DRAFT GENERAL BUDGET
of the European Union
for the financial year 2023

Working Document
Part I

**Draft General Budget
of the European Union
for the Financial Year 2023**

Working Document Part I

Programme Statements of operational expenditure

Draft Budget Working Documents

The 2023 Draft Budget is accompanied by thirteen 'Working Documents', as follows:

Part I: Programme Statements of operational expenditure

Working Document I contains, pursuant to Article 41(3)(h) of the Financial Regulation, Programme Statements, which provide for each spending programme comprehensive information on the financial implementation and progress in achieving the programme objectives. This year, the Programme Statements present the status at the end of 2021 for two different multiannual financial frameworks (MFF): 2021-2017, and 2014-2020 for those programmes for which substantial payments are still being implemented.

Part II: Human Resources of the EU institutions and executive agencies

Working Document II presents information on the human resources of the EU institutions and executive agencies, and in particular for the Commission, both for the establishment plans and for external personnel and across all headings of the multiannual financial framework. Moreover, pursuant to Article 41(3)(b) of the Financial Regulation, it provides a summary table for the period 2020 – 2023 which shows the number of full-time equivalents for each category of staff and the related appropriations for all institutions and bodies referred to in Article 70 of the Financial Regulation.

Part III: Bodies set up by the European Union having legal personality

Working Document III presents detailed information relating to all decentralised agencies and Joint Undertakings, with a transparent presentation of revenue, expenditure and staff levels of various Union bodies, pursuant to Article 41(3)(c) of the Financial Regulation.

Part IV: Pilot projects and preparatory actions

Working Document IV presents information on all pilot projects and preparatory actions which have budget appropriations (commitments and/or payments) in the 2023 Draft Budget, pursuant to Article 41(3)(f) of the Financial Regulation.

Part V: Budget implementation and assigned revenue

Working Document V presents the budget implementation forecast for 2022, information on assigned revenue (implementation in 2021 and estimation for 2023) and a progress report on outstanding commitments (RAL) pursuant to Article 41(3)(d) of the Financial Regulation.

Part VI: Commission expenditure under the administrative heading of the multiannual financial framework

Working Document VI encompasses administrative expenditure to be implemented by the Commission under the administrative heading of the multiannual financial framework (heading 7) in accordance with Article 317 of the Treaty on the Functioning of the European Union, as well as the budgets of the Offices (OP, OLAF, EPSO, OIB, OIL and PMO), pursuant to Article 41(3)(e) of the Financial Regulation.

Part VII: Commission buildings

Working Document VII presents information on buildings under Section III - Commission, pursuant to Article 266(1) of the Financial Regulation.

Part VIII: Expenditure related to the external action of the European Union

Working Document VIII presents information on human resources and expenditure related to the external action of the European Union, pursuant to Article 41(10) and (11) of the Financial Regulation.

Part IX: Funding to international organisations

Working Document IX presents funding provided to international organisations, across all MFF headings, pursuant to Article 41(3)(g) of the Financial Regulation.

Part X: Financial Instruments

Working Document X presents the use made of financial instruments, pursuant to Article 41(4) of the Financial Regulation.

Part XI: Budgetary Guarantees, Common Provisioning Fund and Contingent Liabilities

Working Document XI presents the implementation of Budgetary Guarantees, the Common Provisioning Fund and the assessment of the sustainability of the contingent liabilities arising from budgetary guarantees and financial assistance pursuant to Article 41(5) of the Financial Regulation.

Part XII: EU Trust funds

Working Document XII presents the activities supported by EU Trust Funds, their implementation and performance, pursuant to Article 41(6) of the Financial Regulation.

Part XIII: Payment schedules

Working Document XIII presents summary statements of the schedule of payments due in subsequent years to meet budgetary commitments entered into in previous years, pursuant to Article 41(3)(i) of the Financial Regulation.

INTRODUCTION

1. Purpose and structure

Purpose

The Financial Regulation (Art. 41(3)(h)) requires the Commission to prepare the Programme Statements to justify funding requested for each of the EU spending programmes. The Programme Statements are the first working document accompanying the draft budget proposal and support the Commission's requests for the annual budget allocations for operational expenditure. Reporting on the indicators defined in the legal basis of each of the programmes, these documents help to draw lessons from the past and provide answers to the following questions:

- Is the EU budget achieving its goals?
- Is it on track to reach its expected impact?
- What are the important factors impacting on the performance and what is the Commission doing to address any incipient problem?

The Programme Statements present the most comprehensive and up-to-date performance information for the operational programmes of the EU budget. They were first introduced to support the draft budget 2014 and are updated each year in the context of the preparation of the Commission's draft proposal for the budget of the following year. They are discussed in the annual budget hearings with the Commission services responsible for the spending programmes and revised based on the outcomes of these hearings.

The Programme Statements are also the main source of information for the the Programmes Performance Overview, which is Annex 4 (Volume III) of the Annual Management and Performance Report, published on Europa website.

Structure

As last year, the Programme Statements are organised following the programmes of the 2021-2027 MFF. For each programme, the reader will find first an introduction, including an explanation of how the programme is designed to work, the financial programming and the link to the 2014-2020 programmes. The documents then include information on the budget implementation, key indicators and the implemented and projected contribution to horizontal priorities. Regarding the NextGenerationEU temporary instrument, its centerpiece is the Recovery and Resilience Facility. The instrument is also reinforcing several EU programmes and the related top-ups are included in the programmes benefitting from the additional funds.

The Programme Statements report on the effective implementation of the EU budget operational expenditure. This year, for the first time, the report straddles the implementation of two different multiannual financial frameworks (MFF): the report presents the results achieved by the end of 2021, the first year year of the 2021-2027 multiannual financial framework, and also includes the results of a selection of 2014-2020 programmes for which substantial payments are still being implemented. It is indeed important to highlight that there is not only a continuation of the EU budget intervention across MFF by policy but also that many EU programmes have a life-cycle that is longer than the 7-year MFF period. That means that the budgetary implementation of the 2014-2020 programmes will continue during the 2021-2027 MFF. Examples of this are programmes that finance infrastructure projects or other investments from which the results take time to materialise. This document also strives to keep the focus on these long-term investment programmes as they have important lessons learned to give for future decisions in their field. The sections on budget implementation, performance and indicators are therefore presented for both the 2021-2027 programmes and the selected 2014-2020 programmes. On the other hand, the key achievements are presented jointly for both periods.

The reader will find below the mapping of the 2021-2027 programmes and their corresponding predecessor programmes (from the 2014-2020 multiannual financial framework) on whose implementation continued reporting is warranted:

Programme Statements 2021-2027	Previous 2014-2020 programmes/interventions in the Programme Statements
Horizon Europe	Horizon 2020
Euratom Research and Training Programme	Euratom
ITER	ITER
InvestEU Fund	EFSI

Connecting Europe Facility (incl. Cohesion Fund contribution and military mobility)	CEF (except part on CEF Telecom which continuation is in DEP)
Digital Europe Programme	ISA 2 and CEF Telecom (except connectivity)
Single Market Programme	COSME
	European statistical programme
	Reporting and auditing
	Enhancing consumers involvement in the EU policy making in the field of financial services
	Food and Feed
	Consumer programme
EU Anti-Fraud Programme	AFIS
	Hercule III
Cooperation in the field of taxation	Fiscalis
Cooperation in the field of customs	Customs
European Space Programme	Egnos & Galileo
	Copernicus
Regional Policy (European Regional and Development Fund and Cohesion Fund) and REACT EU	ERDF
	CF
Support to the Turkish-Cypriot Community	Support to the Turkish-Cypriot Community
Recovery and Resilience Facility	<i>nothing to report from 2014-2020 period</i>
Technical Support Instrument	<i>previous interventions from the 2014-2020 period are not reported on</i>
Protection of the Euro Against Counterfeiting	Pericles
Union Civil Protection Mechanism	UCPM 3
	UCPM 4
EU4Health	Health programme
Emergency Support Instrument (Health crisis)	Emergency Support Instrument (2020 only)
European Social Fund + (incl. The Fund for the Most Deprived and Employment and Social innovation) and REACT EU	ESF
	FEAD
	EaSI
Erasmus+	Erasmus +
European Solidarity Corps	European Solidarity Corps +,
	EU Aid Volunteers
Creative Europe	Creative Europe
Justice	Justice (except drugs strand)
Citizenship, Equality, Rights and Values	Rights, Equality and Citizenship (except consumer rights);
	Europe for Citizens
Communication	<i>no more previous intervention to report on</i>
Common Agricultural Policy (European Agricultural Guarantee Fund and European Agricultural Fund for Rural Development) 2023-2027	EAGF 2014-2022

	EAFRD 2014-2022
European Maritime, Fisheries and Aquaculture Fund	European Maritime and Fisheries Fund
Sustainable Fisheries Partnership Agreements and Regional Fisheries Management Organisations	<i>no more previous intervention to report on</i>
Programme for Environment and Climate Action	Programme for Environment and Climate Action (LIFE)
Just Transition Mechanism	<i>nothing to report from 2014-2020 period</i>
Asylum, Migration and Integration Fund	Asylum, Migration and Integration Fund
Integrated Border Management Fund	Internal Security Fund: Border and Visa strand
Internal Security Fund	Internal Security Fund: Police strand;
	Justice: drug strand
Nuclear Decommissioning (Lithuania)	Nuclear Decommissioning Lithuania
Nuclear safety and decommissioning (incl. for Bulgaria and Slovakia)	Nuclear Decommissioning Bulgaria and Slovakia
European Defence Fund	European Defence Industrial Development Programme
Neighbourhood, Development and International Cooperation Instrument	Development Cooperation Instrument (DCI),
	European Neighbourhood Instrument (ENI),
	Partnership Instrument,
	European Instrument for Democracy and Human Rights (EIDHR);
	<i>no more report on the European Fund for Sustainable Development (EFSD) from the 2014-2020 MFF</i>
	Instrument contributing to Stability and Peace (IcSP)
European Instrument for Nuclear Safety	Instrument for Nuclear Safety Cooperation
Humanitarian Aid	<i>no more previous intervention to report on</i>
Common Foreign and Security Policy	<i>no more previous intervention to report on</i>
Overseas Countries and Territories (including Greenland)	<i>no more previous intervention to report on</i>
Macro-Financial Assistance	<i>no more previous intervention to report on</i>
Pre-Accession Assistance (IPA III)	Instrument for Pre-Accession (IPA II)
European Globalisation Adjustment Fund	<i>no more previous intervention to report on</i>
European Union Solidarity Fund (part of SEAR)	<i>no more previous intervention to report on</i>
Innovation Fund	<i>nothing to report from 2014-2020 period</i>
Brexit Adjustment Reserve	<i>nothing to report from 2014-2020 period</i>

Content

Part 1 “**Overview**” contains the presentation of the 2021-2027 programmes, how the programme is designed to work with, notably, its objectives and delivery mode, the link with the 2014-2020 Multiannual Financial Framework, and the 2021-2027 total envelope of the programme.

Part 2 “**Where are we in the implementation?**” explains the use of commitments and payments appropriations, both backward and forward looking. In particular, in the subsection “Cumulative implementation rate”, the reader will find the implementation rate in commitments and in payments of the 2021-2027 programmes and in payment for the selected 2014-2020 programme compared to the related total envelope, as well as a concise justification of the state of play. This section is meant to be read in relation to part 3 “how is the programme performing?”. For many of the 2021-2027 programmes, due to the late adoption of their legal base, the cumulative implementation rate after one year is quite low. For 2014-2020, the cumulative implementation

rate still shows that for a number of important 2014-2020 programmes a relevant share of the 2014-2020 envelope has not yet been spent, mainly due to their long investment period. Performance results for these programmes should be assessed in this light.

Part 3 “**How is the programme performing?**” contains an assessment of the performance of both the active 2021-2027 programmes and of the corresponding 2014-2020 programmes with substantial payments implemented in 2021 (see above correspondence table). For many of the 2021-2027 programmes, no results are available for the first year of implementation, also given the very difficult start of the implementation due to the delayed adoption of the MFF and the individual legal bases. Correspondingly, the performance assessment focuses mainly on assessing output indicators, where available. For 2014-2020, the performance assessment draws from multiple sources: evaluations, studies and reports, key achievements, and indicators. The reader will find a clear, balanced and robust analysis about to what extent the 2014-2020 programmes are reaching their objectives, as well as lessons learned applied in the design of the 2021-2027 programmes. This part also includes a selection of the key achievements related to both the 2021-2027 and related programmes 2014-2020. For most of the programmes, many achievements come from the implementation of the predecessor programmes under the 2014-2020 MFF. This is expected and due to the multi-annual life-cycle of EU programmes (and the projects they finance), where results often follow only after completion of the programmes.

Part 4 “**Programme 2021-2027 – Key monitoring indicators**” reports on the indicators from the adopted legal basis of the programmes for the 2021-2027 period along with their corresponding metadata. Each indicator is presented with an assessment of whether it is on track to achieve its final target, including a justification of this assessment in the field “justification of the trend”. This is meant to allow the reader to get a better understanding of how to interpret the indicator results and, ultimately, of how well the programme is performing.

Part 5 “**Programme 2014-2020 – Key monitoring indicators**” reports on the results of the relevant indicators for the 2014-2020 Multiannual Financial Framework. Like for the 2021-2027 programmes, the indicators are presented with an assessment of whether they are on track to achieve their final target, with a concise justification. Given that many of the legal bases of the 2014-2020 programmes have expired, the strictly legal obligation to report on all indicators has ceased. Correspondingly, we have made a selection from the previous set of indicators that remain relevant – i.e. where we expect future development.

Part 6 “**Programme contribution to horizontal policies**” presents the quantitative and qualitative contribution of each programme (for both the 2014-2020 and 2021-2027 periods) to climate mitigation and adaptation, the fight against biodiversity loss, clean air, gender equality, and the sustainable development goals. The content of this part is used to produce the report that provides an overview of the EU budget contribution towards these horizontal priorities, agreed by the European Parliament, the Council and the European Commission in the inter-institutional agreement accompanying the 2021-2027 MFF.

[Link to other performance reports](#)

The Programme Statements are the main source of information for the Commission’s Annual Management and Performance Report¹ (AMPR), and Annex 4 of its Volume III, namely the Programme Performance Overview. The AMPR is part of the Integrated Financial Accountability Reporting Package, an essential input for the annual ‘discharge procedure’, through which the European Parliament and the Council hold the Commission accountable for the way it manages the EU budget.

2. The EU budget performance framework

Strengthening the effective implementation of the budget – its performance – is an overarching goal for the Commission. The notion of performance of the EU budget not only involves the extent to which EU programmes are well managed, but also the extent to which they deliver the intended results. The European Commission is fully committed to ensuring that the EU budget is implemented in full accordance with the highest standards of financial management, is as effective as possible in achieving its key objectives, and delivers value for all EU citizens. In other words, the Commission puts performance of the EU budget front and centre. For that, a sound performance framework is crucial.

The performance framework for the EU spending programmes is defined in each of the relevant legislative acts and consists of objectives, indicators to measure and monitor progress, as well as annual reporting and multi-annual evaluations.

¹ https://ec.europa.eu/info/publications/annual-management-and-performance-report-eu-budget-0_en

The EU budget has an advanced framework for measuring and reporting on performance. The OECD concluded that the system of performance budgeting under the 2014-2020 MFF² was best in class among OECD countries. The leading principles of this system are set out in the Financial Regulation, which requires the provision of information on the progress of specific, measurable, achievable, relevant and timed objectives measured by indicators. The Better Regulation Guidelines provide instructions on setting indicators, their link with objectives and stage of implementation of a programme or policy area. These principles are implemented in a set of indicators set out in the legal basis of the respective spending programmes.

The work already done and the Commission's commitment to budgetary performance in the future are outlined in the [Communication on the EU budget performance framework for the EU budget under the 2021-2027 MFF](#).

The EU Budget Performance Framework under the 2021-2027 MFF

The 2021-2027 multiannual financial framework is at the heart of the EU's economic policy framework, more so today than ever before. The EU budget is powering the EU's response to the COVID-19 pandemic. It will help to address the ongoing health emergency and the effects of the war in Ukraine, kick-start the recovery, steer our economies and societies towards a more sustainable, digital and resilient future, and strengthen the EU's geopolitical role.

Over the 2021-2027, unprecedented amounts of funding will be channelled through the EU budget to address these challenges. Together with NextGenerationEU – the EUR 750 billion (in 2018 prices) recovery instrument – the 2021-2027 MFF amounts to more than EUR 1.8 trillion. This is close to double the size of the budget for 2014-2020 and is the largest investment package ever financed through the EU budget.

The preparation of the 2021-2027 multiannual financial framework provided the opportunity to further improve the performance framework, taking into account lessons learnt from the past in order to construct a fully-fledged performance framework for the EU budget. The Commission has made a major effort to identify a high-quality set of indicators for the 2021-2027 programmes. The overall number of indicators has been reduced from over 1 100 in the 2014-2020 period to around 750 for 2021-2027. The indicators have been carefully selected to provide a representative indication of performance on an annual basis throughout the cycle and have been included in the basic legal texts for each programme. The Commission has worked closely with the European Parliament and the Council to make sure that these improvements were reflected in the final programmes that were adopted.

Part 4 “Programme 2021-2027 – Key monitoring indicators” of the Programme Statements presents the performance indicators included in the legal bases of the programmes, and which will be used to monitor the performance of the programmes during the 2021-2027 period.

To make sure the indicators provide data that are reliable, trustworthy and comparable, the Commission is also clarifying, for each indicator the source of information, what exactly the indicator measures, together with other supplementary information. This way, all interested parties will have at their disposal all the necessary information to check the robustness of the results. The Programme Statements include a selection of this technical information, while the complete set of technical information is published in the programmes' performance webpages.

The indicators set out in the legal bases will, in most cases, be complemented with a more comprehensive set of indicators as part of the monitoring and evaluation framework for each programme. This reflects the importance of robust data measuring the impacts of EU spending programmes, which the recent Commission Communication on Better Regulation highlighted again. These indicators will allow for deeper analysis of performance in the interim and ex-post evaluations of the programmes, the results of which are an essential input to the design of future programmes. When available, the Commission will report on the results of the multi-annual evaluations of budgetary spending programmes also in the Programme Statements.

Indicators perform several functions: measure progress towards the programme objectives; monitor the implementation and performance of the programme providing an early warning on potential deviations; and allow to communicate and inform about the performance of the EU budget.

The performance framework of the 2021-2027 MFF includes more than **750 indicators** measuring the performance against more than 170 specific objectives. However, not all indicators measure EU budget performance directly. Some provide either high-level contextual information (e.g. "the Europe R&D target of 3% GDP" or process-related information (e.g. "quality of project applications", or "number of participants"). Additionally, not all indicators are available immediately after the start of the

² www.oecd.org/gov/budgeting/budgeting-and-performance-in-the-eu-oecd-review.pdf

programme. The reporting on performance indicators varies from one programme and type of indicator to another and is influenced mainly by the following factors:

- The type of performance indicators³ chosen determines when the performance information starts to be available. Input indicators, used rarely in the PS, and output indicators are available much sooner than result and impact indicators, which require an intervention to be finalised – sometimes large-scale investments.
- For some interventions the outcomes take place in a relatively short time (e.g. participants in learning mobility activities under Erasmus+), while for other interventions (e.g. infrastructure investment programmes like CEF) the results will only be known when the projects reach the necessary maturity.
- The mode of implementation (i.e. shared, direct, or indirect management) influences the way performance information is collected, aggregated and transmitted to the decision makers. Around three quarters of the EU budget is implemented by Member States under shared management. The rest is implemented by the Commission directly or via the executive agencies (direct management), or via agreements with third parties such as the European Investment Bank or other international financial institutions (indirect management). The results from shared management programmes are more complex to aggregate and validate, and are usually reported with at least a one year lag.
- Cost of collection: some indicators for which the collection of data is expensive or complex are collected at a lower frequency (every 2 or 3 years for example). As a result, for some objectives the performance indicators allow progress to be tracked on an annual basis while for others only the mid-term interim evaluations deliver tangible indications on performance.

Indicators in the DB 2023 Programme Statements

In budgetary terms, 2021 was the first year of implementation of the 2021-2027 financial framework. However, many of the 2014-2020 EU spending programmes have a life-cycle that is longer than the 7-year MFF period, extending their budgetary implementation for a number of years into the 2021-2027 MFF, and setting targets to be achieved later than in 2020 (e.g. 2023, given the “n+3” rule applied in shared management programmes, where Member States are allowed to use the committed amounts up to three years after the original commitment).

For many of the 2021-2027 programmes, the implementation is only just starting and no results are available for the first year of implementation. The general statement is even more appropriate in this MFF, given that MFF and legal bases were adopted late, which made a timely implementation start difficult if not impossible. For most of the 2021-2027 indicators, targets (as well as baselines when applicable) have been defined. The methodology to set the targets, baselines and milestones for each indicator can be found in the indicator metadata Excel file (https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en). For some programmes, the definition of the targets require the prior approval of implementation arrangements. This is the case for example for the operational programmes for the European Structural and Investment Funds, and the guarantee agreements for the InvestEU programme. Given that it was not possible to adopt even a single operational programme in any of the shared management programmes prior to the end of 2021, given the limited time frame following the adoption of the CPR, targets for some programmes, including many of those under shared management, will be published in the programme statements for the draft budget 2024.

For the 2014-2020 programmes the implementation is more advanced, there are more indicator data available than in previous years, allowing for a better assessment of the performance of the indicators and the programmes. The most recent data are available for the programmes directly managed by the Commission (reporting results as at the end of 2021 in most cases). The programmes under shared management present values recorded and reported by the Member States as at the end of 2020. The programmes under indirect management present a mixed picture; some have results reported up to 2021, while others depend on the reports or surveys carried out by the international organisations.

Practical limitations of performance indicators

Indicators should, to the extent possible, provide the most direct evidence of the effects they are measuring. However, it is important to stress that the indicators alone are not sufficient to draw conclusions on whether a policy or programme is successful, or on track to achieve its objectives.

³ The type of performance indicators is defined in the ‘Guidelines on monitoring’ from the Better Regulation Guidelines: <https://ec.europa.eu/info/sites/default/files/better-regulation-guidelines-monitoring.pdf>

A comprehensive performance assessment for any programme requires analyzing the indicators in conjunction with other quantitative and qualitative information, such as budget implementation data, external factors impacting the programme, key achievements, project pipeline, etc. While some of that contextual information is presented in the PS, a really comprehensive assessment is typically only possible in the context of the programme evaluations, where the information available is maximized.

FINANCING OF HORIZONTAL POLICY PRIORITIES IN THE EU BUDGET

1. Introduction

This section provides information on the financing of actions related to climate change, biodiversity, gender and Sustainable Development Goals (SDGs) – all horizontal policy priorities in the EU budget - as foreseen in point 16 (d,e,f,g) of the Interinstitutional Agreement (IIA).

Climate and environment policy are at the core of EU policymaking in line with the Treaty¹. The Paris Agreement, formally ratified by the EU in 2016, sets out a global framework to avoid dangerous climate change by limiting global warming to well below 2°C, and pursuing efforts to limit it to 1.5°C above pre-industrial levels. It also aims to strengthen the ability of countries to deal with the impact of climate change and support them in their efforts. The United Nations' Agenda 2030 also drives and informs EU policy, through the integration of the Sustainable Development Goals.

The Commission has made the green transition one of its main priorities for the period 2019-2024, as declared by the President in her political guidelines². The [European Green Deal](#), adopted in 2019, confirms this ambition. The Green Deal places dealing with climate and environmental challenges at the centre of EU activity with a view to transforming the EU into a fair and prosperous society, with a modern, resource-efficient and competitive economy where there are no net emissions of greenhouse gases in 2050 and where economic growth is decoupled from resource use. It also aims, under the “do no harm” (DNH) and the “leave-no-one-behind” principles, to protect, conserve and enhance the EU's natural capital, and protect the health and well-being of citizens from environment-related risks and impacts. In line with the Green Deal, the European Climate Law, adopted in 2021, specifically prescribes that the EU become climate-neutral by 2050 and sets an intermediate target of reducing net greenhouse gas emissions by at least 55% by 2030 compared to their 1990 levels.

To achieve these goals, in July 2021 the Commission adopted a package of legislative proposals named “Fit-for-55”. The package consists of a set of ambitious, inter-connected proposals, balancing between pricing, rules, standards, and support measures, and building on already existing measures (such as the EU Emissions Trading System, ETS) and new instruments (such as a Carbon Border Adjustment Mechanism). The proposal for a new Social Climate Fund will further reinforce the social dimension of the EU budget by addressing social and distributional impacts of Fit-for-55, and more specifically the proposal to extend emissions trading also to buildings and road transport. The Social Climate Fund proposal is fully coherent with and complements existing measures under the Just Transition Mechanism and the European Social Fund+.

In 2020, the European Commission adopted the EU Biodiversity Strategy for 2030. The strategy is a comprehensive, ambitious and long-term plan to protect nature and reverse the degradation of ecosystems. It contains actions and commitments to put Europe's biodiversity on a path to recovery by 2030. It also paves the way for the EU's contribution to the international negotiations on the global post-2020 biodiversity framework. As a core part of the European Green Deal, it also supports a green recovery following the COVID-19 pandemic. The strategy aims at establishing a larger EU-wide network of protected areas of 30% of land and seas, implementing an EU nature restoration plan including by proposing binding nature restoration targets in 2022, and enabling the necessary transformative change through enhanced funding for biodiversity – including through the EU budget - and a strengthened EU-wide biodiversity governance framework. The Strategy also aims at tackling the global biodiversity challenge by playing a key role towards the successful adoption of an ambitious global biodiversity framework under the Convention on Biological Diversity.

To underscore its commitment to its climate and environmental goals, the EU has also set quantitative targets on the shares of its 2021-2027 multi-annual financial framework and NextGenerationEU that it devotes to them. In particular, the EU has committed to dedicate at least 30% of its augmented MFF to climate-relevant expenditures and 7.5% of the 2024 annual budget and 10% of the annual budgets 2026 and 2027 to protecting and enhancing biodiversity.

2. Green Budgeting

The Commission uses “[green budgeting](#)” as an instrument to enhance transparency of the EU budget in terms of funding to support climate and environmental objectives, in line with the Paris Agreement and the European Green Deal. In March 2022 the Commission [committed](#) to further pursuing its work on this tool together with the French Presidency and several Member states.

The EU ‘green budget’ is established around four areas: climate adaptation, climate mitigation, biodiversity and clean air. It also includes a strong “do no harm” component that covers both climate and environmental objectives.

In the period 2021-2027, the Commission foresees to spend the following amounts on these four areas. More work is underway to provide a differentiated estimate between climate mitigation and adaptation, where possible:

	2021	2022	2023	2024	2025	2026	2027	Total
EU BUDGET + NGEU	427 163 €	318 046 €	291 487 €	178 796 €	182 304 €	174 060 €	179 539 €	1 751 395 €
Climate	137 543 €	112 091 €	93 382 €	56 365 €	53 681 €	51 386 €	51 988 €	556 880 €
% Climate	32%	35%	32%	31%	29%	29%	29%	32%
Biodiversity	18 350 €	16 310 €	16 226 €	14 548 €	15 086 €	15 621 €	16 077 €	112 218 €
% Biodiversity	4%	5%	6%	8%	8%	9%	9%	6%
Clean Air	51 593 €	25 714 €	24 284 €	6 780 €	5 756 €	5 925 €	6 075 €	126 127 €
% Clean Air	12%	8%	8%	4%	3%	3%	3%	7%

At the same time, the focus on results is higher than ever. Through the actions of the MFF 2014-2020:

Climate	Biodiversity	Clean Air
<ul style="list-style-type: none"> • By 2019, a reduction of over 4.4 million tons of CO2 equivalent per year had been achieved with the help of regional funds. • A decrease of over 1.9 billion kWh of annual primary energy consumption of public buildings was achieved with the help of regional funding. • Until 2020, an increase over 2 735 MWh of additional capacity of renewable energy production was achieved thanks to regional funding. 	<ul style="list-style-type: none"> • By 2019, nearly 4.1 million additional people had been served by improved wastewater treatment with the help of regional funds. • By 2019, nearly 6.8 million hectares of habitats have achieved better conservation status with support from regional funds. • By 2020, more than 15 000 km² of habitats are being restored or are improving their conservation status thanks to LIFE funding 	<ul style="list-style-type: none"> • By 2020, more than 1.8 million people were benefitting from better air quality thanks to LIFE funding

The new performance framework for the 2021-2027 embedded in each budgetary programme’s regulation puts a sharper focus on climate and environmental challenges. This will allow to present more information in the upcoming years. The Commission is also working towards a “[cross-sectional indicator](#)” on climate mitigation, to estimate the aggregate impact of the various interventions funded by the EU budget.

Furthermore, Green Budgeting is also about greening the revenues of the budget. The Commission’s 2021-2027 MFF proposal tabled in 2018 inter alia included an EU own resource based on [non-recycled plastic packaging waste](#). It entered into force in 2021 and is expected to generate around EUR 6 billion per year. In the Interinstitutional Agreement of December 2020 the

Commission committed to propose two additional green own resources: one based on the [EU Emission Trading System \(ETS\)](#)⁴ and one on the [Carbon Border Adjustment Mechanism \(CBAM\)](#)⁵. These proposals were tabled in December 2021⁶.

The Commission has also introduced in September 2021 the EU Green Bond Framework, under which it plans to finance **30% of the NGEU package**, as announced by the President in her State of the Union address in 2020⁷. The above-referenced framework, which has been validated by an external assessor, provides assurances to the investors that proceeds raised through EU green bonds will finance only climate or environmentally relevant expenditures.

3. Climate mainstreaming

The fight against climate change is, by its very nature, a fight that transcends national boundaries. In order to achieve our climate goals, develop new clean technology, deploy the best solutions and drive our economies towards a more sustainable path, action at EU level is needed. EU action can exploit significant economies of scale, pull together resources to reach critical mass, and contribute to strengthening the EU in the international arena.

The EU budget makes a crucial contribution to the fight against climate change. **Over the course of the 2014-2020 multiannual financial framework, the EU delivered on its ambition of spending 20% of available funds on climate-related measures.**

What do we do?

In the 2014-2020 Multiannual Financial Framework, the Commission implemented an innovative approach in order to dedicate resources to the fight against climate change: ‘climate mainstreaming’. This requires EU programmes in all policy areas to consider climate priorities in their design, implementation, and evaluation phases. With a climate change spending target of 20% applying to the overall EU budget, all EU spending programmes were designed to implement two types of measures:

- **Adaptation.** This involves finding solutions to and ensuring preparedness for adverse effects of climate change, enhancing resilience, taking appropriate action to prevent or minimise the damage such effects can cause, and taking advantage of any opportunities that may arise.
- **Mitigation.** This refers to actions that limit the magnitude of long-term climate change. Climate change mitigation generally involves reductions in emissions of greenhouse gases.

In the context of the **2021 - 2027 Multiannual Financial Framework**, the Commission has further developed its approach to climate mainstreaming, including through:

- increasing the **overall climate spending target** to 30% and including sectorial targets in relevant legislation;
- embedding EU budget action in the **European Green Deal policy framework**, through the adoption of the biodiversity strategy and the farm-to-fork strategy, which will impact the way programmes are designed;
- enhancing the “climate responsiveness” of programmes and actions financed under the EU budget that do not directly tackle the climate challenge, through reinforced **climate proofing** and the application of the “**do-no-harm**” principle;
- A strong shift from the OECD’s Rio markers, which are intent-based, to the **EU climate coefficients**, which are instead result-oriented and based on a predefined list of activities and coefficients;

⁴ Some of the proceeds from the ETS will be used to finance two funds, the Modernisation Fund and the Innovation Fund. Both of these funds are entirely focused on supporting the transition to a carbon-neutral economy. The **Innovation Fund** will provide around EUR 25* billion of support over 2020-2030, depending on the carbon price (* at EUR 50 / tCO₂), for the commercial demonstration of innovative low-carbon technologies, aiming to bring to the market industrial solutions to decarbonise Europe and support its transition to climate neutrality. The **Modernisation Fund** is a dedicated funding programme to support 10 lower-income EU Member States in their transition to climate neutrality by helping to modernise their energy systems and improve energy efficiency. It is financed by revenues from the auctioning of 2% of the total allowances for 2021-30 under the ETS Trading System. Both funds are outside of the 2021-2027 MFF and therefore do not count towards the 30% target.

⁵ [COM\(2021\)564final](#), Carbon Border Adjustment Mechanism (CBAM)

⁶ [Own resources legal texts](#)

⁷ [State of the Union 2020](#)

- A “**climate adjustment mechanism**” which will enable the Commission to take ‘compensatory’ action to address possible gaps in the achievement of climate spending targets of individual EU spending programmes, either by ensuring that the deficit is addressed within the same programme in the following years of its implementation, or by other programmes, so that the overall 30% climate spending target for the EU budget as a whole can be achieved as planned;

How much do we spend?

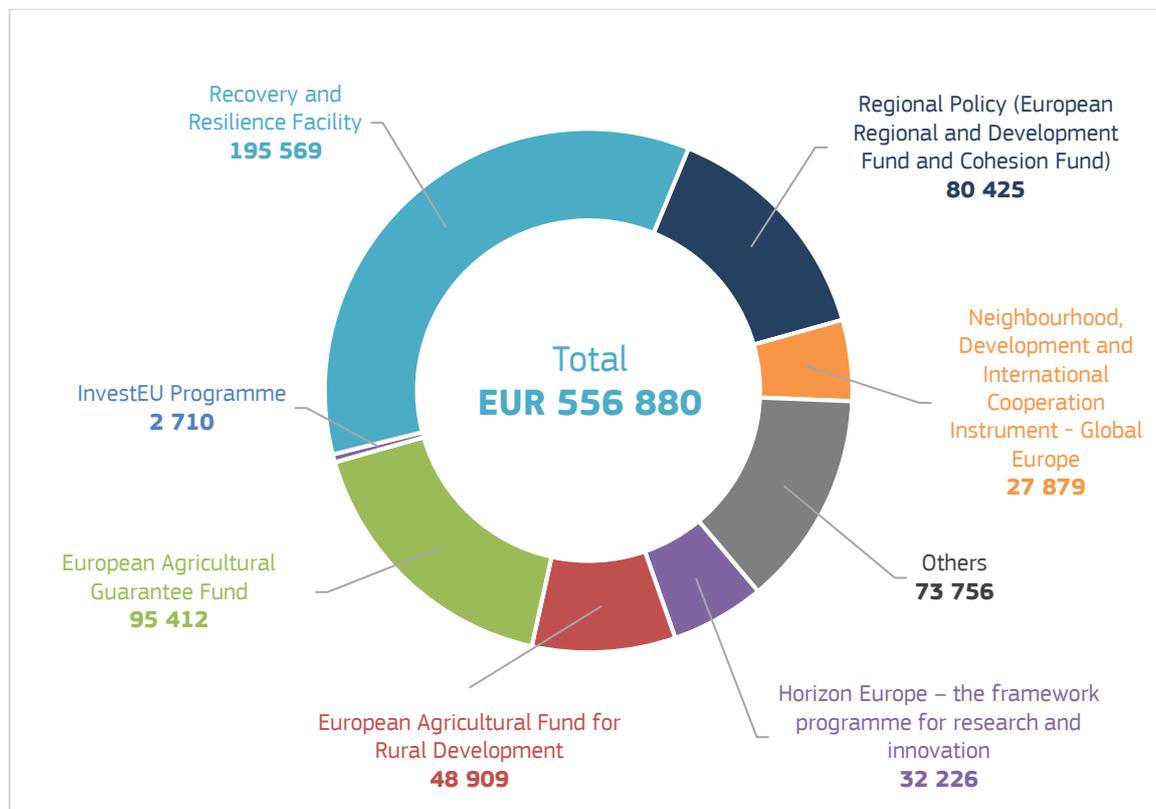

Chart 1 - Climate contribution in 2021 to 2027, in million EUR

Source: European Commission.

In 2022, the Commission is continuing to revise and update all the data available, including further consolidating existing data and applying a more granular methodology where possible.

Using the most up to date information for the 2014-2020 period and correcting a past mistake, EUR 220.9 billion of the EU budget was dedicated to the fight against climate change, i.e. 20.60%. On that basis, the Commission confirms that the 20% target for the 2014-2020 period has been reached.

For the period 2021-2027, the EU budget – including NGEU - is projected to deliver EUR 557 billion or 31.5% of climate spending.

To achieve this, the relevant basic acts include a set of targets that underpins the overarching 30% climate spending target under the EU budget. A complete overview of climate expenditure is presented at the end of this document and in each Programme Statement.

Using the percentage of climate spending per programme calculated on a commitment basis, both for the MFF period 2014-2020 and 2021-2027, it is possible to make a first estimate for the amount of **climate related spending at the payment level**. This can be achieved by applying the average commitment percentage of climate relevant spending by programme by MFF period to the outstanding payments (the “RAL”) by programme by MFF period at the end of 2021. This methodology leads to an estimated climate contribution at the **payment level of around 26.7%**. This estimate excludes the debt-financed Recovery and Resilience Facility. Going forward, the Commission will work to further refine this estimate.

Climate Methodology

In the 2014- 2020 period, to track green expenditure under the EU budget the Commission used EU markers based on the OECD’s Rio markers. The methodology consisted of assigning a coefficient of 0%, 40% or 100% to each intervention to reflect the extent to which climate considerations had been integrated into its design. These markers were assigned at the lowest level of granularity possible by the design of the programme.

Given the risk that the same action may be categorised differently depending on the reason why it was financed⁶, already during the 2014-2020 period the Commission started moving towards a system of more systematic classification based on an “activity-approach”. For the 2021–2027 MFF, the Commission developed that approach further, further reinforces a classification of types of action based on their expected effects on climate, and does so in a consistent manner across the EU budget.

The Commission has published a “Climate Mainstreaming Architecture” SWD to explain in details the approach of climate mainstreaming in the EU budget.

Climate Adjustment Mechanism

The Climate Adjustment Mechanism provision is structured so as to guarantee that the different budget-wide 30% target will be reached. This will be ensured through:

- The specification of sectorial targets, underpinning the overall 30% budget-wide target. These targets have been included in articles of the legislation for the programmes where strong pre-programming is present, to limit the risk of deviation (e.g. RRF, CPR);
- Enhanced monitoring and reporting, through a more granular tracking in the financial system of the Commission and a specific section in the Programme Statement for each individual spending programme taking stock of progress achieved vis-à-vis the target for the respective programme;
- A mechanism whereby the Commission will propose corrective actions in line with the specific basic act provisions in case of deviations in the programming that could endanger the 30% target;

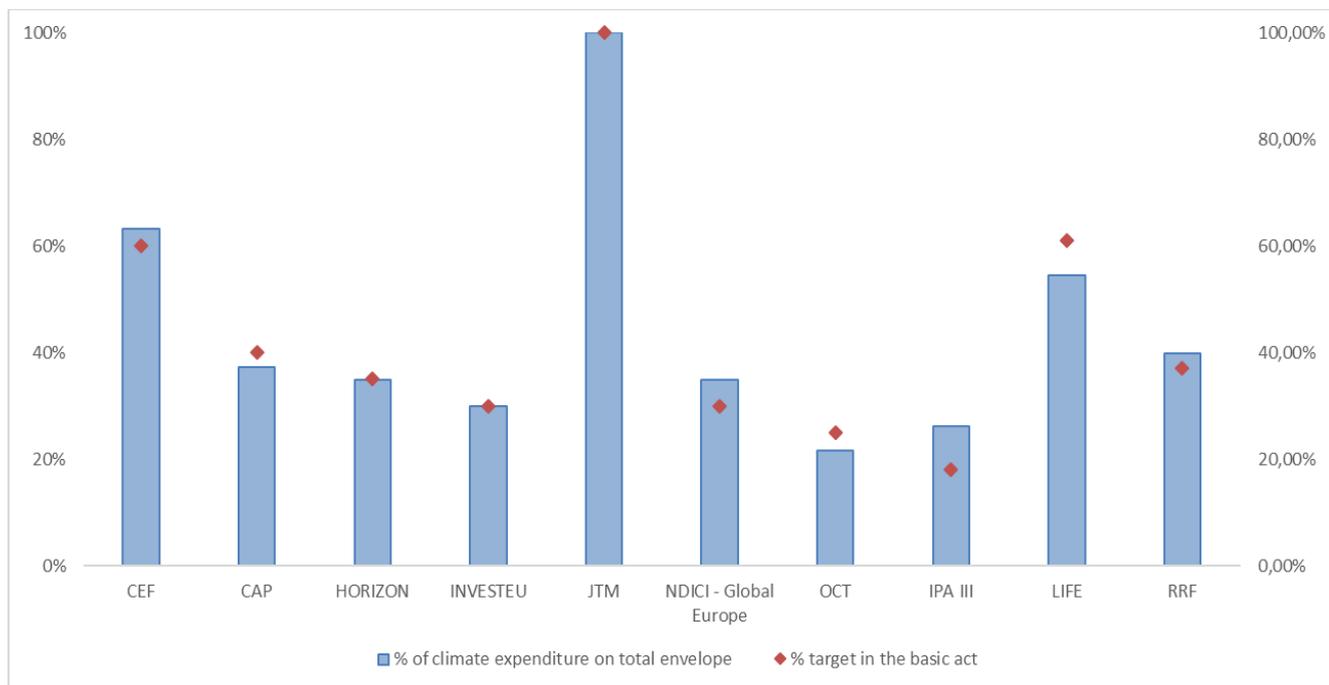

Chart 2 - Comparison of ex-ante targets and foreseen expenditures in 2021-2027

Source: European Commission.

As presented, the EU Budget is on track to fulfil both the overall 30% target and its sectorial target. Each programme statement includes specific section presenting the climate contribution per programme specifying which action are undertaken to ensure proper financing.

This section will be updated every year on the basis of the most up-to-date data and information available and will explain any deviations from the expected performance, as needed, and remedial plans.

Some examples of what we achieved

Under the InvestEU programme

- A EUR 70 million loan was allocated to “Talasol Solar” energy power plant based in Spain, with a total capacity of 300 megawatt-peak. In Romania, the same programme supported a loan to “GreenFiber International SA”, to finance a recycling and circular economy project, who contributed to the creation of 280 full-time jobs and increased the amount of waste collected and processed by over 50 000 tonnes per year.
- The innovative project “sonnen batterie” is a lithium-based energy storage system that enables the storage and optimization of self-generated solar power and the creation of an interconnected energy community where members can share their energy with each other, working towards true energy autonomy for residents. At the same time, the “sonnen app” allows close monitoring, analysis and control of energy usage and production at the level of the household.

Under the space programme, the **Copernicus Climate Change Service** works together with businesses across the globe to turn raw climate data into sector-specific information aimed at users within the field, such as businesses, researchers and policymakers. One of these projects is the global biodiversity service, which aims to support those working to preserve species, to protect the areas that are most climate sensitive, to increase the resilience of ecosystems and to reduce biodiversity loss around the world by providing the information needed to create plans to sustain ecosystems in present and future climate conditions.

Under cohesion policy, the city of Utrecht developed the project “The Smart Solar Charging”, a bi-directional charging system for shared electric cars, where car batteries can charge or deliver energy back to the electricity grid. The EU Budget has contributed to installing 200 smart bi-directional charging points so far and this programme is still scaling up.

Under Erasmus+, the Centres of Vocational Excellence have supported various projects in the field of Green Skills, including GREENOVET fostering the development of Vocational Excellence in Green Innovation across Europe, enabling an innovative, inclusive and sustainable economy. It provides a platform to interconnect the European VET schools at regional, national and transnational level together with key partners in the local innovation and skills ecosystem. For example, it includes EPLUG, a European Platform for Urban Greening aiming to increase the knowledge and skills required to address biodiversity, climate adaptation and well-being in the urban green living environment, and to broaden the expertise among professionals in Europe.

Under the **programme for environment and climate action** the LIFE “FORECCAsT” project provided forest owners and managers of the Parc Naturel Régional du Haut-Languedoc in France with different means to tackle the challenges of climate change, through a mobile phone application to help evaluate and manage the risk of forest die-back. The project was implemented in 25 test sites.

Under NDICI, climate adaptation and/or mitigation is progressively integrated as part of several annual action plans in favor of pre-accession countries (Kosovo, Montenegro, North Macedonia, Serbia, Turkey). For example, in Serbia, the EU for Connectivity and Green Agenda action is focused, among other goals, on promoting the Green Agenda by reinforcing environmental protection (e.g. supporting the construction of the regional sanitary landfill in Novi Sad by 2025), contributing to energy efficiency (e.g. increasing the financial potential of the National Energy Efficiency Fund up to EUR 10 million in 2025), accelerating the shift towards a low-carbon and circular economy, and improving transport sector (e.g. supporting modernisation of 120 km of the Belgrade-Nis railway corridor by 2025).

Climate-related administrative expenditure is not included in the mainstreaming estimates. However, the European Commission is committed to sustainability. Thus, through the eco-management and audit scheme system, the Commission implements a monitoring programme to assess, measure, monitor and reduce the environmental impact of its daily activities. The Commission has achieved significant results, including the following (results refer to the Brussels site during the 2005-2020 period)⁸:

Energy for buildings = – 72% (MWh/person),

CO₂ emissions for buildings = – 88% (tonnes/person),

⁸ https://ec.europa.eu/environment/emas/emas_registrations/emas_in_the_european_institutions_en.htm

Office paper = – 90% (sheets/person/day),
Water use = – 73% (m³/person),
Non-hazardous waste = – 69% (tonnes/person).

4. Biodiversity Mainstreaming

Preservation of biodiversity ensures the long-term stability of ecosystems and enables the sustainable preservation of natural resources for future generations. Tackling biodiversity loss and restoring ecosystems require significant investments, including to ensure a more resilient society and to combat the emergence of diseases linked to ecosystem degradation and wildlife trade.

What do we do?

Halting and reversing the decline of biodiversity in the EU is a major objective of the EU, as confirmed in the political guidelines from Commission President von der Leyen and is reflected in the European Green Deal and its 2020 investment plan. Protecting biodiversity is a global issue that requires transnational intervention and coordination.

In line with the **European Green Deal**, the Commission, the European Parliament and the Council of the European Union decided in the interinstitutional agreement (IIA) that biodiversity should be mainstreamed in the EU programmes, to **allocate at least 7.5% in 2024 and 10% in 2026 and in 2027 of annual spending, respectively under the MFF to biodiversity objectives**, while considering the existing overlaps between climate and biodiversity goals' ⁽⁹⁾. This is in line with the statement in the Biodiversity Strategy for 2030 that biodiversity action requires at least EUR 20 billion per year stemming from 'private and public funding at national and EU level' ⁽¹⁰⁾, of which the EU budget will be a key enabler. The Biodiversity Strategy also sets out that, as nature restoration will make a major contribution to climate objectives, a significant proportion of the EU budget dedicated to climate action will be invested on biodiversity and nature-based solutions

How much do we spend?

⁹ Interinstitutional Agreement between the European Parliament, the Council of the European Union and the European Commission on budgetary discipline, on cooperation in budgetary matters and on sound financial management, as well as on new own resources, including a roadmap towards the introduction of new own resources (OJ L 433, 22.12.2020, p. 28) (<https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv:OJ.LI.2020.433.01.0028.01.ENG>).

¹⁰ Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions – EU biodiversity strategy for 2030 – Bringing nature back into our lives (COM(2020) 380) (<https://eur-lex.europa.eu/legal-content/EN/TXT/?qid=1590574123338&uri=CELEX%3A52020DC0380>).

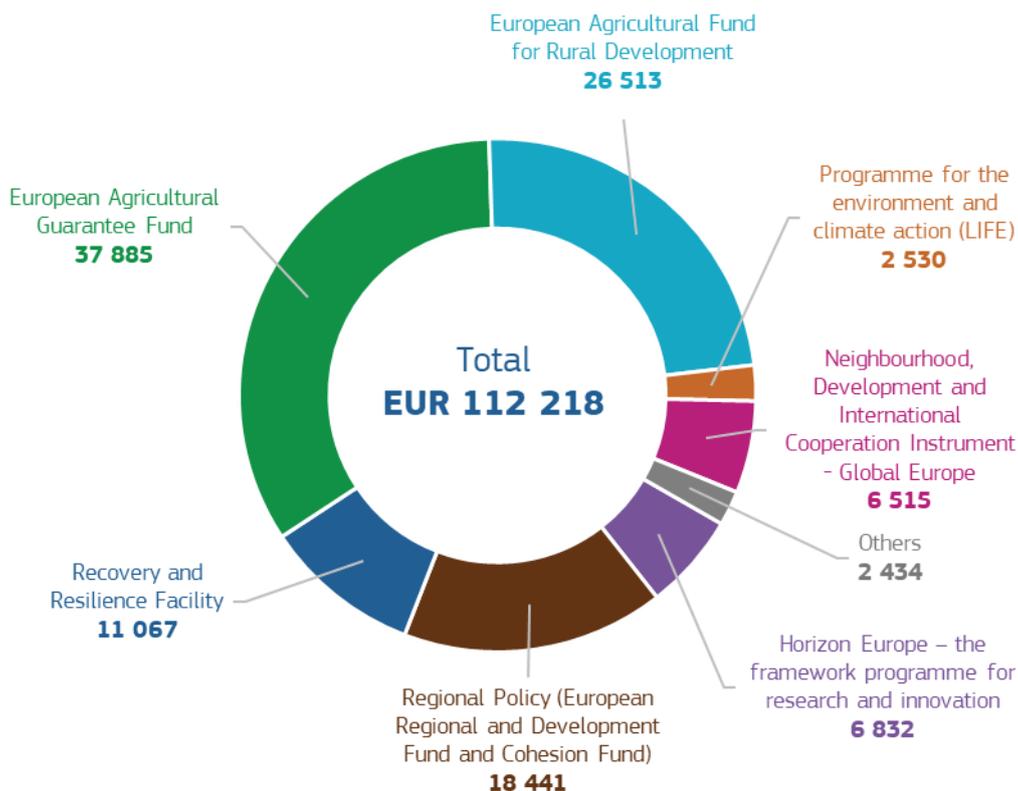

Chart 2 - Biodiversity contribution in 2021 to 2027, in million EUR

Source: European Commission.

For the 2014-2020 period, the EU budget dedicated EUR 85 billion, or 8% of the multiannual financial framework, to the fight against biodiversity loss. For the period 2021-2027, the EU budget is projected to allocate EUR 112 billion (or 6% of the budget as agumented by the NGEU) to biodiversity-relevant interventions. Further data is available in an annex to this section.

Biodiversity Methodology

To track the EU budget expenditure for biodiversity, an internationally recognised methodology (the Rio markers) is used. The methodology involves applying a coefficient of 0%, 40% or 100% to each project/objective/strand/programme, reflecting the degree to which biodiversity considerations have been integrated in their design. The Commission has worked to update the Biodiversity methodology for the 2021-2027 period, to properly implement an enhanced system for tracking biodiversity expenditures.

The Commission has launched a study¹¹ to help developing a sound methodology for Biodiversity tracking. The main conclusions of the study are that the new tracking methodology should aim to:

- Slightly adapt the current approach, where necessary to improve accuracy, to reflect differences in the legislation underpinning programmes and their operation, or in the case of new programmes; in particular, this means that the Rio Markers approach should be maintained for now.

¹¹ [Biodiversity Financing and Tracking](#), Trinomics, May 2022.

- Focus on expected impacts, wherever possible, rather than only on the stated objectives of expenditure (although where evidence on impact is limited or unavailable, the stated objectives may still need to be used as a guide to the coefficient applied);
- Aim for consistency, wherever possible, with the methodology adopted for climate tracking in the 2021-2027 period, except where this is not feasible or does not allow for accurate and consistent results.
- Based on the findings of the assessment of the 2014-2020 methodology, great care needs to be taken on the use of the 40% expenditure marker, with an increased focus on ex post evaluation of its accuracy. There are two main categories of expenditure where this marking is used, both of which justify further information-gathering through the course of implementation of programmes under the 2021-2027 period.
- Using the total of expenditure tracked with the 100% marker, and the 40% of expenditure tracked with the intermediate marker, and referring to it as “expenditure on biodiversity” is potentially misleading. Commission communications material generally refers more cautiously to “contributing to” or “addressing” biodiversity, and this approach should continue. The Interinstitutional Agreement calls for the Commission to report on expenditure “contributing to” halting and reversing biodiversity decline. A distinction could also be drawn between the 100% tracked expenditure (where, generally, there should be a high level of confidence that it is spending “on” biodiversity), and expenditure under the 40% marker, which is a relatively crude estimate.

The methodology for Biodiversity has been largely updated in line with this study. As regards the EAGF and the EAFRD, the forecasts provided for 2023-2027 are still established on the basis of the previous methodology and are still to be updated, in line with the CAP strategic plans as finally approved.

The study also aimed at assessing funding needs to implement the EU Biodiversity Strategy for 2030, current levels of funding and the remaining finance gap. The study finds that the scale of financing needs to deliver the Strategy, including baseline expenditure, is estimated at around EUR 48.15 billion annually between 2021 and 2030. It also estimates expenditure on biodiversity at ca. EUR 29.46 billion annually over 2021-2030 including from the MFF and Member States expenditure. Considering that estimated annual expenditure for 2014 – 2020 averaged at around 24 billion annually, there would be an estimated EUR 5 billion annual increase in biodiversity expenditure. This leaves an estimated financing gap of around EUR 18.69 billion per year from 2021 to 2030.

Some examples of what we achieved

Under the Common Agriculture Policy, the EAFRD and EAGF support biodiversity-friendly practices such as agroecology, ‘close to nature’ forestry, farming practices supporting conservation in particular in Natura 2000 sites and other protected areas, coexistence of farmers with large carnivores, farming practices compatible with farmland birds protection. Financial support is also provided to maintain high-diversity landscape features e.g. hedgerows, trees and ponds, building upon the Biodiversity Strategy target of bringing back at least 10% of agricultural area under high-diversity landscape features. These funds also support organic farming and the Biodiversity Strategy target to reach 25% of organic farming by 2030. Support is also provided to pollinators as a way of maintaining the importance services provided by pollination to the agriculture sector and food production, e.g. encouraging a group of farmers to work at landscape level to ensure heterogeneity and connectivity of pollinator habitats, and implementation of integrated pest management to mitigate the potential negative impacts of pesticides.

Cohesion policy funds enabled to support creation of the Emscher landscape park and restoration of the Emscher river in Germany. The project enabled transformation of vacant land of the former coal and steel industries and their transport infrastructures in the Ruhr region into a connected system of urban landscapes, new parks, industrial and natural heritage and a network of bike paths. The project enabled to implement cost-effective alternative solutions to decontamination. The project is estimated to have created ca. 1 400 direct jobs per year from its inception to 2020 and to have significantly contributed to improving quality of life in the area and the region’s attractiveness.

Furthermore, by 2020, 5 000 inhabitants of the island La Réunion, in France, were protected against floods in two district that are regularly inundated during heavy tropical and cyclonic rains.

The **Horizon 2020 project on the biosystematics, informatics and genomics of the big four insect groups** studied the four largest insect groups, to investigate hotspots of largely unknown insect diversity to better comprehend its potential for helping tackle economic and societal needs. The project employed a wide spectrum of modern, innovative approaches to uncover the evolutionary history of several insect lineages.

Another example is the **EU4Environment project** within the Eastern Partnership. This project helps partner countries to preserve their natural capital and to increase people's environmental well-being, by supporting environment-related action, demonstrating and unlocking opportunities for greener growth, and establishing mechanisms to better manage environmental risks and impacts including on biodiversity and natural ecosystems.

The **European Maritime and Fisheries Fund (EMFF)** complemented other funding sources by supporting actions for the protection and restoration of marine and coastal biodiversity and ecosystems, including in inland waters. This included actions to achieve or maintain a good environmental status and the implementation of spatial protection measures under the EU Marine Strategy Framework Directive, the management, restoration and monitoring of Natura 2000 areas and the protection of species under Habitats and Birds Directives. To restore natural balance to ecosystems on the Swedish archipelago, an EMFF financed project supported an initiative aimed at reinstating coastal wetlands in an effort to increase pike stocks. Key predators in the Baltic Sea, pike are essential to maintaining biodiversity and healthy waters in the area. Under the project, a new manmade wetland system that replicates the natural spawning grounds of pike was developed. Restoring and establishing spawning grounds of pike turned out not only an efficient way of improving fish stocks but at the same time it supported other objectives such as skills development, fostered collaboration and increased tourism. The innovative project was implemented following the success of similar manmade wetlands in other areas across southern Sweden.

The Copernicus component of the **EU Space programme** supports, through land monitoring services, the implementation of biodiversity-related policies. It follows land degradation and monitors riparian and coastal ecosystems or even forest change. Monitoring these allow to support biodiversity and pollination, improve air quality, water quality and quantity, reduce greenhouse gas emissions, enhance carbon sequestration, and support climate change adaptation, regulation of soil erosion and soil quality.

Under the **DCI programme (now NDICI)**:

- By 2020, the **Partnership for Action on Green Economy** supported 20 partner countries to contribute to 79 green economic policies and practices through knowledge development, policy dialogue and technical cooperation. Seven African countries were supported through SWITCH Africa Green towards green business development with projects combining policy and regulatory guidance on partnerships with the private sector (in particular Small-and-Medium-Sized Enterprises), with important co-benefits for biodiversity.

- In the Eastern Neighbourhood, the **EU Water Initiative Plus** (completed in mid-2021) delivered hundreds of knowledge products and modernised 9 water laboratories. Some 40 surveys were carried out in rivers, ground and coastal waters, covering more than 1000 sites. Due to this support, the water monitoring in the Eastern Area Partnership region is now closer to EU standards.

Under the **European Neighbourhood Instrument**, bilateral and regional projects have been targeting biodiversity. For example, the **integrated monitoring and assessment programme-marine protected areas project** aims at achieving a good environmental status for the Mediterranean Sea and coast through an ecologically representative and efficiently managed and monitored network of marine protected areas. The project has a total budget of EUR 4 million and its implementation period runs from 2019 to 2022.

Through the **LIFE PROGRAMME**, by 2020:

- More than 15 000 km² of habitats are being restored or are improving their conservation status;
- More than 300 species have improved their conservations status thanks to LIFE;
- Over 1500 Natura 2000 sites have benefited from LIFE funding.

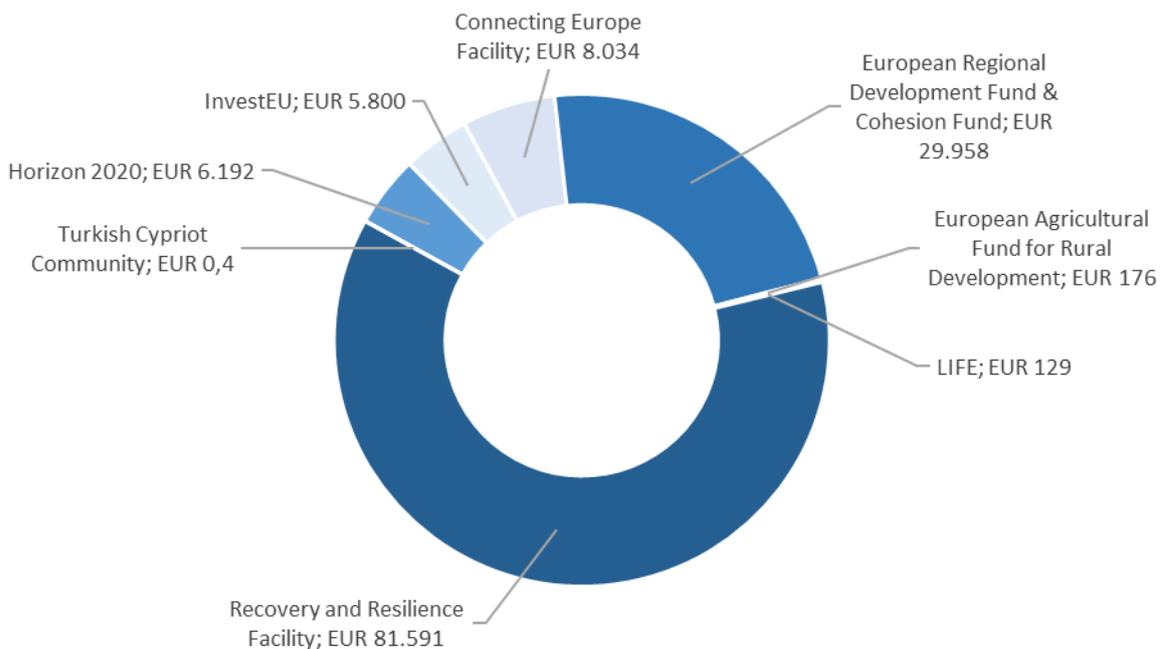

5. Clean Air tracking

The EU has been working for decades to reduce air pollution to levels that do not give rise to negative impacts on, and risks to, human health and the environment. Air quality has improved in the European Union over time and emissions of several air pollutants have decreased. This has been possible thanks to EU clean air legislation and efforts to integrate environmental protection requirements in general and clean air priorities in particular into sectoral policies, including stricter control of the emission of harmful substances into the atmosphere. Joint efforts at EU, national, regional and local level (including thanks to the provision of resources from the EU budget to actions contributing to clean air objectives), have played an important role in delivering progress. However, efforts must continue and intensify, as in most Member States quality of life remains hampered by the adverse impacts of air pollution. EU air quality standards need to be met across the EU.

To address remaining clean air challenges, EU funding has been made available and successfully used by Member States under various financial streams, by either directly supporting clean air projects or effectively mainstreaming clean air objectives in other investments (e.g. infrastructure, rural and regional development). To monitor progress in the Member States' uptake of EU funds for clean air objective, the Commission tracks EU funding contributing to clean air by assessing the extent to which each funding stream contributes to this objective. This monitoring will contribute to better implementation of clean air policies in Member States. This tracking also responds to the Commission obligation to report on Member States' uptake of EU funds in support of the achievement of the objectives of Directive (EU) 2016/2284 on the reduction of national emissions of certain atmospheric pollutants (the NEC Directive, for National Emission reduction Commitments Directive) in its Article 11(1)(c)).

In order to comply with the Directive's obligation of reporting, the programme statements for relevant programmes include the individual programmes' contribution to clean air throughout the 2021-2027 multiannual financial framework. The precise methodology for tracking the contribution towards clean air objectives was published along with the implementation report that is mandated by the NEC Directive (Article 11 of the NEC Directive). Values for the 2021-2027 MFF rely mostly on estimates. Data for the 2021-2027 MFF is, as of yet, unavailable for InvestEU and LIFE as projects have not been chosen yet. Therefore, for these two programmes, the clean air contribution as based on the 2014-2020 MFF is provided. Further data is available in an annex to this section.

Clean Air contribution in EUR million

Projected clean air contribution from 2021 to 2027, in million EUR

6. Gender equality mainstreaming

The Council of Europe defined gender mainstreaming as "the (re)organisation, improvement, development and evaluation of policy processes, so that a gender equality perspective is incorporated in all policies at all levels and at all stages, by the actors normally involved in policymaking¹²". According to the European Institute for Gender Equality (EIGE), gender mainstreaming involves the integration of a gender perspective into the preparation, design, implementation, monitoring and evaluation of policies, regulatory measures and spending programmes, with a view to promoting equality between women and men, and combating discrimination¹³.

The Commission has embedded gender mainstreaming in its strategy for the promotion of gender equality and has established gender equality as a cross-cutting objective for all policy areas, including fundamental rights and citizenship, employment and social inclusion, cohesion policy, education, research and innovation, external cooperation and humanitarian aid.

The Commission's long-standing commitment to gender equality gained new momentum with the adoption of the Gender Equality Strategy 2020-2025¹⁴, which delivers on the Commission's commitment to achieving a Union of Equality. It sets out policy objectives and actions to achieve significant progress towards a gender-equal Europe by 2025. The goal is a Union where everybody, in all their diversity, is free to pursue their chosen path in life, have equal opportunities to thrive, and can equally participate in and lead our European society. The key objectives of the Strategy are ending gender-based violence; challenging gender stereotypes; closing gender gaps in the labour market; achieving equal participation across different sectors of the economy; addressing the gender pay and pension gaps; closing the gender care gap and achieving gender balance in decision-making and in politics. The Strategy pursues a dual approach of gender mainstreaming combined with targeted actions, and intersectionality is a horizontal principle for its implementation. While the Strategy focuses on actions within the EU, it is coherent with the EU's external policy on gender equality and women's empowerment.

Since the fallout of the Covid-19 pandemic, the Commission has moved decisively to develop a comprehensive set of initiatives, comprising both first-response measures and more structural measures, in the context of the Next Generation EU and the reinforced Multiannual Financial Framework. The resulting policy response focusses on fair and inclusive recovery. It ensures that equality is at the heart of recovery, and it is designed to mitigate the disproportionate impact that the crisis has on many vulnerable groups in society, irrespective of sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation.

As concerns funding in particular, in line with the Gender Equality Strategy 2020-2025, Next Generation EU and the 2021-2027 MFF provide a wide range of EU funding and budgetary guarantee instruments to support actions promoting women's labour market participation and work-life balance, invest in care facilities, support female entrepreneurship, combat gender segregation in certain professions, and address the imbalanced representation of girls and boys in some sectors of education and training. Furthermore, dedicated funding is provided for projects benefiting civil society organisations and public institutions that implement specific actions, including preventing and combating gender-based violence. For instance, through the future Citizen, Rights, Equality and Values programme, the Commission continues to support civil society organisations and other stakeholders active at local, regional, national and transnational levels across Europe in tackling gender-based violence and promoting gender equality. Violence, and in particular gender-based violence, are covered by a dedicated strand and specific objective ("Daphne"). Furthermore, the Commission acted to directly support the healthcare systems of EU Member States, where the vast majority of health workers are women (78%)¹⁵, in their fights against the coronavirus pandemic. Notably, in 2020 the Commission mobilised EUR 3 billion from the EU budget through the RescEU medical equipment capacity and the Emergency Support Instrument for the healthcare sector¹⁶.

In line with its commitment to constantly strengthen its reporting framework, the Commission seamlessly applies under the MFF 2021-2027 dedicated systems to track gender relevant expenditure in EU funding programmes. In particular:

-Under the current MFF – same as in the previous programming period – external action programmes (NDICI, CFSP, IPA, OCT) apply the OECD Development Assistance Committee (DAC) marker to record ex ante aid activities targeting gender equality. This allows the identification of gaps between policy and financial commitments and the incentivisation of efforts to close them. The OECD DAC methodology consists in the following scoring system:

- score 2: Gender equality is the principal objective of the intervention and is fundamental in its design and expected results.
- score 1: Gender equality is a significant objective, but not the main reason for undertaking the intervention; and
- score 0: The intervention has been screened against the marker but has not been found to target gender equality.

According to the Gender Action Plan III (2021-2025), at least 85 % of new external actions implemented under the pre-cited instruments, should have gender equality as a principal or a significant objective, as defined by the gender equality policy marker of the OECD DAC. Furthermore, at least one action per country and per region should specifically target gender equality. The NDICI regulation further specifies that at least 5% of gender responsive actions should have gender equality and women's and girls' rights and empowerment as a principal objective.

-Under Annex 1 of the Common provisions Regulation[1] (CPR), a tracking system was introduced to promote the 'gender-relevant' focus of EU Cohesion policy funds[2]. Namely, under the MFF 2021-2027, these funds will track the investments as categorised per gender equality dimension (gender targeting/ gender mainstreaming/ gender neutral). This implies that each operation implemented under cohesion policy programmes will have to contain information about its contribution to gender targeting/mainstreaming. The CPR codes and the OECD DAC markers are aligned. Managing authorities are required to indicate the gender equality dimension of their programme in advance. This ex ante assessment is the basis for estimating potential contribution. The methodology provides for a systematic reporting on planned and achieved levels of expenditure for gender-relevant interventions within cohesion policy programmes.

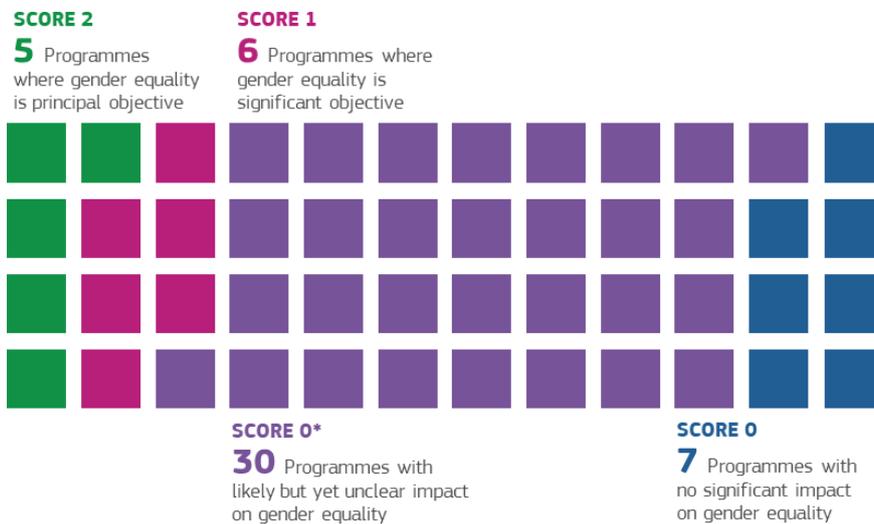

- The Commission has developed a methodology to measure expenditure related to gender equality at programme level in the 2021-2027 MFF, with a view to further reinforcing gender mainstreaming in the post-2020 programming period, and in line with the commitment undertaken in its Gender Equality Strategy. In this endeavour, the Commission has benefited from fruitful exchanges with the European Institute for Gender Equality as well as from a constructive engagement with the European Court of Auditors in the context of their Special Report on Gender Mainstreaming in the EU published in May 2021.

The methodology, which remains under development, is used on a pilot basis for the first time in the context of the reporting associated with the Commission's proposal for the Draft 2023 Budget. This is ahead of the schedule to which the European Commission had committed in the context of the Inter-institutional agreement accompanying the 2021-2027 MFF. The methodology aims at improving gender mainstreaming in the Commission's budget process, through tracking the contribution made by policy design and resource allocation to gender equality objectives. It expands on the general criteria proposed by the OECD for the Rio markers and uses a similar, albeit somewhat adjusted approach as used in climate tracking. In addition, the methodology is aligned with the aforementioned tracking systems for the external action programmes and the CPR. By doing so, the Commission is ahead of the ambition of the IIA both with regard to the scope of implementation and the timeline of its delivery. An overview of the methodology is available in an annex to this section.

The overview of the information reported in the programme statements on the basis of the methodology reflects the continuous efforts to reinforce the integration of gender mainstreaming. In the graph below, programmes are classified on the basis of the highest score associated to the programme, even if only a part of the money contributes. Note that the number of programmes relevant to gender equality as either contributing to gender equality (scores 1 and 2) or potentially contributing to gender equality (score 0*) represent more than 95% of the EU budget. Less than 5% can be considered as gender neutral on the basis of the information currently available.

Contributions to gender equality

The financing is split among four categories

^[1] [EUR-Lex - 32021R1060 - EN - EUR-Lex \(europa.eu\)](#)

^[2] These are the ERDF, ESF+, JTF and the Cohesion fund.

7. The EU budget and Sustainable Development Goals (SDGs)

The United Nations' 2030 Agenda for Sustainable Development, with its 17 Sustainable Development Goals (SDGs) and 169 targets, has given a new impetus to global efforts to achieve sustainable development. The EU has played an important role in shaping the 2030 Agenda, through public consultations, dialogue with partners and in-depth research. The EU is committed to playing an active role to maximise progress towards the SDGs, as outlined, among others, in its Communication 'Next steps for a sustainable European future'¹⁷ and in the Commission Staff Working Document 'Delivering on the UN's Sustainable Development Goals – A comprehensive approach'¹⁸.

This lasting commitment to SDGs constitutes an overriding political priority for the von der Leyen Commission. Progressing towards the UN SDGs is an intrinsic part of the President's political programme¹⁹ and an array of deeply transformative policies has already been presented in 2020, such as the European Green Deal, the climate law, a new Industrial Strategy for Europe, the Annual Sustainable Growth Strategy 2020 and 2021, and the new European Skills Agenda amongst others.

¹⁷ For further information, please consult: <https://euroDa.eu/iPv74QX>

¹⁸ SWD(2020) 400 final, 18.11.2020. For further information, please consult: <https://europa.eu/ldp39gq>

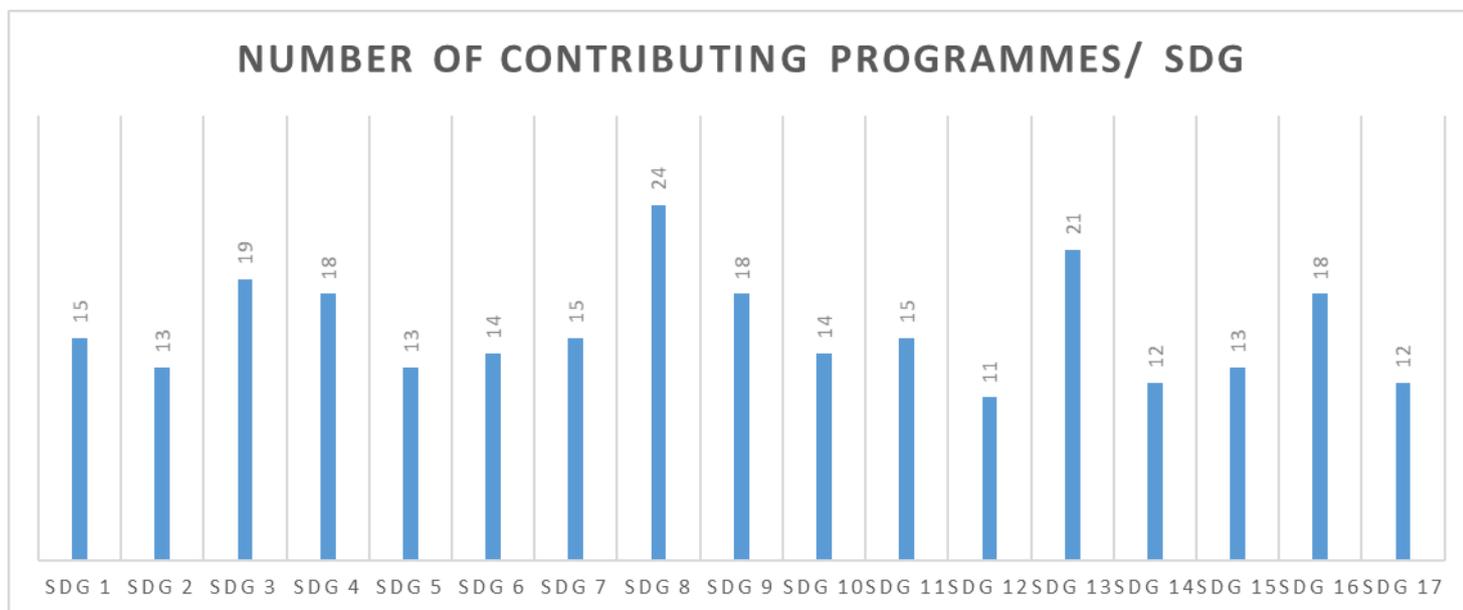

¹⁹ President von der Leyen's [Political Guidelines](#): A Union that strives for more- My agenda for Europe.

This commitment assumes even greater relevance in light of the global COVID-19 pandemic, which has provided an impetus to ‘building back better’ towards a more inclusive, sustainable, just and resilient future for all, leaving no one behind. Notably, the Commission’s Annual Sustainable Growth Strategy 2021²⁰ reaffirmed that sustainability, productivity, fairness and stability, meaning the four pillars on which the EU’s economic policy must rely to implement reforms and investments in the EU²¹, should remain the guiding principles underpinning Member States’ recovery and resilience plans under the Recovery and Resilience Facility.

These priorities lie at the heart of the European Semester and ensure that the new growth agenda does the best for people and the planet. To this end, a holistic and balanced approach where the EU works better together with the Member States and across policy fields is required. Given the division of competences between Member States and the EU, a close coordination is crucial for the achievement of the SDGs.

At EU level, sustainable development challenges are addressed through EU policies and regulatory instruments. As far as the former are concerned, the EU budget, through its spending programmes, provides a significant contribution to sustainable development by complementing the national budgets, in line with the principle of subsidiarity. In doing so, the design and implementation of the EU spending programmes aim at delivering on the objectives in each policy field whilst promoting sustainability through the actions and interventions of the relevant programmes, in a joint and coherent way. In particular, 41 out of 48 of the EU spending programmes contributed towards at least one SDG in 2021.

The number of programmes contributing to individual SDGs is presented in the graph below:

In the light of the cross-cutting nature of SDGs, and in order to ensure a holistic approach in addressing sustainable development, the vast majority (85%) of the spending programmes contributing to SDGs are designed to address multiple SDGs through their policy actions. As last year, the Commission presents the SDGs to which each EU programme contributes along with examples of its contribution. This is with a view to further enhancing the reporting on the performance of its programmes and providing a deeper understanding of the EU policy coherence.

The following infographic illustrates in a non-exhaustive manner the many examples of the contribution of EU programmes to SDGs.

²⁰ COM(2020) 575 final. For further information, please consult: <https://europa.eu/ldM47rj>

²¹ Annual Sustainable Growth Strategy 2020, SWD(2019) 444 final. For further information, please consult: <https://europa.eu/Ry84jt>

The **Fund for European Aid to the most Deprived** co-funded from March 2020 to December 2021 the project 'Distribution of food parcels to students' with EUR 1.4 million. The project targeted the most disadvantaged students in third-level education in the Nouvelle-Aquitaine region of France. Depending on the week, between 800 and 1 400 students received food parcels and in total, nearly 52 000 packages have been distributed to date.

Up to 87% of the forcibly displaced population are hosted in developing countries, while their survival depends on the availability of assistance provided by the authorities, local communities and humanitarian organisations. In 2020, the **Humanitarian aid** programme financed with EUR 900 million the aid to forcibly displaced populations and their host communities.

The **Common Agricultural Policy**, through its EU school scheme, supports the distribution of fruit, vegetables and milk to schools across the EU as part of a wider education programme on EU agriculture and the benefits of healthy eating. For 2017-2023, the total EU budget allocated amounts to €220.8 million per school year.

Erasmus+ will support between 2021- 2024 with €1 million the project Urban Resilience and Adaptation for India and Mongolia. The project aims to promote green and blue infrastructure and nature-based solutions for resilient, climate-friendly and liveable cities through ICT-enhanced tertiary education linked to labour markets.

In 2021, some 16 million EUR were mobilised under the **Emergency Support Instrument** to establish the necessary infrastructure for the issuance and verification of interoperable EU Digital COVID-19 certificates with the aim to facilitate the safe free movement of citizens within the EU during the pandemic.

Under **LIFE's** ECOTEX project in Spain an innovative, eco-efficient and highly replicable recycling system was developed for polyester textile waste. The system increased the circularity of the shoe industry and reduced Greenhouse gas emissions. Several companies in the textile, automotive and packaging industries started projects to replicate this system.

The Education Cannot Wait initiative enabled the provision of education to 1.5 million children and youth, half of whom are girls, in 19 crisis-affected countries; and of training to more than 21 000 teachers. The **Neighbourhood, Development and International Cooperation Instrument** supported this initiative in the period 2018-2021 with 21 million EUR.

Under the EU support to **Overseas Countries and Territories**, the financing of EUR 4 million to be provided from 2021 to 2027 in the context of EU's cooperation with the French Southern and Antarctic Lands has as priority the protection of biodiversity.

In Sweden, a project funded by the **European Social Fund** with 1.6 million EUR helped newly arrived migrant women between 25 and 65 years old speed up the process of finding work or training while also breaking down gender stereotypes. The project ran from 2016 to 2019 and benefited around 700 participants.

Thanks to **Galileo**, data is provided to fishing authorities on the location, speed and course of fishing vessels operating in Europe, allowing them to detect and track movement and activity in restricted fishing grounds. In the EU, about 9000 fishing vessels are equipped with a satellite-based device providing data to fishery authorities to support enforcement efforts.

In 2021, the **Copernicus** Land Monitoring Service systematically provided near-real-time information on global inland water bodies and their seasonal replenishment, lake and river water levels, temperature, turbidity and trophic state, including potential water availability from snow and ice cover.

From 2016-2019, the **European Regional Development fund** supported with 763 292 EUR the Polish Atlas of Rains Intensities (PANDA) project. This is the first online, digital and comprehensive rainfall mapping system in Poland. It is designed to help develop urban storm water and drainage systems that better protect Polish towns, cities and their residents against the effects of heavy rainfall.

The Baltic Synchronisation Project aims to synchronise the three Baltic States' electricity grids with the continental European network and allow the three Baltic States to gain full control of their electricity networks and to strengthen energy security. To this end, the **Connecting Europe Facility** provided financial assistance of 1 052 million EUR until 2020. An additional EUR 170 million is provided through the first call under the **Connecting Europe Facility II**.

The European e-Justice Portal, established with funding from the **Justice programme**, facilitates access to justice throughout the EU and served 4.3 million visitors in 2021

From 2020 to 2024, the **Instrument for Pre-accession Assistance** supports the programme 'Social Inclusion' in Albania, and topped up its contribution with EUR 20.65 million to finance COVID-19 emergency support measures. 173,091 employees benefited from measures related to support to businesses affected by COVID-19 and 65 574 individuals received the minimum salary for a period of 3 months as a targeted measure to small enterprises temporary closed as a result of the COVID-19 crisis.

Under the **EU Civil Protection Mechanism**, the EU Civil Protection Knowledge Network was set up. Its aim is to bring together relevant national civil protection authorities, centres of excellence, researchers, universities, knowledge centres, third countries and international organisations and thereby facilitate sharing of experiences and lessons learnt, and better informed decision-making for more efficient and effective prevention, preparedness and response.

As of 31 December 2020, the **European Fund for Strategic Investments** had supported transport infrastructure investments materialised in signed amounts of approx. EUR 9.3 billion, thereby unlocking some EUR 31.1 billion to promote transport networks, cleaner fleets, reduced congestions and bottlenecks. These investments provided improved transport for over 95 million passengers.

*Annex – gender tracking methodology***Gender Equality: an expenditure tracking methodology
for the MFF 2021-2027****1. Background**

Gender mainstreaming consists of ‘the integration of a gender perspective into the preparation, design, implementation, monitoring and evaluation of policies, regulatory measures and spending programmes, with a view to promoting equality between women and men, and combating discrimination’.²³

Article 8 of the Treaty on the Functioning of the European Union lays down the principle of gender mainstreaming, providing that ‘in all its activities, the Union shall aim to eliminate inequalities and to promote equality between men and women’. Gender equality as a fundamental value for the European Union is further enshrined in the Treaty on the functioning of the European Union and the Charter of Fundamental Rights, and confirmed in EU law.

The Commission applies a dual approach to gender equality. Notably it promotes gender equality on the one hand, through gender mainstreaming, i.e. by increasingly including the gender equality perspective in all stages of EU action i.e. policies, legislative measures and funding programmes; and on the other hand, through specific targeted measures to address persistent inequalities, including within relevant EU funding programmes.

With its Gender Equality Strategy 2020-2025,²⁴ the Commission committed to look at the impact of its activities on gender equality and at how to measure expenditure related to gender equality at programme level in the Multiannual Financial Framework (MFF) 2021-2027.

This commitment was reaffirmed in the Interinstitutional Agreement (IIA) of 16 December 2020²⁵ accompanying the current MFF, whereby the Commission received the mandate to develop such a methodology. The IIA also provides minimum requirements with regard to timeline and scope that the institutions agreed.

In April 2021, the Commission, with its Communication on the ‘Better Regulation: Joining forces to make better laws’, committed to pay greater attention to the gender equality dimension as well as to equality for all. The Commission committed to give gender equality and equality for all consistent consideration in all stages of policymaking.²⁶ This was reflected in the revised Better Regulation Guidelines and Toolbox adopted in November 2021²⁷. The Commission also reaffirmed this commitment in its work programme for 2022²⁸.

In May 2021, the European Court of Auditors (ECA) published its Special Report²⁹ on gender mainstreaming in the EU Budget. Recommendation VI called for the development of a system for tracking funds allocated

²⁹ [Special Report 10/2021](#): Gender mainstreaming in the EU budget: time to turn words into action

and used to support gender equality and for annual reporting on the results achieved in terms of gender equality.

In October 2021, the Council Conclusions on the ECA report were adopted.³⁰ In line with the ECA recommendations, the Council called on the Commission to develop a robust system for tracking funds allocated and used to support gender equality and to report annually on the results achieved in terms of gender equality, in order to improve accountability and budgetary transparency. Furthermore, it called on the Commission to ensure that reliable information on funds allocated to and used for the promotion of gender equality at programme level in the MFF 2021-2027 is available.

2. Outline of the methodology for tracking gender equality related expenditure in the EU Budget

In line with the Gender Equality Strategy 2020-2025 and the IIA on the MFF 2021-2027, the Commission has developed a methodology for the tracking of gender equality related expenditure under the MFF 2021-2027.

The development of this methodology has been informed by discussions with the European Institute for Gender Equality (EIGE), the European University Institute in Florence and the OECD.

The present methodology is implemented in a pilot phase in the context of the Draft Budget (DB) 2023, and may be subject to further modifications following the outcome of this pilot phase.

Key features of the methodology

- **Gender equality** refers to the equal rights, responsibilities and opportunities of women and men and girls and boys, in all their diversity.^{31,32,33} Namely, equality means that people's rights, responsibilities and opportunities will not depend on whether they are born female or male. Gender equality implies that the interests, needs and priorities of women and men in all their diversity are taken into consideration³⁴. The methodology aims to capture all actions supported by the EU budget, which tackle gender imbalances.
- The methodology assesses the contributions of the EU funding programmes to the promotion of gender equality while acknowledging the **specificities of individual programmes**, including with regard to the level of granularity at which it is possible to apply the methodology. The **availability of relevant data and legislative framework** are also considered.
- The development of the methodology has been informed by the **OECD Development Assistant Committee (DAC) Gender Equality Markers**. This provides a level of comparability with the Commission's tracking of contributions to climate and biodiversity and builds on existing know-how of EU institutions and stakeholders. The methodology has also

³⁰ <https://data.consilium.europa.eu/doc/document/ST-12829-2021-INIT/en/pdf>

³¹ [gender equality | European Institute for Gender Equality \(europa.eu\)](https://eige.europa.eu/gender-equality)

³² Certain programmes, EU funded projects and legislative frameworks, such as the European Social Fund Plus under Common Provisions Regulation and Horizon Europe projects managed by DG RTD, also capture data on "Non-binary" or "Other" individuals, where applicable.

³³ See footnote 9 of the Gender Equality Strategy 2020-2025, which states that: "The expression 'in all their diversity' is used... to express that, where women or men are mentioned, these are a heterogeneous categories including in relation to their sex, gender identity, gender expression or sex characteristics. It affirms the commitment to leave no one behind and achieve a gender equal Europe for everyone, regardless of their sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation".

³⁴ [gender equality | European Institute for Gender Equality \(europa.eu\)](https://eige.europa.eu/gender-equality)

been informed by discussions with and the ongoing work of **EIGE** on **Tool No 8 for ‘Tracking resource allocations for gender equality in the EU Funds’**.³⁵

- Currently, the **scope** is limited to equality between women and men, in all their diversity. Interventions contributing to countering other aspects of discrimination³⁶, such as racial/ethnic origin, sexual orientation, and disability, are not included in the methodology. Once the methodology is fully developed and institutionalised, the Commission may decide to initiate further work to include other forms of discrimination.
- The methodology aims for granularity to be as high as possible, taking into account the availability of relevant data. If data are not available at the project/action level, the expenditure will be tracked at a higher level of aggregation, such as the relevant part of a programme (e.g., operational programmes, strand level, or at a particular specific objective) or, in the absence of more detailed information, at the level of the entire programme. For the purposes of the methodology, the term “intervention” designates the most granular level available, which, depending on the programme specificities and data availability, can be different, i.e project level or operational programme, etc. The following **scores** are attributed at the most granular level of intervention possible:

2 – Interventions whose principal objective is to improve gender equality. Improving gender equality is the main objective of the intervention, without it the intervention would probably not be undertaken.

1 – Interventions having gender equality as an important and deliberate objective but not as the main reason for the intervention.

0 – Not targeted interventions, which do not contribute significantly towards gender equality.

0* – Interventions, which can have an important impact on gender equality but where the actual impact is yet unclear, due to for example the absence of an assessment of the gender equality perspective in the design phase, or the absence of data allowing a more detailed assessment of the effects of the intervention.

- The methodology **does not include coefficients** to weigh the contribution of interventions towards gender equality. The Commission will thus report on full financial envelopes under each individual score. Given that a) the consideration of gender equality is in many cases not the prime, albeit an important, objective; and b) most of the budget will in some way contribute to gender equality, attributing weighing factors to these amounts is unlikely to add any value and is, on the contrary, likely to obfuscate important differences between spending rationales. This is in line with common practice in OECD, where even the most advanced methodologies limit themselves to flagging interventions relevant for gender equality.

3. Process of assessment

³⁵ <https://eige.europa.eu/gender-mainstreaming/toolkits/gender-budgeting/tool-8-tracking-resource-allocations-gender-equality-eu-funds?lang=nl>

³⁶ In line with Article 10 TFEU: “In defining and implementing its policies and activities, the Union shall aim to combat discrimination based on sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation”.

The assessment of contributions to gender equality is performed at two stages to capture in a timely and accurate manner the contributions of the EU budget to gender equality, namely:

- *ex ante*, based first on the design³⁷ (including the legal framework) and then on the programming of the interventions;
- *ex post*, based on an ongoing assessment of the results from the implementation of the specific interventions as they come in.

This is in line with the Commission’s tracking methodologies for climate and biodiversity.

It should be noted that the reporting drawing from programming and implementation data will follow the life cycle of each individual programme and will be presented accordingly.

The actual assessment of the applicable score, both *ex ante* and *ex post*, will be conducted by the DG/Service responsible for a given intervention in collaboration with DG BUDG and the Task Force on Equality. DG JUST may also be associated.

Once additional information from the programming and implementation of programmes becomes available, all scores may be subject to possible re-assessment.

For those programmes which have been attributed **score 0*** in the context of the *ex ante* assessment, an effort will be made to re-assess their contribution into scores 0, 1 or 2, once the programme enters the programming and the implementation phases. In the absence of sufficient information, the score may have to remain stable (*i.e.*, 0*), to indicate that the programme continues to have the potential of making an important contributions, which, however, remains insufficiently understood/evidenced for the time being.

Scores 1 and 2 may be attributed at programme or programme strand level only to those interventions where it can be sufficiently substantiated and justified that they demonstrate sufficient positive contributions towards gender equality.

Score 0 may be attributed only to those interventions where it is sufficiently clear and justified that the intervention has no or very limited potential impact on gender equality.

4. Assessment criteria

As mentioned above, the assessment criteria for the attribution of scores are adapted by DG BUDG from the OECD DAC guidelines:

STAGE OF ASSESSMENT	SCORE 0	SCORE 0*	SCORE 1	SCORE 2
Ex ante assessment based on the intervention’s	Gender equality is not targeted by the intervention	Although an analysis of the gender equality perspective has yet to be conducted , it is likely – but not yet clear – that the intervention can have an important	An analysis of the gender equality perspective of the intervention has been conducted. Findings from this analysis of the gender equality perspective have informed the design	

³⁷ For DB2023, scores are attributed on the basis of an ex ante assessment focusing on each intervention’s design.

design		impact on gender equality	of the intervention, and the gender equality aspects have been reflected in the adopted legal acts and/ or in the performance framework of the intervention.	
Ex ante assessment based on the intervention’s programming		At the programming phase, the intervention may reinforce its gender equality perspective , inter alia, by planning gender equality conducive actions or issuing guidance to reinforce the promotion of gender equality by managing authorities.	The firm commitment towards gender equality undertaken in the design of the intervention, is now reflected in the intervention’s programming : A gender equality perspective is integrated, for instance, in actions included in national and regional Programmes under shared management or in the annual work programme executed under direct management through provisions included in grants and procurement procedures.	The top-level ambition of the intervention is to advance gender equality and/or women’s empowerment and this is reflected in its programming .
Ex post assessment based on the intervention’s implementation	At the implementation phase , assess whether evidence from the implementation of the intervention confirms non-relevance for gender equality in	At the implementation phase , the intervention is reassigned to other scores (0, 1 or 2), as soon as the gender equality perspective can be sufficiently assessed and supported by quantitative and/ or qualitative analysis (for scores 1 and 2).	The intervention has positive effects ex post , proven by quantitative and/ or qualitative analysis . Commitment to monitor and report on the gender equality results achieved by the intervention in the evaluation phase .	

- **The inclusion of gender-specific objectives in the performance framework of a programme is not a prerequisite** for an intervention to be included as part of gender equality expenditure. In other words, a programme may actively consider the gender equality perspective and make an important contribution even in the absence of gender-specific objective. This is in particular true given the important work done on the economy of specific objectives in the MFF.
- Similarly, **disaggregation of data by sex or gender³⁸ is not necessary for an intervention to be included in the gender equality expenditure**. However, where possible, proportionate and relevant, and to the extent data is available, the methodology aims at reporting on indicators based on sex/gender disaggregated results.
- Considering the absence of sufficient relevant data across EU funding programmes, it is not possible to conduct an analysis of potential negative effects on gender equality across all programmes. Therefore, the Commission has launched a **pilot project** to explore the **feasibility of** introducing a

³⁸ Note: whereas ‘sex-disaggregated’ generally refers to the male/female split in statistics/indicators, ‘gender-disaggregated’ emphasises the broader context of social norms, and is more inclusive as regards different gender identities, gender expressions and sex characteristics.

screening for potential negative effects on gender equality at a later stage, including an assessment of what would be necessary in terms of information and data. The results of this will be assessed to inform and determine any further steps.

- An **overview** of the score(s) attributed to each EU funding programme is available at the table with **financial contributions** to gender equality presented under each individual Programme Statement's **Section 6.4 'Contribution to Gender Equality'**.
- Furthermore, in accordance with the Budget Circular for Draft Budget 2023, DGs/Services are requested to present for each programme a brief **contextual assessment** of potential gender-specific inequalities, constraints, needs or opportunities in the policy area(s) the programme contributes to, explaining if the programme is or could potentially be relevant to address them.
- DGs/Services are also requested to provide **an assessment of the programme's performance in relation to gender equality** by providing information on interventions funded by the programme in 2021 for the promotion of gender equality and interventions planned or identified for the remainder of the MFF 2021-2027.
- For **gender relevant programmes**, if a programme cannot demonstrate any concrete relevant achievement, DGs/Services are invited to consider actions such as relevant trainings, studies etc. to help inform the policy design with a gender equality dimension, regardless of the size of the corresponding financial envelopes.

5. Coverage and programmes

Point 16 (f) of the IIA between the Commission, the Council and the European Parliament stipulates that a gender equality tracking methodology for certain direct management programmes at programme level shall be implemented no later than 1 January 2023, to test the feasibility of the methodology. At mid-term, it will be explored whether the methodology can be extended to other programmes for the remainder of the MFF.

However, the Commission, drawing from its long-standing and deep commitment to the promotion of equality, including gender equality, has spared no efforts to advance both time-wise and scope-wise faster than envisaged by the IIA. As a result, the Commission has developed the methodology and will test it for its feasibility already in the context of Draft Budget 2023 on all EU funding programmes under the MFF 2021-2027.

1. Overview

1.1. Challenges

Research and Innovation are essential to shape the future of Europe: they contribute to making Europe a better place in which to live and work and are crucial for providing solutions to the challenges we face today, and will face tomorrow. They help make people's lives better by improving healthcare, environment, climate and digital services. At the same time, by delivering countless new products and services, Research and Innovation improve Europe's competitiveness, boost growth and create jobs. Horizon Europe helps Europe deliver on citizens' priorities, as embodied in the Sustainable Development Goals and in the Paris Agreement on fighting climate change, to bring about sustainable growth and high-quality jobs, and to solve global challenges. It responds to the need to:

- Further improve the creation and diffusion of high-quality new knowledge and innovation in Europe
- Reinforce the impact of R&I in addressing EU priorities
- Ensure a more rapid uptake of innovative solutions
- Strengthen the European Research Area.

1.2. Mission (General objectives)

Horizon Europe promotes scientific excellence, generates new knowledge and technologies, and provide the appropriate environment to turn great ideas into products and services that will bring sustainable growth to our economy and create jobs. This will have positive effects on growth, trade and investments flow. Horizon Europe aims to:

- deliver scientific, technological, economic and societal impact from the Union's investments in research and innovation so as to strengthen the scientific and technological bases of the Union and foster its competitiveness in all Member States including in its industry, deliver on the Union strategic priorities and contribute to the realisation of EU objectives and policies,
- contribute to tackling global challenges, including the Sustainable Development Goals by following the principles of the Agenda 2030 and the Paris Agreement, and
- to strengthen the European Research Area. The Programme shall thus maximise the Union's added value by focusing on objectives and activities that cannot be effectively realised by Member States acting alone, but in cooperation.

1.3. Specific objectives

The Programme has the following specific objectives:

- to develop, promote and advance scientific excellence, to support the creation and diffusion of high-quality new fundamental and applied knowledge, of skills, technologies and solutions, to support training and mobility of researchers, to attract talent at all levels and contribute to the full engagement of the Union's talent pool in actions supported under the Programme;
- to generate knowledge, strengthen the impact of R&I in developing, supporting and implementing Union policies and support the access to and uptake of innovative solutions in European industry, in particular SMEs, and in society to address global challenges, including climate change and the SDGs;
- to foster all forms of innovation, facilitate technological development, demonstration and knowledge and technology transfer, strengthen deployment and exploitation of innovative solutions;
- to optimise the Programme's delivery with a view to strengthening and increasing the impact and attractiveness of the ERA, to foster excellence-based participation from all Member States, including low R&I performing countries, in the Programme and to facilitate collaborative links in European R&I.

1.4. Public intervention context

In accordance with the Treaty on the Functioning of the European Union (TFEU), in particular Article 173(3), 182(1), 183 and the second paragraph of Article 188, it is the Union's objective to strengthen its scientific and technological bases by reinforcing the European Research Area in which researchers, scientific knowledge and technology circulate freely and encouraging it to become more competitive, including in its industry, while promoting all research and innovation activities to deliver on the Union's strategic priorities and commitments, which ultimately aim at promoting peace, the Union's values and the wellbeing of its people. The Union invests in research and innovation through the framework programme Horizon Europe to deliver scientific, technological, economic, environmental and societal impact in pursuit of this general objective and to maximise the Union's added value of its R&I investments.

In addition, Horizon Europe will contribute to tackling global challenges, including the sustainable development goals, such as for example are laid down in the 2030 Agenda and the Paris Agreement. The program focuses on objectives and activities that cannot be effectively achieved by Member States acting alone, but in cooperation.

1.5. Actions

Horizon Europe is implemented through three interconnected pillars leading to mutual reinforcement of activities. The Excellent Science pillar supports frontier research projects designed and driven by researchers through the European Research Council. It also funds fellowships and mobility of researchers through Marie Skłodowska-Curie actions, and invests in world-class research infrastructures. The Global Challenges and European Industrial Competitiveness pillar supports research into societal challenges, reinforces technological and industrial capacities, and sets EU-wide missions with ambitious goals tackling some of our biggest problems -health, climate change, clean energy, mobility, security, digital, materials, etc. It will also support partnerships with Member States, industry and other stakeholders to work jointly on research and innovation. It includes action by the Joint Research Centre supporting policy making with independent scientific evidence and technical support.

The Innovative Europe pillar aims to make Europe a frontrunner in market-creating innovation and SME growth through the European Innovation Council. It will help develop the overall European innovation landscape. The European Institute of Innovation and Technology (EIT) will continue to foster the integration of business, research, higher education and entrepreneurship. A fourth component on Widening participation and Strengthening the European Research Area underpins the whole of Horizon Europe. It will support EU Member States in their efforts to unlock their national research and innovation potential and it will especially help low R&I performing Member States to increase their participation in Horizon Europe.

1.6. Delivery mode

Horizon Europe is directly implemented by the Commission or funding bodies through:

- a. The specific programme established by Decision (EU) 2021/764; which includes a financial contribution to the European Institute of Innovation and Technology established by the EIT Regulation.
- b. The specific programme on defence research established by Regulation (EU) 2021/697.

Horizon Europe is complemented by the [Euratom Research and Training Programme](#).

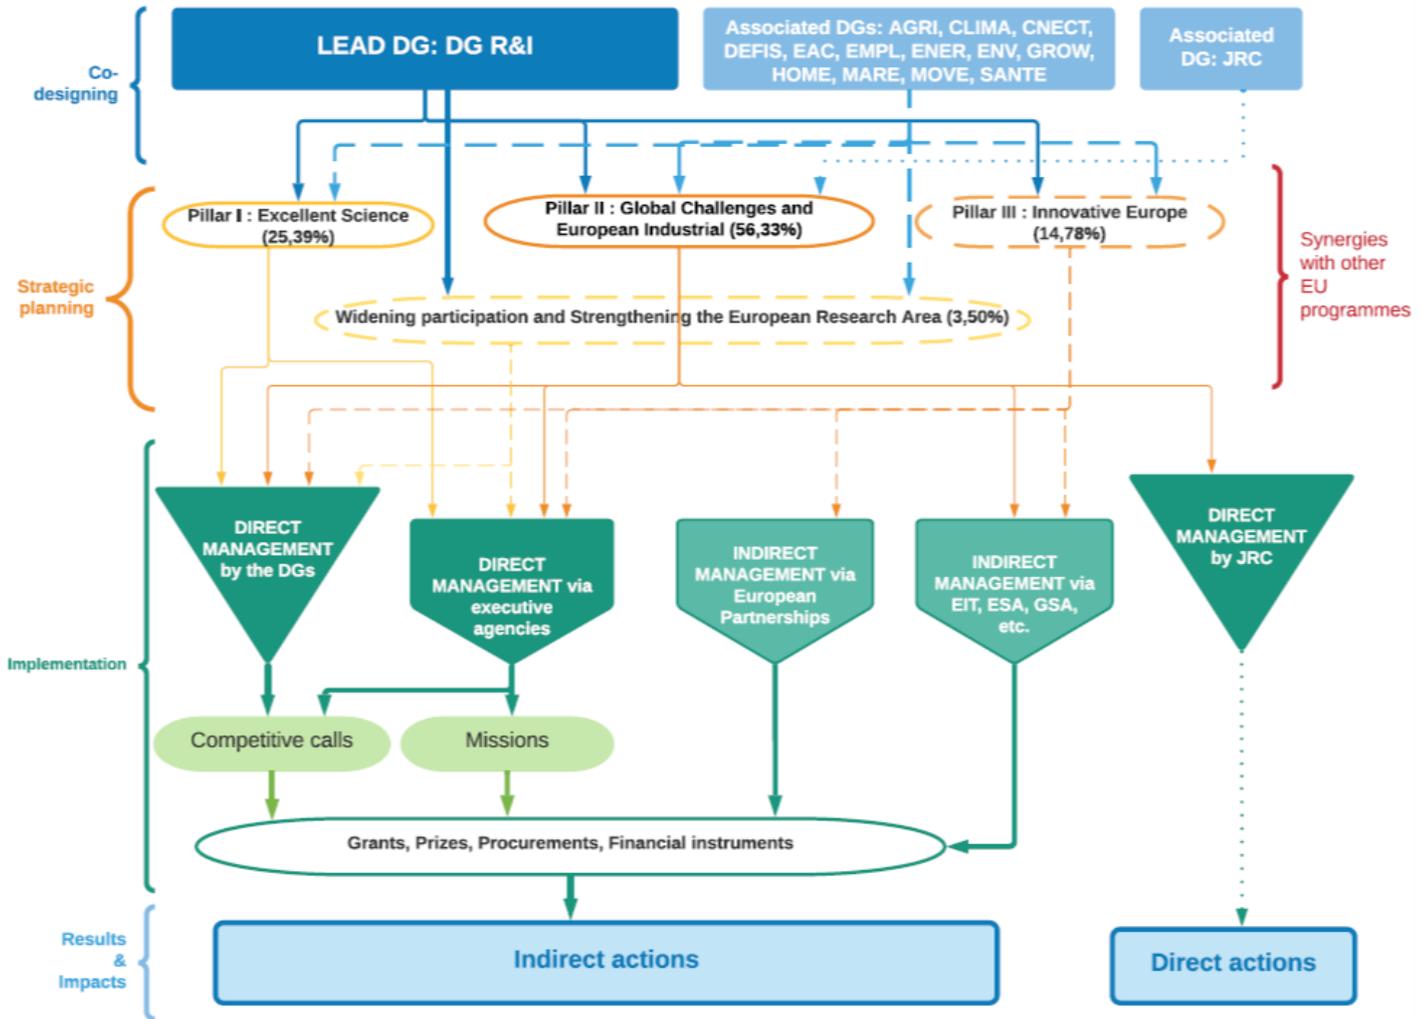

The Horizon Europe indirect activities are delivered through calls for proposals set out in work programmes.

- The main bi-annual work programme covers the following domains: Marie Skłodowska-Curie actions and research infrastructures under Pillar I; all clusters under Pillar II; European innovation ecosystems under Pillar III; the part on widening participation and strengthening the European Research Area. A significant part of Pillar II of Horizon Europe will be implemented through missions and partnerships, which will have separate work programmes.
- Other annual work programmes for European Research Council (ERC); Joint Research Centre (JRC); and the European Innovation Council (EIC)
- The activities of the [European Institute of Technology \(EIT\)](#) are set out in separate programming documents

Horizon Europe provides funding to indirect actions in any of the forms laid down in the Financial Regulation, in particular grants (including operating grants), prizes and procurements. It also supports direct actions undertaken by the JRC.

Horizon Europe is open to association of third countries in accordance with the Horizon Europe Regulation 2021/6951. Legal entities from Associated Countries can participate under equivalent conditions as legal entities from the EU Member States, unless specific limitations or conditions are laid down in the work programme. In addition, Horizon Europe promotes and integrates cooperation with third countries and international organisations and initiatives based on common interest, mutual benefit and global commitments to implement the UN Sustainable Development Goals.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/695 of the European Parliament and of the Council of 28 April 2021 establishing Horizon Europe – the Framework Programme for Research and Innovation, laying down its rules for participation and dissemination, and repealing Regulations (EU) No 1290/2013 and (EU) No 1291/2013 (OJ L 170, 12.5.2021, p. 1). Council Decision (EU) 2021/764 of 10 May 2021 establishing the Specific Programme implementing Horizon Europe – the Framework Programme for Research and Innovation, and repealing Decision 2013/743/EU (OJ L 167 I, 12.5.2021, p. 1).	2021 - 2027	86 123.00

1.8.2. Legal basis explanation

The Horizon Europe Regulation (EU) 2021/695 establishes the EU framework programme for research and innovation for the years 2021–2027. It lays down the objectives, the budget, the forms of EU funding and the rules for participation and dissemination. It is implemented through the specific programme established by the decision (EU) 2021/764 that set out detailed rules for the framework's implementation, as per Article 182 of the TFEU, the operational objectives and activities, especially for missions, the European Research Council and the European Innovation Council. Horizon Europe is also implemented through a financial contribution to the European Institute of Innovation and Technology established by the EIT Regulation (EC) 294/2008. While defence research falls under the scope of the Horizon Europe programme, the specific provisions for defence research such as objectives, rules for participation, delivery mechanisms are specified in the Regulation establishing the European Defence Fund (EU) 2021/697.

As regards the European Partnerships, the Horizon Europe regulation lays down the conditions and principles for establishing three types of European Partnerships: Co-programmed European Partnerships; Co-funded European Partnerships using a programme co-fund action and Institutionalised European Partnerships. These partnerships are based on a Council Regulation ([Article 187](#)) or a

Decision by the European Parliament and Council ([Article 185](#)). They are implemented by dedicated structures created for that purpose. Institutionalised partnerships will only be implemented where other parts of the Horizon Europe programme, including other types of partnership, would not achieve the desired objectives or expected impacts.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	11 527.6	12 239.2	12 342.9	12 271.6	12 513.6	12 775.6	13 027.6	86 698.0
NextGenerationEU	1 772.0	1 776.8	1 828.3	13.1	9.6	7.3	4.9	5 412.0

Total	14 161.6	14 015.9	14 171.2	12 284.7	12 523.3	12 782.9	13 032.5	92 972.1

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

Horizon Europe has been built on the positive results of its predecessor, *Horizon 2020*, of which it maintains many features. As a result of the interim evaluation of the *Horizon 2020* programme, some changes were made that are continued under *Horizon Europe* for example the European Innovation Council pilot launched in 2017 to support breakthrough innovation. In addition, novelties have been introduced in *Horizon Europe*, notably:

- Deliver targeted solutions to societal challenges together with citizens > EU missions;
- Rationalise the funding landscape > Streamlined approach to European Partnerships;
- Strengthen international cooperation > extended association possibilities;
- Reinforce openness > Open Science policy;
- Encourage participation and decrease the R&I gap in Europe > widening participation and spreading excellence;
- Increase the R&I;
- Impact > synergies with other EU programmes and policies.

1.10. Relevant websites providing more information

To learn more about the Horizon Europe Programme, you are invited to visit the relevant website that contain information about:

- The structure of the programme, the strategic planning process, the implementation, news on https://ec.europa.eu/info/horizon-europe_en.
- Information on all EU-supported R&D activities including projects, results, publications on <https://cordis.europa.eu>. The Community Research and Development Information Service (CORDIS) is the European Commission's primary source of results from the projects funded by the EU's framework programmes for research and innovation.
- The full list of calls, funding information and details on how to apply on the [EU Funding and Tenders portal](#).

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	13 586.4	92 972.1	15%
Payments	1 203.7		1%

The year 2021 was marked by **the first year of the Horizon Europe programme implementation**. The late adoption of the legal base has postponed the adoption of the work programmes 2021-2022 and the launching of calls for proposals. The first main Work Programme for Horizon Europe for the period 2021-2022, received 14,7 bn EUR of funding to boost the European green and digital transitions and to contribute to sustainable recovery from the coronavirus pandemic and to EU resilience against future crises. It supports researchers at all stages of their career with new knowledge and skills. It also contributes to the creation of more connected and efficient innovation ecosystems and create world-class research infrastructures. Moreover, the participation across Europe and from around the world is encouraged, while at the same time strengthening the European Research Area.

As regards the *overall implementation of Horizon Europe*, 85 of the over hundred calls for proposals launched in 2021 were closed and fully evaluated by the end of the year. 20.892 eligible proposals had been submitted under those calls. Although two third (66%) of the eligible proposals were above the quality threshold, only 3 110 could be retained due to budgetary constraints, bringing the overall success rate of eligible proposals to 14,9% for the first year of the programme. By end of 2021, 19 grant agreements and 1 framework partnership agreement (FPA) were signed for a total EU contribution of EUR 244.0 million shared across various thematic areas.

Under Horizon Europe, the European Capital of Innovation awards is an annual recognition prize awarded to the European cities that best promote innovation in their communities. Apart from the prestigious recognition, the European Capital of Innovation category addresses cities with a population of minimum 250 000 inhabitants and rewards the winner with EUR 1 000 000 and two runners-up cities with EUR 100 000 each. The European Rising Innovative City category that targets towns and cities with a population of 50 000 and up to 249 999 inhabitants rewards the winner with EUR 500 000 and two runners-up with EUR 50 000 each.

In December 2021, the European Innovation Council (EIC) Horizon Prize for a European Low Cost Space Launch solution was awarded with a value of EUR 10 Million to the German company Isar Aerospace¹. The prize encouraged the development of a European technologically non-dependent solution for launching light satellites into Low-Earth Orbit (LEO) with a committed schedule and orbit.

Overall all the commitment appropriations (in particular those expiring in 2021) have been implemented (voted budget, reconstitution of de-commitments (art.15.3), NGEU credits, contributions from EFTA countries). Despite the late adoption of the Regulation for the establishment of Joint Undertakings (JUs) under Horizon Europe end November 2021, the Commission was able to make the commitments for seven JUs before the end of the year. A carry-over of the 2021 appropriations (commitment and payment) has only been requested for the 2021 EU financial contribution to Europe's Rail JU and to Single European Sky ATM Research 3 JU (SESAR).

Horizon Europe is also implemented by **non EU-countries associated to Horizon Europe**. Association to Horizon Europe is governed by the Horizon Europe Regulation. All sixteen non-EU countries associated to the previous programme, Horizon 2020, have expressed interest to become associated to Horizon Europe. As of December 2021, Georgia, Iceland, Israel, Moldova, Montenegro, North Macedonia, Norway, Serbia and Turkey have applicable association agreements in place. Association agreements have also been signed with Armenia, Bosnia and Herzegovina, Kosovo² and Ukraine. National ratification procedures are expected to enter into force. As long as the ratification of the agreement by Ukraine is suspended Ukraine is eligible to EU funding under HE as low to middle income country³. Association negotiations have been concluded with Albania, the Faroe Islands and Tunisia. The agreements are yet to be signed. The updated list of the associated countries is available on: [Horizon Europe association agreements status | European Commission \(europa.eu\)](https://ec.europa.eu/association-agreements-status)

During 2022, the Commission will therefore have to implement most of the pre-financings of the actions financed by the 2021 budget, together with those of the 2022 actions/calls as foreseen in the Work Programmes. All the commitment appropriations (in particular those expiring end 2022) are foreseen to be implemented (voted budget, reconstitution of de-commitments (art.15.3), NGEU credits, contributions from EFTA countries) to cover the calls foreseen in the work programmes³.

¹ https://ec.europa.eu/defence-industry-space/eic-horizon-prize-low-cost-space-launch-commission-awards-eu-10-million-isar-aerospace-technologies-2022-01-25_en

² This designation is without prejudice to positions on status, and is in line with UNSC 1244 and the ICJ Opinion on the Kosovo declaration of independence

³ [Reference Documents \(europa.eu\)](https://ec.europa.eu/reference-documents)

The bi-annual work programmes 2023-2024 as well as the ERC and EIC 2023 work programmes are foreseen to be adopted during the second semester 2022 allowing the start of the related research projects already in 2023. It is planned to implement commitment appropriations to cover the calls and the horizontal support expenditure.

The proposed Chips Act establishes the Chips for Europe Initiative, to be supported through funding from Horizon Europe (HE) and the Digital Europe Programme (DEP). With regards to Horizon Europe, an amount of up to EUR 1.65 billion is foreseen to be implemented under HE in favour of the Chips for Europe Initiative: EUR 400 million under Cluster 4, EUR 150 million from Cluster 3, EUR 300 million from Cluster 5, EUR 300 million under the European Innovation Council (EIC) and 500 million from the current EUR 1.8 billion dedicated to the Chips JU.

2.2. Programme(s) 2014-2020: Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	75 616.3	75 623.6	100%
Payments	61 946.2		82%

As regards the payment appropriations implemented in 2021, all the available appropriations have been used mainly to cover legal obligations under the former Programme (Horizon 2020), allowing to decrease substantially the level of the open RAL. 2971 Final Payments were processed in 2021 corresponding to 496,417,125.01 EUR paid. Full execution was reached at the end of 2021.

