ANNEXES

ANNEX 1: Statement of the Head of Department for Administration, Finance and Support Services

I declare that in accordance with the Commission's communication on clarification of the responsibilities of the key actors in the domain of internal audit and internal control in the Commission¹, I have reported my advice and recommendations to the Director on the overall state of internal control in the Research Executive Agency.

I hereby certify that the information provided in Section 2 of the present AAR and in its annexes is, to the best of my knowledge, accurate and exhaustive.

Brussels, 22 March 2016

Signed

Wilfried Beurms

Head of Department for Administration, Finance and Support Services,

Internal Control Coordinator

1

Communication to the Commission: Clarification of the responsibilities of the key actors in the domain of internal audit and internal control in the Commission; SEC(2003)59 of 21/01/2003.

ANNEX 2: Human and financial resources

2.1 Human Resources by ABB Activity

The table below details the total staff employed within the REA as of 31 December 2015.

Table 1 – Breakdown of human resources by ABB activity

Human Resour	ces by ABB activity			
Code ABB Activity	ABB Activity	Establishment Plan posts	External Personnel	Total
Activity 02.04	H2020 Leadership in Space actions, the actions of the Space theme of the FP7 Cooperation Programme, as well as part of H2020 Societal Challenge 7 and the actions of the Security theme of the FP7 Cooperation Programme	20.0	40.0	60.1
Activity 05.09	Part of H2020 - Societal Challenge 2	2.4	7.3	9.8
Activity 08.02	Part of H2020 Societal Challenges 2 and 6, Specific Objectives 'Spreading Excellence and Widening Participation' and 'Science with and for Society', and part of the FP7 Capacities – Research for the benefits of the SMEs	24.0	55.7	79.7
Activity 09.04	H2020 Future and Emerging Technologies (FET Open), and parts of Societal Challenges 6 and 7	8.9	24.0	32.9
Activity 15.03	H2020 Marie Skłodowska-Curie actions (MSCA) and the FP7 People Programme (MCA)	45.1	155.0	200.1
	Support Services	15.0	100.8	115.8
	Coordination and Administrative Support	38.6	81.1	119.7
Total		154.0	464.0	618.0

General remark: the above data rely on the snapshot of personnel actually at the REA as of 31 December 2015. These data do not necessarily constitute full-time-equivalents throughout the year.

On 31 December 2015 the REA had 618 staff in place. With the job offers sent out and accepted with a starting date in 2016 and known resignations the total figure is 623.

The target of 630^2 staff has not been reached by the end of 2015, which may be explained by the beginning of the year and the new selection mechanism that is lengthier than the old one.

² Financed from the "EU General Budget"

2.2 Financial resources – Implementation of the REA's operating budget

It should be noted that the balance sheet and statement of financial performance presented in Annex 3 to this Annual Activity Report, represent only the assets, liabilities, expenses and revenues that are under the control of this Directorate General. Significant amounts such as own resource revenues and cash held in Commission bank accounts are not included in this Directorate General's accounts since they are managed centrally by DG Budget, on whose balance sheet and statement of financial performance they appear. Furthermore, since the accumulated result of the Commission is not split amongst the various Directorates-General, it can be seen that the balance sheet presented here is not in equilibrium.

Additionally, the figures included in tables 4 and 5 are provisional since they are, at this date, still subject to audit by the Court of Auditors. It is thus possible that amounts included in these tables may have to be adjusted following this audit.

It should be noted that the balance sheet and statement of financial performance presented in Annex 3 to this Annual Activity Report, represent only the assets, liabilities, expenses and revenues that are under the control of this Directorate General. Significant amounts such as own resource revenues and cash held in Commission bank accounts are not included in this Directorate General's accounts since they are managed centrally by DG Budget, on whose balance sheet and statement of financial performance they appear. Furthermore, since the accumulated result of the Commission is not split amongst the various Directorates General, it can be seen that the balance sheet presented here is not in equilibrium.

Additionally, the figures included in tables 4 and 5 are provisional since they are, at this date, still subject to audit by the Court of Auditors. It is thus possible that amounts included in these tables may have to be adjusted following this audit.

ANNEX 4: Materiality criteria

The Standing Instructions for the preparation of Annual Activity Reports stipulate that the quantitative materiality threshold **must not exceed 2% of the authorised payments of the reporting year of the ABB expenditure**. However, the Guidance on AARs also allows a multi-annual approach, especially for budget areas (e.g. programmes) for which a multi-annual control system is more effective. In such cases, the calculation of errors, corrections and materiality of the residual amount at risk should be done on a "cumulative basis" on the basis of the totals over the entire programme lifecycle.

