COMMISSION RECOMMENDATION

of 18.12.2023

on the draft updated integrated national energy and climate plan of Italy covering the period 2021-2030

and on the consistency of Italy's measures with the Union's climate-neutrality objective and with ensuring progress on adaptation

(Only the Italian text is authentic)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union, and in particular Article 292 thereof,

Having regard to Regulation (EU) 2018/1999 of the European Parliament and of the Council of 11 December 2018 on the Governance of the Energy Union and Climate Action, amending Regulations (EC) No 663/2009 and (EC) No 715/2009 of the European Parliament and of the Council, Directives 94/22/EC, 98/70/EC, 2009/31/EC, 2009/73/EC, 2010/31/EU, 2012/27/EU and 2013/30/EU of the European Parliament and of the Council, Council Directives 2009/119/EC and (EU) 2015/652 and repealing Regulation (EU) No 525/2013 of the European Parliament and of the Council¹ and in particular Article 14(6) and Article 9(2) thereof,

Having regard to Regulation (EU) 2021/1119 of the European Parliament and of the Council of 30 June 2021 establishing the framework for achieving climate neutrality and amending Regulations (EC) No 401/2009 and (EU) 2018/1999², and in particular Article 7(2) thereof,

Whereas:

Recommendation on Italy's draft updated integrated National Energy and Climate Plan (NECP) of Italy covering the period 2021-2030

- (1) Italy submitted its draft updated integrated national energy and climate plan on 19 July 2023.
- (2) Article 3 and Annex I to Regulation (EU) 2018/1999 ('the Governance Regulation') lay down the elements that are to be included in the updated integrated national energy and climate plans. In December 2022, the Commission adopted the Guidance to Member States on the process and scope of preparing the draft and final updated national energy and climate plans³. The Guidance identified good practices and outlined the implications of recent policy, legal and geopolitical developments in energy and climate policies.

¹ OJ L 328, 21.12.2018, p. 1

² OJ L 243, 9.7.2021, p. 1

³ 2022/C 495/02

- (3) In connection with REPowerEU plan⁴, and as part of the 2022 and 2023 European Semester cycles, the Commission has put a strong focus on Member States' energy and climate related reform and investment needs to strengthen energy security and affordability by accelerating the green and fair transition. This is reflected in the 2022 and 2023 Country Reports for Italy⁵ and the Council Recommendations to Italy⁶. Member States should take into account the latest country-specific recommendations in their final updated integrated national energy and climate plans.
- (4) The Commission's recommendations with regard to the delivery of national targets under the Effort Sharing Regulation⁷ (ESR) are based on the likelihood that the Member States will respect the 2030 targets, taking into account the rules for the use of flexibilities under the ESR.
- (5) The Commission's recommendations regarding Carbon Capture, Utilisation and Storage (CCUS) aim at having an overview of the intended deployment of these technologies at national level, including information about annual volumes of CO₂ planned to be captured by 2030, split by source of CO₂ captured coming from installations covered by Directive 2003/87/EC⁸ or from other sources, such as biogenic sources or direct air capture; about planned CO₂ transport infrastructure; and about potential domestic CO₂ storage capacity and injection volumes of CO₂ planned to be available in 2030.
- (6) The Commission's recommendations regarding the performance under the Land Use, Land Use Change and Forestry Regulation ('LULUCF Regulation')⁹ address the delivery by the Member State on the "no debit" rule for the period 2021-2025 (Period 1) and its national target for the period 2026-2030 (Period 2), taking into account the rules governing the use of flexibilities as set out in that Regulation. The Commission's recommendations also take into account that in Period 1 any excess in emissions under the LULUCF Regulation will automatically be transferred to the ESR.
- (7) For climate adaptation to properly support the achievement of energy and climate mitigation objectives, it is essential to identify the potential climate change hazards and analyse climate vulnerabilities and risks that may affect relevant areas, populations and sectors. The Commission's recommendations on adaptation consider the extent to which Italy integrated in its updated NECP adaptation goals that account for climate risks, that could prevent Italy from meeting the objectives and targets of the Energy Union. Without specific adaptation policies and measures, planned and

⁵ SWD (2022) 616 final, SWD (2023) 612 final

⁶ COM (2022) 616 Recommendation for a Council Recommendation; COM(2023) 612 final, Recommendation for a Council Recommendation

⁷ Regulation (EU) 2018/842 of the European Parliament and of the Council of 30 May 2018, OJ L 156, 19.6.2018, p. 26. as amended by Regulation (EU) 2023/857 of 19 April 2023, OJ L 111, 26.4.2023, p. 1