The Commission has taken specific measures to mitigate the risk of under-implementation of the R&I projects due to the pandemic. Concretely, maximum flexibility has been given in relation to the action implementation. For example, extensions of research projects were granted to limit under-implementation due to COVID-19 pandemic. In addition, teleworking during the confinement and the subsequent transitional period are accepted even if it is not the beneficiary's usual practice to telework. Costs of hours worked for the Horizon 2020 action via teleworking during those periods are eligible under the same conditions than hours worked on-site.

In 2022 and 2023, the Commission will continue to pay the intermediate and final payments related to the 12420 still on-going research projects. The RAL will therefore continue to decrease significantly.

3. How is the programme performing ?

3.1. Performance

3.1.1. Active programme performance

Horizon Europe is geared towards impact to contribute to our wellbeing and prosperity. To achieve its ambitious objective, new working methods have been introduced from the first year of the programme:

- **The Strategic plan:** New approach to make sure that the research and innovation funded by the EU will address the challenges faced by Europeans. A cross-sectoral co-creation approach across the EC services defines the orientations for the first four years of the programme and outlines the contributions of its various parts while retaining sufficient flexibility to respond rapidly to new and emerging challenges, unexpected opportunities and crises. The strategic plan also ensures that there is coherence between the different programmes, ensuring that duplication or overlap is avoided.
- The **European Innovation Council (EIC)** has been established under the Horizon Europe programme. It supports game changing innovations throughout the lifecycle from early stage research, to proof of concept, technology transfer, and the financing and scale up of start-ups and SMEs. The strategy and implementation of the EIC is steered by the EIC Board, which has independent members appointed from the world of innovation (entrepreneurs, researchers, investors, corporates and others from the innovation ecosystem). The EIC and SME Executive Agency (EISMEA) established on 1 April 2021, is responsible for supporting the EIC Board and its President, and for implementing the EIC's activities, which are set out in an annual EIC Work Programme.
- Established on 16 February 2021, the European Health and Digital Executive Agency (HaDEA) addresses the European Commission's ambition to help rebuild a post-COVID-19 Europe at its heart, which will be greener, more digital, more resilient and better fit for the current and forthcoming challenges. In this context, the HaDEA implements the Clusters 1 (Health) and 4 (Digital, Industry, and Space) of Horizon Europe.
- Increased attention is given to implement **synergies across EU programmes** for maximising investment in R&I.

- **EU Missions are a novelty** of the Horizon Europe aiming to deliver solutions to some of the greatest challenges facing our world. Each mission has a mandate to solve a pressing challenge in society within a fixed timeline and budget.

As regards the performance of the programme, Horizon Europe's general objective is to deliver scientific, economic and societal impact from the Union's investments in research and innovation. A performance framework using so-called "Key Impact Pathways" has been designed to monitor the programme's performance towards its general objective. It covers the whole life cycle of a research & innovation funded activities, from outputs to impacts. Performance results are reported at different times (by reference to short, medium and long-term periods) using the impact pathways indicators. Each indicator is set for a defined period and laid down in the Horizon Europe legal base. The indicators results are not all reported at the same time but according to the period to which they are assigned. Performance results will be produced regularly enough to track progress, and quickly enough for the data to still be of value for decision-making. The Key Impact Pathways will allow a regular monitoring of the Horizon Europe performance, taking the nature of research and innovation life cycle into account. The performance results of Horizon Europe will be reported using the indicators appropriate to the period.

The Horizon Europe performance framework builds directly on the existing framework, with some modifications. This general consistency should allow continuity in reporting between programming periods and enhance reporting through the application of lessons learned. Targets for the output indicators have been established, although this is a complex task and they may be subject of revision as explained in the fiche of the indicators.

Beyond the introduction of the novelties described above, 2021 was the first year of implementation of the Horizon Europe program. This explains why at the end of the year 2021 only few performance results mainly for the direct actions, carried out by the JRC, are available. However, we present hereafter some main actions carried out for the proper implementation of the programme at the level of the specific objectives. Nevertheless, even if some actions are identified as contributing to a specific objective, this does not preclude them from contributing to other specific objectives.

Specific objective 1: To develop, promote and advance scientific excellence, to support the creation and diffusion of high-quality new fundamental and applied knowledge, of skills, technologies and solutions, to support training and mobility of researchers, to attract talent at all levels and contribute to the full engagement of the Union's talent pool in actions supported under the Programme.

One of the Horizon Europe activities supporting the S.O. 1 is the Marie Skłodowska-Curie Actions (MSCA). Under Pillar I of Horizon Europe, the MSCA offer opportunity to researchers for doctoral education and postdoctoral training. They support researchers from all over the world, in all scientific domain and at all stages of their careers with a focus on their training, skills and career development. Following feedback from various stakeholders, there are a number of changes to Horizon Europe (2021-2027), compared to the previous programme Horizon 2020 (2014-2020). For instance, as regards the Marie Skłodowska-Curie Actions (MSCA) the main changes include streamlined actions; harmonizes rules; greener MSCA and the introduction of the MSCA Green Charter promoting the sustainable implementation of research activities in line with the European Green Deal.

In response to the 2021 calls for proposals for the five MSCA, 9660 applicants have applied showing a clear interest to the MSCA:

- 1077 proposals have been submitted to the *MSCA Doctoral network call* from 56 countries.
- 8356 project proposals have been submitted to the *MSCA Postdoctoral Fellowships Call* from 46 countries.
- 116 project proposals have been submitted to the *MSCA COFUND Call* from 24 countries.
- 111 project proposals have been submitted to the *MSCA and Citizens Call* from 36 countries.

The selection results will be announced in 2022.

The European Research Council (ERC) provides attractive, long-term funding to support excellent investigators and their research teams to pursue ground breaking, high-gain/high-risk research. Research funded by the ERC is expected to lead to advances at the frontiers of knowledge and to set a clear and inspirational target for frontier research across Europe. Scientific excellence is the sole criterion on the basis of which ERC frontier research grants are awarded. The 2021 ERC work programme adopted in February 2021 introduces some novelties, such as interviews now being part of the evaluation process also for Advanced Grant applicants and two new evaluation panels. Due to the transition from Horizon 2020 to Horizon Europe, the call calendar is shifted compared to the calendars of previous years, and the Synergy and Proof of Concept calls have not been open under this year's work programme. In 2021, a funding of **1.9 billion EUR has been made available to allow some 1,000 top researchers to pursue frontier research. Most of the funding (67%) is earmarked for early- to mid-career scientists and scholars. The funding also support jobs for researchers and other professionals employed in ERC-funded teams.**

Specific objective 2: To generate knowledge, strengthen the impact of R&I in developing, supporting and implementing Union policies and support the access to and uptake of innovative solutions in European industry, in particular SMEs, and in society to address global challenges, including climate change and the SDGs.

The main new tools to address global challenges, including climate change and the SDGs are the five EU Missions and the new partnerships.

- **EU Missions to tackle great challenges faced by people in their daily lives.** The aim of EU missions is to provide concrete responses to the EU's most urgent challenges based on clear goals, objectives and timelines. The first EU missions

launched in May 2021⁴ will deliver solutions in five cross-sectoral areas: Adaptation to Climate Change; Cancer; Climate-Neutral and Smart Cities; Ocean, Seas and Waters; Soil Health and Food. We are in urgent need of ambitious responses to these challenges based on the mobilization of all European resources and actors across all sectors. Their novelty and benefit is a new way of working together involving different instruments, business models and public and private investments at EU, national, regional and local levels to achieve a measurable goal that could not be achieved through individual actions. Synergies with European and national programmes is essential to EU Missions' success.

- **Public and Private sectors together to speed up the transition towards a green and digital Europe, and to make European industry more resilient and competitive:** European Partnerships bring the European Commission and private and/or public partners together to address some of Europe's most pressing challenges through concerted research and innovation initiatives. By bringing private and public partners together, European Partnerships help to avoid the duplication of investments and contribute to reducing the fragmentation of the research and innovation landscape in the EU. There are 3 categories of partnerships:

i. **Institutionalised partnerships** require legislative regulation. In November 2021, the regulations establishing the Joint Undertakings, 9 based on Article 187⁵, and one on Article 185⁶ of TFEU were adopted. 10 new Institutionalised Partnerships between the European Union, Member States and/or the industry to improve EU preparedness and response to infectious diseases, develop efficient low-carbon aircraft for clean aviation, support the use of renewable biological raw materials in energy production, ensure European leadership in digital technologies and infrastructures, and make rail transport more competitive. The EU provided nearly €10 billion of funding that the partners will match with at least an equivalent amount of investment. This combined contribution is expected to mobilise additional investments in support of the transitions, and create long-term positive impacts on employment, the environment and society. The 10 institutionalised European partnerships covered by the regulation are: **Global Health EDCTP3; Innovative Health Initiative; Key Digital Technologies; Circular Bio-based Europe; Clean Hydrogen; Clean Aviation; Europe's Rail; Single European Sky ATM Research 3; Smart Networks and Services; European Metrology (Art. 185 of the TFEU)**. Further to the adoption of the European Chips Act by the Commission on 8 February 2022, to seek strengthening the semiconductor ecosystem, the Key Digital Technologies JU becomes Chips Joint Undertaking. The institutionalised partnerships are also implemented by 9 EIT Knowledge and Innovation Communities (KIC) in compliance with the EIT Regulation and the EIT Strategic Innovation Agenda (SIA). The Regulation 2021/2085 establishing the Joint Undertakings under Horizon Europe (Single Basic Act (SBA)) will be amended and expanded to allow the Key Digital Technologies Undertaking (KDT JU), and will be renamed as a Chips Joint Undertaking (Chips JU) to implement most of the increased contribution from HE and contributions from DEP.

ii. **Co-programmed partnerships**, In June 2021, the Commission launched 11 new European Partnerships together mostly with private sector, to deliver solutions to major societal challenges. They will receive over €8 billion from Horizon Europe, the new EU research and innovation programme for 2021-2027. The total commitments, including those from private partners and from Member States, amount to around €22 billion. They will run from 2021 to 2030, allowing them to provide input into the last calls of Horizon Europe and wrap up their final activities afterwards. The adoption of the Memoranda of Understanding allow the following partnerships to start their operations immediately: *European Partnership for Artificial Intelligence, Data and Robotics* • *European Partnership for Photonics* • *European Partnership Made in Europe* • *European Partnership for Clean Steel - Low Carbon Steelmaking* • *European Partnership Processes4Planet* • *European Partnership for Globally Competitive Space Systems*⁹ • *European Partnership for Connected, Cooperative and Automated Mobility (CCAM)* • *European Partnership for Batteries: Towards a competitive European industrial battery value chain* • *European Partnership towards Zero-emission Road Transport (2ZERO)* • *European Partnership for Zero-emission Waterborne Transport* • *European Partnership for People-centric Sustainable Built Environment (Built4People)* • *European Partnership for European Open Science Cloud (EOSC)*.

iii. **Co-funded partnerships:** These partnerships involving public authorities at the core of the consortium are based on grant agreement between the Commission and the consortium of partners. A call for proposals for the following co-funded partnerships has been published in the 2021-2022 work programme of Horizon Europe: *European Partnership for Risk Assessment of Chemicals* • *European Partnership for Fostering a European Research Area for Health Research (ERA for Health)* • *European Partnership for Transformation of Health Care Systems* • *Antimicrobial Resistance (AMR)* • *European Partnership for Driving Urban Transitions to a Sustainable Future* • *European Partnership for Clean Energy Transition* • *European Partnership for Rescuing Biodiversity to Safeguard Life on Earth* • *European Partnership for a Climate Neutral, Sustainable and Productive Blue Economy* • *Planet and Climate European Partnership Water4all: Water security for the planet* • *European Partnership for Innovative SMEs*.

- **Solving global challenges calls for international cooperation.** Horizon Europe is the main financial tool for the implementation of the Europe's strategy for international cooperation in a changing world⁷: the global approach to research and innovation. The programme is open to researchers and innovators from around the globe who are encouraged to team up with EU

⁴ [EUR-Lex - 52021DC0609 - EN - EUR-Lex \(europa.eu\)](#)

⁵ [EUR-Lex - 32021R2085 - EN - EUR-Lex \(europa.eu\)](#); [EUR-Lex - 52021SC0037 - EN - EUR-Lex \(europa.eu\)](#)

⁶ [EUR-Lex - 32021D2084 - EN - EUR-Lex \(europa.eu\)](#)

⁷ [EUR-Lex - 52021DC0252 - EN - EUR-Lex \(europa.eu\)](#) ; [EUR-Lex - 52012SC0258 - EN \(europa.eu\)](#)

partners in preparing proposals. In order to safeguard the EU's strategic assets, interests, autonomy or security, the programme may exceptionally limit participation in its actions, always on duly justified cases, allowing the programme to remain open as a rule.

Specific objective 3: To foster all forms of innovation, facilitate technological development, demonstration and knowledge and technology transfer, strengthen deployment and exploitation of innovative solutions.

The EIC aims at identifying and supporting breakthrough technologies and game changing innovations with the potential to scale up internationally and become market leaders. It supports all stages of innovation from R&D on the scientific underpinnings of breakthrough technologies, to validation and demonstration of breakthrough technologies and innovations to meet real world needs, to the development and scaling up of start-ups and small and medium-sized enterprises (SMEs). In 2021, EIC launched its first work programme. It builds on the experience of the EIC pilot under Horizon 2020 and on the advice from the EIC pilot Advisory Board. The support is organised into three main funding schemes: the EIC Pathfinder for advanced research to develop the scientific basis to underpin breakthrough technologies; the EIC Transition to validate technologies and develop business plans for specific applications; and the EIC Accelerator to support companies (SMEs, start-ups, spin-outs and in exceptional cases small mid-caps) to bring their innovations to market and scale up. The EIC will also link with other components of Horizon Europe, including the European Research Council (ERC), the European Institute of Innovation and Technology (EIT) and its Knowledge and Innovation Communities (KICs), and with other Union funding programmes, such as InvestEU.

The EIC also provides additional activities such as the following prizes:

- **The European Capital of Innovation Awards:** the European Capital of Innovation Awards is an annual recognition prize awarded to the European cities that best promote innovation in their communities. The city of Dortmund in Germany is the European Capital of Innovation 2021.
- **EU Prize for Women Innovators:** This prize celebrates the women entrepreneurs behind Europe's game-changing innovations. In 2021, the winner is Merel Boers (Netherlands), co-founder and CEO of NICO-LAB, a company offering cutting-edge technology to help physicians improve emergency care
- **The European Social Innovation Competition:** The Competition acts as a beacon for social innovators across Europe, incentivising & rewarding early-stage ideas, shaping our society for the better. The 2021 challenge was "Skills for tomorrow - Shaping a green and digital future"

EIT supports the New European Bauhaus with 5 EUR million. The EIT launched in 2021 the first call 'EIT Community Booster – Scaling New European Bauhaus Ventures' in order to support the New European Bauhaus initiative to accelerate solutions integrating **sustainability** (from climate goals, to circularity, zero pollution, and biodiversity), **aesthetics** (quality of experience and style, beyond functionality) and **inclusion** (including diversity first, securing accessibility and affordability). A pilot phase of this Community Booster launched has already supported 13 ventures with a total of €650,000.

Specific objective 4: To optimise the Programme's delivery with a view to strengthening and increasing the impact and attractiveness of the ERA, to foster excellence-based participation from all Member States, including low R&I performing countries, in the Programme and to facilitate collaborative links in European R&I

An ambitious strategic plan for Horizon Europe was adopted in March 2021. The strategic plan 2021-2024 set four key strategic orientations. They mirror the political priorities of the European Union, outline the way research and innovation can address them and enable us to better measure impact. Each of the key strategic orientations encompasses three to four impact areas, which in turn link to a number of expected impacts. They are a core element of the impact-driven approach of Horizon Europe, because they describe the long-term effects to which research and innovation are due to contribute. In total, the strategic plan defines 32 expected impacts that cover a wide range of social, economic, ecological and scientific aspirations. The strategic plan outlines how the six Clusters of Horizon Europe's Pillar II, 'Global challenges and European industrial competitiveness', will contribute to the key strategic orientations and the corresponding expected impacts. Every expected impact links to at least one Cluster, in order to ensure full coverage. While the focus of the strategic plan is on Pillar II, it also covers relevant activities in the other two pillars and the part 'Widening Participation and Strengthening the European Research Area'. This is to ensure synergies across all Horizon Europe programme components. The strategic plan also presents new and modernised approaches to facilitate implementation. For example by pooling resources of a wide range of public and private partners through European Partnerships. The strategic plan identifies co-programmed and co-funded partnerships⁸ and also prepares the ground for five EU Missions.

3.1.2. Previous Programme Performance

By coupling research and innovation, Horizon 2020 is helping to achieve smart, sustainable and inclusive economic growth with its emphasis on excellent science, industrial leadership and tackling societal challenges. The goal is to ensure Europe produces world-class science, removes barriers to innovation and makes it easier for the public and private sectors to work together in delivering innovation.

⁸ 8 For more information, please refer to cluster-specific impact summaries. Note that the strategic plan, which needs to contain the identified co-programmed and co-funded European Partnerships, is a Commission Decision subject to the comitology procedure, whereas Institutionalised Partnerships based on Articles 185 and 187 TFEU follow the procedure for the legislative acts. However, for the sake of completeness, the cluster-specific impact summaries includes also the Institutionalised Partnerships based on Articles 185 and 187 TFEU, distinguishing those that should be included in the strategic plan.

To strengthen and facilitate knowledge sharing and evidence-based policy making, the DG RTD Joint Support Centre has developed a dashboard that provides reports on most of the key performance indicators. The result of 18 of the 23 KPIs is displayed on the Horizon dashboard⁹. For example, the dashboard makes it possible to know for a given specific objective the number of "high impact peer reviewed" publications and to visualize its evolution compared to the target throughout the implementation of the programme. It thus makes it possible to gauge exactly the performance of Horizon 2020. It responds to the need for more transparency in the expenditure of the European budget for research and innovation.

Adding a target to a KPI helps to measure success against that KPI. Therefore, where possible, a target was set. The method for setting the target depends on the maturity of the KPIs. Where possible, historical data from previous R&I programs have been used to establish the baseline and thus estimate the target taking into account the very limited data available at that time. For the "new KPIs", i.e. those which were not measured in the previous framework programs, it was not possible to estimate a target. For these indicators, "new approach" is indicated in the performance tables.

Moreover, in the context of the analysis of the performance of the program an important point which must be taken into account is the rate of implementation of the program. As indicated above in 2021, 82% of the programme was paid to beneficiaries at the end of 2020. This is why the target of some KPIs is not 2020 but the year when the last actions financed under Horizon 2020 will be finished. All final figures will be collected after all of the projects are closed and results reported i.e. several years after the formal end of the programme in 2020.

Based on results obtained so far, traffic light rating has been assigned to each specific objective based on the degree to which performance targets were met, (i.e. on track, moderate progress, deserves attention or no data) as indicated in the following table. No data is assigned to new KPIs where a target was impossible to set since no historical data were available.

The achievement of the specific objectives set for Horizon 2020 has been measured against a total of 23 key performance indicators (KPIs). The key performance indicators set in the Regulation are based on quantitative performance measures. Additional detailed information on the performance results have been reported in the previous programme Statements.

Table: Performance Reporting against targets

				Total
15 KPIs on track	3 KPIs Moderate progress	0 KPIs Deserves attention	5 KPIs with no target	23 KPIs

As shown in the table, Horizon 2020 has made good progress towards achieving scientific impacts through the strengthening of R&I capacity, scientific excellence and reputation, and through the integration of R&I efforts. The results indicate that in most areas Horizon 2020 has achieved its targets and beyond. 3 indicators show moderate progress. No indicator deserves attention. For the 5 "new KPIs", it was not possible to set a target since no historical data were available. However, all KPIs were measured and recorded. Where it was necessary, appropriate measures have been taken such as the creation of the EIC, or the design of EU missions.

The actions of the programme as far as the pillar 'Excellent Science' is concerned are very satisfactory. The performance results has shown that Horizon 2020 has succeeded in attracting and involving the EU's and world's best research institutions and researchers.

- From 2014, the share of publications from ERC-funded projects which are among the top 1 % highly cited remains high, about 7 %, considerably exceeding the target of 1.8 %.
- Over 30 years the EU has invested more and more in future technologies, whether for economic, social or environmental reasons, including through the Future and Emerging Technologies (FET) activities with a budget under Horizon 2020 over EUR 2.5 billion. The FET have already generated more than 20,2 publications in peer review journals per 10MEur and about 1 patent per EUR 10 million funding approaching the targets.
- The Marie Skłodowska-Curie Actions (MSCA) has exceeded its target of 65 000 researchers, including 25 000 PhD.
- From 2014, 115053 researchers have had access to research infrastructures (102949 researchers to research e-infrastructure and 12104 physically), exceeding by far the number targeted.

The actions of the programme as far as the pillar 'Industrial leadership' is concerned have progressed well.

- LEIT projects have produced numerous results, more than 9000 public-private publications. 197% of participating firms have introduced innovations new to the company or the market with the potential to generate scientific breakthroughs, which almost meet the target of 200% The value of 197 % is extracted from the project reporting delivered by the project coordinator. The values reported goes beyond the beneficiaries involved in the project. The beneficiaries have also

⁹ [Horizon Dashboard - Horizon Dashboard - Confluence \(europa.eu\)](https://confluence.europa.eu/horizon-dashboard)

included private companies involved in their network project activities that have introduced the innovation. As regards the patents, the result of 0,85 patent application per 10 Million euro shows that it is progressing slightly to the target of 3. Since patents are generally filed at the end of projects, we can expect to be close to the target at the end of all funded projects. In the field of nanotechnologies, the result obtained so far of 3.5 patents per 10 Million euro is even above the expectations.

- Under the access to risk finance activities, more than 32 000 organisations have been funded and total investments mobilised via debt financing and Venture Capital investments is of EUR 71 billion, exceeding the targets.
- 107% of SMEs participating to the pillar “Industrial leadership” have introduced innovations new to the company or the market exceeding the target of 50%. The value of 107 % is extracted from the project reporting delivered by the project coordinator. The values reported goes beyond the beneficiaries involved in the project. The beneficiaries have also included private companies involved in their network project activities that have introduced the innovation.
- The SMEs instruments have generated around 2545 jobs.

The pillar ‘**Societal Challenges**’ shows moderate progress according to the KPIs. So far, the societal challenges pillar have already generated about 9 910 public-private publications; 83900 innovations that include prototypes and testing activities. From the information available, the following is also reported for the whole societal challenges pillar: 5 peer-reviewed publications in high impact journals per 10 M EUR that is lower than the target of 20 and 0.5 patent application per 10 M EUR lower than the target of 2. Since publications and patents are generally produced at the end of projects, we can expect to be closer to the target at the end of all projects. Moreover, two elements have to be taken into consideration to explain the progress towards the targets. On the one hand the targets set in 2011 from the few first results of FP7, and on the other hand in FP7 the indicators referred to all publications produced of which the ones in peer-reviewed high impact journals are a small sub-group. As the ratio of peer review and peer review in high impact journals was not known, it was difficult to correctly estimate the target for Horizon 2020. This difficulty has been taken into account in the design of Horizon Europe’s performance framework. In addition, as the results are based on self-reporting from the projects, a review of data quality will be done to measure HE performance, where relevant.

Measure taken: To address some of the great societal challenges the world is facing like fighting cancer, adapting to climate change, protecting our oceans, living in greener cities and ensuring soil health and food, 5 EU Missions have been designed and introduced in Horizon Europe. This novelty, an integral part of the Horizon Europe, will increase the effectiveness of funding by pursuing clearly defined targets within a given time frame. Each mission will operate as a portfolio of actions – such as research projects, policy measures or even legislative initiatives - to achieve a measurable goal that could not be achieved through individual actions.

Measures taken: As regards the Joint Undertakings set up under Horizon 2020 (SESAR, IMI2, CS2, FCH2, ECSEL, S2R, BBI), in general their performance is considered positive as reported by the ECA, even if various matters need improvement. Therefore, a new generation of Partnerships has been designed to be simpler and more impactful in addressing the challenges of today’s society. They will have to set up their ambition with clear targets by 2030. Under Horizon Europe the number of partnerships has been reduced to 49, organised into three groups: Co-programmed; Co-funded and Institutionalised.

“Spreading excellence and widening participation” 17 evolutions of the publications in high impact journals in the relevant research fields have been recorded.

As regards, the specific objective **Science with and for society (Swafs)**: The results of a small sample of Responsible Research and Innovation (RRI) and Gender Equality Plans (GEPs) projects revealed that SwafS surpass its target of 100 institutional changes in beneficiaries by the end of Horizon 2020.

But still a way to go: Horizon Europe will further strengthen its efforts to harness the vast potential that citizens have to offer and ensure effective cooperation between science and society.

Research and Innovation direct action carried out by the Joint Research Centre. In 2020, 513 tangible specific impacts on European policies resulting from technical and scientific support have been provided by the Joint Research Centre and 548 peer reviewed publications in high impact journals have been generated by the JRC. These results show that during the Horizon 2020 period the JRC has exceeded its targets of 330 and 500 respectively.

As far as the **European Institute of Technology** is concerned, 2153 organisations from universities, business and research are integrated in the Knowledge and Innovation Communities (KICs), above the target of 1 200. The performance results in 2021 show also that the collaboration inside the knowledge triangle, leading to the development of innovative products, services and processes, is slightly behind to achieve its innovation target and in meeting the ‘start-up and spin-off’ target.

3.2. Key achievements

82 543	41 324	3 843	>69 000	259 505	3,800	9
Publications	Joined public-private publication	Patent applications	Researchers, inc. Ph.D, having	Innovations	start-ups and scale-ups,	Nobel Prize

<i>in high impact, peer reviewed Journal (2014-2021)</i>	<i>in peer reviewed Journal (2014-2021)</i>	<i>(2014-2021)</i>	<i>international or sector mobility (2014-2021)</i>	<i>(2014-2021)</i>	<i>supported through EIT (2014-2021)</i>	<i>that have received support through ERC and/or MSCA (2010-2021)</i>
--	---	--------------------	---	--------------------	--	---

The Research and Innovation projects funded by Horizon 2020 have already produced many results. Due to the large volume of results, it is impossible to present all 2021 key achievements. Therefore, only a few of them with limited information are presented in this section. In addition, some key achievements of the projects supporting the implementation of the Paris agreement and EU strategy on Adaptation to climate change, the EU’s biodiversity strategy for 2030, the Clean air and the SDGs are shown in the section 6. The results of all funded projects including all the European Commission’s information such as the grant, the funding and participants, the projects’ summaries, and links to specific publications and other documents are available on http://cordis.europa.eu/projects/home_en.html.

3.3. Evaluations, studies and reports

The Horizon 2020 interim evaluation was completed and published in May 2017 – see: https://ec.europa.eu/info/research-and-innovation/strategy/support-policy-making/support-eu-research-and-innovation-policy-making/evaluation-impact-assessment-and-monitoring/horizon-2020_en.

A series of evaluation studies are being launched in the context of the ex-post evaluation of Horizon 2020. The on-going and planned studies are listed in the [inter-institutional studies database](#). The SWD on the ex-post evaluation of Horizon 2020 is expected to be published in the 2nd quarter of 2023. In 2021, three studies on specific aspects of Horizon 2020 were completed, namely on the focus areas, the open access policy and the proposal evaluation system.

The key findings of these studies¹⁰ indicate that:

- The European Commission’s leadership in the **Open Science policy** has paid off. Compliance has steadily increased over recent years, achieving a success rate that places the European Commission at the forefront of research and innovation funders, with 83% open access to scientific publications. The current policy of depositing open access publications in a repository is also well understood and implemented by grantees. Regarding licences, about the half of publications were published using Creative Commons (CC) licences, which permit reuse with various levels of restrictions. The study identified gaps in the existing Horizon 2020 open access monitoring data, which pose further difficulties in assessing compliance, and self-reporting by beneficiaries highlighted a number of issues that could be addressed in particular by improving guidance to beneficiaries and implementing technical safeguards in the reporting tool.

- The four **focus areas** implemented under Horizon 2020¹¹ have succeeded in fostering exchanges between EC projects and between beneficiaries. Key lessons learnt for Horizon Europe missions indicate that (1) a strong internal mandate on the higher political and institutional level is essential for an effective implementation; (2) calls should clearly define the societal impact beneficiaries are expected to create, securing ownership and achievement; (3) social sciences and humanities have a substantive role to play in solving societal and environmental problems; (4) a monitoring system is instrumental to improve the outreach of citizen science initiatives and moreover to ensure feedback from projects into the policymaking process.

- The **proposal evaluation processes** used in Horizon 2020 have been broadly fair, though further monitoring would be needed given wider evidence of risk of bias. In addition, the burden of the proposal evaluation processes seems to fall mostly on the applicants, and the two-stage application process to increase of the overall burden. More flexible use of consensus meetings may reduce reviewer burden and enable more flexibility in the use of reviewers. Novel approaches such as double-blind review and lotteries could reduce burden and bias and support more innovative research. Furthermore, there is room for improvement regarding the clarity and consistency of application of funding criteria, and the participation of female applicants to the framework programme.

In addition, five reports from the European Court of Auditors on Internationalisation of SMEs; Climate mainstreaming; Circular economy; synergies; widening are scheduled to be issued in 2022.

4. Programme 2021-2027 - Key monitoring indicators

¹⁰ *Horizon 2020 Open Access Policy*: <https://data.europa.eu/data/datasets/moap-horizon-2020-database?locale=en> & *Focus Areas* in Horizon 2020: <https://op.europa.eu/en/publication-detail/-/publication/ebef3e88-6d0d-11ec-9136-01aa75ed71a1/language-en/format-PDF/source-247630678>

¹¹ *The four focus areas are: « Connecting economic and environmental gains, the Circular Economy », “Building a low-carbon, climate resilient future”, “Boosting the effectiveness of the Security Union” and “Digitalising and transforming European industry and services”*

Specific Objective 1: Scientific impact by creating high-quality new knowledge, strengthening human capital in research and innovation, and fostering diffusion of knowledge and Open Science

Indicator 1: HE peer reviewed scientific publications

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2030
0	900		3 000				150 000			150 000
	Actual Progress									Final
952										
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of peer-reviewed scientific publications resulting from the programme.
Cut-Off Date	31/12/2021
Data source	EC administrative and monitoring data submitted by Horizon Europe participants through project reporting template, Scopus database.
Link to the objective	Publications codify, disseminate and provide access to the new knowledge produced by a Programme project. Peer-reviewed publications indicator is used in Research and Innovation for monitoring new knowledge. Peer-reviewed publications are considered as a relevant sign of good quality new knowledge. By monitoring the number of peer-reviewed publications produced by the Horizon Europe, we aim at monitoring at short term that Horizon Europe is on the right track towards its first specific objective through the creation and diffusion of high quality new knowledge (Key Impact Pathway 1).
Link MFF 14-20 / MFF 21-27	This indicator is the continuation of an indicator of Horizon 2020 (Publications in peer-reviewed high impact journals), but not restricted to high impact journals and including external matching/validation of the publications.
Other methodological comments	Publications are first verified in an external database and then counted. Significant volume of data from indirect actions are expected no sooner than late 2024, as it takes time for beneficiaries to produce papers and report them. The overall number of publications in the EU will be reported as a reference point. The estimated target has been calculated based on Horizon 2020 results obtained in December 2021 (around 150 000). The reference value is provisional as many Horizon 2020 projects as still running and are expected to produce publications peer-reviewed. The reference value from Horizon 2020 is foreseen to be stable in 3 years. In addition, the new method introduced to validate the number of publications may also affect the estimated target. Therefore, the provisional target of 150000 is subject to revision in 2025. The year of the target is 2030 which corresponds approximately to the end of the HE funded projects.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First preliminary results of the direct actions that are carried out by JRC

Indicator 2: Field-Weighted Citation Index of HE peer reviewed publications

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Normalised Means Citation Score of HE peer reviewed publications
Cut-Off Date	
Data source	EC administrative and monitoring data submitted by Horizon Europe participants through project reporting template; Scopus database.
Link to the objective	By monitoring the citation index of peer reviewed publications produced by the Horizon Europe, we aim at monitoring at medium term that Horizon Europe is on the right track towards one of its longer term objective that is to create and diffuse high quality new knowledge, as shown by the high-quality publications that become influential in their field and worldwide (Key impact pathway 1).
Link MFF 14-20 / MFF 21-27	This indicator is the linked to an indicator of Horizon 2020 (Share of publications from ERC-funded projects which are among the top 1 % highly cited per field of science), but includes a broader scope of publications and includes external verification of the publications
Other methodological comments	In order to be independent from any contractor, RTD has decided to calculate MNCS of publications instead of the FWCI score. Field-normalised citation impact indicators, such as a “field-normalised” Mean Normalized Citation Score (or MNCS), calculate an indication of the citation impact of a publication. It is calculated by comparing the number of citations actually received by a publication

	with the number of citations expected for a publication of the same, publication year, and subject field.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected no sooner than 2026, as it takes time for beneficiaries to produce papers and report them, and there needs to be a 3 year window for citations.

Indicator 3: Peer reviewed publications from HE projects that are core contribution to scientific fields

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Share of Horizon Europe peer reviewed publications which are amongst the top 1 % most cited publications produced
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	This indicator is the continuation of an indicator of Horizon 2020 (Share of publications from ERC-funded projects which are among the top 1 % highly cited per field of science), but includes external verification of the publications.
Link MFF 14-20 / MFF 21-27	This indicator is the continuation of an indicator of Horizon 2020 (Share of publications from ERC-funded projects which are among the top 1 % highly cited per field of science), but includes external verification of the publications.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected no sooner than 2026, as it takes time for beneficiaries to produce papers and report them, and there needs to be a 3 year window for citations

Indicator 4: Researchers involved in upskilling (training, mentoring/coaching, mobility and access to R&I infrastructures) activities in FP projects

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										2030
0	1 000	10 000	150 000	34 000			590 000			590 000
	Actual Progress									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of researchers expressed in full-time equivalent (FTE) involved in upskilling activities in projects
Cut-Off Date	31/12/2021
Data source	EC administrative and monitoring data submitted by Horizon Europe participants & Project reporting
Link to the objective	Horizon Europe offers to the researchers many various ways to improve their careers and their working conditions. By monitoring the number of researchers involved in upskilling activities in Horizon Europe projects, we aim at monitoring at short term that Horizon Europe is on the right track towards its first specific objective through improving human capital in Research and Innovation.
Link MFF 14-20 / MFF 21-27	Yes, this indicator includes two indicators reported in Horizon 2020 (MSCA and one on the infrastructure)
Other methodological comments	In 2021, the figures comes from the direct actions and the EIT. JRC include Ph.D students, Trainees, Researchers using JRC research infrastructure through open access schemes and Researchers with temporary contracts, working in the JRC's research projects.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	2021 figures indicate the preliminary results of the direct actions that are carried out by JRC. The 2021 EIT figures will be available in June 2022.

Indicator 5: Upskilled FP researchers with increased individual impact in their R&I field

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										

	Actual Progress								Final
Are we on track :									

Indicator type	Result
Unit of measurement	Average increase of H-index of funded researchers
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	By monitoring the H-index of researchers involved Horizon Europe projects, we aim at monitoring at medium-term that Horizon Europe is on the right track towards one of its longer term objective that is to strengthen human capital, as shown by the improvement in skills, reputation and working conditions of individual participants (Key impact pathway 2).
Link MFF 14-20 / MFF 21-27	No – new indicator introduced
Other methodological comments	The H-index is based on the comparison of the number of articles written by an author to the number of citations. The H-index offers a way to see the evolution of an individual researchers’ performance. An increase in the H-index is an indicator of a positive effect of the Programme on researcher’s impact in their field.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected no sooner than 2023, as there needs to be a time slot to observe increases in H-indexes.

Indicator 6:Upskilled FP researchers with improved working conditions, including researchers' salaries

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
										Final
	Actual Progress									
Are we on track :										

Indicator type	Impact
Unit of measurement	TBC
Cut-Off Date	
Data source	Project reporting, survey (Research Career Observatory).
Link to the objective	By monitoring the improvement of the working conditions of researchers involved in Horizon Europe projects, we aim at monitoring that Horizon Europe is fulfilling its longer term objective that is to strengthen human capital, as shown by the improvement in skills, reputation and working conditions of individual participants (Key impact pathway 2).
Link MFF 14-20 / MFF 21-27	No – new indicator introduced
Other methodological comments	Survey data (from Researchers observatory) will used to collect data on researchers salaries (net salaries) and contract type. Regarding data on job security, collected data includes several relevant questions which provide data on contract type, satisfaction with pensions/social security provisions, and other aspects of working conditions. Under the survey, the same data is collected for a random stratified sample of researchers who were based in European research performing organizations but did not receive EU funding. The salaries and working conditions of HE researchers are then benchmarked against this representative sample of researchers. The availability of data depends on the planning of the survey, which is expected to happen no sooner than 2023.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 7: Research outputs (open data/publication/ software etc.) shared through open knowledge infrastructures

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2030
0				95%			95%			95%
	Actual Progress									Final
	82%									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Share of Open Access outputs in Horizon Europe expressed in %
Cut-Off Date	09/03/2022
Data source	Project reporting, external bibliometric database
Link to the objective	Open access to publications, datasets, software, other research products (e.g., services, tools) allows

	researchers to build on existing work and speed science, industry to access scientific knowledge to innovate, public sector to use for evidence-based policy making, public to be engaged and involved in the research process. Therefore, detecting and isolating outputs related to Open Science is an appropriate measure of the short-term progress towards the objective. By monitoring the Research outputs (open data/publication/ software etc.) shared through open knowledge infrastructures, we aim at monitoring at short term that Horizon Europe is on the right track towards one of its longer term objective that is to open up science, This will be shown by research outputs shared openly, re-used and at the origin of new transdisciplinary/trans-sectoral collaborations (Key impact pathway 3 long term indicator).
Link MFF 14-20 / MFF 21-27	No – new indicator introduced. However, the figures for Horizon 2020 have been collected.
Other methodological comments	All relevant FP research outputs (by type: publications, datasets and software) reported by all Horizon Europe projects (incl. DOI) are matched to an external database. The single extended list of all relevant outputs, removing the duplicates, is used to count numbers and shares. First data for indirect activities are expected no sooner than in late 2022.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	In 2021, only preliminary results of direct activities carried out by JRC are available.

Indicator 8: Open access FP research outputs actively used/cited

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Normalised Means Citation Score of open access peer reviewed publications
Cut-Off Date	
Data source	TProject reporting, external bibliometric database
Link to the objective	The dimension measured of the S.O is the diffusion of knowledge and Open Science. This indicator captures the effect that open access brings to fostering diffusion of knowledge by tracking the use of research outputs. The key question addressed is whether the open access research results are cited more than the closed/embargoed ones.
Link MFF 14-20 / MFF 21-27	No – new indicator introduced
Other methodological comments	See indicator 2 for details on citations.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected no sooner than 2026, as it takes time for beneficiaries to produce papers and report them, and there needs to be a 3 year window for citations.

Indicator 9: FP beneficiaries having developed new transdisciplinary/ trans-sectoral collaborations with users of their open FP R&I outputs

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Collaborative Index of the open access peer reviewed publications
Cut-Off Date	
Data source	Project reporting, external study
Link to the objective	By monitoring the Collaborative Index of the open access peer reviewed publications, we aim at monitoring at medium-term that Horizon Europe is fulfilling its longer term objective that is to open up science, as shown by research outputs shared openly, re-used and at the origin of new transdisciplinary/trans-sectoral collaborations (Key impact pathway 3). Research collaboration is a key in fostering diffusion of knowledge. The purpose of having open science as the modus-operandi is to further enhance collaboration across disciplines, between academia and industry, as well as within Europe and beyond.
Link MFF 14-20 / MFF 21-27	No – new indicator introduced
Other methodological comments	This indicator will be calculated as part of a separate study. The following methods might be used: the starting point is the authors and their affiliations who have produced open access results, and build their co-authorship network, maintaining time stamps to trace these over the years. As a second step,

	we extract overall insights on degree of collaboration, including the collaborative index, the degree of collaboration, and the collaborative coefficient and provide data by programme, and country of authors' institutions. New Collaborations are estimated by counting the authors' dyads that appear in the context of a project, not observed before. The study will likely be part of the interim evaluation of the programme.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected no sooner than 2029

Specific Objective 2 :Technological/economic impact especially within the Union by influencing the creation and growth of companies, especially SMEs including start-ups, creating direct and indirect jobs especially within the Union, and by leveraging investments for R&I

Indicator 1: Innovative products, processes or methods from FP (by type of innovation) & Intellectual Property Rights (IPR) applications

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0					120 000		255 000			255 000
	Actual Progress									Final
	164									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of innovative products, processes or methods & Intellectual Property Rights (IPR) applications resulting from the Programme
Cut-Off Date	17/03/2022
Data source	EC administrative and monitoring data submitted by HE participants & external patent database
Link to the objective	To maintain and improve its relative competitiveness in the global economy, the EU needs a constant supply of new technological output and intellectual property. Horizon Europe by delivering new innovative outputs that have the potential to be exploited on the market contributes to the technological/economic impact within the EU. However, there is no gold-standard approach to measure innovative results. By monitoring the number of Innovative products, processes or methods from FP & Intellectual Property Rights applications, we aim at monitoring at short term that Horizon Europe is on the right track towards one of its second specific objective through the production of innovation-based growth. This is shown by the patents and innovations that are launched on the market and generate added value for businesses (Key impact pathway 8).
Link MFF 14-20 / MFF 21-27	This indicator links to and indicator of Horizon 2020 ('Patent applications and patents awarded in Future and Emerging Technologies'), but covers more types of innovations and includes links to an external database.
Other methodological comments	The indicator is calculated as a simple count of number of innovative products, processes and methods & Intellectual Property Rights (IPR) applications reported in all ongoing and finished Horizon Europe projects. First data for indirect activities are expected no sooner than late 2022. In 2021, JRC reported 4 technical inventions
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	2021 figures indicate only the first preliminary results of the direct actions that are carried out by JRC. The 2021 EIT results will be available in June 2022.

Indicator 2: Innovations from FP projects (by type of innovation) including from awarded IPRs

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Patent citations, family size, scope
Cut-Off Date	
Data source	Project reporting, external patent database
Link to the objective	By monitoring the number of Innovations from FP projects (by type of innovation) including from awarded IPRs, we aim at monitoring at medium-term that Horizon Europe is on the right track towards one of its longer term objective that is to be a source of economic growth, as shown by the patents and innovations that are launched on the market and generate added value for businesses (Key

	impact pathway 7). In the medium-term, the patent indicators are good indicators of progress to technological/economic impact
Link MFF 14-20 / MFF 21-27	This indicator links to and indicator of Horizon 2020 (Patent applications and patents awarded in Future and Emerging Technologies), but includes verification with an external database, distinction between patent family members, and deeper analytical insight.
Other methodological comments	One of the most robust findings of IPR-related research is the skewness of patent value distribution – few patents are valuable, while most others are worth little, if anything at all. This indicator will use external data sources to estimate the impact potential of the patents.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected no sooner than late 2023, as there needs to be time for patents to be granted and reported.

Indicator 3: Creation, growth & market shares of companies having developed FP innovations

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Growth of funded companies
Cut-Off Date	
Data source	Project reporting, external database of companies
Link to the objective	By monitoring the growth of companies having developed innovations, we aim at demonstrating the economic impact of Horizon Europe. One of Horizon Europe’s objective is indeed to be a source of economic growth, as shown by the patents and innovations that are launched on the market and generate added value for businesses (Key impact pathway 7). Horizon Europe should indeed help create reciprocal relationships between research-performing organisations and high-tech SMEs. This reciprocity then leads to an improved transfer of knowledge and exploitation of research results by the companies. If this is the case, there must be a clear and quantifiable effect on the financial performance of beneficiary SMEs, measurable in the long-term.
Link MFF 14-20 / MFF 21-27	This indicator is linked to indicator of Horizon 2020 on Growth
Other methodological comments	In the first step, the Horizon Europe companies are matched to an external company database. The next step is to obtain relevant data on the firms’ turnover and relevant metadata. This will be reported for funded companies. In addition, as part of a study, a control sample of firms will be created, which consists of non-funded SMEs that were part of consortia, or applied themselves, for the same grants (i.e. same call, same year) as the beneficiaries, but did not receive funding due to budgetary constraints. Once both samples of companies are matched, a sharp discontinuity design with a difference-in-difference method are applied to analyse firm performance across the selected time window..
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	TBC]First data are expected no sooner than late 2028, as it takes time for the programme to make an effect and data to be reported. The studies are planned to be part of interim evaluation.

Indicator 4:FTE jobs created, and jobs maintained in beneficiary entities for the FP project (by type of job)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0							450 000			450 000
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Cumulative number of FTE jobs created and maintained in all ongoing and finished Horizon Europe projects
Cut-Off Date	
Data source	EC administrative and monitoring data submitted by HE participants
Link to the objective	A significant share of Horizon Europe investment goes to personnel costs, which directly supports existing jobs or the creation of new positions in beneficiary organisations. Horizon Europe funding also supports and maintains existing jobs that would otherwise be lost if no funding was attracted. This contributes to economic impact of the programme, and can be used as a short-term indicator. By monitoring the number of jobs created, we aim at monitoring at short-term that Horizon Europe is on

	the right track towards one of its second specific objective by generating more and better jobs, initially in the projects, and then through the exploitation of the results and their diffusion in the economy (Key impact pathway 8).
Link MFF 14-20 / MFF 21-27	The indicator is linked to Horizon 2020 indicator ('Growth and job creation in participating SMEs') In this Programme, this indicator reports beyond, it covers all Horizon Europe funded activities
Other methodological comments	The target has been estimated based on Horizon 2020 results for all funded projects obtained in December 2021 (450.000 FTEs). The reference value is temporary as many Horizon 2020 projects as still running. Therefore, the current estimated target of 250 000 is subject to revision in 2025. The year of the target is 2030 which corresponds to the end of HE funded projects.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected in 2022.

Indicator 5: FTE jobs in beneficiary entities following FP project (by type of job)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Growth of employment in funded companies.
Cut-Off Date	
Data source	Project reporting, external database of companies
Link to the objective	By monitoring the number of FTE jobs in beneficiary entities following FP project, we aim at monitoring at medium-term that Horizon Europe is on the right track towards one of its longer term objective that is to generate more and better jobs, initially in the projects, and then through the exploitation of the results and their diffusion in the economy (Key impact pathway 8). Horizon Europe helps create reciprocal relationships between research-performing organisations and high-tech SMEs. This reciprocity then leads to an improved transfer of knowledge and exploitation of research results by the firms. If this is the case, there must be a clear and quantifiable effect on the employment in beneficiary SMEs, measurable in the medium-term.
Link MFF 14-20 / MFF 21-27	The indicator is linked to Horizon 2020 indicator ('Growth and job creation in participating SMEs') but is extended to all programme parts
Other methodological comments	In the first step, the Horizon Europe companies are matched to an external company database. The next step is to obtain relevant data on the firms' employment and relevant metadata. This will be reported for funded companies. In addition, as part of a study, a control sample of firms is created, which consists of non-funded SMEs that were part of consortia, or applied themselves, for the same grants (i.e. same call, same year) as the beneficiaries, but did not receive funding due to budgetary constraints. Once both samples of companies are matched, a sharp discontinuity design with a difference-in-difference method are applied to analyse firm performance across the selected time window. The studies are planned to be part of interim evaluation.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected no sooner than late 2024, as it takes time for the programme to make an effect and data to be reported

Indicator 6: Direct & indirect job created or maintained due to diffusion of FP results (by type of job)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Number of direct & indirect jobs created or maintained
Cut-Off Date	
Data source	Project reporting, studies
Link to the objective	By monitoring the number of direct & indirect job created or maintained due to diffusion of FP results, we aim at monitoring that Horizon Europe is achieving its expected economic impact objective that is to generate more and better jobs, initially in the projects, and then through the exploitation of the results and their diffusion in the economy (Key impact pathway 8). Horizon Europe funding will induce technological change; job markets and skills requirement are being deeply

	transformed due to technological change.
Link MFF 14-20 / MFF 21-27	This indicator is linked to indicator of Horizon 2020 on Jobs
Other methodological comments	A macroeconomic model will be used to estimate the total employment induced by Horizon Europe funding. It has been used in several previous assignments to measure the economic impact of previous programmes, including for the ex-ante impact assessment of Horizon Europe. It will be used to produce aggregate job creation effects of FP funding for different time windows (3 year; 5+ year) and for different skill levels, including low, medium, high skill jobs. We expect to run studies as part of the interim and ex-post evaluations of the programme.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected no sooner than late 2028, as it takes time for the programme to make an effect and data to be reported

Indicator 7: Public & private investment mobilised with the initial FP investment

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	3.3						20.01			20.01
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	EUR billion
Cut-Off Date	
Data source	EC administrative and monitoring data submitted by HE participants through project reporting
Link to the objective	Depending on the funding instrument applied, beneficiaries in Horizon Europe are required to contribute at least a certain share of their own funds to the projects. This significant co-investment of public and private investment towards achieving the programme objective is used as a short-term indicator. By monitoring the Public & private investment mobilised with the initial FP investment, we aim at monitoring at short-term that Horizon Europe is on the right track towards its second specific objective through leveraging investments for research and innovation in Europe, initially in the projects and then to exploit or scale-up their results (Key impact pathway 9).
Link MFF 14-20 / MFF 21-27	This indicator is linked to indicator of Horizon 2020 on investment
Other methodological comments	Calculated as the amounts (in EUR) of public & private investment mobilised in all ongoing and finished Horizon Europe projects. Data on public & private co-invested amounts are derived from the EC monitoring system. Specifically, each project participant has their EU and total contributions listed for each project application. The difference between the total and EU funding is equal to the co-investment made. First data are expected available after the signature of the first grant agreements.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The 2021 figures will be available in spring mid-2022

Indicator 8: Public & private investment mobilised to exploit or scale-up FP results (including foreign direct investments)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Amount of public & private investment
Cut-Off Date	
Data source	Project reporting, external databases [TBC]
Link to the objective	The dimension measured of the S.O is the leverage on investments in R&I Leverage represents the additional investment mobilised by the project beyond the initial project total cost. This includes notably venture capital investment or additional private/public investment attracted by SMEs thanks to the innovations developed in their FP projects.
Link MFF 14-20 / MFF 21-27	This indicator is linked to indicator of Horizon 2020 on investment
Other methodological comments	Initial data is declared by the beneficiary entities themselves as part of their final reports. Further, at firm level, amount of public & private investment mobilised by SMEs are estimated using external databases. [TBC] First data are expected no sooner than late 2021.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 9: EU progress towards 3% GDP target due to FP

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	EU progress towards the 3% GDP target due to Horizon Europe
Cut-Off Date	
Data source	Project reporting, studies
Link to the objective	The dimension measured of the S.O is the leverage on investments in R&I Horizon Europe funding will stimulate further R&D funding, and particularly funding attracted by industry, SMEs and start-ups. In the long-term, this indicator estimates the aggregate effect of Horizon Europe.
Link MFF 14-20 / MFF 21-27	This indicator is linked to the indicator of Horizon 2020 (cf. the H2020 General Objective)
Other methodological comments	A macroeconomic model will be used to estimate the total leverage induced by Horizon Europe funding. It has been used in several previous assignments to measure the economic impact of previous programmes, including for the ex-ante impact assessment of Horizon Europe. It will be used to estimate amount of additional leverage (direct and indirect) attracted to R&D per each euro spent in Horizon Europe. We expect to run studies as part of the interim and ex-post evaluations of the programme.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Specific Objective 3 :Societal impact by addressing the EU policy priorities and global challenges, including UN SDGs, following the principles of the Agenda 2030 and the goals of the Paris Agreement, through R&I, delivering benefits and impact through R&I missions and European Partnerships and strengthening the uptake of innovation in society ultimately contributing to people’s well-being

Indicator 1: Outputs aimed at addressing identified EU policy priorities and global challenges (including SDGs) (multidimensional: for each identified priority)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	100		100	100	100	100	100			100
	Actual Progress									Final
	100									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Share of outputs aimed at addressing the EU policy priority (%)
Cut-Off Date	17/03/2022
Data source	EC administrative and monitoring data submitted by HE participants
Link to the objective	In the short-term, the share of outputs addressing a policy priority indicates one of the societal impacts of Horizon Europe. By monitoring the outputs generated by projects aimed at addressing identified EU policy priorities, we aim at monitoring at short-term that Horizon Europe is on the right track towards one of its third objective that is to help addressing EU policy priorities and global challenge through research and innovation.
Link MFF 14-20 / MFF 21-27	No – New indicator
Other methodological comments	Horizon Europe funded projects produce variety of products, tracked and reported under scientific and economic outputs. Most of them are also likely to have a societal impact; to trace and estimate it, the produced output needs to be accurately measured and then classified according to the specific EU policy priorities, including the SDGs. Additional information on outputs aimed at addressing identified all EU policy priorities and global challenges (including SDGs) will be available in the mid-term evaluation of the Programme. Furthermore, the contribution to the SDGs is reported in the Programme Statement’s section dedicated to the SDGs.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The 2021 preliminary figures refer to the direct activities carried out by JRC. First data for indirect activities are expected in 2022.

Indicator 2: Number and share of innovations and research results addressing identified EU policy priorities and global challenges (including SDGs) (multidimensional: for each identified priority)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Share of outputs aimed at addressing specific EU policy priorities, including meeting the Sustainable Development Goals (SDGs)
Cut-Off Date	
Data source	Project reporting, external databases.
Link to the objective	By monitoring Number and share of innovations and research results addressing identified EU policy priorities and global challenges, we aim at monitoring at medium-term that Horizon Europe is on the right track towards one of its longer term objective that is to help addressing EU policy priorities (including meeting the SDGs) through research and innovation, as shown by the portfolios of projects generating outputs contributing to tackling global challenges (Key impact pathway 4). In the medium-term, shares of verified outputs and their performance indicate the societal impact of Horizon Europe.
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	Calculated as a simple count of innovations (new or significantly improved: methods, technologies and instruments / commercial goods / commercial services / scientific or industrial processes / business models) reported in all ongoing and finished Horizon Europe projects and classified by their contribution to the specific SDGs and subsequently – EU policy priorities. Additionally, where possible, the scientific results tracked by medium-term indicators under scientific and economic indicators, but also awarded patents, are also classified by their contribution to the specific SDGs and subsequently – EU policy priorities. The classification by the SDGs is based on automatic classification algorithms. Where automatic classification is not available, the whole project and its results are assigned to the SDGs based on the indication provided by the participating organisation in the grant application..
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First significant data are expected no sooner than 2024

Indicator 3: Aggregated estimated effects from use/exploitation of FP-funded results, on tackling identified EU policy priorities and global challenges (including SDGs), including contribution to the policy and lawmaking cycle (such as norms and standards) (multidimensional: for each identified priority)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Aggregated estimated effects from use of FP-funded results on tackling specific EU policy priorities, including contribution to policymaking and legislation [TBC]
Cut-Off Date	
Data source	Project reporting, studies
Link to the objective	By monitoring this indicator, we aim at monitoring that Horizon Europe is achieving its impact objective that is to help addressing EU policy priorities (including meeting the SDGs) through research and innovation, as shown by the portfolios of projects generating outputs contributing to tackling global challenges (Key impact pathway 4).
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	The indicator focuses on estimated and detected effects from use of Horizon Europe funded results on tackling specific EU policy priorities. In the long-term, specific studies are needed to analyse the societal impact of Horizon Europe in specific areas. We expect to run those studies as part of the interim and ex-post evaluations of the programme.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First significant data are expected no sooner than 2026.

Indicator 4: Outputs in specific R&I Missions (multidimensional: for each identified mission)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									
0										Indicator under development
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number of outputs aimed at addressing specific Missions
Cut-Off Date	
Data source	EC administrative and monitoring data submitted by HE participants
Link to the objective	The dimension measured of the S.O is the benefits and impact through R&I missions. Horizon Europe incorporates EU missions to increase the effectiveness of funding by pursuing clearly defined targets and delivering solutions to some of the greatest challenges facing our world. In the short-term, number of outputs indicate the societal impact of Horizon Europe in the missions. By monitoring outputs in specific R&I missions, we aim at monitoring at medium-term that Horizon Europe is on the right track towards one of its longer term objective that is to produce knowledge and innovation that contribute to achieving missions of EU interest (Key impact pathway 5).
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	This indicator is currently under development following the launch of the EU Missions at the end of 2021. Horizon Europe funded projects produce variety of products, tracked and reported under scientific and economic outputs. Most of them are also likely to have a societal impact.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The 5 EU Missions were adopted at the end of 2021. The indicator is under development.

Indicator 5: Results in specific R&I missions (multidimensional: for each identified mission)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Number of outputs aimed at addressing specific missions [TBC]
Cut-Off Date	
Data source	Project reporting, external databases.
Link to the objective	By monitoring results in specific R&I missions, we aim at monitoring at medium-term that Horizon Europe is on the right track towards one of its longer term objective that is to produce knowledge and innovation that contribute to achieving missions of EU interest and to deliver benefits and impact through R&I missions (Key impact pathway 5). Horizon Europe incorporates EU missions to increase the effectiveness of funding by pursuing clearly defined targets and delivering solutions to some of the greatest challenges facing our world. In the medium-term, shares of verified outputs and their performance indicate the societal impact of Horizon Europe.
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	This indicator is currently under development following the launch of the missions end of 2021. Calculated as a simple count of innovations (new or significantly improved: methods, technologies and instruments / commercial goods / commercial services / scientific or industrial processes / business models) reported in all ongoing and finished Horizon Europe projects and classified by their contribution to the specific missions..

Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	This indicator is currently under development following the launch of the missions end of 2021.

Indicator 7: FP projects where EU citizens and end-users contribute to the cocreation of R&I content

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0					1.5					2
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	%
Cut-Off Date	
Data source	EC administrative and monitoring data submitted by HE participants.
Link to the objective	To measure the involvement of citizens and civil society in the research process funded by the programme, this indicator tracks the number and share of Horizon Europe projects where EU citizens and end-users contribute to the co-creation of R&I content, additionally estimating the role of such contribution (such as consultation/dissemination, co-creation, co-ownership/joint decision-making). By monitoring FP projects where EU citizens and end-users contribute to the co-creation of R&I content, we aim at monitoring at short-term that Horizon Europe is on the right track towards one of its longer-term objective that is to strengthen the uptake of innovation in society, as shown by the engagement of citizen in the projects and beyond the projects by improved uptake of scientific results and innovative solutions (Key impact pathway 6).
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	Calculated based on a simple count of all ongoing and finished Horizon Europe projects where EU citizens and end-users contribute to the co-creation of R&I content. Relies on the administrative data provided at the beginning of the project, and then tracks changes reported as projects progress. Indicator values are expressed as share of the total programme. First data are expected no sooner than 2022.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected in 2022.

Indicator 8: FP beneficiary entities with citizen and end-users engagement mechanisms after FP project

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Number and share of FP beneficiaries with citizen and end-user engagement mechanisms after FP project.
Cut-Off Date	
Data source	Project reporting

Link to the objective	By monitoring FP beneficiary entities with citizen and end-users engagement mechanisms after FP project, we aim at monitoring at medium-term that Horizon Europe is on the right track towards one of its longer term objective that is to strengthens the uptake of innovation in society, as shown by the engagement of citizen in the projects and beyond the projects by improved uptake of scientific results and innovative solutions (Key impact pathway 6). This medium-term indicator measures the effects of the heightened attention to and demand for co-creation in Horizon Europe through the development of citizen engagement mechanisms in beneficiary entities (such as citizen fora, participatory research, co-creation facilities, experimental sites and similar).
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	In the medium-term, the identification of presence of citizen engagement mechanisms allows estimation of number (and share) of Horizon Europe beneficiary entities that possess and utilise them.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First significant data are expected no sooner than 2023.

Indicator 9: FP co-created scientific results and innovative solutions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

Link to the objective	The long-term indicator focuses on uptake and outreach of framework programme co-created scientific results and innovative solutions. The aim is to assess the extent of the uptake and outreach of the scientific results (e.g. in the fields of science, innovation, the economy and society) and innovative solutions originating from the programme.
Link MFF 14-20 / MFF 21-27	No – new indicator
Other methodological comments	A study will be launched for the assessment of the extent of the uptake and outreach of scientific results and innovative solutions co-created in the FP necessitates a composite indicator. The study is planned as part of the interim evaluation of Horizon Europe.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First significant data are expected no sooner than 2026.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: The Framework Programme for Research and Innovation (Horizon 2020)

Specific Objective 2 : Excellent science - Future and Emerging Technologies - strengthening research in future and emerging technologies

Indicator 1: Publications in peer-reviewed high impact journals

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Publications in peer-reviewed high impact journals per EUR 10 million funding										
Milestones										2025
0				2			25			25
	Actual Progress									
				7	9.8	14.1	15.4	20.2		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of Publications in peer-reviewed high impact journals per 10 million EUR.
Cut-Off Date	31/12/2021
Data source	CORDA, SCOPUS
Narrative	
Methodology	KPI Dashboard: Select “FET” as thematic priority, and read the value from the pre-calculated KPI. The years of reference can be chosen via the deadline date year dimension, selecting relevant years from 2014

Link MFF 14-20 / MFF 21-27	Yes
Other methodological comments	The list of High-Impact Journals by Scopus is used to flag the self-reported peer-reviewed publications, and the total number of flagged publications is divided by the Total EU Contrib/10 million. The specific dashboard view is called “Publications in Peer-Reviewed (PR) and High Impact (HI) Peer Reviewed Journals”
Full metadata available at this address	https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis
Justification of the trend	For many indicators such as the indicators measuring the number of publications, the target is set for the year when the last actions financed under Horizon 2020 will be finished. The final figures are collected until all of the projects are closed and results reported i.e. several years after the formal end of the programme in 2020.

Indicator 2: Patent applications and patents awarded in Future and Emerging Technologies

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Patent applications and patents awarded in Future and Emerging Technologies per EUR 10 million funding										
0	Milestones									2025
										1
	Actual Progress									Final
					0.2	0.45	0.6	0.94

Data source	Corda
Narrative	
Methodology	KPI Dashboard IPRs view : Select “FET” as thematic priority, read the value for the KPI.
Link MFF 14-20 / MFF 21-27	Yes
Other methodological comments	Number of self-reported patent applications and patents awarded by projects funded under FET, divided the Total EU contrib/10 Million. The specific dashboard view is called “Patent Applications and Patent Awarded”.
Full metadata available at this address	https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis
Justification of the trend	The final figures are collected until all of the projects are closed and results reported i.e. several years after the formal end of the programme in 2020.

Specific Objective 5: Industrial leadership – boosting Europe’s industrial leadership through research, technological development, demonstration and innovation in the following enabling and industrial technologies (information and communication technologies; nanotechnologies; advanced materials; biotechnology; advanced manufacturing and processing; space)

Indicator 1: Patent applications and patents awarded in the different enabling and industrial technologies

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Patent applications in the different enabling and industrial technologies per EUR 10 million funding										
0	Milestones									2025
										3
	Actual Progress									Final
				0.3	0.3	0.49	0.66	0.85		
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	Number of patents per 10 million EUR
Cut-Off Date	31/12/2021
Data source	Corda
Narrative	KPI Dashboard IPRs view : Select the “LEIT-” parts among the thematic priorities, read the value for the KPI. Years of reference can be selected from 2014 via the deadline date year dimension.
Methodology	
Link MFF 14-20 / MFF 21-27	yes
Other methodological comments	642 patents application and 261 patents awarded.
Full metadata available at this address	https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis

Justification of the trend	The target is set for the year when the last actions financed under Horizon 2020 will be finished. The final figures will be collected after all of the projects are closed and results reported i.e. several years after the formal end of the programme in 2020.
----------------------------	--

Indicator 2: Share of participating firms introducing innovations new to the company or the market (covering the period of the project plus three years)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2025
0	50%									200%
	Actual Progress									Final
	100%									197%
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Share of firms introducing innovations new to the company or the market.
Cut-Off Date	31/12/2021
Data source	Corda
Narrative	
Methodology	KPI dashboard: pre-calculated share of companies declaring innovations at project reporting vs all legal entities participating in the FP. Years of reference can be selected from 2014 via the deadline date year dimension.
Link MFF 14-20 / MFF 21-27	Yes
Other methodological comments	Self-reporting from the beneficiaries. The specific dashboard view is called “Innovative Companies”.
Full metadata available at this address	https://webgate.ec.testa.eu/dashboard/sense/app/7430404c-503f-4286-94dc-7f5c915be2d5/sheet/8506a750-0c27-4b9a-b929-1d8bb0f9179f/state/analysis
Justification of the trend	

Indicator 3: Number of joint public-private publications

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2025
0	Actual Progress									Final

	Actual Progress									Final
	1 184	2 145	3 904	4 103	4 381	4 638	5 045			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of start-ups or innovations launched on the market.
Cut-Off Date	
Data source	EIT Grant Reporting System
Narrative	• Start-ups created (1) as a result of innovation projects or (2) by students enrolled and graduates from EIT labelled programmesProducts (goods or services) or processes launched on the market / marketed innovation
Methodology	EIT annual reporting
Link MFF 14-20 / MFF 21-27	• Start-ups created of/for innovation or of EIT labelled programmesNumber of innovations (products and services) launched on the market / Marketed Innovations
Other methodological comments	The KICs reported the 2021 results in March/April 2022. The validated EIT figures will then not be available before June 2022 at the earliest.
Full metadata available at this address	
Justification of the trend	The number of new products/services/processes introduced on the market thanks to activities of EIT KICs has been steadily growing over years. In 2017, there has been a change introduced in methodology for calculating this indicator and for this reason the increase has slowed down from 2017. The business ideas incubated and knowledge transfers/adoptions are not counted as of 2017.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	4750.41	5100.00	4750.00	4208.00	4318.00	4404.00	4696.00	32226.41	35%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

Learning from the experience of the 2014 – 2020 period, Horizon Europe will improve its performance related to climate expenditures. The sub-targets for the three Horizon Pillars will take into consideration the specificities of each Pillar and the current baseline performance under Horizon 2020. The proposed solution described hereunder will ensure that the targets are met, while respecting the specific character of the bottom-up programmes.

For programmable activities, the climate markers have been allocated at the level of activity by considering the envisaged expenditure in accordance with the topics included in the Work Programmes. Research family DGs and executive agencies implement a project level tracking to refine estimates so as to give an accurate picture of climate-related expenditure. A similar procedure applies to the part “Widening participation and strengthening area”, major budgets are made available for underrepresented countries to join supported projects. We assume that this will happen in a way that mirrors the portfolio and expenditure in the programmed parts.

Activities in the *excellent science part (Pillar 1)* are not programmed thematically. The estimate is based on the agreement to assign markers to domains of scientific activity.

The *'Global Challenges and European Industrial Competitiveness' part (Pillar 2)* is established through clusters of research and innovation activities, in order to maximise integration and synergies across the respective thematic areas while securing high and sustainable levels of impact for the Union in relation to the resources that are expended. The estimates are calculated at the level of the cluster including the new tools (EU Missions and the new Partnerships) and the direct activities carried out by JRC.

Activities in the *European Innovation Council & European Institute of Innovation and Technology (Pillar 3)* are in an intermediate position: The EIT is active only in the defined large topics (like the ‘Climate Knowledge and Innovation Community (KIC)’ or the EIT Digital). For an estimate of climate expenditure these eight large areas have been assigned climate markers. The European Innovation Council has committed itself to a 30% target and has put in place specific instruments that aim at supporting climate relevant innovative developments. The estimate builds on the agreed target; refinement of estimates will be made by tracking projects and other activities.

Revised estimates providing more accurate figures will therefore be provided from next year onwards when the tracking will be implemented for both programmable and bottom-up parts as described above and a more precise allocation to budgetary years is possible. Implementation figures are final ex-ante estimates based on budget allocation to topics in the work programme before project selections. These figures will be updated based on project monitoring data.

6.1.3. Key achievements

The Horizon Europe Programme is one of the main tool to strengthen our scientific and technological base, develop solutions for fighting climate change. The Pillar 2, in particular the cluster “Climate, energy and mobility”, offers the main funding to fight climate change by better understanding its causes, evolution, risks, impacts and opportunities, and by making the energy and transport sectors more climate and environment-friendly, more efficient and competitive, smarter, safer and more resilient. On top of this dedicated cluster, climate is a cross-cutting issue under Horizon Europe.

Within all the other clusters of the *Pillar 2*, climate-related calls are also present, for example:

- Cluster 1 – Health: *HORIZON-HLTH-2021-ENVHLTH-02-03: Health impacts of climate change costs and benefits of action and inaction;*
- Cluster 2 – Culture, creativity and society: *HORIZON-CL2-2022-HERITAGE-01-08: Effects of climate change and natural hazards on cultural heritage and remediation;*
- Cluster 3 – Civil Security for Society: *HORIZON-CL3-2021-DRS-01-02: Integrated Disaster Risk Reduction for extreme climate events: from early warning systems to long term adaptation and resilience building;*
- Cluster 4 – Digital, Industry and Space: *HORIZON-CL4-2021-RESILIENCE-01-04: Developing climate-neutral and circular raw materials (IA);*
- Cluster 6 – Food, Bioeconomy, Natural Resources, Agriculture and Environment: *HORIZON-CL6-2021-GOVERNANCE-01-13: Modelling land use and land management in the context of climate change.*

Taken from the Taxonomy Regulation, the ‘do no significant harm’ (DNSH) principle has been introduced in several parts of Pillar 2 of **Horizon Europe** by including it in the work programme. It was implemented in the project evaluation by including it in the proposal template under the excellence criterion.

In addition, the numerous new partnerships under Horizon Europe such as *European Partnership for Clean Aviation; European Partnership on Clean Hydrogen* will support achieving the European Green deal. For instance, the Clean Hydrogen Partnership will accelerate the development and deployment of the European value chain for clean hydrogen technologies, contributing to sustainable, decarbonised and fully integrated energy systems. Finally, fourth EU Missions are committed to contribute the Green transition. For example, the main goal of the Mission *Adaptation to Climate Change* is to support at least 150 European regions and communities towards climate resilience by 2030.

Pillar 3 also provides funding opportunities for innovators in the field of climate. For example, in 2021 the *EIC Accelerator* has launched call specifically designed to support Green Deal innovations. The call focuses on the EU’s priorities for transitioning to a green, digital and healthy society, with a special attention to innovations in one of the following areas: Low carbon industries, Deep Renovation of Buildings, Renewable energy; Batteries and other energy storage systems. The EIT Climate-KIC is a Knowledge and Innovation Community (KIC), working to accelerate the transition to a zero-carbon economy.

6.1.4. Performance

35% of the expenditure under Horizon Europe is committed to support Europe’s climate objectives. At the end of 2021, the preliminary figures indicate that Horizon Europe has invested almost 4200 MEur on climate change, which corresponds to 31% of the operational budget at this stage. The preliminary figures will be updated when the complementary 2021 figures will become available.

As regards the previous programme, according to our tracking methodology, Horizon 2020 has so far invested EUR 21,1 billion on climate change; about 32 % of the amount committed to the specific objectives. This does not include expenditure outside of these specific objectives, such as administrative expenditure.

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution	1 068.00	1 068.00	960.00	1 030.00	884.00	902.00	920.00	6 832.00
Share compared to total envelope	9.28 %	8.73 %	7.78 %	8.39 %	7.06 %	7.06 %	7.06 %	7.88 %

(*)These amounts include NextGenerationEU top-ups if any

6.2.2. Explanation On the financial contribution

To support the [Interinstitutional Agreement](#) of December 2020 setting out that the Commission, European Parliament and Council should work toward an ambition of 7.5% of annual spending for biodiversity objectives in 2024, and 10% in 2026 and 2027, Horizon Europe dedicates funding to biodiversity. However, no target for the biodiversity has been set in the legal basis at the level of the programme. The method applied for tracking and estimating expenditures for biodiversity protection and restoration in Horizon Europe is similar to the one applied for tackling climate spending based on the OECD Rio markers.

The breakdown of the financial contribution to biodiversity cannot be presented as the available draft 2023 Work Programmes do not yet include budgets. However, the main parts of the programme contributing to the biodiversity are as follows:

- Pillar 1 mainly ERC & MSCA;
- Pillar 2 mainly all destinations Areas (IA) of Cluster 6^[1]
- The EU missions (notably Oceans, Soils, climate adaptation) & the new Partnerships mainly the co-funded Biodiversity Partnership;
- No significant contribution for biodiversity is ex-ante expected from pillar 3. Only minor amounts from business related innovation mainly from EIT Food.

The NGEU funds did not support areas of relevance for biodiversity, so the end of NGEU does not affect total amount of spending on biodiversity resulting in a higher share in a smaller total budget.

Implementation figures are final ex-ante estimates based on budget allocation to topics in the work programme before project selections. These figures will be updated based on project monitoring data.

6.2.3. Key Achievements

A few projects funded by Horizon Europe have been signed so far. The Work Programme 2021-2022 - through the three calls on Biodiversity and Ecosystem Services - aims to contribute to implementing the EU Biodiversity Strategy for 2030¹², in particular the following priorities:

^[1] This is from the table sent by Art (column AA – rounded proposed budget for 2023)

¹² COM(2020) 380 final

- Biodiversity decline, its main direct drivers and their interrelations are better understood
- Biodiversity and natural capital are integrated into public and business decision making at all levels for the protection and restoration of ecosystems and their services
- Europe builds competitive sustainability and tackles climate change and natural disasters through the deployment of nature-based solutions
- The interrelations between biodiversity, health, food, soil, water, air and climate are better known
- Practices in agriculture and forestry support biodiversity and the provision of other ecosystems services
- Access to a wider range of crops and breeds with a broadened genetic base is improved in line with global biodiversity commitments
- Approaches for enabling transformative changes beneficial for biodiversity are taken up in society
- Biodiversity research is interconnected across Europe and included into governance.

The number of projects being currently implemented and funded by Horizon 2020 aim to the protection and restoration of biodiversity and the further promotion of nature-based solutions. Some examples of these projects are:

- R&I portfolios of projects are testing and demonstrating on the **ground innovative solutions for the restoration of ecosystems** and providing analysis, methods, protocols and impact assessment for supporting the setting of EU restoration targets. For example, H2020 projects AMBER and MERCES have provided the scientific basis for the setting of river and marine ecosystems targets.
- The **Nature-based solutions projects** portfolio, with 32 projects representing an investment of more than 250 million euros, are key in demonstrating the impact and cost effectiveness of nature-based solutions such as creation or restoration of ecosystem for notably climate change resilience. All these projects are contributing in mainstreaming restoration targets, with some H2020 projects working specifically on urban ecosystem restoration.
- Marine ecosystems SponGES is assessing **the biodiversity contained within sponge grounds** ecosystems of the North Atlantic, and developing an integrated ecosystem-based approach to preserve and sustainably use marine resources.
- H2020 REGREEN has generated evidence for how NBS can systematically **integrate ecosystem services and biodiversity** and advocate their benefits and values in urban planning to meet climate and social challenges.
- Other key Horizon 2020 projects provide solutions on how to implement ecosystems restoration targets, notably the 4 projects of the **EU Green Deal call** “7.1 Restoring biodiversity and ecosystem services” mobilising 80 million euros for large-sale restoration of marine and terrestrial ecosystems, and testing restoration as means for transformative change.

6.2.4. Performance

Horizon 2020 contributed significant financial resources to the conservation of biodiversity. EU investments in biodiversity-related research during Horizon 2020 are up to EUR3.5 billion EU which represents 5% of the programme. As regards Horizon Europe, the ex-ante estimate for 2021/22 is slightly higher than initially expected due to high contribution of the EU Missions.

At the end of 2021, the preliminary figures indicate that Horizon Europe has invested almost 1068 MEur on climate change, which corresponds to 7,9 % of the operational budget at this stage. The preliminary figures will be updated when the complementary 2021 figures will become available.”

6.3. Contribution to clean air financing

6.3.1. Contribution

2021-2022 Estimates		2023-2027 programming (EUR million)					Total
2021	2022	2023	2024	2025	2026	2027	
838.00	1 068.00	858.00	872.00	848.00	860.00	848.00	6 192.00

(*)These amounts include NextGenerationEU top-ups if any

6.3.2. Explanation on the financial contribution

The Clean air expenditure indicated in the table has been estimated annually for the full 2021-2027 period building on a high-level tracking methodology originally developed and convened in the OECD. The tracking system for clean air was further developed by the Commission to comply with the reporting obligation on the uptake of EU funding in Article 11 of the National Emission Ceilings Directive (EU)2016/2284 and is included in Annex 4 of the implementation report COM/2020/266 final. It is based on the “EU Marker” system. This means that the clean air related expenditure has been calculated in accordance with the three following categories:

- A 100% contribution to clean air is assumed when clean air is clearly the primary objective, e.g. when vehicles, ships and aircraft (and their components) with zero emissions of air pollutants are concerned, or when activities directly deal with pollution reduction, measurement, assessment or impact.
- If a contribution to clean air is a significant, but not predominant objective, the contribution is counted as 40%. For instance, in the case of urban activities where there is no mission work-programme or precise budget and the impact is partial, we assumed a 40% contribution on the expected budgets. Similarly, in the case of hydrogen and energy, activities dealing with zero emissions energy and fuels are accounted at 40%, while activities dealing with replacement fuels and technologies are not considered to contribute to clean air.
- Expenditure not targeted at clean air objectives, nor contributing to such objectives is to be counted as 0%.

At this stage, it has been considered that only cluster 'Climate, Energy and Mobility'; and cluster 'Food, Bioeconomy, Natural Resources, Agriculture and Environment' contribute to financing "clean air". Concerning the new partnerships under Pillar 2, all 2Zero and battery deals with zero emissions and therefore their contribution is accounted at 100%. However, a number of projects funded through the mission "Climate neutral cities" or the Pillar 1 or Pillar 3 will contribute to "clean air", e.g. EIT Climate-KIC "climate" EITs "Inno Energy" and "Urban Mobility". As it is impossible to estimate their contribution ex-ante, in particular for the bottom-up activities, a scoring of "0" has been applied for the pillar 1 and pillar 3. Therefore, according to the methodology used, the financial contribution to "Clean air" given in the table for the Horizon Europe programme is likely underestimated. Consequently, a tracking at a lower –level, for instance at the level of the topics identified in the work programmes, is foreseen to be implemented for Horizon Europe. This will allow a more accurate estimation ex-post of the contribution of Horizon Europe to clear air financing.

Key Achievements

Two Horizon 2020 projects launched in 2021, **PAUL** and **RI-URBANS** will instead look at the air quality side of things by developing instruments and standards to reliably measure ultrafine particles and other pollutants and GHGs which are not currently regulated. This should enable to enact the recent WHO best practices on ultrafine particles and allow epidemiological studies on them to be performed.

Supported by Horizon 2020 funding helping heavy industry clear the air, the APA project the innovative new filterless air pollution abatement system developed by a company one step closer to marketisation. The APA system effectively cleans the air within a radius of 25-30 metres and, when deployed in clusters, potentially an entire industrial facility. The solution removes everything from particulate matter to heavy metals, hydrocarbons, pollen, spores, nitrogen oxides, sulfur oxides, and carbon. It does this using a patented centrifugal force process that converts the pollution into a water-based by-product that is easy to then process.

As regards, Horizon Europe only few projects have been started at the end of 2021. The Cluster 5 of the main Work Programme includes two topics directly aimed at air quality, one about retrofits for brakes and exhausts and the other looking at emissions by two-wheelers. In addition, the 2ZERO and Batteries partnerships include several topics aiming at making Zero Emissions Vehicles affordable, easy to use and to recharge for all types of road vehicles and in perspective also for aviation and maritime applications, thus fully contributing to clean air.

6.4. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates	2022-2027 programming					Total
	2022	2023	2024	2025	2026	
Score 2: 37,676 Score 1: 160,016 Score 0*: 11 195,889						

(*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significantly impacted**, score 0*: **impact on gender equality to be determined ex post**, score 0: **no significant impact on gender equality**.

Horizon Europe (2021-2027) – Contribution

Under the Horizon Europe framework programme, a strengthened approach for gender equality is introduced, with foreseen increase of the overall expenditure contributing to gender equality objectives compared to Horizon 2020.

In particular, **the Horizon Europe legal basis sets the strengthening of the integration of the gender dimension in research and innovation content, across the whole programme, as an operational objective**. At implementation level, this entails making the integration of sex and gender analysis mandatory by default in all topics of calls-for-proposals (for research and innovation actions and innovation actions) and thus in all funded projects – unless the non-relevance of the gender dimension is duly justified.

Furthermore, all public bodies, research organisations and higher education institutions from Member States and Associated Countries applying to Horizon Europe will, as of calls for proposals with deadlines in 2022, be required to have in place a Gender Equality Plan to be eligible for funding in any work programme part, and **when signing a Grant Agreement, beneficiary organisations “must take all measures to promote equal opportunities between men and women in the implementation of the action and, where applicable, in line with the gender equality plan.** They must aim, to the extent possible, for a gender balance at all levels of personnel assigned to the action, including at supervisory and managerial level”.

Therefore, almost all Horizon Europe work programme parts can potentially be considered as contributing to gender equality in the sense of the 0* category. There are essentially two levels at which gender budgeting/tracking could be done in Horizon Europe: at the level of the gender balance among researchers/staff involved in funded projects, and at the level of the substance of the funded actions, i.e. the level of integration of the gender dimension into the contents of funded projects or call topics.

In this first-time exercise, we concentrate mainly on the latter interpretation – topics/projects that either integrate a gender dimension or that are explicitly dedicated to promoting gender equality. Only in the case of the EIC/EIE work programmes (see below) does this translate into actions dedicated to direct funding/rewarding to under-represented women innovators.

However to estimate how many actions funded under the 2021 budget – most of which have not yet started – will actually contribute significantly to gender equality (and therefore be in the scores 2 and 1 category) and estimate what corresponding budgets can be taken into account, will a priori only be possible ex post, and will require an elaborate tracking methodology, which will need to be devised.

DG RTD has been selected by DG BUDG to participate in a pilot for tracking contributions to gender needed to achieve a fully-fledged gender tracking mechanism for Horizon Europe, showing the impact of EU spending on gender equality, and to identify potential spill-over effects, as well as gaps and data needs.

However, implementing such a refined tracking/monitoring, possibly at project level, possibly involving AI analysis of projects' abstracts, will require considerable resources, for which there are currently no budget provisions in Horizon Europe, beyond the interim and ex-post evaluations. Additional funding would therefore need to be ensured via DG BUDG's budget to carry out a gender tracking on a yearly basis.

Therefore, the budget figures given in the above table thus represent a lower (under-)estimation of the actual contribution of the 2021 Horizon Europe work programmes to gender equality. They correspond to known budgets allocated to actions specifically dedicated to gender quality (score 2), and budgets allocated to actions that we already know will have indirect significant Contribution to gender equality (score 1).

As a first gross estimation, the figure for budgets that potentially could be contributing (score 0*) is simply derived from the above budgets, subtracted from the total Horizon Europe budget for 2021 (which is EUR 11 354,318 million, according to figures shared by DG BUDG).

It is indeed too early to know how much budget allocation the mandatory integration of the gender dimension into all research and innovation projects may translate into (and that could be scored 1 or even 2). Furthermore, since many actions funded under the 2021 Horizon Europe work programme have not yet been kicked off, with evaluations and grant agreement preparations still undergoing, it is not possible to provide an accurate picture.

Regarding actions corresponding the Score 2 and Score 1 categories, we give below figures for some known actions and budgets specifically dedicated to gender equality in the 2021 work programme (WP) parts, as well as foreseen for the 2022 WPs when already known (indeed, some 2021 calls for proposals are still open, most 2022 calls have not yet opened, while the 2023-2024 work programme is still being drafted):

- Under the “Widening participation and Strengthening the European Research Area” WP, several policy-related supporting activities for inclusive gender equality in research and innovation organisations. **Budget for 2021: EUR 8.2 Million** for 2 dedicated topics (2 projects) and 1 expert group on the impact of the COVID-19 pandemic on women researchers and gender equality in R&I in general. Foreseen budget for 2022: EUR 7.9 Million for 5 dedicated actions.
- Under Cluster 2 on “Culture, Creativity and Inclusive Society”, gender studies and intersectional research. **Budget for 2021: EUR 11.74 Million for a dedicated topic** (this topic on “Feminisms for a new age of democracy” was one of the most over-subscribed topics of Cluster 2, and as a result of the high quality proposals, 4 large collaborative projects, instead of 3, should be funded). Foreseen budget for 2022: EUR 9 Million for a dedicated topic.
- Under Cluster 4 on “Digital, Industry and Space”, tackling gender, race and other biases in Artificial Intelligence. **Budget for 2021: EUR 10 Million** for one specific topic. No dedicated topic foreseen in 2022.
- Under Cluster 5 on Climate, Energy and Mobility: a study on gender balance in the R&I field to improve the role of women in the energy transition (**EUR 0.90 million from the 2021 budget**).
- Under Cluster 6 on Food, Bioeconomy, Natural Resources, Agriculture and Environment, no dedicated budget in 2021, but for 2022, EUR 16 Million for two topics addressing gender equality and women-led innovation in farming and rural areas.

- Under the European Innovation Council (EIC) WP: Several activities promoting gender equality have been funded under the 2021 WP, including: A **Women Leadership Programme (WLP)** to coaching and mentoring to EIC-funded women entrepreneurs (**2021 budget roughly estimated at around 106.000 euros**, corresponding to score 2). The first WLP cohort launched in October 2021 and ending in March 2022 has benefitted to 50 women participants, involved 44 mentors, and 31 contracts with EIC Coaches were signed by end of 2021 (9 more being signed under the 2022 EIC WP as soon as it enters into force, plus up to other 10 depending on participants selection); An **EU Prize for Women Innovators** awarded every year to the most talented women entrepreneurs, who have founded a successful company and brought innovation to market. **€ 350,000 in 2021**(corresponding to score 2) for 3 main prizes of EUR 100 000 each and one EUR 50 000 for a ‘rising innovator’ prize under the age of 35. In 2022, the budget is increased to €450,000, for 3 main prizes and 3 prizes to ‘Rising Innovators’; The **EIC Accelerator 2021** funded 31 women-led deep tech startups, for a **budget of over €140 million** (which we have considered here to correspond to score 1).
The EIC set in place a Gender & Diversity Working Group within the pilot EIC Board, which released in 2021 a ‘Statement on gender and diversity in EIC’ which highlights that, despite the high demand for talent, the European pool of next generation leaders in research, innovation and venture investment continues to be limited by the underrepresentation of women in all parts of the innovation ecosystem. Women represent less than 20% of senior management in deep tech start-ups that have raised Series A or B, with CTO positions stagnating at 1% for the last 3 years. In technology investment, men-only teams captured 91% of all capital raised and 85% of all rounds across Europe in 2020, and these imbalances are confirmed at regional level for Central and Eastern Europe and for Nordic countries. Women are equally underrepresented in the management of venture capital, with cascading consequences for the rest of the innovation world, as female investors tend to invest more than men in companies with female founders. The specific approach developed by the EIC, and the EIE (see below) is therefore devised to address these issues, and will be further developed in the next years.
- Under the European Innovation Ecosystems (EIE) WP: a new initiative, **Women TechEU** supports women-led deep-tech start-ups, combining dedicated funding with mentoring and coaching activities (**budget for 2021: EUR 3.75 Million**; the budget for 2022 is increased to EUR 10 Million due to the programme’s success). Furthermore, two other topics have a specific focus on women-led businesses, for a total budget of **EUR 9 million in 2021** (corresponding to score 1). In the 2022 WP, three other topics should contribute to score 1 for a total of EUR 17 million).
- Under the European Institute of Innovation and Technology (EIT) WP: In 2021 the EIT organised a series of activities in connection to implementation of its Gender Action Plan. In particular, in line with the EIT’s 2021 AWP, the institute encouraged the Knowledge and Innovation Communities (KICs) to mainstream more effectively gender, incentivising and monitoring the KICs in pursuing gender balance and inclusiveness. **Girls Go Circular (GGC)** was one of the key actions implemented in 2021 to bridge the gender gap by equipping girls with digital skills and competences and empowering them to apply these skills to circular economy challenges. Other activities in relation to gender equality funded in 2021 include, inter alia: dedicated gender projects launched by the EIT KICs, such as Empowering Women in Agrifood, and Skills for Future; 4 EIT-KIC Gender Mainstreaming Network meetings; 2 gender dedicated trainings; 7 out of 8 EIT KICs have completed drafting their gender policies and respective gender equality action plans. Overall, the EIT allocated in 2021 an estimate of **EUR 2.63 million to dedicated actions (score 2)** and **EUR 0.49 million to the Skills for Future programme (score 1)**. The current EIT WP covers a 2 year 2021-2022 period. In 2022, several additional actions contributing to gender equality will be funded, including, inter alia, EUR 0.633 million for a cross-KIC programme dedicated to women entrepreneurship and leadership, following strategic consultations with key stakeholders in 2021, and programmes on e.g. women in mobility, women in manufacturing (all scores 2) and additional initiatives that will partially contribute to gender equality objectives (score 1). A concept for a common EIC-EIT Women Award is also under development for 2022.
- Under the Marie Skłodowska -Curie Actions (MSCA) WP: This is a bottom-up programme, and it is too early to provide estimate figures for women beneficiaries in all projects funded under the 2021 WP, or for projects that have an explicit gender equality dimension, as none of the calls launched that year has closed its evaluation phase at this stage. Overall, the MSCA pay particular attention to equal opportunities and inclusiveness and make a remarkable contribution towards achieving gender equality across the ERA and beyond. In line with the Charter and Code, all MSCA-funded projects are encouraged to embrace diversity and take measures to facilitate mobility and counter-act gender and disability-related barriers to it. The gender dimension is considered as a key award criterion in its evaluation process and also when selecting doctoral and postdoctoral programmes that will train the innovators and research leaders of tomorrow. By doing so, the programme promotes gender balance in research and research management teams and full consideration of the gender dimension in research and innovation content if relevant for the project. The MSCA also address the gender pay gap and support equal opportunities through the provision of equal pay for all fellows. The programme also includes work-life balance provisions that encourage in particular women to apply and thus contribute to the high participation rate of female researchers. These include family allowances, maternity and parental leave and part-time work for family and personal reasons. This encourages women into the labour market, including in STE(A)M fields.
We therefore attribute a score 0* to the total MSCA 2021 budget of 770 337 666 €. The foreseen budget for the 2022 MSCA calls is even higher: 847 934 717 €.
Based on estimates from previous years, it is expected that the budget allocated in 2021 will contribute to fund 3200 female researchers, of which 1180 PhD candidates, 910 postdoctoral researchers and 1110 research and innovation staff members.

- Under the [European Research Council \(ERC\) WP](#): this is a bottom-up programme, and all projects funded under the 2021 WP are not yet known as selection procedures are still going on. But already **7 projects have "gender" as keyword in their abstract, and can thus be considered as contributing under score 1, for a total amount of 10.524,874 euros**. The data on female grantees (principal investigators) is not yet available.

However, the [ERC has adopted a Gender Equality Plan for the duration of Horizon Europe](#). As part of it the ERC has identified the following key objectives around which it is developing and implementing actions:

- To continue raising awareness about the ERC gender policy among potential applicants;
- To improve the gender balance among researchers submitting ERC proposals in all research fields;
- To raise awareness about the benefits of gender balance among researchers within the ERC teams;
- To continue identifying and removing any potential gender bias in the ERC evaluation procedure;
- To continue monitoring possible differences in gender specific careers and academic posts, following the ERC grants;
- To embed gender awareness within all levels of the ERC processes- from creating awareness about the ERC to grant signing- while keeping the focus on excellence.
- To strive for gender balance among the ERC peer reviewers and other relevant decision-making bodies, aiming at a minimum participation of the underrepresented gender while taking into account the situation in the field of the action. Also, the proportional representation of genders should be at least equal to that of the applications by the underrepresented sex in the Advanced grants in the same area, aiming at the level of 40% in the future.

The ERC Gender Equality Plan and the objectives set in it are closely being monitored and continuously discussed by the ERC Scientific Council's dedicated Working Group on Gender Issues.

- Several actions under the 2021-2022 [Joint Research Centre \(JRC\) WP](#) contribute to gender equality, including the development of a monitoring tool for the Commission's Gender Equality strategy.

Furthermore, the upgraded Horizon Dashboard will include the new approach allowing to better identify the gender composition of researchers benefiting from the EU R&I support, success rates of female researchers, their networks as well as career progression. It will also allow to identify women-led companies supported by Horizon Europe and better understand the impact of the programme on their company growth.

Key achievements and performance under Horizon 2020

Gender as a cross-cutting issue in Horizon 2020

Horizon 2020 was the first Framework Programme for Research and Innovation (R&I) to include specific articles relating to gender equality in its Regulation, setting gender as a cross-cutting issue with three distinct objectives:

- gender balance in research teams at all levels, in order to close the gaps in the participation of women;
- gender balance in decision-making bodies, in order to reach the target of 40% of the under-represented sex in panels and groups and of 50% in advisory groups;
- integration of the gender dimension into R&I content, i.e. taking into account as relevant biological characteristics as well as social and cultural features of both women and men in the design and content of R&I (sex and gender analysis).

These objectives are implemented through a series of Commission provisions which are integrated, as relevant, at various stages of the Research and Innovation cycle.

Gender balance in research teams

- In Work Programmes, applicants are encouraged to promote equal opportunities in the implementation of the funded action and to ensure a balanced participation of women and men at all levels in teams. Up to January 2021, the share of women participants in Horizon 2020 projects was 41% of the total workforce, including non-researchers, while women represented 27% of projects coordinators.
- In [Marie Skłodowska-Curie Actions \(MSCA\)](#) specifically, women represent an overall share of 42% of the entire MSCA fellow population under Horizon 2020, 42% of Individual Fellowships (post-doctoral), and 45% ITNs (i.e. for doctoral candidates), but lower among research and innovation staff (38%). From the budget spent so far on the four main Marie Skłodowska-Curie Actions under Horizon 2020, EUR 2.4 billion have been dedicated to women researchers. A number of studies have addressed the gender dimension of the MSCA programme under Horizon 2020 and contributed to introduce improvements as regards gender equality under Horizon Europe. These include the [FP7 ex post and H2020 interim evaluation of Marie Skłodowska-Curie actions](#) (MSCA) and a number of external studies (see the "[Diagnosis in Excellent Science](#)" produced by the H2020-funded project New Horizon).
- Under the European Innovation Council (EIC) Pilot under Horizon 2020, a specific measure was introduced in the 2020 WP: all applicants had to specify the gender of their CEOs to allow monitoring of the number of women led companies applying, and succeeding at different stages of the selection process. With this data, in the second half of 2020, EIC Accelerator piloted the prioritisation of excellent proposals with women CEOs to a target of 25% women-led companies invited to interview. The measure increased the success of women-led companies from 8% to 29% in 2020 (2020 year average: 21%)

Gender balance in decision making

Targets have been fully reached: the share of contracts with women experts participating in evaluation panels is 42%, while women's participation in Horizon 2020 advisory groups was 55%.

Gender dimension in research and innovation content

The integration of the gender dimension in R&I content has been increasingly mentioned in topics for calls for proposals across the different Horizon 2020 Work Programme parts, and applicants' attention is drawn to the relevance of sex and gender analysis in the content of their planned actions, which is evaluated under the 'Excellence' criterion. Across the 2020 Work Programmes, 125 out of 343 topics (36.4%) for calls for proposals (including the emergency Coronavirus calls for Expression of Interest) integrate an explicit gender dimension in their content. Moreover, an increasing number of bottom-up projects funded under the "Excellent Science" pillar of Horizon 2020, through the European Research Council (ERC) and the MSCA programme, have been integrating sex and gender analysis in their research designs, and in some cases, have been fully dedicated to gender-equality related themes.

Funding to projects dedicated to gender equality issues

- Gender equality projects are funded under the Science-with-and-for-Society (SwafS) Work Programme, which has specific calls on supporting gender equality in R&I. Among these, support is offered to implement gender equality plans (GEPs) in research performing and funding organisations.
- We also fund under SwafS policy-related projects to support a coherent framework of activities, including: trans-national policy networks, communities of practice on GEP implementation, a gender equality training academy to support the implementation of GEPs, addressing gender bias in allocation of funds, integrating a gender perspective in international cooperation, addressing gender-based violence including sexual harassment in academia.
- For the whole of the Horizon 2020 SwafS work programme, over EUR 83 Million will have been allocated to over 40 collaborative projects and other actions on gender equality in R&I, benefitting to around 300 organisations.
- In addition, other SwafS-funded projects, e.g. on responsible research and innovation as well as science education, have also been addressing gender equality issues specifically.

As a result of these provisions, R&I is already considered to be among the 'best in class' with respect to EU policies for the promotion of gender equality.

6.5. Contribution to the sustainable development goals

6.5.1. Goals

SDG 1 End poverty in all its forms everywhere

Training researchers towards a better understanding of poverty:

Since 1990, there have been considerable efforts to reduce absolute poverty in most developing countries. However, especially in Sub-Saharan Africa, progress has been slow. Literature shows that the academic debate on the determinants of poverty reduction takes place in disciplinary silos, where approaches that work well for high-income economies but ignore structural differences between high-income and developing countries are applied and deliver ambiguous results. The EU-funded ADAPTED project will address this apparent research gap by developing high-level training for early-stage researchers, aiming to avoid the existing silos, integrate developing country realities into poverty reduction approaches and bridge the attested knowledge gaps. The project will validate pathways towards poverty eradication, analyse interactions between poverty reduction and other policy areas and contribute to optimise the impact of poverty reduction policies.

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

NEW ROBOTS TRANSFORMING FARMING: The making of a new urban food plan

In Europe, food is available but this doesn't mean it will forever be secure, safe, affordable and nutritious. Currently, the EU food system is not sustainable with respect to the environment and economic and social aspects. In this context, the EU-funded FUSILLI project will transition towards sustainable food systems. It will put 12 cities around Europe in a knowledge sharing and learning network to address the challenges of the food system transformation. The overall aim of the project is to support the participant pan-European cities (and their peri-urban areas) with the aim to address through strong cooperation for knowledge sharing and mutual learning the challenges of the food system transformation.

SDG 3 Ensure healthy lives and promote well-being for all at all ages

Metafoams, a new material foam to protect against noise pollution

Sound pollution is linked to a range of health problems, yet the number of Europeans exposed to high levels of noise is on the rise. Around 50 million people living in urban areas suffer from excessively high levels of traffic noise at night, and for 20 million of them night-time traffic noise actually has a damaging effect on health. Acoustic foams are existing solutions that provide strong sound absorption and noise reduction. Yet, they are effective only in the mid- and high-frequency range. The EU-funded METAFOAM project has a new solution targeting low frequencies. It enables so-called acoustic metafoams – a new class of

materials consisting of particle-enriched acoustic foams. Two effective mechanisms, the visco-thermal dissipation and local resonance are combined envisaging to the creation of a very efficient sound insulator.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Promoting research as a profession in Slovenia

One way to cultivate children's interest in science and to encourage young people to pursue science education is to promote the work of researchers. Highlighting the valuable impact of researchers' work in everyday life can help to engage and connect with young people. This is what the European Researchers' Nights are all about. With this in mind, the EU-funded ZATE project will bring researchers and their achievements to the general public, increasing awareness about research as a profession and inspiring youth to pursue scientific careers. The project will perform an intensive awareness campaign in five cities across Slovenia in cooperation with selected ERN consortiums through various pre-events and event activities and engagement of citizens.

SDG 5 Achieve gender equality and empower all women and girls

Please refer to section 6.4 of this document.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

Remediation of waters contaminated with persistent organic pollutants

Lindane and other chlorinated organic carcinogen substances have been included in the Stockholm Convention on Persistent Organic Pollutants (POPs) to achieve their global elimination. Consequently, the development of cost-effective, safe, and environmentally friendly technologies to destroy these POPs is necessary. A promising alternative uses solar energy integrated into the advanced oxidation process, mainly the solar photo-Fenton process (SPFP). The European Parliament (2016) reported highly contaminated sites with POPs in many Member States, including Spain, that require immediate remediation. The EU-funded SPFPs project's main objective will be to design and build an innovative pilot-plant solar reactor to achieve the irreversible degradation of POPs present in real contaminated waters, taken from several landfills in Spain.

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

SophiA - Sustainable off-grid solutions for pharmacies and hospitals in Africa

Rural and remote health facilities in Africa require sustainable off-grid energy supplies and water free of bacteria and viruses. The EU-funded SophiA project will develop containerised solutions for hospitals using natural refrigerants, solar thermal energy and photovoltaics. This will make it possible for health care units to access carbon-neutral energy for electricity, heating and the cooling of medicine, as well as safe and clean drinking water, increasing quality of life in a sustainable way. The systems will be manufactured in Africa, and they will be tested at four rural hospitals in remote regions of the continent. Project results will accelerate sustainable development, growth and economic transformation in Africa.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

Supporting Blue Growth SMEs

Blue Growth is the strategy set up by the European Commission to support sustainable growth in the maritime industry. The EU-funded GALATEA project will focus on four sectors of the Blue Growth strategy (smart port, smart ship, smart shipyard and maritime surveillance) to support small and medium-sized enterprises (SMEs) in developing innovative solutions in the Atlantic, Baltic and Mediterranean Seas. Through integrating information and communication technologies as well as aerospace technologies in maritime industries, the project aims to support the development of new value chains to promote cross-border and cross-sectoral collaborations. GALATEA strives to have a positive and sustainable impact on EU growth and create more employment opportunities.

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

Strengthening innovation capacity in digital infrastructure design

The digital transformation of our societies is enabled by the design, deployment and operation of continuously evolving, complex digital infrastructures. The research community needs a test platform to address significant challenges related to their efficiency, reliability, availability, range, end-to-end latency, security and privacy. The EU-funded SLICES-DS will design SLICES, a Europe-wide test-platform, to support large-scale, experimental research that will provide advanced compute, storage and network components, interconnected by dedicated high-speed links. The main aim of SLICES will be to strengthen the research excellence and innovation capacity of European researchers and scientists in the design and operation of future digital infrastructures.

SDG 10 Reduce inequality within and among countries

Advanced policies to reduce educational inequalities

A key objective of the Horizon 2020 framework programme 'Europe in a changing world' is to ensure children from vulnerable groups enjoy access to education and reduce educational inequalities. The EU-funded PIONEERED project will specify research-informed policy standards and identify innovative policies and practices to reduce inequalities in accessing education. The project will identify emerging and existing sources of educational inequalities from early childhood to tertiary education, design pioneering

policies and practices of reaction, incorporate the findings, and determine the most adaptable instruments and innovative policies to apply across EU Member States. PIONEERED will analyse national policies addressing inequalities, analyse new and existing relevant data, and conduct research in schools and informal education centres.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

Smart cities as a role model in sustainable development

There is a gap between smart city research and practice, and environmental sustainability. For instance, smart city projects have not assessed the environmental impacts of their strategies. To fill this knowledge gap, the EU-funded ARTEMIS project will explore how the smart city can improve the environmental performance of urban systems. The findings will provide new insight on key aspects of smart city strategies that can effectively reduce environmental impacts. Specifically, the project will develop an integrated framework coupling urban metabolism and life-cycle assessment to estimate how strategies implemented in two EU-funded smart city projects (Lisbon in Portugal and Trento in Italy) have affected a wide set of environmental impacts associated with urban systems.

SDG 12 Ensure sustainable consumption and production patterns

A concrete transition towards circular construction

Concrete – the most widely used construction material – underlies nearly every permanent structure on the planet. What happens to concrete when buildings are no longer needed? The EU-funded ReCreate project will investigate the systemic changes needed in the whole ecosystem of construction and demolition to make these practices more circular. By drawing from partnerships covering the entire value chain, the project will demonstrate deconstruction of intact precast structural components from condemned buildings for reuse in new buildings in real-life innovative pilots. The potential volume of the supply and demand for secondary concrete components in the EU will also be assessed. The project's overall goal is to boost concrete reuse and help the EU reach its ambitious energy and climate targets.

SDG 13 Take urgent action to combat climate change and its impacts

Land use-based solutions for climate change mitigation and adaptation

Land use has consequences for ecosystems and climate change. The EU-funded RethinkAction project will develop a cross-sectoral, user-friendly decision-making platform to foster climate action, focusing on climate mitigation and adaptation solutions related to land use. It will put citizens and decision-makers at the heart of climate change action by informing them about how to overcome barriers through participatory processes. In addition to increasing awareness and the attractiveness of mitigation and adaptation actions, RethinkAction will demonstrate how to create change through practical land use-based solutions. It will roll out six representative case studies in Spain, France, Italy, Hungary, Portugal and Sweden, covering the main regional differences related to climate change.

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Genetics and satellites to the rescue of marine turtles

More than 100 million years ago, marine turtles roamed the earth alongside dinosaurs. Today, of the mere seven remaining species of marine turtle, six are threatened with extinction. The EU-funded SeaTGen project will focus on the green turtles (*Chelonia mydas*) in the south-west Indian Ocean. It will research how populations interact and how they could be impacted by threats in nesting ground and foraging areas as well as along their migratory corridors. Specifically, the project will employ genome-wide single nucleotide polymorphisms combined with traditional mtDNA markers. Novel genetic methods with data from movement ecology (satellite telemetry) and oceanography will be used to assess population structure and recent demographic history. The results will prove useful for future conservation actions.

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Creating a more holistic fire management approach

There is a need to develop novel approaches that shift emphasis to the root causes and impacts of extreme wildfire events. To that end, the EU-funded FIRE-RES project will promote the implementation of a more holistic fire management approach and support the transition towards more resilient landscapes and communities. By integrating research, technology, civil protection, policy and governance spheres related to wildfires, the project will generate new knowledge about sustainable integrated fire management models. Moreover, it will deploy innovations at the technological, social, health, safety, administrative, ecological and economic levels to define how future policies in this area may be achieved in the EU.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

International law and resource wars

Conflicts over natural resources are accompanied by demands and pressures in relation to climate change and inequality. Scientists debate the links between resource scarcity and armed conflicts. But an understudied area of critical significance is how international

law functions in this arena, where power inequality defines relationships between actors like transnational institutions, governments and peoples. The EU-funded REWA project will focus on the topics of conflict resources and security impacts of climate change, through two case studies. REWA focuses on the role of international law in managing these crises and also on the role different actors can play within the related legal dialogue. The project will reveal how distributive justice can be sidelined and inequalities maintained through legal and institutional arrangements.

SDG 17 Strengthen the means of implementation and revitalize the global partnership

Climate science to support and optimise climate-sensitive industries

Southern Africa experiences substantial inter-annual climate variability and is emerging as a potential hotspot of climate change. The EU-funded FOCUS-Africa project will develop sustainable tailored climate services to support improved climate-related outcomes in key climate-sensitive sectors: agriculture and food security, water, energy and infrastructure. Through the project, eight case studies in six countries will assess and test how climate services can be operationalised through the hydro-meteorological systems and institutional infrastructure of the World Meteorological Organisation. The aim will be to illustrate how the use of climate science, forecasts and projections can maximise socio-economic benefits to specific national private and public sectors in the region. The full value chain of climate services will be demonstrated and the lessons learned will be upscaled to other countries in Africa as well as Europe.

6.5.2. Key achievements and performance

Performance:

The EU is committed to development that meets the needs of the present without compromising the ability of future generations to The Horizon Europe Programme should address global challenges, including the United Nations Sustainable Development Goals (SDGs). As indicated earlier in the document, only a few projects have been signed. At this stage, it is therefore not possible to provide a description of the programme's actions contributing to each relevant SDG.

6.1. Contribution to climate mainstreaming	67
6.4. Contribution to gender equality	68
6.5. Contribution to the sustainable development goals	68

1. Overview**1.1. Challenges**

Nuclear research contributes to social well-being and economic prosperity by improving nuclear safety, security and radiation protection. Research and innovation in the nuclear field play a key role in maintaining the highest safety standards and Europe's competences in the nuclear domain. Radiation protection research leads to improvements of safety standards for protection against the dangers arising from exposure to ionising radiation, in medical technologies as well as in other sectors such as industry,

agriculture and the environment from which many citizens benefit. Nuclear research also supports the Union's efforts in the transition to a climate-neutral energy system in a safe, efficient and secure way.

1.2. Mission (General objectives)

The general objective of the Euratom Research and Training Programme is to pursue nuclear research and training activities, with an emphasis on the continuous improvement of nuclear safety, security and radiation protection, as well as to complement the achievement of Horizon Europe's objectives, inter alia in the context of the energy transition.

The Euratom Programme addresses the following research challenges:

- Reinforcement of reactor systems' safety and of spent fuel and radioactive waste management
- Radiation protection and the safe application of ionising radiation
- Safe decommissioning of and environmental remediation of nuclear installations
- Improvement of nuclear security and safeguards
- Maintaining nuclear competences and knowledge management
- A significantly expanded knowledge base for fusion energy

The Euratom Research and Training Programme will complement Horizon Europe, the EU's Framework Programme for Research and Innovation for 2021-2027. It supports nuclear research and training in areas defined by the Regulation establishing the Programme and in accordance with the Euratom Treaty, complementing Member States' actions in this field.

1.3. Specific objectives

- a) improve and support nuclear safety, security, safeguards, radiation protection, safe spent fuel and radioactive waste management and decommissioning, including the safe and secure use of nuclear power and of non-power applications of ionizing radiation;
- b) maintain and further develop expertise and competence in the nuclear field within the Community;
- c) foster the development of fusion energy as a potential future energy source for electricity production and contribute to the implementation of the European fusion roadmap;
- d) support the policy of the Union and its Member States on continuous improvement of nuclear safety, safeguards and security.

1.4. Public intervention context

In accordance with the Euratom Treaty, in particular Article 4(1) and Article 7, the Commission should complement nuclear research in Member States by carrying out a Community research and training programme as agreed to by the Council. In 2021-2025 Euratom will support, in the interest of all Member States, joint research efforts and actions for maintaining strong competences in nuclear research and innovation in both fission and fusion.

All Member States stand to benefit from the development of a sound scientific and technical basis for the safe operation of reactors, secure management of radioactive waste, robust systems of human and environmental protection against the effects of ionising radiation and progress in fusion science and technologies. In support of all objectives, the Programme reinforces the European Research Area in the nuclear field, supports the coordination of Member States' research efforts to avoid duplication, helps retain critical mass in key areas and ensures European added value to expenditure of public funds.

In full respect of Member States' right to decide on their energy mix, the Programme's research results in fission and fusion could also contribute towards a climate-neutral energy system in a safe, efficient and secure way, in particular for those Member States using or planning to use nuclear power as part of their energy mix.

1.5. Actions

In 2021-25 research for nuclear safety will remain a top priority of the Euratom Programme for direct and indirect actions, with particular emphasis on ageing, long-term operation strategies and accident management. The additional safety requirements introduced by the Nuclear Safety Directive¹ calls for increased efforts in developing an understanding of degradation mechanisms of safety-relevant components and the impact on safety overall, and meet equally high standards of safety and radiation protection, safeguards and security. This would support a science-based assessment of the safety margins and allow for timely implementation of safety improvements. The predictive tools and assessment methods developed by the Programme would benefit the periodic safety reviews of existing nuclear installations. They would also help the regulators in assessing new designs.

¹ Council Directive 2009/71/Euratom of 25 June 2009 and its latest amendment Directive 2014/87/Euratom, Directive 2011/70/Euratom that establishes a Community framework for the responsible and safe management of spent fuel and radioactive waste and Directive 2013/59/Euratom laying down basic safety standards for protection against the dangers arising from exposure to ionising radiation.

Direct actions, implemented by the Joint Research Centre (JRC), additionally will focus on nuclear security and nuclear safeguards by developing techniques and methods aiming at reducing nuclear security risks and supporting nuclear non-proliferation efforts. In addition, the JRC will develop nuclear standards and support the implementation of Euratom policies in these areas.

Fusion energy represents a possible long-term option for large-scale, low-carbon electricity production which could help address a growing energy demand beyond 2050. During 2021-2025, the co-funded European Partnership in fusion research will build on the progress made by the EUROfusion consortium during 2014-2020, focusing on the further support required for the efficient commencement of ITER's operations and, working hand-in-hand with industry, on increasing the efforts on the conceptual design of a fusion power plant.

Before deployment of fusion power plants, fusion research will bring to Europe high technology innovations and, thus, a more competitive high-tech industry. Fusion research pushes many of the cutting-edge technologies to new limits and, in many cases, to innovative solutions to challenging problems beyond the bounds of fusion research. Education and training will remain an important element of the Partnership which will set ambitious targets for the training of scientists and engineers while addressing issues of excellence. To enhance the added value that fusion research provides to the economy and society, the current technology transfer programme will be continued and expanded to complement similar national activities and to link to technology transfer networks in the framework of the EIROforum initiative².

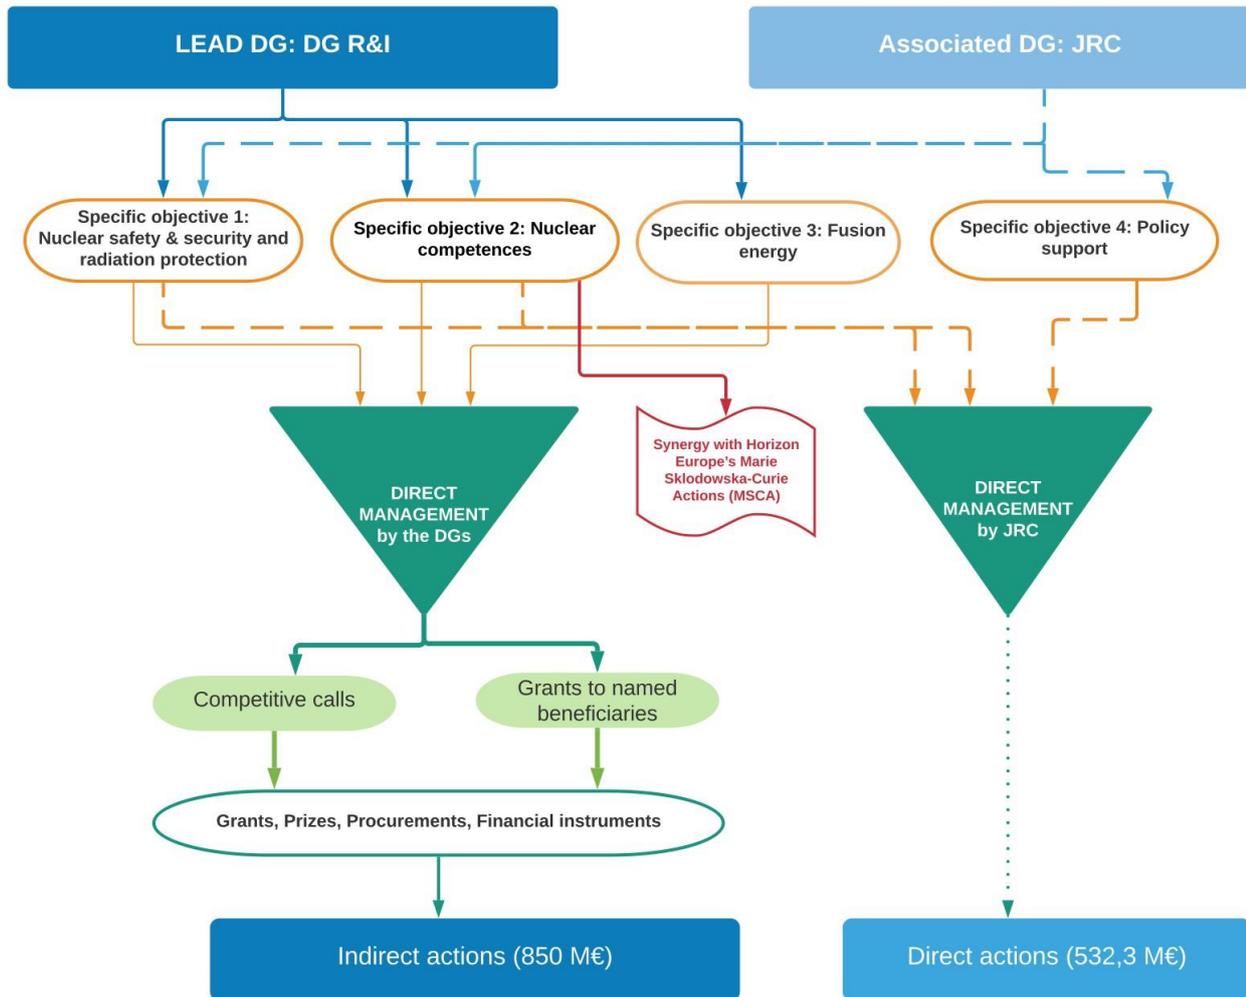

1.6. Delivery mode

The Programme is implemented in direct management or in indirect management. It may provide funding in any of the forms laid down in the Financial Regulation, in particular grants which shall be the main form of support for indirect actions in the programme. It may also provide financing in the form of prizes, procurement and financial instruments within blending operations. The Programme also supports direct actions undertaken by the JRC. Parts of the Programme may be implemented through European Partnerships. For this purpose, it makes direct reference to Annex III of the Horizon Europe Framework Programme Regulation laying down the conditions and principles for establishing European Partnerships.