Because of its multiannual nature, the effectiveness of the Research services' control strategy can only be fully measured and assessed at the final stages in the life of the framework programme, once the ex-post audit strategy has been fully implemented and systematic errors have been detected and corrected.

In addition, basing materiality solely on ABB expenditure for one year may not provide the most appropriate basis for judgements, as ABB expenditure often includes significant levels of pre-financing expenditure (e.g. during the initial years of a new generation of programmes), as well as reimbursements (interim and final payments) based on cost claims that 'clear' those pre-financings. Pre-financing expenditure is very low risk, being paid automatically after the signing of the contract with the beneficiary.

The general control objective for the Research services, following the standard quantitative materiality threshold proposed in the Standing Instructions, is to ensure for each FP (and the Coal and Steel Research Fund for DG RTD), that **the residual error rate**, i.e. **the level of errors which remain undetected and uncorrected, does not exceed 2% by the end of each FP's management cycle**. The question of being on track towards this objective is to be (re)assessed annually, in view of the results of the implementation of the ex-post audit strategy and taking into account both the frequency and importance of the errors found as well as a cost-benefit analysis of the effort needed to detect and correct them.

Notwithstanding the multiannual span of their control strategy, the Director-Generals of the Research DGs (and the Directors of ERCEA, REA, and, for Horizon 2020, EASME and INEA) are required to sign a statement of assurance for each financial reporting year. In order to determine whether to qualify this statement of assurance with a reservation, the effectiveness of the control systems in place needs to be assessed not only for the year of reference but also with a multiannual perspective, to determine whether it is possible to reasonably conclude that the control objectives will be met in the future as foreseen. In view of the crucial role of ex-post audits defined in the common FP7 and future Horizon 2020 audit strategy, this assessment needs to check in particular whether the scope and results of the ex-post audits carried out until the end of the reporting period are sufficient and adequate to meet the multiannual control strategy goals.

The criteria for making a decision on whether there is material error in the expenditure of the Agency, and so on whether to make a reservation in the AAR, will therefore be principally, though not necessarily exclusively, based on the level of error identified in ex-post audits of cost claims on a multi-annual basis.

Effectiveness of controls

The starting point to determine the effectiveness of the controls in place is the cumulative level of error expressed as the percentage of errors in favour of the EC, detected by ex-post audits, measured with respect to the amounts accepted after exante controls.

However, to take into account the impact of the ex-post controls, this error level is to be adjusted by subtracting:

- Errors detected corrected as a result of the implementation of audit conclusions.
- Errors corrected as a result of the extrapolation of audit results to non-audited contracts with the same beneficiary.

This results in a residual error rate, which is calculated in accordance with the following formula:

$$\operatorname{Re} sER\% = \frac{(\operatorname{Re} pER\% * (P - A)) - (\operatorname{Re} pERsys\% * E)}{P}$$

where:

ResER% residual error rate, expressed as a percentage.

RepER% representative error rate, or error rate detected in the common representative sample, expressed as a percentage. For FP 7 this rate is the same for all Research services.

RepERsys% portion of the RepER% representing (negative) systematic errors, expressed as a percentage. The RepER% is composed of two complementary portions reflecting the proportion of negative systematic and non-systematic errors detected.

P total aggregated amount in euro of EC share of funding in the auditable population. In FP7, the population is that of all received cost statements, and the euro amounts those that reflect the EC share included in the costs claimed in each cost statement.

A total EC share of all audited amounts, expressed in euro. This will be collected from audit results.

total non-audited amounts of all audited beneficiaries. In FP7, this consists of the total EC share, expressed in euro, excluding those beneficiaries for which an extrapolation is ongoing).

If the residual error rate is not (yet) below 2% at the end of a reporting year within the FP's management lifecycle, a reservation must be considered.

The Common Representative Audit Sample (CRAS) is the starting point for the calculation of the residual error rate. It is representative of the expenditure of each FP as a whole. Nevertheless, the Director of the Agency must also take into account other information when considering if the overall residual error rate is a sufficient basis on which to draw a conclusion on assurance (or make a reservation) for specific segment(s) of FP7/Horizon 2020. This may include the results of other ex-post audits, ex-ante controls, risk assessments, audit reports from external or internal auditors, etc. All this information may be used in assessing the overall impact of a weakness and considering whether to make a reservation or not.

If the CRAS results are not used as the basis for calculating the residual error rate this must be clearly disclosed in the AAR, along with details of why and how the final judgement was made.

