Assize courts

1 Administrative court for international Protection

**Q043 (2019):** Other specialised 1st instance courts: 1 International Protection Administrative Court and 5 Assize Court. In 2019 the new administrative court for international protection was established to hear cases concerning asylum applications and international protection matters.

**Q043 (2018):** 5 Assize courts

**Q043 (2017):** Assize Courts

**Q043 (2016):** Assize Courts

**Q043 (2015):** In 2015, two new Assize courts and one administrative court were established and one Rent Control Tribunal was removed.

**Q044 (2018):** In 2019 a New administrative court of international protection has been established that will deal with asylum cases.

**Q044 (2016):** Bills are being drafted for the creation of a commercial court and a first instance asylum administrative court.

**Q044 (2014):** In the frame of the 2014 exercise, it has been pointed out that an Administrative court has been established in Cyprus and started functioning on the 7th of January 2016.

## **Czech Republic**

**Q042 (2022):** 2. Supreme Administrative Court

**Q042 (2021):** 2. Supreme Administrative Court

**Q042 (2020):** 2. Supreme Administrative Court

**Q042 (2017):** There are no specialised first instance courts, but judges within individual courts are specialised (e.g. for family, labour and enforcement cases at district courts, and insolvency and administrative cases at regional courts as first instance courts).

**Q042 (2016):** There are no specialised first instance courts, but judges within individual courts are specialised (e.g. for family, labour and enforcement cases at district courts, and insolvency and administrative cases at regional courts as first instance courts).

**Q043 (General Comment):** There are no specialised first instance courts, but judges within individual courts are specialised (e.g. for family, labour and enforcement cases at district courts, and insolvency and administrative cases at regional courts as first instance courts).

**Q044 (2022):** 6 regional courts and 3 district courts have their branches in other cities.

**Q044 (2021):** 6 regional courts and 3 district courts have their branches in other cities.

**Q044 (2020):** 6 regional courts and 3 district courts have their branches in other cities.

## **Denmark**

**Q042 (General Comment):** District courts are called 1st instance courts, the Land Registration court and the Maritime and Commercial Court are considered as first instance specialized courts. Second and third instance courts are the two High Courts and the Supreme Court.

**Q042 (2021):** Under "2" is Land Registration Court and Maritime and Commercial Court. In 4 is beside the 24 district courts 4 biting court houses.

**Q042 (2019):** Commercial and naval court  
Land Registration court.

**Q042 (2018):** Data has not changed on this point.

**Q042 (2017):** District courts are called 1st instance courts, the Land Registration court and the Maritime and Commercial Court are considered as first instance specialized courts. Second and third instance courts are the two High Courts and the Supreme Court.

**Q043 (General Comment):** Re "Juvenile Courts" such courts do not exist. Juveniles are dealt with by district courts as any other case. There are taken special care though of juveniles in a Juvenile Board. The category "other" concerns the Land Registration Court that has been established in 2009. As for the Commercial Court, in Denmark, it is called Maritime and Commercial Court and it presents the peculiarity to also deal, to a great extent but not exclusively, with insolvency cases (bankruptcies etc.). Accordingly, there is an overlap with the category "Insolvency courts". Family courts are administered as part of District courts. There is one military court but military courts are not part of the Danish Courts Administration.

**Q043 (2022):** Land Registration Court (see also general comments). The other specialized court is Maritime and Commercial Court. The latter do some degree deals with insolvency cases similar to district courts.

**Q043 (2021):** "Other specialised courts" is The Land Registration Court.

**Q043 (2020):** Land Registration Court (see also general comments). The other specialized court is Maritime and Commercial Court. The latter do some degree deals with insolvency cases similar to district courts.

**Q043 (2019):** Other specialised 1st instance court is the Land Registration Court. The Maritime and Commercial Court is a commercial court which ALSO deals with insolvency cases. Although it looks like there are two courts there is only one! As the district courts outside Greater Copenhagen deal with insolvency cases, and the Maritime and Commercial Court deals with insolvency cases inside Greater Copenhagen, but at the same time is a specialized commercial court, the Maritime and Commercial Court is marked as a specialized Commercial Court and insolvency court.

**Q043 (2018):** Military courts exist but they are not part of the Danish Courts Administration. The 24 district courts have always dealt with family cases. From 1 April 2019 family issues are a section of the court.

**Q043 (2017):** The category "other" concerns the Land Registration Court that has been established in 2009. As for the Commercial Court, in Denmark, it is called Maritime and Commercial Court and it presents the peculiarity to also deal, to a great extent but not exclusively, with insolvency cases (bankruptcies etc.). Accordingly, there is an overlap with the category "Insolvency courts". Of course Military courts exist but they are not part of the Danish Courts Administration.

**Q043 (2016):** Land Registration Court.

**Q044 (2022):** Included in first instance courts are district courts, Land Registration Court and the Maritime and Commercial Court.

**Q044 (2021):** The 26 are all the 24 district courts plus the Maritime and Commercial Court and Land Registration Court. In the figure 29 is the two high courts and the Supreme Court included.

**Q044 (2020):** Included in first instance courts are district courts, Land Registration Court and the Maritime and Commercial Court.

## Estonia

**Q042 (2019):** A small courthouse was adjoined with another small courthouse. The distance between them was less than 50 km.

**Q042 (2016):** A small courthouse was adjoined with another small courthouse. The distance between them was less than 50 km.

**Q043 (General Comment):** In Estonia, there are no specialized first instance courts, other than administrative courts. All the cases are dealt with by ordinary courts of first instance. The two administrative courts of first instance are situated in Tallinn and Tartu. Nevertheless, for guaranteeing wider access to justice, these two courts have several court buildings in other cities, namely in Pärnu and Jõhvi, where judges and their supporting legal staff work.

**Q044 (General Comment):** Estonia has 17 courthouses of county courts (first instance courts), 4 courthouses of administrative courts (first instance courts), 2 courthouses of appellate courts (second instance courts) and 1 courthouse of the Supreme Court (highest instance court), all together 24 courthouses. However, as some of the courts are situated in the same house (e.g Tallinn Administrative Court and Tallinn Circuit Court) and taking into account the fact that Pärnu County Court has a courthouse that is divided between two locations, there are 20 actual geographical locations of Estonian courts.

**Q044 (2020):** Tartu county court closed one courthouse, so now there's 20 geographic locations.

**Q044 (2014):** In the end of 2015 the Council for Administration of Courts devised the merger of two courthouses in Estonia that are situated very close to each other (20 km). Both houses will remain open but will have joint territorial jurisdiction and administration.

## Finland

**Q042 (General Comment):** In Finland, there are 20 district courts with 36 offices, five courts of appeal, the Supreme Court, six administrative courts, the Supreme Administrative Court, the Market Court, the Labour Court and the Insurance Court. One of the administrative courts, the Labour Court and the Market Court are located in the same location. In total there are 36 courts in 52 geographic locations.

**Q042 (2021):** The number of district courts was reduced at the re-structuring on 1.1.2019

**Q042 (2020):** The number of district courts was reduced at the re-structuring on 1.1.2019.

**Q042 (2019):** The Court Network has been modified.

**Q042 (2016):** Some geographic locations of the District Courts have been shut down.

**Q042 (2014):** In 2014, in Finland there are 81 courts as geographic locations, namely 27 District Courts, 13 Branch offices of District Courts, 25 Auxiliary courtrooms of District Courts (23 till 2014), 3 specialized courts, 6 Administrative Courts (8 till 2014), 5 Courts of Appeal (6 till 2014), the Supreme Court and the Supreme Administrative Court.

**Q043 (General Comment):** In Finland, there are six regional administrative courts, the Market Court, the Labour Court and the Insurance Court.

Another specialised court is the High Court of Impeachment that hears charges against ministers (i.e. members of the Government), the Chancellor of Justice, the Parliamentary Ombudsman and members of the Supreme Court or the Supreme Administrative Court for unlawful conduct in office. In addition, the High Court of Impeachment deals with charges concerning the criminal liability of the President of the Republic. However, it is convened only when necessary.

**Q043 (2016):** In Finland there are 6 Administrative Courts, 1 Market Court, 1 Labour Court and 1 Insurance Court. Then there is the High Court of Impeachment that hears charges against Ministers (i.e. Members of the State Council), Chancellor of Justice, Parliamentary Ombudsman and Supreme Court Justices for unlawful conduct in office but it is convened only when necessary.

**Q044 (2018):** As of 1 January 2019, the district courts will be centralised by decreasing the number of the courts from 27 to 20. A court can have more than one office. The number of the district courts' offices will be reduced from 57 to 36 offices. As of 1 September 2019, undisputed civil cases (for example debt collection, unpaid rents, other small debts and eviction cases) which are handled and decided in summary proceedings will be centralised from all 20 district courts to nine district courts.

**Q044 (2016):** In Finland is ongoing structural reform of the District Courts in which the number of the courts will be decreased from 27 to 20. The main target is to merge smaller courts in to bigger units that would be more efficient and profitable and also maintain high quality. At the same time the geographical locations of the District Courts will be decreased from 57 to 36. This means that in addition to the 7 administrative offices that will be shut down, 5 side offices and 13 separate locations for hearing will be closed. Instead the use of video conference, electronic services and other IT-solutions would be increased. Deadline for the new project is 31.12.2018 so that the reform would be in force in the beginning of the year 2019. The government's proposal has been given at January 2017. The handling of the proposal in the parliament is unfinished.

**Q044 (2014):** According to 2014 data, for the foreseeable future the next reform is the developing of the structure of the District Court network. The foreseen change is a reduction of the number of District Courts.

## France

**Q042 (2021):** 1.1 : 164 TJ + 4 TPI

1.2 : 30 Courts of appeal in mainland France + 6 Courts of appeal in overseas France + 1 Superior Court of Appeal in Saint Pierre and Miquelon = 37

1.3: the Court of Cassation

Source DSJ

**Q042 (2020):**

There are 168 first instance courts of general jurisdiction, 37 second instance courts of general jurisdiction, and 1 highest instance court of general jurisdiction in the French judicial system.

**Q042 (2019):** See the comment on specialised first instance courts in the frame of Q43.

**Q042 (2018):** With regard to the ordinary courts, the number indicated in the 2016 questionnaire includes the local courts that have been abolished since 1 July 2017 (Act No. 2011-1862 of 13 December 2011), their powers having been taken over by the courts of first instance in civil matters and by the police courts attached to the courts of first instance in criminal matters.

The number of 786 corresponded to: 164 TGI + 4 TPI + 307 TI + 311 jprox. Since then, TIs have been removed from the category of ordinary courts of first instance since they constitute specialised courts of first instance. The number of 479 ordinary courts of first instance therefore corresponded to 164 TGI + 4 TPI + 311 TPROX. The figure of 168 is thus explained by the abolition of the 311 local courts since 1 July 2017, as indicated in the comments in the questionnaire.

Thus:  $479 - 311 = 168$  ordinary courts of first instance (164 TGI + 4 TPI).

**Q043 (General Comment):** With regard to the Enforcement of criminal sanctions courts: in matters of enforcement of sentences, the enforcement judge (JAP) is a court of first instance for the enforcement of sentences, being at the same time a decision-making, control and monitoring body. There is at least one JAP per department (article 712-2 of the CPP). The JAP is competent for adult convicts, and his field of intervention is the following: for measures to individualize custodial sentences, he or she has general jurisdiction (except for a few measures that fall under the special jurisdiction of the Court for the enforcement of sentences); for custodial sentences, when a specific text so provides; for the follow-up of security measures. Established by the law of March 9, 2004, the Court for the enforcement of sentences (TAP) is a court of first instance, composed of three JAPs of first instance courts, appointed by order of the First President of the Appellate Court. In each Appellate Court, a TAP is established whose territorial jurisdiction extends to the jurisdiction of this court (articles 712-3 and D 49-2 of the CPP, article indicating the list of TAPs by Appellate court and the territorial jurisdiction). The seat of the TAP is in principle "that of the first instance court of the seat of the Appellate Court" (article D. 49-3 CPP). The objective is to entrust the most complex and sensitive cases to a collegiality. Thus, the TAP has jurisdiction over: 1) by the effect of the law for those sentenced to the heaviest penalties: applications for parole and suspension of "medical" sentences for persons sentenced to imprisonment or imprisonment of more than 10 years and whose remaining sentence to be served exceeds 3 years; applications for an increase in the security period; placement under judicial supervision of dangerous persons...); 2) by decision of the JAP, in particular because of the complexity of the case or the personality of the convicted person (article 712-6 al. 3 of the CPP). In matters of terrorism, a derogatory jurisdiction is provided for under ordinary law (articles 706-22-1 and D 49-75 to D49-81-5 of the CPP). The Paris Enforcement courts specialized in terrorist matters (JAPAT, the TAPAT and the enforcement chamber) have 1) exclusive jurisdiction to monitor persons convicted by specialized terrorism trial courts pursuant to Article 706-17 of the CPP; 2) competing jurisdiction with ordinary law Enforcement courts to monitor persons convicted of acts of terrorism and other offenses falling within the scope of Article 706-16 of the CPP by ordinary law courts. source DACG.

**Q043 (2022):** 272 TPBR, along with 1 tribunal for navigation on the Rhine, 1 TPI for navigation on the Moselle, 6 maritime tribunals, 1 CNDA and 1 Commission of litigation regarding paid parking.

**Q043 (2021):** Labour courts: 211 CPH (conseils de prud'hommes) + 5 labour courts = 216 courts. The CPH have jurisdiction, according to Article L. 1411-1 of the Labour Code, to hear individual disputes between employees or apprentices and their employers arising from the execution of an employment or apprenticeship contract. Commercial courts: 134 TCs, 9 TMCs, 2 TPIs with commercial jurisdiction, 7 TJs with commercial jurisdiction = 152 courts. Commercial courts are specialised courts with jurisdiction to hear disputes relating to commitments between traders, between credit institutions or between them, disputes relating to commercial companies and commercial acts by their form (Art. L. 721-1 et seq. of the Commercial Code). There are 134 commercial courts whose judges are exclusively "juges consulaires". With regard to the judicial organisation in overseas France, there are 2 First instance courts with jurisdiction in commercial matters and 9 mixed commercial courts. In addition, 7 judicial courts have a commercial chamber in Alsace-Moselle. Concerning juvenile courts: 156 according to the key figures of Justice 2021 and 155 according to the judicial atlas of 2021.

"Other specialised courts": the parity courts for rural leases (TPBR): 272 (according to the key figures for Justice 2021); the court for navigation on the Rhine (L 215-4 al.1 COJ) ; the court of first instance for navigation on the Moselle (L 215-4 al.2 COJ); 6 maritime courts (Bordeaux, Brest, Cayenne, Le Havre, Marseille Saint-Denis); the National court of asylum. Source DSJ and Council of State

**Q043 (2020):** Despite the provisional NA answer for the category " Courts for the execution of criminal sanctions ", the total is available, as it is a small number that will not significantly affect the total. On labor courts: 210 CPHs + 6 labor courts = 216 courts Industrial tribunals have jurisdiction, according to Article L. 1411-1 of the Labor Code, to hear individual disputes that arise between employees or apprentices and their employers during the execution of an employment or apprenticeship contract. There are 210 industrial tribunals and 6 labor courts in the French overseas territories. Same figure as in 2020 On commercial courts: 134 TCs, 9 TMCs, 2 TPJs with commercial jurisdiction, 7 TJs with commercial jurisdiction = 152 courts Commercial courts are specialized courts with jurisdiction to hear disputes relating to commitments between traders, between credit institutions or between them, disputes relating to commercial companies and commercial acts by their form (Art. L. 721-1 et seq. of the Commercial Code) On social jurisdictions:

-Since November 1, 2019, litigation concerning military disability pensions has been transferred to the jurisdiction of the administrative courts, doing away with the military disability pension courts and the regional military disability pension courts that rule on appeal.

- Since January 1, 2019, as a result of Law No. 2016-1547 of November 18, 2016 on the modernization of justice in the 21st century, social litigation, formerly divided between the social security courts (TASS), the courts of disability litigation (TCI) and the departmental social assistance commissions (CDAS), was merged and transferred to the "tribunaux de grande instance", ordinary courts of first instance, which became, as of January 1, 2020, by effect of law n° 2019-222 of March 23, 2019 on programming 2018-2022 and reform for the justice system, Judicial Courts. Consequently, these specialized jurisdictions have been abolished. On appeal, the litigation was only under the jurisdiction of the CNITAAT (extended until December 31, 2022; but now it is under the jurisdiction of specially designated courts of appeal, which allows for better accessibility to justice. There are 134 commercial courts whose judges are exclusively consular. With regard to the judicial organization in overseas France, there are 2 courts of first instance with jurisdiction in commercial matters and 9 mixed commercial courts. In addition, 7 judicial courts have a commercial chamber in Alsace-Moselle. In 2020 it was written 143 commercial courts because I think that only the TC and TMC were counted and not the TJ with commercial jurisdiction nor the TPI with commercial jurisdiction. About the other specialized courts :

The tribunaux paritaires des baux ruraux (TPBR) are autonomous (L. 491-1 of the Code rural et de la pêche maritime). The 2018-2022 programming and reform law for justice sets the seats and jurisdictions of the TPBRs no longer with reference to the seats of the former magistrate's courts but according to the seats of the judicial courts and their proximity chamber. On social jurisdictions:

-Since November 1, 2019, the litigation of military disability pensions has been transferred to the jurisdiction of the administrative courts, making the military disability pension courts and the regional military disability pension courts, which rule on appeal, disappear.

- Since January 1, 2019, as a result of law no. 2016-1547 of November 18, 2016 on the modernization of justice in the 21st century, social litigation, which was previously divided between the social security courts (TASS), the disability litigation courts (TCI) and the departmental social assistance commissions (CDAS), was merged and transferred to the "tribunaux de grande instance", courts of first instance under ordinary law, which became, as of January 1, 2020, the "Tribunaux Judiciaires" (Judicial Courts) under law No. 2019-222 of March 23, 2019 on programming for 2018-2022 and reform of the justice system.

**Q043 (2019):** Since 1 January 2019, social litigation, formerly divided between the social security courts (TASS), the incapacity courts (TCI) and the departmental social assistance commissions (CDAS), has been merged and transferred to the "tribunaux de grande instance" (first instance courts of general jurisdiction). As a result, these specialised courts have been abolished.

As of 1 November 2019, litigation concerning military invalidity pensions will be transferred to the administrative courts, eliminating the military invalidity pension courts and the regional military invalidity pension courts which rule on appeal.

These changes explain the variation in the number of courts compared to the previous year. The other specialised courts are: - joint courts for rural leases: 274; juvenile courts: 155; court for navigation on the Rhine: 1; maritime courts: 6; national asylum court: 1; court of first instance for navigation on the Moselle: 1.

**Q043 (2018):** The other specialized courts are: - joint courts for rural leases: 272 ;  
- juvenile courts: 155; - military pension courts: 36;  
- court for navigation on the Rhine: 1;  
- Maritime courts: 6;  
- national court of asylum: 1; - court of first instance for navigation on the Moselle: 1.

In the previous questionnaire, the Joint Rural Lease Courts (JRTs) were indicated, with the District Courts (TIs) within the "Rental Courts", the figure of 307 corresponding to the District Courts, since the seats and jurisdictions of the JRTs were linked to those of the TI. However, the TPBRs are, and have always been, autonomous courts. However, as decrees have been issued to remove some TPBRs, there is no longer a correlation between their number and that of IT. We have therefore indicated here in the "rental courts", only IT (289), and by including TPBRs in a separate item, which is legally more accurate. The total number of TPBRs is 274. On the insurance and social security courts: in the requested reference year, there are 26 disability courts, 115 social security courts (TASS) and 100 departmental social assistance commissions (CDAS). The differential of 100 corresponds to the addition of the 100 CDASs which are administrative courts.

The Paris Court, created on 14 May 2018, brought together all the services of the Regional Court, formerly dispersed over 5 sites, including Ile de la Cité, the Police Court and the 20 District Courts. The number of TIs had to be reduced by 19. In addition, the reform of the transfer of the police court under the 21st century Justice Act had the effect of removing 3 of them from the 307 TIs. The number of IT has therefore increased from 304 (307-3) to 285 district courts (304-19). We have added to these 285 TI the 4 TPIs because of their dual IT and TGI skills. Thus: 285 TI + 4 TPI = 289 TI in total.

**Q043 (2017):** The other specialized courts are:

- juvenile courts 155
- military pensions tribunals 36
- the court for navigation on the Rhine 1
- the court for navigation on the Moselle 1
- maritime trade courts 6
- national court of asylum 1

**Q043 (2016):** The other specialised courts are: 155 juvenile courts; 36 military pension courts; 1 court for navigation on the Rhine; 1 court for navigation on the Moselle; 6 maritime trade courts; 1 national asylum court.

As a matter of fact, the following reforms are on-going:

- The future Tribunal de Paris, whose establishment is scheduled for 14 May 2018, will unify all the services of the TGI (Tribunal de grande instance) currently dispersed over 5 sites, including "Ile de la Cité", the police court and the first instance courts (tribunaux d'instance);
- Since 1 July 2017, the hearings of the Police Court, previously under the jurisdiction of the "tribunaux d'instance", have been transferred to the TGI. The aim of this reform is to refocus the tribunaux d'instance on day-to-day civil justice and to centralise criminal litigation at the seat of the TGI.
- Since 1 July 2017, the 311 local courts have been abolished (Law No. 2011-1862 of 13 December 2011), their powers being taken over by the tribunaux d'instance in civil matters and by the police courts attached to the TGI in criminal matters.
- As of 1 January 2019, social litigation, currently divided between the Social Security Courts (TASS), the Disability Dispute Courts (TCI) and the Departmental Social Assistance Commissions (CDAS), will be unified and transferred to the TGI (first instance courts of general jurisdiction). These specialised courts will then be abolished.

**Q043 (2015):** Other specialised courts are:

- Juvenile courts : 155
- Military Pensions Courts: 36
- Court for navigation on the Rhine: 1
- Maritime Courts: 14
- National Court of Asylum: 1
- Court of First Instance for navigation on the Moselle: 1

**Q043 (2014):** The reduction of the number of specialised courts is primarily due to the suppression of 70 military pensions courts. The other specialised courts are: Children courts (155); Military pensions courts (36); the Rhine navigation court; commercial maritime courts (14); the National court for asylum right; the Court for the navigation on the Moselle. In contrast with 2010 and 2012 data, a part of the "other specialised courts" was distributed in the proposed categories, namely the agricultural land courts, the courts of rental cases, the Courts for enforcement of criminal sanctions and the courts of incapability litigation. The specialised interregional courts, competent to judge cases of organised crime were added.

**Q043 (2013):** The reduction of the number of specialised courts is primarily due to the suppression of 70 military pensions courts. The other specialised courts are: Children courts (155); Military pensions courts (36); the Rhine navigation court; commercial maritime courts (14); the National court for asylum right; the Court for the navigation on the Moselle. In contrast with 2010 and 2012 data, a part of the "other specialised courts" was distributed in the proposed categories, namely the agricultural land courts, the courts of rental cases, the Courts for enforcement of criminal sanctions and the courts of incapability litigation. The specialised interregional courts, competent to judge cases of organised crime were added.

**Q043 (2012):** There are 135 Commercial Courts and 8 mixed commercial courts (this of Mayotte is not included). The category "labour courts" subsumes 210 industrial courts and 6 labour courts. The category "insurance and/or social security courts" refers to the courts responsible for social security cases. The other specialised courts are: Police courts (3); local Police courts (3); Children courts (155); Incapacity Dispute courts (26); Agricultural land courts (281); Sentence enforcement courts (50); Military pensions courts (106); the Rhine navigation court; Commercial maritime courts (14); the Court for the navigation on Moselle. The military court of Paris was discontinued in January 2012. Its functions were transferred to a pole specialised in military matters in the High Court of Paris.

**Q044 (2022):** The data encompasses both the jurisdictions of the judiciary and those of the administrative order (the number of geographical locations of administrative courts: 1) Administrative courts at first instance (including common law jurisdictions at first instance and specialized jurisdictions at first instance): 32 in mainland France / 11 overseas territories; 2) All administrative courts (this figure includes common law courts at first instance, specialized courts at first instance, all second-instance courts and appellate courts, as well as all Supreme Courts): 42 in mainland France / 11 overseas territories.

**Q044 (2021):** 661: this figure takes into account all courts of first instance, excluding Courts of appeal (CA). Sites hosting only a Court of appeal have therefore been excluded from this count. Sites hosting both a CA and a court of first instance have been counted only once (hence the difference of 44: 37 CAs occupying 44 sites), 43 of which are for the administrative order. 715: this figure takes into account all courts, whether on appeal or at first instance. When a court of first instance and a Court of appeal are located on the same site, they have been counted separately, including 53 for the administrative order.

**Q044 (2020):** "With regard to the judiciary, there are 576 courts of first instance - geographic locations. This figure takes into account, by number of sites, all the courts of first instance, excluding the second instance court. Sites hosting exclusively a second instance court have therefore been excluded from this count. Sites hosting both a CA and a trial court were counted only once. There were 619 Courts geographic locations counted. This figure takes into account, by number of sites, all the jurisdictions whether they are appeal or first instance. Moreover, when a first instance court and a second instance court are located on the same site, they have been counted twice (hence the difference of 43 with the previous question: 37 CA which occupy 43 sites).

As regards the administrative order, there are 42 first instance courts for the administrative order and 53 all courts for the administrative order. "

**Q044 (2016):** A reform could take place within the framework of the bill on Justice programming presented in 2018. If no court site should be closed, the organization could be modified, particularly at the level of the courts of appeal, whose map is very different from those of the current administrative regions. There could also be only one first instance court per department.

**Q044 (2014):** As of 1 September 2014, the high courts (TGI) were resettled in the towns of Saint-Gaudens, Saumur and Tulle. Moreover, seconded chambers (geographic locations) were created on the same date in Guingamp and Marmande and on 1 January 2015 in Millau. A draft law to modernise the justice provides that the litigation of social security affairs and disability will be brought together before the TGI. Small offences ruled before the District Court will be transferred to TGI; similarly, compensation for personal injury will be entirely the responsibility of the TGI.

## Germany

**Q042 (General Comment):** Eventhough the german legal system generally knows three instances (first instance, appeal on questions of fact and law, appeal on questions of law only), the different kinds of courts do not correspond directly to the stages of appeal. Local courts (Amtsgerichte) are first instance courts with the regional courts (Landgerichte) as next stage of appeal (exceptions apply in family matters). However, regional courts do not only serve as second instance courts but also deal with first instance cases. Whether a case is initially dealt with at a local or regional court depends (among other things) on the value at dispute (civil cases) or on the kind of the suspected offence (criminal cases). Similarly the higher regional courts may serve as second instance courts (for cases that were initially dealt with at regional courts or for cases in family matters) and as highest instance courts for cases that were initiated at the local courts (especially in criminal cases). The constitutional courts of the federal states and the Federal Constitutional Court (Bundesverfassungsgericht) are not part of the the stages of appeal. Constitutional jurisdiction is also seen as seperate from general and specialised jurisdiction. Constitutional courts review legislation with regard to constitutional provisions. The Federal Constitutional Court mainly assess alleged violations of base rights by public authorities. However, in order to have access to the constitutional courts, the regular path of legal proceedings must generally be exhausted.

**Q042 (2022):** 1.1 First instance courts include: 638 local courts, 115 regional courts  
regional courts handle first as well as second instance cases. In 2022, regional courts registered 300 266 incoming first instance cases and 68 876 incoming second instance cases (civil and criminal matters). For further information see General Comment.

1.2 Second instance courts include: 24 higher regional courts

higher regional courts handle second and third instance cases as well as certain (few) first instance cases. Higher regional courts are the third and final instance with regard to criminal cases, that were originally initiated at the local courts. In 2022, higher regional courts recorded 72 201 incoming second instance cases (excluding family matters) and 4 761 incoming third/last instance cases. For further information see General Comment.

1.3 Highest instance courts include: Federal Supreme Court

2. The total number of specialised courts includes administrative, labour, financial, and social courts as well as the Federal Patent Court.

Discrepancy in comparison to the 2022-2020 cycle:

regional courts were originally counted twice as first instance and second instance courts. Higher regional courts were counted as second instance courts. This was changed during the 2023-2021 cycle (EU-Scoreboard). The regional courts and higher regional courts are now placed according to the number of incoming cases as outlined in the explanatory note.

In previous cycles, the total number of specialised courts included 16 constitutional courts of the federal states as well as the Federal Constitutional Court. In the current cycle, these courts are no longer included as they are mostly seen as seperate from the ordinary justice system (for further information please refer to the general comment).

**Q042 (2021):** 1.1 First instance courts include: 638 Local Courts, 115 Regional Courts

Regional Courts handle first as well as second instance cases. In 2021, Regional Courts registered 344 128 incoming first instance cases and 75 400 incoming second instance cases (civil and criminal matters). For further information see General Comment.

1.2 Second instance courts include: 24 Higher Regional Courts

Higher Regional Courts handle second and third instance cases as well as certain (few) first instance cases. Higher Regional Courts are the third and final instance with regard to criminal cases, that were originally initiated at the Local Courts. In 2021, Higher Regional Courts recorded 102 029 incoming second instance cases and 5 089 incoming third/last instance cases. For further information see General Comment.

1.3 Highest instance courts include: Federal Supreme Court

The total number of specialised courts includes 16 Constitutional Courts of the Länder.

**Q042 (2020):** 1.1 First instance courts include: 638 Local Courts, 115 Regional Courts

1.2 Second instance courts include: 115 Regional Courts, 24 Higher Regional Courts

1.3 Highest instance courts include: 24 Higher Regional Courts, Federal Supreme Court

The vertical consistency is not fulfilled, since the 115 Regional Courts appear as "First instance courts" (1.1) as well as "Second instance courts" (1.2) and 24 Higher Regional Courts appear as "Second Instance Courts"(1.2) as well as "Highest Instance Courts" (1.3).

For further information please consult the General Comment.

The total number of specialised courts includes 16 Constitutional Courts of the Länder.

**Q043 (General Comment):** It is noteworthy that depending on the value at dispute, commercial cases are dealt with at local or regional Courts, on application in a chamber established at the regional court for commercial cases. There are no separate commercial courts. Likewise, there are no independent rent and tenancies courts, enforcement courts or courts for insurance cases. Depending on the caseload, special panels of judges are established for this purpose at the local and regional Courts. Family cases are dealt with at first instance in special departments of the local courts (second instance: higher regional courts). The Federal Armed Forces do not have any military courts of their own; its members are subject to civil jurisdiction. Juvenile courts do not exist as independent courts either. They are established at the local courts or regional courts, depending on the severity of the expected sentence and the type of offence. The juvenile courts may be composed of a single criminal judge sitting as youth judge or one or more judges together with lay youth assessors.

**Q043 (2022):** Comments - If "Other specialised courts", please specify:

The category "other" covers:

18 finance courts (first instance)

Federal Patent Court and the Federal Finance Court (higher instances)

In previous cycles, other specialised courts included 16 constitutional courts of the federal states as well as the Federal Constitutional Court. In the current cycle, these courts are no longer included as they are mostly seen as separate from the ordinary justice system (for further information please refer to the general comment).

**Q043 (2021):** The category "other" covers:

18 Finance Courts (first instance)

16 Constitutional Courts of the Länder, the Federal Constitutional Court, Federal Patent Court and the Federal Finance Court (higher instances)

With regard to the Constitutional Courts please see General Comment Q 42.

**Q043 (2020):** The category "other" covers:

18 Finance Courts (first instance)

16 Constitutional Courts of the Länder, the Federal Constitutional Court, Federal Patent Court, Federal Labour Court, Federal Administrative Court, Federal Social Court and the Federal Finance Court (higher instances)

With regard to the Constitutional Courts please see General Comment Q 42.

**Q043 (2019):** finance courts

**Q043 (2018):** Finance Courts

**Q043 (2017):** Finance courts

**Q043 (2016):** Other specialised 1st instance courts: Finance Courts

**Q043 (2015):** The data refer to the year 2014. At present, no more recent data are available.

**Q043 (2014):** In 2014, in comparison with 2012, the number of specialized first instance courts decreased of three labour courts in two Landers.

**Q044 (General Comment):** The figures in this section are taken from the chart "Number of Federal and State Courts" that does not distinguish between legal entities and geographic location of the courts. Generally, one legal entity equals one geographic location. A small number of courts may have a additional points of presence in other geographic locations. Since the exact number of geographic locations in comparison to legal entities is unknown, the figures from the chart "Number of Federal and State Courts" were used to answer this question as well.

**Q044 (2018):** The possibility of combining courts is being considered by individual Länder in order to reduce costs. The regional structures have proven effective.

On 5 November 2019, the Land Government of Schleswig-Holstein adopted a statutory instrument on the concentration of jurisdiction which combines existing concentrations of jurisdiction while adding further concentration provisions. The instrument will be promulgated at the end of the month.

**Q044 (2016):** The possibility of combining courts is being considered by individual Länder in order to reduce costs.

## Greece

**Q042 (2020):** In highest instance courts include the Supreme Court( Areios Pagos). In First instance courts of general jurisdiction are included in the number 259, 196 local and District Criminal Courts and 63 courts of first degree.

**Q043 (General Comment):** In Greece, there are no special courts for the fields of law described in the question 43, besides those already mentioned. The Greek Constitution is reluctant to provide in the Greek legal system special courts. Instead, within the Courts of First Instance and Courts of Appeal of large cities, we have special Chambers, where the task of adjudicating in special categories of law (e.g. family law, commercial law, etc.) is assigned. Judges entrusted with such duties have usually the correspondent specific studies. As far as other special courts are concerned, special provisions regulate the operation of courts for juveniles, military, navy and air force courts. We clarify that the military, navy and air force courts are under the jurisdiction of the Ministry of National Defense, therefore we have no further information.

**Q043 (2022):** The Court of Auditors is one of three supreme courts in Greece.

**Q043 (2021):** There are no special courts for resolving Internet-related disputes.

**Q043 (2020):** Administrative courts include: in the first instance 30, in the second instance 9 and 1 Supreme Court (the Council of State).

Juvenile courts are subject to the Courts of First Instance, according to your instructions the choice changed from non-available to non applicable.

The military courts are under a different ministry, specifically the National Defense.

The higher instance other specialized courts is the Court of Auditors that is considered one of three supreme courts in Greece.

**Q043 (2017):** In Greece, there are no special courts for the fields of law described in the question 43, besides those already mentioned. The Greek Constitution is reluctant to provide in the Greek legal system special courts. Instead, within the Courts of First Instance and Courts of Appeal of large cities, we have special Chambers, where the task of adjudicating in special categories of law (e.g. family law, commercial law, etc.) is assigned. Judges entrusted with such duties have usually the correspondent specific studies. As far as other special courts are concerned, special provisions regulate the operation of courts for juveniles, military, navy and air force courts.

**Q044 (2020):** The total number of courts includes the Court of Auditors

**Q044 (2014):** According to 2014 data, the Law 1756/1988, article 2, as modified by the Law 4123/2013, provides for a reduction of the number of courts. Besides, the Law 1756/1988, article 4, as modified by the Law 4264/2014, provides for a change in the powers of courts.

## Hungary

**Q042 (General Comment):** The Hungarian court system is as follows: Kúria (1) – the Hungarian Supreme Court - its jurisdiction in criminal, civil and administrative cases covers adjudication of extraordinary remedies and appeals, adopting uniformity decisions. It also decides if municipal decrees are in compliance with higher level legislation. Regional courts of appeal (5) – their jurisdiction in criminal and civil cases covers the adjudication of appeals received from the regional courts (third instance in criminal cases). Regional courts (20) – their jurisdiction in criminal, civil and administrative cases covers the adjudication of appeals received from district courts, administrative and labour courts, and procedure at first instance in certain criminal and civil cases. District courts (113) – their jurisdiction in criminal and civil cases covers the procedures at first instance. The number of judges in the largest district court is 357, whereas the smallest court operates with one judge. Out of the 113 district courts, the district courts in the seat of the regional courts have special competences in many cases.

**Q042 (2020):** The Hungarian court system is as follows: Kúria (1) – the Hungarian Supreme Court - its jurisdiction in criminal, civil and administrative cases covers adjudication of extraordinary remedies and appeals, adopting uniformity decisions. It also decides if municipal decrees are in compliance with higher level legislation. Regional courts of appeal (5) – their jurisdiction in criminal and civil cases covers the adjudication of appeals received from the regional courts (third instance in criminal cases). Regional courts (20) – their jurisdiction in criminal, civil and administrative cases covers the adjudication of appeals received from district courts, administrative and labour courts, and procedure at first instance in certain criminal and civil cases. District courts (113) – their jurisdiction in criminal and civil cases covers the procedures at first instance. Out of the 113 district courts, the district courts in the seat of the regional courts have special competences in many cases. Administrative and labour courts (20) were dismissed on the 31st of March 2020. From this date Regional Courts deal with labour cases on first instance while administrative cases are dealt with by eight Regional Court on a regional level.

**Q042 (2019):** 113 District Courts (first instance courts of general jurisdiction)  
20 Administrative and Labour Courts (specialized first instance courts)  
20 Regional Courts (second instance courts of general jurisdiction + first instance courts in cases of higher importance)  
5 Regional Courts of Appeal (second instance courts in cases of higher importance)  
1 Supreme Court ("Kúria" - special judicial review)

It has to be noted that Administrative and Labour Courts are merged into the regional courts on the 31st of March 2020. Since 1st of April 2020 every regional court deals with labour cases on first instance (second instance are the regional courts of appeal) and 8 regional courts have special administrative law department dealing with first instance cases (second instance is the Supreme Court).

**Q042 (2018):** Two new district courts were established (one in 2017 in the city of Szigetszentmiklós, another one in 2019 in the city of Érd).

113 District Courts (first instance courts of general jurisdiction)  
20 Administrative and Labour Courts (specialized first instance courts)  
20 Regional Courts (second instance courts of general jurisdiction + first instance courts in cases of higher importance)  
5 Regional Courts of Appeal (second instance courts in cases of higher importance)  
1 Supreme Court (special judicial review)

**Q042 (2017):** All courts include :

112 District Courts  
20 Regional Courts  
20 Administrative and Labour Courts  
5 Regional Courts of Appeal  
1 Supreme Court (Kúria)

The Hungarian court system is as follows: Kúria (1) – the Hungarian Supreme Court - its jurisdiction in criminal, civil and administrative cases covers adjudication of extraordinary remedies and appeals, adopting uniformity decisions. It also decides if municipal decrees are in compliance with higher level legislation. Regional courts of appeal (5) – their jurisdiction in criminal and civil cases covers the adjudication of appeals received from the regional courts (third instance in criminal cases). Regional courts (20) – their jurisdiction in criminal, civil and administrative cases covers the adjudication of appeals received from district courts, administrative and labour courts, and procedure at first instance in certain criminal and civil cases. District courts (112) – their jurisdiction in criminal and civil cases covers the procedures at first instance. The number of judges in the largest district court is 357, whereas the smallest court operates with one judge. Out of the 111 district courts, the district courts in the seat of the regional courts have special competences in many cases. Administrative and labour courts (20) – their jurisdiction covers procedures at first instance in individual and collective labour disputes and in administrative cases. First instance administrative and labour courts (20) started operating on 1 January 2013 as first instance specialized courts. Thus from this date the number of first instance courts of general jurisdiction is 112.

**Q043 (General Comment):** There are military departments at five Regional Courts and at one Regional Court of Appeal. Although they only deal with military related criminal cases, they are not considered as specialized courts as they are a part of the ordinary court system both in administrative and professional management.

**Q043 (2020):** "Administrative and labour courts (20) were dismissed on the 31st of March 2020. From this date Regional Courts deal with labour cases on first instance while administrative cases are dealt with by eight Regional Court on a regional level".

**Q044 (2018):** According to proposed legislation an independent administrative court system may be established in the future.

**Q044 (2016):** Two new district courts will be established (one in 2017 in the city of Szigetszentmiklós, another one in 2019 in the city of Érd).

**Q044 (2014):** According to 2014 data, a new first instance (district) court will be established in the city of Érd on 01/01/2018.

## Ireland

**Q042 (General Comment):** In Ireland, there are only three first instance courts (as legal entities) exercising general jurisdiction for the entire State (the High Court, the Circuit Court and the District Court). Each of those three courts has a single court president only, who exercises a nationwide remit for his/her court. The number of geographic locations reflects the physical location serving as seats or venues for the three jurisdictions.

**Q042 (2016):** The specialised courts referred to are the two Special Criminal Courts the jurisdiction of which generally relates to trial of terrorism- and organised crime-related offences.

The increase of one location over the figure provided for 2014 refers to the temporary relocation of the Dublin District Court's Drug Treatment Court in 2016.

**Q043 (General Comment):** The two specialised first instance courts listed above are Special Criminal Court No. 1 and Special Criminal Court No. 2. The latter was established in October 2015 and came into operation, sitting for the first time, in 2016. In previous cycles the category "other" (1) was referring to Special Criminal Court No. 1.

Other than distinctions between jurisdictional levels there is no specialisation - all judges within a court jurisdiction may be allocated to any category of case falling within the jurisdictional remit of the court concerned. Starting in 2013 a new cadre of specialist judges was created in the Circuit Court with specific jurisdiction in relation to certain types of personal insolvency remedy and certain pre-trial order making powers.

Ireland has a specialist regime for the trial of commercial proceedings in the form of the Commercial List of the High Court (known as the 'Commercial Court') but, as it is not a separate legal entity, being a list within and formally a part of the High Court, it is not included as a specialist court as such.

**Q043 (2022):** There are currently 2 Special Criminal Courts in Ireland who (in general) deal with crimes relating to terrorism and organised crime. While divisions of other courts deal with many of the matters set out in the table above, there are no specialised courts per se to deal with same.

Furthermore, while there are other tribunals or bodies outside of the court system which have powers to make determinations in some of the matters in the table (e.g., the Labour Court and Military Courts). These tribunals are not within the courts system.

**Q043 (2019):** Legislation to provide for a Family Court has been proposed

**Q044 (2022):** There has not been an increase in venues since 2020. This answer is based on the explanatory note wherein if there are two courts, e.g. District and Circuit courts sitting in one specific location, they are to be counted separately whereas previously they were counted together.

**Q044 (2018):** The Assisted Decision-Making (Capacity) Act 2015 will, when commenced, replace the existing wardship regime for persons with capacity issues and introduce new decision support arrangements for such persons. New jurisdiction will, in particular, be conferred on the Circuit Court in respect of such arrangements. The current situation is that while some parts of the 2015 Act are commenced, others remain to be commenced.

**Q044 (2016):** The Assisted Decision-Making (Capacity) Act 2015 will, when commenced, replace the existing wardship regime for persons with capacity issues and introduce new decision support arrangements for such persons. New jurisdiction will, in particular, be conferred on the Circuit Court in respect of such arrangements.

**Q044 (2014):** According to 2014 data, legislation is in preparation for the creation of specialised family courts within the High, Circuit and District Courts.

## Italy

**Q042 (2018):** In 2012-2013 we went through a major reform of the judicial map. In particular, a great number of justice of peace offices (initially 846) were shut down. However, each Italian municipality had (and still has) the opportunity to preserve the office at their own expenses. For this reason, each year a series of Justice of Peace offices administered by the municipality might be re-opened or closed. 3 justice of peace offices closed between 2017 and 2018.

**Q042 (2017):** In 2012-2013 we went through a major reform of the judicial map. In particular, a great number of justice of peace offices (initially 846) were shut down. However, each Italian municipality had (and still has) the opportunity to preserve the office at their own expenses. For this reason, each year a series of Justice of Peace offices administered by the municipality might be re-opened or closed.

**Q043 (General Comment):** Since 2014 in Italy there are 22 Brand Commercial courts (Tribunali delle imprese) that are legal entities of their own and not just internal court divisions for organizational purpose (such as labour, family etc.).

It is noteworthy that in Italy, some of the specialized first instance courts are not administered and financed by the Ministry of Justice. This is the case for the regional administrative courts, the regional audit commissions, the local tax commissions and military courts. These courts are not taken into consideration for the replies to questions 6, 46 and 52 for none of the exercises.

In respect of the 20 first instance administrative courts (legal entities) and their supreme court, it should be stressed that they have been encompassed within the total under question 43 for the last four exercises, but only since 2014 this approach is reflected in questions 91 and 99 (number of administrative law cases).

Moreover, in Italy specific matters (such as labour, family etc.) are dealt by specific divisions within the same Court. There are also 26 divisions called DDA (Direzioni Distrettuali Antimafia) which deal specifically with mafia and organized crime.

**Q043 (2022):** The appeal of some specialized courts (e.g. commercial courts, juvenile courts) are dealt by the general jurisdiction appeal courts. Specific subject matters (e.g. labour, insolvency, family, fight against terrorism and organised crime) are dealt by specific divisions within general jurisdiction courts. See general comment for details. The option "Other specialised courts" refers to tax courts.

**Q043 (2021):** The appeal of some specialized courts (e.g. commercial courts, juvenile courts) are dealt by the general jurisdiction appeal courts.

Specific subject matters (e.g labour, insolvency, family, fight against terrorism and organised crime) are dealt by specific divisions within general jurisdiction courts. See general comment for details.

**Q043 (2020):** Tax courts fall into the "Other" category.

The appeal of some specialized courts (e.g. commercial courts, juvenile courts) are dealt by the general jurisdiction appeal courts.

Specific subject matters (e.g labour, insolvency, family, fight against terrorism and organised crime) are dealt by specific divisions within general jurisdiction courts. See general comment for details.

**Q043 (2019):** The category "other" subsumes 29 Minor (or Juvenile) Courts and 103 Tax Courts

**Q043 (2018):** The category "other" category subsumes 29 Minor (or Juvenile) Courts and 103 Tax Courts.

**Q043 (2017):** Other: 29 Minor (or Juvenile) Courts + 103 provincial tax commissions

**Q043 (2016):** OTHER: 29 Minor (or Juvenile) Courts + 103 Local Tax Commissions

**Q043 (2013):** In September 2013, the Italian judicial system implemented an extensive reorganization of the territorial distribution of offices with the closing (by merger) of 30 Tribunals, 30 Prosecution offices, 220 branches of Tribunals and 346 Peace Judges.

**Q044 (2016):** Enhancing the specialization of judges / courts. In particular, the judiciary authorities are evaluating the introduction of specific courts for family and personal matters ("Berruti" reform). Increased competence of Business Courts. Establishment of specialized sections on matters such as immigration, international protection and free movement of citizens of the European Union.

Revision of the appeal system in order to reduce the appeal rate.

## Latvia

**Q042 (2022):** "1.1 First instance courts of general jurisdiction - legal entities": in 2022, three courts were merged into one, creating the Riga City Court.

In Latvia, the two administrative courts and the Economic court are considered as courts of general jurisdiction, but according to the CEPEJ methodology, data are inserted in line 2 "Total number of specialized courts".

**Q042 (2021):** In the total number of specialised courts - legal entities are included 1 Administrative court, 1 Administrative Regional (appeal) Court and 1 Economic Court, what was created and started operates from 31.03.2021. in Latvia. From 01.08.2022. is created and operates Riga City Court, merging 3 courts in Riga city territory. The number of first instance courts of general jurisdiction is indicated as it was in 2021, not including Riga City Court as 1 court in Riga. In Latvia is also Constitutional court - which within the jurisdiction specified in the Constitution of the Republic of Latvia and in this Law, shall adjudicate matters regarding the conformity of laws and other regulatory enactments with the Constitution, as well as other matters regarding which jurisdiction is conferred upon it by this Law. The Constitutional court is not included in the total number of the courts.

**Q042 (2020):** In the total number of specialised courts - legal entities are included 1 Administrative court and 1 Administrative Regional (appeal) court. Starting from 31.03.2021. in Latvia is created and operates the Economic Court. The Economic Court is not included in the total number of specialized courts. In Latvia is also Constitutional court - which within the jurisdiction specified in the Constitution of the Republic of Latvia and in this Law, shall adjudicate matters regarding the conformity of laws and other regulatory enactments with the Constitution, as well as other matters regarding which jurisdiction is conferred upon it by this Law. The Constitutional court is not included in the total number of the courts.

**Q042 (2019):** Since the reform of March, 2018, the number of first instance courts has been reduced to 10 legal entities at first instance (9 general + 1 administrative). There are also 6 appellate courts and Supreme court. In 2019 was completed reform of Land Register Units, which are included in the composition of district (city) courts. The number of legal entities doesn't change, but number of courts per geographic locations therefore differs.

The data regarding the geographic locations are indicated on 31.12.2019.

**Q042 (2018):** Since the reform of March, 2018, the number of first instance courts has been reduced to 10 legal entities at first instance (9 general + 1 administrative). There are also 6 appellate courts and Supreme court.

**Q042 (2017):** The number of first instance courts (legal entities) is indicated on 31.12.2017., in Latvia starting from 2015 till March, 2018 was a reform where court map was revised. The number of first instance courts (legal entities) starting from March, 2018 is 9. As regards the specialised court - there is only one specialised court the Administrative court with 5 court houses.

**Q042 (2016):** There is only one specialised court the administrative court with 5 court houses

**Q043 (General Comment):** The Economic court, is specialized in commercial cases so it can be classified as a specialized court within the scope of this question. It is a first instance court.

The administrative court can be considered as a first and second instance specialized court (within the scope of this question). The Administrative District Court in Riga and the Administrative Regional Court are located in one building. As to the category "military courts", the reply NA is justified by the fact that according to the Law on Judicial Power, judicial power in the Republic of Latvia is vested in district (city) courts, regional courts, the Supreme Court and the Constitutional Court, but in state of emergencies or during war – also military courts. The rest of the courts in Latvia are not established, and therefore in this case should be NAP.

**Q043 (2021):** Military courts is established in state of emergency or during a war. On 1 July 2020, amendments to the Law on Judicial Power came into force, providing for the establishment of the Economic Court, which is competent for both certain types of civil and criminal cases. Accordingly, the Court is competent for specific commercial disputes and criminal cases, which cause significant damage to the business environment and economic development. The Economic Court is indicated as Commercial Court. As for Administrative court - first instance court is Administrative District Court and for higher instance is indicated Administrative Regional (appeal) instance Court.

**Q043 (2020):** Military courts is established in state of emergency or during a war. On 1 July 2020, amendments to the Law on Judicial Power came into force, providing for the establishment of the Economic Court, which is competent for both certain types of civil and criminal cases. Accordingly, the Court is competent for specific commercial disputes and criminal cases, which cause significant damage to the business environment and economic development. The Economic Court is not counted yet in the total number of specialized courts, because it will start its action on 31st March 2021. As for Administrative court - first instance court is Administrative District Court and for higher instance is indicated Administrative Regional (appeal) instance Court.

**Q043 (2019):** There is only Administrative court in Latvia. On July 1, 2020, amendments to the Law "On Judicial Power" entered into force. The Amendments provides for the establishment of the Court of Economic Affairs. The Economic Court will take office on 1 January 2021.

**Q043 (2018):** There is only Administrative court in Latvia.

**Q043 (2016):** There is only one specialised court the administrative court with 5 court houses

**Q044 (2021):** All the courts (geographic locations) - Administrative District Court in Riga and Administrative Regional Court is located in one building, there is counted as 1 court per geographical location and indicated in the number of first instance courts. The same situation is in Vidzeme region - Vidzeme Regional Court Madona Court house and Vidzeme District Court is located in 1 building, there is counted as 1 court per geographical location and indicated in the number of first instance courts.

**Q044 (2018):** Reform was finished in March 2018. In its course first instance court count was reduced to 10 (9 first instance + 1 first instance Administrative court).

In year 2020/2021 there is a plan of creating a court for economical cases that would be a specialised 1st instance court.

**Q044 (2016):** Starting from 1 of February 2016, the reform has been introduced in Latgale (administrative region of Latvia). A number of district (city) courts in territory of Latgale regional court was decreased from six to two district (city) courts (Balvi District Court and Ludza District Court had been incorporated into Rezekne District Court; Kraslava district court and Preili District Court had been incorporated into Daugavpils District Court).

in 2016, Ministry of Justice make preparatory work to make court house reform in two district (city) court in the Rigas region. Accordingly, starting from 1 of February 2017, the City of Rīga Zemgale Urban District Court has been reorganized and conjoined with the City of Rīga Kurzeme District Court and changed the name of this court to City of Rīga Pārdaugavas Court.

**Q044 (2014):** In the frame of the 2014 evaluation, it has been stressed that the Judicial Council and the Cabinet of Ministers have initiated the gradual unification of the territory of operation of district (city) courts, through the implementation of the reform of the Riga court region. From March 2015, the Sigulda Court is attached to the Riga District Court, while the Riga City Central District Court was attached to the Riga City Vidzeme District Court.

The Judicial Council's decision of 8 June 2015 confirmed the restructuring plan concerning the Jurmala City Court. According to the plan, the latter must be attached to the Riga District Court from August 2015. The review of the judicial map is intended to increase the efficiency of the court system and the quality of the judicial activity, to reduce the processing times and to even out the judicial capacity. The reform is still going on.

## Lithuania

**Q042 (General Comment):** 1.1. 12 district courts;

1.2. 5 regional courts (regional courts are appeal instance for judgments, decisions, rulings and orders of district courts as well as first instance courts adjudicating certain categories of cases; in this table regional courts are counted only as second instance courts of general jurisdiction) and the Court of Appeal of Lithuania;

2. 2 regional administrative courts and the Supreme Administrative Court of Lithuania.

Regional courts as the first instance courts examine criminal cases in which persons are accused of having committed serious and very serious crimes, as well as cases in which the accused were the President of the Republic of Lithuania, members of the Seimas (Parliament) or Government, judges, judges or prosecutors of the Constitutional Court at the time of the commission of the criminal act.

Regional courts as the first instance deal with civil cases in which the amount of the claim is greater than 28,510 EUR (except for family legal relations cases due to the division of property), copyright cases, civil public tender legal relations cases, bankruptcy and restructuring cases, according to the statement of the bank's temporary administrator on reduction of the bank's share capital, cases in which one of the parties is a foreign state, according to lawsuits regarding the forced sale of shares, due to the investigation of the activity of a legal entity, and other cases.

Only the Vilnius Regional Court, with exclusive rights, in accordance with the laws in force, as a court of first instance hears cases regarding disputes provided for in the Patent Law of the Republic of Lithuania, regarding disputes provided for in the Trademark Law of the Republic of Lithuania, regarding adoption based on requests of foreign citizens

**Q042 (2022):** according to 2021 answers, Regional courts are counted only as second instance.

**Q042 (2021):** Regional courts are counted only as second instance; general comment has been updated in view of the changed assignment of the regional courts to the second instance only.

**Q042 (2020):** 1.1. 12 district courts and 5 regional courts (the latter are adjudicating certain categories of cases as first instance courts);

1.2. 5 regional courts and the Court of Appeal of Lithuania;

2. 2 regional administrative courts and the Supreme Administrative Court of Lithuania.

**Q042 (2018):** Number of courts (as legal entities) in Lithuania decreased from 1st January 2018 according to the Law on Reorganization of Courts of the Republic of Lithuania (Law of 23rd June, 2016 No. XII-2474). Instead of 49 district courts (as legal entities) there are now 12 district courts (some of them have court houses), instead of 5 regional administrative courts there are now 2 of them (one has houses). The number of first instance courts of general jurisdiction (legal entities) in point 42.1 implies 5 regional courts (of general jurisdiction) which are first instance for criminal and civil cases assigned to its jurisdiction by law. These courts also are appeal instance for judgements, decisions, rulings and orders of district courts, so their number is also included in the number of all courts at point 42.3.

**Q042 (2017):** From January 1, 2018, there are 22 left (17 first instance courts, 2 first instance courts of special jurisdiction, 2 courts of appeal (1 of them is specialized court) and 1 court of cassation).

**Q042 (2014):** As regional courts of Lithuania function not only as courts of appeal, but also as courts of first instance, for 2014, the number of these courts is also included in the number of first instance courts of general jurisdiction. This was not the case in earlier years.

**Q044 (General Comment):** There are 59 1st instance courts locations: 12 district courts (49 locations), 5 regional courts (5 locations) of general jurisdiction and 2 regional administrative courts (5 locations).

For all the courts 62 courts locations: The Supreme Court of Lithuania, the Court of Appeal of Lithuania, the Supreme Administrative Court of Lithuania and 59 1st instance courts locations.

**Q044 (2022):** There are 59 1st instance courts locations: 12 district courts (49 locations), 5 regional courts (5 locations) of general jurisdiction and 2 regional administrative courts (5 locations).

For all the courts 62 courts locations: The Supreme Court of Lithuania, the Court of Appeal of Lithuania, the Supreme Administrative Court of Lithuania and 59 1st instance courts locations.

**Q044 (2020):** There are 59 1st instance courts locations: 12 district courts (49 locations), 5 regional courts (5 locations) of general jurisdiction and 2 regional administrative courts (5 locations).

For all the courts 62 courts locations: The Supreme Court of Lithuania, the Court of Appeal of Lithuania, the Supreme Administrative Court of Lithuania and 59 1st instance courts locations.

**Q044 (2018):** Analysis and discussion on the need and possibility to decrease the number of court houses are initiated.

**Q044 (2016):** From January 1, 2018, there shall be 12 district courts (instead of 49) and 2 regional administrative courts (instead of 5).

## Luxembourg

**Q042 (General Comment):** 42.1.1: three justices of the peace and two district courts

42.1.2: a Court of Appeal 42.1.3: a Court of Cassation

42.2: Total specialized courts (all instances) In addition to the actual jurisdictions, the law of July 27, 1997 organizing the Constitutional Court established this court which is seized, as a preliminary ruling, when a question arises regarding the conformity of a law with the Constitution before a jurisdiction of either judicial or administrative order.

It rules by way of judgment on laws' conformity with the Constitution, except for those approving treaties.

When one party raises an issue concerning a law's compliance with the Constitution before either judicial or administrative jurisdiction, that jurisdiction must refer it to The Constitutional Court unless it considers that making decision on raised issue is unnecessary for its judgment; that such question lacks any foundation; or that The Constitutional Court has already ruled on an identical matter.

If any jurisdiction deems there's an issue about whether certain legislation complies with constitutional provisions and deciding upon this point is necessary for delivering its verdict then it should raise this matter ex officio after previously inviting parties to present their observations.

Parties are entitled to conclude and plead before The Constitutional Court through representation by counsel listed in Category I annually compiled tables set up by bar councils' orders."

The judgments from The Constitutional Courts are published in Official Journal within thirty days from their pronouncement." (Justice Portal : <https://justice.public.lu/fr/organisation-justice/cour-constitutionnelle.html>)

**Q042 (2022):** In addition to the regular courts, the Law of 27 July 1997 on the organization of the Constitutional Court established this court, which is seized for a preliminary ruling when a question arises before a judicial or administrative jurisdiction concerning the conformity of a law with the Constitution. It rules by way of judgment on the conformity of laws with the Constitution, except those approving treaties.

When a party raises an issue regarding compliance of a law with the Constitution before a judicial or administrative jurisdiction, that jurisdiction is required to refer it to the Constitutional Court, unless it considers that deciding on such matter is not necessary for its judgment, that there are no grounds for such issue or that there has already been an adjudication by the Constitutional Court on an identical matter.

If any jurisdiction deems that an issue relating to compliance of a law with the constitution arises and decision on this point is necessary for its judgment, it must raise it ex officio after having previously invited the parties to present their observations.

The parties are entitled to conclude and plead before the Constitutional Court through counsel registered in List I annually drawn up by the councils of bar associations.

Judgments from the Constitutional Court are published in the Official Gazette of Luxembourg within thirty days from their pronouncement. (Justice Portal: <https://justice.public.lu/fr/organisation-justice/cour-constitutionnelle.html>)

**Q042 (2020):** "In addition to the courts proper, the law of 27 July 1997 on the organization of the Constitutional Court established this court, which is seized, on a preliminary basis, when a question relating to the conformity of a law to the Constitution arises before a court of the judicial or administrative order. It rules, by means of a judgment, on the conformity of laws with the Constitution, with the exception of those concerning the approval of treaties.

When a party raises a question concerning the conformity of a law with the Constitution before a court of the judicial or administrative order, that court is obliged to refer the matter to the Constitutional Court, except when it considers that a decision on the question raised is not necessary to render its judgment, that the question is unfounded or that the Constitutional Court has already ruled on a question with the same object.

If a court considers that a question of conformity of a law with the Constitution arises and that a decision on this point is necessary to render its judgment, it must raise it of its own motion after first inviting the parties to present their observations. The parties are admitted to conclude and plead before the Constitutional Court through the ministry of a lawyer registered in list I of the tables drawn up annually by the Bar Associations.

The judgments of the Constitutional Court are published in the Official Journal of the Grand Duchy of Luxembourg within thirty days of their delivery. (Portal of Justice: <https://justice.public.lu/fr/organisation-justice/cour-constitutionnelle.html>) "

**Q042 (2017):** 42.1: 3 justices of the peace and 2 district courts

42.2: Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

**Q042 (2016):** 42.1: 3 justices of the peace and 2 district courts

42.2: Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

**Q043 (General Comment):** Courts of general jurisdiction are organized into specialized sections. For example, the commercial courts (which also deal with insolvency cases) are specialized sections of the district court. Only the administrative, military and social security courts of first instance are autonomous.

**Q043 (2020):** Pour 2020, seules les entités juridiques ont été prises en considération dans le tableau.

**Q043 (2017):** Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

**Q043 (2016):** Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

**Q043 (2014):** Most of the areas mentioned in the question are within the competence of district courts (commercial cases, insolvency cases, family law cases and all criminal cases except for offenses that are under the jurisdiction of justices of peace) and justices of peace (labour law cases, rental cases). The indicated total is a purely statistical information which does not reflect the reality.

**Q043 (2012):** Matters concerning trade and family law are dealt with at the level of district courts, while matters pertaining to labour law and rental cases are within the competence of the justices of peace.

**Malta**

**Q042 (2022):** The 1st instance courts of general jurisdiction are:

- the Court of Magistrates, Civil Jurisdiction
- the Court of Magistrates, Criminal Jurisdiction
- the Civil Court, First Hall - the Criminal Court

The 2nd instance courts of general jurisdiction are:

- the Civil Court of Appeal, Inferior Jurisdiction
- the Civil Court of Appeal, Superior Jurisdiction
- the Criminal Court of Appeal, Inferior Jurisdiction
- the Criminal Court of Appeal, Superior Jurisdiction

In the Maltese judicial system, there are only 2 instances of courts, hence Q1.3 is marked as NAP.

The increase in the number of courts as legal entities reflects the addition of the criminal courts to the above data, namely:

- 1st Instance Courts: Court of Magistrates Criminal Jurisdiction and Criminal Court
- 2nd Instance Courts: Criminal Court of Appeal in its Inferior and Superior Jurisdiction

Q2: The increase by 1 in the number of specialised courts reflects the addition of the Constitutional Court (in line with 2021 data).

**Q042 (2021):** The total number of Specialised Courts has increased to 8 because of the addition of the Constitutional Court as a second instance specialised court.

**Q042 (2020):** The 1st instance courts of general jurisdiction are:

- the Court of Magistrates, Civil Jurisdiction (competency up to Euros 15,000)
- the Civil Court, First Hall (civil cases above Euros 15,000)

The 2nd instance courts of general jurisdiction are:

- the Civil Court of Appeal, Inferior Jurisdiction - the Civil Court of Appeal, Superior Jurisdiction

In the Maltese judicial system, there are only 2 instances of courts, hence Q1.3 is marked as NAP.

The increase in the number of courts as legal entities reflects the addition of the criminal courts to the above data, namely:

- 1st Instance Courts: Court of Magistrates Criminal Jurisdiction and Criminal Court
- 2nd Instance Courts: Criminal Court of Appeal in its Inferior and Superior Jurisdiction

**Q042 (2018):** In 2018, the Commercial Division was set up in order to hear cases filed under the Companies Act that include Insolvency cases. This new specialised first instance court is the reason behind the increase in the number of courts quoted at 42.2 above.

**Q043 (General Comment):** The number of specialised courts includes non-criminal, administrative and criminal courts established as legal entities in line with the CEPEJ methodology. The seven (7) specialised courts referred to in Q43 are the Rent Regulation Board, the Land Arbitration Board, the Rural Leases Control Board, the Small Claims Tribunal, the Court of Voluntary Jurisdiction, the Administrative Review Tribunal and the Juvenile Court. Other courts previously counted as specialised courts, such as the Family Court and the Commercial Court, are divisions of the Civil Court, First Hall, and as such are now being included with the 1st Instance Courts of General Jurisdiction.

**Q043 (2022):** The identified specialised courts listed under 'Other specialised courts' are:

- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction
- the Constitutional Court (higher instance court)

The Juvenile Court is a specialised criminal court.

**Q043 (2021):** The first instance specialised courts are:

- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction
- the Juvenile Court

Under the second instance specialised courts, we are including the Constitutional Court which is a court that deals exclusively with constitutional cases.

**Q043 (2020):** A number of courts that used to be previously identified as specialised courts, are not being categorised this time, given that they all make part of the First Hall, General Jurisdiction Court. These are:

- The Commercial Court (including insolvency cases)
- The Family Court

The identified specialised courts listed under 'Other specialised courts' are:

- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction

The Juvenile Court is a specialised criminal court.

**Q043 (2019):** The courts referred to under 'Other specialised 1st Instance courts' include:

- The Civil Court, First Hall
- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction

**Q043 (2018):** The courts referred to under 'Other specialised 1st Instance courts' include:

- The Civil Court, First Hall
- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction

**Q043 (2017):** The other specialised 1st Instance courts include:

- the Civil Court, First Hall
- the Court of Voluntary Jurisdiction - the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal

**Q043 (2016):** The other specialised 1st Instance courts include:

- the Civil Court, First Hall
- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal

**Q044 (2022):** The Juvenile Court that until the previous evaluation was in a separate geographical location, has since been relocated to the Courts of Justice in Valletta. Hence the change in the figure quoted.

**Q044 (2021):** The Juvenile Court is a first instance specialised court that is located outside of the main court building in Valletta. We are therefore reflecting this different geographic location in the updated figures in Q44.

**Q044 (2016):** Throughout 2017, work was carried out in order to introduce a commercial division within the Civil Court in order to facilitate cases filed under the Companies Act. The bill is currently undergoing the legislative process that would see it being enacted as law by the end of the year. The Commercial Division will become operative in 2018.

## Netherlands

**Q042 (General Comment):** Second instance courts of general jurisdiction handle civil, criminal and tax cases.

There are two additional courts that do not seem to fit this categorization by instance, acting in the area of administrative law. Some administrative law cases (tax cases) are handled by first and second instance courts of general jurisdiction. Other administrative cases are handled by the Trade and Industry Appeals Tribunal, also known as the Administrative High Court for Trade and Industry (College van van Beroep voor het Bedrijfsleven). This is a specialized administrative court, which rules on disputes in the area of social-economic administrative law, and appeals for specific laws. The tribunal hears both first and second instance cases. Categorized as a specialized court.

The Central Appeals Tribunal (Centrale Raad van Beroep) is a court of appeal mainly active in legal areas pertaining to social security and civil service. In these areas, it is also the highest judicial authority. In some cases, it is the first and sole instance. This court does not exactly fit the distinction of the table above, but categorized as a specialized court.

The Administrative Jurisdiction Division of the Council of State is the highest administrative court with general jurisdiction in the Netherlands. It hears various types of appeals (e.g. members of the public / associations / commercial companies against governmental bodies, or between public authorities). This court does not exactly fit the distinction of the table above, but categorized as a specialized court. For more information, see <https://www.rechtspraak.nl/English/Judicial-system-and-legislation/Pages/Special-Tribunals.aspx>. Note that the Supreme Court (highest instance court of general jurisdiction) does not retry the case itself, but judges whether the judges at the first and second instance applied the law correctly in the judgment, and whether the procedure was correctly followed (cassation, potential quashing of judgment).

Since 2013 and following the implementation of the reform related to the reorganization of the judicial map, the number of district courts was reduced from 19 in 2010 to 11 in 2013 and 2014. Moreover, this reform resulted in the closure of sub-district court locations due to which the number of geographic locations decreased from 64 in 2010 to 40 in 2013 and 2014.

**Q042 (2021):** Second instance courts of general jurisdiction handle civil, criminal and tax cases.

There are two additional courts that do not seem to fit this categorization by instance, acting in the area of administrative law. Some administrative law cases (tax cases) are handled by first and second instance courts of general jurisdiction. Other administrative cases are handled by the Trade and Industry Appeals Tribunal, also known as the Administrative High Court for Trade and Industry (College van van Beroep voor het Bedrijfsleven). This is a specialized administrative court, which rules on disputes in the area of social-economic administrative law, and appeals for specific laws. The tribunal hears both first and second instance cases. Categorized as a specialized court.

The Central Appeals Tribunal (Centrale Raad van Beroep) is a court of appeal mainly active in legal areas pertaining to social security and civil service. In these areas, it is also the highest judicial authority. In some cases, it is the first and sole instance. This court does not exactly fit the distinction of the table above, but categorized as a specialized court.

The Administrative Jurisdiction Division of the Council of State is the highest administrative court with general jurisdiction in the Netherlands. It hears various types of appeals (e.g. members of the public / associations / commercial companies against governmental bodies, or between public authorities). This court does not exactly fit the distinction of the table above, but categorized as a specialized court.

For more information, see <https://www.rechtspraak.nl/English/Judicial-system-and-legislation/Pages/Special-Tribunals.aspx>. Note that the Supreme Court (highest instance court of general jurisdiction) does not retry the case itself, but judges whether the judges at the first and second instance applied the law correctly in the judgment, and whether the procedure was correctly followed (cassation, potential quashing of judgment).

**Q042 (2020):** There are 11 first instance courts (Rechtbanken).

There are 4 second instance courts of general jurisdiction: 4 courts of appeal (Second instance, Gerechtshoven) that handle civil cases, criminal cases and tax cases.

There is 1 highest instance court of general jurisdiction, the Supreme Court (Hoge Raad), the highest instance court in The Netherlands.

There are three specialized courts (see comment Q43).

**Q042 (2017):** same as last year

**Q043 (General Comment):** See the comment under Q42 on the other special (not specialised) appeal tribunals as well.

The Trade and Industry Appeals Tribunal, also known as the Administrative High Court for Trade and Industry (College van van Beroep voor het Bedrijfsleven) is a specialized administrative court, which rules on disputes in the area of social-economic administrative law, and appeals for specific laws. The tribunal hears both first and second instance cases, but is categorized as a first instance court.

The Central Appeals Tribunal (Centrale Raad van Beroep) is a court of appeal mainly active in legal areas pertaining to social security and civil service. In these areas, it is also the highest judicial authority. In some cases, it is the first and sole instance.

The Administrative Jurisdiction Division of the Council of State is the highest administrative court with general jurisdiction in the Netherlands. It hears various types of appeals (e.g. members of the public / associations / commercial companies against governmental bodies, or between public authorities).

There is no separate military court, but there is a military chamber in one of the district courts.

**Q043 (2021):** See also comment at Q42 on the other special (not specialized) appeal tribunals.

Trade and Industry Appeals Tribunal, also known as the Administrative High Court for Trade and Industry (College van van Beroep voor het Bedrijfsleven). This is a specialized administrative court, which rules on disputes in the area of social-economic administrative law, and appeals for specific laws. The tribunal hears both first and second instance cases, but is categorized as a first instance court.

The Central Appeals Tribunal (Centrale Raad van Beroep) is a court of appeal mainly active in legal areas pertaining to social security and civil service. In these areas, it is also the highest judicial authority. In some cases, it is the first and sole instance.

The Administrative Jurisdiction Division of the Council of State is the highest administrative court with general jurisdiction in the Netherlands. It hears various types of appeals (e.g. members of the public / associations / commercial companies against governmental bodies, or between public authorities).

**Q043 (2020):** The specialized courts are:

Trade and Industry Appeals Tribunal: the administrative High Court for trade and industry. This tribunal is a specialized administrative court that rules on disputes in the area of social-economic administrative law. Categorized as administrative court.

The Central Appeals Tribunal is the highest judicial authority in areas of social security and civil service. Categorized as other.

**Q043 (2017):** same as last year

**Q043 (2015):** Currently the commercial court in the Netherlands is the specialized court CBb. Per January first 2017 starts the Netherlands Commercial Court (NCC).

**Q044 (General Comment):** First instance: the first instance courts, and the Trade and Industry Appeals Tribunal are included. All courts: first instance, second and highest instance courts of general jurisdiction are included, as well as the Trade and Industry Appeals Tribunal, Central Appeals Tribunal and Administrative Jurisdiction Division of the Council of State.

First instance geographic locations:

-33 first instance geographic locations of general jurisdiction, with 4 locations only housing a Justice of the Peace.

-1 Trade and Industry Appeals Tribunal. Counted separately, although located at the same location as a first instance court of general jurisdiction. It is not the same court, but a separate, specialized court (this change in counting occurred between 2020 and 2021). See Q43 for why this is counted as a first instance court.

All courts geographic locations:

-34 first instance geographic locations (see above).

-6 second instance geographic locations of general jurisdiction, of which 4 are located at the same geographic location as a first instance court.

-1 Supreme Court, located at a separate location.

-1 Central Appeals Tribunal, located at the same geographic location as a first instance court. Counted separately as it is not the same court.

-1 Administrative Jurisdiction Division of the Council of State, located at a separate location.

**Q044 (2021):** First instance: the first instance courts, and the Trade and Industry Appeals Tribunal are included.

All courts: first instance, second and highest instance courts of general jurisdiction are included, as well as the Trade and Industry Appeals Tribunal, Central Appeals Tribunal and Administrative Jurisdiction Division of the Council of State.

First instance geo.locations:

-33 first instance geo.location of general jurisdiction, with 4 locations only housing a Justice of the Peace.

-1 Trade and Industry Appeals Tribunal. Counted separately, although located at the same location as a first instance court of general jurisdiction, as it is not the same court, but a separate, specialized court (different than previous evaluation). See Q43 for why this is counted as a first instance court.

All courts geo.locations:

-34 first instance geo.locations (see above).

-6 second instance geo.locations of general jurisdiction, of which 4 are located at the same geo.location as a first instance court.

-1 Supreme Court, located at a separate location.

-1 Central Appeals Tribunal, located at the same geo.location as a first instance court. Counted separately as it is not the same court.

-1 Administrative Jurisdiction Division of the Council of State, located at a separate location.

**Q044 (2020):** In one case (of 43), a first instance court of general jurisdiction, a specialized first instance court, and a court of appeal are housed at the same site (adding 2 sites according to the explanatory note).

In 3 cases, a first instance court of gen.jur. and a court of appeal are housed at the same site (adding 3 sites according to the explanatory note).

In 1 case, a f.i. court of gen.jur. and a specialized second instance court are housed at the same site (adding 1 site according to the explanatory note).

Finally, the Supreme Court, 1 specialized second instance court, and 2 appeal courts are housed at unique locations (adding 4 sites according to the explanatory note).

**Q044 (2016):** Possibility of closing subdistrict court facility?

**Q044 (2014):** According to 2014 data, the reforms regarding the merging of courts mentioned on the occasion of the 2012 evaluation have been implemented.

## Poland

**Q042 (General Comment):** The Polish court structure is characterized by four levels of courts but only three instances.

Basically, there are district courts which are first instance courts, regional courts which are first and second instance courts (regional courts within their jurisdiction have the majority of first-instance cases), and appellate courts which are second instance courts. The highest instance courts are the Supreme Court, the Supreme Administrative Court and the Constitutional Tribunal.

**Q042 (2022):** 1.1 first instance courts (district courts + regional courts);

1.2 second (appellate courts); 1.3 third instance courts (cassation of the judgment) (Supreme Court) of general jurisdiction;

**Q042 (2021):** The table indicating the content of:

1.1 first instance courts (district + regional courts), 1.2 second (appellate courts) , 1.3 third instance courts (cassation of the judgment) (Supreme Court) of general jurisdiction.

**Q042 (2020):** The table indicating the content of:

1.1 first instance courts (district + regional courts), 1.2 second (appellate courts) , 1.3 third instance courts (cassation of the judgment) (Supreme Court) of general jurisdiction.

**Q042 (2018):** .

**Q042 (2017):** 42.1 First instance courts of general jurisdiction - common courts (318 regional courts, 45 district courts).

42.2 First instance specialised courts - 16 administrative courts, 9 military courts.

42.3 All the courts - the Supreme Court, common courts (318 regional courts, 45 district courts, 11 appeal courts), administrative courts (voivodship administrative courts (16), the Supreme Administrative Court), military courts (regional military courts (7), district military courts (2)).

**Q042 (2016):** 42.1 First instance courts of general jurisdiction - common courts (318 regional courts, 45 district courts).

42.2 First instance specialised courts - 16 administrative courts, 9 military courts.

42.3 All the courts - the Supreme Court, common courts (318 regional courts, 45 district courts, 11 appeal courts), administrative courts (16 voivodship administrative courts. the Supreme Administrative Court), military courts (9 regional military courts, 2 district military courts). The differences between presented data and the data from 2014 edition is likely to be due to the restoration of District Courts, abolished and converted to divisions of larger units in 2013.

The difference in courts number between this (363) and previous evaluation cycle (287) is probably caused by a significant organizational reform of polish court system, which took place in 2013. Almost eighty small district courts were merged with larger entities. Since 2015 the reform has been reversing, which has resulted in an increase in the number of the courts.

**Q042 (2012):** In 2012, there was a structural change concerning District courts. Some of them were transformed into divisions of other courts.

**Q043 (2020):** There are 7 military courts of first instance and 2 military courts of higher instance in Poland.

**Q043 (2019):** It is noteworthy that the Land and Mortgage Courts which are within the structure of the common court system deal with specific topics, but they are departments.