Fission research will be implemented through direct actions implemented by the JRC and indirect actions implemented in direct management (i.e. via competitive calls for proposals, named beneficiary, etc.) by the Directorate-General for Research & Innovation. Fusion research will be implemented through indirect actions in indirect management as a co-fund action by a named beneficiary.

1.7. Graphic overview of the programme structure

² <https://www.eiroforum.org/wp-content/uploads/brochure-eiroforum-imkt.pdf>

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Council Regulation (Euratom) 2021/765 of 10 May 2021 establishing the Research and Training Programme of the European Atomic Energy Community for the period 2021-2025 complementing Horizon Europe – the Framework Programme for Research and Innovation and repealing Regulation (Euratom) 2018/1563 (OJ L 167 I, 12.5.2021, p. 81).	2021 - 2027	1 382.00

1.8.2. Legal basis explanation

The Programme is limited by the Euratom Treaty to five years. For this reason, The Euratom Programme covers the years 2021-2025, to be extended in 2025 by two additional years in order to align it with the MFF 2021-2027. The Council Regulation establishes the Euratom Research and Training Programme for the years 2021–2025. It lays down the objectives, the budget and the forms of Euratom funding. For the rules for participation and dissemination, the Programme applies relevant provisions of the Regulation establishing the Horizon Europe Framework Programme.

In order to achieve the objectives of the Euratom Programme and to address challenges common to the Euratom Programme and to Horizon Europe, the Euratom Programme shall be implemented in synergy with Horizon Europe and other Union funding programmes in line with Annex IV of the Horizon Europe Framework Programme Regulation and specific provisions of the Euratom Regulation. It may provide a financial contribution to the Marie Skłodowska-Curie Actions (MSCAs) in order to support activities relevant for nuclear research.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	264.7	270.7	276.5	281.2	287.8	293.8	304.5	1 979.3
NextGenerationEU								
Decommitments made available again*								
Contributions from other countries and entities	15.1							15.1
Total	279.8	270.7	276.5	281.2	287.8	293.8	304.5	1 994.4

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

Evaluations of successive Euratom programmes have shown how European support is vital for nuclear research to continue to enhance the safety, safeguards and security of nuclear technologies. The interim evaluation of the 2014-2018 Euratom Programme concluded that the Programme is highly relevant across all activities. For this reason, the 2021-2025 Euratom Programme will continue along the main lines established by its predecessors.

In addition, the Euratom Programme 2021-2025 will further:

- improve, together with beneficiaries, the organisation and management of the European Joint Programmes in the nuclear field as European Partnerships
- reinforce Euratom education and training actions to develop competencies in the nuclear field which underpin all aspects of nuclear safety, security and radiation protection, in particular in a new generation of engineers
- exploit synergies between the Euratom Programme and thematic areas of Horizon Europe
- exploit synergies between direct and indirect actions of the Euratom Programme helping to ensure consistency and effectiveness throughout the Programme.

1.10. Relevant websites providing more information

To learn more about the Euratom Programme, you are invited to visit the relevant websites that contain information about:

Direct actions carried out by JRC: https://joint-research-centre.ec.europa.eu/scientific-activities_en

Indirect actions carried by DG RTD:

https://ec.europa.eu/info/research-and-innovation/funding/funding-opportunities/funding-programmes-and-open-calls/horizon-europe/euratom-research-and-training-programme_en

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitment	269.5	1 994.4	14%
Payments	196.4		10%

The financial year 2021 was the first year of implementation of the Euratom Programme 2021-2025. The late adoption of the Regulation (in May 2021 instead of the beginning of the year) delayed the start of the Programme's implementation. In order to ensure continuity in support to the relevant policy areas and to allow implementation from the beginning of the multi-annual financial framework 2021-2027, the Euratom Regulation entered into force as a matter of urgency and applied, with retroactive effect, from 1 January 2021.

As a result of this, the Euratom Work Programme 2021-2022 could only be adopted in July 2021. As result, the calls' deadlines had to be postponed to the year-end, delaying the starting date of projects and the related pre-financing to 2022 instead of 2021. This first Work Programme has a budget of about EUR 300 million to support fusion and fission research and help to foster progress in a

wide range of areas, from further improving nuclear safety and radiation protection, to boosting non-power applications of nuclear technology. 2021-2022 call has a particular focus on the medical field, directly supporting the priorities of the EU's Beating Cancer Action Plan and the SAMIRA Action Plan.

The separate JRC 2021-2022 Work Programme for the direct actions adopted in June 2021 covers the main specific objectives of the Programme, including nuclear security, safeguards, non-proliferation and policy support. It is organised in five portfolios of projects aligned with the relevant Commission priorities.

During 2022, the Commission will therefore implement most of the pre-financings of the actions financed by the 2021 budget, together with those of the 2022 actions as foreseen in the Work Programmes. All the commitment appropriations (expiring end 2022) are foreseen to be implemented.

The Euratom Work Programme 2023-2024 is expected to be adopted during the second half of 2022, allowing to launch a call for proposals with deadline in 2023. Following an evaluation by independent experts, grants for selected proposals will be signed in first half of 2024. The year 2023 will be the third year of implementation of the Euratom Programme.

The pandemic might have a limited impact on the implementation of Euratom Programme.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitment	2 357.0	2 368.9	99%
Payments	2 116.9		89%

As regards the payment appropriations implemented in 2021, all the available appropriations have been used mainly to cover legal obligations under the former Programme (Euratom 2019-2020), allowing to decrease substantially the level of the open RAL. Full execution was reached at the end of 2021. The Commission has taken specific measures to mitigate the risk of under-implementation of the R&I projects due to the pandemic. Concretely, maximum flexibility has been given in relation to the action implementation. For example, extensions of research projects were granted to limit under-implementation due to COVID-19 pandemic. In addition, teleworking during the confinement and the subsequent transitional period are accepted even if it is not the beneficiary's usual practice to telework. Costs of hours worked for the EURATOM indirect actions via teleworking during those periods are eligible under the same conditions than hours worked on-site.

In 2022 and 2023 the Commission will continue to pay the intermediate and final payments related to the on-going research projects under direct actions. The RAL will therefore continue to decrease significantly.

3. How is the programme performing ?

3.1. Performance

3.1.1. Active programme performance

To address areas for improvement identified during the mid-term evaluation of its predecessor, the Euratom Research and Training Programme includes the following five main novelties.

- **Simplification.** The structure of specific objectives has been streamlined and the number of objectives have been reduced.
- **Education and Training.** These activities have been strengthened to maintain and develop further nuclear expertise and knowledge in Europe. Nuclear researchers will be eligible to the Postdoctoral Fellowships of the Marie Skłodowska Curie actions to enhance the mobility of nuclear scientists.
- **Synergies with Horizon Europe.** A clearer legal base for synergies with Horizon Europe has been provided. The Euratom Research and Training Programme uses mainly the same instruments and rules for participation as Horizon Europe.
- **Synergies between actions.** Closer coordination and co-design of Work Programmes will allow nuclear researchers to better access to JRC expertise and its research infrastructure. Where relevant, the JRC will complement activities of the consortia receiving Euratom grants.
- **Focus on health issues.** The new Euratom Work Programme addresses research on cross-sectorial fertilisation and non-power applications. An emblematic example is the use of ionising radiation to support safe and optimised medical

procedures, contributing to Europe's Beating Cancer action plan. This will be implemented through a new Partnership initiative and topic in the Euratom work programme for 2021-22.

Most of the indirect activities will be implemented through 3 European partnerships:

- ✓ Eurofusion
- ✓ European Partnership in radioactive waste management
- ✓ European Partnership in radiation protection and detection of ionising radiation

As regards the programme performance, 2021 was the first year of the implementation of the Euratom Programme. This explains why at the end of 2021 no results for indirect actions were available and only results of the direct actions carried out by JRC are given. However, main actions carried out for the proper implementation of the programme are hereafter briefly described at the level of the specific objectives.

Specific Objective 1: Improve and support nuclear safety, security, safeguards, radiation protection, safe spent fuel and radioactive waste management and decommissioning, including the safe and secure use of nuclear power and of non-power applications of ionizing radiation.

As regards, the indirect actions on fission, the Euratom 2021_2022 Work Programme published in 2021 aims at ensuring the highest standards of nuclear safety of power plants, research reactors, materials and fuels including radioactive waste management and decommissioning. call evaluation took place in November for the consensus stage and all projects selected will be finalised and launched during Spring 2022. Fifty one proposals were submitted to the call's 16 topics (28 proposals were selected on the main list and 5 are on the reserve list to a total of around EUR 117 million contribution from the Euratom budget). Additional actions were related to the organisation of the GIF technical secretariat, Nuclear Innovation Prizes and the Euratom Conferences. In 2022, the Euratom research and training conferences on fission safety of reactor systems (FISA 2022) and radioactive waste management (EURADWASTE '22) supported by the European Commission together with the Commissariat à l'Energie Atomique et aux Energies Alternatives (CEA), will be held under the auspices of the French Presidency of the Council of the EU.

In 2021, the direct actions of the programme published 104 scientific articles in peer reviewed journals and 19 scientific articles published in other periodicals. The technical outputs delivered are 11 sets of reference materials and 2 validated methods, which contributed to the modification of international standards, additionally 16 technical systems for safeguards as well as 6 scientific datasets and databases were delivered.

Specific Objective 2: maintain and further develop expertise and competence in the nuclear field within the Community.

In education and training, 2021-2022 call resulted in selection of proposals for long-term actions in nuclear and radiological education and training and access to infrastructures, offering support to students and researchers. A separate call for MSCA postdoctoral fellowships is expected to lead to fellowships funded by Euratom. Targeted education and training work packages are also included in thematic several R&I projects in nuclear safety.

Moreover, nuclear researchers are constantly challenging the scientific state-of-the-art and creating conditions for innovation. Much of this innovation can be exploited in other science and industrial sectors, for the benefit of society. To reward and highlight outstanding researchers or industries, the Euratom Programme is awarding the SOFT Prize (in the field of fusion) and the Nuclear Innovation Prizes (one in the field of safety of reactor systems and one for radioactive waste management).

Notwithstanding the pandemic restrictions, fourteen training courses for professionals and students from Member States and the Commission were organised developing virtual tools to allow it. Trainings provided during the period were addresses to implement the Basic safety standards Directive, and also in support of the IAEA or to enhance MS's capabilities on nuclear safeguards and nuclear security.

Specific Objective 3: foster the development of fusion energy as a potential future energy source for electricity production and contribute to the implementation of the European fusion roadmap.

In fusion, the Euratom Work Programme sets a clear strategy for the co-funded European Partnership in fusion research to build on the progress made by the EUROfusion consortium. This will ensure the success of ITER by delivering the necessary knowledge, preparing European teams for the exploitation of ITER and providing the training of a new generation of fusion scientists and engineers. The grant for fusion research was signed in December 2021 but was made retroactive to 1 January. This is being implemented by EUROfusion according to the updated roadmap agreed to in 2016. Deuterium-Tritium experimental campaign in Joint European Torus (JET) resulted in the world record-breaking fusion power obtained at the end of 2021. In addition to this, many first-of-a-kind operation and physics data can now be transferred to the ITER organisation in their preparations for the start of the tritium operation which will contribute to the success of the ITER programme. In materials research, design maturity has been provided for a decision on the construction of a fusion-relevant materials test facility potentially to be sited in Granada, Spain. The realisation of this facility is an important milestone in the roadmap to fusion electricity and a necessity for the licensing of the demonstration power plant after ITER.

Specific Objective 4: support the policy of the Union and its Member States on continuous improvement of nuclear safety, safeguards and security

The JRC provided support to the implementation of EU Directives (nuclear safety and basic safety standards), instruments as the Instrument for nuclear safety cooperation and the Instrument contributing to stability and peace, to trade and dual-use of exports. It contributed to implement the EC safeguard regime and the EC support programme to IAEA through analytical techniques and the provision of reference materials, equipment and techniques for the inspections.

The outputs delivered by direct actions included technical reports, science-for-policy reports and parts of policy documents; these outputs produced 35 impacts with tangible evidence, in different steps of the policy cycle.

3.1.2. Previous Programme Performance

This section reports on the Programme’s performance against planned performance based on the key performance indicators of the Euratom Programmes for the 2014-2020 period.

The key performance indicators set in the Euratom Regulation are based on quantitative performance measures. Appropriate measures have been put in place to measure and report annually the result of each indicator.

Based on cumulative results obtained during the implementation period of the programme, traffic light rating has been assigned to each expected accomplishment, (i.e. on track, moderate progress, deserves attention or no data). It was planned to achieve 13 accomplishments (specific objectives) for the 2014-2020 measured against a total of 20 key performance indicators, including 10 and 10 under indirect and direct actions respectively.

Table: Performance Reporting against targets– direct actions

				Total
18 KPIS on track	2 KPIS Moderate progress	0 KPIS Deserves attention	0 KPIS No data (or no target)	20 KPIS

As shown in the table above, the results achieved for the indirect actions of the Euratom Programme, in accordance with the objectives, are very good. Eighteen indicators out of 20 were recorded on track, only two indicators show a moderate progress, no indicator deserves attention. The complete results are shown in the previous programme Statement, attached to the Draft Budget 2022 and relevant updated results in the section 5 of this document.

The fission part of the Euratom Programme 2014-2020 involved an estimated workforce of around 8 000 persons including 200 scientific managers (2%), 5 000 experienced researchers (63%), 500 researchers recruited (6%), 800 PhD partially or full-time in a project (10%) and 1 500 others (engineers, technicians, administrative support) (19%). Organisations participating in Euratom fission projects include: Research Organisations REC 40 %, Private entities PRC 24%, Higher or secondary education establishments HES 30%, Public (excl. REC and HES) 3%, and other 3%. This illustrates the positive and high-impact achieved between Member States’ Institutes, research centers’, academia, industry and Euratom by closely collaborating at European level towards common broad scientific and technological research challenges and opportunities, innovation, development and demonstration goals.

For example, the European Joint Programme on Radioactive Waste Management (EURAD) supported the implementation of the Nuclear Waste Directive in Euratom Member States with EUR 32.5 million of Euratom funding (54 % of total costs, 5 years duration), taking into account the various stages of advancement of national programmes. After a first year dedicated to establishing EURAD’s structure and governance, specific work was carried out to develop dissemination and communication around the program.

In fusion research, the EUROfusion consortium had achieved 90 % of milestones established for 2014-2020. Examples of progress include: operation of the shattered pellet injector (SPI) in JET and DT experiments, theoretical studies (computer simulations) complemented by experiments on TCX which provided the first systematic assessment of possible power exhaust options for a fusion demonstration power plant (DEMO) and tests of ITER-type mono-blocks in EUROfusion devices dedicated to studying plasma wall interaction (PWI). JET has also operated in pure tritium and the 50/50 deuterium/tritium fuel mix which has provided valuable first of a kind information for ITER to exploit in its preparation for full power operation. A DEMO design gate review has been successfully conducted which, using the input from the PEX programme, has defined the priorities for the conceptual design of DEMO.

A unique Research Infrastructure for testing fusion material in realistic conditions is getting underway. The EU-funded DONES-PreP project is the preparatory phase for IFMIF-DONES, which is a novel research infrastructure based on a unique neutron source with energy spectrum and flux tuned to those expected for the first wall in future fusion reactors. DONES-PreP addressed financial, legal and organisation aspects for the construction of the IFMIF-DONES in Escuzar (province of Granada, Spain).

During the 2014-2020 period, through EUROfusion more than 8 300 researchers have had access to advanced research infrastructures.

3.2. Key achievements

Some key achievements obtained in the period 2014 -2020:

Indirect actions

1392	8 300	90 %	5 976
PhDs funded including 750 PhDs in fusion physics and technology	Researchers have had access to advanced research infrastructures through Eurofusion	of annual deliverables achieved by the EUROfusion consortium	scientific publications in peer-reviewed journals

Direct actions (research carried out by JRC)

180	221	158	1600	200	6147	334
regulatory bodies’ staff were trained and the Clearing house on operating experience feedback for nuclear power plants. There were also performed 12 topical studies and 26 reviews of events reported to IAEA	Training courses for professionals and students from Member States and Commission services, provided by JRC	Projects were granted for open access to JRC facilities, resulting on 140 research articles, with participation of 64 PhD and Master students	front-line officers, law enforcement experts and nuclear measurement experts, from 89 countries attended trainings at the European nuclear security training centre	Experimental data sets delivered to open access OECD and IAEA nuclear data libraries	Units of certified reference materials, delivered to Euratom safeguards, to IAEA and to nuclear operators in the period 2014-2020	Expert missions in support of the Instrument for nuclear safety cooperation. JRC contributed as well to 43 documents defining the INSC’s scope and objectives, 84 Terms of reference for projects, 14 technical specifications and 283 technical assessments, participating in 170 tender evaluations.

3.3. Evaluations, studies and reports

The key findings of the latest evaluation (Commission Report COM(2017) 697, (SWD (2017) 426 and 427) were presented in the Programme Statement for 2020.

The interim evaluation of the Euratom Programme concluded that the Programme is highly relevant and it is achieving its results and avoiding duplication, while providing added-value and coordination. The possible areas of improvement for indirect actions include: increasing synergies between direct and indirect actions and between the Euratom Programme and other thematic areas of the EU Framework Programme in order to address cross-cutting aspects such as medical applications of radiation, climate change, security and emergency preparedness, reinforcing Euratom education and training actions for developing competencies in the nuclear field which underpin all aspects of nuclear safety, security and radiation protection. The evaluation recommendations are already being addressed: the JRC continues providing training courses (243) and opening the access to its research facilities to EU Institutions. Other actions have been taken, as briefly described in the section ‘Programme Performance’. Ex-post evaluation of the Programme is planned for 2022/2023 in accordance with the Regulation, while the interim evaluation will be presented together with proposal for extension of the Programme for 2026-2027.

To evaluate the impact of the activities carried out by the direct actions, JRC selected 12 important activities, covering the five specific objectives of the programme. An external experts panel evaluated these impact case studies, which also were sent to the related stakeholders in the European Commission (user DGs), receiving positive evaluation and feedback.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Improve and support nuclear safety, security, safeguards, radiation protection, safe spent fuel and radioactive waste management and decommissioning, including the safe and secure use of nuclear power and of non-power applications of ionizing radiation.

Indicator 1: Number of Euratom funded peer reviewed scientific publications

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0	0			2500	4000					4000
	Actual Progress									Final
0	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of peer-reviewed scientific publications resulting from the Euratom Programme.
Cut-Off Date	31/12/2021
Data source	EC administrative and monitoring data submitted by Euratom Programme participants through project reporting template, Scopus database.
Link to the objective	Publications codify, disseminate and provide access to the new knowledge for improving nuclear safety, radiation protection and for development of fusion energy. Peer reviewed publications are one of the main scientific results. Peer-reviewed publications indicator is used in Research and Innovation for monitoring new knowledge. Peer-reviewed publications are considered as a relevant sign of good quality new knowledge. By monitoring the number of peer-reviewed publications produced by the Horizon Europe, we aim at monitoring at short term that Horizon Europe is on the right track towards its first specific objective through the creation and diffusion of high quality new knowledge
Link MFF 14-20 / MFF 21-27	This indicator is the continuation of an indicator of Euratom Programme 2014-2020 (Publications in peer-reviewed high impact journals), but not restricted to high impact journals.
Other methodological comments	The estimated baseline and target included in the Program Statement shall be subject of an Implementing Act in accordance with Article 12(2) of the Euratom Regulation ; they may subsequently be revised.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Significant data from indirect actions is expected no sooner than 2024, as it takes time for beneficiaries to produce papers.

Indicator 2: Field-Weighted Citation Index of Euratom funded peer reviewed publications

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Field Weighted Citation Index
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	In the mid-term, the Field Weighted Citation Index is an established metric of scientific performance and production of new knowledge in nuclear science and technology for improving nuclear safety, security, waste management, radiation protection and for development of fusion energy and non-power applications of ionising radiation (first and third specific objective of the Programme).
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The Field Weighted Citation Index (FWCI) is the ratio of the observed citation rate (MOCR) with the expected citation rate (MECR) in a given research field. The MECR is calculated as an average citation rate in a given research field. If FWCI = 1, the set of Euratom funded publications has generated the same amount of citations as any other average publication in the given research field. A 3-year citation window is applied to ensure that all publications have the same time lag, and as such the same chance to get cited. First data are expected no sooner than 2024, as it takes time for beneficiaries to produce papers and report them, and there needs to be a 3 year window for citations
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 3: Number and share of peer reviewed publications from Euratom Programme that are core contribution to scientific fields

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Number of top 1 % most cited publications produced, field-weighted [TBC]
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	In the long-term, the share of 1 % most cited publications is an established metric of scientific performance and production of new knowledge in nuclear science and technology for improving nuclear safety, security, waste management, radiation protection and for development of fusion energy and non-power applications of ionising radiation (first and third specific objective of the Programme).
Link MFF 14-20 / MFF 21-27	new indicator
Other methodological comments	First data are expected no sooner than 2024, as it takes time for beneficiaries to produce papers and report them, and there needs to be a 3 year window for citations.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 4: Share of research outputs (open data/ publication/ software etc.) shared through open knowledge infrastructure

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0	0				90%					90%
	Actual Progress									Final
	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Share of open access publications in Euratom Programme expressed in %
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	Open access to publications, datasets, software, other research products allows researchers to build on existing work and speed science, industry to access scientific knowledge to innovate, and public sector to use for evidence-based policy making. Therefore open access supports indirectly objective of the Euratom Programme to create and share high quality new knowledge for improving nuclear safety, radiation protection and for development of fusion energy. By monitoring the research outputs (open data/publication/ software etc.) shared through open knowledge infrastructures, we aim at monitoring that Euratom Programme is on the right track to open up science. This will be shown by research outputs shared openly, re-used and at the origin of new transdisciplinary/trans-sectoral collaborations.
Link MFF 14-20 / MFF 21-27	No – new indicator introduced
Other methodological comments	The estimated baseline and target included in the programme statement will be the subject of an Implementing Act in accordance with Article 12(2) of the Euratom Regulation; they may subsequently be revised.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Significant data from indirect actions is expected no sooner than 2024, as it takes time for beneficiaries to produce papers.

Indicator 5: Share of open access research outputs actively used/cited

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Share of Open Access research outputs in the Euratom Programme
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	Open access to publications, datasets, software, other research products (e.g., services, tools) allows

	researchers to build on existing work, industry to access scientific knowledge to innovate, public sector to use research results for evidence based policy making, public to be engaged and involved in the research process. Measurement of outputs related to Open Science is an appropriate measure of the short-term progress towards Euratom Programme’s objective to improve nuclear safety, security, waste management, radiation protection and for development of fusion energy and non-power applications of ionising radiation (first and third specific objective of the Programme).
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	All relevant research outputs (by type: publications, datasets and software) reported by all Euratom projects (incl. DOI) are matched in an external database. The single extended list of all relevant outputs, removing the duplicates, is used to count numbers and shares. First data are expected no sooner than in 2024
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 6: Share of Euratom beneficiaries having developed new transdisciplinary/ trans-sectoral collaborations with users of their open Euratom R&I outputs

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Citations of open access publications [TBC]
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	This indicator captures the effect that open access brings to fostering diffusion of knowledge by tracking the use of research outputs from the Euratom Programme. The key question addressed is whether the open access research results are cited more than the closed/embargoed ones.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	See indicator 2 for details on citations. First data are expected no sooner than 2024, as it takes time for beneficiaries to produce papers and report them, and there needs to be a 3 year window for citations.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 7: Number and share of outputs aimed at addressing specific EU policy priorities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									100%
0	100%									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Share of outputs aimed at addressing specific EU policy priorities (%)
Cut-Off Date	31/01/2022
Data source	Project reporting
Link to the objective	In the short-term, shares of outputs indicate the societal impact of Euratom Programme
Link MFF 14-20 / MFF 21-27	no
Other methodological comments	The estimated baseline and target included in the programme statement will be the subject of an Implementing Act in accordance with Article 12(2) of the Euratom Regulation; they may subsequently be revised. Euratom funded projects produce variety of research results, tracked and reported under scientific and economic outputs. Most of them are also likely to have a societal impact; to trace and estimate it, the produced output needs to be measured and then classified according to the specific EU policy priorities. Where attribution of a specific innovation or scientific result is not possible, the assumption is that it contributes to the same specific EU policy priorities, as the project producing it or the outputs preceding it.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 8: Number and share of innovations and scientific results addressing specific EU policy priorities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Share of outputs aimed at addressing specific EU policy priorities [TBC]
Cut-Off Date	
Data source	Project reporting, external databases [TBC]
Link to the objective	In the medium-term, shares of verified outputs and their performance indicate the societal impact of Euratom Programme.
Link MFF 14-20 / MFF 21-27	no
Other methodological comments	Calculated as a simple count of innovations (new or significantly improved: methods, technologies and instruments / commercial goods / commercial services / scientific or industrial processes / business models) reported in all ongoing and finished Euratom projects and classified by their contribution to the specific EU policy priorities. First data are expected no sooner than 2022
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 9: Aggregated estimated effects from use of Euratom-funded results, on tackling specific EU policy priorities, including contribution to the policy and law-making cycle

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Aggregated estimated effects from use of Euratom-funded results on tackling specific EU policy priorities, including contribution to policymaking and legislation [TBC]
Cut-Off Date	
Data source	Project reporting
Link to the objective	In the long-term, specific studies are needed to analyse the societal impact of Euratom Programme in specific areas.
Link MFF 14-20 / MFF 21-27	no
Other methodological comments	The indicator focuses on estimated and detected effects from use of Euratom-funded results on tackling specific EU policy priorities [TBC]. We expect to run studies as part of the ex-post evaluations of the Programme.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 10: Number and share of Euratom projects where EU citizens and end-users contribute to the co-creation of R&I content.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Output
Unit of measurement	Number and share of Euratom projects where EU citizens and end-users contribute to the co-creation of R&I content [TBC]
Cut-Off Date	
Data source	Project reporting
Link to the objective	To measure the involvement of end-users and civil society in the research funded by the Euratom Programme, this indicator tracks the number and share of Euratom projects, where civil society and end-users contribute to the co-creation of R&I content, additionally estimating the role of such

	contribution (such as consultation/dissemination, co-creation, co-ownership/joint decision-making).
Link MFF 14-20 / MFF 21-27	no
Other methodological comments	The baseline and target will be introduced in the Programme Statement after the adoption of an Implementing Act in accordance with Article 12(2) of the Euratom Regulation. Calculated based on a simple count of all ongoing and finished Euratom projects where civil society and end-users contribute to the co-creation of R&I content.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected no sooner than 2023.

Indicator 11: Number and share of beneficiary entities with citizen and end-users engagement mechanisms after Euratom project

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Number and share of Euratom beneficiaries with citizen and end-user engagement mechanisms after Euratom project [TBC]
Cut-Off Date	
Data source	Project reporting
Link to the objective	The medium-term indicator measures the effects of emphasis for co-creation in Euratom Programme through the development of end-user engagement mechanisms in beneficiary entities
Link MFF 14-20 / MFF 21-27	no
Other methodological comments	In the medium-term, the identification of presence of end-users engagement mechanisms allows estimation of number (and share) of Euratom Programme beneficiaries that possess and utilise them.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 12: Uptake and outreach of Euratom co-created scientific results and innovative solutions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	tbc
Cut-Off Date	
Data source	Project reporting, studies
Link to the objective	The long-term indicator focuses on uptake and outreach of Euratom Programme co-created scientific results and innovative solutions. The aim is to assess the extent of the uptake and outreach of the scientific results (e.g. in the fields of science, innovation, the economy and society) and innovative solutions originating from the programme.
Link MFF 14-20 / MFF 21-27	no
Other methodological comments	tbc
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 13: Reference materials delivered and reference data incorporated to a library

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0	10	19	27	35	42					42
	Actual Progress									Final
Are we on track :	13									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Cumulative
Cut-Off Date	
Data source	PUBSY (JRC publications database cat 3.3 and 3.4)
Link to the objective	Reference materials and reference data are essential for the measurements accuracy and therefore for the safe and secure use of nuclear energy and other radiation applications
Link MFF 14-20 / MFF 21-27	The activity is the continuation of the one in previous MFF
Other methodological comments	The yearly milestone is the number of items delivered since the MFF's beginning, the target is accumulated
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 14: Number of international standards modified

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0	0	6	10	14	18					18
	Actual Progress									Final
0	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Cumulative
Cut-Off Date	31/12/2021
Data source	PUBSY (JRC publications database cat 3.2)
Link to the objective	International standards are a reference for the use of best practices, measurements, etc.
Link MFF 14-20 / MFF 21-27	The activity is the continuation of the one in previous MFF
Other methodological comments	The yearly milestone is the number of items delivered since the MFF's beginning, the target is accumulated
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 15: Number of service agreements in support of EU safeguards

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
0	5	5	5	5	5					5
	Actual Progress									Final
0	5									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Yearly results
Cut-Off Date	
Data source	(JRC agreements database)
Link to the objective	Scientific and technical support is essential to strengthen the Euratom and international safeguards
Link MFF 14-20 / MFF 21-27	The activity is the continuation of the one in previous MFF
Other methodological comments	The yearly milestone is the number of service agreements in force. The objective is to provide the same level of service to the EU aafeguards system during the whole MFF period, maintaining the same number of service agreements.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 16: Number of technical systems provided and in use

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0	16	30	42	54	65					65
	Actual Progress									Final
0	16									
Are we on track :	On track									

Indicator type	Output
----------------	--------

Unit of measurement	Cumulative
Cut-Off Date	
Data source	PUBSY (JRC publications database cat 3.5)
Link to the objective	Technical systems provided in support of the improvement of nuclear safety, security and radiation protection
Link MFF 14-20 / MFF 21-27	The activity is the continuation of the one in previous MFF
Other methodological comments	The yearly milestone is the number of items delivered since the MFF's beginning, the target is accumulated
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 17: Number of training sessions delivered to nuclear inspectors and front-line officers

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0	6	16	28	40	50					50
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Cumulative
Cut-Off Date	31/01/2022
Data source	EUSECTRA reporting
Link to the objective	The training delivered to nuclear inspectors and front-line officers builds-up the capacity of the nuclear safeguards and security systems in the EU
Link MFF 14-20 / MFF 21-27	The activity is the continuation of the one in previous MFF
Other methodological comments	The yearly milestone is the number of training sessions delivered since the MFF's beginning, the target is accumulated
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Specific Objective 2: Maintain and further develop expertise and competence in nuclear field within the Community.

Indicator 1: Number of persons having benefitted from upskilling activities of the Euratom programme (through training, mobility and access to infrastructure)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0	0		3000		6000					6000
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of researchers expressed in full-time equivalent (FTE) involved in upskilling activities in projects
Cut-Off Date	31/12/2021
Data source	Project reporting. EC administrative and monitoring data submitted by Euratom Programme participants
Link to the objective	Participation in a Euratom funded project should contribute to upskilling of involved researchers and students. Monitoring the number of researchers involved in upskilling activities in Euratom projects, allows to measure in short term that Euratom Programme is on track towards specific objective to maintain and further develop expertise and competence in the nuclear field within the Community.
Link MFF 14-20 / MFF 21-27	Yes this indicator includes various indicators measured in EURATOM
Other methodological comments	The estimated baseline and target included in the Program Statement shall be subject of an Implementing Act in accordance with Article 12(2) of the Euratom Regulation ; they may subsequently be revised.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	On track

Indicator 2: Number and share of upskilled researchers (and other persons) with more influence in their field

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Average increase of H-index of funded researchers
Cut-Off Date	
Data source	Project reporting, external bibliometric database
Link to the objective	In the medium-term, the H-index is the best available indicator of strengthening human capital in research and innovation
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	The H index is based on the comparison of the number of articles written by an author to the number of citations. The H-index offers a way to compare researchers which are in a similar phase of their career, and most importantly, it is at present the only metric that combines research productivity (output volume) and impact (citation volume). First data are expected no sooner than 2023, as there needs to be a time slot to observe increases in H-indexes.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Data available not sooner 2023

Indicator 3: Number and share of upskilled researchers with improved working conditions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	tbc
Cut-Off Date	
Data source	Project reporting, survey
Link to the objective	If Euratom funding has a positive long-term effect on researchers' skills and careers (and therefore the human capital in research and innovation) then there should be an observable effect on the researchers working conditions.
Link MFF 14-20 / MFF 21-27	no
Other methodological comments	MORE survey data is used to collect data on researchers salaries (net salaries) and contract type. Regarding data on job security, collected data includes several relevant questions, which provide data on contract type, satisfaction with pensions/social security provisions, and other aspects of working conditions. Under the MORE survey, the same data is collected for a random stratified sample of researchers who were based in European research performing organizations but did not receive EU funding. The salaries and working conditions of HE/Euratom researchers are then benchmarked against this representative sample of researchers. The availability of data depends on the planning of the MORE survey, which is expected to happen no sooner than 2023.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Data available not sooner 2025

Indicator 4: Number of innovative products, processes or methods from Euratom Programme (by type of innovation) & Intellectual Property Rights (IPR) applications

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Output
Unit of measurement	Number of innovative products, processes or methods resulting from the Euratom (by type of innovation) & Intellectual Property Rights (IPR) applications

Cut-Off Date	
Data source	Project reporting, external patent database [TBC]
Link to the objective	In the short-term, the number of innovative products, processes or methods and IPR (esp. patents) in nuclear field is a good indicator of progress in developing expertise and competencies in nuclear field within the Community.
Link MFF 14-20 / MFF 21-27	This indicator links to Euratom Programme 2014-2020's indicator on patent applications and patents awarded, but is broader and includes links to an external database [TBC]
Other methodological comments	The baseline and target will be included in the Program Statement after the adoption of an Implementing Act in accordance with Article 12(2) of the Euratom Regulation. Calculated as a simple count of number of innovative products, processes and methods & Intellectual Property Rights (IPR) applications reported in all ongoing and finished Euratom projects.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected in 2023

Indicator 5: Number of innovations from Euratom projects (by type of innovation) including from awarded IPRs

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Patent citations, family size, scope [TBC]
Cut-Off Date	
Data source	Project reporting, external patent database
Link to the objective	In the medium-term, the patent indicators are a good indicator of progress in developing expertise and competencies in nuclear field within the Community.
Link MFF 14-20 / MFF 21-27	This indicator links to Euratom Programme 2014-2020's indicator on patent applications and patents awarded, but includes verification with an external database, distinction between patent family members, and deeper analytical insight.
Other methodological comments	One of the most robust findings of IPR-related research is the skewness of patent value distribution – few patents are valuable, while most others are worth little, if anything at all. This indicator will use external data sources to estimate the impact potential of the patents. First data are expected no sooner than late 2023, as there needs to be time for patents to be granted and reported
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First results are expected in 2024

Indicator 6: Creation, growth & market shares of companies having developed Euratom innovations

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Growth of funded companies [TBC]
Cut-Off Date	
Data source	Project reporting, external database of companies
Link to the objective	Euratom Programme helps create reciprocal relationships between research-performing organisations and industry and SMEs. This reciprocity then leads to transfer of knowledge and exploitation of research results by the companies. If this is the case, there must be a clear and quantifiable effect on the financial performance of beneficiary companies, measurable in the long-term.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	In the first step, the companies involved in Euratom Programme are matched to an external company database. The next step is to obtain relevant data on the firms' turnover and relevant metadata. This will be reported for funded companies [TBC].
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected no sooner than late 2024, as it takes time for the programme to make an effect and data to be reported

Indicator 7: Number of FTE jobs created, and jobs maintained in beneficiary entities for the Euratom project (by type of job)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0	0		5000		11000					11000
	Actual Progress									Final
0	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Count of FTE jobs created and maintained in all ongoing and finished Euratom projects
Cut-Off Date	31/12/2021
Data source	EC administrative and monitoring data submitted by HE participants
Link to the objective	A significant share of Euratom investment goes to personnel costs, which directly supports existing jobs or the creation of new positions in beneficiary organisations. Horizon Europe funding also supports and maintains existing jobs that would otherwise be lost if no funding was attracted. This contributes to economic impact of the programme, and can be used as a short-term indicator. By monitoring the number of jobs created, we aim at monitoring at short-term that Horizon Europe is on the right track towards one of its longer-term objective that is to generate more and better jobs, initially in the projects, and then through the exploitation of the results and their diffusion in the economy (Key impact pathway 8).
Link MFF 14-20 / MFF 21-27	No – new indicator introduced
Other methodological comments	The estimated baseline and target included in the Program Statement shall be subject of an Implementing Act in accordance with Article 12(2) of the Euratom Regulation ; they may subsequently be revised
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 8: Increase of FTE jobs in beneficiary entities following Euratom project (by type of job)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Growth of employment in funded companies [TBC]
Cut-Off Date	
Data source	Project reporting, external database of companies
Link to the objective	Euratom Programme helps create reciprocal relationships between research-performing organisations and industry and high-tech SMEs. This reciprocity then leads to an improved transfer of knowledge and exploitation of research results by the firms. If this is the case, there must be a clear and quantifiable effect on the employment in beneficiary companies, measurable in the medium-term.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	In the first step, the Euratom funded companies are matched to an external company database. The next step is to obtain relevant data on the firms’ employment and relevant metadata. This will be reported for funded companies [TBC].
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected no sooner than late 2024, as it takes time for the programme to make an effect and data to be reported.

Indicator 9: Number of direct & indirect jobs created or maintained due to diffusion of Euratom results (by type of job)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Number of direct & indirect jobs created or maintained
Cut-Off Date	
Data source	Project reporting, studies
Link to the objective	Euratom Programme funding will induce technological change transforming different sectors in nuclear field. This can be estimated as a long-term indicator
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First results are expected in 2025

Indicator 10: Amount of public & private investment mobilised with the initial Euratom investment

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0				420	500					500
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Amount of public & private investment mobilised with the initial investment of the Euratom Programme, MEUR
Cut-Off Date	
Data source	EC administrative and monitoring data submitted by Euratom participants through project reporting
Link to the objective	Depending on the funding instrument applied, beneficiaries in the Euratom Programme are required to contribute at least a certain share of their own funds to the projects. This represents a significant co-investment of public and private investment towards achieving the Programme objectives and can be used as a short-term indicator.
Link MFF 14-20 / MFF 21-27	No – new indicator introduced
Other methodological comments	The estimated baseline and target included in the Program Statement shall be subject of an Implementing Act in accordance with Article 12(2) of the Euratom Regulation ; they may subsequently be revised. Calculated as the amounts (in EUR) of public & private investment mobilised in all ongoing and finished Euratom projects. Data on public & private co-invested amounts are derived from the EC monitoring system. Specifically, each project participant has their Euratom and total contributions listed for each project application. The difference between the total and Euratom funding is equals to the co-investment made.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Data not yet available

Indicator 11: Amount of public & private investment mobilised to exploit or scale-up Euratom results

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Amount of public & private investment mobilised with the initial investment of the Euratom Programme
Cut-Off Date	
Data source	Project reporting
Link to the objective	Beneficiaries in Euratom Programme contribute their own funds to the projects. This represents a significant co-investment of public and private investment towards achieving the Programme objectives, and can be used as a short-term indicator.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	Calculated as the amounts (in EUR) of public & private investment mobilised in all ongoing and finished Euratom projects. Data on public & private co-invested amounts are derived from the EC monitoring system. Specifically, each project participant has their EU and total contributions listed for each project application. The difference between the total and EU funding is equals to the co-investment made.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected in 2023

Indicator 12: EU progress towards 3% GDP target due to Euratom Programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	EU progress towards the 3% GDP target due to Euratom Programme
Cut-Off Date	
Data source	Project reporting, studies
Link to the objective	Euratom Programme funding will stimulate further R&D funding, and particularly funding attracted by industry. In the long-term, this indicator estimates the aggregate effect of Euratom Programme.
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 13: Number of researchers having access to research infrastructures through the Euratom Programme support

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Output
Unit of measurement	
Cut-Off Date	
Data source	
Link to the objective	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The baseline and target will be included in the Program Statement after the adoption of an Implementing Act in accordance with Article 12(2) of the Euratom Regulation
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	First data are expected end of 2022

Specific Objective 3: Foster the development of fusion energy as a potential future energy source for electricity production and contribute to the implementation of the European fusion roadmap.

Indicator 1: Progress in the implementation of the fusion roadmap – Percentage of the fusion roadmap’s milestones established for the period 2021-2025 reached by the Euratom Programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0			50%		90%					95%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Percentage of the Fusion Roadmap's milestones established for a period 2021-2025 reached by the Euratom Programme.
Cut-Off Date	31/12/2021
Data source	EC administrative and monitoring data submitted by Euratom Programme participants through project reporting template.
Link to the objective	The EUROfusion roadmap forms the basis for the research actions of EUROfusion consortium and provides a clear and structured way forward to commercial electricity from fusion energy. Monitoring

	of milestones achieved allows to follow progress made towards Euratom Programme’s specific objective concerning fusion.
Link MFF 14-20 / MFF 21-27	This indicator is the continuation of an indicator of Euratom Programme 2014-2020
Other methodological comments	The estimated baseline and target included in the Program Statement shall be subject of an Implementing Act in accordance with Article 12(2) of the Euratom Regulation ; they may subsequently be revised . Indicator shows cumulative percentage of the EUROfusion high level milestones prepared on the basis of the European Research Roadmap to the realisation of Fusion Energy (https://www.euro-fusion.org/eurofusion/roadmap/).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Data not yet available

Specific Objective 4: Support the policy of the Union on nuclear safety, safeguards and security.

Indicator 1: Number and share of Euratom projects producing policy-relevant findings

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0	40%		50%		50%					50%
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Yearly results
Cut-Off Date	31/12/2021
Data source	PRIME (internal JRC evaluation exercise carried out yearly)
Link to the objective	Part of the projects carried out will be oriented to provide support to related EU policy items. Other part is more oriented to develop the necessary scientific background for a sound policy support
Link MFF 14-20 / MFF 21-27	Continuation
Other methodological comments	The yearly milestone is the share of projects providing direct support to EU DGs
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: Number of outputs having a demonstrable impact on the EU policy

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0	35	73	109	142	172					172
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Cumulated
Cut-Off Date	31/12/2021
Data source	PRIME (internal JRC evaluation exercise carried out yearly)
Link to the objective	Support provided with evidence of impact
Link MFF 14-20 / MFF 21-27	Continuation
Other methodological comments	Evaluation and validation of tangible impacts in the policy cycle, resulting from technical and scientific policy support provided by the JRC throughout the year
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 3: Number of policy items (Directives, Instruments, actions on the basis of Euratom Treaty articles) to which JRC provided effective and essential support in any part of the policy cycle)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0					12					12
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Cumulated
Cut-Off Date	31/12/2021
Data source	PRIME (internal JRC evaluation exercise carried out yearly)
Link to the objective	Support to related EU policies provided
Link MFF 14-20 / MFF 21-27	Continuation of support
Other methodological comments	Number of EU related policy items supported with the outputs delivered
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Euratom Research and Training Programme

Specific Objective 5: Moving towards demonstrating the feasibility of fusion as a power source by exploiting existing and future fusion facilities.

Indicator 1: Number of publications in peer-reviewed high impact journals

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010	Milestones									2020
800			800	800			800			800
	Actual Progress									Final
	200	450	325	700	680	822	874			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Cumulative
Cut-Off Date	19/08/2022
Data source	EUROfusion consortium reporting
Narrative	The number of papers published by Euratom-funded scientists in high quality peer-reviewed journals demonstrates Programme’s research excellence. It remains consistent with the level showed during the previous European Programme, once allowance is made for the new programme structure.
Methodology	Number of publications in peer-reviewed high impact journals from Euratom funded fusion research (journals with impact factor equal or higher than ‘Fusion Science and Technology’ journal https://www.ans.org/pubs/journals/fst/)
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	The 2014-2020 indicator shows the peer reviewed articles resulting directly from the implementation of the fusion roadmap.
Full metadata available at this address	EUROfusion consortium annual reporting available to the Commission services
Justification of the trend	Surpass the target in 2019

Specific Objective 7: Promoting innovation and industry competitiveness.

Indicator 1: Number of spin-offs from the fusion research under Euratom Programme

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2007-2013	Milestones									2020
4			5				6			6
	Actual Progress									Final
	1	2	2	2	3	5	6			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Cumulative
Cut-Off Date	31/12/2021
Data source	Cumulative number of spin offs reporting
Narrative	Euratom Programme supports specific actions on technology transfer from fusion research labs to industry. This provides the short-term return on investment in fusion R&D by using, in other areas, the knowledge generated by fusion research, so-called spin offs. Examples include cooled high heat flux components in space applications, improvement of Magnetic Resonance Imaging (MRI), applications in brakes and clutches.

Methodology	Cumulative number of spin offs reported by EUROfusion
Link MFF 14-20 / MFF 21-27	No
Other methodological comments	The target has been reduced from 10 planned for 2018 to 6. The 2020 target is based on updated data on actual spin-offs from fusion research during 2014-2016. All figures are cumulative.
Full metadata available at this address	EUROfusion consortium annual reporting available to the Commission services
Justification of the trend	Target met in 2020.

Indicator 2: Patents applications generated and patents awarded on the basis of research activities supported by the Euratom Programme (average number per year)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0		3	4				4			4
	Actual Progress									Final
	1	2	1	3	2	4	6	7		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of Patent application and awarded
Cut-Off Date	31/12/2021
Data source	Project reporting.
Narrative	Euratom Programme supports the transfer of fusion-related technology and know-how to non-fusion applications where there is a strong commercial or societal benefit. New patents may lead to the development and deployment of new hardware/software and protect European intellectual property.
Methodology	Number of patent applications emerging from EUROfusion consortium
Link MFF 14-20 / MFF 21-27	Yes
Other methodological comments	No sufficient amount of meaningful data is expected for "patents awarded" before 2020, because of the time necessary for a patent to be awarded.
Full metadata available at this address	EUROfusion consortium annual reporting available to the Commission services
Justification of the trend	Surpass the target in 2020.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	149.51	129.50	134.20	137.90	143.10			694.21	35%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

Euratom Research and Training Programme 2021-2025 contributes to climate mainstreaming as the Programme general objective provides for complementing the achievement of Horizon Europe’s objectives, inter alia, in the context of the energy transition. Research results of the Euratom Programme could be used by some Member States, exercising the right to decide on their energy mix, towards establishment of climate neutral energy system in a safe, efficient and secure way.

In this context, the Commission considers that 100% of the expenditure for fusion energy research contributes to the climate effort of the EU budget. Fusion energy represents a possible long-term option for large-scale low-carbon electricity production, which could help address a growing electricity demand towards the end of this century. To prepare Europe for fusion deployment, the research and technology development funded by the Euratom Programme today must demonstrate the scientific and technical feasibility of fusion energy, and then demonstrate its commercial and economic viability.

In view of the importance given by the Euratom Programme to non-power applications, radiation protection and waste management, the Commission considers that not all of the expenditure on fission research contributes to the climate effort of the EU budget. In this context it should be underlined that safety is a concern for all European citizens and a prime focus crosscutting all Euratom funded research activities. The Commission considers that 40% of the Fission Research related expenditure contribute to the climate effort of the EU budget.

6.1.3. Key achievements

In the framework of the EU Sustainable Finance Taxonomy Regulation (EU-2020/852), the JRC was entrusted to assess nuclear energy with respect to the ‘do no significant harm’ (DNSH) criteria. The assessment comprises radiological and non-radiological environmental and human health impacts corresponding to the various lifecycle phases of nuclear energy, addressing the state-of-the-art and DNSH aspects of radioactive waste management. The report also includes a comprehensive description of the relevant nuclear and environmental legal and regulatory frameworks at EU and international level. The report and its reviews, by two different independent group of experts, informed the Commission’s stance on the treatment of nuclear energy in the taxonomy.

6.4. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates	2022-2027 programming					Total	
2021	2022	2023	2024	2025	2026		2027
Score 0*: 265							

(*): Consolidated information about the annual commitments implemented (total per score by programme **in EUR Million**).

The financing is split among four categories- score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but not yet clear impact on gender equality**, score 0: **no significant impact on gender equality**.

Gender equality is a cross-cutting priority in Horizon Europe and concerns also Euratom Programme as stated in the recital 2 of the Council Regulation. The integration of the gender dimension into research and innovation content will be a requirement by default. Furthermore, Euratom Programme is promoting gender equality through sustainable institutional change by requesting that applicants (public bodies, research organisations and higher education establishments) have in place a gender equality plan as an eligibility criterion (requirement shared with Horizon Europe).

JRC manages the European Human Resources Observatory for the Nuclear Energy Sector (EHRO-N) in order to ensure the availability of data on human resources, including gender balance. In its Strategy 2030, the JRC declares itself as an equal opportunities employer committed to the objective of being fully gender balanced; this has been further developed by issuing a gender balance strategy. In 2021, the JRC Equality Mainstreaming action Plan was published. The action plan includes concrete actions to develop to internally and to carry out research contributing to the Commission work on inclusion and equality.

6.5. Contribution to the sustainable development goals

6.5.1. Key achievements and performance

The Euratom Programme is focused on producing knowledge for improving nuclear safety, security, radiation protection and developing fusion energy. By proposing solutions to challenges in nuclear field, research can indirectly contribute to social well-being, economic prosperity and environmental sustainability³ by, for example, extending operation of existing nuclear power plants designing advanced systems and starting first geological repositories for radioactive waste. Impacts of using this knowledge may cover some of Sustainable Development Goals but only indirectly and over the long period of time. Indirect measurement of the Euratom Programme’s contribution towards SDGs is provided by indicators showing:

- Percentage of Euratom budget dedicated to nuclear safety, radiation protection and waste management (81% for 2021-2022).
- Number and quality of peer reviewed scientific publications resulting from Euratom funded research (please refer to Key monitoring indicators in section 4 of this Programme Statement).

³ Recital 2 of the Council Regulation establishing the Euratom Programme 2021-2025

HEADING 1: Single Market, Innovation and Digital

European Joint Undertaking for ITER and the Development of Fusion Energy

Lead DG:ENER

6.5. Contribution to the sustainable development goals.....	78

1. Overview

1.1. Challenges

The ITER project aims to demonstrate the scientific and technological feasibility of fusion energy. It is being built in Saint Paul-Léz-Durance (France) with the support of seven international partners that represent half of the world’s population (Euratom, China, India, Japan, Russia, South Korea, and the United States). The key challenges for ITER for the period covered by the multiannual financial framework (MFF) 2021-2027, as recognized in the ex-ante evaluation accompanying the legislative proposal for the MFF 2021-2027, will be to:

- i. Sustain the positive momentum in the project's performance and management achieved through improvements in management, governance and supervision/monitoring obtained in the previous period (notably after 2016);
- ii. Ensure finalisation of the construction and assembly enabling the achievement of First Plasma and subsequent complementary construction and advancement of the post-First Plasma components; and
- iii. Retain the commitment of all ITER Parties to meeting their obligations thus enabling the timely and cost-efficient completion of the project.

Meeting these challenges, particularly in the context of the impact of covid-19 and of emerging pressures on the schedule due to the first-of-the-kind complexities of the project, will require sustained EU leadership in the project, which needs to be underpinned by excellent performance of the European Joint Undertaking for ITER and the Development of Fusion Energy (F4E) and compliance

of the EU with its share of funding obligations and in-kind contributions (i.e. components under European responsibility, procured and delivered by F4E).

1.2. Mission (General objectives)

The general objective of the ITER-related EU action in 2021-2027 is to fully support the continuation of ITER construction and assembly and to reach the operation of ITER with First Plasma to be followed by first experimental operations as well as further installations and upgrades until 2027 and beyond, laying grounds for successful full power operation (so called Deuterium-Tritium stage) by 2035.

These achievements are considered as a necessary step in the development of fusion in order for it to become a possible source of sustainable energy fostering the job, growth and innovation potential of the energy sector in the later part of the century, in accordance with the European Fusion Roadmap.

1.3. Specific objectives

To achieve the general objectives, the ITER five specific objectives for the MFF 2021-2027 are as follows:

- provide sufficient performance-based funding to the ITER Organization (IO) for its operations, particularly the assembly of the installation from the components arriving from individual ITER members;
- ensure delivery of EU components by F4E in line with the project schedule and strategies, in particular its construction and assembly strategies, or with as limited delays and technically achievable, and in close adherence with performance monitoring;
- offer European high-tech industries and SMEs a valuable opportunity to innovate and develop “spin off” products for exploitation outside fusion, thereby further reinforcing the EU added value of ITER project activities;
- secure continued EU leadership in the project by ensuring timely delivery of EU components and active participation in ITER governance processes; and
- continue activities with Japan (BA) on the operation of the satellite tokamak JT-60SA and on the development of a full scale material testing facility (IFMIF/DONES) to ensure that together with ITER’s results, all technical and scientific elements needed for the design of a fusion-based power generation device for demonstration are in place, thereby anchoring the synergetic contribution of ITER to the coherence of fusion development and fostering the common benefits of fusion research under the Fusion Roadmap.

1.4. Public intervention context

The ITER project aims at building and operating an experimental fusion device, a major step towards the demonstration of fusion as a sustainable energy source. Due to its important advantages, such as the potential availability of large fuel reserves and the lack of CO₂ emissions, fusion could greatly contribute to the long-term EU strategy of decarbonisation of the energy system in a safe, efficient and secure way. Europe’s support to ITER and to other ITER related activities contributes to the strategic agenda of the European Union for clean and secure energy.

The risk, costs, and long-term nature of this large research project puts it beyond the reach of individual EU Member States and even of the EU as such. Thus, the establishment of a global framework through an international agreement between Euratom and six other Parties: China, India, Japan, Russia, South Korea, and the USA was essential to undertake this large-scale scientific experiment. ITER construction started in 2007 and Euratom provides about 45% of the construction through F4E.

1.5. Actions

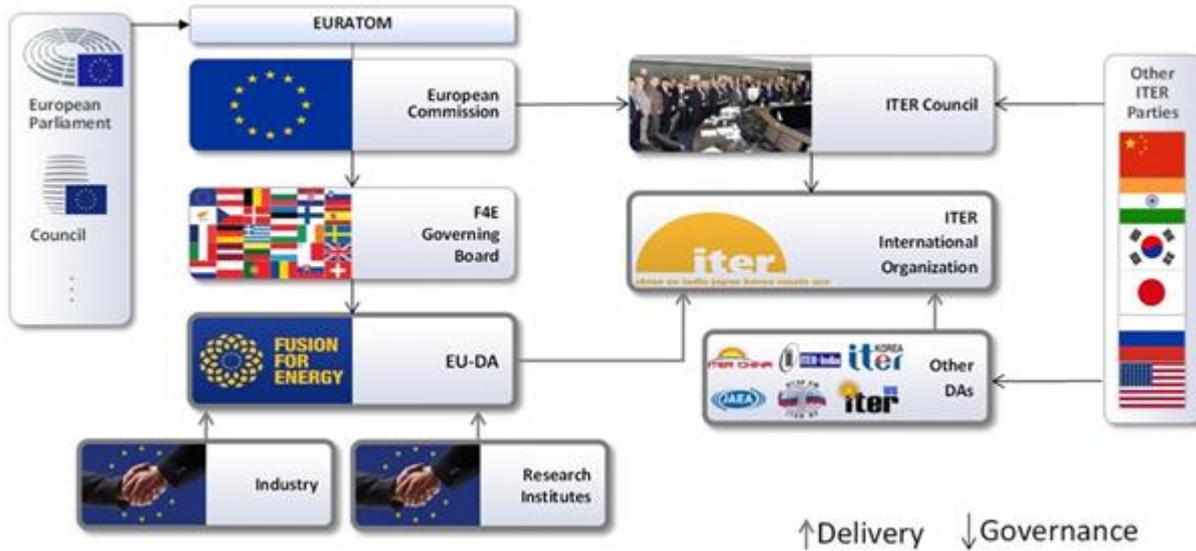

The programme covers the European contribution to the ITER Organization (IO) for the construction of the ITER facility, which includes the procurement of equipment, installation, general technical and administrative support for the construction phase as well as the participation in commissioning and operations.

The programme also covers other ITER related activities, such as the Broader Approach activities with Japan. These contributions are channelled through a Procurement Agency, the Joint Undertaking Fusion for Energy (F4E) located in Barcelona (Spain).

1.6. Delivery mode

Indirect management entrusted to F4E. The lead Directorate General (DG) of the European Commission is DG Energy.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Council Decision 2007/198/Euratom of 27 March 2007 establishing the European Joint Undertaking for ITER and the Development of Fusion Energy and conferring advantages upon it (OJ L 90, 30.3.2007, p. 58).	2021 - 2027	5 614.00

1.8.2. Legal basis explanation

The EU has signed the ITER Agreement together with six other partners (China, India, Japan, Russia, South Korea, and the United States). The ITER Agreement foresees that the Partners’ contributions for the ITER project are discharged by the Domestic Agencies. On the basis of this European Joint Undertaking for ITER and the Development of Fusion Energy (F4E) has been set up by the Council Decision 2007/198/Euratom.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	864.0	710.1	1 019.8	806.3	690.1	856.3	667.3	5 614.0
NextGenerationEU								
Decommitments made available again*								
Contributions from other countries and entities	0.6							0.6
Total	864.6	710.1	1 019.8	806.3	690.1	856.3	667.3	5 614.6

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The construction and assembly of the ITER project continues in the MFF 2021-2027.

1.10. Relevant websites providing more information

The Europa site on Fusion Energy and ITER (https://ec.europa.eu/energy/topics/technology-and-innovation/fusion-energy-and-iter_en) is a valuable source of information of the ITER project and fusion energy in general.

The site of the Joint Undertaking Fusion for Energy (<https://fusionforenergy.europa.eu/>) presents the activities of the European Union’s organisation (Domestic Agency) managing Europe’s contribution to ITER.

The website of the ITER Organization (<https://www.iter.org/>) provides updated information on the project addressing the needs of the public, the press, scientists and the industry.

The EUROfusion roadmap (<https://www.euro-fusion.org/eurofusion/roadmap/>) forms the basis for the programmes of EUROfusion and Fusion for Energy and provides a structured way forward to commercial electricity from fusion.

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	864.0	5 614.6	15%
Payments	262.6		5%

Regarding 2021 commitment appropriations, 99.2% of the total budget has been allocated to F4E, being the remainder allocated to support expenditure. The main actions focused on procurement activities included in The **Work Programme** 2021 adopted at GB49 in December 2020 and amended in November 2021. Due to delays in the implementation of some actions at the end of the year, the signature of three procurement procedures with a total value of EUR 123.7 million will occur in the beginning of 2022.

2022 EU contribution commitment appropriations for the programme is set at EUR 703.0 million, of which 99% is allocated to operational lines. The percentage decrease in operational expenditure between 2021 and 2022 is explained by the diminishment in value of the contracts to be signed in 2022. The **work programme** 2022 is mostly focused on the following activities (First Plasma (FP) relevant activities are indicated):

Magnets (FP): All major contracts have been signed and manufacturing activities are underway for the two remaining main components (i.e. Toroidal Field (TF) Coils and Poloidal Field (PF) Coils). In 2022, it is expected to complete the production of all 10 TF Coils. In the PF Coils Workshop, the last 2 Coils (PF#3 & PF#4) will be in full production in order to be delivered in the following years. The evolution of these activities is highly dependent on the impacts generated by covid-19 during the previous year.

Vacuum Vessel (FP): All major contracts have been signed and manufacturing activities are underway. All Sector deliveries are currently planned to be completed by the end of 2023. Commitments for the transportation of these sectors to Cadarache will be signed with the main contractor in accordance with the delivery dates agreed with the ITER Organization and subject to the manufacturing completion. Furthermore, extensions, modifications or amendments to existing contracts and arrangements, some of them being triggered by PCRs, may have to be signed. Also, Specific Contracts for support activities, like Inspectors, Documentation Support, Engineering and Analysis, Project Management support, etc. will continue to be issued depending on the project needs, including the needs for acceleration and other remedial actions responding to emerging production delays.

In-Vessel [Blanket System and Divertor]:

Blanket System (non-FP): For Blanket First Wall project, the most important activities in 2022 are the continuation of the implementation of Blanket First Wall series production, including the award of task orders for the procurement of CuCrZr and Beryllium raw materials. For Blanket Cooling Manifold project, negotiations with tenderers will be completed and framework contracts will be awarded to start the first stage of the series production.

Divertor Systems (non-FP): For the Divertor Inner Vertical Target (IVT) project, the main activities will be to complete the negotiated procedure and sign several framework contracts for the IVT series production. In addition, there will be some activities devoted to the follow-up of the manufacturing and testing of the full-scale prototypes, including the completion of the second full scale prototype. For the Divertor Cassette Body project, the main activities will be devoted to the follow-up of the on-going manufacturing of the series fabrication (both for Stage 1 and Stage 2). For the Divertor Rails project, the Procurement Arrangement will be signed.

Remote Handling (partly FP): The procurement of the Remote Handling Systems (RHS) will focus mainly on the final design activities and first plasma components moving gradually towards manufacturing. Some areas of non-first plasma component will continue with the preliminary design and moving towards final design. Complementary RH technology activities will be implemented (design and tests) aiming at manufacturing of first components (e.g. rad hard cameras and electronics) to be integrated in the RH systems.

Cryoplant and Fuel Cycle For Vacuum Pumping (partly FP), contracts of Torus and Cryostat Cryopumping System, Frontend Cryopump Distribution system, Leak Detection and Localization systems will focus on design, manufacturing and assembly.

Contracts for Neutral Beam Front-end Cryopump distribution will be signed.

In the area of Tritium Plant and Radiation and Environmental Monitoring Systems (REMS) (mostly FP): contract for first plasma activities of REMS and Task Order for Value engineering and final design of REMS Tokamak complex will continue. Signature of PA amendment for Tokamak complex is planned.

In the area of Cryoplant (FP): commissioning for LN2 Plant and Auxiliary Systems components will take place.

Antennas and Plasma Engineering (partly FP): Electron Cyclotron Upper Launcher: Following the signature of the PA amendment in 2021, all major contracts and specific contracts will be signed by the end of 2022. In 2022, the material procurement and series production for the main in-vessel structural components will continue while the design finalization will continue for the remainder of the scope. In addition, the specific contracts for support activities, such as Inspectors, Engineering and Design review support will be placed as per programme needs.

ITER operations: Coordinate collaboration with EUROfusion and IO on ITER exploitation and EU role in it.

Plasma Engineering: continue support to F4E procurement – step up modelling and simulation work for first plasma and ITER exploitation in general.

Electron Cyclotron Control System: continue the implementation of the PA 5.2.P1B.EU.01. This includes exploiting the synergies between the PA implementation activities and the FALCON facility development.

FALCON: Manage the facility, develop as necessary and ensure availability of the test beds. Main “clients”: EC ex-vessel systems and DDT gyrotron tests (risk reduction for the EU gyrotron series production).

Neutral Beam Heating and EC Power Supplies and Sources (non-FP): Electron Cyclotron (EC) Power Supplies (PS) and Power Sources (Gyrotrons):

Manufacturing, testing and deliveries of the remaining Main and Body HV Power Supplies sets and the installation and commissioning of the units will continue at ITER site. The Call for Tender procedure for Gyrotrons procurement, including tender evaluation, will be finalized up to the framework contract signature.

NB Test Facility (NBTF) at RFX-Padua: At the test facility, MITICA components will continue to be put in operation and auxiliaries integration (CODAS, Interlock, and Safety) will proceed.

MITICA Beam Line Components (BLC) Manufacturing will continue as planned and assembly will start.

MITICA Beam Source manufacturing will be completed, assembly will proceed, and factory testing will start, in preparation for delivery to site.

NB for ITER at Cadarache:

- [PA 53-01] F4E will sign the Specific Tooling contract for the HNB Assembly and progress towards signing the PA stage 2 for Heating Neutral Beam general assembly.
- [PA 53-04 and 53-05] F4E will progress with Neutral Beam Vessel tendering procedure up to contract signature, subject to timely signature of the PA mid-2021, and will progress procurement activities for Drift Duct, Absolute Valve, PMS and ACC coils including signatures of PA for some components, subject to timely availability of technical specifications from IO.
- [PA 53-06] F4E will progress with the detailed and manufacturing design of the Neutral Beam power supplies systems for the ITER units, subject to the consolidation of external interfaces, and revision of technical requirements with IO.

Diagnostics (partly FP): Manufacturing activities for several Diagnostic components and systems will continue, most of them being essential for First Plasma. Design of all remaining Diagnostics systems will progress, as well as the design of ITER port structures and the integration of Diagnostics into the ports. Several Diagnostics systems or sub-systems will complete their design activities, with approval of the final design review. Procurement activities will focus mainly on the signature of a major framework contract for manufacture of First Plasma components and subsequent placement of tasks orders, as well as grants and contracts for the completion of the design of less mature Diagnostics systems or sub-systems.

Test Blanket Systems (non-FP, non-in-kind contribution): The activities will focus on the preliminary design of the two TBM Sets, Ancillary Systems, Safety Studies and Accidental Analyses. Analogously the activities aimed to prove the feasibility of the fabrication and assembly processes of the TBM-sets will continue. As in the previous years, support and transversal activities such as the consultancy of an Agreed Notified Body, the storage, handling and, when needed, transportation of steel materials will proceed. The codification of the database of EUROFER in RCC-MRx will resume. Some activities could be executed under the ITER TBM Project Team Funding scheme. The collaboration with EUROfusion is expected to continue in the R&D area.

Site, Buildings and Power Supplies: The focus of the Buildings works will be to advance the construction of the medium voltage distribution buildings (B44, B45, B46 and B47) and the Tritium Building civil works (B14) up to the roof and to deliver it painted until level L2, to deliver the Control building (B71 Non PIC part), the Fast Discharge Resistor building (B75), and to complete the installation of HVAC, Electrical & Handling Equipment in the Heating building (B15). Load center LC04 will be made operational. Execution design, qualification activities and procurement of buildings services for the Tokamak Complex will progress. The

preliminary design for the Hot Cell Complex will start.

Cash contribution: The activities in the reference period will focus on the commitment of the agreed cash contribution for the ITER Organization within the budget approved by the ITER Council.

Technical Support Activities including the signature of task orders for experts, Quality control inspectors for manufacturing activities, all Engineering unit domains: System Design-Mechanical Engineering, CAD Data Management, Material-Manufacturing Technologies and Processes, Analysis and Codes, Metrology, I&C-CODAC, other Domestic Agencies' components Transportation and project management activities (on QA, system engineering, PM tools, planning, risk and cost) are foreseen. F4E also plans renewal of existing Frameworks contracts and signature of new ones.

F4E presented to the Governing Board an estimation of the **covid-19 pandemic** impact. It considered a schedule delay of up to 4 months, depending on the component and a financial impact linked mainly to the additional sanitary measures that increase costs.

Regarding 2023 EU contribution in commitment appropriations, more than 99.3% of the total budget will be allocated to operational lines, with the remainder being assigned to support expenditure. In terms of the **work programme 2023**, there is an important increase in commitments compared with 2022. This increase is in line with the commitment profile for the EU contribution that was established in line with the 2016 project baseline.

2.2. Programme(s) 2014-2020: Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	2 924.6	2 926.4	100%
Payments	2 392.7		82%

In 2015, the ITER Council approved an action plan prepared by the IO to address the challenges faced by the project related to schedule cost and governance. One of the main actions was the revision of the baseline (long-term schedule cost and scope) in 2016. The updated schedule follows the "staged approach" which first prioritizes the construction of the components essential to achieving First Plasma (FP the beginning of operation) in 2025 followed by a series of installation and testing phases before starting the full performance phase (Deuterium-Tritium operation) in 2035.

ITER has entered into its assembly phase. To reach the First Plasma milestone all components from the ITER members need to be available and delivered on time to the IO and assembled and installed in the Tokamak Complex.

Although the machine is due to begin preliminary operations in 2025 or shortly thereafter (with the start of integrated commissioning for the First Plasma), ITER construction will nevertheless continue until 2035 when testing will end and experimental operation will begin. The European in-kind contribution to the ITER project has progressed over the course of 2020 from ca. 49.82% (December 2020) to almost 58.33% (December 2021) against a planned target of 65.24 %.

The EU budget for the period 2014-2020 has been fully implemented in commitments at the end of 2020. The payment plan for all outstanding commitments in the previous MFF, not paid as of 15 February 2022, is according to the delivery plan: EUR 232.2 million for 2022 and EUR 150.00 million for 2023. The residual payments will materialize in the years to come.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The programme's performance must be assessed combined – the performance of the European Domestic agency F4E which delivers the components for ITER and the performance of the IO itself, which receives the cash contributions from the programme to organise and perform assembly and installation works together with the Domestic Agencies. The Programme started back in 2007 and had rather slow pick-up during the 2007-2013 MFF period. The deficiencies (immaturity of the design and the manufacturing challenges, management deficiencies and a lack of cooperation between the Domestic Agencies and the IO) were identified in the beginning of the 2014-2020 MFF period. They have been addressed, which improved the overall effectiveness of the project.

The impact of ITER's investment in technologies and discoveries for the future ripple throughout the economy by supporting cutting-edge technologies in critical industries, creating new business and jobs, and attracting more students to science while laying the foundation for the commercial electricity generation from fusion energy.

A recent study confirmed that the economic impact of ITER on the EU economy has been positive. Incremental gross value added generated due to ITER's activities equalled EUR 1.739 billion for the period 2008 to 2019. Cumulatively, the total number of jobs per year directly or indirectly created by ITER reached nearly 29 500, with a preliminary peak being reached in the years 2018 and 2019. The same study estimated the net impact of the ITER plant on the European economy at EUR 104 million for 2008 to 2019. This net impact represents the difference of the economic impact described above relative to a hypothetical investment that reflects an identical amount of spending per year on EU member countries' economies.

An online survey was carried out in autumn 2020 to understand the repercussions of the covid-19 crisis on the companies involved in the ITER project. One third of respondents declared that their company is more resilient to the consequences of the crisis thanks to its involvement in ITER.

3.1.2. Active programme performance

In recent year, the ITER project has seen further progress. The manufacturing of the main components has been launched and progressed well overall, with some notable exceptions of delays (e.g. in Vacuum Vessel sectors manufacturing and pre-assembly), the construction of the main buildings was completed and the assembly of the experimental device has commenced. In 2021, the construction and assembly of ITER continued but faced challenges due to covid-19 related restrictions, delays in some deliveries of components by ITER Parties, and unparalleled complexity of assembly activities. The combined effect of these factors results in delays to the expected start of operations (so called First Plasma), the extent of which are currently under assessment by the ITER Organization Members. Some catch up is likely as works are moving ahead, such as incentives to contractors in order to speed the delivery of the components, but it is obvious that the project has to be rescheduled to establish a realistic planning.

Overall project achievements included:

Buildings

- Site Coordination Responsibility (and associated common expenses) was transferred officially from F4E to IO from 1st of October 2021, after ten years of coordination by F4E;
- IO took over all the Heavy Nuclear Doors on Tokamak Building B11: 46 Port cell doors (30t steel box filled with 10t heavy concrete by door) and 4 Lift Lobby doors (1t of steel by door), marking the successful delivery by F4E of a significant and complex mechanical scope.

Magnets

- Four TF coils were completed, and three of them were delivered to ITER IO: an excellent result considering the COVID-19 pandemic impact (making in total seven TF coils of which six already delivered in ITER);
- F4E successfully completed and handed over to the ITER Organization (IO) three PF coils: PF6, PF5 and PF2.

Others

- Installation of the LN2 Plant and Auxiliary Systems in the cryoplant building was completed together with most of the pre-commissioning tests;
- All prototypes of the MITICA beam source were fabricated and successfully tested, validating the design adopted;
- F4E delivered the first batch of 150 Inner Vessel Coils (IVC), for installation on the inner surface of the ITER vacuum vessel.

Some additional general 2021 performance information as follows:

- F4E implemented 100% and 97% in commitment and payment appropriations respectively;
- F4E increased the implementation of actions from annual assessments from 89% to 93% during 2021;
- An independent assessment of F4E's Nuclear Safety Culture raised the level from I and II showing a significant improvement;
- In 2021 F4E had no complaints submitted to the European Ombudsman;
- In 2021 F4E faced one case in court (lodged in 2019, with oral hearing and judgement in 2021) concerning the non-renewal of a former agent, which F4E won on every single plea submitted and the other party was ordered to bear the totality of the costs of the proceedings.

Aside from the specific projects risks (VV, TB04, etc.), the top corporate risks and mitigation actions are monitored closely by F4E and its governance:

- Delay of systems in Critical Path to FP;
- Delay in the reception of data/items from the IO or other DAs;
- Changes in requirements or additional scope;
- Workload not aligned with available resources;
- Requirements not properly propagated;
- Under-performance of components detected during the ITER integrated commissioning.

Due to the very international nature of the ITER project whereby Russia is one of the project partners, there will be an impact to the ITER project because of the war in Ukraine. The different sanctions introduced by the European Union and other countries on Russia public and private sector will have an impact on the Russia deliveries for the project. The question of the continuation of

Russia participation is likely to be put on the table due to the logistic and other difficulties for Russia to honour their commitments and reputational risk for the project if Russia continues to be the project partner.

3.1.3. Previous Programme Performance

The IO and the Domestic Agencies have continued implementing the Revised Construction Strategy. Significant progress in installation activities on the ITER site is noticeable. Uncertainties of the project have been reduced as the manufacturing of the important and technically complex first-of-a-kind (FOAK) components (Cryostat and TF and PF Coils) proved to be feasible. On the other hand, it became clear that due to the technical complexity of the components, the design, prototyping and final manufacturing takes longer than expected for some other components, notably VV sectors. The assembly work of the components, even if well modelled, was facing different unexpected issues that had to be addressed affecting the schedule. The management and administration of this multi-national project also poses significant challenges.

In 2015, the ITER Parties launched a major overhaul of the project, which included the appointment of a new senior management in the IO with an Action Plan under the leadership of a new Director-General. The action plan envisaged a complete re-organisation of the IO, a close cooperation with the Domestic Agencies and the establishment of a Reserve Fund as incentive for the IO to minimize the design changes as much as possible. A new reliable baseline was approved in November 2016, achieved a stabilization of the project and provided a realistic basis for its completion.

Changes in the management and organization of F4E, that acts as EU’s Domestic Agency delivering the European contribution to IO, took place in parallel to those in IO and entailed the change of the Director (in early 2016) and the majority of the top management and its organisation (in 2016 and 2017).

Nevertheless, the 2015-2018 impetus worn out towards the end of the previous programme. The programmed progress could not longer be maintained. The covid was a trigger, but more complex operations, different technical and project management issues have engulfed the project and as a result it became clear that the important First Plasma milestone in 2025 could not be longer achieved.

3.2. Key achievements

29 500	614	EUR 4 824 million	75.8%
annual jobs directly or indirectly created by ITER in the EU between 2007 and 2019.	procurement contracts signed by F4E between 2007 and 2020.	paid to European companies involved in ITER between 2007 and 2019.	project execution to achieve First Plasma.

3.3. Evaluations, studies and reports

The mid-term progress report in accordance with Article 5b of the Council Decision establishing the European Joint Undertaking for ITER and the Development of Fusion Energy and conferring advantages upon it has been adopted on 21 March 2019¹. The evaluation stated that following the overhaul in management, the project was on track within its 2016 baseline, and early indicators showed positive effects of the change. However, ITER’s construction and management are still under improvement; in such a long-term project, it will be important to monitor whether these positive effects continue and grow over the next few years. At present (end 2021), the project’s expected cost and schedule remain within the contingencies specified in 2019.

Regarding ITER’s place in energy policy and decarbonisation, the project remains an important part of EU energy and innovation policy, and although it does not contribute directly to energy and climate targets in the short- to medium-term, its potential role in the decarbonisation of the energy landscape post-2050 is very significant.

An ex-ante evaluation of ITER² accompanied the MFF proposal 2021-2027. Three external studies were conducted in 2018 and 2019. The key findings of these studies were presented in the Programme Statement 2020.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: to fully support the continuation of ITER construction and to reach the operation of ITER with First Plasma by 2025, to be followed by first experimental operations as well as further installations and upgrades until 2027 and beyond, laying grounds for successful full power operation (so called Deuterium-Tritium stage) by 2035

¹ COM(2019)147 final, <https://ec.europa.eu/transparency/regdoc/rep/1/2019/EN/COM-2019-147-F1-EN-MAIN-PART-1.PDF>

² SWD(2018)325

Indicator 1: Percentage of completion of ITER construction

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2029
68,48%	75,74%	79,81%	83,21%	86,52%	90,66%	93,37%	95,90%	98,44%	100,00%	100,00%
	Actual Progress									Final
Are we on track :	Deserves attention**									

Indicator type	Output
Unit of measurement	Cumulative percentage of credits completed by all Domestic Agencies.
Cut-Off Date	30/01/2022
Data source	Data reported by the ITER Organization in the ITER Document Management (IDM) system. ITER is a first-of-a-kind project being built with the contribution of the seven ITER Parties. The construction of the ITER facilities is carried out according to the recent 2016 baseline defining budget, scope, and schedule. This indicator demonstrates how the project execution is in line with the project baseline at the level of all ITER Members.
Link to the objective	ITER is a first-of-a-kind project being built with the contribution of the seven ITER Parties. The construction of the ITER facilities is carried out according to the recent 2016 baseline defining budget, scope, and schedule. This indicator demonstrates how the project execution is in line with the project baseline at the level of all ITER Members.
Link MFF 14-20 / MFF 21-27	This indicator is not a continuation of an indicator from the period 2014-2020.
Other methodological comments	The calculation of this indicator is based on data in available in ITER's Document Management (IDM) system. The Commission does not carry a quality review of this data. The milestones refer to the planned credit; the baseline and targets refer to released credit. Between the completion of a component and the release of the related credits there is a time gap.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The milestone values were calculated on the basis of a steady project progress which unfortunately slowed down in the beginning of 2020 and it continued over 2021. The delay due to the covid-19 pandemic was further exacerbated by delays stemming from the complexity of the current assembly works and of the first-of-the-kind nature of many components. The combined effect of these factors results in delays to the expected start of operations (so called First Plasma), the extent of which are currently under assessment. While some catch up is likely as works are quite well organised and moving ahead it is obvious that the project has to be rescheduled to establish a realistic planning. As a consequence, the values of this indicator will have to be modified once the new project baseline is set-up.

Indicator 2: Percentage of Euratom's in kind obligations discharged by F4E

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2029
68,18%	71,97%	75,72%	79,06%	81,49%	84,98%	88,65%	92,57%	97,83%	100,00%	100,00%
	Actual Progress									Final
Are we on track :	Deserves attention**									

Indicator type	Output
Unit of measurement	Cumulative percentage of credits completed by the Joint Undertaking Fusion for Energy (F4E).

5. The programme contribution to horizontal policies

5.1. Contribution to climate mainstreaming

5.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
		2021	2022	2023		2024	2025		
Climate contribution	857.13	710.10	1019.80	806.30	690.15	856.37	667.37	5607.22	100%

(*)These amounts include NextGenerationEU top-ups if any

5.1.2. Explanation on the financial contribution

Due to its important advantages, such as the potential availability of large fuel reserves and the lack of CO₂ emissions, fusion could greatly contribute to the long-term EU strategy of decarbonisation of the energy system in a safe, efficient and secure way. While fusion may become available for commercial power generation only in the second half of the century, its availability can help to sustain a decarbonised energy mix after 2050 on economically competitive terms and without security of supply concerns. Fusion can be a clean and virtually limitless energy source. The general potential of fusion is nowadays more widely recognised thanks to the strong advancement of fusion science in recent years.

Furthermore, the Paris Agreement binds the Union to pursue clear decarbonisation objectives both until 2050 and beyond and such an objective will require very strong commitments and substantial investments. ITER is one of these such long-term solutions. The ITER project, which is part of the Strategic Energy Technology (SET) Plan, aims at building and operating an experimental fusion device, a major step towards the demonstration of fusion as a sustainable energy source. The Commission considers that 100% of the ITER related expenditure contributes to the climate effort of the EU budget.

5.2. Contribution to gender equality

5.2.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	

Score 0: 864

(*) Consolidated information about the annual commitments implemented (totals per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

The actions under this programme are related to implementing the ITER international agreement relating to fusion energy and providing the related European contribution. These actions were not designed with gender equality in mind, even though some minor indirect impacts might occur, therefore a score 0 is attributed to them.

5.3. Contribution to the sustainable development goals

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

The United Nations’ Sustainable Development Goals are targets to be achieved by 2030. ITER and fusion development in general are on a longer timescale than this framework, but already contribute to several of these Goals at a later stage. For example, they will contribute to a clean energy transition while boosting jobs and growth in the area of energy and climate under **Sustainable Development Goal 7 (“Ensure access to affordable, reliable, sustainable and modern energy for all”)** and Sustainable Development Goal 13 (“Take urgent action to combat climate change and its impacts”).

ITER also falls under the category of Research and Innovation, both of which underpin the implementation of virtually all Sustainable Development Goals and in particular Sustainable Development Goal 9 (“Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation”).

Finally, ITER is also an example of a global partnership for Sustainable Development Goal 17 (“Strengthen Means of Implementation and revitalise the global partnership for sustainable development”).

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

The United Nations' Sustainable Development Goals are targets to be achieved by 2030. ITER and fusion development in general are on a longer timescale than this framework, but already contribute to several of these Goals at a later stage. For example, they will contribute to a clean energy transition while boosting jobs and growth in the area of energy and climate under Sustainable Development Goal 7 ("Ensure access to affordable, reliable, sustainable and modern energy for all") and Sustainable Development Goal 13 ("Take urgent action to combat climate change and its impacts").

ITER also falls under the category of Research and Innovation, both of which underpin the implementation of virtually all Sustainable Development Goals and in particular **Sustainable Development Goal 9 ("Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation")**.

Finally, ITER is also an example of a global partnership for Sustainable Development Goal 17 ("Strengthen Means of Implementation and revitalise the global partnership for sustainable development").

SDG 13 Take urgent action to combat climate change and its impacts

The United Nations' Sustainable Development Goals are targets to be achieved by 2030. ITER and fusion development in general are on a longer timescale than this framework, but already contribute to several of these Goals at a later stage. For example, they will contribute to a clean energy transition while boosting jobs and growth in the area of energy and climate under Sustainable Development Goal 7 ("Ensure access to affordable, reliable, sustainable and modern energy for all") and **Sustainable Development Goal 13 ("Take urgent action to combat climate change and its impacts")**.

ITER also falls under the category of Research and Innovation, both of which underpin the implementation of virtually all Sustainable Development Goals and in particular Sustainable Development Goal 9 ("Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation").

Finally, ITER is also an example of a global partnership for Sustainable Development Goal 17 ("Strengthen Means of Implementation and revitalise the global partnership for sustainable development").

SDG 17 Strengthen the means of implementation and revitalize the global partnership

The United Nations' Sustainable Development Goals are targets to be achieved by 2030. ITER and fusion development in general are on a longer timescale than this framework, but already contribute to several of these Goals at a later stage. For example, they will contribute to a clean energy transition while boosting jobs and growth in the area of energy and climate under Sustainable Development Goal 7 ("Ensure access to affordable, reliable, sustainable and modern energy for all") and Sustainable Development Goal 13 ("Take urgent action to combat climate change and its impacts").

ITER also falls under the category of Research and Innovation, both of which underpin the implementation of virtually all Sustainable Development Goals and in particular Sustainable Development Goal 9 ("Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation").

Finally, ITER is also an example of a global partnership for **Sustainable Development Goal 17 ("Strengthen Means of Implementation and revitalise the global partnership for sustainable development")**.

1. Overview

1.1. Challenges

In 2021, domestic and global challenges continued to have a significant impact on the EU economy. In light of the ongoing Covid-19 pandemic, climate change challenges and the need of digitisation the EU has to act swiftly to achieve its ambitious green transition and digitisation goals.

The current investment levels and forecasts do not meet the Union's needs for structural investment to restart and sustain long-term growth in the face of technological change and global competitiveness, including needs for innovation, digital skills, infrastructure, small and medium-sized enterprises (SMEs) and the need to address key societal challenges such as sustainability or population ageing.

In order to achieve the Union's policy objectives and to support a swift, inclusive and healthy economic recovery, support is necessary to address market failures and sub-optimal investment situations and to reduce the investment gap in targeted sectors.

An intervention at EU level ensures that a critical mass of resources can be leveraged in order to maximise the impact of investment on the ground. The proposal does not replace Member State investment but, on the contrary, it is complementary to such investments, by focusing in particular on support for projects that provide EU added value. In addition, the EU level provides for economies of scale in the use of innovative financial products by catalysing private investment in the whole EU and making best use of the European institutions and their expertise for that purpose. The EU intervention also provides access to a diversified portfolio of European projects, thereby catalysing private investment, and allows for the development of innovative financing solutions, which can be scaled up or replicated, as appropriate, in all Member States.

Intervention at EU level is the only tool capable of effectively addressing investment needs linked to EU-wide policy objectives. In addition, structural reforms and an improved regulatory environment will continue to be necessary to address the remaining investment gaps in the period 2021-2027.

The InvestEU Programme – with its three elements, the InvestEU Fund, the InvestEU Advisory Hub and the InvestEU Portal - will contribute to improving the competitiveness and socio-economic convergence and cohesion of the Union, including in the fields of innovation and digitisation, to the efficient use of resources in accordance with the circular economy, to the sustainability and inclusiveness of the Union's economic growth and to the social resilience and integration of the Union capital markets.

The InvestEU Fund shall provide an EU budget guarantee that will back the financing provided by implementing partners to financial intermediaries and final recipients. The InvestEU Advisory Hub shall provide support for the development of investable projects and access to financing and the InvestEU Portal shall grant visibility to EU projects seeking financing and provide investment opportunities to investors.

1.2. Mission (General objectives)

The general objective of the InvestEU Programme (Article 3(1)) is to support the policy objectives of the Union by means of financing and investment operations that contribute to:

- the competitiveness of the Union, including research, innovation and digitisation;
- growth and employment in the Union economy, its sustainability and its environmental and climate dimension contributing to the achievement of the SDGs and the objectives of the Paris climate agreement and to the creation of high-quality jobs;
- the social resilience, inclusiveness and innovativeness of the Union;
- the promotion of scientific and technological advance, of culture, education and training;
- the integration of the Union capital markets and the strengthening of the Single Market, including solutions addressing the fragmentation of the Union capital markets, diversifying sources of financing for Union enterprises and promoting sustainable finance;
- the promotion of economic, social and territorial cohesion; or
- the sustainable and inclusive recovery of the Union economy after the crisis caused by the Covid-19 pandemic, including by providing capital support for SMEs that were negatively affected by the Covid-19 crisis and were not already in

difficulty in state aid terms at the end of 2019, upholding and strengthening existing its strategic value chains of tangible or intangible assets, developing new ones, and maintaining and reinforcing activities of strategic importance to the Union, including Important Projects of Common European Interest, in relation to critical infrastructure, whether physical or virtual, transformative technologies, game-changing innovations and inputs to businesses and consumers and supporting a sustainable transition.

1.3. Specific objectives

The InvestEU Programme has the following specific objectives:

- supporting financing and investment operations related to sustainable infrastructure;
- supporting financing and investment operations related to research, innovation and digitisation, including support for the scaling up of innovative companies and the rolling out of technologies to market;
- increasing the access to and the availability of finance for SMEs and for small midcap companies and to enhance the global competitiveness of such SMEs;
- increasing access to and the availability of microfinance and finance for social enterprises, to support financing and investment operations related to social investment, competences and skills, and to develop and consolidate social investment markets.

1.4. Public intervention context

The InvestEU programme aims at contributing to the necessary conditions for the competitiveness of the Union's economy and industry (in accordance with article 173 of the Treaty on the Functioning of the European Union). This is done by providing financial products designed to address Union-wide and Member State specific market failures and suboptimal investment situations and systems to spread such products, which cannot be sufficiently achieved by the Member States, but can rather be better achieved at Union level.

Furthermore, the need for public intervention addressing market failures and sub-optimal investment situations has been amplified with the significant social and economic impact of the current Covid-19 pandemic across Member States and regions. Due to the necessary containment measures, economic activity in the EU dropped significantly in 2020 and is slowly returning to pre-Covid levels. The contraction in EU GDP in 2020 was 5.9%, deeper than during the financial crisis in 2009. In 2021, the EU's GDP grew by 5.3%.

Even before the pandemic, while a recovery in investment-to-GDP ratios in the Union could be observed, the investment levels remained below what could be expected in a strong recovery and was insufficient to compensate for years of underinvestment following the 2009 crisis. More importantly, the current investment levels and forecasts do not meet the Union's needs for structural investment to restart and sustain long-term growth in the face of technological change and global competitiveness, including for innovation, skills, infrastructure, small and medium-sized enterprises (SMEs) and the need to address key societal challenges such as sustainability or population ageing. Consequently, in order to achieve the Union's policy objectives and to support a swift, sustainable, inclusive, lasting, and healthy economic recovery, support is necessary to address market failures and sub-optimal investment situations and to reduce the investment gap in targeted sectors.

1.5. Actions

The InvestEU Fund shall provide for an EU guarantee to support financing and investment operations carried out by the implementing partners that contribute to objectives of the Union's internal policies. The InvestEU Advisory Hub shall provide advisory support for the development of investable projects and access to financing and related capacity building assistance. The InvestEU Portal shall boost project's visibility to a large network of international investors.

1.6. Delivery mode

The InvestEU programme will be delivered in indirect management through the EIB Group and other implementing and advisory partners. At Commission level, the InvestEU requires an extensive cross-DG cooperation under ECFIN lead, both for the Guarantee and Advisory Agreements with the EIB Group as well as for the selection of further implementing and advisory partners, following the first calls for expression of interest published in April 2021.

In particular, the policy priorities of financial and advisory products under the programme are developed in close cooperation with DGs that are responsible of specific policy windows (MOVE and ENER for sustainable infrastructure, RTD and CNECT for innovation and digitisation, GROW and RTD for SMEs and EMPL and EAC for social investment and skills).

1.7. Graphic overview of the programme structure

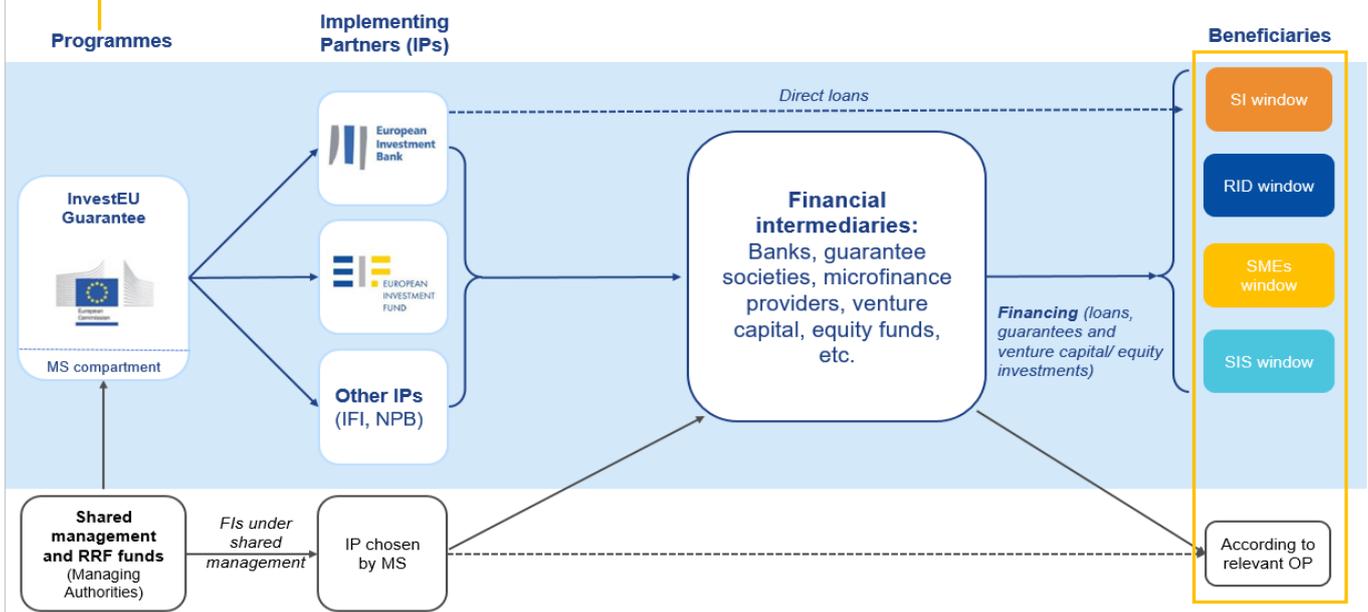

InvestEU Programme: an overview

InvestEU Fund:

- Single fund bringing together the many different EU-level financial instruments
- **EUR 26 bn** EU budgetary guarantee
- Mobilise **EUR 370 billion** in additional investment across Europe, of which 30% to contribute to climate objectives
- Strategic Investments and capital support incorporated across policy windows

The InvestEU Fund delivery chain

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/523 of the European Parliament and of the Council of 24 March 2021 establishing the InvestEU Programme and amending Regulation (EU) 2015/1017 (OJ L 107, 26.3.2021, p. 30).	2021 - 2027	3 067.71

1.8.2. Legal basis explanation

The legal basis: Regulation (EU) 2021/523 of the European Parliament and of the Council of 24 March 2021 establishing the InvestEU Programme and amending Regulation (EU) 2015/1017¹.

The InvestEU Programme consists of:

- the InvestEU Fund (the successor of the European Fund for Strategic Investments (EFSI) and other 13 centrally-managed financial instruments),
- the InvestEU Advisory Hub (the successor of the European Investment Advisory Hub (EIAH) and other 12 centrally managed advisory programmes/initiatives) and
- the InvestEU Portal (the successor of the European Investment Project Portal (EIPP)).

The InvestEU Programme will therefore bring together under one roof the multitude of EU financial instruments and advisory services currently available to support investment in the EU. It will make EU funding for investment projects in Europe simpler, more efficient and more flexible.

The InvestEU Programme, including the InvestEU Fund supporting finance for eligible investments, is demand-driven, responding to investment and finance needs of public and private market participants. Finance supported by the InvestEU Fund should support investments with a higher risk profile that require risk-sharing through the EU budget, in order to unlock private finance.

The InvestEU Fund shall focus on addressing the large investment gaps in key areas of the future through an EU budget guarantee of EUR 26.15 billion, underpinned by an EU budget of EUR 10.46 billion (provisioning rate of 40%) as detailed in section 1.8.4 below. Higher provisioning for the InvestEU Fund, compared to the provisioning of the preceding European Fund for Strategic Investments (EFSI) 2014-2020, is necessary due to the expected higher risk of investments seeking risk coverage under the InvestEU Fund. It will thus further boost job creation and support investment and innovation in the EU. It is expected to mobilise around EUR 372 billion of private and public investment across the EU by end-2027. At least 30% of the InvestEU Fund is expected to contribute to fighting climate change.

A 75 % share of the EU guarantee under the EU compartment, amounting to EUR 19.6 billion, will be granted to the EIB Group. The remaining 25 % of the EU guarantee under the EU compartment shall be granted to other implementing partners.

The InvestEU Fund shall operate through the following four policy windows that shall address market failures or sub-optimal investment situations within their specific scope:

- a sustainable infrastructure policy window which comprises sustainable investment in the areas of transport, including multimodal transport, road safety, including in accordance with the Union objective of eliminating fatal road accidents and serious injuries by 2050, the renewal and maintenance of rail and road infrastructure, energy, in particular renewable energy, energy efficiency in accordance with the 2030 energy framework, buildings renovation projects focused on energy savings and the integration of buildings into a connected energy, storage, digital and transport systems, improving interconnection levels, digital connectivity and access, including in rural areas, supply and processing of raw materials, space, oceans, water, including inland waterways, waste management in accordance with the waste hierarchy and the circular economy, nature and other environment infrastructure, cultural heritage, tourism, equipment, mobile assets and the deployment of innovative technologies that contribute to the environmental or climate resilience or social sustainability objectives of the Union and that meet the environmental or social sustainability standards of the Union;
- a research, innovation and digitisation policy window which comprises research, product development and innovation activities, the transfer of technologies and research results to the market to support market enablers and cooperation between enterprises, the demonstration and deployment of innovative solutions and support for the scaling up of innovative companies, as well as digitisation of Union industry;
- an SME policy window which comprises access to and the availability of finance primarily for SMEs, including for innovative SMEs and SMEs operating in the cultural and creative sectors, as well as for small mid-cap companies;
- a social investment and skills policy window, which comprises microfinance, social enterprise finance, social economy and measures to promote gender equality, skills, education, training and related services, social infrastructure, including health and educational infrastructure and social and student housing, social innovation, health and long-term care, inclusion and accessibility, cultural and creative activities with a social goal, and the integration of vulnerable people, including third country nationals;

A just transition scheme shall be established horizontally across all policy windows. This scheme shall comprise investments which address social, economic and environmental challenges deriving from the transition process towards the achievement of the Union's 2030 climate target and its target of achieving climate neutrality by 2050, as well as benefit territories identified in a just

¹ In addition, a total amount of EUR 6 073.5 million is allocated to the InvestEU Programme in accordance with Council Regulation (EU) 2020/2094 of 14 December 2020 establishing a European Union Recovery Instrument.

transition plan prepared by a Member State in accordance with the Commission Proposal for a Regulation establishing the Just Transition Fund².

All policy windows may include strategic investments including Important Projects of Common European Interest to support final recipients whose activities are of strategic importance to the Union, in particular in view of the green and digital transitions, of enhanced resilience and of strengthening strategic value chains.

Each policy window should be composed of two compartments, that is to say an EU compartment and a Member State compartment. The EU compartment should address Union-wide or Member State specific market failures or sub-optimal investment situations in a proportionate manner.

The Member State compartment should give Member States as well as regional authorities via their Member State the possibility of contributing, on a voluntary basis, a share of their resources from the funds under shared management to the provisioning for the EU guarantee and of using the EU guarantee for financing or investment operations in order to address specific market failures or sub-optimal investment situations in their own territories.

The Member State compartment should also give Member States the possibility of contributing other additional amounts, including those supported by Regulation 2021/241 of 12 February 2021 establishing the Recovery and Resilience Facility (the RRF Regulation), to the provisioning for the EU guarantee and of using the EU guarantee. The provisioning for an EU guarantee relating to a Member State compartment underpinned by other additional amounts contributed by Member States, including those supported by the RRF Regulation, should constitute external assigned revenue.

The InvestEU Advisory Hub will provide project development advisory support and capacity building throughout the investment cycle to foster the origination and development of investment projects and access to financing. The assistance will be provided in the InvestEU Programme's policy areas and will also ensure a central point of access for project promoters and authorities.

The InvestEU Portal was established in accordance with the Commission Implementing Decision (EU) 2021/626 of 14 April 2021. It builds on its predecessor EIPP as a database providing visibility to investment projects for which EU-based project promoters seek financing and providing investors with information about investment opportunities available in Europe, but with a better linkage between the projects and a possible financing by the InvestEU Fund implementing partners. InvestEU Implementing Partners will have access to the InvestEU Portal and receive information on new projects published on the Portal in their specific geographies or activity sectors.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	656.7	1 196.6	340.7	194.0	197.9	201.9	204.8	2 992.7
NextGenerationEU	1 783.0	1 818.0	2 471.0	0.5	0.5	0.5	0.5	6 074
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities	0.0	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	0.0
Total	2 439.7	3 014.6	2 811.7	194.5	198.4	202.4	205.3	9 066.7

(*) Only Article 15(3) of the financial regulation.

The table above includes in the first row appropriations from the general budget and from MFF fines in 2022 and 2023 and in the second row appropriations from NGEU. Compared to the total InvestEU appropriations of EUR 11 273.3 million (see section 1.8.4.), the amount of EUR 9 066.7 million (as stated in the table above) excludes the EIF capital increase (EUR 371.9 million), MFF fines as from 2024 onwards (EUR 834.7 million) and assigned revenues from predecessor financial instruments listed in Annex IV of InvestEU Regulation (EUR 1 000 million).

The total InvestEU appropriations include four different budget sources (general budget, NGEU, MFF fines and assigned revenues from predecessor financial instruments) and they amount to EUR 11 273.3 million, with the following breakdown:

² COM (2020) 22 final of 14.01.2020.

- EUR 10 460.9 million for the EU Guarantee provisioning, of which (i) EUR 2 462.0 million from the general budget, (ii) EUR 5 930.0 million from NGEU, (iii) EUR 1 068.9 million from MFF fines (a provisional amount) and (iv) EUR 1 000 million from predecessor financial instruments;
- EUR 430 million for the Advisory Hub and the Portal, of which (i) EUR 225.7 million from the general budget, (ii) EUR 140.5 million from NGEU, and (iii) EUR 63.8 million from MFF fines;
- EUR 10.5 million for support expenditure, of which (i) EUR 7 million from the general budget, and (ii) EUR 3.5 million from NGEU; and
- EUR 371.9 million for the participation to the capital increase of the European Investment Fund (EIF) from the general budget.

The frontloading of the financial programming of the InvestEU programme is mainly related to the strict deadlines applicable to the NGEU funds, obliging implementing partners to approve financing and investment operations corresponding to 60% of the NGEU budget by the end of 2022 and to 100% of the NGEU budget by the end of 2023.

1.9. Link with the 2014-2020 MFF

The InvestEU Programme is the successor of the 2014-2020 Investment Plan for Europe. It consolidates the EFSI budgetary guarantee and other 13 EU financial instruments under the 2014-2020 MFF. The EIAH and 12 advisory programmes in various policy areas such as sustainable infrastructure, research, innovation and digitalisation, SMEs and social investment and skills as well as the EIPP which is the central EU project-promoting platform with the aim to create a bridge between EU project promoters and investors. InvestEU brings simplification, flexibility and reduces potential overlaps between EU support instruments.

1.10. Relevant websites providing more information

There is a dedicated InvestEU website, which provides information about InvestEU (www.europa.eu/investeu).

2. Where are we in the implementation ?

2.1. Programme 2021-2027

	Commitments	Payments
2021 Implementation	2 401 817 098.94	265 162 421.84
2021-2027 Total envelop		
Cumulative implementation rate	%	%

The cumulative implementation rate includes the budget voted by budget authorities, as well as NGEU appropriations, EFTA and third country participations.

In 2021, the following commitments and payments were made:

- **The provisioning of the InvestEU** specific compartment of the Common Provisioning Fund (CPF), from which future calls on the EU guarantee are to be paid. In 2021, EUR 2 418 856 571.69 was committed (of which EUR 637 555 000,00 from the general budget, EUR 1 745 000 000.00 from NGEU and EUR 36 301 571.69 from predecessor financial instruments). In terms of payments, EUR 300 781 462.02 was paid, of which EUR 100 000 000,00 from the general budget, EUR 151 000 000.00 from NGEU, EUR 36 271 308.05 from predecessor financial instruments and EUR 13 510 153.97 from transferred payment appropriations.
- **InvestEU Advisory Hub, InvestEU Portal and accompanying measures.** In 2021, EUR 814 839.11 was committed and EUR 159 144.84 was paid from the general budget. This included costs related to InvestEU Portal communication activities, functioning of the Investment Committee, IT development and maintenance. In addition, a global commitment of EUR 17 302 000.25 was carried out at the end of 2021. The InvestEU Advisory Hub will start operating upon the signature of the InvestEU Advisory Agreement with EIB expected on 9 March 2022.
- **Support expenditure for InvestEU.** In 2021, EUR 1 145 259.58 was committed (of which EUR 999 670.74 from the general budget and EUR 145 588.84 from NGEU) and EUR 493 123.03 was paid (of which EUR 424 658.47 from the general budget and EUR 68 464.56 from NGEU). This included costs related to InvestEU communication activities and events, IT development related to the InvestEU Management Information System and other support actions.
- **Contributions from other EU programmes to InvestEU (“top-ups”).** At the end of 2021, EUR 65 114 074 was committed. This global commitment includes an amount of EUR 23 500 000 transferred to the InvestEU Advisory Hub, Portal and accompanying measures. The appropriations will be used upon the signature of the InvestEU guarantee and advisory agreements with EIB and EIF.

- **The European Investment Fund capital increase.** An amount of EUR 371 883 160.64 was committed and paid in 2021 for the subscription to the newly issued EIF's shares. The main aim of the participation in the capital increase of the European Investment Fund (EIF) is to allow the EIF to contribute to the implementation of the InvestEU Programme and to continue supporting the European economy and its recovery.

In 2022, the requested commitment and payment appropriations in the voted budget for 2022 will be utilized in line with the ECFIN work programme that enumerate the actions to be financed.

In 2023, the following commitments and payments appropriations are requested in the Draft budget 2023

EUR million	Commitments	Payments	
InvestEU provisioning need	2 759.7		1 300.0
InvestEU Advisory Hub, InvestEU Portal and accompanying measures	50.5		42.8
Support expenditure for "InvestEU"	1.5		1.5
Total	2 811.7		1 344.3

These appropriations will finance actions related to the implementation of the InvestEU programme as described further below.

The EU Guarantee under **the InvestEU Fund** (EU Compartment) will be implemented, for 75% of the budget, by the EIB Group. A Guarantee Agreement between the Commission and EIB Group was signed on 7 March 2022. In accordance with Article 13(5) of the InvestEU Regulation, the remaining 25% of the EU guarantee will be granted to other implementing partners. In April 2021, the Commission launched the first Call for Expression of Interest in order to select other implementing partner. Guarantee Agreements with implementing partners which have been selected under the Call are expected to be signed during 2022.

No contribution agreements have been signed until now for the Member State Compartment of the InvestEU Fund. Negotiations are ongoing with Greece and Romania. Initial discussions also took place with Bulgaria and Finland for a contribution from European Structural and Investment funds. However, up to now, no Partnership Agreements have been approved.

The **InvestEU Advisory Hub** was established pursuant to Article 25 of Regulation (EU) 2021/5231 ("InvestEU Regulation") and will provide advisory support for the development of investable projects and access to financing as well as related capacity building assistance. An Advisory Agreement should be signed in early 2022 with the EIB pursuant to Articles 11(3)(c) and 25 of the InvestEU Regulation, followed by signatures of advisory agreement with other Advisory Partners in 2022, selected through the Call for Expression of Interest of April 2021. The EIB will act as the main advisory partner of the Commission (by implementing 75% of the InvestEU advisory budget) and deliver advisory initiatives under all four policy windows of the InvestEU programme. In addition, acting independently from its role as Advisory Partner, the EIB will also provide operational support to the Commission in managing and implementing the InvestEU Advisory Hub.

The implementation of the above set of activities is to be entrusted to the EIB and other Advisory Partners under indirect management in accordance with Article 62(1)(c)(iii) of the Financial Regulation.

The **InvestEU Portal** was established on the basis of the Commission Implementing Decision (EU) 2021/626 of 14 April 2021. It continues the work under its predecessor, the EIPP, and it is designed to contribute towards the establishment of an EU-wide promotional project platform, helping the acceleration and the fruition of more investment within the Union.

The Investment Committee of the InvestEU Fund (Investment Committee) has been established in accordance with Article 24 of the InvestEU Regulation. This independent body is responsible for examining and approving the coverage of the EU budget guarantee for the financing and investment operations proposed by the implementing partners as the sole decision making body for that purpose. The Investment Committee is composed of 12 members who were in 2021 selected through a call for applications and appointed by the Commission at the recommendation of the InvestEU Steering Board. The Investment Committee will begin examining and approving the use of the EU budget guarantee upon the signatures of guarantee agreements with implementing partners, starting with financing and investment operations proposed by EIB Group [from March 2022] and followed by other implementing partners from the 2nd half of the year.

To support the implementation of the InvestEU Programme, the Commission has developed a new IT system (the InvestEU Management Information System (InvestEU MIS), which should be operational in early 2022. The new IT system will cover the various aspects of the InvestEU Programme and will allow a more efficient exchange of information with between the Commission and the Implementing and Advisory Partners.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitment	8 548.4	8 548.5	100%

Payments	8 137.7	95%
-----------------	---------	-----

As EFSI is a completion programme, no commitments from the general budget have been made since 2021. However, amounts from assigned revenues are still committed and paid to the EFSI provisioning. Moreover, in accordance with Article 35 (2) of the InvestEU Regulation, as of 2023 all surplus of provisions may be used for the provisioning of the InvestEU, taking into account the budgetary needs for the Public Sector Loan Facility for 2021-2027.

In 2021, the following commitments and payments were made:

- **The provisioning of the EFSI** compartment of the Common Provisioning Fund (CPF), from which calls on the EU guarantee are paid. In 2021, EUR 394 872 243,22 was committed stemming from assigned revenues from the EFSI Programme and other financial instruments³. In addition, EUR 832 534 919,11 was paid, coming from the general budget and assigned revenues
- **The European Investment Advisory Hub (EIAH)**. In 2021, EUR 10 692 72300 was paid. This covered payments under the existing EIAH Specific Grant Agreements.
- **The European Investment Project Portal (EIPP)**. In 2021, EUR 375 526,56 was paid. This included costs related to EIPP communication, screening and IT activities.

In 2022, the requested payment appropriations in the voted budget for 2022 will be utilized for the EFSI provisioning, the EIAH and EIPP implementation as described further below.

In 2023, the following commitments and payments appropriations are requested in the Draft budget 2023:

EUR million	Commitments	Payments
European Investment Advisory Hub (EIAH)		11 164. 241
Total		11 164. 241

These appropriations will be used for the European Investment Advisory Hub (EIAH) implementation as described further below.

In 2021, EFSI continued making progress towards the objectives set by the EFSI 2.0 Regulation, in particular on the new climate target of 40% under the Infrastructure and Innovation Window, on the investment mobilised as well as the impact on jobs and growth. By end 2021, EFSI triggered EUR 524.3 billion in cumulative investment across all Member States, thus exceeding the EUR 500 billion end-2020 target while alleviating the impact of COVID-19 on Europe's economy.

EFSI came to the end of its investment period for approvals of operations on 31 December 2020. Currently, the focus is on signing approved operations before the deadline for signatures of 31 December 2022. Given the long-term nature of support under the EFSI, operational monitoring will continue until repayment of all underlying financing and investment operations (expected until 2080). Besides, in 2022 the focus will be also on a smooth transition towards the InvestEU Fund, the proposed new investment support instrument for the next MFF.

In terms of guarantee calls, a total of EUR 222.6 million was called from the EU guarantee as at the end of 2021. However, due to the current economic situation and the continuous pandemic implications, an increase in the number and volume of future guarantee calls can be expected.

For the EIAH implementation, annual specific grants agreements (SGAs) are concluded between the EU and the EIB for the latter to provide technical assistance to final beneficiaries aiming at developing a pipeline of investment projects. The last annual Specific Grant Agreement, the 2020 SGA was signed in December 2020, and it was amended in October 2021 and has an N+3 implementation period.

As regards the EIPP, the EU's online matchmaking platform, until the launch of the InvestEU Portal on 21 April 2021, it continued to provide visibility to EU-based projects enabling investors to easily find investment opportunities in Europe.

3. How is the programme performing ?

3.1. Performance

3.1.1. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started.

³ I.e. Marguerite Fund

The implementation of the InvestEU Programme will be monitored through more than 30 key performance and monitoring indicators (defined in the annex III of InvestEU legal basis) referring to the InvestEU Fund, the Advisory Hub and the Portal and Pillars as well as to the four policy windows of the Programme (see section 4 for further details).

InvestEU Fund

Despite advanced negotiations on the InvestEU Guarantee Agreement with the EIB Group and the launch of the first Call for Expression of Interest in April 2021 to select other implementing partners, no guarantee agreements were signed with implementing partners at the end of 2021. The guarantee agreement with the EIBG was signed in March 2022 and further signatures with other implementing partners are expected to take place at a later stage.

Therefore, no information on the InvestEU Fund performance can be provided with reference to 2021.

In order to reach implementation targets for the InvestEU Fund and to comply with requirements under the NGEU Regulation, measures are being taken to accelerate financing of investments by implementing partners. These include the ‘warehousing’ of eligible financing and investment operations, in accordance with Article 35.4 of the InvestEU Regulation, allowing to provide risk coverage for operations approved or signed after 1 January 2021 and before the signature of the Guarantee Agreement between the EU and an Implementing Partner as well as the use of framework operations for projects that have similar characteristics).

InvestEU Advisory Hub

Despite advanced negotiations on the InvestEU Advisory Agreement with the EIB and the launch of the first Call for Expression of Interest to select other Advisory Partners, no advisory agreements were signed with Advisory Partners at the end of 2021. The advisory agreement with the EIB was signed in March 2022 and further signatures with other advisory partners are expected to take place at a later stage.

Therefore, no information on the InvestEU Advisory Hubs performance can be provided.

InvestEU Portal

After the launch of the InvestEU Portal website on 21 April 2021, the entry-level content and design of the InvestEU Portal webpages were updated accordingly. The enhanced features and functionalities of the InvestEU Portal are in the process of implementation. In 2021, 358 projects were received and 205 projects were published. As of end 2021, the InvestEU Portal provided 1 317 investment opportunities and more than 90 projects have received financing after being published on the Portal. The total amount of investment opportunities and the number of projects that have received financing are cumulative figures including also the EIPP.

In 2021, the InvestEU Portal effectively collaborated with its partners and co-organised several events and participated at numerous events, which were organised mostly online due to the continuous pandemic situation.