In case a calculation of the residual error rate based on a representative sample is not possible for a FP for reasons not involving control deficiencies,³ the consequences are to be assessed quantitatively by making a best estimate of the likely exposure for the reporting year based on all available information. The relative impact on the Declaration of Assurance would be then considered by analysing the available information on qualitative grounds and considering evidence from other sources and areas. This should be clearly explained in the AAR.

The Space and Security themes of the Cooperation Programme managed by the REA are implemented according to the general FP7 funding rules. As a result, the REA considers the CRAS representative error rate as a good basis for calculating the residual error rate for Space and Security research actions managed by the REA.

The Research for the Benefit of SMEs actions of the Capacities Specific Programme and the Marie Curie actions of the People Specific Programme have a different risk profile compared to mainstream FP7 projects.

As a consequence, the representative CRAS error rate cannot be the only element in estimating the risk exposure in terms of legality and regularity errors in the underlying transactions.

The CRAS error rate is used for the Space and Security schemes while, for the Marie Curie and the SME actions, detected error rates are used to support an overall judgement. The detected error rates take into account:

- (1) the audits that were part of the CRAS and were financed from the REA managed programmes,
- (2) the REA's randomly selected audits launched previously under FP7,
- (3) audits performed on the strand of top beneficiaries⁴

Although the size and composition of the sample do not ensure statistical precision, this error rate gives an indication as to the risk exposure in the two populations and represents an important element in the assurance building. The inclusion of top beneficiaries in the calculation does not introduce any significant bias which would render this indicator less relevant and this can be justified as follows.

The **People** Specific Programme is characterised by a high level of participation from universities, both in high-value network grants and in mono-beneficiary fellowships. Funding modalities have remained largely identical compared to FP6, which implies that most beneficiaries have gained a sufficient understanding of the funding rules, independently from their participation frequency. As a result, a differentiation between error rates for incidental and repeat beneficiaries is no longer expected.

_

Such as, for instance, when the number of results from a statistically representative sample collected at a given point in time is not sufficient to calculate a reliable error rate.

Audits of top beneficiaries (TOP) are audits targeting the beneficiaries participating for significant amounts of EU funding. According to the common FP7 audit strategy 2009-2016, by focusing on 'big spenders' a significant part of the total budget can be cleaned from systematic errors in the cost claims of these top beneficiaries and, after taking account of recoveries and corrections, the residual rate of error for FP7 may further reduce.

However, since the beginning of 2014, the TOP beneficiaries under People, Space and Security actions have not been addressed anymore. Audits on SME grants have, on the contrary, been intensified as a result of the higher risk profile of this action.

The **SME actions** have many non-repeat beneficiaries and the share of the total budget covered by beneficiaries who have been audited for at least one FP7 project is consequently low. For the SME actions, the audits targeting the top beneficiaries include mostly audits that have been selected as an add-on to a random selection⁵. As such, by excluding audits selected on the basis of a risk identification while including audits under the strand of 'top beneficiaries', there is no significant bias to be expected in the detected error rate.

The detected error rates are based on 118 and 340 cost statements, for the SME actions and the People Specific Programme (regarding the Marie Curie actions) respectively.

The methodology for calculating the detected error rates has been reviewed according to preliminary comments made by the Internal Audit Service in the context of the "Limited Review of the Calculation and the Underlying Methodology of the Residual Error Rate for the 2015 Reporting Year". The main change is the switch from a simple to a weighted average (on the basis of the amount of the funds considered ineligible) for the error rates. The impact on the calculation of the error rate is significant in this case as, compared to a simple average of the percentages of detected error for each cost claim, it increases the weight of errors in larger (in absolute term) transactions while decreasing the weight of smaller errors in transactions. As a consequence, the detected error rate for the FP7 People Programme, which was already low in 2014 (1.27%), decreases further to reach 0.93% and the detected error rate for the FP7 SME actions, which was rather high in 2014 (5.24%), increases to 6.54%.

Adequacy of the audit scope

The quantity of the (cumulative) audit effort carried out until the end of each year is to be measured by the actual volume of audits completed. The data is to be shown per year and cumulated, in line with the current AAR presentation of error rates. The multiannual planning and results should be reported in sufficient detail to allow the reader to form an opinion on whether the strategy is on course as foreseen.

The Director of the Agency should form a qualitative opinion to determine whether deviations from the multiannual plan are of such significance that they seriously endanger the achievement of the internal control objective. In such case, she or he would be expected to qualify his annual statement of assurance with a reservation.

Materiality is assessed for each Framework Programme

In 2015, the REA managed financial operations under the seventh and Horizon 2020 framework programmes. Both programmes are managed under different sets of regulatory and contractual provisions. Therefore, the assessment of the performance of the internal controls has to take into account these differences.