⁸ Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003 establishing a scheme for greenhouse gas emission allowance trading within the Community and amending Council Directive 96/61/EC (OJ 275, 25.10.2003, p. 32)

⁹ Regulation (EU) 2018/841 of the European Parliament and of the Council of 30 May 2018 on the inclusion of greenhouse gas emissions and removals from land use, land use change and forestry in the 2030 climate and energy framework- and amending Regulation (EU) No 525/2013 and Decision No 529/2013/EU, OJ L 156, 19.6.2018, p. 1, as amended by Regulation (EU) 2023/839 of the European Parliament and of the Council of 19 April 2023 amending Regulation (EU) 2018/841 as regards the scope, simplifying the reporting and compliance rules, and setting out targets of the Member States for 2030, and Regulation (EU) 2018/1999 as regards improvement in monitoring, reporting, tracking of progress and review OJ, L328/1, 21.4.2023, p. 1

implemented, the achievement of objectives in Energy Union dimensions is at risk. Water management in changing climatic conditions requires particular attention due to risks of electricity disruption as floods, heat and drought impact the energy production.

- (8) The Commission's recommendations regarding renewable energy ambition are based on the formula set out in Annex II to Regulation (EU) 2018/1999, which is based on objective criteria; and on the main policies and measures missing in Italy's draft updated NECP to enable a timely and cost-effective achievement of Italy's national contribution to the Union's binding renewable energy target of at least 42.5% in 2030, with the collective endeavour to increase it to 45% pursuant to Directive (EU) 2018/2001 as regards the promotion of energy from renewable sources as amended by Directive (EU) 2023/2413¹⁰. The Commission's recommendations are also based on Italy's contribution to the specific targets of Articles 15a, 22a, 23, 24 and 25 of that Directive and the related policies and measures to rapidly transpose it and implement it. The recommendations reflect the importance to develop comprehensive long-term planning for the deployment of renewable energy, and in particular wind, to increase visibility for the European manufacturing industry and grid operators in line with the European Wind Power Package¹¹.
- (9) The Commission's recommendations regarding the national contribution to energy efficiency are based on Article 4 of the Directive (EU) 2023/1791 on energy efficiency¹²; and the formula in Annex I to that Directive, and the related policies and measures to implement it.
- (10) The Commission's recommendations pay particular attention to the targets, objectives and contributions and related policies and measures to deliver on the REPowerEU plan in order to rapidly phase out dependence from Russian fossil fuels. They take into account lessons learnt from the implementation of the Save gas for a Safe winter Package¹³. The recommendations reflect the imperative to make the energy system more resilient in light of the obligations stemming from Regulation (EU) 2019/941 on risk preparedness in the electricity sector¹⁴ and Regulation (EU) 2017/1938 on the security of gas supply¹⁵, and in line with the Commission's Recommendation on energy storage¹⁶.

¹⁰ Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (OJ L 328, 21.12.2018, p. 82), as amended by Directive (EU) 2023/2413 of the European Parliament and of the Council of 18 October 2023 amending Directive (EU) 2018/2001, Regulation (EU) 2018/1999 and Directive 98/70/EC as regards the promotion of energy from renewable sources, and repealing Council Directive (EU) 2015/652, OJ L, 2023/2413, 31.10.2023

¹² Directive (EU) 2023/1791 of the European Parliament and of the Council of 13 September 2023 on energy efficiency and amending Regulation (EU) 2023/955 (recast), OJ L 231, 20.9.2023, p. 1

¹³ Communication from the Commission to the European Parliament, the Council, the European economic and social committee, "Save gas for a safe winter", COM/2022/360 final

¹⁴ Regulation (EU) 2019/941 of the European Parliament and of the Council of 5 June 2019 on risk preparedness in the electricity sector and repealing Directive 2005/89/EC OJ L158/1

¹⁵ Regulation (EU) 2017/1938 of the European Parliament and of the Council of 25 October 2017 concerning measures to safeguard the security of gas supply and repealing Regulation (EU) n°994/2010, OJ L 280

¹⁶ Commission Recommendation of 14 March 2023 on Energy Storage – Underpinning a decarbonised and secure EU Energy system, OJ C 103, 20.3.2023, p. 1.