The EBAN Annual Congress took place on in June 2021 and was organised together with the EIPP partner the European Business Angels Network (EBAN). 18 start-ups were selected to pitch to investors.

The European Angel Investment Summit took place in October 2021 and was co-organised together with EBAN, DG GROW and Enterprise Europe Network (EEN) with almost 350 attendees. During the two-day summit, 15 InvestEU Portal projects joined the pitching.

A joint virtual e-pitching event on Women-entrepreneurship, co-organised with the InvestEU Portal partner EuroQuity (Bpifrance) & Blueinvest where four InvestEU Portal women-led projects participated.

The InvestEU Portal was also promoted at various other occasions throughout the year. Nonetheless, the challenges of continuously receiving new good projects for publication as well as new quality investors’ registrations remain. Therefore, further communication and promotional activities (e.g. participations to conferences and events, social media campaigns) are envisaged to achieve further visibility of the InvestEU Portal.

3.1.2. Previous Programme Performance

EFSI

The European Fund for Strategic Investments (EFSI) is achieving its objectives, as set in the Regulation. It has supported investments by providing risk-bearing capacity to the EIB and has increased access to financing for SMEs and small-midcaps. The EFSI triggered additional investment of EUR 524.3 billion, thereby exceeding the target of unlocking additional investment of at least EUR 500 billion while alleviating the impact of COVID-19 on Europe’s economy.

The latest independent evaluation on the application of the EFSI Regulation concluded to the overall relevance and effectiveness of the EU Guarantee. In particular, the levels of the EU Guarantee and of the EIB contribution were appropriately sized, which allowed the EIB Group to mobilise a level of investment in line with expectations. The adjustment of the Target Rate for the Guarantee Fund under EFSI 2.0 resulted in a more efficient use of the EU budget⁴. Moreover, part of the additional funds required

⁴ The Guarantee Fund has to be maintained at a certain percentage (the “target rate” also called EFSI provisioning rate) of the total amount of the EU-guaranteed obligations. Under EFSI 1.0 the target rate was set at 50%, estimated before the start of EFSI. The target rate was adjusted under EFSI 2.0 and set at 35%.

to provision the Guarantee Fund originated from EFSI revenues and reflows from other financial instruments, hence limiting the impact on other parts/expenditures of the EU budget and leading to an increased efficiency of EU budget support. As mentioned also in the section on Evaluations/studies conducted, the Commission will launch shortly an ex-post evaluation of EFSI, which is expected to be transmitted to the European Parliament and Council by end-2022.

The EFSI has significantly increased the volume of European Investment Bank (EIB) Group financing and investment operations in priority areas. As of end-2021, the EFSI enabled the EIB Group to approve EUR 99.3 billion of riskier financing and investment operations, of which EUR 86.9 billion have already been signed. As of 31 December 2021, 1 513 EFSI projects have been approved by the EIB Group for a total investment value of EUR 524.3 billion: EUR 293.6 billion for Infrastructure and Innovation Window (IIW) investments (708 approved projects) and EUR 230.7 billion (805 approved projects) under the SME Window (SMEW).

The EFSI has also enabled the EIB Group to support unserved markets and clients, for example for the IIW more than three quarters of the clients are new EIB counterparts.

The EFSI is also implemented in strong cooperation with national promotional banks and institutions (NPBIs). As of 31 December 2021, cumulative EFSI investment mobilised in cooperation with NPBIs amounted to EUR 118.8 billion or 22.7 % of the EFSI total. Moreover, 63 investment platforms were approved under the EFSI to help support smaller projects in 22 Member States with sectoral focus on environment, SMEs and social infrastructure projects.

All EU Member States have received financing supported by the EFSI. At the end of 2021, the top beneficiary countries, in terms of the EFSI investments mobilised relative to GDP, were Estonia, Greece, Bulgaria, Portugal and Finland.

While the EFSI is a demand driven instrument, further efforts were ongoing with an aim to improve the geographical balance among the MS by end-2020 (see section on 'Evaluations/studies conducted'). The EFSI Strategic orientation provided that the share of investment under IIW in any three Member States together (measured by signed loans/investment amounts) should not exceed the indicative limit of 45 % of the total EFSI portfolio. As of 31 December 2021, the share of top three Member States (France, Italy and Spain) accounts for 49.4 % of signed EFSI financing and for 45.02 % of investment mobilised by signatures under the IIW. Both metrics are slightly above the indicative limit of 45 % set out in the Strategic Orientation. However, it is expected that at end of the signature period, on 31 December 2022, the actual concentration limit will be close to 45%.

Although the EFSI is neither geographically nor sector-specifically earmarked, but demand driven, it has backed projects across all eligible sectors under the programme.

Support to different sectors under EFSI is considered balanced. The three largest sectors in terms of investment mobilised are access to finance for SMEs and Mid-Caps (32 %), RDI (25 %) and Energy (16 %). As far as IIW is concerned, all the sectors are within the 30 % limit with largest share of the Energy sector (28 %).

On climate objectives, EFSI has slightly surpassed the 40 % objective for climate action under Infrastructure and Innovation Window. In fact, as of end-2021 44 % of signed operations under the Infrastructure and Innovation Window (IIW) in 2021 contributed to climate action. This was achieved through more focused support of climate related projects like renewable energy and energy efficiency.

On job creation and growth, the EIB estimated that as at 31 December 2021, the EFSI IIW operations contributed to creation of more than 1.3 million jobs. As regards intermediated operations under IIW and SMEW, the EFSI helped sustain and support about 12.7 million jobs. EIB also estimated that, by 2019, EFSI investments had increased EU GDP by 0.9 %.

Following the outbreak of the COVID-19 pandemic in early 2020, available EFSI resources were redirected to existing guarantee instruments, managed by the EIF in order to rapidly mobilise a significant financing volume to the benefit of hard-hit companies.

Furthermore, although the fight against the Covid pandemic was not in EFSI's specific objectives, in order to provide support to final beneficiaries within the fastest timeframes, the EFSI Steering Board also decided in April 2020 to simplify the approval process for specific underlying operations within Covid-19 Envelopes of financing under the IIW. Few examples of EFSI projects:

- EFSI supported the German BioNTech SE with EUR 100 million in debt financing for the development and manufacturing of COVID-19 vaccine. This allowed the company to expand its manufacturing capacity in order to supply the vaccine worldwide as fast as possible in response to the pandemic.
- EFSI supported a EUR 25 million loan to Apeiron Biologics, a private Austrian clinical stage biotech company. Apeiron has been working in the field of immune-oncology to develop new cancer treatments.
- EFSI supported a company called Azimo based in Poland with a mission to make international payments affordable to all. With its fast, simple and low-cost international payment solutions around the world, Azimo furthers the UN Sustainable Development Goals of financial inclusion and inequality reduction.
- EFSI supported a company called Olmix in France with a EUR 30 million loan. The company uses algae and clay to create better food and fertiliser that can improve the nutrition, hygiene and health of plants, animals and humans.

European Investment Advisory Hub (EIAH)

Since its launch in September 2015 and until end-2023, the EIAH offers project promoters a single point of entry for technical assistance, guidance and advice covering the entire project lifecycle.

The EIAH is now a well-established and recognised advisory support tool for project promoters and an influential networking partner for the NPBIs (national promotional banks and institutions). Thus, after a ramp-up phase that took longer than originally expected, the EIAH became a performing programme that continued to perform well in 2021, since, as of the end of 2021, 1 044 requests were allocated for EIAH support, and 120 of the EIAH assignments entered the EIB lending appraisal system and could potentially benefit from the EFSI guarantee (representing an estimate of investment of more than EUR 15 billion under EFSI).

The cooperation with NPBIs is one of the EIAH's main tools to ensure local outreach. As of end of 2021, the EIAH concluded 29 Memoranda of Understanding (MoUs) with NPBIs from 22 Member States and 4 MoUs with other institutions in order to stimulate local demand for advice.

In addition, a call for proposals to develop local advisory capacity within NPBIs was launched by the EIAH in December 2017. The call offered co-funding support (EUR 7 million) in the form of grants for a wide range of programmes to support development of investable projects by participating NPBIs. The types of eligible activities include: (a) delivery of investment advisory services on behalf of the EIAH, (b) establishment or developing organisational capacity and (c) knowledge transfer for the development of a local advisory capacity. As of the end of 2021, 14 funding agreements were signed and 7 of them are already completed.

As of end of 2021, the 'Environment and resource efficiency' EIAH sector (which includes Climate Action and Circular Economy) represented more than 20 % of the requests reaching the EIAH. 26 % of EIAH assignments (requests receiving detailed advisory support) have a climate dimension whereas 2 % of the requests have a circular economy dimension. EIAH assignments with a climate action dimension represent an envelope of EUR 26 million (32 % of the total EIAH assignments estimated budget).

Finally, the EIB signed an initial agreement with the EBRD on 20 March 2017 to deliver the EBRD Advice for Small Businesses (ASB) Programme in Bulgaria, Greece, Romania and Croatia under the European Investment Advisory Hub umbrella. It includes delivery of more than 434 advisory projects during the funding agreement lifetime (until end-2022), across Bulgaria, Greece, Romania and Croatia, of which at least 10 % will be carried out with international advisers, depending on market needs. As of the end of 2021, 350 requests under this programme were receiving detailed advisory support.

As of end-2021, the EIAH received a total of 2456 requests, of which 70 % were received directly by EIAH, whilst the remaining were sourced through partnership arrangements. 2104 requests were project-related and, of those, 1174 came from the private sector. Moreover, 1044 requests have already been allocated to receive more detailed technical assistance from the EIAH, and of those 379 completed.

European Investment Project Portal (EIPP)

The EIPP has been established as the EU's online matchmaking platform with main objective to bring together investors and project promoters by providing an easily-accessible and user-friendly database, giving projects more visibility and helping them secure the financing they need to grow and enabling investors to find investment opportunities.

From January until April 2021, when the InvestEU Portal was launched, 44 projects were received and 27 projects were published on the EIPP. As of 20 April 2021, the EIPP provided 1 112 investment opportunities. In total, more than 80 projects have received financing after being published on the EIPP. As of 20 April 2021, the EIPP enabled more than 80 successful matches between project promoters and investors and provided visibility to 1 112 investment opportunities with a total proposed investment of EUR 107.7 billion. Due to the pandemic, all EIPP-related events were organised online in early 2021 with the initiative promoted at various occasions. As of 21 April 2021, the EIPP initiative continued functioning under the InvestEU Portal. Furthermore, the EIPP transition to InvestEU entailed several IT enhancements. As regards the InvestEU Portal Website, it was fully integrated in the InvestEU corporate website.

Lessons learned

Based on the implementation of EFSI, EIAH and EIPP, some key lessons have been taken for InvestEU:

- first of all, the InvestEU Fund and InvestEU Advisory Hub will be implemented not only by EIB and EIF, but will be open to many other entities, such as international financial institutions and national promotional banks.
- secondly, InvestEU brings-in more simplification by pulling together the EFSI budgetary guarantee, 13 financial instruments and 12 advisory initiatives.
- InvestEU will be more targeted to specific policy objectives, through its four policy windows. It will remain a demand-driven instrument but with a stronger policy focus.
- there will be a clearer definition of additionality, as set out in Annex V of the InvestEU Regulation, and of mobilised investment.
- finally, InvestEU includes a very comprehensive list of performance and monitoring indicators, as set out in Annex III of the InvestEU Regulation.

Regarding the InvestEU Advisory Hub specifically, the following lessons learnt have already been incorporated:

- One-stop shop principle for advisory support to mitigate duplication and overlapping initiatives through the creation of a central entry point for the InvestEU Advisory Hub;
- Opening to several Advisory Partners to facilitate the local outreach; and
- The signature of a single agreement per advisory partner to avoid internal competition between the different advisory offers financed by several EU resources.

3.2. Key achievements

1.5 million	12.7 million	0.5 million	17.9 million	20 million	23 million	39.5 million	478 million
small and medium-sized enterprises were supported between 2015 and 2021.	jobs were sustained and supported between 2015 and 2021.	affordable flats were built or renovated between 2015 and 2021.	additional households were powered by renewable energy through investments in energy generation between 2015 and 2021.	additional households had access to high-speed internet between 2015 and 2021.	people covered by improved health care services between 2015 and 2021.	people benefited from better waste treatment between 2015 and 2021.	additional passenger trips benefitting from new or improved transport infrastructure between 2015 and 2021.

The table shows the key achievements of EFSI from inception to the end of 2021⁵. Other achievements are shown in section 3.1 above.

3.3. Evaluations, studies and reports

Evaluations

In 2018, two EFSI evaluations were completed: an independent external evaluation contracted by the Commission and an evaluation by the Operations Evaluation Division (EV) of the EIB. Details on the conclusions of these previous EFSI related evaluations were provided in the 2021 Programme Statement for the Draft Budget 2022.

In 2022, an independent ex-post evaluation of the EFSI 2.0 is planned as required by the EFSI Regulation (Regulation (EU) 2017/2396). This evaluation shall include the assessment of the functioning of EFSI, the use of the EU Guarantee (whether the guarantee represents a good use of EU resources), an assessment of the European Investment Advisory Hub's market uptake and functioning, as well as an assessment of the European Investment Project Portal. The Commission has to submit at the end of the investment period to the European Parliament and the Council a report containing this independent evaluation and, for this purpose, the Commission intends to assign a contract to carry out an external evaluation.

Audits

In January 2019, the European Court of Auditors (ECA) published a Performance Audit on the implementation of the EFSI titled '[European Fund for Strategic Investments: Action needed to make EFSI a full success](#)'. The ECA audit looked at operations under the EFSI 1.0. The ECA concluded that the EFSI has been effective in raising finance to support substantial additional investment in the EU. The report also made recommendations for areas of improvement, which were addressed to the EIB Group, to the Commission or both. Most recommendations were already addressed by the EFSI 2.0 Regulation. Almost all the ECA main recommendations were reported as implemented within the follow-up performed by EP in 2021, with the exception of the first recommendation (i.e. an assessment of EFSI risk profile), which is considered partially implemented and it is linked to the EFSI ex-post evaluation to be conducted and finalised in 2022.

In 2019, the ECA initiated a Performance Audit on the implementation of the EIAH. The final report was adopted in October 2020. All the recommendations related to the monitoring and improvement of the EIAH performance and inclusion of lessons learned from the European Investment Advisory Hub (EIAH) in the InvestEU Advisory Hub (by targeting advisory assistance to developing projects, by direct cooperation with national promotional banks, by proactive approach through local presence towards requests for advisory, by designing of the new Advisory Hub website, and also by developing a monitoring performance framework) have been fully or partially addressed.

In 2020, the ECA published a report on the performance of the EU Budget, which included a chapter on EFSI⁶. Details on the ECA conclusions are provided in the 2021 Programme Statement.

4. Programme 2021-2027 - Key monitoring indicators

⁵ The provided figures refer to the period 2015-2021.

Specific Objective 1: Support financing and investment operations that contribute to the general objectives of the InvestEU Programme

Indicator 1: Volume of operations signed

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	EUR million
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to the objective of supporting InvestEU financing and investment operations.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.

	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	EUR million
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to boosting digitalisation.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 11: Investment supporting industrial transition

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	EUR million
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to promoting industrial transition.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 12: Investment supporting just transition

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									

Are we on track :	No data
-------------------	---------

Indicator type	Output
Unit of measurement	Number; EUR million
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to supporting investment in order to uphold and strengthen existing strategic value chains of tangible or intangible assets, to develop new ones, and to maintain and reinforce activities of strategic importance to the Union, including Important Projects of Common European Interest, in relation to critical infrastructure, whether physical or virtual, in the areas of cybersecurity, space and defence.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Specific Objective 2: Support financing and investment operations in sustainable infrastructure

Indicator 1: Additional renewable and other safe and sustainable zero and low-emission energy generation capacity installed (in megawatts (MW))

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Megawatts (MW)
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to supported InvestEU operations which contribute to expanding the generation, supply or use of clean and sustainable renewable and safe and sustainable other zero and low-emission energy sources and solutions.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 2: Number of households, number of public and commercial premises with improved energy consumption classification

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to supported InvestEU operations which contribute to promote energy efficiency and energy savings (with a focus on reducing demand through demand side management and the refurbishment of buildings).
Link MFF 14-20 / MFF 21-27	MFF 21/27

Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 3: Estimated energy savings generated by the projects (in kilowatt-hours (kWh))

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Kilowatt-hours (kWh)
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to promote energy savings.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 4: Annual green-house gas emissions reduced/avoided in tonnes of CO2 equivalent

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Tonnes
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to the decarbonisation of: a) Energy-intensive industries and the substantial reduction of emissions in such industries and b) Energy production and distribution chain by phasing out the use of coal and oil.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 5: Volume of investment in the development, smartening and modernisation of sustainable energy infrastructure

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	EUR million
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners

Link to the objective	This indicator is directly linked to InvestEU operations which contribute to the development, smartening and modernisation of sustainable energy infrastructure, in particular, but not only transmission and distribution level, storage technologies, electricity interconnection between Member States and smart grids.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 6: Additional households, enterprises or public buildings with broadband access of at least 100 Mbps upgradable to gigabit speed, or number of WIFI-hotspots created

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to the development of digital connectivity infrastructure, whether physical or virtual, in particular through projects that support the deployment of very high capacity digital networks, 5G connectivity or that improve digital connectivity and access, particularly in rural areas and peripheral regions.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 7: Number of cross-border and missing links projects (including projects relating to urban nodes, regional cross-border rail connections, multimodal platforms, maritime ports, inland ports, connections to airports and rail-road terminals of the TEN-T core and comprehensive network)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number of projects
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to the development of the trans-European transport network (TEN-T) infrastructure, including infrastructure maintenance and safety, the urban nodes of TEN-T, maritime and inland ports, airports, multimodal terminals and the connection of such multimodal terminals to the TEN-T networks, and telematics applications.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 8: Number of projects contributing to the digitalisation of transport, in particular through the deployment of European Rail Traffic Management System (ERTMS), River Information System (RIS), Intelligent Transportation System

(ITS), vessel traffic monitoring and information system (VTMIS)/e-maritime services and Single European Sky ATM Research (SESAR)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to the digitalisation of transport, in accordance with Union transport priorities and the commitments taken under the Paris Agreement on Climate Change.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 9: Number of alternative fuel supply points built or upgraded

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to alternative fuel infrastructure for all modes of transport, including electric charging infrastructure.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 10: Number of projects contributing to the safety of transport

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to designing and applying technologies that help to improve the safety of vehicles and road infrastructure.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be

	defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 11: Investment contributing to the implementation of plans and programmes required by the Union environmental acquis relating to air quality, water, waste and nature

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	EUR million
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to improving air quality, water, waste and nature, as required by the Union environmental acquis.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Specific Objective 3: Support financing and investment operations in research, innovation and digitisation, including support for the upscaling of innovative companies and the rolling out of technologies to market.

Indicator 1: Contribution to the objective of 3 % of the Union's gross domestic product (GDP) invested in research, development and innovation

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	EUR million
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to investing 3% of the Union's GDP in research and innovation, as per the Lisbon strategy.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 2: Number of enterprises supported by size carrying out research and innovation projects

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

track :	
Indicator type	Result
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to the InvestEU operations which contribute to supporting financing and investment operations in research, innovation and digitisation.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Specific Objective 4: Increase the access to and the availability of finance for SMEs and for small mid-cap companies, and to enhance the global competitiveness of such SMEs

Indicator 1: Number of enterprises supported by size (micro, small, medium-sized and small mid-cap companies)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to increasing the access to and the availability of finance for enterprises, from micro to small mid-cap companies.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 2: Number of enterprises supported by stage (early, growth/expansion)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Link to the objective	This indicator is directly linked to the SME window focus on investments in SMEs.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.

Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Specific Objective 5: Increase the access to and the availability of microfinance and finance to social enterprises, support financing and investment operations related to social investment, competences and skills and develop and consolidate social investment markets

Indicator 1: Social infrastructure: Capacity and access to supported social infrastructure by sector: housing, education, health, other

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to financing and investment related to social investment, in particular on social infrastructure.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 2: Microfinance and social enterprise finance: Number of microfinance recipients and social enterprises supported

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to increasing access to and the availability of microfinance and finance to social enterprises
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Indicator 3: Number of individuals acquiring new skills or having their skills validated and certified: formal, education and training qualification

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final

Are we on track :	No data
-------------------	---------

Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Operational reports from implementing partners
Link to the objective	This indicator is directly linked to InvestEU operations which contribute to promoting people competences and skills.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Specific Objective 6: Under the InvestEU Advisory Hub, to provide advisory support for investment project identification, preparation and development to public and private counterparts.

Indicator 1: Number of engagements of the InvestEU Advisory Hub by sector and Member State

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Operational reports from advisory partners
Link to the objective	This is the key indicator regarding the implementation of the InvestEU Advisory Hub.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	Due to the market-driven nature of the InvestEU Programme, targets and milestones cannot be defined.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The implementation of the InvestEU Programme has started in 2022, therefore no results could be provided at this stage.

Specific Objective 7: To create a publicly available InvestEU web portal where EU based projects promoters will be given the opportunity to boost the visibility of their projects to potential international investors

Indicator 1: The number of project published on the InvestEU Portal

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	150	300	450	600	750	900	1 000			1 000
	Actual Progress									Final
	205									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Commission operational data
Link to the objective	This is the key indicator regarding the implementation of the InvestEU Portal.
Link MFF 14-20 / MFF 21-27	MFF 21/27
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The indicator is on track and it exceeded its target due to intensive communication efforts.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: European Fund for Strategic Investments (EFSI)

Specific Objective 1: Increasing the number and volume of European Investment Bank (EIB) financing and investment operations in priority areas

Indicator 1: Cumulative volume of investment mobilised

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
			125	245	340	420	500	500		500
	Actual Progress									Final
		60	164.1	256.3	375.5	458.4	545.3	524.3		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Estimated volume of funding raised (EUR billion, approved operations).
Cut-Off Date	31/12/2021
Data source	EIB operational reporting
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	MFF 14-20
Other methodological comments	The EFSI 1.0 target is to mobilise by July 2018 at least EUR 315 billion of additional investment. The EFSI 2.0 target is to mobilise at least EUR 500 billion of additional investment by 2020.
Full metadata available at this address	
Justification of the trend	The indicator is on track and it even exceeded its target (the decrease in 2021 is due to the cancellation of some EFSI operations after the end of its approval period).

Indicator 4: Aggregated multiplier effect

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
		15	15	15	15	15	15	15		15
	Actual Progress									Final
		13.3	15.18	13.53	15.6	15.66	15.46	15.74		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Multiple in number of times of the EU guarantee amount.
Cut-Off Date	31/12/2021
Data source	EIB operational reporting
Narrative	
Methodology	Multiplier effect
Link MFF 14-20 / MFF 21-27	MFF 14-20
Other methodological comments	The expected effective EFSI multiplier, which can only be calculated at the end of the EFSI investment period, is around 15 in terms of the use of the EU guarantee compared to the total investment raised for the projects supported under the initiative and the terms of the transactions. As at end-2021, the IIW multiplier related to operations signed was estimated at 13,48x and the multiplier related to SMEW operations signed was assessed at 20,49x. This means that a multiplier effect should be generated by means of the provision of an EU guarantee to the EIB, so that EUR 1 of the EU guarantee under this initiative could generate approximately EUR 15 investment in projects.
Full metadata available at this address	
Justification of the trend	The indicator is on track and it even exceeded its target.

Indicator 5: Share of EFSI Financing under the IIW that supports project components that contribute to climate action

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2018
					0.4	0.4	0.4	0.4		0.4
	Actual Progress									Final

					0.359	0.402	0.431	0.436		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Share of action components (Percentage, signed operations)
Cut-Off Date	31/12/2021
Data source	EIB operational reporting
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	MFF 14-20
Other methodological comments

Justification of the trend	The indicator is on track and it even exceeded its target.

Specific Objective 4: To provide advisory support for investment project identification, preparation and development to public and private counterparts, not necessarily linked to EFSI operations through the European Investment Advisory Hub (EIAH)

Indicator 1: Number of projects for which the support have been requested

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
			200	200	200	200	200	200		200
	Actual Progress									Final
		70	271	334	416	456	290	433		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of projects (annual)
Cut-Off Date	31/12/2021
Data source	EIB operational reporting
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	MFF 14-20
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The indicator is on track and it even exceeded its target.

Specific Objective 5: To create a publicly available, secure web portal where EU based project promoters will be given the opportunity to boost the visibility of their projects to potential international investors through the European Investment Project Portal (EIPP).

Indicator 1: Number of projects published on the EIPP

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
			150	300	450	500	500	500		500
	Actual Progress									Final
		0	139	238	508	956	1 163	1 112

Justification of the trend	The indicator is on track and it even exceeded its target.
----------------------------	--

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	722.06	904.40	843.52	58.36	59.53	60.72	61.59	2710.18	30%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

Actions under the InvestEU Programme are expected to contribute at least 30% of the overall financial envelope of the InvestEU Programme to climate objectives. This will be calculated according to the Commission guidance on the InvestEU Programme climate and environmental tracking for implementing partners.

The EFSI 2.0 Regulation, while recognising the demand-driven nature of the EFSI, introduced a target of at least 40% of the EFSI financing under the Infrastructure and Innovation Window to support projects with components that contribute to climate action, in line with the COP21 commitments. The EIB uses its internationally agreed methodology, as part of its rules and procedures, to identify climate action components or cost shares of supported operations. A Key Monitoring Indicator (KMI) referring specifically to the contribution of EFSI financing under the IIW to climate action was introduced in 2018.

Under InvestEU, implementing partners will report on a key performance indicator on investment supporting climate objectives, per policy window. The methodology for this indicator should be agreed with the implementing partners early 2022.

6.1.3. Key achievements

Examples of achievements that were financed by the programme are:

- EFSI supported a EUR 70 million loan to Talasol Solar energy power plant based in Spain. The plant is expected to be operational in 2020 and create 500 jobs during the implementation phase.
- EFSI supported a EUR 7.5 million loan to GreenFiber International SA based in Romania to finance a recycling and circular economy project. The project will contribute to the creation of 280 full-time jobs and will increase the amount of waste collected and processed by over 50 000 tonnes per year.

6.1.4. Performance

As of December 2021, the cumulative share of climate action components under EFSI IIW was 43.6 % for signed amounts.

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution		0.00	0.00					0.00
Share compared to total envelope		0.00 %	0.00 %					0.00 %

(*)These amounts include NextGenerationEU top-ups if any

6.2.2. Explanation On the financial contribution

Actions under the InvestEU Programme are expected to contribute, without setting an explicit target for the InvestEU Programme, at least to the ambition of 7.5% of the entire EU budget reflecting biodiversity expenditures in 2024 and 10% in 2026 and 2027, while considering the existing overlaps between climate and biodiversity goals.

Under InvestEU, implementing partners will report on operations contributing to biodiversity.

6.3. Contribution to clean air financing

6.3.1. Contribution

2021-2022 Estimates		2023-2027 programming (EUR million)					Total
2021	2022	2023	2024	2025	2026	2027	

	0.00	0.00					0.00
--	------	------	--	--	--	--	------

(*)These amounts include NextGenerationEU top-ups if any

6.3.2. Key achievements and Performance (2014-2020)

The EFSI investments in non-combustible renewable energy sources have a secondary positive impact on clean air when this replaces energy production from more polluting sources (see information on SDG 7). It is estimated that approximately EUR 5.8 billion of financing approved under EFSI as of 31 December 2021 contributed principally to clean air objectives. This is expected to help mobilise approximately EUR 29 billion of public and private investments.

6.4. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates	2022-2027 programming					Total
2021	2022	2023	2024	2025	2026	2027
Score 0*: 655.7						
Score 0: 1.0						

(*)Consolidated information about the annual commitments implemented (total per score by programme **in EUR Million**)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

The InvestEU Regulation as well as the accompanying Investment Guidelines stresses in a number of places the importance of supporting/ taking into consideration the gender equality. This includes references ranging from the general to the more specific, such as addressing the digital gap between men and women and helping to encourage female creativity and entrepreneurial potential. In addition, gender equality is considered under the sustainability proofing process which InvestEU-supported projects have to undergo.

Related considerations have been embedded in particular into the flagship equity product to be implemented by the European Investment Fund, in order to incentivise and encourage gender diverse investment teams and female investors. Support to ‘gender smart’ financing will also be available under a dedicated initiative of the InvestEU Advisory Hub implemented by the EIB, aiming to improve access to finance for female-founded and female-led companies; increase women’s representation in the investment community by identifying barriers, strengthening women’s capacity, challenging unconscious bias; and increase awareness of the funding gap and of the missed opportunity.

Moreover, under InvestEU, implementing partners are required to report on operations contributing to gender equality. Therefore, for 2021 the amount of EUR 655.7 million of the voted InvestEU budget implementation is considered as likely to have an impact on gender equality. However, since InvestEU is a market-driven programme, the actual degree of integration of the gender equality dimension in the operations and thus the actual impact cannot yet be estimated.

6.5. Contribution to the sustainable development goals

6.5.1. Goals

SDG 1 End poverty in all its forms everywhere

The EFSI investment support for empowerment and economic advancement through micro-entrepreneurship, can further contribute to combatting poverty, reducing inequality and promoting peaceful and inclusive societies for sustainable development. Moreover, numerous important social housing projects have been undertaken, as for example in France, Spain, Poland, and Portugal. Over 531 000 social or affordable housing units were built or renovated with the EFSI support as of 31 December 2021.

SDG 3 Ensure healthy lives and promote well-being for all at all ages

As of the end of the EFSI approval period, the EFSI investments are estimated to have ensured better healthcare for 23 million people, through contribution to the rehabilitation and expansion of health facilities and the support given to medical research.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

The EFSI support for social entrepreneurship and social infrastructure contributes strongly to health and wellbeing and inclusive and quality education. As of 31 December 2021, approx. EUR 439.92 million of signed amounts were dedicated to education. This mainly related to social infrastructure investment for the purposes of education like schools or university campuses as well as support for SMEs active in the education sector.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

The EFSI investment support has significantly contributed to sustainable water management, wastewater treatment and sanitation. As of 31 December 2021, EIB signed around EUR 2.6bn of total EFSI lending volume for projects related to water supply, sewerage and waste management. It is estimated that at the end of the approval period of EFSI by end-2020 through EFSI support

some 25 million people are benefitting from safe drinking water and 4.8 million m³ of water per day capacity is ensured from constructed or rehabilitated water treatment plants.

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

It is estimated that the EFSI has facilitated the provision of renewable energy to approx. 10 million households as of end-2021. The EFSI investments are estimated to have helped saving over 7 150 GWh of energy per year through the energy efficiency measures of supported projects. As of 31 December 2021, the EFSI signed amounts for energy and environment and resource efficiency reached approx. EUR 19.0 billion and have mobilised an estimated EUR 94.9 billion of investment for energy capacity building from renewable energy sources, improving energy efficiency and supporting electricity network projects. It is worth noticing the promotion of major cross-border projects to increase interconnection and security of supply.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

EFSI investments can support meaningful advancements towards promoting sustained, inclusive and sustainable economic growth, and full and productive employment and decent work for all. EFSI investment support for empowerment and economic advancement through micro-entrepreneurship and SME support, can further contribute to combatting poverty, reducing inequality and promoting peaceful and inclusive societies for sustainable development. Due to the COVID-19 pandemic, many SMEs have faced a sharply reduced access to liquidity, which dramatically increased the threat of insolvencies. Based on the EUR 1 billion unlocked from the EFSI, the EIF provided guarantees worth EUR 2.7 billion to financial intermediaries, unlocking EUR 14.7 billion in available financing for businesses, including micro- and social enterprises as well as SMEs in the cultural and creative sectors as of the end of the approval period for EFSI.

Several employment and start-up programmes have been signed contributing to the creation of a well-qualified workforce as needed by modern economies, as well as generating employment opportunities for young people.

For IIW, EFSI operations are expected to have both temporary and permanent employment effects, related to the implementation and respective the operational phase of the EFSI projects. In addition to the direct impact of EFSI, there is also an indirect or induced employment impact to be considered (for example, a project to develop new transport infrastructure might contribute to new job opportunities in the local economy). By 31 December 2021, EFSI helped sustain and support 12.7 million jobs.

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

The EFSI's strong support for transport, social and digital infrastructure contributes to inclusive and sustainable growth. In addition, the EFSI's strong support for research, development and innovation projects helps foster innovation and contributes to sustainable industrialisation. As of 31 December 2020, investment in transport infrastructure materialised in signed amounts of approx. EUR 9.6 billion, unlocking some EUR 31.5 billion to promote transport networks, cleaner fleets, to reduce congestions and bottlenecks. These investments ensured that 478 million additional passenger trips benefited from new or improved transport infrastructure.

The EFSI financing targeted also the development of the broadband infrastructure needed to keep different actors connected, as well as development of new technologies needed to promote Europe's long-term competitiveness. The EFSI helped deliver high speed internet for 20 million additional households as of the end of its approval period in 31 December 2020.

SDG 10 Reduce inequality within and among countries

The EIAH is providing advisory support for investment project especially in countries where the financing via the capital market is the less developed. In terms of geographical coverage, 51 % of the advisory support assignments are targeting cohesion countries as of 31 December 2021.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

The EFSI's dedicated investments in economic and social infrastructure projects supports advancement towards promoting resilient and inclusive infrastructure, and further efforts to support service-rich integrated infrastructure projects would contribute to inclusive and sustainable cities. The EFSI supported projects about water supply and sanitation, wastewater and solid waste treatment and recycling as well as sustainable urban and rural development. For example, at the end of the EFSI approval period, better waste treatment was made available for 39.5 million people through the EFSI supported investments.

SDG 12 Ensure sustainable consumption and production patterns

The EFSI investment support to inclusive business practices and SME growth and development could also contribute to promoting sustainable production and consumption practices. This is the case of dedicated support to SMEs active in circular economy, those using recyclable materials, and those deploying energy efficiency measures.

SDG 13 Take urgent action to combat climate change and its impacts

EFSI 2.0 sets out a climate action target of 40% for IIW (excluding EFSI financing to SMEs and small Mid-Caps). For achieving this goal, projects such as energy efficiency and clean transport strongly contribute to combatting climate change and its impact, at the same ensuring access to affordable, reliable and sustainable energy. As of 31 December 2020 this target was exceeded and as of

31 December 2021 43.6 % of the financing under the IIW⁷ was dedicated to climate action. In addition, dedicated efforts are made to ensure uptake of broader sustainable growth projects beyond the climate target, and to place a stronger focus on sustainable investments across sectors.

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

EFSI is providing support to activities related to the sustainable use of marine resources, aquaculture and other elements of the wider bioeconomy. As of 31 December 2020, EFSI has mobilised over EUR 2.9 bn of signed financing in the bio-economy sectors.

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

EFSI investments have contributed to sustainable forest management. It is estimated that 4 500 hectares of new forestry area is planted and 13 m³ per hectare of yearly forest growth is ensured as a result of EFSI supported projects in this sector as of the end of its approval period at 31 December 2020.

⁷ Excluding EFSI financing to SMEs and small Mid-Caps.

HEADING 1: Single Market, Innovation and Digital**Connecting Europe Facility (CEF)****Lead DG: MOVE**

6.5. Contribution to the sustainable development goals.....	151

1. Overview

1.1. Challenges

In order to achieve smart, sustainable and inclusive growth, to stimulate job creation and to respect the long-term decarbonisation commitments, the Union needs an up-to-date, multimodal high performance infrastructure to help connect and integrate the Union and all its regions in the transport, energy and digital sectors. Through the Trans-European networks, those connections should help to improve the free movement of persons, goods, capital and services. In particular, they should facilitate cross-border connections, help combating climate change, foster greater economic, social and territorial cohesion and contribute to a more competitive and sustainable social market economy, as well as to accelerate post-coronavirus recovery

1.2. Mission (General objectives)

The aim of the Connecting Europe Facility (CEF) is to accelerate investment in the field of trans-European networks and to leverage funding from both the public and the private sectors, while increasing legal certainty and respecting the principle of technological neutrality. The CEF should also enable synergies between the transport, energy and digital sectors, thus enhancing the effectiveness of the Union action and optimising implementing costs. Moreover, the programme should also contribute to the EU action against climate change, support environmentally and socially sustainable projects and, where appropriate, climate change mitigation and adaptation actions.

1.3. Specific objectives

In pursuing its mission, the CEF targets the following specific objectives, which correspond to action strands:

1. In the transport sector, the CEF specific objectives aim at:
 - contributing to the development of projects of common interest relating to efficient, interconnected and multimodal trans-European transport network (TEN-T) and infrastructure for smart, interoperable, sustainable, inclusive, accessible, safe and secure mobility;
 - adapting parts of the TEN-T for a dual use of the transport infrastructure in view of improving both civilian and military mobility
2. In the energy sector, the CEF aims at:
 - developing projects of common interest relating to further integration of an efficient and competitive internal energy market, supporting interoperability of networks across border and sectors, facilitating decarbonisation of the economy, promoting energy efficiency and ensuring security of supply. Moreover, it facilitates cross-border cooperation in the area of energy, including renewable energies.
3. In the digital sector, the CEF aims at:
 - contributing to the development of projects of common interest relating to the deployment of safe and secure very high capacity digital networks and 5G systems, supporting an increased resilience and capacity of the digital backbone networks on EU territories by linking them to neighbouring territories, as well as fostering the digitalisation of transport and energy networks.

1.4. Public intervention context

Transport:

For the transport sector, the CEF contributes to the achievement of the Trans European Transport Network (TEN-T) policy.

The TEN-T policy aims at strengthening the social, economic and territorial cohesion of the Union and contributes to the creation of a single European transport area, which is efficient and sustainable, increases the benefits for its users and supports inclusive growth. The completion of the dual layer trans-European transport network (TEN-T) infrastructure along Europe is key to achieve these objectives. The network consists of a main backbone layer, the Core network, which includes the Core Network Corridors, to be completed by 2030 and the more capillary Comprehensive network, aiming at completing the connectivity and ensuring cohesion, to be completed by 2050.

CEF Transport also includes a new specific objective, with the aim to adapt the TEN-T Network for the dual use of the transport infrastructure with a view to improving both civilian and military mobility.

In line with articles 171 and 172 of the TFEU, Member States are responsible for implementing projects in the transport network, while the EU is contributing to the development of the trans-European network by identifying and supporting projects of common interest as per article 7 of the TEN-T Guidelines.

The Union support includes, together with the CEF, investments through the Cohesions Funds (Cohesion and ERDF in shared management), through the Recovery and Resilience Facility part of the Next Generation EU Budget (direct management) and through the InvestEU programme (financial products within the sustainable infrastructure window).

In this context; CEF Transport aims at supporting key infrastructure investments through grants (direct management) awarded following open competition among applicants having received the support of the concerned Member States.

Energy:

CEF Energy is an integral part of the Trans-European Networks for Energy (TEN-E) strategy. The TEN-E policy framework is focused on linking the energy infrastructure of EU countries. The TEN-E policy identifies nine priority corridors and three thematic areas in the field of cross-border energy infrastructure and establishes a biennial list of Projects of Common Interest (PCIs) that helps the EU meet its short and long-term energy and climate objectives. PCIs are chosen for their significant expected impact on energy markets and market integration (covering at least two EU countries), and expected contribution to the EU's energy security. They aim at diversifying sources, increasing competition in energy markets by offering alternatives to consumers, and contributing to the EU's climate and energy goals by integrating renewables. The European Green Deal has further emphasized the key enabling role of energy infrastructure in the transition to a climate neutral economy.

The TEN-E Regulation is based on Article 172 of the Treaty on the Functioning of the European Union which provides for the legal base to adopt guidelines covering the objectives, priorities and broad lines of measures envisaged in the sphere of trans-European networks as set out in Article 171. The guidelines also set the conditions under which the EU may financially support the PCIs. CEF Energy is one of the instruments to help reaching the policy objectives of the TEN-E strategy by providing financial support to some projects of common interest. Most PCIs are expected to be commercially viable and financed through regulated network tariffs.

In December 2021, the Commission and co-legislators reached a provisional agreement on a revised TEN-E Regulation which reflects the Green Deal objectives and makes it fit for the infrastructure needs of the energy system of the future. The revised Regulation excludes fossil fuel infrastructure categories and includes new infrastructure categories, helping to decarbonise the gas sector through renewable and low-carbon gases, including hydrogen. The 6th PCI list will be the first list under the revised Regulation, meaning that from the CEF Energy perspective, the 2024 call will be the first one where the new TEN-E comes in.

CEF Energy includes also a new window for cross-border cooperation in the field of renewables. The new window complements the already existing support for transmission grid infrastructure and storage under the TEN-E framework. This window contributes directly to the enabling framework for cooperation on renewables as called for under Article 3 (d) of Directive 2018/2001/EC (Renewable Energy Directive) which is based on the four cooperation mechanisms: statistical transfers, joint projects between Member States, joint projects with third countries and joint support schemes. In July 2021, the Commission and co-legislators adopted a proposal to revise the Renewable Energy Directive, aiming to increase the binding target for renewable energy in the EU energy mix from 32% to 40% by 2030.

Digital:

Consistent deployment of fixed gigabit/terabit and mobile 5G infrastructures is needed to meet the increasing demand for the secure transfer and processing of massive amounts of geographically distributed data. By their nature, trans-European, gigabit and terabit networks enable data to flow and people to collaborate wherever they are. They connect digital capacities such as cloud and high-performance computing as well as millions of objects and data able to transform vertical sectors such as health, education, tourism, manufacturing, transport and logistics. The COVID-19 pandemic has reconfirmed the importance of very high speed, reliable, secure and affordable internet connections for all: businesses, public services, citizens. Digital connectivity infrastructures are supported at European, national, regional and local levels. By addressing projects of common interest and focusing on cross-border interconnections, CEF Digital will contribute to cross-fertilise these investments and act as a catalyst for the EU-wide digital connectivity ecosystem. The underlying goal is to bring together, in an effective manner, public support and private investment. CEF Digital will thus contribute to bridging the investment gap in the area, accelerate the achievement of EU's connectivity targets, contribute to EU's strategic autonomy and support an EU-wide digital ecosystem.

Alternative sources of public support, such as the Recovery and Resilience Facility, as well as the cohesion policy funds can complement and ensure synergies with the financing offered by CEF Digital, as well as complement the cross-border infrastructure developed under CEF Digital.

1.5. Actions

The programme will provide financial support primarily in the form of grants and procurement. Moreover, it may contribute to blending operations in accordance with the InvestEU Regulation.

In principle, only actions contributing to the achievement of the above specific objectives, taking into account long-term decarbonisation commitments, are eligible for funding.

Such actions include studies, works and other accompanying measures necessary for the management and implementation of the programme and the sector- specific guidelines.

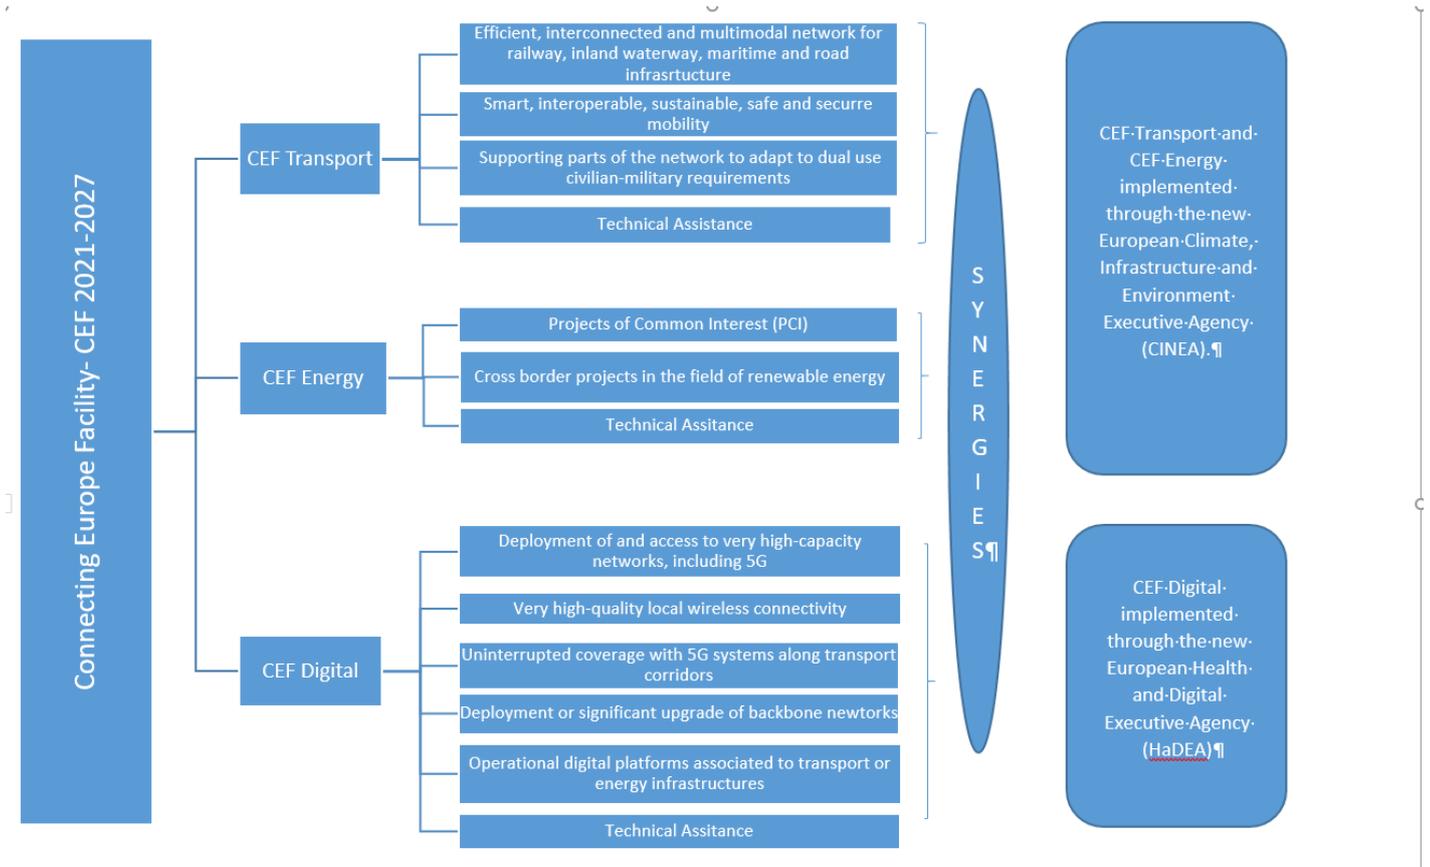

1.6. Delivery mode

The programme will be implemented through direct management. On an ad-hoc basis and if justified, specific actions may be implemented in indirect management.

Three Directorates General are identified as CEF parent DGs, namely the Directorate General for Mobility and Transport (DG MOVE), the Directorate General for Energy (DG ENER) and the Directorate General for Communications Networks, Content and Technology (DG CNECT).

The programme will be implemented through Executive Agencies. The transport and energy strands will be implemented by the European Climate, Infrastructure and Environment Executive Agency (CINEA) while the CEF digital programme has been delegated to the European Health and Digital Executive Agency (HaDEA).

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Connecting Europe Facility (CEF)	116/1189	

Regulation (EU) 2021/1153 of the European Parliament and of the Council of 7 July 2021 establishing the Connecting Europe Facility and repealing Regulations (EU) No 1316/2013 and (EU) No 283/2014 (OJ L 249, 14.7.2021, p. 38).	2021 - 2027	20 733.46
---	-------------	-----------

1.8.2. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

For the transport sector, the CEF programme will continue contributing to the achievement of the TEN-T policy objectives, in particular focusing on the completion of the TEN-T Core Network by 2030, through the support to projects of common interest, in line with the priorities set in the Sustainable and Smart Mobility Strategy. Moreover, and differently from the CEF 2014-2020 programme, a stronger focus will be put on the modernisation of the TEN-T network, with a dedicated share of investments on smart application for transport, new technologies and innovation (including alternative fuels), interoperability, road safety, infrastructure resilience, accessibility and security of transport. Moreover, the programme will support for the first time interventions aiming at improving the civilian-military components of the Network.

The CEF transport strand will continue contributing to the EU climate-related objectives, aiming at the decarbonisation of the transport sector. In accordance with the European Green Deal, CEF 2021-2027 will target a contribution of 60% of its overall financial envelope to co-financing actions supporting climate objectives and moving fast towards zero-emission mobility.

For the energy sector, CEF programme will continue contributing to the implementation of projects of common interest and in turn to the achievement of the TEN-E policy objectives including the further integration of an efficient and competitive internal energy market, interoperability of networks across borders and sectors, facilitating the decarbonisation of the economy, and promoting energy efficiency and ensuring security of supply. The European Green Deal has further emphasized the key enabling role of energy infrastructure in the transition to a climate neutral economy. Hence, more focus will be put on contributing to the achievement of the goals and objectives of the Paris Agreement as well as the 2030 climate and energy targets and long-term decarbonisation objective. In addition, the CEF programme aims to enable cross-border projects in the field of renewable energy.

CEF Digital will depart from the past CEF Telecom 2014-2020 by being fully dedicated to support, through grants or financial instruments, the deployment of high performance digital communication infrastructures. While building on the experience gained with the previous CEF, CEF Digital 2021-2027 will represent a step change as regards the scope, volume and intensity of the proposed EU support.

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	4 510.1	33 108.8	14%
Payments	18.5		0%

After the adoption of the CEF 2021-2027 Regulation¹, the procedure for the adoption of the first sectoral Multi-Annual work programmes (MAP) started. This led to the adoption of the CEF-T² and CEF-E³ 2021-2027 first MAPs (referring to the period 2021-2023) on 05 and 06 August 2021 respectively and to the adoption of the first CEF Digital MAP⁴ (referring to the period 2021-2025) on 16 December 2021. As a result, the first call for proposals under the CEF programme (Transport and Energy) have been launched in September 2021, while for the Digital sector on 12 January 2022.

The split per strand is as follows (no dedicated table for Military Mobility):

Transport⁵:

	Implementation	2021-2027 Budget	Implementation rate
Commitments	3 221.5	23 872.7	13%
Payments	15.3		0%

For the transport sector 100% of the commitments for 2021 have been allocated through a global commitment (October 2021) to upcoming actions resulting from the first set of 13 calls for proposals launched in September 2021. The 2021 allocation corresponds to 13% of the overall commitments foreseen for the strand. The calls closed in January 2022 and the evaluation of proposals is currently ongoing. The calls were launched for an estimated budget of around EUR 7 billion (legal commitments to be covered by several years in commitment appropriations up to 2027). The calls have been very well received by the stakeholders, with more than 400 proposals submitted: under the General envelope there is an oversubscription rate of more than three times the allocated budget; for the Cohesion envelope there is an oversubscription rate of around twice the allocated budget; the Military Mobility call has an oversubscription rate of around 1.3 times the allocated budget. For year 2021, no payments have been disbursed as no grants were signed in 2021. The pre-financing of grants selected under the first set of calls is planned in 2022 and will constitute the main part of payment appropriations in 2022.

It is expected that the second set of call for proposals for the transport sector will be launched in September 2022, as announced in the MAP, along the same schedule, for a similar overall amount and including the same topics. It is expected that the majority of 2022 appropriations will be globally committed to cater for these calls, and individualised in 2023.

¹ REGULATION (EU) 2021/1153 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 7 July 2021 establishing the Connecting Europe Facility and repealing Regulations (EU) No 1316/2013 and (EU) No 283/2014

² C(2021) 5763 final COMMISSION IMPLEMENTING DECISION on the financing of the Connecting Europe Facility - Transport sector and the adoption of the work programme for 2021-2027

³ C(2021) 5791 final COMMISSION IMPLEMENTING DECISION on the financing of the energy sector under the Connecting Europe Facility and the adoption of the multiannual work programme for the period 2021-2027

⁴ C(2021) 9463 final COMMISSION IMPLEMENTING DECISION on the financing of the Connecting Europe Facility – Digital sector and the adoption of the multiannual work programme for 2021-2025

⁵ The table refers to appropriations transferred to CINEA for the management of CEF Transport main projects. The appropriations related to the Technical Assistance projects managed both in CINEA and at DG MOVE are not included.

Appropriations requested for 2023, reflect the announced schedule and amounts of the future call for proposals (2023) and also takes into account expected commitment and payments needs for the projects selected under the CEF 2021 (intermediate payments) and 2022 MAP calls (pre-financing).

Energy⁶:

	Implementation	2021-2027 Budget	Implementation rate
Commitments	784.3	5 830.0	13%
Payments	0.1		0%

For the energy sector, 100% of the commitments for 2021 have been allocated through a global commitment (October 2021). No payments were disbursed for 2021.

After the entry into force of the CEF II Regulation and the subsequent adoption of the MAWP, the first call for proposals for PCIs under the CEF Energy programme, based on PCIs on the 4th PCI list⁷, was launched on 7 September and closed on 19 October 2021. The call was launched for an estimated budget of EUR 785 million and allocated EUR 1.037 billion to 5 actions using multiannual instalments and the budget flexibility of the MAWP. The 5 actions, relating to 5 PCIs, concern 3 actions on electricity transmission (construction works), 1 for gas storage (construction works), and a study on CO2 transport.

The 5 actions that were funded are:

- **EuroAsia interconnector** (€657 million): this electricity project interconnects the transmission networks of Cyprus and Greece, which allows for the bidirectional transmission of electricity, supports the uptake of renewables, and ends Cyprus' energy isolation.
- **Baltic Synchronisation Project Phase II** (€170 million): this includes funding for grid reinforcement in Poland and upgrading the transmission infrastructure in Lithuania, Latvia and Estonia - thus supporting the integration of the Baltic States' electricity system with other European networks. The Baltic Synchronisation project also received funding under previous CEF calls leading to a total CEF support of more than €1.2 billion, underlining the political importance of this project.
- **Aurora line** (€127 million): CEF funding will support the development of a third transmission line between Sweden and Finland in order to increase electricity transmission capacity between the 2 countries and support the integration of onshore and offshore renewable electricity.
- **Chiren expansion** (€78 million): this project supports the capacity increase of a gas storage facility in Bulgaria, which is necessary for regional security of energy supply in South-East Europe, as well as reducing gas supply costs and decarbonising the energy sector.
- **Northern Lights Phase II** (€4 million): a study to support the expansion of CO2 transport and storage networks open to emitters from across the EU, covering technical studies for onshore and offshore infrastructure to plan the expansion of annual transport capacity of the facilities.

The first call for proposals on cross-border renewable projects was launched on 22 September and closed on 1 February 2022, making EUR 1 million available to support both EU Member States and private project promoters through preparatory studies, aiming to prepare the project concept and develop the cooperation set up of a cross-border renewable energy project. Three proposals were submitted, requesting a total amount of EUR 470.000. The results of the evaluation process are expected to be announced in Q2 2022.

The fifth PCI list⁸ adopted in November 2021 under the TEN-E framework includes 98 projects: 67 electricity transmission and storage projects, 20 gas projects (listed previously in the fourth PCI list), six CO2 network projects and five smart grid projects. With its emphasis on electricity transmission and storage projects, it reflects the Green Deal objectives. PCIs on the fifth list will be able to apply under the 2022 call for proposals. This second call for proposals for the energy sector will be launched in Q2, another call for projects to get the status and be included in the "list of cross-border projects in the field of renewable energy" will be launched in March. This list will be adopted by the Commission in autumn 2022, based on which a call for works and studies for cross-border projects in the field of renewable energy can open in Q4 2022. In addition, a new call for preparatory studies for cross-border projects in the field of renewable energy will be launched in 2022. Appropriations requested for 2023 reflect the announced

⁶ The table only refers to C1 voted appropriations on operational budget lines transferred to CINEA for the management of CEF Energy projects.

⁷ SWD (2019)395

⁸ SWD (2021)335

schedule and amounts of the future call for proposals and is based on the expected commitment and payments needs for the actions selected under the CEF 2021 and 2022 MAP calls. These appropriations concern only the first pre-financing payments which will be paid in 2022 and 2023.

The Transparency Platform provides for an interactive map with up-to-date information for each PCI: http://ec.europa.eu/energy/infrastructure/transparency_platform/map-viewer/main.html.

Digital⁹:

	Implementation	2021-2027 Budget	Implementation rate
Commitments	277.4	1 715.4	16%
Payments	2.1		0%

As the CEF digital multiannual work programme was adopted in December 2021, the 2021 budget appropriations were globally committed to 2022. The first calls for proposals were launched on 12 January 2022, with deadline for submissions 20 April. As a result, the grant agreements for the first projects will be signed towards the end of 2022, corresponding to the 2021 global committed budget. A second call for proposals (related to 2022 budget appropriations) is foreseen in autumn 2022, with a corresponding global commitment foreseen for 2023. A third call for proposals is foreseen in 2023. The payment appropriations for 2022 -2023 result from the pre-financing and interim payments foreseen for the grant agreements to be signed as a result of the first three calls. The payments in 2021 relate to the administrative appropriations.

2.2. Programme(s) 2014-2020: Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	29 860.5	29 875.9	100%
Payments	15 225.1		51%

The CEF 2014-2020 cumulative implementation rate in Commitment appropriations reflects the progress of the projects selected for co-funding during the past 7 years of implementation of the programme. The cumulative implementation rate in payment appropriations (51%) mirrors the specificity of the programme, where investments are mainly channelled to complex infrastructure projects implemented over a considerably long time span (e.g. CEF Transport actions are expected to be completed by end of 2024). Moreover, specific sectoral issues further delayed the implementation of the programme.

Transport¹⁰:

	Implementation	2014-2020 Budget	Implementation rate
Commitments	23 608.6	23 696	100%
Payments	12 431.6		52%

* around 81% of the consumed PA refer to accepted cost claims, the remaining amount refers to pre-financing payments. In total 257 final payments have been processed.

In the 2014-2020 period, CEF Transport co-funding is currently allocated to 1036 actions. While addressing infrastructures along both Core and Comprehensive Network of the Trans-European Network for Transport, the Programme focuses its support on the Core Network, with more than EUR 20 billion of CEF support.

⁹ The table refers to the total C1 voted appropriations (including programme support actions) of CEF Digital that were allocated to EuroHPC JU, HaDEA and CNECT for the management of CEF Digital projects.

¹⁰ The tables refer to appropriations (including internal assigned revenues) transferred to CINEA for the management of CEF Transport projects. The appropriations related to the Programme Support Actions projects managed both in CINEA and at DG MOVE as well as the Financial Instruments appropriations are not included.

CEF Transport actions are usually characterised by long implementation periods as they refer to works for large and technically complex transport infrastructure projects, often entailing a risk component. In this framework, payments are disbursed during the entire project life cycle and upon request for payment by the beneficiaries. As indicated in the CEF Transport model Grant Agreement, request for payments must be submitted at least every two years and must refer to eligible costs incurred during the project's reporting period.

As per assessment of the yearly reporting of 2021 (covering implementation up to end of 2020), CEF transport projects experienced some delays and their implementation rate is slower than the one indicated in the indicative spending profile within the ongoing Grant Agreements. Under the three specific objectives supported through the transport strand, the following issues were identified: public procurement issues, legal and environmental issues, technical and technological issues, project coordination issues and interdependency with other CEF or EU funded project. Furthermore, based on the exchanges with the project promoters during 2021, the impact of the COVID19 has further affected the implementation of some CEF supported actions.

The overall reported financial progress by the end of 2021 for the transport sector is around 52% (compared with the expected 59% as included in the latest Grant Agreements in force) and is the result of delays experienced during the projects' implementation. The delays described above affect the spending profiles of the actions, shifting the expenditures to later years, in particular to year 2022 onwards. This situation has been further impacted by the COVID crisis.

In this framework, the Commission, in strong cooperation with CINEA, has undertaken a series of actions to mitigate the impact of the above reported issues on the overall spending performance of the programme. These include a close monitoring of CEF actions, providing for an optimal use of EU-funding. In particular, the agreement reached with beneficiaries for the inclusion of specific monitoring milestones for the Grant Agreements that still include tasks within the critical path of the project, has allowed to re-allocate unused funds to other mature projects as result of the last CEF Transport call for proposal during 2021. Furthermore, the Agency continues to implement its monitoring tools, through the assessment of reports, site visits and follow-up meetings with CEF beneficiaries, ensuring a thorough assessment and identifying the actions for which amendments are needed.

In addition, the Agency continues monitoring and proactively responds to the issues still pending in the aftermath of the COVID 19 pandemic, fully implementing the revised extension policy agreed with DG MOVE and applying, when necessary and duly justified, the flexibility measures in place. The CEF Transport projects' maximum end date is currently fixed at 31 December 2024.

In 2022 and 2023, payment appropriation will be used for interim and final payments related to ongoing Grant Agreements.

CEF Debt Instrument (Financial Instruments)- Transport:

Further to the amendment of the Delegation Agreement with the EIB in mid-2019, the roll-out of the CEF Debt Instrument to support green mobility projects continued and the pipeline of operations kept on growing. The CEF-DI budgetary envelope was paid in full to the EIB in 2020, operations were signed in 2021 both under CEF and NER300 resources¹¹, thereby confirming the effectiveness of channelling NER resources through CEF-DI. During 2021, and despite the delays in investment decisions due to COVID19, two new operations were signed, leveraging total investments of EUR ~670 million. These operations bear on the deployment of battery trains and on the greening of airport infrastructure. In parallel, the pipeline under the high-risk "Future Mobility" product remains strong, covering various sectors contributing to the transition to green and sustainable mobility, which highlights the capacity of the Future Mobility instrument to address the transition to green mobility in an integrated manner. The operations in pipeline bear on Mobility-as-a-Service, autonomous vehicles, electric vehicles and associated charging infrastructure, waterborne transport as well as H2 trains. The CEF-Debt Instrument approval period ends in 2022 and the upcoming InvestEU programme will support its policy objectives.

Energy¹²:

	Implementation	2014-2020 Budget	Implementation rate
Commitments	4 746.6	4 755.6	100%
Payments	1 624.4		34%

*around 76% of the consumed PA refer to accepted cost claims

In the period 2014-2020, CEF Energy co-funding of a total of EUR 4.746 billion was allocated to 149 actions contributing to 107 PCIs. CEF Energy has helped to kick-off and implement key energy infrastructure investments in Europe. By the end of 2021, in total 93 actions which received CEF support have been completed, i.e. 46 electricity and storage, 45 gas, 1 smart grid and 1 CO₂, of which 85 studies and 8 works.

¹¹ https://ec.europa.eu/clima/eu-action/funding-climate-action/ner-300-programme_en

¹² The table refer to appropriations (including internal assigned revenues) transferred to CINEA for the management of CEF Energy projects.

The implementation rate of 34% for CEF Energy is lower compared to the overall CEF implementation. This is due to several large multi-annual actions with long lead times due to their very complex nature and possible delays for identical reasons as explained above, for CEF Transport and in paragraph 3.1.3. Some of these projects may only be completed by 2025. CEF financial assistance for works has been critical to advance their implementation. These projects include the Baltic Synchronisation Project (PCI 4.8) which will synchronise the three Baltic States' electricity grids with the continental European network and allow the three Baltic States to gain full control of their electricity networks and to strengthen energy security, the Biscay Bay electricity interconnector (PCI 2.7) between Spain and France which will further integrate the Iberian Peninsula into the European electricity market, and the Celtic electricity interconnector (PCI 1.6) that will establish the first electricity link between Ireland continental Europe and end Ireland's energy isolation after Brexit. In addition, the Baltic Pipe project (PCI 8.3) which will establish a new, bi-directional offshore gas pipeline connecting PL and DK through the Baltic Sea as well as the Poland – Slovakia gas interconnection (PCI 6.2.1), which are both expected to be completed in 2022 with an important contribution to energy security and diversification of supply sources. The completion of the Gas Interconnector Poland-Lithuania (GIPL), interconnecting both countries gas systems, is also expected for 2022.

The total payments in 2021 consisted of around 76% of interim and final payments, and 24% of first and further pre-financings. In 2022 and 2023, payment appropriations will be used.

A provision in the grant agreements requires project promoters to regularly submit an Action Status Report (ASR) to CINEA. ASRs provide an overview on the technical and financial progress of the Action. In addition, PCIs are subject to yearly monitoring by national competent authorities and the Agency for the Cooperation of Energy Regulators (ACER) pursuant to Art. 5 of the TEN-E Regulation. This allows the Commission to monitor the PCIs progress and the implementation of the PCIs.

CEF Debt Instrument (Financial Instruments) - Energy:

In the energy sector, the first CEF Debt Instrument was expected to be concluded by the EIB in 2018. However, the financial closing of this operation was eventually cancelled by the project promoter. Therefore, the amount initially committed under CEF Debt Instrument for this operation (EUR 89 million) is available for other energy projects and has been transferred to the EIB, which can commit to projects until the end of 2022. Possible PCIs that may receive financing under the CEF Debt Instrument are currently under appraisal by the EIB.

Telecom¹³:

	Implementation	2014-2020 Budget	Implementation rate
Commitments	1 035	1 043.2	100%
Payments	758.5		73%

The contributions to the guarantees for the CEF Debt Instrument (EUR 70 million) have been paid prior to 2021. Concerning the Connecting Europe Broadband Fund (EUR 100 million), payments executed from 2018 till the end of 2021 amount to 31,7 million.

Regarding WiFi4EU, the last commitments were done in 2020. The total budget of the awarded vouchers (commitments) sum up to EUR 132 million, out of which EUR 90,945 million have been paid and EUR 21,57 million are expected to be paid in 2022.

Concerning the CEF Telecom core service platforms and related generic services, the EU contribution reached to +/- 681 million by the end of 2020 out of which payments executed by the end of 2021 amount to +/- 510 million.

The **Connecting Europe Broadband Fund**, established under the CEF Equity Instrument with EFSI support, was launched in June 2018, raising EUR 420 million at first closing, through commitments from the European Commission (EUR 100 million) as well as the EIB, three national promotional banks, and one private investor. A second closing took place in July 2020, with two new private investors joining in for EUR 50 million additional commitments. To date, the CEBF has invested into 8 companies across Europe and has raised the targeted funds from private investors to reach EUR 555 million on final close¹⁴, held in June 2021.

Regarding the **CEF Debt Instrument** (CEF DI), the EIB signed a loan agreement with a project promoter for fibre rollout for a total amount of EUR 100 million, of which EUR 70 million guaranteed by the Commission's commitment to the CEF DI. Total project costs are estimated at EUR 241 million. The EIB has estimated that, upon completion of the project in Slovenia in 2023, an additional 225 000 households (about 25% of the country) will have access to very high-capacity networks.

Regarding WiFi4EU for the period of 2018-2020, more than 8 800 vouchers have been awarded through the programme, with a budget of EUR 130 million spread over four calls. A voucher of EUR 15 000 is granted to municipalities to install free public Wi-

¹³ The table refers to C1 appropriations managed by CNECT, HaDEA/INEA and EuroHPC JU and includes the appropriations for programme support actions as well as the financial instruments ones.

Fi in parks, squares, public buildings, libraries, health centres, and museums throughout Europe. Despite the pandemic environment, the network installations are steadily increasing, reaching more than 7000 in the last quarter of 2021, exceeding expectations.

3. How is the programme performing ?

3.1. Performance

3.1.1. Active programme performance

As indicated in article 3 of the CEF Regulation, the CEF general objectives for the three strands are to build, develop, modernise and complete the trans-European networks. The completion of the networks will contribute to the long-term decarbonisation commitments, to an enhanced European competitiveness, towards smart, sustainable and inclusive growth, ensuring territorial, social and economic cohesion and the access to and the integration of the internal market.

Considering the delayed adoption of the CEF 2021-2027 legal basis and the consequent delayed launched of the first calls for proposals, performance related information mostly cover the calls setup and, in some cases, some preliminary information about the ongoing evaluation procedures. More detailed information on performance of the CEF 2021-2027 programme will be available as soon as the CEF supported sectoral projects will be selected and a relevant share of the expected implementation period is completed.

Nevertheless, lessons learned from the previous programming period, for all three strands, led to the following improvements streams, through the newly adopted Regulation and through inter DGs initiatives. These aim at improved efficiency, transparency and effectiveness when implementing the programme.

Improved predictability:

Article 20 of the CEF 2021-2027 Regulation foresees that the Commission adopts the first sectoral work programmes indicating the timetable of the calls for proposals and the topics covered for the first three years of implementation of the CEF. This provides enhanced transparency and predictability for stakeholders, also improving the quality and the maturity of the applications.

Streamlined evaluation:

Following the recommendations issued by the ECA in its special report 19/2019, a revised evaluation procedure has been put into place. After assessment of the lessons learned from the legacy programme and taking into account the ECA conclusions, the three parent DGs reached an agreement on a streamlined evaluation procedure, including a common interpretation of the award criteria included under article 14 of the CEF Regulation as basis for possible adjustments to the specificities of each sector, while preparing the ground for the full programme onboarding into the Corporate IT solution (eGrants).

Corporate IT solutions:

During 2021, the CEF programme has completed the full onboarding into the eGrants corporate solution for the management of the entire project life cycle. After the agreement reached with the horizontal services on the new CEF Corporate Model Grant Agreement (MGA), the full IT on boarding procedure took several months and required important adjustments to the structure of the CEF programme, compared to the legacy one. In particular, several issues related to the IT environment, fully build around a programme with a very different nature (Horizon Europe), led to compromise solutions that created additional challenges. To mention, the organisation of topics and FAQ in the funding and tender portal, delays for retrieving call related data, limited GIS services and partial inclusions of key financial information for the Grant Agreements' preparation.

Despite these initial difficulties, it is expected that further IT improvements building on lessons learned and the full electronic management in the EC Corporate solution for the CEF grants implementation, will lead over the years to increased efficiencies and simplified procedures both on the side of the CEF beneficiaries and for the Commission/ Executive Agencies.

Moreover, the following sectoral developments also aim at contributing to an enhanced programme implementation:

Transport:

Lessons learned:

Following the recommendations issued by the ECA in its special report 19/2019, more stringent conditions for the assessment of the maturity of the works proposals have been included¹⁵. This novelty is expected to trigger the submission of more mature projects and lead to the selection of actions ready to deliver and less exposed to risks. In addition, these measures have also been accompanied by the adoption of the directive on streamlining measures¹⁶, with the objective of advancing the completion of the

¹⁵ Point 10.3 of the Annex to the Decion adopting the 2021-2127 Multi-Annual Work Programme. <https://transport.ec.europa.eu/system/files/2021-08/c20215763-cef-financing-annex.pdf>

¹⁶ DIRECTIVE (EU) 2021/1187 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 7 July 2021 on streamlining measures for advancing the realisation of the trans-European transport network (TEN-T)

Trans-European transport network and aiming at simplifying permitting and granting procedures for cross-border transport infrastructures.

Furthermore, the CEF 2021-2027 legal base includes an enhanced consistency with the Corridor work plans and better integration of the Core Network Corridor Coordinators advice¹⁷, further enhancing the contribution of the programme for the achievement of the TEN-T objective and strengthening the network impact of the programme.

Blending:

For the period 2021-2027, the lessons learned from the CEF 2014-2020 Blending call and Blending Facility experiences also allowed to develop a new solution with the aim to improve geographical balance and further enhance the maturity of the project proposals. In detail, the new Alternative Fuels Infrastructure Facility (AFIF), while keeping cooperating with Implementing Partners (IPs), opens the possibility for projects promoters to seek a financing from other public or private financial institutions. Furthermore, it aims at further enhancing maturity, requiring a financing approval ahead of the application, but also requiring a signed financing agreement before the signature of the CEF Grant Agreement. As an additional element, the duration of the Grant Agreements has been reduced to 36 months from the date of cut-off. In this framework, IPs remain privileged interlocutors, ensuring a more comprehensive due diligence, through a comprehensive risk-based appraisal process including financial, technical, environmental and social, economic, legal risk and compliance assessment. As another novelty, the AFIF opens for the first time the possibility of blending for the cohesion envelope budget.

In terms of policy priorities, the AFIF further focuses the scope of its intervention, aligning its priorities to the Green Deal objectives and in particular to the Commission proposal for a Regulation on the deployment of alternative fuels infrastructure (AFIR)¹⁸, contributing to the measures proposed in the framework of the “fit for 55”¹⁹ package. The AFIF aims to support alternative fuels infrastructure, recognised as a market segment with a considerable potential to attract market-based financing in the near future. In this respect, the AFIF takes into account the recommendation of ECA in its Special Report 05/2021 in the field of electromobility and the requirement for an infrastructure gap analysis, focussing on ultra-fast charging infrastructure for Light Duty Vehicles (LDV). Moreover it supports charging infrastructure for Heavy Duty Vehicles (HDV) mainly for distant transport along the TEN-T road network. The support will be channelled to sections presenting infrastructural gaps by means of eligibility maps displayed on the TENtec interactive maps (updated regularly with the cut-off dates of the AFIF rolling call). Finally, with the ambition to speed up the roll out of ultrafast electric charging infrastructure on the roads, the support of the AFIF takes the forms of simplified forms of funding with unit contributions per charging point.

Simplified forms of funding:

In the same way of the AFIF and building on the successful experience of the CEF 2014-2020 programme, the use of simplified forms of funding has been further promoted. In particular, updated decisions on the use of unit contributions for different supported priorities/topic have been adopted²⁰ (ERTMS and Rail Freight Noise) and a new framework identifying unit contribution and lump sums²¹ for Member States and Railway Infrastructure Managers (RIM) has been developed for the disbursement of Technical Assistance support. This approach aims at further increasing the programme’s performance, through enhanced efficiency.

Learning from the experience of the CEF Energy 2014-2020 calls for proposals, the Commission has focused its attention on the careful assessment and inclusion of key improvements under the CEF 2021-2027 programme. The first Multiannual Work Programme under CEF II covers three years, which increased the predictability for potential applicants regarding call dates and available budget. Following a recommendation from the ECA special report of 2019, the indicators used to measure performance are improved by including results-based indicators.

In terms of policy priorities, the MWAP focuses on the European Green Deal objectives and the enabling role that cross-border infrastructure and projects in the field of renewable energy play in decarbonisation. This alignment with Green Deal objectives is supported by the framework of the revised TEN-E Regulation, which is fit for the infrastructure needs of the energy system of the future (see also section 1.4).

Digital:

Considering the delayed adoption of the CEF 2021-2027 legal basis and the adoption of the first multiannual work programme for CEF Digital in December 2021, it is too early to assess programme performance. The first calls for proposals were launched on 12 January 2022. With a planned budget of €258 million, the topics called for aim to improve digital connectivity infrastructures, in particular Gigabit and 5G networks, across the Union, and contribute to Europe's digital transformation.

These first calls aim to equip Europe's main transport routes and providers of key services in local communities with 5G connectivity, as well as actions to deploy or upgrade backbone networks based on advanced technologies. The actions will focus on

infrastructure connecting federated cloud services, backbone infrastructures for digital global gateways, such as submarine cables, as well as preparatory actions to set up operational digital platforms for transport and energy infrastructures across the EU.

3.1.2. Previous Programme Performance

In general, the approach of the Connecting Europe Facility 2014-2020 is good. In particular, CEF is an effective and targeted instrument for investment in trans-European infrastructure (TEN) in transport, energy and the digital sector. CEF funding is therefore expected to strongly contribute to the Commission's priorities on jobs, growth and investment, the internal market, Energy Union and climate and the Digital Single Market by providing the infrastructure. The direct management of CEF grants has proven very efficient, with a strong project pipeline and a competitive selection process, a focus on EU policy objectives, coordinated implementation and the full involvement of Member States.

Closed projects supported under the CEF 2014-2020 programme clearly show their added value in contributing to the overall and sectoral CEF objectives and have achieved important outputs, paving the way for the completion of the trans-European networks. In this framework, it is important to underline that CEF projects target infrastructural interventions (mostly for the transport and energy sectors) and hence the level of information that can be provided is limited to their outputs. In fact, as an example, the construction of 20 km cross-border railway infrastructure is not telling on the services that will run on the same infrastructure. For this reason, while results and impacts are often estimated when a project is presented for EU funding, several variables (often out of the EC control) enter into play (e.g. national decisions on the railway services, transposition of EU Directives, e.g. interoperability and others) when trying to assess the actual results achieved.

Regarding synergies, in the 2014-2020 period there has been one synergetic call involving the transport and energy sectors. The stakeholders' reaction was not as successful as expected and for this reason no further synergy call was organised. As a lesson learned, in the context of the revised CEF Regulation, new specific provisions regarding synergies were included. In particular, article 10.2 presents the notion of synergetic element, allowing co-financing elements of any other sector under a sectoral specific action, following specific criteria and within a limit of maximum 20% of the total eligible costs of an action. Thanks to this new provision, in the coming years it is expected to set-up synergy work programmes that are the result of a bottom-up approach and are driven by the stakeholders' needs.

Furthermore, both the revised TEN-E Regulation and the proposal for the revised TEN-T Regulation support synergies among the CEF sectors.

With reference to the output indicators presented below, it is currently too early to conclude whether the programme's targets will be achieved as the nature of large-scale infrastructure projects makes it difficult to already present information. Nevertheless, the close monitoring of the projects provided by the European Climate, Infrastructure and Environment Executive Agency (CINEA) ensures the identification of actions for which amendments are needed, making the instrument very reactive to new needs and constraints.

Furthermore, the CEF parent DGs and the CINEA have worked and will continue working to improve the programme's performance through periodic exchanges. In particular, following the mid-term evaluation of CEF and in line with the recommendations of some ECA special reports, areas for improvement were identified (see point 2.2 above)

Transport:

Projects co-funded under the CEF Transport aim at supporting the completion of the Core and Comprehensive Transport Networks, with a specific focus on the nine Core Network Corridors (CNC). Moreover, the CEF co-financed projects backed the decarbonised and digitalised transport sector objectives. In this framework, the CEF actions foster the completion of a smart, high-performance and sustainable transport network, allowing seamless mobility for passengers and freight around Europe. This contributes to the overall EU policy goals of a complete single market, boosting jobs and supporting a smart, sustainable and inclusive growth in the EU.

The 1036 actions signed within the CEF transport 2014-2020 support more than EUR 23 billion CEF contribution and trigger more than EUR 50 billion of private and public investments. These have strongly contributed to pave the way for the achievement of the key TEN-T and wide EU policy objectives. In particular, the CEF has been one of the front running EU spending programmes supporting sustainable and digital transition. In line with the European Green Deal, transport investments for infrastructures strongly contributed to climate objectives, feeding the EU long-term decarbonisation commitments. Around 80% of the CEF support has been allocated to the rail and inland waterways sectors and to the support to the acceleration of the deployment of alternative fuels facilities, fostering a new mobility paradigm (please see point 6.1.3 below). Moreover, data and digital infrastructure have received targeted support, enhancing the deployment of digital solutions for all transport modes, backing the ecological transition for all sectors, including for transport.

Over the years the selection of CEF Transport projects and the outputs of closed projects, have always contributed to the achievement of the TEN-T objectives addressing the removal of bottlenecks and enhancing interoperability, ensuring sustainable and efficient transport systems and optimising the integration and interconnection of transport modes.

Moreover, the efficient management of CEF funds and the mitigating measures adopted by the Commission services and its Executive Agency (as described under point 2.2), allowed to channel additional re-allocated funds to mature projects that responded to the same key goals.

As a result, the last call for proposals has been launched in 2020, to allow for mature projects to benefit from CEF support. On top of it, the last three cut-off related to the Blending Facility were completed. Overall; in 2021 these procedures led to the signature of 107 additional grant agreements with an overall CEF contribution of more than EUR 480 million, triggering investments for more than EUR 1.5 billion.

On one hand, the 2020 MAP call for proposal focused on studies supporting the future completion of the railway, inland waterways and maritime transport modes along the TEN-T networks while the Blending Facility awarded funds for the deployment of alternative fuels infrastructure (mostly along the road network) and ERTMS technology. In detail:

MAP 2020 calls for proposals:

As a result of the call, in 2021 the Commission has selected 45 studies with an awaited focus on the improvement of railway cross border sections. These encompass future works to complete [Rail Baltica](#) and the access to the [Fehmarn Belt fixed link](#), studies to improve interoperability and connectivity between [Austria](#), Germany, [Poland](#) and the [Czech Republic](#), as well as studies aiming at enhancing cross-border connections [between Spain and Portugal](#) and between [Hungary](#) and the [Austrian/Slovakian border](#). The overall CEF contribution is of more than EUR 220 million, supporting almost EUR 400 million of total eligible costs.

For the Inland waterways sector, the 2020 MAP call resulted in 14 selected studies and a CEF support of around EUR 17 million. The actions mainly concern future planned interventions to improve navigability, improve cross-border sections along inland waterways as well as the fostering modal shift through the future construction of multimodal terminals along the waterway. An illustrative action relates to the studies to develop [multimodal logistic platforms along the Canal du Nord](#) alignment, part of the cross-border Seine-Scheldt network, playing an important role in promoting modal shift and developing waterside industrial and logistic activities.

The last CEF call for proposals also supported 18 studies for the maritime sector, mostly encompassing preparatory steps for future improved maritime, river and land access to ports and enhanced multimodality through upgraded port infrastructures. The CEF support amounts to more than EUR 44 million. To note, the joint efforts of the North Adriatic Port Association (NAPA), for the completion of studies at [ports in Italy and Slovenia](#), with the aim to improve port access, increase multimodal options and deploy alternative fuels solutions. Furthermore, out of these projects, CEF support has been awarded to 6 studies addressing the future deployment of onshore power supply (OPS) and energy transition at ports, in particular at the port of [Piraeus \(Athens\)](#), [Rotterdam](#) and Leixões (Porto), hence contributing to the Green Deal objectives.

Blending Facility (cut-off 3, 4 and 5):

In the same period, the evaluation of the last three cut-off of the CEF Transport Blending facility took place, leading to the selection of 19 projects for the Alternative Fuels priority, with a CEF support of almost EUR 115 million and the selection of 5 projects under the ERTMS priority, with a total CEF contribution of more than EUR 50 million. For the Alternative Fuels priority, the selected projects focused on the deployment of alternative fuels infrastructures for road, with a particular attention to the public transport sector, supporting the deployment of low and zero emission solutions (bio-CNG, electricity and hydrogen) in urban areas such as [Paris](#), [Lyon](#), as well as in [Groningen](#) and [Barcelona](#). For the ERTMS priority, to mention the support to the retrofitting, upgrade or fitment of 221 railway vehicles (freight locomotives and passenger trainsets) with 349 ERTMS Level 2, Baseline 3 (set #2 or #3) on-board units (OBUs) circulating along the French, German and Luxembourgish TEN-T rail network.

CEF Transport indicators:

When assessing the indicators reported below, it is important to have in mind that their targets are based on the on-going actions, and therefore increase every time a new action is selected. In addition, there is a time lag of approximately one year and a half between the actual completion of a project and its registration as a result: this delay corresponds to the administrative closure of the projects.

At the same time, as underlined under section 2.2 above, the implementation pace of the programme and the performance against its related indicators has been delayed by issues not always under the direct control of the Commission. Moreover, the COVID pandemic has further jeopardised the achievement of the expected results during year 2021, delaying the projects implementation as reflected in the extension policy adopted in 2020²².

For the above-mentioned reasons, around 50% of actions within the CEF Transport portfolio have undergone an amendment to extend their duration, with an average extension request of 19 months. This led to the postponement of the actual end date of many projects and generated a situation by which more than 50% of the actions within the CEF Transport portfolio and more than 75% of the projects still ongoing are expected to be completed between 2022 and 2024.

²² Information note to the CEF Transport Committee of 11 June 2020- Ares (2020) 3101743-
https://ec.europa.eu/inea/sites/inea/files/cefpub/new_info_note_to_the_cef_committee_on_extension_policy.pdf

In the light of above, it can be confirmed that the long-term success and performance of the CEF Transport programme cannot be currently reflected in the indicators reported below. In fact, the majority of the CEF Transport actions signed as outcome of past calls for proposals are still ongoing and their results (outputs) will be achieved up to end of 2024. Nevertheless, for 2021 it could be observed that the performance achievement start to materialise. It is considered that in the coming years more achievements will be reached, towards meeting the expected targets.

Energy:

CEF Energy funded actions have significantly contributed to the decarbonisation of the EU energy market by strengthening cross-border connections aiming to end energy isolation and eliminate bottlenecks, therewith decreasing dependence on fossil fuels. CEF Energy also supports projects increasing security of supply in Member States where this issue is most pressing. Examples include the Estonia-Latvia third electricity interconnection that will increase the security of supply in the Baltic region by reinforcing north-south electricity connections (see also below), the Gas Interconnector Poland-Lithuania, the first gas interconnector between the eastern Baltic Sea region and continental Europe, and Balticconnector, the first gas interconnector between Finland and Estonia.

In 2021, the following PCIs were completed and supported by CEF grants for works in previous years:

- PCI 4.2.2: Internal line between Harku and Sindi (EE), part of the Baltic Energy Market Interconnection Plan in electricity. Commissioned in August 2021, this new double circuit has a capacity of 1143 MVA/240 MVA and a length of 175 km. Known as the 3rd interconnection between Estonia and Latvia, it aims to increase the security of supply and develop the electricity market in the Baltic region.
- PCI 6.5.1: Development of an LNG terminal in Krk (HR) up to 2.6 bcm/a– Phase I and connecting pipeline Omišalj – Zlobin (HR), which comprises a Floating Storage and Regasification Unit (FSRU), a jetty and a connecting high-pressure pipeline, for an approximate send-out capacity of 2 bcm/year. The terminal will enhance the diversification and security of natural gas supply for the region.

In addition, other PCIs, which received the CEF support for studies on earlier implementation stages, were completed in 2021 include:

- PCI 1.7.2: Interconnection between Tourbe (FR) and Chilling (UK) [currently known as "IFA2" project], part of the Northern Seas offshore grid. This project entails a new subsea 320 kV – 390 kV HVDC link with a capacity of around 1000 MW between the UK and France, the CEF supported study contributed to the preparation of necessary studies required to enable positive Final Investment Decision (FID) decisions on behalf of both beneficiaries and signature of construction contracts.
- PCI 1.10.1: Interconnection between Blythe (UK) and Kvittdal (NO) [currently known as "North Sea Link"]. The CEF supported study included the technical design studies for cable equipment, technical design tasks associated with converters, as well as reception of required permits, planning conditions and licenses for a HVDC subsea interconnection with a capacity for 1.4 GW between Norway and the United Kingdom.
- PCI 3.7.3: Construction of a new 400 kV AC line (OHL) of 13 km and with a capacity of 1500 MW between Maritsa East and Maritsa East 3 (onshore).
- PCI 3.16.1: Interconnection Hungary – Slovakia between Gabčíkovo (SK) and Gönyű (HU) and Veľký Ďúr (SK)
- PCI 3.17: Interconnection Hungary – Slovakia between Sajóivánka (HU) and Rimavská Sobota (SK)
- PCI 3.7.4: Construction of new 400 kv OHTL between Maritsa East and Burgas
- PCI 3.8.1: Construction of a new 400 kV line between Dobrudja and Burgas.

Overall, it is important to note that CEF Energy is a strong catalyst in bringing together project promoters, National Regulatory Authorities, and government representatives to solve issues so that cross-border infrastructure projects can be realised. Its grants component is making the difference in promoting cooperation between countries to develop and implement energy interconnection PCIs that otherwise would not happen. This is especially the case for cross-border projects located in countries with smaller population sizes or in a more remote location, where energy tariffs would need to be increased substantially to cover the investment needs. The Celtic electricity Interconnector between Ireland and France and the Gas Interconnector Poland-Lithuania are examples of projects that could not have been funded in a purely national context.

The success in awarding CEF Energy co-funding to numerous actions of the PCIs and its contribution to policy objectives of the TEN-E Regulation may not be fully reflected yet in the indicators and results reported below due to the long implementation time of the grants for works for large and technically complex energy infrastructure projects. In addition to the long lead-time, it takes time before actual results will be reported. Delays may occur for various reasons including securing sufficient co-funding (national or other sources), public procurement issues (e.g. complaints/appeals during tender procedures) as well as legal and environmental issues (e.g. permitting, spatial planning, other authorisations and land acquisition). The Covid19 sanitary crisis has also led to additional delays for some actions, e.g. the need to reschedule public consultations resulting in longer than expected permitting procedures. Moreover, the reporting and monitoring on actual results will only be done with some delay once the project is closed after the final report has been received and assessed, the outputs verified and the final payment (if need be) performed.

For specific objectives 4 and 5²³, it is to be noted that the initial list of 248 energy infrastructure projects that are Projects of Common Interest (PCIs) is updated every two years and that the PCIs referred to are those on the fourth list, published by the Commission on 31 October 2019. The selection of PCIs is an on-going process to cater for emerging projects geared to fulfil future needs. It is therefore of prime importance to indicate to which edition of the list indicator values refer to. The fourth Union list of PCIs²⁴ contains 149 projects (of which 85 received CEF support), i.e., 100 electricity transmission and storage, 6 smart grid deployment, 32 gas, 6 oil and 5 cross-border carbon dioxide networks. Electricity and smart grids account for more than 70% of the projects, mirroring the increasing role of renewable electricity in the energy system and the need for network reinforcements enabling the integration of renewables and more cross-border trade. On 21 November 2021, the Commission published its fifth PCI list, expected to enter into force in March 2022; the projects on this list will be able to apply as of the 2022 call.

The actions supported by CEF Energy are overall progressing well with several actions/PCIs completed in 2021 for which CEF Energy provided co-funding for works and/or studies (see below for further details). Only 5 actions have been terminated since the beginning of the programme. Most of the closed actions demonstrated full technical completion and made an important contribution to the PCI implementation. In some cases, delays affecting the end date of the action are however observed. Main reasons for the delays relate to procurement, permitting, public acceptance, regulatory and political issues (see also above). Despite many key projects still on-going, as explained above, some important PCIs could be completed in 2021 and previous years contributing to the specific objectives. A study supporting the evaluation of the TEN-E Regulation concluded that commissioned PCIs have increased market integration, security of supply and supported the integration of renewable energy sources into the energy system²⁵.

Specific objective 4 - Increasing competitiveness by promoting the further integration of the internal energy market and the interoperability of electricity and gas networks across borders

In the period 2014-2020, CEF Energy funded actions have significantly contributed to the integration of the EU energy market through strengthening cross-border connections aiming to end energy isolation and increasing transmission power. PCIs contributing to this specific objective are progressing, but some face significant delays, mostly due to external factors. Delays in the permitting phase, often related to public opposition, prevent timely completion. In addition, in some cases it was not possible to implement the projects with the originally envisaged route which required the identification of alternative routes making additional studies and assessments necessary.

When the gas PCIs currently under implementation will be in operation, Europe should achieve a well-interconnected and shock-resilient gas grid and all Member States will have access to at least three gas sources or the global liquefied natural gas (LNG) market. 23 Member States will have access to the global LNG market with increasing liquidity which is a key element to improve the Union's energy security through the diversification of gas sources. The completion of two Hungary-Slovakia interconnections will increase market integration in central Europe. With the completion of the LNG terminal in Krk (Croatia) in January 2021, which comprises a Floating Storage and Regasification Unit (FSRU), a jetty and a connecting high-pressure pipeline, for an approximate send-out capacity of 2 bcm/year, an important milestone was achieved to enhance the diversification and security of natural gas supply for the region.

Specific objective 5 - Enhancing Union security of energy supply

CEF Energy also supports projects increasing security of supply in Member States where this issue is most pressing; concerning this objective it is important to note that the number of gas PCIs on the fourth PCI list has considerably decreased compared to the third PCI list. Examples include the Estonia-Latvia third electricity interconnection that will increase the security of supply in the Baltic region by reinforcing north-south electricity connections (see also below), the Gas Interconnector Poland-Lithuania, the first gas interconnector between the eastern Baltic Sea region and continental Europe, and Balticconnector, the first gas interconnector between Finland and Estonia.

In addition to CEF financial assistance, four High-Level Groups set-up by the Commission in different regions of the EU with a scope of providing high-level political support and direction to assist infrastructure development in these regions, have made an important contribution to the successful completion of action/PCIs. These four groups are the Central and South-Eastern European Connectivity (CESEC) Initiative, the North Sea Energy Cooperation (NSEC), the Baltic Energy Market Interconnection Plan (BEMIP) and the High-Level Group on Interconnections for South-West Europe (HLG SWE). For instance, CESEC has been important to advance the completion of the Krk LNG terminal, and BEMIP plays an important role in ensuring good progress with the Baltic Synchronisation project.

Telecom:

²³ **Specific Objective 4:** Increasing competitiveness by promoting the further integration of the internal energy market and the interoperability of electricity and gas networks across borders;

Specific Objective 5: Enhancing Union security of energy supply;

²⁴ Commission Delegated Regulation (EU) 2021/8409 of 19 November 2021 amending Regulation (EU) No 347/2013 of the European Parliament and of the Council as regards the Union list of projects of common interest. OJ L 74, 11.3.2020, p. 1 http://data.europa.eu/eli/reg_del/2020/389/oj

²⁵ Ecorys et al. (2021): Support to the evaluation of Regulation (EU) No 347/2013 on guidelines for trans-European energy infrastructure. Final report, <https://op.europa.eu/en/publication-detail/-/publication/19bec11f-5f86-11eb-b487-01aa75ed71a1>

For the objective of contributing to the efficient flow of private and public investments to stimulate the deployment and modernisation of broadband networks, CEF Telecom invested into two complementary actions: WiFi4EU and the Connecting Europe Broadband Fund (CEBF).

The figures on WiFi4EU networks in operation and in preparation show that the initiative has been performing well and had delivered on the political promise to attribute wireless connectivity vouchers (of EUR 15 000 each) to about 8 800 municipalities, across the EU. By December 2021, around 8 800 municipalities have received WiFi4EU support, with more than 7000 networks already installed and currently used by European citizens.

Extensive, but small, ground-level, schemes like WiFi4EU bring significant impact in terms of raising awareness of the importance of connectivity and supporting digital inclusion, especially in rural areas. However, in order to efficiently manage the thousands of beneficiaries it was essential to put in place an adequate IT infrastructure to support the execution of the programme from the outset. The experience gained in WiFi4EU is a precious start point for any future similar scheme. In the future CEF Digital, WiFi4EU will evolve to support 5G deployment and take up by local communities, by offering innovative services based on 5G (*5G for Smart Communities*)

The CEBF is the first investment platform ever created in Europe to boost investments in broadband infrastructures. The anchor investors are the European Commission, the European Investment Bank (EIB), and three National Promotional Banks and Institutions (NPBIs). The mandate is to finance broadband infrastructure “greenfield” projects, in order to contribute achieving the objectives set forth in the Digital Agenda for Europe (DAE) and the European Gigabit Society (EGS) communication.

The CEBF is supporting deployment projects focusing mostly in remote or rural areas, where population density is low and there is a strong risk of a 'digital divide'. It is contributing to closing the funding gap in the market via direct financing to private sector (focusing on mid-caps and SMEs), publicly owned companies, public and private partnerships, and via financial intermediaries.

The private sector is involved at two levels: 1) at Fund level, to facilitate private investments, by using public funds (first loss piece contributed by CEF Telecom) to absorb part of the risks; 2) at investment level (project promoters), CEBF financing complements private sector funding, as well as public sector support, to cover the financial needs of broadband deployment projects.

Due to the nature of the projects (“greenfield”, rural areas, market-failure), the CEBF is de-facto acting as a “business angel” for most of those projects. This allows projects to go beyond the stage after which it will be able to raise additional funding from private banks. The role of the Commission’s first loss piece is therefore essential to lower the risk exposure of projects and closing the deal with private investors.

The Connecting Europe Broadband Fund has performed well. Based on the EUR 100 million “first loss piece” provided by the Commission, EUR 290 million from the EIB and the three National Promotional Banking Institutions (NPBIs) the fund reaches today EUR 555 million in capital after final closing. This includes EUR 165 million from six private investors, representing a leverage of 30% of the fund value. The portfolio to-date includes 8 projects which, together with the projects currently in the pipeline, ensure a balanced geographical coverage of the EU Member States. In terms of connectivity results, the currently available data (30 September 2021) shows that 225,789 households have access to high speed fibre communication networks as a result of the deployment projects supported by CEBF.

One lesson learnt is that future financial vehicles should have a broader and more flexible scope for strategic investments so as to address policy needs as they emerge. This flexibility is needed to support a sector like digital, which is evolving very rapidly in terms of technologies and markets.

3.2. Key achievements

TRANSPORT achievements in 2021²⁶

In 2021, despite the difficulties related to the COVID pandemic context, some projects selected under previous calls for proposals (between 2014 and 2017) were opportunely completed, contributing to the achievement of climate and digitalisation objectives for the transport sector:

143	204	4200	More than 150
Ultra-fast, fast and standard charging stations deployed across the Netherlands, Belgium, Germany, Austria,	km of double track railway line equipped with ERTMS in the Czech Republic, improving safety and allowing for enhanced interoperability along the Baltic- Adriatic Core	km of TEN-T road where harmonised and synchronized ITS services have been deployed	Km of railway lines improved along the Austrian and German railway networks, including 21 km of tunnels (Koralalm) and a 1,5 km cross border section between the two countries (Freilassing-

²⁶ The achievements mentioned in this section refer to projects closed during 2020. It is anyhow to be noted that the achievements in term of KPIs have been attributed to the year of the CEF supported Action end date.

Slovakia and Poland.

Network Corridor.

Salzburg).

ENERGY achievements in 2021

12.43 GW	1,455 km	5.4 bcm/y	497 km
Additional electricity transmission capacity	of electricity lines installed in Hungary, Slovakia, Bulgaria, Estonia, France, Norway and the UK	Additional gas transmission capacity through completion of 2 supported PCI projects	of gas pipelines installed in Hungary, Romania, Croatia, Estonia and Latvia

Nine CEF-supported PCIs completed in 2021 contributed to this additional increase in electricity and gas capacity and electricity and gas lines.

TELECOM achievements in 2021:

WiFi4EU ²⁷ vouchers awarded	Networks installed		WiFi4EU operational access points
8 802	7 348		76 178

3.3. Evaluations, studies and reports

The key findings of the latest evaluations have been presented in the Programme Statement 2019 ⁽²⁸⁾.

Transport:

After the publication of the Staff Working Document on its evaluation in May 2021, the closure of the open public consultation in the same month and the finalisation of the impact assessment exercise, in December 2021, the Commission presented its proposals for the review of the TEN-T Regulation (EU) N° 1315/2013. The files have started its legislative procedure and will be negotiated with the co-legislators.

Specific studies:

- **TEN-T Core Network Corridor studies:** Corridor studies for 2020-2021 (5th version) are currently in preparation and are expected to be finalised and published during 2022. The studies provide an updated overview of the TEN-T completion along the 9 Core Network Corridors and for the 2 horizontal priorities of European Railway Traffic Management System (ERTMS) and Motorways of the Sea (MoS).

Energy:

In December 2021, the Commission and co-legislators reached a provisional agreement on the revision of the TEN-E Regulation, see above (section 1.4) for more information.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: To contribute to the development of projects of common interest relating to efficient and interconnected networks and infrastructure for smart, sustainable, inclusive, safe and secure mobility (Transport strand)

²⁷ Data as of February 2022

⁽²⁸⁾ <https://ec.europa.eu/transport/sites/transport/files/legislation/swd-2018-0044-mid-term-evaluation-cef-ia-part2.pdf>

Indicator 1: Number of cross-border and missing links addressed with the support of CEF

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2029
0				5			50			77
	Actual Progress									Final
0										
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Units- cumulative
Cut-Off Date	31/12/2021
Data source	CINEA
Link to the objective	The indicator aims at monitoring and measuring the CEF programme, fulfilling the specific objective of contributing to the development of projects of common interest related to efficient interconnected and multimodal networks and infrastructure for smart, interoperable, sustainable, inclusive, accessible, safe and secure mobility (art. 3.2 a) i) of CEF 2021-2027 Regulation. In particular, it refers to eligible actions relating to efficient, interconnected, interoperable and multimodal networks for the development of railway, road, inland waterway and maritime infrastructure (art. 9.2 a) of the CEF Regulation.
Link MFF 14-20 / MFF 21-27	Under the CEF 14-20 data for a similar indicator were collected: number of new or improved cross-border connections and number of removed bottlenecks and sections of increased capacity on transport routes for all modes. However, it was not clear against which set of data this indicator had to be collected (all CEF projects, only pre-identified projects, etc.) and a clear definition of bottlenecks and sections of increased capacity was missing. Moreover, CEF Actions might only partially address a cross-border connection (through a study or through a first phase of the works); hence, it was not clear how to measure the CEF intervention.
Other methodological comments	It is to be noted that the methodology used for the definition of targets and milestones presents some shortcoming as the number of cross-border and missing links addressed will depend on several factors such as budget availability and stakeholders' response to call for proposals.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	As of 31/12/2021, the CEF 2021 calls launched in September 2021 are still under evaluation hence no Action has been supported through the programme under the Transport strand. Nevertheless, it is considered that the indicator is on-track as first measurable results should be achieved during year 2024, when it is estimated that some studies awarded under the first calls for proposals will be completed. The bulk of the projects (works) addressing this indicator are expected to be completed in a much larger timeframe (5 to 7 years), considering their complexity.

Indicator 2: Number of CEF supported actions contributing to the digitalisation of transport, in particular through the deployment of ERTMS, RIS, ITS, VTMS/e-maritime services and SESAR

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2029
0				160						200
	Actual Progress									Final
0										
Are we on track :	On track									

Indicator type	Input
Unit of measurement	Units- cumulative
Cut-Off Date	31/12/2021
Data source	CINEA
Link to the objective	The indicator aims at monitoring and measuring the CEF programme, fulfilling the specific objective of contributing to the development of projects of common interest related to efficient interconnected and multimodal networks and infrastructure for smart, interoperable, sustainable, inclusive, accessible, safe and secure mobility (art. 3.2 a) i) of CEF 2021-2027 Regulation. In particular, it refers to eligible actions relating to smart, interoperable, sustainable, multimodal, inclusive, accessible, safe and secure mobility and supporting telematics application systems in accordance with article 31 of Regulation (EU) No 1315/2013 for the respective transport modes and art. 9.2 b) ii) of the CEF Regulation.
Link MFF 14-20 / MFF 21-27	This indicator measuring number of CEF supported actions does not have any correspondence in the CEF 14-20 programme. In the previous programme, output indicators measured in terms of number of kilometres were established for some of the priorities, such as ERTMS, RIS and ITS.
Other methodological comments	It is to be noted that the methodology used for the definition of targets and milestones presents some shortcoming as the number of actions contributing to digitalisation of transport will depend on several

	factors such as budget availability and stakeholders' response to call for proposals.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	As of 31/12/2021, the CEF 2021 calls launched in September 2021 are still under evaluation hence no Action has been supported through the programme under the Transport strand. Nevertheless, it is considered that this indicator is on track, estimating the same average reply by stakeholders as for CEF 14-20 and considering the budget allocated (with an important frontloading for the first 3 years of implementation, around 70%), the foreseen level of CEF Transport grants should be reached.

Indicator 3: Number of alternative fuel supply points built or upgraded with the support of CEF

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2029
0						12 000				38 000
	Actual Progress									Final
	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Units- cumulative
Cut-Off Date	31/12/2021
Data source	CINEA
Link to the objective	The indicator aims at monitoring and measuring the CEF programme, fulfilling the specific objective of contributing to the development of projects of common interest related to efficient interconnected and multimodal networks and infrastructure for smart, interoperable, sustainable, inclusive, accessible, safe and secure mobility (art. 3.2 a) i) of CEF 2021-2027 Regulation. In particular, it refers to eligible actions relating to smart, interoperable, sustainable, multimodal, inclusive, accessible, safe and secure mobility and supporting alternative fuels infrastructure for all modes of transport, in accordance with article 33 of the Regulation (EU) 1315/2013 and art. 9.2 b) iv) of the CEF Regulation.
Link MFF 14-20 / MFF 21-27	Under the CEF 14-20 data for a similar indicator were collected: number of supply points for alternative fuels for vehicles using the TEN-T core network for road transport and number of ports and inland ports of the Core network equipped with supply points for alternative fuels. However, the two indicators measured on one side supply points for one single mode (road) and number of nodes (ports or inland ports) for other two transport modes. Moreover, CEF 14-20 supported alternative fuels which are not covered anymore under CEF 21-27 (e.g. CNG and LPG).
Other methodological comments	It is to be noted that the methodology used for the definition of targets and milestones presents some shortcoming as the number of alternative fuel supply points addressed will depend on several factors such as budget availability and stakeholders' response to call for proposals.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	As of 31/12/2021, the CEF 2021 calls launched in September 2021 are still under evaluation hence no Action has been supported through the programme under the Transport strand. Nevertheless, it is considered that the indicator is on-track as first measurable results should be achieved during year 2026, when it is estimated that part of the projects awarded under the AFIF rolling call will be completed.

Indicator 4: Number of CEF supported actions contributing to the safety of transport

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2029
0				60						90
	Actual Progress									Final
	0									
Are we on track :	On track									

Indicator type	Input
Unit of measurement	Units- cumulative
Cut-Off Date	31/12/2021
Data source	CINEA
Link to the objective	The indicator aims at monitoring and measuring the CEF programme, fulfilling the specific objective of contributing to the development of projects of common interest related to efficient interconnected and multimodal networks and infrastructure for smart, interoperable, sustainable, inclusive, accessible, safe and secure mobility (art. 3.2 a) i) of CEF 2021-2027 Regulation. In particular, it refers to eligible actions relating to smart, interoperable, sustainable, multimodal, inclusive, accessible, safe and secure mobility and supporting safe and secure infrastructure and mobility for road, in accordance with Article 34 of the Regulation (EU) 1315/2013 and art. 9.2 b) vii) of the CEF Regulation.

Link MFF 14-20 / MFF 21-27	This indicator, measuring number of CEF supported actions, does not have any correspondence in the CEF 14-20 programme. In the previous programme, an indicator measuring reduction of road casualties was included. It was nevertheless very difficult to link the infrastructural intervention only with the reduction of road casualties.
Other methodological comments	It is to be noted that the methodology used for the definition of targets and milestones presents some shortcoming as the number actions contributing to the safety of transport will depend on several factors such as budget availability and stakeholders' response to call for proposals.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	As of 31/12/2021, the CEF 2021 calls launched in September 2021 are still under evaluation hence no Action has been supported through the programme under the Transport strand. Nevertheless, it is considered that this indicator is on track, estimating the same average reply by stakeholders as for CEF 14-20 and considering the budget allocated (with an important frontloading for the first 3 years of implementation, around 70%), the foreseen level of CEF Transport grants should be reached.

Indicator 5: Number of CEF actions contributing to transport accessibility for persons with reduced mobility

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2029
0				20						30
	Actual Progress									Final
	0									
Are we on track :	On track									

Indicator type	Input
Unit of measurement	Units- cumulative
Cut-Off Date	31/12/2021
Data source	CINEA
Link to the objective	The indicator aims at monitoring and measuring the CEF programme, fulfilling the specific objective of contributing to the development of projects of common interest related to efficient interconnected and multimodal networks and infrastructure for smart, interoperable, sustainable, inclusive, accessible, safe and secure mobility (art. 3.2 a) i) of CEF 2021-2027 Regulation. In particular, it refers to eligible actions relating to smart, interoperable, sustainable, multimodal, inclusive, accessible, safe and secure mobility and improving transport infrastructure accessibility in all modes of transport and for all users, especially users with reduced mobility, in accordance with Article 37 of the Regulation (EU) 1315/2013 and art. 9.2 b) ix) of the CEF Regulation.
Link MFF 14-20 / MFF 21-27	This indicator, measuring number of CEF supported actions, does not have any correspondence in the CEF 14-20 programme. Moreover, CEF supported grants related to accessibility issues were not monitored in the legacy programme.
Other methodological comments	This indicator will be very difficult to monitor with a greater granularity. In fact, tasks related to the improved accessibility of passengers with reduced mobility are always embedded into other activities and cannot be captures at Grant Agreement level. Moreover, it is to be noted that the methodology used for the definition of targets and milestones presents some shortcoming as the number of actions contributing to transport accessibility for persons with reduced mobility will depend on several factors such as budget availability and stakeholders' response to call for proposals.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	As of 31/12/2021, the CEF 2021 calls launched in September 2021 are still under evaluation hence no Action has been supported through the programme under the Transport strand. Nevertheless, it is considered that this indicator is on track, estimating the same average reply by stakeholders as for CEF 14-20 and considering the budget allocated (with an important frontloading for the first 3 years of implementation, around 70%), the foreseen level of CEF Transport grants should be reached.

Indicator 6: Number of CEF supported actions contributing to reduce rail freight noise

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2029
0				14						20
	Actual Progress									Final
	0									
Are we on track :	On track									

Indicator type	Input
Unit of measurement	Units- cumulative
Cut-Off Date	31/12/2021
Data source	CINEA

Link to the objective	The indicator aims at monitoring and measuring the CEF programme, fulfilling the specific objective of contributing to the development of projects of common interest related to efficient interconnected and multimodal networks and infrastructure for smart, interoperable, sustainable, inclusive, accessible, safe and secure mobility (art. 3.2 a) i) of CEF 2021-2027 Regulation. In particular, it refers to eligible actions relating to smart, interoperable, sustainable, multimodal, inclusive, accessible, safe and secure mobility and supporting the reduction of rail freight noise (art. 9.2 b) iii) of the CEF Regulation.
Link MFF 14-20 / MFF 21-27	This indicator, measuring number of CEF supported actions, does not have any correspondence in the CEF 14-20 programme. Moreover indicators for CEF supported grants related to reduction of rail freight noise were not reported in the legacy programme.
Other methodological comments	It is to be noted that the methodology used for the definition of targets and milestones presents some shortcoming as the number of actions contributing to the reduction of rail freight noise will depend on several factors such as budget availability and stakeholders' response to call for proposals.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	As of 31/12/2021, the CEF 2021 calls launched in September 2021 are still under evaluation hence no Action has been supported through the programme under the Transport strand. Nevertheless, it is considered that this indicator is on track, estimating the same average reply by stakeholders as for CEF 14-20 and considering the budget allocated (with an important frontloading for the first 3 years of implementation, around 70%), the foreseen level of CEF Transport grants should be reached.

Specific Objective 2: To adapt the TEN-T networks to military mobility need (Transport strand)

Indicator 1: Number of transport infrastructure components adapted to civilian-military dual-use requirements

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2029
0				90						140
	Actual Progress									Final
	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Units- cumulative
Cut-Off Date	31/12/2021
Data source	CINEA
Link to the objective	This indicator is relevant for CEF specific objective 7. The indicator will monitor and measure the CEF programme, fulfilling the specific objective of contributing to the development of projects of common interest to adapt parts of the TEN-T for the dual use of the transport infrastructure with a view to improving both civilian and military mobility (art. 3.2 a) ii) of CEF II Regulation. It refers to eligible actions or specific activities within an action, supporting parts, new or existing, of the TEN-T suitable for military transport, in order to adapt the TEN-T to dual-use infrastructure requirements (art. 9.2 c) of the CEF 2021-2027 Regulation.
Link MFF 14-20 / MFF 21-27	Military Mobility supported actions are a novelty of the CEF 21-27 programme. No such actions were supported under CEF 14-20.
Other methodological comments	It is to be noted that the methodology used for the definition of targets and milestones presents some shortcoming as the number of actions contributing to the reduction of rail freight noise will depend on several factors such as budget availability and stakeholders' response to call for proposals.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	As of 31/12/2021, the CEF 2021 calls launched in September 2021 are still under evaluation hence no Action has been supported through the programme under the Transport strand. Nevertheless, it is considered that this indicator is on track, considering the budget allocated (with an important frontloading for the first 3 years of implementation, around 70%), the foreseen level of CEF Transport grants should be reached.

Specific Objective 3: To contribute to the development of projects of common interest relating to further integration of the internal energy market, interoperability of networks across borders and sectors, facilitating decarbonisation and the facilitation of cross-border cooperation in the area of renewable energy (Energy strand)

Indicator 1: Number of CEF actions contributing to projects interconnecting MS networks and removing internal constraints

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2030

0				35						95
	Actual Progress									Final
0										
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Units - cumulative
Cut-Off Date	31/12/2021
Data source	The data will be collected after grant agreement signature and will be available as of that moment. The first grant agreements are expected to be signed in 2022.
Link to the objective	One of the specific objectives of the CEF Energy is to contribute to the development of the projects of common interest relating to further integration of an efficient and competitive internal energy market. The indicator shows the contribution of actions supported by CEF to this specific objective in electricity and gas sectors.
Link MFF 14-20 / MFF 21-27	This indicator follows up on two indicators used for the 2014-2020 MFF: 'the reduction or elimination of MS energy isolation' (in amount of PCIs) and 'the percentage of electricity cross-border transmission power in relation to installed electricity generation capacity in the relevant Member States' (in amount of Member States), which were used to measure the specific objective 'Increasing competitiveness by promoting the further integration of the internal energy market and the interoperability of electricity and gas networks across borders'.
Other methodological comments	This indicator includes all CEF actions, except for storage projects, electrolysers and smart grids. The data will be collected after grant agreement signature and will be available as of that moment. The first grant agreements are expected to be signed in 2022.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The progress is 0 but the Grant Agreements to be signed in 2022 are expected to include 4 actions addressing the indicator, a number which is expected to increase, hence contributing to reach the milestone of 35 signed grant agreements in year 2024 and 94 in 2030 respectively.

Specific Objective 4: To contribute to the security of energy supply (Energy strand)

Indicator 1: Number of CEF actions contributing to projects ensuring resilient gas network

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2030
0				3						3
	Actual Progress									Final
0										
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Units - cumulative
Cut-Off Date	31/12/2021
Data source	CINEA. The data will be collected after grant agreement signature and will be available as of that moment. The first grant agreements are expected to be signed in 2022.
Link to the objective	The projects of common interest in the gas sector are aimed to develop missing or enhance existing interconnections to increase security of gas supply, cross-border trade and competition. The indicator shows the contribution of the actions supported by CEF to the trans-European energy networks policy objective to ensure the security of supply.
Link MFF 14-20 / MFF 21-27	This indicator follows up on one indicator used for the 2014-2020 MFF: 'System resilience, taking into account the number of supply disruptions and their duration' (in amount of Member States), which was used to measure the specific objective 'Enhancing Union security of energy supply'.
Other methodological comments	This indicator includes CEF actions in the categories of gas and gas storage. The data will be collected after grant agreement signature and will be available as of that moment. The first grant agreements are expected to be signed in 2022.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The progress is 0 but the Grant Agreements to be signed in 2022 are expected to include 1 action addressing the indicator, a number which is not expected to increase significantly, hence contributing to reach the milestone of 3 signed Grant Agreements in 2024 and 2030.