However, it has to be noted that for Horizon 2020, very few payments against cost claims have been made and no audit has yet been carried out, thus no error rate has been calculated.

While one cost-claim is selected, an outsourced ex-post assignment can cover up to three participations, each with up to three cost claims, as part of one assignment for which a flat rate fee is due.

	Selection and appointment of expert for scientific reviews of intermediate and/or final reporting If needed: application of Suspension/interruption of payments, Penalties or liquidated damages. Referring grant/beneficiary to OLAF			

Stage 4: Ex-post controls

A - Reviews, audits and monitoring

Main control objectives: Measuring the level of error in the population after ex-ante controls have been undertaken; detect and correct any error or fraud remaining undetected after the implementation ex-ante controls; identifying possible systemic weaknesses in the ex-ante controls, or weaknesses in the rules

Main risks It may happen (again) that	Mitigating controls	How to determine coverage, frequency and depth	How to estimate the costs and benefits of controls	Control indicators
The ex-ante controls (as such) do not prevent, detect and correct erroneous payments or attempted fraud to an extent going beyond a tolerable rate of error. Lack of consistency in the audit strategy within the family	Common Ex-post control strategy for the entire Research family (H2020), implemented by a central service (Common Support Centre, DG RTD): - At intervals carry out audits of a representative sample of operations to measure the level of error in the population after ex-ante controls have been performed - Additional sample to address specific	- Common Representative audit Sample (CRAS): MUS sample across the programme to draw valid management conclusions on the error rate in the population. - RTD risk-based sample, determined in accordance with the selected risk criteria,	Costs: estimation of cost of staff involved in the coordination and execution of the audit strategy .Cost of the appointment of audit firms for the outsourced audits. Benefits: budget value of the errors detected by the auditors.	Representative error rate. Residual error rate in comparison to the materiality threshold. Amount of errors and corrections concerned.
family. Lack of efficiency for absence of coordination: multiple audits on the same beneficiary, same programme: reputational risk and high administrative burden on the beneficiaries' side.	risks - when relevant, joint audits with the Court of Auditors Multi-annual basis (programme's lifecycle) and coordination with other AOs concerned Validate audit results with beneficiary In case of systemic error detected, extrapolation to all the projects run by the audited beneficiary If needed: referring the beneficiary or	aimed to maximise deterrent effect and prevention of fraud or serious error	Non quantifiable benefits: Deterrent effect. Learning effect for beneficiaries. Improvement of ex-ante controls or risk approach in ex-ante controls by feeding back findings from audit. Improvement in rules and guidance from feedback from audit.	Number of audits finalised (+ % of beneficiaries & value coverage) Cost of control ex post audits/ value of grants audited

Main risks It may happen (again) that	Mitigating controls	How to determine coverage, frequency and depth	How to estimate the costs and benefits of controls	Control indicators
	grant to OLAF			

B - Implementing results from ex-post audits/controls

Main control objectives: Ensuring that the (audit) results from the ex-post controls lead to effective recoveries; Ensuring appropriate accounting of the recoveries made

Main risks It may happen (again) that	Mitigating controls	How to determine coverage, frequency and depth	How to estimate the costs and benefits of controls	Control indicators
The errors, irregularities and cases of fraud detected are not addressed or not addressed in a timely manner	Systematic registration of audit / control results to be implemented and actual implementation. Validation of recovery in accordance with financial circuits. Authorisation by AO Notification to OLAF and regular follow up of detected fraud.	Coverage: 100% of final audit results with a financial impact. Depth: All audit results are examined in-depth in making the final recoveries. Systemic errors are extrapolated to all the non-audited projects of the same beneficiary	Costs: estimation of cost of staff involved in the implementation of the audit results. Benefits: budget value of the errors, detected by ex-post controls, which have actually been corrected (offset or recovered).	Amounts being recovered and offset Number/value/% of audit results pending implementation Number/value/% of audit results implemented.
			Loss: budget value of such ROs which are 'waived' or have to be cancelled.	

ANNEX 10: Specific annexes related to "Management of Resources"

As a complement to the information provided in the core of the report, detailed tables are presented below to provide a finer overview of the implementation of the control framework in place at the REA for the management of the operational budget (**Section 2.1.2.2**). The following will give a highlight on the control systems currently in place at stage 4/4, which relates to the ex-post controls and recoveries, to the implementation of the audit strategies and plans, to the estimated Error Rates, to the implementation of FP7 audit results – including extrapolations and to the liquidated damages.