Besides, the National Court Register and Pledge Registry Departments are business divisions.

The EU Trademark and Community Design Court (which existed in the XXII Division of the District Court in Warsaw)-functioned from 2004 until the creation of intellectual property courts, which took place on 1 July 2020. Cases in the field of intellectual property belong to the jurisdiction of selected District Courts (Article 47990 of the Code of Civil Procedure), while the District Court in Warsaw (XXII Division) has exclusive jurisdiction in matters of intellectual property concerning computer programs, inventions, utility models, topography of integrated circuits, plant varieties and company secrets of a technical nature.

The Court of Competition and Consumer Protection is a special department functioning within the District Court in Warsaw. In the current state of law, the scope of activity of the 17th Department of the Court of Competition and Consumer Protection includes the handling of the following cases in court proceedings of appeals and complaints against decisions and orders issued by the government: the President of the Office of Competition and Consumer Protection, the President of the Energy Regulatory Office, the President of the Railway Transport Office, the President of the Office of Electronic Communications. When it comes to matters from lease or tenancy agreements - as long as these matters are of an economic nature, they are recognized by business departments, as are matters related to new technologies and the Internet space.

**Q044 (2022):** The figure of 496 indicated in 2022 is the sum of the common, administrative and military courts of first and second instance and the Supreme Court by geographic location (i.e. including the subdivisions). To the number of courts of first instance by geographical location (item 44 in line 1 - all common, administrative, military courts of first instance with localised divisions: number of courts 434) was added

the number of 62 courts: - regional courts: 47; - courts of appeal: 11; - military courts: 2; - Supreme Administrative Court: 1; - Supreme Court: 1;

Total: 494 (434 + 62).

**Q044 (2020):** Regarding point 44, it should be noted that in the previous evaluation cycles (2016, 2017, 2018, 2019) the answer in terms of the number of all courts as geographical locations was 401, while in 2020 it is 494.

The figure of 494 indicated in 2020 is the sum of the common, administrative and military courts of first and second instance and the Supreme Court by geographic location (i.e. including the subdivisions). To the number of courts of first instance by geographical location (item 44 in line 1 - all common, administrative, military courts of first instance with localised divisions: number of courts 433) was added the number of 61 courts: - regional courts: 46; - courts of appeal: 11; - military courts: 2; - Supreme Administrative Court: 1; - Supreme Court: 1;  
Total: 494 (433 + 61).

The discrepancy is due to the adoption of a different method of data presentation in 2020 (by geographical location). In compliance with the Explanatory note, the 2020 data show first-instance courts (line 1), and further all courts (line 2) together with all seats in different locations, which in the realities of the Polish legal system should be understood as a necessity to show the number of courts together with local divisions.

**Q044 (2016):** It is considered to reduce the number of district courts which are responsible for land and mortgage registers or abolishing external branches in district courts.

## Portugal

**Q042 (2020):** 1.1 Courts of general jurisdiction and proximity divisions;  
1.2. 2nd Instance Courts (Tribunal Relação de Lisboa, Coimbra, Porto, Évora e Guimarães).  
1.3. Supreme Justice Court

**Q042 (2019):** Regarding Q 42.1 the decrease of the total number of first instance courts of general jurisdiction is accompanied by an increase of certain types of first instance courts (please consult answers provided to Q 43).

Regarding Q 42.2, the total corresponds to first instance specialised courts of judicial courts and administrative and tax courts. Under our Constitution, we have two set of courts: judicial courts, which have general jurisdiction in civil/commercial and criminal matters and encompass specialized courts, and administrative and tax courts, whose role is to settle disputes arising out of administrative and tax relations. These latter are specialised in this domain only.

In order to be rigorous and coherent with Q 43, we have included first instance administrative and tax courts. The total corresponds to 418 judicial courts + 17 administrative/tax courts.

**Q042 (2018):** These data correspond to the values given for the last scoreboard.

The differences registered result from the changes to the judicial organization (Law n. 40-A/2016, 22 December) in force since January 1, 2017.

42.1 the number of 1st instance courts with general jurisdiction decreased due to the increase of specialized courts.

Accordingly, 20 courts that were closed in 2014 were re-enacted as proximity judgments, new family sections were created as well as new sections with generic jurisdiction.

**Q042 (2017):** The differences registered result from the changes to the judicial organization (Law n. 40-A/2016, 22 December) in force since January 1, 2017.

42.1 the number of 1st instance courts with general jurisdiction decreased due to the increase of specialized courts.

Accordingly, 20 courts that were closed in 2014 were re-enacted as proximity judgments, new family sections were created as well as new sections with generic jurisdiction.

**Q042 (2014):** As a result of the new Judicial Organization Reform, the number of specialized first instance courts increased in 2014, while the enlargement of the court districts has been promoted. The reform melted the former judicial districts into 23 judicial districts, each containing two or more units, according to the demographic and economic reality of the respective geographic area. The difference between Q42.2 and Q43 is due to the inclusion of the 20 administrative courts in Q43. In Portugal, the administrative jurisdiction is autonomous, independent from the civil jurisdiction.

**Q043 (General Comment):** Q.43 -total:The number given under Q43.1.1 includes 17 first instance courts and 3 higher instance courts of administrative jurisdiction that are not included under Q.42.2. Administrative courts are part of another jurisdiction and under our law cannot be considered specialized courts.

**Q043 (2020):** «Commercial courts» deal with, inter alia, winding up of the company, insolvency and suspension and revocation of company resolutions.

«Internet related disputes»: only for Internet domain system (DNS) issues, which are under the jurisdiction of the Intellectual Property Court; for all other Internet related issues, general jurisdiction courts are competent. Internet related disputes were not included in the number of specialised courts for previous cycles.

«Other specialised courts»: includes all other courts that are not listed in the categories above.

This category includes Civil Central Judicial Divisions, Criminal Central Judicial Divisions, Civil Local Proximity Judicial Divisions, Criminal Local Proximity Judicial Divisions, Petty Criminality Local; Proximity Judicial Divisions, Criminal Examination Judicial Divisions, Enforcement Judicial Divisions, Central Criminal Examination Court, Competition Court and Maritime Court.

**Q043 (2019):** This category includes Civil Central Judicial Divisions, Criminal Central Judicial Divisions, Civil Local Proximity Judicial Divisions, Criminal Local Proximity Judicial Divisions, Petty Criminality Local Proximity Judicial Divisions, Criminal Examination Judicial Divisions, Enforcement Judicial Divisions, Central Criminal Examination Court, Intellectual Property Court, Competition Court and Maritime Court.

**Q043 (2018):** Changes to the judicial organization (Law n. 40-A/2016, 22 December) are in force since January 1, 2017.

**Q043 (2017):** Changes to the judicial organization (Law n. 40-A/2016, 22 December) are in force since January 1, 2017.

Other specialised 1st instance courts include, among others: Criminal Instruction Courts, Maritime Courts; Intellectual Property and Competition Court; Enforcement Courts.

Law 31/2012, 14 August, put in force the Rent and tenancy section (Balcão Nacional do Arrendamento) that is functioning since 8

January 2013.

**Q043 (2015):** In 2013-2014, the Reform of the Portuguese Judicial system was implemented. One of the major goals of this reform was to set up specialised courts on a national level, which led to a significant increase of commercial courts compared to previous years.

The difference between Q42.2 and Q43 is due to the inclusion of the 20 administrative courts in Q43. In Portugal, the administrative jurisdiction is autonomous, independent from the civil jurisdiction and cannot be considered as specialised courts.

Other courts:

Other specialised 1st instance courts include: Criminal Instruction Courts, Maritime Courts; Intellectual Property and Competition Court; Enforcement Courts.

Law 31/2012, 14 August, put in force the Rent and tenancy section (Balcão Nacional do Arrendamento) that is functioning since 8 January 2013

**Q043 (2014):** In 2013-2014, the Reform of the Portuguese Judicial system was implemented. One of the major goals of this reform was to set up specialised courts on a national level, which led to a significant increase of commercial courts compared to previous years.

For 2014, the category “other” subsumes as in 2012 Criminal Instruction Courts, Maritime Courts, Intellectual Property and Competition Court and Enforcement Courts. Additionally, the Rent and tenancy section (Balcão Nacional do Arrendamento) has been established by law in August 2012 and is functioning since 8 January 2013.

**Q043 (2012):** For 2012, the category “other” encompasses Criminal Instruction Courts, Maritime Courts, Intellectual Property and Competition Court and Enforcement Courts.

**Q044 (2020):** The difference between 2019 and 2020 is justified by the increase in new buildings.

**Q044 (2018):** Law n.º 19/2019, 19th February.

The recent amendments to the Law of the Organization of the Judiciary System are intended to ensure the reciprocal proximity of justice and citizens in two key segments: criminal jurisdiction and family and minors jurisdiction.

These new amendments aim to facilitate people's access to courts and combat the desertification of the interior regions of the country.

**Q044 (2016):** Law n.40-A/2016, 22 December and Decree-Law n. 86/2016, 27 December.

On the 1st of January 2017, 20 extinct districts were reopened, as well as 23 of the so-called proximity sections, in which judicial acts may now be concluded.

## Romania

**Q042 (General Comment):** In Romania there are 175 judecatorii, first instance courts of general jurisdiction.

**Q042 (2022):** Law no. 304/2022 on the judicial organisation.

The number of „judecatorii” has decreased by one between 2019-2020 because the activity of Judecătoria Insuratei was suspended so it no longer appears in the statistics. 175 represent the first instance courts with general jurisdiction in this matter, even if tribunals, courts of appeal and the High Court may also judge first instance cases. Starting from 2020 the methodology of presentation of data changed and only “judecatorii” are counted as first instance courts of general jurisdiction, even if tribunals, courts of appeal and the High Court may also judge first instance cases.

**Q042 (2021):** Law no. 304/2004 on the judicial organisation.

The number of „judecatorii” has decreased by one between 2019-2020 because the activity of Judecătoria Insuratei was suspended so it no longer appears in the statistics. 175 represent the first instance courts with general jurisdiction in this matter, even if tribunals, courts of appeal and the High Court may also judge first instance cases. Starting from 2020 the methodology of presentation of data changed and only “judecatorii” are counted as first instance courts of general jurisdiction, even if tribunals, courts of appeal and the High Court may also judge first instance cases.

**Q042 (2020):** Law no. 304/2004 on the judicial organisation.

The number of „judecatorii” has decreased by one between 2019-2020 because the activity of Judecătoria Insuratei was suspended so it no longer appears in the statistics. 175 represent the first instance courts with general jurisdiction in this matter, even if tribunals, courts of appeal and the High Court may also judge first instance cases. Starting from 2020 the methodology of presentation of data changed and only “judecatorii” are counted as first instance courts of general jurisdiction, even if tribunals, courts of appeal and the High Court may also judge first instance cases.

**Q042 (2017):** There are 176 first instance courts, 42 tribunals and 15 courts of appeals. All of the first instance courts deal with cases in first instance, but also the tribunals and the courts of appeal may have material or personal jurisdiction in first instance.

**Q042 (2016):** There are 176 first instance courts, 42 tribunals and 15 courts of appeals. All of the first instance courts deal with cases in first instance, but also the tribunals and the courts of appeal may have material or personal jurisdiction in first instance.

**Q043 (2022):** Law no. 304/2022 on the judicial organisation.

**Q043 (2020):** Law no. 304/2004 on the judicial organisation.

**Q044 (2022):** It should be mentioned that some of the first instance specialised courts share the location with „judecatorii”.

**Q044 (2020):** Law no. 304/2004 on the judicial organisation.

It should be mentioned that some of the first instance specialised courts share the location with „judecatorii”.

**Q044 (2014):** According to 2014 data, a bill on closing 30 courts and 30 attached prosecution offices with low volume of work was initiated by the Ministry of Justice with the support of the Superior Council of Magistracy of Romania. The bill was rejected by the Parliament. The Superior Council of Magistracy seeks for alternative solutions for the reallocation of the resources.

## **Slovak Republic**

**Q042 (2022):** The new Supreme Administrative Court - specialized court of higher instance was established in 2021 and started its full work in 2022.

**Q042 (2021):** The changed answer in line 2 is due to the Supreme Administrative Court of the Slovak Republic, it was established from January 1, 2021 by Constitutional Act No. 422/2020.

**Q042 (2020):** The Constitutional Court is not included, since it was not included in previous cycles. According to the explanatory note - "In some countries, other bodies can be referred to as courts. When they are not part of the regular judiciary system, they should not be considered here (e.g. courts of audits, constitutional courts when not dealing with individual cases but rather with questions of compliance with constitution and international law etc.)." In Slovak republic the Constitutional Court can deal with some rare individual cases.

**Q042 (2019):** The entire court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, The Specialized Criminal Court and the Supreme Court of the Slovak republic.

**Q042 (2018):** The entire court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, The Specialized Criminal Court and

The Supreme Court of the Slovak republic

**Q042 (2017):** The court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, Specialized Criminal Court and Supreme Court of the Slovak republic

**Q042 (2016):** The court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, The Specialized Criminal Court and The Supreme Court of the Slovak republic

**Q043 (General Comment):** In the Slovak court system there are 8 Regional courts which are the courts with dual competence. The Regional courts are the courts of appeal with the general jurisdiction in the civil, commercial and the criminal cases. In the appellate procedure they decide the appeals lodged against the decisions of all 54 District courts within their local jurisdiction. At the same time the Regional courts have the jurisdiction as the courts of first instance in administrative matters. They act as the administrative courts.

The Specialized Criminal court is competent to judge the grave criminal matters enumerated in the § 14 of the Criminal procedure Code (e. g. premeditated murder, corruption, terrorism, organised crime, severe economic crimes, damaging the financial interests of the EU etc.). Highest instance courts are the Supreme Court, Supreme Administrative Court and the Constitutional Court.

**Q043 (2021):** The first instance administrative cases agenda is concentrated in eight regional courts, which also act as general courts of appeal. The question (43.) defines specialized courts as legal entities, so it cannot be understood that the administrative cases agenda is centralized on specialized courts as legal entities, but it is concentrated on 8 regional general courts. These 8 general regional courts are already legal entities included in Q42, line 1.2. Highest instance courts are the Supreme Court and the new Supreme Administrative Court.

**Q043 (2020):** The first instance administrative cases agenda is concentrated in eight regional courts, which also act as general courts of appeal. The question (43.) defines specialized courts as legal entities, so it cannot be understood that the administrative cases agenda is centralized on specialized courts as legal entities, but it is concentrated on 8 regional general courts. These 8 general regional courts are already legal entities included in Q42, line 1.2.

**Q044 (2021):** The Constitutional court is not included in Q44.

**Q044 (2020):** The Constitutional Court is not included in the 44 answer.

**Q044 (2014):** According to 2014 data, on 1st July 2016, the new Civil Litigious Procedure Code will enter into force. It introduces the so called "causal jurisdiction" of first instance courts. It means that certain types of civil claims will belong to the jurisdiction of only some of the first instance courts. This will apply e.g. for individual labour disputes, arbitration disputes, disputes arisen from bill of exchange etc.

## Slovenia

**Q042 (General Comment):** First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

Second instance courts of general jurisdiction: 4 higher courts

Specialised courts: 3 labour courts (1st instance) + 1 labour and social court (1st instance) + 1 Administrative court (1st instance) + 1 Higher labour and social Court (2nd instance) = 6

Highest instance courts of general jurisdiction: The Supreme Court (also highest instance court for specialised courts)

**Q042 (2018):** First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 Administrative court = 5

All courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court) + second instance courts and courts of appeal (4 higher courts of general jurisdiction + 1 higher labour and social court) + the Supreme court = 77.

**Q042 (2017):** First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 Administrative court = 5

All courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court) + second instance courts and courts of appeal (4 higher courts of general jurisdiction + 1 higher labour and social court) + the Supreme court = 77.

**Q042 (2016):** First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 Administrative court = 5

All courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court) + second instance courts and courts of appeal (4 higher courts of general jurisdiction + 1 higher labour and social court) + the Supreme court = 77.

**Q042 (2015):** legal entities:

First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 administrative court = 5

geographic locations:

All the courts = 77

- first instance courts of general jurisdiction = 55 (Q42.1); additionally

- first instance specialised courts = 4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court = 16; additionally

- second instance courts and courts of appeal = 4 higher courts of general jurisdiction + 1 higher labour and social court = 5; and finally

- supreme court: the Supreme Court of the Republic of Slovenia = 1.

**Q043 (General Comment):** Although the given answer for 'labour courts' is 4 and 'insurance and/ or social welfare courts' at first instance is 1, the total number of these courts is 4, as one of the labour courts and the social court form a single legal entity – the Labour and social court in Ljubljana.

Concerning specialised courts – higher instances, although the given answer for 'labour courts' is 1 and 'insurance and/ or social welfare courts' is 1, the total number of these courts is 1, as they form a single legal entity – the Higher labour and social Court.

**Q043 (2019):** Please see general comment.

**Q044 (General Comment):** First instance courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts and social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of the Administrative court) =70

All courts: In addition to above also 4 higher courts of general jurisdiction + 1 higher labour and social court + the Supreme court = 76.

**Q044 (2018):** A change in the organisation of first instance courts (judicial map), as well as first instance judges' position is being prepared by the Ministry of Justice - see Q208.

**Q044 (2016):** Ministry of Justice is preparing court network reform. Existing first instance court network is considered as inefficient and insufficient. The main goal of this reform is to set up a system, which could assure better quality and efficiency of adjudication, specialization of judges and even allocation of cases. Furthermore, reform still should assure proper access to the courts and financial efficiency. Ministry of Justice is also taking in consideration different system of the nomination of judges, nomination of Supreme Court judges and president of the Supreme Court. Existing nomination procedure of judges is too rigid and does not enable taking prompt actions when the post is vacant.

**Q044 (2014):** According to 2014 data, discussions about the reorganization of the structure of courts have been initiated. Following the CEPEJ Guidelines on the creation of judicial maps to support access to justice within a quality judicial system (CEPEJ(2013)7) the change should be gradual. The reduction in the number of courts regarding geographical locations is not foreseen, but reorganization in the powers of local courts that are organizational units of district courts might be needed. There are local courts that have only a few (3-5) judges, which is not rational in the sense of court management. Such local courts might start dealing only with certain kinds of cases, with other local courts in the same district dealing with other kinds of cases, having de facto specialized local courts.

Nevertheless, these changes are still in the initial debate phase, so no formal proposal can be presented yet.

## Spain

**Q042 (General Comment):** In Spain, as general rule, the First Instance are unipersonal Courts: One Judge-courts. In Spain we have two types of specialization: Special Jurisdictions established by Organic Law (Violence against women, Commercial, for example), and the possibility for GCJ to determine that in some places, a general jurisdiction Court (Civil) is focused in some kind of cases.

**Q043 (General Comment):** The Arbitration Court was created by decision of the General Council of the Judiciary of 25 November 2010. The latter assigns exclusive jurisdiction over arbitration matters to the Court of First Instance No. 101 of Madrid. This measure seeks to foster the development of uniform criteria in court proceedings for the assistance and control of arbitration in Madrid.

In Spain, as general rule, the First Instance are unipersonal Courts: One Judge-courts. In Spain we have two types of specialization: Special Jurisdictions established by Organic Law (Violence against women, Commercial, for example), and the possibility for GCJ to determine that in some places, a general jurisdiction Court (Civil) is focused in some kind of cases.

**Q043 (2022):** Courts Labour specialised in enforcement; Courts on enforcement of Arbitration; Civil Registry; Courts on Penitentiary Surveillance; Courts for mortgage enforcement; Courts on capacity of persons; Criminal Courts of Violence against Women; other

**Q043 (2021):** "Juzgados de lo Mercantil" are in Spain in charge of insolvencies and commercial cases (both). So it cannot be separated commercial and insolvency.

**Q043 (2020):** Commercial courts - new units have been established.

**Q043 (2019):** Courts of violence against women 106

Foreclosure proceedings Courts: 3

Court of arbitration: 1

Civil capacity courts: 13

Criminal courts: 348

Criminal courts specialized in Violence against women, 31

Juvenile Courts: 82

Prison courts: 51

Civil Registries: 28

**Q043 (2018):** Between 2016 and 2018, more first instance courts have become specialized in family matters. Courts of violence against women: 106  
Foreclosure proceedings Courts: 3  
Court of arbitration: 1  
Civil capacity courts: 12  
Criminal courts: 341  
Criminal courts specialized in Violence against women, 32  
Juvenile Courts: 82  
Prison courts: 51  
Civil Registries: 28  
Additionally (and they are not accounted) there are 26 military courts that are not part of the Judiciary but they are inspected by it)

**Q043 (2017):** -338 Criminal courts  
-32 Criminal courts specialized in violence against women  
-106 violence against women courts  
-82 juvenile courts  
-51 Prison courts  
-3 foreclosure proceedings courts  
-1 Arbitration court  
-18 Civil Capacity courts  
- 28 Civil register offices

**Q043 (2016):** - 335 Criminal courts  
-30 Criminal courts specialized in violence against women  
-106 violence against women courts  
-83 juvenile courts  
-51 Prison courts  
-3 foreclosure proceedings courts  
-1 Arbitration court  
-18 Civil Capacity courts  
- 28 Civil register courts

**Q043 (2015):** Other specialised courts include: 343 Penal courts; 23 Penal courts specialized in violence against women; 106 violence against women courts; 83 juvenile courts; 50 Prison courts; 3 foreclosure proceedings courts; 1 Arbitration court; 12 Civil Capacity courts and 28 Civil registry.

The Commercial Courts deal with insolvency issues.

Military Courts have not been accounted because they do not belong to the Judiciary (except the Supreme Court 5th room ). There are other 26 Military Courts.

**Q043 (2014):** In 2014, the category “other” encompasses: 357 Penal courts; 23 Penal courts specialized in violence against women; 106 violence against women courts; 83 Juvenile courts; 50 Prison courts; 16 Courts for disabled people (capacity courts), 26 Civil Register Courts, 3 Foreclosure proceedings courts (mortgage courts); 1 Arbitration court. The Decanatos exclusive are not included in this exercise because these organs are not courts and have rather administrative nature.

**Q043 (2012):** In 2012, the category “other” encompasses: 380 Penal courts; 17 Penal courts specialised in violence against women; 106 Violence against women courts; 82 Juvenile courts; 1 Juvenile Enforcement court; 50 Prison courts; 9 Capacity courts; 26 Civil Register courts; 8 Decanatos exclusive; 4 Labour enforcement courts; 4 Mortgage courts and one Arbitration Court.

**Q044 (General Comment):** One building usually houses different courts. For example, in Madrid one building (Castilla Square) houses 47 unipersonal Courts.

**Q044 (2018):** The traditional structure of a Court includes a Judge (or Magistrate), a Judicial Counsellor, and several civil servants (the exact number depends on many circumstances). The New Judicial Office (Nueva Oficina Judicial) has been implemented in many territories and its development continues. The New Judicial Office (NOJ) has, as base, the called 'Procedural Unit of Direct Support' (UPAD), a small office with personnel necessary for the strict aid of the work of the Judge. On the other hand, and for the uniform processing of repetitive tasks, the called Common Procedural Services have been created. The Judicial Counsellor is the Director of these services, and is responsible of processing the phase of the judicial file of a strictly procedural nature.

**Q044 (2016):** The traditional structure of a Court includes a Judge (or Magistrate), a Lawyer of the Administration of Justice, and several civil servants (the exact number depends on many circumstances). The New Judicial Office (Nueva Oficina Judicial) has been implemented in many territories and its development continues. The New Judicial Office (NOJ) has, as base, the called 'Procedural Unit of Direct Support' (UPAD), a small office with personnel necessary for the strict aid of the work of the Judge. On the other hand, and for the uniform processing of repetitive tasks, the called Common Procedural Services have been created. The Lawyer of the Administration of Justice is the Director of these services, and is responsible of processing the phase of the judicial file of a strictly procedural nature.

**Q044 (2014):** On the occasion of the 2014 evaluation, the attention was drawn on the deployment in the entire country of the Judicial Office, the new model for organising courts of law and the creation of the Instance Courts (Tribunales de Instancia), a new model of collegial courts aimed at replacing local courts belonging to the same judicial district.

# Indicator 2: The judicial organisation

*Question 043.*

*Question 044.*

#### Question 042

##### Austria

**(2022):** In 2022 in Austria, the number of courts considered as legal entities is 152. Namely, there are 133 courts of general jurisdiction and 19 specialised courts. Among the 133 legal entities of general jurisdiction, 128 act at first instance, 4 at second instance and one at third instance. More precisely, the 115 District courts and the 13 Regional courts of general jurisdiction intervene as first instance courts. It is noteworthy that the 7 other regional courts that have specialised jurisdiction are not taken into consideration here, but are counted as specialised first instance courts (*infra*). It is to be mentioned that the peculiarity of the 20 Austrian Regional courts is that even though these are first instance courts, some of them are also competent in respect of appeals against District courts' decisions. The 4 Higher Regional Courts have appeal competence in respect of all civil and criminal cases.

The Supreme court is the highest instance court in civil and criminal matters.

**(2020):** In 2020 in Austria, the number of courts considered as legal entities is 152. Namely, there are 133 courts of general jurisdiction and 19 specialised courts. Among the 133 legal entities of general jurisdiction, 128 act at first instance, 4 at second instance and one at third instance. More precisely, the 115 District courts and the 13 Regional courts of general jurisdiction intervene as first instance courts. It is noteworthy that the 7 other regional courts that have specialised jurisdiction are not taken into consideration here, but are counted as specialised first instance courts (*infra*). It is to be mentioned that the peculiarity of the 20 Austrian Regional courts is that even though these are first instance courts, some of them are also competent in respect of appeals against District courts' decisions. The 4 Higher Regional Courts have appeal competence in respect of all civil and criminal cases.

The Supreme court is the highest instance court in civil and criminal matters.

**(2014):** From January 1st 2013 to July 1st, 2014 a number of district courts merged. In 2014, there are 129 first instance district courts which is less than 132 (number communicated for 2013) but still not complying with the aim of 115.

##### Belgium

**(General Comment):** The reform of the Justices of the peace, involving a reduction in geographical establishments, was consolidated by the law of 25th December 2017. The implementation of the reform took place between 2016 and 2019.

1.1 General jurisdiction courts of first instance : 13 first-instance courts, 162 Justices of the peace, 11 assize courts (one per province and two in Brussels), and 15 police courts.

1.2 General jurisdiction appellate courts : There are five appellate courts ; however, the 13 first-instance courts also act as appellate jurisdictions with regard to decisions made by the justices of the peace.

Vertical coherence within the table is not ensured, since the total counts for each category did not account for those instances where a single court has dual jurisdiction (first and second instance).

For this current assessment cycle (2020 data), both justices of the peace and police court figures are included under general courts. In previous cycles, they were categorized as specialized first-instance jurisdictions. As from year-end-2020, data includes all eleven assize courthouses too.

Given that Council of State acts both at first instance level and on appeal, it has been accounted for under both columns Q43 but only once within total column Q42.

**(2022):** 1.2. The courts of general jurisdiction at the second instance – legal entities : only the 5 courts of appeal have been mentioned here, but the 13 lower courts also have jurisdiction to hear appeals from decisions of the Justices of the peace.

**(2021):** 1.1 First instance courts of general jurisdiction: 13 first instance courts, 162 Justices of the peace, 11 Assize courts (one per province and two in Brussels) and 15 Police courts.

1.2 Second instance courts of general jurisdiction: 5 Courts of appeal (the 13 first instance courts that rule as appeal courts on the decisions of the Justices of the peace are taken into consideration only within line 1.1).

As for the previous evaluation round (2020 data), Justices of the peace and Police courts are counted as courts of general jurisdiction. Before 2020, they were categorized as specialized courts of first instance. As of 2020, the 11 Assize courts are also included in the data. Insofar as the Council of State (Conseil d'Etat) intervenes both in first instance and on appeal, it has been taken into account in both columns of Q43, but only once in the total of Q42.2.

It is worth mentioning that the Assize courts are not structural entities (they are not permanent); they are organised within the Courts of appeal. The Assize court is constituted whenever the Investigation Chamber of the respective Court of appeal (Chambre des mises en accusation) refers a case to that court - the Assize court.

All courts in Belgium (except the Court of cassation) are grouped into 49 legal entities (steering committees).

**(2020):** "1.1 First instance Courts of general jurisdiction: 13 first instance courts, 162 justices of the peace, 11 assize courts (one per province and two in Brussels) and 15 police courts. "Second instance Courts of general jurisdiction": 13 courts of first instance that rule as appeal courts on the decisions of the justices of the peace and 5 appeal courts.

Vertical consistency in the table is not ensured, as the 13 courts of first instance with dual jurisdiction (1 and 2 instances) have been counted only once in the totals.

For the current evaluation round (2020 data), justices of the peace and police courts are counted as general courts. In previous cycles, they were categorized as specialized courts of first instance. As of 2020, the 11 assize courts are also included in the data. Insofar as the Conseil d'Etat intervenes both in first instance and on appeal, it has been taken into account in both columns of Q43, but only once in the total of Q42.2."

**(2017):** The law of 25 December 2017 amended the number of cantons of justices of the peace from 187 to 162. The implementation of this reform will take place until 2019.

**(2016):** A reform of the justices of the peace is under way, leading to a reduction in the number of hearing locations.

**(2014):** Following a reform of the judicial map, the number of legal entities decreased: from 27 to 13 first instance courts, from 27 to 9 labour courts, from 27 to 9 commercial courts, and from 34 to 15 police courts.

## Bulgaria

**(General Comment):** There are the following courts in Bulgaria: District Courts- 113- The District Court is the main court of first instance. It has jurisdiction over all cases except those which are statutorily assigned to another court. It deals with civil, criminal and administrative-criminal cases. The decisions of the district courts are subject to appeal before the respective Regional court. Provincial/Regional Courts- 28- The Provincial Courts act as courts of first and second instance. As courts of first instance, they examine a precisely defined category of cases involving significant sums or substantial societal interest. When acting as a second (appellate) instance, they re-examine decisions taken by the district courts. Administrative Courts- 28, Courts of Appeals - 5, Military Courts - 3 - The Military courts consider criminal cases of crimes committed by servicemen or officials of the Interior Ministry at first instance. Military Court of Appeal - 1 Supreme Court of Cassation - 1 Supreme Administrative Court - 1

**(2022):** Regional/ Provincial courts are courts of first instance for a certain category of cases and courts of second instance for another category of cases. In this case, they are included in the number of courts of second instance with general jurisdiction, the decisive indicator used is the number of incoming cases.

**(2020):** Judiciary System Act

Article 65

All courts are legal entities funded by the budget and shall be represented by the administrative head or another designated person. In the discharge of the functions of administrative head, orders, instructions and rules shall be issued in accordance with the statutory competence. The general assembly, the plenum of the Supreme Cassation Court and the Plenum of the Supreme Administrative Court shall be bodies of the respective court, which rule only in the cases specified in the law, give opinions, adopt rules and decisions by open ballot and a majority of more than half of the judges present.

**(2019):** There are the following courts in Bulgaria: District Courts- 113- The District Court is the main court of first instance. It has jurisdiction over all cases except those which are statutorily assigned to another court. It deals with civil, criminal and administrative-criminal cases. The decisions of the district courts are subject to appeal before the respective Regional court. Provincial/Regional Courts- 28- The Provincial Courts act as courts of first and second instance. As courts of first instance, they examine a precisely defined category of cases involving significant sums or substantial societal interest. When acting as a second (appellate) instance, they re-examine decisions taken by the district courts.

Administrative Courts- 28

Specialized Criminal Court -1

Courts of Appeals - 5

Specialized Court of Appeal - 1

Military Courts - 3 - The Military courts consider criminal cases of crimes committed by servicemen or officials of the Interior Ministry at first instance.

Military Court of Appeal - 1

Supreme Court of Cassation - 1

Supreme Administrative Court - 1

**(2018):** 42.1. District Court - 113

The District Court is the main court of first instance. It has jurisdiction over all cases except those which are statutorily assigned to another court. It deals with civil, criminal and administrative-criminal cases. The decisions of the district courts are subject to appeal before the respective Regional court.

Provincial/ regional courts- 28

The provincial courts act as courts of first and second instance. As courts of first instance, they examine a precisely defined category of cases involving significant sums or substantial societal interest. When acting as a second (appellate) instance, they re-examine decisions taken by the district courts.

Military first instance courts- 3

Military courts consider criminal cases of crimes committed by servicemen or officials of the Interior Ministry at first instance.

## Croatia

**(General Comment):** The reform of judicial map implemented in 2015 decreased the number of Misdemeanour Courts from 63 to 22. Therefore, in accordance with the Act on Territorial Jurisdiction and Seats of Courts (Official Gazette, No. 128/14) in force, there are currently 22 Misdemeanour Courts in function. On the 1st of January 2019. new Courts Areas and Seats Act came into force. From the organizational aspect, the most important organizational measure was the merging of misdemeanor courts into municipal courts, and few municipal courts were reopened after 2015. That is why we have now less first instance specialized courts than in 2018. and more courts of general jurisdiction (22 courts which were in 2018. plus 8 courts which were reopened after the new law came into force).

**(2020):** On the 1st of January 2019. new Courts Areas and Seats Act came into force. From the organizational aspect, the most important organizational measure was the merging of misdemeanor courts into municipal courts, and few municipal courts were reopened after 2015. That is why we have now less first instance specialized courts than in 2018. and more courts of general jurisdiction (22 courts which were in 2018. plus 8 courts which were reopened after the new law came into force).

**(2019):** On the 1st of January 2019. new Courts Areas and Seats Act came into force. From the organizational aspect, the most important organizational measure was the merging of misdemeanor courts into municipal courts, and few municipal courts were reopened after 2015. That is why we have now less first instance specialized courts than in 2018. and more courts of general jurisdiction (22 courts which were in 2018. plus 8 courts which were reopened after the new law came into force).

**(2016):** There was a reform of judicial map implemented in 2015 in which the number of Misdemeanour Courts has decreased from 63 to 22. Therefore, in accordance with the Act on Territorial Jurisdiction and Seats of Courts (Official Gazette, No. 128/14) in force, there are currently 22 Misdemeanour Courts in function.

**(2014):** In 2014, according to the Act on Territorial Jurisdiction and Seats of Courts, there are 67 first instance courts but the Municipal Court in Novi Zagreb is not in function while the Municipal Criminal Court in Zagreb is a specialized court counted in Q42.2. Accordingly, there are 65 actually functioning first instance courts of a general jurisdiction.

**(2013):** For 2013, the Ministry of Justice added to the number of geographic locations all offices of a specific court that are located outside of the seat of the court, in which judicial activities are undertaken. The number of courts did not increase in 2013. Also, 66 municipal courts (65 municipal courts and 1 Municipal Criminal Court in Zagreb) were in function out of total 67 first instance courts prescribed by the Act on Territorial Jurisdiction and Seats of Courts. The Municipal Court in Novi Zagreb is still not in function.

## **Cyprus**

**(2020):** Cyprus has a two-tier system, therefore the Supreme Court is the second, highest and final instance court. The data for Supreme Court in this question are included in the highest instance courts, but the case flow data of the Supreme Court are included in the second instance cases - questions 97 and 98.

**(2017):** x

**(2014):** The number of courts changed in 2014. Instead one labour court in the district of Nicosia, there are 3 separate courts in different districts. This applies as well as for rent and tenancies court. One more family court was also established. The Assize court deals with serious criminal offences only.

## **Czech Republic**

**(2022):** 2. Supreme Administrative Court

**(2021):** 2. Supreme Administrative Court

**(2020):** 2. Supreme Administrative Court

**(2017):** There are no specialised first instance courts, but judges within individual courts are specialised (e.g. for family, labour and enforcement cases at district courts, and insolvency and administrative cases at regional courts as first instance courts).

**(2016):** There are no specialised first instance courts, but judges within individual courts are specialised (e.g. for family, labour and enforcement cases at district courts, and insolvency and administrative cases at regional courts as first instance courts).

## **Denmark**

**(General Comment):** District courts are called 1st instance courts, the Land Registration court and the Maritime and Commercial Court are considered as first instance specialized courts. Second and third instance courts are the two High Courts and the Supreme Court.

**(2021):** Under "2" is Land Registration Court and Maritime and Commercial Court. In 4 is beside the 24 district courts 4 biting court houses.

**(2019):** Commercial and naval court  
Land Registration court.

**(2018):** Data has not changed on this point.

**(2017):** District courts are called 1st instance courts, the Land Registration court and the Maritime and Commercial Court are considered as first instance specialized courts. Second and third instance courts are the two High Courts and the Supreme Court.

## **Estonia**

**(2019):** A small courthouse was adjoined with another small courthouse. The distance between them was less than 50 km.

**(2016):** A small courthouse was adjoined with another small courthouse. The distance between them was less than 50 km.

## **Finland**

**(General Comment):** In Finland, there are 20 district courts with 36 offices, five courts of appeal, the Supreme Court, six administrative courts, the Supreme Administrative Court, the Market Court, the Labour Court and the Insurance Court. One of the administrative courts, the Labour Court and the Market Court are located in the same location. In total there are 36 courts in 52 geographic locations.

**(2021):** The number of district courts was reduced at the re-structuring on 1.1.2019

**(2020):** The number of district courts was reduced at the re-structuring on 1.1.2019.

**(2019):** The Court Network has been modified.

**(2016):** Some geographic locations of the District Courts have been shut down.

**(2014):** In 2014, in Finland there are 81 courts as geographic locations, namely 27 District Courts, 13 Branch offices of District Courts, 25 Auxiliary courtrooms of District Courts (23 till 2014), 3 specialized courts, 6 Administrative Courts (8 till 2014), 5 Courts of Appeal (6 till 2014), the Supreme Court and the Supreme Administrative Court.

## France

**(2021):** 1.1 : 164 TJ + 4 TPI

1.2 : 30 Courts of appeal in mainland France + 6 Courts of appeal in overseas France + 1 Superior Court of Appeal in Saint Pierre and Miquelon = 37

1.3: the Court of Cassation

Source DSJ

**(2020):**

There are 168 first instance courts of general jurisdiction, 37 second instance courts of general jurisdiction, and 1 highest instance court of general jurisdiction in the French judicial system.

**(2019):** See the comment on specialised first instance courts in the frame of Q43.

**(2018):** With regard to the ordinary courts, the number indicated in the 2016 questionnaire includes the local courts that have been abolished since 1 July 2017 (Act No. 2011-1862 of 13 December 2011), their powers having been taken over by the courts of first instance in civil matters and by the police courts attached to the courts of first instance in criminal matters. The number of 786 corresponded to: 164 TGI + 4 TPI + 307 TI + 311 jprox. Since then, TIs have been removed from the category of ordinary courts of first instance since they constitute specialised courts of first instance. The number of 479 ordinary courts of first instance therefore corresponded to 164 TGI + 4 TPI + 311 TPROX. The figure of 168 is thus explained by the abolition of the 311 local courts since 1 July 2017, as indicated in the comments in the questionnaire. Thus:  $479 - 311 = 168$  ordinary courts of first instance (164 TGI + 4 TPI).

## Germany

**(General Comment):** Even though the German legal system generally knows three instances (first instance, appeal on questions of fact and law, appeal on questions of law only), the different kinds of courts do not correspond directly to the stages of appeal. Local courts (Amtsgerichte) are first instance courts with the regional courts (Landgerichte) as next stage of appeal (exceptions apply in family matters). However, regional courts do not only serve as second instance courts but also deal with first instance cases. Whether a case is initially dealt with at a local or regional court depends (among other things) on the value at dispute (civil cases) or on the kind of the suspected offence (criminal cases). Similarly the higher regional courts may serve as second instance courts (for cases that were initially dealt with at regional courts or for cases in family matters) and as highest instance courts for cases that were initiated at the local courts (especially in criminal cases).

The constitutional courts of the federal states and the Federal Constitutional Court (Bundesverfassungsgericht) are not part of the stages of appeal. Constitutional jurisdiction is also seen as separate from general and specialised jurisdiction.

Constitutional courts review legislation with regard to constitutional provisions. The Federal Constitutional Court mainly assesses alleged violations of basic rights by public authorities. However, in order to have access to the constitutional courts, the regular path of legal proceedings must generally be exhausted.

**(2022): 1.1** First instance courts include: 638 local courts, 115 regional courts regional courts handle first as well as second instance cases. In 2022, regional courts registered 300 266 incoming first instance cases and 68 876 incoming second instance cases (civil and criminal matters). For further information see General Comment.

**1.2** Second instance courts include: 24 higher regional courts

higher regional courts handle second and third instance cases as well as certain (few) first instance cases. Higher regional courts are the third and final instance with regard to criminal cases, that were originally initiated at the local courts. In 2022, higher regional courts recorded 72 201 incoming second instance cases (excluding family matters) and 4 761 incoming third/last instance cases. For further information see General Comment.

**1.3** Highest instance courts include: Federal Supreme Court

**2.** The total number of specialised courts includes administrative, labour, financial, and social courts as well as the Federal Patent Court.

Discrepancy in comparison to the 2022-2020 cycle:

regional courts were originally counted twice as first instance and second instance courts. Higher regional courts were counted as second instance courts. This was changed during the 2023-2021 cycle (EU-Scoreboard). The regional courts and higher regional courts are now placed according to the number of incoming cases as outlined in the explanatory note.

In previous cycles, the total number of specialised courts included 16 constitutional courts of the federal states as well as the Federal Constitutional Court. In the current cycle, these courts are no longer included as they are mostly seen as separate from the ordinary justice system (for further information please refer to the general comment).

**(2021): 1.1** First instance courts include: 638 Local Courts, 115 Regional Courts

Regional Courts handle first as well as second instance cases. In 2021, Regional Courts registered 344 128 incoming first instance cases and 75 400 incoming second instance cases (civil and criminal matters). For further information see General Comment.

**1.2** Second instance courts include: 24 Higher Regional Courts

Higher Regional Courts handle second and third instance cases as well as certain (few) first instance cases. Higher Regional Courts are the third and final instance with regard to criminal cases, that were originally initiated at the Local Courts. In 2021, Higher Regional Courts recorded 102 029 incoming second instance cases and 5 089 incoming third/last instance cases. For further information see General Comment.

**1.3** Highest instance courts include: Federal Supreme Court

The total number of specialised courts includes 16 Constitutional Courts of the Länder.

**(2020): 1.1** First instance courts include: 638 Local Courts, 115 Regional Courts

**1.2** Second instance courts include: 115 Regional Courts, 24 Higher Regional Courts

**1.3** Highest instance courts include: 24 Higher Regional Courts, Federal Supreme Court

The vertical consistency is not fulfilled, since the 115 Regional Courts appear as "First instance courts" (1.1) as well as "Second instance courts" (1.2) and 24 Higher Regional Courts appear as "Second Instance Courts"(1.2) as well as "Highest Instance Courts" (1.3).

For further information please consult the General Comment.

The total number of specialised courts includes 16 Constitutional Courts of the Länder.

## Greece

**(2020):** In highest instance courts include the Supreme Court( Areios Pagos). In First instance courts of general jurisdiction are included in the number 259, 196 local and District Criminal Courts and 63 courts of first degree.

## Hungary

**(General Comment):** The Hungarian court system is as follows: Kúria (1) – the Hungarian Supreme Court - its jurisdiction in criminal, civil and administrative cases covers adjudication of extraordinary remedies and appeals, adopting uniformity decisions. It also decides if municipal decrees are in compliance with higher level legislation. Regional courts of appeal (5) – their jurisdiction in criminal and civil cases covers the adjudication of appeals received from the regional courts (third instance in criminal cases). Regional courts (20) – their jurisdiction in criminal, civil and administrative cases covers the adjudication of appeals received from district courts, administrative and labour courts, and procedure at first instance in certain criminal and civil cases. District courts (113) – their jurisdiction in criminal and civil cases covers the procedures at first instance. The number of judges in the largest district court is 357, whereas the smallest court operates with one judge. Out of the 113 district courts, the district courts in the seat of the regional courts have special competences in many cases.

**(2020):** The Hungarian court system is as follows: Kúria (1) – the Hungarian Supreme Court - its jurisdiction in criminal, civil and administrative cases covers adjudication of extraordinary remedies and appeals, adopting uniformity decisions. It also decides if municipal decrees are in compliance with higher level legislation. Regional courts of appeal (5) – their jurisdiction in criminal and civil cases covers the adjudication of appeals received from the regional courts (third instance in criminal cases). Regional courts (20) – their jurisdiction in criminal, civil and administrative cases covers the adjudication of appeals received from district courts, administrative and labour courts, and procedure at first instance in certain criminal and civil cases. District courts (113) – their jurisdiction in criminal and civil cases covers the procedures at first instance. Out of the 113 district courts, the district courts in the seat of the regional courts have special competences in many cases. Administrative and labour courts (20) were dismissed on the 31st of March 2020. From this date Regional Courts deal with labour cases on first instance while administrative cases are dealt with by eight Regional Court on a regional level.

**(2019):** 113 District Courts (first instance courts of general jurisdiction)

20 Administrative and Labour Courts (specialized first instance courts)

20 Regional Courts (second instance courts of general jurisdiction + first instance courts in cases of higher importance)

5 Regional Courts of Appeal (second instance courts in cases of higher importance)

1 Supreme Court ("Kúria" - special judicial review)

It has to be noted that Administrative and Labour Courts are merged into the regional courts on the 31st of March 2020. Since 1st of April 2020 every regional court deals with labour cases on first instance (second instance are the regional courts of appeal) and 8 regional courts have special administrative law department dealing with first instance cases (second instance is the Supreme Court).

**(2018):** Two new district courts were established (one in 2017 in the city of Szigetszentmiklós, another one in 2019 in the city of Érd).

113 District Courts (first instance courts of general jurisdiction)

20 Administrative and Labour Courts (specialized first instance courts)

20 Regional Courts (second instance courts of general jurisdiction + first instance courts in cases of higher importance)

5 Regional Courts of Appeal (second instance courts in cases of higher importance)

1 Supreme Court (special judicial review)

**(2017):** All courts include :

112 District Courts

20 Regional Courts

20 Administrative and Labour Courts

5 Regional Courts of Appeal

1 Supreme Court (Kúria)

The Hungarian court system is as follows: Kúria (1) – the Hungarian Supreme Court - its jurisdiction in criminal, civil and administrative cases covers adjudication of extraordinary remedies and appeals, adopting uniformity decisions. It also decides if municipal decrees are in compliance with higher level legislation. Regional courts of appeal (5) – their jurisdiction in criminal and civil cases covers the adjudication of appeals received from the regional courts (third instance in criminal cases). Regional courts (20) – their jurisdiction in criminal, civil and administrative cases covers the adjudication of appeals received from district courts, administrative and labour courts, and procedure at first instance in certain criminal and civil cases. District courts (112) – their jurisdiction in criminal and civil cases covers the procedures at first instance. The number of judges in the largest district court is 357, whereas the smallest court operates with one judge. Out of the 111 district courts, the district courts in the seat of the regional courts have special competences in many cases. Administrative and labour courts (20) – their jurisdiction covers procedures at first instance in individual and collective labour disputes and in administrative cases. First instance administrative and labour courts (20) started operating on 1 January 2013 as first instance specialized courts. Thus from this date the number of first instance courts of general jurisdiction is 112.

## Ireland

**(General Comment):** In Ireland, there are only three first instance courts (as legal entities) exercising general jurisdiction for the entire State (the High Court, the Circuit Court and the District Court). Each of those three courts has a single court president only, who exercises a nationwide remit for his/her court. The number of geographic locations reflects the physical location serving as seats or venues for the three jurisdictions.

**(2016):** The specialised courts referred to are the two Special Criminal Courts the jurisdiction of which generally relates to trial of terrorism- and organised crime-related offences.

The increase of one location over the figure provided for 2014 refers to the temporary relocation of the Dublin District Court's Drug Treatment Court in 2016.

## Italy

**(2018):** In 2012-2013 we went through a major reform of the judicial map. In particular, a great number of justice of peace offices (initially 846) were shut down. However, each Italian municipality had (and still has) the opportunity to preserve the office at their own expenses. For this reason, each year a series of Justice of Peace offices administered by the municipality might be re-opened or closed. 3 justice of peace offices closed between 2017 and 2018.

**(2017):** In 2012-2013 we went through a major reform of the judicial map. In particular, a great number of justice of peace offices (initially 846) were shut down. However, each Italian municipality had (and still has) the opportunity to preserve the office at their own expenses. For this reason, each year a series of Justice of Peace offices administered by the municipality might be re-opened or closed.

## Latvia

**(2022):** "1.1 First instance courts of general jurisdiction - legal entities": in 2022, three courts were merged into one, creating the Riga City Court.

In Latvia, the two administrative courts and the Economic court are considered as courts of general jurisdiction, but according to the CEPEJ methodology, data are inserted in line 2 "Total number of specialized courts".

**(2021):** In the total number of specialised courts - legal entities are included 1 Administrative court, 1 Administrative Regional (appeal) Court and 1 Economic Court, what was created and started operates from 31.03.2021. in Latvia. From 01.08.2022. is created and operates Riga City Court, merging 3 courts in Riga city territory. The number of first instance courts of general jurisdiction is indicated as it was in 2021, not including Riga City Court as 1 court in Riga. In Latvia is also Constitutional court - which within the jurisdiction specified in the Constitution of the Republic of Latvia and in this Law, shall adjudicate matters regarding the conformity of laws and other regulatory enactments with the Constitution, as well as other matters regarding which jurisdiction is conferred upon it by this Law. The Constitutional court is not included in the total number of the courts.

**(2020):** In the total number of specialised courts - legal entities are included 1 Administrative court and 1 Administrative Regional (appeal) court. Starting from 31.03.2021. in Latvia is created and operates the Economic Court. The Economic Court is not included in the total number of specialized courts. In Latvia is also Constitutional court - which within the jurisdiction specified in the Constitution of the Republic of Latvia and in this Law, shall adjudicate matters regarding the conformity of laws and other regulatory enactments with the Constitution, as well as other matters regarding which jurisdiction is conferred upon it by this Law. The Constitutional court is not included in the total number of the courts.

**(2019):** Since the reform of March, 2018, the number of first instance courts has been reduced to 10 legal entities at first instance (9 general + 1 administrative). There are also 6 appellate courts and Supreme court. In 2019 was completed reform of Land Register Units, which are included in the composition of district (city) courts. The number of legal entities doesn't changes, but number of courts per geographic locations therefore differs. The data regarding the geographic locations are indicated on 31.12.2019.

**(2018):** Since the reform of March, 2018, the number of first instance courts has been reduced to 10 legal entities at first instance (9 general + 1 administrative). There are also 6 appellate courts and Supreme court.

**(2017):** The number of first instance courts (legal entities) is indicated on 31.12.2017., in Latvia starting from 2015 till March, 2018 was a reform where court map was revised. The number of first instance courts (legal entities) starting from March, 2018 is 9. As regards the specialised court - there is only one specialised court the Administrative court with 5 court houses.

**(2016):** There is only one specialised court the administrative court with 5 court houses

## Lithuania

**(General Comment):** 1.1. 12 district courts;

1.2. 5 regional courts (regional courts are appeal instance for judgments, decisions, rulings and orders of district courts as well as first instance courts adjudicating certain categories of cases; in this table regional courts are counted only as second instance courts of general jurisdiction) and the Court of Appeal of Lithuania;

2. 2 regional administrative courts and the Supreme Administrative Court of Lithuania.

Regional courts as the first instance courts examine criminal cases in which persons are accused of having committed serious and very serious crimes, as well as cases in which the accused were the President of the Republic of Lithuania, members of the Seimas (Parliament) or Government, judges, judges or prosecutors of the Constitutional Court at the time of the commission of the criminal act.

Regional courts as the first instance deal with civil cases in which the amount of the claim is greater than 28,510 EUR (except for family legal relations cases due to the division of property), copyright cases, civil public tender legal relations cases, bankruptcy and restructuring cases, according to the statement of the bank's temporary administrator on reduction of the bank's share capital, cases in which one of the parties is a foreign state, according to lawsuits regarding the forced sale of shares, due to the investigation of the activity of a legal entity, and other cases.

Only the Vilnius Regional Court, with exclusive rights, in accordance with the laws in force, as a court of first instance hears cases regarding disputes provided for in the Patent Law of the Republic of Lithuania, regarding disputes provided for in the Trademark Law of the Republic of Lithuania, regarding adoption based on requests of foreign citizens

**(2022):** according to 2021 answers, Regional courts are counted only as second instance.

**(2021):** Regional courts are counted only as second instance; general comment has been updated in view of the changed assignment of the regional courts to the second instance only.

**(2020):** 1.1. 12 district courts and 5 regional courts (the latter are adjudicating certain categories of cases as first instance courts);

1.2. 5 regional courts and the Court of Appeal of Lithuania;

2. 2 regional administrative courts and the Supreme Administrative Court of Lithuania.

**(2018):** Number of courts (as legal entities) in Lithuania decreased from 1st January 2018 according to the Law on Reorganization of Courts of the Republic of Lithuania (Law of 23rd June, 2016 No. XII-2474). Instead of 49 district courts (as legal entities) there are now 12 district courts (some of them have court houses), instead of 5 regional administrative courts there are now 2 of them (one has houses). The number of first instance courts of general jurisdiction (legal entities) in point 42.1 implies 5 regional courts (of general jurisdiction) which are first instance for criminal and civil cases assigned to its jurisdiction by law. These courts also are appeal instance for judgements, decisions, rulings and orders of district courts, so their number is also included in the number of all courts at point 42.3.

**(2017):** From January 1, 2018, there are 22 left (17 first instance courts, 2 first instance courts of special jurisdiction, 2 courts of appeal (1 of them is specialized court) and 1 court of cassation).

**(2014):** As regional courts of Lithuania function not only as courts of appeal, but also as courts of first instance, for 2014, the number of these courts is also included in the number of first instance courts of general jurisdiction. This was not the case in earlier years.

## Luxembourg

**(General Comment):** 42.1.1: three justices of the peace and two district courts

42.1.2: a Court of Appeal 42.1.3: a Court of Cassation

42.2: Total specialized courts (all instances) In addition to the actual jurisdictions, the law of July 27, 1997 organizing the Constitutional Court established this court which is seized, as a preliminary ruling, when a question arises regarding the conformity of a law with the Constitution before a jurisdiction of either judicial or administrative order.

It rules by way of judgment on laws' conformity with the Constitution, except for those approving treaties.

When one party raises an issue concerning a law's compliance with the Constitution before either judicial or administrative jurisdiction, that jurisdiction must refer it to The Constitutional Court unless it considers that making decision on raised issue is unnecessary for its judgment; that such question lacks any foundation; or that The Constitutional Court has already ruled on an identical matter.

If any jurisdiction deems there's an issue about whether certain legislation complies with constitutional provisions and deciding upon this point is necessary for delivering its verdict then it should raise this matter ex officio after previously inviting parties to present their observations.

Parties are entitled to conclude and plead before The Constitutional Court through representation by counsel listed in Category I annually compiled tables set up by bar councils' orders."

The judgments from The Constitutional Courts are published in Official Journal within thirty days from their pronouncement." (Justice Portal : <https://justice.public.lu/fr/organisation-justice/cour-constitutionnelle.html>)

**(2022):** In addition to the regular courts, the Law of 27 July 1997 on the organization of the Constitutional Court established this court, which is seized for a preliminary ruling when a question arises before a judicial or administrative jurisdiction concerning the conformity of a law with the Constitution. It rules by way of judgment on the conformity of laws with the Constitution, except those approving treaties.

When a party raises an issue regarding compliance of a law with the Constitution before a judicial or administrative jurisdiction, that jurisdiction is required to refer it to the Constitutional Court, unless it considers that deciding on such matter is not necessary for its judgment, that there are no grounds for such issue or that there has already been an adjudication by the Constitutional Court on an identical matter.

If any jurisdiction deems that an issue relating to compliance of a law with the constitution arises and decision on this point is necessary for its judgment, it must raise it ex officio after having previously invited the parties to present their observations.

The parties are entitled to conclude and plead before the Constitutional Court through counsel registered in List I annually drawn up by the councils of bar associations.

Judgments from the Constitutional Court are published in the Official Gazette of Luxembourg within thirty days from their pronouncement. (Justice Portal: <https://justice.public.lu/fr/organisation-justice/cour-constitutionnelle.html>)

**(2020):** "In addition to the courts proper, the law of 27 July 1997 on the organization of the Constitutional Court established this court, which is seized, on a preliminary basis, when a question relating to the conformity of a law to the Constitution arises before a court of the judicial or administrative order. It rules, by means of a judgment, on the conformity of laws with the Constitution, with the exception of those concerning the approval of treaties.

When a party raises a question concerning the conformity of a law with the Constitution before a court of the judicial or administrative order, that court is obliged to refer the matter to the Constitutional Court, except when it considers that a decision on the question raised is not necessary to render its judgment, that the question is unfounded or that the Constitutional Court has already ruled on a question with the same object.

If a court considers that a question of conformity of a law with the Constitution arises and that a decision on this point is necessary to render its judgment, it must raise it of its own motion after first inviting the parties to present their observations. The parties are admitted to conclude and plead before the Constitutional Court through the ministry of a lawyer registered in list I of the tables drawn up annually by the Bar Associations.

The judgments of the Constitutional Court are published in the Official Journal of the Grand Duchy of Luxembourg within thirty days of their delivery. (Portal of Justice: <https://justice.public.lu/fr/organisation-justice/cour-constitutionnelle.html>) "

**(2017):** 42.1: 3 justices of the peace and 2 district courts

42.2: Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

**(2016):** 42.1: 3 justices of the peace and 2 district courts

42.2: Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

## Malta

**(2022):** The 1st instance courts of general jurisdiction are:

- the Court of Magistrates, Civil Jurisdiction
- the Court of Magistrates, Criminal Jurisdiction
- the Civil Court, First Hall - the Criminal Court

The 2nd instance courts of general jurisdiction are:

- the Civil Court of Appeal, Inferior Jurisdiction
- the Civil Court of Appeal, Superior Jurisdiction
- the Criminal Court of Appeal, Inferior Jurisdiction
- the Criminal Court of Appeal, Superior Jurisdiction

In the Maltese judicial system, there are only 2 instances of courts, hence Q1.3 is marked as NAP.

The increase in the number of courts as legal entities reflects the addition of the criminal courts to the above data, namely:

- 1st Instance Courts: Court of Magistrates Criminal Jurisdiction and Criminal Court
- 2nd Instance Courts: Criminal Court of Appeal in its Inferior and Superior Jurisdiction

Q2: The increase by 1 in the number of specialised courts reflects the addition of the Constitutional Court (in line with 2021 data).

**(2021):** The total number of Specialised Courts has increased to 8 because of the addition of the Constitutional Court as a second instance specialised court.

**(2020):** The 1st instance courts of general jurisdiction are:

- the Court of Magistrates, Civil Jurisdiction (competency up to Euros 15,000)
- the Civil Court, First Hall (civil cases above Euros 15,000)

The 2nd instance courts of general jurisdiction are:

- the Civil Court of Appeal, Inferior Jurisdiction - the Civil Court of Appeal, Superior Jurisdiction

In the Maltese judicial system, there are only 2 instances of courts, hence Q1.3 is marked as NAP.

The increase in the number of courts as legal entities reflects the addition of the criminal courts to the above data, namely:

- 1st Instance Courts: Court of Magistrates Criminal Jurisdiction and Criminal Court
- 2nd Instance Courts: Criminal Court of Appeal in its Inferior and Superior Jurisdiction

**(2018):** In 2018, the Commercial Division was set up in order to hear cases filed under the Companies Act that include Insolvency cases. This new specialised first instance court is the reason behind the increase in the number of courts quoted at 42.2 above.

## Netherlands

**(General Comment):** Second instance courts of general jurisdiction handle civil, criminal and tax cases.

There are two additional courts that do not seem to fit this categorization by instance, acting in the area of administrative law. Some administrative law cases (tax cases) are handled by first and second instance courts of general jurisdiction. Other administrative cases are handled by the Trade and Industry Appeals Tribunal, also known as the Administrative High Court for Trade and Industry (College van van Beroep voor het Bedrijfsleven). This is a specialized administrative court, which rules on disputes in the area of social-economic administrative law, and appeals for specific laws. The tribunal hears both first and second instance cases. Categorized as a specialized court.

The Central Appeals Tribunal (Centrale Raad van Beroep) is a court of appeal mainly active in legal areas pertaining to social security and civil service. In these areas, it is also the highest judicial authority. In some cases, it is the first and sole instance. This court does not exactly fit the distinction of the table above, but categorized as a specialized court.

The Administrative Jurisdiction Division of the Council of State is the highest administrative court with general jurisdiction in the Netherlands. It hears various types of appeals (e.g. members of the public / associations / commercial companies against governmental bodies, or between public authorities). This court does not exactly fit the distinction of the table above, but categorized as a specialized court. For more information, see <https://www.rechtspraak.nl/English/Judicial-system-and-legislation/Pages/Special-Tribunals.aspx>. Note that the Supreme Court (highest instance court of general jurisdiction) does not retry the case itself, but judges whether the judges at the first and second instance applied the law correctly in the judgment, and whether the procedure was correctly followed (cassation, potential quashing of judgment).

Since 2013 and following the implementation of the reform related to the reorganization of the judicial map, the number of district courts was reduced from 19 in 2010 to 11 in 2013 and 2014. Moreover, this reform resulted in the closure of sub-district court locations due to which the number of geographic locations decreased from 64 in 2010 to 40 in 2013 and 2014.

**(2021):** Second instance courts of general jurisdiction handle civil, criminal and tax cases.

There are two additional courts that do not seem to fit this categorization by instance, acting in the area of administrative law. Some administrative law cases (tax cases) are handled by first and second instance courts of general jurisdiction. Other administrative cases are handled by the Trade and Industry Appeals Tribunal, also known as the Administrative High Court for Trade and Industry (College van van Beroep voor het Bedrijfsleven). This is a specialized administrative court, which rules on disputes in the area of social-economic administrative law, and appeals for specific laws. The tribunal hears both first and second instance cases. Categorized as a specialized court.

The Central Appeals Tribunal (Centrale Raad van Beroep) is a court of appeal mainly active in legal areas pertaining to social security and civil service. In these areas, it is also the highest judicial authority. In some cases, it is the first and sole instance. This court does not exactly fit the distinction of the table above, but categorized as a specialized court.

The Administrative Jurisdiction Division of the Council of State is the highest administrative court with general jurisdiction in the Netherlands. It hears various types of appeals (e.g. members of the public / associations / commercial companies against governmental bodies, or between public authorities). This court does not exactly fit the distinction of the table above, but categorized as a specialized court.

For more information, see <https://www.rechtspraak.nl/English/Judicial-system-and-legislation/Pages/Special-Tribunals.aspx>. Note that the Supreme Court (highest instance court of general jurisdiction) does not retry the case itself, but judges whether the judges at the first and second instance applied the law correctly in the judgment, and whether the procedure was correctly followed (cassation, potential quashing of judgment).

**(2020):** There are 11 first instance courts (Rechtbanken).

There are 4 second instance courts of general jurisdiction: 4 courts of appeal (Second instance, Gerechtshoven) that handle civil cases, criminal cases and tax cases.

There is 1 highest instance court of general jurisdiction, the Supreme Court (Hoge Raad), the highest instance court in The Netherlands.

There are three specialized courts (see comment Q43).

**(2017):** same as last year

## Poland

**(General Comment):** The Polish court structure is characterized by four levels of courts but only three instances. Basically, there are district courts which are first instance courts, regional courts which are first and second instance courts (regional courts within their jurisdiction have the majority of first-instance cases), and appellate courts which are second instance courts. The highest instance courts are the Supreme Court, the Supreme Administrative Court and the Constitutional Tribunal.

**(2022):** 1.1 first instance courts (district courts + regional courts);

1.2 second (appellate courts); 1.3 third instance courts (cassation of the judgment) (Supreme Court) of general jurisdiction;

**(2021):** The table indicating the content of:

1.1 first instance courts (district + regional courts), 1.2 second (appellate courts) , 1.3 third instance courts (cassation of the judgment) (Supreme Court) of general jurisdiction.

**(2020):** The table indicating the content of:

1.1 first instance courts (district + regional courts), 1.2 second (appellate courts) , 1.3 third instance courts (cassation of the judgment) (Supreme Court) of general jurisdiction.

**(2018):** .

**(2017):** 42.1 First instance courts of general jurisdiction - common courts (318 regional courts, 45 district courts).

42.2 First instance specialised courts - 16 administrative courts, 9 military courts.

42.3 All the courts - the Supreme Court, common courts (318 regional courts, 45 district courts, 11 appeal courts), administrative courts (voivodship administrative courts (16), the Supreme Administrative Court), military courts (regional military courts (7), district military courts (2)).

**(2016):** 42.1 First instance courts of general jurisdiction - common courts (318 regional courts, 45 district courts).  
42.2 First instance specialised courts - 16 administrative courts, 9 military courts.  
42.3 All the courts - the Supreme Court, common courts (318 regional courts, 45 district courts, 11 appeal courts), administrative courts (16 voivodship administrative courts, the Supreme Administrative Court), military courts (9 regional military courts, 2 district military courts). The differences between presented data and the data from 2014 edition is likely to be due to the restoration of District Courts, abolished and converted to divisions of larger units in 2013. The difference in courts number between this (363) and previous evaluation cycle (287) is probably caused by a significant organizational reform of Polish court system, which took place in 2013. Almost eighty small district courts were merged with larger entities. Since 2015 the reform has been reversing, which has resulted in an increase in the number of the courts.

**(2012):** In 2012, there was a structural change concerning District courts. Some of them were transformed into divisions of other courts.

## Portugal

**(2020):** 1.1 Courts of general jurisdiction and proximity divisions;  
1.2. 2nd Instance Courts (Tribunal Relação de Lisboa, Coimbra, Porto, Évora e Guimarães).  
1.3. Supreme Justice Court

**(2019):** Regarding Q 42.1 the decrease of the total number of first instance courts of general jurisdiction is accompanied by an increase of certain types of first instance courts (please consult answers provided to Q 43). Regarding Q 42.2, the total corresponds to first instance specialised courts of judicial courts and administrative and tax courts. Under our Constitution, we have two set of courts: judicial courts, which have general jurisdiction in civil/commercial and criminal matters and encompass specialized courts, and administrative and tax courts, whose role is to settle disputes arising out of administrative and tax relations. These latter are specialised in this domain only. In order to be rigorous and coherent with Q 43, we have included first instance administrative and tax courts. The total corresponds to 418 judicial courts + 17 administrative/tax courts.

**(2018):** These data correspond to the values given for the last scoreboard. The differences registered result from the changes to the judicial organization (Law n. 40-A/2016, 22 December) in force since January 1, 2017.  
42.1 the number of 1st instance courts with general jurisdiction decreased due to the increase of specialized courts. Accordingly, 20 courts that were closed in 2014 were re-enacted as proximity judgments, new family sections were created as well as new sections with generic jurisdiction.

**(2017):** The differences registered result from the changes to the judicial organization (Law n. 40-A/2016, 22 December) in force since January 1, 2017.  
42.1 the number of 1st instance courts with general jurisdiction decreased due to the increase of specialized courts. Accordingly, 20 courts that were closed in 2014 were re-enacted as proximity judgments, new family sections were created as well as new sections with generic jurisdiction.

**(2014):** As a result of the new Judicial Organization Reform, the number of specialized first instance courts increased in 2014, while the enlargement of the court districts has been promoted. The reform melted the former judicial districts into 23 judicial districts, each containing two or more units, according to the demographic and economic reality of the respective geographic area. The difference between Q42.2 and Q43 is due to the inclusion of the 20 administrative courts in Q43. In Portugal, the administrative jurisdiction is autonomous, independent from the civil jurisdiction.

## Romania

**(General Comment):** In Romania there are 175 judecatorii, first instance courts of general jurisdiction.

**(2022):** Law no. 304/2022 on the judicial organisation.

The number of „judecatorii” has decreased by one between 2019-2020 because the activity of Judecătoria Insuratei was suspended so it no longer appears in the statistics. 175 represent the first instance courts with general jurisdiction in this matter, even if tribunals, courts of appeal and the High Court may also judge first instance cases. Starting from 2020 the methodology of presentation of data changed and only “judecatorii” are counted as first instance courts of general jurisdiction, even if tribunals, courts of appeal and the High Court may also judge first instance cases.

**(2021):** Law no. 304/2004 on the judicial organisation.

The number of „judecatorii” has decreased by one between 2019-2020 because the activity of Judecătoria Insuratei was suspended so it no longer appears in the statistics. 175 represent the first instance courts with general jurisdiction in this matter, even if tribunals, courts of appeal and the High Court may also judge first instance cases. Starting from 2020 the methodology of presentation of data changed and only “judecatorii” are counted as first instance courts of general jurisdiction, even if tribunals, courts of appeal and the High Court may also judge first instance cases.

**(2020):** Law no. 304/2004 on the judicial organisation.

The number of „judecatorii” has decreased by one between 2019-2020 because the activity of Judecătoria Insuratei was suspended so it no longer appears in the statistics. 175 represent the first instance courts with general jurisdiction in this matter, even if tribunals, courts of appeal and the High Court may also judge first instance cases. Starting from 2020 the methodology of presentation of data changed and only “judecatorii” are counted as first instance courts of general jurisdiction, even if tribunals, courts of appeal and the High Court may also judge first instance cases.

**(2017):** There are 176 first instance courts, 42 tribunals and 15 courts of appeals. All of the first instance courts deal with cases in first instance, but also the tribunals and the courts of appeal may have material or personal jurisdiction in first instance.

**(2016):** There are 176 first instance courts, 42 tribunals and 15 courts of appeals. All of the first instance courts deal with cases in first instance, but also the tribunals and the courts of appeal may have material or personal jurisdiction in first instance.

## Slovak Republic

**(2022):** The new Supreme Administrative Court - specialized court of higher instance was established in 2021 and started its full work in 2022.

**(2021):** The changed answer in line 2 is due to the Supreme Administrative Court of the Slovak Republic, it was established from January 1, 2021 by Constitutional Act No. 422/2020.

**(2020):** The Constitutional Court is not included, since it was not included in previous cycles. According to the explanatory note - "In some countries, other bodies can be referred to as courts. When they are not part of the regular judiciary system, they should not be considered here (e.g. courts of audits, constitutional courts when not dealing with individual cases but rather with questions of compliance with constitution and international law etc.)." In Slovak republic the Constitutional Court can deal with some rare individual cases.

**(2019):** The entire court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, The Specialized Criminal Court and the Supreme Court of the Slovak republic.

**(2018):** The entire court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, The Specialised Criminal Court and The Supreme Court of the Slovak republic

**(2017):** The court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, Specialised Criminal Court and Supreme Court of the Slovak republic

**(2016):** The court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, The Specialised Criminal Court and The Supreme Court of the Slovak republic

## Slovenia

**(General Comment):** First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

Second instance courts of general jurisdiction: 4 higher courts

Specialised courts: 3 labour courts (1st instance) + 1 labour and social court (1st instance) + 1 Administrative court (1st instance) + 1 Higher labour and social Court (2nd instance) = 6

Highest instance courts of general jurisdiction: The Supreme Court (also highest instance court for specialised courts)

**(2018):** First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 Administrative court = 5

All courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court) + second instance courts and courts of appeal (4 higher courts of general jurisdiction + 1 higher labour and social court) + the Supreme court = 77.

**(2017):** First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 Administrative court = 5

All courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court) + second instance courts and courts of appeal (4 higher courts of general jurisdiction + 1 higher labour and social court) + the Supreme court = 77.

**(2016):** First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 Administrative court = 5

All courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court) + second instance courts and courts of appeal (4 higher courts of general jurisdiction + 1 higher labour and social court) + the Supreme court = 77.

**(2015):** legal entities:

First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 administrative court = 5

geographic locations:

All the courts = 77

- first instance courts of general jurisdiction = 55 (Q42.1); additionally

- first instance specialised courts = 4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court = 16; additionally

- second instance courts and courts of appeal = 4 higher courts of general jurisdiction + 1 higher labour and social court = 5; and finally

- supreme court: the Supreme Court of the Republic of Slovenia = 1.

## Spain

**(General Comment):** In Spain, as general rule, the First Instance are unipersonal Courts: One Judge-courts. In Spain we have two types of specialization: Special Jurisdictions established by Organic Law (Violence against women, Commercial, for example), and the possibility for GCJ to determine that in some places, a general jurisdiction Court (Civil) is focused in some kind of cases.

## Question 043

## Austria

**(General Comment):** As a rule every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. six in Vienna (civil cases, criminal cases, commercial cases [2 x], labour and social welfare cases, administrative cases) and two in Graz (civil cases, criminal cases); Since there are special courts for civil law cases in Vienna and Graz, which cannot be selected individually here, and because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts does not correspond to the total number of specialised courts.

One commercial court in Vienna, both courts (in Vienna and Graz) specialised on civil cases and both courts (in Vienna and Graz) specialised on the enforcement of criminal sanctions also act as second instance courts.

**(2022):** As a rule every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. six in Vienna (civil cases, criminal cases, commercial cases [2 x], labour and social welfare cases, administrative cases) and two in Graz (civil cases, criminal cases); Since there are special courts for civil law cases in Vienna and Graz, which cannot be selected individually here, and because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts does not correspond to the total number of specialised courts.

One commercial court in Vienna, both courts (in Vienna and Graz) specialised on civil cases and both courts (in Vienna and Graz) specialised on the enforcement of criminal sanctions also act as second instance courts.

**(2021):** As a rule every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], labour and social welfare cases) and two in Graz (civil cases, criminal cases); Because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts does not correspond to the total number of specialised courts. One commercial court in Vienna, both courts (in Vienna and Graz) specialised on civil cases and both courts (in Vienna and Graz) specialised on the enforcement of criminal sanctions also act as second instance courts.

**(2020):** As a rule every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], labour and social welfare cases) and two in Graz (civil cases, criminal cases);

Because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts does not correspond to the total number of specialised courts.

One commercial court in Vienna, both courts (in Vienna and Graz) specialised on civil cases and both courts (in Vienna and Graz) specialised on the enforcement of criminal sanctions also act as second instance courts.

**(2019):** On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialized, i.e. eight in Vienna (civil cases, criminal cases, commercial cases [2x], employment- and social welfare cases, administrative cases) and two in Graz (criminal cases, remaining cases). There is also a regional administrative court in every federal state (9 in total). Because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts equals nineteen.

**(2018):** On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], employment- and social welfare cases) and two in Graz (criminal cases, remaining cases)

**(2017):** On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], employment- and social welfare cases) and two in Graz (criminal cases, remaining cases)

**(2016):** On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], employment- and social welfare cases) and two in Graz (criminal cases, remaining cases)

## Belgium

**(General Comment):** In Belgium, the following courts do not exist - insolvency courts, family courts, juvenile courts, insurance and / or social welfare courts, rent and tenancies courts, enforcement of criminal sanctions courts, courts specialised in fight against terrorism or in internet related disputes. These case categories are within the competence of company courts (insolvency, insurances), first instance courts (family, juveniles, enforcement of sentences), labour courts (safety in work). As for the previous evaluation round (2020 data), Justices of the peace and Police courts are counted as courts of general jurisdiction. Before 2020, they were categorized as specialized courts of first instance.

Administrative courts: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen.

Six courts of first instance have chambers specialised in enforcement of criminal sanctions. The designation "enforcement court" is used, but in reality, it is a specialized chamber. All first instance courts (13) have a specialized family and youth section. The designation "family court" is used, but in reality, it is a specialized section.

**(2021):** In Belgium, the following courts do not exist - insolvency courts, family courts, juvenile courts, insurance and / or social welfare courts, rent and tenancies courts, enforcement of criminal sanctions courts, courts specialised in fight against terrorism or in internet related disputes. These case categories are within the competence of company courts (insolvency, insurances), first instance courts (family, juveniles, enforcement of sentences), labour courts (safety in work).

As for the previous evaluation round (2020 data), Justices of the peace and Police courts are counted as courts of general jurisdiction. Before 2020, they were categorized as specialized courts of first instance.

**(2020):**

For the current evaluation round (2020 data), justices of the peace and police courts are counted as general courts. In previous cycles, they were categorized as specialized courts of first instance.

**(2019): Other:** 162 justices of the peace and 15 police courts. Administrative courts: Council of State, Council for Aliens Litigation, de Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen (these courts are under the authority of the Minister for Home Affairs and the Flemish Regional Government, and not the Minister of Justice).

Six courts of first instance have specialized chambers for the application of sentences. The denomination 'court for the enforcement of sentences' is used, but in reality it is a specialized chamber.

All the courts of first instance (13) have a special family and youth section. The denomination 'family court' is used, but in reality it is a specialized section.

**(2017): Others:** justices of the peace and police courts. The law of 25 December 2017 amended the number of cantons of justices of the peace from 187 to 162 (162 justices of the peace and 15 police courts).

Administrative courts: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.

Five courts of first instance have specialized chambers for the enforcement of sentences. Despite the term used in their respect - "court for the enforcement of sentences", those are specialised chambers.

All courts of first instance (13) have a specialised family and youth section. The term "family court" is used, but these are also specialised sections.

**(2016): Other:** justices of the peace and police courts

Administrative courts: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.

Five courts of first instance have specialized chambers for the enforcement of sentences. The name "court for the enforcement of sentences" is used, but in reality it is a specialized chamber.

All courts of first instance (13) have a specialized family and youth section. The name "family court" is used, but in reality it is a specialized section.

**(2015): Other:** justices of the peace and police courts

Administrative courts: the Council of State, the Council of the Litigation of Foreigners, Milieuhandhavingscollege, de Raad voor Vergunningsbetwistingen en de Raad voor Verkiezingsbetwistingen.