Indicator 2: Number of CEF actions contributing to the smartening and digitalisation of grids and increasing energy storage capacity

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
----------	------	------	------	------	------	------	------	------	------	--------

2020	Milestones								2030
0				10					25
	Actual Progress								Final
Are we on track :	On track								

Indicator type	Output
Unit of measurement	Unit - cumulative
Cut-Off Date	31/12/2021
Data source	The data will be collected after grant agreement signature and will be available as of that moment. The first grant agreements are expected to be signed in 2022.
Link to the objective	Developing a smart and efficient energy system including storage and demand response solutions that help balance the grid significantly contributes to the ambitious EU long-term decarbonisation objectives, ensures efficiency and security of energy supply. Smart grid projects play key role in energy transition by integrating electricity generation, distribution or consumption using real time system management and influencing cross-border energy flows. The indicator shows the contribution of the CEF funded actions to achievement of these specific objectives.
Link MFF 14-20 / MFF 21-27	This indicator follows up on an indicator used for the 2014-2020 MFF: 'The number of projects allowing diversification of supply sources, supplying counterparts and routes' (in amount of PCIs), which was used to measure the specific objective 'Enhancing Union security of energy supply'.
Other methodological comments	This indicator includes CEF actions related to smart grids and energy storage. The data will be collected after grant agreement signature and will be available as of that moment. The first grant agreements are expected to be signed in 2022.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The progress is 0 but the Grant Agreements to be signed after 2022 are expected to include actions addressing the indicator, hence contributing to reach the milestone of 10 signed grant agreements in year 2024 and 25 in 2030 respectively.

Specific Objective 5: To contribute to sustainable development through enabling decarbonisation (Energy strand)

Indicator 1: Number of CEF actions contributing to projects enabling increased penetration of renewable energy in the energy systems

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones								2030	
0				42						117
	Actual Progress								Final	
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Units - cumulative
Cut-Off Date	31/12/2021
Data source	The data will be collected after grant agreement signature and will be available as of that moment. The first grant agreements are expected to be signed in 2022.
Link to the objective	The focus of the TEN-E policy is shifting towards the accelerated integration of increasing amounts of renewable energy in line with the ambitious energy and climate targets, related energy security and the completion of the internal energy market by addressing remaining bottlenecks. Deployment of electricity interconnectors and storage facilities, development of the smart grids is crucial for integrating energy markets and enabling more renewables in the system. At the same time, biogas and renewable hydrogen are expected to play an important role in the future EU energy mix. The indicator will show the number of the CEF supported actions contributing to the projects of common interest enabling the increased penetration of renewable energy in the energy systems.
Link MFF 14-20 / MFF 21-27	In this Programme Statement, the indicators under the CEF I objective 'Contributing to sustainable development and protection of the environment, inter alia by the integration of energy from renewable sources into the transmission network, and by the development of smart energy networks and carbon dioxide networks' were not continued, hence in this case there is no Link with the 2014-2020 MFF.
Other methodological comments	Includes actions on electricity, smart grids and storage. Potential inclusion of new categories of revised TEN-E Regulation, e.g. renewable hydrogen.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The progress is 0 but the Grant Agreements to be signed after 2022 are expected to include actions addressing the indicator, hence contributing to reach the milestone of 42 signed grant agreements in

year 2024 and 117 in 2030 respectively.

Indicator 2: Number of CEF actions contributing to cost efficient reaching of the EU shared RES target on the basis of cross-border cooperation in the area of renewables

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2030
0				21						48
	Actual Progress									Final
0										
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Units - cumulative
Cut-Off Date	31/12/2021
Data source	The data will be collected after grant agreement signature and will be available as of that moment. The first grant agreements are expected to be signed in 2021.
Link to the objective	The RED II Directive establishes a share EU target for RES by 2030. To create opportunities for reducing the cost of meeting the EU target and to give flexibility to Member States to comply with their obligation not to fall below their 2020 national targets after 2020, it is allowed the consumption in Member States of energy produced from renewable sources in other Member States and Member States are allowed to count energy from renewable sources consumed in other Member States towards their own renewable energy share. Bilateral or multilateral cooperation agreements (statistical transfers, joint projects between Member States or joint support schemes) and the voluntary opening of support schemes to projects located in other Member States are supported under CEF actions.
Link MFF 14-20 / MFF 21-27	The cross-border renewables window is newly introduced under CEF II, hence there is no link to the 2014-2020 MFF.
Other methodological comments	Includes actions on electricity, smart grids and storage. Potential inclusion of new categories of revised TEN-E Regulation, e.g. renewable hydrogen.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The progress is 0 but the Grant Agreements to be signed after 2022 are expected to include actions addressing the indicator, hence contributing to reach the milestone of 21 signed grant agreements in year 2024 and 48 in 2030 respectively.

Specific Objective 6: To contribute to the deployment of very high capacity digital networks and 5G systems, to the increased resilience and capacity of digital backbone networks on EU territories by linking them to neighbouring territories, as well to the digitalisation of transport and energy network (Digital strand)

Indicator 1: New connections to very high capacity networks for socio-economic drivers and very high quality connections for local communities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2029
0	0	25	50	90						140
	Actual Progress									Final
0										
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Units - cumulative
Cut-Off Date	01/01/2022
Data source	Project promoter /Monitoring data
Link to the objective	Contribution to the objective of increasing coverage with gigabit networks and 5G systems.
Link MFF 14-20 / MFF 21-27	No direct link with CEF 2014-2020
Other methodological comments	Milestone figures relate to the first Multiannual Work Programme 2021-23. The figures represent the number of socio-economic drivers expected to have access to 5G systems for new, innovative, use cases, as a result of the projects funded (grants signed in a particular year). Given the adoption of the CEF digital WP only in December 2021, the first call for projects is only in 2022 and the first grants will be signed before the end of 2022. The number of actions foreseen is based on the budget available for the respective call, divided by the expected average size of the projects and assuming at least one socio-economic driver is connected.

Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Given the adoption of the CEF digital multiannual work programme in December 2021 and the first call for projects in January 2022, there is no data available yet.

Indicator 2: Number of CEF actions enabling 5G connectivity along transport paths

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2028
0	0	5	5	17						46
	Actual Progress									Final

Cut-Off Date	01/01/2022
Data source	Implementing agency HaDEA
Link to the objective	Contribution to specific objective 6 of increasing coverage with 5G systems, in particular along transport corridors, thus contributing to achieving the 2025 gigabit society connectivity target “5G coverage along major transport paths” and the "5G for Europe: an action plan” and the 3rd mobility package Communication - On the road to automated mobility: an EU strategy for mobility of the future (COM(2018)283)
Link MFF 14-20 / MFF 21-27	No direct link with CEF 2014-2020 (new topic)
Other methodological comments	Milestone figures related to the first Multiannual Work Programme 2021-23; Given the adoption of the CEF digital WP only in December 2021, the first call for deployment projects is only in 2022 with the grants to be signed before the end of 2022. The assumption is that the grants for the projects called for in 2023 will be signed in 2024 (therefore no new actions in 2023). The number of actions foreseen is based on the budget available for the respective call, divided by the expected average size of the projects. The actual progress (number of actions) will depend on the actual size of the projects to be funded.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Given the adoption of the CEF digital WP only in December 2021, and the first call for deployment projects in January 2022 with the grants to be signed before the end of 2022, there is no data yet available.

Indicator 3: Number of actions enabling new connections to very high capacity networks

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2028
0	0	11	29	36						50
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Units - cumulative
Cut-Off Date	01/01/2022
Data source	Implementing agency HaDEA
Link to the objective	Direct relevance for the objective of increasing resilience and capacity of digital backbone networks in the EU (art. 3.2.c of the CEF Regulation). The co-funded actions will address, under different topics, the deployment of new, or significant upgrade of cross-border backbone networks.
Link MFF 14-20 / MFF 21-27	No direct link with CEF 2014-2020, as it is a new topic/programme.
Other methodological comments	Milestone figures are related to the first Multiannual Work Programme 2021-23. The number of actions reported will integrate projects developed under the topics set out in the work programme, such as quantum communication infrastructures, interconnection of cloud centers, submarine cables. Given the adoption of the CEF digital WP only in December 2021, the first actions will be launched (grant agreements signed) only towards end of 2022. The number of actions foreseen is based on the budget available for the respective call, divided by the expected average size of the projects. Actual progress (number of actions) will depend on the actual size of the projects to be funded.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Given the adoption of the CEF digital WP in December 2021 and the first calls for proposals launched in January 2022, the first projects will be launched (grant agreements signed) only towards the end of 2022, therefore no data yet available.

Indicator 4: Number of CEF actions contributing to the digitalisation of energy and transport sectors

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
0	0	1	0	2						2
	Actual Progress									Final
0	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Unit - cumulative
Cut-Off Date	01/01/2022
Data source	Future implementing Agency HaDEA
Link to the objective	Will contribute to the digitalisation of transport and energy networks
Link MFF 14-20 / MFF 21-27	No direct link with CEF 2014-2020 projects, new topic.
Other methodological comments	One dedicated call for proposals for one, or more, works projects is intended to be launched in 2024, to be specified in the next CEF digital multiannual work programme (covering 2024-27) A comprehensive coordination and support action will be executed in the meantime (grant signature expected by end of 2022).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The discussions on the 2021-23 CEF digital work programme resulted in the decision to start with a preparatory Coordination and Support Action, in order to prepare the works projects to be launched in the next work programme.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Connecting Europe Facility (CEF)

General Objective 1: Developing modern and high-performing trans-European networks and creating an environment more conducive to private, public or public-private investment

Indicator 4: Volume of public and private investment in projects of common interest for fast and ultra-fast broadband internet funded by CEF

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Private investments										
2013	Milestones									2020
0	0	0	0	0	0	30	100	100	100	110
	Actual Progress									Final
0	0	0	0	0	0	30	85	165		
Are we on track :	On track									
Public investments										
2013	Milestones									2020
0	0	0	0	0	0	390	390	390	390	390
	Actual Progress									Final
0	0	0	0	0	0	390	390	390		
Are we on track :	On track									

Indicator type	Input
Unit of measurement	EUR million
Cut-Off Date	31/12/2021
Data source	Report by Fund Manager
Narrative	Some reported figures are expected to vary more than others, in particular as the fund continues to invest in new projects and progressively starts disinvesting in existing ones. Also, additional investments (follow-on) are permitted after the initial Investment Period (currently 5 years following initial closing).
Methodology	The tables above present the private/public investments at fund level (for CEBF). At first close (2018), the capital of the fund was EUR 395 M out of which EUR 390 M public funds (EUR 100 M from the EC, EUR 140 M from EIB, EUR 150 M from three NPBI). Currently, the total capital of the fund is EUR 555 M, meaning that the fund has leveraged EUR 165 M of private funds. Private investment (at project level) is only available for debt taken on by the promoter of the projects but not

	for equity. In other words, leverage is under-estimated in this table. Private investment (at fund level) is expected to remain at EUR 165 M, as no new closing is expected to take place during the remaining term of the fund. The target fund size is EUR 500 M (EUR 110 M private and EUR 390 M public), but it should be kept in mind that (i) management fees reduce the capital actually available for investments, while (ii) the actual fund size (EUR 555 M) is actually higher than the target fund size.
Link MFF 14-20 / MFF 21-27	The Fund will continue to invest in projects aligned with the DG’s policy objectives, in particular focusing on Gigabit (fiber) networks.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The fund started to invest into projects only in 2019 with a significant increase in 2020.

Specific Objective 1: Removing bottlenecks, enhancing rail interoperability, bridging missing links, and improving cross-border sections

Indicator 2: Km of lines in service equipped with the European Railway Traffic Management System (ERTMS), linked to TEN-T

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Km of track-side to be equipped with ERTMS through actions funded by CEF grants (double-track equivalent)										
2013	Milestones									2024
5 000										5 861
	Actual Progress									Final
	0	0	0	0	30	30	234	234		
Are we on track :	Moderate progress									
Estimated total private, public or public-private partnership investment (i.e. eligible costs) triggered by CEF funding in a given year for actions achieving this indicator										
2013	Milestones									2024
										4 665.9
	Actual Progress									Final
	36	118.5	292.9	686.4	1 388.7	2 206.7	2 546.8	3 318.3		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Km (additional to baseline) and EUR million respectively
Cut-Off Date	31/12/2021
Data source	CINEA
Narrative	Km are reported for the year during which the action was/is expected to be completed.
Methodology	Data shown cumulative. The target 2024 is the cumulative outputs for projects signed until 2021. The target is final as no more CEF 2014-2020 projects will be signed. The milestones are expected results by actions still ongoing while actual results correspond to outputs achieved by closed CEF Transport actions. To be also noted that CEF supported actions contribute to the reporting only once assessed by the CINEA and closed. In this framework, beneficiaries have 12 months after the final end-date of implementation of the Action to submit their final report. To this, the additional time for CINEA to assess the report and close the Action shall be considered.
Link MFF 14-20 / MFF 21-27	Data collection on the KM or railway lines equipped with ERTMS will continue under the CEF 2021-2027 at level 3 indicators. Level 2 indicators enshrined in the CEF 21-27 legal base only aim at measuring the number of CEF supported projects concerning the digitalisation of transport.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	In 2021, the “real” milestone (i.e. considering a 15 months gap to administratively close the action) is estimated to be 331 km. The indicator is hence on track if the additional administrative time-frame is considered. It is to be noted that the COVID pandemic still affected the timely submission of reports and hence the achievement of the expected results for year 2021. Milestones and target reflect the current programme portfolio, following amendments and terminations due to implementation issues (use it or lose it principle). Changes of the national deployment plans, long procurement procedures and dependence on other rail projects conditioning its deployment and technical difficulties are the main delay factors observed. These factors are not under the direct control of the Commission.

Indicator 5: Length of the railway network in the EU-28 upgraded following the requirements set out in Article 45 (2) of Regulation (EU) No 1315/2013

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Total Gauge										

2013	Milestones									2024
	0	0	0	0	0	0	0	216	280	662
	Actual Progress									Final
	0	0	0	0	0	0	0	0

	0	0	0	0	51	60	100	109		
Are we on track :	Moderate progress									
Total Freight										
2013	Milestones									2024
				0	22	113	119	478	1 537	1 916
	Actual Progress									Final
	0	0	0	9	22	113	115	160		
Are we on track :	Moderate progress									

Indicator type	Output
Unit of measurement	Km
Cut-Off Date	31/12/2021
Data source	CINEA
Narrative	Km are reported for the year during which the action was/is expected to be completed.
Methodology	Data shown cumulative. The target 2024 is the cumulative outputs for projects signed until 2021. This is the final target as no other CEF 2014-2020 projects will be signed. The milestones are expected results by actions still ongoing while actual results correspond to outputs achieved by closed CEF Transport actions. To be also noted that CEF supported actions contribute to the reporting only once assessed by the CINEA and closed. In this framework, beneficiaries have 12 months after the final end-date of implementation of the Action to submit their final report. To this, the additional time for CINEA to assess the report and close the Action shall be considered. Please also note that after data quality check, the input on the gauge sub-indicator for the previous years had to be corrected.
Link MFF 14-20 / MFF 21-27	Data collection on km railway lines supported by CEF on specific parameters such as gauge, electrification and capacity to accommodate 740 m freight trains are going to be measures at level 3 under the CEF 2021-2027.
Other methodological comments	It is to be noted that a data control check confirmed that no achievement was made for the number of Km of gauge supported by CEF. Wrong feature in the encoding system at CINEA provided wrong information for the previous years.
Full metadata available at this address	
Justification of the trend	In 2021, the “real” milestones (i.e. considering a 15 months gap to administratively close the action) are estimated to be 216 km for the gauge, 376 km for the electrification and 478 km for freight. The indicator is hence moderately on track if the additional administrative time-frame is considered. It is to be noted that the COVID pandemic has further delayed the submission of reports and hence the achievement of the expected results for year 2021. Milestones and target reflect the current programme portfolio, following amendments and terminations due to implementation issues (use it or lose it principle). In particular, railway actions feeding to this indicator have been mainly affected by public procurement issues (e.g. complaints/appeals during tender procedures) as well as legal and environmental issues (e.g. permitting, spatial planning, other authorizations and land acquisition). Moreover, technical issues related to unforeseen events (such as landslides) and COVID affected timely completion.

Specific Objective 2: Ensuring sustainable and efficient transport systems in the long run, with a view to preparing for expected future transport flows, as well as enabling the decarbonisation of all modes of transport through transition to innovative low-carbon and energy-efficient transport technologies, while optimising safety

Indicator 1: Number of supply points for alternative fuels for vehicles using the TEN-T core network for road transport in the EU-28

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Total

Electric										
2012	Milestones									2024
	0	0	9	247	592	944	1 343	1 718	11 508	20 817
29 800	Actual Progress									Final
	0	0	9	247	592	944	1 259	1 259		
Are we on track :	Moderate progress									

Indicator type	Output
Unit of measurement	Number of supply points. Additional to baseline
Cut-Off Date	31/12/2021
Data source	CINEA
Narrative	Foreseen milestones are expected results by still ongoing CEF actions. Each supply point is assumed to be operational in the year in which the CEF funded action has been completed. A CEF-funded action can include several supply points. The number of supply points is attributed to the year when the full action defined in the grant agreement has been completed (e.g. if a grant stipulates the creation of 100 supply points, the action is only considered as completed in the year when all 100 supply points have been set up. All the 100 supply points are then attributed to that year, even if most of them had already been set up in previous years).
Methodology	Data shown cumulative. The target 2024 is the cumulative outputs for projects signed until 2021. The target is final as no other CEF 2014-2020 projects will be signed. The milestones are expected results by actions still ongoing while actual results correspond to outputs achieved by closed CEF Transport actions. To be also noted that CEF supported actions contribute to the reporting only once assessed by the CINEA and closed. In this framework, beneficiaries have 12 months after the final end date of implementation of the Action to submit their final report. To this, the additional time for CINEA to assess the report and close the Action shall be considered.
Link MFF 14-20 / MFF 21-27	Data on the number of supply points for alternative fuels for road will continue to be collected as level 2 and level 3 indicators under the CEF 2021-2027 programme.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	In 2021, the “real” milestone (i.e. considering a 15 months gap to administratively close the action) is estimated to be 1745 supply points. The indicator is hence on track if the additional administrative time-frame is considered. It is to be noted that the COVID still affected the timely submission of reports and hence the achievement of the expected results for year 2021. Milestones and target reflect the current programme portfolio, following amendments and terminations due to implementation issues (use it or lose it principle). In particular, for alternative fuels infrastructures, issues related to securing appropriate locations and changing market conditions have had important impacts. During the implementation period it also appeared clear that more efforts will be needed to ensure the network effect of these Actions. For this reason, a new Alternative Fuels Facility has been developed and launched for the CEF 2021-2027 programme to boost the use of financial instruments. The facility will also contribute to better allocate the investments according to the needs along the network through the update of a dedicated deployment map.

Specific Objective 4: Increasing competitiveness by promoting the further integration of the internal energy market and the interoperability of electricity and gas networks across borders

Indicator 2: Reduction or elimination of Member States' energy isolation

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2024
					9	8	6			4
9	Actual Progress									Final
					9	8	6	6		

Are we on track :	On track
-------------------	----------

Indicator type	Output
Unit of measurement	PCIs
Cut-Off Date	31/12/2021
Data source	CINEA
Narrative	While the challenge remain important for peripheral or isolated Member States, by implementation of several projects of common interest the isolation is reduced in several parts of the EU (The Commission Staff working Document (C(2021)335)
Methodology	The indicator is related to the number of PCIs to be commissioned to reduce or eliminate energy isolation.
Link MFF 14-20 / MFF 21-27	This indicator is linked to the 2021-2027 indicator 'Number of actions supported by the CEF contributing to projects interconnecting MS networks and removing internal constraints'.
Other methodological comments	Number of PCIs contributing to the reduction or elimination of Member States' energy isolation to be commissioned. This indicator has been monitored during the programme implementation based on formal monitoring requirements for PCIs set out in the TEN-E Regulation (Art. 5, monitoring and implementation). Although its evolution is only partly related to the CEF budget, this indicator is kept until the end of the programme and can be used ex-post.
Full metadata available at this address	
Justification of the trend	Despite the completion of PCIs which received CEF financial assistance in the form of grants for works and/or studies, there are still 6 PCIs to be commissioned, also as a consequence of Brexit and the implications for Ireland.

Indicator 3: Percentage of electricity cross-border transmission power in relation to installed electricity generation capacity in the relevant Member States

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2024
16	Actual Progress									Final
	17			17	17	17	19	16		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Member States
Cut-Off Date	31/12/2021
Data source	ENTSO-E
Narrative	The number of Member States that are above the 15% by 2030 interconnectivity target as set out in Regulation 2018/1999 of the governance of the Energy Union and replacing the previous target of 10% by 2020.
Methodology	This indicator lists the amount of Member States that are above the 15% interconnection target as set out in the Regulation on the governance of the Energy Union. Although its evolution is only partly related to the CEF budget, this indicator has been monitored during the programme implementation. It measures the ration of cross-border transmission capacity and the installed generation capacity in a Member State. It can also be used ex-post. The 15% target for 2021 replaces the previous 10% target, which was used until 2020 and based on recital 5 in the 2013 TEN-E Regulation.
Link MFF 14-20 / MFF 21-27	This indicator is linked to the 2021-2027 indicator 'Number of actions supported by the CEF contributing to projects interconnecting MS networks and removing internal constraints'.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	PCIs contributing to this specific objective have been completed and are progressing. However, some PCIs that contribute to the achievement of this indicator face significant delays in particular at the permitting phase. The final target is set for 25, since Cyprus and Ireland are not expected to reach 15% given their geographically isolated location.

Specific Objective 5: Enhancing Union security of energy supply

Indicator 1: Number of projects allowing diversification of supply sources, supplying counterparts and routes

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2024
	Actual Progress									Final
				40	38		11			1

				40	38	28	13	12		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	PCIs
Cut-Off Date	31/12/2021
Data source	CINEA
Narrative	Number of PCIs supporting EU's security of supply to be commissioned
Methodology	The indicator is related to the number of PCIs to be commissioned to support EU security of energy supply
Link MFF 14-20 / MFF 21-27	This indicator is linked to the 2021-2027 indicator 'Number of actions contributing to the smartening and digitalization of grids and increasing energy storage capacity'.
Other methodological comments	12 PCIs supporting the EU security of supply are still to be commissioned.
Full metadata available at this address	
Justification of the trend	One gas project was commissioned in 2021 (LNG terminal in Krk)

Indicator 3: System resilience, taking into account the number of supply disruptions and their duration

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
3		21			22		22			22
	Actual Progress									Final
		19	22	21	20	18	20	20		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of Member States
Cut-Off Date	31/12/2021
Data source	CINEA
Narrative	This indicator measures Member States' preparedness in the event of a disruption of the single largest gas infrastructure.
Methodology	Baseline: Gas: 3 MS do not meet the N-1 formula (as defined in Regulation (EU) No 994/2010) – Bulgaria, Greece and Portugal Target: Gas: N-1 is met by 22 MS (all except Cyprus, Malta as long as they do not have gas system and Luxemburg, Slovenia, Sweden which have a derogation). For consistency over time, the milestones were not changed to take account of new provisions in the Regulation No (EU) 2017/1938 and the end of the derogation for Malta and Slovenia in 2019.
Link MFF 14-20 / MFF 21-27	This indicator is linked to the 2021-2027 indicator ' Number of actions supported by the CEF contributing to projects ensuring resilient gas network'
Other methodological comments	The indicator is based on monitoring requirements set out in Regulation No (EU) 2017/1938 on the security of supply for gas, under which Member States have to report every four years to the Commission (last notification: 2019). The progress of the indicator is based on PCIs which are implemented. Although its evolution is only partly related to the CEF budget, it can be monitored during the Programme implementation and can be kept until the end of the Programme. It can also be used ex-post.
Full metadata available at this address	
Justification of the trend	Under the new criteria under Regulation No (EU) 2017/1938 which take also into account demand side measures, only one Member State does not meet the new target of 24 Member States. Due to notification every four years, there is no change in actual progress.

Specific Objective 9: Encourage and support entities with a public mission, such as local public authorities, to offer free Wi-Fi connectivity in the centres of community life (e.g. in and around public buildings, health centres, parks or town squares)

Indicator 1: Number of operational free Wi-Fi access points supported by CEF

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2023
								65 000	80 000	90 000
	Actual Progress									Final
							32 000	71 800		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of access points
Cut-Off Date	31/12/2021
Data source	WiFi4EU portal
Narrative	The indicator measures the total number of WiFi hotspots installed, as a result of the vouchers, worth 15 000 euros each, awarded to the municipalities
Methodology	The municipalities report the Access Points created in the WiFi4EU networks.
Link MFF 14-20 / MFF 21-27	Not applicable, as the first CEF Digital multiannual work programme (2021-23) does not include a similar action.
Other methodological comments	The current (revised) KPIs and their targets have been validated by the implementing executive Agency (HaDEA).
Full metadata available at this address	
Justification of the trend	Network installations are increasing steadily and the trend observed in 2021, if confirmed, will lead to at least 85% of projects completed by end of 2022. The trend could decrease as of 2022 due to the expected completion of most of Call 2 and 3 rollouts.

Indicator 2: Number of daily connections generated on free Wi-Fi access points supported by CEF in a given year

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2023
								25000000	35000000	41000000
	Actual Progress									Final
							50000-100000	43000000		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Units
Cut-Off Date	31/12/2021
Data source	WiFi4EU portal
Narrative	The indicator measures the number of daily connections to the WiFi hotspots installed, representing an indication of the usage.
Methodology	Number of connections per day in a given year in all WiFi4EU networks. Connections are defined as “valid connections made by different devices in one day”. Each different device will be counted only once during a day (24 hour period).
Link MFF 14-20 / MFF 21-27	Not applicable, as the first CEF Digital multiannual work programme (2021-23) does not include a similar action.
Other methodological comments	The KPIs and their targets have now been validated and implemented by the executive Agency (HaDEA). The cut-off date is end of 2025 as there will be at least a three year monitoring after implementation, for each and every beneficiary.
Full metadata available at this address	
Justification of the trend	The use of the network was at an average rate of 117 620 daily connections. It is expected that the trend will keep on growing with the new deployments performed by beneficiaries of calls 2, 3 and 4, and with the launch of Phase II of the initiative which will provide secured connections and seamless roaming.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	4193.78	4323.00	4340.00	4358.00	1225.00	1242.00	1262.00	20943.78	63%

(*These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

The CEF 2021-2027 legal base includes in its recital 5 a clear reference to climate tracking objectives and a set of EU coefficients related to the Transport and Energy sectors. Reflecting the importance of tackling climate change in line with Union’s

commitments to implement the Paris Agreement, and the commitment to the United Nations Sustainable Development Goals, the Regulation should therefore mainstream climate action and lead to the achievement of an overall target of at least 30% of the EU budget expenditures supporting climate objectives. Actions under this Programme should contribute 60% of the overall financial envelope of the Programme to climate objectives, based inter alia on the following coefficients:

- i) 100% for the expenditures relating to railway infrastructure, charging infrastructure alternative and sustainable fuels, clean urban transport, electricity transmission, electricity storage, smart grids, CO2 transportation and renewable energy;
- ii) 40% for inland waterways and multimodal transport, and gas infrastructure provided that it enables the use of renewable hydrogen or bio-methane to be increased.

As indicated under recital 5 of the CEF Regulation, “[...] the detailed climate expenditure tracking coefficients applied should be consistent with those set out in Annex 1 of Regulation EU 2021/1060, where applicable. Relevant actions will be identified during the preparation and implementation of the CEF, and reassessed in the context of the relevant evaluations and review processes. In order to prevent the infrastructure from being vulnerable to potential long term climate change effects, and to ensure that the cost of greenhouse gas emissions arising from the project is included in the project's economic evaluation, projects supported by the CEF should be subject to climate proofing, where relevant, in accordance with guidance that should be developed by the Commission coherently with the guidance developed for other programmes of the Union [...]”

CEF2 objectives	CALL	2021	2022	2023	2024	2025	2026	2027
Projects on the Core Network (Total)	CORE	3.620	3.620	3.620	3.620			
Projects on the Core Network (Climate Tracking)*	CORE (80%)	2.896	2.896	2.896	2.896

Projects on the Comprehensive Network (Climate Tracking)*	COMP (80%)	480	480	480	480			
Actions related to smart and interoperable mobility (Total)	SIMOB	550	550	550	550			
Actions related to smart and interoperable mobility (Climate Tracking)**	SIMOB (40%)	220	220	220	220			
Actions related to sustainable and multimodal mobility: Alternative Fuel Infrastructure Facility (Total)	AFIF	525	525	525	525	602	602	602
Actions related to sustainable and multimodal mobility: Alternative Fuel Infrastructure Facility (Climate Tracking)***	AFIF (100%)	525	525	525	525	602	602	602
Actions related to sustainable and multimodal mobility: Other (Total)	SUSTMOB	125	125	125	125			
Actions related to sustainable and multimodal mobility: Other (Climate Tracking)****	SUSTMOB (40%)	50	50	50	50			
Actions related to safe and secure mobility (Total)	SAFEMOB	250	250	250	250			
Actions related to safe and secure mobility (Climate Tracking)*****	SAFEMOB (0%)	-	-	-	-			
Military Mobility (Total)	MILMOB	330	330	330	330			
Military Mobility (Climate Tracking)*****	MILMOB (40%)	132	132	132	132			
Total		6.000	6.000	6.000	6.000	602	602	602
Total (Climate tracking)		4.303	4.303	4.303	4.303	602	602	602
%		72%	72%	72%	72%	100%	100%	100%

For the Transport sector, the estimation follows a conservative approach and is based on the budget allocation included in the first set of call for proposals launched in September 2021 and still under evaluation. The contribution also includes the Cohesion envelope. As per first CEF 2021-2027 MAP, an important part of the budget has been front-loaded (around 70% of the budget).

For years from 2021 to 2024, the estimation it is based on the assumption that:

- 80% of the funding attributed to the support to projects on the Core and Comprehensive network will be focused to sustainable modes (e.g. rail or inland waterway), hence contributing at 100%. The remaining 20% is considered contributing at other modes, and hence calculated at 0%;
- For projects co-financed under smart and interoperable mobility calls, the average climate tracking will be at 40%;
- All projects supported under the Alternative Fuels Infrastructure Facility (AFIF) will contribute at 100%;
- Projects co-funded under sustainable and multimodal mobility calls, should in average contribute at 40%;
- Co-financing provided under the safe and secure mobility calls will have a 0% tracking;
- Projects supported through the military mobility call, should in average contribute at 40%.

For years from 2025 to 2027 the estimation is based on the assumption that all remaining budget will be allocated to actions supporting the deployment of alternative fuels infrastructures along the TEN-T, hence contributing at 100% to climate objectives.

A more granular assessment at the project level is currently under preparation with the CINEA Agency. Final consolidated climate tracking information will hence available ex-post.

Energy:

Climate tracking	2021	2022	2023	2024	2025	2026	2027
Total	786.000.000	797.000.000	811.800.000	830.000.000	845.000.000	860.000.000	880.000.000
Total (climate tracking)	534.800.000	574.280.000	591.000.000	761.000.000	775.500.000	791.000.000	811.000.000
	68%	72%	73%	92%	92%	92%	92%

CEF Energy contributes to climate performance by supporting electricity and CO2 transport infrastructure, which count for a 100% climate tracking coefficient, for example through its support for the EuroAsia interconnector which connects Cyprus to Greece, both under CEF I and CEF II.

For CEF Energy it is expected that the climate mainstreaming contribution will increase significantly in the period 2021-2027 due to a higher share of electricity projects, the revised TEN-E Regulation, and the new window for cross-border renewable projects. The CEF Energy Work Programme for 2021-2027 is expected to contribute to the achievement of at least 60% of the overall financial envelope of the CEF Programme supporting climate objectives.

Based upon the climate tracking contribution of CEF Energy under CEF I, the estimated contribution of CEF II until 2024 is at least 68% for the CEF PCI budget, and 100% for the new cross-border renewables window. It is important to note that the 68% is a cautious approach: Under the last call of the CEF I Regulation (in 2020), the climate contribution was 84%, with 92% respectively under the first call of CEF II (in 2021); similar shares are expected under future calls. Given the revised TEN-E Regulation which will emphasise projects counted under 100% coefficient and will be at play from the CEF perspective as of 2024, after this year the climate tracking percentage is expected to increase to at least 92%.

For both the Transport and the Energy sectors, an accurate calculation of the contribution to climate objectives can only be presented ex-post. The outcome is dependent to the nature, the number and the final co-financing amount of projects awarded as result of CEF calls for proposals and their successful completion.

6.1.3. Key achievements

Using as a reference the above listed tracking methodology and considering that the CEF 2021-2027 programme set itself in continuation with the 2014-2020 legacy (at least for the transport and energy strands), it has been possible to develop the below methodology assessing the climate target contribution of the CEF 2014-2020 programme. The below table also includes the amounts of the Cohesion Fund managed through CEF (Transport).

Sector	Climate tracking	Number of actions	Actual CEF funding	Climate tracking * CEF funding	% OF TOTAL
Energy	0	75	1.634.469.957	-	
Energy	1	74	3.037.716.127	3.037.716.127	
Energy Total		149	4.672.186.084	3.037.716.127	65%
Synergy	0,4	4	8.510.072	3.404.029	
Synergy	1	3	12.291.140	12.291.140	
Synergy Total		7	20.801.212	15.695.169	75%
Transport	0	201	3.018.191.272	-	
Transport	0,4	345	3.515.893.650	1.406.357.460	
Transport	1	490	16.674.501.680	16.674.501.680	
Transport Total		1.036	23.208.586.601	18.080.859.140	78%
Grand Total		1.192	27.901.573.897	21.134.270.436	76%

6.1.4. Performance

It is expected that the CEF programme will strongly contribute to the climate performance of the EU spending programmes. As an example, in the transport sector, for Rail Baltica it is estimated that the project will create CO2 emission reduction benefits worth EUR 3.0 billion– contributing greatly to the EU’s global leadership in environmental sustainability.²⁹

CEF Energy contributes to climate performance by supporting electricity and CO2 transport infrastructure, for example through its support for the EuroAsia interconnector which connects Cyprus to Greece, both under CEF I and CEF II. Under the first call of CEF II, the climate contribution was 98%; we expect a similar share under future calls.

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)					Total
		2022	2023	2024	2025	2026	
Biodiversity contribution		0.00	0.00				0.00
Share compared to total envelope		0.00 %	0.00 %				0.00 %

(*)These amounts include NextGenerationEU top-ups if any

²⁹ <https://www.railbaltica.org/rail-baltica-global-cost-benefit-analysis/>

6.2.2. Explanation On the financial contribution

The programme will contribute to the ambition of 7.5% of annual spending under the MFF to biodiversity objectives in the year 2024 and 10% of annual spending under the MFF to biodiversity objectives in 2026 and 2027 while considering the existing overlaps between climate and biodiversity objectives³⁰

In particular, for the transport sector, the first CEF 2021-2027 MAP includes the eligibility of activities relating to the mitigation of environmental impact and the preservation of biodiversity, notably as regards on-site reforestation or specific infrastructure components allowing for the continuity of the natural habitat or the safe crossing of animals³¹. Activities relating to the mitigation of environmental impact may also include noise protection barriers. Considering the setup of CEF Transport Grant Agreements, it will not be possible to isolate the funding allocated to these measures in the signed actions.

CEF Energy complies with the legislation on biodiversity objectives, as stated in recital 5 of the CEF Regulation³².

6.2.3. Key Achievements

As indicated above, investments in biodiversity under the 2014-2020 programme mostly focused on mitigating measures to infrastructural interventions in sensitive areas in order to protect ecosystem or recreating initial biodiversity conditions. Planned interventions mostly concern the safe crossing of animals along transport infrastructures (mostly rail) and the protection of marine and river ecosystems when CEF projects intervene to improve the access to maritime ports or enhance navigability along the Inland Waterways (IWW) Network. Considering the setup of CEF Transport Grant Agreements, it has not been possible to isolate the funding allocated to these measures in the signed actions.

6.2.4. Performance

Considering the framework outlined above, it is expected that, as for CEF 2014-2020, for the transport sector the programme will contribute to biodiversity mostly through mitigating measures required by the national and EU environmental legislation and not through net investments on biodiversity.

6.3. Contribution to clean air financing

6.3.1. Contribution

2021-2022 Estimates		2023-2027 programming (EUR million)					Total
2021	2022	2023	2024	2025	2026	2027	
1 628.00	1 631.00	1 636.00	1 641.00	494.00	499.00	505.00	8 034.00

(*)These amounts include NextGenerationEU top-ups if any

6.3.2. Explanation On the financial contribution

For the Transport sector, the estimation follows a conservative approach and is based on the first adopted CEF 2021-2027 MAP, including the indicative call planning over the next three years of implementation and includes a forward looking assumption until the end of the programme in 2027. The CEF transport contribution also includes the amount transferred to CEF from the Cohesion Fund. Moreover, as per first 2021-2027 MAP, an important part of the budget has been front-loaded (almost 70%).

For years from 2021 to 2024 the estimation it is based on the assumption that:

- 80% of the funding attributed to the support to projects on the Core and Comprehensive network will be focused to sustainable modes (e.g. rail or inland waterway), hence contributing at 40%. The remaining 20% will be at 0%;
- For projects co-financed under smart and interoperable mobility, the average climate tracking will be at 0%;
- All projects supported under the Alternative Fuels Infrastructure Facility (AFIF) will contribute at 40%;
- Projects co-funded under sustainable and multimodal mobility calls, will include a 0% tracking;
- Co-financing provided under the safe and secure mobility and the military mobility will have a 0% tracking.

For years from 2025 to 2027 the estimation is based on the assumption that all remaining budget will be allocated to actions supporting the deployment of alternative fuels infrastructures along the TEN-T, hence contributing at 40% to climate objectives.

For CEF Energy the estimate is based on a conservative approach building on the climate mainstreaming contribution under CEF 2014-2020.

³⁰ Recital 4 of the Proposal for a Regulation of the European Parliament and of the Council establishing the Connecting Europe Facility and repealing Regulations (EU) No 1316/2013 and (EU) No 283/2014

³¹ As an example, the tasks supported under CEF Action 2019-EU-TM-0262-S with the objective to prepare a catalogue for the ichthyofauna, ornithofauna, river bottom types (benthos) and floodplain habitats along the Croatian/Serbian Danube common section : <https://ec.europa.eu/inea/en/connecting-europe-facility/cef-transport/2019-eu-tm-0262-s>

³² Regulation (EU) 2021/1153

For both the Transport and the Energy sectors, an accurate calculation of the contribution to climate objectives can only be presented ex-post. The outcome is dependent to the nature, the number and the final co-financing amount of projects awarded as result of CEF calls for proposals and their successful completion.

During the period 2014-2020 the CEF programme has contributed to clean air objectives through investments in the transport and energy sectors. In particular:

CEF Transport

Transport mode	%	Actual funding	Result
Air	0%	1,501,313,716	-
Inland Waterways	40%	1,260,027,854	504,011,141
Maritime	40%	1,229,976,641	491,990,656
Other	0%	50,798,672	-
Rail	40%	16,248,389,422	6,499,355,769
Road	0%	1,481,088,682	-
AF actions (excluding nodes priority)	40%	1,138,586,723	455,434,689
Nodes Priority	100%	298,404,892	298,404,892
Grand Total		23,208,586,601	8,249,197,148

CEF Energy

Energy Sector	%	Actual Funding	Result
☐ Carbon Dioxide	0%	143,938,563	-
☐ Electricity	40%	2,801,616,696	1,120,646,678.52
☐ Gas	40%	1,490,531,394	596,212,557.61
☐ Smart Grid	40%	236,099,431	94,439,772.40
Grand Total		4,672,186,084	1,811,299,009

The amounts in the above tables refer to signed Grant Agreements. Additional grant agreements contributing to clean air objectives are expected to be signed during year 2020 and 2021. The above table (Transport) also includes the amounts of the Cohesion Fund managed through CEF.

6.4. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates			2022-2027 programming				Total
2021	2022	2023	2024	2025	2026	2027	

Score 0*: 4 510.1

(*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significantly impacted**, score 0*: **impact on gender equality to be determined ex post**, score 0: **no significant impact on gender equality**..

The CEF 2021-2027 Regulation, in its recital 6 underlines that: “According to Article 8 of the Treaty on the Functioning of the European Union, in all its activities, the Union shall aim to eliminate inequalities and to promote equality between men and women. Gender equality, as well as rights and equal opportunities for all, and the mainstreaming of those objectives should be taken into account and promoted throughout the assessment, preparation, implementation and monitoring of the programme”.

Transport:

Transport facilitates access to the labour market, healthcare and education as well as to other services necessary for improving the welfare of individuals and households. In particular, transport infrastructure investments supported through the CEF are a pre-condition to the development of transport services directly contributing to indiscriminate access and allowing for the necessary safety and accessibility conditions for diverse workforce. Nevertheless, given its scope, CEF Transport cannot intervene on the potential inequalities arising from Member States’ internal infrastructure planning, national policies or development of gender discriminatory services along the infrastructure.

The CEF programme supports in majority the development and construction of cross-border infrastructures such as railway substructures, electrification, superstructures, inland waterways canals, berth and quays at maritime ports, as well as infrastructure for alternative fuels supply (charging points). In this context, the programme also awards part of its support to other interventions, such as safe and secure parking infrastructures for trucks, for which the gender dimension can be considered more in detail. As a

reference, when supporting these projects, the CEF co-funding is linked to the respect of a pre-identified set of EU standards related to the infrastructure, divided into four different categories. As an example, please see below the minimum requirements per category related to the perimeter of the safe parking infrastructure and the parking area:

	BRONZE LEVEL	SILVER LEVEL	GOLD LEVEL	PLATINUM LEVEL
PERIMETER	<p>B.1. Visual deterrent to recognize the secure parking area</p> <p>B.2. Lighting at 15 Lux</p> <p>B.3. Vegetation trimmed, good visibility</p>	<p>S.1. Physical deterrent to prevent unauthorised access (e.g. ditch, rocks, fence) or continuous video monitoring and recording by trained staff</p> <p>S.2. Lighting at 20 Lux</p>	<p>G.1. > 1.8 m physical barrier (height)</p> <p>G.2. Lighting at 25 Lux</p> <p>G.3. CCTV covering perimeter</p> <p>G.4. Measures to prevent unintentional damage to barriers</p> <p>G.5. Clear zone of 1 meter between barrier and parking area</p>	<p>P1. Add-on for physical barrier: Deterrents to climb over</p>
PARKING AREA	<p>B.4. Only freight vehicles and authorized vehicles allowed as indicated by signage</p> <p>B.5. Physical or remote surveillance checks / inspection at minimum once in 24 h</p> <p>B.6. Lanes must be lit at 15 Lux</p> <p>B.7. Vegetation trimmed, good visibility</p>	<p>S.3. Physical or remote surveillance checks/inspection at minimum twice in 24 h (one at daytime, one at night)</p> <p>S.4. If pedestrian lanes exist, they must be lit at 15 Lux</p>	<p>G.6. Onsite or remote staff contact can be contacted 24/7</p> <p>G.7. Marked vehicle and pedestrian lanes</p>	<p>P2. Site manned or video-controlled 24/7</p>

This notwithstanding, in this framework, considering the setup of CEF Transport Grant Agreements and the type of actions funded, it will not be possible to isolate the dedicated funding allocated to gender related measures in the supported actions.

In addition, during the implementation of the programme, the Commission will constantly strive to ensure gender equality, for instance when selecting the experts that support the dedicated services during the evaluation of the call for proposals launched in the framework of the CEF programme.

Energy:

Women and men have different energy needs. Since the scope of CEF Energy is cross-border energy infrastructure, it could contribute to broader energy access. CEF energy also contributes to gender equality in the sense that it ensures gender equality and equal opportunities in its selection of external evaluators for the calls. Yet, given its scope, CEF Energy cannot influence potential inequalities arising from Member States’ internal infrastructure planning or other national policies. There is no gender-disaggregated data available on this strand of the CEF programme.

Digital:

The Digital Agenda for Europe was established with a view to stimulating economic growth while at the same time addressing social challenges through information and communications technology.

The vision set in the Communication “2030 Digital Compass: the European way for the Digital Decade”³³ and the proposal for the 2030 Policy Programme "Path to the Digital Decade"³⁴ demand an even greater quality of connectivity, for instance in terms of bandwidth, low latency, security and resilience³⁵.

However, digital is an area where gender inequalities persist, including those related to gender gaps and differences in access to and use of digital technologies³⁶.

Coverage of EU households capable of delivering download speeds of at least 30 Mbps reached 90% in 2021, while fixed very high capacity networks (VHCN), offering gigabit connectivity, covered 70% of EU homes in 2020³⁷.

Even though [these data are not disaggregated by sex, studies](#) suggest that access to the Internet is probably less widespread among women-headed households for various reasons, such as lower income, lower digital skills and less interest in Internet technologies³⁸.

³³ [EUR-Lex - 52021DC0118 - EN - EUR-Lex \(europa.eu\)](#)

³⁴ [Proposal for a Decision establishing the 2030 Policy Programme “Path to the Digital Decade” | Shaping Europe’s digital future \(europa.eu\)](#)

³⁵ See COM(2021) 574 final - Staff Working Document Accompanying the Commission’s Proposal for the Digital Decade Policy Programme, section 3.3.1.1

³⁶ <https://eige.europa.eu/gender-mainstreaming/policy-areas/digital-agenda>

³⁷ Digital Economy and Society Index report 2022- Connectivity: to be published

³⁸ <https://eige.europa.eu/gender-mainstreaming/policy-areas/digital-agenda>

Together with other funding instruments, including the [Recovery and Resilience Facility](#) and the [InvestEU](#), CEF Digital will help support an unprecedented amount of investments devoted to safe, secure, and sustainable high-performance digital connectivity infrastructure. Furthermore, CEF Digital will contribute to the increased capacity and resilience of digital backbone infrastructures in all EU territories, in particular the Outermost Regions.

CEF Digital will support only the deployment of physical connectivity infrastructures, however, the actual applications and services which will run on top of them, or the end users benefitting from them, will ensure the digital inclusiveness of the targeted geographical areas and typologies of connected entities (households, schools, hospitals, etc.). Although the exact number of covered entities cannot be determined a priori, it can be assumed that state of the art digital connectivity, as well as the innovative applications enabled, will create new opportunities across genders, thus contributing to fill in the gender digital gap.

6.5. Contribution to the sustainable development goals

6.5.1. Goals

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

CEF Energy supports SDG7 by promoting investments contributing to further integration of the internal energy market and to sustainable development, in particular, by the integration of energy from renewable sources into the transmission network and by the development of smart energy networks. In particular, CEF Energy shall contribute to supporting energy infrastructure projects of common interest that have significant socio-economic benefits and ensure greater solidarity among Member States, but which do not receive adequate financing from the market. For instance, the Baltic Synchronisation Project (PCI 4.8) will synchronise the three Baltic States' electricity grids with the continental European network and allow the three Baltic States to gain full control of their electricity networks and to strengthen energy security (CEF financial assistance until 2020: EUR 1 052 million, with an additional EUR 170 million through the first call under CEF II).

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

The CEF transport programme aims at contributing to the Sustainable Development Goals (SDG). In particular, CEF Transport supports SDG 9 through investments for building transport infrastructures that are resilient, including the necessary technology to ensure a proper monitoring of the newly built infrastructures in case of natural catastrophes.

Under CEF 2014-2020 programme, the support to this goal has been ensured through dedicated activities within co-funded projects. As an example, as part of the modernisation of the railway infrastructure between Athens and Thessaloniki, in a highly seismic and flood interested region, the monitoring of newly constructed and upgraded bridges has been supported, as well as hydraulic works to protect the railway from floods³⁹.

In this context, the CEF 2021-2027 programme includes a dedicated topic related to actions improving transport infrastructure resilience, in particular to climate change and natural disasters, through infrastructure upgrades.

As regards the energy strand, CEF Energy supports SDG 9 through the investments aiming to increase the interoperability of electricity and gas networks across borders. For example, the Baltic Pipe project (PCI 8.3, CEF financial assistance: EUR 753 M) will establish a new, bi-directional offshore gas pipeline connecting PL and DK through the Baltic Sea with an important contribution to energy security and diversification of supply sources.

Actions that receive CEF grants for works need to provide evidence concerning the existence of significant positive externalities such as security of supply, solidarity or innovation.

CEF Digital will contribute to the development of projects of common interest relating to the deployment of safe, secure, sustainable and very high capacity digital networks, including 5G systems, to the increased capacity and resilience of digital backbone networks in all EU territories. By their nature, trans-European, Gigabit and Terabit networks connect digital capacities such as cloud and high-performance computing as well as millions of objects and data able to transform and modernise vertical sectors such as health, education and training, tourism, manufacturing, transport and logistics

CEF Digital will contribute to filling some of the existing connectivity gaps and ensure that local/regional infrastructures are efficiently connected through end-to-end high-performance infrastructure, including backbone networks. It will notably support strategic connectivity to remote regions including the outermost regions (e.g. through submarine cables). This all-encompassing and inclusive approach to connectivity will give all citizens and businesses the opportunity to benefit from the digital single market and accelerate economic recovery.

Projects funded by CEF Digital will contribute to invigorate the digital readiness and competitiveness of the EU's business, industrial and public services ecosystem. They are expected to accelerate the modernisation of vertical sectors such as healthcare, transport, education and training and public administration, which depend heavily on access to reliable, affordable high-quality digital networks and can benefit from innovative 5G based solutions.

³⁹ <https://ec.europa.eu/inea/en/connecting-europe-facility/cef-transport/2014-el-tmc-0651-w> and https://www.ergose.gr/project/tithorea_domokos/?lang=en

CEF Digital will also support the development of “Global Gateways” by investing in ultra-secure and resilient backbone networks connecting Europe with third countries, including submarine cables and satellite terrestrial backbones.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

CEF Transport programme will continue promoting infrastructural investments enhancing the safety and sustainability of urban transport. This includes an optimal use of public transport, supported by the necessary investments in alternative fuels charging infrastructures and with a special attention to the needs of those in vulnerable situations. Moreover, the programme aims at supporting the improvement of multimodal passenger hubs, ensuring accessibility for all users, especially for passengers with reduced mobility, allowing for the connection with available long-distance transport modes.

Under the CEF 2014-2020 programme, CEF has supported such infrastructure projects, for instance through the deployment of alternative fuels charging infrastructure for public transport in cities like Lyon⁴⁰, while at the same time supporting works at the city’s railway junction⁴¹ in order to relieve congestion, improve performance, efficiency of rail infrastructure and operating conditions such as robustness, resilience and safety of the network.

SDG 13 Take urgent action to combat climate change and its impacts

CEF Transport aims at promoting the de-carbonisation of transport with a specific focus on alternative fuels infrastructures. The programme aims at contributing to the EU goal of climate-related spending and decarbonising transport. In accordance with the European Green Deal, CEF 2021-2027 will target a contribution of 60% of its overall financial envelope to co-financing actions supporting climate objectives and moving fast towards zero-emission mobility. In particular, the programme will contribute to this SDG supporting infrastructures related to sustainable transport modes (in particular railways and inland waterways) data and digitalisation backing the ecological transition for transport and accelerating the take-up of alternative fuels solutions for all transport modes. Under the CEF 2014-2020, the support to sustainable transport modes has been wide. In this framework, the allocation of CEF funds to alternative fuels infrastructures represents one of the most direct investments to tackle climate related challenges. As an example, through the Blending Facility, the programme allocated support to the deployment of a reliable network of fast multi-standard chargers for electric vehicles along the TEN-T network in Italy⁴². The action is expected to deploy 550 electric fast chargers across Italy with approximately 1,100 charging points. As a result, the action will contribute to the deployment of an extensive network of electric chargers in the country, contributing to the mass diffusion of electric vehicles and to pollution reduction.

CEF Energy support SDG 13 by financing actions that contribute to the decarbonisation of the energy system, inter alia through the integration of renewable energy into the grid and the transmission of renewable generation to major consumption centres and storage site. For example, the Celtic electricity interconnector (PCI 1.6, CEF financial assistance: **EUR 530.7 million EUR**) will establish the first electricity link between Ireland continental Europe, end Ireland’s energy isolation after Brexit, and help the integration of variable renewable energy sources. The European Green Deal has further emphasized the key enabling role of energy infrastructure in the transition to a climate neutral economy. The revised TEN-E Regulation is fully aligned with the European Green Deal objectives.

1. Overview**1.1. Challenges**

Europe faces many challenges in the digital arena.

To begin with, there is the increasingly fierce global competition to control the digital technologies, which will shape the world of tomorrow. Today, businesses, the public sector and researchers often have to look outside the Union to access the computing, data or artificial intelligence resources they need. At the same time, hundreds of thousands of jobs in crucial digital areas go unfilled, hampering investment and innovation. Unless Europe can step up its efforts to develop key digital infrastructures, industries and skills, it risks losing out this race, which could threaten Europe's strategic autonomy and competitiveness.

Relatedly, cyberattacks become increasingly more frequent, complex, and disruptive. Europe's vital infrastructure and data are at risk unless it improves its cybersecurity.

Finally, the take-up of digital technologies by businesses - in particular SMEs - and public administrations remains very uneven, requiring determined action at the Union's level to ensure that no region or sector is left behind by the digital transformation.

Given the network effects in the digital area (e.g., the need to promote interoperability at the EU level and/or reaching critical mass to build state-of-the-art capacities) the EU is uniquely placed to act decisively on these challenges. The Digital Europe programme and together with co-investments with Member States and the private sector will achieve a real impact and generate a virtuous circle.

1.2. Mission (General objectives)

The Digital Europe Programme will ensure that Europe drives the digital transformation of the economy and society and brings its benefits to all citizens and businesses. It will focus on:

- Building essential capacities and advanced skills in key digital technology areas, contributing to Europe's technological sovereignty;
- Accelerating their deployment and best use in areas of public interest and the private sector.

1.3. Specific objectives

Specific Objective 1- High Performance Computing (HPC)

The financial contribution from the Union under this Specific Objective shall pursue the following operational objectives:

- deploy, coordinate at Union level and operate an integrated demand-oriented and application-driven world-class exascale supercomputing and data infrastructure that shall be easily accessible to public and private users, in particular SMEs, irrespective of the Member State in which they are located, and easily accessible for research purposes, in accordance with Regulation (EU) 2018/1488;
- deploy ready to use operational technology resulting from research and innovation in order to build an integrated Union HPC ecosystem, covering various aspects in the scientific and industrial value chain segments, including hardware, software, applications, services, interconnections and digital skills, with a high level of security and data protection;
- deploy and operate post-exascale infrastructure, including integration with quantum computing technologies and research infrastructures for computing science and encourage the development within the Union of the hardware and software necessary for such deployment.

Specific Objective 2 - Artificial Intelligence

The financial contribution from the Union under this Specific Objective shall pursue the following operational objectives:

- build up and strengthen core AI capacities and knowledge in the Union, including building up and strengthening quality data resources and corresponding exchange mechanisms, and libraries of algorithms, while guaranteeing a human-centric and inclusive approach that respects Union values.
- make the capacities referred to in point above accessible to businesses, especially SMEs and start-ups, as well as civil society, not-for-profit organisations, research institutions, universities and public administrations, in order to maximise their benefit to the European society and economy;
- reinforce and network AI testing and experimentation facilities in Member States; develop and reinforce commercial application and production systems in order to facilitate the integration of technologies in value chains and the development of innovative business models and to shorten the time required to pass from innovation to industrial production and foster the uptake of AI-based solutions in areas of public interest and in society.
- AI-based solutions and data made available shall respect the principle of privacy and security by design and shall fully comply with data protection legislation.

Specific Objective 3 - Cybersecurity and Trust

The financial contribution from the Union under this Specific Objective shall pursue the following operational objectives:

- support the building-up and procurement of advanced cybersecurity equipment, tools and data infrastructures, together with Member States, in order to achieve a high common level of cybersecurity at European level, in full compliance with data protection legislation and fundamental rights, while ensuring the strategic autonomy of the Union;
- support the building-up and best use of European knowledge, capacity and skills related to cybersecurity and the sharing and mainstreaming of best practices;
- ensure a wide deployment of effective state-of-the-art cybersecurity solutions across the European economy, paying special attention to public authorities and SMEs;
- reinforce capabilities within Member States and private sector to help them comply with Directive (EU) 2016/1148 of the European Parliament and of the Council¹ including through measures supporting the uptake of cybersecurity best practices;
- improve resilience against cyberattacks, contribute towards increasing risk-awareness and knowledge of cybersecurity processes, support public and private organisations in achieving basics levels of cyber security, for example by deploying end-to-end encryption of data and software updates;
- enhance cooperation between the civil and defence spheres with regard to dual-use projects, services, competences and applications in cybersecurity, in accordance with a Regulation establishing the European Cybersecurity Industrial, Technology and Research Competence Centre and the Network of National Coordination Centres (the 'Cybersecurity Competence Centre Regulation').

Specific Objective 4 - Advanced Digital Skills

The financial contribution from the Union under this Specific Objective shall support the development of advanced digital skills in areas covered by the Programme in order to contribute to increasing Europe's talent pool, bridge the digital divide and foster greater professionalism, especially with regard to high performance and cloud computing, big data analytics, cybersecurity, distributed ledger technologies (e.g. blockchain), quantum technologies, robotics, AI, while taking gender balance into account. In order to tackle skills mismatches and to encourage specialisation in digital technologies and applications, the financial contribution shall pursue the following operational objectives:

- support the design and delivery of high-quality, long-term training and courses, including blended learning, for students and for the workforce;
- support the design and delivery of high-quality, short-term training and courses for the workforce, in particular in SMEs and in the public sector;
- support high-quality on-the-job training and work placements for students, including traineeships, and the workforce, in particular in SMEs and in the public sector.

Specific Objective 5 - Deployment and Best Use of Digital Capacities and Interoperability

The financial contribution from the Union under this Specific Objective shall pursue the following operational objectives:

- support the public sector and areas of public interest, such as health and care, education, judiciary, customs, transport, mobility, energy, environment, cultural and creative sectors, including relevant businesses established within the Union, to effectively deploy and access state-of-the-art digital technologies, such as HPC, AI and cybersecurity;
- deploy, operate and maintain trans-European interoperable state-of-the-art digital service infrastructures across the Union, including related services, in complementarity with national and regional actions;
- support the integration and use of trans-European digital service infrastructures and of agreed European digital standards in the public sector and in areas of public interest to facilitate cost-efficient implementation and interoperability;
- facilitate the development, update and use of solutions and frameworks by citizens, public administrations and businesses, including of open-source solutions and the re-use of interoperability solutions and frameworks;
- offer the public sector and Union industry, in particular SMEs, easy access to testing and piloting of digital technologies and increase the use thereof, including their cross-border use;
- support the uptake by the public sector and the Union industry, in particular SMEs and start-ups, of advanced digital and related technologies, including in particular HPC, AI, cybersecurity, other leading edge and future technologies, such as distributed ledger technologies (e.g. blockchain);
- support the design, testing, implementation, and deployment and maintenance of interoperable digital solutions, including digital government solutions, for public services at Union level which are delivered through a data-driven reusable solutions

¹ Directive (EU) 2016/1148 of the European Parliament and of the Council of 6 July 2016 concerning measures for a high common level of security of network and information systems across the Union (OJ L 194, 19.7.2016, p. 1).

- platform aiming to foster innovation and establish common frameworks in order to unleash the full potential of the public administrations' services for citizens and businesses;
- ensure the continuous capacity at Union level to lead digital development, in addition to observing, analysing and adapting to fast-evolving digital trends, and share and mainstream best practices;
 - support cooperation towards achieving a European ecosystem for trusted data sharing and digital infrastructures using, inter alia, distributed ledger services and applications, including support for interoperability and standardisation and by fostering the deployment of Union cross-border applications based on security and privacy by design, while complying with consumer and data protection legislation;
 - build up and strengthen the European Digital Innovation Hubs and their network.

1.4. Public intervention context

The Digital Europe programme, is based on the following provisions of the Treaty on the Functioning of the European Union (TFEU): Article 173(3) TFEU, focused on the EU's industrial competitiveness, with regard to most of activities undertaken under this Programme; Article 172 TFEU, notably with regard to the digital transformation of areas of public interest. The COVID-19 crisis has highlighted the critical role of digital technologies and infrastructures. In light of the exponential development of digital technologies, the constant geopolitical shifts and the large public investments of global competitors in key digital technologies, such as artificial intelligence, supercomputing and cybersecurity, and in digital skills, no Member State acting alone can make critical investments in digital capacities at the scale required. Given the challenges ahead and the level of investments needed, the intervention at EU level is necessary in order to improve the competitiveness of Europe in the digital economy and reinforce its strategic autonomy.

The Digital Europe programme's actions are complemented by an array of regulatory measures aiming to eliminate barriers in several critical technological areas, with regard, for instance, to the incentivise business to business and business to government (B2B and B2G) data sharing in across the EU (Data Governance Act, Data Act), the creation of a safer and fairer online environment for users and businesses (Digital Services Act, Digital Markets Act) and the improvement of the level of security of network and information systems across the Union (NIS2 Directive).

1.5. Actions

High-performance computing: DEP will deploy world-class exascale and post-exascale supercomputing capacities and ensure the widest access to and use of these capacities;

Artificial intelligence: DEP will unleash the potential of data with EU-wide common data spaces based on a cloud-to-edge federated infrastructure and promote the testing and adoption of AI technologies with a European AI platform and world-class testing and experimentation facilities;

Cybersecurity and trust: DEP will build up advanced cybersecurity equipment, tools and data infrastructures. It will support the development and best use of European knowledge, capacity and skills related to cybersecurity, promote the sharing of best practices and ensure a wide deployment of the state of the art cybersecurity solutions across the European economy (including a quantum secure communication infrastructure for Europe- EuroQCI).

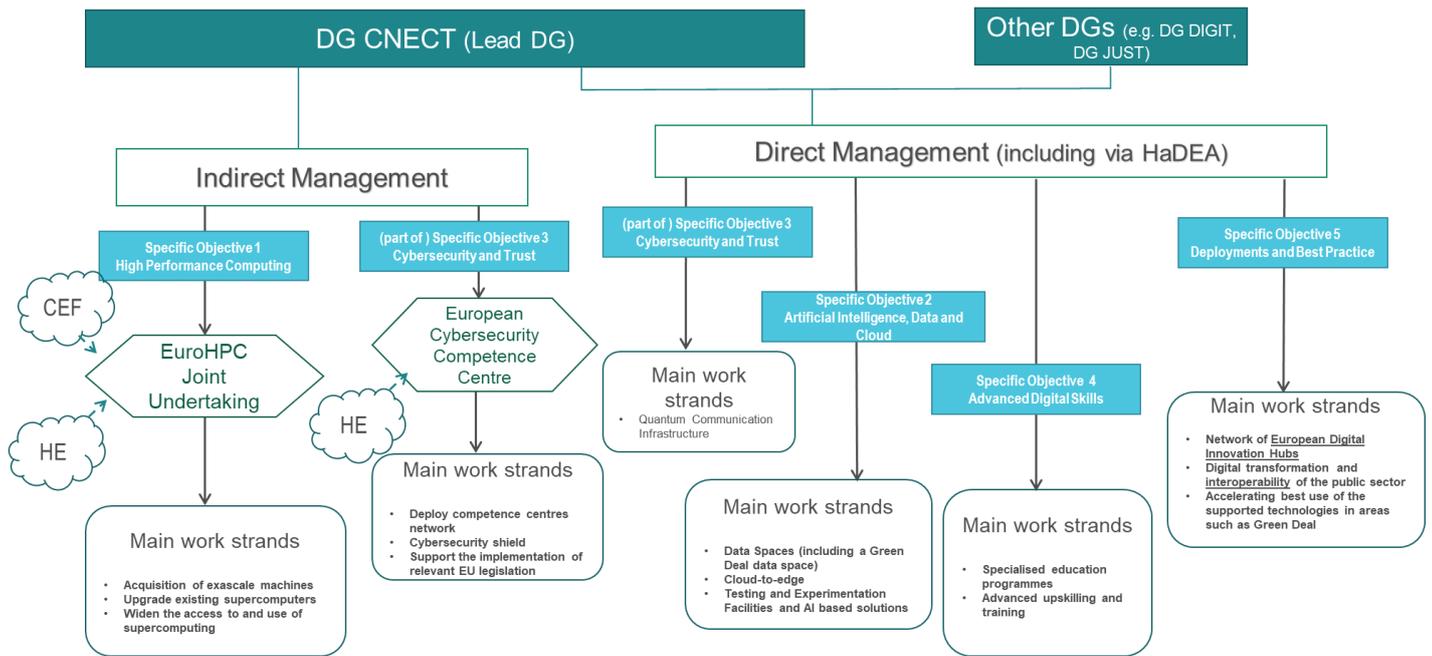

Advanced digital skills: DEP will boost academic excellence in digital, by increasing the education offer in technologies, such as HPC, cybersecurity and AI. Training in these areas will be implemented through cooperation among tertiary education institutions, world-class research centres and innovative businesses.

Adoption and best use: DEP will deploy a network of European Digital Innovation Hubs offering public and private organisations all across Europe access to technology testing and support in their digital transformation. It will contribute to address challenges such as protecting the environment and fighting climate change through high impact deployments, for example, the Destination Earth initiative and the digital twins for smart communities. It will build capacities to reinforce the European blockchain ecosystem through the European Blockchain Services Infrastructure (EBSI). It will enable cross border interoperable digital public services centred on users, facilitating the sharing of data in areas like, justice and promote an inclusive and trustworthy digital space.

1.6. Delivery mode

For the 'artificial intelligence', 'advanced digital skills' and 'widening the best use of digital technologies' specific objectives, the Commission directly manages the programme. The high-performance computing specific objective is implemented primarily through the EuroHPC joint undertaking and the cybersecurity specific objective will be implemented primarily through the European Cybersecurity Industrial, Technology and Research Competence Centre and the Cybersecurity Competence Network. The lead DG is CNECT, with other DGs also involved, in particular DG DIGIT for the actions focused on the interoperability of the public administrations.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/694 of the European Parliament and of the Council of 29 April 2021 establishing the Digital Europe Programme and repealing Decision (EU) 2015/2240 (OJ L 166, 11.5.2021, p. 1).	2021 - 2027	7 588.00

1.8.2. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

Although Digital Europe is a new programme, some of its activities target the sustainability and continuation of actions deployed under the previous Multiannual Financial Framework.

In particular, the deployment of Digital Service Infrastructures facilitating cross-border interoperability between public administrations, businesses and citizens was funded under the CEF Telecom programme, while the actions in the ISA² programme focussed on interoperability in public administration applications. Part of these solutions are now integrated within the scope of Digital Europe Programme.

In addition, the Digital Europe Programme builds on successful projects funded under H2020 programme, making it possible to move technologies such as high performance computing and artificial intelligence into large-scale deployments. The European High Performance Computing strategy was implemented using funding from both Horizon 2020 and CEF programmes. Horizon 2020 supported artificial intelligence but focused on research and innovation and not on large-scale deployments.

<https://ec.europa.eu/info/funding-tenders/opportunities/portal/screen/programmes/digital>

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	1 159.6	6 607.8	18%
Payments	26.1		0%

The first set of Work Programmes of the new Digital Europe Programme were adopted on the 10 November 2021, when the first calls were also launched, triggering the first procedural steps towards the implementation of the programme. The first set of calls for proposals was published on 17 November, and closed on the 22 February. A second set of calls for proposals was launched on the same date. Both calls cover topics in all work strands of the programme. This includes the first steps towards the deployment of common data spaces built on innovative, secure and energy efficient cloud to edge capabilities, and by promoting the testing and adoption of trustful AI technologies with world-class testing and experimentation facilities as well as a library of AI-based resources and a marketplace, for AI tools that are made in Europe. Investments in the area of Cybersecurity cover the deployment of a secure quantum communication infrastructure (EuroQCI), as well as a network of National Coordination Centres with Member States fostering cross-border cooperation, and support for cybersecurity in the health sector. The calls launched also aim to provide education and training opportunities for the future experts in key capacity areas deployed by the programme while also targeting the reskilling and upskilling of the existing workforce through short-term trainings in advanced digital skills reflecting the latest developments. Additional investments covered by these calls also target the establishment of the network of Digital Innovation Hubs, the deployment of the European Blockchain Service Infrastructure, support to the implementation of the European Digital Identity Framework, the continuation of the investments in the previous financial framework for the Safer Internet network, as well as European Digital Media Observatory and its network of hubs.

Following the agreement on the implementation framework for the Destination Earth Initiative, the deployment of the Central platform and Digital Twins has also started in 2022.

Various procurement actions have also started implementation in continuation with the previous multiannual financial framework, especially in the area of eGovernment. For instance under the Specific Objective 5, the first contracts focusing on interoperability-related operational objectives were already signed in 2021 using 28% of allocated commitment appropriations, and their implementation is ongoing. The priority was given to the projects/actions that required business continuity (as the interoperability package for 2021 and 2022 is in fact further evolution of the work under the predecessor programmes ISA2 and CEF Telecommunication); the first results are expected in the coming months.

A third call for proposals is expected to be launched in the third quarter of 2022.

The programme was able to consume an important share of the available commitment appropriations, in the form of global commitments, and 0.3 per cent of the total envelope of payment appropriations has been consumed, in view of the very short time span left for implementation in 2021. Following the corresponding evaluations, the signature of the first grant agreements will start in the last quarter of 2022. Consequently, the first batch of projects stemming from the calls for proposals covered in the first Work

programme, is expected to start the implementation phase in early 2023, when the first payments can be performed as part of the pre-financing.

The Commission services under the leadership of DG CONNECT, together with the Digital Europe Programme Committee have also started to prepare the following Work Programmes using 2023 and 2024 appropriations.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

CEF

With an overall investment of almost EUR 280 million in the core service platforms, the Commission enabled the EU-wide interoperability of specific digital services such as eHealth, Public Open Data, eID and Cybersecurity. With an EU contribution of almost EUR 365 million in generic services and an overall leveraged amount of more than EUR 528 million, the uptake of these services with CEF support reached a portfolio of 735 projects in the Member States and participating countries in the European Economic Area by the end of 2021. Nearly half of these projects are under implementation, due to the duration of the actions funded by the programme, which go up to 4 years. The last Grant Agreements signed for some of these actions have been signed. CEF digital services support EU citizens, businesses and public administrations in interconnecting and adapting their systems to become interoperable across borders.

The cumulative implementation table for CEF-telecom can be found in the CEF Programme Statement.

ISA2

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	131.2	131.2	100%
Payments	123.5		94%

The implementation of ISA² has been efficient. The implementation of some actions funded by the ISA2 2020 programme continued into 2021 as envisaged focusing on the transition to Digital Europe Programme and on sustaining existing operations due to the late adoption of the DEP working Programme 2021-2022 (November 2021). As for the payments 2021 (almost 25 M), they were used to cover the payments for all the actions under WP 2020, with a notable portion spent on the development of key and generic interoperability enablers, support of instruments for public administrations, and EU Policies.

The outstanding payments will be executed mainly in 2022 with the final payments done in 2023.

There was no significant impact of the Covid-19 crisis on the programme implementation in 2021

The integration and coordination of activities funded before by 2 separate programmes, namely CEF Telecommunications and ISA², is expected to rationalise investments in the area of interoperability for public administrations and eGovernment, as well to increase cooperation and coherence of digital funding in domains such semantics, data spaces or public sector innovation.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

Given the delayed adoption of the first Digital Europe Work Programmes using 2021 and 2022 appropriations in November 2021, implementation was necessarily very limited in 2021.

3.1.2. Active programme performance

Performance assessment will be provided once the implementation of sufficient actions under Digital Europe Programme start.

3.1.3. Previous Programme Performance

Performance of ISA² - Interoperability solutions for public administrations, businesses and citizens 2014-2020

The programme's key performance indicators confirm that it has performed well. Some key interoperability enablers have shown even better performance than expected, which is explained by better-than-anticipated government interoperability acceptance and by faster-than-expected technological progress. Member States' positions have evolved from hesitant to very actively involved and

requesting intensified common investment in interoperability enablers. In 2020 and 2021, the programme was able to adapt to the Covid-19 crisis with no major negative impact on the programme implementation. In fact, the outreach of the programme increased due to larger stakeholder participation in online meetings and events, which may potentially boost the [ISA² solutions'](#) uptake. Based on this experience, more online interoperability –focused events for the stakeholders of the new programme are envisaged.

While the ISA² final evaluation reports an overall positive picture of how the programme has performed (see section 3.3), it outlines some lessons learned, which could give rise to future improvements. First, EU Member States call for more coordination and exchange of best practices in the digital implementation of EU policies, and the deployment of new digital solutions. The COVID-19 pandemic has made such needs even more pressing. To act upon them, the Commission may consider enhancing the existing interoperability governance to foster structured and proactive collaboration between all levels of EU public administrations and to give guidance and stimulus for digital-ready policymaking. Second, the programme's stakeholders would welcome a potentially smaller set, but more mature, user-centric and sustainable interoperability solutions, which are accessible through one-stop-shop also at regional and local level. Finally, in view of the good cohesion between the ISA² programme and CEF Telecommunication and the call for more coordinated and targeted actions, this assessment confirmed the usefulness of integrating both past programmes into a single Digital Europe Programme.

Raising awareness: ISA² has increased its outreach to all levels of public administrations and businesses, focusing on SMEs and start-ups. Its involvement in the [Join, Boost, Sustain initiative](#) is a great example of interlinking with related initiatives reaching stakeholders in cities and communities. Also, to expand the role of interoperability, DG DIGIT and DG CONNECT have jointly developed a dedicated European Interoperability Framework for Smart Cities and Communities (EIF4SCC) in the framework of Living-in.eu movement. In 2020, the Interoperability Academy went online as part of the EU Academy (the Commission's e-learning platform for external stakeholders) reaching multipliers directly and opening new cooperation avenues. So far, 1400 people have participated in online courses, webinars or live events under the auspices of Interoperability Academy and focused on interoperability knowledge, skills, and competences. 15 eLearning resources on the interoperability-related topics have been made available in EU Platform. The action on European Interoperability Architecture has closely cooperated with DGs REFORM, SANTE and TAXUD to support Member States, especially those lagging behind, in digitalisation. This cooperation also included on Reform and Resilience Plans to make them “interoperable by design”, and developing national taxation and health digital public services.

The ISA² programme has also intensified its cooperation with other EU programmes and projects such as Connecting Europe Facility (CEF), Structural Reforms Programme (SRSP), and Horizon 2020 as well as their successor programmes (e.g. the Technical Support Instrument). This included organising joint events, sharing results and content, providing advice and support as well as identifying synergies between Member States' requests under the SRSP 2020 and TSI 2021 programme and ISA² actions. ISA² solutions have provided direct support to several EU initiatives, i.e. the Single Digital Gateway, the EU Business Registers Interconnection System (BRIS), or the Once-Only Principle (TOOP) project. For example, the Core Vocabularies have provided the basis for the data models which will be made available in the semantic repository of the Single Digital Gateway and the repository of links. Also, synergies have been identified both with the TOOP and the Digital Europe for All (DE4A) projects, for example in the context of the revision of the Core Criterion and Core Evidence Vocabulary (CCCEV) and the development of application profiles.

User-centricity: It was a key aspect for the ISA² Programme with dedicated workshops for EU regions or work on the central interoperability user platform Joinup. Potential users of future solutions have increasingly participated in their design phase (e.g. the Legal Interoperability ISA² action on better legislation).

Sustainability: The Digital Europe programme builds on achievements and lessons learnt from the ISA² programme (including the importance of continuous awareness raising and the need for user-driven approach) integrating CEF building blocks and ISA² solutions under the same Programme, and strengthening dedicated interoperability expertise and support.

Performance of CEF Telecom - 2014-2020

CEF Telecom supported from 2014 to 2020, the deployment of an ecosystem of trusted cross-border digital service infrastructures (DSIs)² essential to trigger the digital transformation of public sector services in the Member States all for the benefits of citizens and businesses.

Concretely, in the area of Cybersecurity, for example, the DSI contributes to EU preparedness to deal with cyber threats and incidents by supporting the implementation of the [Directive on security of network and information systems \(NIS Directive, 2016/1148\)](#) and the cybersecurity certification framework through the Cybersecurity Act (Regulation (EU) 2019/881). The Directive provides legal measures to boost the overall level of cybersecurity in the EU, encompassing the need for well-resourced Member State computer security incident response teams (CSIRTs) and swift and effective operational cooperation between them. CSIRTs have received funding to create, maintain or expand national capacities to run cybersecurity services and to co-operate across borders. Their operational cooperation is facilitated by interacting with the Core Service Platform co-operation mechanism

² Europeana, eIdentification, eSignature, eDelivery, eInvoicing, eArchiving, Public Open Data, Automated Translation, Cybersecurity, eProcurement, Business Registers Interconnection System (BRIS), eHealth, Electronic Exchange of Social Security Information (EESSI), the European e-Justice portal, European Digital Media Observatory, European Platform on Digital Skills and Jobs, Online Dispute Resolution (ODR), Safer Internet, EU Student eCard and Blockchain.

of the Cybersecurity DSI, MeliCERTes which supports information sharing and maturity development for CSIRTs. MeliCERTes provides CSIRTs under the NIS Directive with a common baseline set of tools so as to facilitate a shared understanding of artefacts, threats and incidents, provide secure communications and enhance data exchange between them. As from 2019, an additional cooperation mechanism to facilitate the creation of European-level Information Sharing and Analysis Centers (ISACs) has been created.

The deployment of DSIs has been marked by a considerable expansion of the ecosystem, passing from 8 in the first Work Programme, to 20 DSIs supported in the last Work Programme. In effect, the programme started supporting the interoperability in a limited set of areas such as egovernment, Cybersecurity and cultural sector. Over the years, the programme started enabling through various solutions the interoperability also in other areas such as health, justice, social security, education and skills to name a few. In practice this meant that CEF has supported and enabled the interoperability of EU businesses, citizens and public administrations in more and more sectors.

An overview of the performance of the actions deployed with the support of the CEF Telecommunications Programme is available [here](#). This data will feed into the ex-post evaluation of the programme.

3.2. Key achievements

ISA² - Interoperability solutions for public administrations, businesses and citizens 2016-2020

54	1344	2	4
actions that focus on developing digital solutions in the interoperability area were supported under the 2016-20 ISA ² programme.	EU initiatives were screened between 2016 and 2021 for potential information and communications technology and interoperability impact using the legal interoperability screening methodology.	EU-wide initiatives (European Interoperability Framework & Digital Public Administration) supported by the 2016-20 ISA ² programme aimed at an integrated interoperability approach in the EU.	pillars of ‘location interoperability solutions for e-government’ action (studies, frameworks and solutions, reports and events) benefit the EU through effective and usable public digital services, improved spatial awareness and analytical skills, and better support for the policy life cycle.
508	4	28	4
events which ISA ² has participated in or organised until 2021 to increase its outreach.	core vocabularies were developed by the 2016-20 ISA ² programme to facilitate efficient and effective electronic cross-border or cross-sector interaction between (a) EU public administrations and (b) public administrations and businesses and citizens.	interoperable digital solution were developed under the 2016-20 ISA ² programme ; they are operational and can be reused free of charge.	Observatories were funded under the 2016-20 ISA ² programme to: 1) help foster the interoperability, capacity building policy and modernisation of public administrations; 2) support the adoption of open source and 3) foster one domain-specific interoperability (location); 4) support innovation and interoperability in the public sector

CEF Telecom - 2014-2020

20 ³	80	735
Trusted cross-border digital service infrastructures (DSIs) have been deployed under the 2014-2020 CEF-Telecom. Together with the Member States, they have been identified as essential to trigger the digital transformation of public sector services in the Member States all for the benefits of citizens and businesses.	Calls for grants have been launched under the 2014-2020 CEF-Telecom, mobilising stakeholders in all Member States and EFTA associated countries for the deployment of Digital service infrastructures	Actions have been funded under the 2014-2020 CEF-Telecom to promote the uptake of an ecosystem of 20 Digital Services Infrastructures fully interoperable cross-border across the EU for citizens, businesses and public administrations.

The Connecting Europe Facility – Telecommunications (2014-2020) supported the deployment and promotion of 20 interoperable Digital Service Infrastructures (DSIs). DSIs are based on mature technical and organisational solutions to support exchanges and collaboration between citizens, businesses and public administrations. The vision was to create a European ecosystem of interoperable digital services that will allow all citizens, businesses and administrations across the EU to fully benefit from living in a Digital Single Market. Foreexample, the **Cybersecurity Digital Service** Infrastructure (DSI) contributes to the EU preparedness to deal with cyber threats by facilitating the implementation of the EU Cybersecurity strategy. The funding increases the cybersecurity capabilities and the cooperation of key European cybersecurity players, in particular, but not only, those addressed by the Directive on security of network and information systems (NIS Directive, 2016/1148) and the Cybersecurity Act (Regulation (EU) 2019/881). These are operators of essential services (OESs), single points of contact (SPOCs), national competent authorities (NCAs), as well as National Cybersecurity Certification Authorities (NCCAs) and national Computer Security Incident Response Teams (CSIRTs). As a result of the funding received, OESs are boosting their own internal cybersecurity capabilities and engage with relevant Information Sharing and Analysis Centres (ISAC) involving industry peers and public authorities. National bodies mainly focus on the take-up of the obligations deriving by European legislation. For example, they exchange best practices, train their staff and set-up incident reporting mechanisms. CSIRTs are expanding their capacities to run cybersecurity services and to cooperate across borders. Such cooperation is further facilitated by MeliCERTes, a platform set up by the European Commission with a common set of tools for information sharing and maturity development for CSIRTs. Through the projects concluded so far, governmental/national CSIRTs in 20 Member States received funding to increase their capacities, for example through training and acquisition of specialised tools. To date, 100 projects for Cybersecurity are being deployed in all Member States with an overall funding of EUR 45 million.

Another example is the **eHealth Digital Service** Infrastructure, which facilitates the movement of health data across national borders, ensuring the continuity of care and the safety of citizens seeking healthcare outside their home country, and enabling the pooling of EU-wide medical expertise to treat rare diseases. The actions supported by the eHDSI aim at setting up the necessary Member State infrastructure for such data exchange. They also support infrastructures enabling sustainable patient access to highly specialised care. Moreover, they ultimately contribute to the Digital Single Market through the provision of EU-wide interoperable eHealth services, thus boosting competitiveness and supporting an inclusive e-society. The DSI covers 3 services. Firstly, the cross-border ePrescription/ eDispensation (eP) service allows a patient who is abroad to receive the equivalent medication that he/she would receive in his/her home country. Secondly, the Patient Summary (PS) services provides a health professional access to the verified key health data of a patient needing unplanned cross-border healthcare. Finally, the European Reference Networks (ERN) are virtual networks bringing together healthcare providers and centres of expertise across Europe to tackle complex or rare medical conditions that require specialised treatment and a concentration of knowledge and resources. To the moment, 117 projects for eHealth are being deployed in all Member States with an overall funding of EUR 29 million.

3.3. Evaluations, studies and reports

In 2021, the Commission presented its final evaluation of the ISA² programme – COM (2021) 965.⁴ The evaluation relied on quantitative and qualitative data and focused on seven main criteria: relevance, effectiveness, efficiency, coherence, EU added value, utility and sustainability. It found that the original needs and problems that the programme intended to address remain highly relevant. The COVID-19 pandemic has made existing needs even more pressing, including the need for coordination when

³ Europeana, eIdentification, eSignature, eDelivery, eInvoicing, eArchiving, Public Open Data, Automated Translation, Cybersecurity, eProcurement, Business Registers Interconnection System (BRIS), eHealth, Electronic Exchange of Social Security Information (EESSI), the European e-Justice portal, European Digital Media Observatory, European Platform on Digital Skills and Jobs, Online Dispute Resolution (ODR), Safer Internet, EU Student eCard and Blockchain.

⁴ [ISA2 final evaluation \(europa.eu\)](#)

implementing digital solutions at EU level. The evaluation concluded that, in general, the ISA2 programme was successful: 1) it has gone some way towards achieving its objectives – especially by developing, operating and facilitating the reuse of interoperability solutions and by promoting a holistic approach to interoperability in the EU–; 2) its operation was cost-effective – for those actions where the assessment was feasible, the costs per end-user (e.g. business, citizens, etc.) have been estimated as low; and 3) it demonstrated both internal (among its own actions) and external (with other EU initiatives) coherence. Finally, the evaluation results clearly underlined the EU added value of the programme, while outlining some possible areas for improvement (see section 3.1).

The European Interoperability Framework (EIF) evaluation report received positive comments from RSB and it is undergoing now the final Interservice Consultation. The evaluation relied on quantitative and qualitative data and focused on effectiveness, efficiency, coherence, EU added value and relevance. The conclusions are that the EIF has played in general a positive role in the digitalisation of public services, by providing high-level advice through widely adopted principles that guide the creation of interoperable digital public services. In terms of efficiency, the EIF's benefits outweigh the expenditures incurred by public agencies to implement it. The EIF is coherence with its main principles. On EU added value, the EIF has been considered in the preparation of some legislation in areas where interoperability is vital.

The EIF evaluation was presented along with an impact assessment report for a strengthened EU governments' interoperability policy, following the proposal on the EU governments interoperability strategy, announced in the Commission's Communication 'Shaping Europe's digital future'. The aim is to ensure coordination and common standards for secure and borderless innovative public sector data flows and services.

CEF Telecommunications

The CEF mid-term evaluation⁵ concluded that in the Telecom sector, the dual focus of CEF on digital cross-border services of public interest has an important impact on achieving the EU digital single market goals, enabling citizens and businesses to access high quality digital services across Europe. As such, it was acknowledged already in 2018 that by that time it had helped develop and implement common policies to address societal challenges including the digital transformation of healthcare, cybersecurity and digitisation of governments. These good results are proportionate to the level of funding that the programme counted on, by supporting the very first steps towards a full cross border digital infrastructure in areas of public interest. The mid-term evaluation also concluded that the programme proved to be an effective and targeted instrument for investment in trans-European infrastructure (TEN) in the digital sector, it strongly contributed to the Commission's priorities on jobs, growth and investment, and the Digital Single Market. The direct management of CEF grants has proven very efficient, with a strong project pipeline and a competitive selection process, a focus on EU policy objectives, coordinated implementation and the full involvement of Member States.

The CEF mid-term evaluation also highlighted that in the case of some DSIs, like Electronic Exchange of Social Security Information or Online Dispute Resolution (where EU Regulations and Directives require their deployment), CEF Telecommunications is providing an essential incentive for speeding up this process and important financial support for the Member States to become compliant. Other DSIs, like Cybersecurity, enable mechanisms to be used by Member States on a voluntary basis, by promoting actions that most likely would have not been carried out at EU scale without CEF support.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Make Europe a world-leading region in high-performance computing, improving our scientific potential and industrial competitiveness

Indicator 1: HPC infrastructures jointly procured

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2022
7	7	12								12
	Actual Progress									Final
	7									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Absolute number
Cut-Off Date	31/03/2022

⁵ See the Report from the European Commission to the European Parliament, The Council, the European economic and social Committee and the Committee of the regions on the mid Term evaluation of the Connecting Europe Facility (CEF) and annexed Staff Working Documents COM(2018) 66 final

Data source	EC monitoring
Link to the objective	Acquire and deploy advanced supercomputing capabilities to upraise Europe's scientific capabilities and industrial competitiveness
Link MFF 14-20 / MFF 21-27	This work strand continues the work started in the previous MFF by the EuroHPC JU.
Other methodological comments	The EuroHPC Joint Undertaking (JU) finalised in 2021 the procurements for two precursor-to-exascale supercomputers and five petascale supercomputers. A new Call for Tenders was published in December 2021 for an additional precursor to exascale following a cancelled tender in 2020. Tender to close in February 2022, for an expected start of the system installation in Q3 2022. In December 2021, the EuroHPC JU launched a Call for Expression of Interest for hosting one EuroHPC supercomputer with next generation supercomputing capabilities targeting exascale performance. A Call for Expression of Interest for hosting additional mid-range supercomputers (petascale and pre-exascale capabilities) was also launched to continue deploying a world leading service and data infrastructure in the Union and boosting national supercomputing capabilities. The outcome of these actions is foreseen in Spring 2022.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Regarding the baseline, 2 precursors to exascale & 5 petascale supercomputers have been acquired in the context of the 2014-2020 MFF. A 3rd precursor to exascale MARENOSTRUM V was foreseen to be acquired in 2020. Following the cancellation of the respective procedure, a new Call for Tenders was published in December 2021. The evaluation of the new Call is currently on going. The calls for tender using 2021 and 2022 Digital Europe appropriations will be launched in 2022, when the number of infrastructures will increase.

Indicator 2: Usage of the exascale and post-exascale computers in total and by various stakeholder groups (universities, SMEs etc.)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2025
0	0	0	5%	7%	10%					10%
	Actual Progress									Final
0	0									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	% of totally available computing time in minutes (expressed as fraction)
Cut-Off Date	01/04/2022
Data source	Measured by the machines themselves
Link to the objective	Ensure the widest access to high-performance computing infrastructures
Link MFF 14-20 / MFF 21-27	This is a new work strand under MFF 21-27. No exascale systems are currently operational (so far, the EuroHPC JU has acquired the pre-cursors to exascale and petascale supercomputers).
Other methodological comments	In December 2021, the EuroHPC JU launched a Call for Expression of Interest for hosting one EuroHPC supercomputer with next generation supercomputing capabilities targeting exascale performance. Therefore, not until 2023 it will be feasible to report on Exascale usage by stakeholders.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No exascale systems are currently operational (so far, the EuroHPC JU has acquired the pre-cursors to exascale and petascale supercomputers). In December 2021, the EuroHPC JU launched a Call for Expression of Interest for hosting one EuroHPC supercomputer with next generation supercomputing capabilities targeting exascale performance. Therefore, only as of 2023, when such HPC capacities are in place their operations will be monitored and reported on it will be feasible to report on Exascale usage by stakeholders. The usage of exascale and post-exascale computers necessarily depends on the development of the required infrastructure. As this activity is currently ongoing and all required preparatory work is being performed, it is on track.

Specific Objective 2: Boost the development of artificial intelligence and use it to respond to critical issues of our time

Indicator 1: Co-investment in sites for experimentation and testing

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	0	0	0	50000000	100000000	200000000	275000000			275000000
	Actual Progress									Final
0	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Euro
Cut-Off Date	01/04/2022
Data source	EC monitoring (part of the projects reporting requirements)
Link to the objective	Deploy world class reference sites for experimentation and testing in real setting focusing on the applications of AI in essential sectors
Link MFF 14-20 / MFF 21-27	This is a new initiative under MFF 21-27.
Other methodological comments	The budget includes both the edge AI TEF and the sectorial TEFs. The target estimated co-investment is based on an extrapolation of the total funding for TEFs under the entire duration of the programme. For the 1st WP (21-22) a budget of 195M€ has been committed, the remaining amount is speculative as it will depend on the WP development for the remaining time of the programme. The commitment regarding the co-investment will be known at selection stage, as this is part of the project budget, but it will only be confirmed at periodic report stage, when projects have to provide costs statements, and report expenses. (we initially put 2 years as a safety margin, but now put the regular reporting frequency, but there might be delays in reporting– also the distribution takes into account an approximation of the duration of the projects and the launch of successive calls).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	On track. The calls for which the present KPI aims to measure co-investment have been already launched. The co-investment will materialise during the implementation of the projects, when appropriations will be disbursed. This is expected to happen as of 2024. Although payments have not been performed yet, the procedure enabling the implementation of the underpinning actions is on track.

Indicator 2: Usage of common European libraries or interfaces to libraries of algorithms, usage of Common European Data Spaces and usage of sites for experimentation and testing related to activities under this regulation

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2030
0	0	0	0	40	80	120	240	400	500	700
	Actual Progress									Final
	0									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Absolute numbers
Cut-Off Date	01/04/2022
Data source	EC monitoring (part of the projects reporting requirements)
Link to the objective	Ensure wide access to artificial intelligence capacities for businesses and public administrations
Link MFF 14-20 / MFF 21-27	This is a new initiative under MFF 21-27
Other methodological comments	The number refers to legal entities (public and private organisations, including research institutes and SMEs) deploying and using the digital infrastructures made available by SO 2: Cloud, data and AI. By including the deployment of the infrastructures, the projects participants can be added. These are first estimates of the usage of the various resources developed under the programme. These figures should be revised in order to provide more realistic estimates, after the actions launched under WP 21-22 will be finalised by the beginning of 2024.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	On track. This is a new initiative under MFF 21-27. Actions have not been launched yet but required procedures in preparation of the implementation of the actions are on track. The usage of common European libraries, Common European Data Spaces and sites for experimentation and testing will be monitored after the infrastructure will be in place. First data available as of 2024, when infrastructures start to be operational.

Indicator 3: Cases for which organisations decide to integrate artificial intelligence in their product, processes or services, as a result of the Programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2030
0	0	0	0	0	5	10	20	50	70	100
	Actual Progress									Final
	0									
Are we on track :	On track									

Indicator type	Result
----------------	--------

Unit of measurement	Unique entities
Cut-Off Date	01/04/2022
Data source	EC monitoring (e.g. survey sent to users of the capacities offered by the programme)
Link to the objective	Support the integration of artificial intelligence by businesses and public administrations
Link MFF 14-20 / MFF 21-27	This is a new initiative under MFF 21-27
Other methodological comments	Note that such uptake of AI by companies are not immediate, nor necessarily immediate result of the projects (they might need an integrator or DIH to help them), this is why it would could take longer to fully integrate AI in their products/processes or services. There will be a period of testing, validation, and then finally the convinced ones will fully integrate them. First data will be available as of 2025. These tentative estimates are probably very conservative and should be re-assessed regularly (e.g. every 2 years) once the infrastructures are fully functioning.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	On track. The cases for which organisations decide to integrate AI in their product depend on the development of such infrastructure. Procedures to launch the actions that will develop such infrastructures are currently ongoing. As soon as these infrastructures are in place, the uptake of AI by organisations will be monitored based on the first data available as of 2025.No data. On track. First data available as of 2025.

Specific Objective 3: Invest in cybersecurity to guarantee the resilience, integrity and trustworthiness of the Digital Single Market, including critical networks, infrastructures and services

Indicator 1: Cybersecurity infrastructure and/or tools jointly procured

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	0	0	0	0	0	0	15			15
	Actual Progress									Final
0	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Infrastructures, services and tools (see definition)
Cut-Off Date	01/04/2022
Data source	EC monitoring
Link to the objective	Deploy advanced cybersecurity equipment, tools, services and data infrastructures
Link MFF 14-20 / MFF 21-27	This is a new initiative under MFF 21-27.
Other methodological comments	This is a new programme, and the foreseen actions will create infrastructures, such as security operation centres and cyber ranges. Taking into consideration the expected number of proposals under these topics, the target is 15. Such infrastructures will typically only be ready after a 3-year project, hence we do not expect to see them in action before 2027. Projects will be expected to publish reports about such infrastructures and demonstrate them in reviews.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The procedures required to launch the actions that will procure such cybersecurity infrastructure is on track. As it takes approximately 3 years to develop such advanced infrastructures, the target of 15 can be expected to be fully met only when the projects are completed. First Work Programme enabling the underpinning investment was adopted in November 2021. Once the calls will be concluded, evaluated and respective contracts/grant agreements signed, first projects will start to be implemented in early 2023.

Indicator 2: Users and communities getting access to European cybersecurity facilities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2028
0	0	0	0	0	0	0	150	300		300
	Actual Progress									Final
0	0									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Unique companies/organisations/entities
Cut-Off Date	01/04/2022
Data source	EC monitoring
Link to the objective	Ensure wide access to and usage of cybersecurity capacities to strengthen the resilience, integrity and

	trustworthiness of the Digital Single Market, including critical networks, infrastructures and services
Link MFF 14-20 / MFF 21-27	This is a new initiative under MFF 21-27.
Other methodological comments	It is expected that the infrastructures created by projects become operational by 2027 and then have on average 10 organisations which will be using them. A year after creation we expect the number to correspond to 20. As we expect around 15 of such infrastructures, 150 users for 2027 and 300 for 2028 are to be expected. Projects will consistently report on the number of users.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	For users to be able to access such facilities, the underpinning infrastructure needs to be developed. Procedures to launch these actions are on track. First Work Programme enabling the underpinning investment was adopted in November 2021. Once the calls will be concluded, evaluated and respective contracts/grant agreements signed, first projects will start to be implemented in early 2023. As of 2024 when the first data will be available, the number of users and communities will be continuously monitored.

Specific Objective 4: Promote advanced digital skills to address the shortage of digital experts, particularly in key technological areas

Indicator 1: Persons who have received training to acquire advanced digital skills

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	0	0	2 500	15 000	36 200	82 900	133 600			133 600
	Actual Progress									Final
	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Absolute number
Cut-Off Date	01/04/2022
Data source	EC monitoring
Link to the objective	Contribution of the DEP to strengthen advanced digital skills, by increasing the education offer and the number of experts trained (art. 7.1 of the proposed Regulation)
Link MFF 14-20 / MFF 21-27	This is a new initiative under MFF 21-27.
Other methodological comments	The milestones and the target showed above should be considered as indicative.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Procedures to launch the underpinning actions that will develop training activities are on track. First Work Programme enabling the underpinning investment was adopted in November 2021. Once the calls will be concluded, evaluated and respective contracts/grant agreements signed, first projects will start to be implemented in early 2023. The number of participants will be continuously monitored after the development of the trainings and the successful delivery.

Indicator 2: Enterprises having difficulty recruiting ICT specialists

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2029
55,4%	58,7%	61,7%	64,3%	66,4%	68%	69%	69,4%	69,2%	68,4%	68,4%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	01/04/2022
Data source	Eurostat
Link to the objective	Contribution of the DEP to bridge the gap of experts needed to operate key digital technologies and tackle skills mismatches (art. 7.1 of the proposed Regulation)
Link MFF 14-20 / MFF 21-27	This is a new initiative under MFF 21-27.
Other methodological comments	The target is set based on the assumption that the past trend will continue at a gradually slower pace. The indicator is only indirectly linked to the implementation of the DEP, therefore the target showed above should be considered as indicative. It can be assumed that the DEP will contribute to improving the trend observed, but the extent of this contribution cannot be estimated. In addition and importantly, external factors (including business digitalisation, labour market and demographic dynamics) will affect the actual trend and can determine deviations from the milestones and targets

	presented above.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	At the moment of drafting the Programme Statement, the data from EUROSTAT for 2021 is not yet available. A potential positive impact of the training on the recruitment of ICT specialists will only be visible after the implementation of the trainings.

Indicator 3: People reporting improved employment situation after the end of the training supported by the Programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	0	0	1 250	7 500	18 100	41 450	66 800			66 800
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Absolute number
Cut-Off Date	01/04/2022
Data source	Survey data (self-assessment by the participants in the Master's programmes supported by the DEP)
Link to the objective	Contribution of the DEP to bridge the gap of experts needed to operate key digital technologies and tackle skills mismatches (art. 7.1 of the proposed Regulation)
Link MFF 14-20 / MFF 21-27	This is a new initiative under MFF 21-27.
Other methodological comments	50% of the milestones in indicator 1 of SO 4 account for the vales of the milestones in indicator 3. This means that half of the people who are expected to attend the trainings should report an improved employment situation after the end of the training supported by DEP. These numbers are based on existing calls and the allocation of funding.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Procedures to launch the actions that are necessary to create training initiatives to ultimately improve employment situations are on track. First Work Programme enabling the underpinning investment was adopted in November 2021. Once the calls will be concluded, evaluated and respective contracts/grant agreements signed, first projects will start to be implemented in early 2023. Once the training opportunities have been delivered, the expected improvement in the employment situation will be closely monitored.

Specific Objective 5: Widen the adoption and best use of digital technologies in all regions and sectors to make Europe more competitive and address major societal challenges

Indicator 1: Take-up of digital public services

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	0	0			0.5	1				1
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Normalised 0-1 progress scale
Cut-Off Date	01/03/2022
Data source	EC monitoring
Link to the objective	Modernise public services through the use of interoperable, citizen-centric digital solutions in order to increase citizen welfare and EU competitiveness.
Link MFF 14-20 / MFF 21-27	Part of the services accounted for in this KPI have been deployed in the context of CEF Telecommunications and ISA2
Other methodological comments	For this first estimation, the 4 work strands, Common service platform, the Once Only Principle, Digital Wallet and Justice and Consumer protection have been taken into consideration. For each digital solution to be used as a proxy, one or several sub-indicators are defined to measure its uptake. e.g. the number of projects reusing a solution and a score evaluated against the completion of the planned work in the context of the maintenance of a core system. For each sub-indicator, a level of progress is computed based on the baseline and target. This figure cannot exceed 1 (100%). Based on this, the progress of the work strands was estimated placing equal weight on all work strands. A value of 1 equals 100% of the objectives have been met, a value of 0,5 indicates that the objectives were met partially, and a value of 0 indicates that the objectives have not been achieved.

Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The procedures to launch the calls are on track. The First Work Programme enabling the underpinning investment was adopted in November 2021. Once the calls will be concluded, evaluated and respective contracts/grant agreements signed, first projects will start to be implemented in early 2023. Procurement starts as of 2021 and first data is expected as of 2023 upon the completion of some actions part of the larger framework of the four workstrands.

Indicator 2: Enterprises with high digital intensity score

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
15.4%	15.9%	16.5%	17%	17.6%	18.3%	18.9%	19.6%	20%	21%	19.6%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	% of EU enterprises (expressed as a fraction)
Cut-Off Date	
Data source	Eurostat
Link to the objective	Support the integration of digital technologies by European businesses, notably SMEs
Link MFF 14-20 / MFF 21-27	This is a new initiative under MFF 21-27.
Other methodological comments	The target is calculated as a projection of past trends and based on the assumption that the trend will accelerate. The assumption on the acceleration of the trend is in line with the targets established with the 2030 Policy Programme “Path to the Digital Decade” (COM (2021)574 final). The indicator is only indirectly linked to the implementation of the DEP, therefore the milestones and the target showed above should be considered as indicative. It can be assumed that the DEP will contribute to improving the trend observed, but the extent of this contribution cannot be estimated. In addition and importantly, a large number of exogenous factors can affect its evolution (including economic context and other policies). The list of technologies partially changes every year since 2015 to reflect technological evolutions and policy priorities. This factor reduces the comparability across years and makes projections on future trends very challenging.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	At the moment of drafting the Programme Statement, the data from EUROSTAT for 2021 is not yet available. The impact of the programme on the acceleration of the digital intensity of enterprises will be closely monitored and assessed once the actions that are expected to support such a trend, will be fully implemented.

Indicator 3: Extent of alignment of the National Interoperability Framework with the European Interoperability Framework

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2025
3.750	3.755	3.760	3.765	3.770	3.775					3.775
	Actual Progress									Final
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	1-4 continuous scale
Cut-Off Date	01/12/2021
Data source	The indicator is calculated from the current European Interoperability Framework (EIF) monitoring mechanism, showing the mean value of the level of implementation at EU level. The data is collected consistently and exhaustively via a detailed survey covering the 27 Member States, combined with existing measurements from existing EC secondary data sources such as Open data portal indicators.
Link to the objective	Modernise public services through the use of interoperable, citizen-centric digital solutions in order to increase citizen welfare and EU competitiveness.
Link MFF 14-20 / MFF 21-27	This work strand builds on the EIF implementation monitoring supported under the previous MFF through ISA2.
Other methodological comments	Since the EIF may be updated in the future according to an upcoming legal act on interoperability, the methodology, milestones and target values will be then revisited and adapted in the middle of DEP programme (2024). Therefore, the current target value has been established for 2025.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Member States are already reaching a high level of maturity on interoperability, across a high number

	of areas. Therefore, the improvements are quite small on an annual basis.
--	---

Indicator 4: Businesses and public sector entities which have used the European Digital Innovation Hubs’ services

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	0	0	3600	9600	17600	33600	57600			57 600
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Unique entities
Cut-Off Date	01/04/2022
Data source	EC monitoring
Link to the objective	Ensure wide access to European Digital Innovation hubs by businesses and public administrations
Link MFF 14-20 / MFF 21-27	This is a new initiative under MFF 21-27.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The procedures to launch the underpinning actions to set up the infrastructure required for businesses and the public sector to eventually use the services of the digital hubs is on track. First Work Programme enabling the underpinning investment was adopted in November 2021. Once the calls will be concluded, evaluated and respective contracts/grant agreements signed, first projects will start to be implemented in early 2023. The monitoring and evaluation of this indicator will take place after the implementation of the European Digital Innovation Hubs’ services.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 2: Interoperability Solutions and common frameworks for European public administrations, businesses and citizens (ISA2)

Specific Objective 1: to facilitate efficient and effective electronic cross-border or cross-sector interaction between European public administrations and between them and citizens and businesses, in order to enable the delivery of electronic public services supporting the implementation of Union policies and activities

Indicator 1: Number of key interoperability enablers

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
3			9	9	9	10	10			10
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of “key interoperability enablers” produced
Cut-Off Date	31/12/2021
Data source	European Commission, DIGIT D2
Narrative	“Key interoperability enablers” are actions that develop key generic interoperability solutions to help public administrations provide services. This type of solution is essential to facilitate efficient and effective electronic cross-border or cross-sector interaction between European public administrations as well as between them and citizens and businesses in order to enable the delivery of interoperable electronic public services, which is one of the ISA2 programme objectives.
Methodology	The value of the indicator reflects the number of the ISA2 programme actions that identify, develop and implement interoperability solutions that are considered essential to facilitating interoperability in Members States. The quantity of such solutions depends on the number and type of proposals submitted by the Member States and Commission services and accepted for implementation in each annual work programme following the positive opinion of the comitology committee.
Link MFF 14-20 / MFF 21-27	Reporting on this indicator will discontinue in the MFF 2021-2027
Other methodological comments	The number mentioned in the baseline for the indicator corresponds to the major actions that were

	carried over from the previous programme ISA to the new programme ISA2 and should not be confused with the amount of outputs created by the previous programme (ISA)The indicator value for the years 2017-2020 could only be estimated at the beginning of the programme. This is because the number and type of the solutions produced by the ISA2 actions depends on the number and the type of proposals submitted by the Member States and Commission services, and then accepted for implementation in each annual work programme. As a result of proposals received in 2017 for the WP2018, the number of key interoperability enablers produced in 2018 was already higher than estimated in 2015.
Full metadata available at this address	
Justification of the trend	For most of the monitored period, the indicator has been on track except when it over-performed in 2018 and as a result exceeded the target value. This is explained by rates of government interoperability acceptance and technological progress exceeding initial expectations. There has been an increasing demand in Member States for intensified common investment in interoperability enablers. As the funding finished with the closing of the programme in December 2020, no new interoperability enablers were developed in 2021. The payments in 2021 were used to sustain the existing operations.

Indicator 2: Number of supporting instruments for public administrations delivered to and used by European public administrations

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
4			9	9	11	13	13			13
	Actual Progress									Final
			9	9	12	13	13	13		13
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of supporting instruments used by EU public administrations
Cut-Off Date	31/12/2021
Data source	European Commission, DIGIT D2
Narrative	“Supporting instruments for public administrations” are actions to develop support solutions that can help public administrations build interoperable services and that contribute to the development of more effective, simplified, and user-friendly e-administration at all levels. Delivering such supporting instruments to EU public administrations has been prerequisite to meeting main objectives of the ISA2 programme.
Methodology	The value of the indicator reflects the number of the ISA2 programme actions that identify, develop, and implement support solutions that can help EU public administrations build interoperable state-of-the-art services. The number of such solutions depends on the number and type of proposals submitted by the Member States and Commission services and accepted for implementation in each annual work programme following the positive opinion of the comitology committee.
Link MFF 14-20 / MFF 21-27	Reporting on this indicator will discontinue in the MFF 2021-2027
Other methodological comments	The number mentioned in the baseline for the indicator corresponds to the major actions that were carried over from the previous programme ISA to the new programme ISA2 and should not be confused with the amount of outputs created by the previous programme (ISA).The value of the indicator for the years 2017-2020 could only be estimated at the beginning of the programme. This is because the number and type of the solutions produced by the ISA2 actions depends on the number and the type of proposals submitted by the Member States and Commission services, and then accepted for implementation in each annual work programme. As a result of proposals received in 2017 for the WP 2018, the number of supporting instruments for public administrations delivered in 2018 was already higher than estimated in 2015.
Full metadata available at this address	
Justification of the trend	In general, the indicator has been on track except when it over-performed in 2018, which is explained by the increased need of Member States to modernise their public services and to improve electronic interaction among Member States as well as between Member States public administrations, individuals and companies. The target value has been reached as planned. As the funding finished with the closing of the programme in December 2020, no new supporting instruments were developed in 2021. The payments in 2021 were used to sustain the existing operations.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	35.96							35.96	1%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

By bringing European human centred AI-solutions and by unleashing the powers of digital, the Digital Europe Programme is expected to contribute to Europe’s common goal of being climate neutral by 2050 as set out in the European Green Deal. Several actions in the first Work Programmes (i.e. using 2021 and 2022 appropriations), have the potential to contribute to climate mainstreaming.

In particular, based on their scope, several actions will contribute directly to this target. Such is the case of selected actions contributing to the creation of a European Green Deal data space, the Urban Digital twins or the Destination Earth initiative. Another example would be the Digital Product Passport aiming to achieve sustainable and circular systems in three key value chains by improving product sustainability, boosting material and energy efficiency, enabling new business models and circular value extraction based on data sharing.

Partial contributions to climate action can also be expected from other actions where the scope of the action could cover use cases that address challenges linked to the climate change. In these topics, the assessment can only be done after the evaluation, depending on the scope of the awarded projects. This is the case for the data space for smart communities or the projects deploying the data space for mobility which could for instance support the monitoring of GHG emissions or the adaptation of transport policies to reduce climate impact.

Finally, also worth mentioning, that other actions might also marginally contribute with positive externalities although the climate action is not their main objective. Such is the case of the requirements of energy efficiency in the build-up of the cloud-to-edge capacities, or the actions supporting the digitalisation of justice which are expected to contribute by fostering paper-less communication in civil and cross border proceedings.

The tracking will be performed at commitment level, directly on the financial system of the Commission when each operation is registered. As DEP is a new programme with no historical data, and as use cases for some calls cannot be anticipated, it’s not possible to forecast climate expenditures for the whole period.

6.2. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*: 1130							

(*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significantly impacted**, score 0*: **impact on gender equality to be determined ex post**, score 0: **no significant impact on gender equality**.

In line with the Commission’s methodology to track gender equality related expenditure, the programme has been attributed a score 0*, which means that the programme’s impact on gender will be determined ex post once sufficient information from the programming and implementation phase is available. The contribution from Digital Europe to gender equality in the first set of Work Programmes could be relevant for two actions, namely the “Specialised education programmes in key capacity areas” and “Short term training courses in key capacity areas” under Specific Objective 4, in line with article 7 of the Digital Europe Regulation. Should the implementation of the abovementioned actions in SO4 confirm a contribution, this will be reflected in the respective Programme Statement.

6.5. Contribution to the sustainable development goals

6.5.1. Goals

SDG 3 Ensure healthy lives and promote well-being for all at all ages

The Digital Europe programme is expected to contribute to this SDG through the support provided for the digitalisation of the health sector in particular through the uptake of digital health solutions and services.

Several actions in the first Work Programme are expected to contribute directly to this goal. Such is the case of the Data spaces for Health or the Testing and Experimentation Facility for Health which together are meant to constitute an investment from 2021 and 2022 EU budget of up to 68 million EUR.

Other topics might also marginally contribute with positive externalities although healthcare is not their main objective. Such is the case of support to specialised education programmes in key digital technologies for professionals in various areas, including the health sector.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

The Digital Europe programme will promote learning opportunities in advanced digital skills in key capacity areas like data and AI, cybersecurity, quantum and HPC. The support will target training opportunities for the future experts as well as upskilling of the existing workforce through short trainings reflecting the latest developments in the above mentioned key capacity areas. An example of such investment would be the “Specialised educational programmes in key capacity areas” with a total support from EU 2021 and 2022 budget of 122 million EUR.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

The Digital Europe programme is expected to contribute in bridging the investment gap in Europe and to generate jobs and economic growth. The programme will support the promotion of the advanced digital skills needed for the deployment of the technologies funded by the programme. An example of such investment would be the “Short-term training courses in key capacity areas” with a total support from EU 2021 and 2022 budget of 25 million EUR.

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

The Digital Europe programme will contribute to the broader digital transformation of areas of public interest and of industry. The acquisition and deployment of advanced supercomputing capabilities aim to enhance Europe’s industrial competitiveness. Moreover, the reinforced network of European Digital Innovation Hubs will contribute to the digitisation of industry and address issues of technological accessibility, ensuring that businesses, including SMEs, have access to cutting-edge technologies and finance for adapting to digital change. The deployment of cross border interoperable digital solutions, will enhance collaboration between European Public administrations. An example of such investment would be in the setup of the network of Digital Innovation Hubs with a total support from EU 2021 - 2023 budget of 321 million EUR.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Selected actions under the Digital Europe Programme as well as the legacy solutions deployed in the context of the ISA2 and CEF Telecommunications Programmes aim to enlarge and maximise the benefits of the digital transformation for citizens and businesses. Contribution to this SDG is expected from selected topics that aim to support the digitalization and interoperability of public administrations, piloting of AI applications in law enforcement domain, as well as the digital transformation of Justice and consumer protection. The digital transformation of public administrations shall foster trust in online services, improve the service delivery and the convenience of services for European businesses and citizens, and reduce digital administrative barriers. An example of such investment would be in the work strands supporting the digitalisation of justice and consumer protection under the first Work Programme, which sum up to a support from EU 2021 and 2022 budget of 17 million EUR.

HEADING 1: Single Market, Innovation and Digital**Single Market Programme, including COSME, ISA2, ESP, consumer involvement in fin. Services, financial reporting, Food and Feed, consumer programme****Lead DG: GROW**

6.1. Contribution to climate mainstreaming 211

6.2. Contribution to biodiversity mainstreaming..... 212

6.4. Contribution to gender equality 213

6.5. Contribution to the sustainable development goals 213

1. Overview

1.1. Challenges

The single market programme (SMP) will improve the functioning of the internal market and help protect and empower citizens, consumers and businesses, including small and medium-sized enterprises (SMEs). The programme will support the design, implementation and enforcement of Union legislation underpinning the proper functioning of the single market for goods and services. It will also assist the digitalisation of services and business operations, facilitate market access and international co-operation especially in the areas of company law and contract and extra-contractual law, anti-money laundering, free movement of capital, financial services and competition, for the area of plants, animals, food and feed. Overarching and contributing to all areas, the programme will support the development, production and dissemination of European statistics on all EU policies.

The programme will contribute to a range of Commission priorities including a European Green Deal, a Europe fit for the digital age and an economy that works for people, as well as a stronger Europe in the world. Further improvements to the functioning of the internal market can help develop the competitiveness of the European economy and thereby support the effective recovery following the COVID-19 pandemic. The Commission’s updated industrial strategy for Europe announced a focus on industrial "ecosystems" to lead the transition towards a green and digital economy. A well-functioning Single Market, as Europe’s competitiveness driver, should be the basis of effective economic recovery of each ecosystem after the crisis.

In a context of budgetary constraints, the EU needs to seek synergies and prevent duplication and fragmentation in its support to the Single Market. It also needs to ensure greater visibility and coherence of its action towards Single Market users. The overarching goal is to help the Single Market reach its full potential and remain the ultimate engine of Europe’s recovery.