In addition, to support the conclusions as regards assurance (**Section 2.4**), a detailed overview of the payments processed by the Agency will be provided for 2015 and the previous years per programme (H2020 and FP7) and distributed per activity.

Finally, a follow-up on the 2 reservations 2014 has been included, giving the state of play of the implementation of the action plans related to the reservation on the Space and Security schemes, and the reservation on the SME scheme, for which part of it can be lifted this year.

 Implementation of the control framework for the management of the operational budget

Implementation of the audit strategies and plans 8

^{**} In 2014: including 50 desk audits on the SME action planned; finally 49 audits launched.

^{***} Random sample includes 18 transactions selected as part of the CRAS 2012 and 30 as part of the CRAS 2014. The remaining transactions belong to the group of beneficiaries in receipt of significant amounts of EU funding.

To make sure to avoid counting audits twice or three times across actions, the REA fractions the number of audits across the action as follows. The calculation at the REA splits the same audit since it can be conducted on several cost claims presented under different programmes. Therefore, if one audit is conducted on different programmes, only a share (based on the number of cost claims) will be considered for each programme (for example, if one audit has been conducted in two different programmes for 2 cost claims each, the audit will be considered only 0.5 for each programme)."

Table 2: Indicator – Number of projects by programme/theme/action covered by ex-post audits for the period 2009-2015

Distribution of launched audits	November of musicate	of w	hich

• Reservations: REA 2014 FP7 reservations and their follow-up

Reserve	Action Plan as announced in 2015	Actions implemented in 2015	Impact and likely evolution
1- The rate of the residual errors with regard to the accuracy of cost claims impacting on granted EU funding for Space and Security themes of the Cooperation Specific Programme in the 7 th FP grants	As reported in the 2014 AAR, the intrinsic risk of the Space and Security themes is similar to other themes of the Cooperation Specific Programme. In consequence the CRAS error rate is fully representative for these themes since the error rate predominantly reflects the errors encountered in the mainstream Cooperation Specific Programme projects. In consequence the action plan and the impact are the same as for the rest of the Research family. In consequence the REA fully endorses the Research family action plan.	On top of the actions mentioned by DG RTD in their follow-up of the 2014 FP7 reservations, which are relevant for the whole Research family, it is worth to note that the REA has developed its own actions: - The REA fully participates to the constant improvement of the ex-ante controls, especially in the light of findings from the Court of Auditors', and further develops dedicated trainings for the staff dealing with FP7 payments to better instruct them on the controls that must be performed. - In 2015 the REA has launched 89 audits, including 17	The REA fully endorses the conclusion of DG RTD for the Research family and will maintain a reservation as long as there is significant FP7 expenditure. It is also the REA's opinion, based on its own experience, that the residual error rate will remain above 2% and that it would not be effective in terms of costs and image to firmly step up the audit campaigns to bring it below the 2%.
	The possibilities to simplify the FP7 rules have been exhausted, although there is some evidence that the simplification measures introduced in 2011 have had a positive impact on error rate. The remaining scope to reduce errors will be addressed in particular through the following actions: — continuing its ongoing efforts to give guidance and feedback to the participants and to the certifying auditors to prevent errors occurring; — continuing with its control and audit work in order to further reduce the FP7 residual error rate.	risk-based audits for Space and Security projects, for which the recoveries and extrapolations continue (where appropriate). - In addition to the improved guidance to FP7 beneficiaries and certifying auditors, also mentioned by DG RTD, the REA has participated in the guidance events and coordinators days organised by DG RTD, in order to inform them on the new framework programme H2020. Part of the presentation highlights "how to avoid errors", which is expected to have an impact on the ongoing FP7 costs claims too, as some errors are common for the two framework programmes.	It is expected that, as regards H2020, the residual error rate will remain in the range of 2-5%, in spite of the simplification introduced in the Programme, as indicated in the financial statements accompanying the Horizon 2020 proposal. One may anticipate a residual error rate as close as possible to the threshold of 2%, but not necessarily below the 2%.