**(2014):** The other specialised courts are 15 police courts and 187 justices of peace. Family courts are a section within the 13 first instance courts. The administrative courts (the Council of State, the Alien Litigation Council, "(Vlaamse)Raad voor Vergunningsbetwistingen", "het (Vlaamse) Milieuhandhavingscollege") are not part of the judicial system administered by the Ministry of Justice. Following a reform of the judicial map, the number of labour, commercial and police courts was reduced.

## Bulgaria

**(General Comment):** Administrative Courts- 28

Supreme Administrative Court - 1

Military Courts - 3

Military Court of Appeal - 1

**(2022):** Previous cycles the category “other specialised courts” encompasses the Specialized Criminal Court of Republic of Bulgaria and Specialized Criminal Court of Appeal. In the State Gazette, no. 32 of 26.04.2022, the Law on Amendments and Supplements to the Law on the Judiciary/ Judiciary System Act was promulgated, which closed the specialized court and prosecutor's office.

**(2021):** The category “other specialised courts” encompasses the Specialized Criminal Court of Republic of Bulgaria, established in 2011, situated in Sofia and treated as a Provincial/Regional Court. Its jurisdiction covers criminal cases of a general nature for crimes carried out throughout the Republic of Bulgaria. Its competence is determined on the basis of the subject of the case and not the quality of the perpetrator. The Criminal Procedure Code exhaustively enumerates cases within the competence of this Court, namely crimes committed by organized criminal groups, or on behalf of them and following their decision.

**(2020):** The category “other specialised courts” encompasses the Specialized Criminal Court of Republic of Bulgaria, established in 2011, situated in Sofia and treated as a Provincial/Regional Court. Its jurisdiction covers criminal cases of a general nature for crimes carried out throughout the Republic of Bulgaria. Its competence is determined on the basis of the subject of the case and not the quality of the perpetrator. The Criminal Procedure Code exhaustively enumerates cases within the competence of this Court, namely crimes committed by organized criminal groups, or on behalf of them and following their decision.

**(2019):** The cases under the jurisdiction of Specialized Criminal Court are specified in Art. 411a of the Penal Procedure Code

**(2018):** The category “other” encompasses the Specialized Criminal Court of Republic of Bulgaria (see the general comment).

**(2017):** Specialized Criminal Court

**(2016):** 'Other specialised 1st instance courts' - 1 Specialized Criminal Court.

## Croatia

**(General Comment):** No comment.

**(2022):** will be explained later

**(2020):** In Croatian Judicial system there is a higher instances of 3 specialized courts: commercial, administrative and other (misdemeanour).

**(2019):** One criminal and two misdemeanour courts. After the reorganization of courts in 2019 we do not have 22 misdemeanour courts. Only two courts specialized only for misdemeanour cases were left in two largest cities (Zagreb and Split). Third specialized court is court in Zagreb specialized only for criminal cases.

**(2018):** Other specialised 1st instance courts are Misdemeanour courts and Municipal Criminal Court in Zagreb.

**(2017):** 23 other specialised 1st instance courts are 22 Misdemeanour courts and 1 Municipal Criminal Court in Zagreb

**(2016):** According to the Act on the Jurisdiction and Seats of Courts (Official Gazette 128/14) as of 1 April 2015 the number of municipal courts has been reduced, as of 1 July 2015 reduced the number of misdemeanour courts has been reduced and as of 1 April 2015 a new commercial court has been established.

Other specialised 1st instance courts are 22 Misdemeanour courts and a Municipal Criminal Court in Zagreb.

## **Cyprus**

**(2022):** Administrative Court for International Protection

**(2021):** other specialised courts are the Assize courts and the Administrative Court of International Protection.

In 2021 a law was enacted (law 55/21) providing for the establishment of a juvenile court in each district of the Republic. Family, Labour and rent control courts have been established in one more district.

**(2020):** 5 Assize courts

1 Administrative court for international Protection

**(2019):** Other specialised 1st instance courts: 1 International Protection Administrative Court and 5 Assize Court. In 2019 the new administrative court for international protection was established to hear cases concerning asylum applications and international protection matters.

**(2018):** 5 Assize courts

**(2017):** Assize Courts

**(2016):** Assize Courts

**(2015):** In 2015, two new Assize courts and one administrative court were established and one Rent Control Tribunal was removed.

## **Czech Republic**

**(General Comment):** There are no specialised first instance courts, but judges within individual courts are specialised (e.g. for family, labour and enforcement cases at district courts, and insolvency and administrative cases at regional courts as first instance courts).

## **Denmark**

**(General Comment):** Re "Juvenile Courts" such courts do not exist. Juveniles are dealt with by district courts as any other case. There are taken special care though of juveniles in a Juvenile Board. The category "other" concerns the Land Registration Court that has been established in 2009. As for the Commercial Court, in Denmark, it is called Maritime and Commercial Court and it presents the peculiarity to also deal, to a great extent but not exclusively, with insolvency cases (bankruptcies etc.). Accordingly, there is an overlap with the category "Insolvency courts". Family courts are administered as part of District courts. There is one military court but military courts are not part of the Danish Courts Administration.

**(2022):** Land Registration Court (see also general comments). The other specialized court is Maritime and Commercial Court. The latter do some degree deals with insolvency cases similar to district courts.

**(2021):** "Other specialised courts" is The Land Registration Court.

**(2020):** Land Registration Court (see also general comments). The other specialized court is Maritime and Commercial Court. The latter do some degree deals with insolvency cases similar to district courts.

**(2019):** Other specialised 1st instance court is the Land Registration Court. The Maritime and Commercial Court is a commercial court which ALSO deals with insolvency cases. Although it looks like there are two courts there is only one! As the district courts outside Greater Copenhagen deal with insolvency cases, and the Maritime and Commercial Court deals with insolvency cases inside Greater Copenhagen, but at the same time is a specialized commercial court, the Maritime and Commercial Court is marked as a specialized Commercial Court and insolvency court.

**(2018):** Military courts exist but they are not part of the Danish Courts Administration. The 24 district courts have always dealt with family cases. From 1 April 2019 family issues are a section of the court.

**(2017):** The category “other” concerns the Land Registration Court that has been established in 2009. As for the Commercial Court, in Denmark, it is called Maritime and Commercial Court and it presents the peculiarity to also deal, to a great extent but not exclusively, with insolvency cases (bankruptcies etc.). Accordingly, there is an overlap with the category “Insolvency courts”. Of course Military courts exist but they are not part of the Danish Courts Administration.

**(2016):** Land Registration Court.

### **Estonia**

**(General Comment):** In Estonia, there are no specialized first instance courts, other than administrative courts. All the cases are dealt with by ordinary courts of first instance. The two administrative courts of first instance are situated in Tallinn and Tartu. Nevertheless, for guaranteeing wider access to justice, these two courts have several court buildings in other cities, namely in Pärnu and Jõhvi, where judges and their supporting legal staff work.

### **Finland**

**(General Comment):** In Finland, there are six regional administrative courts, the Market Court, the Labour Court and the Insurance Court.

Another specialised court is the High Court of Impeachment that hears charges against ministers (i.e. members of the Government), the Chancellor of Justice, the Parliamentary Ombudsman and members of the Supreme Court or the Supreme Administrative Court for unlawful conduct in office. In addition, the High Court of Impeachment deals with charges concerning the criminal liability of the President of the Republic. However, it is convened only when necessary.

**(2016):** In Finland there are 6 Administrative Courts, 1 Market Court, 1 Labour Court and 1 Insurance Court. Then there is the High Court of Impeachment that hears charges against Ministers (i.e. Members of the State Council), Chancellor of Justice, Parliamentary Ombudsman and Supreme Court Justices for unlawful conduct in office but it is convened only when necessary.

### **France**

**(General Comment):** With regard to the Enforcement of criminal sanctions courts: in matters of enforcement of sentences, the enforcement judge (JAP) is a court of first instance for the enforcement of sentences, being at the same time a decision-making, control and monitoring body. There is at least one JAP per department (article 712-2 of the CPP). The JAP is competent for adult convicts, and his field of intervention is the following: for measures to individualize custodial sentences, he or she has general jurisdiction (except for a few measures that fall under the special jurisdiction of the Court for the enforcement of sentences); for custodial sentences, when a specific text so provides; for the follow-up of security measures. Established by the law of March 9, 2004, the Court for the enforcement of sentences (TAP) is a court of first instance, composed of three JAPs of first instance courts, appointed by order of the First President of the Appellate Court. In each Appellate Court, a TAP is established whose territorial jurisdiction extends to the jurisdiction of this court (articles 712-3 and D 49-2 of the CPP, article indicating the list of TAPs by Appellate court and the territorial jurisdiction). The seat of the TAP is in principle "that of the first instance court of the seat of the Appellate Court" (article D. 49-3 CPP). The objective is to entrust the most complex and sensitive cases to a collegiality. Thus, the TAP has jurisdiction over: 1) by the effect of the law for those sentenced to the heaviest penalties: applications for parole and suspension of "medical" sentences for persons sentenced to imprisonment or imprisonment of more than 10 years and whose remaining sentence to be served exceeds 3 years; applications for an increase in the security period; placement under judicial supervision of dangerous persons...); 2) by decision of the JAP, in particular because of the complexity of the case or the personality of the convicted person (article 712-6 al. 3 of the CPP).

In matters of terrorism, a derogatory jurisdiction is provided for under ordinary law (articles 706-22-1 and D 49-75 to D49-81-5 of the CPP). The Paris Enforcement courts specialized in terrorist matters (JAPAT, the TAPAT and the enforcement chamber) have 1) exclusive jurisdiction to monitor persons convicted by specialized terrorism trial courts pursuant to Article 706-17 of the CPP; 2) competing jurisdiction with ordinary law Enforcement courts to monitor persons convicted of acts of terrorism and other offenses falling within the scope of Article 706-16 of the CPP by ordinary law courts.

source DACG.

**(2022):** 272 TPBR, along with 1 tribunal for navigation on the Rhine, 1 TPI for navigation on the Moselle, 6 maritime tribunals, 1 CNDA and 1 Commission of litigation regarding paid parking.

**(2021):** Labour courts: 211 CPH (conseils de prud'hommes) + 5 labour courts = 216 courts. The CPH have jurisdiction, according to Article L. 1411-1 of the Labour Code, to hear individual disputes between employees or apprentices and their employers arising from the execution of an employment or apprenticeship contract. Commercial courts: 134 TCs, 9 TMCs, 2 TPIs with commercial jurisdiction, 7 TJs with commercial jurisdiction = 152 courts. Commercial courts are specialised courts with jurisdiction to hear disputes relating to commitments between traders, between credit institutions or between them, disputes relating to commercial companies and commercial acts by their form (Art. L. 721-1 et seq. of the Commercial Code). There are 134 commercial courts whose judges are exclusively "juges consulaires". With regard to the judicial organisation in overseas France, there are 2 First instance courts with jurisdiction in commercial matters and 9 mixed commercial courts. In addition, 7 judicial courts have a commercial chamber in Alsace-Moselle. Concerning juvenile courts: 156 according to the key figures of Justice 2021 and 155 according to the judicial atlas of 2021.

"Other specialised courts": the parity courts for rural leases (TPBR): 272 (according to the key figures for Justice 2021); the court for navigation on the Rhine (L 215-4 al.1 COJ) ; the court of first instance for navigation on the Moselle (L 215-4 al.2 COJ); 6 maritime courts (Bordeaux, Brest, Cayenne, Le Havre, Marseille Saint-Denis); the National court of asylum. Source DSJ and Council of State

**(2020):** Despite the provisional NA answer for the category " Courts for the execution of criminal sanctions ", the total is available, as it is a small number that will not significantly affect the total. On labor courts: 210 CPHs + 6 labor courts = 216 courts Industrial tribunals have jurisdiction, according to Article L. 1411-1 of the Labor Code, to hear individual disputes that arise between employees or apprentices and their employers during the execution of an employment or apprenticeship contract. There are 210 industrial tribunals and 6 labor courts in the French overseas territories. Same figure as in 2020 On commercial courts: 134 TCs, 9 TMCs, 2 TPJs with commercial jurisdiction, 7 TJs with commercial jurisdiction = 152 courts Commercial courts are specialized courts with jurisdiction to hear disputes relating to commitments between traders, between credit institutions or between them, disputes relating to commercial companies and commercial acts by their form (Art. L. 721-1 et seq. of the Commercial Code) On social jurisdictions:

-Since November 1, 2019, litigation concerning military disability pensions has been transferred to the jurisdiction of the administrative courts, doing away with the military disability pension courts and the regional military disability pension courts that rule on appeal.

- Since January 1, 2019, as a result of Law No. 2016-1547 of November 18, 2016 on the modernization of justice in the 21st century, social litigation, formerly divided between the social security courts (TASS), the courts of disability litigation (TCI) and the departmental social assistance commissions (CDAS), was merged and transferred to the "tribunaux de grande instance", ordinary courts of first instance, which became, as of January 1, 2020, by effect of law n° 2019-222 of March 23, 2019 on programming 2018-2022 and reform for the justice system, Judicial Courts. Consequently, these specialized jurisdictions have been abolished. On appeal, the litigation was only under the jurisdiction of the CNITAAT (extended until December 31, 2022; but now it is under the jurisdiction of specially designated courts of appeal, which allows for better accessibility to justice. There are 134 commercial courts whose judges are exclusively consular. With regard to the judicial organization in overseas France, there are 2 courts of first instance with jurisdiction in commercial matters and 9 mixed commercial courts. In addition, 7 judicial courts have a commercial chamber in Alsace-Moselle. In 2020 it was written 143 commercial courts because I think that only the TC and TMC were counted and not the TJ with commercial jurisdiction nor the TPI with commercial jurisdiction. About the other specialized courts :

The tribunaux paritaires des baux ruraux (TPBR) are autonomous (L. 491-1 of the Code rural et de la pêche maritime). The 2018-2022 programming and reform law for justice sets the seats and jurisdictions of the TPBRs no longer with reference to the seats of the former magistrate's courts but according to the seats of the judicial courts and their proximity chamber. On social jurisdictions:

-Since November 1, 2019, the litigation of military disability pensions has been transferred to the jurisdiction of the administrative courts, making the military disability pension courts and the regional military disability pension courts, which rule on appeal, disappear.

- Since January 1, 2019, as a result of law no. 2016-1547 of November 18, 2016 on the modernization of justice in the 21st century, social litigation, which was previously divided between the social security courts (TASS), the disability litigation courts (TCI) and the departmental social assistance commissions (CDAS), was merged and transferred to the "tribunaux de grande instance", courts of first instance under ordinary law, which became, as of January 1, 2020, the "Tribunaux Judiciaires" (Judicial Courts) under law No. 2019-222 of March 23, 2019, on programming for 2018-2022 and reform of the justice system

**(2019):** Since 1 January 2019, social litigation, formerly divided between the social security courts (TASS), the incapacity courts (TCI) and the departmental social assistance commissions (CDAS), has been merged and transferred to the "tribunaux de grande instance" (first instance courts of general jurisdiction). As a result, these specialised courts have been abolished. As of 1 November 2019, litigation concerning military invalidity pensions will be transferred to the administrative courts, eliminating the military invalidity pension courts and the regional military invalidity pension courts which rule on appeal. These changes explain the variation in the number of courts compared to the previous year. The other specialised courts are: - joint courts for rural leases: 274; juvenile courts: 155; court for navigation on the Rhine: 1; maritime courts: 6; national asylum court: 1; court of first instance for navigation on the Moselle: 1.

**(2018):** The other specialized courts are: - joint courts for rural leases: 272 ;

- juvenile courts: 155; - military pension courts: 36;

- court for navigation on the Rhine: 1;

- Maritime courts: 6;

- national court of asylum: 1; - court of first instance for navigation on the Moselle: 1.

In the previous questionnaire, the Joint Rural Lease Courts (JRTs) were indicated, with the District Courts (TIs) within the "Rental Courts", the figure of 307 corresponding to the District Courts, since the seats and jurisdictions of the JRTs were linked to those of the TI. However, the TPBRs are, and have always been, autonomous courts. However, as decrees have been issued to remove some TPBRs, there is no longer a correlation between their number and that of IT. We have therefore indicated here in the "rental courts", only IT (289), and by including TPBRs in a separate item, which is legally more accurate. The total number of TPBRs is 274. On the insurance and social security courts: in the requested reference year, there are 26 disability courts, 115 social security courts (TASS) and 100 departmental social assistance commissions (CDAS). The differential of 100 corresponds to the addition of the 100 CDASs which are administrative courts.

The Paris Court, created on 14 May 2018, brought together all the services of the Regional Court, formerly dispersed over 5 sites, including Ile de la Cité, the Police Court and the 20 District Courts. The number of TIs had to be reduced by 19. In addition, the reform of the transfer of the police court under the 21st century Justice Act had the effect of removing 3 of them from the 307 TIs. The number of IT has therefore increased from 304 (307-3) to 285 district courts (304-19). We have added to these 285 TI the 4 TPIs because of their dual IT and TGI skills. Thus: 285 TI + 4 TPI = 289 TI in total.

**(2017):** The other specialized courts are:

- juvenile courts 155

- military pensions tribunals 36

- the court for navigation on the Rhine 1

- the court for navigation on the Moselle 1

- maritime trade courts 6

- national court of asylum 1

**(2016):** The other specialised courts are: 155 juvenile courts; 36 military pension courts; 1 court for navigation on the Rhine; 1 court for navigation on the Moselle; 6 maritime trade courts; 1 national asylum court.

As a matter of fact, the following reforms are on-going:

- The future Tribunal of Paris, whose establishment is scheduled for 14 May 2018, will unify all the services of the TGI (Tribunal de grande instance) currently dispersed over 5 sites, including "Ile de la Cité", the police court and the first instance courts (tribunaux d'instance);

- Since 1 July 2017, the hearings of the Police Court, previously under the jurisdiction of the "tribunaux d'instance", have been transferred to the TGI. The aim of this reform is to refocus the tribunaux d'instance on day-to-day civil justice and to centralise criminal litigation at the seat of the TGI.

- Since 1 July 2017, the 311 local courts have been abolished (Law No. 2011-1862 of 13 December 2011), their powers being taken over by the tribunaux d'instance in civil matters and by the police courts attached to the TGI in criminal matters.

- As of 1 January 2019, social litigation, currently divided between the Social Security Courts (TASS), the Disability Dispute Courts (TCI) and the Departmental Social Assistance Commissions (CDAS), will be unified and transferred to the TGI (first instance courts of general jurisdiction). These specialised courts will then be abolished.

**(2015):** Other specialised courts are:

Juvenile courts : 155

Military Pensions Courts: 36

Court for navigation on the Rhine: 1

Maritime Courts: 14

National Court of Asylum: 1

Court of First Instance for navigation on the Moselle: 1

**(2014):** The reduction of the number of specialised courts is primarily due to the suppression of 70 military pensions courts. The other specialised courts are: Children courts (155); Military pensions courts (36); the Rhine navigation court; commercial maritime courts (14); the National court for asylum right; the Court for the navigation on the Moselle. In contrast with 2010 and 2012 data, a part of the "other specialised courts" was distributed in the proposed categories, namely the agricultural land courts, the courts of rental cases, the Courts for enforcement of criminal sanctions and the courts of incapability litigation. The specialised interregional courts, competent to judge cases of organised crime were added.

**(2013):** The reduction of the number of specialised courts is primarily due to the suppression of 70 military pensions courts. The other specialised courts are: Children courts (155); Military pensions courts (36); the Rhine navigation court; commercial maritime courts (14); the National court for asylum right; the Court for the navigation on the Moselle. In contrast with 2010 and 2012 data, a part of the "other specialised courts" was distributed in the proposed categories, namely the agricultural land courts, the courts of rental cases, the Courts for enforcement of criminal sanctions and the courts of incapability litigation. The specialised interregional courts, competent to judge cases of organised crime were added.

**(2012):** There are 135 Commercial Courts and 8 mixed commercial courts (this of Mayotte is not included). The category "labour courts" subsumes 210 industrial courts and 6 labour courts. The category "insurance and/or social security courts" refers to the courts responsible for social security cases. The other specialised courts are: Police courts (3); local Police courts (3); Children courts (155); Incapacity Dispute courts (26); Agricultural land courts (281); Sentence enforcement courts (50); Military pensions courts (106); the Rhine navigation court; Commercial maritime courts (14); the Court for the navigation on Moselle. The military court of Paris was discontinued in January 2012. Its functions were transferred to a pole specialised in military matters in the High Court of Paris.

## Germany

**(General Comment):** It is noteworthy that depending on the value at dispute, commercial cases are dealt with at local or regional Courts, on application in a chamber established at the regional court for commercial cases. There are no separate commercial courts. Likewise, there are no independent rent and tenancies courts, enforcement courts or courts for insurance cases. Depending on the caseload, special panels of judges are established for this purpose at the local and regional Courts. Family cases are dealt with at first instance in special departments of the local courts (second instance: higher regional courts). The Federal Armed Forces do not have any military courts of their own; its members are subject to civil jurisdiction. Juvenile courts do not exist as independent courts either. They are established at the local courts or regional courts, depending on the severity of the expected sentence and the type of offence. The juvenile courts may be composed of a single criminal judge sitting as youth judge or one or more judges together with lay youth assessors.

**(2022): Comments -** If "Other specialised courts", please specify:

The category "other" covers:

18 finance courts (first instance)

Federal Patent Court and the Federal Finance Court (higher instances)

In previous cycles, other specialised courts included 16 constitutional courts of the federal states as well as the Federal Constitutional Court. In the current cycle, these courts are no longer included as they are mostly seen as separate from the ordinary justice system (for further information please refer to the general comment).

**(2021):** The category "other" covers:

18 Finance Courts (first instance)

16 Constitutional Courts of the Länder, the Federal Constitutional Court, Federal Patent Court and the Federal Finance Court (higher instances)

With regard to the Constitutional Courts please see General Comment Q 42.

**(2020):** The category “other” covers:

18 Finance Courts (first instance)

16 Constitutional Courts of the Länder, the Federal Constitutional Court, Federal Patent Court, Federal Labour Court, Federal Administrative Court, Federal Social Court and the Federal Finance Court (higher instances)

With regard to the Constitutional Courts please see General Comment Q 42.

**(2019):** finance courts

**(2018):** Finance Courts

**(2017):** Finance courts

**(2016):** Other specialised 1st instance courts: Finance Courts

**(2015):** The data refer to the year 2014. At present, no more recent data are available.

**(2014):** In 2014, in comparison with 2012, the number of specialized first instance courts decreased of three labour courts in two Landers.

## Greece

**(General Comment):** In Greece, there are no special courts for the fields of law described in the question 43, besides those already mentioned. The Greek Constitution is reluctant to provide in the Greek legal system special courts. Instead, within the Courts of First Instance and Courts of Appeal of large cities, we have special Chambers, where the task of adjudicating in special categories of law (e.g. family law, commercial law, etc.) is assigned. Judges entrusted with such duties have usually the correspondent specific studies. As far as other special courts are concerned, special provisions regulate the operation of courts for juveniles, military, navy and air force courts. We clarify that the military, navy and air force courts are under the jurisdiction of the Ministry of National Defense, therefore we have no further information.

**(2022):** The Court of Auditors is one of three supreme courts in Greece.

**(2021):** There are no special courts for resolving Internet-related disputes.

**(2020):** Administrative courts include: in the first instance 30, in the second instance 9 and 1 Supreme Court( the Council of State).

Juvenile courts are subject to the Courts of First Instance, according to your instructions the choice changed from non-available to non applicable.

The military courts are under a different ministry, specifically the National Defense.

The higher instance other specialized courts is the Court of Auditors that is considered one of three supreme courts in Greece.

**(2017):** In Greece, there are no special courts for the fields of law described in the question 43, besides those already mentioned. The Greek Constitution is reluctant to provide in the Greek legal system special courts. Instead, within the Courts of First Instance and Courts of Appeal of large cities, we have special Chambers, where the task of adjudicating in special categories of law (e.g. family law, commercial law, etc.) is assigned. Judges entrusted with such duties have usually the correspondent specific studies. As far as other special courts are concerned, special provisions regulate the operation of courts for juveniles, military, navy and air force courts.

## Hungary

**(General Comment):** There are military departments at five Regional Courts and at one Regional Court of Appeal. Although they only deal with military related criminal cases, they are not considered as specialized courts as they are a part of the ordinary court system both in administrative and professional management.

**(2020):** “Administrative and labour courts (20) were dismissed on the 31st of March 2020. From this date Regional Courts deal with labour cases on first instance while administrative cases are dealt with by eight Regional Court on a regional level”.

## Ireland

**(General Comment):** The two specialised first instance courts listed above are Special Criminal Court No. 1 and Special Criminal Court No. 2. The latter was established in October 2015 and came into operation, sitting for the first time, in 2016. In previous cycles the category "other" (1) was referring to Special Criminal Court No. 1.

Other than distinctions between jurisdictional levels there is no specialisation - all judges within a court jurisdiction may be allocated to any category of case falling within the jurisdictional remit of the court concerned. Starting in 2013 a new cadre of specialist judges was created in the Circuit Court with specific jurisdiction in relation to certain types of personal insolvency remedy and certain pre-trial order making powers.

Ireland has a specialist regime for the trial of commercial proceedings in the form of the Commercial List of the High Court (known as the 'Commercial Court') but, as it is not a separate legal entity, being a list within and formally a part of the High Court, it is not included as a specialist court as such.

**(2022):** There are currently 2 Special Criminal Courts in Ireland who (in general) deal with crimes relating to terrorism and organised crime. While divisions of other courts deal with many of the matters set out in the table above, there are no specialised courts per se to deal with same.

Furthermore, while there are other tribunals or bodies outside of the court system which have powers to make determinations in some of the matters in the table (e.g., the Labour Court and Military Courts). These tribunals are not within the courts system.

**(2019):** Legislation to provide for a Family Court has been proposed

## Italy

**(General Comment):** Since 2014 in Italy there are 22 Brand Commercial courts (Tribunali delle imprese) that are legal entities of their own and not just internal court divisions for organizational purpose (such as labour, family etc.).

It is noteworthy that in Italy, some of the specialized first instance courts are not administered and financed by the Ministry of Justice. This is the case for the regional administrative courts, the regional audit commissions, the local tax commissions and military courts. These courts are not taken into consideration for the replies to questions 6, 46 and 52 for none of the exercises.

In respect of the 20 first instance administrative courts (legal entities) and their supreme court, it should be stressed that they have been encompassed within the total under question 43 for the last four exercises, but only since 2014 this approach is reflected in questions 91 and 99 (number of administrative law cases).

Moreover, in Italy specific matters (such as labour, family etc.) are dealt by specific divisions within the same Court. There are also 26 divisions called DDA (Direzioni Distrettuali Antimafia) which deal specifically with mafia and organized crime.

**(2022):** The appeal of some specialized courts (e.g. commercial courts, juvenile courts) are dealt by the general jurisdiction appeal courts. Specific subject matters (e.g labour, insolvency, family, fight against terrorism and organised crime) are dealt by specific divisions within general jurisdiction courts. See general comment for details. The option “Other specialised courts” refers to tax courts.

**(2021):** The appeal of some specialized courts (e.g. commercial courts, juvenile courts) are dealt by the general jurisdiction appeal courts.

Specific subject matters (e.g labour, insolvency, family, fight against terrorism and organised crime) are dealt by specific divisions within general jurisdiction courts. See general comment for details.

**(2020):** Tax courts fall into the “Other” category.

The appeal of some specialized courts (e.g. commercial courts, juvenile courts) are dealt by the general jurisdiction appeal courts.

Specific subject matters (e.g. labour, insolvency, family, fight against terrorism and organised crime) are dealt by specific divisions within general jurisdiction courts. See general comment for details.

**(2019):** The category “other” subsumes 29 Minor (or Juvenile) Courts and 103 Tax Courts

**(2018):** The category “other” category subsumes 29 Minor (or Juvenile) Courts and 103 Tax Courts.

**(2017):** Other: 29 Minor (or Juvenile) Courts + 103 provincial tax commissions

**(2016):** OTHER: 29 Minor (or Juvenile) Courts + 103 Local Tax Commissions

**(2013):** In September 2013, the Italian judicial system implemented an extensive reorganization of the territorial distribution of offices with the closing (by merger) of 30 Tribunals, 30 Prosecution offices, 220 branches of Tribunals and 346 Peace Judges.

## Latvia

**(General Comment):** The Economic court, is specialized in commercial cases so it can be classified as a specialized court within the scope of this question. It is a first instance court.

The administrative court can be considered as a first and second instance specialized court (within the scope of this question). The Administrative District Court in Riga and the Administrative Regional Court are located in one building. As to the category “military courts”, the reply NA is justified by the fact that according to the Law on Judicial Power, judicial power in the Republic of Latvia is vested in district (city) courts, regional courts, the Supreme Court and the Constitutional Court, but in state of emergencies or during war – also military courts. The rest of the courts in Latvia are not established, and therefore in this case should be NAP.

**(2021):** Military courts is established in state of emergency or during a war. On 1 July 2020, amendments to the Law on Judicial Power came into force, providing for the establishment of the Economic Court, which is competent for both certain types of civil and criminal cases. Accordingly, the Court is competent for specific commercial disputes and criminal cases, which cause significant damage to the business environment and economic development. The Economic Court is indicated as Commercial Court. As for Administrative court - first instance court is Administrative District Court and for higher instance is indicated Administrative Regional (appeal) instance Court.

**(2020):** Military courts is established in state of emergency or during a war. On 1 July 2020, amendments to the Law on Judicial Power came into force, providing for the establishment of the Economic Court, which is competent for both certain types of civil and criminal cases. Accordingly, the Court is competent for specific commercial disputes and criminal cases, which cause significant damage to the business environment and economic development. The Economic Court is not counted yet in the total number of specialized courts, because it will start its action on 31st March 2021. As for Administrative court - first instance court is Administrative District Court and for higher instance is indicated Administrative Regional (appeal) instance Court.

**(2019):** There is only Administrative court in Latvia. On July 1, 2020, amendments to the Law “On Judicial Power” entered into force. The Amendments provides for the establishment of the Court of Economic Affairs. The Economic Court will take office on 1 January 2021.

**(2018):** There is only Administrative court in Latvia.

**(2016):** There is only one specialised court the administrative court with 5 court houses

## Luxembourg

**(General Comment):** Courts of general jurisdiction are organized into specialized sections. For example, the commercial courts (which also deal with insolvency cases) are specialized sections of the district court. Only the administrative, military and social security courts of first instance are autonomous.

**(2020):** Pour 2020, seules les entités juridiques ont été prises en considération dans le tableau.

**(2017):** Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

**(2016):** Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

**(2014):** Most of the areas mentioned in the question are within the competence of district courts (commercial cases, insolvency cases, family law cases and all criminal cases except for offenses that are under the jurisdiction of justices of peace) and justices of peace (labour law cases, rental cases). The indicated total is a purely statistical information which does not reflect the reality.

**(2012):** Matters concerning trade and family law are dealt with at the level of district courts, while matters pertaining to labour law and rental cases are within the competence of the justices of peace.

## Malta

**(General Comment):** The number of specialised courts includes non-criminal, administrative and criminal courts established as legal entities in line with the CEPEJ methodology. The seven (7) specialised courts referred to in Q43 are the Rent Regulation Board, the Land Arbitration Board, the Rural Leases Control Board, the Small Claims Tribunal, the Court of Voluntary Jurisdiction, the Administrative Review Tribunal and the Juvenile Court. Other courts previously counted as specialised courts, such as the Family Court and the Commercial Court, are divisions of the Civil Court, First Hall, and as such are now being included with the 1st Instance Courts of General Jurisdiction.

**(2022):** The identified specialised courts listed under 'Other specialised courts' are:

- the Land Arbitration Board
  - the Rural Leases Control Board
  - the Small Claims Tribunal
  - the Court of Voluntary Jurisdiction
  - the Constitutional Court (higher instance court)
- The Juvenile Court is a specialised criminal court.

**(2021):** The first instance specialised courts are:

- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction
- the Juvenile Court

Under the second instance specialised courts, we are including the Constitutional Court which is a court that deals exclusively with constitutional cases.

**(2020):** A number of courts that used to be previously identified as specialised courts, are not being categorised this time, given that they all make part of the First Hall, General Jurisdiction Court. These are:

- The Commercial Court (including insolvency cases)
- The Family Court

The identified specialised courts listed under 'Other specialised courts' are:

- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction

The Juvenile Court is a specialised criminal court.

**(2019):** The courts referred to under 'Other specialised 1st Instance courts' include:

- The Civil Court, First Hall
- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction

**(2018):** The courts referred to under 'Other specialised 1st Instance courts' include:

- The Civil Court, First Hall
- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction

**(2017):** The other specialised 1st Instance courts include:

- the Civil Court, First Hall
- the Court of Voluntary Jurisdiction - the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal

**(2016):** The other specialised 1st Instance courts include:

- the Civil Court, First Hall
- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal

## **Netherlands**

**(General Comment):** See the comment under Q42 on the other special (not specialised) appeal tribunals as well.

The Trade and Industry Appeals Tribunal, also known as the Administrative High Court for Trade and Industry (College van van Beroep voor het Bedrijfsleven) is a specialized administrative court, which rules on disputes in the area of social-economic administrative law, and appeals for specific laws. The tribunal hears both first and second instance cases, but is categorized as a first instance court.

The Central Appeals Tribunal (Centrale Raad van Beroep) is a court of appeal mainly active in legal areas pertaining to social security and civil service. In these areas, it is also the highest judicial authority. In some cases, it is the first and sole instance. The Administrative Jurisdiction Division of the Council of State is the highest administrative court with general jurisdiction in the Netherlands. It hears various types of appeals (e.g. members of the public / associations / commercial companies against governmental bodies, or between public authorities).

There is no separate military court, but there is a military chamber in one of the district courts.

**(2021):** See also comment at Q42 on the other special (not specialized) appeal tribunals.

Trade and Industry Appeals Tribunal, also known as the Administrative High Court for Trade and Industry (College van van Beroep voor het Bedrijfsleven). This is a specialized administrative court, which rules on disputes in the area of social-economic administrative law, and appeals for specific laws. The tribunal hears both first and second instance cases, but is categorized as a first instance court.

The Central Appeals Tribunal (Centrale Raad van Beroep) is a court of appeal mainly active in legal areas pertaining to social security and civil service. In these areas, it is also the highest judicial authority. In some cases, it is the first and sole instance. The Administrative Jurisdiction Division of the Council of State is the highest administrative court with general jurisdiction in the Netherlands. It hears various types of appeals (e.g. members of the public / associations / commercial companies against governmental bodies, or between public authorities).

**(2020):** The specialized courts are:

Trade and Industry Appeals Tribunal: the administrative High Court for trade and industry. This tribunal is a specialized administrative court that rules on disputes in the area of social-economic administrative law. Categorized as administrative court.

The Central Appeals Tribunal is the highest judicial authority in areas of social security and civil service. Categorized as other.

**(2017):** same as last year

**(2015):** Currently the commercial court in the Netherlands is the specialized court CBb. Per January first 2017 starts the Netherlands Commercial Court (NCC).

## Poland

**(2020):** There are 7 military courts of first instance and 2 military courts of higher instance in Poland.

**(2019):** It is noteworthy that the Land and Mortgage Courts which are within the structure of the common court system deal with specific topics, but they are departments.

Besides, the National Court Register and Pledge Registry Departments are business divisions.

The EU Trademark and Community Design Court (which existed in the XXII Division of the District Court in Warsaw)-functioned from 2004 until the creation of intellectual property courts, which took place on 1 July 2020. Cases in the field of intellectual property belong to the jurisdiction of selected District Courts (Article 47990 of the Code of Civil Procedure), while the District Court in Warsaw (XXII Division) has exclusive jurisdiction in matters of intellectual property concerning computer programs, inventions, utility models, topography of integrated circuits, plant varieties and company secrets of a technical nature.

The Court of Competition and Consumer Protection is a special department functioning within the District Court in Warsaw. In the current state of law, the scope of activity of the 17th Department of the Court of Competition and Consumer Protection includes the handling of the following cases in court proceedings of appeals and complaints against decisions and orders issued by the government: the President of the Office of Competition and Consumer Protection, the President of the Energy Regulatory Office, the President of the Railway Transport Office, the President of the Office of Electronic Communications. When it comes to matters from lease or tenancy agreements - as long as these matters are of an economic nature, they are recognized by business departments, as are matters related to new technologies and the Internet space.

## Portugal

**(General Comment):** Q.43 -total:The number given under Q43.1.1 includes 17 first instance courts and 3 higher instance courts of administrative jurisdiction that are not included under Q.42.2. Administrative courts are part of another jurisdiction and under our law cannot be considered specialized courts.

**(2020):** «Commercial courts» deal with, inter alia, winding up of the company, insolvency and suspension and revocation of company resolutions.

«Internet related disputes»: only for Internet domain system (DNS) issues, which are under the jurisdiction of the Intellectual Property Court; for all other Internet related issues, general jurisdiction courts are competent. Internet related disputes were not included in the number of specialised courts for previous cycles.

«Other specialised courts»: includes all other courts that are not listed in the categories above.

This category includes Civil Central Judicial Divisions, Criminal Central Judicial Divisions, Civil Local Proximity Judicial Divisions, Criminal Local Proximity Judicial Divisions, Petty Criminality Local; Proximity Judicial Divisions, Criminal Examination Judicial Divisions, Enforcement Judicial Divisions, Central Criminal Examination Court, Competition Court and Maritime Court.

**(2019):** This category includes Civil Central Judicial Divisions, Criminal Central Judicial Divisions, Civil Local Proximity Judicial Divisions, Criminal Local Proximity Judicial Divisions, Petty Criminality Local Proximity Judicial Divisions, Criminal Examination Judicial Divisions, Enforcement Judicial Divisions, Central Criminal Examination Court, Intellectual Property Court, Competition Court and Maritime Court.

**(2018):** Changes to the judicial organization (Law n. 40-A/2016, 22 December) are in force since January 1, 2017.

**(2017):** Changes to the judicial organization (Law n. 40-A/2016, 22 December) are in force since January 1, 2017.

Other specialised 1st instance courts include, among others: Criminal Instruction Courts, Maritime Courts; Intellectual Property and Competition Court; Enforcement Courts.

Law 31/2012, 14 August, put in force the Rent and tenancy section (Balcão Nacional do Arrendamento) that is functioning since 8 January 2013.

**(2015):** In 2013-2014, the Reform of the Portuguese Judicial system was implemented. One of the major goals of this reform was to set up specialised courts on a national level, which led to a significant increase of commercial courts compared to previous years.

The difference between Q42.2 and Q43 is due to the inclusion of the 20 administrative courts in Q43. In Portugal, the administrative jurisdiction is autonomous, independent from the civil jurisdiction and cannot be considered as specialised courts.

Other courts:

Other specialised 1st instance courts include: Criminal Instruction Courts, Maritime Courts; Intellectual Property and Competition Court; Enforcement Courts.

Law 31/2012, 14 August, put in force the Rent and tenancy section (Balcão Nacional do Arrendamento) that is functioning since 8 January 2013

**(2014):** In 2013-2014, the Reform of the Portuguese Judicial system was implemented. One of the major goals of this reform was to set up specialised courts on a national level, which led to a significant increase of commercial courts compared to previous years.

For 2014, the category “other” subsumes as in 2012 Criminal Instruction Courts, Maritime Courts, Intellectual Property and Competition Court and Enforcement Courts. Additionally, the Rent and tenancy section (Balcão Nacional do Arrendamento) has been established by law in August 2012 and is functioning since 8 January 2013.

**(2012):** For 2012, the category “other” encompasses Criminal Instruction Courts, Maritime Courts, Intellectual Property and Competition Court and Enforcement Courts.

## Romania

**(2022):** Law no. 304/2022 on the judicial organisation.

**(2020):** Law no. 304/2004 on the judicial organisation.

## Slovak Republic

**(General Comment):** In the Slovak court system there are 8 Regional courts which are the courts with dual competence. The Regional courts are the courts of appeal with the general jurisdiction in the civil, commercial and the criminal cases. In the appellate procedure they decide the appeals lodged against the decisions of all 54 District courts within their local jurisdiction. At the same time the Regional courts have the jurisdiction as the courts of first instance in administrative matters. They act as the administrative courts.

The Specialized Criminal court is competent to judge the grave criminal matters enumerated in the § 14 of the Criminal procedure Code (e. g. premeditated murder, corruption, terrorism, organised crime, severe economic crimes, damaging the financial interests of the EU etc.). Highest instance courts are the Supreme Court, Supreme Administrative Court and the Constitutional Court.

**(2021):** The first instance administrative cases agenda is concentrated in eight regional courts, which also act as general courts of appeal. The question (43.) defines specialized courts as legal entities, so it cannot be understood that the administrative cases agenda is centralized on specialized courts as legal entities, but it is concentrated on 8 regional general courts. These 8 general regional courts are already legal entities included in Q42, line 1.2. Highest instance courts are the Supreme Court and the new Supreme Administrative Court.

**(2020):** The first instance administrative cases agenda is concentrated in eight regional courts, which also act as general courts of appeal. The question (43.) defines specialized courts as legal entities, so it cannot be understood that the administrative cases agenda is centralized on specialized courts as legal entities, but it is concentrated on 8 regional general courts. These 8 general regional courts are already legal entities included in Q42, line 1.2.

## Slovenia

**(General Comment):** Although the given answer for 'labour courts' is 4 and 'insurance and/ or social welfare courts' at first instance is 1, the total number of these courts is 4, as one of the labour courts and the social court form a single legal entity – the Labour and social court in Ljubljana.

Concerning specialised courts – higher instances, although the given answer for 'labour courts' is 1 and 'insurance and/ or social welfare courts' is 1, the total number of these courts is 1, as they form a single legal entity – the Higher labour and social Court.

**(2019):** Please see general comment.

## Spain

**(General Comment):** The Arbitration Court was created by decision of the General Council of the Judiciary of 25 November 2010. The latter assigns exclusive jurisdiction over arbitration matters to the Court of First Instance No. 101 of Madrid. This measure seeks to foster the development of uniform criteria in court proceedings for the assistance and control of arbitration in Madrid.

In Spain, as general rule, the First Instance are unipersonal Courts: One Judge-courts. In Spain we have two types of specialization: Special Jurisdictions established by Organic Law (Violence against women, Commercial, for example), and the possibility for GCJ to determine that in some places, a general jurisdiction Court (Civil) is focused in some kind of cases.

**(2022):** Courts Labour specialised in enforcement; Courts on enforcement of Arbitration; Civil Registry; Courts on Penitentiary Surveillance; Courts for mortgage enforcement; Courts on capacity of persons; Criminal Courts of Violence against Women; other

**(2021):** "Juzgados de lo Mercantil" are in Spain in charge of insolvencies and commercial cases (both). So it cannot be separated commercial and insolvency.

**(2020):** Commercial courts - new units have been established.

**(2019): Courts of violence against women 106**

Foreclosure proceedings Courts: 3

Court of arbitration: 1

Civil capacity courts: 13

Criminal courts: 348

Criminal courts specialized in Violence against women, 31

Juvenile Courts: 82

Prison courts: 51

Civil Registries: 28

**(2018):** Between 2016 and 2018, more first instance courts have become specialized in family matters. Courts of violence against women: 106

Foreclosure proceedings Courts: 3

Court of arbitration: 1

Civil capacity courts: 12

Criminal courts: 341

Criminal courts specialized in Violence against women, 32

Juvenile Courts: 82

Prison courts: 51

Civil Registries: 28

Additionally (and they are not accounted) there are 26 military courts that are not part of the Judiciary but they are inspected by it)

**(2017):** -338 Criminal courts

-32 Criminal courts specialized in violence against women

-106 violence against women courts

-82 juvenile courts

-51 Prison courts

-3 foreclosure proceedings courts

-1 Arbitration court

-18 Civil Capacity courts

- 28 Civil register offices

**(2016):** - 335 Criminal courts

-30 Criminal courts specialized in violence against women

-106 violence against women courts

-83 juvenile courts

-51 Prison courts

-3 foreclosure proceedings courts

-1 Arbitration court

-18 Civil Capacity courts

- 28 Civil register courts

**(2015):** Other specialised courts include: 343 Penal courts; 23 Penal courts specialized in violence against women; 106 violence against women courts; 83 juvenile courts; 50 Prison courts; 3 foreclosure proceedings courts; 1 Arbitration court; 12 Civil Capacity courts and 28 Civil registry.

The Commercial Courts deal with insolvency issues.

Military Courts have not been accounted because they do not belong to the Judiciary (except the Supreme Court 5th room ). There are other 26 Military Courts.

**(2014):** In 2014, the category "other" encompasses: 357 Penal courts; 23 Penal courts specialized in violence against women; 106 violence against women courts; 83 Juvenile courts; 50 Prison courts; 16 Courts for disabled people (capacity courts), 26 Civil Register Courts, 3 Foreclosure proceedings courts (mortgage courts); 1 Arbitration court. The Decanatos exclusive are not included in this exercise because these organs are not courts and have rather administrative nature.

**(2012):** In 2012, the category “other” encompasses: 380 Penal courts; 17 Penal courts specialised in violence against women; 106 Violence against women courts; 82 Juvenile courts; 1 Juvenile Enforcement court; 50 Prison courts; 9 Capacity courts; 26 Civil Register courts; 8 Decanatos exclusive; 4 Labour enforcement courts; 4 Mortgage courts and one Arbitration Court.

#### Question 044

##### Austria

**(2020):** For this cycle, data on geographic locations is presented in respect of different locations for different instances, in compliance with the methodology developed in the Explanatory Note. The variation observed with previous cycles is only of a methodological nature.

**(2016):** It is planned to reduce the number of courts by 3 in 2018 (-1) and 2019 (-2)

##### Belgium

**(General Comment):** Having taken account the number of buildings housing the courts: 225 buildings in which all our premises are located. In Eupen, the court of first instance combines the court of first instance, the labor court and the commercial court, resulting in a total of 8 for both labor courts and commercial courts (Law of February 14th, 2014).

**(2020):** Deduction made on the basis of the number of buildings in which the courts are housed: 225 buildings in which all our premises are housed. In Eupen, the first instance courts combines the court of first instance, the labour court and the company court, which gives 8 for the labour and company courts ( Law of 14 February 2014)

**(2016):** A reform of the justices of the peace is under way: 1. a reduction in the number of geographical settlements 2. expansion of their jurisdiction by increasing the amount of claims.

The reform of the cantons (justices of the peace) was launched in 2016 and resulted in the law of 25 December 2017 which formally amended or abolished the cantons. The amendments come into force over 1.5 years.

**(2014):**

According to 2014 data, a change in the number of seats of the justices of the peace is ongoing. Similarly, from 1 April 2014, the statutory number of courts has been decreased for commercial, labour and police first instance courts while keeping the existing geographical seats.

##### Bulgaria

**(2022):** Sofia District Court has two buildings where hearings are held.

**(2018):** Proposals for amendments to the Code of Administrative Procedure and Code of Civil Procedure to change the jurisdiction of the district and administrative courts with a view to regulating their workload. A model for the optimization of the judicial map at the level of district courts will be developed in implementation of a project under the Operational Program "Good Governance" 2014-2020.

**(2016):** Proposals for amendments to the Administrative Procedure Code and the Code of Civil Procedure are intended to reform the jurisdiction of regional and administrative courts in order to regulate their workload. Within the implementation of a project under “Good governance” Operational Programme 2014-2020 a model for optimization of the judicial map on regional courts level will be developed.

##### Croatia

**(2020):** The reorganisation of judicial map that started in 2015 in which the number of municipal and misdemeanour courts as well as the number of municipal state attorneys' offices has been reduced continued in 2019 with the merger of municipal and misdemeanour courts into municipal courts.

The reasons for the merger were a significant decrease in the number of misdemeanour cases and overburdened municipal courts with civil cases. In the new judicial map, instead of 46 municipal and misdemeanour courts, there are now 34 municipal courts - all misdemeanour and municipal courts were merged in the same cities except in 2 largest cities, Zagreb and Split, in which specialised municipal courts for misdemeanour cases were retained, and due to geographical specificities and size of certain municipal courts they were separated and new municipal courts were established (10). Also, a new commercial court was established in Dubrovnik. The aim of this new judicial map with new courts in the network and increased jurisdiction of permanent services is to increase the efficiency of the courts, improve access to court services, ensure even distribution of the workload of judges, shorten the length of court proceedings, reduce the number of unresolved cases in municipal courts, and ensure optimisation and easier management of human resources in courts.

**(2018):** The reorganisation of judicial map that started in 2015 in which the number of municipal and misdemeanour courts as well as the number of municipal state attorneys' offices has been reduced continued in 2019 with the merger of municipal and misdemeanour courts into municipal courts.

The reasons for the merger were a significant decrease in the number of misdemeanour cases and overburdened municipal courts with civil cases. In the new judicial map, instead of 46 municipal and misdemeanour courts, there are now 34 municipal courts - all misdemeanour and municipal courts were merged in the same cities except in 2 largest cities, Zagreb and Split, in which specialised municipal courts for misdemeanour cases were retained, and due to geographical specificities and size of certain municipal courts they were separated and new municipal courts were established (10). Also, a new commercial court was established in Dubrovnik. The aim of this new judicial map with new courts in the network and increased jurisdiction of permanent services is to increase the efficiency of the courts, improve access to court services, ensure even distribution of the workload of judges, shorten the length of court proceedings, reduce the number of unresolved cases in municipal courts, and ensure optimisation and easier management of human resources in courts.

**(2016):** There is a new judicial reform in plan in which the misdemeanour courts will be merged with municipal courts (both 1st instance courts).

**(2014):** According to the new Act on Territories and Seats of Courts (Official Gazette 128/14), that entered into force on the 1st of April 2015, a further rationalization of the network of municipal (from 67 to 24) and misdemeanour courts (from 63 to 22) and the establishment of an additional commercial court (8 instead of 7) are to be carried out from 1st of April and 1st of July.

As well, the new Act introduces changes regarding the territorial jurisdiction with regard to dealing with appeals. In criminal cases, any county court can decide on appeals lodged against judgments, while only few county courts may decide on appeals in land, labor and family matters.

## **Cyprus**

**(2018):** In 2019 a New administrative court of international protection has been established that will deal with asylum cases.

**(2016):** Bills are being drafted for the creation of a commercial court and a first instance asylum administrative court.

**(2014):** In the frame of the 2014 exercise, it has been pointed out that an Administrative court has been established in Cyprus and started functioning on the 7th of January 2016.

## **Czech Republic**

**(2022):** 6 regional courts and 3 district courts have their branches in other cities.

**(2021):** 6 regional courts and 3 district courts have their branches in other cities.

**(2020):** 6 regional courts and 3 district courts have their branches in other cities.

## **Denmark**

**(2022):** Included in first instance courts are district courts, Land Registration Court and the Maritime and Commercial Court.

**(2021):** The 26 are all the 24 district courts plus the Maritime and Commercial Court and Land Registration Court. In the figure 29 is the two high courts and the Supreme Court included.

**(2020):** Included in first instance courts are district courts, Land Registration Court and the Maritime and Commercial Court.

## **Estonia**

**(General Comment):** Estonia has 17 courthouses of county courts (first instance courts), 4 courthouses of administrative courts (first instance courts), 2 courthouses of appellate courts (second instance courts) and 1 courthouse of the Supreme Court (highest instance court), all together 24 courthouses. However, as some of the courts are situated in the same house (e.g Tallinn Administrative Court and Tallinn Circuit Court) and taking into account the fact that Pärnu County Court has a courthouse that is divided between two locations, there are 20 actual geographical locations of Estonian courts.

**(2020):** Tartu county court closed one courthouse, so now there's 20 geographic locations.

**(2014):** In the end of 2015 the Council for Administration of Courts devised the merger of two courthouses in Estonia that are situated very close to each other (20 km). Both houses will remain open but will have joint territorial jurisdiction and administration.

## **Finland**

**(2018):** As of 1 January 2019, the district courts will be centralised by decreasing the number of the courts from 27 to 20. A court can have more than one office. The number of the district courts' offices will be reduced from 57 to 36 offices. As of 1 September 2019, undisputed civil cases (for example debt collection, unpaid rents, other small debts and eviction cases) which are handled and decided in summary proceedings will be centralised from all 20 district courts to nine district courts.

**(2016):** In Finland is ongoing structural reform of the District Courts in which the number of the courts will be decreased from 27 to 20. The main target is to merge smaller courts in to bigger units that would be more efficient and profitable and also maintain high quality. At the same time the geographical locations of the District Courts will be decreased from 57 to 36. This means that in addition to the 7 administrative offices that will be shut down, 5 side offices and 13 separate locations for hearing will be closed. Instead the use of video conference, electronic services and other IT-solutions would be increased. Deadline for the new project is 31.12.2018 so that the reform would be in force in the beginning of the year 2019. The government's proposal has been given at January 2017. The handling of the proposal in the parliament is unfinished.

**(2014):** According to 2014 data, for the foreseeable future the next reform is the developing of the structure of the District Court network. The foreseen change is a reduction of the number of District Courts.

## **France**

**(2022):** The data encompasses both the jurisdictions of the judiciary and those of the administrative order (the number of geographical locations of administrative courts: 1) Administrative courts at first instance (including common law jurisdictions at first instance and specialized jurisdictions at first instance): 32 in mainland France / 11 overseas territories; 2) All administrative courts (this figure includes common law courts at first instance, specialized courts at first instance, all second-instance courts and appellate courts, as well as all Supreme Courts): 42 in mainland France / 11 overseas territories.

**(2021):** 661: this figure takes into account all courts of first instance, excluding Courts of appeal (CA). Sites hosting only a Court of appeal have therefore been excluded from this count. Sites hosting both a CA and a court of first instance have been counted only once (hence the difference of 44: 37 CAs occupying 44 sites), 43 of which are for the administrative order. 715: this figure takes into account all courts, whether on appeal or at first instance. When a court of first instance and a Court of appeal are located on the same site, they have been counted separately, including 53 for the administrative order.

**(2020):** "With regard to the judiciary, there are 576 courts of first instance - geographic locations. This figure takes into account, by number of sites, all the courts of first instance, excluding the second instance court. Sites hosting exclusively a second instance court have therefore been excluded from this count. Sites hosting both a CA and a trial court were counted only once. There were 619 Courts geographic locations counted. This figure takes into account, by number of sites, all the jurisdictions whether they are appeal or first instance. Moreover, when a first instance court and a second instance court are located on the same site, they have been counted twice (hence the difference of 43 with the previous question: 37 CA which occupy 43 sites).

As regards the administrative order, there are 42 first instance courts for the administrative order and 53 all courts for the administrative order. "

**(2016):** A reform could take place within the framework of the bill on Justice programming presented in 2018. If no court site should be closed, the organization could be modified, particularly at the level of the courts of appeal, whose map is very different from those of the current administrative regions. There could also be only one first instance court per department.

**(2014):** As of 1 September 2014, the high courts (TGI) were resettled in the towns of Saint-Gaudens, Saumur and Tulle. Moreover, seconded chambers (geographic locations) were created on the same date in Guingamp and Marmande and on 1 January 2015 in Millau. A draft law to modernise the justice provides that the litigation of social security affairs and disability will be brought together before the TGI. Small offences ruled before the District Court will be transferred to TGI; similarly, compensation for personal injury will be entirely the responsibility of the TGI.

## Germany

**(General Comment):** The figures in this section are taken from the chart "Number of Federal and State Courts" that does not distinguish between legal entities and geographic location of the courts. Generally, one legal entity equals one geographic location. A small number of courts may have a additional points of presence in other geographic locations. Since the exact number of geographic locations in comparison to legal entities is unknown, the figures from the chart "Number of Federal and State Courts" were used to answer this question as well.

**(2018):** The possibility of combining courts is being considered by individual Länder in order to reduce costs. The regional structures have proven effective.

On 5 November 2019, the Land Government of Schleswig-Holstein adopted a statutory instrument on the concentration of jurisdiction which combines existing concentrations of jurisdiction while adding further concentration provisions. The instrument will be promulgated at the end of the month.

**(2016):** The possibility of combining courts is being considered by individual Länder in order to reduce costs.

## Greece

**(2020):** The total number of courts includes the Court of Auditors

**(2014):** According to 2014 data, the Law 1756/1988, article 2, as modified by the Law 4123/2013, provides for a reduction of the number of courts. Besides, the Law 1756/1988, article 4, as modified by the Law 4264/2014, provides for a change in the powers of courts.

## **Hungary**

**(2018):** According to proposed legislation an independent administrative court system may be established in the future.

**(2016):** Two new district courts will be established (one in 2017 in the city of Szigetszentmiklós, another one in 2019 in the city of Érd).

**(2014):** According to 2014 data, a new first instance (district) court will be established in the city of Érd on 01/01/2018.

## **Ireland**

**(2022):** There has not been an increase in venues since 2020. This answer is based on the explanatory note wherein if there are two courts, e.g. District and Circuit courts sitting in one specific location, they are to be counted separately whereas previously they were counted together.

**(2018):** The Assisted Decision-Making (Capacity) Act 2015 will, when commenced, replace the existing wardship regime for persons with capacity issues and introduce new decision support arrangements for such persons. New jurisdiction will, in particular, be conferred on the Circuit Court in respect of such arrangements. The current situation is that while some parts of the 2015 Act are commenced, others remain to be commenced.

**(2016):** The Assisted Decision-Making (Capacity) Act 2015 will, when commenced, replace the existing wardship regime for persons with capacity issues and introduce new decision support arrangements for such persons. New jurisdiction will, in particular, be conferred on the Circuit Court in respect of such arrangements.

**(2014):** According to 2014 data, legislation is in preparation for the creation of specialised family courts within the High, Circuit and District Courts.

## **Italy**

**(2016):** Enhancing the specialization of judges / courts. In particular, the judiciary authorities are evaluating the introduction of specific courts for family and personal matters ("Berruti" reform). Increased competence of Business Courts. Establishment of specialized sections on matters such as immigration, international protection and free movement of citizens of the European Union.

Revision of the appeal system in order to reduce the appeal rate.

## **Latvia**

**(2021):** All the courts (geographic locations) - Administrative District Court in Riga and Administrative Regional Court is located in one building, there is counted as 1 court per geographical location and indicated in the number of first instance courts. The same situation is in Vidzeme region - Vidzeme Regional Court Madona Court house and Vidzeme District Court is located in 1 building, there is counted as 1 court per geographical location and indicated in the number of first instance courts.

**(2018):** Reform was finished in March 2018. In its course first instance court count was reduced to 10 (9 first instance + 1 first instance Administrative court).

In year 2020/2021 there is a plan of creating a court for economical cases that would be a specialised 1st instance court.

**(2016):** Starting from 1 of February 2016, the reform has been introduced in Latgale (administrative region of Latvia). A number of district (city) courts in territory of Latgale regional court was decreased from six to two district (city) courts (Balvi District Court and Ludza District Court had been incorporated into Rezekne District Court; Kraslava district court and Preiļi District Court had been incorporated into Daugavpils District Court).  
in 2016, Ministry of Justice make preparatory work to make court house reform in two district (city) court in the Rīgas region. Accordingly, starting from 1 of February 2017, the City of Rīga Zemgale Urban District Court has been reorganized and conjoined with the City of Rīga Kurzeme District Court and changed the name of this court to City of Rīga Pārdaugavas Court.

**(2014):** In the frame of the 2014 evaluation, it has been stressed that the Judicial Council and the Cabinet of Ministers have initiated the gradual unification of the territory of operation of district (city) courts, through the implementation of the reform of the Riga court region. From March 2015, the Sigulda Court is attached to the Riga District Court, while the Riga City Central District Court was attached to the Riga City Vidzeme District Court.  
The Judicial Council's decision of 8 June 2015 confirmed the restructuring plan concerning the Jūrmala City Court. According to the plan, the latter must be attached to the Riga District Court from August 2015. The review of the judicial map is intended to increase the efficiency of the court system and the quality of the judicial activity, to reduce the processing times and to even out the judicial capacity. The reform is still going on.

## Lithuania

**(General Comment):** There are 59 1st instance courts locations: 12 district courts (49 locations), 5 regional courts (5 locations) of general jurisdiction and 2 regional administrative courts (5 locations).

For all the courts 62 courts locations: The Supreme Court of Lithuania, the Court of Appeal of Lithuania, the Supreme Administrative Court of Lithuania and 59 1st instance courts locations.

**(2022):** There are 59 1st instance courts locations: 12 district courts (49 locations), 5 regional courts (5 locations) of general jurisdiction and 2 regional administrative courts (5 locations).

For all the courts 62 courts locations: The Supreme Court of Lithuania, the Court of Appeal of Lithuania, the Supreme Administrative Court of Lithuania and 59 1st instance courts locations.

**(2020):** There are 59 1st instance courts locations: 12 district courts (49 locations), 5 regional courts (5 locations) of general jurisdiction and 2 regional administrative courts (5 locations).

For all the courts 62 courts locations: The Supreme Court of Lithuania, the Court of Appeal of Lithuania, the Supreme Administrative Court of Lithuania and 59 1st instance courts locations.

**(2018):** Analysis and discussion on the need and possibility to decrease the number of court houses are initiated.

**(2016):** From January 1, 2018, there shall be 12 district courts (instead of 49) and 2 regional administrative courts (instead of 5).

## Malta

**(2022):** The Juvenile Court that until the previous evaluation was in a separate geographical location, has since been relocated to the Courts of Justice in Valletta. Hence the change in the figure quoted.

**(2021):** The Juvenile Court is a first instance specialised court that is located outside of the main court building in Valletta. We are therefore reflecting this different geographic location in the updated figures in Q44.

**(2016):** Throughout 2017, work was carried out in order to introduce a commercial division within the Civil Court in order to facilitate cases filed under the Companies Act. The bill is currently undergoing the legislative process that would see it being enacted as law by the end of the year. The Commercial Division will become operative in 2018.

## Netherlands

**(General Comment):** First instance: the first instance courts, and the Trade and Industry Appeals Tribunal are included. All courts: first instance, second and highest instance courts of general jurisdiction are included, as well as the Trade and Industry Appeals Tribunal, Central Appeals Tribunal and Administrative Jurisdiction Division of the Council of State.

First instance geographic locations:

-33 first instance geographic locations of general jurisdiction, with 4 locations only housing a Justice of the Peace.

-1 Trade and Industry Appeals Tribunal. Counted separately, although located at the same location as a first instance court of general jurisdiction. It is not the same court, but a separate, specialized court (this change in counting occurred between 2020 and 2021). See Q43 for why this is counted as a first instance court.

All courts geographic locations:

-34 first instance geographic locations (see above).

-6 second instance geographic locations of general jurisdiction, of which 4 are located at the same geographic location as a first instance court.

-1 Supreme Court, located at a separate location.

-1 Central Appeals Tribunal, located at the same geographic location as a first instance court. Counted separately as it is not the same court.

-1 Administrative Jurisdiction Division of the Council of State, located at a separate location.

**(2021):** First instance: the first instance courts, and the Trade and Industry Appeals Tribunal are included.

All courts: first instance, second and highest instance courts of general jurisdiction are included, as well as the Trade and Industry Appeals Tribunal, Central Appeals Tribunal and Administrative Jurisdiction Division of the Council of State.

First instance geo.locations:

-33 first instance geo.location of general jurisdiction, with 4 locations only housing a Justice of the Peace.

-1 Trade and Industry Appeals Tribunal. Counted separately, although located at the same location as a first instance court of general jurisdiction, as it is not the same court, but a separate, specialized court (different than previous evaluation). See Q43 for why this is counted as a first instance court.

All courts geo.locations:

-34 first instance geo.locations (see above).

-6 second instance geo.locations of general jurisdiction, of which 4 are located at the same geo.location as a first instance court.

-1 Supreme Court, located at a separate location.

-1 Central Appeals Tribunal, located at the same geo.location as a first instance court. Counted separately as it is not the same court.

-1 Administrative Jurisdiction Division of the Council of State, located at a separate location.

**(2020):** In one case (of 43), a first instance court of general jurisdiction, a specialized first instance court, and a court of appeal are housed at the same site (adding 2 sites according to the explanatory note).

In 3 cases, a first instance court of gen.jur. and a court of appeal are housed at the same site (adding 3 sites according to the explanatory note).

In 1 case, a f.i. court of gen.jur. and a specialized second instance court are housed at the same site (adding 1 site according to the explanatory note).

Finally, the Supreme Court, 1 specialized second instance court, and 2 appeal courts are housed at unique locations (adding 4 sites according to the explanatory note).

**(2016):** Possibility of closing subdistrict court facility?

**(2014):** According to 2014 data, the reforms regarding the merging of courts mentioned on the occasion of the 2012 evaluation have been implemented.

**Poland**

**(2022):** The figure of 496 indicated in 2022 is the sum of the common, administrative and military courts of first and second instance and the Supreme Court by geographic location (i.e. including the subdivisions). To the number of courts of first instance by geographical location (item 44 in line 1 - all common, administrative, military courts of first instance with localised divisions: number of courts 434) was added the number of 62 courts: - regional courts: 47; - courts of appeal: 11; - military courts: 2; - Supreme Administrative Court: 1; - Supreme Court: 1;  
Total: 494 (434 + 62).

**(2020):** Regarding point 44, it should be noted that in the previous evaluation cycles (2016, 2017, 2018, 2019) the answer in terms of the number of all courts as geographical locations was 401, while in 2020 it is 494.

The figure of 494 indicated in 2020 is the sum of the common, administrative and military courts of first and second instance and the Supreme Court by geographic location (i.e. including the subdivisions). To the number of courts of first instance by geographical location (item 44 in line 1 - all common, administrative, military courts of first instance with localised divisions: number of courts 433) was added the number of 61 courts: - regional courts: 46; - courts of appeal: 11; - military courts: 2; - Supreme Administrative Court: 1; - Supreme Court: 1;  
Total: 494 (433 + 61).

The discrepancy is due to the adoption of a different method of data presentation in 2020 (by geographical location). In compliance with the Explanatory note, the 2020 data show first-instance courts (line 1), and further all courts (line 2) together with all seats in different locations, which in the realities of the Polish legal system should be understood as a necessity to show the number of courts together with local divisions.

**(2016):** It is considered to reduce the number of district courts which are responsible for land and mortgage registers or abolishing external branches in district courts.

## Portugal

**(2020):** The difference between 2019 and 2020 is justified by the increase in new buildings.

**(2018):** Law n.º 19/2019, 19th February.

The recent amendments to the Law of the Organization of the Judiciary System are intended to ensure the reciprocal proximity of justice and citizens in two key segments: criminal jurisdiction and family and minors jurisdiction.

These new amendments aim to facilitate people's access to courts and combat the desertification of the interior regions of the country.

**(2016):** Law n.40-A/2016, 22 December and Decree-Law n. 86/2016, 27 December.

On the 1st of January 2017, 20 extinct districts were reopened, as well as 23 of the so-called proximity sections, in which judicial acts may now be concluded.

## Romania

**(2022):** It should be mentioned that some of the first instance specialised courts share the location with „judecatorii”.

**(2020):** Law no. 304/2004 on the judicial organisation.

It should be mentioned that some of the first instance specialised courts share the location with „judecatorii”.

**(2014):** According to 2014 data, a bill on closing 30 courts and 30 attached prosecution offices with low volume of work was initiated by the Ministry of Justice with the support of the Superior Council of Magistracy of Romania. The bill was rejected by the Parliament. The Superior Council of Magistracy seeks for alternative solutions for the reallocation of the resources.

## Slovak Republic

**(2021):** The Constitutional court is not included in Q44.

**(2020):** The Constitutional Court is not included in the 44 answer.

**(2014):** According to 2014 data, on 1st July 2016, the new Civil Litigious Procedure Code will enter into force. It introduces the so called "causal jurisdiction" of first instance courts. It means that certain types of civil claims will belong to the jurisdiction of only some of the first instance courts. This will apply e.g. for individual labour disputes, arbitration disputes, disputes arisen from bill of exchange etc.

## Slovenia

**(General Comment):** First instance courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts and social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of the Administrative court) =70

All courts: In addition to above also 4 higher courts of general jurisdiction + 1 higher labour and social court + the Supreme court = 76.

**(2018):** A change in the organisation of first instance courts (judicial map), as well as first instance judges' position is being prepared by the Ministry of Justice - see Q208.

**(2016):** Ministry of Justice is preparing court network reform. Existent first instance court network is considered as inefficient and insufficient. The main goal of this reform is to set up a system, which could assure better quality and efficiency of adjudication, specialization of judges and even allocation of cases. Furthermore, reform still should assure proper access to the courts and financial efficiency. Ministry of Justice is also taking in consideration different system of the nomination of judges, nomination of Supreme Court judges and president of the Supreme Court. Existent nomination procedure of judges is too rigid and does not enable taking prompt actions when the post is vacant.

**(2014):** According to 2014 data, discussions about the reorganization of the structure of courts have been initiated. Following the CEPEJ Guidelines on the creation of judicial maps to support access to justice within a quality judicial system (CEPEJ(2013)7) the change should be gradual. The reduction in the number of courts regarding geographical locations is not foreseen, but reorganization in the powers of local courts that are organizational units of district courts might be needed. There are local courts that have only a few (3-5) judges, which is not rational in the sense of court management. Such local courts might start dealing only with certain kinds of cases, with other local courts in the same district dealing with other kinds of cases, having de facto specialized local courts. Nevertheless, these changes are still in the initial debate phase, so no formal proposal can be presented yet.

## Spain

**(General Comment):** One building usually houses different courts. For example, in Madrid one building (Castilla Square) houses 47 unipersonal Courts.

**(2018):** The traditional structure of a Court includes a Judge (or Magistrate), a Judicial Counsellor, and several civil servants (the exact number depends on many circumstances). The New Judicial Office (Nueva Oficina Judicial) has been implemented in many territories and its development continues. The New Judicial Office (NOJ) has, as base, the called 'Procedural Unit of Direct Support' (UPAD), a small office with personnel necessary for the strict aid of the work of the Judge. On the other hand, and for the uniform processing of repetitive tasks, the called Common Procedural Services have been created. The Judicial Counsellor is the Director of these services, and is responsible of processing the phase of the judicial file of a strictly procedural nature.

**(2016):** The traditional structure of a Court includes a Judge (or Magistrate), a Lawyer of the Administration of Justice, and several civil servants (the exact number depends on many circumstances). The New Judicial Office (Nueva Oficina Judicial) has been implemented in many territories and its development continues. The New Judicial Office (NOJ) has, as base, the called 'Procedural Unit of Direct Support' (UPAD), a small office with personnel necessary for the strict aid of the work of the Judge. On the other hand, and for the uniform processing of repetitive tasks, the called Common Procedural Services have been created. The Lawyer of the Administration of Justice is the Director of these services, and is responsible of processing the phase of the judicial file of a strictly procedural nature.

**(2014):** On the occasion of the 2014 evaluation, the attention was drawn on the deployment in the entire country of the Judicial Office, the new model for organising courts of law and the creation of the Instance Courts (Tribunales de Instancia), a new model of collegial courts aimed at replacing local courts belonging to the same judicial district.

# Indicator 3: The performance of courts at all stages of the proceedings

- 1 First instance other than criminal cases by case categories and by case status
- 1 Evolution of first instance other than criminal cases for total, civil and commercial litigious and administrative cases
- 2 Clearance Rate and Disposition Time for first instance other than criminal cases
- 3 Variations of first instance other than criminal cases by case categories
- 4 Second instance other than criminal cases by case categories and by case status
- 4 Evolution of second instance other than criminal cases for total, civil and commercial litigious and administrative cases
- 5 Clearance rate and Disposition time for second instance other than criminal cases
- 6 Variations of second instance other than criminal cases by case categories
- 7 Supreme court other than criminal cases by case categories and by case status
- 7 Evolution of Supreme court other than criminal cases for total, civil and commercial litigious and administrative cases
- 8 Clearance rate and Disposition time for Supreme court other than criminal cases
- 9 Variations of Supreme court other than criminal cases by case categories
- 10 European Commission templates for first instance cases
- 11 First instance criminal cases by case categories and by case status
- 12 Evolution of the first instance total of criminal cases, severe criminal cases and misdemeanour and / or minor criminal cases
- 13 Clearance rate and Disposition time for first instance criminal cases
- 14 Variations for first instance main categories of the criminal cases
- 15 Second instance criminal cases by case categories and by case status
- 16 Evolution of the second instance total of criminal cases, severe criminal cases and misdemeanour and / or minor criminal cases
- 17 Clearance rate and Disposition time for second instance criminal cases
- 18 Variations for second instance main categories of the criminal cases
- 19 Supreme courts, criminal cases by case categories and by case status
- 20 Supreme courts, Evolution of the total of criminal cases, severe criminal cases and misdemeanour and / or minor criminal cases
- 21 Clearance rate and Disposition time for Supreme court criminal cases
- 22 Supreme courts, Variations for main categories of the criminal cases

**Other than criminal cases - First instance cases by case categories and by case status**

**Table 3.1.1.1a: First instance other than criminal cases - pending on 1st Jan. 2022**

**Absolute values (Q91)**

States	Total number of other than criminal law cases	Civil (and commercial) litigious cases	Total non-litigious cases	General civil (and commercial) non-litigious cases	Registry cases	Non-litigious land registry cases	Non-litigious business registry cases	Other registry cases	Other non-litigious cases	Administrative law cases	Other cases

**Cyprus, Malta** have a two tier system therefore the Supreme Court is the second, highest and final instance court.

**Hungary:** As of 1st April 2020, remedies in administrative cases are transferred from second instance courts to the Supreme Court.

**Malta:** In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

**Poland:** The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

**Slovak Republic:** In 2021, the Supreme Administrative Court was established as a separate institution. It acts as second instance court in the administrative cases. It took over all the administrative law cases of the Supreme Court.

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court.

Hungary: As of 1st April 2020, remedies in administrative cases are transferred from second instance courts to the Supreme Court.

Malta: In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Poland: The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court.

Hungary: As of 1st April 2020, remedies in administrative cases are transferred from second instance courts to the Supreme Court.

Malta: In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Poland: The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

**Cyprus, Malta** have a two tier system therefore the Supreme Court is the second, highest and final instance court.

**Hungary:** As of 1st April 2020, remedies in administrative cases are transferred from second instance

**Malta:** In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

**Poland:** The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

**Slovak Republic:** In 2021, the Supreme Administrative Court was established as a separate institution. It acts as second instance court in the administrative cases. It took over all the administrative law cases of the Supreme Court.

**Table 3.5.1.2: Disposition time for second instance other than criminal cases in 2022**

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court.

Hungary: As of 1st April 2020, remedies in administrative cases are transferred from second instance courts to the Supreme Court.

Malta: In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Netherlands: The number of resolved cases includes only cases finalised by a judge decision, while cases closed differently (e.g. withdrawn, discarded upon objection and alike) are not included

Poland: The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

Slovak Republic: In 2021, the Supreme Administrative Court was established as a separate institution. It acts as second instance court in the administrative cases. It took over all the administrative law cases of the Supreme Court.

**Hungary:** As of 1st April 2020, remedies in administrative cases are transferred from second instance courts to the Supreme Court.

**Malta:** In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

**Romania:** Cases older than 3 years are presented.

**Slovak Republic:** In 2021, the Supreme Administrative Court was established as a separate institution. It acts as second instance court in the administrative cases. It took over all the administrative law cases of the Supreme Court.

# **Evolution of Supreme court other than criminal cases for total, civil and commercial litigious and administrative cases**

**Cyprus, Malta** have a two tier system therefore the Supreme Court is the second, highest and final instance court.

**Hungary:** As of 1st April 2020, remedies in administrative cases are transferred from second instance courts to the Supreme Court.

**Malta:** In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

**Netherlands:** The number of resolved cases includes only cases finalised by a judge decision, while cases closed differently (e.g. withdrawn, discarded upon objection and alike) are not included

**Poland:** The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

**Slovak Republic:** In 2021, the Supreme Administrative Court was established as a separate institution. It acts as second instance court in the administrative cases. It took over all the administrative law cases of the Supreme Court.

**Cyprus, Malta** have a two tier system therefore the Supreme Court is the second, highest and final instance court.

**Hungary:** As of 1st April 2020, remedies in administrative cases are transferred from second instance courts to the Supreme Court.

**Malta:** In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

**Netherlands:** The number of resolved cases includes only cases finalised by a judge decision, while cases closed differently (e.g. withdrawn, discarded upon objection and alike) are not included

**Poland:** The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

**Slovak Republic:** In 2021, the Supreme Administrative Court was established as a separate institution. It acts as second instance court in the administrative cases. It took over all the administrative law cases of the Supreme Court.

**Malta:** In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

**Poland:** The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

**Slovak Republic:** In 2021, the Supreme Administrative Court was established as a separate institution. It acts as second instance court in the administrative cases. It took over all the administrative law cases of the Supreme Court.

Hungary: As of 1st April 2020, remedies in administrative cases are transferred from second instance courts to the Supreme Court.

Slovak Republic: In 2021, the Supreme Administrative Court was established as a separate institution. It acts as second instance court in the administrative cases. It took over all the administrative law cases of the Supreme Court.

# **European Comission templates for first instance data on other than criminal instance cases**

**Table 3.10.1 (EC): Disposition time\* (in days) for first instance total of other than criminal cases\*\*, from 2012 to 2022 (Q91)**

\*\* Other than criminal cases refer to the CEPEJ categories: Civil (and commercial) litigious cases, general civil (and commercial) non-litigious cases, non-litigious land registry cases, non-litigious business registry cases, other non-litigious registry cases, other non-litigious cases, administrative law cases and other cases

**Greece:** In 2017 new IT management systems were introduced for civil as well as administrative cases and some variations can be noticed.

**Italy:** Only since 2014 the 29 regional administrative courts data are taken into account in the number of cases on first instance.