1.2. Mission (General objectives)

The programme brings together six predecessor programmes from different policy areas: the grants and contracts part of COSME (support to SMEs); the programme on consumer protection; the programme for enhancing the involvement of consumers and other financial services end-users in Union policymaking in the area of financial services; the programme to support specific activities in the field of financial reporting and auditing; the programme for a high level of health for human, animals and plants along the food chain and in related areas; and European statistics. It includes several previously independent budgetary lines connected to the functioning of the internal market, concerning, market surveillance, company law, contract and extra-contractual law,

standardisation and support for competition policy, customs and taxation and financial services, financial stability and the Capital Markets Union. These previous programmes and budget lines are now brought under the SMP banner.

The SMP's integrated setup will allow a more agile financing framework, which will lead to efficient use of synergies and prioritizing across all 14 ecosystems. One of the ambitions of the SMP is to create and develop synergies and further simplify the programme, beyond the mere juxtaposition of policy objectives.

1.3. Specific objectives

The programme-specific objectives are:

- Making the internal market more effective, especially in the light of the digital transformation by supporting:
 - the development, implementation and enforcement of Union law covering the internal market in goods and services, including the free movement of capital and financial services; and
 - effective market surveillance throughout the Union;
- Improving the competitiveness of businesses, especially SMEs;
- Ensuring the effective functioning of the internal market through standardisation and supporting the development of high-quality financial and non-financial reporting and auditing standards;
- Promoting the interests of consumers and ensuring a high-level of product safety and consumer protection by empowering and assisting consumers, ensuring access to efficient redress mechanisms, supporting enforcement authorities and consumer organisations, by enhancing the participation of consumers and other end users of financial services in financial services policy making, promoting a better understanding of the financial sector and the different forms of commercialised financial products;
- Contributing to a high level of health for humans, animals and plants throughout the food chain; and
- Producing and communicating high-quality statistics on Europe.

1.4. Public intervention context

The SMP will help facilitate a well-functioning Single Market as the basis of an effective economic recovery after the crisis crisis, in line with its specific objectives

The Internal Market objective aims at making the internal market more effective, especially in the light of the digital transformation, by supporting the development, implementation and enforcement of Union law covering the internal market in goods and services, including the free movement of capital and financial services; and effective market surveillance throughout the Union. This should ensure that citizens and businesses enjoy the benefits of the internal market and, through a range of tools, ensure they are aware of and can exercise their rights. Through this pillar, the SMP will implement, enforce and develop rules in areas including company and contract law, anti-money laundering, the free movement of capital and financial services. This pillar will support effective market surveillance, to ensure only safe and compliant products are made available. The SMP will ensure financial services meet the needs of consumers, civil society and end-users and enhance tools and expertise of the Commission to enforce effectively competition rules in the digital economy.

The Competitiveness (SME) objective of the SMP will support measures to strengthen the competitiveness and sustainability of SMEs which also achieve additionality at European level. This encompasses measures to foster growth, scale-up and creation of SMEs, access to markets, including through internationalization, entrepreneurship, entrepreneurial skills, enhancing the business environment, digital transformation, new business opportunities for SMEs, including those with innovative business models, competitiveness of industrial ecosystems and sectors, the development of industrial value chains, and the modernisation of industry, contributing to a green, digital and resilient economy.

Effective standards: The SMP will provide financial support to organisations that develop European wide standards to ensure that products and services meet an agreed level of quality and safety.

Under the **Financial Reporting and Auditing Standards** objective will also provide financial support for the development of international financial reporting and auditing standards. Those international standards underpin the EU's own legal framework on financial reporting (accounting and auditing) and are an essential element of the legislation regulating EU capital markets and the strengthening of the Capital Markets Union. The SMP will also contribute to the development of European and, thereby, global standards on sustainability reporting standards, which will be fundamental for the achievement of the Commission's priorities set out in the European Green Deal. Co-financing will be provided to:

- the IFRS Foundation, which develops international financial reporting standards (IFRSs) via its International Accounting Standards Board (IASB),

- the European Financial Reporting and Advisory Group (EFRAG) which provides the European Commission with endorsement advice on new or modified standards and monitors the standard setting activities undertaken by the IASB to ensure that European interests are safeguarded,
- the Public Interest Oversight Board (PIOB) which oversees three Standard Setting Boards supported by the International Federation of Accountants (IFAC) in the areas of audit and assurance, education, and ethics.

Through the **Consumer protection** objective, the programme supports the enforcement of consumer protection and safety rules. The Programme empowers consumers and put them at the heart of the internal market by supporting and complementing Member States' policies in seeking to ensure that consumers can fully reap the benefits of the internal market and that their safety, legal and economic interests are properly protected. Furthermore, it ensures that products circulating on the internal market, including online, are safe for consumers and it supports coordinated approach to market surveillance rules across the EU. The SMP also boost consumers and traders trust by giving them access to more efficient and cost-effective means of out-of-court redress. The Consumer protection strand activities implement priorities of the New Consumer Agenda, which presents a vision of EU consumer policy for 2020-2025, addressing consumers' needs in particular those the most vulnerable, enforcing consumer rights, increasing their resilience in the longer term and promoting a greener, more digital and faired single market.

Under the **Enhancing consumers involvement in the EU policy making in the field of financial services** objective, the programme will provide continued financial support for enhancing the participation of consumers, other financial services end-users and civil society in financial services policy-making as well as for promoting a better understanding of the financial sector. By doing so the SMP will contribute a main Commission priority for 2019-2024, i.e. "An economy that works for people" and shall help the Commission in its efforts to shape an economy that can fully respond to the needs of the EU's citizens.

The programme identifies two not-for-profit organisations that may be awarded grants to undertake activities to these ends. As well as together reinforcing the voice of consumers in relation to financial services policymaking, the organisations also have complementary strengths and expertise:

- Finance Watch strives to address also the bigger societal challenges related to finance, focusing on financial inclusion and sustainable finance;
- Better Finance grew into a centre of financial expertise, advocating for an open, transparent and efficient financing of the real economy, served by financial institutions that keep in mind the interests of customers and the public.

An evaluation of the predecessor programme conducted in 2020 found that "there are currently no alternative organisations at EU level covering a similar range of topics in financial services and in the same depth." However, were other potential beneficiaries to emerge, having as among their primary objectives representing the interests of consumers and end-users at Union level and that have, through their membership a broad geographical coverage and range of interests, then a call for applicants should be open to them.

Through **the Food Strand**, the SMP will prevent, control and eradicate animal diseases and plant pests, support sustainable food production and consumption, and the improvement of animal welfare, and improve the effectiveness, efficiency and reliability of official controls.

The SMP will cover veterinary and phyto-sanitary programmes, emergency measures and official controls related activities. From 2021 on, under the new MFF and the SMP, the EU will be able to financially support measures and actions related to animal welfare, to the prevention of food waste and fraudulent practices, the fight against antimicrobial-resistance (AMR) and to promote a sustainable food production and consumption.

The SMP will provide funding to National Statistics Institutes, under **the European statistics** objective, for the development, production and dissemination of high-quality statistics to monitor the economic, social, environmental and territorial situation, thereby providing for evidence-based decision making in the EU and measuring the impact of EU initiatives. This will be done in a timely, impartial and cost-efficient manner, through a strengthened European Statistical System (ESS) and enhanced partnerships within that system and with all relevant external parties. Multiple data sources, advanced data analytics methods, smart systems and digital technologies will be used and a national breakdown, and where possible, a regional one, will be provided.

Eurostat will continue to provide statistics and data to support the recovery from the COVID-19 crisis. The European Statistical Recovery Dashboard, containing monthly and quarterly indicators from a broad range of statistical areas that are highly relevant for monitoring economic and social recovery from the COVID-19 pandemic, was launched in December 2020 and will continue to be improved and regularly updated. Furthermore, under the Trusted Smart Statistics initiative, Eurostat will continue seizing the opportunities provided by new technologies and new data sources, especially those originating from the digitalisation of society and of the economy. This will result in improving the official statistics portfolio along key quality dimensions: better timeliness, finer granularity, improved cost-effectiveness, and more transparency. This initiative is gradually providing the European Statistical System with capabilities that are essential for adapting the official statistics to the digital era. Eurostat will also better communicate and better promote European statistics and facilitate their use by different stakeholders by increasing its presence across different dissemination channels (Eurostat website, social media), by disseminating flagship publications (Key figures on Europe, SDGs,

Regional Yearbook) and also by producing new interactive digital publications. Moreover, it will expand the range and reach of the statistical products, such as Statistics Explained articles and Statistics 4 beginners articles.

1.5. Actions

The main activities of the programme include:

- Support for the effective enforcement and modernisation of the Union legal framework through data-gathering and analyses;
- Studies, assessments, analyses and evaluations;
- Capacity-building activities and facilitation of joint actions between Member States and between their competent authorities and the Commission and the decentralised Union agencies;
- Support for projects, tools and services to identify and address specific challenges for competitiveness and sustainability faced by businesses and industrial ecosystems;
- Financing of mechanisms allowing individuals, consumers and business representatives to contribute to decision-making processes;
- Support for bodies involved in developing high-quality international financial and non-financial reporting and auditing standards, facilitating their integration into the Union law, and promoting the innovation and development of best practices in corporate reporting;
- Support for actions improving awareness, digital literacy and life-long education of consumers about their rights and redress possibilities in particular for the most vulnerable, fostering sustainable consumption, facilitating access to quality out of court dispute resolution and action supporting enforcement authorities and consumer representative organisations.
- Support for actions enhancing the participation of consumers and other end-users of financial services in financial services policy making, promoting a better understanding of the financial sector and of the different categories of commercialised financial products and ensuring that the interests of consumers in the area of retail financial services are protected; Strengthening the exchange and dissemination of expertise and knowledge.

This is complemented by very specific and targeted types of actions in a number of areas including: improvement of competitiveness, notably of SMEs; standardisation and emergency measures along the food chain and protection of human, animal and plant health, as well as animal welfare.

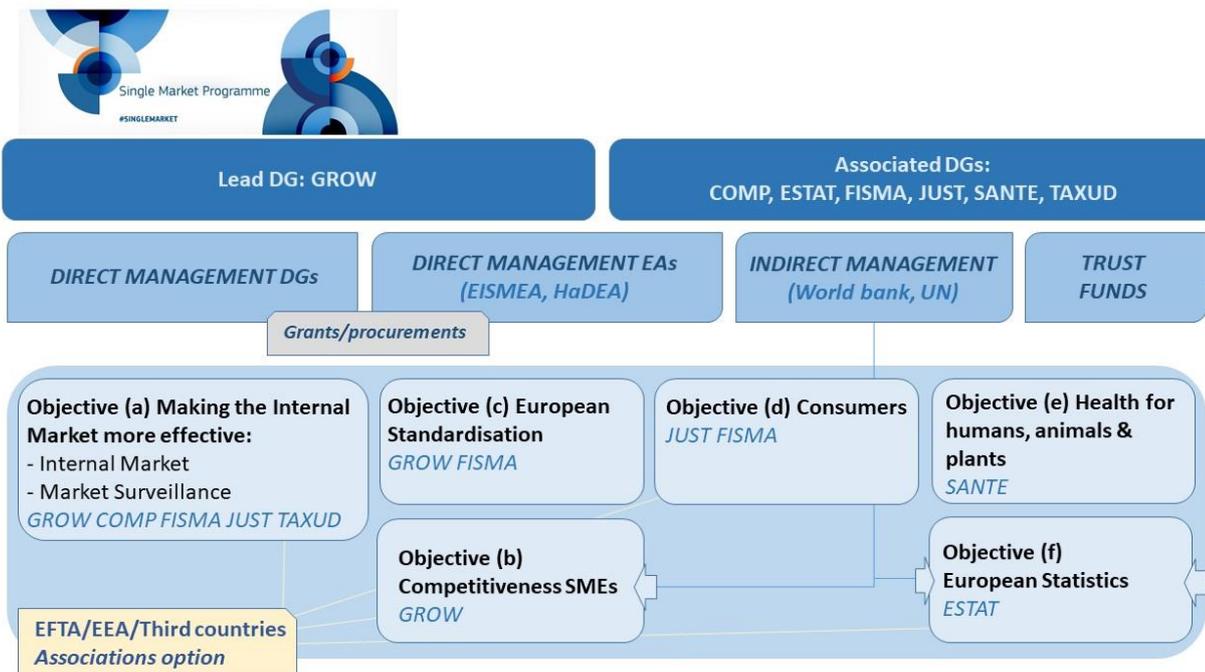

The SMP also includes specific activities for implementing the framework for financing the development, production and dissemination of European statistics within the meaning of Article 13 of Regulation (EC) No 223/2009.

1.6. Delivery mode

The programme is mainly implemented through direct management using in particular (but not exclusively) grants and procurement. The participating DGs are COMP, ESTAT, FISMA, GROW, JUST, SANTE, TAXUD.

Parts of the programme are implemented by two executive agencies. These concern in particular specific activities for strengthening the competitiveness and sustainability of businesses and SMEs that are delegated to the European Innovation Council and SMEs Executive Agency (EISMEA), activities for promoting the interests of consumers, activities relating to the protection of the health of humans, animals and plants along the food chain, and to the support of the welfare of animals. The majority of the actions under the Food strand of the SMP will be delegated for implementation to the newly established Health and Digital Executive Agency (HaDEA). The programme is coordinated along the lines set out in a Memorandum of Understanding signed by the seven participating Directorate-Generals, with the provision of a coordination secretariat provided by DG GROW.

1.7. Graphic overview of the programme structure

THE SMP STRUCTURE AND OBJECTIVES

GENERAL OBJECTIVES	SPECIFIC OBJECTIVES
Improve the functioning of the Internal Market	Improving the Internal Market and market surveillance
	Support to SMEs
	Standardisation
	Promoting the interests of Consumers
	High level of health and safety for humans, animals and plants
High quality Statistics	European Statistics (covering all EU policies)

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The programme brings together six predecessor programmes from different policy areas. It also includes several previously independent budgetary lines connected to the functioning of the internal market.

The Multiannual Financial Framework (MFF) Regulation for 2021-2027 (the MFF Regulation) sets the budgetary framework and main orientations for the Single Market Programme (SMP) for the period 2021-2027.

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	596.0	4 266.1	14%
Payments	86.0		2%

The SMP was adopted by the European Parliament and the Council in April 2021. The Work Programmes for the full SMP and the 2021 Financing Decision were adopted in May 2021. The 2022 Work Programme was adopted on 17 February 2022.

Competitiveness of enterprises (SME) objective:

In 2021, the SME strand had a voted budget of EUR 117 443 450. This budget was fully committed, and two multiannual calls were launched for the Enterprise Europe Network in May and the Joint Cluster Initiative in late September. The evaluations for the August cut-off date for the Enterprise Europe network call were completed (58 of the 73 eligible proposals were successful and the

preparation of the signature of grant agreements ensuring coverage of the network in the vast majority of EU Member States with 12 grant contracts signed before the end of the year, The remaining 46 are due to be signed in early 2022). The December cut-off concluded with 32 proposals due to cover the EU Member States where coverage was not achieved in the first cut-off date for this call. The evaluations of these proposals are ongoing. Other calls such as the Social economy and local green deals call were published in the autumn or foreseen in January/February 2022. The tourism call “COVID-19 - Recovery Through Sustainable Tourism Growth and SME Support” for just over EUR 12 000 000 was published in December 2021 and will be followed in 2022 with a second call of EUR 20 500 000 which will provide additional much-needed support for building sustainability and resilience in the tourism sector.

In 2022, the SME strand has a voted budget of EUR 151 450 000. The 2022 Work Programme provides for continuity of proven concepts such as the Enterprise Europe Network (EEN), Erasmus for Young Entrepreneurs, the IPR SME helpdesks, the EU-Japan Business Centre, the SME Envoy Network, the SME Performance Review, the Single Digital Gateway and Public Procurement for Innovation. It also supports the new Joint Cluster Initiative (Euroclusters), the tourism sector including specifically earmarked budget, and backs the implementation of the SME strategy. It also ensures the rollout of new tasks in EEN such as those linked to sustainability and digitalisation.

Example of an initiative for supporting Ukraine: In the framework of the European Cluster Collaboration Platform, the EU Clusters Support Ukraine Forum has been created to enhance the ability of European industry to contribute to the delivery of humanitarian aid for Ukraine and to support Ukrainian refugees in Member State countries. This forum enables European industry to share information, register offers of assistance, propose collaboration and request assistance in order to facilitate procurement and delivery of urgent humanitarian support (see: <https://clustercollaboration.eu/content/eu-clusters-supporting-ukraine>).

Financial and Non-Financial Reporting and Auditing Standards objective

In 2021, the first year of SMP implementation, grants totalling EUR 8 078 058 of commitment appropriations were awarded to the three beneficiaries supporting the development of high-quality financial and non-financial reporting and auditing standards that are identified in the Regulation establishing the Single Market. Commitment appropriations not needed for 2021 have been reprogrammed for later years of the multiannual financial framework period.

In addition, in 2021 EUR 4 666 529 of payment appropriations were used to provide operational cash flow to the grant beneficiaries in the form of pre-financing for the implementation of their 2021 work programmes.

The commitment appropriations available for 2022 (EUR 8 662 095) will be used for the 2022 operating grants to designated beneficiaries of the programme in the area of financial and non-financial reporting and auditing standards. The three organisations concerned have submitted their applications for Union funding for 2022, which are being assessed by the Commission services with a view to their award before end-April 2022.

The payment appropriations available for 2022 will be used to provide operational cash flow to the grant beneficiaries for the implementation of their 2022 work programmes as well as to honour the outstanding commitments from 2021.

At around EUR 8 944 000, the estimated commitment appropriations that will be made available in 2023 for the award of operating grants to the three designated beneficiaries would be slightly higher than in 2022. They will be used for the operating grants to be awarded in 2023. The forecast payment appropriations of EUR 8 847 000 for 2023 will be used to provide operational cash flow to the grant beneficiaries for the implementation of their 2023 work programmes as well as for honouring the outstanding commitments from 2022.

Consumer objective

The Consumer strand activities are part of a biennial work programme that covers 2021 and 2022 with a total budget of ca. EUR 49 million (incl. EEA EFTA contribution and internal transfers) out of which ca. EUR 39 million is implemented by the Executive Agency EISMEA.

The late adoption of SMP Regulation and related Financing Decision - together with related policy reconsiderations - led to delays in the call planning for both grants and procurement actions, meaning that some actions originally planned for 2021 will be finalised in 2022.

In June 2021, six calls/invitation to submit proposals were launched (five for the action grants and one operating grant). The calls covered areas including: offering assistance to consumers in Member States in the form of Alternative Dispute Resolution, promoting stable debt advice services; supporting joint actions of the European Consumer Centres (ECC); co-operation between national authorities responsible for the enforcement of consumer protection law (CPC); support for the activities of Member States authorities participating in EU consumer policy; and support for the activities of the consumer organisation at the Union level – BEUC. In total 80 proposals from 29 countries, including EU member states, Norway and Iceland were submitted. Five grant agreements have been signed in 2021, the other are under evaluation and will be finalised in Q1/2022.

In addition, several service contracts signed focused on training and capacity building for consumer policy stakeholders; communication of the changes brought by the directive on better enforcement and modernisation of EU consumer protection; behavioural and evaluation studies supporting Consumer policy development; as well as for an Informal Ministerial Meeting under the French Presidency, the Consumer dialogues and consumer summit events.

Enhancing consumers involvement in the EU policy making in the field of financial services objective

In 2021, the first year of SMP implementation, grants totalling EUR 1 496 375 of commitment appropriations were awarded to the two beneficiaries that are identified in the Regulation establishing the Single Market for their actions supporting consumers and other end-users of financial services.

In addition, in 2021 EUR 918 550 of payment appropriations of were used to provide operational cash flow to the grant beneficiaries in the form of pre-financing for the implementation of their 2021 actions.

The commitment appropriations available for 2022 (EUR 1 497 691) will be used for the 2022 action grants to designated beneficiaries of the programme in the area of enhancing the participation of consumers and other end-users of financial services in financial services policy making, promoting a better understanding of the financial sector and of the different categories of commercialised financial products and ensuring that the interests of consumers in the area of retail financial services are protected; Strengthening the exchange and dissemination of expertise and knowledge. The two organisation concerned have submitted their applications for Union funding for 2022, which are being assessed by the Commission services with a view to their award.

The payment appropriations available for 2022 will be used to provide operational cash flow to the grant beneficiaries for the implementation of their 2022 actions as well as to honour the outstanding commitments from 2021.

In the first year of implementation, the focus was on a number of key topics such as sustainable finance (the Renewed Sustainable Finance Strategy), financial inclusion, Capital Markets Union, digitalisation (the Digital Finance Package), financial stability, the impact and consequences of the Covid-19 pandemics, and other emerging priorities. In 2021, the beneficiaries of the programme engaged in activities that not only contributed to substantive achievements in relation to the objectives of the SMP but also broadened the outreach and impact on EU policy-making in the area of financial services of organisations representing the interests of consumers and end-users of financial services. In general terms, such activities included:

- publication of research and policy papers;
- contribution to public consultations;
- communication and outreach activities, including organisation of high-level conferences, participation in hearings, good press coverage and social media activities, and financial education and training;
- increasing the representation of consumer and end-user interests in the Union policy-making through regular meetings with EU policymakers and participation in expert or stakeholder groups and European Supervisory Authorities (ESAs).

Also in 2021 continued efforts were made to develop methodology and best practices on how to increase the engagement of consumers and financial services end-users in order to identify issues relevant for Union policy-making and ensure that the interests of consumers in the area of financial services are protected.

In 2021, the global COVID-19 pandemic continued to hamper the beneficiaries' physical participation (including as speakers) in various events. Both organisations have, however, taken part in online conferences and webinars and thus ensured that the voice of financial service users was heard.

Food objective

Under the SMP umbrella, a common single Financing Decision and Work Programme was adopted. All Food chain related activities are presented in an Annex to the Financing Decision (i.e. veterinary programmes, phyto-sanitary programmes, EURLs and Food and Feed activities that include the new activities: animal welfare, AMR, food sustainability, food fraud, food waste, etc.). The formal adoption of the Financing Decision will take place in February 2022. Member States have then submitted their veterinary and phyto-sanitary programmes by 31/05/2022 as per SMP provisions. The timing for grants preparation and finalisation will go to January 2023.

As regards the 2021-2022 activities, transitional provisions under the current SMP Regulation allow the measures implemented from 1/1/2021 to be eligible for financing, even if the grants are signed later, in order to avoid disruption on the fight against animal diseases and pests.

By letters sent to contracting authorities end of December 2020, beneficiaries (MS and EURL/EURCs) have been informed of the above timing and on the step to be taken to ensure continuity of the actions to be implemented.

In the first year of implementation (2021), a total budget of around EUR 230 million in commitment appropriations was implemented. The initial approximate allocation designated to the different food chain activities within the SMP was as follows:

- Veterinary programmes – 46.5 %
- Phyto-sanitary programmes – 9.0%
- Veterinary and phyto-sanitary emergency measures – 9.0 %
- Official controls: European Reference Laboratories/European Reference Centres – 9.5 %
- Better Training for Safer Food – 4.5%
- Animal welfare, food waste and fraud, AMR, sustainable food production and consumption – 6.4%
- Other expenses (communication, IT, contingency, ...) – 13.0%

- Better Training for Safer Food – 4.5%
- Animal welfare, food waste and fraud, AMR, sustainable food production and consumption – 6.4%
- Other expenses (communication, IT, contingency, ...) – 13.0%

For 2021, 130 national **veterinary programmes** covering the monitoring and eradication of 12 diseases and implemented by 27 Member States, have been approved and implemented in accordance with pre-defined priorities; their final report is due at the end of April 2022. Around EUR 107 million was allocated to co-fund them, which accounts for the largest proportion of spending under the Food and Feed budget. For 2022, 129 national veterinary programmes covering the monitoring and eradication of 12 diseases and implemented by 27 Member States, have been approved and implemented in accordance with pre-defined priorities. In addition, 9 programmes in neighbouring third countries have been approved for 2022. The total budget allocated to the veterinary programmes in 2022 is EUR 107 million.

In 2021, 19 Member States had EU-approved national programmes in place for control and eradication of ASF with a total allocation of EUR 12.6 million and 13.3 million are envisaged for 2022.

As regards the **national survey programs for organisms harmful to plants**, in 2021, 24 programmes were implemented for which the final report is due at the end of April 2022. The budget allocated for these activities is EUR 20 million for 2021 and EUR 20 million for 2022, covering 24 Member States.

There were 44 EU funded European Reference Laboratories (EURLs) in 2021. These laboratories helped ensuring the proper functioning of the internal market, the protection of human health and animal health, and the maintenance of consumers' confidence. The budget allocated to the EURLs/EURCs for 2021 and 2022 is 20 million per year.

Preparations are ongoing for the support of the emergency measures, both veterinary and phytosanitary. As a result of outbreaks of ASF and highly pathogenic Avian Influenza, substantial requests for co-financing are expected to be submitted by Member States, going far beyond the available budget. In this respect, a recourse might have to be done to the Solidarity and Emergency Aid Reserve (SEAR).

European Statistics objective

In the domain of European statistics, the EUR 74 million commitment appropriations of the 2021 voted budget were implemented completely, supporting calls for proposals, tenders and other actions detailed in the Annex of the Financing Decision/Work Programme. Due to the delay in the adoption of the legal basis as well as the FD/WP, certain agreements could not be finalized within the year and consequently EUR 0.8 million payment credits initially foreseen to provide advance payments to beneficiaries were not used.

In 2022, the European Statistics objective has a voted budget of EUR 75 million, which will be used for the implementation of the annual work programme via the traditional instruments of the statistical programme, namely open grant calls, grants to members of the European Statistical System, as well as calls for tenders and other actions serving the purposes of the objective producing and communicating high quality statistics on Europe.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Programme for the Competitiveness of Enterprises and Small and Medium-Sized Enterprises (COSME)

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	2 358.7	2 359.0	100%
Payments	1 762.1		75%

COSME Financial Instruments: At the end of 2020, all commitment appropriations as authorised by the European Parliament and the Council of the EU for the period 2014-2020 were used in line with the planned operational implementation. The implementation rate of payment appropriations vis-à-vis commitment appropriations varies between the two COSME financial instruments.

Whereas, the Loan Guarantee Facility has a rather accelerated budgetary implementation ratio (e.g. 84% budgetary execution rate of payments vis-à-vis commitments as of 31 December 2021), the respective ratio for the Equity Facility for Growth is lower (i.e. 38% budgetary execution rate of payments vis-à-vis commitments as of 31 December 2021) due to the implementation specificities.

In the case of the Loan Guarantee Facility, payment appropriations are needed to allow the implementation partner (the European Investment Fund) to honour guarantee calls from financial intermediaries for defaulting loans and to pay implementation fees.

Furthermore, the Loan Guarantee Facility was additionally reinforced by the SME window of the European Fund for Strategic Investments. Since 2015, it has enhanced the Loan Guarantee Facility by adding additional risk-taking capacity and doubling the available resources in terms of commitment appropriations. It is expected that by the end of 2022 the budgetary implementation ratio will reach almost 100%, i.e. payment appropriations should match almost in full commitment appropriations.

In the case of the Equity Facility for Growth, payment appropriations are needed to allow the implementation partner (the European Investment Fund) to honour cash-calls from fund managers, who will use the cash to invest in portfolio companies, and for implementation fees. Since it is industry standard that venture capital fund managers have up to 5 years to make the first initial investments in SMEs following the creation of the venture fund, there is a significant delay between the time of signature of a fund agreement by the EIF and the respective cash calls by the fund managers. Furthermore the initial investment by the fund manager, funds can hold on to their portfolio companies for up to 10 years during which they can undertake follow-on investments to grow the companies. This pattern of activity explains why there is a significant time delay between commitment and payment appropriations in the case of venture capital investments.

In any case both COSME financial instruments are planned to last until 31 December 2034 when the last guarantee and equity operations are wound down by the EIF. All details are available in the Working Document Part X dedicated to the financial instruments.

Financial Reporting and Auditing Standards

Over the period 2014-2020 commitment appropriations of EUR 55 307 969 had been used for the programme's operational implementation.

However, budget appropriations totalling EUR 2.9 million were decommitted over the same period. This represents 5.4% of the total budget appropriations initially committed. The decommitment was mainly due to a beneficiary underspending the awarded Union funds for particular reasons. Arrangements were put in place to mitigate the likelihood and impact of recurrence which were successful in mitigating the problem whilst allowing the objectives of the programme to be achieved.

The payments executed over the period 2014-2020 amount to EUR 48 819 949 and represent 88% of the total commitment appropriations for the same period. The operating grants implementation period runs from 1 January to 31 December and balance payments due to the beneficiaries were made in 2021 which explains the difference between the cumulative commitment appropriations (taking into account the aforementioned decommitment) and the cumulative payment appropriations..

Consumer Programme

Cumulative implementation rate at the end of 2021 (EUR million):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	187.8	188.4	100%
Payments	161.9		86%

The implementation of the Consumer Programme 2014–2020 is well on track and at the end of 2021, all commitment appropriations (including the credits on the global commitment) were used according to the planned operational implementation.

In 2020 and 2021, following the impact of the Covid-19 crisis on some of the procurement activities (cancellation of meetings, conferences and study visits), the budget allocated to grants was slightly increased (within the 20% flexibility foreseen in the Financing Decision), which allowed to increase the overall implementation rate.

The implementation of the payment appropriations over the period 2014-2020 represent 86% of the total commitment appropriations for the same period. The payment appropriations will continue to be executed in the coming years (estimated until 2023), to allow for the finalisation of ongoing projects related to grants and procurement activities. They concern mainly multi-annual activities which are still in progress or in the finalisation phase.

Enhancing consumers involvement in the EU policy making in the field of financial services

Over the period 2017-2020 commitment appropriations of EUR 5 532 382 had been used for the programme's operational implementation.

However, budget appropriations totalling EUR 0.3 million were decommitted over the same period. This represents 5.4% of the total budget appropriations initially committed. The decommitment was mainly due to a beneficiary underspending the awarded Union funds for particular reasons. Arrangements were put in place to mitigate the likelihood and impact of recurrence which were successful in mitigating the problem whilst allowing the objectives of the programme to be achieved.

The payments executed over the period 2017-2020 amount to EUR 4 828 690 and represent 87% of the total commitment appropriations for the same period. The action grants implementation period runs from 1 January to 31 December and balance

payments due to the beneficiaries were made in 2021 which explains the difference between the cumulative commitment appropriations (taking into account the aforementioned decommitment) and the cumulative payment appropriations.

Food and Feed

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	1 827.2	1 827.3	100%
Payments	1 539.8		84%

European Statistical Programme

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	446.7	449.1	99%
Payments	391.3		87%

During 2014-2020, 99% of commitments were implemented in the framework of the European Statistical Programme, thereby allowing to reach the foreseen goals.

The payment appropriations continue to be executed in the coming years, to allow for the finalisation of ongoing projects related to grants and procurement activities. In 2021, some expected submission of deliveries and cost claims from beneficiaries and contractors were delayed, in specific related to the pandemic situation, which resulted in EUR 3.3 million unused payment appropriations.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

All the 2014-2020 programmes are on track to achieve their objectives or have already achieved it.

3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 has progressed further

3.1.3. Previous Programme Performance

Programme for the Competitiveness of Enterprises and Small and Medium-Sized Enterprises (COSME)

The COSME programme addresses the full range of challenges that SMEs face for boosting their competitiveness. The financial instruments and other support for access to finance provided under this programme do not just provide financial support to numerous SMEs that have difficulties in obtaining finance. They also have a positive impact on the SMEs' assets, share of intangible assets, sales, employment rates and even reduce the SMEs' probability of default. This is empirically demonstrated by the econometric work carried out from various studies on the COSME predecessor activities related to access to finance (see "The real effects of EU loan guarantee schemes for SMEs: A pan-European assessment, European Investment Fund, June 2019).

Several activities of the COSME programme indirectly contribute to the general objective of 'strengthening the competitiveness and sustainability of the Union's enterprises, particularly SMEs.. Looking at the time and cost to establish a business, the updated methodology shows a reduction from 2014 of 15 days to 12 days in 2020, while the cost (expressed in % of income per capita) has reduced from 4.8% to 3.2% in 2020 (EU-27). This is now measured using World Bank Doing Business data. While this is a positive trend, it shows there is still work to do in improving the business environment.

The work of the SME envoys and SME Performance Review ensure a flow of information for businesses and policymakers, contributing indirectly to improve the business framework and the competitiveness of SMEs. The SME Performance Review reports, including a specific report on the digitalization of SMEs contributed to the Commission's analyses of SME relevant issues

at European and national level in the context of the European Semester, and in 2020/2021 in the context of the Recovery and Resilience Facility.

The second general objective is to encourage entrepreneurial culture and to promote the creation and growth of SMEs. EU-28 SMEs in the 'non-financial business economy' followed a solid growth path up to 2019. In 2014-2019, SME value added increased by 18.2 %, and SME employment increased by 7.6 %. Nevertheless, the growth in value added of large firms was significantly higher, at 49.2 %. More recently, in 2019, all enterprise size classes recorded growth in the number of enterprises, value added and employment, and EU-27 SMEs posted stronger growth than in large enterprises, especially in terms of growth in value added. Moreover, within the EU-27 SME population, micro-SMEs outperformed by far small and medium-sized SMEs in 2019.

In 2019, SMEs accounted for over 60% of the increase in EU-27 value added, and 70% of the increase in EU-27 employment. In both cases, SMEs' contribution was driven by micro-SMEs, which accounted for 31% and 56% of the total growth in value added and employment respectively.

However, in 2020, the COVID-19 crisis brought to an abrupt halt or even reversed the gains made by the EU SME sector over the past decade. Many industries, especially in the SME-intensive services sector, experienced large declines in sales as a result of the various lockdowns and other measures introduced by Member States, while some other industries saw their sales increase. The various business support measures implemented by Member States during the pandemic limited the employment impact of the decline in economic activity. The 2021 SME Performance Review shows that across the EU, the number of SMEs has fallen by -1.3% in 2020. Employment in SMEs fell by -1.7% in 2020 (representing 1.4 million jobs lost in SMEs) and SME value added by -7.6%. SME employment has not yet reached 2019 levels even by the end of 2021.

Specific projects showed continued success and growth although some adjustments were necessary in 2020. The Erasmus for Young Entrepreneurs mobility scheme (active since 2009 as a pilot action and continued under COSME) demonstrates the need for entrepreneurial exchange whereby would-be or newly established entrepreneurs receive practical support from experienced entrepreneurs. Experienced entrepreneurs in return increase their knowledge and access to other markets as well as gain new ideas and techniques for their business. The programme was strongly hit by COVID-19 and the number of matched entrepreneurs dropped significantly in 2020 (1 684 entrepreneurs were matched compared to 2 672 in 2019). 2021 performance was still affected by the COVID 19 sanitary measures. Measures to react to the situation were taken and remote exchanges were offered to start with. However, the programme has maintained its broad geographical spread, implemented by a network of over 180 local intermediary organisations in 37 countries (out of 39 participating), including in Kosovo* and in Martinique (EU outermost region).

Around 263 898 SMEs received advisory services from the Enterprise Europe Network from 2015-2020. Specific actions initiated in 2020 to help SMEs overcome the COVID crisis were continued and consolidated in 2021, in particular virtual brokerage events to help SMEs find alternative business partners, advice on access to finance and single market advisory services. According to a survey by the Enterprise Europe Network, about 74% of the responding companies were strongly or moderately affected by the crisis, forcing them to deal with supply chain disruptions, employee absences and temporary shutdowns among others. The most obvious reasons were delays due to transport and logistics problems, border closings and national lockdown measures.

COSME Financial Instruments: Until September 2021, the Loan Guarantee Facility under the COSME Financial Instruments allowed more than 790 000 SMEs to receive more than EUR 49 billion financial support in 2014-2021. In reaction to the 2020 COVID crisis, EUR 714 million from the European Fund for Strategic Investments (EFSI) were redirected to the COSME Loan Guarantee Facility to allow the European Investment Fund (EIF) to incentivise banks to provide liquidity to SMEs affected by the COVID crisis. More flexibility was given to users of the Facility, and the guarantee rate was increased from 50 to 80%. Until September 2021, this helped more than 100 000 European SMEs to access more than EUR 9 billion of liquidity finance under the COSME COVID measure.

Until September 2021, the funds supported by the Equity Facility for Growth had invested more than EUR 2.7 billion in more than 400 companies. Out of this amount, more than EUR 1.9 billion were invested in more than 240 SMEs in their growth and expansion stage. The latter two indicators (EUR 1.9 billion and 240 SMEs) were below the initially foreseen long-term targets for 2020. Some of the drivers behind that performance were:

- Signature of agreements for the Equity Facility for Growth continued to take longer, as equity entails more complex due diligence and fund-raising processes.
- The Equity Facility for Growth prioritised funds focused on investments in COSME third countries participating in the programme, whereas these third countries cannot be supported under the SME window of the European Fund for Strategic Investments. However, demand from these jurisdictions continues to be limited.

Based on lessons learned from audits and other assessments of operational expenditure for the previous financial years highlighted in previous Programme Statements, the Commission proposed to set up one single InvestEU Programme 2021-2027. This established one single fund (InvestEU Fund). It builds on the successful model of the European Fund for Strategic Investments. The InvestEU ensures a streamlined approach towards the management and reporting on financial instruments/budgetary guarantees. Under the InvestEU fund, financial products tailored for the Commission's policy priorities, including financing of SMEs, are being established.

All details are available in the Working Document Part X dedicated on the financial instruments.

Challenges and conclusion: The most recent evaluation found that COSME actions were highly relevant in addressing the challenges related to fostering economic growth and jobs. The Programme had a good proximity to SMEs thanks to an extended network of intermediaries, a high multiplier effect and showed EU added-value. It supported types of SMEs (with measures such as Loan Guarantee Facility and Enterprise Europe Network). The programme was small but showed flexibility in adapting quickly to new priorities.

However, 20 % of the budget was fragmented in a number of small actions with a low potential for effectiveness and cost-efficiency. In relation to monitoring, the evaluation points to a lack of centralised data about implementation and notes that indicators are mostly based on outputs rather than on long-term effects. Some efforts are still needed to centralise the data that is currently dispersed between the coordinating team, the units managing individual actions and the delegated entities. The programme delivers in terms of jobs and growth creation, but it does not address directly global and societal challenges. The programme is coherent and works without big overlaps with other EU programmes and national/regional SMEs' support schemes, however there is scope for improving synergies, mainly at national and regional level.

The fragmentation into smaller actions was gradually addressed in the last two years of the work programme, ensuring that the larger actions were reinforced where appropriate, and the amount of smaller supporting actions reduced. This also fed into the preparation of actions under the Single Market Programme where the most impactful actions are being reinforced. However, the programme should retain its ability to launch smaller pilot actions to meet the changing landscape of SMEs.

Specific Activities in the Field of Financial Reporting and Auditing

As previously noted for these activities included in Working Document No.1 for the draft 2021 Union budget, in 2019 the [Commission assessed](#) the achievements resulting from the funding programme established by Regulation (EU) 258/2014, an assessment which confirmed the relevance and the benefit of the EU funding programme. The same conclusion can be drawn for 2020, the last year of the funding programme. In particular, Union support strengthened the legitimacy of the three beneficiaries (the International Financial Reporting Standards (IFRS) Foundation, the European Financial Reporting Advisory Group (EFRAG) and the Public Interest Oversight Board (PIOB)) to serve the European public interest by developing and promoting European views in the field of financial reporting and auditing and ensuring these views are properly considered in the IASB and IFAC standard-setting processes. In terms of achievements, the funding programme enabled the three beneficiaries to develop standards, which enhance the transparency and comparability of financial information about financial instruments, revenue recognition, and lease contracts.

Over 2017-2020 the progress made by IFRS Foundation was in line with its work programme. Four major standards were issued: IFRS 9 - *Financial Instruments*, IFRS 15 - *Revenue from Contracts with Customers*, IFRS 16 - *Leases* and IFRS 17 - *Insurance Contracts*. The IASB also published its updated *Conceptual Framework for Financial Reporting* to describe the objective of and concepts for general purpose financial reporting. In 2018, the focus of the IASB agenda evolved from major standard-setting projects towards research projects, maintenance-type activity and initiatives aimed at improving the communication through financial statements. In 2019, the IASB started to revise its new standard IFRS 17 at the request of major stakeholders including the EU, the amendments to which were issued in June 2020. The IASB also in 2019 started to work on a project to enhance the presentation of *Primary Financial Statements*, with feedback on the Exposure Draft being discussed in December 2020.

Over 2017-2020 EFRAG fulfilled its work programme in a satisfactory manner, and in line with the recommendations from the Maystadt Report (October 2013). On financial reporting EFRAG's work was largely driven by the IASB work programme, the IFRS Interpretations Committee, and the IFRS Foundation. Throughout the period, EFRAG provided substantial comment letters to all new draft standards issued by the IASB at an early stage of the IFRS Foundation's due process. To support decision making on endorsement, EFRAG issued timely advice on whether the final IFRS standards issued by the IASB complied with the technical criteria of the IAS Regulation, including the true and fair view principle, and were conducive to the EU public good. In 2020, EFRAG worked on research projects that were continued in 2021: Discounting with low interest rates; Better information on Intangibles; Crypto Assets; and Variable and Contingent Considerations. EFRAG also published a Discussion Paper on the Accounting for crypto-assets (liabilities), on which the outreach was undertaken in 2021.

EFRAG has also widened the scope of its work in recent years and established a European Corporate Reporting Laboratory ("the Lab"), which became operational in February 2019, when the Lab's Task Force on climate-related reporting started its work, the report on which was published in February 2020. A second project about reporting of non-financial risks and opportunities, and linkage to the business model started in September 2020.

The PIOB continued to carry out its oversight function of the International Auditing and Assurance Standards Board (IAASB) and the International Ethics Standards Boards for Accountants (IESBA).

Since March 2020 the global COVID-19 pandemic has influenced the work of the IFRS Foundation, EFRAG and PIOB in several ways. The three entities not only adapted by changing the way they worked (crisis meetings were conducted as on-line meetings, outreaches have been cancelled, postponed or turned into webinars) but also deadlines were extended to recognise the circumstances of stakeholders and to allow them to provide input and where applicable seek input from their constituents. The IASB supported stakeholders with some COVID-19 related amendments that provide targeted accounting relief, and by adjusting the Board's work plan including postponing less critical consultations. One example of this is the amendment to IFRS 16 to

facilitate the accounting by entities for COVID-19-related lease concessions such as rental holidays and temporary rent reductions. On the other hand, the IASB prioritised time-sensitive projects such as those related to IBOR reform and the IFRS 17.

In March 2020, EFRAG called on the IASB to extend their consultation periods of non-time critical projects and the IASB extend the consultation periods of several of its projects. EFRAG also revisited the timelines of its projects in light of the IASB decisions and the particular circumstances of the pandemic recognising the priorities of its stakeholders. Although the COVID-19 crisis had an impact on EFRAG's working methods in 2020, it does not seem to have influenced the implementation of their work programme. For example, EFRAG has been able to meet fully the deadlines, including the extensive preparation process of the endorsement advice of IFRS 17 and the outreach and field test of the IASB Exposure Draft General Presentation and Disclosures and the IASB Discussion Paper Business Combinations and Disclosures, Goodwill and Impairment.

Overall, the funding programme supported reliable corporate reporting by companies. This in turn facilitates the allocation of savings and the reduction of the cost of capital for companies in the EU. As regards the financial independence of the beneficiaries, their funding diversification has increased their credibility and technical capacity. The EU financing of the PIOB has helped to attract other public sponsors and to ensure a minimum level of independency from IFAC and the auditing profession. The implementation of the Maystadt reform has also broadened the constituency of EFRAG and contributed to better coordination between European stakeholders in the field of financial reporting. The objective of having national financing of the IFRS Foundation that is proportionate to a country's gross domestic product has, however, not been achieved. Further diversification of the funding of PIOB is also needed; it is one of the main objectives of the reform by the Monitoring Group.

Enhancing consumers involvement in the EU policy making in the field of financial services

Since the launch of the programme in 2017, Better Finance and Finance Watch, have been successfully working towards the achievement of the programme's objectives. They have further developed the knowledge and expertise needed to participate in EU and other relevant multilateral policy-making in the area of financial services, in line with the objectives of Regulation (EU) 2017/826. In parallel, the two organisations built up a network and implemented a number of dissemination activities that enabled them to inform consumers and other financial services end-users as well as stakeholders representing their interests, about issues at stake in the regulation of the financial sector.

The 2019 [evaluation](#) of the programme's implementation and its achievements concluded that the objective of further enhancing the involvement of consumers and financial services end-users in Union policy-making in the area of financial services was achieved. The two organisations also largely achieved the objective of informing consumers and other financial-services end-users on issues at stake in the regulation of the financial sector.

The study further confirmed that the two organisations have provided important input to the financial policymaking process, in particular through their contributions to public consultations, participation in important Commission and European Supervisory Authorities expert groups, and various publications. Based on their research activities, the beneficiaries helped fill gaps in the overall understanding of certain financial phenomena.

While the two beneficiaries have worked on most of the consumer- or user-related topics in the EU policy debate on financial services each of them prioritised some policy aspects and pursued them in line with the objective of Regulation 2017/826. The study showed that the activities implemented by both organisations in relation to the programme are largely appreciated by stakeholders, and considered to be of high quality. However, some stakeholders argued that the beneficiaries could have covered certain topics in greater depth, e.g. the review of the European Supervisory Authorities Regulations and credit assessment.

The study also concluded that advocacy at EU level on behalf of non-industry stakeholders continues to be necessary to ensure that the perspective of consumers and end-users is taken into consideration. The Union programme allows these organisations to maintain the necessary expertise and independence to effectively represent the interests of consumers and end-users in financial policy-making.

Since March 2020 the global COVID-19 pandemic has hampered the beneficiaries' physical participation (including as speakers) in a number of events as many have been cancelled or postponed. Instead, both organisations organised 13 virtual events, provided speakers to 66 online conferences and webinars and attended another 105 on-line events. Thus ensured that the voice of financial service users was heard.

Consumer programme

The implementation of the Consumer Programme progressed well, producing significant results under the programme's different specific objectives.

Product safety and market surveillance

In the field of product safety, the Commission has promoted and facilitated cooperation among enforcement authorities by financing joint sampling and testing activities on specific products, which eventually feed the Safety Gate: the rapid alert system for dangerous non-food products, as well as knowledge sharing activities on a variety of market surveillance issues.

Cooperation between national authorities through the Safety Gate has significantly increased over time, since the system's creation in 2003. The ratio of the number of reactions to the number of serious risk notifications increased from 0.90 in 2013 to 1.99 in 2021

(these very good statistics can be explained by the fact that a notification can trigger several reactions from authorities of other Member States). The number of notifications has now stabilised at a regular rate with around 2 000 per year. In 2021, Safety Gate enabled the circulation of 2142 alerts. Toys are, as in many previous years, the most notified product category, followed by motor vehicles and electrical appliances and equipment. Safety Gate has grown into an effective and important tool of the EU market surveillance that is internationally recognised and appreciated by its main target groups across the EU. Safety Gate has also played an important role in tracing dangerous products announced as protecting against COVID-19 infections (mostly face masks, disinfectants and UV sanitizers) which represented 9% of all alerts submitted in 2020 and 6% in 2021.

The **Coordinated Activities on the Safety of Products (CASP)** funded by the Programme enabled cooperation between EU/EEA Market Surveillance Authorities (MSAs) to reinforce the safety of products placed on the European markets. CASP projects consist of testing the products selected by the MSAs, analysing the outcomes, assessing the risk and taking the appropriate measures on non-compliant products, which are then subject of an alert in the Safety Gate system. The CASP 2021 focused inter alia on toys coming from non-EU web shops, electric toys, baby swings and walkers, e-cigarettes and personal protective equipment. Building on the positive experience of past years, the current CASP relied on an almost exclusively online-based working environment. Furthermore, an additional, horizontal activity was launched focusing on common risk assessment approaches for child appealing and food imitating products.

The ever-growing online offer of products makes it more and more challenging for the MSAs to monitor whether the dangerous products reported on Safety Gate and thus banned from sale are removed from all online listings, and to make sure these products will not re-appear again at a later stage. Manual checks for such products in online shops are time-consuming, costly, and not effective enough. This raised the need for developing a powerful IT tool named the **eSurveillance webcrawler** to monitor whether web shops or any other online marketplaces sell dangerous products and to do this with a coherent, unique and cost-efficient approach. The project is piloting phase and its launched is expected in Q1/2022. Currently, 340 users from 22 countries test the application. After the first two months of the piloting phase, the results are very promising and show a very high level of accuracy (more than 90% of confirmed dangerous products found by application).

In 2021, the Commission organised a second edition of the **EU Product Safety Award** to showcase the best business practices that can serve as an inspiration for other companies. At the same time, the award aims to alert consumers to the importance of product safety. In its second edition, the award focused on two aspects: protecting vulnerable consumer groups and the use of new technologies to enhance consumer safety, with separate awards for small and medium-sized companies and large companies. Eleven winning companies coming from eight different countries were announced in September 2021.

Enforcement of consumer rights and redress:

The Consumer Programme allocated EUR 1 million to support the operational capacities of the national **Consumer Protection Cooperation authorities (CPC)** responsible for the enforcement of EU consumer protection laws. In 2021, intense work took place to fight the continuous impacts of the Coronavirus pandemic on consumers and to ensure that national authorities are well equipped to carry out coordinated activities for the benefit of European consumers. The modern IT system, kicked off in 2020, enabled rapid exchanges between CPC authorities and the Commission on potentially unfair and harmful market trends affecting consumers across Europe. In addition, with the support of the IT system, the external entities such as consumer and trade associations, European Consumer Centres or other designated organisations were able to issue alerts about serious problems for the attention and action by the enforcement authorities. In response to massive flight cancellations caused by the COVID-19 pandemic and subsequent issues with reimbursements, the CPC authorities had launched a coordinated action requesting airlines to provide clear information regarding the travel vouchers and to reimburse passengers timely. As a result, 16 major airlines cooperated and committed to respect passenger rights and improve their communication.

The Programme has provided funding to the **European Consumer Centres Network (ECC Net)** which helps consumers with cross-border purchases; educate them about their rights when shopping internationally and helping them seek redress against a trader in another EU country, Iceland or Norway. Since the outbreak of COVID-19, the ECC-Net was on the forefront helping consumers confronted with cancellations of flights and package travel. From March 2020 to March 2021, the network received 170 000 requests for information, an increase of 44 % compared to the same period of the previous year. This increase was mainly caused by the travel-related issues, which represented 90% of requests. Over this period, ECCs helped consumers recover EUR 4 million. They have also contributed significantly to the dissemination of useful information for cross-border travel.

In 2021, the ECCs applied for 2-year grants amounting to EUR 14 million in total to respond to the increased needs related to some aspects of the COVID-19 crisis (e.g. problems related to online shopping and the increase of scams) and consumer education; e.g. on the risks associated to online games for children and air passenger rights. In 2021, the Network carried out a study on the best practices in cross-border out-of-court dispute resolution. The data shared by the ECC-Net is vital for the CPC enforcement actions and for policy-making.

The **Online Dispute Resolution (ODR)** platform allows to consumers who shop online know better their rights, are able to formulate complaints clearly and seek the best redress solution for their case. In 2021, the number of cases dealt with by a Union-wide online dispute resolution system surpassed 160 000. On the basis of the available data, it is estimated that about 40% complaints are resolved bilaterally between the consumer and the trader following the contact from the ODR platform. This system

is multilingual, offers free translation and registers of more than 420 qualified Alternative Dispute Resolution (ADR) bodies that offer to consumers faster and less expensive way in solving disputes with traders without going to courts.

In 2021, the Commission allocated EUR 1 million in grant support for Alternative Dispute Resolution (ADR) entities. Supported activities include awareness-raising, trainings for ADR practitioners, customised support for vulnerable consumers, creation of online tools to speed up case-handling, exchange of best practices among ADR entities, with the purpose to increase the uptake, efficiency and quality of consumer redress. In September 2021, a two-day virtual ADR assembly was organised for all ADR practitioners to reflect on the challenges, notably related to the COVID-19 pandemic and to the shift towards digitalisation, to share views on how to boost the effectiveness and efficiency of the ADR/ODR.

Information, awareness raising and education

Informed consumers, aware of their rights, are at the centre of EU consumer policy: the programme pursues this objective through targeted information and communication campaigns. As an example, in 2021 it supported, the production and promotion of four educational videos on the following topics: financial literacy, data protection, sustainability, internet safety. The objective of the project was to raise awareness of specific consumer rights among both young consumers and general public and empower them to become more informed buyers. The videos are available in all EU languages, dissemination lasted one week and generated over 1 200 000 views.

Thanks to an annual operating grant of EUR 2 million, awarded in 2021 in the framework of the Framework Partnership Agreement 20018-2021, the **European Consumer Organisation BEUC** (Bureau européen des unions de consommateurs) could carry out various activities in favour of defending the interests of European consumers. Furthermore, EUR 5 million are dedicated to **Consumer PRO**, a service contract signed with BEUC (running for four years) for the organisation and implementation of training and other capacity building activities in the EU, Iceland and Norway for the consumer organisations and other actors in the consumer policy. Main outputs: 30 national training sessions on the topics: consumer law, digital rights and data protection, finance, food, housing, mobility, product sustainability and enforcement; six European Workshops on: strategic planning, consumer advice, fundraising, grant management and consumer education; one online best practice seminar.

In 2020, BEUC included in its work programme support to consumers in the Covid-19 pandemic. They analysed the consequences of the pandemic in the EU such as increase of unfair commercial practices, especially artificially high prices for high-demand essential products and aggressive selling, misleading information and unsubstantiated claims regarding the medicinal or healing properties of certain products, problems with travel cancellations and tourism services, difficulties linked to the economic situation of households.

The Programme funded also several actions on debt advice to help over indebted consumers to remedy their economic wealth and to repay their outstanding debts, while maintaining a decent level of life. In this regard, a project formed of three tasks was finalised in 2021: a study on the funding of **debt-advice**; the organisation of events for the exchanges of best practices and events of capacity building for potential future debt-advisors coming from 13 countries where debt-advice is still inadequate. In the course of 2021, the call for tenders for action grants (total budget of EUR 1 200 000) has been launched aimed at putting in place actions (creation of networks of experts, info-chains for the systematic exchange of information in these matters, physical structures for the provision of debt-advice services, establishment of technical networks, etc.) which will facilitate the provision of debt-advice services in a stable base. 28 offers submitted are currently under evaluation.

The Consumer Programme contributes also to raise awareness of EU consumer law, including by SMEs through a dedicated training project **Consumer Law Ready**. The developed courses (including on-line), have been carefully tailored to national consumer legislation and made available in all the national languages. In light of the difficulties to hold classroom trainings, online activities in the project were reinforced. The project counted around 1200 participating SMEs and local trainers in 2021, and 51 trainings by lead trainers of each country.]

The Programme makes compliance easier and enhances enforcement by financing the content update of the Consumer Law database (part of the e-Justice Portal). The tool helps lawyers, judges, as well as businesses and consumers, to quickly check rights and obligations arising from consumer law, including past legal rulings from Member States and from the European Court of Justice, alongside and relevant national administrative practice. The Consumer Law database regroups 9 key EU directives in the field of consumer law and provides information on enforcement systems for each of these Directives. In 2020 and 2021, besides adding more than 700 new items to the database, the existing content of the database was checked for errors and duplication and an online conference for consumer law experts held on current developments.

Food and Feed

The Food and Feed programme focuses on national programmes for the eradication, control, and surveillance of animal diseases and zoonoses; national survey programmes and eradication for pests; training in the field of food and feed safety, animal health, animal welfare and plant health; IT tools in the field of food safety, animal health, animal welfare, and plant health; the European Union Reference Laboratories. The Food and Feed programme co-funded emergency measures to fight animal disease and plant pest outbreaks.

The performance indicators linked to the programme's specific objectives are relevant, measurable and realistic. Since 20 March 2019 the entire Union is declared free of swine vesicular disease, therefore the corresponding indicator is not relevant anymore because the disease has been eradicated.

In the period 2014-2020, the Court of Auditors published several reports assessing the implementation of the Food and Feed Programme. In the SR 2019/02 of the Court of Auditors on Food Safety, it is emphasised that the EU's food safety model in respect of chemicals is considered a point of reference and it is soundly based and respected. On 26 April 2016, the Court published its Special Report (SR 28/2016) on a performance audit on animal disease eradication programmes and drew positive conclusions on DG SANTE's management of the programmes. All recommendations of the Court referred to actions that were already ongoing and all of them have been already finalised.

In 2021, the Court of Auditors carried out a follow-up review of the Court's Special Report on "Animal welfare in the EU" (SR 31/2018). Based on the preliminary findings presented in the Clearing Letter (CL-13193) received on 12 January 2022, three recommendations were timely implemented by DG SANTE and two recommendations face a delay in implementation, due to the decision to launch a Fitness Check in 2020, relevant for the revision of the EU animal welfare legislation ([https://ec.europa.eu/food/system/files_en?file=2020-05/aw_fitness-check_roadmap.pdf](https://ec.europa.eu/food/system/files/en?file=2020-05/aw_fitness-check_roadmap.pdf)). The non-compliances in animal welfare on farm that Member States have provided would require additional efforts to identify common baselines and targets.

The Food and Feed programme has contributed to the improvement of animal welfare through the financial support for BTSF trainings in this area in several countries. This has led to improvements in this sector as stated by ECA that emphasized in its report SR 2018/31 that the EU actions on animal welfare have improved compliance with the EU requirements and supported higher standards with a clear positive impact on animal welfare. DG SANTE proposes to launch an external study to prepare the evaluation of the 2012-2015 animal welfare strategy and based on the results of the study will elaborate the evaluation on the strategy through a Commission staff working document. A contract for the one-year study was signed on 10 October 2019.

In 2019, the Internal Audit Service has requested DG SANTE to further improve and simplify the financial management of the veterinary and phytosanitary programmes. In the light of this process DG SANTE signed an Administrative Arrangement with the Joint Research Centre of the Commission to develop new methodologies for the calculation of unit costs in both areas. In line with the IAS recommendations this exercise is conducted in collaboration with DG BUDG and the Legal Service in view of the formal decision by the Authorising Officer by sub delegation authorising the use of such unit costs or even lump sums on the basis of these unit costs. The work has suffered slight delays because of the COVID-19 situation but the final report for the review of the methodology for unit costs in the veterinary area was submitted by JRC to SANTE in March 2021. At the same time the report for phase 1 concerning a new methodology for the calculation of unit costs for sampling activities in the phytosanitary area (where no such approach existed) was also submitted by the JRC. DG SANTE intends to apply both methodologies in the near future.

The challenges of the programme:

- The Commission agrees on the existence of backlogs especially in the area of regulated food ingredients and is working to enhance its procedures for the monitoring and enforcement of all food and health legislation which will cover the follow up to recommendations arising from Commission audits.
- See mid-term evaluation report ⁽¹¹⁾.

Following the mid-term evaluation of Regulation (EU) No 652/2014 (Common Financial Framework - CFF) and in order to follow up on a Court's recommendation, the JRC was asked to carry out a study to establish the cost-effectiveness methodology in the food chain area. The report published in 2018 provides a methodological guidance on cost-effectiveness analysis in the view of future evaluations of the EU interventions currently funded under the CFF of the food chain area. In addition, a methodology was proposed to develop a set of indicators in order to evaluate the different levels of intervention in the spending areas covered by the CFF. As a follow up, a set of indicators for monitoring and evaluation purposes are under identification in the framework of the Single Market Programme, food strand part, covering the financial period 2021-2027 (MFF).

Currently, the final ex-post evaluation of Regulation (EU) No 652/2014 is ongoing following the legal obligation under the EU financial rules (Regulation (EU, Euratom) 2018/1046) on performing retrospective evaluations of programmes and activities which entail significant spending in order to assess the performance of the programme or activity.

European Statistical Programme

The implementation of the European statistical programme progresses well, producing significant results under the programme's different objectives.

The general objective of the programme was for the European Statistical System to be the leading provider of high-quality statistics on Europe. Its performance indicator, measuring the Eurostat impact on the Internet, shows the general good performance of the programme. The number of times that Eurostat is mentioned on the Internet is on target. The percentage of negative opinions is extremely low, showing trust in and satisfaction with the data produced.

The second performance indicator, 'Statistical coverage', measures the relevance of the statistics published by Eurostat. It shows how the quantity and variety of data published by Eurostat evolves and is measured as the number of different statistics published

on the Eurostat website. The statistical coverage shows an increase of 39 million (9%) compared to last year. This demonstrates that Eurostat has enlarged its offer of statistics to meet new user needs and that demands for new statistics are being satisfied, thanks also to improvements in the production processes, as the available resources are not increasing.

The final evaluation of the European statistical programme confirmed the overall good performance of the programme (see section 3.3).

3.2. Key achievements

99%	166	53	Over 2 000 notifications	0	790 000	
of the IFRS standards endorsed in the EU in 2021	countries using International Financial Reporting Standards (IFRS) in 2021	Total number of position papers and responses to public consultations in the field of financial services in 2021	are received every year through Safety Gate - the rapid alert system for dangerous non-food products	Cases of swine vesicular disease since 20 March 2019. The entire Union is declared free of swine disease, therefore the disease has been eradicated.	SMEs in 35 countries have received financing from the Loan Guarantee Facility in the 2014-2021 period	Regular publication of the statistical information tool the European Statistical Recovery Dashboard (monthly)

3.3. Evaluations, studies and reports

Programme for the Competitiveness of Enterprises and Small and Medium-Sized Enterprises (COSME)

The [Interim evaluation of the COSME Programme](#) published in 2019 was presented in the previous Programme Statement.

[An evaluation study of cluster support actions under COSME, Horizon 2020 and FPI](#) was completed in October 2021. COSME support measures for clusters are largely considered as well structured and internally coherent. Targets for direct outputs related to events organised, partnerships initiated, and SMEs funded are widely achieved. The clusters were efficient as facilitators in supporting and disseminating funding to SMEs (cascade funding). The ECCP has been effective in improving the main functions such as partnering, matchmaking, and informing clusters and in providing advisory services towards their members. The ECCP also contributed towards intelligence gathering and information dissemination about the role of cluster organisations, their activities and achievements.

An assessment of the EU Open for Business campaign was finalised in June 2021. It concluded that this campaign successfully informed SMEs in all Member States about EU support tools for access to finance, markets and partners. It also recommends building upon the momentum of this campaign through an overarching multiannual follow up campaign to inform SMEs about a wider range of EU support tools. This will be addressed through an action in 2022 to set up a repository of support tools for SMEs on Your Europe Business, a study to guide outreach to SMEs, and a pilot campaign in 2023 followed by a multiannual campaign. The quality and efficiency of Enterprise Europe Network services was confirmed by the analysis of monitoring and reporting data received by the Executive Agency from EEN’s SME clients concerning the expected outcomes of EEN services; 92% of the SMEs surveyed expect their market situation to improve thanks to Network support and 95 % would recommend its services to others. Earlier findings from the Final [Evaluation of the impact of the Enterprise Europe Network \(2008-2014\)](#) concluded that “for both employment and turnover, EENs’ client SMEs presented annual growth rates that were 3.1 percentage points superior to the control group” that did not receive EEN services.

A European Court of Auditors Special Report on SME Internationalization Instruments is in the process of being finalised. One of the recommendations concerns the Enterprise Europe Network. The Court recommends in particular to strengthen the Network’s visibility, extend the outreach of training on access to finance and free trade agreements, develop cooperation arrangements with other programmes supporting SME growth within the Single Market where useful, and extend the geographical coverage of the third country component of the Network.

In December 2021 the European Court of Auditors presented a special report on the Commission’s support for the EU’s Tourism industry from 2014-2020. Overall it rated the Commission’s actions as partially effective, and recommended putting in place a new strategy focused on supporting investments that contribute to more sustainable tourism. In line with the Commission’s work with the stakeholders on the co-creation and co-implementation of the Transition Pathway for EU tourism, the tourism actions in SMP-SME Work programme 2022, and those under consideration for 2023 have a strong focus on boosting the sustainability of this sector

Specific Activities in the Field of Financial, Non-Financial Reporting and Auditing

The key findings of the European Commission report on the Evaluation^[1] of the IAS Regulation N°1606/2002 of 18 June 2015 and on the assessment of the achievement of the Programme in accordance with Regulation (EU) No 258/2014 in October 2019^[2] were presented in the Programme Statement for these activities included in Working Document No.1 for the draft 2021 Union budget.

The European Commission reports to the European Parliament and the Council of 23 November 2017, 19 October 2018, 29 October 2019,¹⁴ December 2020^[3] and 15 March 2022⁽⁴⁾ on the activities of the IFRS Foundation, EFRAG and PIOB in respectively 2016, 2017, 2018, 2019 and 2020.. The reports confirmed: 1) the overall pertinence and coherence of the predecessor Programme supporting specific activities in the field of financial reporting and auditing⁽⁵⁾, 2) the effectiveness of its execution, and 3) the overall and individual effectiveness of the beneficiaries' work programmes. All reports concluded the Union funding programme remains fully justified in the context of the EU's efforts to establish a Capital Markets Union and to safeguard financial stability.

^[1] COM (2015) 301 final ^[2] COM/2019/549 final ^[3] COM(2020) 807 final ⁽⁴⁾ COM(2022)104 final

⁽⁵⁾ Regulation (EU) 258/2014 of the European Parliament and of the Council establishing a Union programme to support specific activities in the field of financial reporting and auditing

Enhancing consumers involvement in the EU policy making in the field of financial services

The key findings of the [evaluation](#) of the predecessor programme supporting specific activities enhancing the involvement of consumers and other financial services end-users in Union policy-making in the area of financial services for the period of 2017-2020⁽¹⁾ were presented in the Programme Statements 2022.

⁽¹⁾ Regulation (EU) 2017/826 of the European Parliament and of the Council on establishing a Union programme to support specific activities enhancing the involvement of consumers and other financial services end-users in Union policy-making in the area of financial services for the period of 2017-2020

Consumer programme

The key findings of the latest evaluation of the Consumer programme were presented in the Programme Statements 2020.

Food and Feed

On 26 April 2016, the European Court of Auditors published its Special Report on a performance audit on animal disease eradication programmes. Overall, the Court concluded that the audited animal disease programmes adequately contained animal diseases.

Four recommendations issued by the Court are taken forward by the Commission:

- facilitate the exchange of epidemiological information between Member States;
- examine whether the existing set of indicators should be updated to provide better information on veterinary control activities and the cost-effectiveness of programmes;
- systematically include, when relevant, the wildlife aspect in the veterinary programmes;
- support the availability of vaccines for use by the Member States when epidemically justified.

In its follow-up audit in 2019, the Court concluded that DG SANTE had implemented three of the four recommendations without undue delay. The action to develop a new Animal Disease Information System (ADIS) improving the existing exchange of epidemiological information was implemented in 2021. ADIS was launched on 21 April 2021 in conjunction with the AHL using the new legal basis recently adopted by the Commission (Commission Implementing Regulation (EU) 2020/2002). This centered the notification process on priority diseases which went through the risk assessment and categorisation exercise carried in the framework of the AHL (Regulation (EU) 2016/429 of the European Parliament and of the Council). The work on interoperability with the OIE-WAHIS is occurring (one direction) with ADIS making use of reference tables from OIE-WAHIS. Already 3.412 outbreaks were entered into ADIS by mid-July 2021. ADIS will release the module on Union Reporting (in line with the AHL requirements) in Q2 2022.

A final ex-post evaluation of the implementation of the activities co-funded under Regulation (EU) No 652/2014 is underway since December 2021.

The evaluation focuses on the measures that have received sizeable EU financial support during the implementation period 2014-2020 and cover the following areas:

- Veterinary programmes and emergency measures to fight against animal diseases and zoonosis;
- Surveys programmes and plant health emergency measures to fight against the presence of pests;
- European Union Reference Laboratories (EURLs);
- Training activities in the food chain area (BTSF).

The evaluation applies the criteria of overall effectiveness, efficiency, relevance, added value, and coherence. It will also strive to provide useful feedback for the implementation of the actions in the food chain area, envisaged in the new Single Market

Programme 2021-2027. The evaluation is based on existing information (e.g. programmes’ reports, epidemiological data etc.) as well as feedback of the MS competent authorities (questionnaire to be circulated in the first months of 2022).

European Statistical Programme

In 2021, Eurostat completed the final evaluation of the 2013-2020 European Statistical Programme (ESP). Eurostat charged a contractor with writing an independent evaluation report to support the preparation of its own evaluation. The evaluation covered the whole duration of the programme, with a particular focus on the years 2018-2020, which had not been covered by the [two mid-term evaluations of the programme](#). The results of the evaluation have been published as a [Report from the Commission to the European Parliament and the Council on the final evaluation of the implementation of the European statistical programme 2013-2020](#), which is supported by a [staff working document](#) containing the detailed evaluation findings and conclusions.

The report examines the five standard evaluation criteria (effectiveness, efficiency, relevance, coherence and EU added value) from the Commission better regulation guidelines. It states that the ESP was adequately designed to satisfy the stakeholders’ needs and continued to satisfy such evolving needs and that it was effective in delivering on its objectives. It also shows that the ESP demonstrated efficient use of both financial and human resources and that it was internally and externally coherent while having EU added value. However, some improvements would be needed in terms of timeliness and completeness of the statistics and to satisfy the increasing user demands for new statistics while reducing production costs and administrative burden.

The report addresses also four specific points mentioned in Article 15 of the ESP Regulation. For those, the evaluation found that the actions taken by the European Statistical System (ESS) to reduce the production costs and to limit the overall burden have been effective and that the ESP included activities to develop new statistics and contributed to improving data availability, including on social economy activities and on the Europe 2020 indicators. The evaluation also showed that the ESP contributed to progress on rendering access to official statistics easier and more user-friendly, even if there is scope for further improvement, while prioritisation remained a challenge.

The reports contains three recommendations: 1) focus on innovation, new methods and new data sources; 2) further improve the access to European statistics via Eurostat’s website; 3) implement the new approach to prioritisation. Eurostat will include actions to handle the recommendations in its annual planning of activities, but work has already started. For instance, the ESS innovation agenda based on the multiannual action plan (MAP) 2021-27 will strategically drive innovation within the ESS. In addition, the MAP sets long-term priorities, including reviews of some priority areas like climate change and health. Furthermore, several initiatives to harness the potential of different non-traditional sources for the production of statistics and tackling technical and methodological challenges are being launched. The look and feel as well as navigability of Eurostat’s website will be improved next year.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Making the internal market more effective, facilitating the prevention and removal of obstacles, supporting the development, implementation and enforcement of the Union law

Indicator 1: Number of new complaints in the area of free movement of goods and services, as well as Union legislation on public procurement

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	475									n/a
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Standard indicator
Cut-Off Date	
Data source	Data extraction from CHAP database
Link to the objective	Functioning of the internal market: Striving to avoid unfair competition induced by unfair products, prevention and removal of discriminatory, unjustified or disproportionate obstacles, development, implementation and enforcement Union law in the internal market for goods and services, the principle of mutual recognition
Link MFF 14-20 / MFF 21-27	n/a
Other methodological comments	Indicator data extracted from the CHAP database. Number of complaints (> CHAP). Complaints

	registered in CHAP can be searched by: - Status: open cases AND/OR closed cases - Origin: DG/Directorate/unit - Time: cases registered as from a specific date or within specific dates
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: Services Trade Restrictiveness Index.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	0.194									1
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Composite indicator: indice with value from 0 to 1. Complete openness to trade and investment = zero, completely closed to foreign services providers = one.
Cut-Off Date	
Data source	OECD National legislation from public websites
Link to the objective	Free movement of services
Link MFF 14-20 / MFF 21-27	n/a
Other methodological comments	The OECD STRI is a unique, evidence-based tool that collects information on services trade restrictions across 19 major services sectors. The project has two distinct but complementary instruments: a services trade regulatory database and a services trade restrictiveness index. These instruments provide a rich source of information for trade policy makers, trade negotiators and researchers, and an instrument for impact assessment of trade liberalisation. The STRI further allows individual countries to benchmark their services market regulations against the global best practice, identify outlier restrictions and current bottlenecks. The COM calculates a simple average of OECD STRI All sector average index for the 22 EU MS covered.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Target perceived: a decrease. First assessment to be done 2022

Indicator 3: Number of visits to the Your Europe portal and to the national pages included in Your Europe; user satisfaction

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
0	35									38,4
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	No. of visits to the Your Europe Portal
Cut-Off Date	31/12/2021
Data source	Single digital gateway data repository / Matomo (Your Europe Portal)
Link to the objective	improving competitiveness of business and promote interests of citizens by making aware of rights and obligations within the single market
Link MFF 14-20 / MFF 21-27	n/a
Other methodological comments	Increase in the number of visits is clearly an indicator of success; however, it is very difficult to pin down growth to any specific reason, or to assess how different factors contribute to growth. A decrease in visits is not necessarily a mark of decrease quality (the coronavirus crisis meant a big drop in the number of visits to the portal with unchanged content / quality)
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The extremely high number of visits in 2021 was due to an extraordinary, one-time circumstance: the loosening of Covid-related travel restrictions and high interest in related information. Such numbers will not be reached in 2022. Not least because technical issues beyond our control are preventing us from calculating certain types of visits (to Accelerated Mobile Pages).

Specific Objective 2: Market Surveillance

Indicator 1: Number of cases of non-compliance in the area of goods, including online sales

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
9 606	10 234									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Unit of measurement Number of products
Cut-Off Date	
Data source	Information and Communication System for Market Surveillance (ICSMS), which is a database accessible to all MSAs of the Member States. The system is hosted and maintained by the Commission.
Link to the objective	The activities reflected by this indicator contribute to the following Programme-specific objectives: • improving the competitiveness of businesses, especially SMEs, by striving to avoid unfair competition induced by non-compliant products available on the Single Market • promoting the interests of consumers, by controlling that the products available on Single Market are compliant with EU legislation • contributing to a high level of health for humans, animals and plants throughout the food chain, by controlling that the products available on the Single Market are safe
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: Number of Joint market surveillance campaigns.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
10	Actual Progress									Final
	12									
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number of campaigns
Cut-Off Date	
Data source	DG GROW
Link to the objective	"The activities reflected by this indicator contribute to the following Programme-specific objectives: • improving the competitiveness of businesses, especially SMEs, by striving to avoid unfair competition induced by non-compliant products available on the Single Market • promoting the interests of consumers, by controlling that the products available on Single Market are compliant with EU legislation • contributing to a high level of health for humans, animals and plants throughout the food chain, by controlling that the products available on the Single Market are safe "
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Specific Objective 3: Improving the competitiveness of enterprises with special emphasis on SMEs

Indicator 1: Number of SMEs, clusters and business network organisations, and business support organisations receiving support from the programme, in particular for internationalisation, digitalisation and sustainability.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0					320000					320,000 at mid-term
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Gross numbers: an SME that benefitted from concrete support from a COSME funded action.
Cut-Off Date	
Data source	EISMEA partnership agreement database
Link to the objective	Increasing SME competitiveness
Link MFF 14-20 / MFF 21-27	Continuation of COSME indicator. see previous programme indicator
Other methodological comments	The definition of the support received by SMEs can be wide. Some intermediaries have the potential to reach a great number of SMEs. The indicator should measure concrete direct support and should not measure the potential number. Data for 2021 is provided in the table for the previous programme indicator.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: Number of companies supported having concluded business partnerships.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
				2700						18,500
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	an SME that signed a partnership agreement thanks to the EEN partnership services
Cut-Off Date	
Data source	EISMEA
Link to the objective	stimulate and provide support to SMEs to increase their competitiveness in the Single Market and beyond, , supporting them in addressing global and societal challenges and business internationalisation, and strengthening Union industrial leadership in global value chains
Link MFF 14-20 / MFF 21-27	Continuation of COSME programme indicator
Other methodological comments	EISMEA provides clear guidelines on partnership agreements, in addition, they are verified and validated by EISMEA as part of the monitoring and evaluation process. The Enterprise Europe Network’s operations in 2021 were co-funded by the COSME programme. The target figure and performance data related to EEN partnership services in 2021 are therefore included in the tables for the 2014-2021 financial period below (COSME).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 3: Number of entrepreneurs benefitting from mentoring and mobility schemes, including young, new and female entrepreneurs, as well as other specific target groups.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
		3000								22,000
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Participating entrepreneur (new and host) engaged in a business exchange
Cut-Off Date	
Data source	EYE IT tool, Executive Agency
Link to the objective	Competitiveness of SMEs
Link MFF 14-20 / MFF 21-27	previous programming period runs into 2021. The new call takes place in 2022 with data available as from 2023. Figures from 2020 -2021 are impacted by Covid-19.
Other methodological comments	assumption 3.000 entrepreneurs matched per year. Most recent reliable figures date from 2019 before Covid-19 restrictions.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Specific Objective 4: Ensuring the effective functioning of the internal market through standardisation processes

Indicator 1: Share of implementation of European standards as national standards by Member States in total amount of active European standards.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									
	90%									95%
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Measure how many of the European standards are available in all Member States. Percentage of numbers of standards
Cut-Off Date	
Data source	European standardisation organisations (CEN, CENELEC and ETSI)
Link to the objective	European standards should be transposed without delay at national level to allow for the smooth and harmonised functioning of the Single market
Link MFF 14-20 / MFF 21-27	
Other methodological comments	After the adoption of a EU standard, the members of CEN and CENELEC are invited to fill in electronically in the common IT system a Form declaring the date that the standard has been transposed at national level (implementation). CEN and CENELEC actively monitor the number of transposed standards compared to the catalogue of active standards and report the ratio in percentage per national member to the Commission. ETSI has a very limited number of European standards -its core business is technical IT specifications. Therefore ETSI has a limited number of cases to report e.g. radio equipment directive 2014/53/EU , which can be handled manually and reported to the Commission. All other ETSI publications do not need for trasposition at national level.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: Percentage of international financial reporting and auditing standards endorsed by the Union.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
98%	98%	99%	99%	99%	99%	99%	99%	99%	99%	100%
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Percentage indicating share of standards endorsed in the EU compared to the number of standards issued by the International Accounting Standards Board (IASB).
Cut-Off Date	31/12/2021
Data source	The percentage is calculated by the Commission services. The number of IFRS standards issued by the IASB is provided by the grant beneficiary.
Link to the objective	The Programme aims to support the development of high-quality international standards that underpin the implementation of Union legislation. This includes standard setting in the field of financial, non-financial reporting and auditing, thereby contributing to the transparency and well-functioning of the Union’s capital markets and to enhancing investor protection. The indicator is relevant to the policy objectives as it provides a snapshot of the endorsement level of the International Financial Reporting Standards (IFRS) by the EU.
Link MFF 14-20 / MFF 21-27	The indicator has been monitored since 2014 and continues to be monitored over the 2021-2027 programming period. The same methodology has been followed
Other methodological comments	The number of standards endorsed by the EU is compared against the absolute number of standards issued by the IASB. The indicator allows comparison with its baseline value, ensures continuous monitoring of its trend and helps assessing the progress towards a single set of high quality global accounting standards.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The percentage of standards endorsed in the EU could not reach 100% of the standards issued by the International Accounting Standards Board (IASB) because of the constant updates and developments of the standards and the time necessary for their endorsement by the EU. (The endorsement process

	takes approximately 6 months for simple (narrow scope) amendments and longer for major standards.) This explains the current difference of less than one percentage point between the 2021 value of the indicator (i.e. 99%) and its target (i.e. 100%). One major standard (IFRS 17 Insurance contracts) was endorsed by the Commission in 2021 which resulted in the indicator's value increase in comparison with 2020.
--	--

Specific Objective 5: Promoting the interests of consumers and ensuring a high level of consumer protection and product safety

Indicator 1: Consumer condition index.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	Actual Progress									Increase
	74.3									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	The Consumer Condition Index (CCI) is measured every two years at absolute value.
Cut-Off Date	31/12/2020
Data source	Consumer and retailer surveys for the Consumer Conditions Scoreboard https://ec.europa.eu/info/policies/consumers/consumer-protection-policy/key-consumer-data_en#key-data-the-new-online-consumer-scoreboard
Link to the objective	Promoting the interests of consumers and ensuring a high level of consumer protection and product safety.
Link MFF 14-20 / MFF 21-27	The Consumer Conditions Scoreboard has been monitored every 2 years since 2013 (annually in 2011 and 2012) and offers a comparison with the state of play in the previous programming periods. It continues to be monitored over the 2021-2027 however the methodology has been modified.
Other methodological comments	The CCI monitors the quality of the consumer environment at EU and national level. The 17 CCI indicators are broken down into 3 pillars; each having an equal weight (33.3): Pillar I - Knowledge and Trust, measuring the consumers and retailers knowledge of consumer rights and trust in organisations (including public authorities) and in redress mechanisms; Pillar II - Compliance and Enforcement, measuring retailers' compliance (through the reported incidence of specific unfair commercial practices) and the effectiveness of public enforcement of consumer and product safety legislation; and Pillar III - Complaints and Dispute Resolution measuring problems faced by consumers, their complaints and satisfaction with complaint handling, as well as the participation of the retailers in alternative dispute resolution mechanisms. The methodology has been slightly revised as of 2020 in order to be in line with policy priorities and with the latest market and regulatory developments.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The 2021 Consumer Condition Index confirms the stable results achieved over the previous programming period.

Indicator 2: Number of position papers and responses to public consultations in the field of financial services from beneficiaries.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
53	53	53								53
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	The indicator is measured annually at absolute value. This allows comparison with its baseline value and enables monitoring trends.
Cut-Off Date	31/12/2021
Data source	Data provided by grant beneficiaries
Link to the objective	The SMP should support the creation of the right conditions to empower all participants in the internal market: businesses, citizens including consumers, civil society and public authorities. To that end, the Programme should aim to ensure the competitiveness of businesses, notably SMEs, but also support

	the enforcement of consumer protection and safety rules and raise the awareness of businesses and individuals by providing them with the right tools, knowledge and competence to make informed decisions and strengthen their participation in Union’s policy-making.
Link MFF 14-20 / MFF 21-27	The indicator has been monitored since 2014 and continues to be monitored over the 2021-2027 programming period. The same methodology has been followed.
Other methodological comments	The data mainly draws from the activity reports provided by the beneficiaries of the Programme - organisations active in the field of strengthening the position of consumers and end-users of financial services and defending their interests in the financial sector; and advocating for an open, transparent and efficient financing of the real economy, in the interest of investors, shareholders and financial services users who are independent from the financial industry.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The 2021 output confirms the stable results achieved over the previous programming period. It is to be noted that while the beneficiaries may issue position papers on their own initiative, the number of responses they provide in a given year depends on the number of public consultations that the European Commission launched in that year.

Specific Objective 6: Contributing to a high level of health for humans, animals and plants along the food chain and in related areas

Indicator 1: Number of successfully implemented national veterinary programmes.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
90% (186/205 vet programmes successfully implemented)	Milestones									>90%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Percentage of national programmes successfully implemented (%) = Number of national programmes successfully implemented / Total number of programmes approved
Cut-Off Date	
Data source	Information provided by the MSs through the online IT Tools used for data collection (MSs co-financing applications, intermediate and final reports).
Link to the objective	A high level of health and welfare for humans, animals and plants along the food chain will ensure a high level of protection for consumers, enhance the competitiveness of the EU food and feed industry and favour the creation of jobs, improve the effectiveness, efficiency and reliability of official controls related activities along the food supply chain, carried out with a view to implement and enforce EU rules in this area and the free movement of goods
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The indicator measures the success of the activities carried out in different policy areas (e.g. prevention, detection, eradication and containment). The results confirm the presence/status of diseases in the Union territory. For veterinary programmes, MS present one programme per disease.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: Number of successfully implemented national phytosanitary programmes.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									95%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Percentage of national programmes successfully implemented (%) = Number of national programmes

	successfully implemented / Total number of programmes approved
Cut-Off Date	
Data source	Information provided by the MSs through the online IT Tools used for data collection (MSs co-financing applications, intermediate and final reports).
Link to the objective	A high level of health and welfare for humans, animals and plants along the food chain will ensure a high level of protection for consumers, enhance the competitiveness of the EU food and feed industry and favour the creation of jobs, improve the effectiveness, efficiency and reliability of official controls related activities along the food supply chain, carried out with a view to implement and enforce EU rules in this area and the free movement of goods.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The indicator measures the success of the activities carried out in different policy areas (e.g. plant health: prevention, detection, eradication and containment). The results confirm the presence/status of those pests and diseases in the Union territory, allowing to take quick actions in the interest of the EU agriculture and forestry. The number of pests and priorities for co-funding are adapted on bi-annual basis. However, the co-funding of full programmes is limited by the budget allocated for this activity. For plant health, each MS presents one consolidated programme.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Specific Objective 7: Producing and communicating high quality statistics on Europe

Indicator 1: Number of web mentions and positive/negative opinions.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Number of web mentions										
	Milestones									2028
480000	482 400	484 812	487 236	489 672	492 120	494 581	497 054	499539	502 037	499539
	Actual Progress									Final
	486 000									
Are we on track :	On track									
Share of negative opinions										
	Milestones									2028
<2%	<2%	<2%	<2%	<2%	<2%	<2%	<2%	<2%	<2%	<2%
	Actual Progress									Final
	0,01%									
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Number (of mentions) and percentage (of negative mentions)
Cut-Off Date	31/12/2029
Data source	Eurostat Digital Dissemination Unit
Link to the objective	The message given by the indicator is how much the statistics published by Eurostat are relevant for the users and used, expressed by the number of mentions, and how satisfied the users are with the quality of the statistics, which is inversely proportional to the share of negative comments.
Link MFF 14-20 / MFF 21-27	It is linked to the indicator 'Eurostat impact on Internet' of the previous European statistical programme in the MFF 2014-2020. The tool used to calculate it has changed. 'Brandwatch' was used until 2020 and a new one, called 'Talkwalker' and a standard tool in the Commission, is used since 2021.
Other methodological comments	A 'mention' is an online text referring to Eurostat. It may be an article written by a journalist of the Financial Times, a post by a blogger, or a tweet by a news agency. An online tool, called Talkwalker, analyses mentions in seven languages (English, German, French, Italian, Spanish, Portuguese and Swedish).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Positive trend as expected.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Programme for the Competitiveness of Enterprises and small and medium-sized enterprises (COSME)

General Objective 1: to strengthen the competitiveness and sustainability of the Union's enterprises, particularly SMEs

Indicator 2: Changes in unnecessary administrative and regulatory burdens on both new and existing SMEs

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
days										
2012	Milestones									2020
5.4	4			4						
	Actual Progress									Final
	15.63	14.05	12.93	12.43	12.07	12.96	11.9			
Are we on track :	On track									
EUR										
2012	Milestones									2020
372	313			300						
	Actual Progress									Final
	4.84%	4.43%	4.1%	4.05%	3.55%	3.42%	3.09%			
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Days and EUR respectively (baseline). This has now been revised. As from 2019 data is calculated using World Bank Doing Business- the data for cost to set up a new SME is expressed in % of income per capita.
Cut-Off Date	31/12/2020
Data source	World Bank Doing Business
Narrative	
Methodology	New methodology from 2019 (looks not only at the legal “perfect” case but talks to experts about how long it takes in practice). Absolute numbers are therefore larger and cannot be directly compared to the previous figures given.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In some countries there is a possibility to have a simplified or on-line registration to set up an SME under certain conditions. Taking electronic/simplified registration into account, the results are 2.7 days, EUR 271. Original baseline of 5.4 days had reduced to 3.1 in 2017. Original baseline of EUR 372 for cost had reduced to EUR 300 in 2018. However, as from 2019, data comes from “World Bank Doing Business” with a different methodology. Data for Cost to set up a new SME is expressed in % of income per capita. Up to 2018 only the EU-28 value is available. Table shows EU-28 figures. For 2019 and 2020, data for EU-27 days are 13.28 and 12.17 respectively. For cost EU-27 is 3.54% for 2019 and 3.20% for 2020.
Full metadata available at this address	https://www.doingbusiness.org/en/doingbusiness
Justification of the trend	See methodological comments

General Objective 2: to encourage entrepreneurial culture and to promote the creation and growth of SMEs

Indicator 1: Changes in SME growth: Total EU turnover (Gross Value Added)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010	Milestones									2020
5,8%	4%	4%	4%	4%	4%	4%				
	Actual Progress									Final
	4%	5%	2%	4%	4%	3,84% ^b (updated)	-7,6%	5,8%		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	percentage of value added
Cut-Off Date	31/07/2021
Data source	Up to 2018, these are Eurostat figures. For 2019 and 2020, these are estimates from the SME Performance Review produced by DIW Econ, based on 2008-2018 figures from the Eurostat Structural Business Statistics Database as well as provisional data for 2019-2020 from the National Accounts database and the Short-Term Business Statistics Database (EUROSTAT).

Narrative	
Methodology	Data is based on forecasts, figures updated according to current data.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data up to 2018/2019 concerns EU-28, data for 2020 (and updated figure for 2019) concerns EU-27. In 2018, there was a break in methodology for Eurostat on the number of SMEs (switch from legal unit to statistical unit) so the timeline is not directly comparable on absolute numbers.
Full metadata available at this address	
Justification of the trend	Many industries, especially in the SME-intensive services sector, experienced large declines in sales as result of the various lockdowns linked to the COVID 19 pandemic.

Indicator 2: Changes in SME growth: Employees

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Total number of employees in SMEs										
2010	Milestones									2020
87.5										96
	Actual Progress									Final
	90	91	94	96	98	99	83.4	83,8%		
Are we on track :	Moderate progress									
The annual growth of employees in SMEs										
2010	Milestones									2020
-0.40%	1%	1%	1%	1%	1%	1%	0%			
	Actual Progress									Final
	2,10%	0,54%	2,30%	1,97%	1,50%	1,39%	-1,7%	0,6%		
Are we on track :	Moderate progress									

Indicator type	Impact
Unit of measurement	see other methodological comments.
Cut-Off Date	31/08/2021
Data source	Figures from the SME performance review http://ec.europa.eu/growth/smes/business-friendly-environment/performance-review/index_en.htm
Narrative	The annual growth of employees in SMEs: 2011: 0.2%
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data from the SME Performance Review 2021 based on figures for up to 2018. Data up to 2018/2019 concerns EU-28, data for 2020 concerns EU-27. NB: data has been revised back in time by Eurostat, and in 2018 Eurostat introduced a methodological break to collect enterprises as statistical units instead of legal units; this has revised the numbers of SMEs downwards.
Full metadata available at this address	
Justification of the trend	Downward trend in line with the difficulties associated with the COVID-19 pandemic.

Specific Objective 1: to improve framework conditions for the competitiveness and sustainability of Union enterprises, particularly SMEs, including in the tourism sector

Indicator 6: Tourism - Participation in transnational cooperation projects

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Projects awarded										
2011	Milestones									2020
										Increase
	Actual Progress									Final
				6	7	6		10		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Countries covered per project and number of projects.
Cut-Off Date	31/12/2021
Data source	EISMEA
Narrative	Target: Increase in the number of Member States participating in transnational cooperation projects and in the number of the transnational projects funded by the programme

Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Complementary information for the above indicator: Baseline target in 2013 of 33 projects support under calls for proposals for transnational partnerships. In 2014, 42 transnational cooperation projects supported involving SMEs, 52 in 2015, 58 in 2017 and 65 in 2018. The call in 2019 will support 425 SMEs in 25 countries. The 2020 call on digitalisation is expected to reach 60 SMEs per project with an estimated 8-10 projects to be awarded. The call of 2021 should reach minimum 80 SMEs per project with estimated 10-13 projects to be awarded. T
Full metadata available at this address	
Justification of the trend	

Indicator 8: New Business Concepts - Number of new products/services in the market

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Indicator type	Result
Unit of measurement	number of projects
Cut-Off Date	31/12/2020
Data source	EISMEA
Narrative	
Methodology	Cumulative number of new products/services (initial measurement)
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Worth Partnership Project is an acceleration programme which provide mentoring, coaching and visibility to business partnerships between designers, manufacturers/craftsmen and tech providers to develop new, innovative business ideas. First edition of the WORTH Partnership Project (2017-2021) supported in total 152 transnational partnerships. The second edition - Worth Partnership Project II (2021-2025) financed under 2020 COSME work programme has ambition to support at least 200 new partnerships. Currently the first call for proposals is open and it will support tentatively around 60-70 partnerships. project call is currently under evaluation.
Full metadata available at this address	
Justification of the trend	

Specific Objective 3: to improve access to finance for SMEs in the form of equity and debt

Indicator 1: Number of firms benefiting from debt financing

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Expressed in volume: Loan Guarantee Facility										
2013	Milestones									2020

Are we on track :	On track									

Indicator type	Result
Unit of measurement	EUR billion / number of SMEs

Cut-Off Date	30/09/2021
Data source	The European Investment Fund
Narrative	The Loan Guarantee Facility – as supported by the European Fund for Strategic Investments – continues its high performance for the benefit of SMEs in need of finance.
Methodology	The European Investment Fund collects the data from the financial intermediaries and transmits it in aggregated format to the Commission.
Link MFF 14-20 / MFF 21-27	Invest EU
Other methodological comments	The data for the baseline is based on the latest EIF quarterly report as of 31 December 2013 for the High Growth and Innovative SME Facility (GIF) under the 2007-2013 Competitiveness and Innovation Programme (CIP). No results were available for 2014 because the COSME Delegation Agreement was signed on 22/07/2014, the call for expression of interest was published on 04/08/2014. The result data for 2015-2019 is based on the latest European Investment Fund (EIF) quarterly operational report for the COSME Loan Guarantee Facility of 31 December of the respective reporting year, whereas the data for 2021 have a cut-off date of September 2021.
Full metadata available at this address	n/a
Justification of the trend	Thanks to the reinforcement of the COSME Loan Guarantee Facility resources from the SME window of the European Fund for Strategic Investments (doubling the available resources), it was possible to achieve the targets set for the overall programming period (2014-2020) already in the course of 2018. All details are available in the Working Document Part X dedicated on the financial instruments.

Indicator 2: Number of venture capital investments from the COSME programme and overall volume invested

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target	
COSME Equity Facility for Growth											
2013	Milestones									2020

Are we on track :	On track										

Indicator type	Result
Unit of measurement	EUR Billion/number of SMEs finance
Cut-Off Date	30/09/2021
Data source	The European Investment Fund
Narrative	The Equity Facility for Growth continues its performance continued for the benefit of SMEs in need of alternative finance despite all factors challenging its implementation.
Methodology	The European Investment Fund collects the data from the financial intermediaries and transmits it in aggregated format to the Commission.
Link MFF 14-20 / MFF 21-27	InvestEU
Other methodological comments	The data for the baseline is based on the latest EIF quarterly report as of 31 December 2013 for the High Growth and Innovative SME Facility (GIF) under the 2007-2013 Competitiveness and Innovation Programme (CIP). No results were available for 2014 and 2015, because the COSME Delegation Agreement was signed on 22/07/2014, the call for expression of interest was published on 04/08/2014 and the first fund agreements were signed end of 2015. The result data for 2016-2020 is based on the latest European Investment Fund (EIF) quarterly operational report for the Equity Facility for Growth of 31 December of the respective reporting year, whereas the data for 2021 are with cut-off date September 2021.
Full metadata available at this address	N/A
Justification of the trend	Complex due diligence and fund-raising processes, accompanied by prioritisation in jurisdictions with limited demand and confirms the initial trend for this indicator of the Equity Facility for Growth. All details are available in Working Document Part X dedicated to the financial instruments.

Specific Objective 4: To improve access to markets, particularly inside the Union but also at global level

Indicator 2: Enterprise Europe Network - Number of partnership agreements signed

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
2 295	Actual Progress									Final
		2 924	2 924	2 397	2 611	3 279	2 679	2 701		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of SMEs per year
Cut-Off Date	
Data source	EEN final reports submitted by the 92 consortia that have signed a framework partnership agreement
Narrative	2012: 2 475 Target: 2 500 per year
Methodology	Encoding partnership agreements in EASME database
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Final performance figures for 2021 not yet available. They are usually available by the end of February when EISMEA finalizes the EEN Annual Activity Report, with the final statistical compilations from the EEN platform. Includes BCC countries (the international partners of the network)
Full metadata available at this address	
Justification of the trend	Results beyond target even with negative impact of COVID in 2020

Previous Program 2: European statistical programme (ESP)

General Objective 1: The European Statistical System to be the leading provider of high-quality statistics on Europe.

Indicator 1: Eurostat impact on Internet

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of mentions										
2017	Milestones									2020
264 932	Actual Progress									Final
				264 932	390 207	388 662	365 340	482400		482400
Are we on track :	On track									
Percentage of negative opinions										
2017	Milestones									2020
0%	Actual Progress									Final
				0%	0%	0%	0%	0%		0%
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of mentions and percentage of negative opinions
Cut-Off Date	31/12/2021
Data source	Monthly report on Eurostat's impact on the web.
Narrative	The indicator measures the impact on the internet of the statistics published by Eurostat, as the number of mentions and the percentage of those mentions which are negative. An increase shows that there is growing interest in the statistics published by Eurostat. A very low share of negative opinion shows that the statistics are appreciated by the users.
Methodology	A 'mention' is an online text referring to Eurostat. It may be an article written by a journalist of the Financial Times, a post by a blogger, or a tweet by a news agency. An online tool analyses mentions in seven languages (English, German, French, Italian, Spanish, Portuguese and Swedish). Number of mentions and share of negative ones are calculated each month. The indicator uses the total over the year. Until 2020, a tool called 'Brandwatch' was used for this indicator. In 2021, it was replaced by the

	standard tool in the Commission, 'Talkwalker', allowing Eurostat to continue monitoring the indicator.
Link MFF 14-20 / MFF 21-27	Yes, it is defined as a core performance indicator for the MFF 21/27.
Other methodological comments	New indicator as identified in ESTAT's Strategic Plan 2018-2020.
Full metadata available at this address	They are available in the section on the new MFF.
Justification of the trend	An increased number of web sites are blocking the access to paid content by automated tools, which causes a decrease in the measured total number of mentions. The system used may be changed in future because of the evolution of technology during the life cycle of the new programme and for possible privacy concerns. For those reasons, Eurostat is assessing if alternative tools available at Commission level give useful alternative results.update: With the use of the new standard tool of the Commission, 'Talkwalker', the technical difficulties have been resolved and Eurostat continues to monitor this indicator.

Specific Objective 1: To provide statistical information, in a timely manner, to support the development, monitoring and evaluation of the policies of the Union properly reflecting priorities, while keeping a balance between economic, social and environmental fields and serving the needs of the wide range of users of European statistics, including other decision-makers, researchers, businesses and European citizens in general, in a cost-effective manner without unnecessary duplication of effort.

Indicator 1: Statistical coverage (measured as number of indicators, sub-indicators and all their breakdowns)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2017	Milestones									2020
328489272										increase
	Actual Progress									Final
				328489272	366260359	423110043	446063473	485 883 216		446063473
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of statistical indicators
Cut-Off Date	31/12/2021
Data source	Report on the content of Eurostat's public databases.
Narrative	It measures the number of indicators, sub-indicators and all their breakdowns included in Eurostat's reference database (Eurobase). Indicators differing only by the time dimension are not counted. An increase shows that Eurostat is enlarging its offer by producing more statistics to meet increasing users' demands.
Methodology	A programme goes through the entire database and counts the number of different statistical indicators.
Link MFF 14-20 / MFF 21-27	No.
Other methodological comments	New indicator as identified in ESTAT's Strategic Plan 2018-2020.
Full metadata available at this address	
Justification of the trend	Positive trend, on track.

Previous Program 3: Specific activities in the field of financial reporting and auditing

Specific Objective 1: To improve the conditions for the efficient functioning of the internal market by supporting the transparent and independent development of international financial reporting and auditing standards

Indicator 1: Number of countries using International Financial Reporting Standards (IFRS)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
128	130	130	130	140	150	155	159	166	167	166
	Actual Progress									Final
	130	130	133	140	159	159	166	166		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Absolute number of countries using International Financial Reporting Standards (IFRS)

Cut-Off Date	31/12/2021
Data source	Data provided by the grant beneficiary
Narrative	The indicator is relevant to the policy objectives as it provides a snapshot of the number of countries in the world applying the IFRS. It allows comparison with its baseline value, ensures continuous monitoring of its trend and helps assessing the progress towards the application of a single set of high quality global accounting standards.
Methodology	To assess the progress towards the global adoption of IFRS standards the beneficiary monitors the application of the IFRS standards in each jurisdiction. The absolute number of countries using International Financial and Reporting Standards is updated on ongoing bases.
Link MFF 14-20 / MFF 21-27	The indicator has been monitored since 2014 and we continue monitoring it over the 2021-2027 programming period
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Positive trend. Around 85% of the countries in the world already apply the IFRS standards

Indicator 2: Percentage of standards endorsed in the EU compared to the number of standards issued by the IASB

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0.89	0.96	0.96	0.96	0.96	0.96	0.96	0.96	0.99	0.99	1
	Actual Progress									Final
0.96	0.95	0.96	0.97	0.96	0.96	0.98	0.99			
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Ratio between the standards endorsed in the EU and the total number of standards issued by the IASB
Cut-Off Date	31/12/2021
Data source	Data provided by grant beneficiaries
Narrative	The indicator is relevant to the policy objectives as it provides a snapshot of the endorsement level of the IFRS by the EU per year, allows comparison with its baseline value, ensures continuous monitoring of its trend and helps assessing the progress towards a single set of high quality global accounting standards.
Methodology	The absolute number of standards issued by the IASB is compared against the number of standards endorsed by the EU. The difference is less than 1 percent. This is due to the time lag between issuance of an IFRS by the IASB and its adoption by the Commission. (The endorsement process can be launched once the IASB has issued the standard. Endorsement takes approximately 6 months for simple (narrow scope) amendments and longer for major standards.)
Link MFF 14-20 / MFF 21-27	The indicator has been monitored since 2014 and continues to be monitored over the 2021-2027 programming period. No change of methodology in comparison with the previous programming period 2014-2020.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The percentage of standards endorsed in the EU compared to the number of standards issued by the IASB could not reach 100% target because of the constant updates and developments of the standards and the time necessary for their endorsement by the EU. One major standard (IFRS 17 Insurance contracts) was endorsed by the Commission in 2021 which resulted in the indicators value increase in comparison with 2020.

Previous Program 4: Food and Feed

General Objective 1: Contributing to a high level of health for humans, animals and plants along the food chain and in related areas, by preventing and eradicating diseases and pests and by ensuring a high level of protection for consumers and the environment, while enhancing the competitiveness of the Union food and feed industry and favouring the creation of jobs

Indicator 1: Incidence of main food-borne disease in the EU (BSE and Salmonella)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Unit of measurement	Confirmed cases of BSE and Salmonella
Cut-Off Date	
Data source	EFSA-ECDC report for zoonoses: https://www.efsa.europa.eu/en/efsajournal/pub/6971
Narrative	Total BSE Cases (classical and atypical): 2015: 3, 2016: 5, 2017: 6, 2018: 4, 2019: 7; 2020:4
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The EFSA final report for BSE for 2021 is not yet available. See Specific Objective 1 – Indicator 1 for explanation on the trend. 2021 EFSA-ECDC report for zoonoses is not yet available (the latest available report is the 2020 one, published on 13 December 2021: https://www.efsa.europa.eu/en/efsajournal/pub/6971)
Full metadata available at this address	
Justification of the trend	We are on track for BSE and for Salmonella.

Specific Objective 1: to contribute to a high level of safety of food and food production systems and of other products which may affect the safety of food, while improving the sustainability of food production

Indicator 1: Reduction in the number of cases of diseases in humans in the Union which are linked to food safety or zoonoses

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
90 883	67 000									60 000
	Actual Progress									Final
	92 012	94 477	94 425	91 590	91 857	87 923	52 702			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Confirmed cases of human salmonellosis
Cut-Off Date	
Data source	2021 EFSA-ECDC report for zoonoses is not yet available (the latest available report is the 2020 one, published on 13 December 2021: https://www.efsa.europa.eu/en/efsajournal/pub/6971)
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The baseline is data from the year 2012, source 2013 report. The reduction of the number of human cases is not as good as expected mainly because of the multi country outbreak caused by Polish eggs. In order to improve the current set of legal measures related to Salmonella in certain poultry populations, the Commission also requested EFSA to provide a scientific opinion on Salmonella control in poultry flocks and its public health impact. The outcome of this EFSA work is currently considered by the relevant Commission services
Full metadata available at this address	
Justification of the trend	For Salmonella, improvements were stagnating from 2010 to 2019. It should be noted that the reduction of salmonellosis case in human is not only linked to satisfactory implementation of control programmes in poultry but other sources of infection should be taken into account (e.g. production chain of poultry not covered by the programme, pork, cattle, ...). A substantial drop in reported human cases was observed in 2020, which was influenced by the Covid-19 epidemic and the fact that United Kingdom is no longer reporting.

Specific Objective 2: To contribute to achieving a higher animal health status for the Union and to support the improvement of the welfare of animals

Indicator 2: Overall reduction of disease parameters such as incidence, prevalence and number of outbreaks

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
African swine fever: outbreaks in domestic pigs										
2013	Milestones									2020
109		10			0		0			0
	Actual Progress									Final
	80	58	71	141	1 360	1 852	1 206	1 826		
Are we on track :	Deserves attention**									
Rabies outbreaks in wild animals										
2013	Milestones									2020
679		80			0					0
	Actual Progress									Final
	298	129	31	6	8	5	12	116		
Are we on track :	Deserves attention**									
Avian influenza outbreak in poultry (domestic animals) of HPAI										
2013	Milestones									2020
		0			0					0
	Actual Progress									Final
	10	70	391	820	34	8	437	1 719		
Are we on track :	Deserves attention**									

Indicator type	Result
Unit of measurement	Numbers of outbreaks / MS affected
Cut-Off Date	
Data source	ADNS reports – MS reports
Narrative	Rabies is close to eradication at EU level (only 2 EU MS affected in 2021), however risk remains due to neighbouring third countries as shown by recurrence in Poland in 2021. CSF is practically eradicated in the EU. Surveillance needs to remain in place due to the risk posed by neighbouring 3rd countries. Official freedom status pending for a few MS. Target for ASF is to reduce outbreaks in domestic pigs and prevent spread to non- affected MS (no specific target can be set at this stage for wild boar). Similarly, a target for HPAI in wildlife cannot be set.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Given the positive results in 2014 and 2015, the milestone for 2016 has been reduced from 200 to 80 outbreaks, and the target for 2020 from 100 to 0 outbreaks.
Full metadata available at this address	
Justification of the trend	Even if MS implement the programmes effectively it is not always possible to control/eradicate animal diseases when these involve wildlife (ASF, HPAI, Rabies) or insect vectors (BT). In the case of ASF in particular, the absence of an effective vaccine, combined with wild boar involvement and possible human induced spread, makes disease control in wildlife even more challenging. Similar challenges are present for ASF control in domestic pigs, in countries with large numbers of backyard pigs (e.g. RO). Nevertheless, there are already 2 MS that have managed to eradicate the disease from wild boar population (CZ, BE) and without the programmes implemented the impact of the disease would be even more dramatic, even if this not reflected in the numbers of outbreaks reported.

Specific Objective 3: To contribute to the timely detection of pests and their eradication where those pests have entered the Union

Indicator 1: Coverage of the Union territory by surveys for pests, in particular for pests not known to occur in the Union territory and pests considered to be most dangerous for the Union territory

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Percentage of EU territory covered by surveys for pests, in particular known to occur in the Union territory										
2012	Milestones									2020
0.05	0.6	0.7	0.8	0.9	1	0.9	1			1
	Actual Progress									Final

	0.785	0.857	0.857	0.857	0.857	0.857	0.9			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	30/04/2020
Data source	For all the data above, source of information is the annual report submitted by MS to Commission/ADNS notification DG SANTE by 30 April of each year.
Narrative	
Methodology	The number of Member States submitting survey programmes for co-funding has increased through the years. However, not all Member States submit applications.
Link MFF 14-20 / MFF 21-27	Co-funding of survey programmes combined with eradication/containment measures for pests continue through phytosanitary programmes under the new MFF.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

Indicator 2: Time and success rate for the eradication of those pests

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Time to eradicate pests not know to occur in the Union, number of days between finding and notification: days										
2015	Milestones									2020
42		20	20	20	20		8			8
	Actual Progress									Final
		22	14	22	14	13	18	12		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of days between finding and notification
Cut-Off Date	
Data source	Annual report submitted by MS to Commission
Narrative	The quick official confirmation and notification of the findings facilitates the undertaking of swift eradication measures.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Deadlines for official notification have been integrated in the EU legislation.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	58.72							58.72	1%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

The SME pillar includes a number of actions with broader SME competitiveness goals, that also include some support services/measures for climate (for example, Enterprise Europe Network, and measures for tourism and Social Economy). In particular, the Enterprise Europe Network will provide Sustainability Advisor services and other partnership and advisory services to support SMEs for enhancing their climate-related performance. As there is not a distinct budget for these services it is not possible to provide precise budgetary figures.

6.1.3. Key achievements

COSME

The COSME programme contributed around EUR 130 million to climate mainstreaming during the period 2014-20.

Of this, EUR 25,7 million was via the Equity Facility for Growth. In addition, climate related activities have contributed up to EUR 15 million annually principally via the Enterprise Europe Network, but also through some smaller sector specific actions such as those linked to sustainable construction. The COSME Equity Facility for Growth has invested EUR 6.7 million as of 30 September 2021 in a [Venture Capital fund focusing its activities on clean technologies](#). Details are available in the COSME Equity Facility for Growth update of 30 September 2021.

Overall, the COSME Equity Facility for Growth has facilitated EUR 31 million of investments in SMEs operating in the ‘Energy and Environment’ sector. Details available at

Other examples that demonstrate how COSME financial instruments contribute to green activities are:

- SCALE-UP OF INTELLIGENT ENERGY EFFICIENCY SERVICES SEE [“How EFSI benefits SMEs in Europe - Swedbank case study: Enerqus \(Lithuania\)”](#)
- ENERGY-EFFICIENCY: SEE [“HOW EFSI BENEFITS SMEs IN EUROPE - RAIFFEISEN CASE STUDY: BUL-GREECE \(BULGARIA\), WHOLESALE”](#)
- ENERGY EFFICIENCY SUSTAINABILITY: SEE [“SONNEN: TAKING ENERGY INTO YOUR OWN HANDS”](#)

The EEN advisory and partnership services also help businesses to reduce emissions and meet other climate goals. There are several EEN sector groups active in this field, supporting SMEs with partnership and advisory services, including the Renewable Energy Sector Group and the Sustainability Thematic Group.

In the area of tourism, specific calls for proposals supported tourism SMEs’ capacities to improve their environmental and climate performance. The European Capitals of Smart Tourism and European Destination of Excellence initiatives promote best practices in sustainable management of touristic destinations and create opportunities for tourism SMEs in the awarded destinations.

The social economy has been delivering innovative green solutions for decades. Social economy entities are present in the circular economy, for example through providing re-use and up- and recycling services and generating new products and services. Regarding decarbonisation, 1.900 energy cooperatives in the EU generate renewable energy at local level, further enabled by the EU regulatory framework (e.g. clean energy package) recognising the rights of citizens and communities to engage directly in the energy sector (renewable energy, electricity market). Social economy actors are offering clean and shared mobility services, sustainable housing solutions and low carbon industrial applications.

A COSME Action focused on exchange of best practices between regions for sustainable growth and the involvement of social economy actors. One strand of the call tackled climate change (Social Economy missions - 2020). A new “Social Economy mission” scheme under the SMP is currently being evaluated and consortia will begin the implementation early in 2023.

The high level Conference on Social Economy that took place in Mannheim in May 2021 also highlighted the role of social economy actors in tackling climate change. More than 3000 persons gathered on line and a Stakeholder Declaration was released that was key for preparing the European Social Economy Action Plan.

The Intelligent Cities Challenge initiative ([ICC](#)) guides cities to:

- a) Decarbonise buildings and mobility, support local renewable energy systems, a circular economy, sustainable waste management and the greening of industry and SMEs.
- b) Prepare Pilot Local Green Deals (LGDs) and implement local actions to support environmental and social sustainability, create new jobs and accelerate a new, green and fairer recovery. ICC developed together with pioneering cities a “Blueprint for Local Green Deals” based on inspiring examples. Over 30 ICC Mayors and city leaders showed their political support and made concrete commitments for Local Green Deals during the ICC Mayors summit on June 2021.
- c) The Single Market programme is also further promoting Local Green Deals supporting SMEs and social economy, through a targeted call for proposals (10 partnerships - 2m Euros) that is currently under evaluation.

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution		0.00	0.00					0.00
Share compared to total envelope		0.00 %	0.00 %					0.00 %

(*)These amounts include NextGenerationEU top-ups if any

6.4. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates			2022-2027 programming				Total
2021	2022	2023	2024	2025	2026	2027	

Score 0*: 582.5

(*)Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

Gender equality is not explicitly laid down in the legal basis of the programme, or directly envisaged in specific pillar objectives and their respective budget lines. However, given potential future impact on gender equality for some of the activities, yet unknown at this stage, certain parts of the programme inherently will already pay particular attention to this cross-cutting priority, as described below.

The SME pillar will support the needs of new entrepreneurs, in particular female entrepreneurs. While no specific objective/target is available in the COSME legal basis, COSME actions take the gender dimension into account. For example, this dimension was tracked for the last time in 2020. It demonstrates that as of 2019 (i) almost every 4 out of 10 SMEs – that have received a debt financial support thanks to the COSME Loan Guarantee Facility – have either female Chief Executive Officer, General Manager or Company Director and (ii) almost 1 out of 10 SMEs – that received an equity investment thanks to the COSME Equity Facility for Growth – has at least one female in an executive position.

Concerning Erasmus for Young Entrepreneurs, the programme is open equally to men and women. The statistic for applicants shows that since the beginning of the programme:

–New entrepreneurs – 51,37% of applied NEs are women (48,63 % men)

–Host Entrepreneurs – 28,33% of applied HEs are women (71,67 % men).

Out of 175 active Intermediary organisations (IO), 4 IOs have specific focus on support of women Entrepreneurs.

COSME also supports women entrepreneurs with specific entrepreneurship activities, for example via the WeGate project:- the platform WEgate creates a network where women entrepreneurs and would-be entrepreneurs can do business together and also benefit from services that can help their businesses grow, such as access to finance, mentoring and coaching, including on financial literacy. At the moment, WEgate has approximately than 3 000 members. COSME has also facilitated peer-to-peer learning with several workshops on entrepreneurship education and women entrepreneurship. These workshops have connected around 300 public and private stakeholders that have actively exchanged experiences and produced policy recommendations on entrepreneurship education and women entrepreneurship.

Eurostat is giving special attention to the gender perspective in its programme by systematic collection, provision and dissemination of gender and discrimination statistics as well as analysis of gender related aspects. Gender and discrimination statistics do not necessarily entail the collection of additional statistics from existing surveys but rather make full use of existing data to illustrate possible gaps e.g. between men and women. The main purpose of the activity is to extend the visibility of equality statistics available in the European Statistical System. In 2021, Eurostat disseminated gender pay gap data for 2019 and many detailed gender disaggregations and discrimination statistics.