Reserve	Action Plan as announced in 2015	Actions implemented in 2015	Impact and likely evolution
2- The rate of the residual errors with regard to the accuracy of cost claims impacting on granted EU funding for Research for the benefit of SMEs actions of the Capacities Specific Programme in the FP7 grants	As explained in the AAR 2014, the reasons for the reservation were two-fold: a) The intrinsic risk of the SME scheme: results obtained in the context of ex-post control targeting the SME actions specifically indicate an error rate which is above the materiality criterion and a risk exposure significantly higher than the FP7 average. b) The costs incurred by SMEs for outsourcing tasks to RTD performers are not always duly recorded in the accounts of the SMEs, thereby failing a contractual eligibility requirement. a) There are no further possibilities to simplify the FP7 rules as all grants have been awarded, although there is some evidence that the simplification measures introduced in 2011 have had a positive impact on error rate. The remaining scope to reduce errors will be addressed in particular through the following actions: - continuing its on-going efforts to give guidance and feedback to the participants and certifying auditors to prevent errors occurring; - continuing with its control and audit work in order to further reduce the FP7 residual error rate. b) As regards the non-recording of the RTD performers' invoice in the SMEs accounts, the REA is planning to undertake the following actions, in order to further address the high risk of legality/regularity errors: - For on-going projects of the SME actions: the REA	a) As regards the first part of the reservation, in 2015: 36 risk-based audits have been performed by the REA on SMEs. This 2015 audit campaign confirms the higher error rate for the SME scheme. The REA continues its on-going efforts to give guidance and feedback to the participants and certifying auditors to prevent errors occurring. It also continues efforts to further reduce the residual error rate through ex-ante and ex-post controls (audits). b) With respect to second part of the reservation, i.e. the risks linked to SMEs not duly recording declared costs for subcontracting to RTD performers, 26 desk audits have been performed during 2015, on top of the 49 performed in 2014. The 26 audits focussed only the 2014 final payments and confirmed the outcome of the 2014 desk audit campaign, with a risk exposure of 11.9%. For 2015 however the reservation will be lifted as before proceeding to any final payment the REA requests SMEs to provide evidence that the RTD performers' invoices have been duly issued, registered and paid. In consequence the risk of non-compliance due to the non-registration of the RTD performer invoice is fully mitigated.	a) Taking into account the need to balance legality/regularity with other objectives, such as attractiveness and success of the EU research policy and the cost of controls, the REA is of the opinion that ex-post controls cannot be increased significantly. Therefore, it is not expected that the residual error rate will be below the materiality threshold. b) In consideration of the measures that have been effectively put in place since 01/01/2015, all the final payments 2015 are covered by exhaustive ex-ante controls. These ex-ante controls allow the REA to ensure full compliance with these formal eligibility requirements for the 540 FP7-SME projects being closed from 2015 onwards. Therefore, the REA is able to lift the part of the reservation specific to the SME programme / RTD performers in the AAR 2015.

Reserve	Action Plan as announced in 2015	Actions implemented in 2015	Impact and likely evolution
	will strengthen its ex-ante controls. In particular, within the framework of the final project review, the REA will request SMEs to provide evidence that the RTD performers' invoices have been issued, registered and paid. This strengthened exante control will apply for all final reporting periods for which (a first version of the) deliverables are submitted as of 1 January 2015 ¹⁰ .		
	The REA considers that the proposed action plan strikes a delicate balance between the necessity for legality/regularity and the need for reducing 'red tape' and will allow the REA to drop this reservation as of the AAR 2015.		

-

This may imply that some payments made early in 2015 and relating to cost claims/deliverables received in 2014 for which these strengthened controls will not yet apply, but this will account for only a limited amount of total expenditure charged to the 2015 budget for this programme. For these payments, one beneficiary selected on a sample basis will nevertheless be asked to submit additional evidence.

ANNEX 11: Specific annexes related to "Assessment of the effectiveness of the internal control systems"

Follow-up of actions under the prioritised ICS for 2015

The Agency is committed to maintaining and improving effectiveness of its internal controls. For 2015, the following standards were prioritised:

ICS 8 – Processes and procedures – in particular with respect to (i) updates for H2020 (in close collaboration with the H2020 Common Support Centre (CSC) on harmonised business processes) and (ii) reporting and management of exceptions, non-compliance events and internal control weaknesses to improve awareness amongst staff.

The REA's intranet is directly linking to the central source for H2020 information (H2020 GoFund) and staff is informed directly by the CSC about updates made. The Chairpersons of the REAs five networks (network of project officers, network of call coordinators, network of ethics correspondents, network of legal officers and network of financial officers) have stayed during 2015 in close contact with the CSC and the relevant Business Process Owners. Requests to provide comments to improve H2020 processes and procedures by the CSC were dealt with by senior management who was also involving the REAs networks to provide contributions.

For FP7 processes and procedures the REA's intranet is maintained up to date by the ICS 8 content owners in close collaboration with REA ICS. The area of responsibility is defined in the REA ICS 8 content owner list posted on the intranet. The FP7 procedures are, when needed updated and published.

The guidelines on reporting exceptions, non-compliance events and weaknesses were presented to management by the ICC in a management meeting. Additionally, meetings with the five REA networks were scheduled and a dedicated presentation was given by the sector supporting the ICC to raise awareness about the reporting of exceptions, non-compliance events and weaknesses (ICS 8.4).