- (11) The Commission's recommendations take into account the need to accelerate the integration of the internal energy market to strengthen the role of flexibility and empower and protect consumers. The Commission's recommendations also consider the importance of assessing the number of households in energy poverty in line with the requirements of Article 3 of Regulation (EU) 2018/1999, and the Commission Recommendation (EU) 2023/2407¹⁷.
- (12) The Commission's recommendations reflect the importance of ensuring sufficient investments in clean energy research and innovation to boost their development and manufacturing capacities, including appropriate policies and measures for energy intensive industries and other businesses; and the need to upskill workforce for a net-zero industry in order to consolidate a strong, competitive and clean economy within the Union.
- (13) The Commission's recommendations build on the commitments taken under the Paris Agreement to phase down the use of fossil fuels, as well as on the importance of phasing out fossil fuel subsidies.
- (14) The Commission's recommendations on investment needs follows its assessment of whether the draft updated plan provides a general overview of investment needs to achieve the objectives, targets and contributions for all dimensions of the Energy Union; indicates the sources of financing, distinguishing private and public sources; outlines investments consistent with Italy's Recovery and Resilience Plan, Italy's Territorial Just Transition Plans and the 2022-2023 country-specific recommendations issued under the European Semester; and includes a robust macro-economic assessment of planned policies and measures. The NECP should ensure the transparency and predictability of national policies and measures, to support investment certainty.
- (15) The Commission's recommendations reflect the crucial importance of a wide regional consultation, and of ensuring early and inclusive consultation on the plan, including effective public participation with sufficient information and timeframe, in line with the Aarhus Convention¹⁸.
- (16) The Commission's recommendations on just transition reflect the assessment of whether Italy's plan identifies in sufficient depth the relevant social, employment and skills impacts of the climate and energy transition and outlines adequate accompanying policies and measures to promote a just transition, while contributing to the promotion of both human rights and gender equality.
- (17) The Commission's recommendations to Italy are underpinned by the assessment of its draft updated integrated NECP¹⁹, which is published alongside this Recommendation.
- (18) Italy should take due account of the present recommendations when developing its final updated integrated NECP to be submitted by 30 June 2024.

Recommendations on the consistency with the Union's climate-neutrality objective and with ensuring progress on adaptation

¹⁷ Commission Recommendation (EU) 2023/2407 of 20 October 2023 on energy poverty, C:2023/4080, OJL 2023/2407, 23.10.2023

¹⁸ Convention on access to information, Public Participation in Decision-making and Access to Justice in Environmental Matters of 25 June 1998 (the 'Aarhus convention')

¹⁹ SWD(2023) 917

- (19) Pursuant to Regulation (EU) 2021/1119 (the European Climate Law), the Commission is required to assess the consistency of national measures with the climate-neutrality objective and with ensuring progress on adaptation. It assessed the consistency of Italy's measures with these objectives²⁰. The below recommendations are based on that assessment. Italy should take due account of the present recommendations and follow up on them in accordance with the European Climate Law.
- (20) While the Union's net greenhouse gas emissions (including from land use, land use change and forestry (LULUCF) and excluding international transport) show a steady downward trend overall, broadly in line with the linear trajectory achieving the Union's 2030 climate target of -55% and the Union's 2050 climate-neutrality objective, the pace of emission reduction needs to accelerate and action by Member States is essential. Progress across Member States has been mixed with several sectoral challenges and weaknesses that need to be remedied without further delay. The assessment, based on the available information, shows that progress towards the Union's climate-neutrality objective appears insufficient for Italy. Reliable long-term strategies are the cornerstone for achieving the economic transformation needed to move towards the Union's climate-neutrality objective.
- (21) Strong adaptation strategies and plans are needed to ensure that societal, political and economic preparedness advances steadily in line with the European Climate Law and gets ahead of the climate related impacts. To assist Member States in updating and implementing comprehensive national adaptation strategies, plans and policies the Commission adopted a set of guidelines in July 2023²¹. Adaptation policies focus on areas or sectors particularly vulnerable to climate change, or whose activities are key to the resilience of other sectors, or which have significant importance to the national economy or public health. Priority response is required on impacts and risks that occur today or are expected to increase due to climate change, socio-economic development, or other non-climatic drivers, and which are expected to affect critical infrastructure or systems with long lifespan or are expected to affect systems irreversibly. Adaptation measures need to be carried out with a view to improving preparedness and resilience, and may be prepared through adaptation pathways, setting out a sequence of measures towards an adaptation goal. Monitoring and evaluation of adaptation efforts is necessary for maintaining accountability and improving the adaptation policy.
- (22) The systemic ability to adjust to climate change is a key feature to avoid or moderate potential damage, to take advantage of opportunities, and to cope with the consequences. Physical impacts of climate change are evolving at a faster pace than expected. Progress in adaptive capacity is needed at all levels of the government, and in the public and private sectors, and requires increased awareness on vulnerabilities and risks. Many climate adaptation interventions start at the local and regional level. Local governments play a key role in fostering public engagement and local action. Meaningful exchanges and coordinated action across all levels of governance is needed. Private stakeholders are agents of change by providing information, resources, capacities, and funding.