**Slovak Republic:** Because of changes in the structure of the caseload data the number of cases is not comparable between different cycles.

$$* \text{ CEPEJ Clearance Rate (\%)} = \frac{\text{Resolved cases in a period}}{\text{Incoming Cases in a period}} \times 100$$

**Austria:** The total number of first instance criminal cases is higher than the sum of the subcategories because it also includes administrative criminal cases for which the distinction between severe and minor offences is not possible.

**Ireland:** The first and second instance criminal cases are generally counted by offence rather than case.

**Austria:** The total number of Second instance criminal cases is higher than the sum of the subcategories because it also includes administrative criminal cases for which the distinction between severe and minor offences is not possible.

**Belgium:** Starting from 2021 cases dealt with by the Investigation chamber (Chambre des mises en accusation) are presented separately in the "other criminal cases" category. Before, they were included in the severe criminal cases.

**Cyprus and Malta** have a two-tier system, where the Supreme Court is the second, highest and final instance court. It was agreed to present the data for the Supreme Court in the second instance.

**Ireland:** The first and second instance criminal cases are generally counted by offence rather than case.

Cyprus and Malta have a two-tier system, where the Supreme Court is the second, highest and final instance court. It was agreed to present the data for the Supreme Court in the second instance.

Greece: The methodology to present data in line with CEPEJ categories was updated and the comparison with previous cycles can not be made.

# Indicator 3: The performance of courts at all stages of the proceedings

## Comments provided by the national correspondents organised by country

*Question 091. First instance courts: number of other than criminal law cases.*

*Question 092. If courts deal with “civil (and commercial) non-litigious cases”, please indicate the case categories included:*

*Question 093. Please indicate the case categories included in the category “other cases”:*

*Question 094. First instance courts: number of criminal law cases.*

*Question 097. Second instance courts (appeal): Number of “other than criminal law” cases.*

*Question 098. Second instance courts (appeal): Number of criminal law cases.*

*Question 099. Highest instance courts (Supreme Court): Number of “other than criminal law” cases:*

*Question 100. Highest instance courts (Supreme Court): Number of criminal law cases.*

### Austria

**Q091 (2022):** Starting from 2022, “non-litigious family matters” are taken into consideration in the category “general civil non-litigious cases”, while before they were communicated in “other”.

**Q091 (2021):** “Non litigious business registry cases”: Sec. 3a para. 2 of the COVID-19 act concerning corporate law (“Gesellschaftsrechtliches COVID-19-Gesetz”) allows corporations to file their annual accounts and other documents, that have to be published by law, not only within 9 but within 12 months from the account date (mostly: December 31st of a year). Usually, the duty to file these reports within 9 months leads to a high number of incoming files in September. 2020 and 2021 the special rules lead to such high incoming file numbers in December and thereby to an increase in pending cases at the end of the year.

**Q091 (2020):** "Non litigious business registry cases": Sec. 3a para. 2 of the COVID-19 act concerning corporate law ("Gesellschaftsrechtliches COVID-19-Gesetz") allows corporations to file their annual accounts and other documents, that have to be published by law, not only within 9 but within 12 months from the account date (mostly: December 31st of a year). Usually, the duty to file these reports within 9 months leads to a high number of incoming files in September. 2020 the special rules lead to such high incoming file numbers in December and thereby to an increase in pending cases at the end of the year.

"4. Other cases": The number of incoming and resolved cases surged due to an increase of "general civil proceedings, that are not allocated to other categories of cases" because the district administrative authorities (Bezirksverwaltungsbehörden) had to notify the district courts of every single person against which a quarantine measure (SARS-CoV-2) had been taken. In concerns of statistical data every such notification resulted in an incoming (and resolved) case.

Generally, no courts were closed during the lockdowns. During the first lockdown (middle of March until the end of April 2020) the number of incoming cases dropped significantly. Nearly all court hearings had to be postponed during the first lockdown. In total (all case types) in April 2020 there were 89.25 % less court hearings than in April 2019. In general litigious civil matters of first instance there were even 94.59 % less hearings. A comparison of the total number of court hearings held in the period of March 2019 to February 2020 on the one hand and of March 2020 to February 2021 on the other hand shows that there were 22.22 % less hearings since the first lockdown. The significant drop in incoming cases and held court hearings in April 2020 resulted in the opportunity to concentrate on finishing pending cases in which all hearings had already been held. The statistical data shows that the number of judgments pending more than 2 months since the final hearing declined considerably (1st of July 2020: -75 % compared to 1st of April 2020). Judges did always (even before the Covid-19 pandemic) have the opportunity to work from home. Many have made use of this option during the lockdowns. The Federal Ministry of Justice does not keep statistics on this matter (number of judges working from home) since judges are not obliged to record their working times or places.

**Q091 (2019):** There is a lack of horizontal consistency concerning the category "general civil and commercial non-litigious cases". Figures provided by the statistical system were double checked in this respect and are correct.

**Q091 (2017):** Due to the absolute low numbers of pending cases on 1 Jan./31 Dec. high deviations in percentage are normal. Note to 2.1.1.: Because of an inaccuracy by analysing pending non-litigious business registry cases the count had to be corrected on 1st December 2017. Therefore the pending cases on 31.12.2016 do not comply with those of 01.01.2017.

**Q091 (2016):** Due to the low absolute numbers of pending cases on 1 Jan./31 Dec. high deviations in percentage are normal.

**Q091 (2015):** In the category litigious are counted all proceedings (in civil matters, labour and social security cases at first instance courts) which are marked as being litigious in the court register (f.e. from the second court hearing on).

Civil and commercial non-litigious cases include commencement of bankruptcy proceedings, Bankruptcy proceedings, composition proceedings, non-litigious proceedings about rent, non profit cooperative association for housing, home ownership, proceedings about Lease of farm land, wardship cases in connection with administration of assets, custody and maintenance, uncontested payment orders, enforcement cases.

Category "other" includes Probate Proceedings, cases concerning the Administration of justice, Cancellation proceedings and proceedings in connection with [official] declaration of death authentication of signatures, proceedings to render legal assistance in civil matters for other courts (also international ones), General civil proceedings, that are not allocated to other categories of cases, Some Non litigious family matters.

**Q091 (2012):** In 2012, a legislative reform entailed more obligations for companies to register.

**Q092 (2014):** For the year 2014, this category has been extended to the enforcement cases.

**Q094 (2021):** The distinction between misdemeanour criminal cases and severe criminal cases is possible only for the criminal courts. However the total number includes administrative criminal law cases as well, where distinction is not possible.

**Q094 (2020):** The distinction between misdemeanour criminal cases and severe criminal cases is possible only for the criminal courts. However the total number includes administrative criminal law cases as well, where distinction is not possible.

**Q094 (2018):** The distinction between misdemeanour criminal cases and severe criminal cases is possible only for the criminal courts. However the total number includes administrative criminal law cases as well, where distinction is not possible.

**Q094 (2016):** Administrative criminal cases are included in misdemeanour and in total

**Q097 (General Comment):** From January 1st, 2014 there are 11 newly found courts for administrative law in Austria, namely 9 regional administrative courts, 1 Federal Administrative Court and 1 Federal Tax Court (all courts of first instances). Furthermore, there is also the Supreme Administrative Court (final instance). With regard to administrative law cases there is no second instance. The statistical evidence of the Federal Ministry of Justice of Austria does not distinguish between the types of second instance cases mentioned under 2.1., 2.2. and 2.3. Data regarding the general categories "litigious cases" (1.) and "non-litigious cases" (2.) is available. The number of "Other cases" (4.) is included in the category "litigious cases" (1.).

**Q097 (2022):** Non litigious family matters in the second instance have always been represented within the category of "non-litigious cases".

**Q097 (2021):** "Civil and commercial litigious cases" – the number of incoming civil litigious cases slightly increased between 2020 and 2021. The number of resolved such cases increased but to a lesser extent than incoming cases. Accordingly, the number of pending civil litigious cases at the end of the year increased. There is no explicit explanation for these variations. It should be recalled that 2020 year was a particular year due to the pandemic. In 2021, the data are back at the level of 2019.

**Q097 (2017):** In the area of appeal cases concerning other than criminal law cases only the categories of general civil law, labour law and social law are gathered. The administrative cases are NAP in second instance since they are presented in first and final instance.

**Q097 (2016):** In the area of appeal cases concerning other than criminal law cases only the categories of general civil law, labour law and social law are gathered. The administrative cases are NAP in second instance since they are presented in first and final instance.

**Q098 (2020):** "Misdemeanour and / or minor criminal cases": compared to the previous 10 years the pending, incoming and resolved cases in this category in the year 2020 showed a slight decrease. There is no specific explanation for this circumstance.

**Q098 (2016):** There is significant discrepancy in the number of incoming and resolved misdemeanour cases because the administrative criminal cases of second instance are included in third instance.

**Q099 (2022):** Administrative Law Cases: The number of 3547 pending administrative cases on 1 January ref. year corresponds to 3392 procedures adopted from previous years and 155 procedures completed in previous years and reopened in the reference year.

**Q099 (2021):** Discrepancy between number of pending administrative law cases on 31 December 2020 and number for pending administrative cases on 1 January 2021: 3043 procedures adopted from previous years and 139 procedures completed in previous years and reopen in the reference year. "Administrative law cases": The COVID-19 pandemic posed significant and new challenges to international and government institutions worldwide, including the Supreme Administrative Court. Social distancing necessary to combat the pandemic required profound changes in the service of the Supreme Administrative Court to guarantee its functioning. In addition to internal organisational measures such as the possibility of remote work and new electronic communication tools, changes to the legal framework were necessary to enable the passing of resolutions via circular letter without physical contact between the members of the judicial body. These legal changes became effective in the course of 2020 and 2021. The continuing high level of new cases in asylum and aliens law is due to the numerous applications for international protection filed in Austria from 2015 onwards. The increase in staff at both the Federal Office for Immigration and Asylum and the Federal Administrative Court has led to an increase in the number of cases dealt with by these authorities and thus also in the number of cases brought before the Supreme Administrative Court, which has now been at a relatively high level for several years.

**Q099 (2020):** Discrepancy between number of pending administrative cases on 31 December 2019 and number for pending administrative cases on 1 January 2020: the number of 3 064 pending administrative cases on 1 January 2020 corresponds to 2762 procedures adopted from previous years and 302 procedures completed in previous years and reopen in the reference year.

Pending administrative law cases older than 2 years: the observed increase is a consequence of the high number of cases in the field of asylum and aliens.

**Q099 (2019):** The reason for the increased number of incoming administrative cases and accordingly the increase in the number of pending administrative cases is related to the high number of cases in the field of asylum and aliens law characterizing the period 2016 - 2019.

**Q099 (2018):** The reasons for this increase of the incoming administrative cases is related to the high number of cases in the field of asylum and aliens law.

**Q099 (2017):** To 3.:

Because of the model of business cases installed at the Supreme Administrative Court pending cases at the begin of a reporting year have to be analysed by calculation. Incoming cases are subtracted from the sum of resolved cases and of pending cases at the end of the reporting year. New applications within the same case cause a reopening of the concerned cases. Thus the number of pending cases changes. Therefore a completely consistent image of figures of pending cases from the end of previous year and those from the begin of the current year is not feasible.

**Q099 (2016):** The big variation is due to the fact that this cycle the administrative cases were included. The administrative courts were established January 1st 2014. After their establishment the data of the administrative courts is introduced this cycle for the first time.

**Q100 (2022):** The total figure includes data on administrative criminal cases before the Supreme Administrative Court.

**Q100 (2021):** The total figure includes data on administrative criminal cases before the Supreme Administrative Court.

**Q100 (2020):** The total figure includes data on administrative criminal cases before the Supreme Administrative Court.

**Q100 (2016):** The big variation is due to the fact that this cycle the administrative cases were included. The administrative courts were established January 1st 2014. After their establishment the data of the administrative courts is introduced this cycle for the first time.

## Belgium

**Q091 (2022):** In relation to administrative matters, the total number of cases includes figures for the Council of State, the Council for Alien Law Litigation and the Flemish administrative courts Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen. However, the figure of 1392 (in the last column 'Cases pending for more than 2 years from the date on which a case is brought before first instance courts') only concerns the Council of State. Thus: - For the Council of State: 4.425; 2.214; 1.996; 4.523 and 1.392 - For The Council for Alien Law Litigation: 9.273 ;16 ,456 (a judgment may close different cases hence lack complete horizontal logic); 16 ,139 ;9 ,584 and NA.

**Q091 (2021):** Administrative law cases are those of the Council of State, the Aliens Litigation Council and the Flemish administrative courts Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen. However, the figure 1 428 (in the last column "Pending cases older than 2 years from the date the case came to the first instance court") concerns the sole Council of State. Thus, with regard to the Council of State, the figures are the following: 4 936; 2 191; 2 208; 4 420 and 1 428; with regard to the Aliens Litigation Council: 14 415; 14 124 (one judgment can close several cases which may result in a lack of horizontal consistency); 19 256; 9 273 and NA. Juvenile cases are not counted in the category "other cases". In fact, this case type includes both civil and criminal litigation.

### Q091 (2020):

"The health crisis has impacted the numbers.

\*Justice of the Peace: no pending cases (start + end). The way justice of the peace cases are counted has been adapted and unlike previous cycles, all dockets have also been taken into account for 2020. \*Civil courts of first instance: no pending cases (start + end). The same counting method was applied as last year. Omissions as well as so-called "dormant cases" are counted in the closed cases. \*Corporate courts: same counting method as last year. Only cases registered in the corporate court computer application, called TCKH, are counted in these figures. There are also corporate court cases that are only recorded in the RegSol computer application (since mid-2017) in bankruptcy proceedings, for example, between the receiver and the bankruptcy judge. Cases only registered in RegSol are not counted in these figures, which induces an underestimation. Commercial investigations (chambers of distressed companies) are not taken into account as the figures are unreliable due to the very disparate registration methods in the different company courts. No pending cases.

\*As far as administrative cases are concerned, the total number of cases includes the figures for the Council of State, the Aliens Litigation Council and the Flemish administrative courts Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen. However, the figure of 1489 (in the last column ""Cases pending for more than 2 years from the date on which the case is brought before the courts of first instance" ) concerns only the Council of State. Thus, - for the Council of State, the figures are: 4,564; 2,119; 2,019; 4,936 and 1,489; for the Conseil du Contentieux des Etrangers: 16,009; 14,238 (a judgment can close different cases hence the absence of complete horizontal logic); 15,769; 14,451 and NA.

"

**Q091 (2019):** Regarding the category "4. other cases" which refers to "protection cases", the statistical service does not have figures for 2019, following discussions on the counting rules between the courts. However, we kept the total for "other than criminal" cases since protection cases represent more or less 10,000 cases, or 1% of the total. Their actual number will not change the total figure significantly.

"Administrative cases pending at the end of the year": the lack of horizontal consistency is due to the fact that the number of judgments does not necessarily correspond to the number of closed cases. For example, a judgement that closes two cases is recorded as one stop

**Q091 (2018):** Civil and commercial cases include cases of justices of the peace, courts of first instance, civil, family and youth sections, labour courts and company courts (known as "commercial courts")

Civil and family courts: no data for pending cases. New rules for counting and recording cases mean that the statistics are not comparable to previous years. In particular, cases where there is a permanent referral are now counted as a case.

Concerning juvenile courts: no data for completed or pending cases due to the lack of uniform practice and low registration of completed cases.

Concerning registry cases: these are immediate acts, which is why the number of incoming cases is equal to the number of resolved cases. Administrative affairs: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.

**Q091 (2017):** The difference with the 2016 data is due to the lack of data on justices of the peace cases. In respect of justices of the peace, from July 2017 to June 2018, a deployment of new codes was carried out at the national level. The support service of the College of Courts and Tribunals is currently in the process of defining accounting rules for justices of the peace. For this reason, no figures were issued in 2018 pertaining to 2017 data.

Civil data are not included or only partially included for 5 courts; Youth courts: no data from Brussels (Dutch-speaking); no data for resolved cases and pending cases; No data for civil cases from police courts; Commercial courts: no data for pending cases + new counting rules for resolved cases. For this reason, comparison with previous data is made difficult; not all activities carried out in commercial courts are reflected in the statistics provided. Indeed, the following services are not covered: commercial investigation service, business continuity law, bankruptcy and dissolutions/liquidations.

**Q091 (2016):** Administrative cases: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.

The sharp decrease in administrative cases is due to immigration cases. There are 5 administrative courts, two of which are at federal (national) level: the State Council and the Aliens Litigation Council. It is within the latter that there has been a decrease in the number of cases. Immigration and asylum cases are handled by the Conseil du Contentieux des Etrangers. The Aliens Litigation Council is an independent administrative court, which deals with cases "in the first instance", i.e. full substantive litigation or "in cassation", i.e. a decision "in annulment" or "suspension". The Council may be seized with appeals against decisions of the "Commissariat général aux Réfugiés et aux Apatrides", against decisions of the "Office des Etrangers" and against all other individual decisions taken pursuant to the Act of 15 December 1980 on access to the territory, residence, establishment and removal of aliens (Aliens Act).

Please also note that figures for juvenile courts as well as figures for civil cases treated by the police courts are not included in this cycle. These figures present very small number from the total number of cases.

**Q091 (2015):** The pending cases of commercial courts, first instance (civil, youth, family) and justice of the peace are not included.

Included in pending cases are: labor courts, police courts, courts of appeal.

**Q091 (2014):** With regard to non-litigious business registry cases, the central register of notices of seizure, delegation, transfer, collective debt settlement and loan is managed by the National Chamber of Bailiffs. Administrative cases are handled by the State Council (except for cassation rulings), the Alien Litigation Council and the Flemish regional administrative colleges, "Raad voor verkiezingsbetwistingen, Raad voor milieuhandhaving by Raad voor vergunningbetwistingen".

**Q091 (2012):** The category 1 "civil (and commercial) litigious cases" refers to cases tried by first instance courts, commercial courts and justices of peace, and civil cases dealt with by the police courts. Civil cases concerning youth are not included, as well as cases tried in second instance by courts of first instance. For 2010, there are no available data on the labour courts because the project to build a data warehouse 'Statistics labour courts' is not yet finalised. Cases from categories 1 and 2 cannot be distinguished and are all grouped in category 1.

**Q094 (2022):** Also to be noted: 9,398 for 'youth court cases' (only the category 'new cases' is available), not accounted for in the table. Point 3: Other criminal cases: the figure of 15,309 corresponds to cases before the Council Chamber (this figure is not included in the total of new criminal cases because data on completed cases is unavailable). The figures for pending and completed cases are not available.

**Q094 (2021):** "Severe criminal cases": all cases that are dealt with by first instance criminal courts; "Minor criminal cases": all cases that are dealt with by the Police courts. Protectional cases - youth: 9 227 incoming cases in matters of youth protection. For this case category the number of resolved cases is not available for 2021. These are protectional cases dealt with by the juvenile court (in respect of parents, situations of concern, extremely urgent situations of concern, facts classified as offences).

**Q094 (2020):** "The health crisis has had an impact on the numbers.

"

**Q094 (2016):** Severe: all cases that are dealt with at first instance by the criminal courts of first instance; Minors: all cases that are dealt with by the police court

Three sites could not provide statistics for severe cases.

**Q094 (2014):** Offences handled by the police court (although this court can pronounce prison sentences) are considered as minor offences.

**Q097 (General Comment):** Data on pending appeals against first instance decisions of the Justices of the peace and Police courts (civil cases) are not available.

**Q097 (2022):** In the Court of Appeal (Civil Matters): - Cases pending as of 01/01/2022 = 28525; cases pending as of 31/12/2022 = 27375; Cases pending for more than 2 years from the date on which the case is brought before the courts at second instance = 11578. Employment Tribunal: - Cases pending as of 01/01/2022 = 5461; cases pending as of 31/12/2022 = 5294; Cases pending for more than two years from the date on which The case is brought before The courts at second instance = 1416. Source: datawarehouse (data extraction date: August, 1st, 2023).

**Q097 (2021):** Court of appeal (civil matters): Pending cases on 1/01/2021 = 29 320 ; Pending cases on 31/12/2021 = 28 507 ; Pending cases older than 2 years from the date the case came to the second instance court = 12 133. Bron: datawarehouse (date of data extraction: 01/07/2022).

**Q097 (2020):** \*Cases in the second instance courts , labor courts and cases on appeal against decisions of justices of the peace and police courts (civil matters), at the trial level.

\*Court of second instance (civil matters): Cases pending as of 1/01/2020 = 30668; Cases pending as of 12/31/2020 = 29300; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 12391. \*Labor Court: Cases pending as of 1/01/2020 = 6033; Cases pending as of 12/31/2020 = 5841; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 1730. Source: datawarehouse (data extraction date: 06/16/2021)

\*Civil litigation cases: for 2020, there is a decrease in the number of new cases and an even greater decrease in the number of completed cases due to the pandemic that has affected the operation of the courts

**Q097 (2018):** Number of cases before courts of appeal, labour courts and cases of appeal against decisions of justices of the peace and police courts, at the first instance level.

Court of Appeal (civil matters): pending cases at 1/01/2018 = 33,018; pending cases at 31/12/2018 = 32,321; pending cases for more than 2 years from the date in which the case is brought before the courts of second instance = 13,507. Labour Court: pending cases at 1/01/2018 = 6236; pending cases at 31/12/2018 = 6201; pending cases for more than 2 years from the date in which the case is brought before the courts of second instance = 1535. Bron: datawarehouse (extraction 1/09/2019) no data on pending appeals against decisions of the justices of the peace and police courts at the first instance level. In administrative matters, there is no second instance. The Council of State is the only supreme court.

**Q097 (2017):** Number of cases before courts of appeal, labour courts and appeals against decisions of justices of the peace and police courts at the first instance level.

Courts of Appeal: Justice in numbers

**Q097 (2016):** Number of cases before courts of appeal, labour courts and cases of appeals against decisions of justices of the peace and police courts, at first instance.

**Q098 (General Comment):** Serious offenses: cases brought on appeal before the Court of Appeal (criminal matters) Minor offenses: cases brought on appeal before the lower court - criminal jurisdictions - for cases handled by the police court (therefore handled in second instance by criminal jurisdictions) Youth protection cases: included under minor offenses Criminal cases (under point 3. other criminal matters) now also include cases from the chambers of indictment. The chamber of indictment intervenes in judicial investigation oversight, particularly controls pre-trial detention, and decides on referral to trial.

**Q098 (2022):** Court of Appeal (criminal matters): - Totals: Pending cases on 1/01/2022 = 6610; pending cases on 31/12/2022 = 6677; Cases pending for more than 2 years from the date when the case is brought before the courts of second instance = 1436. - Serious offenses (involving criminal and social penal cases): Pending cases on 1/01/2022 = 6304; pending cases on 31/12 /2022 = 6311; Cases pending for more than two years from the date when the case is brought before the courts of second instance = 1307. - Protection-related youth affairs: Pending cases as at January 1, 2022 = 306 ; pending as at December 31 , 2022 = 366 ; Cases pending since over two years from the date when a case is brought before the courts of second instance = 129. Source: datawarehouse (data extraction date : 1/18 /2022) - Other criminal matters = figures for the chamber of indictments.

**Q098 (2021):** Protectional cases - youth: these cases have been included in point 2 "Minor criminal cases". Here are the figures: pending cases on 1/01/2021 = 337; pending cases on 31/12/2021 = 306; Pending cases older than 2 years from the date the case came to the second instance court = 124. Bron: data warehouse (data extraction date: 01/07/2022). The category "3. Other criminal cases" corresponds to the cases dealt with by the Investigation Chamber (Chambre des mises en accusation).

**Q098 (2020):** "Second instance Courts (Criminal Matters): \* Totals: Cases pending as of 1/01/2020 = 9434; Cases pending as of 12/31/2020 = 9317; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 2616. \* Serious offenses (involves correctional and indictment division cases): Cases pending as of 1/01/2020 = 9095; Cases pending as of 12/31/2020 = 8981; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 2499.

\* Minor offences: youth cases are included in the figures shown in the table (1,374 new cases and 1,377 completed cases respectively). Also noteworthy are the youth cases: Cases pending on 1/01/2020 = 339; Cases pending on 31/12/2020 = 336; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 117.

Source: datawarehouse (data extraction date: 16/06/2021)

\*For 2020, there is a decrease in the number of new cases and in the number of completed cases due to the pandemic that affected court operations."

**Q098 (2016):** The category "Severe criminal cases" concerns appeals to the courts of appeal against the judgements of the courts of first instance ruling in criminal matters. The category "Misdemeanour and / or minor criminal cases" refers to appeals to the courts of first instance against decisions of police courts in criminal matters.

**Q099 (2022):** - The category "2.3 Other non-contentious matters" contains cases G (applications for judicial assistance) brought before/dealt with by the Court of Cassation. - The category "4. Other matters" contains cases D (disciplinary matters) brought before/dealt with by the Court of Cassation. - The category "3. Administrative matters" includes, on one hand, administrative cases dealt with by the Council of State and, on the other hand, administrative cases handled by the Court of Cassation. In this latter case, it encompasses a portion of C-type cases - civil affairs; a substantial number of S-type cases - social affairs; and all F-type cases - fiscal affairs - processed by the Court of Cassation. Among completed matters under point "3.Administrative matters" (total 763 = 353 + 410), concerning the Council of State, it should be noted that figure 410 includes final judgments and orders refusing leave to appeal (189+221). For "administrative matters", a new methodology has been adapted to comply with CEPEJ's definition for "an administrative matter" (i.e., disputes between citizens and any public authority at local, regional or national level). Under previous cycles only those issues dealt with by the Council of State were counted under point "3.Administrative matters

**Q099 (2021):** "Civil (and commercial) litigious cases": in 2021, the Court of cassation managed to adopt a higher number of final decisions compared to 2020 (973 final decisions in 2021 compared to 853 in 2020). This is largely due to a series of 72 similar cases in which final decisions were delivered in 2021, as well as to the endeavours to increase the number of final decisions in tax matters (+30 final decisions compared to 2020). The number of incoming civil (and commercial) litigious cases in 2021 is more or less comparable to the one in 2020. In the long term, an upward general trend is to be noticed. However, more specific evolutions have been observed within this case category: in 2021, compared to 2020, the number of incoming civil cases (including commercial and administrative cases), as well as the number of incoming social cases has slightly decreased, while the number of incoming tax cases has increased. The latter is increasing from year to year.

The category "2.3 Other non-litigious cases" encompasses cases related to requests for judicial assistance introduced before and dealt with by the Court of cassation in 2021.

The category "4. Other cases", concerns disciplinary cases brought before and resolved by the Court of cassation in 2021.

Incoming disciplinary cases, as well as resolved disciplinary cases are higher in 2021 compared to 2020 (+ 15 incoming cases; + 11 final judgments). Given that the Court processes a small number of disciplinary cases each year, it is not possible to draw relevant conclusions based on the observed variations.

"3. Administrative law cases": data communicated by the State Council; in respect of the number of resolved cases, there were 170 final decisions and 255 non-admission orders.

**Q099 (2020):** In the category '1. contentious civil (and commercial) cases' are included the C, F and S cases (civil; fiscal and social cases) that were filed/processed before the Court of Cassation in 2020.

The category '4. other cases' contains the D cases (disciplinary cases) filed before/processed by the Court of Cassation.

It should be noted that the Court of Cassation is also competent to decide on applications for legal aid. The category 3

"administrative cases" was provided by the highest administrative Court.

(source Cour de Cassation)

With regard to the category "administrative cases" (Council of State), for completed cases: it should be noted that the figure of 479 covers 177 final judgments and 302 orders of non-admission. (source Council of State). It should be noted that the lack of horizontal coherence is due to the fact that the number of judgments does not necessarily correspond to the number of closed cases. For example, a judgment that closes two cases is recorded as a single judgment.

In 2020, the number of new administrative cases increased compared to 2019. However, due to the exceptional situation caused by COVID, the State Council could not keep up with the flow of cases and even though the number of completed cases increased compared to 2019, the number of pending cases at the end of 2020 increased. "

**Q099 (2019):** Civil, social and fiscal affairs at the supreme Court. Administrative cases are the cases 'in cassation' at the Council of State.

**Q099 (2018):** Civil, social and tax cases at the Court of Cassation  
Administrative affairs = cases "in cassation" at the Council of State

**Q099 (2017):** civil and commercial cases: cases in roles C, S and F at the Court of Cassation  
administrative cases: cases before the Council of State "in cassation": Out= 221 judgments and 214 non-admission orders

**Q099 (2016):** Civil, social and fiscal cases at the Court of Cassation

Administrative cases ="cassation" cases in the State Council

The decrease in administrative cases is due to a reduction in referrals to the Council of State for this type of case.

**Q099 (2014):** 2014: The civil and commercial cases include cases of roles C (private and public law), F (tax law) and S (employment law) of the Court of cassation.

Administrative cases fall within the decisions of the Council of State in cassation.

**Q100 (2021):** Remarks on the evolution of criminal cases:

While the number of incoming criminal cases brought before the Court of Cassation each year remained relatively stable between 2016 and 2020, this number increased sharply in 2021, with 345 additional units compared to 2020. This is an increase of 25.50% in one year. At present, it is not clear whether this increase is a one-off and attributable to rather occasional circumstances or whether it is the harbinger of a period of significant growth in the number of criminal cases. It goes without saying that this sudden development will have to be monitored closely in the years to come.

Of necessity, the Court of Cassation has succeeded in significantly increasing the number of final judgments handed down in criminal cases in 2021 compared to 2020 (+237 units). This is an increase of 17.27%. However, these efforts could not prevent the criminal caseload at the end of 2021 from increasing for the first time in years, especially with 89 units compared to the criminal caseload at the end of 2020.

**Q100 (2016):** Cases on the 'p' list of the Court of Cassation

the downward trend in the input of criminal cases is due to the tightening of access conditions: stricter time limits, obligation to serve notice of appeal, compulsory intervention by a lawyer trained in the cassation technique, abolition of immediate appeal against interlocutory judgments, abolition of the Court of Cassation's review of pre-trial detention, except for the first confirmation of the arrest warrant. To all this it must be added the introduction of a rapid and non-adversarial procedure allowing appeals that are not substantiated or manifestly inadmissible or unfounded to be refused.

## Bulgaria

**Q091 (General Comment):** The division by types of cases in the statistical forms published by the Supreme Judicial Council of Bulgaria is quite different from the CEPEJ categorisation and for that reason breakdown cannot be made. Only administrative cases are possible to differentiate due to existence of administrative courts. Furthermore, in Bulgaria registry cases are not resolved by courts. They are under the competence of the Registry agency where is the property register, the commercial register, the BULSTAD register and the Register of the Property Relations between spouses.

**Q091 (2020):** As it is impossible to distinguish between litigious and non-litigious cases for the present, for 2020 the following data is available as to the sum of all civil and commercial litigious and non-litigious cases: pending at the beginning 85 460; incoming 282 768, resolved 285 461 and pending at the end of the year 82 767. It is noteworthy that since 2020, the Unified Court Information System (UIS) has been gradually introduced in all courts, developed within the project "Creating a Model for Optimizing the Court Card of Bulgarian Courts and Prosecutor's Offices and Developing a Unified Court Information System" with the financial support of Operational Program "Good Governance" 2014-2020. Depending on the functionalities of the system, it is possible to collect information on the next cycle according to the indicators in question 91.

**Q091 (2018):** The observed increase in the number of incoming administrative law cases and accordingly in the number of pending administrative law cases at the end of 2018, is a consequence of an increase characterizing the period 2016-2017. As explained in the comment accompanying 2017 data, there is no specific reason for the increase in the number of incoming administrative law cases between 2016 and 2017. During this period there was an increase in the number of cases before the administrative courts (mainly claims under the Administrative Procedure Code, Management of Resources from the European Structural and Investment Funds Act, Tax and Social Insurance Procedure Code, Competition Protection Act, etc.).

**Q091 (2017):** 02/11/2018 7:17:04 AM There is no specific reason for the increase in the number of incoming administrative law cases between 2016 and 2017. During this period there was an increase in the number of cases before the administrative courts (mainly claims under the Administrative Procedure Code, Management of Resources from the European Structural and Investment Funds Act, Tax and Social Insurance Procedure Code, Competition Protection Act, etc.).

**Q091 (2014):** The number of all civil cases (litigious and non-litigious) considered as an overall category could be obtained by extracting from the total the number of administrative cases (67 513 pending cases on 1 January 2014; 294 657 incoming cases; 300 799 resolved cases; 61 371 pending cases on 31 December 2014).

**Q091 (2012):** The number of pending administrative law cases on 31 December 2012 has increased because of the increase of the number of incoming cases in 2010 and 2012. Administrative courts resolved about 72% on average of the cases during the year.

**Q093 (General Comment):** .

**Q094 (General Comment):** For most of the crimes, the Bulgarian Criminal Code provides for a deprivation of liberty, which makes the distinction hard to be made. The offences could be divided into two categories: common offences and offences subject to private prosecution. For the common offences, the search of responsibility is subordinated to the common regime (there is a public interest concerned or public interest and personal goods). Such are the crimes against individuals (homicide, grievous or intermediate bodily harm, rape, fornication and etc.), crimes against the property (the list is not exhaustive). As to the offences subject to private prosecution, the criminal proceedings are initiated upon a complaint by the affected person (personal interests of the affected person, and usually the affected person and the perpetrator are close relatives). Those offences have a lower degree of public danger and affect less the rights of the concerned person. Such offences are the minor bodily injury, the insult, the slander and etc.

"Total criminal cases" includes all criminal cases - criminal cases of a general nature, criminal cases of a private nature, cases of exemption from criminal liability with the imposition of an administrative penalty in accordance with Art. 78a of the Criminal Code, private criminal cases, interrogation and administrative-criminal cases heard by the first instance courts.

**Q094 (2022):** "Total criminal cases" includes all criminal cases - criminal cases of a general nature, criminal cases of a private nature, cases of exemption from criminal liability with the imposition of an administrative penalty in accordance with Art. 78a of the Criminal Code, private criminal cases, interrogation and administrative-criminal cases heard by the first instance courts.

**Q094 (2020):** It should be noticed that since 2020, the Unified Court Information System (UIS) has been gradually introduced in all courts, developed within the project "Creating a Model for Optimizing the Court Card of Bulgarian Courts and Prosecutor's Offices and Developing a Unified Court Information System" with the financial support of Operational Program "Good Governance" 2014-2020.

Depending on the functionalities of the system, it may be possible to collect information on the next cycle according to the indicators mentioned in question 94.

**Q097 (2021):** As it is impossible to distinguish between litigious and non-litigious cases for the present, for 2021 the following data is available as to the sum of all civil and commercial litigious and non-litigious cases: pending at the beginning 16 469; incoming 41 774, resolved 41 391 and pending at the end of the year 16 852.

**Q097 (2020):** "Total": the decreases in the number of pending cases is due to growth in civil and commercial cases in 2019 which continued in 2020, but at a slower pace. As it is impossible to distinguish between litigious and non-litigious cases for the present, for 2020 the following data is available as to the sum of all civil and commercial litigious and non-litigious cases: pending at the beginning 13 612; incoming 43 927, resolved 41 070 and pending at the end of the year 16 469.

**Q097 (2019):** See General comments

**Q097 (2018):** NA

**Q097 (2016):** There is no particular explanation for the downward trend observed between 2014 and 2016 in respect of the number of pending cases on 1 January for the categories "total" and "administrative law cases". All the data provided is correct.

**Q097 (2012):** In the frame of the 2012 exercise, it has been explained that the number of pending administrative law cases on 31 December 2012 has increased because of the increase of the number of incoming cases in 2010 and 2012.

**Q098 (2022):** "Total criminal cases" include all criminal cases of second instance - criminal cases of a general nature and criminal cases of a private nature (common offences and offences subject to private prosecution), cases of release from penal responsibility with imposing of administrative punishment in accordance with Art. 78a of the Criminal Code, private criminal cases, interrogations, and administrative-criminal cases.

**Q098 (2020):** The specified sum does not include proceedings for which no penalties are imposed (pre-trial proceedings, enforcement proceedings). These proceedings are within the competence of other bodies in the Republic of Bulgaria.

**Q098 (2018):** NA

**Q099 (General Comment):** The data on the supreme courts are provided by the Supreme Court of Cassation and the Supreme Administrative Court on the basis of the information extracted from the case management systems implemented in these courts. The software of the Supreme Court of Cassation for extraction of statistical data is made according to a methodology developed in the Supreme Court of Cassation, as the codes for the respective type of cases are formed by a working group of judges in the Supreme Court of Cassation. This software, which allows the SCC to extract the statistics needed to answer Question 99, is different from the product used for other courts.

Since 2020, the Unified Court Information System (UIS) has been gradually introduced in all courts, developed within the project "Creating a Model for Optimizing the Court Card of Bulgarian Courts and Prosecutor's Offices and Developing a Unified Court Information System" with the financial support of Operational Program "Good Governance" 2014-2020.

**Q099 (2022):** "Civil litigious cases" - the reasons for the higher number of pending cases at the beginning of 2022 compared to 2021 are twofold: the large increase in case filings in 2021 and the critical staffing of the court, leading to a high backlog at the end of 2021. 1. The number of pending cases on 1 January 2022 is 845 more than on 1 January 2021, as the number of cases filed in 2021 is 1105 more than in 2020. As a result of the amendments to the Civil Procedure Law, access to cassation appeals has been expanded from the beginning of 2020 in cases related to consumer disputes, which in turn determined the increase in the number of cassation cases in the Civil Division and the Commercial Division. 2. In 2021 the Court is not sufficiently staffed due to the delay in the competitions for the appointment of judges in the Supreme Court of Cassation, as well as due to the retirement of judges in 2021 - 3 judges in the Civil Division and 1 judge in the Commercial Division. "Administrative cases"/SAC/: Regarding the increase in the number of pending cases at the end of the reporting period (2022) and the higher number of cases initiated, compared to the number of cases completed, is explained, on the one hand, by the unevenness of the initiated cases by matter in the different divisions of the SAC, and, on the other hand - by the complexity and volume of the cases handled by some divisions (e.g. tax, customs, cases under the Management of Resources from the European Funds under Shared Management Act, public procurement, elections, etc.); the need for in-depth knowledge of European law, including requests for preliminary rulings to the Court of Justice of the European Union (CJEU). The problem with the pending cases till issuance of interpretative decisions or rulings of CJEU continues to be relevant, as all such cases are suspended and that respectively results in delays in their consideration and further strains the schedule. In particular, an analysis of the factually and legally complex tax cases shows that the one-month time limit for court decisions is not optimal. The complexity of this type of cases and the need for direct application of Community law suggest another reasonable time-limit for the panel to issue its ruling. Furthermore, it should be stressed that in parallel with the judicial activity during the year under review, General meetings of First and Second Chambers of the SAC on interpretative cases for unification of the case law were held on a monthly basis. Joint meetings of the SCC and the SAC on joint interpretative cases were also conducted regularly. On the other hand, the decrease in the number of initiated cases during the reporting period is also due to undertaken legislative changes concerning jurisdiction. Last but not the least, in 2022, there was still a high incidence of COVID-19 among the judges and staff of the SAC, which further led to delay in the administration of justice of the court.

**Q099 (2021):** There are also some other non-litigious cases that are not included in the data. However, their number is insignificant.

Concerning the category "Civil and commercial litigious cases": the reasons for the difference between 2020 and 2021 are twofold: the large increase in caseloads in 2021 and the critical staffing of the Supreme court of cassation. 1. There are 836 pending cases as of December 31, 2021 more compared to those at the end of 2020, as the cases received in 2021 were 1105 more than those who entered in 2020. As a result of the amendments to the Civil Procedure Law, access to cassation appeals was expanded from the beginning of 2020 in cases related to consumer disputes, which in turn caused an increase in the number of cassation cases in the Civil College/Chamber and the Commercial College/Chamber. 2. The court in 2021 is not sufficiently staffed due to delays in the competitions for the appointment of judges in the Supreme Court, as well as due to the retirement of judges in 2021 - in the Civil College/Chamber - 3 judges, and in the Commercial College/Chamber - 1 judge.

**Q099 (2020):** The number of pending administrative cases decreased meaningfully because of reorganization of work in the Supreme Administrative Court (SAC). By issuing an internal order The Chairman/President of the SAC increased the workload of each judge to achieve these results.

The difference of two cases in the horizontal calculation/consistency (indicated by the SCC 3863 cases instead of 3865- Pending cases on 31 Dec. ref. year) is due to two cases found in 2020, which were completed in the SCC in a previous period (before 2020), but were not correctly filled in then with all the details needed by the software to report the cases as completed. The adjustment was made in 2020, which actually reduces the number of cases for consideration by two, and the number of completed cases does not increase because the cases were completed in a previous period - before 2020.

**Q099 (2019):** There are some non-litigious cases that are not included in the data but their number is insignificant.

**Q099 (2018):** There are also some other non-litigious cases that are not included in the data. However their number is insignificant.

The number of pending administrative cases older than 2 years decreased meaningfully because of reorganization of work in the Supreme Administrative Court (SAC). By issuing an internal order The Chairman/President of the SAC increased the workload of each judge to achieve these results.

**Q099 (2017):** The answer for 2. Non litigious cases (2.1+2.2+2.3) is NAP for previous cycles as well.

**Q099 (2016):** The increase in the number of pending administrative law cases (in the beginning and at the end of the year) is explained by the fact that data has been provided by different sources for 2014 and 2016.

**Q100 (General Comment):** The software of the Supreme Court of Cassation for extracting statistics is different from the product used for other courts. The division of criminal cases according to the criteria set out in Question 100 was made on the basis of the definitions of the CEPEJ.

In the category "other criminal cases" are included: cases with charges on corpus delicti which doesn't have independently application; cases on Chapter XXXIII Criminal Procedure Code (re-opening of criminal cases); private cassation proceedings (change of local jurisdiction, jurisdiction disputes, proceedings on returning of cassation claim/protest etc.); procedures regarding execution of judicial acts that are entered into force; proceedings regarding administration and/or movement of cases etc.

**Q100 (2022):** 1. In the category "Other criminal cases" are included: cases with charges on corpus delicti which doesn't have independently application; cases on Chapter XXXIII Criminal Procedure Code (re-opening of criminal cases); private cassation proceedings (change of local jurisdiction, jurisdiction disputes, proceedings on returning of cassation claim/protest etc.); procedures regarding execution of judicial acts that are entered into force; proceedings regarding administration and/or movement of cases etc.

2. A comparison of the 2022 data with the 2021 data reveals a greater than 20% difference for five of the indicators noted in the table with comments. For four of the five indicators, the obvious reason is that the numbers for all indicators are small, so the differences are small in absolute value and do not reflect a significant change in the performance of the Criminal Division of the Supreme Court of Cassation, but are recalculated into a large percentage difference.

For example in one indicator – "Pending cases older than 2 years from the date the case came to the Supreme Court", a difference of 1 case is converted into a 20% difference. Only the indicator – "Incoming cases – Severe criminal cases" has a significant difference in absolute value. It is due to the reduction by 10% in the total number of admissions to the Criminal Division of the Supreme Court of Cassation in 2022 compared to 2021. This decrease is entirely in severe criminal cases – 23.15%, while in cases for minor crimes and in other cases the number almost does not change and even increases slightly (by 5.88% and 4.96%, respectively). The decrease is due to the natural dynamics of admissions over the years, which is unpredictable within a narrow range.

**Q100 (2021):** Explanation related to all differences reported under item 2 "Misdemeanors and/or minor criminal cases" (31.8%, 22.73%, -20.69%) and item 3 "Other criminal cases" (-45 % and 54.55%): the reasons for the differences in percentages for the above types of cases compared to 2020 are mathematical. The figures for all the listed indicators for the reference years 2020 and 2021 are small, respectively, and the differences are small as an absolute value and do not reflect a significant change in the work on criminal cases in the Supreme Court of Cassation, but are recalculated in a large percentage difference. A more detailed mathematical explanation is obtained if each of these indicators is calculated, what percentage it represents in relation to the total number of cases for examination for the corresponding year, received by the Criminal Board of the Supreme Court. In 2020, there were 1 328 cases for consideration, while in 2021 - 1 407 cases. Taking into account the total number of cases for consideration in 2020 and 2021, the difference for which an explanation is due varies in absolute value from 0.76% to -1.79%. It is too small to be an indication of a significant change in the work of the Supreme Court of Cassation in criminal cases.

**Q100 (2018):** The “Other cases” group are: cases where the punishment for a committed crime depends on the punishment for other crime, that is established in the main text of the Criminal Code – it could be an offence of more severe or lightly punishment; cases on procedures related to the main case; cases on claims for re-establishment of criminal case; cases on jurisdiction disputes; cases on interpretation of a judicial act; cases on rehabilitation; cases that were instituted on a private appeal, etc. Some cases which were previously counted in misdemeanour/minor are now indicated under “other” which explains the decrease in the number of misdemeanour/minor criminal cases in respect of all categories – pending, incoming and resolved cases.

**Q100 (2016):** Comment on question 100

Till 2015 only the Supreme Court of Cassation was hearing the requests for resumption of criminal cases. In 2015 the Criminal Procedure Code was amended with the Law For Amendment and Supplementation of Criminal Procedure Code /SG, 42/2015/. According to the amendment the request for resumption of the criminal case grounded on art. 422, par. 1, p. 5 of the Criminal Procedure Code shall be heard by the respective court of appeal, when the judgments under art. 419 of the Criminal Procedure Code were decreed by a regional or district court, except of the new verdicts.

As a result of the legislative amendment, a significant part of the requests under Chapter Thirty-three of Criminal Procedure Code are heard by the courts of appeal in the state.

The above led to reduction in the number of cases related to the resumption of criminal cases heard by the Supreme Court of Cassation. This is also the reason for the presence of more than 20% deviation from the total number of criminal cases heard by the Supreme Court of Cassation during 2016 than those from previous years.

**Q100 (2014):** In the annual report of the Supreme Court of Cassation in 2012 (criminal division) the cases pending at the end of the reporting period were 260. In the report for 2013 the pending cases at the beginning of the period were 602 and the pending cases at the end of the reporting period were 671. Under Table 1 of the report for 2012, there is a note that the pending cases which are not included in the number of adjourned and private proceedings were filed in December 2012 at the registry of the Supreme Court of Cassation and are scheduled for consideration in January and February 2013. As a result, the total number of pending cases in 2014 appears much higher than in 2012.

## Croatia

**Q091 (2022):** In 2022, the number of incoming Civil (and commercial) litigious cases dropped because of the unique situation from the previous cycle of a significant number of incoming collective labour cases from the public sector workers (more than 60.000 incoming cases). Since they were resolved in 2022, this has led also to a significant increase in the number of resolved cases.

Regarding General civil (and commercial) non-litigious cases, as this includes enforcement cases which have had legislative changes during 2021, a new type of case has been recorded in courts by the end of 2021, which now seems to be a permanent increase in both incoming cases and resolved cases (up from an average of 40.000 cases received and resolved every year prior to 2021 to about 60.000 cases in 2021 and 90.000 cases in 2022. These are all cases of small value that are very quick to resolve.

For non-litigious registry cases, there is a slightly bigger horizontal inconsistency due to additional corrections from the sides of courts after the official published data.

**Q091 (2021):** Between 2020 and 2021, there was an increase of incoming civil and commercial cases caused by the receipt of a large number of civil cases, namely lawsuits in labor disputes due to payment based on rights arising from the collective agreement, which occurred in the first quarter of 2021 and continued, to a somewhat lesser extent, throughout the rest of the year. Also there was an increase of the number of incoming enforcement cases that courts received during the last quarter of 2021, which was caused by a change of legislative framework in September 2021.

**Q091 (2020):** Regarding your comment about decreased number of incoming cases (except business registry cases) shown in this table: Due to the pandemic caused by COVID-19, in 2020., court proceedings for limited period in 2020 were submitted under specific conditions and measures, which contributed to decreased number of incoming cases, as well as court hearings especially in litigious cases.

Regarding the number of incoming non-litigious business registry cases - New article added by the Act on Amendments to the Court Register Act (Official Gazette No. 40/19) which came into force at the end of 2019., stipulated the obligation of companies to submit a request for entry of at least one e-mail address to the courts managing business registry. This was the reason for temporarily increased number of requests (cases), which were all resolved by the end of January 31, 2021.

**Q091 (2019):** In 2019 new amendments to the Personal Bankruptcy Law came into force. That caused significant increase of other than criminal cases to the municipal courts. There was an increase in the number of land registry incoming cases too. The increased number of incoming land registry cases is caused by intensified economic activities and activities on the real property market. With the same number of employees working on these cases, pending cases increased at the end of the year. Additionally, a large number of citizens started civil lawsuits against banks regarding loans in Swiss currency. These factors combined led to the increase of pending cases at the end of the year as well. The decrease in the number of civil and commercial non litigious cases is due to enforcement cases: courts solved a significant amount of these cases during 2018, while the number of incoming cases decreased as well. For that reason, at the end of 2018 /beginning of 2019 there are fewer cases than at the end of 2017/ beginning of 2018.

As regards "administrative cases", administrative courts resolved more cases during 2018. That decreased the pending stock of the cases at the end of 2018/beginning of 2019.

**Q091 (2018):** Decrease of the number of incoming cases (34%) in category 2.1. in comparison to previous cycle is due to the significant decrease of enforcement cases which are calculated in this category. Majority of enforcement cases are aimed at debtor's monetary assets based on trustworthy documents – i.e. documents that make the existence of debt highly plausible (such as regular utility bills, telecom operators' invoices, credit card invoices, unpaid installments of bank loans, etc.). Those cases were removed from jurisdiction of courts to public notaries already in 2012., and since then there is year after year decrease of enforcement cases in municipal courts - enforcement based on other types of enforcement titles (other than trustworthy document), as well as enforcement against real property.

**Q091 (2017):** The cases relative to the Personal Bankruptcy Act which came into force on 1st January 2016 are handled by the 1st instance Municipal Courts. The data about these cases was not available in the moment of completing the questionnaire for the Evaluation (CEPEJ study for EU Scoreboard) (data 2016) but the data is now available within the ICMS system for the year 2017 and they are incorporated in the category 1. Civil (and commercial) litigious cases (including litigious enforcement cases and if possible without administrative law cases, see category 3). There were 268 pending Personal Bankruptcy cases on January 1st 2017, 377 incoming cases in 2017, 281 cases resolved in 2017 and 365 pending cases on 31st December 2017.

"Registry cases": In this category there is more than 20% increase of pending cases at the beginning of reference year in comparison to the beginning 2016. The reason are land registry cases. As stated in the previous cycle, the reason for the increased number of pending land registry cases is the significant increase of these cases during 2016 and the difficulty for courts to cope with this increase in same amount as in 2015. This all reflects on data for 2017.

The reason for the decrease in the number of pending administrative cases at the end of the 2017 is lying in the fact that administrative courts received almost 18% less cases than in 2016. Although judges resolved less cases than in previous year, in relation to the increase, it was enough to decrease the number of pending cases at the end of 2017 for more than 20%.

**Q091 (2016):** More land registry cases has been received in 2016 than in 2014 so the total number of registry cases has increased as well.

During the two-year period (through 2014 and 2015), administrative courts accumulated unresolved cases - they solved significantly less than they received, which led to 15024 pending cases at the beginning of 2016. By the end of 2015, a total of 5 judges were transferred to administrative courts from other legal branches, which resulted in better results in 2016 (more resolved cases).

**Q091 (2015):** In 2015 the reorganization of the judicial system in the Republic of Croatia, which is partly related to the reorganization of the second instance proceedings, has been carried out. Consequently, in the county courts there has been a harmonization of case registers and case codes (litigious, non-litigious and other) in a way that in 2015 courts carried out the alignment and correction of the indication of certain types of second-instance civil cases. For this reason, in 2015 the correction of the category of cases according to the new methodology of monitoring has been carried out.

The total of all categories is aligned with the continuity of previous cycle (horizontal consistency), whereas the individual categories in the column "Pending cases on Jan. 1 2015" are presented under the new revised indication of the types of cases. For example, some cases that have been categorized in previous cycles under category 'Other', the courts have categorized according to the certain types of dispute which was possible after new case registers were open (e.g. Enforcement – Security by lien on the basis of an agreement of the parties).

**Q091 (2014):** In 2014, a new methodology of monitoring unresolved land registry cases was introduced, in a way that regular land registry cases (i.e. registration, note, caution) are not being monitored anymore and are not presented in the total. Other land registry cases (i.e. objections, appeals, specific corrections, etc.) are still being monitored. The overall number of enforcement cases is subsumed in the category "general civil and commercial non-litigious cases". The Municipal Civil Court undertook the harmonization of data due to data migration. After the new standardization of the audit, the Supreme Court has started to be less up-to-date since the number of received cases is far beyond the number of cases which may be resolved (priority is given to urgent and old cases).

**Q091 (2013):** The implementation of the ICMS system resulted in unification of data into one reporting system. The category “general civil and commercial non-litigious cases” includes inheritance cases but excludes company registry cases. The increase of the incoming “civil and commercial litigious cases” was mostly due to the continuity of the negative economic situation, while the efforts of judges, as well as broadening the scope of powers of court advisors resulted in the increase of resolved cases. The implementation of the enforcement on pecuniary means carried out by the Financial Agency (FINA) led to decreases in respect of “non-litigious enforcement cases”. Since 2013, court advisors deliver a decision in land registry cases, while the judge supervises its content. The competence of other persons for issuing land registry was also established, electronic delivery of submissions and e-notice board were introduced.

**Q091 (2012):** Till December 2011, “administrative law cases” were adjudicated at the Administrative Court. Provided that the latter was overburdened, a two-instance administrative adjudication was introduced in January 2012. 4 regional administrative courts were established as first instance courts, while the former Administrative Court became second-instance High Administrative Court. Since 2012, there is a mandatory oral court hearing of the parties before the first-instance courts.

**Q092 (2014):** For 2013 and 2014, the provided examples concern only question 92: exercise of the parental care; meeting and spending time with parent; obtaining the capacity to exercise rights of minor that became parent; decision with whom the child will be living; issuing of the permit for entering into marriage before age of majority; deprivation/returning of capacity to exercise rights; deprivation/returning /prolongation of parental care; deprivation of parents’ right to live with the child and raise the child; content of court will; security of evidence; setting-up/derogation of necessary passage; setting-up of court deposit, opening of a safe; verification of a contract on life-long support; amortization of documents; trust of a child with behavioural disorder; the recognition of foreign court decisions; declaring a missing person dead; co-ownership dissolution; meetings and spending time with grandmother, grandfather, sister, brother, half-sister, step-brother; land borders; regulation of relations between co-owners; restraining a child; providing legal aid; conclusion of court settlement; inheritance statement; proof of death; regulation of co-ownership relationships; boundaries and necessary passage; determination of extramarital union; other- family non-litigious proceedings; storage of the testament; providing international legal assistance; verification; other –the rest of non-litigious proceedings; international child abduction; other - proclamation of the deceased and proof of death; the appointment of members of the companies body; the appointment of auditors, temporary/interim administrator; the safeguard of evidence; the establishment of a court deposit; opening of the safe deposit box; registry cases; previous measures; forcible establishment of lien; temporary measure; temporary and previous measures, recognition of arbitration decisions; recognition of a foreign court decision; cases entering in the scope of Article 4 point 2 of the Companies Act; court insurance by the transfer of ownership and rights.

**Q092 (2013):** For 2013 and 2014, the provided examples concern only question 92: exercise of the parental care; meeting and spending time with parent; obtaining the capacity to exercise rights of minor that became parent; decision with whom the child will be living; issuing of the permit for entering into marriage before age of majority; deprivation/returning of capacity to exercise rights; deprivation/returning /prolongation of parental care; deprivation of parents’ right to live with the child and raise the child; content of court will; security of evidence; setting-up/derogation of necessary passage; setting-up of court deposit, opening of a safe; verification of a contract on life-long support; amortization of documents; trust of a child with behavioural disorder; the recognition of foreign court decisions; declaring a missing person dead; co-ownership dissolution; meetings and spending time with grandmother, grandfather, sister, brother, half-sister, step-brother; land borders; regulation of relations between co-owners; restraining a child; providing legal aid; conclusion of court settlement; inheritance statement; proof of death; regulation of co-ownership relationships; boundaries and necessary passage; determination of extramarital union; other- family non-litigious proceedings; storage of the testament; providing international legal assistance; verification; other –the rest of non-litigious proceedings; international child abduction; other - proclamation of the deceased and proof of death; the appointment of members of the companies body; the appointment of auditors, temporary/interim administrator; the safeguard of evidence; the establishment of a court deposit; opening of the safe deposit box; registry cases; previous measures; forcible establishment of lien; temporary measure; temporary and previous measures, recognition of arbitration decisions; recognition of a foreign court decision; cases entering in the scope of Article 4 point 2 of the Companies Act; court insurance by the transfer of ownership and rights.

**Q092 (2012):** For the 2012 exercise, the provided indications constitute replies to both questions 92 and 93.

The non-litigious cases were divided in the following categories:

1. Non-litigious cases referred to issues on personal status (status law): restriction, deprivation and returning of capacity to exercise rights; prolongation of parental care; deprivation and restriction of parental care; permit for entering into marriage; confession of fatherhood; detention in the institutions for mental diseases; promulgation of vanished persons dead and proving of death;
2. Non-litigious cases referred to property issues: inheritance proceedings; regulation of co-ownership relations; division of property and voluntary transmission of common property; boundary regime/regulation; amortization of decrees; conduction of different registers;
3. In the scope of non-litigious cases there have been developed special, different units: bankruptcy proceedings; liquidations and forced settlements; land registry proceedings; enforcement proceedings.

**Q093 (2014):** In 2013 and 2014 the reply NAP in respect of the category “other” is due to the fact that a bankruptcy registry has not been established in the Republic of Croatia.

**Q093 (2013):** In 2013 and 2014 the reply NAP in respect of the category “other” is due to the fact that a bankruptcy registry has not been established in the Republic of Croatia.

**Q093 (2012):** For the 2012 exercise, the provided indications constitute replies to both questions 92 and 93. Non-litigious cases were divided in the following categories:

1. Non-litigious cases referred to issues on personal status (status law): restriction, deprivation and returning of capacity to exercise rights; prolongation of parental care; deprivation and restriction of parental care; permit for entering into marriage; confession of fatherhood; detention in the institutions for mental diseases; promulgation of vanished persons dead and proving of death;
2. Non-litigious cases referred to property issues: inheritance proceedings; regulation of co-ownership relations; division of property and voluntary transmission of common property; boundary regime/regulation; amortization of decrees; conduction of different registers;
3. In the scope of non-litigious cases there have been developed special, different units: bankruptcy proceedings; liquidations and forced settlements; land registry proceedings; enforcement proceedings.

**Q094 (2022):** The data for 2022 in “Other criminal cases” include only the execution of sanctions (imprisonment), investigation actions of a judge and cases connected to procedural matters. In this cycle, the number of other criminal cases decreased because we aligned our methodology with CEPEJ reporting and excluded some of the case types which in previous cycles were included. This is due to the fact that data for misdemeanour cases came from a separate case management system in the previous cycles (prior to 2020), and it was not possible to exclude those cases which do not fit any of the above categories.

**Q094 (2021):** In category “Other cases” are included (from last cycle) cases related to criminal matters in first instance: execution of sanctions (imprisonment), investigation actions of a judge, cases connected to procedural matters (e.g. panel of judges decision about detention, about prolongation of detention, about confirmation or dismissal of indictment, etc.)

**Q094 (2020):** In category “Other cases” are included (from last cycle) cases related to criminal matters in first instance: execution of sanctions (imprisonment), investigation actions of a judge, cases connected to procedural matters (e.g. panel of judges decision about detention, about prolongation of detention, about confirmation or dismissal of indictment, etc.)  
Regarding decreased number of resolved minor criminal cases: Due to the pandemic caused by COVID-19, in 2020., court proceedings for limited period in 2020 were submitted under specific conditions and measures, which contributed to decreased number of court hearings, also in minor criminal cases.  
Regarding horizontal inconsistency: For most of the categories, the full horizontal inconsistency can not be ensured, due to some adjustments and changes in the Case Management System used by courts.

**Q094 (2018):** In category “Other cases” are included (from this cycle) cases related to criminal matters in first instance: execution of sanctions (imprisonment), investigation actions of a judge, cases connected to procedural matters (e.g. panel of judges decision about detention, about prolongation of detention, about confirmation or dismissal of indictment, etc.)

**Q094 (2016):** Starting from 1 June 2013, when the Act on Amendments to the Misdemeanours Act (OG 39/2013) entered into force, the inflow of first-instance misdemeanour cases displayed in this table continuously and significantly had been reduced. The number of resolved cases reduced as well, but due to a significant decrease in inflows, the number of unresolved cases reduced by the end of the period. This reflected also on High Misdemeanours Court, whose data is shown in this table.

**Q094 (2014):** The new Criminal Procedure Act entered into force in September 2011, introducing the investigation conducted by the State Attorney Offices (instead of court investigation), as well as new and wider opportunities for negotiating settlements. Besides, the decrease of the total number of misdemeanour cases at all levels was the main goal of adopting the Act on the Amendments of the Misdemeanour Act in 2013. The definition of misdemeanour act was changed, the principle of opportunity as well as the simplification of the procedure were introduced, more active role was given to the plaintiff etc. The Register of Unpaid Fines was established. There is no more suspension of the proceedings because of the statute of limitations.

**Q097 (2022):** Regarding second instance „General civil (and commercial) non-litigious cases”, starting with early 2022, all the cases have been classified as „appeal on sentence” type of cases, instead of „enforcement cases”, „family law cases”, „labour law cases” or any other case type available in the court management system database, as it was in the previous cycles. Because of that, we are unable to differentiate between second instance litigious cases and second instance non-litigious cases (or any of the other types of cases for that matter). For „Other non-litigious cases”, the reason for no available data is the same as regarding “General non-litigious cases”, as those types of cases that would have been in the category of „Other non-litigious cases” according to the classification by the courts in the previous years, are also categorised as a generic „appeal case”. As regards registry cases, there is no specific reason for the decrease in the number of resolved cases, as the number of incoming cases is roughly the same as last year (around 1.700 incoming cases). Regarding administrative cases, there is no specific reason for the decrease in the number of resolved cases, as the number of incoming cases is roughly the same as last year (around 5.500 incoming cases).

**Q097 (2019):** Due to legal changes, the High Administrative Court of RoC started to receive more cases from 2016. With the same amount of judges, they did not manage to cope well with this income of case, therefore pending cases increased.

**Q097 (2018):** In category 1. Civil (and commercial) litigious cases there has been a decrease in the number of pending cases at the beginning of the period, received cases, resolved cases and also pending cases at the end of the year. This seems to be the trend for several years now. Although these courts are resolving less cases than in previous period, due to the reduced income, pending cases are still significantly decreased. Reduced number of received civil litigious and commercial cases on second instance do not have reason in for example law changes. Simply because less cases are resolved at first instance, less appeals are lodged to the second instance.

The increased number of pending administrative law cases at the beginning and at the end of the year as well as received cases is due to the extended jurisdiction of the High administrative court following law changes. The latter led to an increased inflow of cases and difficulty for the High administrative court to cope successfully with the income of second instance cases, especially since the number of judges remain the same as before law changes. This comment was provided also for last cycle. The rest of the categories which have increase or decrease in pending cases is just an effect of the incoming or resolved cases.

**Q097 (2017):** The increased number of pending administrative law cases at the beginning and at the end of the year is due to the extended jurisdiction of the High administrative court following law changes. The latter led to an increased inflow of cases and difficulty for the High administrative court to cope successfully with the income of second instance cases. This comment in more details was provided also for last cycle.

In this category there is more than 20% increase of pending cases at the beginning of reference year in comparison to the beginning 2016. The reason are land registry cases. Reason for increased number of pending land registry cases is decreased number of resolved cases in relation to the number of incoming cases (87%) during previous year (2016.) which affected results for 2017. In 2017, second instance courts also resolved less than received land registry cases.

The reason for the decreased number of pending business registry cases at the beginning of 2017 in comparison to the beginning of 2016 is the number of resolved cases in relation to the number of incoming cases (104%) during 2016. The lower number of received cases and Clearance rate of 106% lead to the decrease of the number of pending business registry cases at the end of 2017. The reason for the decreased number of pending "other non-litigious cases" at the beginning of 2017 in comparison to the beginning of 2016 is the significant number of resolved cases in relation to the number of incoming cases (185%!!) during 2016. Regarding the increased number of incoming cases of this type, there are in absolute numbers very few cases (154) and although there is an increase of more than 20% in comparison to previous year, we think that there is no significant explanation for this, which would affect the trends in following cycles. As for the decrease in the number of resolved "other non-litigious cases", there is no significant explanation for this, but we think that it will not influence the trend in future cycles.

The reason for the decrease of pending civil and commercial litigious cases older than 2 years in second instance courts lays in the fact that in 2017 second instance county courts and the High Commercial Court resolved significant amount of cases in relation to received cases (122%) with special focus on older cases. This led to a decrease of more than 17% of all pending cases and more than 30% of pending cases older than 2 years.

The reason for the decrease of pending non-litigious cases older than 2 years in second instance courts lays in the fact that in 2017 second instance county courts and the High Commercial Court resolved more cases than received (103%) with special focus on older cases. This led to decrease of more than 7% of all pending cases and more than 30% of pending cases older than 2 years (of which they have few in the beginning). The reason for the decrease of pending "general civil and commercial non-litigious cases" older than 2 years in second instance courts lays in the fact that in 2017 second instance county courts and the High Commercial Court resolved more cases than received (103%) with special focus on older cases. This led to decrease of more than 7% of all pending cases and more than 30% of pending cases older than 2 years (of which they have few in the beginning). The reason of the increase of pending registry cases older than 2 years in this category is entirely due to the increase of the number of pending land registry cases older than two years. The reason is already explained - the increase of pending cases in total is due to the difficulty of second instance courts to cope with the income of these cases. Finally, in respect of administrative law cases, due to the decrease of number of pending cases of this type in total, there is also decrease for 8 cases of pending cases older than 2 years (as stated before, we do not think that this is significant change taking into consideration absolute numbers and type of cases).

**Q097 (2016):** Second instance land registry cases, due to introducing separate case registers for certain type of cases on second instance courts, are now traceable as such in case management system. They have been taken out from Other non-litigious cases, where they were presented in previous cycles. The number of administrative cases, both in incoming and pending cases at the end of period is increasing. This is due to the law changes, which have extend jurisdiction of this court and consequently increase income of cases and unresolved cases at the end of period.

**Q097 (2014):** It is noteworthy that in 2012 and 2013, the ICMS could not recognize and divide cases into litigious or non-litigious. In 2014, the ICMS was improved as Croatia introduced updated and a very detailed code table, in order to extract more detailed case types from the system. Therefore, now the distinction between all cases in litigious and non-litigious cases as well as other types of cases can be made very accurately. This change of methodology of categorisation affected the difference between pending cases on 31 December 2013 and pending cases on 1 January 2014 which will disappear in the next cycle.

**Q097 (2013):** In the frame of the 2013 exercise it has been explained that the discrepancies that can be observed in respect of the category "total of other than criminal cases" between the number of pending cases indicated for December 2012 and the number of pending cases communicated for January 2013, result from an administrative correction of a specific small number of cases by the second instance courts after the closure of the statistic period, which the reporting system then generates as a difference concerning previously rendered data.

As to the category "civil and commercial litigious cases", owing to a different methodology of presentation of data, the number of pending cases in the end of 2012 does not coincide with the number of pending cases in the beginning of 2013. The number of pending cases on 31 December 2012 included second instance-civil and commercial courts' cases, bankruptcy cases, general non-litigious cases, enforcement cases, land registry cases and company registry cases. Since 2013, it is possible to provide data on the second-instance civil and commercial litigation cases and bankruptcy cases separately from the general non-litigious cases, enforcement cases, land registry cases and company registry cases.

The variations observed with regard to the category "total of other than non-criminal law cases" for the period 2010-2013 can be explained by the negative economic situation in Croatia, which resulted in the increase of incoming commercial and civil cases before first instance courts and consequently led to the increase of the second instance cases.

**Q097 (2012):** As to the variations observed in respect of the "administrative law cases", they are justified by the reform related to the administrative justice. Basically, till December 2011, they were adjudicated at the Administrative Court of the Republic of Croatia. Provided that the latter was overburdened, the two-instance administrative adjudication was introduced in January 2012. Four regional administrative courts were established as first instance courts (Zagreb, Osijek, Rijeka and Split), and former Administrative Court became second-instance High Administrative Court (appellate court).

**Q098 (General Comment):** Due to the peculiarity of the Croatian legal system explained within the frame of question 94, the category "severe criminal cases" subsumes criminal cases under the jurisdiction of the 2nd instance county courts, while the category "misdemeanours and/or minor criminal cases" encompasses cases under the jurisdiction of the 2nd instance misdemeanour courts and the High Misdemeanour Court. Croatian legislation distinguishes misdemeanours and criminal offences. Misdemeanour Act prescribes that misdemeanours and misdemeanour legal sanctions can be proscribed solely for those behaviours that violate or threaten public order, social discipline and social values guaranteed and protected by the Constitution of the Republic of Croatia, international law and the laws whose protection is not possible without misdemeanour legal sanction, and their protection is not achieved with criminal coercion. The above shows that misdemeanours are certain behaviours that deserve sanction, but which by its severity and consequences do not deserve criminal liability.

Since the Criminal code does not strictly classify the categories of severe and minor criminal offences, we are not able to classify as misdemeanour/minor all offences for which it is not possible to pronounce a sentence of deprivation of liberty, and classify as severe offences all offences punishable by a deprivation of liberty

According to this, in the category "severe criminal cases" there are criminal cases under the jurisdiction of the 2nd instance county courts, while in the category "misdemeanours and/or minor criminal cases" there are cases under the jurisdiction of the 2nd instance misdemeanour courts and High Misdemeanour Court.

**Q098 (2021):** In category "Other cases" are included cases of execution of imprisonment sanctions on county courts in second instance.

**Q098 (2018):** Starting from 1 June 2013, when the Act on Amendments to the Misdemeanors Act (OG 39/2013) entered into force, the inflow of first-instance misdemeanour cases had been reduced up to the point where there was no more justification for keeping specialized courts for these types of cases. This led also to continuous decrease of second instance misdemeanour cases, which is also the case in this reporting cycle.

Category "Other cases" - category introduced in this cycle: in case of Croatia, cases calculated here are cases of execution of imprisonment sanctions on county courts in second instance.

**Q098 (2016):** Starting from 1 June 2013, when the Act on Amendments to the Misdemeanours Act (OG 39/2013) entered into force, the inflow of first-instance misdemeanour cases displayed in this table continuously and significantly had been reduced. The number of resolved cases reduced as well, but due to a significant decrease in inflows, the number of unresolved cases reduced by the end of the period.

**Q098 (2014):** According to 2014 data and pursuant to the Act on the Amendments of Misdemeanour Act which entered into force in 2013 (OG 39/13), possession of drugs for personal usage is no longer a criminal act but a misdemeanour act. That provision enabled disburdening of the county courts. Furthermore, municipal courts became competent for criminal act of unauthorized production and trafficking of drugs (which was previously in the jurisdiction of county courts and made a share of 40-50% of all cases dealt with by the county courts).

**Q098 (2013):** Generally speaking, the decrease of the total number of misdemeanour cases at all levels was the main goal and purpose of adopting the Act on the Amendments of the Misdemeanour Act in 2013 (OG 39/13) in which the definition of misdemeanour act was changed, the principle of opportunity as well as the simplification of the procedure were introduced, the more active role was given to the plaintiff. Moreover, specific measures were introduced: if the fine is paid when caught in committing a misdemeanour offence, it is considered as paid if the half of the amount was paid immediately, and if the deadline was prescribed, it is considered as paid if the 2/3 of the amount was paid. Moreover, the enforcement procedure conducted on monetary assets is more efficient. The Register of Unpaid Fines was established.

According to the new misdemeanour provisions, there is no suspension of the proceedings because of the statute of limitations. Every court decision is being enforced, fines are being paid, therefore strengthening the general prevention and withdraw of committing misdemeanour offences. All of the above said leads to the reduction of the number of misdemeanour cases at both courts' instances: misdemeanour courts and High Misdemeanour Court of the Republic of Croatia

**Q099 (2017):** Regarding the answers in this question, cases dealt with by the Supreme Court of the Republic of Croatia, as the highest instance court in the RoC, have been presented. We are unable to show separately the required categories. The Supreme Court of the RoC is in the process of preparing the implementation of the ICMS, which will in future enable the expression of cases by types. Source for this data is published data by the Supreme Court of the RoC for year 2017 on their website.

**Q099 (2016):** Due to a large influx of revision proceedings and a slower solving of cases in 2014 and 2015, at the beginning of 2016 the number of pending cases continues to increase. However in 2016 the Supreme Court of the Republic of Croatia significantly resolved more cases than in previous cycle and the number of pending cases had decreased compared with 2015 although not when compared with 2014.

**Q099 (2015):** In the table 99. cases dealt by the Supreme Court of the Republic of Croatia, as the highest most instance court, have been presented. We are unable to show separately the required categories. The Supreme Court is in the process of preparing the implementation of the ICMS, which will in future enable the expression of cases by types.

**Q099 (2014):** After the new standardization of the audit, the Supreme Court has started to be less up-to-date since the number of received cases is far beyond the number of cases which the existing judges and advisors at the Supreme Court may solve. In resolving the cases at the Supreme Court, advantage is given to urgent cases (determined by laws) and to old cases.

**Q100 (General Comment):** The Supreme Court of the Republic of Croatia distinguishes only if the case is civil or criminal, but does not classify case types in specific categories beyond that classification. The main classification in the Case management system is based on the instance of the procedure in the sense that there are some instances when the Supreme Court acts as a second instance appellate court. When the criminal procedure is regarding a very serious criminal offense (charges for which the jail sentence is more than 10 years), the County courts act as a first instance court, and all appeals are decided upon by the Supreme Court as a second instance court. In that sense, the classification of cases of the Supreme Court in the Case management system distinguishes only those cases which are from the position of the second instance or from the position of the third instance court. Since the recently established High Criminal Court of the Republic of Croatia has overtaken the role of the appellate court for the County courts in aforementioned instances, the Supreme Court has retained only the competency of a third instance court in criminal cases, but the cases are still distinguished in the same classification as before.

**Q100 (2022):** The Supreme Court of the Republic of Croatia distinguishes only if the case is civil or criminal, but does not classify case types in specific categories beyond that classification. The main classification in the Case management system is based on the instance of the procedure in the sense that there are some instances when the Supreme Court acts as a second instance appellate court. When the criminal procedure is regarding a very serious criminal offense (charges for which the jail sentence is more than 10 years), the County courts act as a first instance court, and all appeals are decided upon by the Supreme Court as a second instance court. In that sense, the classification of cases of the Supreme Court in the Case management system distinguishes only those cases which are from the position of the second instance or from the position of the third instance court. Since the recently established High Criminal Court of the Republic of Croatia has overtaken the role of the appellate court for the County courts in aforementioned instances, the Supreme Court has retained only the competency of a third instance court in criminal cases, but the cases are still distinguished in the same classification as before.

**Q100 (2021):** There has been a decrease of incoming criminal law cases between 2020 and 2021 following the establishment of the High Criminal Court on 1st of January 2021, which took over part of the previous Supreme Court's jurisdiction.

**Q100 (2018):** The table shows cases under the jurisdiction of the Supreme Court of the Republic of Croatia, as the highest judicial authority in the Republic of Croatia.

**Q100 (2016):** The table shows cases under the jurisdiction of the Supreme Court of the Republic of Croatia, as the highest judicial authority in the Republic of Croatia. We are not able to present the data separately for “Severe criminal cases” and “Misdemeanour and/or minor criminal cases” due to the fact that the implementation of the Integrated Case Management System at the Supreme Court of the Republic of Croatia is underway. It will enable the track record of the cases by type. The significant decrease of the number of pending cases at the beginning of 2016 in the Supreme Court is due to the fact that since beginning of 2014 this court continuously solves more cases than it receives and also because in 2015 there was a further reduction in inflow of cases.

**Q100 (2014):** For 2014, the table shows cases under the jurisdiction of the Supreme Court, as the highest judicial authority in the Republic of Croatia. Data on “severe criminal cases” and “misdemeanour and/or minor criminal cases” could not be presented separately due to the fact that the implementation of the Integrated Case Management System at the Supreme Court of the Republic of Croatia is underway. It will enable the track record of the cases by type. When comparing 2012, 2013 and 2014 data, it can be noticed a trend of decrease of the total number of incoming criminal cases, which is a result of legislative amendments, suspension of extraordinary legal remedy (request for extraordinary mitigation of penalty), as well as the decrease of the number of cases in which the decision about an appeal to investigative imprisonment needs to be decided on.

## Cyprus

**Q091 (General Comment):** The reason for not having data for the subcategories of cases is that there was no electronic filing system that would enable us to have statistical data on different types of cases.

**Q091 (2022):** The total number of resolved cases has increased as there was an increase in the number of judges. Administrative law cases include the cases filed at the Administrative court of international protection.

**Q091 (2021):** In the administrative cases, the applications for international protection are included and there was an increase in these applications in 2021, as a result of more asylum seekers coming into Cyprus. From 1 January 2021, the Review authority for refugees was abolished.

**Q091 (2020):** In the previous cycle a big number of cases were tried together. This is the reason why number of resolved cases in 2020 might appear lower than in 2019.

Reducing delays in the disposition time is part of the reform process. The difference in the pending cases in administrative cases compared with previous year is that in this figure we included the cases filed before the Administrative court of international protection which was set up.

**Q091 (2019):** In the previous campaigns the number of cases filed and resolved was increased as a result of a big number of cases filed together (in one bundle) and tried together.

**Q091 (2018):** The increase in the number of resolved cases is a consequence of the cases tried together. For number of administrative cases, it should be taken into account that cases were consolidated and that 2724 consolidated cases were withdrawn.