ICS 9 – Management Supervision, in reaction to the discontinuation of the IAC in the REA (its role being taken over by the IAS), which justifies additional attention from management to supervise legality and regularity issues;

The ICC and Head of Sector C.01 have been appointed by the Director as contact persons for the IAS. They stayed in close contact with the IAS services throughout 2015 and established a very good working relationship. In 2015, a note with proposals to reinforce the assurance building process was prepared. The note was discussed with the ICC; the Director will decide about measures to be taken in 2016.

ICS 12 – Information and Communication, to raise awareness of the staff on the REA's external communication strategy and key messages.

Following the new REA external communication strategy, an awareness campaign for staff was planned to be organized in 2015, addressing specifically the key messages that the REA wants to pass. The action to improve effectiveness of this prioritized ICS is still ongoing.

The REA's external communication strategy was adopted by the REA management and the Steering Committee in July 2015. The REA's external communication strategy and the key messages were presented to the REAs Operational Communication Network and are scheduled to be presented to each REA unit (starting as of September 2015) and to all staff via an Internal Communication Info-Session. The dedicated REAs intranet pages were updated and more detailed information sessions for staff are planned in 2016.

ANNEX 12: Performance tables

As listed in **Section 1**. Key results and progress towards the achievement of general and specific objectives of the Agency, the REA contributed to reach the targets set in the Management Plan of its parent DGs by doing call management.

The following tables are supporting in particular the **Section 1.1.1.1**. on the implementation of the H2020 actions delegated to the REA (e.g. overview of the H2020 call implementation for the 2014 and 2015 budgets) and **Section 2.1.2.1** on Efficiency (e.g. details on the performance reached for the each of the H2020 2014 and 2015 calls as regards the TTI and TTG, overview of the evaluation review cases).

• Implementation of H2020 actions delegated to the REA

a) Implementation of the H2020 calls financed under the 2015 commitment budget

b) Implementation of the 2014 global commitments (H2020)

¹ Abusive submissions are excluded from the number of 'received proposals'.

² Abusive, inadmissible and withdrawn proposals are excluded from the number of 'eligible proposals'.

³ Call with multiple cut-off dates.

 $^{^{4}}$ Submission and evaluation of proposals for this call take place in two stages. The indicated call deadline is the closing date for the second stage. The indicated success rate is the success rate of the second stage.

⁵ Grant to a named beneficiary.

⁶ This success rate does not include the grants to named beneficiaries.

 $^{^{7}}$ The received and eligible and main listed proposals include all proposals, irrespective of the future implementation.

Table 3: Indicator – Implementation of calls charged to the 2014 commitment budget

- ¹ Abusive submissions are excluded from the number of 'received proposals'.
- ² Abusive, inadmissible and withdrawn proposals are excluded from the number of 'eligible proposals'.
- ³ Call with multiple cut-off dates.
- ⁴ Submission and evaluation of proposals for this call take place in two stages. The indicated call deadline is the closing date for the second stage. The indicated success rate is the success rate of the second stage.
- ⁵ Grant to a named beneficiary.
- ⁶ This success rate does not include the grants to named beneficiaries.
- ⁷ Success rate for all SC 2 calls single stage and two stage calls combined. For the two stage calls, the success rate has been calculated on the basis of the number of proposals invited for the second stage.
- ⁸ The received, eligible and main listed proposals include all proposals, irrespective of the future implementation. The proposals retained for funding and the number of grants signed only include projects managed by the REA. The REA manages only a subset of the proposals retained for funding as all security sensitive proposals, following the security scrutiny, are managed by the parent DGs.
- ⁹ This success rate for all 2014 calls does not include grants to named beneficiaries and for two-stage calls it takes only into account the eligible proposals for the second stage ('proposals invited for the second stage').

Efficiency

a) Time-to-Grant and Time-to-Inform

Table 4: Indicator - Time-to-Inform and Time-to-Grant for the 2014 calls

Time-To-Grant (TTG) – Time from call deadline until grant signature of the projects on the rank list (excluding reserve list). Expressed as a percentage of the total number of projects from the main list (i.e. excluding reserve list) at month-end. This figure will be provided once the 8 months deadline is over.

¹² Indicates the number of grants signed as a percentage of the projects from the main list (i.e. excluding the reserve list) at month-end.

This figure is only given when the last grant agreement (for a project from the main list) has been signed. If the GAP is not yet finalised, it appears as n/a.

The max. TTG of 399 was due to the delayed signature of the last project retained from the main list (VIRION) because of eligibility concerns. The project was finally signed on 13/05/2015.