²⁰ EU Climate Action Progress Report 2023, COM(2023) 653 final, and Commission Staff Working Document Assessment of progress on climate adaptation in the individual Member States according to the European Climate Law, SWD(2023) 932

²¹ Commission Notice Guidelines on Member States' adaptation strategies and plans, C/2023/4802, OJ C 264, 27.7.2023, p. 1

- (23) Nature-based solutions offer efficient and cost-effective adaptation and mitigation options if their deployment is incentivised through strategic frameworks, policies and funding. They can be implemented independently or integrated in other adaptation and mitigation measures, combined with more technological or infrastructure-based solutions. Implementation needs to consider the complexity of ecosystems and the projected effects of climate change, the local context, linked interests and values, and socio-economic conditions.

HEREBY RECOMMENDS THAT ITALY TAKES ACTION TO:

CONCERNING THE DRAFT UPDATED NATIONAL ENERGY AND CLIMATE PLAN UNDER REGULATION (EU) 2018/1999

1. Set out cost-efficient additional policies and measures, including in the transport buildings and agriculture sectors and for non-CO₂ emissions, including methane, N₂O and F-gases from industrial processes and product use, agriculture, and waste management, to bridge the projected gap of between 6.7 and 8.7 percentage points to meet the national greenhouse gas target of -43.7% in 2030 compared to 2005 levels under the ESR. Provide updated projections to show how the existing and planned policies will deliver on the target and, if necessary, specify how flexibilities available under the ESR will be used to ensure compliance. Complement the information on the policies and measures, clearly spelling out their scope, timeline and, where possible, expected greenhouse gas reduction impact, including measures in Union funding programmes, such as the common agricultural policy.
2. Identify the amount of CO₂ emissions that could be captured annually by 2030, including the source. Provide details on how the captured CO₂ will be transported. Identify the CO₂ injection volumes that will be available by 2030.
3. Set out a concrete pathway towards reaching the national LULUCF target as defined in Regulation (EU) 2018/841. Include additional measures in the LULUCF sector, detailing their timing and scope and quantifying their expected impacts to ensure that greenhouse gas removals are effectively aligned with the 2030 EU net removal target of – 310 MtCO₂eq and the country-specific removal target of – 3 158 ktCO₂eq defined in Regulation (EU) 2018/841. Provide clear information on how public funds (both Union funds, including the common agricultural policy, and State aid) and private financing through carbon farming schemes are consistently and effectively used to achieve the net removal national target. Provide information on the status and progress to be made in ensuring the enhancements to higher tier levels/geographically explicit datasets for monitoring, reporting and verification, in line with Part 3 of Annex V to Regulation (EU) 2018/1999.
4. Provide additional analysis on the relevant climate vulnerabilities and risks regarding the achievement of national objectives, targets, and contributions and/or the policies and measures in the different dimensions of the Energy Union. Better outline and quantify where possible the link to the specific Energy Union objectives and policies, that adaptation policies and measures should support. Set out additional adaptation policies and measures in sufficient detail to support the achievement of national objectives, targets and contributions under the Energy Union, including measures to safeguard electricity generation capacity and residential energy saving. Pay particular attention to water management in changing climatic conditions due to risks of electricity disruption as floods, heat and drought impact the energy production.