All the consumer evidence collected through consumer condition surveys, retailer surveys, consumer market and behavioural studies is gender disaggregated for any significant gender-based differences on a regular basis. Therefore, all the results of these studies take into consideration the gender distribution and all the data is analysed from the gender perspective.

6.5. Contribution to the sustainable development goals

6.5.1. Goals

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Under the **Food** objective, the proposed activities related to Food Contact Materials will contribute to a higher level of safety, especially regarding the recycled materials used in their production. They will also help to a better enforcement of the applicable safety rules.

The proposed activities related to sustainable consumption and production (including food waste prevention) will contribute to improved resource efficiency, thereby helping to close the gap between supply and growing demand for food. In particular, the recovery and redistribution of surplus food from the supply chain to help feed those in need contributes to addressing hunger in our communities.

SDG 3 Ensure healthy lives and promote well-being for all at all ages

Under the **Food** objective, the proposed activities related to sustainable consumption also aim to facilitate the shift of dietary patterns towards healthy diets, thereby helping to reduce the negative impact of low quality diets on obesity and non-communicable diseases (NCDs).

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

The **Consumer** objective contributed via its dedicated energy efficiency awareness raising actions.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

Under the **COSME** objective, the programme is continuing to work to encourage entrepreneurship, provide mentoring and best practice review, offering support to the Single Market Strategy and the Single Digital Gateway, and through social economy projects work to strengthen the links between traditional and social economy enterprises.

Specifically, social economy plays a crucial role in the realization of the 2030 Agenda and the SDGs by promoting inclusive and sustainable development through concrete social, institutional and technological innovations and practices. Being locally rooted and tapping into informal and formal networks, the social economy contributes to the effectiveness of regional and local development in different ways. The programme's Social Economy Missions schemes will increase the scale and scope of regional efforts to boost the social economy, thereby reinforcing development dynamics as well. It will also boost knowledge sharing between European regions to create cross border partnerships to promote inclusive economic growth. Such partnerships will help regional policy makers to develop local social economy action Plans contributing to enhance territorial attractiveness and resilience while supporting people's well-being, work opportunities and mobility.

Furthermore, the Intelligent Cities Challenge prepares the local workforces for the green and digital transitions and the jobs of the future through a dedicated thematic priority on [reskilling and upskilling](#). Based on innovative and effective examples of pioneering cities, the [cities guide for reskilling](#) provides a strategic and pro-active approach to manage reskilling of the local workforce towards the skills needed for the green and digital transformation.

Furthermore, the programme contributes to improving the conditions for the efficient functioning of the Single Market by supporting the transparent and independent development of international financial reporting (including in relation to the interaction between and interdependencies of financial reporting and broader corporate reporting requirements) and auditing standards. This in turn facilitates the optimal allocation of funds by investors and the reduction of the cost of capital for EU companies. EFRAG endorsement advice supports the Commission assessment of whether IFRSs are conducive of the European public good. EFRAG's work programme has also been increasingly shaped by the Commission's Action Plan on *Financing Sustainable Growth* (2018). Recognising the importance of ensuring that accounting standards do not discourage sustainable and long-term investments, the Commission requested, as part of the 2018 Action Plan, that EFRAG explored potential alternative accounting treatments to fair value measurement for long-term investment portfolios of equity and equity-type instruments. On 30 January 2020 EFRAG issued its advice to the Commission. EFRAG recommended the Commission to follow-up with the IASB to consider the re-introduction of re-cycling through the Profit or loss statement of profits or losses realised upon the disposal of equity instruments measured at fair value through other comprehensive income (FVOCI) ⁽¹⁵⁾. On 13 March 2020, EVP Dombrovkis requested the IASB to consider the issue ⁽¹⁶⁾. This is an example that the funding programme is in line with SDG 8, as it directly helps to promote sustained inclusive and sustainable economic growth, full and productive employment and decent work for all. Similarly, in April 2021 the IAASB published [guidance](#) aimed at helping auditors and other assurance professionals apply [International Standard on Assurance Engagements \(ISAE\) 3000 \(Revised\)](#) to sustainability and other non-financial (or extended external reporting) assurance engagements. In 2022, the IAASB will continue to develop this area further, which corresponds to the need of the Commission to adopt assurance standards for corporate sustainability reporting under the proposed CSRD.

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

Examples of projects under the **COSME** objective include those improving digital skills, facilitating public procurement of innovation and the co-financing by innovation consortia. The main impacts of the WORTH Partnership Project on SMEs are business development, fostering innovation, and increased competitiveness and growth. Under the first edition of the WORTH Partnership Project (2017-2021), 152 transnational partnerships, involving 349 partners from 34 EU-COSME associated states were selected and supported with an incubation programme. The incubation support consisted of over 2.300 hours of tailored mentoring and advisory service as well as over 40 hours of training consisting of 35 online modules/seminars and 8 on-site workshops. Through this the partners (designers/creators, SMEs/manufacturers and tech providers) acquired or further developed business, technical and communication skills and venture-building capacities.

The supported projects contributed with key design solutions to global challenges, accelerating the green and digital twin transitions and associated transformation of the European economy, industry, and society such as a) circular economy and resources efficiency; b) rethinking social innovation and social inclusion; c) the reinvention of craftsmanship and European heritage preservation; d) advanced digitised manufacturing, value chains and business models; e) smart and high-performance materials; f) high-value added solutions for attractive growth markets. The partnerships achieved significant progress towards market uptake, where 44% of them achieved a prototype, 34% developed a minimum viable product while 23% developed a final product. A total of 424 prototypes, minimum viable products, final products and limited series were developed. According to 67% of selected partners, the development of a prototype or final product remained as the most relevant benefit leveraged within WORTH.

Moreover, 47% of selected partners confirmed that the project developed within WORTH led to an increase in turnover or sales or was likely to do so in the near future.

In the area of tourism, calls for proposals supported capacity building of tourism SMEs and in particular their ability to take up innovation and more sustainable business models.

Social Economy: A key aspect for the green transition is tackling energy poverty and helping greening social infrastructure. Our new initiative under the SMP, also presented in the Renovation Wave, is the Affordable Housing Initiative. It seeks to pilot 100 lighthouse renovation districts by 2030 and support investments in sustainable affordable and social housing by Member States, regions and cities.

The Affordable Housing Initiative will also contribute to the New European Bauhaus, as it seeks to fulfil community needs and participatory models for renovation, social innovation and regeneration projects in line with the European Green Deal objectives. Projects will be implemented through European partnerships supporting local partnerships between different actors (public, industry, social economy, civil society). The initiative wants to promote social innovation as a tool for inclusive project design and engage SMEs in various sectors to co-invest in the newest sustainable and inclusive technologies addressing needs in social housing districts and neighbourhoods.

The Intelligent Cities Challenge has a strong impact on building resilience and fostering innovation for local economic activity. This challenge helps cities coordinate actions, for delivering comprehensive business models, governance structures and networks. It builds strong partnerships with local businesses, SMEs and organisations, demonstrating that city-stakeholder collaboration adds significant value to a transition to a circular and sustainable economy. Cities are progressing with their planned activities as part of the ICC trajectory currently developing 241 solutions/applications involving local economic actors and public administrations.

Past achievements - Period 2014-2020

The Digital Cities Challenge (June 2017 to June 2019 with EUR 2 800 000 supported by COSME budget) offered strategic advice and coaching to 41 participating EU cities (of small and medium size), to develop innovative ecosystems for smart growth and industrial modernisation using advanced technologies. Cities represented by their administration, industry and academia, participated to create a vibrant innovative ecosystem and release their potential for growth.

The programme also continues to provide financing specifically adapted to the needs of SMEs, and to support Cluster partnerships.

The Enterprise Europe Network advisors have long and rich history in helping SMEs increase their competitiveness and create growth and jobs in a wide range of sectors of activities. As an example, the EEN runs 15 sector groups that organize business matchmaking and R&I partnering events. This is the case in particular for the sector group on renewable energy. EEN advisors provide innovation management capacity assessments and guidance for about 4 000 SMEs per year. In addition, EEN helps SMEs obtain financing and bring them in contact with potential investors. In 2021, pursuant to the SME Strategy, the EEN continued the capacity building and training for Sustainability Advisors to be put in place in all regions of the EU in the new EEN Network from 1st January 2022. EEN also continued its cooperation with the European Digital Innovation Hubs and Clusters to help SMEs with their digital transformation and adaptation to more resilient business processes. As announced in the 2021 Industrial Strategy Update, the EEN and ECCP are working together to increase the resilience of SMEs. A dedicated Resilience Expert Group is being set up in the EEN.

SDG 12 Ensure sustainable consumption and production patterns

Food strand:

The proposed activities related to Food Contact Materials will contribute to their more sustainable production and use, ensuring in particular a better recyclability of these materials, and the use of more natural and sustainable materials.

This proposed activities related to pesticides and biocides will ensure the timely removal of unsafe products and that all products on the market are safe, and that consumers are fully protected from residues in food.

As part of the European Green Deal, the 'Farm to Fork' strategy will design a fair, healthy and environmentally friendly food system. This includes the fight against animal diseases and pests in order to prevent, contain and eradicate animal diseases (especially zoonosis such salmonellosis) and pests in EU to provide safer foods for more people. These activities will support the scaling up of food waste prevention efforts by Member States and stakeholders in order to accelerate the EU's progress towards Sustainable Development Goal Target 12.3 calling for halving food waste by 2030 and reducing food losses along the production and supply chain.

Consumer:

Promotion of sustainable consumption is in line with priorities for the green transition in the New Consumer Agenda adopted in 2020. The European Consumer Summit 2021 conclusions called to promote consumer education initiatives on sustainable consumption, through targeted actions addressing specific segments of consumers, such as young and elderly consumers.

In this context, the Consumer policy supports initiatives that empower and assist consumers to make sustainable and informed choices, in particular by raising consumer's awareness of the environmental performance of products, such as their durability and

eco-design features, as well as fostering the application of consumer rights and redress possibilities in relation to misleading practices

The Consumer Programme financed a supporting study in the context of the legal initiative in preparation on empowering consumers for the green transition. The initiative is planned to be adopted on 30 March 2022 together with several other initiatives in preparation in the context of the Green Deal. The ambition of this initiative is to improve the information at the point of sale about products' environmental characteristics, such as lifespan and reparability. It also aims to protect consumers better from unfair practices, such as greenwashing and early product obsolescence.

The Programme contributed also via awareness raising actions targeting consumers and promoting green transitions and circular economy. For instance, the Green Consumption Pledge which calls upon businesses in various sectors of the economy to undertake concrete, public and verifiable commitments to reduce their overall carbon footprint, to produce and market more sustainable products and to redouble their efforts towards raising the awareness of consumers about the impact of their consumption choices. In June 2021 the event was organised to announce pledging companies and to reflect on the future of the Green Consumption Pledge. This event was followed online by more than 600 viewers, and generated a good deal of interest in future possibilities to apply to join the Pledge.

Consumer conditions Survey outlined that consumers' environmental awareness is on the increase. 56% of consumers considered at least once the environmental impact of their purchase and 23% of consumers considered the environmental impact of most or all of their purchases (up from 18% in 2014).

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Under the European statistics objective, Eurostat is called to regularly monitor progress towards the UN Sustainable Development Goals (SDGs) in an EU context. For this purpose, it coordinated the development of the EU SDG indicator set, which consists of around 100 indicators. The indicator set is reviewed every year to ensure the highest quality and that the most policy relevant indicators are included. About two thirds of these indicators are produced by the European Statistical System (ESS). Based on the EU SDG indicator set, Eurostat produces an annual monitoring report (<https://ec.europa.eu/eurostat/web/sdi>) assessing the progress of the EU towards the UN SDGs. The report is complemented by various communication products (website, data tables, interactive visualisation tools, country profiles, brochure) to target different user groups. Interlinkages between SDGs and spillover effects on countries outside the EU are analysed as well. The 2021 edition included a special chapter on the impact of COVID-19 on sustainable development.

Furthermore, the SDG indicators are getting integrated in the European Semester. The 2022 edition of the Eurostat monitoring report will become part of the European Semester Spring package and the country reports will include a specific SDG annex presenting status and progress of the Member States towards the SDGs.

Eurostat also provides training to the National Statistical Institutes to produce harmonised and comparable social statistics, environmental statistics, national accounts, etc. Moreover, it offers courses to explain indicator frameworks and the monitoring of the UN Agenda 2030 for Sustainable development

1. Overview**1.1. Challenges**

The Union's financial interests are being impacted by both fraudulent activities and financial irregularities, both on the side of EU revenues and EU expenditure. Every year, the Commission's annual report on the protection of the EU's financial interests demonstrates that the level of such irregularities and fraudulent behaviour requires continuous and enhanced action on the part of

the Union. The aim of the programme is therefore to provide the necessary coordination of antifraud activities and financial, technical and information support to Member States in their efforts and actions to protect the Union's financial interests. This coordination and support role is particularly obvious when the fraud or the irregularity has a cross border dimension or is seen to be impacting several Member States.

1.2. Mission (General objectives)

Article 325 of the Treaty on the Functioning of the European Union (TFEU) provides for a shared obligation of the Member States and the Union to protect the Union's financial interests. Irregularities and fraud are by definition a Union-wide phenomenon, which is not limited to an individual Member State. The intervention at Union level on the protection of the Union financial interests is justified in terms of subsidiarity where it facilitates cooperation between the Union and the Member States or between Member States, without impinging on Member States' responsibilities. The Union Anti-Fraud Programme (UAFP) is designed to support and complement Member States in preventing and fighting fraud affecting the financial interests of the EU, and supporting mutual assistance in customs and agricultural matters. With the adoption of the Regulation (EU) 2021/785, establishing the Programme, the latter now merges three different existing instruments, which were implemented separately from each other before:

- the "Hercule" operational programme, providing financial support to Member States in their fight against fraud, corruption and any other illegal activities affecting the financial interest of the Union;
- the Anti-Fraud Information System (AFIS) supporting Member States in mutual assistance in customs and agricultural matters; and,
- the Irregularity Management System (IMS) put at the disposal of Member States and candidate countries by the Commission for the reporting of irregularities, including fraud, in cases related to the shared management and pre-accession assistance funds.

The above three strands will contribute together to the achievement of the political objective to support Member States in countering fraud and other illegal activities, ensuring that no European taxpayer's money is being diverted from its intended goal.

1.3. Specific objectives

The Programme has three specific objectives, one for each strand:

- a) Preventing and combating fraud, corruption and any other illegal activities affecting the financial interest of the Union;
- b) Supporting the reporting of irregularities, including fraud, with regard to the shared management and pre-accession funds of the Union Budget; and,
- c) Providing tools for information exchange and support for operational activities in the field of mutual administrative assistance in customs and agricultural matters.

1.4. Public intervention context

Article 325 of the Treaty on the Functioning of the European Union (TFEU) provides for a shared obligation of the Member States and the European Union to protect the Union's financial interests. Article 33 TFEU provides for strengthening of customs cooperation between Member States and between the latter and the Commission. The implementation of the Union multi-annual budgets has been accompanied by a set of measures to support the Member States and the Union as a whole in preventing and fighting fraud affecting the Union's financial interests, and supporting mutual administrative assistance and cooperation in customs and agriculture matters.

These obligations are actively being addressed and streamlined by the Programme's strands. Activities with the aim of providing better technical and scientific assistance, specialised training and dissemination of knowledge, including comparative law studies, help significantly to protect the financial interests of the Union and at the same time to attain an equivalent level of protection across the Union.

The UAFP aims to act in synergy with other EU instruments providing technical support in the area of the fight against fraud and corruption, such as the Customs Control Equipment Instrument and the Technical Support Instrument.

1.5. Actions

The first component of the programme provides the Member States with targeted assistance in achieving their obligations to protect the Union's financial interests. This will be carried out by means of support for the purchase of specialised antifraud equipment and tools, specific trainings as well as targeted conferences and studies. The Commission will implement this component by: (i) awarding grants following calls for proposals; (ii) concluding public procurement contracts following calls for tender; (iii) entering into administrative arrangements with the Joint Research Centre (JRC); (iv) reimbursing costs incurred by representatives from eligible countries who participate in training and operational activities, and (v) offering targeted support to relevant international organisations actively helping to protect the Union's financial interests.

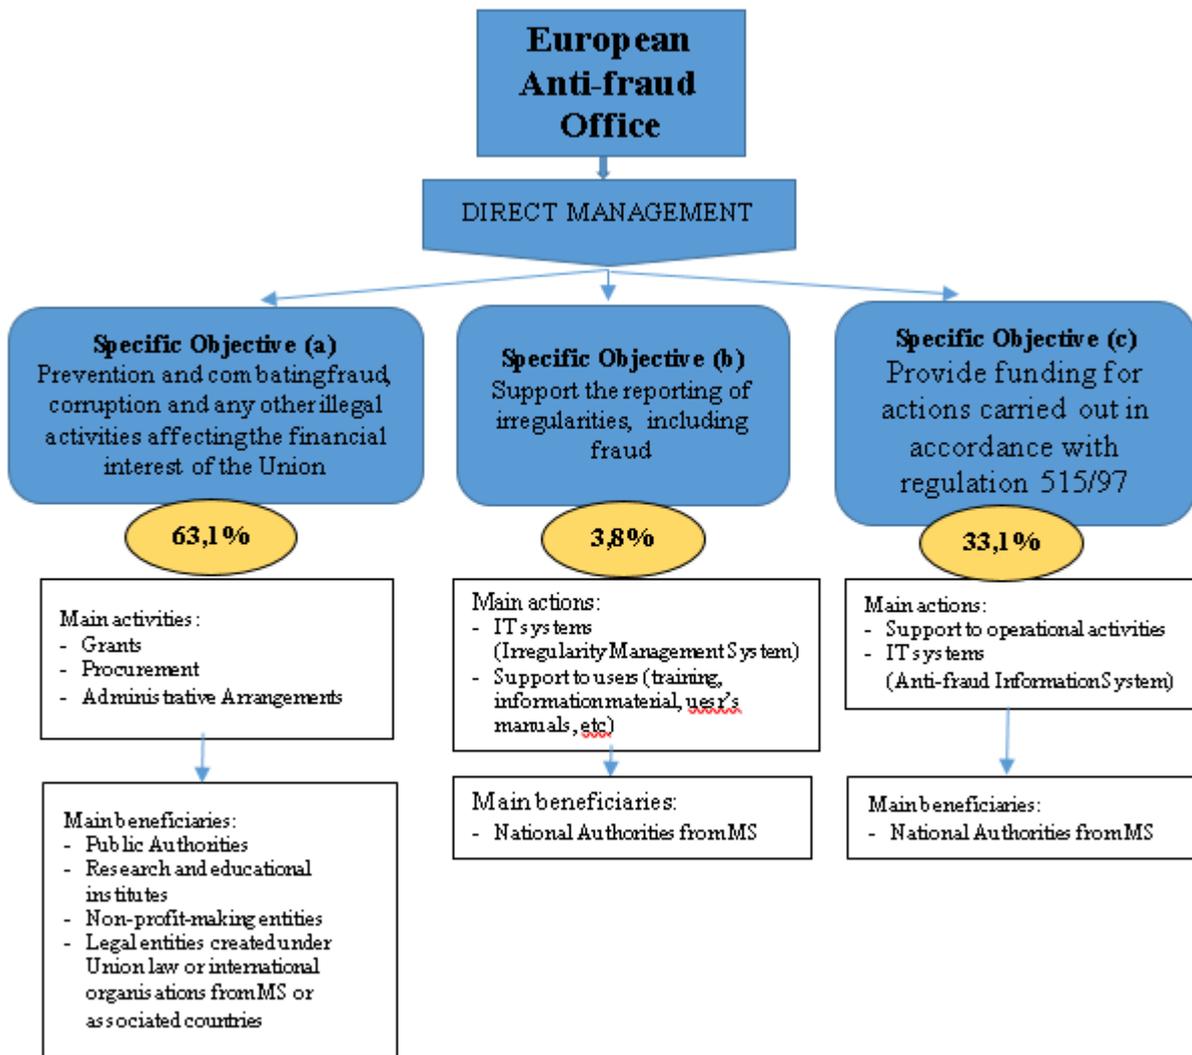

Concerning the second component, the Commission puts at disposal and maintains the Irregularity Management System (IMS) to facilitate the compliance of Member States with the obligation (laid down in various sectorial pieces of legislation) to report detected irregularities.

The activities of the third component will consist, on the one hand of the operation and maintenance of the AFIS platform for the exchange of Mutual Assistance Information, and on the other hand of supported activities, such as Joint Customs Operations, training courses, preparatory or evaluation meetings for operational actions.

1.6. Delivery mode

The programme is implemented through direct management. The European Anti-Fraud Office (OLAF) is the lead service for the programme implementation.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/785 of the European Parliament and of the Council of 29 April 2021 establishing the Union Anti-Fraud Programme and repealing Regulation (EU) No 250/2014 (OJ L 172, 17.5.2021, p. 110).	2021 - 2027	181.21

1.8.2. Legal basis explanation

In the context of the Multiannual Financial Framework 2021-2027, the European Parliament and the Council adopted on 29 April 2021 a Regulation establishing the Union Anti-Fraud Programme, which entered into force in May 2021 but retroactively applicable as of 1 January 2021.

The Programme shall ensure the continuity of EU support for activities carried out by the Member States and the Commission in the defence of the Union's financial interests and in support of mutual administrative assistance between Member States and cooperation between the latter and the Commission in customs and agricultural matters. A dedicated strand (IMS) will continue supporting the reporting of irregularities by the Member States, including fraud.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The Union Anti-Fraud Programme is, as mentioned before, a threefold programme: it is, on the one hand, the successor of the now closed Hercule III operational programme, supporting activities preventing and combatting fraud, corruption and any other illegal activities affecting the financial interests of the Union. The Programme also includes the financing basis for the IMS (Irregularity Management System) and for AFIS (Anti-Fraud Information System), which are operational activities performed by the Commission (OLAF). AFIS is a set of customs IT applications operated under a common information system managed by the Commission, set up to perform the tasks entrusted to the Commission by Regulation 515/97 on mutual administrative assistance in customs and agriculture matters. IMS is a secure electronic communications tool which facilitates the Member States' obligation to report detected irregularities, including fraud, and which supports their management and analysis.

1.10. Relevant websites providing more information

https://ec.europa.eu/anti-fraud/policy_en

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	24.0	181.2	13%
Payments	2.5		1%

The programme is being implemented through annual work programmes, through Calls for proposals, public procurement and administrative arrangements.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	153.3	154.4	99%
Payments	126.0		82%

The Hercule III commitment appropriations were implemented with high rate of 99%. The available appropriations were closely monitored and the unused amounts under any specific sub-category of activities were shifted towards the other ones.

For the payment appropriations, the rate of implementation of almost 90% is explained by:

- The majority of grant contracts awarded between 2018 and 2020 were extended at the request of the beneficiaries. The exceptional pandemic situation led to important delays in the implementation of projects (not only in relation to the training and conferences activities planned for 2020, but also in the equipment procurement activities); therefore, for several grant files the final reports, and the final payments, are still pending;
- The lower actual costs declared by grant beneficiaries in the submitted final reports, compared to the foreseen costs at the moment of the application submission; this is mainly related to the training and conferences grants, where the beneficiaries encounter some cost savings (such as participant travel and subsistence costs); in technical assistance grants, there were instances where the beneficiary managed to obtain a better price for the specific equipment, following the public tendering, compared to the initial budgeted amounts.

The AFIS programme had consistently over the last years a very high usage of available commitments, and the cumulative implementation rate is well above 99%. For payment appropriations, the cumulative implementation rate is 99%.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The Programme had a delayed start in 2021, as its legal basis (Regulation (EU) 785/2021) was adopted on 29 April 2021. As soon as the first financing decision was adopted through a Commission Implementing Decision of 23 July 2021, OLAF has launched all the necessary activities and financial interventions in order to fulfil the programme's specific objectives.

3.1.2. Active programme performance

Concerning the programme's first strand, two Calls for Proposals were published in July 2021, on the Commission's "Funding and Tenders" portal. The granting cycle was delayed in 2021 (compared to previous years) due to the late adoption of the programme's first Financing Decision (FD) and Annual Work Programme (AWP), caused by a high workload on both the Commission's policy side and on the Commission's translation services). The deadline for the submission of applications was 5 October 2021.

The two Calls covered the following topics: (i) "Technical assistance" with an indicative budget of EUR 9.3 million, and (ii) "Training, Conferences, Staff Exchanges and Studies" with an indicative budget of EUR 1.6 million.

Overall, the two Calls registered 55 applications coming from 14 Member States. The evaluation process has been finalised and the applicants will be notified on the outcome of the evaluation exercise (March 2022).

The "Technical Assistance" Call received 45 applications from 13 Member States. The total requested was EUR 20.3 million, more than double the available budget. 2021 witnessed high quality applications receiving very high scores, several applications being retained on a reserve list. This component thus remains relevant to national authorities. After the expert evaluation, 24 applications are retained on the award and reserve list.

The "Training, Conferences, Staff Exchanges and Studies" Call registered 10 applications from 8 Member States. The total requested was EUR 1.4 million (it is obvious that the pandemic circumstances were not at all favourable to the planning of this type of events). Six applications are selected for an award under this Call.

The successful applicants will receive a co-financing rate of maximum 80% of the eligible costs. The Commission will only grant funding in excess of this ceiling in exceptional and duly justified cases, as provided for in the 2021 AWP. However, in no case can such funding exceed 90% of the eligible costs.

Concerning the programme's second strand (the Irregularity Management System), maintenance costs absorbed EUR 483 thousand. Two updating releases allowed fixing some issues previously encountered.

In November 2021, OLAF procured a study on the “Future of IMS”, with a cost of about EUR 233 thousand, to explore the potential of the system, taking into account the needs and wishes of its users and main stakeholders, as well as the ongoing reflections on the digitalisation of the fight against fraud and on the interoperability of relevant IT tools at EU and Member State level. The study is due by the second quarter 2022.

With regard to the programme’s third strand, the Anti-Fraud Information System (AFIS), 8 platform releases (i.e. bund of application releases), consisting of more than 50 application releases in total, and 25 additional application releases and fixes were developed in 2022. Among these, there were several major releases, such as:

- the Mutual Assistance System (MAS), an entirely new application that automates the manual collection and processing of data and gathers all mutual assistance related files in one central place;
- two major upgrades of the Container Status Message directory (CSM): the first enables the determination of a complete trip of a container from the reported physical movements, by using a machine-learning algorithm. The second allows visualising the flow of containers that have been transported between two ports;
- a new module for the Customs Information System (CIS+) to support the new Cash Control Regulation (Regulation EU 2018/1672).

The new CIS+ module went live on 1 June 2021, on time for the application of the new Cash Control Regulation. It ensures the timely and efficient exchange of cash declaration data and related infractions between Member States’ Customs services, national Financial Intelligence Units (FIU) and the competent EU bodies. In December 2021, six months after going live, the new CIS module had more than 2 200 users and contained the data of 31 500 cash declarations and 1 800 infractions of the Regulation.

This new CIS+ module is not only very important from an operational point of view, but also for AFIS key monitoring indicator - the number of mutual assistance information made available. In the previous programme, the indicator was stagnating for the last two years, which led to AFIS missing the 2019 milestone and the target for 2020. However, thanks to the infractions of the new Cash Control Regulation that are now shared via the new CIS+ module, AFIS is now back on track to meet its target for this indicator in the new programme.

3.1.3. Previous Programme Performance

Provide funding for actions carried out in accordance with regulation 515/97

The programme has achieved all but one of the targets of its indicators.

The specific objective ‘to support Mutual Assistance in Customs Matters through the provision of secure information exchange tools for Joint Operations and specific Customs anti-fraud information exchange modules and databases such as the Customs Information System’ has three indicators:

1. The number of active customs fraud cases for which information is available in the Mutual Assistance databases,
2. The number of Joint Customs Operations (JCOs) (including EU wide and regional operations) supported/year, and
3. The coverage of the Anti-Fraud Transit Information System (A-TIS).

The first indicator has not met its 2020 target of 24 000 cases. At the end of 2020, the Mutual Assistance databases contained 19 125 active customs fraud cases.

The target was based on the main assumption that relevant IPR infringements, which are reported via DG TAXUD’s anti-counterfeit and piracy system (COPIS), would significantly contribute to the number of cases. However, at the end of 2020 only 971 cases (5%) were IPR infringements reported via COPIS. This had two reasons:

- The main reason is that the Member States’ customs services are not publishing the majority of these draft cases of IPR infringements available to them in the Customs Information System (CIS+), one of AFIS’ main Mutual Assistance databases.
- The interface with DG TAXUD’s COPIS only went live in 2019, with five years of delay. The start of the development of this interface, which was originally foreseen for 2014, was delayed to 2017, due to the late go-live of COPIS itself and the need for a following stabilisation phase for this system. Due to this delay, relevant IPR infringements, which are reported in COPIS, are only available since 2019 as draft fraud cases in CIS+ for completion and publication by Member States’ customs services.

2. However, thanks to the efforts made by the Commission services, such as the on-going development of additional web services for CIS+ allowing the connection of national customs systems, it is envisaged that the 2020 target will be achieved in 2024.

The evaluation reports of the participants to these JCOs show that this physical structure and AFIS application strongly facilitate the coordination tasks associated to JCOs with a large number of participants. The use of these facilities is frequently recommended during the evaluation of these operations by the participants. The fact that these facilities are also frequently used for operational activities in the area of law enforcement cooperation (free of charge for the participants), even though other institutions and organisations, like Europol or the World Customs Organisation, offer alternative solutions, is an additional proof of Member States’ appreciation.

Following Member States’ recommendations in previous years, OLAF has strengthened in the reporting period the involvement of Member States during all stages of development of new or updated AFIS applications, aiming at improving their usage and user

satisfaction. Special workshops were organised for the new versions of AFIS Mail, CIS+ and IMS, which involved a large number of participants from the Member States. As a result, Member States acceptance and usage of the mentioned applications has significantly improved, along with the enlargement of their user base, as usage statistics and satisfaction reports demonstrate.

The last satisfaction survey from 2019 demonstrates that the majority of the users is satisfied with the AFIS applications. 84 % of the respondents agreed or slightly agreed that the AFIS applications they use most frequently, respond to their professional needs. Only less than 5 % of the respondents disagree to a certain extent (disagree: 1.5 % and slightly disagree: 3.3 %). 10 % of the users remain neutral.

Preventing and combatting fraud, corruption and any other illegal activities affecting the financial interests of the EU

The fulfilment of its specific objective to “prevent and combat fraud, corruption and any other illegal activities affecting the Union's financial interest” is measured through two performance indicators:

1. The added value and effective use of co-financed technical equipment, expressed by the direct users of the equipment in their final technical reports submitted – for the final reports received in 2021 (for grants awarded under Hercule III), the beneficiaries assessed that the use of Hercule funded equipment added a high value to their activities, expressing an overall satisfaction rate of 97%. The rate is significantly higher than the 75% target set.

2. The number and type of trainings activities funded under the programme, including the amount of specialised training, and the satisfaction rate as expressed by the participants. In 2020, the programme awarded 24 grants for training-related activities. Due to the global sanitary situation, most of the trainings and conferences initially planned for 2020 (both grant and procurement contracts) were postponed to 2021. 15 trainings and conferences were organised, mostly in a virtual or hybrid mode. Two of them took place with a physical presence.

Regarding the training grant contracts finalised during 2021, the participants and trainees considered the events financed by the Programme very well suited to their needs— around 300 participants that replied to the surveys expressed a satisfaction rate of more than 90%.

Each of the programme’s five operational objectives have been addressed through specific forms of funding (grants, procurement and administrative agreements) and relevant co-financed activities.

The exceptional pandemic circumstances of 2020-2021 had an important impact on the general implementation of the Programme especially in terms of training and conferences activities. The beneficiaries of grants were, in most cases, not able to continue with the implementation of their projects as foreseen (both the purchase of technical equipment and the training, conferences and staff exchanges were in many cases delayed). OLAF offered its support in postponing the project’s implementation and amending the contracts.

Most of the training activities (funded via both grants and procurement instruments) foreseen for taking place in 2020 were either postponed to 2021, or delivered virtually, where feasible. Following a successful publication and evaluation of the 2020 Calls for proposals, unused amounts earmarked for procured activities in the 2020 budget were transferred grants (EUR 2 million were transferred from procured activities to grants, representing approximately 12% of the total budget for the year), ensuring an efficient implementation of available operational funds and allowing a grant award to the best-ranked applications across the three Calls.

The access to commercial databases and analytical IT tools continued to be provided to the Member States authorities, by signing specific contracts under the existing framework contracts with suppliers.

3.2. Key achievements

10 500	1 550	47	285	8
Participants attended specialised training and conference activities co-financed by the Hercule III Programme between 2014 and 2020, via grants	Law enforcement officials from all Member States participated in the specialised digital forensic and analyst training, procured by OLAF (2014-2020)	High-level events focused on the protection of the Union’s financial interests were organised by OLAF during the duration of the Hercule III Programme	Grants were awarded, mainly to competent authorities in the Member States, strengthening their operational and technical capacity to carry out investigations into activities detrimental to the Union’s financial interests	Commercial databases and specific IT tools were made available each year to Member States authorities, enabling substantial economies of scale

Provide funding for actions carried out in accordance with regulation 515/97

254 731	31 500	16	11	1
Tablets of counterfeit medicine intercepted in one single operation ¹	Cash declarations transferred via the new CIS+ module in the first six months	Million Euro worth of dangerous toys seized in one single operation ²	Joint Customs Operations (JCO) were supported	New Application went live (the Mutual Assistance System)

The Anti-Fraud Information System (AFIS) and its related services were always operational and accessible. This allowed the AFIS strand of the EU Anti-Fraud Programme to support in 2021, despite the continued COVID-19 pandemic, 11 Joint Customs Operations and several other actions that were performed by Member States and OLAF. These included not only operations and actions protecting the financial interests of EU, but also other policies, such as counterfeit medicines, illegal pesticides³, waste⁴ and wildlife trafficking⁵.

Preventing and combatting fraud, corruption and any other illegal activities affecting the financial interests of the EU

Several key achievements of the Programme can be highlighted:

1. Improved operational efficiency and effectiveness reported by the beneficiaries of technical assistance grants:

Technical Assistance beneficiaries are requested to submit a final implementation report one year after the closing date of the grant contract. This report contains information on the results achieved following the usage of the equipment as well as the organisation’s assessment of the contributions made towards the achievement of the Programme’s objectives. The results reported illustrate how the purchased technical equipment, such as detection tools, enabled the grant beneficiaries to seize substantial amounts of smuggled cigarettes, counterfeit goods and tobacco products. In addition, the national authorities reported that investigation support equipment, such as communication equipment, cameras, IT-tools and forensic soft- and hardware, facilitated the lawful gathering of evidence during operations in support of investigations aimed at protecting the Union’s revenues, expenditures and assets. Examples of results reported during 2021:

- Grant awarded to the Department of Customs and Excise of Spain and was used for the acquisition of two observation vehicles equipped with elements for communications system surveillance and data storage. The recordings obtained were used as evidence for criminal prosecution. The beneficiary reported that numerous products and machinery destined for illicit tobacco-related activities were identified and retained during the searches: crushing machines, mixers, packaging machines, etc. Among others, the following items were confiscated: 257 800 cigarette packs, 525 000 unpackaged cigarettes, 178 boxes with pipe tobacco and EUR 35 000 in cash.
- The police of Lublin in Poland has purchased a multifunction mobile unit for automated number plate recognitions system, surveillance technology, recording and covert monitoring. The equipment purchase aimed mainly to strengthen the operational and investigative capacity of operational police officers. The equipment is specifically designed for difficult terrain conditions such as forests and muddy areas. The beneficiary reported seizures of 3.6 million pieces of cigarettes, from January 2019 to February 2020. The beneficiary also reported that, following the undertaken operational activities, 64 people were investigated.
- The Hellenic Police of Athens received a grant for modernisation of technical equipment for detection and investigative operations. This equipment spans a variety of items including laptops, cameras, antennas, video recorders, pinhole cameras, thermal monoculars and radios. This equipment contributed to faster and effective inspections especially to detect contraband cigarette and tobacco products and to tackle financial crime and criminal organisations. The beneficiary reported that the project contributes to operational efficiencies of the Security Directorate to facilitate the daily activities in preventing and combatting the smuggling of counterfeit goods in the black market. The operations conducted during 2018-2019 led to seizures of almost 129 tonnes of tobacco, 41 handguns, 120 vehicles, thousands of kilos of drugs and narcotics and more than EUR 2 million in cash. The estimated value from Non-Payment VAT exceeds 5.5 million euros for the tobacco-related operations. For the rest of the criminal activities detected, the estimated value of the quantities that have been seized is estimated to be more than EUR 120 000 000.
- Guardia Civil (Spain) obtained technical support to strengthen the fight against fraud and counterfeiting (especially tobacco smuggling) throughout the Spanish border with the Mediterranean Sea. This Spanish border links ports and roads from Algeciras (near the North of Africa) up to the French border. The equipment provided Guardia Civil with enhanced ability to carry out spot-checks aiming to reinforce legal access to intelligence in the framework of criminal investigations carried out against fraud and corruption activities nationwide. These capabilities should assist joint international operations carried out in the EU territory and beyond. The beneficiary reported seizures of round 5 000 cases of cigarettes, 98 000 kg

ground tobacco, 62 drawers of rolled cigarettes and cash for around EUR 7.9 million. The total seized value is an estimated EUR 24 million, involving the arrest of 100 people.

2. Increased cross-border cooperation and exchange of information:

The beneficiaries reported that the Programme enabled long-lasting cooperation across borders. The training activities and staff exchanges contributed to the creation of networks and exchange of best practices:

- The General Prosecutor's Office of the Italian Court of Auditors, organised, together with the national Anti-fraud Coordination Service, two training sessions based on cooperation agreements and experience exchanges between five Member States. The events created a valuable framework enabling the exchange of experiences between the accounting prosecutors of the Courts of Auditors of Spain, France, Greece, Portugal and Italy, the relevant national and European Anti-Fraud services, as well as judges in the criminal field of the various Member States involved. During the four days of workshops was announced the protocol of operational collaboration between the General Prosecutor office of the Italian Court of Auditors and the newly established European Public Prosecutor's Office (EPPO). This protocol was signed in September 2021 and constitutes the first cooperation agreement between the Office and an accounting judiciary of an EU State.
- The Academy of European Law (ERA) in Germany organised the conference entitled 'Transposition of the PIF Directive into national legislation' that took place online due to the sanitary circumstances in February 2021. This conference took stock of the transposition status of the Directive (EU) 2017/1371 (so called "PIF Directive"). This Directive seeks to harmonise the definitions, sanctions and prescription periods of the offences affecting the Union's financial interests. The conference presented the initiatives recently put forward by the European Commission to revamp EU's policies on fraud in an integrated manner, an approach made possible by the adoption in 2017 of the PIF Directive. The conference debated ideas on how to improve the EU's fight against fraud by enhancing transnational and multi-disciplinary cooperation. This conference encompassed 65 legal practitioners, discussing cooperation between investigators and prosecutors in Member States in cross-border fraud and corruption cases.

3. Enhanced multi-disciplinary cooperation between anti-fraud practitioners and academics on protecting the EU financial interests and raised awareness of the judiciary and other legal professionals of this matter:

- The Programme continued funding the publication of eucrim (the European Criminal Law Associations' forum) by the Max Planck Institute for Study of Crime, Security and Law in Germany during 2020 and 2021. The journal strives to support the European Criminal Law Associations and to foster their network. It raises awareness of legal practitioners and other stakeholders throughout Europe with regard to relevant legal provisions and policies in the area of the protection of the EU's financial interests and European criminal law. The periodical promotes a deeper understanding of long-term developments in this field by means of its news and articles sections. Each issue focused on a specific topic related to the protection of the EU's financial interests. The eucrim journal is primarily published electronically (<https://eucrim.eu/>) in four issues per year and can be downloaded free of charge. The journal has gathered valuable contributions from academics, practitioners, and several other branches of the legal profession, leading to the exchange of information and knowledge.
- The University of Burgos in Spain implemented the project 'Toolkit for the Prevention of frauds in European Funds with special attention to European Regional Development Fund (ERDF) and Cohesion Funds (CF). The project consisted in a comparative research on the analysis of cases in different European countries on the obtaining, management and use of EU funds, in particular the ERDF and CF. A toolkit was produced, with a developed model and map to predict corruption risk, as well as guidelines (freely downloadable by target users in the field of antifraud and criminal law, at national and EU level). An international network of researchers at regional and local level of researchers from different areas and EU universities has been established. The online workshops, training and final conference were attended by 190 participants from eight countries. The main results of the project were, on the one hand, to develop an in-depth knowledge of the diversion mechanisms of the ERDF and CF, as well as their interconnections; on the other hand, and consequently, to enable an increase in the capacity of the relevant European institutions for the early detection of the misuse of EU funds.

4. Efficient use of resources generating cost savings and economies of scale:

The programme provides funds for the procurement of subscriptions to commercial databases, on behalf of law enforcement authorities in Member States, to support operations and investigations, in particular in the area of protection of the financial interests of the EU. The Commission manages this access, enabling substantial economies of scale and common data framework. Training is also ensured for an optimal usage by the relevant staff. During 2017-2021, the Programme has ensured Member States with access to commercial databases, such as worldwide trade statistics, detailed company information and global vessel movements. The databases were highly used by customs and other law enforcement authorities in supporting both investigations and risk analysis activities, identifying potentially suspicious trade, etc.

- The trade statistics database made available through the Programme is being used to assist identification of traffic diversions or transshipment of goods, which are being moved via an intermediate third country to disguise the real origin of goods imported into the EU, usually to avoid anti-dumping duty or to evade a prohibition/restriction. In addition, it

provides the basis to cross-check information on exports from third countries with information on imports into a Member State from other sources.

- The database with information on companies is being used in investigations led by Member States' customs authorities related to fraud and irregularities affecting the Union's financial interests and/or safety and security of its' citizens.

- Specific IT and operational tools have been developed in collaboration with the Joint Research Centre (JRC), widely used by the Member States' authorities. The laboratory for analysis of tobacco samples (TOBLAB) processed in the 2020/2021 reporting period, 144 requests from the Member States for analysis of seized cigarettes and raw/fine cut tobacco samples.

- The data and risk analysis project facilitating efficient EU-wide cooperation and use of customs data, including sharing of best practices and strengthening analytical capacities to better target customs anti-fraud controls and perform investigations (CAFET project) was also put in place via the JRC. Under CAFET umbrella, in 2021, the number of users of the Automated Monitoring Tool (AMT), which generates signals on anomalies in international trade, increased to almost 3300, with 1900 of them regularly retrieving information on long-term trends and further analysis of potential undervaluation. "Container Movement analytics and analysis of potential origin fraud" project (ConTraffic) was being further consolidated and developed. In the first 9 months of 2021, ConTraffic averaged 115 user logins (covering 45 distinct users). Checks on potential origin detected that about 2% of the analysed goods-items had a mismatching origin. Based on these mismatches, OLAF identified and communicated 332 possible signals of anomalies to MS Customs.

5. High level of participants' and beneficiaries' satisfaction related to the projects co-financed by the Programme:

The mandatory surveys filled in by the participants to conferences, trainings or seminars in order to assess the relevance of the project and to measure their satisfaction levels reveal that a very large majority of users (more than 90 %) express a satisfactory or very satisfactory opinion on the event. The results of the surveys are included by the beneficiary in the project's final report and show that the networking opportunities and the sharing of skills and best practices are particularly highly valued by the trainees and participants.

The beneficiaries of technical assistance grants must indicate, as part of their final reporting, their assessment of the added-value of the purchased equipment/tools and related training. The feedback received for implemented projects is very positive – for example, the beneficiaries of grants finalised during 2021 evaluated that the equipment responds to the organisation's operational and professional needs with a rate of 4.8 on 5 (around 97% satisfaction rate).

3.3. Evaluations, studies and reports

Provide funding for actions carried out in accordance with regulation 515/97

The underlying legal base for AFIS, Council Regulation (EC) No 515/97 of 13 March 1997 on mutual assistance between the administrative authorities of the Member States and cooperation between the latter and the Commission to ensure the correct application of the law on customs and agricultural matters (), as lastly amended by Regulation (EU) No 2015/1525 of the European Parliament and of the Council of 9 September 2015 () has been evaluated in 2020 and the results will be available in the second quarter of 2022.

Preventing and combatting fraud, corruption and any other illegal activities affecting the financial interests of the EU

The European Commission, (OLAF) undertook, between October 2020 and December 2021, with the support of an external contractor, the final evaluation of the Hercule III programme (2014-2020). The analysis was structured around five main evaluation criteria of effectiveness (including sustainability), efficiency, relevance, coherence (internal and external) and EU added value. Based on the collected feedback from the stakeholders, the evaluation came to the following conclusions and recommendations:

The programme has been considered as:

- **highly relevant**, and must be continually adjusted to new developments in the fraud landscape, in anti-fraud tools and in the regulatory framework;
- showing a **very high effectiveness**, both in terms of technical assistance and training, though actual effectiveness has proved difficult to assess. The evaluation also identified that the programme produced several **positive external side effects**;
- generating both **direct and indirect benefits**. Direct benefits included the possibility to acquire technical assistance equipment where Member States do not have available funding to invest in technologically advanced and expensive equipment. It therefore acts as an enabler for Member State authorities;
- being **coherent, both internally and externally**;
- presenting **strong short to medium-term effects; evidence of long-term impacts was less tangible**. It has been recommended that, for technical assistance, the programme could include specific costs under future calls for proposals for technical upgrades or software updates to secure the long-term impact of the investment (durability);
- **providing EU added value**. It does so by acting as an enabler and a driver for Member States to use a higher standard of equipment to detect and reduce the risk of fraud. It also acts as a facilitator for EU-level cooperation between Member States, specifically by funding training, conferences, databases and tools.

It was challenging to fully assess the true impact of the programme under the current monitoring and evaluation framework applicable to Hercule III. Therefore, the (new) programme should try to improve the current monitoring and evaluation framework by developing more specific indicators, set at the level of eligible actions.

Finally, creating a centralised database of projects implemented under the programme would provide a readily accessible evidence base for future evaluations. Hence, OLAF should seek to centralise data collection and storage on implemented projects in a single database to facilitate access to project documents and overviews of results.

Link to the Report of the Commission to the European Parliament and the Council, with its accompanying **staff working document**: https://ec.europa.eu/anti-fraud/policy/hercule-reports_en

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Preventing and combatting fraud, corruption and any other illegal activities affecting the financial interests of the European Union

Indicator 1: Satisfaction rate of activities organised and (co-) financed through the programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
90%	90%	92%	92%	94%	94%	95%	95%			95%
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	Final reports submitted by the beneficiaries of the Programme.
Link to the objective	Measuring the added value of the financed actions in relation to the Programme’s specific objective, as expressed by beneficiaries (users of the funded equipment) and participants in the co-financed events.
Link MFF 14-20 / MFF 21-27	No change in methodology compared to the previous period.
Other methodological comments	no comment.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The latest known result of 2020 (source: Annual Activity Report OLAF) was 93.3% for the now closed Hercule III programme. As we are now in a new Programme with a slightly modified call for expression of interest to submit applications for funding, the satisfaction rate may be slightly lower than for previous years. One also should consider the impact of the COVID-19 restrictions on organising and holding training seminars and/or conferences, even see certain technical assistance projects delayed because of delivery issues. All of those considerations request a careful approach in judging the potential trend in the years 2020-2021 between the two programmes.

Indicator 2: Percentage of Member States receiving support each year of the programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
81%	81%	82%	83%	84%	85%	86%	87%			87%
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	Desk analysis on the number of MS receiving support via the various activities financed by the Programme (procured trainings and conferences, granted training and staff exchanges, technical assistance grants, Databases and IT-Tolls, etc.).
Link to the objective	Enabling and supporting the prevention and fight against fraud, corruption and any other illegal activities affecting the financial interests of the European Union in as many MS as possible.
Link MFF 14-20 / MFF 21-27	No change in methodology.

Other methodological comments	All the Member States received support via the programme through the procured access to commercial databases and IT analytical tools made available to them. We cannot report yet on the exact number of Member States receiving grants in 2021 as the evaluation process of the Calls for Proposals is still ongoing (organisations from about 13-14 Member States are most probably receiving a grant under the 2021 operational budget).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	In 2021, all Member States (100%) received, through the UAFP, one or another form of financial or other (technical) support.

Specific Objective 2: Supporting the reporting of irregularities, including fraud, with regard to the shared management and pre-accession assistance funds of the Union budget.

Indicator 1: User satisfaction rate for the use of Irregularities Management System.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2019	Milestones									2024
72%	72%	72%	72%	72%						72%
	Actual Progress									Final
	84%									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage (yearly)
Cut-Off Date	31/12/2020
Data source	EU survey 2019
Link to the objective	In order to measure the satisfaction of IMS users, a survey will be launched yearly via the EU survey platform, addressed to all UMS users.
Link MFF 14-20 / MFF 21-27	No change of methodology. Last survey was taken in 2019. No survey in 2020 or 2021 due to human resources limitation.
Other methodological comments	Baseline: outcome EU Survey 2019. Milestones selected upon the 2019 survey. No survey has been held since, hence the same milestones are maintained in keeping with the OLAF Strategic Plan 2020-2024. The satisfied users will be counted as percentage of respondents (valid responses) having provided an appreciation of the system of at least 6 on a scale of 10.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The user satisfaction has met the milestone in 2021.

Specific Objective 3: Providing tools for information exchange and support for operational activities in the field of mutual administrative assistance in customs matters.

Indicator 1: Number of mutual assistance information made available and number of supported mutual assistance-related activities.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2019	Milestones									2027
18 639		22 000		24 000	24 000	24 000	24 000			24 000
	Actual Progress									Final
	19 919									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of entries with information for mutual assistance.
Cut-Off Date	31/12/2021
Data source	AFIS and supported mutual assistance-related activities.
Link to the objective	Supporting the information exchange and operational activities in the field of mutual administrative assistance in customs matters by providing related information and supporting related activities. Successor of the AFIS programme in MFF 2021-2027
Link MFF 14-20 / MFF 21-27	Successor of the AFIS programme in MFF 2021-2027
Other methodological comments	No change of methodology.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Based on the experience of the previous programming period and the usual increase of numbers of information items made available, the trend compared to the baseline is an increase as well for 2021. The milestone for 2022 of 22 000 corresponds with the figure that has been communicated in the

	OLAF Annual Activity Report 2020, page 11, with the following disclaimer in 2020: The proposed Result Indicator 4.4 can only be met if the Anti-Fraud Programme is adopted as proposed (i.e. no significant cuts of the proposed budget).
--	---

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Programme to promote activities in the field of the protection of the financial interests of the European Union (Hercule III)

Specific Objective 1: To prevent and combat fraud, corruption and any other illegal activities affecting the Union's financial interest

Indicator 1: The added value and effective use of co-financed technical equipment, expressed by the users of the equipment in their final technical report and final implementation report of the action (percentage of users that considered the use of Hercule funded equipment added value to their activities)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
				0.7	0.75	0.75	0.75			0.75
	Actual Progress									Final
						0.96	0.93	0.97		
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	The information for this indicator is submitted by the beneficiaries in their final technical report as well as in the implementation report (one year after the closing date of the action for which the grant was awarded, where the added-value is detailed with concrete examples).
Narrative	N.A.
Methodology	Percentage of users that considered that the use of Hercule funded equipment has brought an added value to the beneficiary's activities in the field.
Link MFF 14-20 / MFF 21-27	N.A.
Other methodological comments	N.A.
Full metadata available at this address	N.A.
Justification of the trend	The beneficiaries of Hercule co-financed equipment and tools continued to be highly satisfied with the added-value of the purchased technology in relation to their activities.

Indicator 2: The number and type of trainings activities funded under the Hercule III programme, including the amount of specialised training, and the satisfaction rate as expressed by the participants

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Training activities (with specialised trainings)										
	Milestones									2020
25	25	25	25	25	25	25	25			25
	Actual Progress									Final
	29	30	22	30	24	33	15			
Are we on track :	On track									
Satisfaction rate										
	Milestones									2020
0.6	0.65	0.67	0.69	0.7	0.72	0.74	0.75			0.75
	Actual Progress									Final
	0.9	0.9	0.9	0.9	0.9	0.9	0.94			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Numerical and satisfaction rate % (percentage, based on a score given between 1 - 5 by the respondents)
Cut-Off Date	31/12/2020
Data source	Hercule III programme files and stats.
Narrative	See title of specific indicator 2.

Methodology	Values in Baseline, Target in Milestones include 2 specialised trainings (except in 2014: only 1 specialised training)
Link MFF 14-20 / MFF 21-27	N.A.
Other methodological comments	This indicator has been elaborated for OLAF's Annual Management Plan 2014 in the light of the operational objectives in the Hercule III Regulation.
Full metadata available at this address	N.A.
Justification of the trend	Most of the trainings and conferences planned financed under the 2020 budget were postponed, due to the sanitary circumstances. Some of them (organised by grant beneficiaries) took place in a virtual or hybrid mode. Two training events were organised with physical presence. The nature of the targeted participants (mainly law enforcement officials), together with the sensitivity of the topics to be discussed and the hope that the sanitary situation would improve, made the virtual option not fully pursued by the event organisers.

Previous Program 2: Anti-Fraud Information System (AFIS)

Specific Objective 1: To support Mutual Assistance in Customs Matters through the provision of secure information exchange tools for Joint Operations and specific Customs anti-fraud information exchange modules and databases such as the Customs Information System

Indicator 1: Number of active customs fraud cases for which information is available in the Mutual Assistance databases

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
8 000		12 000		17 000		21 500	24 000			24 000
	Actual Progress									Final
	10 000	12 000	13 800	16 324	18 340	18 639	19 125			
Are we on track :	Moderate progress									

Indicator type	Output
Unit of measurement	Cases
Cut-Off Date	31/12/2020
Data source	AFIS Mutual Assistance database
Narrative	Milestone for 2017 reduced from 20 000 to 17 000 in 2016. New Milestone for 2019 added in 2016. Target reduced to 24 000 in 2016 (cfr. the programme performance update section).
Methodology	The application keeps a record of all the incoming and outgoing exchanges of information.
Link MFF 14-20 / MFF 21-27	The AFIS platform is continued in 2021-2027 as part now of the UAFProgramme. The same method of recording items of information remains. The milestones are in line with what was decided in the previous programme.
Other methodological comments	Milestone for 2017 reduced from 20 000 to 17 000 in 2016. New Milestone for 2019 added in 2016. Target reduced to 24 000 in 2016 (cfr. the programme performance update section).
Full metadata available at this address	N.A.
Justification of the trend	The indicator has not fully achieved its target, as Member States' customs services publish only a small percentage of IPR infringements. However a moderate positive evolution is expected for the coming years.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

Reflecting the importance of tackling climate change in accordance with the Union's commitments to implement the Paris Agreement adopted under the United Nations Framework Convention on Climate Change, and with the United Nations Sustainable Development Goals, the UAFP aims at contributing to mainstreaming climate actions and achieving an overall target of 30 % of Union budget supporting climate objectives.

To this end, the UAFP may for example better equip Member States to prevent the importation of certain illicit, climate-unfriendly products, thereby not only preventing infringements of the EU customs legislation, but also protecting the environment.

The UAFP can also provide support for the cooperation between customs and other competent authorities to fight certain fraudulent activities to the detriment of the environment, such as those related to waste shipments or illicit trade of endangered species.

The Commission (OLAF) invites the applicants (future beneficiaries of grants) for financial support through the annual work programme and the Calls to explore certain indicative priority areas, including, for example:

- the fight against fraud in EU funds in the areas of **environment, climate and food security** ('Green Deal' related actions)

6.2. Contribution to gender equality

6.2.1. Key achievements and performance

2021 estimates		2022-2027 programming					Total
2021	2022	2023	2024	2025	2026	2027	

Score 0: 24

(*)

Consolidated information about the annual commitments implemented (totals per score by programme **in EUR Million**)

The financing is split among four categories:

score 2: **gender equality is principal objective**

score 1: **gender equality is significant objective**

score 0*: **likely but yet unclear impact on gender equality**

score 0: **no significant impact on gender equality**

The Union anti-fraud programme has no significant impact on gender equality.

More than 70% of the programme's annual budget is targeting projects financing the acquisition of technical equipment and tools for national law enforcement agencies. As a result, the bulk of activities financed under the UAFP does not target nor has significant bearing on the promotion of gender equality.

As for the training and conferences part of the programme, it should be noted that the staff participating on behalf of their Member States' authorities, has been recruited and selected by those authorities. Thus, the Commission/OLAF cannot ensure that gender equality is being implemented in the choice of delegates made by the authorities. The contribution of these events to promoting gender equality can therefore not be expressed in tangible terms.

6.5. Contribution to the sustainable development goals.....	251

1. Overview**1.1. Challenges**

The Union and the national tax authorities still suffer from insufficient capacity and insufficient cooperation – both within the EU and with third countries – to carry out effectively and efficiently their missions. They need to provide quick and joint responses to emerging problems such as tax fraud, tax evasion and tax avoidance, digitalisation and new business models, while at the same time preventing unnecessary administrative burden for citizens and businesses in cross-border transactions. These trends raise continuously new challenges for the functioning and performance of national tax authorities. They call for better and innovative ways to carry out their core task i.e. collecting taxes that directly feed the national and indirectly the Union budget.

In the coming years, emphasis will continue to be put on further improving the administrative capacity of Member States, be it through IT capacity building, traditional and innovative forms of cooperation or human competency building initiatives. The

capacity of tax administrations is indeed instrumental to ensure they run efficiently their tax systems within the internal market and to address cross-border tax fraud and evasion.

Different forms of IT collaboration, such as expert teams or project groups in the area of IT systems, will increase the number of shared IT activities and reusable components among Member States. This approach should reduce the costs for deploying EU wide tax IT systems, both at EU and national level while responding in a more agile way to EU tax policy needs. Strengthening operational cooperation through the use of expert teams further allows for pooling expertise to perform tasks in specific domains, mainly for the European electronic systems.

The majority of the programme's budget will focus on the development and operation of the European electronic systems, which are instrumental to interconnect tax authorities and allow information to be exchanged rapidly. IT systems play a central role in supporting tax authorities in fighting against tax fraud, tax evasion and tax avoidance, by enabling a secure exchange of information between Member State tax administrations, enhancing administrative cooperation between them and improving their administrative capacity. IT systems are also instrumental in facilitating the digitalisation of public administration and tax collection.

In the field of Indirect Taxation, activities will continue the implementation of the **VAT e-Commerce package**, which was launched on 1 July 2021. The challenges will consist of updating the EU VAT rules as well as addressing real time reporting, e-invoicing, extension of the one-stop shop, establishing a single EU VAT registration system and VAT rules for platforms, with a view to reducing the VAT Gap.

Moreover, administrative cooperation will require further support in order to improve the fight against tax fraud and evasion by exploring cooperation between administrations and anti-fraud officials - including interaction between the EU's anti-VAT fraud network (Eurofisc) and OLAF, and Europol.

Additionally, in the area of VAT, major updates will be foreseen for the Transaction Network Analysis tool (TNA) that provides Member States tax administrations with a platform enabling them to develop and run algorithms to detect VAT carousel fraud networks.

With regard to the transmission and exchange payment data, the Central Electronic System of Payment information CESOP, from 2024, will keep record of cross-border payment information within the EU, as well as payments to third countries or territories, for a period of five years. This will reinforce the capacity of Member States to fight against e-commerce VAT fraud, by allowing them to properly control the correct fulfilment of VAT obligations on cross-border Business to Consumer supplies of goods and services.

In the field of direct taxation, to address the emergence of alternative means of payment and investment such as crypto-assets and e-money, further revision of the Directive on Administrative Cooperation will be proposed (DAC 8). Tax transparency is fundamental to preventing and detecting tax abuse. A new transparency and information exchange measures for crypto-assets and e-currencies will ensure that they can be effectively regulated and taxed. The DAC 8 initiative will also look at further strengthening administrative cooperation between tax authorities, including by reviewing compliance procedures, the rules for e-money and the rules for cross-border tax rulings.

1.2. Mission (General objectives)

The Fiscalis programme has the general objective of supporting tax authorities and taxation to enhance the functioning of the internal market, of fostering Union competitiveness and fair competition in the Union, of protecting the financial and economic interests of the Union and its Member States, including protecting those interests from tax fraud, tax evasion and tax avoidance, and of improving tax collection.

1.3. Specific objectives

The Programme has the specific objectives to support tax policy and the implementation of Union law relating to the field of taxation; to foster tax cooperation, including exchange of tax information; and to support administrative capacity building, including human competency and the development and operation of the European electronic systems.

1.4. Public intervention context

The legal base of the Fiscalis Programme is defined in the Treaty on the Functioning of the European Union, and in particular its rules on the approximation of laws (Articles 114) and administrative cooperation (Article 197). Both collecting taxes and combating tax fraud and evasion are competences of EU Member States. However, in an increasingly globalised world, the EU provides a framework and offers instruments to effectively handle cross-border tax issues. Through IT and other means, the EU allows for co-operation and exchange of information among its Member States on all sorts of taxes. EU legislation enables collaboration between national tax authorities in various ways.

The Fiscalis Programme supports European electronic systems and related applications in operation for taxation. These systems allow information to be exchanged rapidly and in a common format that can be recognized by all Member States. The Fiscalis Programme also funds activities to support the automatic exchanges of information. Furthermore, the Fiscalis Programme supports collaborative actions such as meetings, workshop as well as other events and capacity building actions for tax officials to strengthen their capacity of tackling tax fraud, tax evasion and aggressive tax planning.

1.5. Actions

According to Art. 7 of the Regulation 847/2021, the programme supports actions such as meetings and similar ad hoc events; project-based structured collaboration; IT capacity-building actions, in particular the development and operation of European electronic systems; human competency-building and other capacity-building actions, studies, innovation activities and communication activities.

The Fiscalis programme offers Member States a Union framework to develop activities through IT cooperation and capacity building, on the one hand, and cooperation amongst national taxation officials, on the other hand. In this regard, it provides financial sustainability of the interoperable and interconnected European electronic systems, which allow the electronic exchange of tax-related information between Member States. Additionally, the collaborative actions give the administrations unequalled opportunities for cooperation, communication and networking, ultimately building trust and leading to greater convergence of approaches and practices. The Fiscalis programme also funds human competency and capacity building actions, including training and exchange of best practices.

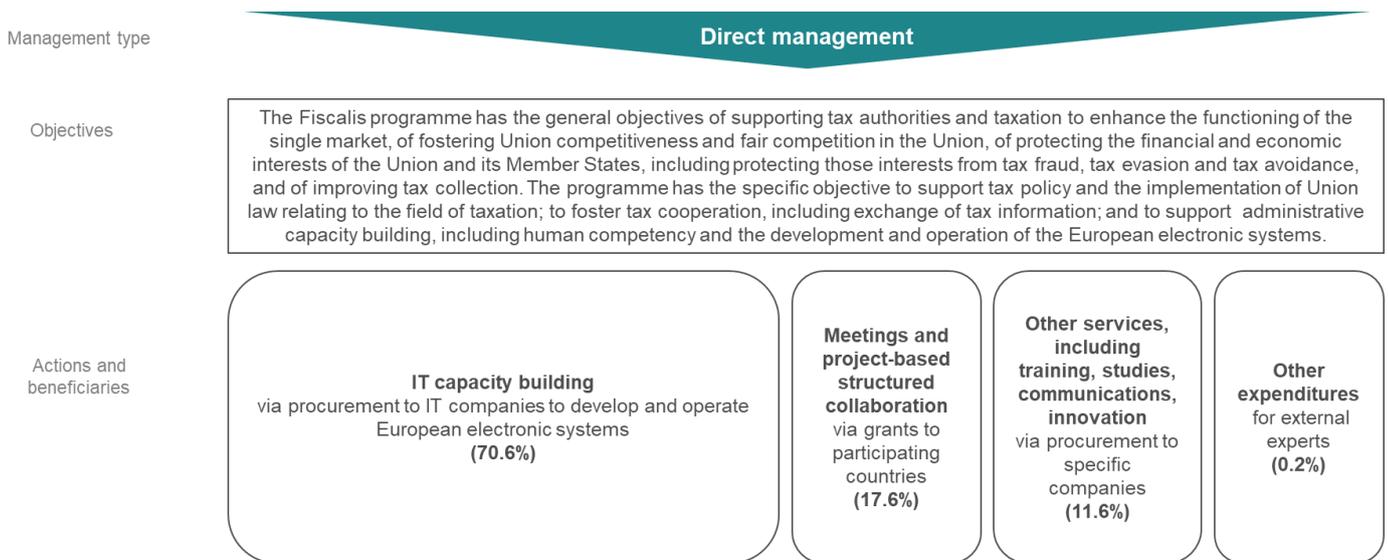

1.6. Delivery mode

The Fiscalis programme will be implemented in direct management by DG TAXUD through:

- Procurement contracts: for the European Information Systems expenditure, training activities and studies.
- Grant agreements with the participating countries: for collaborative actions and expert teams.

Work programmes will be established – together with the stakeholders – stipulating the priorities for a specific period.

1.7. Graphic overview of the programme structure

*Percentages presented in the graph are based on the estimative budget distribution for the period 2021-2027.

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/847 of the European Parliament and of the Council of 20 May 2021 establishing the 'Fiscalis' programme for cooperation in the field of taxation and repealing Regulation (EU) No 1286/2013 (OJ L 188, 28.5.2021, p. 1).	2021 - 2027	269.24

1.8.2. Legal basis explanation

As it is foreseen in Articles 114, on the approximation of laws and Article 197 on administrative cooperation Treaty on the Functioning of the European Union, the legal base of the Fiscalis programme is the Regulation (EU) 2021/847 of the European Parliament and of the Council establishing the 'Fiscalis' programme for cooperation in the field of taxation and repealing Regulation (EU) No 1286/2013. Furthermore, the Multiannual Work Programme constitutes the framework for the implementation of the programme.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	34.8	36.9	37.7	38.4	39.2	40.0	40.8	267.8
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities	0.0	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	0.0

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The Fiscalis Programme is a continuation of the previous programme Fiscalis 2020, and there are no significant changes regarding the general and specific objectives as well as the actions. The overall budget amounts to 269 million, which entails an increase of 20% in the budget allocation compared to the previous programme.

1.10. Relevant websites providing more information

https://ec.europa.eu/taxation_customs/fiscalis-2021-2027_en

2. Where are we in the implementation ?**2.1. Programme 2021-2027**

Cumulative implementation rate at the end of 2021:

	Implementation	Budget	Implementation rate
Commitments	34.8	267.8	13%
Payments	10.1		4%

Despite the late adoption of the new 2021-2027 Multi-Annual Financial Framework, the new Fiscalis Regulation (20 May 2021) and the 2021-2023 Financing Decision (2 July 2021), EUR 34 789 052.41 was committed and EUR 10 136 776,37 was paid.

The largest expenditure (64%) relates to the European Electronic Systems. 28% was committed for collaboration activities (including expert teams) and 8% was committed on other actions such as communication, studies and consultations.

4% of the committed budget was paid in 2021; the remainder will be paid in the 2022-2025 period.

For 2022, it is planned to commit EUR 36 639 861 and to pay EUR 27 387 974. European Electronic Systems represents 87% of the expenditure, collaboration activities 5% and other actions 8%.

The 2023 payment appropriations request (EUR 34 380 000) is based on past implementation rates (31% is paid in year 1, 44% in year 2, 14% in year 3, 2% in year 4 and the remainder in year 5)

Impact of COVID-19 pandemic is yet to be determined for the new programme due to the late adoption of the regulation and financing decision. For procurement, largely related to the maintenance and development of the IT systems, the impact is very limited. However for grants on collaborative actions, there might be an impact due to the ongoing absence of travels and therefore of costs related to f2f meetings. The impact on previous programme was notable (see section 2.2.) resulting in under consumption of budget allocation, which resulted in an extension of the 2020 grants until November 2021. For these reasons the grants under the new programme only started in December 2021 and the impact of COVID is still to be established.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	223.7	223.7	100%
Payments	209.4		94%

As can be seen from the above financial performance table, 100% of the programme's total commitment appropriations (EUR 223 680 580) have been consumed. To date, 94% has been paid. The remaining payments will be finalised in the 2022-2024 period.

2014-2020 programme	2020	2021	2022
Commitment appropriations	32 993 000	1 453 580*	NA
Payment appropriations	30 843 095	24 000 000	8 200 530

*For European Electronic Systems and other service contracts (studies): 2020 budget was committed in 2021 via a global commitment done at the end of 2020 to be able to bridge the gap between the end of the former programmes and the adoption of the new MFF and related Financing Decision. For collaboration activities (including expert teams), external experts and the remaining service contracts: there were no new commitments done during 2021 related to the budget of the Fiscalis 2020 programme. All activities continued in 2021 based on commitments done in 2020.

For 2022, it is planned to pay EUR 8 200 530, to honour payments under contracts and grant agreements made on the former programme.

The 2023 payment appropriations request (EUR 1 490 000) is based on past implementation rates. The last payment under the former programme is scheduled to take place in 2024).

COVID-19 pandemic has affected programme grant activities and the related costs. Due to the restrictions to travels and physical meetings, collaborative activities mainly took place in an online format with no or rather limited financial costs. This allowed employing the 2020 programme unused budget to cover the maintenance of the existing IT systems in the absence of the funds under the new Fiscalis Regulation (which became available only in July). Due to the delays related to the difficulties faced by some Member States in adapting to the new working methodologies, the grants of 2 expert teams (CESOP and Mantic IV) were extended to 2021 given the impossibility of concluding their remit by the due date.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

2021 was the first year of implementation of the new programme Fiscalis and it is also a year of transition from the previous Fiscalis 2020 programme. The delays in the negotiations of the Multiannual Financial Framework 2021-2027, which were concluded in December 2020, along with the subsequent time needed for the co-legislators to finalise negotiations on the outstanding provisions in the Fiscalis programme Regulation, resulted into its adoption only during the course of 2021. More precisely, the Regulation 2021/847 entered into force on 28 May, while the adoption of the Financing Decision and the first Work Programme, which, as a novelty from the previous programme, is now multi-annual (2021-2023), was possible only in July 2021.

Due to the fact that 2021 was a transitional year and given the nature of the rolling activities under the previous programme, the performance of the previous and active programme is intertwined, irrespective of the financing source (Fiscalis 2020 vs. Fiscalis Programme 2021-2027). Therefore, for reporting purposes, the performance outlined below focuses on the previous programme. Information on the active programme is therefore limited to financial outputs (grants launched/signed, procurement processes closed).

The 2020 Fiscalis programme budget funds continued to be used for both, **IT projects** and **general collaborative actions**, until **July and November, respectively**.

3.1.2. Active programme performance

In 2021 expenses were split between the Fiscalis 2020 and the Fiscalis programme's budgets. Joint actions other than expert teams under the Fiscalis 2020 finished on 30 November 2021 while the Collaborative Actions under the new Fiscalis programme were carried out during the course of December 2021.

During Q4 2021, two grants agreements were signed in the field of general collaboration activities and Expert Teams¹:

- General Collaboration Activities in the field of Fiscalis: sets the overall framework for project-based structures collaboration and meetings (signed December-2021; implementation until end of 2023).
- MANITC 5 Expert Team: provides financial support to tax authorities of participating countries in implementing enhanced operational cooperation in the area of IT collaboration (signed December 2021, implementation until November 2023).

Due to the delayed launch of the programme, the signature of the new grant agreements and the implementation of collaboration activities and expert team grants for the Fiscalis programme could only start in December 2021. This explains the absence of major achievements or outputs attained during this period regarding the collaborative activities. However, the following results can be highlighted for the first month of implementation of the programme that was also a month of the Christmas holidays:

Within the General Collaboration Activities in the field of taxation, **seven** activities were launched, including three project groups and one capacity building activity initiated by the Commission.

Also in Q4 2021 an invitation to submit a proposal was sent for the DATANA Expert Team (data analysis and enhanced use of data with data analytics approach). The evaluation of the proposals was finalised in December 2021 and the grant agreement is expected to be signed in Q1 2022. In addition, 93 specific contracts were signed under multi-annual framework contracts.(IT, studies, communication and other service contracts).

The implementation of the collaborative activities under the current programme (during the period of December 2021) were still impacted by the Covid-19 pandemic and related restrictions. In particular, the pandemic continue to affect the collaborative actions and events due to the absence of travels and physical meetings. On-line meetings replaced almost all face-to-face meetings. The COVID-19 crisis affected the number of multilateral controls and of the presences in the administrative offices and participation in administrative enquiries (PAOEs). Some expert teams had to reschedule their activities and adapt to new working methodologies. The new programme covered the funding of the IT systems for the period July-December 2021. Despite the Covid-19 pandemic, the European Information Systems operated regularly and business continuity was guaranteed.

3.1.3. Previous Programme Performance

The Fiscalis 2020 programme pursued the specific objectives of **supporting the fight against tax fraud, tax evasion and aggressive tax planning and the implementation of Union law in the field of taxation by ensuring exchange of information, by supporting administrative cooperation and, where necessary and appropriate, by enhancing the administrative capacity of participating countries with a view to assisting in reducing the administrative burden on tax authorities and the compliance costs for taxpayers.**

The Fiscalis 2020 programme provided financial support to a range of actions aimed at achieving the general and specific objectives. Article 7 of the regulation (EU) 2013/1286 defined the eligible actions, which can be divided into three main categories:

European Information Systems building, Joint actions (JA)², Human Capacity Building.

General Performance of the programme:

The Covid-19 pandemic related restrictions continued to affect the programme activities. In particular, the pandemic affected the collaborative actions and events due to the absence of travels and physical meetings, resulting in a substantial under-consumption

¹ Art. 9(3) of Regulation (EU) 2021/847 establishing the Fiscalis programme: in accordance with point (f) of the first paragraph of Article 195 of the Financial Regulation, grants shall be awarded without a call for proposals where the eligible entities are customs authorities of participating countries, provided that the conditions set out in Article 5 of this Regulation are met.

² According to article 7 of Regulation (EU) 2013/1286, the types of joint actions are:

(i) seminars and workshops;
(ii) project groups, generally composed of a limited number of countries, operational during a limited period of time to pursue a predefined objective with a precisely described outcome;
(iii) bilateral or multilateral controls and other activities provided for in Union law on administrative cooperation, organised by two or more participating countries, which include at least two Member States;
(iv) working visits organised by the participating countries or another country to enable officials to acquire or increase their expertise or knowledge in tax matters;
(v) expert teams, namely structured forms of cooperation, with a non-permanent character, pooling expertise to perform tasks in specific domains, in particular in the European Information Systems, possibly with the support of online collaboration services, administrative assistance and infrastructure and equipment facilities;
(vi) public administration capacity-building and supporting actions;
(vii) studies;
(viii) communication projects;
(ix) any other activity in support of the overall, specific and operational objectives and priorities set out in Articles 5 and 6 of the Fiscalis 2020 regulation, provided that the necessity for such other activity is duly justified.

of the programme's budget. Almost all face-to-face meetings were cancelled and many of them were replaced by on-line meetings. The COVID-19 crisis led to a considerable decrease of the number of multilateral controls and of the presences in the administrative offices and participation in administrative enquiries (PAOEs). Some expert teams had to reschedule their activities and adapt to new working methodologies.

Nevertheless, despite the impact of the Covid-19 pandemic and the delayed adoption of the Programme Regulation, in 2021 the collaboration generated by the programme remained strong. The majority of the collaboration action managers and the participants adapted to the new working modalities (online collaboration/online meetings). Business continuity in the IT domain was ensured as proven by the stable availability of IT systems.

The **general collaborative actions** under the Fiscalis 2020 programme continued until the end of November based on the extension of their grant agreement until 30 November 2021, while the grant agreement for the general collaborative actions under the new Fiscalis programme was signed on 2nd December allowing the commencement of the activities on 1st December.

With regard to the fulfilment of the specific objectives, the programme performed as follows:

Supporting administrative tax cooperation:

This objective was pursued by the most significant part of collaborative actions. Overall, there were in total **66** collaborative actions organised under this objective. Under this objective, the **TADEUS Network** of the Heads of Tax Administration Summit continued to support driven projects on a new governance structure and strategy for Eurofisc and developing a Human Resources Management (HRM) maturity model.

Implementation of Union law relating to taxation:

30 actions addressed this objective, by securing exchange of information; enhancing the administrative capacity of participating countries, reducing tax authorities' administrative burden and taxpayers compliance costs.

Among the main achievements gained in 2021, within this objective, the Fiscalis programme provided a substantial contribution to the **EU Cooperative compliance programme**, which produced, by means of a dedicated project group, two specific guidelines, namely, the **Guidelines for Cooperative Compliance for Medium and Small Enterprises** (CC MAS Framework) and the **Guidelines European Trust and Cooperation Approach** (ETACA).

Another important result concerns the establishment of the **EU AIAC Community**, which encompasses the advanced international administrative cooperation instruments (AIAC) including controls and administrative enquiries with a cross-border dimension

Fighting tax fraud, tax evasions and aggressive tax planning:

62 actions, consisting of a variety of action types addressed this objective. In this regard, worth of notice is the **Eurofisc network**, which was supported by the programme by means of 6 project groups. The network facilitates rapid exchange of targeted information to fight against cross-border VAT fraud, coordinates information exchanges and follow-up actions, processes and analyses of data. Eurofisc network uses the electronic system, the Transaction Network Analysis Search (TNA) tool.

Support IT capacity building:

In addition to the general collaborative actions, in 2021 **seven Expert Teams** operated, five of which were established under the Fiscalis 2020 programme. Expert Teams contributed to the objective of **fighting against tax fraud, tax evasion and tax avoidance**, and to **improve tax collection**, by supporting the development and implementation of the IT tools. In this regard, they proved to be instrumental in securing exchange of information, supporting administrative cooperation and enhancing administrative capacity.

Due to the Covid-19 related restrictions, 4 expert teams saw their initial timeline rescheduled and one recorded a change in the composition of the consortium.

The **Managed IT Collaboration expert team (MANITC IV)** continued to promote, support and coordinate Member States' collaborative initiatives in IT area. The expert team grant agreement was extended at the beginning of 2021 for additional 11 months in order to complete the tasks that could not be completed during 2020.

The **Expert team for Excise Duty Calculator (EDC ET)** released an **Excise Duty Calculator** developed by four Member States. The IT tool can be used by the Member States or private individuals to calculate the amount of excise duties involved. The **Expert team of Mobile Application for EMCS controls (Excise Control and Movement System) m-EMCS** delivered the **mobile application for EMCS controls**, which provides mobile access to e-AD data from national EMCS ensuring fast access to trustful EMCS information for control purposes to officers during road controls or at the premises of economic operators.

On the other side, the experience of these expert teams has shown that Member States should ensure a steady commitment throughout the whole duration of the project in order to avoid disruption in the activities and impacting other participants to the project. To avoid wasting programme's budget, time and resources of the involved participating countries, Member States should ensure an efficient uptake and deployment of the products once they are delivered and to guarantee that the products are properly used, while ensuring a timely maintenance and update. The expert team for Excise Duty Calculator and m-EMCS, highlighted the need to carefully take in to consideration sustainability and continuity in the medium and longer term of the results obtained, once

the financial support of the programme is no longer available. Subsequent activities can entail running and maintenance costs, dissemination of the results among all eligible actors, adequate and update training, these all requiring further heed and commitment.

Development and operation of European Electronic Systems for taxation (EES):

In 2021, the programme continued to fund an important portfolio of **European Information Systems (EIS)** (under the new Fiscalis programme they are identified as **European Electronic Systems (EES)**) aimed at supporting tax authorities in fighting against tax fraud, tax evasion and tax avoidance. These systems enabled a secure exchange of information between Member State tax administrations, enhancing administrative cooperation between them and improving their administrative capacity.

IT systems played a central role in facilitating the digitalisation of public administration and tax collection.

In 2021, the particular circumstances related to the Covid-19 pandemic and the delay in the entry into force of the new Fiscalis programme Regulation, **led to a conservative approach in the implementation of the IT activities**, focusing mainly on the maintenance of the IT systems rather than on the development of new **functions in order to ensure business continuity**. As a result, the Commission continued to provide these services respecting the agreed service levels, guaranteeing business continuity.

The **Common Communications Network/Common Systems Interface CCN/CSI**, the IT underlying infrastructure, developed, managed and maintained by the Commission was available during 2021 more than 99 % of the time during working hours. In particular, the availability of this platform was 99.98 %. All the main centralised IT tax systems– developed, managed and maintained by the Commission – were available in 2021, with more than 99 % of the time meeting the expected targets.

In 2021, **27** systems and related applications were in operation. The majority continued or developed the activities initiated in the previous year. In particular, the DAC 6, CESOP and TNA had several releases.

Among the key achievements obtained in 2021 in terms of IT systems' deployment and development and related IT joint actions, the entry into force on 1 July 2021 of the **VAT e-commerce package** represents the most important one. The VAT e-commerce package introduced a number of changes to the Value-Added Tax (VAT) rules governing the taxation of cross-border business-to-consumer e-commerce activity in Europe. In this regard, the Fiscalis programme provided extensive support by means of several activities.

In particular, the programme supported the finalisation of the IT implementation of this package by funding the extension of the **VAT Mini One Stop Shop (MOSS)** to a **One Stop Shop (OSS)** and the introduction of two new simplification measures, namely, the Import One Stop Shop (IOSS) and the Special Arrangements. Moreover, the programme funded dedicated projects groups aimed at implementing and testing in each Member State the initiative, a communication campaign and e-learning activities aimed at providing information on the functioning of the One Stop Shop to businesses as well as to officials in the Member States.

Worthy of mention are also the results achieved with the **Transaction Network Analysis (TNA)** system, funded by the programme, where it was possible to collect for the first time data from VIES on the Web. **TNA** has provided valuable support in the detection of suspicious cases of VAT fraud. The system has been continuously improving and it has lowered the administrative burden on the side of the Member States while delivering good results in swift exchange of targeted information.

Moreover, in 2021, TNA enabled Eurofisc to generate for the first time detailed statistics on cross-border VAT fraud, including monetary values - statistics parts of which were also made public by the Commission.

Supporting administrative capacity building including human competency and training:

Under this objective, the feedback from participants in **joint actions** collected under the Performance Measurement Framework showed that the programme is progressing above the baseline and towards the target. 81.2% of the responding participants declared that the programme provided them with a good opportunity to expand their network besides the limitations imposed by the Covid pandemic. Additionally, in the same period, the number of respondents who declared that they have been in contact for work purposes with the officials they met during programme activities (long-lasting networking) averaged at around 57.7 % , recording a slight increase from the value of 56.8% of 2020. (collaboration robustness between programme stakeholders)

In this regard, the low level of long-lasting networking achieved in 2021 is due to the on-line events replacing physical meetings, which provided participants with limited networking opportunities. Additionally, the level of long-lasting networking may be result of an unclear understanding of the different possibilities to “be in contact”, which more often includes collaborative tools beyond the traditional contacts

The number of **ongoing on-line collaboration groups on the Programme Information and Collaboration Space (PICS)** increased to 413, while the **number of face to face meeting was 41**. The COVID-19 pandemic largely affected the numbers of collaborative actions resulting in the majority of the face-to-face meetings been replaced by online meetings. When condition allowed some Multilateral Controls, MLC, and Presences in administrative offices, PAOEs took place in person.

In addition to the EIS/EES and the general collaborative actions, the programme funded **capacity building activities**, including human competency enhancement. The programme covered the development cost of the common training materials, including electronic training modules.

In 2021, the majority of the activities were held online due to the restrictions relating to the Covid-19 pandemic. Among the initiatives organised under the programme, there were:

- eLearning courses on eFCA for direct taxation, EMCS, OSS/IOSS Basic module, IOSS advanced module for the indirect taxation;
- NanoLearnings (small learning courses of not more than 5 minutes) covering subjects such as VAT Transactions, OSS principles and procedures, Customs Territory vs VAT Territory;
- Train the Trainers (ToT) on “interactive online eLearning methods and tools”: an online course organised within the CLEP project on the initiative of some Member States to respond to the need to adapt to new working methodologies caused by the Covid-19 pandemic.

Within the competency framework for taxation (TaxCompEU), in 2021 a Reference Training programme was delivered with the required support to Member States for its implementation by means of specific tools (such as workshops, country interviews, strategic partnership agreements and high-level implementation plan, webinars, etc.). In 2021, the Commission procured 52 new eLearning modules and there were 8762³ downloads.

In 2021, the Fiscalis programme also continued supporting the implementation of the **General Data Protection Regulation**, providing collaborative fora for the Member States to improve the understanding on the data protection principles, rules and requirements in Union IT system.

3.2. Key achievements

1 707 milion	16 313	27	7**	99.99%
number of messages on the key EES* and their components	officials were trained by using EU common training material in 2021	European Electronic Systems	Expert teams in the taxation area were operation at the end of 2021	of the time on average, the Vies-on-the-Web system was available

*Key EES = EMCS messages (including National Movements), VIES, OSS

**5 expert teams were established under the previous Fiscalis programme.

3.3. Evaluations, studies and reports

According to Article 7 of the Regulation (EU) 2021/847, among the actions implemented in order to attain the general and specific objectives set out in Article 3, the programme support actions, such as the preparation of studies and other relevant written material like evaluations and comparative analysis in the tax area by external contractors, covering mainly technical issues. These studies provide a valuable contribution to understanding and increasing awareness on taxation matters.

By means of example, the “**VAT gap in the EU – report 2021**”, the ninth edition of the VAT gap study was published in 2021. The report provides for the period 2015-2019 yearly Value Added Tax (VAT) Gap estimates for the EU-28 due to (1) VAT fraud and VAT evasion, (2) VAT avoidance practices and optimisation, (3) bankruptcies and financial insolvencies, and (4) administrative errors. VAT Gap as the difference between the VAT due and the actual VAT revenues. The report also analyses econometrically the VAT Gap determinants and presents the overall collection efficiency (the “C-efficiency” ratio), updates of the Policy Gap estimates for 2019, and the contributions that reduced rates and exemptions made to the theoretical VAT revenue losses.

The **Performance Measurement Framework (PMF)** study was finalised (in January 2021) by an external contractor for both Customs 2020 and Fiscalis 2020 programmes. The study confirmed the Mid-Term Evaluation conclusions on the current PMF by the criteria of its effectiveness, efficiency, coherence, relevance and alignment with the Better Regulation Guidelines’ principles. The study team identified the PMF strengths (i.e. elements to retain) and weaknesses (i.e. areas for improvement): in particular, it identified weaknesses with the quality of indicators to meaningfully assess the performance of the programmes across the activities supported, but also its limited utility and visibility among stakeholders. Most importantly, the report presented a proposal for a new PMF and new tools for its implementation. These include updated intervention logics, lists and definitions for proposed indicators, suggested roles and responsibilities for stakeholders within DG TAXUD, data collection tools, and PMF management and reporting

tools. The new framework is partially in place. Its full implementation requires the adoption of a delegated act scheduled for Q2 2022.

The Study on the **final evaluation** of Fiscalis 2020 programme⁴ evaluated the degree to which the programme achieved its objectives, used resources efficiently (including for simplification), as well as its contribution to EU priorities of smart, sustainable and inclusive growth, continued relevance of its objectives, and EU level added value. The report built on the mid-term evaluation results and assessed the degree to which its recommendations were implemented or whether they brought about improvements. Emphasis was placed on evaluating the Fiscalis IT systems through five in-depth case studies. Other Fiscalis-funded activities were also evaluated, assessing interlinkages between types of actions to provide a well-rounded picture of programme performance as a whole.

The “**Conclusions and lesson learnt**” section, summarised the results of the analysis carried out along with some related recommendations that are expressed in terms of **lessons learned**, based on the experience acquired, anticipating the approach that will be required for the reporting activity of the Fiscalis programme.

The study on the final evaluation⁵ of the programme concluded, that in terms of efficiency, Fiscalis 2020 investment was significant, with a EUR 223,366,000 budget. The large majority (80 %) was funnelled into IT systems (development, infrastructure, testing, maintenance, operation), followed by joint actions (15 %) and training activities (5 %). Although an assessment of the different IT systems and joint actions cost-effectiveness is challenging due to a lack of cost data, positive achievements (e.g. increased VAT collection, simplification, reduced admin or compliance burdens, improved cooperation, knowledge sharing) by Fiscalis 2020 elements make the investment seem worthwhile. Notably joint actions and training activities, had a relatively small budget but considerable impact, were worthy investments.

Moreover, the programme successfully achieved its objectives and contributed to coherent tax policy and implementing Union law in taxation in the EU through information sharing and knowledge transfer. It was a suitable tool to support the EU’s fight against fraud, tax evasion and aggressive tax planning, though its impact is difficult to measure in quantitative and monetary terms

Some of the **lessons learned** indicated in the report suggested concrete actions aimed at addressing identified shortcomings or at improving effectiveness and efficiency of the programme.

The reports contains explicit reference to the contribution of the different joint actions, IT systems, expert teams and training activities to the achievement of the programmes objectives. By way of example, it is explained how certain IT systems, such as the DACs and the MOSS, were introduced to support the implementation of changes in legislation, thus facilitating communication and administration cooperation between Member States or how some joint actions addressed the correct audience in the attempt of increasing participation.

The studies and evaluations financed under the programme Fiscalis 2020 can be found on the TAXUD EUROPA website: https://ec.europa.eu/taxation_customs/calls-tenders-grants-calls-expression-interest_en and on the EU Bookshop on <https://bookshop.europa.eu/en/home/> (author: Directorate-General for Taxation and Customs Union).

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: To support tax policy and the implementation of Union law relating to the field of taxation; to foster tax cooperation, including exchange of tax information; and to support administrative capacity building, including human competency and the development and operation of the European electronic systems.

Indicator 1: Union Law and Policy application and implementation index. - Number of actions under the programme organised in this area

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	7	84	84	84	84	84	84			84
	Actual Progress									Final
	7									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of actions
Cut-Off Date	31/12/2021
Data source	Activity Reporting Tool (ART) managed by DG TAXUD

⁴ The outcomes of the study on the final evaluation of the Fiscalis 2020 programme will be published at a later stage when the SWD is ready.

⁵ The outcomes of the study on the final evaluation of the Fiscalis 2020 programme will be published at a later stage, when the SWD is ready.

Link to the objective	Via the collaborative activities the experts share good practices, elaborate on common interpretation. The number of outputs here is defined as the number of individual guidelines, recommendations or best practices/ administrative procedures included in a given document (rather than the number of documents produced in which these outputs could be included).
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: the indicator starts at 0. Target: based on extrapolation of the first month of implementation (December 2021). The number of actions reported is calculated for actions having at least one meeting in the reporting period. However, considering that the number of activities directly links with policy evolution, the target needs to be regularly revised and such revision will be due based on the first 2 years of implementation. Following that, considering the previous programme cycle, the value is expected to be stable or increasing. Stability in the score over time would mean that the number of collaborative actions in place is appropriate to ensuring the programme's contribution to the achievement of the stated objective Milestones: The milestone follows the same method used for setting the target that is based on the extrapolation from first month of implementation of the programme.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The value for 2021 equals the milestone as the implementation of the general collaborative actions (other than expert teams) started on 1 December 2021 and the fact in the first month of implementation there was already 7 general collaboration actions launched in the domain of this indicator. As the target is set compared to the first two years of measurement, feedback on the trend is relevant in 2023.

Indicator 2: Union Law and Policy application and implementation index. – Number of recommendations/guidelines issued following those actions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0		91	91	91	91	91	91			546
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number of recommendations/guidelines
Cut-Off Date	31/12/2021
Data source	Surveys
Link to the objective	Via the recommendations and guidelines generated by experts in the collaborative actions.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF
Other methodological comments	Timeliness: Yearly as from the first year Data for the current programme for 2021 available only as of the end of Q1/2022 and be reported in the next reporting cycle Baseline: the indicator starts at 0. Milestones: The milestone follows the same method used for setting the target that is the based on results achieved in 2020 under the previous programme. Target: based on the results achieved in 2020 under the previous programme and will consequently be revised based on the first two years' of implementation. No relevant data for 2021 was provided. Considering the previous programme cycle, the value is expected to be stable or increasing compared to the first two year of implementation. Stability in the score over time would reflect that the number of recommendations / guidelines being issued / revised is appropriate to ensuring the programme's contribution to the achievement of the stated objective. The target is calculated as the sum of the annual milestones
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No data available. Data and feedback on the trend will be provided in the programme statement for 2023.

Indicator 3: Learning index - Number of tax officials trained by using common training material

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	0	18 400	18 000	18 000	17 000	16 000	15 000			102 400
	Actual Progress									Final
	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of tax officials trained
Cut-Off Date	31/12/2021

Data source	Data provided by national administrations and Activity Reporting Tool (ART) (managed by DG TAXUD)
Link to the objective	Via the common training material the of tax officials trained enhance their administrative capacity building, including their human competency
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: the indicator starts at 0. Specific for 2021: All learning activities in 2021 were funded under the budget of Fiscalis 2020. Therefore, no data is reported under the new Fiscalis Programme. Milestones: are set up based on the known eLearning programme planning taking into account new courses to be launched in that year and the life cycle of the rest of the courses in portfolio. Years were new courses are planned have an increase of 10-15% and others a stable number or decrease. Target: is based on the average of last years' results without considering new courses or new delivery methods since no new major developments of courses are currently planned. Based on the evolution of the activities and training needs, the target will be subject to revision. The target is calculated as the sum of the annual milestones
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	All officials trained in 2021 were under the Fiscalis 2020 programme budget.

Indicator 4: Learning index – Number of times eLearning tax modules were downloaded

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	0	273	276	279	282	285	288			1 683
	Actual Progress									Final
0	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of e-learning modules used
Cut-Off Date	31/12/2021
Data source	Data provided by national administrations
Link to the objective	Via the e-learning modules tax officials improve their knowledge in the field of taxation and further enhance administrative capacity building, including human competency
Link MFF 14-20 / MFF 21-27	Indicator not present in 2014-2020 MFF
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: the indicator starts at 0. Specific for 2021: All learning activities in 2021 were funded under the budget of Fiscalis 2020. Therefore, no data is reported under the new Fiscalis Programme. Milestones: the number of eLearning courses in the portfolio should increase or decrease depending on the life cycle of the courses. In general, the current courses should have a life of 2-3 more years and then they will need to be deleted from portfolio or replaced by new ones in the same topic or different ones. Each year we calculate at least 3 new eLearning courses. Target: based on the average of courses developed under the previous programme taking into account the future lifecycle of the course. The number of eLearning modules should keep stable or increase at least by including new localised versions. Therefore, the target is expected to be stable or increased to the 2014-2020 average. The target is calculated as the sum of milestones.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	All downloads in 2021 were under the Fiscalis 2020 programme budget.

Indicator 5: Learning index – Quality scored by participants in training activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0%	0%	77%	76%	76%	75%	75%	75%			75%
	Actual Progress									Final
0%	0%									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Percentage %
Cut-Off Date	31/12/2021
Data source	DG TAXUD
Link to the objective	The quality scored by participants in training activities show how training activities were relevant to their work and met their expectations, as well as the content, the methodology followed and the technology employed. It shows to which extend the training activities contributed to the enhancement of the administrative capacity building, including human competency.
Link MFF 14-20 / MFF 21-27	Indicator not present in 2014-2020 MFF.

Other methodological comments	Timeliness: Yearly as from the first year. Baseline: the indicator starts at 0. Target: 75 % corresponds to a 'very good' score using the applied methodology (Kirk Patrick quality score). The target aims to be at least inside of this level. Milestones: are set up based on the known eLearning programme planning taking into account the life cycle of the courses in portfolio. Specific for 2021: All learning activities in 2021 were funded under the budget of Fiscalis 2020. Therefore, no data is reported for the new Fiscalis Programme.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	All eLearning activities in 2021 were under the Fiscalis 2020 programme budget.

Indicator 6: Availability of European electronic systems

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
99.5%	99.5%	99.5%	99.5%	99.5%	99.5%	99.5%	99.5%			99.5%
	Actual Progress									Final
	99.64%									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Percentage of time
Cut-Off Date	31/12/2021
Data source	DG TAXUD
Link to the objective	Ensuring the European Electronic Systems' continuity is a major responsibility under the programmes since disruptions in their operation would affect national authorities, economic operators and citizens across the entire EU and hamper the functioning of the internal market.
Link MFF 14-20 / MFF 21-27	Indicator not present in 2014-2020 MFF
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: Based on average of availability levels in the MASP-T for the two systems reported, VIES and EMCS. Target: corresponds to a value close to 100%, taking into account data from previous years. The availability levels stipulated in the MASP-T are: Gold (expected to be available by Q3 2022): 99.8% of the time Silver: 99.6% of the time Bronze: 99.4% of the time Best effort (defined for unclassified applications or information systems - it applies by default in case the previous service levels are not agreed upon for the particular hosted application) Milestones: The milestone follows the same method used for setting the target, that is a value close to 100%, taking into account data from previous years. They aim to reach the target every year The disaggregated data for 2021 progress are: Bronze availability level: VIES - 99.64% Silver availability level: EMCS - 99.64%
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 exceeds the milestone set, showing the effective continuity in the EES availability. Mid-term tendency to be assessed once next year's values are available.

Indicator 7: Availability of the Common Communication Network

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
99,8%	99,8%	99,8%	99,8%	99,8%	99,8%	99,8%	99,8%			99,8%
	Actual Progress									Final
	99,99%									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Percentage of time
Cut-Off Date	31/12/2021
Data source	DG TAXUD
Link to the objective	Ensuring the European Electronic Systems' continuity is a major responsibility under the programmes since disruptions in their operation would affect national authorities, economic operators and citizens across the entire EU and hamper the functioning of the internal market.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF (indicator 1)
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: same as target. Target: is set to value that provides good services. it corresponds to a value close to 100%, taking into account data from previous years. Target is 99.8%, as per the Technical Annex for FWC TAXUD/2016/CC/137 Milestones: The milestone follows the same method used for setting the target, that is a value corresponding to a value close to 100%, They aim to reach the target every year
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 exceeds the milestone set, showing the effective continuity in the CCN availability.

Mid-term tendency to be assessed once next year's values are available.

Indicator 8: IT simplified procedures for the national administrations and economic operators – Number of economic operators registered

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										2027
0	77 800	6 882 000	6 882 000	6 882 571	6 882 000	6 882 000	6 882 000			41 369 800
	Actual Progress									
	77 824									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of economic operators registered
Cut-Off Date	31/12/2021
Data source	DG TAXUD
Link to the objective	Several European Electronic Systems are used by economic operators for simplified administrative procedures. This indicator suggests whether these systems are being used, overall simplifying procedures for more economic operators than previously.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: the indicator starts at 0. Milestones is based on 2020 results, that is: VIES= 6 882 571 (OSS system entered production only in 2021). Milestones are expected to be increased or stable over the period by comparison of 2020 values. Increase compared to the 2020 value, shows that an increasing number of economic operators benefit from simplified e-procedures. Value corresponding to a significant percentage of the baseline. As these indicators are subject to strong fluctuations, the target will correspond to a lower bound under which the variation could be considered abnormal. The target is calculated as the sum of the annual milestones. 2021 results (referring period July-December): VIES available from MSs only in the summer 2022; OSS:77824
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 exceeds the milestone set, showing the significance of EES interconnectivity. Mid-term tendency to be assessed once next year's values are available.

Indicator 9: IT simplified procedures for the national administrations and economic operators – Number of applications

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										2027
0	353 000	877 000	877 000	877 000	877 000	877 000	877 000			5 615 000
	Actual Progress									
	353 254									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of applications
Cut-Off Date	31/12/2021
Data source	DG TAXUD
Link to the objective	Several European Electronic Systems are used by economic operators for simplified administrative procedures.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: the indicator starts from 0. Milestones: is a value corresponding to an increase versus 2020. Monitoring the increase or decrease Based on the results of year 2020 under the previous programme corresponding to 877.254. Data for 2021 is not representative since it refer to period July - December. As these indicators are subject to strong fluctuations, the milestones will correspond to a lower bound under which the variation could be considered abnormal. An increase or a decrease in the number of applications for VAT refunds for cross-border transactions would simply reflect economic reality. Nonetheless, a big amount of applications may indicate that the Directive is fit for purpose and a reduced number of incidents (OPX) may show that the IT system is not brake for the operators to apply. The target is calculated as the sum of the annual milestones. Result for 2021 refers to the period July-December
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 exceeds the milestone set, showing that the Directive is fit for purpose.

Indicator 10: IT simplified procedures for the national administrations and economic operators – Number of messages exchanged

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	832 000 000	1 440 000 000	1 440 000 000	1 440 000 000	1 440 000 000	1 440 000 000	1 440 000 000			9 472 000 000
	Actual Progress									Final
	832 000 000									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of system-to-system messages exchanged
Cut-Off Date	31/12/2021
Data source	DG TAXUD
Link to the objective	Several European Electronic Systems are used by economic operators for simplified administrative procedures.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	DG TAXUD is working on a solid methodology for a new Performance Measurement Framework including a new intervention logic and new indicators. The new PMF will be available in Q2 2021. Baseline: the indicator starts at 0 Milestones: It is expected to remain stable or increase by reference to the previous year. In December, millions of messages were erroneously sent by the MSs so the value should be lower in 2022. Based on the aggregated amount of the 2020 data of the following systems: VIES-1433 million; EMCS 6 615 661. It is expected to remain stable or increase by reference to the previous year. The target is calculated as the sum of the annual milestones Result for 2021 (July - December) resulting from the aggregated amount of the data of the following systems: VIES: 820,6 million; OSS: 7 376 035; EMCS:3 668 081(excluding national movements), EMCS: 3 740 576 (including national movements)
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 equals the milestone set, showing the significance of EES interconnectivity.

Indicator 11: IT simplified procedures for the national administrations and economic operators – Number of consultations carried out

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	540 000 000	840 000 000	840 000 000	840 000 000	840 000 000	840 000 000	840 000 000			5 580 000 000
	Actual Progress									Final
	540 000 000									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of consultations carried out
Cut-Off Date	31/12/2021
Data source	DG TAXUD
Link to the objective	Several European Electronic Systems are used by economic operators for simplified administrative procedures.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: the indicator starts at 0. Milestones: They remain stable or increase by reference to the previous year. Based on the aggregated amount of the 2020 data of the following systems VIES-806,8 millions- SEED- 32.606.670 - TEDB-128.217. The target is calculated as the sum of the annual milestones. Result for 2021 (July- December) resulting from the aggregated amount of the data of the following systems: VIES:522millions- SEED:17.665.527- TEDB:57.105
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 equals the milestone set showing the significance of the interconnectivity of the EES.

Indicator 12: Collaboration Robustness index - Number of face-to-face meetings held under the programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	10	240	240	240	240	240	240			1 440
	Actual Progress									Final
	10									
Are we on track :	On track									

track :	
Indicator type	Output
Unit of measurement	Number of meetings under the general collaborative actions excluding expert teams.
Cut-Off Date	31/12/2021
Data source	Activity Reporting Tool (ART) managed by DG TAXUD
Link to the objective	Collaborative meetings allow direct contacts between policy experts and thus contribute to strengthening networking and collaboration.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF (Indicator 2)
Other methodological comments	Timeliness: Yearly as from the first year: Baseline: the indicator starts at 0. Milestones: Defined based on the results achieved in 2020 under the previous programme since data from 2021 were not representative due to Covid-19 restrictions that limited the number of f2f meetings. Considering the evolution of the activities and their modalities, the milestones need to be regularly revised. Such revision will be due based on the first 2 years of implementation. Following that, the value is expected to be stable or increasing compared to the first two year of implementation. The milestones will be revised in 2024. The target is calculated as the sum of the annual milestones based on the experience of the previous programme statistics. Results in 2021: 2 physical meetings and 8 virtual meetings. A reassessment of the milestones and target is expected in 2022 in order to include expert teams meetings under this indicator
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Considering that the implementation of the collaborative actions started on 1 December 2021 and that in the first month of implementation already 10 events took place (2 physical meetings and 8 virtual), the tendencies are promising. The value for 2021 meets the milestone set.

Indicator 13: Collaboration Robustness index - Number of on-line collaboration groups

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	244	244	244	244	244	244	244			244
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of groups
Cut-Off Date	31/12/2021
Data source	Online collaboration platforms
Link to the objective	Each online and their activities allow for online collaborations complementary to and supporting face to face meetings
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: the indicator starts at 0. Milestones: the milestone follows the same method used for setting the target which is based on the value of the first year of implementation Target: based on the value of the first year of implementation. It is expected to be a stable value or increase compared to the first two years of measurement, The target will be revised based on the first 2 years of implementation. Stability in the number of collaboration groups in online collaboration platforms over time would either mean (1) that the number of groups in place is appropriate or (2) that there is further need for the programme to raise awareness of the existence of the on-line collaboration groups.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 meets the milestone set, and is thus in good track to ensure the stability in online collaboration as a final target. The mid-term tendency will be assessed once next year's values are available.

Indicator 14: Collaboration Robustness index - Degree of networking generated

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
85.2%				85.2%						90%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Percentage

Cut-Off Date	31/12/2021
Data source	Surveys
Link to the objective	Collaborative activities depending on their set up and content contribute to networking in various degrees.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: based on the value of degree of networking generated of 2020, being the last representative year. Target: based on the mid-term and final evaluation findings of the 2020 programme confirming the programme's major contribution to networking. Milestones: is based on the value of 2020 of degree of networking generated. The milestone anticipates the easing of the Covid-19 restrictions because online meetings are often considered as generating a lesser degree of networking. Result for 2021: Data available as of the end of Q1/2022 and be reported in the next reporting circle
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No visible trend since data for 2021 will only be available later in 2022. Trend to be assessed in the next exercise.

Indicator 15: Best Practices and Guideline index – Number of actions under the programme organised in this area

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	1	12	12	12	12	12	12			12
	Actual Progress									Final
	1									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of actions
Cut-Off Date	31/12/2021
Data source	Activity Reporting Tool (ART) managed by DG TAXUD
Link to the objective	Via the collaborative activities, the experts generate and share best practices and guidelines.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF
Other methodological comments	Timeliness: Yearly as from the first year. Baseline: The indicator starts at 0. Milestones: follows the same method used for setting the target. In order to ensure the progress toward the target, an interim milestone has been established at mid-term of the duration of the programme. Milestones will be revised in 2024 on the basis of the values for 2022 and 2023. Target: based on the number of actions recorded for the first month (December) of implementation of the programme (1x12=12). The target and milestones will be revised in 2024 on the basis of the values for 2022 and 2023, considering that the first months of implementation may not be representative. Stability in the number of actions in this area means this number is appropriate to ensuring the programme's contribution to this objective. Hence, the milestones and target are set based on the assumption that a 'stable' amount of actions in this area will be held in the coming years.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No visible trend since data for 2021 will only be available later in 2022. Trend to be assessed in the next exercise.

Indicator 16: Best Practices and Guideline index - Percentage of participants that made use of a working practice / guideline developed with the support of the programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
40%				50%						70%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	Surveys
Link to the objective	The use by participants of working practices/guidelines reflects the value to support cooperating and human competency and training
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF
Other methodological comments	Timeliness: Every 18 months as from June 2021 Baseline: data from the year 2020 which is the last representative year Milestone: an interim milestone has been established at mid-term of the duration

	of the programme. The milestone follows the same method used for setting the target which is defined taking into consideration the results of the previous programme Target: defined taking into consideration the average results of the previous programme. The target considers whether working practices, guidelines or recommendations are issued and shared. Yet, this depends on the type of actions organised and the type of outputs produced (working practices, guidelines or recommendations). Results for 2021: Data to be reported in the next reporting cycle
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No data, trend will be assessed once 2021 values become available in the next programme statement.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Action programme for taxation in the European Union (Fiscalis 2020)

Specific Objective 1 : To support the fight against tax fraud, tax evasion and aggressive tax planning and the implementation of Union law in the field of taxation by ensuring exchange of information, by supporting administrative cooperation and, where necessary and appropriate, by enhancing the administrative capacity of participating countries with a view to assisting in reducing the administrative burden on tax authorities and the compliance costs for taxpayers

Indicator 1: Common Communication Network for the European Information Systems

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2021
0.9994	0.9994	0.999	0.999	0.999	0.999	0.999	0.999	0.999		0.999
	Actual Progress									Final
	0.9989	0.9995	0.9998	0.99984	0.99976	0.9947	0.9997	0.999		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Percentage terms of the availability (time) of the Common Communication Network and Common System Interface (CCN/CSI)
Cut-Off Date	30/06/2021
Data source	IT statistics produced by TAXUD.
Narrative	The Common Communication Network and Common System Interface (CCN/CSI), are indispensable for the running of the taxation related European Information Systems (EIS). The taxation EIS constitute interoperable and cost-effective IT solutions to support tax authorities in implementing EU legislation. The uniform implementation of tax policy is a key element to enhance the functioning of the single market, foster Union competitiveness and protect the financial and economic interests of the Union and its Member States. This indicator provides a measurement of the programme's results on the effective operation of the CCN/CSI.
Methodology	Timeliness: for the purpose of monitoring programme's objectives, the frequency is annual. However, availability can be also measured on weekly, monthly or quarterly basis, if needed for specific IT monitoring.
Link MFF 14-20 / MFF 21-27	indicators already present in the MFF 14-20 and no changes in the methodology (n.12, 13 and 14)
Other methodological comments	Due to the complexity and interlinked budgetary contracts supporting the CCN separation of the data for year 2021 is not feasible.
Full metadata available at this address	https://myintracomm.ec.europa.eu/dg/TAXUD/IT/CCN%20CSI/Pages/ccncsi.aspx
Justification of the trend	Overall, annual values are stable. In the same vein, we are on track with regard to milestones and final target expected.

Indicator 2: Feedback from participating countries on the results of actions under the programme (collaboration robustness)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Network opportunity										
2012	Milestones									2021

	Actual Progress									Final
	109	126	174	152	177	227	270	244		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Relevant for each sub indicator (top to bottom of the table):a) Degree of networking expressed in percentage terms of positive replies.b) Number of face-to-face meetings held under the programme.c) Number of ongoing on-line collaboration groups on the Programme Information and Collaboration Space (PICS).
Cut-Off Date	30/11/2021
Data source	Relevant for each sub indicator (top to bottom of the table):a) Relevant question on the Event Assessment Form (EAF).b) Relevant question on the Event Assessment Form (EAF).c) Activity Reporting Tool (ART). ART is an IT tool used to manage activities carried out under the Customs and Fiscalis programmes.d) Programmes Information and Collaboration Space (PICS). PICS is DG TAXUD's online collaboration tool for tax and customs professionals working in administrations across Europe.
Narrative	Covid-19 impact preventing physical meetings:• Reduced perception on collaboration robustness due to physical meetings• Reduced number of meetings, • Increased online collaboration to compensate for the lack of physical meetings
Methodology	Relevant for each sub indicator (top to bottom of the table):a) EAFs are filled in online via EUSurvey by participants to an event. Timeliness: annual frequency; data collection for year X takes place between March X and March X+1.b) EAFs are filled in online via EUSurvey by participants to an event. Timeliness: annual frequency; data collection for year X takes place between March X and March X+1.c) Query in ART: total number of meetings, minus virtual meetings. Timeliness: annual query.d) Query in PICS: on-line groups (total); filter results by programme.
Link MFF 14-20 / MFF 21-27	indicator already present in the MFF 14-20 and no changes in the methodology (n.12, 13 and 14)
Other methodological comments	Data on networking effect can be obtained from the EAF and from the programme's poll. The networking data for 2020 are not available yet, as the collection of data is performed during the month of February 2021. The data will be analysed on the first week of March and available by mid of March. Next year, the collection of data will be anticipated in January, in order to have them available for the programme statements exercise.
Full metadata available at this address	N/A
Justification of the trend	The number of face-to-face meetings in 2020-2021 have been hugely impacted by the Covid-19 pandemic due to travel restrictions

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

N/A

6.1.2. Explanation on the financial contribution

During 2021, there have not been actions contributing to climate mainstreaming conducted under the auspices of the Fiscalis programme.

6.2. Contribution to gender equality

6.2.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	

Score 0 : 22.2							
Score 0*: 12.6							

(*)**Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)**
The financing is split among four categories: score 2: gender equality is principal objective, **score 1:** gender equality is significant objective, **score 0*:** likely but yet unclear impact on gender equality, **score 0:** no significant impact on gender equality.

Fiscalis programme’s interventions are split in relation to gender equality score as follows:

- Score 0: relates to IT expenditure, in particular on the development and operation of European Electronic Systems, which does not target the promotion of gender equality.
- Score 0*: relates to the remaining types of expenditure, i.e. collaboration activities, trainings, studies and communication, for which a potential to promote gender equality has been identified.

At policy level, the programme’s objective is to support tax cooperation across the EU.

DG TAXUD takes note of the potential relevance of gender equality in the taxation domain in light, inter alia, of taxation’s redistribution and multiplier effects⁶.

DG TAXUD is currently working on its Equality Work Plan. Any contextual analysis it may contain on potential gender-specific inequalities, constraints, needs or opportunities in the policy area the programme contributes to will be analysed to ascertain whether the programme could potentially be relevant to address them.

Considering this context, there have been no programme’s interventions in 2021 regarding gender equality and no interventions have been planned or identified, for the time being, for 2022.

6.3. Contribution to the sustainable development goals

6.3.1. Goals

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

The Commission’s general objective is to ensure that tax policy supports wider EU policy objectives for smart, sustainable and inclusive growth in the EU. The Fiscalis programme through its activities contributes to the achievement of the present Sustainable Development Goal promoting sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all.

Overall, considering the objectives of the programmes, all activities contribute to the EU’s priority to support ‘an economy that works for people’ for its whole duration, including both IT capacity building and collaboration activities. As a result, the whole budget of the programme contributes to the attainment of SDG 8.

As a leading example, within the VAT e-commerce package, the OSS, the One Stop Shop (OSS), which is an extension of the ‘Mini One Stop Shop’ (MOSS) to all types of services as well as to distance sales of goods, allows companies that sell goods online to deal with their VAT obligations in the EU through one easy-to-use online portal in their own Member State and their own language. Without the portal, VAT registration would be required in each EU Member State into which they want to sell – a situation cited by companies as one of the biggest barriers for small businesses trading cross-border.

1. Overview**1.1. Challenges**

Customs help safeguarding the financial interests of the Union and of the Member States and, in their role as guardians of the external EU border for goods, also protect the public against terrorist, health, environmental and other threats. Over recent years, the performance of the customs union and customs administrations has been influenced by trends such as globalisation inducing exponentially growing volumes of trade in goods, as well as by ever-increasing security threats and transnational crime. Rapidly changing technologies (digitalisation, connected-ness, Internet of things, blockchain), new business models (e-commerce, supply chain optimisation) and reduced public finances have created new challenges for the customs union. As a response, the modernisation of the customs union through the Union Customs Code was initiated, requiring multiple new European electronic systems.

In addition, in order to address these new developments, it remains essential for customs administrations to reinforce their effectiveness and cooperation to ensure they act as one, notably by fully addressing the following operational challenges:

- Unequal capacity of customs administrations in terms of unequal skills, functioning, IT systems and infrastructure and human resources capacity.
- Uneven interpretation and implementation of the customs union legislation
- Geographical, administrative, legal and strategic obstacles for cooperation between customs administrations and between them and third parties.