¹⁵ All retained project from the main list were signed within 8 months, apart from 1 project which withdrew.

Rounded (99.7%). Out of the 1305 projects main listed, 47 withdrew and 4 projects were not signed within the 245 days for reasons beyond the REA's control (e.g. an internal reorganisation from the beneficiary's side or technical problems).

The max. TTG of 288 days was due to delayed signature of the last of the 4 remaining proposals, following an explicit request from the beneficiaries.

All GAs signed on time, except the grant agreement 665860 (SoMoPro3) due to the beneficiary governance procedure, resulting in delays for signing the GA.

¹⁹ A single call with multiple cut-off dates.

In accordance with the previous agreement the management of two CSA were subsequently transferred to DG CNECT namely: 665083-FET_TRACES and 665136-OBSERVE.

Time-To-Grant (TTG) – Time from call deadline until grant signature of the projects on the rank list (excluding reserve list). _

The max. TTG of 338 days was due to the delayed signature of the project DEMOCRITOS: the Russian partner needed additional time to get the authorisation to participate in this project. The project was finally signed on 27/02/2015.

H2020-SFS-2014-1 call relates to 1 grant only that was signed in April 2015.

The max. TTG of 339 days was due to the delayed signature of the project SPRINT following the coordinator's request for prolongation. The project was finally signed on 08/05/2015.

Out of the 16 projects main listed for the DRS call, 11 grants are prepared by the REA while 1 is prepared by DG RTD, 2 by DG HOME and 2 by EASME.

The time limit for TTI has been exceeded by 1 day due to some last minute hick-ups in the IT system and related access rights management.

The Signature of 2 GAs was delayed following an explicit request for additional time from the consortium. One (PANDEM) was signed on 12 June and the remaining one (CARISMAND) was signed on 08/09/2015.

Out of the 12 projects main listed for the FCT call, 11 grants are prepared by the REA and one by DG HOME.

²⁸ Out of the 3 projects main listed for the BES call, 2 grants are prepared by the REA and one by DG HOME.

²⁹ Signature of the last GA was delayed following an explicit request for additional time from the consortium.

-

One proposal was under investigation for double-funding. The case was concluded in August. It was found that while a similar proposal template was used, there was no risk for double funding, so the grant agreement was signed in September.

For the Specific objective 'Science with and for society', there has been a late hand-over from DG RTD (on 28 April) and insufficient budget was made available to finance the main listed projects of the calls. This, together with delays in batches, has resulted that none of the grants could be signed by the TTG deadline of 4 June.

For the topic SEAC-1, DG RTD reconvened the final evaluation panel in March 2015 due to flaws detected before the finalisation of the evaluation. Due to the late availability of the results of the re-evaluation of the SEAC-1 topic, the GAPs for the 5 SEAC-1 proposals were only opened on 08/05/2015 and the time limit for TTI was thus exceeded by 65 days. Overall, the TTG deadline of 4 June for SEAC (topics 1 and 2) could not be met due to the late finalisation of the evaluation and the ethics screening, together with delays in batches and budget issues.

DG RTD has prepared an amendment of the WP 2014-15, handing over the topic 2 to the REA. The Initial Rejection Decision, as well as the information letters to applicants, were signed by DG RTD. The transfer of the budget for SEAC-2 from RTD to the REA took place at the end of May.

Table 5: Indicator – Time-to-Inform and Time-to-Grant for the 2015 calls

Expressed as a percentage of the total number of projects from the main list (i.e. excluding reserve list) at month-end. This figure will be provided once the 8 months deadline is over.

Indicates the number of grants signed as a percentage of the projects from the main list (i.e. excluding the reserve list) at month-end.

This figure is only given when the last grant agreement (for a project from the main list) has been signed. If the GAP is not yet finalised, it appears as n/a.

The decision was taken to terminate the GAP for the VALMINARTS proposal because of significant levels of correlation between this proposal and a running RISE project (REMINE). The rejection decision for the VALIMARTS proposal was signed on 11/09/2015.

A single call with multiple cut-off dates.

All except one grant were signed within 8 month TTG. One proposal (LUMINOUS-686764) was sent to ethics assessment which was still on-going with additional second round of questions sent to the consortium.

¹⁷ out of 18 main listed proposals were signed by 31/12/2015. GAP extension of one project (ERFTM) due to serious financial problems of one key partner.

Submission and evaluation of proposals for this call take place in two stages. The indicated date is the closing date for the second stage.

Submission and evaluation of proposals for this call take place in two stages. The indicated date is the closing date for the second stage.