5. Provide estimated trajectories and a long-term plan for the deployment of renewable energy technologies over the next 10 years, with an outlook to 2040. Include an indicative target for innovative renewable energy technologies by 2030 in line with Directive (EU) 2018/2001 as amended. Confirm that the projections and indicators included in the plan constitute specific targets to contribute to the indicative sub-targets in buildings and industry for 2030; the binding target in heating and cooling for both 2021-2025 and 2026-2030 and the indicative target in district heating and cooling for 2021-2030. Include an indicative target in heating and cooling to achieve the top-ups of Annex IA to Directive (EU) 2018/2001.
6. Include detailed and quantified policies and measures in a way that enables a timely and cost-effective achievement of its national contribution to the Union's binding renewable energy target of at least 42.5% in 2030, with the collective endeavour to increase it to 45%. Describe in particular how it plans to further facilitate permitting with faster and simpler procedures. Describe how the design of the obligation on fuel suppliers in the transport sector will be covered and include comparable measures for promoting hydrogen in industry and prepare the EU for renewable hydrogen trade.
7. Include projections on bioenergy demand and supply per sector and provide data for imports and the source of forest biomass used for energy. Include an assessment of the domestic supply of forest biomass for energy purposes in 2021-2030 in accordance with the strengthened sustainability criteria of Article 29 of Directive (EU) 2018/2001 as amended, and an assessment of the compatibility of the projected use of forest biomass for energy production with Italy's obligations under the revised LULUCF Regulation, particularly for 2026-2030, together with national measures and policies to ensure compatibility. Include further measures to promote the sustainable production of biomethane given Italy's sustainable biogas/biomethane potential and production profile of natural gas consumption and existing infrastructure, digestate use and biogenic CO₂ applications.
8. Provide to the extent possible an expected timeline of the steps leading to the adoption of legislative and non-legislative policies and measures aimed at transposing and implementing the provisions of Directive (EU) 2018/2001 as amended, in particular for the measures mentioned in the previous points.
9. Set out complete policies and measures to achieve the national contributions on energy efficiency and in particular how the Energy Efficiency First principle will be implemented. Specify robust energy efficiency financing programmes and support schemes, able to mobilise private investments and additional co-financing. Set out measures to realise the potential of developing infrastructure for high-efficiency cogeneration or efficient district heating and cooling from waste heat and renewable energy sources, including in the industrial sector identified through a comprehensive assessment, in line with Article 25(1) of Directive (EU) 2023/1791.
10. Include updated ambitions on ensuring a highly energy-efficient and decarbonised national building stock and transforming existing buildings into zero-emission buildings by 2050, including intermediate milestones for 2030 and 2040, and a comparison of these milestones with the most recent long-term renovation strategy. Include more information on related measures for buildings, including in terms of fundings, and costs and their impact in terms of energy savings.
11. Strengthen resilience of the energy system by setting clear objectives and measures to address constrained or interrupted supply and in particular by setting an objective for energy storage deployment and putting forward policies and measures to integrate

the imperative of climate adaptation in the energy system. Assess the adequacy of the oil infrastructure (refinery, oil stocks) with the expected decline in oil demand and the move towards lower-carbon alternatives.

12. Set out clear targets to improve the electricity interconnection capacity and identify a clear timeline to implement related projects. Put forward clear objectives and targets for demand response to improve the flexibility of the system in light of an assessment of the flexibility needs and describe how to facilitate energy system integration in connection with Article 20a of Directive (EU) 2018/2001 as amended. Develop more competitive retail markets and increase the level of consumer empowerment in the retail market.
13. Further develop the approach to addressing energy poverty by including an assessment of the situation of current households affected and indicating a specific measurable reduction target, as required by Regulation (EU) 2018/1999 and taking into account Commission Recommendation (EU) 2023/2407. Provide more details on the role of the national energy poverty observatory established in 2021.
14. Further clarify national objectives in research, innovation and competitiveness to deploy clean technologies, establishing a pathway for 2030 and 2050 with a view to support the decarbonisation of industry and promote the transition of businesses towards a net zero and circular economy. Put forward policies and measures to promote the development of net-zero projects including those relevant for the energy intensive industries. Describe a predictable and simplified regulatory framework for permitting procedures and how access to national funding will be simplified where needed. Provide detailed policies and measures for the development of clean energy related skills, and to facilitate open trade for resilient and sustainable supply chains of key net-zero components and equipment.
15. Specify the reforms and measures to mobilise the private investments needed to achieve the energy and climate targets. Improve and expand the analysis of investment needs to include a comprehensive and consistent overview of the public and private investment needs in aggregate and by sector. Complement a top-down economy-wide approach with a bottom-up project-specific assessment along the five dimensions of the Energy Union. Include a breakdown of total investment needs with additional information on the national, regional and EU funding sources, as well as private financial sources, to be mobilised. Add a short description of the type of financial support schemes chosen to implement the policies and measures, which are financed through public budget, and the use of blended financial instruments making use of grants, loans, technical assistance, public guarantees, including the role of the national promotional banks in the respective schemes and/or how private financing is mobilised. Consider the cost-effective generation of transfers to other Member States under the ESR as a funding source. Provide a robust assessment of the macroeconomic impact of the planned policies and measures.
16. Outline how the policies and measures included in the updated plan are consistent with Italy's national recovery and resilience plan and the REPowerEU chapter.
17. Explain by when Italy intends to phase out fossil fuel subsidies. Explain in more detail how Italy plans to phase out solid fossil fuels for power generation by clarifying related commitments and measures.
18. Provide more detailed information on the social, employment and skills consequences, or any other distributional impacts, of the climate and energy