**Q091 (2017):** The variation concerning incoming (total) and resolved (total and administrative) cases (decrease) is due to the fact that, in 2016, cases were filed and tried in a bundle but each was considered separately for statistical purposes. Put differently, cases were joined together and therefore there was an increase in the number of resolved cases. Accordingly, we can observe a decrease in the number of resolved cases between 2016 and 2017.

**Q091 (2015):** Variations: The increase in the number of pending cases between 2010 and 2015 is a result of the bail in Cyprus a lot of administrative cases had been filed against that decision.

The reason for the decrease in the number of resolved cases is that the bail in cases had been consolidated and was tried jointly after 31st of December 2014.

**Q091 (2014):** The increase in the number of pending cases is a result of the bail in Cyprus; a lot of administrative cases had been filed against that decision. The reason for the decrease in the number of resolved cases is that the bail in cases had been consolidated and was tried jointly after 31st of December 2014.

**Q094 (General Comment):** The reason for not having data for the subcategories of cases is that there was no electronic filing system that would enable us to have statistical data on different types of cases.

**Q094 (2018):** There were fewer criminal cases in 2018.

**Q094 (2014):** As a result of the bail in, the total number of first instance criminal pending cases on 1 January 2014 increased with 27% between 2012 and 2014.

**Q097 (General Comment):** The case flow data of the Supreme Court are included in this question as second instance cases, although Cyprus has a two-tier system, therefore the Supreme Court is the second, highest and final instance court.”

**Q097 (2021):** Increase in resolved cases: cases tried together.

**Q097 (2020):** Reducing delays in the disposition time is part of the reform process. In administrative cases in 2019 a big number of cases were tried together. The cases that had the same subject matter were filed individually but were consolidated and tried together but for statistical purposes they were calculated separately. This is the reason why number of resolved cases in 2020 might appear lower than in 2019. The difference in the pending cases in administrative cases compared with previous year is that in this figure we included the cases filed before the Administrative court of international protection which was set up.

The reason we do not have statistical data on subcategories of cases is that the electronic filing system was not introduced that would enable to have statistical data on such cases.

**Q097 (2019):** The Administrative law cases include the cases from the administrative court which was established in 2018.

**Q097 (2017):** appeals filed against decisions of the administrative courts which was established in 2016 should be included in the pending cases on 1.1.2017 as Other cases include family court appeals

Variation between 2016 and 2017 in administrative cases (incoming and resolved): this includes appeals filed against decisions of the administrative court

**Q097 (2016):** The Supreme Court is the appeal court.

**Q098 (General Comment):** The case flow data of the Supreme Court are included in this question as second instance cases, although Cyprus has a two-tier system, therefore the Supreme Court is the second, highest and final instance court."

**Q098 (2020):** with regard to criminal appeals less were filed.

**Q098 (2016):** There was an increase in the cases pending between 2014 and 2016. With regard to the increase of number of cases resolved this was due to the creation of the administrative court and therefore the Supreme court did no longer had to deal with first instance administrative cases.

**Q099 (General Comment):** Q99 is NAP because Cyprus has a two tier system therefore the supreme court is the second, highest and final instance court.

**Q099 (2018):** Cyprus only has a two tier system. The Court of Appeal is also the Supreme Court, therefore the relevant data could be found in the section on second instance cases.

**Q099 (2016):** The supreme court is the appeal court

**Q100 (General Comment):** The peculiarity of the judicial system of Cyprus is that the Supreme Court is the appeal and the final instance court.

**Q100 (2020):** The Supreme Court is also the appeal court

**Q100 (2018):** Cyprus only has a two tier system. The Court of Appeal is also the Supreme Court, therefore the relevant data could be found in the section on second instance cases.

**Q100 (2016):** The supreme court is the appeal court

## Czech Republic

**Q091 (General Comment):** For years 2010, 2012 and 2013, business register cases, administrative cases and insolvency registry cases which are decided by the regional courts (second instance courts) acting as first instance courts, were included in the table concerning the case-load of second instance courts (question 97). On the contrary, since 2014, administrative cases, business registry cases and insolvency cases (and also some litigious cases) which are still decided by the second instance courts acting as first instance courts, are subsumed within the table of question 91 (which was already the case for the 2008 exercise). Methodology has been changed in year 2015 – more case types have been included, which led to the big increment in the number of cases. There are no further changes expected.

**Q091 (2022):** Pending cases on 31 Dec. ref. year: In general, the number pending cases in Czech republic is decreasing, which can be seen in the table.

Administrative law cases: There is a significant and steady decrease in law administrative cases in last years. Thanks to the decreasing number of incoming cases and thanks to the increasing of the number of judges, the pending cases are rapidly decreasing.

**Q091 (2021):** Business registry cases are very quickly resolved and there is quite a variance between years. The number of cases is probably affected by many factors – new laws, economic situation and much more. This is also reflected in the number of pending cases.

2.3 Other non-litigious cases - It is relatively minor and "not very important" case type. The number of cases is quite small. It follows that there is big variance in the data between years.

**Q091 (2020):** The registry cases are very quickly resolved and the numbers can vary between years significantly. In 2019, courts managed to resolve more cases than was the number of incoming cases, which led to decrease in pending cases. The same explanation applies to “other non-litigious cases”. The number of cases is quite small. It follows that there is big variance in the data between years. Furthermore, during 2019 courts managed to resolve significantly more cases than in 2018, no special reasons were reported other than a fact that number of cases is relatively small and the cases are not complex. This also resulted in further reduction of the number of cases at the end of 2019. In 2020, the courts again managed to resolve more cases than was the number of incoming cases for both registry cases and other non-litigious cases. Business registry cases are very quickly resolved and there is quite a variance between years. The number of cases is probably affected by many factors – new laws, economic situation and much more. Other cases: The number of incoming cases has grown, probably due to changes in insolvency legislation.

**Q091 (2019):** The registry cases are very quickly resolved and the numbers can vary between years significantly. Last year, courts managed to resolve more cases than was the number of incoming cases, which led to decrease in pending cases at 1 January of the reference year. For Other non-litigious cases the same reasons apply for the number of cases at the beginning of the year. Furthermore, during 2019 courts managed to resolve significantly more cases than last year, no special reasons were reported other than a fact that number of cases is relatively small and the cases are not hard. This also resulted in further reduction of the number of cases at the end of the reference year. For incoming Other cases, there was a legislative change in insolvency law that is probably a reason for the significant grow in the number of incoming cases.

**Q091 (2018):** Methodology has been changed in 2.1 and 2. (civil and commercial non-litigious cases) in year 2015 – more case types have been included, which led to the big increment in the number of cases.

**Q091 (2017):** Methodology has been changed in 2.1 and 2. (civil and commercial non-litigious cases) in year 2015 – more case types have been included, which led to the big increment in the number of cases. Generally the number of incoming cases is decreasing, more use of ADR.

In the previous year the number of resolved cases greatly exceeded the number of incoming cases for other non-litigious cases, which led to huge drop in pending cases and discrepancy appeared.

Non-litigious business registry cases are very easy to resolve and the variance between years in the number of cases (incoming, resolved and pending) is quite big in general. Thus the annual change could easily be (and is) greater than 25 %. Courts have problems with resolving administrative cases. It follows that number of incoming cases was last year much bigger than number of incoming cases. Thus number of pending cases increased greatly cases and discrepancy appeared.

As to Other cases, insolvency cases are reported. This is relatively new and very specific agenda, which usually takes 5 years to resolve. There was an increase in case filings five years ago, which resulted in growth in the number of resolved cases nowadays. On the other hand, for various reasons (including legislative changes) the number of incoming cases is decreasing.

**Q091 (2016):** Methodology has been changed in 2.1 and 2. (civil and commercial non-litigious cases) in year 2015 – more case types have been included, which led to the big increment in the number of cases. Generally the number of incoming cases is decreasing, more use of ADR.

**Q091 (2015):** Methodology has been changed in 2.1 in year 2015 – more case types have been included, which led to the big increment in the number of cases.

Civil and commercial non-litigious cases include: 2.1 - uncontested payment orders, cases of the upbringing and maintenance of a minor, declaration of admissibility of taking or keeping of a person in a medical (health care) institution, declaration of the death of a person, inheritance proceedings, judicial deposit cases

Category "other includes: insolvency cases and incidence disputes

**Q091 (2014):** For 2014, business register cases, administrative cases, insolvency registry cases and also some litigious cases which are decided by the regional courts (second instance courts ) acting as first instance courts are subsumed within the table of question 91.

For 2014 the category “other” encompasses insolvency cases.

In 2014, the high increase of insolvency cases is due to numerous cases of personal bankruptcies as well as to an unfavourable economic situation.

**Q091 (2013):** For 2013, business register cases, administrative cases and insolvency registry cases which are decided by the regional courts (second instance courts ) acting as first instance courts, were included in the table concerning the case-load of second instance courts. In 2014, these cases (and also some litigious cases) are subsumed within the table of question 91.

For 2012, the category of enforcement cases concerns exclusively enforcement carried out by the court itself, while for 2013, this category encompasses also enforcement ensured by private executors (in this procedure, the court authorizes the private executor to proceed to the enforcement and decides about remedial measures against executor's decision). For 2012, the category "other" includes electronic payment orders and probate proceedings, while for 2013 it encompasses only electronic payment proceedings. Moreover, in respect of the electronic payment orders, there was a switchover to another register and 174.067 cases were transferred to a new register. The describes evolutions affect the total.

**Q091 (2012):** For 2012, business register cases, administrative cases and insolvency registry cases which are decided by the regional courts (second instance courts ) acting as first instance courts, were included in the table concerning the case-load of second instance courts. In 2014, these cases (and also some litigious cases) are subsumed within the table of question 91.

Variations between 2010 and 2012 concerning the number of pending cases on 1st January, the number of incoming cases and the number of pending cases on 31 December stem from the high number of incoming electronic payment orders in 2011. Besides, more enforcement cases are handled by private executors.

**Q092 (2014):** For all of the four exercises (2010, 2012, 2013 and 2014) the category of civil and commercial non-litigious cases encompasses cases of upbringing and maintenance of a minor. In 2014, it subsumes also declarations of admissibility of taking or keeping a person in a medical (health care) institution and declarations of death of persons.

**Q093 (General Comment):** For 2010 and 2012 the category "other" subsumes electronic payment orders and probate proceedings, while for 2013, it encompasses only electronic payment orders. By contrast, for 2014, its content covers insolvency cases. Since 2015 category "other cases" includes insolvency cases and incidence disputes.

**Q094 (General Comment):** We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases".

**Q094 (2018):** We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases"

**Q094 (2014):** Severe criminal cases are crimes in respect of which the law provides for a minimum term of imprisonment of 5 years. They are decided by regional courts acting in first instance. Minor criminal cases are tried by district courts in first instance, regional courts being the appellate courts in such matters.

**Q097 (General Comment):** It is noteworthy that the methodology of presentation of data has been changed since the 2014 exercise. Since 2014, administrative cases, business registry cases and insolvency cases (and also some litigious cases) which are still decided by the second instance courts acting as first instance courts, are subsumed within the table of question 91 (which was already the case for the 2008 exercise).

**Q097 (2022):** Other cases are insolvency and incidency cases.

**Q097 (2020):** In general, number of incoming cases is decreasing and it follows that the numbers of pending cases and resolved are decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies. Civil (and commercial) litigious cases: In general, number of incoming cases is decreasing (mostly because number of first instance cases is decreasing too) and it follows that the number of pending cases is decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies.

Other cases: The variations are the result of changes in first instance agenda. This category includes insolvency cases and there were numerous legislative changes in last years. Also, it must be noted that the number of pending cases is relatively small, thus the variance is bigger.

**Q097 (2019):** In "Other cases" category, insolvency cases are reported.

In general, number of incoming cases is decreasing and it follows that the numbers of pending cases and resolved are decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies.

**Q097 (2018):** In "Other cases" category, insolvency cases are reported.

In general, number of incoming cases is decreasing and it follows that the numbers of pending cases and resolved are decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies.

**Q097 (2017):** In "Other cases" category, insolvency cases are reported. In this year the number of resolved insolvency cases greatly exceeded the number of incoming insolvency cases, which led to huge drop in pending cases at the end of the year and discrepancy appeared. The changes are connected to changes in first instance insolvency agenda.

**Q097 (2016):** Increase in the number of "other cases" in 2015 and 2016 is due to the change of methodology applied to these data.

**Q097 (2015):** Increases in the number of "other cases" are due to the change of methodology applied to the 2015 data.

**Q097 (2014):** In 2014, the high increase of insolvency cases is due to numerous cases of personal bankruptcies as well as to an unfavourable economic situation.

**Q097 (2013):** For the 2013 exercise, the totals do not include the number of non-litigious business registry cases which is not available.

**Q097 (2012):** For the 2012 exercise, the totals do not include the number of non-litigious business registry cases which is not available.

**Q098 (General Comment):** We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases".

The data provided involves appeals and complaints (corrective measure against a resolution). Instead of "Pending cases older than 2 years from the date the case came to the second instance court" "Pending cases older than 1 year from the date the case came to the second instance court" are provided.

**Q098 (2021):** The number of pending cases older than 2 years is very low in second instance and thus it follows that there is a big variance in the data between years.

**Q098 (2012):** In the frame of the 2012 evaluation cycle, it has been specified that the total number of criminal cases includes severe criminal cases decided by second instance courts acting in first instance and appeals against decisions of the first instance courts in criminal matters. On the contrary, in 2010, the total encompassed only the number of appeals, while the number of severe criminal cases was not subsumed. Accordingly, due to the different methodology of presentation of data, the comparison between the 2010 and 2012 figures should be qualified.

**Q099 (2022):** Administrative cases: The Supreme court is overburdened and has trouble resolving its cases thus the number of pending cases grow quite quickly. It is connected to growth in the number of administrative first-instance cases in previous years and growing tendency to file an appeal to the Supreme Administrative Court.

Other cases: Includes insolvency cases. The changes are the result of changes in second-instance agenda.

**Q099 (2021):** Other cases: This category includes appeals in last (third) instance of insolvency cases and incidence disputes.

**Q099 (2020):** Civil (and commercial) litigious cases: After several years of steady growth in the incoming cases, the incoming cases started to decrease in 2018. This is mainly due to legislative changes and drop in first and second-instance agenda in previous years. Thanks to this decrease the Supreme court was able to resolve part of its backlog and thus pending cases significantly decreased.

Civil (and commercial) non litigious cases: The variations should be put into perspective due to small absolute values.

Administrative cases: The Supreme court is overburdened and encounter difficulties to resolve its cases thus the number of pending cases grow quite quickly. It is connected to grow in number of administrative first-instance cases and growing tendency to fill an appeal to Supreme Administrative Court.

Other cases: This category includes appeals in last (third) instance of insolvency cases and incidence disputes. The changes are the result of changes in second-instance agenda. Also, it must be noted that the number of pending cases is relatively small, thus the variance is bigger.

**Q099 (2019):** Court was overburdened last year (there was much higher number of incoming cases than it managed to resolve), so there is a big increase in the number of pending Administrative cases.

**Q099 (2018):** The category "other" includes appeals in last (third) instance of insolvency cases and incidence disputes.

**Q099 (2017):** The category "other" includes appeals in last (third) instance of insolvency cases and incidence disputes. This whole agenda is relatively new (since 2008) and it takes quite a long time to resolve a case (several years). Since the agenda is new, it took several years before the number of first-instance incoming cases stopped growing and reach somehow stable level. Of course, the number of appeals (second instance) and incoming case second instance cases started to grow as well, but later. For simplicity, it can be said that Supreme Court deals with appeals in final (third instance). It follows that the number of final instance cases in this agenda also started to grow and again, later than the number of incoming cases in second instance. Thus the number of incoming cases in this agenda (insolvency cases and incidence disputes) is currently growing. The court seems to be struggling to deal with this growth in number of incoming cases, yet it is difficult to understand the reasons behind it, as the growth does not seem to be very high in absolute numbers.

**Q099 (2016):** In 2016 the administrative cases were added and for that reason all numbers show variation. Previously the number of administrative cases on this instance was NA.

**Q099 (2012):** In the frame of the 2012 evaluation cycle, it was specified that the civil and other cases are within the competence of the Supreme Court, while the administrative cases are within the competence of the Supreme Administrative Court.

**Q100 (General Comment):** We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases"

**Q100 (2020):** Total of criminal cases: The variations should be put into perspective due to small absolute values.

**Q100 (2018):** We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases"

## Denmark

**Q091 (General Comment):** As concerns "non-litigious business registry cases", it is important to note that pending cases always may vary a lot as it is a residual figure when pending prior to the period, received and resolved cases are counted. Furthermore, the reason for the discrepancy is that we do not have pending figures from the Maritime and Commercial High Court. Administrative courts do not exist in Denmark, and administrative cases are initially dealt outside courts by court-like bodies, like appeal boards, committees, or councils. The number of "administrative law cases" which are litigious and go to courts is encompassed in the number of "civil and commercial litigious cases".

With regard to "non litigious land registry cases", it should be pointed out that due to the high amount of incoming and resolved cases, the residual figure of pending cases prior and after the period may vary.

**Q091 (2022):** The number of administrative litigious cases that go to courts in 2022 are estimated at 2600 which is 5,5% of the total number of incoming civil and commercial litigious cases in Denmark. They can not be easily separated from the other civil and commercial cases.

In 2022 there was still an aftermath of the unusual situation of the Covid-19 related to the periods with closing down the society, including the courts. It has created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it. Land registration is the major source of incoming cases with very large figures. It fluctuates a lot depending on interest rates, loan rescheduling etc.

2.1. General civil (and commercial) non-litigious cases: The courts have successfully reduced the number of pending cases. As concerns "2.2.2. Non-litigious business registry cases", it is important that because of new regulations/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases.

**Q091 (2020):** 2020 was an unusual year because of the Covid-19 related close down of society, including close down of courts. It created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it. Land registration is the major source of incoming cases. It fluctuates a lot depending on interest rates, loan rescheduling etc.

2.1. General civil (and commercial) non-litigious cases: The courts have successfully reduced the number of pending cases. As concerns "2.2.2. Non-litigious business registry cases", it is important that because of new regulations/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases. The courts received many extra backlogged cases from the Danish Commerce and Companies Agency reinforced closure of companies that were still backlogged in the early 2020. The courts were closed for 3 weeks except for vital cases and government assistant to companies helped them and reduced bankruptcies and closures of companies that would normally have happened.

**Q091 (2019):** Variation in land registration (loans etc) as market and interest rates always vary from year to year.

For non-litigious business registry cases: Received markedly fewer enforced cases re enforced closure in 2019 than in 2018; Solved many extra insolvency cases in the beginning of year 2019 received in late autumn / winter 2018; pending cases on 31 December - It is important to understand the figure, that we succeeded to include pending cases from the Maritime and Commercial court.

**Q091 (2018):** As concerns "non-litigious business registry cases", it is important that because of new regulations/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases. Besides from that it is important to note that pending cases always may vary a lot as it is a residual figure when pending prior to the period, received and resolved cases are counted. Furthermore, the reason for the discrepancy is that we do not have pending figures from the Maritime and Commercial High Court. The number of "administrative law cases" which are litigious is encompassed in the number of "civil and commercial litigious cases".

With regard to "non litigious land registry cases", it should be pointed out that due to the high amount of incoming and resolved cases, the residual figure of pending cases prior and after the period may vary.

**Q091 (2017):** The figures provided in respect of this question are not fully consistent. The Maritime and Commercial Court only measures incoming and resolved insolvency cases but not pending cases. Accordingly, when the data on processed/resolved cases from this court are included, there will always be a small inconsistency. Therefore, vertical and horizontal figures are not totally consistent.

Concerning the category "land registry cases", the number of pending cases on 1 January 2017 is a residual figure from received, finalized and pending cases ultimo the year; it may deviate from pending cases ultimo 2016, but it is a residual figure. The number of pending cases on 31 December 2017 is an actual figure. Concerning the category "registry cases", it is specified that the Maritime and Commercial Court does not publish pending cases which results in a discrepancy.

**Q091 (2016):** As concerns "non-litigious business registry cases", it is important that because of new regulations/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases. Besides from that it is important to note that pending cases always may vary a lot as it is a residual figure when pending prior to the period, received and resolved cases are counted. The number of "administrative law cases" which are litigious is encompassed in the number of "civil and commercial litigious cases".

With regard to "non litigious land registry cases", it should be pointed out that due to the high amount of incoming and resolved cases, the residual figure of pending cases prior and after the period may vary.

**Q091 (2014):** Due to an improved business situation, courts at all levels receive fewer cases, i.e. civil cases, enforcement cases, forced sales, insolvency cases; pending cases are also reduced thereby. Non-litigious business registry cases follow the overall tendency.

**Q091 (2013):** The successive decrease observed in the number of civil and commercial litigious cases stems from the possibility to reopen cases and the missing data on pending cases before the Maritime and Commercial Court. As for the land registry cases, following the digitalizing in 2009 of land registry, the number of pending cases decreased markedly.

**Q092 (General Comment):** Paternity, adoption, guardianship and others in the same category; cases under inquisitorial procedures.

**Q093 (General Comment):** Estate after a deceased person, notary, insolvency cases not included under 2.2.2. above.

**Q094 (General Comment):** Danish Court Administration has not worked out a statistics on pending cases older than 2 years. When we categorize cases as "severe", it does not mean that privation of liberty is the end result, but based on the category chosen by the court to deal with the case could include severe cases. Minor cases are typically fines that will never have as a result of privation of liberty. Probably there are too many cases under the category "severe" then, but that is the figures we have.

**Q094 (2022):** In 2022 the courts are still dealing with a high number of pending cases in the aftermath of the situation with covid-19.

**Q094 (2021):** 2020 was an unusual year because of the Covid-19 pandemic, related close down of society, including close down of courts. It created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it.

**Q094 (2020):** 2020 was an unusual year because of the Covid-19 related close down of society, including close down of courts. It created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it.

**Q094 (2018):** Our statistics on criminal cases does not have data on pending cases older than 2 years. We can not differentiate pending cases according to age. When we categorize cases as "severe", it does not mean that privation of liberty is the end result, but based on the category chosen by the court to deal with the case could include severe cases. Minor cases are typically fines that will never have as a result of privation of liberty. Probably there are too many cases under the category "severe" then, but that is the figures we have.

**Q094 (2016):** Our statistics on criminal cases does not have data on pending cases older than 2 years. We can not differentiate pending cases according to age.

The reason pending cases per 31 December 2016 has decreased is that the courts have resolved more cases than incoming cases.

**Q094 (2014):** For the period 2010-2014, district courts have been able to resolve more cases than the number of incoming cases, especially concerning minor criminal cases (traffic offences etc.) which have been given a higher priority. In 2012, district courts received more minor criminal cases due to a new procedure according to which the police sent cases where citizens haven't paid their fines to courts. This was changed again in the end of 2012 where warnings were sent out first and the number of minor cases dropped therefore markedly in 2013. In 2014 the number of received minor criminal cases has gone up again following a decision of the police to step up on issuing fines for traffic offences. Besides, city courts resolved more cases through the plea guilty procedure.

**Q094 (2012):** The Courts of Denmark received an extraordinary appropriation in 2009 specifically to bring down backlogs. This effect can be seen in 2012, among other things in the lower number of pending cases. The increase in the number of misdemeanor and/or minor criminal cases is due to the fact that a high number of cases concerning, especially, traffic fines were handled at court level.

**Q097 (General Comment):** It is noteworthy that all appellate cases are considered as "litigious cases" which explains the reply NAP for all the other categories, as well as the fact that the total coincides with the number of civil and commercial litigious cases. The number of "administrative law cases" which are litigious is encompassed in the number of "civil and commercial litigious cases".

Another important remark concerns cases that are not first instance cases before the two High Courts and which are included in question 97. Cases that begin as first instance at one of the two High Courts are not included in the figures in table 97.

**Q097 (2016):** Pending cases may vary a lot depending on the ratio of resolved cases compared to incoming cases. We can observe a decrease of about 30 % of pending cases ultimo the 2016. This is due to this "residual" nature of pending cases. The decrease in the pending cases between 2014 and 2016 is because in both calendar years 2015 and 2016 the number of resolved cases exceed the number of incoming cases.

**Q097 (2014):** In the ambit of the 2014 exercise, it has been emphasized that due to an improved business situation, courts on all levels receive fewer cases, i.e. civil cases, enforcement cases, forced sales, insolvency cases. Generally speaking, pending cases are also reduced thereby.

**Q098 (General Comment):** All criminal cases at 2nd instance are considered severe as they would otherwise not become 2nd instance criminal cases. We can not differentiate pending cases depending on their age. There might be cases though that would not fulfil the criteria of a severe case. About one third of the cases may be smaller or bigger issues from the cases in the district courts that are appealed to one of the two High Courts before proceeding at the district courts and then finally settled in the district court. It is not possible to see if it an issue is from a severe case in the district or a case that is not severe. Then the whole case may afterward be appealed to one of the two High Courts when the district courts have come to a final judgment.

**Q098 (2022):** All criminal cases at 2nd instance are considered severe as they would otherwise not become 2nd instance criminal cases. Due to periods of lock downs because of the situation with covid-19, the courts have still a lot of pending cases.

**Q098 (2020):** 2020 was an unusual year because of the Covid-19 related close down of society, including close down of courts. It created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it.

**Q098 (2016):** All criminal cases at 2nd instance are considered severe as they would otherwise not become 2nd instance criminal cases. We can not differentiate pending cases after how old they are.

**Q099 (2021):** There is no special reason explaining the increase in the number of incoming cases. It should be recalled that 2020 was a special year because of the lockdown. The Supreme court depends on the two High Courts to receive cases and they send a few more cases to the Supreme court in a year without lockdown compared with 2020.

**Q099 (2019):** resolved and incoming cases have not markedly changed. So it is pending cases that varies. But pending cases are residual numbers and will typically vary from year to year.

**Q099 (2018):** In the Danish context, non-litigious cases do not make sense. Pending cases may vary as it is residual in nature and is depending on the number of incoming and resolved cases and the ratio between those two.

it is also important, when we talk discrepancy, that there is a year between previous and present year (2016 - 2018). 2017 is missing, so data - in particular pending cases - may vary.

**Q099 (2017):** Pending cases primo and ultimo 2017 for the Supreme Court is found based on pending cases ultimo 2016, received cases in 2017 and resolved cases in 2017. Put differently, pending cases are now generated based on pending ultimo 2016 and cases in 2017.

**Q099 (2016):** In the Danish context, non-litigious cases do not make sense. Pending cases may vary as it is residual in nature and is depending on the number of incoming and resolved cases and the ratio between those two.

**Q099 (2015):** The number of incoming cases ("other than criminal cases") dropped between 2010 and 2015. Since the instance reform in 2007, the Supreme Court is now almost only a third instance court (instead of being partly a second instance court and partly a third instance court). Indeed, first instance pending cases at the two High Courts in 2007 have gradually already been appealed or finalised.

**Q099 (2014):** In the frame of the 2014 exercise, the attention was drawn on the fact that the number of incoming and resolved cases before the Supreme Court was still falling, since the reform of 1st January 2007. Before 2007, many cases started in one of the two High Courts and could be appealed directly to the Supreme Court as second instance. Since 2007, almost all cases start at the lowest level and consequently, much fewer cases are appealed to the Supreme Court. This effect of still fewer cases appealed to the Supreme Court following the reform could still be seen from 2012 to 2014.

**Q100 (2018):** Data are from the yearly report 2018 from the Supreme Court, <http://www.hoejesteret.dk/hoejesteret/embedsregnskab/Documents/Årsberetning2018.pdf>

**Q100 (2016):** Based on the data the Danish Court Administration got, it is not possible to show pending criminal cases.

**Q100 (2014):** For 2014, the number of pending criminal cases was not available.

The number of received criminal cases has fallen all the years since 2010, except from 2014 where it went up with 7 cases and the same number of criminal cases were received as in 2012. It is worth mentioning that the Danish Court Administration differentiates between cases that are fully appealed and cases in respect of which a specific point is appealed (i.e. should the person being charged stay in custody while the case is on-going). The number of cases fully appealed has varied between 27 and 14 over the period 2010-2012-2013-2014 (in 2013 and 2014 there were 14 received cases). Completed "full cases" have varied between 32 and 12 cases (in 2014 there were 12 completed criminal cases). The rest of the cases were related to specific questions.

Therefore, and due to the instance reform as well, the Supreme Court has over the years dealt with fewer and fewer cases.

## Estonia

**Q091 (2022):** No comment could be provided on the variations in the caseload between 2020 and 2022.

**Q091 (2021):** The increased number of administrative law cases pending at the end of 2021 is due to COVID-19 related cases that have taken more time to be solved.

Concerning general civil and commercial non litigious cases, it should be mentioned that during the second Covid-19 year, courts processed cases that they were not able to process during the first Covid-19 year.

**Q091 (2020):** MoJ

In 2020, there have been difficulties with filling the vacancies of judge positions in the biggest county court (judges going on maternity leave or retirement), which may have resulted in an increase in pending cases older than 2 years in general.

**Q091 (2019):** Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

**Q091 (2018):** The variations in total and in the non litigious cases are due to the number of entrepreneurs that has grown every year, so the number of incoming case is also increasing. Furthermore, the number of real estate transactions has increased and the market is active. The number pending cases end of 2017 is different because the numbers are taken later and the data has been corrected.

**Q091 (2017):** There are not any particular reasons to explain variations in the number of non-litigious business registry cases, causing variations in respect of the category "registry cases" and "non-litigious cases". As regards item 2.1 "general civil and commercial non-litigious cases", there is an important discrepancy between the number of pending cases on 31 December 2016 and the number of pending cases on 1 January 2017. The reason is related to the time the numbers have been taken out of the system (see general comment). The fifth column "pending cases older than 2 years", includes cases that are suspended (part 9 of our Code of Civil Procedure, <https://www.riigiteataja.ee/en/eli/506022018001/consolide> ). The proceedings may be suspended for example if the one of the parties dies or falls seriously ill; or if in order to solve the dispute the court needs a resolution of an another case.

**Q091 (2016):** The decrease in the number of incoming administrative court cases is due to the decrease in the number of inmate complaints. The variations in total and in the non litigious cases are due to increase of incoming business and land registry cases.

**Q091 (2014):** The increase in the number of incoming administrative law cases is due to a rise of complaints of prisoners. As to the decrease in the total of pending other than criminal law cases on 1 January 2014, the performance indicators of courts have justified supplementary budget resources. Agreements between the Ministry of Justice and courts are expected concerning the efforts that need to be undertaken in court to clear the backlog and accelerate proceedings. For 2014, non-litigious enforcement cases are included in the category "general civil (and commercial) non-litigious cases".

**Q091 (2013):** As to non-litigious business registry cases and the observed decreases, in 2012 it was impossible to separate supervisory proceedings from general proceedings and therefore 2012 data included supervisory proceedings as well. The number of pending "civil and commercial litigious cases" decreased on account of the enhanced efficiency of the first instance courts, while the decrease in the number of incoming cases is due to the reestablishment of the normal case-flow after the economic crises.

**Q091 (2012):** The land register (together with the marital property register) and the commercial register (together with the non-profit associations and foundations register, commercial pledge register and ship register) are part of the county courts. "Land registry cases" and "business registry cases" refer to the registration procedure, including supervisory proceedings over undertakings. Disputes arising from the registration procedure are subsumed in "general civil (and commercial) non-litigious cases". The dynamics of the "civil and commercial non litigious cases" is considerably influenced by the payment order proceedings that form the largest part of this category and are dealt with by only one courthouse. The 2012 data includes enforcement, land and business registry cases.

**Q094 (2020):** Other criminal cases: for example different enforcement and pretrial cases. The pandemic has affected the courts activity in criminal matters in general. The criminal procedure law was not as flexible when judges had to work online. The complete revision of the criminal procedure law is ongoing and will come into force next year.

**Q094 (2018):** Increase of incoming misdemeanor and minor criminal cases.

**Q094 (2016):** Misdemeanour cases can be joined and solved together in court. Cases that can lead to deprivation of liberty of less than five years are still included under severe criminal cases.

Because the distinction between severe and minor criminal cases is not the same with the CEPEJ, data for subcategories can be found below : Severe criminal cases : Pending cases on 1 Jan. ref. year : 803

Incoming cases : 7628

Resolved cases : 7463

Pending cases on 31 Dec. ref. year: 824

Pending cases older than 2 years from the date the case came to the first instance court : 23

Misdemeanour and / or minor criminal cases :

Pending cases on 1 Jan. ref. year : 1835

Incoming cases : 10032

Resolved cases : 10628

Pending cases on 31 Dec. ref. year: 891

Pending cases older than 2 years from the date the case came to the first instance court : 3

**Q094 (2014):** The variations observed over the years 2010, 2012 and 2014 are most likely due to the fact that the Ministry of Justice and the biggest court in Estonia (Harju County court) had an agreement setting the target for eliminating backlogs.

**Q094 (2012):** Horizontal inconsistency within the table stems mainly from the joinder and severance of criminal matters. Following a law amendment of March 2011, claims against enforcement of misdemeanour decisions are brought before bailiffs and not before courts.

**Q097 (General Comment):** Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

**Q097 (2022):** "Administrative law cases": there are problems that have been dealt with but no results can be observed yet. Above all there were many vacancies in civil departments and that has had an effect in administrative too.

**Q097 (2021):** In 2021, a general increase in the case load of circuit courts is observed.

**Q097 (2019):** Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

**Q097 (2015):** In respect of the civil and commercial non-litigious cases, the increase from 2013 in the number of pending cases resulted from the implementation of an efficiency-raising project in 2013 in Harju County Court. Accordingly, the efficiency of the latter increased significantly in civil cases. Owing to the fact that this court is the largest 1st instance court dealing with 1/3 of all of the cases in Estonia, it had an impact on the case-flow of the second instance courts (only 2 appeal courts competent in civil, criminal and administrative matters).

As to the administrative cases, it is noteworthy that as there are only 2 appeal courts in Estonia competent in civil, criminal and administrative matters, every change in the number of 2nd instance judges influences the statistics of the Courts of appeal. Between 2010 and 2012 there were a few vacant administrative judges' positions in one of the appeal courts which had an impact on the number of pending cases

**Q097 (2014):** On the occasion of the 2014 exercise, it has been emphasized that there has been an ongoing reform concerning the court budgets and judicial performance indicators. Agreements have to be adopted on the occasion of the budget negotiations between the Ministry of Justice and the courts concerning the efforts that need to be undertaken in court to clear the backlog and accelerate proceedings.

As to the increase of the total of pending other than criminal cases (beginning and end of the year), the reason is that 1st instance courts started the project of clearing backlogs and accelerating proceeding earlier. As a result, the number of incoming cases in 2nd instance courts increased in 2013 and resulted also in an increase of the number of pending cases by the end of the year 2013.

For 2014, non-litigious enforcement cases are included in the category "general civil (and commercial) non-litigious cases".

**Q097 (2013):** In the frame of the 2012 and 2013 exercises, several clarifications were provided.

Firstly, in respect of the civil and commercial litigious cases, the observed variations were deemed to be normal, as a part of the ordinary dynamics of the case-flow.

Secondly, in respect of the civil and commercial non-litigious cases, the increase in the number of pending cases resulted from the implementation of an efficiency-raising project in 2013 in Harju County Court. Accordingly, the efficiency of the latter increased significantly in civil cases. Owing to the fact that this court is the largest 1st instance court dealing with 1/3 of all of the cases in Estonia, it had an impact on the case-flow of the second instance courts (only 2 appeal courts competent in civil, criminal and administrative matters). Owing to that, in 2014 one civil judge's position was given to the Tallinn Appeal Court in order to raise their efficiency.

As to the enforcement procedures, they are in the competence of public bailiffs who are completely independent from the judicial system but act as public authorities. The reply NA is justified by the impossibility to distinguish in the bailiffs' information system the enforcement proceedings where the enforcement instrument is court decision from all the other enforcement proceedings where the enforcement instrument is for example a fine made by police, an administrative act made by the tax authority etc.

In respect of the land registry and business registry cases, it should be recalled that they are within the competence of the 1st instance courts. If the decision of the registry is appealed, it goes to the first instance court as a regular civil case.

As to the administrative cases, it is noteworthy that as there are only 2 appeal courts in Estonia competent in civil, criminal and administrative matters, every change in the number of 2nd instance judges influences the statistics of the Courts of appeal.

Between 2010 and 2012 there were a few vacant administrative judges' positions in one of the appeal courts which had an impact on the number of pending cases.

**Q097 (2012):** In the frame of the 2012 and 2013 exercises, several clarifications were provided.

Firstly, in respect of the civil and commercial litigious cases, the observed variations were deemed to be normal, as a part of the ordinary dynamics of the case-flow.

Secondly, in respect of the civil and commercial non-litigious cases, the increase in the number of pending cases resulted from the implementation of an efficiency-raising project in 2013 in Harju County Court. Accordingly, the efficiency of the latter increased significantly in civil cases. Owing to the fact that this court is the largest 1st instance court dealing with 1/3 of all of the cases in Estonia, it had an impact on the case-flow of the second instance courts (only 2 appeal courts competent in civil, criminal and administrative matters). Owing to that, in 2014 one civil judge's position was given to the Tallinn Appeal Court in order to raise their efficiency.

As to the enforcement procedures, they are in the competence of public bailiffs who are completely independent from the judicial system but act as public authorities. The reply NA is justified by the impossibility to distinguish in the bailiffs' information system the enforcement proceedings where the enforcement instrument is court decision from all the other enforcement proceedings where the enforcement instrument is for example a fine made by police, an administrative act made by the tax authority etc.

In respect of the land registry and business registry cases, it should be recalled that they are within the competence of the 1st instance courts. If the decision of the registry is appealed, it goes to the first instance court as a regular civil case.

As to the administrative cases, it is noteworthy that as there are only 2 appeal courts in Estonia competent in civil, criminal and administrative matters, every change in the number of 2nd instance judges influences the statistics of the Courts of appeal.

Between 2010 and 2012 there were a few vacant administrative judges' positions in one of the appeal courts which had an impact on the number of pending cases.

**Q098 (General Comment):** Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database. Other criminal cases: The enforcement and pretrial cases do not exist in the second instance.

**Q098 (2022):** In recent years, there has been a (wide-ranging) generational change among judges in Estonia, which has led to a temporary drop in performance. especially in the district courts.

**Q098 (2020):** The pandemic has affected the courts activity in criminal matters in general. The criminal procedure law was not as flexible when judges had to work online. The complete revision of the criminal procedure law is ongoing and will come into force next year.

**Q098 (2016):** Discrepancies are due to the numbers being quite small. Number of incoming cases depends on the crimes being committed and the number of resolved cases depends on. Because the distinction between severe and minor criminal cases is not the same with the CEPEJ, data for subcategories can be found below :

Severe criminal cases : Pending cases on 1 Jan. ref. year : 71

Incoming cases : 745

Resolved cases : 762

Pending cases on 31 Dec. ref. year: 54

Pending cases older than 2 years from the date the case came to the first instance court : 0

Misdemeanour and / or minor criminal cases :

Pending cases on 1 Jan. ref. year : 9

Incoming cases : 208

Resolved cases : 214

Pending cases on 31 Dec. ref. year: 3

Pending cases older than 2 years from the date the case came to the first instance court : 0

**Q098 (2014):** The variations observed over the years 2010, 2012 and 2014 are most likely due to the fact that the Ministry of Justice and the biggest court in Estonia (Harju County court) had an agreement setting the target for eliminating backlogs.

**Q099 (General Comment):** It is noteworthy that the discrepancies that can be observed between the number of pending cases indicated for December of one year and the number of pending cases communicated for January of the next year, are due to the fact that the statistic system is alive and courts are entitled to modify and up-date data at any time. Moreover, differences in the horizontal consistency may be explained by the fact that during the proceedings some cases are joined and some are disjoined.

**Q099 (2016):** The number of pending cases has increased because the number of cases where the Supreme Court has decided to open proceedings in the Supreme Court has increased.

**Q100 (General Comment):** The Supreme Court is the court of cassation, therefore only those cases are heard which have been given leave to appeal (i.e. that have been declared admissible for proceedings in the Supreme Court). The data presented shows the number of cases which have been actually heard by the Supreme Court and not the number of appeals. The Supreme Court is not required to give reasons in its ruling on the admissibility of the appeals.

**Q100 (2021):** The Supreme Court did not provide a specific explanation with regard to the decrease in the number of resolved criminal cases, but if we look the overall reasons, they are Covid-19 related.

**Q100 (2020):** The pandemic has affected the courts activity in criminal matters in general. The criminal procedure law was not as flexible when judges had to work online. the complete revision of the criminal procedure law is ongoing and will come into force next year.

**Q100 (2016):** Numbers are quite small. No special reason for discrepancies. Because the distinction between severe and minor criminal cases is not the same with the CEPEJ, data for subcategories can be found below :

Severe criminal cases : Pending cases on 1 Jan. ref. year : 18

Incoming cases : 82

Resolved cases : 73

Pending cases on 31 Dec. ref. year: 27

Pending cases older than 2 years from the date the case came to the first instance court : NA

Misdemeanour and / or minor criminal cases :

Pending cases on 1 Jan. ref. year : 6

Incoming cases : 26

Resolved cases : 29

Pending cases on 31 Dec. ref. year: 3

Pending cases older than 2 years from the date the case came to the first instance court : NA

**Q100 (2014):** The variations observed in 2014 are not of importance, since the numbers are small.

**Q100 (2012):** In 2012, the higher number of criminal cases compared to 2010 was a result of the higher number of cases where the decision of the lower court was appealed. As regards the number of misdemeanour cases before the Supreme Court, the number of appeals was not much lower compared to 2010 but the number of cases accepted by the Supreme Court was lower (in 2010 the Supreme Court declared admissible 35% of the appeals, while in 2012 only 21% of the appeals were accepted).

## Finland

**Q091 (General Comment):** The pending cases older than two years are not collected in Finland. The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on January 2023 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

**Q091 (2021):** Comments The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance Court.

**Q091 (2020):** The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts). The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance Court.

**Q091 (2019):** The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is:

1)Incoming cases 2)Resolved cases

3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts). The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance Court.

The number of administrative cases increased dramatically in 2016 due to the asylum crisis. Accordingly, more judges were hired to deal with cases and make the procedure more effective. The limits in which cases have to be handled have also been shortened in order to reduce the number of pending cases. To tackle this crisis, a legislative reform decentralized the asylum cases from one administrative court (Helsinki) to three other administrative courts as well.

As to "civil and commercial litigious cases", we can notice a very high Clearance Rate for 2016 due to the fact that in 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases. Accordingly, the number of pending cases decreased between 2016 and 2019.

"General civil and commercial non-litigious cases": the number of pending cases at the end of 2019 increased slightly between 2018 and 2019. In this respect, it should be noticed that the partial switch to the new case management system AIPA (as for example divorce cases are already processed in this system) can be the explanation as some initial challenges in the reporting tool has been noted recently.

**Q091 (2018):** The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance Court.

The number of administrative cases increased dramatically in 2016 due to the asylum crisis. Accordingly, more judges were hired to deal with cases and make the procedure more effective. The limits in which cases have to be handled have also been shortened in order to reduce the number of pending cases. To tackle this crisis, a legislative reform decentralized the asylum cases from one administrative court (Helsinki) to three other administrative courts as well.

As to “civil and commercial litigious cases”, we can notice a very high Clearance Rate for 2016 due to the fact that in 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases. Accordingly, the number of pending cases decreased between 2016 and 2018.

**Q091 (2017):** 1. Civil (and commercial) litigious cases: in 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases; accordingly, the number of pending civil litigious cases at the beginning of 2017 has decreased. 2.2.1 From the beginning of the year 2010 Land register cases were transferred to National Land Survey of Finland.

3. Administrative law cases: On appeal, the administrative court reviews the legality of the decision of the authority. The number mentioned in category 3 includes cases dealt with by Administrative Courts, Market Court and Insurance Court. It is worth mentioning that in 2016 the number of administrative cases increased dramatically due to the asylum crisis. As a result, the number of pending administrative cases at the beginning of 2017 increased considerably. Against this background, Finland had adopted different measures to face the asylum crisis (e.g. decentralisation of the competence in respect of asylum cases from one administrative court (Helsinki) to three other administrative courts). Accordingly, the number of incoming administrative cases for 2017 decreased (28%).

**Q091 (2016):** In 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases. The number of administrative cases increased dramatically due to the asylum crisis. Accordingly, more judges were hired to deal with cases and make the procedure more effective. The limits in which cases have to be handled have also been shortened in order to reduce the number of pending cases. To tackle this crisis, a legislative reform decentralized the asylum cases from one administrative court (Helsinki) to three other administrative courts as well. For that reason, statistics show variations as concerns the number of pending administrative law cases in 2016. The number of pending administrative law cases on 1.1.2016 was 20 4775, but due to the decentralization around 5000 cases were transferred from Helsinki to these other courts. In the statistics, these cases do not appear as pending anymore. It is not possible to say how many of them have been resolved, but they are included in the number of resolved administrative law cases.

**Q091 (2014):** Non-litigious enforcement cases are subsumed in the category “general civil (and commercial) non-litigious cases”. The enforcement is of the competence of the enforcement authorities, not of this of courts. Cases mentioned here are appeals in execution proceedings before district courts.

**Q091 (2012):** The increase in the number of pending civil and commercial litigious cases is the result of an exceptionally high number of incoming litigious civil cases in 2011.

**Q093 (General Comment):** The land courts deal with disputes and appeals arising from surveying operations. The most common case types are the divisions, parcellings and encumbrances referred to in the Surveying Act, as well as the procedures under the Expropriation Act and the Private Roads Act. The procedure is very similar to the civil procedure in a district court. Land court cases are dealt with by the District Courts of South Savo, East Uusimaa, Kanta-Häme, Lapland, Oulu, Ostrobothnia, North Savo, and Southwest Finland. The land court, which acts as a separate department of the district court, has a district judge specialising in these matters as chairperson and a land court engineer and two lay members in the main proceedings. The decisions of a land court can be appealed against to the Supreme Court.

All matters concerning insolvency are classified as matters of petition, which means that they require court involvement. These matters are therefore not categorised as civil cases, i.e. dispositive matters between the parties. But, these matters can of course turn out to be litigious in the sense that there are conflicting opinions about the outcome, and the court must decide upon these after a more or less regular trial proceeding. Not all cases become litigious and the court may rule on insolvency/bankruptcy when the legal merits are met. In Finland we tend to define these as two-or-more-party disputes that may be concluded in agreement of the parties (dispositive) and the court is bound by the agreement. The indispositive cases are characterised by the "official principle" which means that only the court can decide the outcome after proceedings are initiated. The indispositive cases also tend to have different rules regarding the costs of the trial than regular civil cases. As a special court, the task of the labour court is to process and resolve disputes concerning collective agreements, as well as disputes based on the laws on collective agreements and collective agreements, defined in more detail in the law on proceedings in the labour court. Most of the time, the question is about the correct content or interpretation of the said agreements, or violations of agreements or labour and collective agreement laws and the resulting sanctions. In addition, the labour court, as an appellate court, resolves appeals against the decisions of the board for confirmation of the general bindingness of the collective agreement and appeals against the decisions issued by the labour council in certain exemption cases. The Labor Court is the only competent court in the above-mentioned matters. Its judgments cannot be appealed but are final and immediately enforceable. Note: The labour court therefore does not deal with all labor law disputes. Disputes arising from the employment contract between the employer and the employee are dealt with in the relevant district court, the decision of which, under certain conditions, has the right of appeal to the Court of Appeal and the Supreme Court.

**Q094 (General Comment):** The cases are not statistically categorised in severe criminal cases and misdemeanour and / or minor cases in Finland.

The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on January 2023 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

**Q094 (2021):** The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 20.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. This year we have included military court cases and co-er-cive mea-sures which were previously not included in this number.

**Q094 (2020):** The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

**Q094 (2018):** There is no particular explanation regarding the decreased clearance rate of criminal cases.

**Q097 (General Comment):** The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on January 2023 and reflects the situation on that day. The data available is: 1) Incoming cases 2) Resolved cases 3) Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

**Q097 (2022):** In previous years, military court cases of the second instance have been erroneously registered under Other civil cases, so in this statistical year, the before mentioned cases have been registered as criminal cases. Similarly, this question has previously included cases that have come in for consideration in the second instance courts as first instance cases. Since the first instance cases previously had their own procedure, from which it was not easy to determine whether the case concerned criminal or civil case, they were therefore registered in the group "Other cases". In this statistical year, it has been possible to find out whether they belong to criminal or civil cases and thus have been taken into account to the statistics according to the breakdown. In addition, "Other cases" have included cases related to releasing a prisoner serving a life sentence, which are also no longer counted in this group, because these are processed as separate applications and are not civil or criminal matters.

**Q097 (2021):** The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 20.1.2022 and reflects the situation on that day. The data available is: 1) Incoming cases 2) Resolved cases 3) Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Other cases are: Cases dealt in Court of Appeal as first instance, military court cases, and cases related to releasing a prisoner serving a life sentence [pitkääaikaisvankien vapauttamismenettelyasiat].

**Q097 (2020):** The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2021 and reflects the situation on that day. The data available is: 1) Incoming cases 2) Resolved cases 3) Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

**Q097 (2019):** The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is: 1) Incoming cases 2) Resolved cases 3) Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts).

**Q097 (2018):** In 2017, the number of incoming cases has decreased for example due to some procedural changes and the courts have been able to resolve more pending cases. Accordingly, the number of pending cases at the beginning of 2018 has decreased.

**Q097 (2017):** In 2016, the number of incoming cases has decreased (for example due to some procedural changes) and the courts have been able to resolve more pending cases. Accordingly, the number of pending cases at the beginning of 2017 has decreased.

**Q097 (2016):** The number of incoming cases has decreased (for example due to some procedural changes) and the courts have been able to resolve more pending cases.

**Q097 (2013):** The category of civil and commercial non-litigious cases includes petitions for the 2012 exercise, divorce cases and petitions (without cases included in the other sub-categories) for the 2013 exercise. As for the category "other", according to the provided comments, in 2012 it encompasses cases, which Appeal Courts resolve as 1st instance, military justice cases and cases concerning prisoners. In 2013 it subsumes temporary procedural remedy cases, adjustment of the debts of a private individual - cases, restructuring of enterprises cases and bankruptcy cases and complaints.

**Q097 (2012):** The category of civil and commercial non-litigious cases includes petitions for the 2012 exercise, divorce cases and petitions (without cases included in the other sub-categories) for the 2013 exercise. As for the category "other", according to the provided comments, in 2012 it encompasses cases, which Appeal Courts resolve as 1st instance, military justice cases and cases concerning prisoners. In 2013 it subsumes temporary procedural remedy cases, adjustment of the debts of a private individual - cases, restructuring of enterprises cases and bankruptcy cases and complaints.

**Q098 (General Comment):** The cases are not statistically categorized in severe criminal cases and misdemeanour and / or minor cases in Finland.

**Q098 (2021):** The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 20.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

**Q098 (2020):** The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new case managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

**Q099 (2022):** Administrative law cases: In the Supreme Administrative Court, there has been exceptionally high number of cases concerning international protection since 2017 and now as the number of incoming cases of this case category has decreased, the numbers have settled. This also corresponds to the decrease in the number of resolved cases, because the synergistic benefits of large number of cases with common features have decreased and the extra personnel resources reserved for clearing the backlog have been given up. Other factors that could have influenced the development are the increased court fees starting from 2016, as well as the change in the role of the Supreme Administrative Court in 2020, when the leave to appeal system became the main rule in appeals (previously it was an exception that was widely applied to different groups of cases from the possibility of direct appeal).

**Q099 (2021):** The number of incoming administrative cases has been on the decline for the last years. Variations observed in respect of "civil and commercial litigious cases" are due to yearly fluctuations.

**Q099 (2020):** The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

**Q099 (2019):** The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

**Q099 (2018):** The total of incoming other than criminal cases decreased slightly in 2018 compared to 2017. The number of administrative law cases decreased slightly in 2018 but is still high. The general increase is mostly a consequence of the asylum crisis and the fact that cases from the administrative courts have reached the highest instance in 2017 and 2018.

**Q099 (2017):** The total of incoming other than criminal cases increased for the period 2016-2017. This increase is mostly due to the increase in the number of administrative law cases as a consequence of the asylum crisis and the fact that cases from the administrative courts have reached the highest instance in 2017 (which was not the case in 2016).

**Q099 (2016):** Courts were able to resolve more cases because the number of incoming cases decreased. The Supreme Administrative court got more resources and personnel due to the asylum crisis, but cases from the administrative courts have still not reached the highest instance.

**Q099 (2014):** In respect of the variations observed between 2012 and 2014 data, it is noteworthy that the statistics system has changed. Data is not received any more from the Central Statistical Office of Finland. Instead, the Ministry of Justice receives information directly from processing systems. This method of compilation of statistics does not quite support answering the question, as the information is run periodically and not daily. As a result, some discrepancies occur. As the system does not provide the numbers for 1 January 2014, it is necessary to calculate them separately from the correct data obtained on a later date.

**Q100 (2021):** Variations observed in respect of criminal cases are due to yearly fluctuations.

**Q100 (2020):** The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on

12.1.2021 and reflects the situation on that day. The data available is: 1) Incoming cases 2) Resolved cases 3) Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

## France

**Q091 (2022):** Source: Ministry of Justice/SG/SEM/SDSE, General Civil Registry; Council of State. Following a change in methodology, the "contentious civil (and commercial) cases" now include: general litigation cases before the judicial tribunal, local court and rural leases paritarian tribunal, family matters, sales-related cases, agricultural work accidents cases, proceedings related to distressed businesses (safeguarding, reorganization and judicial liquidation) before the judicial tribunal and commercial court, judge's orders matters, liberty and detention judge matters (detention of foreigners and involuntary hospitalization), as well as social division proceedings before the judicial tribunal; ordinary procedures before the labor relations council; contentious business at the commercial court; protection of adults' affairs as well as political electoral disputes.

Following the 2021 divorce reform in order to avoid any disruption in series continuity an estimate is used for 2022 (contentious civil cases and non-contentious civil cases).

Due to lack of data reporting on political electoral disputes are not included in beginning or end-of-year stocks for "contentious civil and commercial cases". These represent 0.6% of completed case load in 2022. Similarly due to absence of data reporting attempts at conciliation are not included in beginning or end-of-year stocks for "non-contentious civil cases". These represent 0.6% of completed case load in 2022. Due also to lack of data reporting suits (excluding consumer code) at the local court and salary garnishments are not included in beginning or end of year stock for other cases. These represent 8.% of completed caseloads in 20. (respectively 1.% and 6%).

The above explained lacks of data do not allow for complete horizontal coherence in the table.

**Q091 (2021):** Source SDSE  
Source Council of State

**Q091 (2020):** Comments on volumes.

Completed cases are down more than new cases, both civil/2019 and felonies/2018 (contravention are surprisingly up / 2018). The health crisis and containment may have played on TAs (completed cases) (reducing the ability of courts to process cases) but also on NAs (new cases) (fewer misdemeanors committed, fewer cases brought to court). Prior to this, a major lawyers' strike and a transport strike had mainly affected the TAs.

Commentary provided by the highest administrative Court concerning the administrative order: the measures derogating from the ordinary law of contentious administrative procedure adopted to respond to the situation arising from the health crisis caused by the Covid-19 epidemic were provided for by order no. 2020-305 of March 25, 2020, then by order no. 2020-1402 of November 18, 2020, and decree no. 2020-1406 of the same day. I - Concerning the rules relating to the organization or holding of hearings 1°) Use of audiovisual or any other means of electronic communication

The two orders of March 25 and November 18, 2020 provided for the possibility of using an audiovisual means of telecommunication for the holding of hearings or any other means of electronic communication.

When this device was used, it was used, in almost all the jurisdictions that had recourse to it, for less than 10% of the cases judged in collegiality during the same period.

The most common configuration used was that in which one or more members of the panel were at a distance and the president, the other members of the panel, and the parties and their counsel were in the courtroom (approximately 75% of the courts that used videoconferencing chose this configuration and 53% of them used it for less than 10% of the cases tried by the panel). Very few courts have used video-conferencing with remote parties. The reasons for which the courts have used video-conferencing are linked to the constraints linked to the health crisis, in particular the difficulties encountered by lawyers to travel, especially in overseas territories, and the isolation imposed on certain people (judges or lawyers) declared to be in contact or recognized as fragile.

As regards single judges, the courts have made a very measured application of the provisions allowing the use of an audiovisual means of telecommunication, since only 6 administrative courts out of 35 have indicated that they have used it. The administrative courts indicated that they had used videoconferencing, as a single judge, for the processing of emergency proceedings in matters concerning foreigners, particularly in cases where the foreigner was in administrative detention. Finally, 15 administrative courts indicated that they held summary proceedings by videoconference. For almost all of these courts, the summary proceedings judge was in the courtroom and the parties were at a distance, and less than 10% of summary proceedings cases were judged in this configuration. Travel difficulties were the main reasons why the courts of first instance held summary proceedings by videoconference. The texts applicable during the state of health emergency allowed the use of any means of electronic communication, other than videoconferencing, in case of impossibility to use it. Only a few TAs used this procedure and for less than 10% of the cases in the courts that used it.

Generally speaking, the courts have made a very measured application of the provisions of the orders allowing hearings to be held by videoconference and this use was justified by the constraints and difficulties linked to the health crisis. 2°) The provisions allowing to limit the number of persons attending the hearing were applied by a large number of courts and in a frequent manner. On the other hand, the provisions allowing the president of the court to decide that the hearing will be held without the presence of the public have been used very little. 3°) The dissemination of the public reports and conclusions has

**Q091 (2019):** Administrative law cases pending for more than 2 years: in contrast with previous cycle, 2019 data are expressed in net figures, excluding serial cases presenting the same legal issue for trial.

**Q091 (2018):** With regard to the reduction of the number of non-contentious cases, this corresponds both to the impossibility of including data relating to adults under protection in 2018, due to a technical problem, and to the abolition of the approval of over-indebtedness plans by the judge of the Court of First Instance, the proceedings before which are processed by the Over-indebtedness Commission, as from 1 January 2018. Act No. 2016-1547 of 18 November 2016 on the modernization of 21st century justice, known as the "Justice 21 Act" and the Act of 9 December 2016, abolished judicial approval of the measures recommended by the over-indebtedness commission. As a reminder, divorces by mutual consent no longer fall within the competence of the family court.

**Q091 (2016):** The important increase in the number of pending non-litigious cases is due to the increased number of requests for ending unions - 60% (especially in 2016) and the increased number of pending cases before execution judges within the TGI in respect of a third party (without significant increase in the number of incoming cases, but a regular increase, namely for the last two years in the number of cases under consideration).

**Q091 (2014):** In civil litigation, cases relating to the activity of the liberty and custody judge amount to 98 300 cases in 2014 and have increased by 6.8% compared to 2013. These cases have significantly increased in 2012 (+ 65.5%), due to the law No. 2011-803 of July 2011 on the rights and protection of persons under psychiatric care. The reform systematised the control of psychiatric hospitalisations without the consent of the liberty and custody judge.

**Q092 (2014):** In 2014, the category civil cases (and commercial) non-litigious are also included in non-litigious cases relating to enforcement.

**Q094 (2022):** Source: Ministry of Justice/SG/SEM/SDSE, Cassiopeia statistical file.

With regard to the total stock of criminal cases, it is not possible for us to provide this information as the data on the stock of police courts ('Minor Offences') is not available.

Furthermore, the line 'Total number' does not correspond to 1+2+3 but rather to 1+2. Indeed, in accordance with the request from CEPEJ, cases falling under the Investigating Judge have been classified under '3. Other Criminal Cases'. These are provided for indicative purposes only and should not be added to the other two categories so as to avoid duplication (which may fall within either minor or major offences depending on how each case proceeds).

**Q094 (2020):**

"Comments on volumes.

Closed cases are down more than incoming cases cases, both civil/2019 and felonies/2018 (contravention are surprisingly up / 2018).

The health crisis and containment may have played on TAs (completed cases) (reducing the ability of courts to process cases) but also on NAs (new cases) (fewer misdemeanors committed, fewer cases brought to court). Prior to this, a major lawyers' strike and transportation strike had mostly affected TAs.

**Q097 (2022):** Sources: Ministry of Justice/SG/SEM/SDSE, General Civil Directory; Council of State.

Following a change in methodology, "contentious civil (and commercial) cases" now include: general litigation cases before the court of appeal and civil cases from the special chamber for minors (educational assistance).

As a result of a change in methodology, "non-contentious civil cases" correspond to gracious matters before the courts of appeal, namely: divorces and separations by mutual consent, approvals of agreements regarding changes in matrimonial regimes, matters relating to civil status (declaratory judgment, rectification and annulment of a vital record entry and modification of gender designation), adoption requests (simple and full), successions (vacant or unclaimed succession, affixing seals and contestation related to seals), as well as matters concerning minor incapacity (initiation of guardianship proceedings, appeals against decisions made by guardianship authorities,

emancipation,

authorization for an act or appointment

of an ad hoc administrator within the framework

of legal administration,

control over an act under risky circumstances),

preventive procedures for companies facing difficulties

(conciliation procedure and ad hoc mandate),

preliminary conciliation attempts before judicial tribunals

and local courts,

amicable settlement procedures in agricultural matters,

real estate investment companies ('SCI')

and associations.

**Q097 (2021):** Source Council of State and SDSE

Administrative law cases: regarding the ageing of the stock, the output of the Administrative Courts of Appeal (CAA) fell sharply in 2020 (-10%) because of the COVID-19. When the situation returned to normal, the CAAs gave priority to foreigners' litigation, which accounts for almost 50% of their entries, and the stock therefore aged mechanically.

**Q097 (2020):** "The health crisis and containment may have played on TAs (completed cases) (by reducing the ability of courts to process cases) but also on NAs (new cases) (fewer offenses committed, fewer cases brought to trial). Commentary provided by the Conseil d'Etat: As a reminder, the measures derogating from the ordinary law of contentious administrative procedure adopted to respond to the situation arising from the health crisis caused by the Covid-19 epidemic were provided for by Ordinance no. 2020-305 of March 25, 2020, and then by Ordinance no. 2020-1402 of November 18, 2020, and Decree no. 2020-1406 of the same day. I - Concerning the rules relating to the organization or holding of hearings

1°) Use of audiovisual or any other means of electronic communication

The two orders of March 25 and November 18, 2020 provided for the possibility of using an audiovisual means of telecommunication for the holding of hearings or any other means of electronic communication.

When this device was used, it was used, in almost all the jurisdictions that had recourse to it, for less than 10% of the cases judged in collegiality during the same period.

The most common configuration used was that in which one or more members of the panel were at a distance and the president, the other members of the panel, and the parties and their counsel were in the courtroom (approximately 75% of the courts that used videoconferencing chose this configuration, and 53% of them used it for less than 10% of the cases heard by the panel). Very few courts have used video-conferencing with remote parties. The reasons for which the courts have used video-conferencing are linked to the constraints linked to the health crisis, in particular the difficulties encountered by lawyers to travel, especially in overseas territories, and the isolation imposed on certain people (judges or lawyers) declared to be in contact or recognized as fragile.

In the case of single-judge hearings, the courts have made a very measured application of the provisions allowing the use of an audiovisual means of telecommunication, since only 6 administrative courts out of 35 have indicated that they have used it. The administrative courts indicated that they had used videoconferencing, as a single judge, for the processing of emergency proceedings in matters concerning foreigners, particularly in cases where the foreigner was in administrative detention. Finally, 15 administrative courts indicated that they held summary proceedings by videoconference. For almost all of these courts, the summary proceedings judge was in the courtroom and the parties were at a distance, and less than 10% of summary proceedings cases were judged in this configuration. Travel difficulties were the main reasons why the courts of first instance held summary proceedings by videoconference. The texts applicable during the state of health emergency allowed the use of any means of electronic communication, other than videoconferencing, in case of impossibility to use it. Only a few TAs used this procedure and for less than 10% of the cases in the courts that used it.

Generally speaking, the courts have made a very measured application of the provisions of the orders allowing hearings to be held by videoconference and this use was justified by the constraints and difficulties linked to the health crisis. 2°) The provisions allowing to limit the number of persons attending the hearing were applied by a large number of courts and in a frequent manner. On the other hand, the provisions allowing the president of the court to decide that the hearing will be held without the presence of the public have been used very little. 3°) The dispensation of the public rapporteur's conclusions has been used very little by the courts. This dispensation was applied because of the vulnerable state of the public rapporteur or to limit the length of the hearings (in those cases, the dispensation was granted for cases that did not present any difficulty).

**Q099 (2014):** 2014: The statistics of the Court of Cassation are not based on the same information system as the ones of courts of first instance and appeal courts. If discontinued cases of the category non-litigious cases may be subject to an appeal, it is not possible to identify them, they are included in the figure given for civil litigious cases. Thus, the total figure is the one retained.

**Q100 (General Comment):** The total number of resolved cases corresponds to judgments of cassation, cassation without referral and dismissal of the appeal. The other judgments handed down by the criminal chamber of the Court of Cassation are not counted. It is not possible to distinguish the litigation of the Court of Cassation by type of offence. The item "serious criminal cases" includes all appeals before the Court of cassation. It should be noted that the appeals mainly concern crimes and offences. The share of minor criminal cases is residual. The data are taken from the annual activity report of the Court of Cassation. Priority questions of constitutionality are not taken into account.

**Q100 (2022):** The statistical system does not allow for distinguishing between appeals related to serious and minor offenses.

The caseload includes the enforcement litigation not accounted for in the 2020 and 2021 caseloads.

The category of "other criminal cases" encompasses requests for opinions, priority constitutional questions, and principal petitions.

Source: Court of Cassation.

**Q100 (2020):** The health crisis and the lockdown may have had an impact on TAs (completed cases) (by reducing the capacity of courts to process cases) but also on NAs (new cases) (fewer offenses committed, fewer cases brought to court). Prior to this, a major lawyers' strike and a transport strike had mainly influenced TAs.

## Germany

**Q091 (General Comment):** General information on the statistics used as sources for answering the questions in this section: Once per year, the Federal Statistical Office compiles and publishes the statistics of the civil, criminal, administrative, finance, social, family and labour courts. Nationwide uniform ordinances define the scope and rules of data collection for these statistics. The courts collect the data and submit it to the statistical offices of the Länder, who check and edit the data and send it to the Federal Statistical Office. In simplified terms, the ordinances provide two different kinds of data collection sheets: The "procedural surveys" that collect data on the specifics of the proceedings happening at a court and the "monthly surveys" that track the caseload of a court. With regard to the caseload count, the monthly surveys distinguish between "caseload of proceedings covered by the procedural surveys" and "other caseload". For the cases from the first category (proceedings covered by the procedural surveys), the monthly surveys collect the number of cases pending at the beginning and at the end of a month as well as the number of received and resolved cases. For the "other caseload", the monthly surveys only count the number of received cases.

2.1 General civil (and commercial) non-litigious cases: The figure represents the number of non-litigious enforcement cases. In the monthly survey for the statistics of the civil courts, these cases fall into the category of "other caseload". This is the reason why only the number of incoming cases is available.

2.2.1. Non litigious land registry cases: The figure represents the number of incoming requests with regard to entries, change of entries or deletion of entries in the land registry. This data is not part of the statistics of the civil courts but was taken from the statistics on the workload of the Local Courts in matters of non-contentious jurisdiction (according to the Act on Proceedings in Family Matters and in Matters of Non-contentious Jurisdiction - FamFG). The number of pending and resolved land registry cases is not collected within the framework of this statistic.

Pending cases older than 2 years from the date the case came to the first instance court:

With regard to the statistics of the civil, criminal, administrative, finance, social, family and labour courts, a statistical record of the day a case came to the court only exists for the cases covered by the procedural surveys. Courts submit the data from the procedural surveys to the statistical offices after the case has been concluded for the respective court and at the respective instance. This means that the duration of a proceeding is unknown for pending cases. The monthly surveys count the number of pending cases at the beginning and at the end of a month, but do not collect any information on the date the pending cases came to the court. The statistics compiled by the Federal Statistical Office include information on the percentage of cases that were resolved within certain time frames but no numbers on how many proceedings took longer than two years. The statistic on the workload of the Local Courts in matters of non-contentious jurisdiction does not collect any data regarding the date a case first came to court.

Horizontal inconsistencies in the table:

The inconsistencies with regard to the pending cases at the end of the year also occur in the statistics published by the Federal Statistical Office. The reason for this is, that courts submit count corrections for the monthly surveys at the end of the year.

**Q091 (2022):** "Non-litigious civil cases" represent non-litigious enforcement cases.

"Non-litigious business registry cases" represent - the number of registrations in the business registry (Handelsregister) at the end of the previous year

- the number of new registrations during the reference year
- the number of deleted registrations during the reference year
- the number of registrations at the end of the reference year

"Administrative law cases" include cases at the administrative, social and finance courts

"Other cases" include family cases at the local courts and cases at the labour courts (family matters are not assigned to the category civil cases, because they are subject to a different procedural law). Discrepancies in comparison with the 2020 cycle: There has been a general decrease in incoming and resolved litigious civil cases as well as non-litigious civil cases (enforcement cases). No specific reason could be identified for this development.

**Q091 (2021):** 2.2.2: data represents - the number of registrations in the business registry (Handelsregister) at the end of the previous year

- the number of new registrations during the reference year
- the number of deleted registrations during the reference year
- the number of registrations at the end of the reference year

"other cases" include: family and labour law cases

**Q091 (2020):** There is no special reason explaining the slight decrease in the number of incoming administrative law cases.

**Q091 (2019):** The horizontal consistency in the table is not ensured because the data are continuously checked.

**Q091 (2018):** The high number of administrative pending cases on January 1st and December 31st is a result from the numerous unresolved cases in 2017 due to the rise of asylum seekers since 2015.

Cases of guardianship law in 2018 are not included in the "other cases" category, because changeover of data collections by the Länder.

**Q091 (2017):** Source: Federal Statistical Office (DESTATIS)

No. 4 - Other cases: Cases of guardianship law in 2017 are not included, because changeover of data collections by the Länder.

**Q091 (2016):** Source: Federal Statistical Office (DESTATIS)

**Q091 (2015):** For civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office for 2015. As for the category "other", it refers to the most recent available data at the closing date of the CEPEJ data collection and encompasses information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. However, some of the Länder were unable to provide complete data regarding this category. Accordingly, the information for this category remains incomplete. The category "other" refers to: local court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

**Q091 (2014):** For civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office for 2014. As for the category "other", it refers to the most recent available data at the closing date of the CEPEJ data collection and encompasses information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. However, some of the Länder were unable to provide complete data regarding this category. Accordingly, the information for this category is incomplete and is not comparable. The category "other" includes: local court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

**Q091 (2013):** Two Länder did not provide data with regard to the number of other than criminal law cases, while one Land did not provide information about the number of non-litigious land registry cases. The information is incomplete and the following legal cases were not taken into account: Incoming cases - payment order procedure (civil courts: 4 751 355 cases; labour courts: 56 053 cases), insolvency cases (143 662), cases concerning the civil registry office, wills, estates, accommodations, agriculture, escrow, and public notice proceedings (1 469 273); Pending legal cases on 31 December 2013 - guardianship and curator cases (12 795); insolvency cases (303 654).

**Q091 (2012):** The data was not available for 1 Land and remained incomplete for 4 Länder.

**Q092 (2012):** In 2012, the value entered was calculated by deducting the contentious judgments from all sets of proceedings that were resolved before the Local and the Regional Court in civil cases (not including those passed on within the court). Those sets of proceedings that are resolved other than by contentious judgment were particularly resolved by default, acknowledgement or waiver judgments, settlements, withdrawal of the charge or of the motion, staying of the proceedings or non-pursuance and orders in accordance with section 91a of the Code of Civil Procedure.

**Q093 (2014):** For the 2013 and 2014 exercises, the category "other" includes: Local Court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

**Q093 (2013):** For the 2013 and 2014 exercises, the category "other" includes: Local Court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

**Q093 (2012):** In the ambit of the 2012 exercise the category "other" includes: family-court jurisdiction, labour courts (proceedings leading to a judgment or a decision) as well as guardianship and custodianship courts. The figures do not include 1 426 805 new legal matters related to payment proceedings before labour courts, registry office cases, inheritance cases, custody, agriculture, legal aid, deposit cases and public notice proceedings with regard to which resolution or the number of cases pending at the beginning and at the end of the year are not recorded. The figures also do not include 202 106 new legal cases related to insolvency proceedings with regard to which only resolution is recorded (292 821).

**Q094 (General Comment):** General information on the statistics used as sources for answering the questions in this section: see General Comment Q 91

The category "severe criminal cases" includes criminal proceedings in accordance with the Criminal Code and ancillary criminal laws. The category "misdemeanour and/or minor criminal cases" subsumes regulatory fine proceedings before criminal courts.

"Other cases" include:

- proceedings concerning suspension of execution of the remainder of a sentence of life imprisonment or concerning suspension of execution of placement in a psychiatric hospital or in preventive detention - determinate custodial sentences - proceedings under sections 109, 110, 138 of the Prison Act (Strafvollzugsgesetz, StVollzG) - proceedings under Part IV of the Act on International Legal Assistance in Criminal Matters (Gesetz über die internationale Rechtshilfe in Strafsachen, IRG) and section 71 (4) of Part II - supervision of conduct
- complaints about costs/fees - complaints against search/seizure orders - complaints in economic cases and tax cases
- complaints in matters concerning detention - cases in matters falling within the Regulatory Offences Act (Ordnungswidrigkeitengesetz, OWiG) registered in the complaints register - other complaints - subsequent or reserved preventive detention
- proceedings regarding the order of subsequent or reserved preventive detention - proceedings regarding the suspension of execution of a sentence where the court has reserved the order of preventive detention, in the cases covered by section 462a (2), third sentence, of the Code of Criminal Procedure (Strafprozessordnung, StPO)
- proceedings before the judicial service court
- proceedings regarding health professionals, tax consultants, agents in tax matters, patent lawyers or architects
- other disciplinary proceedings - proceedings regarding legal remedies in matters of enforcement of youth custody, youth detention and remand detention

Only the number of incoming cases is available for "other criminal cases", because with regard to data collection through the "monthly surveys" these cases fall into the category "other caseload" (see General Comment Q91)

Pending cases older than 2 years from the date the case came to the first instance court: see General Comment Q 91

Horizontal inconsistencies: See General Comment Q 91

**Q094 (2022):** "Severe criminal cases" include criminal proceedings according to the Criminal Code and ancillary criminal laws. The category "misdemeanour and/or minor criminal cases" includes regulatory fine proceedings before criminal courts.

"Other criminal cases" include: - proceedings at the penal execution chambers (concerning suspension of execution of the remainder of a sentence of life imprisonment or concerning suspension of execution of placement in a psychiatric hospital or in preventive detention, determinate custodial sentences, proceedings under sections 109, 110, 138 of the Prison Act (Strafvollzugsgesetz, StVollzG), proceedings under Part IV of the Act on International Legal Assistance in Criminal Matters (Gesetz über die internationale Rechtshilfe in Strafsachen, IRG) and section 71 (4) of Part II)

- proceedings regarding supervision of conduct
  - complaints about costs/fees - complaints against search/seizure orders - complaints in economic cases and tax cases
  - complaints in matters concerning detention - cases in matters falling within the Regulatory Offences Act (Ordnungswidrigkeitengesetz, OWiG) registered in the complaints register - other complaints - subsequent or reserved preventive detention
  - proceedings regarding the order of subsequent or reserved preventive detention - proceedings regarding the suspension of execution of a sentence where the court has reserved the order of preventive detention, in the cases covered by section 462a (2), third sentence, of the Code of Criminal Procedure (Strafprozessordnung, StPO)
  - proceedings before the judicial service court
  - proceedings regarding health professionals, tax consultants, agents in tax matters, patent lawyers or architects
  - other disciplinary proceedings - proceedings regarding legal remedies in matters of enforcement of youth custody, youth detention and remand detention
- With regard to "other criminal cases", only the number of incoming cases is recorded (exception: proceedings concerning supervision of conduct).

**Q094 (2021):** The category "misdemeanour and/or minor criminal cases" subsumes regulatory fine proceedings before criminal courts.

"Other criminal cases" include:

- proceedings at the penal execution chambers (concerning suspension of execution of the remainder of a sentence of life imprisonment or concerning suspension of execution of placement in a psychiatric hospital or in preventive detention, determinate custodial sentences, proceedings under sections 109, 110, 138 of the Prison Act (Strafvollzugsgesetz, StVollzG), proceedings under Part IV of the Act on International Legal Assistance in Criminal Matters (Gesetz über die internationale Rechtshilfe in Strafsachen, IRG) and section 71 (4) of Part II)
- proceedings regarding supervision of conduct
- complaints about costs/fees - complaints against search/seizure orders - complaints in economic cases and tax cases
- complaints in matters concerning detention - cases in matters falling within the Regulatory Offences Act (Ordnungswidrigkeitengesetz, OWiG) registered in the complaints register - other complaints - subsequent or reserved preventive detention
- proceedings regarding the order of subsequent or reserved preventive detention - proceedings regarding the suspension of execution of a sentence where the court has reserved the order of preventive detention, in the cases covered by section 462a (2), third sentence, of the Code of Criminal Procedure (Strafprozessordnung, StPO)
- proceedings before the judicial service court
- proceedings regarding health professionals, tax consultants, agents in tax matters, patent lawyers or architects
- other disciplinary proceedings - proceedings regarding legal remedies in matters of enforcement of youth custody, youth detention and remand detention

With regard to "other criminal cases", only the number of incoming cases is recorded (exception: proceedings concerning supervision of conduct).

