

# BDI – The Voice of German Industry

An industry roadmap for the market introduction of renewable and decarbonised gases

Dr. Carsten Rolle, Head of Department, Energy and Climate Policy  
Federation of German Industries (BDI)

# For the market introduction of renewable and decarbonised gases focus on the industry and transport sector

Source: BDI 2019

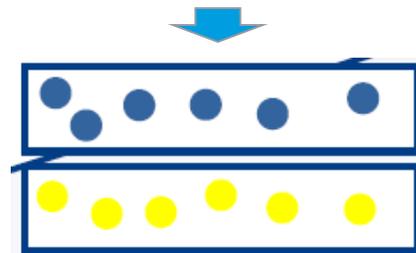

# Coordinated EU action required to support the market introduction of renewable and decarbonised gases

## EU-wide terminology and GOs

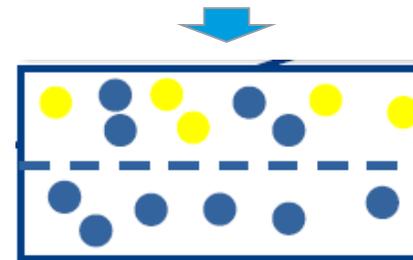

- An EU-wide terminology is urgently required to enable a harmonised implementation of **Article 19 RED II** which expands GOs also on gases.
- A **Commission Recommendation** can serve as a reference point as long as decarbonisation package is being negotiated.
- The BDI supports the **CO<sub>2</sub>-based** terminology approach which should be also **applied to GOs**.

## Hydrogen infrastructure

- The BDI supports the development of **parallel grid infrastructure** for hydrogen and methane on the **TSO** level.

- In the next step **flexibility** should be enabled on the **DSO** level, allowing for hydrogen blending in certain balancing areas.

- The TSO transformation towards hydrogen requires **EU coordination**.