transition and on the planned objectives, policies and measures to support a just transition. Specify the form of support, the impact of the initiatives, the target groups and the resources dedicated, taking into account the Council Recommendation on ensuring a just transition towards climate neutrality²². Ensure alignment between the coal phase out timeline outlined in the Territorial Just Transition Plans and the final updated NECP, with particular attention to Sulcis Iglesiente (Sardinia). Include to the extent possible more elements to provide an adequate analytical basis for the preparation of a future Social Climate Plan, in accordance with Regulation (EU) 2023/955²³, including indications on how to assess the challenges and social impacts on the most vulnerable of the emissions trading system for fuel combustion in buildings, road transport and additional sectors, and to identify potential beneficiaries and a relevant policy framework. Explain how the policy framework identified in the NECP will contribute to the preparation of Italy's Social Climate Plan and how consistency between the two plans will be ensured.

19. Provide a clear and more detailed overview on how the consultation process enabled participation from all relevant authorities, citizens and stakeholders, including social partners, in the preparation of both the draft and the final updated plan including information on the timing and duration of the different consultations. Provide a summary of the views expressed by different actors, and a summary of how the plan integrates the views expressed during the consultations.
20. Intensify regional cooperation with neighbouring Member States and within the Central and South Eastern Europe energy connectivity High-Level Group, including in the interconnectivity, renewables, energy efficiency, internal market taking into account common challenges and shared objectives. Describe how Italy plans to establish a framework for cooperation with other Member States by 2025 in line with Article 9 of Directive (EU) 2018/2001 as amended. Pursue efforts to sign the four remaining bilateral solidarity arrangements for the security of gas supply with its neighbours (Austria, Germany, Greece and Croatia).

CONCERNING THE CONSISTENCY OF NATIONAL MEASURES WITH THE CLIMATE-NEUTRALITY OBJECTIVE AND WITH ENSURING PROGRESS ON ADAPTATION UNDER REGULATION (EU) 2021/1119

1. Step up climate mitigation efforts by making tangible progress on the existing and planned policies and consider additional, urgent measures to align the expected greenhouse gas emission reductions and projections with the climate-neutrality objective. In particular, efforts should be directed towards decarbonising energy production.
2. Update and increase the ambition and quality of the national long-term strategy, including by substantiating Italy's emission reductions and enhancement of removals targets in individual sectors with credible policies and measures.
3. Update the national adaptation strategy so that climate adaptation considerations are integrated into key vulnerable sectors, and gaps and barriers to adaptation are addressed. Ensure that the adaptation priorities, strategies, policies, plans, and efforts

²² Council Recommendation of 16 June 2022 on ensuring a fair transition towards climate neutrality, OJ C243, 27.6.2022 p.35-51

²³ Regulation (EU) 2023/955 of the European Parliament and of the Council of 10 May 2023 establishing a Social Climate Fund and amending Regulation (EU) 2021/1060 (OJ L 130, 16.5.2023, p. 1)

are commensurate with the predicted future climate vulnerabilities and risks, based on the best available science and the climate prediction and early warning tools available. Ensure progress in the implementation of adaptation measures. Ensure that adaptation policies are monitored and evaluated systemically and regularly, and results are reflected in the ensuing revised policy design and implementation.

4. Improve coordination between different levels of governance (national/regional/local) to align planning tools and help coordinated interventions aimed at 'systemic' transformation. Raise awareness of existing vulnerabilities and risks and existing options. Learn from the results of monitoring and evaluation, empower governance structures, enable action at local level and promote flexibility to adjust to changing circumstances. Involve social partners and private sector stakeholders in policy design, implementation and investments. Document the processes and outcomes of relevant consultations.
5. Promote nature-based solutions and ecosystem-based adaptation in national strategies, policies and plans and provide investments for their deployment.

Done at Brussels, 18.12.2023

For the Commission

Kadri Simson

Member of the Commission