**Q094 (2018):** As only the number of resolved "other cases" is available, these will not be included in the total.

**Q094 (2014):** The information provided in the frame of the 2014 evaluation refers to 2013 data (the 2014 data is not available).

**Q097 (2022):** Civil (and commercial) litigious cases include second instance civil cases at the regional courts and higher regional courts. There was a rise in pending cases (1. January and 31 December) compared to the 2020 cycle as well as a decrease in resolved cases. This is most likely a result of the flood of lawsuits brought against car manufacturers in connection with the "diesel emission scandal". For example, the higher regional court of Stuttgart, where a large car manufacturer has its main offices, has seen a rise in pending cases (1 January) of more than 100% compared to 2020. "Administrative law cases" include cases at the higher administrative courts and regional social courts.

"Other cases" include cases at the regional labour courts and second instance family matters at the higher regional courts.

**Q097 (2021):** "Other": family cases at Higher Regional Courts, appeal and complaint proceedings at Regional Labour Courts Pending civil and commercial litigious cases on 31 Dec: The discrepancy stems from a rise in pending cases at the Higher Regional Courts (approx. 33% compared to 2020). While the number of pending cases at the Higher Regional Courts has risen in all Länder, the discrepancy is especially high in Baden-Württemberg (rise of approx. 88%). The reason for this is most likely the flood of lawsuits brought against car manufacturers in connection with the "diesel emission scandal". The Higher Regional Court of Stuttgart, where a large manufacturer has its main offices, has seen a rise in pending cases of more than 100% compared to 2020.

**Q097 (2020):** family cases at Higher Regional Courts, appeal and complaint proceedings at Regional Labour Courts

**Q097 (2019):** The horizontal consistency in the table is not ensured because the data are continuously checked.

**Q097 (2015):** A substantial number of the Länder was unable to provide information, meaning that any amount cited would not be meaningful in substantive terms.

**Q097 (2014):** The 2014 data are the same as those that have been provided in 2013. No update was available.

**Q097 (2013):** For 2013, two Landers did not provide any information.

The category "other" includes proceedings on complaints on appeal in family cases at the Higher Regional Courts and appellate proceedings on fact and law and proceedings on complaints on appeal at the Regional Labour Courts. In addition, given a lack of complete data, a total of 164 272 new legal cases or proceedings on complaints on appeal (in custodianship, accommodation, insolvency, estate, and costs cases, along with other complaints on appeal) were not considered in the category "other".

Regarding the slight horizontal inconsistency for the category "administrative law cases", it can partly be explained by the federal State structure of Germany. Moreover, data regarding incoming administrative law cases also reflected the number of appeals against decisions to grant provisional legal protection in the higher administrative regional courts and in the higher social courts; and appeals in matters of legal aid and other proceedings. In comparison with the previous years, the 2013 data are more accurate. The same applies regarding resolved cases even though no data was available for the appeals in matters of legal aid and other proceedings.

With regard to the sub-category "civil and commercial litigious cases" and the meaningful increase of the number of resolved cases, it should be noticed that in the frame of the 2013 exercise, the indicated figure encompassed the number of resolved civil and commercial litigious and not-litigious cases. For this cycle, it was impossible to distinguish between these two sub-categories.

**Q097 (2012):** In the frame of the 2012 evaluation it was stressed that the values regarding questions 91, 94, 97, 98, 99, 100, 101, 102, 107, 108 corresponded to data of the year 2011.

**Q098 (2022):** "Severe criminal cases" include criminal proceedings according to the Criminal Code and ancillary criminal laws. The category "misdemeanour and/or minor criminal cases" includes regulatory fine proceedings before criminal courts.

"Other" includes complaints in regulatory fining proceedings at the Higher Regional Courts (according to Section 80 of the Act on Regulatory Offences), objections in regulatory fining proceedings according to the Competition Act. With regard to these cases, only the number of incoming cases is recorded. Discrepancies in comparison with the last cycle:

The decrease in resolved severe criminal cases can mostly be attributed to second instance cases at the regional courts. No special reason could be identified for this development.

The decrease in pending minor criminal cases on 1 January is caused by the fact, the number of pending cases on 1 January 2020 higher than usual. No specific reason could be identified for this deviation or for the deviation of "other than criminal cases".

**Q098 (2021):** "Other": complaints in regulatory fining proceedings at the Higher Regional Courts (according to Section 80 of the Act on Regulatory Offences), objections in regulatory fining proceedings according to the Competition Act

With regard to these cases, only the number of incoming cases is recorded. Pending minor criminal cases on 1 Jan: The number of incoming cases was lower in 2020 than in 2019 and the number of resolved cases higher, resulting in a lower number of pending cases at the end of 2020. A reason for this development could not be identified.

**Q098 (2020):** complaints in regulatory fining proceedings at the Higher Regional Courts (according to Section 80 of the Act on Regulatory Offences), objections in regulatory fining proceedings according to the Competition Act

**Q098 (2016):** The category "severe criminal cases" (line 2) includes criminal proceedings in accordance with the Criminal Code (Strafgesetzbuch, StGB) and ancillary criminal laws. The category "minor criminal cases" (line 3) includes regulatory fine proceedings before the criminal courts.

**Q098 (2014):** According to 2014 data, the category "severe criminal cases" included criminal proceedings in accordance with the Criminal Code and ancillary criminal laws. The category "misdemeanour and/or minor criminal cases" subsumed regulatory fine proceedings before criminal courts.

The information provided in the frame of the 2014 evaluation refers to 2013 data (the 2014 data is not available).

**Q098 (2012):** According to 2012 data, the category "severe criminal cases" included criminal proceedings in accordance with the Criminal Code and ancillary criminal laws. The category "misdemeanour and/or minor criminal cases" subsumed regulatory fine proceedings before criminal courts.

**Q099 (2022):** The annual statistic of the Federal Court of Justice does not differentiate between litigious and non-litigious cases. The case-flow of all litigious and non-litigious other than criminal cases (including family matters) at the Federal Court of Justice 2022 was as follows:

5275 cases pending on 1 Jan.; 6624 incoming cases; 6013 resolved cases; 5886 cases pending on 31 Dec.

The total of other than criminal law cases is the total of administrative law cases (no. 3), other cases (no. 4) and the cases at the Federal Court of Justice mentioned above.

Administrative law cases include cases at the Federal Administrative Court, Federal Social Court and Federal Finance Court Discrepancy of "other cases":

Other Cases represent labour law cases at the Federal Labour Court. The annual report of the Federal Labour Court does not provide an explanation for the general decrease in cases.

**Q099 (2021):** The statistics of the Federal Court of Justice do not differentiate between litigious and non-litigious cases. The data given under Nr. 1 represents all appeal cases in civil matters at the Federal Court of Justice (including family matters).

"Other Cases": Data represents labour law cases at the Federal Labour Court.

The annual report of the Federal Labour Court doesn't provide an explanation for the decrease in incoming cases and resolved cases. According to press reports, the decrease in incoming cases might be due to the good economic situation prior to the pandemic (less dismissal cases). The decrease in resolved cases might be due to a rising number of cases, in which an involvement of the European Court of Justice is necessary.

**Q099 (2015):** The data provided date from 2014. At present, no data are available for 2015.

It is not possible to distinguish between litigious civil cases, respectively commercial cases, and those that are non-litigious. Accordingly, number 1 of the answer to question 99 includes all appeals on points of law brought in the civil matters before the Federal Court of Justice (Senates for civil matters including family law matters). However, the number of proceedings dealt with and concluded by litigious rulings in 2014 amounts to 600.

**Q099 (2014):** The 2014 data are the same as those that have been provided in 2013. No update was available.

**Q099 (2013):** For 2013, two Landers did not provide any information. Data provided for the civil (and commercial) litigious cases include all appeals lodged encompassing litigious and non-litigious cases as well as family law cases.

**Q099 (2012):** In the frame of the 2012 evaluation it was stressed that the values regarding questions 91, 94, 97, 98, 99, 100, 101, 102, 107, 108 corresponded to data of the year 2011.

**Q100 (General Comment):** In alignment with the categorisation of cases in questions 94 and 98, "severe criminal cases" include criminal proceedings according to the Criminal Code and ancillary criminal laws. The category "misdemeanour and/or minor criminal cases" includes regulatory fine proceedings before criminal courts. In the annual statistic of the Federal Court of Justice, criminal proceedings according to criminal laws and regulatory fine proceedings are not reported separately.

**Q100 (2022):** The annual statistic of the Federal Court of Justice does not differentiate between "severe criminal cases" and "minor criminal cases". The total number of cases represents the number of appeals, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels of the Federal Court of Justice (including antitrust panel).

**Q100 (2021):** It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases represents the number of appeals, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).

There were more incoming cases in 2021 than 2020 and also more pending cases at the beginning of the year 2021 than 2020. As a result, the number of pending criminal cases on 31 December 2021 increased. No special reason could be identified for this development. The annual report of the Federal Court of Justice doesn't provide any information on this matter.

**Q100 (2020):** It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases means the number of appeals on points of law, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).

**Q100 (2018):** It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases means the number of appeals on points of law, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).

**Q100 (2016):** It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases means the number of appeals on points of law, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).

**Q100 (2014):** The 2014 data reflects an overview of the case workflow processed by the Senates for Criminal Matters of the Federal Court of Justice (statistics for the year 2014). For 2014, it was not possible to distinguish between categories of "severe criminal cases" and "minor criminal cases". The total number of criminal proceedings concerns appeals on points of law, including matters submitted to the Federal Court of Justice for its review of the principle of the matter and misdemeanour cases pursuant to the Act on Regulatory Offences. It also includes misdemeanours pursuant to the Act on Restraints of Competition that are pending before the Senates for Criminal Matters of the Federal Court of Justice (including the Senate for Anti-Trust Matters).

It is noteworthy that as there were only very few "minor criminal cases" in the previous cycles, the figures remain comparable for the last three evaluations.

## **Greece**

**Q091 (2022):** The data has been provided by the office for the collection and processing of judicial statistics.

It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting statistical data, such as the training of staff and the creation of an instructional manual guide with definitions and instructions. These measures were intended to help collecting more reliable data from both small and large courts and prosecution services and eliminate the standard errors in judicial statistics. As our methodology is developing, discrepancies in data can be observed. Besides, as regards "Other cases", it should be mentioned that some types of cases that were previously included in this category, are now distributed in the other case-categories in the table.

**Q091 (2021):** The data has been collected from the 63/63 First Instance courts of Greece.

**Q091 (2020):** The courts from March 2020 due to Covid 2019 operated under special conditions and dealt with priority mainly criminal cases, this is the reason for the differentiation of pending cases of civil and administrative nature. Civil cases are answered NA, because not all courts could provide the data.

**Q091 (2019):** The Council of State did not provide the Ministry of Justice with data regarding the Administrative law cases

**Q091 (2018):** -

**Q091 (2017):** The divergence between 31.12.2016 and 1.1.2017 regarding the Civil and Commercial cases (First column of this year's data) is mainly due to the recent operation of the NEW system (integrated Civil and Criminal Court case management system -OSDDY PP) in the Court of First Instance of Piraeus (1587 more cases on 1.1.2017 than those on 31.12.2016). In 2017, the number of "incoming" and "resolved" civil and commercial litigious cases at first instance courts increased due to the fact that in 2017 the function of the courts was not affected by the strike of lawyers, which took place in 2016. The horizontal consistency of the table is not ensured with regard to civil and commercial litigious cases because in 2017 some of the courts which do not yet have an automated system had to make minor adjustments in the statistical data provided to the MoJ. Concerning administrative law cases, any deviations from the 2016 figures, regarding the number of cases on 31.12.2016 and of 1.1.2017 (240650) are due to a number of factors that the General Commission of the State is trying to track down and gradually eliminate. A slight deviation has been noticed for the 2017 data of the administrative first instance courts of Athens and Piraeus, which is due to the data migration to a new information technology (IT) system called "Integrated Court Management System for the Administrative Justice (OSDDY-DD)". This deviation that has already been taken into account by the Central Organizational Committee for the due implementation of OSDDY-DD, is expected to lapse gradually within the next years. Furthermore, deviations have also emerged from the new way of collecting statistical data that the central Organizational Committee is trying to establish in order to ensure the uniform input of data by each court and from recent verifications of relevant numerical data that were subsequently sent by the courts. Finally, discrepancies are also due to errors of the information system itself, for which an effort is being made to identify and inform about, the contractor of the system. The deviation regarding the Number of resolved cases of 2017 from 2016 is due to the fact that in 2017 the function of the courts was not affected by the strike of the lawyers, which took place in 2016. Regarding the new integrated court management system, for administrative cases it has been implemented at all court levels since autumn 2016 and for civil and commercial cases and more especially in the Court of First Instance of Piraeus, the integrated court management system was gradually implemented from March 2016 resulting to an accurate calculation of pending cases of 1/1/2017.

**Q091 (2016):** Any deviations from the 2015 figures are due to a new way of collecting statistics. In fact, in 2016, a working group was set up to update and simplify the content of the statistical data requested by the judicial services of the country. The working group created tables followed by detailed instructions and training in relation to the requested information. According to the instructions given to the courts, some procedures they handle, in those which there is no participation of a judge, are not included in the data collected. In addition, in 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction in the number of cases (especially civil and commercial litigious cases).

The number 79.872 of resolved administrative law cases does not include joint cases, i.e. decisions that refer to more than one case. Furthermore, for the 2016 data of the administrative First Instance Courts of Athens and Piraeus a slight deviation has been noted which is due to the data migration to a new information technology (IT) system called "Integrated Court Management System for Administrative Justice (OSDDY-DD)". This deviation that has already been taken into account by the Central Organizational Committee for the due implementation of OSDDY – DD is expected to lapse gradually within the next years.

As concerns the category "civil and commercial litigious cases" - incoming and resolved - in 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction of numbers regarding the cases.

**Q091 (2014):** The significant increase in the number of pending cases on 1 January for the total of "other than criminal law cases" is due to lawyers' abstention in the years 2013 and 2014.

**Q091 (2012):** The system of collecting data does not comply with the CEPEJ methodology. Besides, recent law changes have altered the jurisdiction of courts, so the figures communicated for 2012 could not be compared with these provided for the previous evaluation cycles.

**Q094 (2022):** It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting statistical data. The content of the categories of criminal cases in the table are the same as for the previous evaluation cycle, but the services now monitor and record these cases better so discrepancies in data can be observed. This is especially the case for the Misdemeanour and / or minor criminal cases.

**Q094 (2021):** The courts' function in cooperation with the prosecution's offices. For example, postponed cases get to the prosecutor offices and then to the courts, in repeat 2-3 times, during the period (year). The definition of the pending cases included postponed cases or the cases the trial date has been setting out of the reference year or hasn't been determined during the year. The data has been collected from 63 out of 63 First instance courts in Greece.

**Q094 (2020):** To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which was completed in March 2019 for 41 courts of the State, an integrated information system is implemented, which includes individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data.

**Q094 (2018):** To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which was completed in March 2019 for 41 courts of the State, an integrated information system is implemented, which includes individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data.

**Q094 (2016):** Filling in the requested information regarding the criminal procedure is not possible at the moment. To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)-Phase A', which is expected to be completed by November 2018, an integrated information system will be implemented, which will include individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data. For 2016 the available data regarding the criminal procedure are as follows: Courts of First Instance: Criminal Cases Discussed: 473.457, Convictions/Acquittals: 206.311, Postponements: 262.433, Courts of Appeal: Criminal Cases Discussed: 59.643, Convictions/Acquittals: 24.995, Postponements: 33.601

**Q097 (2022):** The data has been provided by the office for the collection and processing of judicial statistics. It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting statistical data, such as the training of staff and the creation of an instructional manual guide with definitions and instructions. These measures were intended to help collecting more reliable data from both small and large courts and prosecution services and eliminate the standard errors in judicial statistics. As our methodology is developing, discrepancies in data can be observed. Besides, as regards "Other cases", it should be mentioned that some types of cases that were previously included in this category, are now distributed in the other case-categories in the table.

**Q097 (2021):** The data are from the Statistical Service of the Ministry of Justice. The data has been collected from the 19 out of 19 Courts of Appeal in Greece. Business registry cases do not belong anymore to the case of the courts, there is new department of a different Ministry.

**Q097 (2020):** Due to the pandemic, pending cases have accumulated in the courts of first instance, with the result that the courts of second instance have fewer cases to handle. The data given for questions 97 and 98 are collected from all second instance courts. However, many fields are answered NA as only few data were collected from the second instance Courts.

**Q097 (2019):** The Council of State did not provide the Ministry of Justice with data regarding the Administrative law cases

**Q097 (2017):** Concerning Civil and Commercial litigious cases but also administrative law cases, the numbers are different from those provided in the 2016 questionnaire due to the recent operation of the OSDDY-PP and OSDDY-DD Integrated Management Systems (please see the comments provided for Q91). Variations in the number of resolved cases are explained by the fact that in 2017 the function of the courts was not affected by the strike of the lawyers, which took place in 2016.

**Q097 (2016):** Any deviations from the 2015 figures are due to a new way of collecting statistics. In fact, in 2016, a working group was set up to update and simplify the content of the statistical data requested by the judicial services of the country. The working group created tables followed by detailed instructions and training in relation to the requested information. According to the instructions given to the courts, some procedures they handle, in those which there is no participation of a judge, are not included in the data collected. In addition, in 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction of numbers regarding the cases.

**Q097 (2012):** In the ambit of the 2012 exercise, it has been stressed that, as far as the statistical information provided by the courts is concerned (e.g. replies to questions 91 and 97), the system of collecting data could not comply with the CEPEJ methodology because it was planned having altogether different national needs in mind. Thus, schematically, a case brought into the Greek judicial system gets an initial reference number. However, in the process of being tried, it gets more than one reference number according to the laws. As a result the numbers of incoming and resolved cases do not match. Moreover, the Ministry of Justice, Transparency and Human Rights was not able to verify the accuracy of the replies, due to the lack of IT system. Besides, recent law changes have altered the jurisdiction of courts, so the figures communicated for 2012 could not be compared with these provided for the previous evaluation cycles.

**Q098 (2022):** The data has been provided by the office for the collection and processing of judicial statistics. It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting statistical data. The content of the categories of criminal cases in the table are the same as for the previous evaluation cycle, but the services now monitor and record these cases better so discrepancies in data can be observed. This is especially the case for the Misdemeanour and / or minor criminal cases.

**Q098 (2021):** The data are from the Statistical Service of the Ministry of Justice. The courts function in cooperation with the prosecutions offices. For example, postponed cases get to the prosecutor offices and then to the courts, in repeat 2-3 times, during the period (year). The definition of the pending cases included postponed cases or the cases for which the trial date has been setting out of the reference year or hasn't been determined during the year. The data has been collected from 19 out of 19 Courts of Appeal in Greece.

**Q098 (2020):** Due to the pandemic, pending cases have accumulated in the courts of first instance, with the result that the courts of second instance have fewer cases to handle.

The data given for questions 97 and 98 are collected from all second instance courts. However, many fields are answered NA as only few data were collected from the second instance Courts.

**Q098 (2018):** To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which was completed in March 2019 for 41 courts of the State, an integrated information system is implemented, which includes individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data.

**Q098 (2016):** Filling in the requested information regarding the criminal procedure is not possible at the moment. To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which is expected to be completed by November 2018, an integrated information system will be implemented, which will include individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data. For 2016 the available data regarding the criminal procedure are as follows: Courts of First Instance: Criminal Cases Discussed: 473.457, Convictions/Acquittals: 206.311, Postponements: 262.433, Courts of Appeal: Criminal Cases Discussed: 59.643, Convictions/Acquittals: 24.995, Postponements: 33.601

**Q099 (2022):** It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting statistical data, such as the training of staff and the creation of an instructional manual guide with definitions and instructions. These measures were intended to help collecting more reliable data from both small and large courts and prosecution services and eliminate the standard errors in judicial statistics. As our methodology is developing, discrepancies in data can be observed. Besides, as regards "Other cases", it should be mentioned that some types of cases that were previously included in this category, are now distributed in the other case-categories in the table.

**Q099 (2021):** The fact is that Supreme Court couldn't split the number of civil cases on each category provided in the table. The correct numbers for Categories 1+2 are the following: 2300 pending cases on 1 Jan. ref. year, 2 644 incoming cases, 2 262 resolved cases and 2 682 Pending cases on 31 Dec. ref. year.

**Q099 (2020):** No data were collected from Supreme Courts regarding incoming and resolved cases. Therefore, we were unable to provide the relevant evaluable data.

**Q099 (2018):** "the discrepancy between the number of the resolved cases of 2017 and of 2018 for administrative law cases is due to the combination of the following factors:

- in 2018 a number of difficult cases, that had to do with the system of social insurance, was about to be completed
- lawyers become familiar with the filters regarding the cassation and its strict prerequisites, which lead to less rejections of cases as inadmissible and subsequently to a higher number of cases being discussed as far as their real facts are concerned.
- for the abovementioned reason the fast procedure provided for by the relevant code of procedure is not so often implemented
- there are still vacant places of councillors of state, i.e. of the highest rank."

**Q099 (2017):** "Administrative law cases": the number of incoming cases decreased in mainly two sections of the Council of State (i.e. section b for tax issues (-239 cases) and section d for general issues (-692)).

**Q099 (2016):** Previous data concerning the total did not include administrative law cases.

**Q100 (2022):** It is worth highlighting that comparisons with previous data/cycles are not relevant. Indeed, since last year, measures have been taken to improve the system for collecting statistical data. The content of the categories of criminal cases in the table are the same as for the previous evaluation cycle, but the services now monitor and record these cases better so discrepancies in data can be observed. This is especially the case for the Misdemeanour and / or minor criminal cases.

**Q100 (2021):** There are no Other criminal cases at the level of the Supreme Court, these proceedings appear only at First instance and Appeals courts and prosecutors' offices, therefore category 3. should be NAP.

**Q100 (2020):** There were no data collected for this question.

**Q100 (2016):** With regard to the category "pending cases on 1 January 2016", the abnormality of the figures is due to the fact that the postponed cases because of the abstention of the lawyers in 2015 were not considered as pending to the backlog of the court.

In 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction of the number of resolved criminal law cases. Accordingly, the number of pending criminal law cases increased.

## Hungary

**Q091 (2021):** The number of incoming cases decreased in general and the situation was the same for administrative cases. As the number of incoming cases decreased and the courts were able to finish more cases than the number of the "new" cases, the backlog was reduced.

**Q091 (2020):** The pandemic situation had a huge effect on the case flow of the courts on every level of the court system. Special regulations were adopted by the legislator to promote videoconferencing and the courts were "closed between the 16th of March and the 31th of March (during this period no procedural events could be performed at the courts). Although the courts carried out their main activities, many cases were prolonged e.g. because the parties were not able to attend the hearings. Regarding administrative cases the re-organization of administrative jurisdiction also could have an effect on the case-flow.

**Q091 (2018):** One of the reasons of the decreasing number of incoming cases is the new civil procedural code coming into force on the 1st of January 2018. This resulted that many of those parties (especially those who were represented by lawyer) who had the chance to do so, filed their petition before the end of 2017 under the scope of the old and well-known procedural code. Regarding the discrepancy between 2017 and 2018 in the number of registry cases, it is due to the fact that for the first time in 2018, the number of non-litigious business registry cases is available.

**Q091 (2017):** Regarding the categories "2.1 general civil (and commercial) non-litigious cases", and "4. other cases" the number of pending cases on 1st of January differ from the closing number of the previous year because of data collection problems at certain regional courts.

In the category "registry cases" the higher number of incoming and resolved cases in 2016 was the result of a large number of involuntary dissolution cases. As the courts finished these cases and backlog cases from previous years the number of resolved cases in 2016 was higher than incoming cases in contrast with 2017.

**Q091 (2016):** In category "4. other cases" there is a difference between the number of pending cases on 31 December 2015 and the number of pending cases on 1 January 2016. The cause of this difference is the change of the IT system and the cleansing of the database.

2.1 General civil and commercial non-litigious cases: there was a change in the statistical methodology at the largest regional court that caused a difference in the figures pertaining to pending cases on 1 January 2016.

2.2.3. "other registry cases" include registration of civil societies.

The increase in the number of general civil (commercial) non litigious cases pending on 1 January 2016 is due to the change in the statistical methodology at the largest regional court that caused a difference in the figures.

The number of incoming "other registry cases" increased between 2014 and 2016 because of the increasing number of registry cases of civil societies. Accordingly, the number of resolved "other registry cases" increased also for the same period. With regard to the category "other non-litigious cases", the increased numbers characterizing the period 2014-2016 are the consequence of the increasing number of court mediation cases and non-litigious labour cases.

**Q091 (2015):** There is a difference between the number of pending cases on 31 December 2014 and the number of pending cases on 1 January 2015. The cause of this difference is the change of the calculation method at some regional courts.

The category "civil and commercial non-litigious cases" includes all cases that are not concluded through the rules of the civil procedure, but through a more or less simplified procedure. Thus, there is a very wide range of related categories set forth by the Civil Procedure Code or other acts. For example, a reference was made to: exclusion of a judge; preliminary verification; issuance of a restraining order and review of that; declaration of dead; declaration of missing; revision of the medical care of mentally disordered patients, deposit at the court; company registration procedures; registration of associations, foundations etc.

The category "other registry cases" include registration of civil societies.

The category "other non-litigious cases" include court mediation and non-litigious labour cases.

The category "other" include Insolvency cases and labour cases.

**Q091 (2014):** In 2014, in contrast with the 2013 evaluation, some registration cases as well as non-litigious enforcement cases were also included within the category "civil and commercial non-litigious cases". The item "other registry cases" includes registration of civil societies. The item "other non-litigious cases" includes court mediation and non-litigious labour cases. Before 2013, non-litigious administrative law cases were counted as "non-litigious civil and commercial cases". Since 2013, non-litigious and litigious administrative law cases are provided together. The increased number of investigations conducted by administrative authorities (e.g. tax authorities) resulted in an increased number of reviews against these decisions.

**Q091 (2013):** Till 2013, the data-provider for non-litigious enforcement cases was the Ministry of Justice. Since 2013, the data-collecting system of courts covers also this group of cases (general non-litigious cases). Before 2013, non-litigious administrative law cases were counted as "non-litigious civil and commercial cases". Since 2013, non-litigious and litigious administrative law cases are provided together. As for the subcategory "civil (and commercial) litigious cases", it encompasses different categories of cases for 2012 and 2013.

**Q093 (2013):** In 2010, 2012 and 2014 the category "other" encompasses insolvency registry cases and labour litigious cases. In 2012, additionally it includes misdemeanour cases. In 2013, the category subsumes insolvency cases and non-litigious labour cases.

**Q094 (General Comment):** Criminal offences are severe or minor crimes. Severe crimes (bűntett) are committed intentionally and are punishable with at least two years of imprisonment. All other criminal offences are minor crimes (vétség). Crimes that are not committed intentionally are always considered as minor crimes, despite the possible punishment.

Misdemeanours (szabálysértés) are not considered as criminal offences, but are unlawful acts that are endangering the society. The authorities intervening in their respect are the police, the district office, or the National Tax and Customs Office. Their decisions can be reviewed by the relevant section of the respective district court upon request of the accused person. Generally, the court rules without oral hearings, based upon the available documents. However, it can set a hearing if it finds it necessary or if the person charged by a misdemeanor requests it. The judgment is a final and enforceable decision. It is noteworthy that the Hungarian law identifies also the category of civil offences encompassing offences mainly against public administration. However some criminal offenses, such as property crimes involving objects of small value (under 50000 HUF), are classified in this category as well. Civil offences fall under the jurisdiction of various administrative agencies, local governments or traffic police, but not the courts.

Concerning the methodology of presentation of data, as according to the Hungarian Criminal Code not only severe crimes (bűntett), but also almost every minor crime (vétség) are punishable with imprisonment, both categories were included into the category "severe criminal cases". Thus misdemeanors (szabálysértés) were included into the category "minor criminal cases".

**Q094 (2022):** As misdemeanour cases have very strict deadlines, the number of resolved cases strongly correlates with the number of incoming cases. The decrease of incoming cases may be a result of the end of the pandemic as misdemeanours in connection with it "disappeared" as well.

**Q094 (2021):** New types of misdemeanours were introduced into the legal system in accordance with the measures taken against the COVID-19 pandemic. As the number of incoming cases increased the number of resolved cases increased as well.

**Q094 (2018):** Criminal offences are severe or minor crimes. Severe crimes are committed intentionally and are punishable with at least two years of imprisonment. All other criminal offences are minor crimes. Misdemeanours are not considered as criminal offences, but are unlawful acts that are endangering the society.

**Q094 (2014):** The increase in the number of incoming misdemeanour cases in 2012 and 2014 is the consequence of an amendment of the relevant legislation. This increase resulted also in higher numbers of resolved and pending cases.

**Q094 (2012):** For 2012, not all types of misdemeanour cases were included in the respective category. The increase in the number of incoming misdemeanour cases stems from legislative amendments. This increase resulted also in higher numbers of resolved and pending cases.

**Q097 (2021):** As of 1 April 2020, a significant change was introduced concerning the competence of the Administrative Chamber. As a result of this change, all legal remedies sought for in administrative disputes were decided by the Curia after 1 April 2020. Other cases: second instance labour cases and those second instance insolvency cases that are not included in category 2.1.

**Q097 (2020):** The pandemic situation had a huge effect on the case flow of the courts on every level of the court system. Special regulations were adopted by the legislator to promote videoconferencing and the courts were "closed between the 16th of March and the 31th of March (during this period no procedural events could be performed at the courts). Although the courts carried out their main activities, many cases were prolonged e.g. because the parties were not able to attend the hearings. Regarding administrative cases the re-organization of administrative jurisdiction also could have an effect on the case-flow.

**Q097 (2019):** No specific reason was pointed out in respect of decreases observed for the period 2018 - 2019 with regard to "4. other cases".

**Q097 (2017):** With regard to variations observed in the numbers of "registry cases" and "other registry cases", it is noteworthy that the content of these categories is the same for the last four cycles. As the legislation on civil societies was amended in 2014 this resulted in an increased number of registry cases, but since then the number of incoming cases is decreasing.

**Q097 (2016):** With regard to the pending cases, it is noteworthy specifying that the decrease of the "backlog" of the courts is an overall trend in the Hungarian judiciary.

As for the other variations observed within the frame of question 97, the "raw" figures in most of the categories can be considered as relatively low figures (e.g. some hundreds in the whole country), so even a not so huge increase or decrease result in a large percentage change.

**Q097 (2014):** In 2014, in contrast with the 2013 evaluation, some registration cases were also included within the category "civil and commercial non-litigious cases". The item "other registry cases" includes registration of civil societies. The item "other non-litigious cases" includes court mediation and non-litigious labour cases.

The category "other" encompasses insolvency cases and labour cases.

**Q098 (2021):** As it was mentioned at the first instance, the introduction of new types of misdemeanours resulted in a higher number of incoming cases. As a result of the increase of incoming cases the number of resolved cases was also higher.

**Q098 (2014):** The increases over the period 2010-2014 regarding misdemeanour and/or minor criminal cases, is due to the constant increase of incoming and resolved first instance cases starting from 2010, which led to the increase in the number of second instance incoming cases.

**Q099 (General Comment):** 2.2.2. Non-litigious company registration cases:

- legal remedy (appeal/judicial review) against a decision delivered in the course of a legality supervision procedure in respect of companies

- legal remedies (appeal/judicial review) in connection with the incorporation of companies and with the amendment of information entered in the company register

- deciding on legal remedies against decisions delivered in the course of the forced deletion procedure of companies

2.2.3. Other registry cases:

- legal remedies against a lower instance court decision delivered in the course of the incorporation of civil society organisations and other non-commercial organisations and in connection with the amendment of information entered in the court register of such organisations (primarily judicial review)

- deciding on legal remedies against court decisions delivered in the course of legality supervision and legality control procedures in respect of civil society organisations and other non-commercial organisations

- deciding on legal remedies against decisions delivered in the course of a procedure prior to the deletion of civil society organisations and other non-commercial organisations (for instance, decisions delivered in the course of a simplified deletion procedure, etc.)

2.3. Other non-litigious cases:

- designation of the competent court,

- appealed non-litigious labour law case,

- judicial review procedure in non-litigious labour law cases (the subject matter of which may be, for instance, the violation of trade union rights, the exercise of the right to strike, etc.),

- deciding on an appeal delivered in a labour law litigation.

**Q099 (2022):** The justification for the changes is related to the fact that in the year 2021, the Curia's remedial powers – due to a law amendment effective from April 1, 2020 – extended to the second instance adjudication of legal disputes in public administrative cases, thus the Curia became the general court of second instance with nationwide jurisdiction in administrative matters. In addition, the Curia continued to operate as a review court, if the conditions for review as specified in the Act on Administrative Procedures were fulfilled in the given case. By the autumn of 2021, the Curia faced the highest workload throughout the country.

To stop the above trend, which has become critical, the legislator adopted Act CXXXIV of 2021 in which the legislator provided for that the level of regional courts of appeal should be involved in the second instance adjudication of administrative case. As a result of the amendment, effective as of 1 March 2022, the levels of judicial forums hearing administrative cases have changed. High courts having an administrative chamber will be general courts of first instance in administrative matters. The Curia has original jurisdiction in exceptional cases set out by law. Regional courts of appeal having an administrative chamber will be general courts of second instance. Thus, the abovementioned Act has provided for that it falls within the responsibilities of regional courts of appeal to hear cases at the ordinary appeal stage, and it has also provided for exclusive geographical jurisdiction, which means that the Act has reinstated the second instance (appellate) jurisdiction of Budapest Capital Regional Court of Appeal in administrative matters.

The decrease in the number of the so-called general civil litigious and non-litigious cases can be traced back to several reasons. The most significant of these is that under the scope of the new Civil Procedure Code, which entered into force on January 1, 2018, the number of lawsuits is decreasing every year. Among other things, this is related to the fact that litigation diversion procedures, such as mediation, play a greater role than before in the settlement of private law disputes, and the value limit below which a property claim can be enforced with a payment order before a notary, i.e., in an out-of-court, non-litigation procedure, has tripled. As a result of all this, the timeliness indicators of the lower courts have improved continuously in recent years, which means that the number of protracted, more difficult decisions that can be challenged before the Curia as the highest court is decreasing.

The number of completions is basically determined by the volume of cases received, and although they show a decrease compared to the previous year, they significantly exceed the number of cases received, even though the number of judges handling such cases has decreased due to retirement.

We do not consider it justified to examine the reduction in the number of received and completed cases in so-called general civil (and commercial) non-litigious cases by itself. In relation to the case groups indicated for the so-called general civil (and commercial) non-litigious cases, the number of cases received and completed changes continuously every year, which make up a fraction of all cases received by the Curia. Comparing the 2022 data with the 2020 data, it can be seen that in the indicated case group, fewer such cases were received in 2020 than in the current year, so the number of civil non-litigious cases received in 2021 was different from the average. Taking into account the general rules of statistics, the highlighting of some data may result in inadequate conclusions.

Our data collection methodology has not changed from the previous cycles. It is therefore recommended that we keep the data as it is, otherwise, the data provided will not be comparable with those of previous years.

**Q099 (2021):** Other cases: insolvency cases, review procedures in labour cases, uniformity complaints  
Administrative Chamber

As of 1 April 2020, a significant change was introduced concerning the competence of the Administrative Chamber. As a result of this change, all legal remedies sought for in administrative disputes were decided by the Curia after 1 April 2020. This caused a significant increase in the caseload which was substantially higher than any number of incoming cases in the previous years, regarding the year 2021 as a whole. The change in the competences had an impact for the whole year 2021, due to which administrative legal remedy cases accounted for almost half of the total number of incoming cases at the Curia. Because of the change, the number of administrative judges was increased, and the increased judicial staff managed to resolve the surplus in a timely manner.

Civil Chamber

In comparison to 2020 data, the increase in the number of incoming civil and commercial litigious (line 1) can be explained by the fact that the incoming appeal (second instance) cases were higher by almost 40%. Regarding the appeal cases, the Curia experienced a temporary fallback in 2020; however, as the pandemic situation got better, lower courts could resolve more cases. So, the increase experienced in 2021 is explained by the low base value in 2020, as well as by the improvement in the COVID-19 pandemic situation.

The increase in the number of incoming general civil non-litigious cases (line 2.2.1) can be explained by the increase of cases initiated for the designation of the competent court to two and a half times. Despite the fact that the Civil Division of the Civil Chamber had resolved two times more cases than in the previous year, still there was a significant number of 'designation cases' remained pending.

2.1. Civil and commercial non-litigious cases referred to the Curia through an appeal or a petition for review, cases concerning recusal of judges, cases concerning the designation of the competent court, cases concerning an objection filed because of allegedly excessive duration of the proceedings.

2.2. This is an aggregate of the numbers reported under lines 2.2.1, 2.2.2, and 2.2.3.

2.2.2. Business registry cases referred to the Curia through an appeal or a petition for review.

2.2.3. Review proceedings concerning the registry of civil organizations and other non-profit organizations.

2.3. Review proceedings initiated in non-litigious labour cases, as well as non-litigious proceedings related to labour litigation, initiated for the designation of the competent court.

**Q099 (2020):** The pandemic situation had a huge effect on the case flow of the courts on every level of the court system. Special regulations were adopted by the legislator to promote videoconferencing and the courts were "closed between the 16th of March and the 31st of March (during this period no procedural events could be performed at the courts). Although the courts carried out their main activities, many cases were prolonged e.g. because the parties were not able to attend the hearings. Regarding administrative cases the re-organization of administrative jurisdiction also could have an effect on the case-flow.

**Q099 (2017):** The number of incoming cases decreased in most of the observed categories at the Supreme Court. This also resulted in a decrease in the number of resolved cases thus the number of pending cases increased.

**Q099 (2016):** Generally, the increase in the number of incoming cases at the Kúria (Hungarian Supreme Court) for 2016 is the result of the increasing use of extraordinary remedies by the parties. As the number of incoming cases increased, it resulted in an increase in the other categories as well.

**Q099 (2014):** In 2014, in contrast with the 2013 evaluation, some registration cases were also included within the category "civil and commercial non-litigious cases". The item "other registry cases" includes registration of civil societies. The item "other non-litigious cases" includes court mediation and non-litigious labour cases.

The category "other" encompasses insolvency cases and labour cases.

On the occasion of the 2014 exercise, it has been stressed that one of the main aims of the judicial reform of January 1, 2012 was that the President of the Supreme Court (Kúria) and the Supreme Court itself should focus more on the quality of judicial work. As the President of the Supreme Court was released from the burden of the central administration of the court system, the Kúria was able to reduce its backlog as well as to focus more on the consistency of the national jurisdiction.

**Q100 (2021):** In case of severe criminal cases, the fallback of the clearance rate can be explained on one hand by the pandemic situation; on the other hand, by the fact that in years 2020 and 2021, almost 50% of the judges of the Criminal Chamber retired. The vacant judicial positions were already filled. The increase in the number of motions for review can be explained by an increased activity of defendants and their defence counsels. Any objective reason for that increased activity cannot be established.

## Ireland

**Q091 (General Comment):** Historically, the number of pending civil cases has not been recorded in caseload data, as many cases initiated before the Irish courts either settle out of court or are not proceeded with by the plaintiff/applicant without there being any procedural requirement that the parties inform the court of either a settlement or an intention not to proceed with the case. Civil (and commercial) non-litigious cases include proceedings not resolved inter partes, such as undefended pecuniary claims, deed poll applications, probate (grants of representation), wardship proceedings, registrations of enduring powers of attorney, appointment of care representatives, unopposed personal and corporate insolvency proceedings, liquor licencing applications and marriage notice exemption applications.

Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Category "other" includes: Taxation of bills of costs, Appointment by Chief Justice of Commissioner for Oaths and Notaries Public, Persons called to the Bar; Declarations by newly appointed Judges; Extensions of service granted to District Court Judges/County Registrars; Certificates of Authentication issued.

**Q091 (2022):** The COVID pandemic had an effect on the courts' ability to deal with incoming business in 2020 especially, which explains the discrepancies with number of court cases in 2022.

**Q091 (2021):** As the Courts Service is not in a position to confirm to increase or decrease, we can note the following: There was a decrease in over 2,500 in personal injuries cases, recovery of debt cases overall decreased by about 1,500 cases and small claims decreased by 40 percent to 2,134, licensing was down 18 percent to 10,764. We can say it is very likely that ongoing covid restrictions contributed to this in licensing.

**Q091 (2020):** Reduction in non-litigious cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. This included domestic violence and criminal proceedings. All written judgments were delivered electronically and published on the Courts Service website, courts.ie.

Attendance at Court offices was by appointment only to ensure that footfall could be safely managed.

**Q091 (2017):** We are not in a position to offer further comment on the figure for resolved Civil (and commercial) litigious cases. We are not in a position to offer further comment on variations in the number of incoming and resolved "other" cases.

**Q091 (2016):** The decrease in the number of incoming and resolved "other cases" observed for the period 2014 - 2016 is due to a sharp reduction on taxations of legal costs since 2014.

**Q091 (2015):** Category "other" includes: Taxation of bills of costs.

**Q091 (2014):** A substantial number of cases which have been completed (through settlement or non-pursuit of the case by the plaintiff without notice to the court) are not recorded and counted as completed. Consequently, the clearance rate appearing from the case flow data provided is considered to understate significantly the actual case clearance rate.

**Q091 (2013):** The number of enforcement cases has been reported for the first time. The Courts Service has sought to create a category of cases under the Irish system that would be equivalent to non-litigious enforcement cases under other justice systems. The figure consists of the following steps leading to enforcement measures by court judgments and orders: Execution orders, Registered Judgments, Judgment Mortgage Certificates.

**Q092 (2014):** Starting 2014 the category: "Appointment of care representatives" was added to the "Civil (and commercial) non-litigious cases"

**Q093 (2014):** From 2014, the range of 'Other cases' has been revised to incorporate the category 'certificates of taxation of legal costs issued'. This can explain the fact that different elements have been included in the category 'other' in 2013 and 2014.

**Q094 (General Comment):** Except for the Supreme Court, criminal cases are generally counted by offence rather than case due to the various ICT systems used. This is due to data collection/ ICT systems that are in use by the Court Service.

Akin to question 91, the number of pending criminal law cases cannot be provided within the frame of question 94, provided that it is not recorded in caseload data.

Misdemeanour and/or minor criminal cases include all cases triable summarily (e.g. common assault, public order offences, burglary or theft in other than aggravated circumstances).

**Q094 (2022):** The COVID pandemic had an effect on the courts' ability to deal with incoming business in 2020 especially, which explains the discrepancies with number of resolved cases in 2022. Regarding severe criminal cases both the Circuit Criminal Courts and Central Criminal Courts showed an increase in resolved cases (offences) in 2022. Resolved cases are cases where orders are made. There may be more than one order made in some cases which is why the figure for resolved cases is higher than that for incoming cases.

**Q094 (2021):** Severe criminal cases are taken to mean indictable offences that are dealt with in the Circuit and High Court. Misdemeanour is taken to mean minor offences and indictable offences dealt with summarily in the District Court. The number of incoming cases will never equal the number of resolved cases. It is worth noting that the number of resolved cases in 2021 was a significant increase in the resolved cases from 2020. It is also worth noting that not all offences are proceeded with by the prosecutor, particularly minor offences.

Criminal cases are generally counted by offence rather than case due to the various ICT systems used

**Q094 (2020):** Misdemeanour and minor criminal cases are cases heard in the District Court. There were fewer such cases incoming and resolved because of Covid-19.

**Q094 (2018):** From 2016 extra judicial resources were applied by Senior Judiciary to the Courts dealing with some of the most serious criminal matters, which explains the increase of the number of resolved severe cases.

**Q094 (2016):** With regard to the number of resolved severe criminal cases, there is no particular reason explaining the observed discrepancy between 2014 and 2016, except for the fact that in 2014 figures were exceptionally high.

**Q094 (2014):** The previous data in respect of severe criminal cases were presented by reference to the defendant rather than to the offence(s) charged, whereas the data for 2014 reflects offence(s) charged, to align with the unit of measurement for minor criminal cases.

**Q094 (2012):** There were substantial reductions in the number of recorded traffic and public order offences between 2010 and 2012, and these categories of offences make up a significant proportion of the minor criminal cases that come before the courts.

**Q097 (General Comment):** Administrative law cases are included in the number of Civil (and commercial) litigious cases.

**Q097 (2020):** Reduced cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. This included domestic violence and criminal proceedings. All written judgments were delivered electronically and published on the Courts Service website, courts.ie.

Attendance at Court offices was by appointment only to ensure that footfall could be safely managed.

The Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate its work. Procedures were introduced to ensure that justice was administered in public. Judgments were delivered electronically. Waiting times for a hearing were improved, to a certain extent, by a net reduction in the numbers of new cases coming into the list from other jurisdictions. By year end, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.

**Q097 (2017):** The number of resolved civil and commercial litigious cases reflects a significant reduction in disposal of second instance appeals by comparison with that returned in the previous reporting cycle.

**Q097 (2016):** As concerns the number of resolved "Civil and commercial litigious cases", 2016 data reflects a significant increase in disposal of second instance appeals over that in the previous reporting cycle. Accordingly, the total of resolved cases is affected.

**Q098 (General Comment):** Except for the Supreme Court, criminal cases are generally counted by offence rather than case due to the various ICT systems used. This is due to data collection/ ICT systems that are in use by the Court Service.

**Q098 (2022):** In 2020, the year in which the covid pandemic had its greatest effect on court business, the number of criminal appeals particularly in minor criminal cases was much lower than usual.

**Q098 (2020):** Reduced misdemeanour/minor cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. This included domestic violence and criminal proceedings. All written judgments were delivered electronically and published on the Courts Service website, courts.ie. Attendance at Court offices was by appointment only to ensure that footfall could be safely managed.

The Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate its work. Procedures were introduced to ensure that justice was administered in public. Judgments were delivered electronically. Waiting times for a hearing were improved, to a certain extent, by a net reduction in the numbers of new cases coming into the list from other jurisdictions. By year end, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.

Offences are counted here rather than number of cases. There were 260 appeals in respect of 1,405 offences lodged in the Court of Appeal (Criminal) in 2020. The Court disposed of 367 appeals in respect of 1,719 offences.

**Q098 (2018):** With regard to the category "resolved cases", the figures reflect a continuing increase in disposal of second instance appeals disposed of over that in the previous reporting cycle (2016 data) due to the establishment of the Court of Appeal.

**Q098 (2016):** Data on resolved cases reflect a significant increase in disposal of second instance appeals due to the establishment of the Court of Appeal. Concerning the number of incoming severe criminal cases, 2016 data reflects the receipt by the Court of Appeal of a substantial number of pending appeals following its establishment.

**Q098 (2014):** The increase of 161% between 2012 and 2014 in the number of incoming cases and the increase of 101% in the number of resolved cases are due to a change in the unit of measurement for criminal cases from a defendant related unit to an offence related unit.

**Q099 (General Comment):** Administrative law cases are included in the number of Civil (and commercial) litigious cases.

**Q099 (2022):** There was an increase in 2022 over 2020.

**Q099 (2020):** Reduced cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. All written judgments were delivered electronically and published on the Courts Service website, courts.ie. Both the Supreme Court and Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate their continued work. Procedures were introduced to ensure that justice was administered in public. Both jurisdictions delivered their judgments electronically. Waiting times for a hearing in both Courts were improved, to a certain extent, by a net reduction in the numbers of new cases coming into their lists from other jurisdictions. By year end in both Courts, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.

**Q099 (2019):** There has been an overall increase in the appeals in civil matters to the Supreme Court from 2016 and it is expected at this stage that this trend will continue into next year.

**Q099 (2018):** There has been an overall increase in the appeals in civil matters to the Supreme Court from 2016 and it is expected at this stage that this trend will continue into 2019.

**Q099 (2017):** Since the establishment of the Court of Appeal in 2014, the number of pending cases at third instance has fallen. However, the number of incoming cases at third instance has slightly increased between 2016 (164) and 2017 (190).

**Q099 (2016):** The reduced number of incoming and resolved cases reflects the consequences of the establishment of the new Court of Appeal which came into operation in October 2014.

**Q099 (2015):** The reduction in the number of incoming cases to the Supreme Court substantially reflects the change in the jurisdiction of the Supreme Court from that of a second instance appeal court to an appeal court which is primarily third instance in nature

**Q099 (2014):** 2014: Variation: The significant increase in the number of resolved civil (and commercial) litigious cases between 2012 and 2014 reflects a significant exercise undertaken by the Supreme Court in reviewing its caseload in preparation for the establishment in 2014 of the new Court of Appeal (which has assumed the previous second instance jurisdiction of the Supreme Court), which resulted in the striking out or withdrawal of a significant number of appeals then pending before the Supreme Court.

**Q100 (2022):** The number of cases pending in the Supreme Court has decreased between 2020 and 2022.

**Q100 (2020):** Reduced cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. All written judgments were delivered electronically and published on the Courts Service website, courts.ie. Both the Supreme Court and Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate their continued work. Procedures were introduced to ensure that justice was administered in public. Both jurisdictions delivered their judgments electronically. Waiting times for a hearing in both Courts were improved, to a certain extent, by a net reduction in the numbers of new cases coming into their lists from other jurisdictions. By year end in both Courts, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.

**Q100 (2018):** The increase in incoming and resolved caseload reflects arrangements on foot of the establishment of the Court of Appeal and the new appellate jurisdiction of the Supreme Court.

**Q100 (2016):** The increase in incoming and resolved caseload reflects arrangements on foot of the establishment of the Court of Appeal and the new appellate jurisdiction of the Supreme Court.

## Italy

**Q091 (2022):** In the framework of the National Recovery and Resilience Plan (PNRR) Italy has undertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at <https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html>

**Q091 (2020):** In 2020 the case flow was highly affected by the COVID-19 pandemic and the consequent temporary shutdown of courts. This had an impact on both incoming and resolved cases, which fell quite considerably compared to 2019. However, the fall in the number of resolved cases was less drastic than that of incoming cases, resulting in a clearance rate (CR) higher than 100% and, hence, in a reduction in the number of the unresolved cases (i.e. the pending cases at the end of the period). The COVID-19 pandemic also had a strong impact on the disposition time (DT). The number of pending older than 2 years is not available because figures include the activity of both tribunals and justice of peace offices and for the latter this information is not available.

**Q091 (2019):** Number of "pending cases older than 2 years" is not available because it refers to first instance causes which also include the activity of Justice of peace offices, for which this information is not available.

**Q091 (2018):** Administrative cases. – It should be noted that fast-track simplified proceedings are available for dispute resolution in important areas of administrative law, such as public procurement ("rito appalti"). In 2018, the disposition time for such disputes was 237 days in the first instance and 274 days before the Consiglio di Stato (CDS). Furthermore, requests of interim measures are frequent in administrative law cases (about one third of the cases in first instance and half of the cases before the CDS). They provide fast legal protection of the claimant's rights, often anticipating the final judgment on the merits.

**Q091 (2015):** Figures at Q.91 (points 1 and 2) have been extracted from a new IT system called "Civil Data warehouse". This new system allows us to get in-depth information on single proceedings. Before the implementation of such data warehouse, statistics were based on aggregated variables that only partially could distinguish between litigious and non-litigious cases.

As far as figures at Q.91 (point 3), please consider that Administrative Justice doesn't fall under the umbrella of the Ministry of Justice as it is administered by the Council of State (Consiglio di Stato). However, figures at Q.91 (point 3) were not provided by the Council of State, they were rather taken from a public document available online at [https://www.giustizia-amministrativa.it/cdsintra/cdsintra/Notiziasingola/index.html?p=NSIGA\\_3826149](https://www.giustizia-amministrativa.it/cdsintra/cdsintra/Notiziasingola/index.html?p=NSIGA_3826149)

Since the administrative cases (Q.91 point 3) refers to a different administration, it wouldn't be reasonable to compare these numbers against the number of judges provided at Q.46.

Civil and commercial non-litigious cases include: Uncontested payment orders, uncontested divorces, technical appraisals, judicial interdiction and incapacitation, hereditament, etc.

**Q091 (2014):** In 2014, figures for the category "administrative law cases" have been submitted for the first time. The administrative justice doesn't fall under the umbrella of the Ministry of Justice as it is a completely different administration.

**Q091 (2013):** In 2013 and 2014, the Italian judicial system has gone through a historical geographic reorganization with the closing of almost 1000 courts. Thus, the statistics regarding flows of cases at the end of 2013 may show some anomalies that will be adjusted with the following data gathering. A constant reduction in the incoming civil and commercial litigious and non-litigious cases is observed from the end of 2009. The number of ADR cases is constantly increasing with a filter effect on the litigious incoming files.

**Q092 (General Comment):** Non-litigious cases include -amongst others- divorce and separation by mutual consent, change of divorce/separation conditions, judicial interdiction and incapacitation, hereditament, some family-related procedures, etc. Under this category also fall the following: order for payment procedures, proceedings for validation of eviction, precautionary proceedings and proprietary measures.

**Q093 (2014):** In the ambit of the 2014 exercise, the category "other" encompasses the number of enforcement cases.

**Q094 (2022):** In the framework of the National Recovery and Resilience Plan (PNRR) Italy has undertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at <https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html>

**Q094 (2021):** In Italy there is no formal definition of minor criminal cases. For the purposes of this exercise, are considered as minor criminal cases those proceedings dealt with by the Justice of Peace Offices.

**Q094 (2018):** The reduction in the number of resolved first instance criminal cases, and consequently the increase in the Disposition Time, between 2018 and 2016 comes from the decriminalization measures introduced in 2016 that led to a sharp increase in the number of case dismissals in that year. Indeed, the data for 2017 are:

Incoming: 1.311.900

Resolved: 1.293.054

Pending: 1.282.406

Disposition time: 362 days

These figures show a positive trend of the DT between 2014 and 2017, maintained in 2018.

**Q097 (General Comment):** - Non-litigious enforcement cases are not in the competence of the Courts of Appeal.

- With regard to the administrative cases (which number is provided only since 2014), the appeals are dealt with by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body ensuring the legality of public administration in Italy. The Council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law. Figures referring to the activity of the Council of State are inserted in the frame of question 99 and not question 97.

**Q097 (2022):** In the framework of the National Recovery and Resilience Plan (PNRR) Italy has undertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at

<https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html>

The main goal is a general reduction of the disposition time by 40% in the civil sector and 25% in the criminal sector by June 2026 (all three instances together) .

More specifically a reduction of the civil backlog by 65% in first instance courts and 55% in appeal courts by the end of 2024; by 90% in first instance courts and appeal courts by June 2026. As far as the civil cases, such targets relate exclusively to litigious cases.

A monitoring system is in place and a detailed dashboard is available at

<https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx>

**Q097 (2021):** There are no "other cases"

Figures in 2020 were hugely affected by the pandemic

**Q097 (2020):** In 2020 the case flow was highly affected by the COVID-19 pandemic and the consequent temporary shutdown of courts. This had an impact on both incoming and resolved cases, which fell quite considerably compared to 2019. However, the fall in the number of resolved cases was less drastic than that of incoming cases, resulting in a clearance rate (CR) higher than 100% and, hence, in a reduction in the number of the unresolved cases (i.e. the pending cases at the end of the period). The COVID-19 pandemic also had a strong impact on the disposition time (DT).

**Q097 (2018):** -

**Q097 (2017):** The number of pending "civil and commercial non-litigious cases", older than 2 years, decreased between 2016 and 2017. Generally speaking, pending cases older than 2 year have priority. However, in this specific case, the important reduction (in %) is mainly due to the fact that the numbers are small.

**Q097 (2016):** As regards the variations concerning the category "general civil (and commercial) non litigious cases", it should be noted that the Ministry of Justice has recently implemented a data warehouse system that can collect a huge number of data and events pertaining to millions of civil cases. The new DWGC (Data Warehouse for Civil Justice) is now fully operational and it represents a major improvement in terms of statistics and quality. Since 2015, data pertaining to Q.97 is extracted from the above Datawarehouse and it is to be considered more accurate than the figures provided in the past. It should be noted that in 2014 for many cases it was not possible to distinguish between litigious and non-litigious cases because they were coming together in a bundle. With the data warehouse it is possible to tell whether any given procedure has either litigious or non-litigious nature. Besides, when comparing pending cases on 31 Dec 2014 with pending cases on 1 Jan 2016, the variations are less important.

**Q097 (2015):** The appeal of administrative case is dealt by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body that ensures the legality of public administration in Italy. The council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law.

Figures referring to the activity of the Council of State (second instance of administrative justice) have been submitted to Q.99 rather than Q.97.

Figures on Q.97 (points 1 and 2) have been extracted from a new IT system called "Civil Data warehouse". This new system allows us to get in-depth information on single proceedings. Before the implementation of such data warehouse, statistics were based on aggregated variables that only partially could distinguish between litigious and non-litigious cases. All cases dealt by the Supreme Court of Cassation has always a litigious nature.

**Q098 (General Comment):** In Italy there is no formal definition of "minor criminal cases". For the purposes of this exercise are considered as minor criminal cases those proceedings dealt with by the Justice of Peace Offices which have been appealed (to Tribunal).

**Q098 (2022):** In the framework of the National Recovery and Resilience Plan (PNRR) Italy has undertaken a series of actions in order to reduce both disposition time and backlogs. More information about the reform can be found at <https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html> The main goal is a general reduction of the disposition time by 40% in the civil sector and 25% in the criminal sector by June 2026 (all three instances together) .

More specifically a reduction of the civil backlog by 65% in first instance courts and 55% in appeal courts by the end of 2024; by 90% in first instance courts and appeal courts by June 2026. As far as the civil cases, such targets relate exclusively to litigious cases.

A monitoring system is in place and a detailed dashboard is available at <https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx>

**Q098 (2021):** Figures in 2020 were hugely affected by the pandemic

**Q098 (2018):** -

**Q098 (2016):** With regard to second instance criminal cases, in 2014-2015 a new case management system was introduced. This has negatively affected the statistics for those two years. Statistics for 2016 are definitely more robust and consistent. Besides, when comparing pending cases on 31 Dec 2014 with pending cases on 1 Jan 2016, the variations are less important.

**Q099 (General Comment):** · With regard to the administrative cases (which number is provided only since 2014), the appeals are dealt with by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body ensuring the legality of public administration in Italy. The Council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law. Figures referring to the activity of the Council of State are inserted in the frame of question 99 and not question 97. · In Italy, non-litigious enforcement cases are not heard by the highest instance court. The latter only hears litigious enforcement cases.

**Q099 (2022):** Within the framework of the National Plan for Recovery and Resilience (PNRR), Italy has taken a number of measures to reduce both disposition times and backlogs. The main objective is an overall reduction of 40% in the civil sector and 25% in the criminal sector by June 2026 (all three instances together). More information on the reform is available at <https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html>. A monitoring system is also in place and a detailed dashboard is available at <https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx>.

**Q099 (2021):** "Other cases" represent residual cases, such as those concerning the competence or jurisdiction of the courts, or those concerning the correction of the so-called material errors committed by the Supreme Court.

**Q099 (2019):** Other cases represent residual cases, such as cases regarding the competence or jurisdiction of the courts, correction of material errors.

**Q099 (2018):** The increase of the incoming civil litigious cases is ascribed to proceedings related to immigration matters. There is no specific explanation for the increase of resolved administrative cases. Other cases represent residual cases, such as cases regarding the competence or jurisdiction of the courts, correction of material errors.

**Q099 (2017):** The category "other cases" at Q.99 (Supreme Court) represents residual cases such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc. The 25% variation (in terms of number of resolved cases) has no particular explanation. Please also note that this category do not exist at first and second instance.

**Q099 (2016):** "Other cases" represent residual cases such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc. In respect of this category, the numbers are small and the observed variations should be put into perspective.

**Q099 (2014):** In the frame of the 2014 exercise, it has been indicated that figures subsumed within the category "other" represent really residual cases (such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc.).

As to the increases observed in respect of the "total of other than criminal law cases" with regard to all the items (pending, incoming, resolved cases), it is noteworthy that in 2014 for the first time "administrative law cases" dealt with by the Council of State were considered. If looking only to "civil (and commercial) litigious cases", the differences are not that big. In general terms the Supreme Court of Cassation resolves fewer cases than incoming cases.

**Q099 (2012):** In the frame of the 2012 exercise, it has been specified that non-litigious enforcement cases are not heard by the highest instance court which hears only litigious enforcement cases. Before 2012, only litigious enforcement cases have been provided. For 2012, data related to litigious enforcement cases are the following: initially pending: 1090; incoming: 221; resolved: 413; finally pending: 898.

**Q100 (General Comment):** "Minor criminal cases" represent cases against justice of peace's decisions and cases against first and second instance judges' decisions, regarding minor offences that are punished with fines. "Other cases" may relate to procedures pending in first or second instances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); "Other cases" may also relate to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detention) of the imprisonment), or to the correction of material errors on Highest Court's sentences.

**Q100 (2022):** Within the framework of the National Plan for Recovery and Resilience (PNRR), Italy has taken a number of measures to reduce both disposition times and backlogs. The main objective is an overall reduction of 40% in the civil sector and 25% in the criminal sector by June 2026 (all three instances together). More information on the reform is available at <https://www.italiadomani.gov.it/content/sogei-ng/it/en/Interventi/riforme/riforme-orizzontali/riforma-della-giustizia.html>. A monitoring system is also in place and a detailed dashboard is available at <https://webstat.giustizia.it/SitePages/Monitoraggio%20PNRR.aspx>.

**Q100 (2021):** \* Most discrepancies between 2021 and 2021 data are due to the fact that in 2020 the activity of the courts was hugely affected by the pandemic.

\*\*Moreover, small number often lead to large percentage variations.

**Q100 (2020):** 2. "minor criminal cases" represent cases against justice of peace's decisions and cases against first and second instance judges' decisions, regarding minor offences that are punished with fines. 3. "Other cases" Can be related to procedures pending in first or second instances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); "Other cases" can be also related to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detention) of the imprisonment), or can be related to the correction of material errors on Highest Court's sentences.

**Q100 (2018):** Following the introduction of the new item "other" at Q100, the Supreme Court has revised and ameliorated their classification of cases. The misdemeanour category now includes not only the proceedings coming from the justice of peace offices but also all those minor offences which are punished with fines. "Other cases" (point 3) can be related to procedures pending in first or second instances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); "Other cases" can be also related to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detection) of the imprisonment), or related to the correction of material errors on Highest Court's sentences.

**Q100 (2016):** In respect of minor criminal cases, the numbers are small and the observed variations should be put into perspective.

## Latvia

**Q091 (General Comment):** Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible. In 2022 the increase in the balance of pending cases is related to changes in data collection, more specifically, from 2023 it is possible to determine the number of unfinished cases in non-litigious land registry cases.

In the spring of 2023, the Court Administration made improvements to the statistical data recording system, which prevented the collection of incomplete data related to the reorganization of the courts in previous periods. For these reasons, previously published data may differ and not be comparable.

Within the Court Information System, submissions received in the previous year but registered the next year are considered as incoming cases for the new year. "Non-litigious business registry cases" are not defined in the Civil Code and are not within the competence of courts in the first instance. "Non-litigious land registry cases" is one of the cases which are one of the functions of district (city) courts in accordance with the Land Register Law. Examination of the Land Register matters shall be under the jurisdiction of district (city) courts.

The category "civil and commercial non-litigious cases" encompasses: applications for securing claim prior to initiation of the matter in a court; applications for securing of evidence prior to initiation of the matter in a court; applications for execution of obligations through the court; undisputed compulsory execution of obligations; execution of obligations in accordance with warning procedures; voluntary sale of immovable property at auction through the court; submitting the subject-matter of an obligation for safekeeping in the court; applications for Commercial Court adjudication execution procedures; applications for arbitrary court decision compulsory execution; applications for property protection if there is no inheritance case; applications concerning execution of court adjudications.

**Q091 (2022):** In 2022 the increase in the balance of pending cases is related to changes in data collection, more specifically, from 2023 it is possible to determine the number of unfinished cases in non-litigious land registry cases.

The number of pending cases on Jan. and on 31.Dec. is higher than 2020 year due high number of pending non-litigious cases. Every year from 2019, significant increase in the number of non-litigious civil cases has been observed. Compared to the 2020, the number of incoming cases and resolved cases increased significantly. The increase of incoming cases and resolved cases of non-litigious civil cases affected increase of pending cases. In the end of 2021, amendments to the Civil Procedure Law entered into force, which made it easier to submit applications for enforcement of obligations according to warning procedures, these changes contributed to the increase in the number of non-litigious cases received. Civil Procedure Law determines that the judge shall, within seven days take a decision The short case review period contributes to that the number of received and completed cases is similar.

The number of pending cases (pending for more then 2 years) has decreased. The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending civil and administrative cases.

**Q091 (2021):** The number of pending cases on January differs from pending cases on December, 2020 registered data due the living Court information system database. The number of pending cases on Jan. is higher than previous year due high number of pending non-litigious cases. See comments from previous campaigns. Every year from 2019, a significant increase in the number of non-litigious civil cases has been observed. Compared to the previous period, the number of cases increases by 25%. According to the Civil Procedure Law, judge should examine application within seven days. The consideration time determined by the law also affects the amount of resolved cases, and accordingly indicates a direct connection with the amount of incoming cases.

Administrative cases: At the end of 2021, the number of cases received, (which were directed against the Covid-19 restrictive measure - mandatory vaccination), increased significantly, and it was not possible to resolve these cases until the end of the year

The number of pending cases (pending for more then 2 years) has decreased. The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending civil and administrative cases.

**Q091 (2020):** The number of resolved and incoming cases of general civil (commercial) non litigious cases are higher because there was significant increase on applications for the undisputed enforcements. Usually, cases on the undisputed enforcement are submitted electronically and solved in written procedure. The increment of such cases are probably closely connected with activities of creditors` intensity.

We cannot find the main reason why pending cases older than 2 years are resolved more than in previous years.

Representatives of courts point out the effect of Covid19 restrictions because many old cases were re-classified from oral to written procedure if it was possible and if parties of case agreed to that.

**Q091 (2019):** In 2018 there were several stages of court system reform. Several District courts were merged, and The Land Register offices appended to the District courts. Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved. The reform of the judiciary could also have affected the backlog of cases pending for more than 2 years, as it is undoubtedly that when transferring a backlog from one court to another, another judge needs extra time to go into the case file. However, the methodology for processing statistical data must also be taken into account, i.e. the functionality of the database, that the period of suspension of proceedings is taken into account during the proceedings and other external economic factors could have affected the number of long-standing civil cases. Taking into account also the peculiarities of litigation in our country, for example, that commercial cases are not separated from civil cases and that one civil case may contain several claims which are considered in one procedure, this generally means that the case takes longer to process.

**Q091 (2018):** In 2018 there were several stages of court system reform. Several District courts were merged, and The Land Register offices appended to the District courts. Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved.

**Q091 (2017):** Data updated after court reorganisation in 2018.

**Q091 (2016):** Data updated after court reorganisation in 2018.

**Q091 (2014):** Variations concerning administrative law cases over the period 2012-2014 are due to a change in the legislation. Namely, from July 2012, appealed administrative decisions of institutions are handed to District courts.

**Q091 (2013):** Amendments to the Civil Procedure Law introduce new long-pending forms for insolvency cases such as judicial protection proceedings, insolvency proceedings for individuals, etc., whose proportion increased. The insolvency process begins with a court ruling but the case cannot be closed until the end of the insolvency process. Besides, quick pending cases have been transferred from courts to the Land Registry offices from January 2012. The micro-enterprise development opportunities have increased the number of long-pending insolvency cases in the court. From July 2012, appealed administrative decisions of institutions are handed to District courts.

**Q091 (2012):** Decreases in the values are due to external (socio-economic) and internal (court system) factors: the gradual exit from the economic crisis; transfer of the majority of the non-litigious civil cases (land registry, business registry and non-litigious enforcement cases) from first instance courts to the competent Land Registry Department; transfer of the appealed decisions against administrative authorities from the Administrative court to the Regional courts of general jurisdiction (thus, only cases of the special jurisdiction of the administrative courts are counted).

**Q094 (General Comment):** Severe criminal cases include all criminal cases according to the Criminal law - it includes all cases where a harmful offense (act or failure to act) committed deliberately (intentionally) or through negligence, provided for the Criminal Law, and for the commission of which criminal punishment is set out shall be considered a criminal offense. Misdemeanor and / or minor criminal cases includes all administrative infringement cases according to the Law on Administrative liability about administrative offence of a person for which administrative liability is provided for in a law or binding regulations of local governments. Other criminal cases include execution of a sentence, cases on penal order of the prosecutor, cases on determination of compulsory measures of a medical nature. In 2022 the increase in the balance of pending cases is related to changes in data collection systems` audit, more specifically, for misdemeanour and / or minor criminal cases.

**Q094 (2022):** The decrease in the number of resolved cases is related to the drop in the number of cases received in the courts of first instance.

Decrease of pending cases on 1 Jan is related to the decrease of misdemeanour and / or minor criminal cases. In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming and resolved of misdemeanour and / or minor criminal cases significantly. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. This is the main reason for decrease of incoming misdemeanour and / or minor criminal cases.

In 2022 the increase in the number of pending cases at the end of the year is related to changes in data collection systems` audit, more specifically, for misdemeanour and / or minor criminal cases. Severe criminal cases, which are assessed according to the Latvian Criminal Law and Criminal Procedure Law, are decreasing each year. The tendency of the decrease in the number of criminal cases has been observed for a longer period of time. The reduction of severe criminal cases can be explained by changes in legislation. (In the summer of 2020, amendments to the Criminal Procedure Law entered into force, which stipulated that the case for minor violations of the criminal law is not referred for initiation of criminal proceedings (Section 373 An investigator with a consent of a prosecutor or a prosecutor may refuse to initiate criminal proceedings, if a misdemeanor has been committed), which affected the the total number of criminal law cases received in court. A decrease in the number of criminal cases received has been observed since 2019.

The number of pending cases (pending for more than 2 years) has significantly decreased. The decrease in cases is due to the lifting of restrictions, which were related to limiting the spread of Covid-19. The reduction of pending cases also is related to the court reform, increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases. Starting from 2022, data on "other criminal cases" are also collected and inserted in the table.

**Q094 (2021):** Pending cases: The number of pending cases in January differs from pending cases in December 2020 registered data due the living Court information system database

Severe criminal cases include all criminal cases according to the Criminal law - it includes all cases where a harmful offense (act or failure to act) committed deliberately (intentionally) or through negligence, provided for the Criminal Law, and for the commission of which criminal punishment is set out shall be considered a criminal offense. Misdemeanor and / or minor criminal cases includes all administrative infringement cases according to the Law on Administrative liability about administrative offence of a person for which administrative liability is provided for in a law or binding regulations of local governments.

Criminal cases, which are assessed according to the Latvian Criminal Law and Criminal Procedure Law, are decreasing. The reduction from 2020 was influenced by changes in legislation. However, the tendency of the decrease in the number of criminal cases has been observed for a longer period of time, and it cannot be explained by the activities of the courts, but by assumptions about the general development trends of society.

In the summer of 2020, amendments to the Criminal Procedure Law entered into force, which stipulated that the case for minor violations of the criminal law is not referred for initiation of criminal proceedings (Section 373 An investigator with a consent of a prosecutor or a prosecutor may refuse to initiate criminal proceedings, if a misdemeanor has been committed), which affected the the total number of criminal law cases received in court. A decrease in the number of criminal cases received has been observed since 2020.

In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming cases significantly. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. This is the main reason for decrease of incoming cases. The number of pending cases (pending for more than 2 years) has significantly decreased. The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases. In 2021, courts of first instance resolved more criminal cases than in previous periods, which is related to the court's ability to adapt to resolve cases in the restrictive conditions of the Covid-19.

Data of 2020 for minor criminal cases are revised for incoming and resolved cases: 5 755 incoming cases and 6 631 resolved cases.

**Q094 (2020):** Data on resolved severe criminal cases is decreased because of Covid-19 restrictions. We have already pointed out the limitations of court work: written procedure, prohibition of face-to-face meetings, cancellation of court hearings etc.

**Q094 (2018):** There may be some change in data due to court system reform.

**Q094 (2016):** Severe criminal cases - All sections of The Criminal Law  
Misdemeanor and / or minor criminal cases - All sections of Latvian Administrative Violations Code

**Q094 (2014):** According to 2014 data and pursuant to the Criminal Law, criminal offences are divided into criminal violations and crimes distinguished by their nature, degree of the harm and the threat to the interests of a person or the society. A criminal violation is an offence for which the law provides for a deprivation of liberty for a term exceeding fifteen days, but not exceeding three months (temporary deprivation of liberty), or a type of lesser punishment. Crimes are classified in the following way: less serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three months but not exceeding three years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term up to eight years); serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three years but not exceeding eight years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term exceeding eight years); especially serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding eight years or a life imprisonment).

**Q094 (2012):** According to 2012 data and pursuant to the Criminal Law, criminal offences are divided into criminal violations and crimes distinguished by their nature, degree of the harm and the threat to the interests of a person or the society. A criminal violation is an offence for which the law provides for a deprivation of liberty for a term exceeding fifteen days, but not exceeding three months (temporary deprivation of liberty), or a type of lesser punishment. Crimes are classified in the following way: less serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three months but not exceeding three years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term up to eight years); serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three years but not exceeding eight years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term exceeding eight years); especially serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding eight years or a life imprisonment).

**Q097 (General Comment):** Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible.

In accordance with the provisions related to data gathering, all information must be recorded in the Court Information System within 3 days. However, the Court Information System functionality for the statistical reports provides in the System recorded figures at the end of the year. Consequently, submissions received in the previous year but registered the next year are considered as incoming cases for the new year.

Justice statistics do not distinguish between “non-litigious enforcement cases” because such type of cases are not defined in the Civil Code. Accordingly, the reply in their respect is NAP. The “non-litigious land registry cases” are dealt with by the regional courts in second instance and they are within the competence of the first and second (appeal) instance.

**Q097 (2022):** Data on incoming, resolved non-litigious civil cases in appeal court decreased in 2022, but the changes cannot be explained.

It should be mentioned that the statistical system has been improved which affected the 2022 data. Moreover, 2020 and 2021 data have been updated according to the same methodology of presentation of data as for 2022 data. The number of pending cases (pending for more than 2 years) has significantly decreased. The decrease in cases is due to the lifting of restrictions, which were related to limiting the spread of Covid-19. The reduction of pending cases (pending more than 2 years) is related to a interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases.

**Q097 (2021):** Comparing to the previous period, the number of pending civil cases on 1 Jan is lower due the restriction measures of the Covid-19 spreading in 2019 and 2020. However indicator of pending administrative law cases on the beginning of year is lower than previous period due the high CR in 2020.

The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending cases.

**Q097 (2020):** Data on civil (commercial) litigious cases (number of resolved and incoming cases) is lower due to the Covid19 pandemic. On March 14 2020 there was the state of emergency that affected the work of courts. In order to mitigate potential risks of virus, oral proceedings that did not involve serious violations of rights were cancelled. This restriction directly affected the number of resolved cases. Also, there were restrictions on appearance of persons in the court, that affected the number of new claims or request - incoming cases. The first state of emergency lasted till June 2020. The second state of emergency started in November 2020.

Number on civil (commercial) non - litigious cases include the data like in the first instance. Mainly there are cases on undisputed enforcement. Usually, non-litigious cases are resolved in written (not oral) process, and during State of emergency oral processes were not allowed, but there were no restriction on written process. According to this the number of non-litigious cases are higher.

Number on incoming administrative cases are lower. It is connected with restrictions of state emergency situation when representatives from institutions could not check, revise, visit companies (individuals) in the face-to-face meetings.

**Q097 (2019):** Decrease of pending administrative cases is due to many resolved cases in previous period  
The number of Non-litigious civil cases is very low, that's why percentage isn't good qualifier

**Q097 (2018):** Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – pending. Data on court statistics are being calculated by automated systems and records on changes that affect data in database are not available. Any changes to the Court Information System can affect the data.

**Q097 (2017):** As regards the decrease from 2016 in administrative law cases pending on 1 Jan, it can be explained as there were much more resolved cases than incoming in previous cycle. As regards the decrease in the total of other than criminal pending cases, it can be explained as there was a change of pending civil law cases in second instance. This might be an issue due to reclassifying the starting moment of a court case. Also, much more resolved cases than incoming cases has decreased the amount of unresolved cases on 31 Dec.

**Q097 (2016):** The increase in pending civil cases is due to fewer resolved cases in 2015. Decrease in pending Administrative cases is due to more resolved cases in 2015.

**Q097 (2014):** In the frame of the 2013 and 2014 exercises it has been indicated that the category “other” includes the following types of cases from the Supreme Court : cases related to moral and physical damages; copyright related cases; family relationship; deprivation of citizenship; labour law cases; cases in respect of inheritance rights.

**Q097 (2013):** In the frame of the 2013 and 2014 exercises it has been indicated that the category “other” includes the following types of cases from the Supreme Court : cases related to moral and physical damages; copyright related cases; family relationship; deprivation of citizenship; labour law cases; cases in respect of inheritance rights.

**Q097 (2012):** The decreases observed in 2012 with regard to the totals in respect of the different items (pending, incoming and resolved cases) are the consequence of the evolutions noticed for each of the sub-categories in respect of the number of incoming cases. The decrease of the latter and the improvement of the judicial efficiency resulted in a decrease of the number of pending cases. The end of the economic crisis and the strengthening of the courts' capacity are general factors which have to be taken into account when analysing this positive trend.

As to the sub-category “civil and commercial litigious cases”, the increase of the number of pending cases on 1 January 2012 is due to the increase of the number of incoming cases in different categories of cases such as different types of bankruptcy cases which know a long processing time. The duration of these special types of bankruptcy cases cannot be shortened by improving the efficiency of the judiciary. The increase of the number of resolved cases can be explained by the improvement of the work capacity of courts.

As to the sub-category “civil and commercial non-litigious cases”, the decrease of the number of resolved cases and pending cases on 1 January 2012 and 31 December 2012 can be explained by the transfer of a part of the cases from the first instance courts to the Land Registry Department, following the legislative reform of 1 January 2012. The number of incoming cases has decreased essentially due to external (socio-economic) factors, namely the gradual exit from the economic crisis during 2010-2013.

As to the sub-category “non-litigious land registry cases”, the increase of the number of resolved cases between 2010 and 2012 can be explained by the courts work reviewing a large number of cases in the law limited time because of external factors causing an increase of the number of incoming cases before the entry into force of the new provisions of the Civil Procedure Law on 1 January 2012.

As to the sub-category “administrative law cases”, the decrease of the number of pending cases on 1 January 2012 can be explained by the courts work, namely the improvement of the judicial capacity and the decrease of the number of incoming cases due to external factors as public activity resubmission to the Administrative Court and internal factors. The decrease of the number of resolved cases can be explained by the limited capacity of courts work, the complexity of the cases, the parties' failure to appear for court hearings, etc. The decrease of the number of pending cases on 31 December can be explained by the improvement of the judicial capacity of courts and decrease of incoming cases due to external factors.

There are no cases in the sub-category “other”. All cases are distributed among the mentioned categories No.1, No.2 and No.6.

The decreases observed with regard to the totals in respect of the different items (pending, incoming, resolved cases) are the consequence of the evolutions noticed for each of the sub-categories in respect of the number of incoming cases. The decrease of the latter and the improvement of the judicial efficiency resulted in a decrease of the number of pending cases on 1 January and 31 December. The end of the economic crisis and the strengthening of the courts' capacity are general factors which have to be taken into account when analysing this positive trend.

As to the sub-category “civil and commercial non-litigious cases”, the increase of the number of resolved cases between 2012 and 2013 can be explained by the long pending backlog of complex cases before the courts of the second instance.

**Q098 (General Comment):** Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible. The figures reflect data of second instance courts and the Supreme Court Criminal chamber. The latter is the appellate body in respect of cases decided by regional courts acting as courts of first instance. Statistics related to the Supreme Court are mentioned only within the total, because till 2009 the statistics were compiled by a specially hired expert.

**Q098 (2022):** Decrease of incoming and resolved cases is mainly related to the impact of decrease of misdemeanour and / or minor criminal cases. In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming and resolved of misdemeanour and / or minor criminal cases significantly. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. As the number of cases in the courts of first instance decreases, the number of cases in the regional courts also decreases. This is the main reason for decrease of incoming and resolved misdemeanour and / or minor criminal cases. Of course, there is also a decrease in the number of serious criminal cases, which is related to the overall decrease in criminal cases in the courts of first instance. The number of pending cases on 31.Dec. has increased due to a limited capacity of the largest appeal court (Rīgas apgabaltiesa (The Riga Regional court)): the number of judges in the Board of criminal cases has decreased and some serious criminal cases were completed. The Riga Regional Court is the largest appeal court in Latvia. This court has the largest amount of work and the workload of the judge compared to other appeal courts. The number of pending cases (pending for more then 2 years) has significantly decreased. The decrease in cases is explained:

- due to the lifting of restrictions, which were related to limiting the spread of Covid-19;
- due to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases.

**Q098 (2021):** In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming cases significantly in the first instance courts. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. This is the main reason for decrease of incoming cases in the first instance courts and in appeal courts as well.

The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases.

**Q098 (2020):** In 2020 there was changes in Administrative Procedure Law, that might affect the amount of resolved cases. Furthermore, number of misdemeanour and / or minor cases are higher in the appeal courts because in last years the Constitutional court has declared several norms on administrative infringements are not incompatible with the Constitution of Latvia. This led to an increase of incoming administrative cases.

**Q098 (2018):** Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – pending. Data on court statistics are being calculated by automated systems and records on changes that affect data in database are not available. Any changes to the Court Information System can affect the data.

**Q098 (2014):** In 2014, the statistics of the Supreme Court Criminal Chamber were the following: pending cases on 01.01.2014: 139; incoming cases: 19; resolved cases: 73; pending cases on 31.12.2014: 0.

Due to a court reform, the Chamber of Criminal Cases of the Supreme Court has been liquidated as from 1 January 2015. All cases, which were not resolved on 31 December 2014, were transferred to regional courts.

**Q099 (2022):** Number of incoming cases have diminished in general, therefore all indicators have been affected. For small numbers of cases, the indicator shows an impact although in general there is none.

**Q099 (2021):** Total number of incoming administrative cases and civil cases has decreased significantly; taken measures to handle backlog of administrative cases has resulted in increased turnover, this has resulted in falling numbers of pending cases. To handle backlog of administrative cases, two additional posts of judges were created for the years 2021 and 2022. For some type of listed cases the total numbers are so small, that even 2-3 cases give discrepancy ratio of 100 % or even more.

**Q099 (2020):** There has been gradual decrease of incoming cases: civil cases 1336 (2018), 1164 (2019), 1127 (2020) and administrative cases 850 (2018), 844 (2019), 826 (2020). There has been increase of examined cases per judge of the Administrative chamber (+4) and there was additional judge from the Civil chamber allocated to deal with administrative cases (February-September 2019) and substitute judge working at the Supreme Court (September-December 2020). As result the clearance rate for administrative cases in 2019 was 113% and in 2020 was 114%.

The clearance rate for civil cases (Civil chamber) was 120% which is explained by decrease of incoming cases and high number of examined cases per judge (97 cases). Decrease of non-litigious land registry cases is explained, first, by decrease of total numbers of transaction, for example according to the statistics published by the State Cadastre, total number of transaction of land with buildings was 21619 in 2019 and 18616 in 2020. And, second, because majority of land registry cases of previous years concerned aspects of transformation of property rights (privatization and restitution) and economic activity before economic crises of 2008/2009 which are solved by now. Starting from 2019 the Supreme Court uses the same categories of cases as it is used in the first and second instance courts. Therefore previously used category „other cases” disappears.

**Q099 (2019):** Starting from 2019 the Supreme Court has changed system of classification of cases under different categories for civil cases. During this change we encountered problem of reclassification of cases registered during previous years. This reclassification had as objective to introduce the detailed classification used for first and second instance courts. Statistics for the reference year 2019 encompasses results from both categories. Since 2015 number of unresolved administrative cases increased. During year 2018 additional recourses were allocated to the Administrative department (chamber) of the Supreme Court, including additional judges. As the result, number of resolved cases in 2019 increased. For next coming two years there are two additional judges envisaged for the Administrative department.

Other non-litigious cases (2.3) are specific enforcement procedures which are regarded as uncontested for our civil procedure. These have been received via the specific procedure of a protest submitted by the Prosecutors General Office. The number became available as the result of introduction of the detailed classification regime.

**Q099 (2018):** Supreme Court does not rely only on data in the Court Information System, they keep separate sheet for statistics

**Q099 (2017):** Supreme court has provided data for questions 1 & 2. As regards the decrease of Civil (and commercial) litigious cases, there was a major performance raise in 2016. Also, the Supreme court has only recently begun to collect statistics on their work performance and thus there was and still are some NA answers for CEPEJ questionnaire

**Q099 (2016):** Supreme court had accumulated too many unresolved cases and 1/3 of those are older than 2 years so they have made some changes and achieved progress.

**Q099 (2015):** An explanation for the rather large difference in case count for general civil and commercial non-litigious cases are changes in civil proceedings - while in 2014 undisputed compulsory execution cases were also heard by Supreme Court, in 2015 it was tasked with hearing decisions from Land registry, sworn bailiffs and notaries only.

**Q099 (2012):** In 2012, the decrease of the total of cases before the higher instance courts correlates with the general decrease of the number of civil cases.

**Q100 (2022):** Several judges have retired and new judges have started to work at the Supreme Court. This has made an impact on the case flow. Year 2021 the case flow was slow. Year 2022 the number of resolved cases allowed to diminish the backlog.

**Q100 (2021):** Total number of pending cases has significantly increased. Measures to handle this problem have been adopted and are under implementation. There are amendments to the Criminal Procedure Law adopted (<https://likumi.lv/ta/id/336542-grozijumi-kriminalprocesa-likuma>), in force since 3.11.2022.) to transfer competence to review specific agreement process cases to the regional courts. Some internal case management arrangements have been put into action.

**Q100 (2020):** During last two years 3 out of 8 judges (after increase of number of judges – 9 judges) have retired. Some additional time was needed to replace them (competition and appointment). There was significant decrease of examined cases in 2020 (clearance rate was 102% in 2019 and 95% in 2020) and increase of received cases in 2019: 734 (2018), 764 (2019) and 686 (2020).

**Q100 (2018):** Supreme Court does not rely only on data in the Court Information System, they keep separate sheet for statistics

## Lithuania

**Q091 (2022):** 2.1. The duration of court hearings is influenced by the number of new cases received at the court and the number of working judges who hear these cases (judge workload), the type or type of the case and its complexity, the cases specified in the law when the hearing must be postponed (e.g. by a party to the proceedings disease etc.). It should be noted that in 2022, 705 judges worked in Lithuanian courts (of which 2 judges were appointed for 2 years), 786 judge positions, that is, 81 positions were not filled, which could lead to a larger balance of unexamined cases at the end of the year. It is noteworthy that in 2022 compared to 2021, the number of civil cases examined in district and district courts (first instance) increased by 1.7%.

3. A significant change in received and examined administrative cases compared to 2021 was due to an increase in the number of administrative cases due to the issuance of a court order, when waste system administrators, due to the increased number of debtors, go to court with requests for the local fee for the collection and management of municipal waste, debt recovery, as well as there has been a significant increase in asylum cases due to the illegal migration crisis in the country. For registry cases, the answer should be NA, the NAP was chosen for the calculation purposes: it is not possible to identify those cases among all other general civil cases.

Other cases: In 2022, compared to 2021, the number of cases of administrative offenses examined in district courts decreased significantly - by 65% compared to 2020. – decreased by as much as 76%. These changes were caused by changes to the Code of Administrative Offenses, which entered into force in 2021-07-01 and in which certain cases of administrative offenses were transferred from district courts to be examined by non-judicial institutions.

**Q091 (2021):** in 2021 July 1 the amendments to the Code of Administrative Misdemeanors entered into force, by which the cases of administrative offenses were transferred to be examined (except for the cases referred to in Article 614, paragraph 1, point 3) from district courts out of court to pre-trial institutions.

in 2021 in the district courts, there was a noticeable decrease in the number of civil cases examined by the first instance due to the bankruptcy of legal entities - 1,212 cases (1,624 in 2020, 2,787 in 2019). Compared to 2019, such cases decreased by more than half. It can be assumed that such a decrease in cases in this category could have been caused by the 2020 initiative adopted by the Council of Judges. The impact of the consequences of the novel coronavirus (COVID-19) on Lithuania entered into force Law no. XIII-2861, which was temporarily (until December 2020 31) the initiation of the insolvency process was suspended. It is noteworthy that out of 1212 civil cases on bankruptcy of legal entities, which examined in 2021, the majority - 860 cases - were received by 2020.

**Q091 (2020):** "Pending non-litigious cases": general decrease of number of cases and application of administrative means. The number of resolved civil and commercial litigious cases might have been affected by the pandemic as not all the categories of cases could have been adjudicated remotely. The number of administrative cases, as well as for civil and commercial litigious cases could have decreased because of the need for some period to adapt IT and video conference equipment in the situation emerged. The increase of number of pending administrative cases older than 2 years is related to decisions of courts in environmental law cases to stay proceedings pending a decision in a related case, which will be a preliminary ruling in another case: legal entities are challenging a decision requiring them to pay a tax on the pollution of packaging waste from which they were exempted because they had concluded a contract for the organization of waste management. As the documents proving the waste management issued by the licensed recycler were canceled, the documents certifying the waste management of other entities were canceled, which obliged the entities (which had a contract with the waste manager to organize packaging waste management) to pay this fee. The cases are suspended and pending a decision in a case challenging a decision declaring waste management documents issued to applicants invalid because it will have a preliminary ruling in these cases.

**Q091 (2019):** In 2019 there is a downward trend in the backlog of incoming and resolved cases. At the end of the year, the backlog of pending cases at the district, county (I instance) and county administrative courts amounted to 29 898 cases, at the end of 2018 – 33 233 cases; at the end 2017 - 36 419 cases (10 percent less than in 2018 and 18 percent less than in 2017). In 2019 the number of court order cases has decreased. This decrease may have been caused by the general decrease of debtors' natural persons in 2017–2019. According to the information provided by the credit bureau Creditinfo data, on 1st January 2020 there were 163 929 debtors (natural persons), on 1st January 2019 -177 055, on 1st January 2018 - 207 000 debtors (natural persons).

In 2018, the number of administrative cases received increased by 27.35% compared to 2017 (e.g. the number of cases concerning conditions and detention of prisoners, cases concerning the legal status of aliens have significantly increased) and this led to the growth in the number of pending cases at the end of 2018 (and to the beginning of the reference year 2019). In 2019, compared to 2018, the number of administrative cases heard in regional administrative courts increased by 14 percent. The change in the increase was due to a 34 percent increase compared to 2018 in the number of applications for a local fee for the collection and treatment of municipal waste. In 2019 a further upward trend in tax cases, enforcement cases and arrest cases, but there has been a significant reduction in civil liability for damage caused by illegal actions by public authorities.

In 2019, as compared to 2018, the number of administrative misconduct cases investigated in district courts increased by 16 percent. The change was due to a 64 percent increase in the number of cases of administrative offenses related to transport and road transport (370-463 Articles of the Code of Administrative Offenses). In 2019 significantly increased the number of cases of driving under the influence of drugs, psychotropic or other psychoactive substances without driving license. The number of cases related to trade, the financial system and statistics has also increased.

**Q091 (2018):** The decrease in general civil (and commercial) non-litigious cases (2.1.) may have been due to the overall decrease in debtors' natural persons in 2017 and 2018. The latter suggestion is based in data from the credit bureau Creditinfo (1 January, 2019 number of debtors natural persons was 177,055; 1 January - 207,000; 1 January, 2017 - 252 479). Credit Bureau "Creditinfo" stores information about credit risk for businesses and private entities, forms the credit history and establishes credit ratings.

The decrease in "other non-litigious cases" (2.3.): civil cases in process of enforcement (execution) in all district courts was due to changes in the law that came into effect in 2017 July 1, on the basis of which the bailiff, rather than the court of first instance, is responsible for dealing with the succession in enforcement proceedings.

The decrease in "other cases" (4): administrative offence cases (including cases in process of enforcement (execution) in 2017-2018 period was due to the entry into force of the Code of Administrative Offences on 1 January, 2017 which left the handling of a large proportion of administrative misconduct and the imposition of penalties to various public administration entities (out of court). This could also be due to the expanded list of circumstances in which the person is not prosecuted under the Code of Administrative Offences. The decrease in these cases was also influenced by the Amendments to the Criminal Code (on 1 January, 2017) that criminalized persons who drove a road vehicle or taught practical driving while under the influence of alcohol with more than 1.5 ounces of alcohol. In 2018, compared to 2017, the number of cases of administrative offences investigated in district courts decreased by 15.66%, compared to 2016, a decrease of 75.83%. Concerning administrative cases (3): in 2018, the number of cases received increased by 27.35% compared to 2017 (e.g. the number of cases concerning conditions and detention of prisoners, cases concerning the legal status of aliens have significantly increased) and this led to the growth in the number of pending cases at the end of the reference year.

**Q091 (2017):** Other non-litigious cases: civil cases in process of enforcement (execution).

Concerning the category "non-litigious cases" the number of pending cases on 1 January 2017 increased considerably compared to their number on 1 January 2016. The same increase characterises the categories "general civil and commercial non litigious cases" and "other non- litigious cases" (pending cases at the beginning of 2017). However, we can observe that at the end of 2017 the number of pending cases decreased concerning the category "non-litigious cases" and the sub-category "other non-litigious cases". Only with regard to "civil and commercial non-litigious cases" the number of pending cases at the end of 2017 increased. We can see that these variations are the result of variations in the number of incoming cases for the period 2015-2017. Besides, as the numbers are small, variations appear important. The main reason for increased pending cases is the increased number of incoming other non-litigious civil cases, i.e. enforcement cases, in 2017. More precisely, in 2017, the number of civil cases in enforcement procedure – requests to change the recoverer, increased. There is no particular reason, besides the fact that some companies were buying the recoverers' rights from other natural persons or legal entities.

As regards the category "other cases", it refers to cases of administrative offences and cases of administrative offences in process of enforcement (execution). Following the entry into force of a new Code of Administrative Offence (1 January 2017), the number of incoming cases of administrative offences decreased. The decrease in the number of incoming administrative law cases in 2017 is explained by the increased number of incoming administrative cases in previous years (due to the decisions of the Constitutional Court).

Registry cases cannot be identified among the overall number of general civil cases.

Administrative law cases: courts received less administrative cases; they are fighting backlogs from previous years.

**Q091 (2016):** Administrative law cases - courts are fighting backlogs. This led to the growth in the number of resolved cases and consequently to the decrease in the number of pending cases 31 December 2016.

Other non-litigious cases: civil cases in process of enforcement (execution). The increased number of these incoming cases also results in the increase of number of incoming non-litigious cases. The number of increased incoming other non-litigious cases (enforcement) may be due to the number of the resolved civil cases in 2015 (the number of pending cases on 1 January 2016 decreased). As regards registry cases: the answer should be NA, the NAP was chosen for the calculation purposes: it is not possible to identify those cases among all other general civil cases.

**Q091 (2015):** Civil and commercial non-litigious cases include court orders

Category "other" includes: Cases of administrative offences and cases of administrative offences in process of enforcement (execution).

**Q091 (2014):** The number of incoming administrative cases increased which affected the total. They were mostly cases on remuneration of public servants due to the decision of the Constitutional Court declaring the laws on the reduction of the remuneration of State servants and judges unconstitutional. For the same reason, the number of cases of administrative offence (in execution process) increased, which affected the category "other". As to the significant decrease in the number of general civil (and commercial) non-litigious cases (pending 31 Dec) in 2014, civil cases on deliver of judicial orders are resolved quickly and such residues are normal.

**Q092 (2014):** For 2013 and 2014, the category "civil and commercial non-litigious cases" includes court orders.

**Q092 (2013):** For 2013 and 2014, the category “civil and commercial non-litigious cases” includes court orders.

**Q093 (2013):** For 2010, this category encompasses only cases of administrative offence, while since 2012 it subsumes also the administrative offence cases in the process of execution.

**Q094 (2022):** Protracted proceedings in criminal cases are caused by the non-appearance of the parties to the proceedings or their representatives at the court session, the request of the parties to the proceedings to postpone the proceedings and the collection of additional evidence. It can be concluded that the protracted examination of criminal cases is also usually determined by circumstances depending on the actions of the participants in the process.

There were 57 criminal cases (64 in 2021, 72 in 2020), the examination of which lasted longer than 5 years. In the last few years, there has been a trend towards a decrease in the number of criminal cases examined at the first instance in first instance courts, the examination of which lasted longer than 5 years.

**Q094 (2018):** On 1 January 2017 Amendments to the Criminal Code of the Republic of Lithuania were adopted that provide for criminal liability for persons who drove a road vehicle or taught practical driving while under the influence of alcohol more than 1,5 promilles. This change of regulation had impact on the increase of the number of criminal cases starting from 2017 (in comparison with 2016).

**Q094 (2016):** The crime situation changed in Lithuania - the number of registered crimes by prosecution also decreased through these years, as a result less cases were received in courts. As regards 94.1 and 94.2: the answer should be NA, the NAP was chosen for the calculation purposes.

**Q094 (2012):** For 2012, in contrast with the 2010 data, criminal cases in the execution process were also taken into account. The increase in the number of incoming and resolved criminal cases is due to the entry into force of the Law on Domestic Violence in December 2011. It has made compulsory the criminal investigation in respect of every single incident of domestic violence. The Lithuanian economic situation as well as the national economic priorities also account for the increase.

**Q097 (General Comment):** In Lithuania, statistical data on case flow and their classification are made according to the specific regulations and are mainly based on the institutes of Civil, Criminal Codes and the codes of Civil and Criminal procedures, as well as the Code of Administrative Offences and the law on Administrative procedure. Therefore figures for some of the types of cases are unavailable because there is no such classification while making statistical reports. In respect of the variations that can be observed between figures provided for the different evaluation cycles and in the light of the above described peculiarity of the statistic system of Lithuania, it is noteworthy that cases the number of which is not available are included in other categories, i.e. “civil litigious”, “civil non-litigious”. Accordingly, the indicated totals are relevant. Second instance courts deal with some non-litigious cases, but their number is insignificant.

**Q097 (2022):** 3. in 2021 the duration of the review of decisions of administrative cases at the appellate instance was significantly shortened (more than 130 days compared to 2020), this fact led to a smaller balance of unexamined cases at the beginning of 2022. 3.1. The significant change in administrative cases received and examined by the second instance, compared to 2021, was caused by an increase in complaints regarding the decisions made by the court of first instance regarding debt collection of local fees for the collection and management of municipal waste, as well as complaints regarding asylum requests related to illegal migration to Lithuania.

3.2. The duration of the review of decisions by the appeal instance of administrative cases was significantly reduced (120 days compared to 2021 and 253 days compared to 2020), which led to a smaller balance of unexamined cases at the end of 2022. In 2022, compared to 2021, more complaints about decisions made in courts were examined, as well as accordingly, the ratio of examined complaints and amended or annulled decisions slightly increased.

**Q097 (2021):** Other cases include appeal cases regarding decisions announced by the district courts in cases of administrative offenses.

The number of incoming administrative cases were increased in 2021 due to 1214 cases received in Vilnius Regional Administrative Court and the Regional Administrative Court regarding asylum (due to decisions taken by the Migration Department under the Ministry of Internal Affairs not to consider the request for granting asylum or decisions not to grant asylum). Only 335 such cases were examined.

**Q097 (2020):** Second instance courts deal with some non-litigious cases, but their number is insignificant.

**Q097 (2019):** "Other": administrative offence cases (including cases in process of enforcement (execution)).

"Administrative cases" - the data provided encompasses cases dealt with by the Supreme Administrative Court of Lithuania; it is to notice that these figures include apellation cases (on decisions of the court of first Instance) well as cases that are heard in the Supreme Administrative Court of Lithuania as sole instance.

"Pending cases older than two years": the decrease is due to the fact that cases pending for more than 2 years have been resolved.

**Q097 (2018):** The decrease in "other cases" (4), i.e. administrative offence cases (including cases in process of enforcement (execution), at second instance courts (appeal) in 2017-2018 period was related to the decreased number of resolved administrative offence cases in the first instance courts (see Q091).

**Q097 (2017):** As regards the category "other cases" which refers to cases of administrative offences and cases of administrative offences in process of enforcement (execution), the observed decreases in their numbers (pending at the beginning of 2017, incoming, resolved, pending at the end of 2017) are the consequence of the entry into force of the new Code of Administrative Offences.

**Q097 (2016):** The changes in number of cases are mainly related to the increased number of resolved administrative cases in the first instance administrative courts in 2015 and 2016 (the courts were fighting backlogs from previous years) and the renewed processes that were suspended in the second instance court due to the application to the Constitutional Court of the Republic of Lithuania (related to salaries of civil servants, decreased pensions, etc.).

**Q097 (2014):** The increase between 2013 and 2014 in number of cases can be explained by the increase in the number of incoming administrative cases and cases of administrative offence. They were mostly cases on remuneration of public servants in 2013 due to the decision of the Constitutional Court of the Republic of Lithuania, which recognized the laws on the reduction of the remuneration of state servants and judges unconstitutional. This also had an effect on the significant increase of the category "other cases" since this situation resulted in the increase of the number of cases of administrative offence (in execution process).

**Q098 (General Comment):** There is no separate statistical data allowing to distinguish between severe/minor/and other criminal cases. Neither the court information system is applied to this, nor the courts have obligation to provide the information on the seriousness of the crime. In the court information system offenses are described through the indication of an article (it does not show the severeness of a crime by itself).

**Q099 (General Comment):** Other cases - jurisdictional cases and administrative offences cases.

**Q099 (2022):** The Supreme Court of Lithuania hears only those cassation requests that have been selected as meeting the requirements of the law by a special panel of three judges of the Civil Cases Division. Only those cases that are significant in terms of the interpretation and application of equal law come before this court. The judges of the Supreme Court of Lithuania can devote more time and attention to the most important cases in the state. In addition, this ensures the promptness of the court process.

in the Supreme Court of Lithuania in 2022 the duration of civil cases was shortened by 2 days, but the longer duration of cases was also influenced by the fact that not all the posts of judges were filled in this court.

**Q099 (2020):** In 2019, the Supreme Court of Lithuania examined fewer cases than were received, therefore the number of pending cases increased at the end of the year. However, it should be noted that in 2019 the Supreme Court of Lithuania has provided a number of important and particularly socially sensitive interpretations in both civil, criminal and administrative offences cases.

The decrease in the number of resolved civil and commercial litigious cases and accordingly the increase in the number for pending cases at the end of 2020 are due to the reduction in the number of judicial posts and the lengthy appointment by Parliament procedures for vacancies.

**Q099 (2019):** Other cases - jurisdictional cases and administrative offences cases.

Over the last five years, there has been an almost consistent decline in cases, including cassation appeals. In 2019, as compared to 2015, 20 percent less civil cassation appeals were filed and 17 percent fewer civil cassation cases were accepted, 43 percent fewer civil cassation cases were examined. In 2019, the Supreme Court of Lithuania examined fewer cases than were received, therefore the number of pending cases increased at the end of the year.

However, it should be noted that in 2019 the Supreme Court of Lithuania has provided a number of important and particularly socially sensitive interpretations in both civil, criminal and administrative offences cases.

**Q099 (2018):** The number of civil (and commercial) litigious cases (1.) of the cassation instance court (Supreme Court) pending at the end of the year decreased due to the general decrease of resolved cases at first instance. In 2018 the number of civil cases resolved at first instance courts decreased by 10.89% compared to 2017 and was 15.03 % lower than in 2016. This led to the slightly lower inflow and larger number of resolved cases, therefore, to the decreased number of pending cases at the end of the year.

**Q099 (2016):** NA was changed to NAP only for calculation purpose -situation hasn't changed.

**Q099 (2014):** In the frame of the 2014 exercise, it has been indicated that the Supreme Court of Lithuania received 1369 appeals (cassation) in criminal cases and 2794 appeals (cassation) in civil cases. 677 appeals in criminal cases and 2038 in civil cases were returned to the complainants.

2014: Different category of cases as in Q91, 97 and 99 exist in Lithuania, but they are all under the category 1. Civil (and commercial) litigious cases and it is not possible at this point to distinguish them from other cases.

The increase between 2013 and 2014 in number of cases can be explained by the increase in the number of incoming administrative cases and cases of administrative offence. They were mostly cases on remuneration of public servants in 2013 due to the decision of the Constitutional Court of the Republic of Lithuania, which recognized the laws on the reduction of the remuneration of state servants and judges unconstitutional. This also had an effect on the significant increase of the category "other cases" since this situation resulted in the increase of the number of cases of administrative offence (in execution process).

**Q100 (2022):** In the Supreme Court of Lithuania, not all the posts of judges were filled, which led to a longer duration of hearing cases.

**Q100 (2020):** general decrease of number of cases

**Q100 (2016):** The number of admitted cassation claims decreased in 2015 and in 2016 was almost the same as in 2015. Besides, the number of resolved cases increased in 2015 due to the aim to comply with the timeliness.

## Luxembourg

**Q091 (2022):** The decrease in the number of non-contentious cases brought before the courts can be attributed to a legislative change in 2021, which raised the jurisdictional threshold from €10,000 to €15,000 in favour of the justices of the peace (<https://legilux.public.lu/eli/etat/leg/loi/2021/07/15/a541/jo>). This change has resulted in a reduction in both new cases filed and cases concluded by the courts, as certain matters that would have traditionally been brought before the courts are now within the purview of justices of the peace since 2021.

**Q091 (2021):** The comment provided for 2020 data remains relevant in respect of cases pending at the end of 2020. It should be recalled that since the law of 27 July 2018 establishing the Judge for family law litigation (JAF), which came into force on 1.11. 2018, cases under the jurisdiction of the JAF are included in the category "civil litigious cases". These are cases previously dealt with by the civil chambers, but also cases dealt with by the youth and guardianship court (e.g., cases relating to parental responsibility with regard to a natural child or a child whose parents are divorced) or at the level of the justice of the peace (maintenance cases). Moreover, it can be observed that the number of incoming cases in these matters has increased since they are within the JAF competence. This is explained by the simplification of the access to justice for the litigant, who, in procedures other than divorce, can refer to the JAF by a simple letter; by the emergence of cases on the basis of new legal provisions (e.g., application by the minor); and by all the litigation generated by the new legal provision establishing the institution of generalized joint parental authority. Moreover, since proceedings before the JAF take much less time than before the reform introducing the JAF, motions to modify decisions taken are filed more quickly and thus increase the volume of cases.

**Q091 (2020):** "The law of July 27, 2018 establishing the family court judge (JAF) went into effect on 1.11. 2018. The cases currently under the jurisdiction of the JAF were included for the first time in the category "contentious civil cases" for the year 2020 which explains the observed increases in the number of new, completed and pending cases compared to the previous data. These are cases previously handled by the civil chambers, but also cases handled by the juvenile and guardianship court (e.g., parental responsibility cases involving a natural child or a child whose parents are divorced) or at the justice of the peace level (alimony cases). In addition, there has been an increase in the number of new cases in these areas since they were handled by the Family Court. This fact can be explained by the simplification of access to justice for the litigant, who, in procedures other than divorce, can refer to the JAF by a simple letter, by the emergence of cases based on new legal provisions (e.g. request emanating from the minor) and by all the litigation generated by the new legal provision of the institution of a generalized joint parental authority? Moreover, since proceedings before the JAF take much less time than proceedings before the introduction of the JAF law, motions to modify decisions are filed more quickly and thus increase the volume of cases.

Including JAF cases, for 2019, new cases would be 7,626 (up from 5,038) while completed cases were 6,714 (up from 5,098). Including JAF cases, for 2018, 91.1 new cases would be 5,248 (up from 4,807) while completed cases were 4,905 (up from 4,857).

Regarding pending cases in 2018, at the end of the years JAF cases constituted a plus of 453, which corresponds to 1,649 pending cases at the end of the 2018 period in item 91.1. instead of the 1,256 cases informed. Taking into account horizontal consistency, the changes in new and completed cases discussed above, imply that at the end of the 2019 period, pending cases (91.1) totaled 2,561 (instead of 1,196).

The figures for previous years remain unchanged.

"Other non-contentious cases" pending at year-end: Due to containment during the COVID-19 pandemic the number of public hearings was reduced to a minimum, allowing courts to prioritize work on cases not requiring such hearings. In addition, special crisis legislation allowed cases to be taken under advisement without a public hearing, with the agreement of the parties.

"

**Q091 (2018):** The pending cases at the date of 31/12/2017 had to be adapted, since there were 27 cases of vacation court, which were no longer pending at the end of the year. These 27 cases were withdrawn from the 1,341 pending cases indicated in the Scoreboard 2017 to reach 1,314 other pending non-litigious cases on 01/01/2018.

**Q091 (2016):** For question 91.1 the new data collection system revealed a higher number of pending cases, previously not considered by those in charge of counting.

For question 91.2.2, the new data collection system provides now information on other non-litigious cases, previously unavailable.

**Q091 (2015):** The figures given (with the exception of those for the administrative court) are those of the two district courts (Luxembourg and Diekirch).

The three justices of the peace totalized 78.273 national as well as 285 European payment orders.

**Q091 (2014):** The data (except for the Administrative Court) are those of the district courts. Uniform statistical data for both types of courts are not yet available. The three justices of peace ruled 75 411 national payment orders, 260 european payment orders and resolved a total of 6386 cases for a total of 65840 new cases. The implementation of statistics counters for civil and commercial cases resulted in variations. The applied criteria have been refined and give a more accurate image.

**Q091 (2013):** Data concerns (except for the Administrative Court) district courts. Uniform statistical data for both types of courts (district courts and justice of peace) are not yet available. The District Court of Diekirch rendered 580 decisions and registered 664 new cases. The three justices of peace ruled 69 859 payment orders and resolved a total of 5 682 cases for a total of 6 508 new cases. The increase in the number of civil (and commercial) non-litigious cases between 2010 and 2013 is partly explained by the establishment in 2011 of the judiciary statistics office. The increase in the number of administrative law cases mainly stems from the increase in the asylum-related disputes.

**Q091 (2012):** The data provided (except for the Administrative Court) are those of the district courts. Uniform statistical data for both types of courts (district courts and justice of peace) are not yet available. The District Court of Diekirch rendered 591 decisions and registered 688 new cases. The three justices of peace ruled 63 651 payment orders and resolved a total of 8041 cases for a total of 9310 new cases. The 2012 data encompasses civil and commercial cases of both district tribunals (Luxembourg and Diekirch).

**Q092 (2014):** 2014: Category 2 (civil (and commercial) non-litigious cases) refers to european payment orders issued by two district courts. They are handled almost immediately, so that there is no stock at the end of the period. That is why the pending cases as well as incoming cases are classified as NAP.

**Q092 (2013):** 2012: Category 2 (civil (and commercial) non-litigious cases) refers to payment orders issued by district courts. They are handled almost immediately, so that there is no stock at the end of the period.

**Q092 (2012):** 2012: Category 2 (civil (and commercial) non-litigious cases) refers to payment orders issued by district courts. They are handled almost immediately, so that there is no stock at the end of the period.

**Q094 (General Comment):** We have classified as minor offenses all cases concluded by penal order in the magistrate's court or district court. Serious offenses encompass all cases concluded by judgment at first instance in the magistrate's court, correctional court, or criminal court.

The figures listed under 'other cases' correspond to those cases which were referred to the investigating department.

Regarding the unavailability of pending and incoming cases: Due to the specific organization of workflow between courts and public prosecution service, files are only transferred to courts shortly before a hearing date, and if a case is not heard on that scheduled date, they are then returned to the public prosecution service until a new hearing date. Thus, there are - with few exceptions - no pending cases before criminal courts over an extended period, and the number of incoming cases is more or less equal to the number of resolved ones.

**Q094 (2022):** In our consideration of minor offences, we have included all cases concluded by penal order in the magistrate's court or district court. Serious offences encompass all cases concluded by judgment at first instance in the magistrate's, correctional or criminal court.

The figures recorded under 'other cases' correspond to those matters brought before the investigating office.

**Q094 (2018):** Nous avons compté parmi les infractions mineures, toutes les affaires terminées par ordonnance pénale au tribunal de police ou au tribunal d'arrondissement. Les infractions graves représentent toutes les affaires terminées par jugement en première instance au tribunal de police, correctionnel ou criminel.

L'augmentation du nombre d'affaires résolues est due au fait que, pour les cycles précédents, les ordonnances pénales des tribunaux d'arrondissement n'étaient pas prises en compte au niveau des infractions mineures, qui comptabilisaient seulement les ordonnances pénales de justices de paix. Ainsi, pour 2016, les infractions pénales mineures reportées s'élevaient à 6460 en comptant les ordonnances pénales des tribunaux d'arrondissement, au lieu de 5454. Le total des affaires terminées a considérablement augmenté puisqu'il nous est depuis la période d'évaluation 2018-2020 possible, par l'ajout de la catégorie « Autres affaires » dans le questionnaire, de renseigner les affaires dont le cabinet d'instruction a été saisi. Les chiffres inscrits dans « autres affaires » correspondent donc aux affaires dont a été saisi le cabinet d'instruction.

Regarding the unavailability of the number of pending cases and incoming cases, Due to the specific organization of the work flow between the courts and the public prosecutor's office, files are transferred to the courts only a short time before the hearing, and, if the case is not heard at the given date, are then returned to the public prosecutor's office until the new date of the hearing. Thus, there are – with very few exceptions - no cases pending before the penal courts over a longer period of time, and the number of incoming cases equals more or less the resolved cases. With regard to civil cases, we should be able to provide information on cases pending for more than two years for the next evaluation, once the new application has been used for a longer period of time.

**Q094 (2012):** Courts do not have a "stock" given that cases are handled at the public prosecutor's office and are only referred to the court shortly before the hearing. The only moment when cases are pending is between the hearing and the adoption of the decision. Usually, the judgment is made within 3 or 4 weeks after the hearing. Thus, data concerning incoming cases is identical to data concerning resolved cases.

**Q097 (2022):** Resolved administrative cases: While the number of cases concluded by the Administrative Court has increased by almost 34%, it transpires that this variation was primarily recorded between 2020 and 2021, and commented upon during the assessment of the 2021 data. Between 2021 and 2022, there is a decrease of -6% in the number of resolved cases.

Administrative pending cases on December 31st reference year: The decline in pending cases between 2020 and 2022 is indeed significant, dropping from 240 to 174 cases. However, when compared to the figures provided in `201`, outstanding administrative matters have only decreased by -4%, reducing from `182` to `174` pending matters before the Administrative Court."

**Q097 (2021):** The increased number of pending administrative law cases at the beginning of 2021 is a consequence of the increase in the number of pending administrative law cases at the end of 2020. In this respect, it should be recalled that the decrease of the Clearance rate for 2020 was mainly due to the increase in the number of appeals, in particular those relating to the general development plan of the City of Luxembourg. These cases had entered the first instance from January to March 2018, while the related judgments, consolidated by the administrative court, were delivered between May and September 2020. The related appeals, 51 in number, were filed between July and November 2020 and were still under investigation on 31 December 2020 due to the fixed time limit regime of investigation, but also due to the pandemic and the introduction of crisis legislation involving a suspension of appeal timeframes.

**Q097 (2020):**

Administrative cases - the decrease in the RC for 2020 is primarily due to the increase in the number of appeal motions, particularly those related to the City of Luxembourg's general development plan. These cases were entered in the first instance from January to March 2018, while the related judgments, consolidated by the Administrative Court, were issued between May and September 2020. The related appeals, numbering 51, were filed between July and November 2020 and were still being processed on December 31, 2020, due to the fixed timeframe regime (suspension from July 16 to September 15 - one month for the answer - one month for the reply - one month for the rejoinder), but also due to the pandemic and the implementation of crisis legislation involving a suspension of the appeal deadlines (until June 24, 2020). Thus, in addition to the increase in the number of requests for appeal, their investigation has been postponed, leading to an increase in the number of cases pending as of December 31, 2020. Throughout 2020, the Administrative Court was essentially up to date and disposed of cases as soon as they had been heard. The same is true in 2021.

**Q097 (2019):** Civil and commercial litigious cases pending at the beginning of the year have been restated in relation to those available at the time of the 2018-2020 evaluation cycle. The introduction of a new case management application at the Court of Appeal (JUCIV) has made it possible to identify a number of cases, still listed as pending, which were in fact completed.

**Q097 (2016):** It is a fact that the number of appeals before the Court decreased between 2014 and 2016. A key reason is that the number of appellate judgments rendered by the court has decreased significantly. The first reason is that the court had to evacuate a large number of cases as a matter of priority under the so-called accelerated procedure provided for by the law of 18 December 2015 on international protection. For the judicial year 2015/2016, 355 judgments out of a total of 938 judgments (excluding striking off) were rendered in accelerated proceedings and therefore not subject to appeal.

**Q097 (2013):** 2013: because of the international events that have increased the number of asylum seekers, the administrative courts that have jurisdiction in case of appeal against a refusal of refugee status, have, in particular in 2013 but already during the 3-4 previous years, known a significant increase in this very specific litigation both at first instance level and appeal level.

**Q098 (General Comment): 0**

**Q098 (2018):** Concernant le nombre d'affaire résolues en matière d'affaire pénales grave, une baisse des recours introduits à la Cour d'appel est observée depuis ces dernières années, en conséquence les affaires terminées ont diminué en 2018. Concernant le nombre d'affaire résolues en matière d'affaire pénales mineures, le chiffre plus élevé des affaires d'infractions mineures s'explique par le fait qu'en 2017, 59 recours avaient été introduits sur des jugements du tribunal de police et que ces recours ont été traités pour partie en 2018 seulement.

**Q099 (General Comment):** The pending files are now detailed between criminal and civil/commercial cases, thus this additional information is now available. There is no cassation possibility against the decisions of the administrative court of appeal.

**Q099 (2022):** In civil (and commercial) litigious cases, it should be noted that for incoming cases, although the relative variation of -29.63% in figures between 2020 and 2022 is significant compared to 2021, the number has decreased from 82 to 76 cases, representing an -11% change. The commentary provided last year remains relevant. The number of new cases depends on appeals filed over which the Court has no influence and is, among other factors, a function of decisions made at other levels. The legislation has not changed since the previous reference period.

Furthermore, the decrease in pending cases as of December 31st can be attributed to the decline in new cases in 2022 since the number of decisions made remained stable between 2020 and 2022.

**Q099 (2021):** The number of incoming cases depends on the appeals lodged which the Court has no influence on and which is, among other things, a function of the number of decisions taken at the level of the other instances. In 2020, the number of decisions taken by the different instances has decreased compared to the previous years, which can explain the decreased number of incoming cases before the Court of Cassation. The legislation has not changed since the previous reference period.

**Q099 (2019):** Pending cases at the beginning of the year have been restated in relation to those available at the time of the 2018-2020 evaluation cycle. The introduction of a new case management application at the Court of cassation (JUCIV) has made it possible to identify a number of cases, still listed as pending, which were in fact completed.

**Q099 (2018):** Comparing 2016 to 2018, the increase in pending cases at the end of the period is 40.73%. However, there was already a clear increase in cases pending at the end of the period between 2016 and 2017, which is largely explained by a larger number of new cases in 2017. Between 2017 and 2018, the variation in cases pending at the end of the period is + 5%, which does not seem excessive, especially taking into account the low numbers.

**Q099 (2017):** Q99: total and civil and commercial litigation cases: the slight increase in the number of incoming cases in 2017 and the relatively stable number of resolved cases explain the increase in the number of pending cases at the end of 2017 to 109 .

**Q099 (2014):** 2014: several categories are in NAP because the Court of Cassation has no jurisdiction over these categories.

**Q100 (General Comment):** The Court of cassation makes a legality control, independant from the severity of the infraction. The pending files are now detailed between criminal and civil/commercial cases, thus this additional information is now available.

**Q100 (2022):** Pending cases as of 1st January refer to the data provided in 2021. This decrease had been elucidated as follows: 'The decline in pending cases can be attributed to the reduction in new cases in 2020, as the number of decisions made remained stable between 2018 and 2020.

**Q100 (2020):** "The number of new cases depends on the appeals filed, on which the Court has no influence, and which is, among other things, a function of the number of decisions taken by the other courts. In 2020, the number of decisions taken by the different instances has decreased compared to the previous years, which can explain the decrease of new cases at the Court of Cassation. The legislation has not changed since the previous reference period.

The decrease in pending cases can be explained by the decrease in new cases in 2020, since the number of decisions taken remained stable between 2018 and 2020.

"

## Malta

**Q091 (2022):** In 2022, there was an overall increase in the caseload of the civil courts when compared to the previous evaluation, primarily because this data reflects the normal caseload following the Covid-19 pandemic. Having said this, during this year there was also one specific 1st instance court that has registered an exponential increase in the incoming caseload as a result of legislative issues. This increase in the incoming caseload was reflected in a modest increase in the resolved caseload, but had a more pronounced effect on the pending caseload.

The data provided for 'pending over 2 years' for the civil and commercial civil cases is missing the aged caseload of the Court of Notarial Acts.

**Q091 (2021):** As from 2021, the civil litigious category includes the data of the Civil Court (Asset Recovery Section) that was established in 2021. A spike in the incoming caseload of civil litigious cases has resulted in the courts not managing to resolve enough cases in order to retain the previous levels of efficiency, despite a marginal increase in the number of resolved cases.

**Q091 (2020):** The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.

**Q091 (2019):** Non litigious cases - incoming cases: The data was provided by the case management system of the Court Services Agency and shows an increase in the incoming caseload of these cases over that of the previous year.

Non litigious cases - pending cases at the end of the reference year: The relative high number of pending cases at the end of the year compared by the previous year is the result of the increase of incoming cases but a retention in the number of resolved cases. As a result, efficiency, as expressed as a higher number of pending cases, has suffered.

**Q091 (2018):** This evaluation cycle contains for the first time the efficiency data of the First Hall, Commercial Section which is a new court established in April 2018. Furthermore there was a registered increase in the incoming caseload particularly of the Court of Voluntary Jurisdiction and in cases of dissolution of marriage.

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.

**Q091 (2017):** Apart from the provision of the new non-litigious data captured by sub-section 2.1 above, this year we also introduced the data for another civil, litigious court, namely, the Court of Voluntary Jurisdiction, established by the Civil Courts (Establishment of Sections) Order 2003, in terms of Art 2 of the Code of Organisation and Civil Procedure (Chp 12 of the Laws of Malta). The Court has jurisdiction to deal with, amongst other matters, applications related to adoptions, interdictions and incapacitations, matters related to wills and to trusts, and to specific cases falling under the Foster Care Act (Chp 491 of the laws of Malta).

As concerns pending cases at the beginning of the year, information is not available for the newly provided data, namely data from the Court of Voluntary Jurisdiction and the non-litigious data. These data will be available for the next cycle. Increases observed between 2016 and 2017 in the total of incoming and resolved cases result from the fact that new data has been added (data on non-litigious cases and data from the Court of Voluntary Jurisdiction).

**Q091 (2016):** Horizontal consistency: This is a problem encountered also in previous evaluations. Unfortunately this inconsistency results from the way that the data is logged, and it is practically impossible to resolve it at present. Concerning the variations between cycles: In reality, in 2015 the Administrative Review Tribunal worked real hard to reduce the pending caseload and also resolved one set of interrelated cases that translated in the conclusion of about 150 separate cases. So 2015 was a very good year in which the efficiency parameters of the Tribunal spiked. In 2016, the rhythm by which cases were being resolved went back to 2014 figures, hence the apparent decrease in the number of resolved cases between 2015 and 2016. The reduction in the pending caseload is also the result of the additional 150 odd cases that were resolved in 2015 and that dramatically reduced the pending caseload for good, even if the resolved caseload of 2016 was less than that of 2015. Concerning Administrative cases: These figures reflect the pending balance at the beginning of 2016. Throughout 2015, the Tribunal resolved one batch of related cases that resulted in a drop in the number of pending cases and a spike in the number of resolved cases.

**Q091 (2014):** The category “civil litigious cases” covers family mediation cases and cases before the Court of revision of notarial acts and the Small Claims Tribunal. In 2014, another magistrate started presiding over the Administrative Review Tribunal thereby increasing the judicial complement by 2 members. This change resulted in an increase in the number of resolved cases. Following an internal exercise carried out by the Court Administration, cases that have been prescribed, have been cleaned from the system.

**Q091 (2013):** In 2013, the number of administrative law cases continued increasing. The Administrative Court was created in 2010. Over the time, the number of areas of competence of the Administrative Court has increased, which resulted in an increased caseload.

**Q091 (2012):** The Administrative Court was set up in late 2010, as a result of which, figure given in the previous report reflected the operation of the Court over a couple of months only. For 2012, the communicated figures reflect the operation of the Court over a twelve month period.

**Q094 (2022):** Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).

**Q094 (2020):** Given that the categorisation of criminal offences in Malta does not exactly match with the CEPEJ definitions provided, only the total of such cases is being reported. An actual breakdown of the figures quoted above is as follows:

- Pending 1st January 2020 = 11899 (79 cases Criminal Court and 11820 cases Court of Magistrates)
- Incoming cases 2020 = 11086 (17 cases Criminal Court and 11069 cases Court of Magistrates)
- Resolved cases 2020 = 7321 (5 cases Criminal Court and 7316 cases Court of Magistrates)
- Pending cases 31st December 2020 = 15883 (89 cases Criminal Court and 15794 cases Court of Magistrates)

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost. The decrease in the number of incoming and resolved cases, and the ensuing high number of pending cases, results from the restrictions imposed by the pandemic on the functioning of the Courts of Law.

**Q094 (2018):** Given that the categorisation of criminal offences in Malta does not exactly match with the CEPEJ definitions provided, only the total of such cases is being reported. An actual breakdown of the figures quoted above is as follows:

- Pending 1st January 2018 = 11887 (61 cases Criminal Court and 11826 cases Court of Magistrates)
- Incoming cases 2018 = 13817 (19 cases Criminal Court and 13,798 cases Court of Magistrates)
- Resolved cases 2018 = 14168 (8 cases Criminal Court and 14140 cases Court of Magistrates)
- Pending cases 31st December 2018 = 11589 (72 cases Criminal Court and 11517 cases Court of Magistrates)

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost. The decrease in the number of incoming and resolved cases is a phenomenon we are observing over the past years. The discrepancy between the data of 2016 and 2018 makes sense when one looks at the 2017 data that also shows a decrease in the caseloads from 2016. It is to be noted that the incoming caseload in 2018 is actually a bit higher than that of 2017.

**Q094 (2016):** In the Maltese legal system, all proceedings which appear before the Court of Magistrates may be punishable with a fine or imprisonment, bar a few contraventions which still appear before the Court of Magistrates and it is not possible to obtain data relating to these few cases. Nevertheless, all cases which lead to an imprisonment of ten years or more can only be heard by the Criminal Court whilst cases between 2 and 12 years may be heard by the Court of Magistrates only once the procedure before it as a Court of Criminal Inquiry is completed. Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).

This definition of severe/minor-misdemeanor cases is not fully consistent with the definition built by CEPEJ and therefore a comparison is not possible with the previous cycles. According to the Maltese categorization of cases, the number for severe criminal cases in 2016 is as follows: pending on the 1st Jan of Ref Year = 3054; Incoming cases = 827; Resolved cases = 1143; Pending cases on the 31st Dec of Ref Year = 2736. The number for minor/misdemeanor criminal cases is as follows: pending on the 1st Jan of Ref Year = 10571; Incoming cases = 15887; Resolved cases = 15682; Pending cases on the 31st Dec of Ref Year = 10805.

**Q094 (2013):** The 2014 data is derived from the official court statistics that are also available online at [www.justiceservices.com](http://www.justiceservices.com). The horizontal discrepancy in the data at point 6 cannot be verified since the data collection in the criminal courts is not as yet automated.

**Q097 (2022):** The increase in the incoming caseload at 1st Instance has reflected itself in an increase in the incoming caseload at the 2nd Instance across all courts. Moreover, in one particular court, the incoming caseload has increased twofold due to a legal provision that facilitates the filing of specific cases.

The number of resolved cases has increased across all 2nd Instance courts and underscores the efforts of the judiciary to address the burgeoning caseload.

**Q097 (2020):** The decrease in the Incoming caseload results from the disruption of the pandemic on the court operations. In the second instance courts, we are still unable to distinguish precisely between the cases that are appealed. Thus, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

**Q097 (2019):** Total other than criminal cases - resolved cases: The data shows an increase in the resolved caseload of the 2nd instance courts and in fact, the pending caseload at the end of the year is less than that registered in 2018. These courts were more efficient in 2019.

**Q097 (2017):** In Malta, the civil second instance courts comprise the Civil Court of Appeal in its Inferior and Superior Jurisdiction. To date, whilst we can collect the data relating to the incoming, resolved and pending caseloads of these courts, we cannot easily distinguish between the sub-divisions of case typology outlined above. What we can tell for sure is that all cases filed before the Courts of Appeal are civil and commercial litigious cases (including a minority of administrative law cases) so the figures provided at Category 1 reflect the global total of cases heard at the second instance courts. Non-litigious cases are not filed before these courts (hence NAP answers).

Concerning the variation between 2016 and 2017 in the pending cases older than 2 years, the reason is due to a different methodology used in 2016 and in 2017.

**Q097 (2016):** Regarding Civil (and commercial) litigious cases: 2015 was the best year in terms of number of resolved cases, mainly because the judiciary were trying hard to conclude cases that were ready for sentencing. In fact, our efficiency indicators reflected this effort. As regards to the other data, we do not, as yet, have those statistics at hand and hence, the last 3 evaluations were marked as NAP.

**Q097 (2014):** The discrepancy in the data provided for 2014 as "pending cases on 31st December 2014" results from an internal exercise being carried out by the Court Administration in which cases that have been prescribed, are being cleaned from the system. This exercise is going to be carried out more frequently so that it does not reflect in discrepancies in the data that is published.

**Q097 (2013):** The significant increase of the number of civil and commercial litigious cases between 2010 and 2013 was due to the fact that the number of appeals has increased substantially in the past few years and the jurisdiction of the Court of Appeal has been extended to include also appeals from large public contract awards. Accordingly, the Court of Appeal was not in a position to manage the considerable influx of cases.

**Q097 (2012):** In 2012, a number of judges in the Appeal Court retired and their replacement took some time to materialise, as a result of which, the number of decided cases decreased.

**Q098 (2022):** There was a registered increase in incoming cases across all courts.

**Q098 (2021):** During 2021, the criminal courts were still largely effected by Covid restrictions. Given that these particular courts did not introduce video-conferencing, it was not possible to counteract the increasing incoming caseload with an equally increasing resolved caseload. As a result of this imbalance, the efficiency parameters of the criminal courts suffered. Having said this, following the removal of the pandemic restrictions, sincere efforts have been made in order to restore the efficiency of the criminal courts to the former levels.

**Q098 (2020):** The above data reflects the aggregate scores of the Criminal Court of Appeal in its Superior and Inferior Jurisdiction.

The pandemic restrictions effected the caseload of the Court.

**Q098 (2018):** Given that in the Maltese legal system, the definition of severe/ minor-misdemeanor cases is not fully consistent with the definition built by CEPEJ, the data for these types of cases for Malta, is going to be presented within this section: For severe cases: Pending caseload at 1st January 2018 = 32; Incoming cases = 6; Resolved cases = 14; Pending cases on the 31st December = 21. Minor/ misdemeanor criminal cases: 1st January 2018 = 1266; Incoming cases = 445; Resolved cases = 644; Pending cases on the 31st December = 1018.

**Q098 (2016):** There was an increase in the pending caseload of the Court of Criminal Appeal, Inferior Jurisdiction. In the Maltese legal system, the definition of severe/minor-misdemeanor cases is not fully consistent with the definition built by CEPEJ and therefore a comparison is not possible with the previous cycles. According to the Maltese categorization of cases, the number for severe criminal cases in 2016 is as follows: pending on the 1st Jan of Ref Year = 26; Incoming cases = 15; Resolved cases = 10; Pending cases on the 31st Dec of Ref Year = 32. The number for minor/misdemeanor criminal cases is as follows: pending on the 1st Jan of Ref Year = 1214; Incoming cases = 629; Resolved cases = 485; Pending cases on the 31st Dec of Ref Year = 1358.

**Q098 (2012):** In 2012, the increase of the number of criminal cases resulted from the fact that for some time the number of judges hearing the appeals, particularly in the Criminal Court of Appeal (Inferior Jurisdiction), was reduced due to retirement and re-allocation of duties. Accordingly, the number of appeals in the inferior jurisdiction increase considerably.

**Q099 (2017):** In Malta the 2nd instance courts are the highest instance. Hence the NAP answer to this section.

**Q099 (2016):** In Malta the 2nd instance courts are the highest instance. Hence the NAP answer to this section.

**Q100 (2018):** NA

## Netherlands

**Q091 (General Comment):** In the Netherlands, some registers are kept by the judiciary. Those do not include a land- or business registry, see [www.rechtspraak.nl/registers](http://www.rechtspraak.nl/registers). Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situations. Also, there is a register with 'nevenfuncties' (jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. The Dutch system does not count mutations in the registers as court cases, so 'other registry cases' is NAP.

Regarding the unavailability of the number of pending cases at the beginning of the year, since the Netherlands do not officially measure it, it is not provided.

**Q091 (2022):** In previous years, we were able to produce the number of incoming and pending cases for categories 1, 2, and 2.1, but not this year. The Judiciary has decided on a different norm for one of the components needed for this number, so these numbers are no longer available as of 2022.

**Q091 (2021):** In previous years, we were able to produce the number of incoming and pending cases for categories 1, 2 and 2.1, but not this year. The Judiciary has decided on a different norm for one of the components needed for this number, so these numbers are no longer available.

**Q091 (2020):** Administrative law cases include tax cases and immigration / asylum cases.

First instance cases at Council of State, Court of Appeal, including trade tribunal, are excluded.

In the Netherlands, there are some registers that are kept by the judiciary. Those do not include a land- or business registry, see [www.rechtspraak.nl/registers](http://www.rechtspraak.nl/registers). Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situation. There is also a register with so-called 'nevenfuncties' (a list of jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. For the category 'other registry cases' the answer is NAP, as the Dutch system does not count mutations in the registers as court cases.

**Q091 (2019):** In The Netherlands, there are some registers which are kept by the judiciary. These do not include a land- or business registry (see [www.rechtspraak.nl/registers](http://www.rechtspraak.nl/registers)). Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situation. There is also a register with so-called 'nevenfuncties' (a list of jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. For the category 'other registry cases', the answer is NAP, as the Dutch system does not count mutations in the registers as court cases.

**Q091 (2018):** In the Netherlands, there are some registers that are kept by the judiciary. Those do not include a land- of business registry. See: <https://www.rechtspraak.nl/Registers>

Most registers are related to debt, bankruptcy and help or surveillance of people that are unable to handle their financial situation. There is also a register of 'nevenfuncties', which lists all the jobs/positions that judges fulfill next to being a judge. Mutations in these registers are not counted as court cases. For the category "other registry cases", since the Dutch system does not count mutations in the registers as court cases, the answer is NAP.

**Q091 (2017):** None

**Q091 (2016):** Number of administrative law cases litigious plus non-litigious.

In 2016, there has been a strong decrease in numbers of cases compared to 2014. This decrease pertains to the group of misdemeanours, in particular the group of traffic offences ("Mulder Law"). The cases of "vorderingen dwangsom" (coercive detention) are no longer treated by the Public Prosecution. This following complaints at the Ombudsman. These coercive detention cases increased at first strongly in 2013 and 2014. But after that decision of the Public Prosecution The "Mulder Law" cases decreased from 200.000 in 2014, via 100.000 in 2015 to 40.000 in 2016.

**Q094 (General Comment):** Classification of severe and minor cases:

Minor offences: mainly traffic offences (speeding tickets, running red lights) and petty theft, vagrancy, littering, etc.

Severe offences: driving while drunk, grand theft, violent crimes, vice, drugs/narcotics, etc.

**Q094 (2022):** Increase in Category 1 - This is due to a technical change in registration, where it was found that some 14.500 cases were effectively resolved (from a legal standpoint) but had remained 'open' in the administration. This has led to a decrease of the number of pending cases. Increase in Category 2 - These cases are both minor criminal offences and also traffic fine cases (so-called WAHV- or Mulder-cases). The latter group shows the main increase. Possibly the increase is due to numbers being low in 2020 and 2021 as a result of Corona, and increased mobility since then

**Q094 (2020):** Classification of severe and minor cases:

Minor offences: mainly traffic offences (speeding tickets, running red lights) and petty theft, vagrancy, littering, etc.

Severe offences: driving while drunk, grand theft, violent crimes, vice, drugs/narcotics, etc.

Effects of the pandemic:

No in person hearings happened in the period between 17 March and April 6 2020. At the start of the pandemic, not everyone was able to work remotely due to insufficient available laptops and that many files were still coming in on paper. There were some exceptions for working remotely as well, such as security, some administrative staff (people that compiled paper files, for example), etc.

Some measures were taken: hearing in other buildings, online or hybrid, and hearings in the evenings. The age restriction for judges was upped from 70 years old to 73 years old, more criminal orders were handled by the public prosecution and more cases were handled by one judge instead of more (enkelvoudig versus meervoudig)

**Q094 (2016):** In 2016, there has been a strong decrease in numbers of cases compared to 2014. This decrease pertains to the group of misdemeanours, in particular the group of traffic offences ("Mulder Law"). The cases of "vorderingen dwangsom" (coercive detention) are no longer treated by the Public Prosecution. This following complaints at the Ombudsman. These coercive detention cases increased at first strongly in 2013 and 2014. But after that decision of the Public Prosecution The "Mulder Law" cases decreased from 200.000 in 2014, via 100.000 in 2015 to 40.000 in 2016.

**Q097 (General Comment):** It is not possible to differentiate between litigious and non-litigious cases at second instance. The financial registrations at first instance make a clear distinction between types of cases (that the answer for first instance can be based upon), but for second instances this differentiation does not exist (and thus, the registration is all the same).

As to the lack of horizontal consistency that can be observed, the reason is that the official number of cases pending on January 1st is determined at different time then the other 3 categories (official incoming, official resolved, official pending on December 31st). Due to time lags in registration and dynamics in the data systems, if the cases pending on January 1st are measured at the same time as the others, the result would be different.

**Q097 (2021):** The number of incoming administrative law cases increased between 2020 and 2021, most probably due to the pandemic. Especially, the number of appeals for tax cases is higher in 2021.

**Q097 (2020):** It is not possible for us to differentiate between litigious and non-litigious cases at second instance. In short, we can provide this for first instance because the financial registrations makes clear distinction between types of cases (finances differ) that we can base that answer on, but for second instances, this differentiation in finances does not exist and thus, the registration is all the same.

**Q097 (2019):** .

**Q097 (2018):** If there is an appeal, cases are litigious in my view. I would tend to enter the value "0", but since the question is being asked, you probably see things differently. So I chose the answer "NA"

**Q097 (2017):** Administrative law cases, litigious plus non-litigious.

**Q097 (2016):** Administrative law cases, litigious plus non-litigious.

**Q098 (2014):** The reason for the horizontal inconsistency in 2014 is that the figures from the 4 columns of the table are not retrieved at the same time. The number of pending cases on Jan 1st is determined one year before the other 3 columns can be filled. One year later it is possible to determine the number of incoming cases, the number of resolved cases and the number of pending cases on Dec 31st. The definition of 'pending' together with dynamic changes in the registration system mean that the number of pending cases on Jan 1st will have changed. To ensure horizontal consistency, all the 4 columns should be determined after the years' end which would imply to overrule a previously determined and official (i.e. published) number of pending cases on Jan 1st.

**Q099 (General Comment):** The formula for pending cases on 31 December might not work satisfactory – there will be a gap between pending cases at the end of the year and the number of pending cases at the beginning of the year + incoming cases -/- resolved cases. Furthermore, the number of resolved cases only includes cases resolved with a decision of a judge. Cases in which the appeal in cassation has been withdrawn or annulled, cases that have been administratively resolved by the clerk, cases in which the processing of the appeal in cassation has been suspended, and cases that have been discharged upon objection cannot be counted separately. Therefore, their number is not included. 2 – Non-litigious cases: in theory, it might possible these cases get to the Supreme Court, but the numbers are not specified for the courts. 3 – Administrative law cases: please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is not third instance court for other administrative cases in the Netherlands, so these are not included in the numbers given. 4 – Other cases: There might be other cases in separate courts, but these numbers are not nationally available.

**Q099 (2021):** The formula for pending cases on 31 December might not work satisfactory – there will be a gap between pending cases at the end of the year and the number of pending cases at the beginning of the year + incoming cases -/- resolved cases. The gap is caused by cases that are labelled 'outflow other'. These are cases that do not get resolved because of administrative reasons (for instance, the appeals is filed to late, or mandatory court fees have not been paid and there is no dispensation).

2 – Non-litigious cases: in theory, it might possible these cases get to the Supreme Court, but the numbers are not specified for the courts.

3 – Administrative law cases: please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is not third instance court for other administrative cases in the Netherlands, so these are not included in the numbers given. 4 – Other cases: There might be other cases in separate courts, but these numbers are not nationally available. Regarding discrepancy: There are always factors that might influence the number of cases the SC handles in a year. There are no published numbers identifying the various types of cases the tax chamber handles. As mentioned before, we can provide a more general explanation for an increase in SC cases and/or disposition time. For example, delays or catch up in lower courts (increasing/lowering the number of incoming cases), new laws or changes in law that the SC must answer, cases may become more complex due to increasing complexity of laws and differences (and thus, cases may take longer), or cases that are connected are grouped to deal with in clusters (meaning more cases for a longer time). While a specific cause cannot be clearly pinpointed, all these factors might influence the numbers.

**Q099 (2020):** With regard to 2. Non litigious cases: In theory, it is possible these cases get to the Supreme Court, but these cases are not specified in available numbers for the courts.

With regard to 3. Administrative law cases: Please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is no third instance court for other administrative cases in the Netherlands, so these are not represented in this number.

With regard to 4. Other cases: There might be other cases in separate courts (Kamers), but these numbers are not available nationally.

With regard to the discrepancies: there are always some factors that might be of influence on the number of cases the Supreme Court handles in a year. It might be due to delays or catch ups in lower courts (so incoming cases are lower/higher), new laws or changes in law that the SC must answer (like covid-regulations), cases may become more complex because laws and differences are more complex (as a result cases may take longer), or cases that are connected that are grouped to deal with in clusters (meaning more cases for a longer time). While we cannot clearly pinpoint a 'cause' of the discrepancies, all these factors mentioned might influence the numbers.

**Q099 (2019):** Reason for discrepancies: discrepancies seem higher, as absolute values are lower. When asked, the High Court explains that there is always an eb and flow of cases due to several factors.

**Q099 (2018):** Cases handled by the High Court are 'litigious' by nature (= cases are settled at first instance if one party remains inactive)

**Q099 (2017):** the answer to this question is still not available.

**Q099 (2016):** At the moment the Supreme Court has not the data available to answer this question. The National Correspondent is consulting the Supreme Court to improve this situation.

**Q100 (General Comment):** No distinction is made between severe criminal cases, misdemeanors and/or minor criminal cases in the numbers and accounts kept by the Dutch SC.

Pending cases at the end of the year are not equal to the number of pending cases at the beginning of the year + incoming cases - solved cases

**Q100 (2021):** No distinction is made between severe criminal cases, misdemeanors and/or minor criminal cases in the numbers and accounts kept by the Dutch SC.

Pending cases at the end of the year are not equal to the number of pending cases at the beginning of the year + incoming cases - solved cases

**Q100 (2020):** In the numbers and accounts that are kept by the Dutch Supreme Court, no distinction is made between severe criminal cases and misdemeanours and/or minor criminal cases.

With regard to the discrepancies: there are always some factors that might be of influence on the number of cases the Supreme Court handles in a year. It might be due to delays or catch ups in lower courts (so incoming cases are lower/higher), new laws or changes in law that the SC must answer (like covid-regulations), cases may become more complex because laws and differences are more complex (as a result cases may take longer), or cases that are connected that are grouped to deal with in clusters (meaning more cases for a longer time). While we cannot clearly pinpoint a 'cause' of the discrepancies, all these factors mentioned might influence the numbers. The gap of 213 is caused by cases that are labeled as 'outflow other' (in Dutch: uitstroom overig). These are cases that do not get resolved because of administrative reasons (for instance: the appeal is filed too late, or mandatory court fees have not been paid and there is no dispensation).

## Poland

**Q091 (2022):** \* Administrative law cases - In 2022, the number of incoming administrative cases decreased compared to the previous year. The number of incoming complaints about the inaction of public administration bodies and the protracted conduct of proceedings by these bodies also decreased. The decrease in the receipt of such complaints in 2022 was 30.2% compared to 2021. This may be indicative of the catching up of public administration activities caused by the COVID-19 pandemic. Data for the next years will show whether the downward trend will continue.

**Q091 (2021):** \* administrative law cases - It is difficult to identify, apart from the COVID-19 pandemic, any particular reason for the increase in the number of cases brought before provincial administrative courts. A particularly large increase in the number of cases submitted to administrative courts concerned complaints about the inaction of public administration bodies and the protracted conduct of proceedings by these bodies. The increase in the receipt of such complaints in 2021 was 73.2% compared to 2020. This may also be indicative of some backlog in public administration due to the numerous pandemic restrictions in 2020.

**Q091 (2020):** Comments: The discrepancies in Table 91. First instance courts: number of other than criminal law cases - compared to the previous periods (2018 and 2019) are mainly due to combinations of two reasons. First - the COVID19 pandemic, which significantly reduced case inflow to the courts (in some type of cases even by several dozen of percent), reduced the number of resolved cases and pending cases as well. The second factor, which in contrary - caused increase in the volume of cases registered in court system was the inflow of cases related with conversion of the right of perpetual use of built-up land for residential purposes into land ownership (2.2.1 - Non litigious land registry cases). In 2020, there were more than a million incoming cases of this type (in 2019 – more than 2,5 million), which also resulted in an increase in the number of resolved cases in this area, as well as pending cases for the next reporting period.  
Administrative law cases: the main reason for the slight slowdown in casework was the pandemic.

**Q091 (2019):** The discrepancies in section 4.2.2. Case flow management - first instance - compared to the previous period mainly concern the data shown in point 2.2.1 Non-litigious land registry cases.

In explaining the above, it should be emphasized that the general state of cases in courts of first instance in 2019 was related to cases brought to the land registry departments with regard to the conversion of the right of perpetual use of built-up land for residential purposes into land ownership. In 2019, more than 2 million incoming cases of this type, which also resulted in an increase in the number of resolved cases in this area, as well as pending cases for the next reporting period.

It should be noted that after excluding from the analysis all cases considered in Land Registry Departments, the impact of cases and settlements in 2019 were almost at the same level as in the previous year.

**Q091 (2018):** The discrepancy between 2016 and 2018 was realised in 2017 due to the increasing number of mostly non-litigious cases. More details in 2017 data.

Number of pending cases in the category 2.1. General civil (and commercial) non-litigious cases has dropped slightly. That situation is caused by high effectiveness of courts. Number of resolved cases is higher than number of incoming cases. That situation has maintained since 2017.

Higher number of pending cases in Non-litigious business registry cases is temporary and it is a result of higher number of initiated compulsory proceedings. If it is ascertained that the application for entry in the Register or compulsory documents have not been submitted despite expiry of the deadline, the registry court shall call on the obliged parties to submit them. We observed that the effectiveness of courts has increased and therefore number of pending cases in mentioned category has dropped at the end of the year.

In regard to non litigious land registry cases we observe in Divisions of Land and Mortgage higher staff turnover. It contributes to problems with solving cases, therefore number of pending cases has increased.

In regard to "other" cases we have observed significant increasing of incoming cases without specified category. In this category we include following cases: exemption from costs, reconstruction of files, affidavit of assets, excluding judge etc. Higher number of pending cases on 31 Dec. is a consequence of high number of incoming cases during the year. It was probably temporary situation.

**Q091 (2017):** As a general explanation for discrepancies in 2016 to 2017 data, it has to be stated that in 2016, there was a substantial number of incoming non-litigious cases, mostly general civil cases, but also registry cases (around 700k cases total).

This important number of cases was not resolved and the backlog remained important at the end of the year. This could explain the large difference of pending cases between 1 Jan 2016 and 1 Jan 2017.

2.1. In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases on 1 Jan. ref. year has increased. In 2017 we did not notice any problems with mentioned system, so the number of resolved cases has increased significantly. At the same reason the number of pending cases on 31 Dec. 2017 has dropped.

We indicate that fluctuation of the number of cases can be also caused by implemented organizational changes in courts (changes in staff, changes in the organization of work). 2.2. Registry cases (2.2.1+2.2.2+2.2.3) discrepancies are justified in points 2.2.1 and 2.2.2.

2.2.1. Non litigious land registry cases. Higher number of pending cases (on 1 Jan. ref. year and on 31 Dec. ref. year) is caused by Higher number of incoming cases than resolved cases. This situation is related to large-scale investments in infrastructure in Poland Building new roads is closely connected with changes in land registry. We need to indicate that courts have to cope with large number of difficult cases. (Mentioned reason is related to resolved / incoming cases)

2.2.2. Within the changes in business registry cases we can observe significant increase in all types of Application for registration

(first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of

removing from registry). We indicate that it could be caused by fluctuation in compulsory proceedings. Mentioned proceedings are carried on in the cases where it is found that an application for an entry in the National Court Register or the documents whose submission is obligatory were not submitted despite the lapse of the time limit. The registry court shall summon the obliged persons to submit them, and shall set an additional 7-day time limit. We emphasize, that the registry court shall discontinue the compulsory proceedings, if it can be concluded from the circumstances of the case that the proceedings will not lead to the fulfilment of the mentioned obligation. (Mentioned reason is related to resolved / incoming and pending cases)

2.2.3. and 2.3. - Categories do not exist in our judicial system.

**Q091 (2016):** Within the changes in business registry cases we can observe significant increase in all types of Application for registration (first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of removing from registry).

In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases had increased.

**Q094 (2022):** Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code.

The category "Other cases" covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

Cases under the Criminal Procedure Code and the Misdemeanours Code, which are presented as 'other criminal cases', are preliminary or follow-up proceedings.

**Q094 (2020):** The discrepancies in Table 94. First instance courts: number of criminal law cases - compared to the previous period (2018) are mainly due to two reasons. First – the COVID19 pandemic which reduced the inflow of Misdemeanour and / or minor criminal cases (p. 2). Second – in 2020 release the number of Other cases (p. 3) was added to the table. It significantly increased the number of total cases shown in the line Total of criminal cases (1+2+3).

**Q094 (2014):** For the 2014 evaluation, changes in the statistical forms made possible the identification of some types of misdemeanor cases (mainly the organizational ones, which were not considered in 2012). Above this, there is a constant growth in the number of incoming cases.

**Q094 (2012):** The increase of the total of criminal cases and the number of severe criminal cases in respect of the item "pending cases on 1st January 2012" is due to the fact that since 2010, there was a significant increase of the inflow of cases.

**Q097 (General Comment):** The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97, while Q99 is replied by NA.

The category „Other cases” includes appeals and complaints concerning social insurance, minors and others.

**Q097 (2022):** According to the available data for civil, commercial and labour and social security cases at second instance for 2022. - taking 2021 as a benchmark: In courts of appeal :

(a) In civil and commercial cases, including in the AGa category in 2022, the number of cases settled actually decreased slightly (by 1.0%), with a total increase in settlements in ACa+AGa cases of 7.5% compared to 2021. Thus, overall in civil and commercial appellate cases, the number of settlements in the appellate courts has increased. Despite the increase in settlements, the impact of ACa+AGa cases (65.6%) was not brought under control, due to its drastic increase of 51.9% compared to 2021. (cases involving franking credits).

- In 2022, there was a slight decrease in the handling of ACz (by 1.9%) and AGz (by 2.4%) complaint cases, which can be explained by a decrease in the impact of these categories of cases by 7.3% and 4.9%, respectively, compared to 2021. The impact of ACz cases was controlled at 100.6% and AGz cases at 101.9%;

Thus, in AGa cases, the reason for the decrease in handling (by only 1%) was a drastic increase in the impact of ACa cases (by 64.5%), while the handling of ACa and AGa cases combined increased, so there is no basis for further explanation. In AGz cases, the decrease in disposals should be linked to the decrease in receipts. The decrease in the handling of cases has not impeded the control of the impact of the cases, so there are no grounds for further explanation. b) In labour and social security cases, the total number of cases disposed of in 2022 decreased (by 17%), of which the number of cases disposed of in the APa category decreased by 9.6%, which was due to a 14.8% decrease in the number of cases received in this category, as 104.9% of the cases received were managed, while in the AUa category, the number of cases disposed of decreased by 18.1% (from 21,360 to 17,500 cases) in relation to 2021, This was partly attributable to the 4.9% decrease in receipts, but above all to the inability to handle a larger number of homogeneous AUa cases, as was the case in 2021 regarding the pension amount of women from the so-called "1953 vintage", which were handled in large numbers in 2021. in connection with new decisions of the pension authority, issued on the basis of the provisions of the Act of 19 June 2020 amending the Act on pensions from the Social Insurance Fund (Journal of Laws of 2020, item 1222) implementing the judgment of the Constitutional Tribunal of 6 March 2019. P 20/16. It should be emphasised that the disposition of this type of cases in 2021 was atypically high (in both appellate and district courts) and significantly higher than in 2020, when it amounted to 12 929 cases in appellate courts. Moreover, in 2021, proceedings were discontinued in 6 923 cases in this category, while in 2022, only 1 193 cases were discontinued. only 1 193 cases of this category were discontinued, which resulted in a decrease in the total number of cases handled in the labour and social security division and the inability to control the impact in 2022. (93,6%); - in 2022, the handling of grievance cases in the AUz cat. decreased by 28.9% (from 3,611 to 2,565), which was also due to the decrease in the inflow of cases in this category (by 27.43%) in relation to 2021, as the inflow in this category of cases was contained. In the APz category, the 16.41% decrease in the number of cases settled in 2022 (from 201 to 168 cases) was also due to a 19.40% decrease in the inflow of cases in this category (from 201 to 162 cases) in relation to 2021.

In regional courts:

(a) in civil appellate cases Ca the number of civil cases settled in 2022 decreased in comparison to 2021 only minimally by 0.01% (by 6 cases), so there are no grounds for further clarification;

- in complaint cases Cz at second instance, the number of cases handled in 2022 decreased by 10.60% (from 37,565 to 33,594) compared to 2021, as a result of a 17.48% decrease in receipts (from 38,499 to 32,000). It should be emphasized that

**Q097 (2021):** The category „Other cases” includes appeals and complaints concerning social insurance, minors and others. \* administrative law cases - The figures given to you on the receipt of cases at the Supreme Administrative Court and their settlement were affected primarily by two circumstances, i.e. changes in the organizational structure of the Supreme Administrative Court (NSA) and the related transfer of cases between departments, and, as indicated above, restrictions on court operations due to the declared epidemic state in Poland.

As of January 1, 2021, new additional adjudicatory divisions were established in the Finance Chamber and the General Administrative Chamber. Some cases from Divisions I and II of both chambers were transferred to the newly created Division III. These actions had a significant impact on the way the statistics were read.

According to the data provided to you, in 2020 the NSA completed 15786 cases registered in the "SK" repertory (cassation complaints, complaints for the resumption of proceedings). However, this number includes not only cases completed by issuing a substantive decision, but also cases closed due to their transfer to a new department. There were 3115 such cases in 2020. Given the above, the real efficiency in 2020 was 88%, not 110% as reported. Cases closed in the Finance Chamber of the Supreme Administrative Court in 2020 were, in turn, in large part added to the impact in 2021, for they were re-registered in another judicial department.

The re-registration of the aforementioned cases in the Financial Chamber, as well as the re-registration of cases in the General Administration Chamber for similar reasons (4079 cases) were recorded in the total number of cases received by the NSA in 2021. Hence, 7194 cases (re-registered) would have to be deducted from the total number of 26873, which was given to you in earlier correspondence. Thus, the real flow of new cases to the NSA was 19679.

The data on the completion of cases for 2021 shows that 17111 cases were completed at the NSA. It should be noted that this figure also includes cases closed in the General Administration Chamber due to their transfer to Division III. Such cases, as mentioned, were 4079. Thus, it can be assumed that in 2021 the NSA completed 13032 cases through their substantive settlement. These data, in turn, allow us to assume that the NSA's adjudication efficiency in 2021 was 67%.

Despite the decrease in efficiency in 2021 compared to the previous year, it should be noted that in 2021 the NSA settled more cases than in 2020. On the other hand, undoubtedly, the higher inflow of cases to the NSA was due to the increased number of complaints filed with provincial administrative courts, as discussed in more detail in point 1. The increased inflow of cases to the NSA was also due to a partial blockage in the circulation of documentation between administrative courts of both instances, which occurred especially during the first phase of the pandemic (March-May 2020). During this period, far fewer cases were submitted to the NSA, which consequently translated into an increase in impact in the following months of 2020 and 2021. In turn, referring to issues related to the number of cases handled at the NSA in 2021, one can additionally point to staff shortages resulting from the retirement of some judges and the fact that more than a quarter of full-time positions were unfilled (more than 20% of judicial positions remained unfilled). In addition, the COVID-19 pandemic necessitated the reorganization of the Court's work by providing parties with the opportunity to attend hearings remotely. For technical reasons, fewer cases may be handled at remote hearings than at land-based hearings.

**Q097 (2020):** "Other than criminal law" cases: compared to the previous period (2018), decreases in the numbers of "incoming cases" before courts and "resolved cases" result from the COVID19 pandemic. As regards increases in the number of pending cases, they are due to increased amount of unresolved specific categories of cases in civil litigious procedures (e.g. claims under the loan agreement) and civil non-litigious procedures (e.g. division of the property). Administrative law cases : In 2020, the court disposed of 57.70% of all cases within 12 months, and within up to 24 months 78.66%. With regard to cassation complaints, 44.06% of cases were dealt with within 12 months. As far as complaints are concerned, 75.99% are settled within 2 months, while within 12 months the rate is 99.57%. 4. "4.Other cases": From the analysis of annual information for 2020 at the level of district courts and appellate courts in the labour and social security division, the following factors had an impact on the decrease in the degree of control of the impact (and thus the number of cases handled) and the increase in the average duration of proceedings in Ua, Uz and AUa and AUz cases in relation to 2019: - restrictions on court activity in 2020 related to the Covid-19 pandemic, due to the declaration of an epidemic state in the territory of the Republic of Poland from 20 March 2020 and the associated need for quarantine, sick leave, isolation, the need to provide care for children under 8 years of age, remote working, resulting in a reduction in the work of adjudicators, clerks and experts; - Insufficient number of experts on the list of expert witnesses compared to the number of cases requiring an opinion and the need to carry out joint or multiple expert opinions from different specialities, refusal of experts to carry out examinations necessary for their opinion (as a result of the epidemic situation in relation to SARS-CoV-2 infections), - a large number of suspended cases resulting from the regulation of the Act of 19 June 2020 on amending the Act on pensions from the Social Insurance Fund (Journal of Laws of 2020, item 1222), concerning a group of women born in 1953 (in these cases the proceedings were suspended by law as of 10 July 2020 until the pension authority issues a new decision recalculating the benefit of entitled persons, but not earlier than after 6 months from the suspension).

**Q097 (2019):** The decrease of Clearance Rate for 1. Civil and commercial litigious cases and 4. Other cases in 2019 compared with 2018 is caused by increased value of incoming cases. For 1. Civil and commercial litigious cases: from 141 045 cases in 2018 to 155 341 cases in 2019 (increase of 10%) and for 4. Other cases: from 41 242 cases in 2018 to 44 233 cases in 2019 (increase of 7%). The number of judges hearing in these type of cases in 2019 was at comparable level like in 2018 so the number of cases per one judge had increased automatically. In 2019, 16,844 cassation appeals (3,385 appeals less than in 2018) and 80 appeals for reopening the proceedings were submitted to the Supreme Administrative Court. From the previous period, 27,649 complaints and 28 applications for reopening of proceedings remain to be considered. In total, the Supreme Administrative Court had to consider 44,493 cassation appeals. In 2019, a total of 16,375 cassation complaints were examined. In 3,465 cases, the Supreme Administrative Court allowed the cassation appeal (21.16%), dismissed 11,721 cassation appeals (71.58%), and settled 1,189 in a different way (7.26%). Apart from cassation appeals, in 2019 the Supreme Administrative Court handled 4,665 complaints against decisions (orders) of courts of first instance, of which 715 allowed the appeal (15.36% of all appeals), and in 3,773 cases, the Supreme Administrative Court dismissed the appeal (80.88%), and it handled 177 matters in a different way (3.79%).

Moreover, the Supreme Administrative Court examined 162 complaints about violation of a party's right to hear a case in court proceedings without undue delay, of which 4 were admitted (2.47% of all settlements of this type), 60 were dismissed (37.04%), and 98 were settled in other way (60.49%).

In 2019, the Supreme Administrative Court handled 42.33% of all cases within 12 months, and 80.43% within 24 months. With regard to cassation complaints, 23.54% of the cases were settled within 12 months. In the case of complaints, 91.13% are examined by 2 months, and within 12 months, this ratio is 99.72%.

**Q097 (2017):** 2.2.2. There is not any specific explanation for observed increase. We can indicate only that mentioned increase is related especially to Register of Pledges.

As regards General civil (and commercial) non-litigious cases, we have validated previous data and we have made some corrections. We also indicate that a number of pending cases on 1 Jan. ref. year have been increased due to higher number of incoming cases in 2016.

**Q097 (2016):** Within the changes in business registry cases we can observe significant increase in all types of Application for registration (first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of removing from registry).

In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases had increased.

**Q098 (General Comment):** Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code. The category "Other cases" covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours. Mainly these are cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code, e.g: complaints against the discontinuation of the proceedings, complaints against the application or extension of pre-trial detention, complaints against the ordering the execution of a substitute prison sentence, complaints against a failure to grant parole. Cases under the Criminal Procedure Code and the Misdemeanours Code, which are presented as 'other criminal cases', are preliminary or follow-up proceedings.

**Q098 (2022):** Serious criminal cases include all offences under the Penal Code, the Fiscal Penal Code and offences under other laws. Misdemeanours are cases conducted under the Misdemeanours Code.

The category "Other cases" includes other cases conducted in the criminal courts that are not directly related to serious criminal cases or misdemeanours (mainly cases conducted under the Criminal Procedure Code and the Misdemeanours Code).

**Q098 (2021):** Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code.

The category "Other cases" covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

**Q098 (2020):** Variations in the number of criminal law cases in 2020 compared to the previous period (2018) are mainly due to two reasons. First – the COVID19 pandemic which reduced the inflow of severe criminal cases (p. 1) and misdemeanour and / or minor criminal cases (p. 2). Second – in 2020 release, the number of Other cases (p. 3) was added to the table. It significantly increased the number of total cases shown in the line Total of criminal cases (1+2+3).

**Q098 (2012):** The increase of the total of criminal cases and the number of severe criminal cases in respect of the item “pending cases on 1st January 2012” is due to the fact that since 2010, there was a significant increase of the inflow of cases”.

As to the number of minor cases, there was a change in the statistical system which resulted in aggregating some categories of cases considered as minor with other criminal second instance cases. Accordingly, it was impossible to include them in the provided figures.

**Q099 (General Comment):** The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97, while Q99 is replied by NA.

While the Supreme Court considers non-contentious cases, there is no inclusion of this category of cases in the internal statistics. Accordingly, the reply is NA.

**Q099 (2022):** Compared to previous years, the number of pending cases on 31 December of the reference year has increased, but it should be noted that the number of incoming cases has increased significantly.

In the Civil Chamber, for example, the number of incoming cases doubled compared to the cases received in 2020 (4360 incoming cases in 2020, while 8176 incoming cases in 2023).

Another factor that significantly affects the statistics of case recognition is the new measure introduced by the amendment to the Supreme Court Act of 9 June 2022, which entered into force on 15 July 2022 - the motion to examine the fulfilment of the requirements of independence and impartiality of a Supreme Court judge, taking into account the circumstances of his or her appointment and his or her post-appointment. Article 29(6) of the Supreme Court Act, which provides an additional procedural guarantee for the parties, on the other hand affects the length of the proceedings before the Supreme Court. It can be noted that this measure is widely used by the parties, which can be particularly observed in disciplinary proceedings. Furthermore, it has an impact on other Chambers of the Supreme Court, including the Civil Chamber.

It should also be noted that the Supreme Court has not had all of its legally stipulated Supreme Court judge positions filled for years (as at 31 December 2021, 90 of the 125 positions stipulated in Section 2 of the Supreme Court Rules were filled), which, combined with the increasing number of incoming cases each year, has resulted in an increasing number of pending cases. Even taking the abovementioned problems into account, it should be noted that the number of cases decided by the Supreme Court is increasing year-on-year.

In the Civil Chamber, 5785 resolved cases (compared to 4926 resolved cases in 2021);

In the Extraordinary Review and Public Affairs Chamber, 1617 resolved cases (compared to 1120 resolved cases in 2021);

In the Criminal Chamber, 4161 resolved cases (compared to 4003 resolved cases in 2021);

Only the Labour and Social Security Law Chamber has recorded a slight decrease in the number of resolved cases - 2286 in 2022 (compared to 2299 resolved cases in 2021).

**Q099 (2021):** \*1. They include cases conducted in the Civil Chamber, the Labor and Social Insurance Chamber Chamber and the Chamber for Extraordinary Control and Public Affairs, including those with the reference NSNc

\*4)The data includes cases conducted in the Chamber for Extraordinary Control and Public Affairs with the references NSK, NSKP, NZP, NZ, NSW, NSP NKRS, NWW, and NO signatures. These are cases that fall under the jurisdiction of the Extraordinary Control and Public Affairs Chamber mainly in the field of public law public, i.e., other than extraordinary complaints in both civil and criminal cases (which have been assigned to civil and criminal cases shown in boxes 99 and 100, respectively),

For example, cases in the field of telecommunications regulation, energy, competition protection, but also appeals against resolutions of the National Judicial Council.

\*4)Other cases are also disciplinary cases resolved in the Disciplinary Chamber of the Supreme Court.

In the case statistics of the Chamber Civil, Labor and Social Security Chamber, as well as in the statistics of civil cases (extraordinary complaints) of the Extraordinary Control and Public Affairs Chamber, there was an increased receipt in 2021 compared to 2020. This was an increase so significant that the statistics of cases handled declined compared to 2020. It should be assumed that - similar to previous years previous years, the general reason for the less favorable statistics are further organizational changes within the Supreme Court and the impact of the dispute over judicial reform on the efficiency of the work of Supreme Court judges. In addition, following the assumption of the post of President of the Civil Chamber of the Supreme Court by prof. Joanna Misztal-Konecka, there has been a review of the observance of the order in which cases are received in their allocation to individual judges. The Office Instruction was then modified in the part concerning the system of case numbers. Some cases were then assigned new case numbers, which could lead to an artificial overestimation of the number of cases with an unchanged rate of their handling.

**Q099 (2020):** \*Civil cases :- litigious cases heard by the civil chamber and the labour and social insurance chamber: Civil Chamber - pending cases on 1 Jan - 2596, incoming cases - 4360, resolved cases - 5518, pending cases on 31th Dec - 1438; Labour and social insurance chamber - pending cases on 1 Jan - 2161, incoming cases - 1535, resolved cases - 1938, pending cases on 31th Dec - 1758; \*Other cases: - cases pertaining to public law, decided by the Chamber for Extraordinary Control and Public Issues and disciplinary cases resolved in the Disciplinary Chamber of the Supreme Court: the Chamber for Extraordinary Control and Public Issues - pending cases on 1 Jan - 149, incoming cases - 6696, resolved cases - 6710, pending cases on 31th Dec - 135; the Disciplinary Chamber of the Supreme Court: pending cases on 1 Jan - 105, incoming cases - 312, resolved cases - 395, pending cases on 31th Dec - 22; Other cases: \*These increases must be explained by the election year, in which the Chamber of Extraordinary Control and Public Affairs dealt with numerous protests. This has resulted in a substantial increase in the dynamics of cases in this Chamber.  
Discrepancies - Administrative law cases - see data in Q97 and general comment to that question.

**Q099 (2019):** 1. Civil cases = civil cases + labour and social security cases;  
4. Other cases = public law cases + disciplinary cases;  
3. Data from Supreme Administrative Court; "1. Civil and commercial litigious cases": Pending cases on 1 Jan. ref. year : 2586 (civil cases) + 2010 (labour and social security cases); Incoming cases :5105 (civil cases) + 2480 (labour and social security cases); Resolved cases: 5095 (civil cases) + 2329 (labour law and social security cases); Pending cases on 31 Dec. ref. year: 2596 (civil cases) + 2161 (labour and social security cases);  
"4. Other cases": Pending cases on 1 Jan. ref year: 117 (disciplinary cases) + 215 (public law cases); Incoming cases: 269 (disciplinary cases) + 894 (public law cases); Resolved cases: 281 (disciplinary cases) + 955 (public law cases); Pending cases on 31 Dec. ref. year: 105 (disciplinary cases) + 154 (public law cases).  
Public law cases and disciplinary cases were not entered in the table in 2018. Public law cases in 2018: Pending cases on 1 Jan. ref. Year – no data; Incoming cases – 293; Resolved cases – 81; Pending cases 31th December – 212; Disciplinary cases in 2018 : In 2018 the Disciplinary Chamber of the Supreme Court received a total of 161 cases, of which 52 to the First Department and 109 to the Second Department. In the First Department, in 2018, 11 cases were resolved. In the Department of the Second Disciplinary Chamber, 17 cases were considered and completed in terms of content, and 16 cases formally (data from the Supreme Court activity report for 2018).

**Q099 (2016):** In 2014 the Administrative Supreme court cases were not included and they are reintroduced in this cycle. In regard to administrative law cases we kindly indicate that administrative cases are excluded from the jurisdiction of the common courts. Administrative cases are proceeded by the Voivodship Administrative Courts and Supreme Administrative Court, which are only competent to proceeded such cases.

**Q099 (2012):** In the frame of the 2012 exercise, it has been indicated that the Supreme Court provided the Ministry of Justice with data set that allowed summing up non-criminal cases with administrative cases of the Supreme Administrative Court. Therefore it was possible to include both data-sets.

**Q100 (General Comment):** The Supreme Court does not divide its statistics into categories corresponding to those defined and used by the CEPEJ.

**Q100 (2020):** The dynamics of the movement of cases of 2020 in the work of the Criminal Chamber of the Supreme Court was due to changes of a personnel nature. In addition, some of the disciplinary cases of advocates were submitted for consideration to the Criminal Chamber on the basis of decisions of the First President of the Supreme Court made in the period until May 2020 or decisions of the President of the Supreme Court directing the work of the Criminal Chamber at a later date, as the Disciplinary Court of the Polish Bar Association refers files of disciplinary cases with cassation appeals to the Criminal Chamber, recognizing that the Disciplinary Chamber should refrain from examining them. At the same time, the above-standard involvement in the work of judges, assistants and all other employees of the Criminal Chamber allowed for an increase in the number of cases dealt with.

**Q100 (2018):** Number of incoming cases has increased due to implemented law changes in Code of Criminal Procedure. On 15 April 2016 entered into force regulations about complaints against appellate court judgments. Parties may complain to the Supreme Court of the Republic of Poland against an appellate court judgment revoking a judgment of the court of the first instance and referring the case for reconsideration. In the first period of functioning of mentioned regulations there were not many incoming cases. The situation changed in 2018. We have observed that many cases incoming on the base of regulations implemented in 2016. Moreover, in 2018 were carried on some organisational changes e.g. Military Chamber of Supreme Court has been closed and all cases were moved to Criminal Chamber.

## Portugal

**Q091 (General Comment):** The question 91\_1 "Civil (and commercial) litigious cases", includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.

**Q091 (2022):** The question 91\_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.

On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly – those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries

From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work take non by the courts as referred above, the data does not include civil and labour enforcement cases. The number of enforcement cases for the year 2022 are: Pending cases on 1 Jan. 2022: 394367; Incoming cases: 108036; Resolved cases: 140946; Pending cases on 31 Dec. 2022: 361457. This numbers correspond to the total number of existing procedures in Portugal in 2022, following the existing model prior to the entry into force of the said legal diploma.

For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative Reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.

The question 91\_3 “Administrative law cases”, includes administrative and tax cases. The number of Pending cases on 1 Jan. that correspond only to tax cases is 38089. The number Incoming cases that correspond only to tax cases is 11619. The number of Resolved cases that correspond only to tax cases is 14888. The number of Pending cases on 31 Dec. That correspond only to tax cases is 34820. In what concerns this type of cases, in 2022 there were 24,212 new cases and 27,051 completed cases. However, of these totals, only 23,483 new cases and 26,322 completed cases corresponded to real movements of the beginning and end of cases. The remaining 729 cases refer to cases that were internally transferred between units.

**Q091 (2021):** The increase in the number of cases resolved on 1 January 2021 should be contextualised, in our view, within the framework of the effects of the Covid 19 pandemic and the consequent confinement, with a reflection on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

**Q091 (2020):** The decrease in the number of Civil (and commercial) litigious cases reflects the effects of the Covid 19 pandemic and the consequent lockdown, that had an impact on the functioning of the courts, considering that in certain periods face-to-face services have been interrupted or conditioned.

On 1 September 2013, the new Code of civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly – those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since it is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour enforcement cases. The number of enforcement cases for the year 2020 are: Pending cases on 1 Jan. 2020: 521224; Incoming cases: 96047; Resolved cases: 159616; Pending cases on 31 Dec. 2020: 457655. These numbers correspond to the total number of existing procedures in Portugal in 2020, following the existing model prior to the entry into force of the said legal diploma.

For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative Reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators. In the scope of Working Group within the Ministry of Justice that monitors the development of the procedural processing system of the 1st instance judicial courts (Citius System), work is underway to implement the mechanism in question, in order to allow for autonomous accounting of cases that are awaiting the performance of an act that falls within the competence of the registry or the judge. At the moment, it is not yet possible to estimate a date for the conclusion of the work. The question 91\_3 “Administrative law cases”, includes administrative and tax cases. The number of Pending cases on 1 Jan. that correspond only to tax cases is 44542. The number Incoming cases that correspond only to tax cases is 44329. The number of Resolved cases that correspond only to tax cases is 48704. The number of Pending cases on 31 Dec. that correspond only to tax cases is 40167. In what concerns this type of cases, in 2020 there were 68,467 new cases and 73,880 completed cases. However, of these totals, only 20,731 new cases and 26,144 completed cases corresponded to real movements of the beginning and end of cases. The remaining 47,736 cases refer to cases that were internally transferred between units, namely due to the establishment of specialised courts in September 2020 (which are not independent legal entities), or that were subject to changes in the subject matter. Considering that in 2020 the number of cases transferred between organizational units was very high in the 1st instance administrative and tax courts, for this cycle we indicated in the table only the numbers of cases opened and closed, without including transferred cases. In previous editions, the figures included transferred cases, which could impair the comparative reading.

**Q091 (2019):** 91.1 The decrease of the number of pending cases older than 2 years follows the general trend of decrease of pending cases for this category. There were no legislative changes that can explain this decrease.

**Q091 (2018):** The question 91\_1 "Civil (and commercial) litigious cases", includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.

On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since it is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour. The number of enforcement cases for the year 2018 are: Pending cases on 1 Jan. 2018 700.638; Incoming cases:127.646; Resolved cases:222.480; Pending cases on 31 Dec. 2018: 605.804 These numbers correspond to the total number of existing procedures in Portugal in 2018, following the existing model prior to the entry into force of the said legal diploma.

For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.

The question 91\_3 "Administrative law cases", includes administrative and tax cases.

The number of Pending cases on 1Jan. that correspond only to tax cases is 47931

The number Incoming cases that correspond only to tax cases is 14895

The number of Resolved cases that correspond only to tax cases is 16828

The number of pending cases on 31 Dec. that correspond only to tax cases is 45998

91.1 Due to increased efficiency of first instance courts, we can notice for the last several cycles a downward trend in respect of the number of pending cases, namely civil and commercial litigious cases

**Q091 (2017):** Q 91.1 - the decrease of pending cases older than 2 years can be explained by the global decrease of these cases. There were no legislative changes that could explain this decrease.

The question 91\_1 "Civil (and commercial) litigious cases", includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.

On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since it is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above (the technical work is still on going), the data does not include civil and labour enforcement cases. The number of enforcement cases for the year 2017 are: Pending cases on 1 Jan. 2017: 804.423; Incoming cases: 148.713; Resolved cases: 249.837; Pending cases on 31 Dec. 2017: 703.299. These numbers correspond to the total number of existing procedures in Portugal in 2017, following the existing model prior to the entry into force of the said legal diploma.

For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.

The question 91\_3 "Administrative law cases", includes administrative and tax cases.

The number of Pending cases on 1Jan. that correspond only to tax cases is 49.943

The number Incoming cases that correspond only to tax cases is 14.707

The number of Resolved cases that correspond only to tax cases is 16.811

The number of pending cases on 31 Dec. that correspond only to tax cases is 47.839

**Q091 (2016):** " Item 91-1 "Civil (and commercial) litigious cases", includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases. On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still on-going aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour enforcement cases. The data on enforcement cases for the year 2016 is: pending cases on 1 Jan. 2016: 934.860; incoming cases: 158.164; resolved cases: 289.402; pending cases on 31 Dec. 2016: 803.622. These numbers correspond to the total number of existing procedures in Portugal in 2016, following the existing model prior to the entry into force of the said legal diploma. For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators. Item 91\_3 "Administrative law cases", includes administrative and tax cases. The separate data on tax cases is as follows: pending cases on 1Jan. - 53.597; incoming cases - 16.445; resolved cases - 20.222; pending cases on 31 Dec. - 49.820. Regarding the decrease in the number of incoming administrative law cases, it results from the decrease in the number of incoming tax law cases, in particular in what concerns misdemeanour appeals".

**Q091 (2015):** The category "civil (and commercial) litigious cases" includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases. On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. It is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred in that table. Just for information, the data on the total number of existing enforcement procedures in Portugal in 2015, following the existing model prior to the entry into force of the said legal diploma is the following: pending cases on 1 Jan. 2015: 1.000.446; incoming cases: 199.359; resolved cases: 272.191; pending cases on 31 Dec. 2015: 927.614.

The category "administrative law cases" includes administrative and tax cases. The separate data on tax cases is the following: pending cases on 1Jan - 47.866; incoming cases - 24.808; resolved cases - 19.164; pending cases on 31 Dec. - 53.510.

**Q091 (2014):** For 2014, data are not available due to technical constraints.

**Q091 (2013):** Portugal took important measures in order to improve the courts clearance rate and backlogs which resulted in an increased number of resolved non-criminal and enforcement cases. Some measures were focused primarily on enforcement cases, since they represent 70% of the total of pending cases. For example, the government adopted measures with the purpose to eliminate cases where there are no assets to execute or no procedural momentum, as well as measures with the aim to limit the number of incoming cases, establishing initial court fees. Courts with excessive number of pending cases were subject to particular assistance of specialized teams.

**Q091 (2012):** As for the number of incoming non-criminal and enforcement cases, the 2012 data reflect the effects of the entry into force of Decree 113-A/2011, which proceeded to a major judiciary reorganization. The figures reflect the corresponding movement of cases between organizational units. As a result, in 2012, a higher number of cases that have not entered ex novo in the Portuguese courts were taken into account. These cases have ended in the unit/court where they left and entered into the new courts where they were transferred.

**Q092 (2013):** On the occasion of the 2010, 2012 and 2013 exercises, it has been specified that the category of civil (and commercial cases) litigious cases includes the case flow of civil justice, labour justice and juvenile justice.

**Q092 (2012):** On the occasion of the 2010, 2012 and 2013 exercises, it has been specified that the category of civil (and commercial cases) litigious cases includes the case flow of civil justice, labour justice and juvenile justice.

**Q094 (2022):** In our view, the increase in the number of incoming and outgoing cases in 2022 compared to 2020 reflects the effects of the Covid-19 pandemic and the resulting lockdown, which had an impact on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

3. "Other criminal cases" - cases involving procedural types provided for in criminal law, which do not fall into the "severe criminal cases" and "minor criminal cases" categories. These are, for example, cases relating to "legal accumulation", "interrogation of foreigners", "judicial expulsion", "compulsory internment" and "habeas corpus".

**Q094 (2021):** The discrepancy should be contextualised, in our view, within the framework of the effects of the Covid 19 pandemic and the consequent confinement, with a reflection on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

**Q094 (2020):** 94.1 - The decrease in the number of cases completed in the category "Total of criminal law cases" between 2018 and 2020 is justified by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation. 94.2 - The decrease in the number of incoming and outgoing cases in the category "Misdemeanour and / or minor criminal cases" between 2018 and 2020 is justified by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation. Still, the number of cases pending on January 1, 2020 reduced compared to the number of cases pending on January 1, 2018, since the number of cases completed from 2018 to 2019 was relatively higher than the number of cases entered in those years. 94.3 - The increase in the number of pending cases older than 2 years in the "Other criminal cases" category in 2020 compared to 2018 may be related to reduced court activity in the year 2020 due to the Covid-19 pandemic situation.

**Q094 (2018):** Regarding the decrease of the numbers comparing to 2016, there were no legislative changes or others that could explain this decrease. Due to increased efficiency of first instance courts, we can notice for the last several cycles a down-ward trend in respect of the number of pending cases, namely criminal law cases.

**Q094 (2016):** There is no specific reason explaining the decrease in the number of incoming and pending criminal cases in comparison with the values of previous cycles. There were no legislative changes or other that could explain this value. However, we can note that cases at first instance in criminal and other areas have been decreasing in the last years. In addition, this decrease may also result from the fact that the number of criminal cases registered by police forces has been decreasing.

**Q094 (2012):** The number of pending minor criminal cases on 1 January and 31 December 2012 decreased due to the fact that the number of misdemeanor and minor criminal resolved cases in 2010 and 2011 was significantly superior to the number of cases filed on both those years. Generally, there is a decreasing trend concerning minor offences.

**Q097 (General Comment):** Since 2007, statistical data concerning pending cases in 2nd instance judicial courts are collected through the courts information systems. Being a dynamic system, allowing regular corrections and up-dating, this data collection may lead to oscillation data from previous years resulting in variations in pending cases.

In Portugal, there are not non-litigious cases in superior courts.

The category "other" does not exist in the higher instances.

It is noteworthy that before 2015, data concerning the total of "other than criminal law cases" did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.

**Q097 (2022):** total: The increase in the number of cases filed in 2022 compared to 2020 reflects, from our point of view, the effects of the Covid 19 pandemic and the consequent lockdown, which had an impact on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

1. The drop in the number of pending cases in 2022 compared to 2020 is related to the fact that in the period from 2020 to 2022 the number of cases completed was higher than the number of cases received.

**Q097 (2021):** The decrease in the number of pending cases is related to the fact that in 2020 the number of cases that were completed in the second instance courts was higher than the number of new cases. This downward trend in pending cases has been constant since 2016.

**Q097 (2020):** The decrease in the number of cases under the category "Civil (and commercial) litigious cases" between 2018 and 2020 is justified by the decrease in court activity in 2020 due to the Covid-19 pandemic situation. The number of cases pending on December 31, 2020 has reduced compared to the number of cases pending on December 31, 2018, since the number of cases completed from 2018 to 2020 was relatively higher than the number of cases entered in those years. The increase in the number of cases completed in Administrative Courts between 2018 and 2019 may be justified by the increase in the number of judicial magistrates working in these courts. Even so, despite this increase in cases completed, there was an increase in the number of cases pending on January 1, 2020 compared to the number of cases pending on January 1, 2018, considering that the number of cases completed from 2018 to 2019 was still relatively lower than the number of cases entered in those years.

**Q097 (2019):** This increase of resolved cases can be explained by the increase on the number of judges in Administrative Courts.

**Q097 (2018):** Regarding the increase in the number of pending administrative law cases comparing to 2016, there were no legislative changes or others that could explain this variation".

**Q097 (2016):** There is no specific explanation as regards the increase in the number of civil and commercial litigious cases pending on 1 January 2016 between 2015 and 2016. The question 97\_3 "Administrative law cases", includes administrative and tax cases.

The number of Pending cases on 1Jan. that correspond only to tax cases is 3.909

The number Incoming cases that correspond only to tax cases is 1.809

The number of Resolved cases that correspond only to tax cases is 1.663

The number of Pending cases on 31 Dec. that correspond only to tax cases is 4.055

**Q097 (2015):** The question 97\_3 "Administrative law cases", includes administrative and tax cases.

**Q098 (General Comment):** When courts handle appeal cases it is not possible to separate appeals that had in their origin a criminal case or a misdemeanor case.

**Q098 (2016):** There is no specific reason explaining the increase in the number of pending criminal cases on 31 December 2016 in comparison with the values of the previous cycle. There were no legislative changes or other that could explain this change.

**Q099 (General Comment):** In Portugal, there are not non-litigious cases in superior courts.

The category "other" does not exist in the higher instances.

It is noteworthy that before 2015, data concerning the total of "other than criminal law cases" did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.

**Q099 (2022):** 1 - 1st column

The increase in the number of pending cases on January 1, 2022 compared to January 1, 2020 is related to the fact that in the period from 2020 to 2021 the number of incoming cases was higher than the number of outgoing cases. In our view, this behavior reflects the effects of the Covid-19 pandemic and the resulting lockdown, which had an impact on the functioning of the courts in 2020 and 2021, considering that in certain periods face-to-face services were interrupted or conditioned.

3 - 1st column

The decrease in the number of cases pending on January 1, 2022 compared to January 1, 2020 is related to the fact that in the period 2020 to 2021 the number of cases closed was higher than the number of cases admitted.

**Q099 (2021):** The increase in the number of cases pending on 1 January 2021 is related to the fact that in 2020 the number of cases brought was slightly higher than the number of cases completed. There is no specific explanation for these values.

**Q099 (2020):** There was an increase in the number of cases pending from 2018 to 2020 at the Supreme Court of Justice, considering that the number of cases that ended from 2018 to 2020 was relatively lower than the number of cases brought in those years. The rise in the number of pending cases in the year 2020 is also partly explained by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation.

**Q099 (2019):** 99 (total) - the increase on the number of pending cases vis a vis 2018 is explained by the fact that the closed cases from 2018 to 2019 were relatively inferior to the number of incoming cases in those years. There were no legislative changes that could explain these numbers.

99.1 - the increase on the number of pending cases vis a vis 2018 is explained by the fact that the closed cases from 2018 to 2019 were relatively inferior to the number of incoming cases in those years. There were no legislative changes that could explain these numbers.

**Q099 (2018):** Regarding the slight decrease in the number of pending civil and commercial litigious cases at the beginning of the year 2018, comparing to 2016, there were no legislative changes or others that could explain this decrease

**Q099 (2017):** Q99.1 - The decrease in the number of pending civil and commercial litigious cases on 31 december 2017 is explained by the fact that the number of resolved cases in 2017 was superior to the number of incoming cases in the same year. There were no legislative changes or other that can explain this decrease.

**Q099 (2016):** In Portugal, there are not non-litigious cases in superior courts.  
The category "other" does not exist in the higher instances.

It is noteworthy that before 2015, data concerning the total of "other than criminal law cases" did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.

The question 99.3 "Administrative law cases", includes administrative and tax cases.

The number of Pending cases on 1Jan. that correspond only to tax cases is 783

The number Incoming cases that correspond only to tax cases is 1.039

The number of Resolved cases that correspond only to tax cases is 946

The number of Pending cases on 31 Dec. that correspond only to tax cases is 876

**Q099 (2015):** The question 99.3 "Administrative law cases", includes administrative and tax cases.

**Q100 (General Comment):** The communicated data reflects the case-flow of criminal cases before the highest instance courts.

"Misdemeanor cases" are never taken to high instance courts.

**Q100 (2020):** The increase in the number of criminal cases pending on January 1, 2020 compared to the number of cases pending on January 1, 2018, at the Supreme Court is justified by the fact that the number of cases completed from 2018 to 2019 was relatively lower than the number of cases entered in those years.

**Q100 (2016):** In Portugal, misdemeanour/minor criminal cases may not be dealt in the Supreme Court of Justice.

**Q100 (2012):** The number of pending cases has decreased between 1 January 2010 and 1 January 2012 due to the fact that the number of resolved cases in that period was superior to the number of incoming cases. Conversely, in the period between 31 December 2010 and 31 December 2012, the number of incoming cases was superior to the number of resolved cases, which resulted in the increase of the number of pending cases. In addition, the number of pending cases at 1 January 2010, as well as the number of incoming cases in 2010 benefited from the effect of the change of the Criminal Procedure Code (Law n.48/2007) that narrowed the access to the High Judicial Superior Council. In the years 2011 and 2012, this effect was diluted, leading to a slight increase of the pending cases on 31 December 2012.

## Romania

**Q091 (General Comment):** In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

**Q091 (2022):** There are no explanations for the discrepancies, as for volumes of cases in the order of hundreds no conclusions can be drawn regarding statistical trends.

**Q091 (2021):** As presented in the comments to the data communicated in the previous CEPEJ cycle, the measures taken in the pandemic period led to an increase in the stock of cases, that explain the number of pending cases on Jan 1st and also some of the values of the pending cases in courts for 2 years. At the same time, as shown in some of the data on resolved cases, although the stock at the beginning of 2021 was considerable by the enhanced activity the number of resolved cases increased

**Q091 (2020):** The decrease in the number of resolved cases in 2020 was caused by the context of the Covid-19 pandemic. The activity of all the courts was partially suspended between the 15-th of March until the end of May 2020 because a state of emergency was declared. During that period only few urgent cases were adjudicated. Some courts instituted preventive measures even before the 15-th of March 2020 which included postponing non-urgent cases. After the state of emergency ended there were still in place measures that affected the normal activity of the courts like: the introduction of specific timeframes for each case, hearings through video conference, a strict limitation of human interaction at the auxiliary compartments of the courts that dealt directly with public like the Archive and the Registry office, so that requests and documents had to be submitted by post, fax or e-mail. These measures affected not only the court staff but all court users that had to adapt to the new circumstances and led to the postponement of many cases. There were also gaps in activity caused by cases of Covid-19 among the personnel of the courts. The same explanation is valid for the increased Disposition time which led to an increased number of pending cases older than 3 years.

**Q091 (2019):** In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2. Referring to the non-litigious business registry cases, the differences in the statistical data are given by the dynamics in the business environment and the interactions at economic level and do not relate to any manifestation at the level of public authority. By referring to total requests that are the object of registration in the trade register, the influence is insignificant. Referring to the administrative cases, the decrease in the number of pending cases in administrative matters can be determined by aspects such as: certain types of cases that have been exhausted before courts (e.g cases on salary rights of public servants initiated in 2010) or cases such as those on pollution taxes that were mostly exhausted before courts and for which administrative procedures have been expressly regulated as to discharge the huge workload in courts that they have generated. In terms of incoming administrative cases, when referring to a decrease in their number, similar reasons that justify the decrease in the number of pending administrative cases should be taken into consideration, namely, for example, those referring to the administrative procedures that have been expressly regulated as to discharge the huge workload in courts (e.g. regarding to the cases on pollution taxes). There is no particular explanation on the increased number of general civil and commercial non-litigious cases in 2019, resulting in a slight decrease of the CR for this category. However, it should be noticed that the operativity and volume of solved cases has increased.

**Q091 (2018):** In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2. Referring to the non-litigious business registry cases, the differences in the statistical data are given by the dynamics in the business environment and the interactions at economic level and do not relate to any manifestation at the level of public authority. By referring to total requests that are the object of registration in the trade register, the influence is insignificant. Referring to the administrative cases, the decrease in the number of pending cases in administrative matters can be determined by aspects such as: certain types of cases that have been exhausted before courts (e.g cases on salary rights of public servants initiated in 2010) or cases such as those on pollution taxes that were mostly exhausted before courts and for which administrative procedures have been expressly regulated as to discharge the huge workload in courts that they have generated. In terms of incoming administrative cases, when referring to a decrease in their number, similar reasons that justify the decrease in the number of pending administrative cases should be taken into consideration, namely, for example, those referring to the administrative procedures that have been expressly regulated as to discharge the huge workload in courts (e.g. regarding to the cases on pollution taxes).

**Q091 (2017):** In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2. "Administrative law cases": indeed, the data are correct, namely there is a significant increase in the number of incoming cases in 2017 that could be explained by the changes brought in 2013 to the Law no. 554/2004 of administrative litigations; the amendments resulted in a high number of second appeals in this matter (by number of second appeals we understand all second appeals under the competence of both the Supreme Court (High Court of Cassation and Justice) and of the courts of appeal, because in this matter some of the cases shall be judged in first instance by tribunals and others by the courts of appeals).

**Q091 (2016):** In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2. The high clearance rate of administrative cases in previous cycles has led to lower significantly the number pending cases. The increase of the number of incoming cases is a consequence of a higher number of requests filed in administrative domain that also triggers an increase in the number of resolved cases. The decrease in the number of non-litigious pending cases as well as "other" pending cases is mostly due to lower number of incoming cases.

**Q091 (2014):** By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators. Accordingly, a case is transferred from the field "stocks" to the field "closed" only when the final decision, including its reasoning is drafted signed and communicated to the parties. For that reason, the number of pending cases on 31 December 2013 cannot be identical with the number of pending cases on 1st January 2014. The initial total number of pending cases has increased as a result of reporting the data into Ecris database. The number of incoming cases and this of resolved cases are comparable from one year to another for the period 2010-2013. The stocks at the end of the period is in relation to the adjustment of the stocks at the beginning of the period, but comparable with 2012. Concerning the number of administrative law cases the workload has constantly decreased starting with 2012. The increase of stocks initially communicated for 2013 comes from the high number of incoming cases in 2012. The final stock of 2014 is lower also because of the lower number of the new cases in 2013. It may also be noticed that the new cases closed in 2013 was higher than in 2012. The high decrease in the number of incoming, resolved and pending administrative law cases on 31 December between 2013 and 2014 is progressive and is caused by the social climate.

**Q091 (2013):** With regard to the category “civil and commercial litigious cases”, because of the delays between hearings that are often very long (usually the first hearing is determined by an electronic system after a long period of time, in relation with the actual workload of judges), the new entered files are not usually finalised within a year.

With regard to the category “civil and commercial non-litigious cases”, all the indicators kept a growing trend in 2012 and 2013. As for the stock of files (pending on 31.12), the increase between 2012 and 2013 is due to the fact that during the same period the number of resolved files has also decreased.

As to the trends observed in 2013 in respect of the “non-litigious enforcement cases” and “non-litigious land registry cases”, data are correct.

As to the category “administrative law cases”, the big differences have always been a reason for concern and continuous analysis. In the report on the status of Judiciary on 2012, it was noted that “in the administrative contentious and fiscal matters, the most of the cases were related to the restitution of the tax for pollution, but also to the obligation of the authorities to register the vehicles, without the payment of the tax for pollution (obligation to perform)”. It should be mentioned that the actions of the legislative have led to the growth of the number of administrative cases in the past 5 years, at tribunals with more than 400% and at the courts of appeal with around 200%.

**Q091 (2012):** With regard to the category “civil and commercial non-litigious cases”, all the indicators kept a growing trend in 2012.

As to the category “administrative law cases”, the big differences have always been a reason for concern and continuous analysis. In the report on the status of Judiciary on 2012, it was noted that “in the administrative contentious and fiscal matters, the most of the cases were related to the restitution of the tax for pollution, but also to the obligation of the authorities to register vehicles, without the payment of the tax for pollution (obligation to perform)”. It should be mentioned that the actions of the legislative have led to the growth of the number of administrative cases to be solved in the past 5 years, at tribunals with more than 400% and at the courts of appeal with around 200%.

**Q094 (General Comment):** There is no classification of severe and less severe offences in the Romanian statistics. In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

**Q094 (2020):** As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases in 2020 an increased Disposition time and an increased number of pending cases older than 3 years. In criminal law cases postponements were recurrent in cases involving persons serving a prison sentence, because generally they have to be brought to every court hearing which was not always possible due to the curantine measures taken by the prison administrations.

**Q094 (2018):** The changes brought to the code of criminal procedure may be among the reasons for the augmentation of the total number of criminal law cases pending on January 1st between 2016 and 2018, namely for e.g. the procedure regarding the prosecutor's decision to discontinue the criminal investigation has to be confirmed by a judges/in court, according to the new provisions.

**Q094 (2016):** In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years; - 1/2-1 year; - 1 - 1 and 1/2 years; - 1 and 1/2 - 3 years; - 3 - 5 years;

In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.

The total number of incoming criminal cases in first instance courts has substantially increased when compared to 2014 data (+41%). These figures have been confirmed by the CEPEJ National Correspondent.

**Q094 (2014):** The significant increase in the number of total pending cases on 1st of January within the period 2012 – 2014 is due to the new way of counting the statistical data by the application Statis. The time of reaching a decision is not equivalent to the time of drafting the decision. For the present evaluation, files where a decision is reached but is not drafted yet are not counted.

**Q097 (General Comment):** It is worth specifying that, since 2010, the first table (question no. 91) centralizes all the first instance cases (irrespective of the level of the courts), the second table (question no. 97) centralizes all the second instance cases – appeal (irrespective of the level of the court) and table no. 3 (question no. 99) shows the statistical data on all second appeal cases (last instance cases) from all courts (irrespective of their level).

In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

**Q097 (2022):** Due to the large number of magistrates retiring in 2022, the number of solved cases decreased, as a result the stock of files at the end of the year increased, while the number of newly entered cases followed an upward trend compared to the previous reporting cycle.

**Q097 (2021):** As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases, therefore the the stock with old cases increased in some cases.

**Q097 (2020):** As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases in 2020 an increased Disposition time and an increased numer of pending cases older than 3 years.

**Q097 (2019):** In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

**Q097 (2018):** In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

The increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts in judging appeals and second appeals has changed. Accordingly, the number of appeals in the New Civil Procedural Code includes the number of appeals and second appeals from the Old Code and shows continuous increase since the entry into force of the provisions.

**Q097 (2017):** In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

The increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts in judging appeals and second appeals has changed. Accordingly, the number of appeals in the New Civil Procedural Code includes the number of appeals and second appeals from the Old Code and shows continuous increase since the entry into force of the provisions.

**Q097 (2016):** In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

The general increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts on judging appeals and second appeals has changed. Accordingly, the number of appeals in the new Civil Procedure Code includes the number of appeals and second appeals from the old Code and shows continuous increase after 2014.

**Q097 (2014):** By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators. Accordingly, a case is transferred from the field “stocks” to the field “closed” only when the final decision, including its reasoning is drafted signed and communicated to the parties. For that reason, the number of pending cases on 31 December 2013 cannot be identical with the number of pending cases on 1st January 2014.

The meaningful increases in figures observed between 2012 and 2014 are due to the fact that, in relation to the appeal, beyond the differences recorded in Statis, there was a change of jurisdiction in civil matters. Accordingly, the appeal (apel) became the main instrument to challenge a decision.

**Q097 (2013):** With regard to the category “civil and commercial litigious cases”, the observed evolutions between 2010 and 2013 are due to the fact that following the changes in the procedural provisions in the new codes, the jurisdiction of the courts on judging appeals and second appeals has changed. Accordingly, the number of appeals in the new Civil Procedure Code includes the number of appeals and second appeals from the old Code. Thus, even if the number of solved files in second instance is higher in 2013 than in the previous year, the number of new appeals (incoming cases in second instance) is higher. This explains the growth of the workload in the last period of time on these courts, although previously the trend was descending.

With regard to the category “civil and commercial non-litigious cases”, the analysis of data and the noticed evolutions and variations between 2010 and 2013 should be qualified. In fact, the figures are not so high and the growth and regress of a few cases during one year lead to relatively important variations. For example, a growth of only 8 cases at the end of the year will reflect a growth of 35%. The same reasoning should be applied with regard to the category “non-litigious land registry cases” where a growth of only 122 cases at the beginning of the year will reflect a growth of over 40%.

In respect of the category “non-litigious enforcement cases”, the considerable increases between 2010 and 2013 with regard to all the items (pending cases, incoming and resolved) were the consequence of the new distribution of competences between courts. Since 2013, all the enforcement cases are in the jurisdiction of the courts of appeal. The number of cases in third instance decreased correlatively.

Following the changes in the procedural provisions made in 2013, the second appeal, as means of review in the field of non-litigious business registry, became appeal, in accordance with the new principles of the Civil Procedure Code as regards the means of review.

**Q098 (General Comment):** There is no classification of severe and less severe offences in the Romanian statistics.

**Q098 (2016):** In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;  
- 1/2-1 year;  
- 1 - 1 and 1/2 years;  
- 1 and 1/2 - 3 years;  
- 3 - 5 years;

In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.

**Q098 (2014):** The significant increase of the total of criminal cases in respect of all the enumerated categories (pending, incoming and resolved cases) in 2014 is due to the entry into force of the new Codes and the changes of jurisdiction.

**Q098 (2012):** The decrease of the total of criminal cases in 2012 in respect of all the enumerated categories (pending, incoming, resolved cases) is due to the entry into force of Law n° 202/2010, the so called "small reform law". Consequently, the legal remedy of appeal (appeal on the merit) has been abolished in several criminal matters, remaining only the "recurs" ("appeal on law").

**Q099 (2022):** There are no explanations for the discrepancies, anyway for volumes of cases in the order of hundreds no conclusions can be drawn regarding statistical trends.

**Q099 (2021):** The increase in Pending cases older than 2 years for administrative cases could be explained both by the significant increase in 2017 of the number of incoming cases of this type and by the limited capacity for resolving cases during the pandemic crises (from 30038 in 2019 to 26800 in 2020); therefore, the effect shall be seen in terms of statistics after 3 years in the number of pending cases (according to our statistical application the pending cases are registered in the category cases pending for more than 3 years).

**Q099 (2019):** In 2017 there was a significant increase in the number of incoming administrative cases explained by the modifications in terms of procedure, namely amendments regarding the jurisdiction for administrative cases brought in 2013 that might have generated later effects in terms of number of "second appeals" (peculiarity of our system). Since 2017 and the described peak, the number of incoming administrative cases is decreasing.

**Q099 (2018):** The differences compared to the previous cycle are due to changes brought by the Constitutional Court's decisions to the interpretation given by the High Court of Cassation and Justice to the legislation regarding the increasing number of incoming civil litigious cases and the decreasing number of civil litigious cases pending for more than 2 years.

**Q099 (2017):** In the national Statis system, the cases are recorded on different categories of pending cases. So, for the last column, there are mentioned the numbers for cases pending for more than 3 years. The increase in the number of incoming administrative cases may be explained by the modifications in terms of procedure, namely modifications regarding the jurisdiction for administrative cases brought in 2013 that might have generated later effects in terms of number of "second appeals" (peculiarity of our system); moreover, there should be mentioned that the number of second appeals in this question, refers to both the second appeals judged by the supreme court (High Court of Cassation and Justice) and by the courts of appeals, aspect that is valid even for the previous cycles.

**Q099 (2016):** In the national Statis system, the cases are recorded on different categories of pending cases. So, for the last column, there are mentioned the numbers for cases pending for more than 3 years. As result of the changes in the procedural provisions in the new codes; the jurisdiction of the courts on judging appeals and second appeals has changed and some of the cases that were under the jurisdiction of the High Court are now under the jurisdiction of the courts of appeal Consequently the number of cases in Supreme court shows significant decrease in all categories.

**Q099 (2014):** By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators and offers data with greater value for 2014. This partly explains the considerable increase of the number of pending administrative cases on 1st January between 2012 and 2014. Besides, the number of incoming cases in 2013 was higher than in 2014.

**Q099 (2013):** In respect of the administrative law cases, until 2013, there was only a second appeal that is encompassed in the answers to question 99.

**Q100 (2022):** according to the application for statistics

**Q100 (2021):** according to the application for statistics

**Q100 (2018):** The increase in the total of criminal law cases incoming between 2016 and 2018 can be explained by the re-trial / re-examination of a high important number of cases (to be noted that none of these cases were new) according to the Constitutional Court's decision that brought changes to the interpretation given by the High Court of Cassation and Justice in the matter of judicial organisation.

**Q100 (2016):** The jurisdiction of the courts on judging appeals and second appeals has changed and some of the cases that were under the jurisdiction of the High Court are now under the jurisdiction of the courts of appeal. Consequently, the number of cases in the Supreme court shows a significant decrease in all categories.

In the national statistics system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;

- 1/2-1 year;

- 1 - 1 and 1/2 years;

- 1 and 1/2 - 3 years;

- 3 - 5 years;

In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.

**Q100 (2014):** The significant decrease between 2012 and 2014 of the total of criminal cases in respect of the following categories – incoming, resolved and pending on 31st December, is due to the entry into force of the new Codes and the changes of jurisdiction.

**Q100 (2012):** The important increase of the total of criminal cases pending on 1 January 2012 is the consequence of the entry into force of Law n° 202/2010. Consequently, the legal remedy of appeal (appeal on the merit) has been abolished in several criminal matters, remaining only the “recurs” (“appeal on law”). It resulted in an increase of the number of “recurs”.

## Slovak Republic

**Q091 (General Comment):** For 2016 data, new methodology was implemented based on the working group's conclusions and CEPEJ mission's recommendation (06/2016). Former reporting structure was not consistent with the methodology of CEPEJ, which could lead to inappropriate comparison of Slovak Republic (SR) with other countries. Also, the Ministry of Justice (MoJ) realized that evaluation of courts' performance by disposed and unresolved (decided and undecided) cases is discriminating SR in comparison with other countries in European Union (EU) as this methodology is not counting a decision of first instance court as disposed until the case becomes valid. This results into reporting such case as unresolved despite respective court has already made a decision and it is no longer in its disposition how - and more importantly when - the case will be resolved (disposed) by the second instance court. This is the nature of reporting of many “unresolved” cases on courts despite court already decided, in fact. Newly proposed way of reporting extracts the numbers of decided cases in respective court instances from “unresolved” and allocates these numbers to those court instances that made an actual decision in respective time. This means that decision validity state is not being awaited for as it could potentially contain an appeal and thus also a time that a case spends on second instance court. Upon decision's validity the case would become „disposed/resolved“ at the first instance court but most probably it would not be disposed in the same period when it was decided by the (first instance) court. This past methodology (applied by 2016) resulted (visually) in accumulation of unresolved cases while some of them were already decided by first instance court.

**Q091 (2022):** Discrepancy between the pending cases on 31 Dec. 2021 and the pending cases on 1 Jan. ref. year in the line 1. and Total is due to an administrative error caused by the court. In the rest lines, there is no discrepancy between the pending cases on 31 Dec. 2021 and the pending cases on 1 Jan. ref. year (compared with the previous year).

A significant increase in the Business registry cases category in 2022 (comparing incoming and resolved to 2020) is related to legislative changes to Act no. 530/2003 Coll. on the Commercial Register. The amendment to the law - included the birth-number among the recorded data with the aim of unambiguously identifying natural persons registered in the business register. In the case that it was not possible to add this data automatically from other reference sources into the business register, it had to be added based on a court proposal submitted by September 30, 2022 (increase in incoming cases).

Other discrepancies are reflection either of the submission activity of the public (incoming cases) or productivity of the judicial system itself - in resolved cases.

**Q091 (2021):** An erroneous reporting of decided cases at the courts in 2020 had to be corrected in Pending cases at 1st January 2021 by 1128 cases (line 2. and Total of other than criminal law cases).

2.2.2 Non-litigious business registry cases - the increase in cases coming to the courts in 2019 due to the new legislation gradually stabilized over the course of the year 2020, 2021.

The category “other” encompasses bankruptcy and debt restructuring cases, including the debt elimination procedure (bankruptcy of the natural persons), inheritance proceedings and other. In covid years especially the number of cases inheritance proceedings rose.

3. Administrative law cases - new reform of Administrative courts was expected and the clearance rate of the regional courts dropped to 80 %.

**Q091 (2020):** Exolanation of the discrepancies:

In the category 2.2.3. Other registry cases was added register "RPVS" - Register of public sector partners. The Register of public sector partners has the character of a register of legal and natural persons, which receives from the state, local-government and other public sector entities public financing or property above the limit specified by law. The persons who conclude a contract, framework agreement or concession contract pursuant to public procurement regulations, healthcare providers and so on. The classification of the registry in category 2.2.3. was consulted with CEPEJ organization.

In the category 2.2.2 and consequently in the category 2.2. - at the end of year 2019, the incoming cases into the business register was enormously increased due to new applied legislation, which caused high level of the pending cases at the beginning of the year 2020.

Administrative law cases - keeps the high level of pending cases.

Non-litigious business registry cases - the cause of the increase is explained below:

The Commercial Code (Act No. 513/1991 Coll) was amended by the Act No. 390/2019 Coll, which became effective from the 1st of October 2020. This amendment brought following changes (also changes to the Commercial register):

- 1.From October 1, 2020, it is possible to submit an application for registration of data in the Commercial Register only in electronic form (including objections to the refusal of registration )
- 2.Obligation of the company's founders to submit the consent of the real-estate owner to setting up a registered seat of the company with verified signature of the owner.
- 3.The list of the information is being expanded in order to identify these persons more precisely. In the case of natural persons, a date of birth and a birth number must be given, if it was assigned. In the case of legal persons, their registration number must be given. The existing companies are required to complete this information by September 30, 2021.
- 4.The amendment also covers one of the reasons why the court is entitled to dissolve a company without liquidation. It is a breach of the obligation filing the financial statement into the collection of deeds within the specified period of 9 months from its preparation. This means, that if a company doesn't deposit this financial statement in the collection of documents within 15 months from its preparation, the registry court will decide on its dissolution without a proposal.

The other discrepancies are mainly caused by the situation in 2020 due to Covid-19 pandemic situation.

The emergency situation due to COVID 19 has been ongoing since March 2020. Since then, hearings have been held to the necessary extent, which is determined by a decree of the Ministry of Justice. The decree was amended 4 times according to the development of the epidemic situation.

Thus, the courts were not closed in 2020, but operated in a restricted regime, and that restricted regime depended on the development of the epidemic situation. There were situations where hearings were organised to the absolute minimum, for example in April 2020, almost no hearings were held. Since May 2020, it has been up to the courts to ensure hearings to the extent necessary and in accordance with other regulations related to the pandemic situation.

In several measures in 2020, the Ministry of Justice recommended that courts organize work so that court staff and judges work from home.As for an access to the file for lawyers, it was provided.

**Q091 (2019):** The changes in the total number of Pending cases on 1 Jan. ref. year - the courts, which did not comply with the established methodology for reporting bankruptcy and restructuring, corrected the data in 2019 and thus the initial state of 2019, which causes differences compared to 2018 pending cases. Similar situation is in the other non-litigious cases, where the methodology for the cases (acceptance of things into custody of court) was changed due the legislation changes in the court register during the year 2019.

Line 2; 2.1;2.2;2.2.2: According to the act. no. 390/2019 Coll. on the end user of benefits for entrepreneurs, the entrepreneurs became obliged to make the corresponding entry in the Business Register by 31 December 2019. The increase in new-coming cases was mainly in the last three months of 2019 by 117 thousand cases in business register courts.

The deadline for processing proposals for the registration of end-user benefit data by the court has been postponed to 30 June 2020, due to the large expected new-coming cases of business records at the end of the year.

**Q091 (2018):** 1. Differences in the initial states of things as of 1 January 2018 different from the final states as of 31 December 2017 are due to the introduction of electronic data collection through the Data Collection Application (hereinafter referred to as AZU). When introducing electronic data collection in 2018, the courts were allowed to record the actual state of pending cases as of 1 January 2018 with the aim of not transmitting any inaccuracies from paper collection of previous periods. These differences should not occur in the next year due to the introduction of automatic transfer of the number of undecided cases from the end of the previous period in the electronic data collection.

2. Another reason for the differences in the opening cases as of 1 January 2018 from the closing stocks as of 31 December 2017 is the change in the classification of some court registers between rows in the table in question 91. The change of classification was carried out on the basis of the recommendation of the national correspondent for the SR and after its thorough consultation with the members of the working group GT CEPEJ - EVAL

**Q091 (2017):** The data in the table are not horizontally consistent. This is caused by the fact, that the data on pending cases on 1. January 2017 (the same as data on 31. December 2016 given for the previous cycle) were collected in a one-shot collection for the Justice Scoreboard 2017 and were not bound by control patterns of horizontal consistency as it is in the new electronic data collection active since January 2018. The improper initial number of unresolved cases taken from a "paper" collection of data in 2016 caused such differences. Likewise, the transition from 2015 final numbers to 2016 initial numbers were counted up manually from paper collections. We cannot therefore consider the initial numbers as of 1 January as reliable. The transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the ongoing project between CEPEJ and Ministry of justice of the Slovak republic.

There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. Some inconsistencies in data between the old and new system persist.

The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.

As to administrative cases, until the 30. June 2016 the case-jurisdiction in administrative matters in the first instance stipulated by law was divided between Regional courts and the district courts. The general rule was, that the general jurisdiction in first instance lies at the Regional courts. However, there was a small number of proceedings (enumerated in law) where the District courts had the jurisdiction to act as a court of first instance. In reality, more than 90% of all administrative cases were tried by the Regional court as the courts of first instance.

Since 1. July 2016 the new Code of the administrative procedure came into force. According to this new law the Regional courts have the exclusive jurisdiction to try administrative cases as the courts of first instance.

As for the appeal procedure, there is the general rule that the appellate court is the court one level above in the structure of the court system. It means that the appeals against the decisions of the District courts are processed at the Regional courts and the appeals against the decisions of Regional court are processed at the Supreme court as the court of appeal.

In our data for administrative cases in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. Those appeal proceedings were indicated in table to Q 97

All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in the table to Q 99

**Q091 (2016):** The new structure of data presented by the Ministry of Justice is the reason for the discrepancies and incompatibility of the data with the previous cycles. As regards the category "general civil non-litigious cases" we notice a decrease of incoming cases as of the year 2013.

In this cycle the succession cases were classified as "Other non litigious cases" while in previous years they were classified as "general civil (and commercial) non litigious cases."

**Q091 (2014):** The increase in the number of incoming and pending other than criminal law cases at all levels of the judiciary is due to the increase in the number of litigious cases. The Slovak judicial system for a several years faces significant increases of claims filed with the courts by debt-collecting companies and non-bank loan companies against consumers, as well as class actions of one private company against the State for alleged damages etc. The higher number of resolved administrative cases was achieved by the intensive effort to reduce the existing backlogs in administrative matters.

**Q091 (2013):** The Slovak judicial system was facing different types of claims which massively loaded courts of all instances. For example, there was a huge number of legal actions arisen from the loans provided by the so called "non-bank loan companies" where courts had to consider constant violations of the consumer protection law. Besides, there was a huge number of class actions against the State, carried out by one of the non-bank companies for alleged damages etc. In spite of the positive trend concerning the increase of the number of total resolved cases, the number of incoming cases was increasing even more, causing backlogs.

**Q091 (2012):** The number of pending enforcement and business registry cases was gradually and considerably decreasing over the period 2011-2012. As concerns the variation noticed in respect of the number of incoming and resolved administrative law cases, it was due to the fact that in 2010 a meaningful number of specific collective claims were filed and resolved.

**Q092 (General Comment):** The category "civil (and commercial) non-litigious cases" includes all cases arisen from legal relationships regulated by family law (maintenance cases, custody of the child, visiting rights, guardianship, divorce cases with the ruling on rights and obligations towards the minor child etc.), cases related to assessment of the legal capacity of natural persons, reminder procedure (electronic payment orders).

**Q093 (General Comment):** The category "other" encompasses bankruptcy and debt restructuring cases, including the debt elimination procedure (bankruptcy of the natural persons), issuing of the enforcement permission for the enforcement agents, enforcement of court rulings on the visiting rights to minor child and enforcement of court fees receivables.

**Q094 (General Comment):** The statistical data collected by the Ministry of Justice of the Slovak Republic does not allow the categorization of the criminal matters according to the types of criminal offences as defined in explanatory note.

**Q094 (2022):** Among "Other criminal cases" it is possible to include, for example, motions regarding the expungement of a conviction, motions regarding the imposition of protective measures and the execution of detention, motions related to custody and the execution of a sentence, motions for conditional release, motions related to probation and mediation, requests from domestic and foreign authorities in criminal cases, motions that are decided in preliminary proceedings, etc. Other discrepancies are reflection either of the submission activity of the prosecutors or productivity of the judicial system (judicial staff) in resolved cases.

**Q094 (2020):** Sources: Analytical center, Ministry of Justice of the Slovak republic

**Q094 (2018):** There is a big discrepancy between pending cases on 31st of December 2016 and "Pending cases on 1st of January 2018". This is caused of two factors: The first one and major is in delivered data in 2016. In the 2017 was the data collection still in paper form and in the old methodology, as we explained already. In the same time the project Audit with the experts from CEPEJ was already influencing the newly growing Analytical center and motivated as to try collect pending cases for 2016 backward. Since there were no electronic tools for collecting data available neither for courts nor for Ministry of Justice; the result were obviously full of mistakes. Analytical center had no chance to make data check, since pending cases were never collected before, so we had to rely on the courts data without possible checkup. After 2017, when was already available electronic tool (AZU) for collecting data from courts with implemented controlling formulas, then the mistakes from previous manual collection have occurred significantly especially in the first instance criminal agenda. The second factor is, that the Clearance rate dropped from 106, 52% in 2016 to the level 101, 81% in 2018.

**Q094 (2016):** For 2016 data, new methodology was implemented to make the reporting structure consistent with the CEPEJ methodology and leads to better comparison of Slovak Republic (SR) with other countries. The previous methodology was not counting a decision of first instance court as resolved until the case becomes finalised at last instance. This resulted in reporting such case as unresolved despite respective court has already made a decision. This is the nature of reporting of many "unresolved" cases on courts despite court already decided, in fact. New way of reporting extracts the numbers of decided cases in respective court instances from "unresolved" and allocates these numbers to those court instances that made an actual decision in the reference period that is in correspondence with CEPEJ methodology and better comparable with other countries.

**Q097 (2022):** The decline in litigious and non-litigious cases has been gradual since 2017. This phenomenon was not analysed in more detail. The decrease may be caused by the impact of the activity of courts of first instance as well as the behaviour of participants in court proceedings - a lower number of appeals.

There is some small amount of non-litigious registry cases, but they can not be monitored separately, they are part of the bigger group.

In August 2021, the Supreme Administrative Court of the Slovak Republic was established as a separate institution and it took over all the administrative law cases of the Supreme Court of the Slovak Republic. The Supreme Administrative Court of the Slovak Republic acts as second instance court in the administrative cases.

Source: [https://www.nssud.sk/web\\_object/stat\\_2022.pdf](https://www.nssud.sk/web_object/stat_2022.pdf)

**Q097 (2021):** Explained in the table.

**Q097 (2020):** More significant decline of incoming cases and resolved cases as well in the Second instance courts as a result of a pandemic situation. In the category 3. Administrative law cases was only one pending case on 1 January 2020, which was resolved during the year and no case came into the Second instance courts in the year 2020.

The number of non-litigious business registry cases is included in "general civil and commercial non-litigious cases".

**Q097 (2019):** The decrease in the number of cases (especially incoming and pending on 31 December) was not analysed yet but we can confirm that there were no significant changes in the system or legislation.

**Q097 (2018):** The discrepancies in the number of pending cases as of 1 January 2018 in comparison with the final numbers as of 31 December 2017 were caused due to the introduction of electronic data collection through the Data Collection Application (hereinafter referred to as AZU). When introducing the electronic data collection in 2018, the courts were allowed to record the actual state of pending cases as of 1 January 2018 with the aim of not transmitting any inaccuracies from paper data collection of previous periods. These differences should not occur in the next year, given the introduction of automatic transfer of the number of undecided cases from the end of the previous period in the electronic data collection

**Q097 (2017):** As regards the trends of the decrease in all monitored indicators, the decrease in caseload at first instance courts has a secondary impact on the drop in caseload at the courts of appeal. We did not analyse in details the cause of decrease and the detail structure of caseload. The decrease of caseload has the positive effect of raising the CR to 121% and decreasing of total number of pending (unresolved) cases.

The data in the table are not horizontally consistent. This is caused by the fact, that the data on pending cases on 1. January 2017 (the same as data on 31. December 2016 given for the previous cycle) were collected in a one-shot collection for the Justice Scoreboard 2017 and were not bound by control patterns of horizontal consistency as it is in the new electronic data collection active since January 2018. The improper initial number of unresolved cases taken from a "paper" collection of data in 2016 caused such differences. Likewise, the transition from 2015 final numbers to 2016 initial numbers were counted up manually from paper collections. We cannot therefore consider the initial numbers as of 1 January as reliable. The transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the on-going project between CEPEJ and Ministry of justice of the Slovak republic.

There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. Some inconsistencies in data between the old and new system persist.

The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.

As to administrative cases, since 1 July 2016 the appeals against the decisions of the District courts are processed at the Regional courts and the appeals against the decisions of Regional court are processed at the Supreme court as the court of appeal.

In our data for administrative cases in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. Those appeal proceedings appear in this table. All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in the table to Q 99

**Q097 (2016):** The new structure of data presented by the Ministry of Justice influenced also the second instance. Registry cases are all included in 2.1 and can not be separated by categories.

**Q097 (2014):** In respect of the variations observed in 2014 with regard to the category "administrative law cases", it is worth mentioning that the low number of cases makes small absolute variation large in relative terms.

**Q097 (2013):** For 2013, a general remark was provided in respect of questions 91, 97 and 101, explaining that there were no specific reasons justifying the variations in the numbers of cases of the particular categories. It was stressed that the Slovak judicial system was facing different types of claims which massively loaded courts of all instances. For example, there was a huge number of legal actions arisen from the loans provided by the so called "non-bank loan companies" where courts had to consider constant violations of the consumer protection law. Besides, there was a huge number of class actions against the State, carried out by one of the non-bank companies for alleged damages etc. The capacity of the court staff to resolve all of the filed cases in the appropriate time period was limited despite the measures which have been taken. In spite of the positive trend concerning the increase of the number of total resolved cases, the number of incoming cases was increasing even more, causing backlogs.

**Q098 (2022):** In the line "Total" of the table in Q 98 are data for all court registers in the criminal appeal agenda. Among the category "Other criminal cases" are included for example cases in which the appeals court decides on jurisdictional disputes, objections of bias, on complaints for inaction and other complaints filed after the filing of the indictment, etc.

Sources: Analytical center, Ministry of Justice of the Slovak Republic.

**Q098 (2020):** Sources: Analytical center, Ministry of Justice of the Slovak republic

**Q098 (2016):** The 2016 data are based on the new methodology which may cause inconsistency comparing to previous cycles. The 2014 data are based on the methodology that covered only two main criminal court registers, while the 2016 data are based on the methodology that covers more than two criminal court registers. This makes the basic and key difference.

**Q099 (General Comment):** The collected statistical data for the Supreme Court do not distinguish the litigious and non-litigious cases. In the civil and commercial matters the Supreme court decides primarily on the applications for appellate review on legal questions. In the commercial cases it decides also in the appellate procedure against the decisions of the Regional courts as the courts of first instance.

**Q099 (2022):** The collected statistical data for the Supreme Court do not distinguish the litigious and non-litigious cases. Information delivered by the Supreme Court of the Slovak Republic available on internet <https://www.nsud.sk/data/att/f59/688231.22d3e0.pdf>. The new Supreme Administrative Court of the Slovak Republic took over the Administrative law cases from the Supreme Court .

Data for new Supreme Administrative Court of the Slovak Republic are not mentioned in the table, since the table is only for the Supreme Court of the Slovak Republic.

The data for new Supreme Administrative Court of the Slovak Republic in 2022 were:

Pending cases on 1 Jan. ref. year - 2106

Incoming cases - 2015

Resolved cases - 1889

Pending cases on 31 Dec. ref. year - 2232

Pending cases older than 2 years from the date the case came to the Supreme Court - 103

Source: [https://www.nssud.sk/web\\_object/stat\\_2022.pdf](https://www.nssud.sk/web_object/stat_2022.pdf)

**Q099 (2021):** As to the number of administrative law cases, in August 2021, the Supreme Administrative Court of the Slovak Republic was established as a separate institution and it took over all the administrative law cases of the Supreme Court of the Slovak Republic. Therefore, the above-mentioned figures of the administrative law cases cover only the period from January to July 2021.

**Q099 (2020):** Decline of incoming cases and resolved cases as well in the Supreme court as a result of a pandemic situation.

**Q099 (2019):** No cases in the category other cases

Line 1: A significant drop in the number of cases for 2019 compared to 2018 has been caused by a massive decrease of incoming cases of a certain plaintiff - Pohotovost' s. r. o., a legal person which back then overwhelmed the Supreme Court's Civil and Commercial law divisions with thousands of appeals and caused an abnormal caseload. Therefore, the indicators for 2019 should be considered as regular average numbers. Compared to e.g. 2018 and previous years which were rather exceptional.

**Q099 (2018):** The decrease in numbers of both incoming and resolved other than criminal cases may be explained by two important issues. First of all this is the complex change of the Civil and Administrative court procedure by introducing the new procedural rules which came into force since 1 July 2016. The other reason is the decrease of the caseload at the lower courts which naturally influence the number of cases at the Supreme court level.

**Q099 (2017):** The decrease in numbers of both incoming and resolved cases must be understood in connection with the data for previous years. As we explained in previous cycles (data 2014, 2015, 2016), at the level of the Supreme Court of the Slovak Republic there was the enormous increase of incoming (and resolved) cases related to consumer protection in civil and enforcement procedure. We recorded in previous years thousands of recurring submissions of several private loans' companies. These submissions started to be processed quicker and subsequently, its number dropped. The similar explanation is relevant also for the administrative cases.

As regards the variations, some inconsistencies in data between the old and new system persist, and they can be explained as the transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the on-going project between CEPEJ and Ministry of justice of the Slovak republic.

There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.

As to administrative cases, in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in this table.

**Q099 (2016):** The enormous increase of the incoming cases is related to consumer protection in civil and enforcement procedure.

**Q099 (2013):** For 2013, a general remark was provided in respect of questions 91, 97 and 101, explaining that there were no specific reasons justifying the variations in the numbers of cases of the particular categories. It was stressed that the Slovak judicial system was facing different types of claims which massively loaded courts of all instances. For example, there was a huge number of legal actions arisen from the loans provided by the so called "non-bank loan companies" where courts had to consider constant violations of the consumer protection law. Besides, there was a huge number of class actions against the State, carried out by one of the non-bank companies for alleged damages etc. The capacity of the court staff to resolve all of the filed cases in the appropriate time period was limited despite the measures which have been taken. In spite of the positive trend concerning the increase of the number of total resolved cases, the number of incoming cases was increasing even more, causing backlogs.

**Q100 (General Comment):** The collected statistical data does not distinguish between the two types of criminal offences.

**Q100 (2022):** Information delivered by Supreme Court of the Slovak Republic available on internet  
<https://www.nsud.sk/data/att/f59/688231.22d3e0.pdf>

**Q100 (2018):** The decrease in incoming and resolved cases is influenced by the decrease of the caseload at the lower courts

**Q100 (2016):** During 2015 there were more pending cases created

## Slovenia

**Q091 (General Comment):** Category 1. Category 1. 'Civil (and commercial) litigious cases' at first instance includes: civil litigious cases at local and district courts, various civil cases at local and district courts, commercial litigious cases at district courts, labour law cases at labour courts,

social law cases at social court, various labour and social law at labour and social courts, insolvency cases including compulsory composition, bankruptcy of legal person, bankruptcy of physical person, bankruptcy of inheritance, compulsory dissolution, simplified compulsory composition and preventive restructuring at district courts.

The number includes the labour law and social law cases (before specialised labour and social law courts) due to their similarity to litigious cases in material and procedural aspects.

Q91 - Category 2.1. 'General civil (and commercial) non-litigious cases': see Q92.

Q91 - Category 2.2.1. 'Non litigious land registry cases' at first instance includes (at local courts): land registry cases, decisions on appeals at first instance and various land registry cases.

Q91 - Category 2.2.2 'Non-litigious business registry cases ' at first instance includes (at district courts): business registry cases and various business registry cases.

Q91 - Category 2.2.3. 'Other registry cases': No cases were included in this category.

Q91 - Category 2.3. 'Other non-litigious cases': No cases were included in this category.

Q91 -Category 3. 'Administrative law cases' at first instance include (at the Administrative court): - administrative cases and various administrative cases.

Q91 - Category 4. 'Other cases': see Q93.

The above listed cases are classified into CEPEJ categories slightly differently over the years.

Q 91, 97, 99, 101 - Inconsistencies:

Inconsistencies within the tables are possible due to the peculiarity of the Supreme Court's Data Warehouse (used in the Slovenian judiciary as the official source of data since January 1st 2012, at every court, and for providing data to the Ministry of Justice and at the Judicial Council).

It is a "live" system (dynamic reporting), meaning that the reported figures for a specific date or period of time inevitably vary for different reasons (e.g. the data was not promptly entered into the CMS; in some instances, the decision, in which category some specific new cases should be included, may be subsequently changed and when data are unified some figures change; there is also the possibility that a mistake was done when entering the data and was later detected in the quality check and corrected.)

In Data warehouse reports, every category (column in the table) is calculated (counted) separately, therefore the „Pending on 31 Dec“ may not equal to the formula (Pending 1 Jan + Incoming – Resolved) due to fore mentioned influences."

**Q091 (2022):** 2.2. Registry cases and 2.2.2. Land Registry cases - Pending cases on 31 Dec – increase by 123%/143%: In 2020, the number of incoming cases decreased due to Covid-19 pandemics and its effect on the sales of real estate. Consequently, the number of pending cases at the end of 2020 decreased. In 2022, it returned to usual level. 2.2.2. Business Registry cases – Pending cases older than 2 years – increase by 300%: Please note the small number of cases (4 cases in 2022), compared to incoming/resolved cases (approx 43.000 per year).

3. Administrative cases – Pending cases older than 2 years – increase by 149%:

In previous years, the Administrative court was faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (e.g. 24,5 % of incoming cases in 2017), as well as some new competences. This caused an increase in the number of pending and resolved cases. In the aforementioned cases, the court was also faced with new legal and factual issues, as well as administrative difficulties. In recent years, the Administrative court is also dealing with a considerable number of priority or urgent cases (e.g. asylum seekers), which means a longer waiting line for “regular” cases. Though administrative and managerial actions have been taken, the number of (older) pending cases has increased due to the aforementioned difficulties and the overburdening of the court.

4. Other cases – Pending cases on 31 Dec – decrease by 46%:

Due to the limitation of operation of courts due to Covid-19 pandemics in 2020, the number of pending cases was unusually high. In 2022 it returned to usual level. 4. Other cases – Pending cases older than 2 years - increase by 86%:

The majority of cases in this category are enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court of Ljubljana – exclusive jurisdiction). This is automated and fast procedure (average duration is between 1 and 2 months), however some of those cases could not be completed due to legal reasons (e.g. waiting for inheritance cases regarding parties to finish). Please note the small number of cases (approx. 100 cases), compared to incoming/resolved cases (approx 120.000 per year).

**Q091 (2021):** 2.2 Registry cases and 2.2.1 Non litigious land registry cases - Pending cases on 1 Jan.: decrease by approx. 50%

In 2020, the number of incoming cases decreased due to Covid-19 pandemics and its effect on the sales of real estate.

Consequently, the number of pending cases at the beginning of 2021 decreased. 2.2 Registry cases and 2.2.1 Non litigious land registry cases - Incoming cases/Resolved cases: increase by approx. 25%

In 2021, the number of incoming (and consequently resolved) cases increased, most likely due to the loosening of Covid-19 restrictions and its effect on the real estate market.

2.2 Registry cases and 2.2.1 Non litigious land registry cases - Pending cases on 31 Dec.:

In 2021, the number of incoming and resolved cases increased (see above). However, the increase in resolved cases was slightly lower, hence the increase in pending cases at the end of the year (Disposition time in register cases is low – approx. 0,2 months; ratio of Resolved vs. Pending cases is approx. 65:1).

2.2.2. Non litigious business registry cases – Pending cases older than 2 years from the date the case came to the first instance court: decrease by 200%:

Please note the small (absolute) number of cases (less than 5 cases).

4. Other cases - Pending cases on 31 Dec.: decrease 38%

The majority of cases in this category are enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court in Ljubljana – exclusive jurisdiction), where the trend of decrease of pending cases is observable in 2021 and 2022. More factors could have contributed to the decrease, but no specific major reason can be identified.

4. Other cases - Pending cases older than 2 years: increase by 58%