Furthermore, for the customs union to be fit for the future, it needs to exploit fully the advantages of digitalisation, data and new technologies. This contributes to faster, better and more streamlined customs controls and procedures within the Union, particularly at the external customs border. Digitalisation enhances the competitiveness of European businesses and reinforces the important equilibrium between customs controls and facilitation of the flow of legitimate goods transiting or moving in and out of the Union. The customs union is focused on developing a digitalised and data-rich EU customs through a series of complementary projects over the coming years.

In this context, the Customs programme supports the preparation and uniform implementation of customs legislation and policy as well as customs cooperation and administrative capacity building, including human competency and the development and operation of European electronic systems (EES). These, in addition with the support to innovation set as one of the objectives of the Customs programme, should enable the customs union and custom administrations to continue protecting the financial and economic interests of the Union and its Member States, and contributing to security and safety.

1.2. Mission (General objectives)

Many of the activities in the customs area are of a cross-border nature, involving and affecting all 27 Member States, and therefore cannot be effectively and efficiently delivered by individual national administrations. The Programme has the general objective to support the customs union and customs authorities working together and acting as one to protect the financial and economic interests of the Union and its Member States, to ensure security and safety within the Union and to protect the Union from unfair and illegal trade, while facilitating legitimate business activity.

1.3. Specific objectives

The Programme has the specific objective to support: the preparation and uniform implementation of customs legislation and policy; customs cooperation; administrative and IT capacity building, including human competency and training, as well as the development and operation of European electronic systems; innovation in the area of customs policy.

1.4. Public intervention context

Although the customs union is an area of exclusive competence with a high degree of harmonised EU legislation, the implementation of this legislation remains entirely with the individual Member States. Strong cooperation is essential to reach a deeper operational integration and to enable customs authorities in the different Member States to act as if they were one.

Against this backdrop, the Customs programme for cooperation in the field of customs has the general objective to support the customs union and customs authorities to work together and act as one to protect the financial and economic interests of the Union and its Member States. The Programme also aims at supporting the preparation and uniform implementation of customs legislation and policy as well as customs cooperation and administrative capacity building, including human competency and the development and operation of European electronic systems.

More concretely, when it comes to IT capacity-building actions, the programme aims to contribute to the development and operation of the European electronic systems for customs, including their design, specification, conformance testing, deployment, maintenance, evolution, modernisation, security, quality assurance and quality control. Over 90% of the financial capacity of the Programme is expected to be devoted to these efforts. In addition, the Programme supports the development of deep collaboration among Member States' customs authorities. The Customs programme provides fora for this collaboration, in order to allow authorities to share knowledge, experience, good practices and set guidelines together through programme activities such as task teams, networks, project groups, study visits and other similar set-ups. The Programme also facilitates collaboration with the key trade partners of the Union in the interest of the functioning of the customs union, including close cooperation with enlargement countries.

1.5. Actions

The programme supports actions such as meetings and similar ad hoc events, project-based structured collaboration, IT capacity-building actions, human-competency and other capacity-building actions, such as training and exchange of best practices, and other actions (e.g. studies, innovation activities, communication actions).

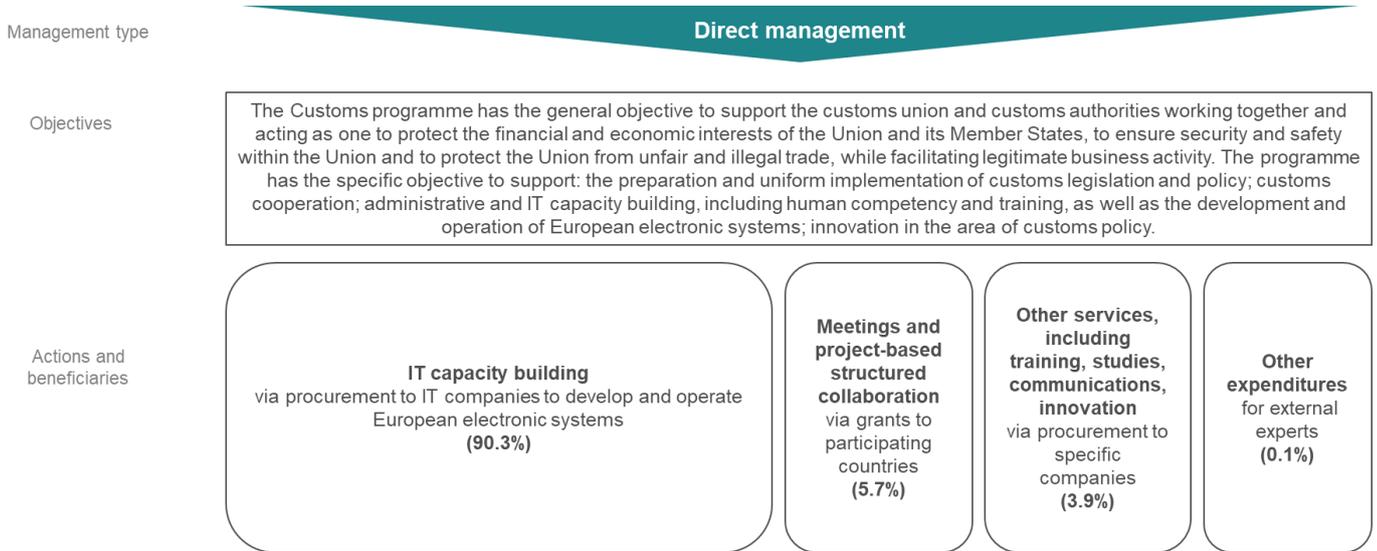

1.6. Delivery mode

The Customs programme is implemented in direct management by the Commission (DG TAXUD) through:

- Procurement contracts: for the European Information Systems expenditure, training activities and studies.
- Grant agreements with the participating countries: for collaborative actions and expert teams.

The work programmes implementing the Customs programme are established via comitology, in consultation with the Customs Programme Committee.

1.7. Graphic overview of the programme structure

*Percentages presented in the graph are based on the estimative budget distribution for the period 2021-2027.

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/444 of the European Parliament and of the Council of 11 March 2021 establishing the Customs programme for cooperation in the field of customs and repealing Regulation (EU) No 1294/2013 (OJ L 87, 15.3.2021, p. 1).	2021 - 2027	950.00

1.8.2. Legal basis explanation

The legal base of the Customs programme is the Regulation (EU) 2021/444 of the European Parliament and of the Council establishing the 'Customs' programme for cooperation in the field of customs and repealing Regulation (EU) No 1294/2013. Further, the Multiannual Work Programmes constitute the implementing acts of the programme.

The legal basis of this Regulation therefore covers customs cooperation as provided for in Article 33 of the Treaty on the Functioning of the European Union (TFEU), the internal market, as provided for in Article 114 TFEU and the common commercial policy, as provided for in Article 207 TFEU.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	125.5	130.4	133.1	135.7	138.4	141.2	144.3	948.6
NextGenerationEU								

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities	0.0	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	0.0

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The Customs programme is a continuation of the Customs 2020 programme. However, it introduces innovation as an objective of the programme. The new programme is equipped with a financial envelope of EUR 950 million for the period 2021-2027, which means an increase of 81.6% compared to the previous programming cycle.

1.10. Relevant websites providing more information

https://ec.europa.eu/taxation_customs/customs-2021-2027_en

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	125.5	948.6	13%
Payments	21.9		2%

Despite the late adoption of the new 2021-2027 Multi-Annual Financial Framework, the new Customs Regulation (11 March 2021) and the 2021-2022 Financing Decision (29 April 2021), EUR 125 517 137,47 was committed and EUR 21 865 953,30 was paid.

The largest expenditure (93%) relates to the European Electronic Systems. Further 6% was committed for collaboration activities (including expert teams) and 1% was committed on other actions such as communication, studies and consultations.

For 2022, it is planned to commit EUR 130 144 000 and to pay EUR 88 588 568. European Electronic Systems represents 94% of the expenditure, collaboration activities 3% and other actions 3%.

The 2023 payment appropriations request (EUR 88 528 568) is based on past implementation rates (22% is paid in year 1, 45% in year 2, 18% in year 3, 5% in year 4 and the remainder in year 5).

The impact of Covid-19 pandemic is yet to be determined for the new programme due to the late adoption of the Regulation and Financing Decision. For procurement, largely related to the maintenance and development of the customs IT systems, the impact is very limited. However for grants on collaborative actions, there might be an impact due to the ongoing absence of travels and therefore of costs related to physical meetings (organisational and participation costs). The impact on the previous programme was notable (see section 2.2.) resulting in under-consumption of grants' budget allocations, which led to the extensions of the 2020 grants until the end of November 2021. For these reasons, the grants under the new programme only started in December 2021 and the impact of Covid-19 is still to be established primarily depending on the evolution of the pandemic and on the post-Covid-19 reality in terms of physical meetings.

2.2. Programme(s) 2014-2020: Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	532.5	532.5	100%

Payments	502.1	94%
-----------------	-------	-----

As can be seen from the above financial performance table, 100% of the programme's total commitment appropriations (EUR 532 490 464) have been consumed. To date, 94% has been paid. The remaining payments will be finalised in the 2022-2023 period.

2014-2020 programme	2020	2021	2022
Commitment appropriations	75 164 000	1 249 467*	NA
Payment appropriations	93 498 094	61 000 000	25 841 760

*For European Electronic Systems and other service contracts (studies): 2020 budget was committed in 2021 via a global commitment done at the end of 2020 to be able to bridge the gap between the end of the former programmes and the adoption of the new MFF and related Financing Decision. For collaboration activities (including expert teams), external experts and the remaining service contracts: there were no new commitments done during 2021 related to the budget of the Customs 2020 programme. All activities continued in 2021 based on commitments done in 2020.

For 2022, it is planned to pay EUR 25 841 760, to honour payments under contracts and grant agreements made on the former programme.

The 2023 payment appropriations request (EUR 4 660 000) is based on past implementation rates. The last payment under the former programme is scheduled to take place in 2024).

The Covid-19 pandemic affects programme grant expenditures due to the limitations on travel and physical meetings and almost complete shift to virtual meeting. Nevertheless, grants only represent approximately 5.7% of the Customs programme's budget, which makes the Covid-19 impact on the expenditure of the programme relatively low.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The delayed adoption of the Multiannual Financial Framework 2021-2027 resulted in the late adoption and launch of the Customs programme. The Customs programme entered into force on 15 March 2021 with the corresponding late adoption of the Financing Decision / Multi-Annual Work Programme (29 April 2021) and start of activities.

Due to the fact that 2021 was a transitional year and given the rolling nature of the activities under the previous programme, the performance of the previous and active programme is intertwined, irrespective of the financing source (Customs 2020 vs. Customs Programme 2021-2027) and with a substantial spill-over effect from the Customs 2020 programme to the new Customs programme. Therefore, for reporting purposes, the performance outlined below focuses on the previous programme. Information on the active programme is therefore limited to financial outputs (grants launched/signed, procurement processes closed).

3.1.2. Active programme performance

During Q4 2021, three grants agreements were signed in the field of general collaboration activities and expert teams¹:

- General Collaboration Activities Grant in the field of Customs: sets the overall framework for project-based structures collaboration and meetings (signed December 2021; implementation until end of 2022).
- CLET 3 Expert Team: provides financial support to the customs authorities of participating countries in the area of Customs Laboratories (signed December 2021; implementation until November 2024).
- ICS2 SSA Expert Team – Phase 1: provides financial support to the ICS2 system (a new strategic platform for customs risk management), in particular regarding safety and security analytics (signed December 2021; implementation until end of 2022).

Due to the delayed programme launch (see introduction), the signature of the new grant agreements and the implementation of general collaboration activities and expert team grants for the Customs programme could only start in December 2021. This explains the absence of major achievements or outputs attained during this period regarding the collaborative activities. However, the following can be highlighted from this first month of implementation of the programme that was also a month of the Christmas holidays:

¹ Art. 9(3) of Regulation (EU) 2021/444 establishing the Customs programme: in accordance with point (f) of the first paragraph of Article 195 of the Financial Regulation, grants shall be awarded without a call for proposals where the eligible entities are customs authorities of participating countries, provided that the conditions set out in Article 5 of this Regulation are met.

- General Collaboration Activities Grant in the field of Custom: during the month of December 2021, three activities were launched, including two project groups and one capacity building activity initiated by the Commission.
- Expert team for pooling and sharing specific analytical expertise of Customs Laboratories at European Union level – Customs Laboratories Expert Team (CLET 3): the group continued its work to analyse a large number of potentially dangerous substances or of products representing an important loss of revenue for Union and Member State budgets, and sharing of results at Union level through the maintenance of a common database.
- Import Control System 2 Safety and Security Analytics Expert Team (ICS2 SSA): the expert team brings forward a Safety and Security Analytics (SSA) capability to enable the Member States and the Commission to work together with the support of additional tools and working methods, leveraging the common repository and ICS2 business processes.

In addition, 254 specific contracts were signed under multi-annual framework contracts (information technology, studies, communication and other service contracts). In this regard, it is worth noting that the budget for IT in 2021 was split between Customs 2020 (first half of the year) and the new Customs Programme (second half of the year). Therefore, achievements related to IT are also split (see chapter 3.2).

3.1.3. Previous Programme Performance

The Customs 2020 programme's specific objective is to support customs authorities in protecting the financial and economic interests of the Union and of the Member States, including the fight against fraud and the protection of intellectual property rights, to increase safety and security, to protect citizens and the environment, to improve the administrative capacity of the customs authorities and to strengthen the competitiveness of European businesses.

As concluded in the final evaluation of Customs 2020 prepared by external contractors, the Customs 2020 programme activities are highly complementary, provide tangible outputs by pooling resources and generated considerable benefits. The IT capacity building activities, which represented the biggest share of the programme expenditure (87%), was the area where the programme led to the biggest savings, by creating common components for the European information systems for customs (EIS) thus avoiding multiplication of efforts for Member States and reducing compliance costs and administrative burdens for economic operators. Joint (collaboration) actions (11% of programme's budget) and human competency building activities (2%) also had a high value for money, considering the small proportion of budget expenditure compared to their high reported contribution to the achievement of programme objectives.

The performance under the programme's specific objective is presented along the lines of the Customs programme operational objectives and the specific objectives of the Customs programme (2021-2027):

General Performance:

Despite the impact of the Covid-19 pandemic and the delayed adoption of the Programme Regulation, in 2021 the collaboration generated by the programme remained strong. The majority of the collaboration action managers and the participants adapted to the new working modalities (online collaboration/online meetings). Business continuity of IT was ensured as proven by the stable availability of IT systems.

On the other hand, whilst 90.7%% of the participants of the Programme's collaboration actions reported that they were passing on the information obtained via programme activities within their administration, the cascade effect seems to be rather limited as the generated knowledge stays mainly with the officials directly involved in programme activities as indicated by the results of polls addressed to customs officials in the EU. In addition, more than 70% of the initiatives under the programme other than bilateral activities are proposed and managed by the Commission. The contacts with the Member States confirmed that this stems from the fact that the willingness in general in the participating countries to initiate and take ownership over specific actions is rather limited, a challenge which is also impacting expert teams (e.g. ICS2 and Expert Team on new approaches to develop and operate Customs IT Systems (ETCIT 3) preparations). As a result, the need to further promote national administrations' involvement and leadership in the implementation of the programme can be highlighted.

Uniform implementation of customs legislation and policy:

In 2021, the Programme supported 33 collaborative actions whose primary objective identified a strong link with the preparation, coherent application and effective implementation of Union law/policy. Among these, the programme group dedicated to the implementation of the business-to-government framework of the Single Window, the project group and High-level Seminar on E-commerce under the Slovenian Presidency (October 2021), and the AEO Network are noteworthy examples.

In addition, it is worth mentioning that the trend for the upcoming Customs programme in this area is promising, since the implementation of the collaborative actions started on 1 December 2021 and this first month there was already one action launched in this domain under the new cycle.

However, the April 2021 Special Report of the European Court of Auditors on customs controls² highlighted that while implementing the new customs financial risk framework was an important step towards uniform application of controls, the framework is not designed well enough to ensure that Member States perform controls in a harmonised way. Moreover, the Member States interpret, and thus implement, the legal acts and the related guidance in different ways. The Court consequently recommended to the Commission to enhance the uniform application of customs controls, and develop and implement a fully-fledged analysis and coordination capacity at EU level. These conclusions call for further investigation into how the Customs programme could be engaged more in overcoming these weaknesses.

Customs cooperation:

The number of meetings organised under the programme has been impacted by the Covid-19 pandemic. This prevented the programme from attaining the target to organise 380 meetings per year, whilst the programme was recording figures well on track before 2020. Notably, in 2020, 85 meetings were organised, down from 570 in 2019. Covid-19 also impacted the networking opportunities under the programme, leading to a decrease in the satisfaction rate of participants from levels above the 90% target in previous years (96%) to a rate lower than the target in 2020 (81%). However, in December 2021, the first month of implementation of the new Customs 2021 programme, already 7 events took place, showing a continuing tendency of relying on online meetings in the absence of physical ones.

Online collaboration groups remained active during the pandemic. In 2021, a total of 240 groups were active in on the Programme’s online collaboration platform (PICS). This figure is lower than the peak number of groups reached in 2020 (326). However, the 2021 figure still reflects a dynamic trend for the Programme overall, beyond the target set of ‘stability or increase’. Indeed, the initial number of groups recorded in 2014 when the programme started (117) almost doubled by the end of 2021.

Expert teams also remained active contributors to programme activities in 2021. For instance, the expert team dedicated to the Eastern and South-Eastern Land Border (CELBET) had intensive interactions in 2021. In addition, the expert team on new approaches to develop and operate customs IT systems (ETCIT) contributed to the initial work of the Wise Persons Group³ on the future of customs by sharing its findings on the new approaches to customs IT collaboration. ETCIT also triggered the establishment of a network of Chief Information Officers (CIO network) which will result in improved, more effective and efficient national IT development and operation. The expert teams on Binding Tariff Information (BTI 2) and on customs laboratories (CLET) were also operational in 2021.

Administrative and IT capacity building, including human competency and training, as well as the development and operation of EES:

In order to ensure the uninterrupted and secure functioning of the EES, despite the late entry into force of the Programme, measures had to be engaged to stretch the existing contracts to their ultimate limits. This enabled the network and system availability in 2021, which have to remain close to 100%. The development, maintenance, operation, and quality control of common components of the existing and new EES concerned 51 systems in 2021.

In 2021, the Commission progressed well on the developments of the Union Customs Code (UCC) IT systems under its responsibility and reached approximately 84% of readiness by December 2021 working towards the deadlines set by legal acts. No delays beyond these legal deadlines were identified or materialised.

Regarding human competency and training, the number of officials in the programme beneficiary administrations trained in 2021 increased significantly in the last year given the availability of the new Customs & Tax EU Learning Portal, from 18 109 in 2020 up to 384 696 in 2021. In terms of the number of downloads of the courses, while previously the number was increasing in the last year downloads significantly decreased. The reason is the online availability of the courses in the Learning portal, which has replaced downloading. In that sense, the trend is overall positive, since the number of officers accessing the courses in 2021 was 20 times more than in the previous year.

3.2. Key achievements

2.8 billion	384 696	82%	99.99%
messages were exchanged in 2021 via the key customs EES and their components	officials were trained by using EU common training material in 2021	of the Union Customs Code IT systems’ completion rate was achieved by the end of 2021	of the time in 2021 the Common Communication Network was available for use

² Special Report 04/2021: Customs controls: insufficient harmonisation hampers EU financial interests (<https://www.eca.europa.eu/en/Pages/DocItem.aspx?did=58256>)

³ https://ec.europa.eu/taxation_customs/customs-4/wise-persons-group-challenges-facing-customs-union-wpg_en

3.3. Evaluations, studies and reports

The Customs programme finances the procurement of studies, evaluations and comparative analysis in the customs area by external contractors, covering mainly technical issues as the ones mentioned below as examples:

Concerning studies, the study supporting an interim evaluation of the UCC implementation was finalised in December 2021. Its publication is expected by Q2 of 2022. In addition, in early 2021 the Study on the Implementation of the EU Strategy and Action Plan for Customs Risk Management (RIMSCO) was finalised. The Customs Laboratories European Network (CLEN) also finalised two studies in 2021, CLEN2SAND on designer drugs and other illicit products, and the CLEN - Consultation of STN on the web FIZ-CAS, which were concluded in May and September, respectively.

The study on the Customs programme’s Performance Measurement Framework (PMF) s was finalised (in January 2021) by an external contractor for both Customs 2020 and Fiscalis 2020 programmes. The study confirmed the Customs 2020 programmes’ mid-term evaluation conclusions on the current PMF by the criteria of its effectiveness, efficiency, coherence, relevance and alignment with the Better Regulation Guidelines’ principles. The study team identified the PMF strengths (i.e. elements to retain) and weaknesses (i.e. areas for improvement): in particular, it identified weaknesses with the quality of indicators to meaningfully assess the performance of the programmes across the activities supported, but also its limited utility and visibility among stakeholders. Most importantly, the report presented a proposal for a new PMF and new tools for its implementation. These include updated intervention logics, lists and definitions for proposed indicators, suggested roles and responsibilities for stakeholders within DG TAXUD, data collection tools, and PMF management and reporting tools. The new framework is partially in place. Its full implementation requires the adoption of a delegated act scheduled for Q2 2022.

The final evaluation of the Customs 2020 programme was launched in the second half of 2020, with an evaluation Staff Working Document and a Commission report to be prepared by the end of Q1 2022. The Final Evaluation report prepared by external contractors concluded that the Customs 2020 programme largely contributed to facilitating and enhancing exchange of information and cooperation between customs authorities and their officials within the EU through its three types of activities (IT capacity building activities, joint actions and human competency building). Several joint actions and IT capacity building activities under the programme supported the preparation, effective implementation and coherent application of Union law in the field of customs and related matters, and the human competency building activities supported its coherent application. This cooperation and IT development could have not been achieved by the Member States alone. Furthermore, the evaluation confirmed the capacity of the programme to address a broad range of issues and emerging challenges such as Covid-19 and the withdrawal of the United Kingdom from the European Union, thanks to its general character, as well as its complementarity with broader Union policies, especially in the area of prohibitions and restrictions.

The studies and evaluations financed under the programme Customs 2020 can be found on the TAXUD EUROPA website: https://ec.europa.eu/taxation_customs/calls-tenders-grants-calls-expression-interest_en and on the EU Bookshop on <https://bookshop.europa.eu/en/home/> (author: Directorate-General for Taxation and Customs Union).

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Support the preparation and uniform implementation of customs legislation and policy as well as customs cooperation and administrative capacity building, including human competency and the development and operation of European electronic systems.

Indicator 1: Union Law and Policy application and implementation index - Number of actions under the programme organised in this area

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	5	60	60	60	60	60	60			60
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of actions
Cut-Off Date	31/12/2021
Data source	Activity Reporting Tool (ART) managed by DG TAXUD
Link to the objective	The experts share good practices via the collaborative activities and elaborate on the common interpretation and implementation of the policy and legislation, thus directly contributing to the preparation and uniform implementation of customs legislation and policy.
Link MFF 14-20 / MFF 21-27	Indicator is already present in 2014-2020 MFF (Indicator 4).
Other methodological comments	Data collected via ART. For 2021, the reporting period is December (overlap with previous programme funding). Milestones and target are set based on extrapolation of the first month of implementation (Dec-2021). The number of actions reported is calculated for actions having at least

	one meeting with direct link to the related specific objective (preparation and uniform implementation of customs legislation and policy). Baseline: the indicator starts at 0. The target will be revisited. The first revision will be due based on the first two years of implementation. Considering previous programme cycles, value is expected to be stable or increasing.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	As the target is set compared to the first two years of measurement, feedback on the trend is relevant in 2023. However, as the implementation of the general collaborative actions (other than expert teams) started on 1 December 2021 and the fact in the first month of implementation there was already 1 general collaboration action launched in the domain of this indicator, the tendency is promising.

Indicator 2: Union Law and Policy application and implementation index – Number of recommendations/guidelines issued following those actions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	0	107	107	107	107	107	107			642
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number of recommendations/guidelines
Cut-Off Date	31/12/2021
Data source	Surveys
Link to the objective	The recommendations/guidelines generated by the experts in the collaborative actions directly contribute to the preparation and uniform implementation of customs legislation and policy.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF (Indicator 4).
Other methodological comments	The action leaders report on the number of individual guidelines, recommendations or best practices/administrative procedures included in a given document (rather than the number of documents produced in which these outputs could be included). For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is the month of December 2021. Data for 2021 will be available as of end of Q1 2022, to be reported in next reporting cycle. The milestones and target are set based data on 2020 and will consequently be revised based on the first two years' of implementation. Considering the previous programme cycles, the value is expected to be stable or increasing compared to the first 2 years of implementation average of the programme. Baseline: the indicator starts at 0. The target is calculated as the sum of the annual milestones.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No data available. Data and feedback on the trend will be provided in the programme statement for 2023.

Indicator 3: Learning index - Number of customs officials trained by using common training material

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	0	28 140	29 500	31 000	31 000	32 500	34 000			186 140
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of customs officials trained with eLearning courses.
Cut-Off Date	31/12/2021
Data source	Data provided by Customs & Tax EU Learning portal (managed by DG TAXUD).
Link to the objective	The training of customs officials contributes to the programme's objective of human competency and training. Human competency building activities also indirectly supports the uniform implementation of customs policy and law.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF (Indicator 7).
Other methodological comments	Specific for 2021: All learning activities in 2021 were funded under the budget of Customs 2020. Therefore, no data is reported for the new Customs Programme so the figure for 2021 is zero. Method to set the baseline: the indicator starts at 0. A better dissemination through the Customs & Tax EU Learning Portal has increased exceptionally the indicator in 2021. Method to set the milestones and the target: expectation of a 5% increase per year of the baseline or stable results depending on the programme planning. However, future milestones will depend on the available courses offered every year. The target is calculated as the sum of the annual milestones.

Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	All officials trained in 2021 were under the Customs 2020 programme budget.

Indicator 4: Learning index - Number of times eLearning customs modules were downloaded

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	0	445	450	455	460	465	470			2 745
	Actual Progress									Final
0										
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of e-learning modules in the portfolio used by customs professionals.
Cut-Off Date	31/12/2021
Data source	Data provided by Customs and Tax EU Learning portal.
Link to the objective	The usage of eLearning modules contributes to the programme's objective of human competency and training. Human competency building activities also indirectly supports the uniform implementation of customs policy and law.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF (Indicator 7).
Other methodological comments	Specific for 2021: All learning activities in 2021 were funded under the budget of Customs 2020. Therefore, no data is reported for the new Customs Programme. Method for setting the baseline: the indicator starts at 0. Method for setting the milestones and the target: The number of eLearning courses in the portfolio should increase or decrease depending on the life cycle of the courses in use. In general, the current courses should have 3-4 more years of use and then they will need to be deleted from portfolio or replaced by new ones in the same topic or different ones. Each year we calculate at least 5 new eLearning courses to be produced and in use (taking into account number of new development minus the deletion of outdated ones). The target is calculated as the sum of the annual milestones.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	All downloads in 2021 were under the Customs 2020 programme budget.

Indicator 5: Learning index - Quality scored by participants in training activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	0%	74%	74,5%	75%	75%	75%	75%			75%
	Actual Progress									Final
0										
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Kirkpatrick score (average of score in 3 categories: technology, methodology and content) and subcategories.
Cut-Off Date	31/12/2021
Data source	DG TAXUD satisfaction survey.
Link to the objective	Quality training activities contribute to the specific objective of the programme of reinforcing the skills and competences of customs professionals.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF (not included in previous Programme Statements).
Other methodological comments	Specific for 2021: All learning activities in 2021 were funded under the budget of Customs 2020. Therefore, no data is reported for the new Customs Programme. Method for setting the baseline: the indicator starts at 0. Method for setting the milestones and the target: Application of the Kirkpatrick methodology according to which a score equal or above 75% places the learning material on the highest level of quality (very good).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	All eLearning activities in 2021 were under the Customs 2020 programme budget.

Indicator 6: Availability of European electronic systems

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
99.60%	99.60%	99.60%	99.65%	99.65%	99.65%	99.65%	99.65%			99.65%
	Actual Progress									Final
99.60%	99,88%									
Are we on track :	On track									

track :	
Indicator type	Output
Unit of measurement	Percentage of time.
Cut-Off Date	31/12/2021
Data source	DG TAXUD
Link to the objective	Ensuring the European Electronic Systems' continuity is a major responsibility under the programmes since disruptions in their operation would affect national authorities, economic operators and citizens across the entire EU and hamper the functioning of the internal market.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF (Indicator 5).
Other methodological comments	Data is collected from the ITSM Operation & TES contractors. For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period is Jul-Dec 2021. The data for 2021 is calculated as an average of the availability of the different IT systems: -Gold – 99.8%: CS/RD2-100%; EOS-EORI-99.92%; REX-99.99%; CRS-100%; TARIC transmission-99.8% TARIC3-99.99%; Quota-99.95%; INF-SP-100%; INF-STP-100%; EBTI-100%; UUMDS-99.92%; CERTEX-99.96%. -Silver – 99.6%: NCTS-99.48%;AES/ECS-99.48%; ICS2-99.59%; -Bronze – 99.4% -Best Effort – 98.0% Since the availability of the EES for Customs is crucial for the functioning of the customs union, the target and milestones have been set at close to 100% based on the average target for the individual systems concerned as per standard IT categorisation of “gold/silver/bronze/best effort” and the Multiannual Strategic plan for customs IT systems – MASP-C. Baseline based on silver category of various levels.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 exceeds the milestone set, showing the effective continuity in the EES availability. Mid-term tendency to be assessed once next year's values are available.

Indicator 7: Availability of the Common Communication Network

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
99,8%	99,8%	99,8%	99,8%	99,8%	99,8%	99,8%	99,8%			99,8%
	Actual Progress									Final
	99,99%									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Percentage of time.
Cut-Off Date	31/12/2021
Data source	DG TAXUD
Link to the objective	Reliance on its availability is a precursor for other systems – including contributing to the EU internal market as a whole – to function smoothly. Ensuring the Common Communication Network's continuity is a major responsibility under the programme since this secure dedicated network forms the IT architecture and backbone of cooperation between authorities.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF (Indicator 3).
Other methodological comments	The data is collected monthly from the contractor and the reported data is the average of the monthly values. For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is July to December 2021. Since the availability of the CCN is crucial for the functioning of the customs union, the target and milestones for this indicator have been set at close to 100% based on the average of standard IT categorisation of “gold/silver/bronze/best effort” (also confirmed in the Multiannual Strategic plan for customs IT systems – MASP-C).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 exceeds the milestone set, showing the effective continuity in the CCN availability. Mid-term tendency to be assessed once next year's values are available.

Indicator 8: Use of key European electronic systems aimed at increasing interconnectivity and moving to a paper-free Customs Union - Number of messages exchanged on the key EES/system components

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	2 000 000 000	2 800 000 000	2 800 000 000	2 800 000 000	2 800 000 000	2 800 000 000	2 800 000 000			18 800 000 000
	Actual Progress									Final
	2 019 695 761									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of messages exchanged.
Cut-Off Date	31/12/2021
Data source	DG TAXUD
Link to the objective	Use of key European electronic systems aimed at increasing interconnectivity and moving to a paper-free Customs Union.
Link MFF 14-20 / MFF 21-27	Indicator not present in 2014-2020 MFF.
Other methodological comments	Use of key European electronic systems aimed at increasing interconnectivity and moving to a paper-free Customs Union. For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is July to December 2021. The figure in "Actual progress" is the total number of messages exchanged for all IT systems. For 2021, the disaggregated data is as follows: ECS (34 252 419), ICS(48 287 818), NCTS(45 142 604), Surveillance (982.454.038) and ICS2 (909 558 882). Baseline: the indicator starts at 0. The values for milestones and target are calculated based on the full year data from 2021. These will be reviewed in 2024, considering the average values for 2022-2023. The target is calculated as the sum of the annual milestones.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 exceeds the milestone set, showing the significance of EES interconnectivity. Mid-term tendency to be assessed once next year's values are available.

Indicator 9: Use of key European electronic systems aimed at increasing interconnectivity and moving to a paper-free Customs Union - Number of records consulted in key databases

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	59 000 000	118 000 000	118 000 000	118 000 000	118 000 000	118 000 000	118 000 000			767 000 000
	Actual Progress									Final
	59 060 808									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of consultations carried out
Cut-Off Date	31/12/2021
Data source	DG TAXUD
Link to the objective	Use of key European Electronic Systems aimed at increasing interconnectivity and exchanging information.
Link MFF 14-20 / MFF 21-27	Similar indicator already present in 2014-2020 MFF but no equivalence as the reported data is mainly the consultation of all systems of DDS2 which includes some Taxation systems as well
Other methodological comments	The data is extracted from the different administrative systems. For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is July to December 2021. The figure in actual progress is the total number of records for all IT systems. For 2021, the disaggregated data is as follows: CDS: 89 271; Customs Offices database: 3 304 915; EBTI: 22 794 573; MRN follow-up: 50 528; QUOTA: 4 123 700; TARIC: 11 909 800; CLASS: 22 344; DDS2-EO: 7 531 882; ECICS2: 9 039 064; SUSP: 52 258; Surveillance: 142 473. Baseline: the indicator starts at 0. The values for milestones and target are based on the extrapolated values of 2021 that represent a six-month period. These will be revised in 2024, considering the average values for 2022-2023. The target is calculated as the sum of the annual milestones.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 exceeds the milestone set, showing the significance of EES interconnectivity. Mid-term tendency to be assessed once next year's values are available.

Indicator 10: Union Customs Code completion rate

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2025
75%	82%	92%	98%	99%	100%					100%
	Actual Progress									Final
	82%									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Percentage %
Cut-Off Date	31/12/2021
Data source	DG TAXUD
Link to the objective	The UCC completion rate is linked to the objective of the programme to support the preparation and

	uniform implementation of customs legislation and policy.
Link MFF 14-20 / MFF 21-27	Indicator not present in 2014-2020 MFF.
Other methodological comments	The baseline for this indicator is the result achieved by the end of 2020 (ECA report on the UCC IT Systems). The milestones are set assuming a steady progress towards the completion of the UCC IT systems by 2025 which is a legal requirement (UCC and UCC Work Programme).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 meets the milestone and is thus on track with the UCC timeline of implementation.

Indicator 11: Collaboration Robustness index - Number of face-to-face meetings held under the programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	7	250	250	250	250	250	250			1 500
	Actual Progress									Final
	7									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of meetings under the general collaborative actions excluding expert teams.
Cut-Off Date	31/12/2021
Data source	Activity Reporting Tool (ART) managed by DG TAXUD.
Link to the objective	Collaborative meetings allow direct contacts between policy experts and thus contribute to strengthening networking and collaboration.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF (indicator 1).
Other methodological comments	The data is collected via the Activity Reporting Tool that includes all general collaborative action meetings (both virtual and physical ones). For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is the month of December 2021. In the reporting period only virtual meetings took place. The baselines of this indicator is 0, since the number of meetings recorded under Customs 2020 did not include virtual meetings and is hence not comparable. In addition, the pre-COVID-19 situation makes data from the previous programme non-representative for the current situation. The target is calculated as the sum of the annual milestones. Milestones and target values have been calculated based on the experience from the previous programme statistics. A reassessment of the milestones and target is expected in 2022 in order to include expert team meetings under this indicator.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Considering that the implementation of the collaborative actions started on 1 December 2021 and that in the first month of implementation already 7 events (all 7 being virtual meetings) took place, the tendencies are promising.

Indicator 12: Collaboration Robustness index - Number of on-line collaboration groups

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	240	240	240	240	240	240	240			240
	Actual Progress									Final
	240									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of active groups.
Cut-Off Date	31/12/2021
Data source	Online collaborative platform(s).
Link to the objective	Each online group and their activities allow for online collaboration complementary to and supporting face-to-face meetings.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF (Indicator 1).
Other methodological comments	The data is collected via the statistical features of online collaborative platform(s). For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is the month of December 2021. Baseline: the indicator starts at 0. Stability in the number of collaboration groups throughout the cycle means that this number is appropriate to ensuring the programme's contribution to its objectives. Hence, the milestones and target have been set based on the assumption that a 'stable' amount of groups throughout the cycle will be maintained, based on the values of 2021. This figure will be revised in 2024 on the basis of the experience from the first two years of implementation of the programme.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 meets the milestone set, and is thus in good track to ensure the stability in online

	collaboration as a final target. The mid-term tendency will be assessed once next year's values are available.
--	--

Indicator 13: Collaboration Robustness index – Degree of networking generated

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
80%	80%			85%						90%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	Surveys
Link to the objective	Collaborative activities depending on their set-up and content contribute to networking in various degrees.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF (indicator 1).
Other methodological comments	The data is collected via surveys addressed to the participants in the programme's general collaborative activities. For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is the month of December 2021. Data for 2021 to be reported in next reporting cycle. The baseline of the indicator is the data from the last representative year from the previous programme (year 2020). The milestones and target have been calculated on the basis of the mid-term and final evaluation findings of the Customs 2020 programme, which confirm the programme's major contribution to networking, and the assumption that the new programme should maintain a similarly high level of networking. The milestone anticipates the easing of the Covid-19 restrictions because online meetings are often considered as generating a lesser degree of networking. However, in light of the uncertain COVID-19 context, the milestones may be revised in 2024.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No visible trend since data for 2021 will only be available later in 2022. Trend to be assessed in the next exercise.

Indicator 14: Best Practices and Guideline index – Number of actions under the programme organised in this area

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	1	12	12	12	12	12	12			12
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of actions
Cut-Off Date	31/12/2021
Data source	Activity Reporting Tool (ART) or its replacement managed by DG TAXUD.
Link to the objective	Via the collaborative activities, the experts generate and share best practices and guidelines.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF (Indicator 6).
Other methodological comments	For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is the month of December 2021. Stability in the number of actions in this area means this number is appropriate to ensuring the programme's contribution to this objective. Hence, the milestones and target are set based on the assumption that a 'stable' amount of actions in this area will be held in the coming years. Baseline: the indicator starts at 0. More concretely, the target set is an extrapolation based on the number of actions recorded for the first month of implementation of the programme (1x12=12). The milestones and target will be revised in 2024 on the basis of the values for 2022 and 2023, considering that the first months of implementation may not be representative.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Value for 2021 meets the milestone set, showing a positive starting trend in the first month of implementation of the programme in terms of actions in this area. Mid-term tendency to be assessed once next year's values are available.

Indicator 15: Best Practices and Guideline index – Percentage of participants that made use of a working practice / guideline developed with the support of the programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
75%	75%	75%	75%	75%	75%	75%	75%			75%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Percentage %
Cut-Off Date	31/12/2021
Data source	Surveys
Link to the objective	The higher the number of respondents that indicate that they made use of the programme outputs such as indicators and guidelines, the higher the programme’s contribution is to the uniform implementation of customs legislation and policy as well as customs cooperation and administrative capacity building.
Link MFF 14-20 / MFF 21-27	Indicator already present in 2014-2020 MFF (Indicator 6).
Other methodological comments	The data is collected via surveys annually. For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is the month of December 2021. Data for 2021 will be reported in the next programme statement. The baseline is according to the last representative year’s data under the Customs 202 programme (year 2020). The milestones and target have been set on the tendencies monitored under the Customs 2020 programme and the evident stabilisation at around 75%. The milestones and target will be revised in 2024 on the basis of the values for 2022 and 2023.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No data; trend will be assessed once 2021 values become available in the next programme statement in 2023.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Action programme for customs in the European Union (Customs 2020)

Specific Objective 1 :to support customs authorities in protecting the financial and economic interests of the Union and of the Member States, including the fight against fraud and the protection of intellectual property rights, to increase safety and security, to protect citizens and the environment, to improve the administrative capacity of the customs authorities and to strengthen the competitiveness of European businesses

Indicator 1: Feedback from participants in actions under the Programme and users of the Programme index (Collaboration robustness)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Network opportunity										
2013	Milestones									2021
	0.96	0.9	0.9	0.9	0.9	0.9	0.9	0.9		0.9
	Actual Progress									Final
	0.97	0.96	0.96	0.96	0.96	0.96	0.81	0.811		
Are we on track :	Moderate progress									
Cooperation: Number of face to face meetings										
2013	Milestones									2021
	380	380	380	380	380	380	380	380		380
	Actual Progress									Final
	265	547	552	448	473	570	85	20		
Are we on track :	Moderate progress									
Number of online groups (taxation and joint groups)										
2013	Milestones									2021
	200	200	200	200	200	200	200	200		200
	Actual Progress									Final
	117	124	465	147	186	237	326	240		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Relevant for each sub indicator (top to bottom of the table): a) Degree of networking expressed in percentage terms of positive replies. b) Number of face-to-face meetings held under the programme. c) Number of ongoing on-line collaboration groups on the Programme Information and Collaboration Space (PICS).
Cut-Off Date	30/11/2021
Data source	Relevant for each sub indicator (top to bottom of the table):a) Relevant question on the Event Assessment Form (EAF) b) Activity Reporting Tool. c) Programmes Information and Collaboration Space (PICS). PICS is DG TAXUD's online collaboration tool for tax and customs professionals working in administrations across Europe.
Narrative	Covid-19 impact preventing physical meetings:• Reduced perception on collaboration robustness due to lack of physical meetings. Online meetings generate less contacts and less networking. • Reduced number of meetings, however the trend is upward following 2020 low point. Online meetings replaced physical meetings where appropriate and relevant. • The number of active collaboration groups is proportionate to the level of networking robustness.
Methodology	Relevant for each sub indicator (top to bottom of the table):a) EAFs are filled in online via EUSurvey by participants to an event. Timeliness: annual frequency; data collection for year X takes place between March X and March X+1. Programme polls are done via EUSurvey every 18 months. b) Number of “operational” events registered for the reporting period in ART (face-to-face physical meetings only); c) Number of active groups registered in PICS. The group’s domain should be identified as “customs”.
Link MFF 14-20 / MFF 21-27	Indicators 11, 12 and 13.
Other methodological comments	Data on networking effect can be obtained from the EAF and from the programme's poll. In order to ensure comparability of results across years and consistency with figures reported in the AAR, the results for 2017 and 2018 have been modified to those obtained from the EAF. The data on networking for 2020 are not available yet, as the collection of data is performed during the month of February 2021. The data will be analysed on the first week of March and available by mid of March. For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is January-November 2021.
Full metadata available at this address	N/A
Justification of the trend	The drop on above network indicators and number of face-to-face meetings in 2021 is due to the Covid-19 pandemic and the related travel and meeting restrictions. While the physical meetings have largely been replaced by online meetings and online collaboration, the lack of physical meetings and the lack of direct and personal networking opportunities are reducing the perception on the programme’s contribution to networking. The reduced networking via physical meetings apparently undermines online collaboration willingness as well.

Indicator 2: Number of guidelines and recommendations issued by MS in their national administrations following activities under the Programme relating to modern and harmonised approaches to customs procedures

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2021
0	94	100	100	100	100	100	100	100		794
	Actual Progress									Final
	108	151	82	186	66	236	107			
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Recommendations and guidelines are counted individually, rather than by the number of documents containing them.
Cut-Off Date	30/11/2021
Data source	Relevant questions on the Event Assessment Form (EAF).
Narrative	Measures the number of recommendations / guidelines issued and revised further to a collaborative action (joint action).
Methodology	The questionnaires are presented in EU Survey.
Link MFF 14-20 / MFF 21-27	No.
Other methodological comments	The recommendations and guidelines are counted here individually, rather than by the number of documents containing them. Fluctuations in this indicator, however, need to be interpreted carefully, as not every recommendation or guideline is equally important and is dependent on its actual business value. Typically the collection of data is performed during the month of February / March and analysed on the month of March. For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is January-November 2021.
Full metadata available at this address	N.A.
Justification of the trend	2021 values exceeded by far the milestone. Final target was also exceeded, showing the relevance of the issuance of guidance and recommendations as a key element of the programme.

Indicator 3: Common Communication Network for the European Information Systems

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2021
	0.999	0.999	0.999	0.999	0.999	0.999	0.999	0.999	0.999	0.999
	Actual Progress									Final
	0.9989	0.9995	0.9998	0.9998	0.99976	0.9947	0.9997	0.9999		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Percentage terms of the availability (time) of the Common Communication Network and Common System Interface (CCN/CSI).
Cut-Off Date	30/06/2021
Data source	IT statistics produced by TAXUD.
Narrative	The Common Communication Network and Common System Interface (CCN/CSI), are indispensable for the running of the customs related European Information Systems (EIS). In accordance with the Union Customs Code and the e-Customs Decision, the customs EIS lie at the heart of the Customs Union, which is one of the elements supporting the smooth running of the Single Market by allowing the free circulation of goods. This indicator provides a measurement of the programme's results on the effective operation of the CCN/CSI.
Methodology	Timeliness: for the purpose of monitoring programme's objectives, the frequency is annual. However, availability can be also measured on weekly, monthly or quarterly basis, if needed for specific IT monitoring.
Link MFF 14-20 / MFF 21-27	Indicator 7
Other methodological comments	For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is January-June 2021.
Full metadata available at this address	
Justification of the trend	Overall, annual values are stable, on track with regards to milestones and final target expected.

Indicator 4: Union Law and Policy Application and Implementation Index

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of actions under the Programme organised in this area										
2013	Milestones									2021
0	60	60	100	100	100	100	100	100		100
	Actual Progress									Final
	67	65	123	122	114	132	88	33		
Are we on track :	Deserves attention**									
Number of recommendations issued following those actions										
2013	Milestones									2021
0	200	200	200	200	100	100	100	100		1200
	Actual Progress									Final
	312	290	225	267	133	163	107	9		
Are we on track :	Deserves attention**									

Indicator type	Output
Unit of measurement	Number of actions and recommendations/guidelines.
Cut-Off Date	30/11/2021
Data source	Activity Reporting Tool (ART) or its replacement managed by DG TAXUD; Action Follow-up Forms.
Narrative	The Union Law and Policy application and implementation index measures the progress in the preparation, application and uniform implementation of customs legislation and policy inter alia on the basis of: number of actions under the programme organised in this area and number of recommendations/guidelines issued following those actions. The uniform implementation of customs legislation and policy is the pillar of the Customs Union, which is one of the elements supporting the smooth running of the Single Market by allowing the free circulation of goods.
Methodology	Actions counted for this indicator must have at least one meeting in the reporting period (1 January and 30 November 2021).
Link MFF 14-20 / MFF 21-27	Indicators 1 and 2
Other methodological comments	When counting the number of actions that are operational in a year under a specific objective, it should be taken into account that the indicator only counts the actions for which the objective in question was chosen as primary objective. This is done so to avoid counting twice the same action under different objectives. However, it should be noticed that there are many actions having "Support the preparation, coherent application and effective implementation of Union law/policy" as secondary

	objective that are not counted under this indicator. For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is January-November 2021.
Full metadata available at this address	This data is contained in the Annual Progress Report (APR) which is publicly available in the TAXUD EUROPA website.
Justification of the trend	We should take into account that, while earlier years had more actions in total, and more actions specifically addressing concrete issues, in the last years many actions were to a greater extent organised in broader projects covering themes rather than specific interventions. Content-wise, the projects are usually multi-annual rather than annual, as the actions and processes they cover stretch over more than one year. This may lead to less new initiatives and in a decrease in the total number. COVID-19 pandemic may have impacted the figures for 2020-2022.Regarding the number of recommendations in 2021, non-representative data was reported in 2021 due to limited feedback received in AFFs for 2021 from action managers.

Indicator 5: European Information System Availability

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Centralised IT customs applications (including tariff systems): business hours										
	Milestones									2021
	0.99	0.97	0.97	0.97	0.97	0.97	0.97	0.97		0.97
	Actual Progress									Final
	0.99	0.99	0.98	0.987	0.9944	0.9627	0.9982	0.999		
Are we on track :	On track									
Centralised IT customs applications (including tariff systems): otherwise										
	Milestones									2021
	0.95	0.95	0.95	0.95	0.95	0.95	0.95	0.95		0.95
	Actual Progress									Final
	0.99	0.99	0.98	0.987	0.9944	0.9627	0.9982	0.999		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Percentage terms of the availability (time) of specific Union components of the European Information Systems during business hours or outside business hours respectively.
Cut-Off Date	30/06/2021
Data source	IT statistics produced by TAXUD.
Narrative	In accordance with the Union Customs Code and the e-Customs Decision, the customs European Information Systems (EIS) lie at the heart of the Customs Union, which is one of the elements supporting the smooth running of the Single Market by allowing the free circulation of goods. This indicator provides a measurement of the availability of specific Union components of the EIS that are in operation, namely centralised IT customs applications (including tariff systems).
Methodology	Timeliness: for the purpose of monitoring programme's objectives, the frequency is annual. However, availability can be also measured on weekly, monthly or quarterly basis, if needed for specific IT monitoring.
Link MFF 14-20 / MFF 21-27	Indicator present in 2021-2027 MFF but measuring the availability of individual systems.
Other methodological comments	For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is January-November 2021.
Full metadata available at this address	N.A.
Justification of the trend	Overall, annual values are stable, on track with regards to milestones and final target expected.

Indicator 6: Best Practices and Guideline Index

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of actions under the Programme organised in this area										
2013	Milestones									2021
	84	100	100	100	100	100	100	100		100
	Actual Progress									Final
	85	200	191	92	133	121	77	5		
Are we on track :	Deserves attention**									
Percentage of participants that made use of working practice/administrative procedure/gudeline developed/shared with Programme support										
2013	Milestones									2021
0%	88%	90%	90%	90%	90%	90%	90%	90%		90%
	Actual Progress									Final
	50.42%	81.01%	68.25%	75%	81%	82.66%	74.39%			
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number of actions in this area and percentage of respondents within national authorities indicating that their authority made use of a working practice.
Cut-Off Date	30/11/2021
Data source	ART and Event Assessment Forms (EAFs)
Narrative	The Best Practices and Guideline index measures the evolution in the identification, development, sharing and application of best working practices and administrative procedures, inter alia on the basis of: number of actions under the programme organised in this area; percentage of participants that made use of a working practice/guideline developed with the support of the programme. The uniform implementation of customs legislation and policy is the pillar of the Customs Union, which is one of the elements supporting the smooth running of the Single Market by allowing the free circulation of goods.
Methodology	Action having at least one meeting in period 1 January and 30 November.
Link MFF 14-20 / MFF 21-27	Indicators 14 and 15
Other methodological comments	When counting the number of actions that are operational in a year under a specific objective, the indicator only counts the actions for which the objective in question was chosen as primary objective. This is done to avoid counting twice the same action under different objectives. However, there are many actions having "Identify, develop, share and apply best working practices and administrative procedures" as secondary objective that are not counted under this indicator. Content-wise, the projects are usually multi-annual rather than annual. For 2021, due to the overlap between Customs 2020 and the Customs Programme, the reporting period for this indicator is January-November 2021.
Full metadata available at this address	This data is contained in the Annual Progress Report (APR) which is publicly available in the TAXUD EUROPA website.
Justification of the trend	We should take into account that, while earlier years had more actions in total, and more actions specifically addressing concrete issues, in the last years many actions were to a greater extent organised in broader projects covering themes rather than specific interventions. Content-wise, the projects are usually multi-annual rather than annual, as the actions and processes they cover stretch over more than one year. This may lead to less new initiatives and in a decrease in the total number. COVI-19 pandemic may have impacted the figures for 2020.

Indicator 7: Learning Index

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of officials trained by using common training material of the Union										
2013	Milestones									2021
	4 112	3 000	20 000	20 000	20 000	20 000	20 000	300 000		407 000
	Actual Progress									Final
	4 776	3 092	23 685	19 234	17 547	37 796	18 109	384 696		
Are we on track :	On track									
Number of times Programme eLearning modules were downloaded										
2013	Milestones									2021
0	3 200	3 000	10 000	10 000	10 000	10 000	10 000	10 000		66 200
	Actual Progress									Final
	3 219	3 202	12 920	12 291	12 612	9 978	34 347	10 877		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of officials trained and number of times the eLearning modules were downloaded per year.
Cut-Off Date	31/12/2021
Data source	Customs & Tax EU Learning portal and data provided by participating countries.
Narrative	The Learning index measures the progress resulting from actions under the programme aiming to reinforce skills and competences of customs officials, inter alia on the basis of: number of customs officials trained by using common training material and number of times eLearning customs modules were downloaded. Human capacity building will support the customs authorities to reinforce their capacities in fulfilling their role in the Customs Union.
Methodology	Annual.
Link MFF 14-20 / MFF 21-27	Indicator 3
Other methodological comments	Timeliness: annual frequency. Despite the overlap between Customs 2020 and the new Customs Programme, all learning activities in 2021 were funded under the budget of Customs 2020. Therefore, the indicator bellows reports the whole year 2021.
Full metadata available at this address	
Justification of the trend	The number of officials trained has increased significantly in the last year given the availability of the new Customs & Tax EU Learning Portal. Regarding the number of downloads, while previously the number was increasing, the last year numbers significantly decreased given the online access to the eLearning courses since the availability of the Learning portal replacing downloading. In that sense, it

	is a positive development to read in conjunction with the number of officers accessing the courses, which is 20 times more than in the previous year.
--	---

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

N/A

6.1.2. Explanation on the financial contribution

During 2021, the following actions contributed to climate mainstreaming and were conducted under the auspices of the Customs programme^[1]:

- Two eLearning modules on F-gas-CERTEX, within the framework of the EU Customs Single Window (CSW). In particular, the two eLearning modules will deal with the EU CSW-CERTEX interconnection with CLIMA F-gas system. This activity started in Q4 2021 and will continue in first semester 2022.
- The Customs Business Group (CBG) met to discuss activities in cooperation with DG CLIMA (regarding F-gas and ozone depleting systems) and DG ENV (CITES). Online meeting with no associated costs.
- Meeting on the “Best working practices related to non-compliance with import requirements of F-gas legislation”. Online meeting with no associated costs.

6.2. Contribution to gender equality

6.2.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0: 116 Score 0*: 9.5							

(*)Consolidated information about the annual commitments implemented (total per score by programme **in EUR Million**)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

Customs programme’s interventions are split in relation to gender equality score as follows:

- Score 0: relates to IT expenditure, in particular on the development and operation of European Electronic Systems, which does not target the promotion of gender equality.
- Score 0*: relates to the remaining types of expenditure, i.e. collaboration activities, trainings, studies and communication, for which a potential to promote gender equality has been identified.

At policy level, the programme’s objective is to support customs cooperation across the EU and within the customs union. DG TAXUD takes note of the potential relevance of gender equality in the customs policy domain, among others, in light of the different impacts, challenges and opportunities that trade policies can have on women and men⁴ as well as the paramount importance that diversity and inclusion have for performance and quality of service within Customs⁵.

In particular, on 24 September 2021 DG TAXUD hosted under the auspices of the WCO the first virtual event of the Network on the topic of “Women in Customs”⁶. The event brought together approximately 200 representatives of customs administrations from around the world. However, the organisation of this event was not covered by the Customs programme (i.e. no funding needed from the programme to support EU Member States participation).

Furthermore, DG TAXUD joined the Network for Gender Equality and Diversity in Customs launched by the World Customs Organisation in November 2021. The Network advocates for the need to and the benefits of implementing gender-responsive and inclusive policies in customs worldwide, and to foster and promote exchanges of experience at international level. It also encourages greater and long-term support from senior management on this matter.

^[1] These actions were not tracked in ABAC as they are part of a cluster of activities (framework contracts or grants) that in its majority does not contribute to climate mainstreaming. These expenditures may be reflected in future years after a revision.

⁴ [World Customs Organization \(wcoomd.org\)](https://www.wcoomd.org)

⁵ [gender-equality-declaration.pdf \(wcoomd.org\)](#)

⁶ [Women in Customs: How gender balance can make customs more resilient, credible and representative \(europa.eu\)](https://europa.eu)

DG TAXUD is currently working on its Equality Work Plan. Any contextual analysis it may contain on potential gender-specific inequalities, constraints, needs or opportunities in the policy area the programme contributes to will be analysed to ascertain whether the programme could potentially be relevant to address them.

Considering this context, there have been no programme's interventions in 2021 regarding gender equality and no interventions have been planned or identified, for the time being, for 2022.

6.3. Contribution to the sustainable development goals

6.3.1. Goals

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

The Customs Union is a foundation of the European Union and an essential element in the functioning of the single market. The single market can only function properly when there is a common application of common rules at its external borders. To achieve that, the 27 national customs administrations of the EU act as though they were one. These common rules they apply go beyond the Customs Union as such with its common tariff and extend to all aspects of trade policy, such as preferential trade, health and environmental controls, the common agricultural and fisheries policies, the protection of our economic interests by non-tariff instruments and external relations policy measures

In that regard, the Custom Programme contribution to the development of efficient, modern customs is an essential element to ensure a proper balance between effective controls and safety within the single market, and the facilitation of legitimate trade, a cornerstone for the economic prosperity of the EU. The programme secures this contribution through the support to digitalisation, efficiency of the EU Customs Union and operations, as well as at developing human competency and training for customs officials, thus contributing to SDG 8.

Overall, considering the objectives of the programmes, all activities contribute to the EU's priority to support 'an economy that works for people' for its whole duration, including both IT capacity building, collaboration and other activities. As a result, the whole budget of the programme contributes to the attainment of SDG 8.

As an example, in 2021, the Commission successfully deployed the UCC Import Control System 2 (ICS2) Release 1. Since its launch, the system has been processing a large amount of data with about 10 million Entry Security Declaration (ENS) per month, supporting effective risk-based customs controls whilst facilitating free flow of legitimate trade across the EU external borders. The system represents the first line of defence in terms of protection of the EU internal market and the EU consumers.

6.5. Contribution to the sustainable development goals.....	303

1. Overview

1.1. Challenges

In order to establish a coherent space policy and effective governance to support the EU's political priorities, the Commission's proposal brings all existing and new space activities under the umbrella of a single EU Space Programme.

The EU Space Programme enables solutions to tackle global challenges such as sustainability and climate change, safety and security, natural disasters and mobility and strengthens the EU's role on the international scene as a global space power. The EU's space flagships foster innovative services that can meet the needs of users whilst guaranteeing European competitiveness. It will support security and defence capabilities relying on space-based services, and enhance safety, the security of the Union and its Member States, and reinforce autonomy in areas of strategic importance.

The EU Space Programme, by reason of scale, exceeds the financial and technical capacities of a single Member State and encompasses a pan-European capacity. Furthermore, it depends on the provision of data and services throughout all the Member States, requiring coordination at Union level. In addition, given the requirements in terms of security, all Member States must be involved. Taking the above into account, and given that the programme components fully fall within EU competence, action at EU level is necessary.

1.2. Mission (General objectives)

The mission of the EU Space Programme (Galileo/EGNOS, Copernicus, SSA and GOVSATCOM) is to develop, maintain and operate the necessary infrastructure to support the policies of the Union and the Member States. In particular, it contributes to Union's strategic autonomy and its space industry and ensures the delivery of high quality services to users in a continuous and reliable manner (Copernicus and Galileo/EGNOS). The EU Space Programme comprises the following components: Galileo and EGNOS (European Geostationary Navigation Overlay Service) for satellite navigation, Copernicus for Earth Observation, the Space Surveillance and Tracking (SST) capacity and in the near future the reinforced Space Situational Awareness (SSA), and GOVSATCOM to provide the critical means of communication, even in times of crisis.

1.3. Specific objectives

The EU Space Programme pursues the following objectives:

- to provide long-term, of state-of-the-art and, where appropriate, secure positioning, navigation and timing services whilst ensuring service continuity and robustness;
- to deliver accurate and reliable Earth Observation data, information and services integrating other data sources, supplied on a long term sustainable basis, to support the formulation, implementation and monitoring of the Union and its Member States' policies, and actions based on user requirements;
- to enhance Space Surveillance and Tracking (SST) capabilities to monitor, track and identify space objects and space debris, with the aim to further increase the performance and autonomy of SST capabilities at Union level, to provide space weather services and to map and network Member States Near-Earth Objects (NEO) capacities;
- to ensure the long-term availability of reliable, secure and cost effective satellite communications services for GOVSATCOM users;
- to support an autonomous, secure and cost-efficient capability to access space, taking into account the essential security interests of the Union;
- to foster the development of strong Union, space economy including by supporting space ecosystem and by reinforcing the competitiveness, innovation, entrepreneurship, skills and capacity building in all Member States and Union with particular regard to small and medium-sized enterprises and start-ups or legal and natural persons from the Union active or wishing to become active in that sector.

1.4. Public intervention context

The EU's action is based on Article 189 of the Treaty on the Functioning of the European Union. The EU Space Programme can support and transform many areas of EU legislation in the fields of environment, civil protection, security, climate change, internal market, transport, energy, agriculture, cooperation with third countries and humanitarian aid and many more.

Under the same Article, EU action for space research under Horizon Europe, the EU research and innovation framework programme, is supporting technological development and the competitiveness of European upstream and downstream space sectors, including support to space entrepreneurship.

1.5. Actions

The EU Space Programme is implemented through each of its components. In addition to maintaining continuity of the existing infrastructure and services from its flagship components (Copernicus and Galileo/EGNOS), the EU Space Programme introduces a number of new features, such as the Copernicus security and emergency services, and the Galileo Public Regulated Service that can be used for emergency services, peacekeeping operations, crisis and border management, or military operations. New initiatives include secure satellite communications and Space Situational Awareness to preserve assets of the EU Space Programme to reinforce links between space, security and defence. GOVSATCOM will provide reliable, secured, and cost-effective satellite communication services for EU and national public authorities managing security critical missions and infrastructures. The underlying secure satellite communication capacity and services will be provided by Member States and by security-accredited commercial private companies, while future space assets could be developed after 2024.

1.6. Delivery mode

Directorate-General for Defence Industry and Space (DG DEFIS) is the lead DG for the programme implementation. The EU space components are implemented mainly through indirect management with the European Union Agency for the Space Programme (EUSPA), the European Space Agency (ESA), EUMETSAT, and other entrusted entities whereas, a part of the budget is implemented through direct management by the Commission (grants and procurement).

The EU Space Programme enables a wide range of EU policies, including climate, environment, security, and mobility. As a consequence, extensive collaborations exist between DG DEFIS and other services such as DG HOME, DG AGRI, EEAS, EAC, DG CLIMA, DG CNECT, DG GROW, DG ENVI, DG INTPA, DG ECHO, DG JRC, DG MARE, DG TAXUD, DG FPI, DG SANTE, DG ESTAT and DG MOVE.

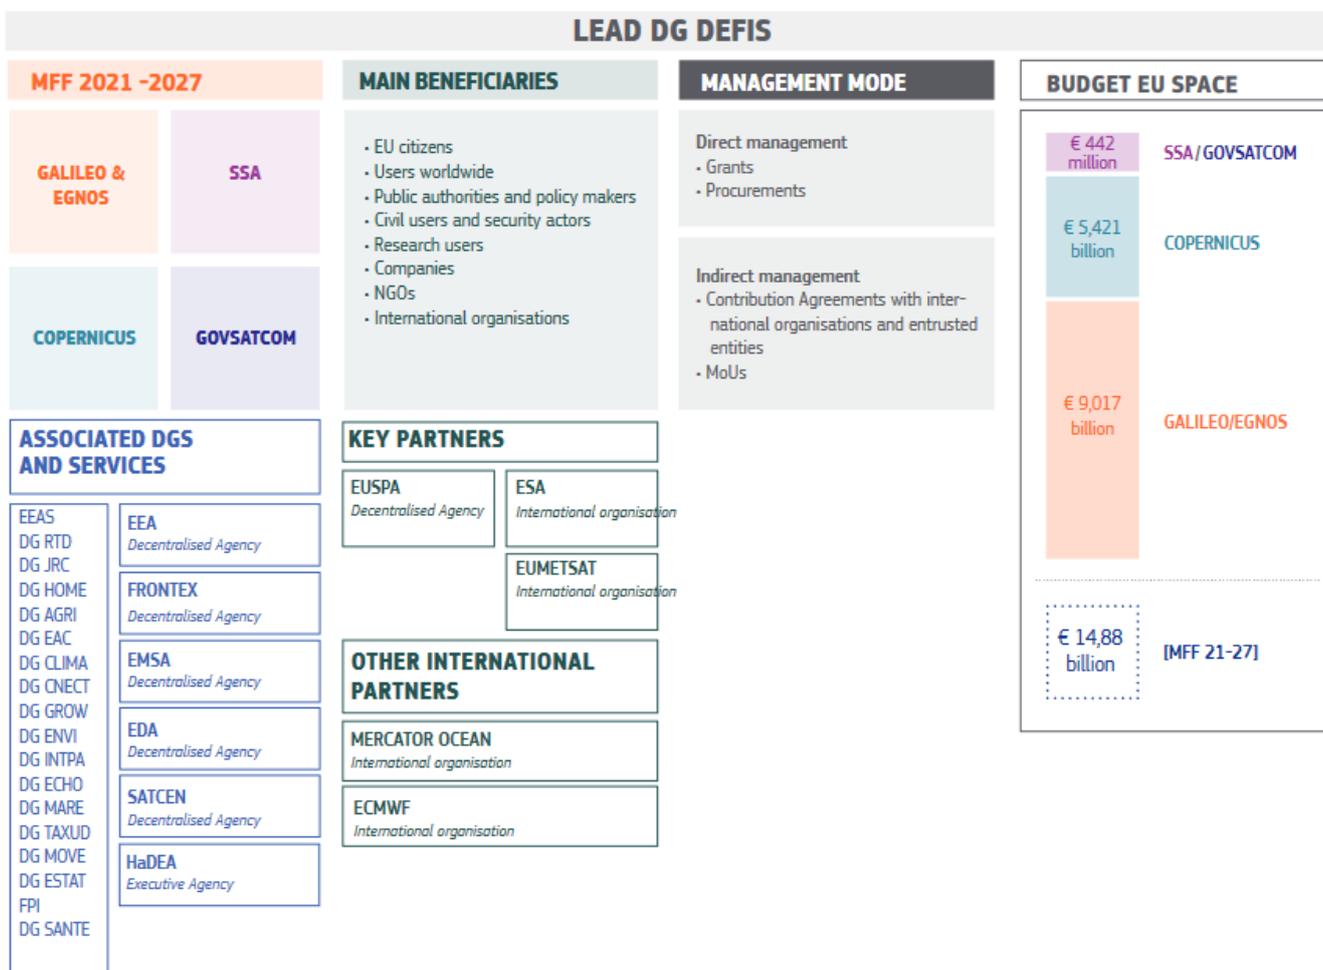

For the research, DG DEFIS closely collaborates with DG RTD that is in lead for Horizon 2020 and Horizon Europe and implement mainly through direct management by DG DEFIS and with the Health and Digital Executive Agency (HaDEA). A special and long-term relation exists with DG JRC, active in operational research for Galileo/ EGNOS and Copernicus, and potentially for other space and defence industry aspects in the future.

DG DEFIS coordinates the EU efforts on countering hybrid threats and Military Mobility, and in that capacity, co-operates with services in the Security Union family as well as with the European External Action Service.

The EU Space Programme and its partners, within their respective roles and responsibilities, support Europe to remain a leading international actor, in addressing various societal challenges and in strengthening the competitiveness of the European space industry through the whole value chain. In particular, by mapping critical technologies dependence and supply chains of the defence, aeronautics and space ecosystem in fast evolving markets, informed policy actions will result, to enhance strategic autonomy and technological sovereignty in Europe, whilst promoting investments and reinforcing support to SME's.

1.7. Graphic overview of the programme structure

EU SPACE PROGRAMME

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/696 of the European Parliament and of the Council of 28 April 2021 establishing the Union Space Programme and the European Union Agency for the Space Programme and repealing Regulations (EU) No 912/2010, (EU) No 1285/2013 and (EU) No 377/2014 and Decision No 541/2014/EU (OJ L 170, 12.5.2021, p. 69).	2021 - 2027	14 880.00

1.8.2. Legal basis explanation

The EU space programme Regulation (EU) 2021/696, under the Multiannual Financial Framework of the EU for 2021 -2027, was adopted by co-legislators on 28 April 2021, published on 12 May 2021 (OJ L 170, 12.5.2021, p. 69–148), and is applicable from 1 January 2021. The Regulation is bringing together the existing space programmes in this domain from previous MFF periods (Copernicus, Galileo and EGNOS) and provides a legal basis for new initiatives such as GOVSATCOM and SSA.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	1 977.3	2 008.2	2 045.1	2 088.3	2 051.2	2 095.1	2 124.7	14 390.0

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
NextGenerationEU

Total	2 100.8	2 008.2	2 045.1	2 088.3	2 051.2	2 095.1	2 124.7	14 513.4

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The EU Space Programme is building on the success of its predecessor components that will be continued with more focus on synergies with other EU policy areas. For the next programming period, the Commission proposed to maintain and further enhance the EU's leadership in space. The proposal brings all existing and new space activities under the umbrella of a single EU Space Programme. The latter maintains existing infrastructure and services and introduces a number of new features, e.g. fostering a strong and innovative space industry in Europe, maintaining Europe's autonomous access to space and a unified system of governance.

1.10. Relevant websites providing more information

[EU Space Programme \(europa.eu\)](http://europa.eu)

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	2 078.6	14 513.4	14%
Payments	1 577.3		11%

Following the adoption of the EU Space programme Regulation (EU) 2021/696 in April 2021, a Financial Framework Partnership Agreement (FFPA) and Contributions Agreements (CA) between the Commission, the European Space Agency (ESA) and EUSPA (European Union Agency for the Space Programme)¹ were signed on 22 June 2021. The FFPA and the CA set out the general obligations applicable to the tasks entrusted to both entities for the implementation of the EU space programme components by indirect management.

For the EU Satellite Navigation component (Galileo and EGNOS), most of the implementation, except the overall programme management, is delegated to EUSPA, which subsequently delegates part of it to ESA, and it is expected to consume fully the total of commitment appropriations of the year 2022. The overall implementation of the Galileo programme progressed well during 2021. Activities focused on ensuring the continuity of service provision and related operations and on developing new innovative service features such as the Galileo emergency warning service, the high accuracy service, and the authentication services.

A highlight was the successful Galileo satellite launch in December 2021 with two new satellites added to the Galileo constellation, bringing the total number of Galileo satellites in orbit to 28, which increases the robustness and availability of the existing public services; the Galileo Open Service and the Galileo Search and Rescue Service, including the Return Link Service.

COVID-19 imposed severe restrictions on travel and working procedures that have led to delays of several months in achieving key milestones of the programme, such as declaration of the Open Service Full Operational Capability (OS FOC) and the improved PRS Service Initial Operational Capability. Considering these constraints, the programme remains on track and in particular, the key services are being delivered according to expectations.

¹ C(2021) 4351 and C(2021) 4319

For the EU Earth Observation component (Copernicus), six new contribution agreements with the other entrusted entities (EUMETSAT, MERCATOR OCEAN, ECMWF, EEA, FRONTEX, EMSA)² were signed by the end of 2021. A new contribution agreement with SATCEN is under negotiation, with signature expected in 2022. Most of the implementation is delegated to ESA, EUSPA and to the other entrusted entities and it is expected to consume fully the total of commitment appropriations of the year 2022. Despite the COVID-19 crisis-related restrictions, overall operations and service provision activities were normal. There were no disruptions in the implementation of Copernicus programme thanks to excellent cooperation with the entrusted entities and overall business continuity that could be ensured. Services continuity was assured in 2021 without interruptions and, according to the reported KPIs on satisfying user needs and the regular feedback from the User Forum, with a high level of satisfaction from users, even though the ground segment operations and the services faced the difficulty to operate remotely due to the COVID-19 crisis.

Russia's military aggression in Ukraine has demonstrated how promptly we need to reinforce the EU's strategic autonomy, notably by:

- 1) working on a new security and defence framework in Europe and enhancing synergies between space and defence
- 2) supporting New Space initiatives and strengthening our EU space programme
- 3) ensuring an autonomous access to space, and
- 4) reinforcing resilience of EU supply chains.

The unilateral decision of the Russian space agency Roscosmos to withdraw from the Guiana Space Centre following the sanctions imposed on Russia by the EU and its partners in response to Russia's military aggression in Ukraine will have no consequences on the continuity and quality of the Galileo and Copernicus services, and it does not put the continuous development of these infrastructures at risk. Relevant decisions for the implementation of the programme will be taken in due course in order to resolutely continue developing the second generation of the EU flagships and to ensure EU strategic autonomy. DG DEFIS is also assessing with industry and with ESA critical dependencies of technologies and the supply of raw materials on Russia, Belarus or Ukraine for the EU space ecosystem, and putting in place, where necessary, mitigating measures.

For the SSA component, implementation of actions related to Space Weather, Near-Earth Objects are delegated to ESA, and implementation of actions related to user uptake, information and other support are delegated to EUSPA. It is expected to consume fully the total of commitment appropriations of the year 2022. The Commission implements the remaining activities, notably the Space Surveillance and Tracking, in direct management.

For the GOVSATCOM component, activities are delegated to EUSPA, notably the procurement of the secure operational ground segment (GOVSATCOM Hubs) and the user-related aspects, and to ESA, notably the development and deployment of end-to-end demonstrators of future GOVSATCOM space segment and related ground segment and upstream research and development. It is expected that the total of commitment appropriations of the year 2022 is consumed.

2.2. Programme(s) 2014-2020: Cumulative implementation rate and explanations

Galileo and EGNOS

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	6 841.4	6 841.4	100%
Payments	6 412.3		94%

During the MFF 2014-2020, the EU Satellite Navigation programmes (Galileo and EGNOS) committed EUR 6 841 million, making full use of the appropriations made available and reaching 100% execution in terms of commitment appropriations. In terms of payment appropriations, payments made during that same period amounted to EUR 6 412 million which represented 94% rate of payment execution.

Copernicus

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	4 251.4	4 251.5	100%
Payments	3 942.2		93%

² C(2021)5261

During the MFF 2014-2020 the EU Earth Observation programme (Copernicus) committed EUR 4 251 million, making full use of the appropriations made available and reaching 100% execution in terms of commitment appropriations. In terms of payment appropriations, payments made during that same period amounted to EUR 3 942M, which represent 93% rate of payment execution.

3. How is the programme performing ?

3.1. Performance

3.1.1. Active programme performance

EGNOS and Galileo

Galileo is the EU's state-of-the-art global navigation satellite system, providing a highly accurate global positioning service under civilian control. Galileo consists of a satellite constellation and the necessary ground infrastructure to control the satellites and enable the provision of positioning, navigation and timing services. Galileo offers autonomous navigation and positioning services but is also compatible with the US GPS satellite navigation system. Galileo is an EU large infrastructure project and is entirely financed by the EU budget. Galileo ensures Europe's autonomy in an area that is of strategic importance to both its economy and security. As for the previous programming period, the key priority for the MFF 2021-2027 is to ensure the continuity of Galileo and EGNOS services, continue development in preparation of full operational capability of Galileo services and promotion of market uptake of Galileo and EGNOS services.

Galileo Services

The positioning and timing performance of Galileo is better than that of any other Global Navigation Satellite System (GNSS) system. Galileo Initial Services are fully interoperable with GPS, and their combined use is bringing more accurate and reliable positioning for end users. Navigation in cities, where tall buildings can often block satellite signals, particularly benefits from the increased number of satellites of Galileo and GPS combined. In addition, Galileo's accurate timing contributes to enabling more resilient synchronisation of banking and financial transactions, telecommunication and energy distribution networks to help them operate more efficiently. With regard to the Galileo services, several important developments have taken place in 2021:

- The Search and Rescue (SAR) functionality called the Return Link Service (RLS), which was declared operational in January 2020, has been upgraded to Full Operational Capability in March 2021 allowing the commercialisation of RLS enabled emergency beacons worldwide. The Galileo system has delivered excellent SAR services since their declaration, as reported in the Galileo SAR Quarterly Performance Reports³. It takes less than 10 minutes with the Galileo's Search and Rescue service to detect emergency distress beacons and locate people in distress when compared to up to 3 hours previously required. As the location of the distress beacon is determined more accurately, people lost at sea or in the mountains can be rescued more quickly. With the new functionality, the Galileo SAR RLS service, an automatic acknowledgement message is sent back to the user in distress, informing them that their request for help has been received. Further SAR functionality is being defined, in particular Remote Beacon Activation (RBA) and 2-Way Communication. RBA will allow remote activation of the alert beacons in case the beacon user cannot do so (the main use case for aviation is the aircraft disappearance Malaysian airline MH370) and for maritime, it can be a sailor in distress who is unable to switch on the alert beacon). This service will be uniquely provided by Galileo. The service declaration is scheduled during the first half of 2023. The 2-Way Communication service will allow collection of information from the distress area using the RLS. It will allow exchanging messages between the Rescue Coordination Centre and the people in distress. The service declaration is not expected to happen before 2024 and it will be targeting second generation beacons only.
- The OSNMA (Open Service Navigation Message Authentication) test phase started live in November 2020, and for the High Accuracy Service (HAS), which will provide 20 cm positioning accuracy over Europe, the service concept was consolidated and the first phase of testing has begun. The Commercial Authentication Service (CAS) concept has been further developed and the roadmap for implementation has been defined. Requirements and concept for an Emergency Warning Service are being finalised in collaboration with civil protection authorities of EU Member States.
- In addition, a new version of the Open Service Signal In Space Interface Control Document, (SIS ICD) was published early 2021. This publication incorporates new signal features for increasing robustness and acquisition time, especially in difficult environments. All modifications are backwards compatible, so legacy receivers are not impacted. These improvements will also be implemented in the actual Signal in Space (SIS) broadcast by the satellites by the end of 2023. In the meantime, the publication of the SIS ICD document allows manufacturers to adapt their products accordingly.

The COVID-19 crisis-related restrictions as well as other issues resulting from the lessons learned exercise following the Galileo service incident in July 2019 led to delays of several months in achieving key milestones of the Galileo and EGNOS programmes. The milestones affected were the following:

³ Available on <https://www.gsc-europa.eu/>

- The Open Service Full Operational Capability (OS FOC) milestone was delayed due to new ground segment development and deployment activities stemming from the implementation of the July 2019 incident recommendations, which required improvements in the robustness of the system. The schedule was further slowed down by the COVID-19 crisis which has led to travel restrictions, constraints in accessing the sites of the control centres, etc. Delays in the satellite development activities resulted due to the COVID-19 crisis but also due to issues with the satellite clocks. The initial schedule for OS FOC was end of 2020, while the milestone is now planned for end of 2022. The delay in the OS FOC should not be considered as a major issue for the Programme, as Galileo is already delivering services and very accurate signals to more than two billion users through signals sent by the 22 operational satellites currently in orbit. The successful launch of another 2 satellites carried out in December 2021 will improve and reinforce the OS service. The upcoming satellite launches will further improve and reinforce the OS service, by improving the performance in terms of service availability.
- The Public Regulated Service (PRS) milestones, in particular the Initial Operational Capability milestone has been delayed for similar reasons as the OS FOC, since it relies on the deployment of appropriate ground infrastructure and satellites. The COVID-19 crisis has had a significant impact, notably due to the classified nature of activities linked to PRS, which requires strong security measures for handling the information and to a large extent requires physical meetings. This milestone was initially planned for end-2021 and is now planned for end-2023 but with a risk of delay to 2024 due to issues affecting the deployment of the new Galileo infrastructure release, the so called System Build 2.0. This delay is more of a concern than any potential delays with OS FOC, as Member States need to plan defence investments associated with the use of PRS. The Commission is engaging with Member States to keep them continuously informed on risks associated with this calendar.

No Galileo service disruptions occurred in 2021. The Galileo Open Service has been delivered with excellent quality and availability, and performance of the Galileo Search and Rescue (SAR) service, including the Return Link Service has also been excellent during 2021. Work is continuously going on to improve the resilience of the Galileo system in order to ensure uninterrupted availability of all services. An operational Galileo gives the Union a strong position on the world stage of satellite navigation where the US and Russian systems are being modernised and the Chinese system is rapidly being developed.

Galileo Infrastructure

The **space segment** has been stable with 28 Galileo satellites in orbit by end of 2021 after a successful Galileo launch carried out in December 2021. The two new satellites launched in December 2021 will be incorporated into the Galileo operational constellation in the second quarter of 2022. The manufacturing of additional satellites to complete the constellation and provide sufficient spares for ensuring its continuity has continued, but with delays in the schedule due to the COVID-19 situation. The next launches of Galileo satellites were expected to take place in April 2022 (2 satellites) and in the second semester of 2022 (2 satellites). However, due to the crisis precipitated by the Russian invasion of Ukraine, these launches (which were scheduled on Russian Soyuz rockets) will not take place as planned. Possibilities for use of alternative launchers are under study. In particular, the programme intends to use the European Ariane-6 launcher in the near future and the development of a specific dispenser to carry the Galileo satellites on-board Ariane-6 was initiated in 2019 and will be completed in 2022.

With regard to the **ground infrastructure**, despite delays incurred due to the COVID-19 crisis, the System Build release SB1.7 was deployed in advance of the satellite launch in December 2021. The new release meets all the requirements related to the deployment and operation of the Galileo satellites, including the upcoming “so called Batch 3” satellites. Work has also continued in parallel on the next System Builds, which will support advanced features and improved resilience of the system.

Galileo next generation

Galileo has made major progress on the preparation of the Galileo Second Generation (G2G). Following the adoption of a Commission Implementing Act in December 2020⁴, the overall schedule for G2G including the procurement of the first G2G satellites were accelerated to allow for a first launch of the second generation satellites to take place by end 2024. The technical requirements were consolidated and the first of two industrial contracts was signed in the first quarter of 2021.

EGNOS – the regional satellite navigation system

EGNOS, the European Geostationary Navigation Overlay Service, is a fully operational regional satellite navigation system, monitoring and correcting open signals emitted by the US GPS and, in the future, Galileo. It consists of several transponders installed on geostationary satellites and a network of ground stations. By improving the accuracy and reliability of the US GPS signal over the territory of Europe, EGNOS allows users in Europe to use GPS signals, for instance, for safety-critical applications such as operating aircraft. It allows users in Europe and beyond to determine their position to around 1 metre.

The performance of the EGNOS programme that is providing satellite-based services improving the performance of GPS and is gradually covering all EU Member States, has steadily improved and just a few territories remain uncovered (i.e. the following territories have APV-I availability less than 99%: Azores of Portugal, part of Canary Islands of Spain, part of Cyprus and small

⁴ Commission Implementing Act C(2020)8969 of 17 December 2020

parts in the East of Romania and North of Scandinavia). The coverage of all of these territories is envisaged to be achieved with the launch of the EGNOS V3 technology around 2026.

The continuous provision of **EGNOS services** was successfully achieved by efficient implementation of recurrent activities and preparation of system evolutions.

To guarantee the continuity of services beyond 2020, the development of the major **EGNOS evolution V2.4.2-A** was finalised with the entry into services in fourth quarter of 2021 while the qualification of the major evolution V2.4.2-B is on-going, targeting the entry into service in 2023. These major evolutions solve major obsolescence issues and improve the coverage of European Member States' territories.

EGNOS has successfully managed the transition to a new generation Central Processing Facility⁵ with the entry into service of the EGNOS V2.4.2.A. The activities for the development of a new generation of EGNOS, the EGNOS version 3, continued.

Market uptake Galileo and EGNOS

Since the declaration of Galileo Initial Services in 2016, the market uptake of Galileo-enabled smartphones has been very rapid. In 2021, the estimated number of Galileo-enabled smartphones sold worldwide has reached more than 2.5 billion. In 2021, there were 895 Galileo-enabled smartphone and tablet models available on the market. The full overview of Galileo-enabled devices is available online: <https://www.usegalileo.eu/>. Other activities supporting the market uptake of Galileo included myGalileosolution initiative to foster the developments of applications that use Galileo signals and standardisation activities to ensure that Galileo is properly considered in standardisation bodies.

The key market segment for EGNOS is civil aviation. Today, EGNOS is used at more than 769 airports in Europe and its usage is increasing as in 2019 there were 373 airports with EGNOS-based approach procedures. This is also thanks to the requirements of Regulation 2018/1048 mandating the publication of Localizer Performance with Vertical guidance (LPV procedures) delivered by EGNOS in all instrument runway ends before January 2024. Beyond the aviation sector, EGNOS improves and extends the scope of such GNSS applications as precision farming, on-road vehicle management and navigating ships through narrow channels.

With regard to the Key monitoring indicators (2021-2027), the specific objective to provide long-term, state-of-the-art and secure positioning, navigation and timing services whilst ensuring service continuity and robustness has been measured by the number of Galileo and EGNOS receivers in the total number of receiver models worldwide. The analysis is based on the capabilities of more than 500 receivers, chipsets and modules currently available on the market (end of Q4 2021). There is a positive trend of the increasing production of Galileo-enabled receivers that Galileo enabled and the actual progress is going towards the milestones set. In 2021, the presence of Galileo in receiver models was at 64 % of the total number of receiver models worldwide, the key market segment were consumer devices (smartphones and tablets). With regard to the EGNOS enabled receiver models, the market share stabilised at 63% of the total number of receiver models worldwide. This is because consumer solutions such as mobile phones are far less likely to be enabled for satellite based augmentation systems (only 45% uptake in Q4 2021) as such systems provide high accuracy but involve also energy costs due to continuous Signal In Space data reception. However, the low adoption rate in consumer solutions countered by an almost 100% uptake in high precision applications (such as agriculture and geomatics), while newer technologies such as drones also have a high uptake (94%) of satellite based augmentation systems. Safety of life applications benefit the most from EGNOS implementation in other segments, such as aviation, maritime, rail and road markets.

In 2021, the European Court of Auditors published a Special Report 07/2021 that assessed the measures taken by the Commission since 2014 to promote the uptake of services derived from the EU space programmes Galileo and Copernicus, towards achieving the expected economic and societal benefits. The Commission accepted the four recommendations of this report and is working towards delivering on them. The European Court of Auditors proposed four recommendations, which the Commission accepted, whereby the Commission should:

- by 2023 develop a comprehensive strategy for supporting the uptake of EU space services,
- by 2024 develop a conceptual framework for estimating the benefits of the EU space programmes and improve performance measurement,
- by 2024 ensure full readiness of Galileo and better targeted action on uptake of the EU space services,
- by 2024 ensure a better use the regulatory framework to support the uptake of EU space services.

Copernicus

Copernicus, the EU Earth observation and monitoring system, has continued to meet the criteria established in its general and specific objectives under the EU space Regulation. Robust and reliable Earth monitoring data and information were provided on a full, free and open basis. Copernicus is building on the achievement of a European autonomous access to environmental knowledge and a major role of the EU at international level. Over the past years, the key priority has been ensuring the continuity of Copernicus services, preparing the future Copernicus 2.0 and the promotion of market uptake of Copernicus services.

Copernicus Infrastructure

⁵ The "heart" of the EGNOS system, computing corrections and integrity.

The **ground segment operations** faced some difficulties to operate remotely due to the COVID-19 crisis but managed to continue operational activities. Most of the teams involved in the operations of the Copernicus space component across Europe, both within ESA and in industry, are teleworking and access to the operational centres was minimised, impacting the contingency management and the capability to timely react to potential anomalies. Special non-essential operations have been temporary suspended to focus on the continuity of the routine operations.

The Copernicus cross-cutting **in situ network**, producing quality-assured information, focused its work in 2021 on the maintenance of the Copernicus In Situ Information System (CIS) and the Copernicus Reference Data Access Portal CORDA. This facilitated access to in situ data for service providers active in the core service production. CORDA provides access to Copernicus services to almost 2000 geospatial datasets, delivered via more than 6 000 data services managed by 258 European data providers and owners.

After the successful Copernicus Sentinel 6A satellite launch on 21 November 2020, the Sentinel-6 Michael Freilich in-orbit commissioning review was completed in 2021. This satellite (S6A) provides improved and high-precision measurements of the sea level, with evident relevance for climate change observations. With **eight operating satellites in orbit**⁶, complemented by a ground infrastructure and in-situ measurements, the Copernicus monitoring capacities are successfully deployed.

Copernicus services

The six Copernicus services (land, marine, atmosphere, climate change, emergency and security) are all operational and continued to provide continuous and reliable geo-information on key indicators. For example, on biophysical parameters, temperature measurements, ocean state, levels of sea ice, greenhouse gases (GHGs), carbon dioxide (CO₂), and methane (CH₄), these being key anthropogenic drivers of climate change, wildfires, volcanic eruptions and floods. Copernicus-data based monitoring solutions i.e. for water ecosystem monitoring, coastal ecosystems monitoring, snow and ice ecosystems monitoring and terrestrial ecosystems monitoring, support EU's climate ambition for 2050 climate-neutrality and sustainability and the EU Biodiversity Strategy for 2030. The Copernicus Earth observation data and information also facilitated monitoring changes to land, air, and water from corporate activities allowing to objectively, frequently and consistently measure ESG (Environmental, Social and Governance) performance. Ongoing Copernicus activities additionally tried to identify possible environmental factors affecting the spread of the COVID-19 disease such as humidity, temperature or wind, as well as the impact on the environment of the reduction of human activities due to lock-down of cities/countries.

The **Copernicus Emergency Management Service (CEMS)**, operational since April 2012, continued to provide information for emergency response in relation to different types of natural or man-made disasters worldwide. In 2021, the rapid mapping and the risk and recovery mapping on-demand services of Copernicus EMS were activated 61 and 15 times respectively and reached a milestone of attaining 500 CEMS activations in total. Notable CEMS activations included support to Germany, Belgium, Netherlands and Luxembourg during the extreme floods in July 2021, support to Greece when faced with a devastating fire season in July/August 2021 and the most intense heatwave in the last 30 years, and support to Spain to manage the volcanic eruption in September/October 2021 in La Palma, Canarias with high resolution images showing the extent and the changes of the lava flow, the ash deposit, as well destroyed buildings, roads and facilities

The **Copernicus Security Service**, covering sub-services within three areas:

1. The Copernicus Border Surveillance service (CBS) supporting Member States, EU Agencies and EU institutions in tackling cross-border criminality and irregular migration. Apart from helping to save lives at sea, the Earth Observation tools have contributed significantly to increasing the efficiency of Frontex surveillance operations.
2. **Copernicus Maritime Surveillance service (CMS)**: 58 different Member States Administrations, EU institutions and International organizations continued using the Copernicus Maritime surveillance service in 2021 to support the monitoring of activities at sea that have an impact on areas such as: fisheries control maritime safety and security law enforcement marine environment (pollution monitoring) support to international organisations
3. **Copernicus Service in Support to EU External Action (SEA)**: in 2021, the SEA continued to provide its users with rapid, on-demand geospatial information for the detection and monitoring of events or activities outside the European borders that may have implications for European and global security. The service continued delivering custom-designed intelligence products based on the analysis of satellite imagery, taking the form of a range of printable and digital maps and reports in support of humanitarian aid, conflict and crisis, and the rule of law.

The **Copernicus Marine Environment Monitoring Service (CMEMS)** continued providing systematic reference information on the marine ecosystems, both for global oceans and for the European regional seas. The future design of the CMEMS for the period 2021-2027 was in focus, seeking to match an ambitious science roadmap and the EU green deal priorities. The CMEMS published its 5th Ocean state report and successfully delivered on eutrophication⁷ monitoring at Exclusive Economic Zone in support of

⁶ Sentinel-1A, 1B, 2A, 2B, 3A, 3B, 5P, 6A

⁷ Harmful algal blooms, dead zones, and fish kills are the results of a process called eutrophication—which begins with the increased load of nutrients to estuaries and coastal waters.

Eurostat reporting of SDG 14.1. The publication ‘7 years of CMES achievements (2015-2020)⁸’ was released showing an exponential user uptake in the number of users. More than 34 296 users registered for CMEMS, 4 480 users for the Copernicus WEkEO service and 324 unique products in 2021. Under the [EU4OceanObs project](#)⁹, partners worldwide were reached by means of 29 workshops and international meetings in 2021. Since June 2021, CMEMS information products are searchable per policy area with a dedicated MSFD catalogue (<https://marine.copernicus.eu/news/new-catalogue-support-msfd-joint-copernicus-marine-and-emodnet-initiative>).

The **Copernicus Land Monitoring Service (CLMS)** continued to provide various land monitoring information products at local, pan-European, global level and counted a total of 94 813 users by 2021. The CLMS Corine land cover (CLC) product was updated, the service continued the production of the HRLs2018 and the implementation of the next generation CLC+ that will support the LULUCF (Land Use, Land-Use Change and Forestry) reporting obligations. A series of 2018 updates of the local hotspot monitoring products (Urban Atlas, Riparian Zones, Natura2000, Coastal Zones monitoring information with the CMEMS) were updated in 2021, and were further enriched, such as the 3D information (building block height) included in Urban Atlas. The High Resolution Vegetation Phenology and Productivity layer covering the period 2017-2020 was published on the standard WEkEO interface. The global land monitoring continued to provide on a ten daily basis over 20 variables, supporting the monitoring of vegetation, agriculture, energy, cryosphere and water cycle. The 500 metre ‘Lake Ice Extent over Northern Hemisphere’ product was released as well as the 1 km ‘Snow Cover Extent Northern Hemisphere’ product that was added to the regular production chains. The sectoral activity Copernicus4GEOGLAM, completed its first round of field campaigns for collection of ground observations in Kenya, Uganda and Tanzania. In 2021, the ‘in season agriculture mask and crop type mapping’ were completed for these areas and were added to the hotspots explorer.

The **Copernicus Atmosphere Monitoring Service (CAMS)** continually monitored air quality worldwide and reported a total of 117.419 users at by the third quarter of 2021. CAMS contributed significantly to the debates on the links between air quality and COVID-19 symptoms. CAMS supports research by providing information on the distribution and evolution of fine particulate matter close to Earth’s surface. To make relevant air quality information easier to access, CAMS has built the web-based [CAMS COVID resource](#), which includes graphs and animations to support researchers, policymakers and the public. CAMS data is also feeding the joint Commission and ESA Rapid Action on Coronavirus platform: <https://atmosphere.copernicus.eu/european-air-quality-information-support-covid-19-crisis>. CAMS also continued to monitor global wildfire activity as well as the resulting emission of pollutants. Quality-assured information about the state of the ozone layer supported in particular the monitoring of the Antarctic ozone hole which is considerably larger again in 2021.

Another positive development came when the three CAMS information products were taken up in the 2022 Intergovernmental Panel on Climate Change (IPCC) 6th Assessment Report. Thereby these CAMS information products supported a widely respected report on the physical understanding of the climate system and climate change.

The **Copernicus Climate Change Service (C3S)**, operational since June 2018, which routinely monitors the Earth’s climate, provided throughout 2021 continuous and reliable information on key indicators such as temperature, sea ice and CO₂ levels. In October 2021, the number of users registered exceeded 100,000. The climate data store keeps delivering to its users some ~2 PB per month of quality-controlled climate data and is serving global re-analysis, multi-model seasonal forecasts, Essential Climate Variables (ECV) products and other datasets as they become available. ERA5, C3S most popular dataset, provides hourly estimates for a large number of atmospheric, ocean-wave and land-surface quantities. User can now consult the hourly time-series for any meteorological parameter from 1950 to near real time (5 days before present).

C3S and CMAS received broad coverage in top-tier media outlets, in Europe and beyond, across TV, radio, print and online thanks to its proactive outreach to the press regarding the service's climate intelligence products such as its monthly climate bulletin. Through a TV media partnership with Euronews (<https://www.euronews.com/programs/climate-now>), where C3S sponsors and provides content for the programme Climate Now, C3S reaches around 7.7 million viewers per quarter. Furthermore, under a partnership with the global broadcaster CNN, data driven content from the service, along with that of CAMS, reaches around 268.7 million people across the world each quarter.

The added value of Copernicus CAMS and C3S services in the context of climate adaptation were put at centre stage when presented at the United Nations Climate Change Conference of the Parties (COP26) in November 2021, in Glasgow (UK) during a session called "Climate adaptation enabled through the Copernicus Services and international cooperation"¹⁰.

Copernicus next generation

Evolution plans and the preparations for Copernicus 2.0 requires the renewal of the existing Delegation Agreements with entrusted entities for the next seven years. A number of Contribution Agreements were negotiated and signed by end 2021 (also see section 2.1). In 2021, an industry survey (request for information) and an industry workshop were organised to prepare the revision of the Copernicus Contributing Missions (CCM). Future missions will feature Copernicus commercial satellite data. European new space is expected to answer to the Copernicus services’ very high resolution data need.

⁸ <https://marine.copernicus.eu/news/copernicus-1-marine-service-achievements-2015-2021>

⁹ project led by DG FPI on behalf of DG DEFIS and RTD

¹⁰ Session organised by ECMWF in cooperation with the Joint Research Centre (JRC) and DG DEFIS

Copernicus user and market uptake

Copernicus is reaching more than 497,286 registered users on the open hub and as shown by the reported KPIs on satisfaction to the user needs with a high level of satisfaction from users. The overall number of Copernicus Sentinel products which were available for download on the open hub by the end of third quarter of 2021 was 45 million data products, corresponding to 29.95 PiB¹¹ of data. This is the total number of Sentinel-1,-2,-3 and -5P products.

Copernicus has successfully embraced the big data revolution in various ways. Most notable was the setting up of the **Data Access and Information Services (DIAS)** collocating Copernicus data and information procured with European Earth Observation (EO) and cloud providers and making it available on line and near-line ready to be processed on demand. The progress in the quality of the services and the completeness of the data on offer have been steady. The development of a Copernicus integrated data management approach seeks to streamline the data access infrastructures and interfaces to provide a more consistent experience of Copernicus data and information. By working closely with the existing dissemination infrastructures of the different Copernicus components and building on the DIAS technological approach, Copernicus will offer to users more robust and feature-rich data and information exploitation infrastructures eventually providing a Copernicus data and information space. It will allow for the provisions of data analytics tools by third parties for the user benefits and also enable the European digital Big Data projects implementation.

With regard to the market uptake, the EUSPA EO and GNSS Market Report estimates that over the next decade the revenues are set to double from roughly EUR 2.8 billion to over EUR 5.5 billion as the market for Earth Observation applications is boosted by a large pool of value-added services (i.e. 85% of global revenue)¹². The top five segments, namely Urban Development and Cultural Heritage, Agriculture, Climate Services, Energy and Raw Materials, and Infrastructures, generate over half of global revenues (i.e. 55%). The Insurance and Finance segment is expected to experience the fastest growth over the next decade for both data and value-added service revenues, boosted by the growing use and demand for parametric insurance products in the context of disaster resilience frameworks. Although the European EO industry is dominated by SMEs and start-ups, from a supply perspective, European companies hold over 41% of the global EO market.

Copernicus is a major building block to start the development of **DestinationEarth** project¹³ by providing massive amounts of Earth Observation and monitoring data and information and outputs from modelling services¹⁴. **DestinationEarth** is developing digital twins of the Earth, related to climate adaptation and weather-induced extreme events. The key value for Copernicus is to own an operational service framework fully connected to beneficiaries and demonstrating its high quality of standards. In addition, Copernicus proposes an integrated data management concept to foster the reuse of the former Copernicus DIAS investment to contribute to the future CONNECT digital platform (cloud+High Performance Computing).

DG DEFIS also worked closely with DG JRC to set up the **Knowledge Centre for Earth Observation (KCEO)** to ensure the uptake of Copernicus within/by user-DGs. The KCEO is an important tool to boost the uptake of Copernicus services' information products within cross-sectoral policy areas. The KCEO involves some 17 user DGs across the Commission, closely coordinated with DG R&I and CNECT.

The second phase of the action deploying a Farm Sustainability tool and platform jointly supported by DG DEFIS, DG AGRI, and DG DIGIT (ISA² Programme) was extended and carried out in further Member States in 2021. The **FaST** digital service platform will make available capabilities for agriculture, environment and sustainability to EU farmers, Member State Paying Agencies, farm advisors and developers of digital solutions. The vision of this project is for the FaST to become a common platform for the generation and re-use of solutions for sustainable and competitive agriculture based on space data (Copernicus and Galileo) and other public and private datasets.

The **international dimension** has been enlarged through specific agreements signed with several countries, adding to the role of the EU in international fora and conferences, including various UN agencies. With the conventional data access infrastructure (e.g. ESA Open hub) and the setting up of the Copernicus Data and Information Access Services (DIAS), the entire Copernicus database is available on a **free, full and open data policy**, including to GEOSS¹⁵ members. This means that users (public authorities, companies, researchers, NGOs...) have the possibility to choose from which platform they prefer to access the data and information. The target of 100 % excludes the restricted products from the Emergency and Security Services.

Cooperation arrangements have been concluded with the United States, Australia, Brazil, Chile, Colombia, the African Union Commission, India, Serbia and Ukraine. Whereas the timeline of discussions with Japan, Canada, New Zealand, Singapore, Thailand, Vietnam, Argentina, Indonesia, the United Nations Environment Programme (UNEP) as well as the Food and Agriculture Organisation (FAO) and the World Meteorology Organisation (WMO) had to be postponed due to the COVID-19 crisis with no new arrangement signed with international partners in 2021. In 2018, the European Commission took over the chair of the Committee for Earth Observation Satellites (CEOS) and is now recognised as a major space player. Copernicus is regarded as the global benchmark for Earth Observation. At the 34th Plenary CEOS, the Greenhouse Gas Roadmap for CO₂ (carbon dioxide) and

¹¹ 1 PiB = 250 bytes

¹² <https://www.euspa.europa.eu/2022-market-report>

¹³ part of the Digital Europe Programme and Horizon Europe and co-lead by DG CNECT, DEFIS, RTD, JRC

¹⁴ the Climate Change service, the Atmosphere Monitoring Service, the Marine Environment Monitoring Service, the Land Monitoring Service and the Emergency Management Service

¹⁵ Global Earth Observation System of Systems

CH4 (methane) was endorsed. Thanks to European leadership, space agencies operating Earth Observation satellites worldwide are coordinating on relevant observations from space to support the implementation of the Paris Agreement, as well as, other policies of international or global nature such as the UN 2030 Agenda for Sustainable Development, and the European Development Policy. Furthermore, the joint EU-European Free Trade Association (EFTA) Council adopted on 29 October 2021 the Decision to incorporate relevant parts of the EU Space Programme Regulation into the European Economic Area Agreement (for Norway and Iceland).

SST/SSA

Space Situational Awareness (SSA) is a new component of the EU Space Programme. SSA is a holistic approach, including comprehensive knowledge and understanding, to the main space hazards: encompassing collision between space objects, fragmentation and re-entry of space objects into the atmosphere (grouped under SST domain), space weather phenomena (SWE), and near earth objects (NEO).

SST sub-component

At the operational level, the EU is active in the field of Space Surveillance and Tracking (SST) since 2014 (Decision 541/2014). The EU SST Consortium delivers three SST services related to risk assessment of collision, detection and characterisation of in-orbit fragmentations, break-ups or collisions, and risk assessment of the uncontrolled re-entry. Currently, the EU SST Consortium is providing collision avoidance services to more than 260 European spacecraft and serves more than 130 organisations from 23 EU Member States.

The objectives of the SST sub-component are to enhance safety, security and sustainability of all outer space activities pertaining to space objects and debris proliferation, as well as space environment. This is done by implementing appropriate measures, including development and deployment of technologies for spacecraft disposal at the end of operational lifetime and for space debris disposal. A new SST Partnership will take over the activities performed by the SST Consortium regarding the provision of SST services at Union level while ensuring a smooth transition and the continuity of the provision of SST services.

To further support the implementation of the SST Decision, to ensure a seamless transition without EU SST service discontinuity and to allow for time necessary for the establishment of the future EUSST Partnership, two main objectives were prioritised in 2021: uninterrupted provision of SST services and establishment of the EUSST Partnership. The Commission has decided to extend until 31 December 2022 the ongoing grant (“1SST2018-2020”) managed by the EUSST Consortium. The extension was announced in the adopted SSA Work Programme 2021. The Commission services worked at the same time on the preparation of an Implementing Decision on the participation of Member States in the SST sub-component and the establishment of the SST Partnership.

GOVSATCOM

GOVSATCOM is a new component of the EU Space Programme. A preparatory action was started prior to 2021 with funding support by the European Parliament. This Preparatory Action has supported a series of activities, in view of the successful start of the operational GOVSATCOM component of the EU Space Programme. The focus of the preparatory actions has been on: interface with users, operational user requirements, security requirements and procurement of the secure operational ground segment studies.

The implementation of the GOVSATCOM component will consist of preparing the grounds for a timely and appropriate level of adoption of the GOVSATCOM services when they will start to be provided; and continuation of the procurement of the GOVSATCOM ground segment infrastructure. These objectives are implemented through own resources, actions in direct management and actions in indirect management.

The first priority in 2021 is to start consolidating the implementing acts for the GOVSATCOM service portfolio, the operational requirements, the general security requirements, the location of the Hub(s) and the sharing and prioritisation of resources. The second priority is supervising and supporting the procurement of GOVSATCOM Hubs, which is entrusted to EUSPA. In parallel, downstream research for GOVSATCOM services uptake and upstream technology are being carried out respectively by EUSPA and ESA. Thirdly, the Commission is preparing the adoption of GOVSATCOM services through specific outreach activities. Finally, the Commission is working with Member States for the consolidation of the security requirements of GOVSATCOM. No infrastructure of GOVSATCOM has been deployed yet (procurement ongoing). Therefore, no GOVSATCOM services can be provided yet.

CASSINI

To foster innovation and support the emerging European New Space industry, in particular the small and medium-sized enterprises, the CASSINI initiative was rolled out in 2021. The actions under this initiative are funded by the Union space programme, Horizon Europe and InvestEU.

To raise interest in becoming an entrepreneur in the space area, a contract for CASSINI Hackathons was launched in 2021. Two large events took place online and in ten locations each, in June and November 2021, respectively.

The next action, the CASSINI Matchmaking which will be bringing together start-ups with investors and large companies, will be launched in April 2022 and with the first event planned to take place in June 2022.

Later in the year 2022, the CASSINI Business Accelerator, with the aim to improve business skills and networks among start-up companies, will be launched.

The lack of risk capital will be improved by the CASSINI Seed and Growth Funding Facility. This action will be starting in the second quarter of 2022 and is expected to strengthen private investment in space-related companies. EIF will be acting as an implementing partner for this action.

3.1.2. Previous Programme Performance

EGNOS and Galileo

To ensure continuity during the transition from the old to the new Multi-annual Financial Framework (MFF), some core programme activities for EGNOS and Galileo, carried in 2021, were financed under the previous MFF budget. These activities focused in particular on the rolling operations of the ground and space infrastructure and the satellites deployed to ensure continuous provision of services.

Two Galileo satellites were launched in December 2021 therefore the number of satellites in orbit has increased to 28. Of these, one satellite is unavailable for operational use, an additional satellite is available as in-orbit spare but not participating in the operational constellation. There are also 2 satellites that due to a launch anomaly in 2014 were placed into non-nominal eccentric orbits. These satellites have been contributing to the Search and Rescue service for several years. The 2 newly launched satellites are expected to contribute to the Galileo services including the SAR from the second quarter of 2022.

On the Galileo ground infrastructure, a new version, System Build 1.7, was deployed and is supporting the requirements associated with the launch in December 2021 and planned launches in 2022 and the increased number of satellites. The System Build 2.0, which is the baseline for Galileo Full Operational Capability will be deployed in the fourth quarter of 2023 instead of by the end of 2020, due to reasons that are directly linked to the incident in July 2019 and delays due to the COVID-19 (also see section 3.1.2 on Galileo infrastructure).

With regards to the EGNOS coverage extension, the 1-2% of EU land-masses not covered are known (Azores of Portugal, North East part of Finland and Eastern part of Cyprus) and these parts will only be covered when the new generation EGNOS V3 will become operational. The activities for the development of a new generation of EGNOS, the EGNOS version 3 continued (also see section 3.1.2 on EGNOS).

Copernicus

To ensure continuity during the transition from the old to the new Multi-annual Financial Framework (MFF), some core programme activities for Copernicus, carried in 2021, were financed under the previous MFF budget. These activities focused in particular on the continuation of the six Copernicus services, the maintenance of the Copernicus cross-cutting in situ network and the rolling operations of the space infrastructure and the satellites deployed to ensure continuous production

The Copernicus satellite Sentinel-6 Michael Freilich in-orbit commissioning review was completed in 2021. It established that with eight operating satellites in orbit, complemented by a ground infrastructure and in-situ measurements, the Copernicus monitoring capacities are successfully deployed (also see section 3.1.2. Copernicus Infrastructure).

3.2. Key achievements

	Actual Progress									Final
	1.5									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Metres
Cut-Off Date	31/12/2027
Data source	EUSPA (European Union Agency for the Space Programme); EGNOS Service Provider Monthly Performance Report (January 2022).
Link to the objective	To provide long-term, state-of-the-art and secure positioning, navigation and timing services whilst ensuring service continuity and robustness
Link MFF 14-20 / MFF 21-27	n/a
Other methodological comments	Galileo horizontal and vertical accuracy is measured 95% of the time. EGNOS horizontal and vertical accuracy is measured 95 % of the time.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	On Galileo, the achieved positioning accuracy is already significantly better than the commitment. The primary goal for the future is to ensure that the level of accuracy achieved is maintained in a stable and consistent manner. On EGNOS, better accuracy than expected was achieved mainly due to the high number of GPS satellites improving the geometry and the low impact of ionosphere due to the mild conditions.

Indicator 2: Availability and continuity of services provided by Galileo and EGNOS separately

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Galileo availability										
2021	Milestones									2027
99.5%				99.5%						99.5%
	Actual Progress									Final
	99.5%

95%	95%								95%
	Actual Progress								Final
	95%								
Are we on track :	On track								
EGNOS continuity - APV-I									
2021	Milestones								2027
98%	98%								98%
	Actual Progress								Final
	98%								
Are we on track :	On track								
EGNOS continuity - LPV-200									
2021	Milestones								2027
93%	85%								93%
	Actual Progress								Final
	93%								
Are we on track :	On track								

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2027
Data source	EUSPA (European Union Agency for the Space Programme)
Link to the objective	To provide long-term, state-of-the-art and secure positioning, navigation and timing services whilst ensuring service continuity and robustness
Link MFF 14-20 / MFF 21-27	n/a
Other methodological comments	The Galileo continuity is not yet defined. It will be defined in the applicable issue of the Open Service-Service Definition Document (OS-SDD) which is expected in the course of 2022. EGNOS: APV-I = Approach procedure with vertical guidance, category 1. LPV-200= Localizer Performance with Vertical guidance to a decision altitude of 200ft. EGNOS availability - APV-I - is measured as the percentage of EU territories with APV-I availability more than 99% of the time. EGNOS availability - LPV-200- is measured as the percentage of EU territories with LPV-200 availability more than 99% of the time. EGNOS continuity - APV-I - is measured as the percentage of EU territories with APV-I continuity risk better than 5*10-4/15 seconds. EGNOS continuity - LPV-200 - is measured as the percentage of EU territories with LPV-200 continuity risk better than 5*10-4/15 seconds.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	For Galileo, the availability of the positioning and timing services already meets and exceeds the final target value, and the goal for the future is to ensure that the availability is maintained and stable. Continuity requirements for Galileo will be defined by the time Full Operational Capability is declared. Accuracy of the services are already well above the target values and will not be impacted. For EGNOS, the APV-I availability is expected to reach 99% in 2024 and keep the performance till the end of the period; for LPV-200 the same performance is expected to be maintained (95%) for the next years. In terms of continuity, while for APV-I the performance is expected to be maintained (98%), a degradation in continuity is expected for LPV-200 in 2024 (85%) to the increased solar activity; a recovery is targeted by the end of this period (93%).

Indicator 3: EGNOS services geographical coverage

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones								2027	
97%	97%								99%	
	Actual Progress								Final	
	97%									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage geographical coverage
Cut-Off Date	31/12/2027

Data source	EUSPA (European Union Agency for the Space Programme)
Link to the objective	To provide long-term, state-of-the-art and secure positioning, navigation and timing services whilst ensuring service continuity and robustness
Link MFF 14-20 / MFF 21-27	Indicator replacing the former Objective 2 - indicator 1
Other methodological comments	% of the EU territories with more than 99% of APV-I service level availability.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The compliance will likely be reduced in the coming years where there will be the solar peak of cycle 25 (2023-2026) and then an improvement is expected for compliance similar to the target in 2027.

Indicator 4: Number of EGNOS procedures published (both APV-I and LPV-200)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
690	Actual Progress									Final
	769				900					1 150
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of airports with EGNOS procedures
Cut-Off Date	31/12/2027
Data source	EUSPA (European Union Agency for the Space Programme)
Link to the objective	To provide long-term, state-of-the-art and secure positioning, navigation and timing services whilst ensuring service continuity and robustness
Link MFF 14-20 / MFF 21-27	Indicator replacing the former Objective 2 - indicator 2
Other methodological comments	Number of LPV (i.e. APV-I) and LPV-200 procedures
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The trend will be positive and it is expected that by the end of this MFF all the EU instrument runway ends will have EGNOS procedures.

Indicator 5: EU user satisfaction with respect to Galileo and EGNOS services

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
EU user satisfaction with respect to Galileo services										
2021	Milestones									2027
80%	Actual Progress									Final
	80%					85%				90%
Are we on track :	On track									
EU user satisfaction with respect to EGNOS services										
2021	Milestones									2027
85%	Actual Progress									Final
	85%									90%
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage, based on index value satisfaction survey
Cut-Off Date	31/12/2027
Data source	EUSPA (European Union Agency for the Space Programme)
Link to the objective	To provide long-term, state-of-the-art and secure positioning, navigation and timing services whilst ensuring service continuity and robustness
Link MFF 14-20 / MFF 21-27	n/a
Other methodological comments	This indicator measures the user satisfaction perceived by the users that participated in the annual user satisfaction survey organised by the EU Agency for the Space Programme (EUSPA) in cooperation with the European GNSS Service Centre for Galileo users and European Satellite Services Provider for EGNOS users. Global user satisfaction score out of 10, based on the user satisfaction survey on year 2020, performed in Dec 2020-April 2021.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The trend is expected to be positive as the availability of the services will increase.

Indicator 6: Share of Galileo and EGNOS enabled receivers in the worldwide and the EU Global Navigation Satellite Systems/ Satellite Based Augmentation System (GNSS/SBAS) receivers market

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Share of Galileo enabled receivers worldwide										
	Milestones									2027
57					63					70
	Actual Progress									Final
	57									
Are we on track :	On track									
Share of EGNOS enabled receivers worldwide										
	Milestones									2027
63					64					65
	Actual Progress									Final
	63									
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Percentage (cumulative)
Cut-Off Date	31/12/2027
Data source	European Union Space Agency (EUSPA) Earth Observation and GNSS Market Report
Link to the objective	To provide long-term, state-of-the-art and secure positioning, navigation and timing services whilst ensuring service continuity and robustness
Link MFF 14-20 / MFF 21-27	Indicator replacing the former General Objective 1 - indicator 1. This indicator will be continued in the MFF 2021-2027.
Other methodological comments	Galileo and EGNOS penetration in receiver models, worldwide is based on EUSPA’s independent analysis assesses the capabilities of more than 500 receivers, chipsets and modules currently available on the market (end of Q4 2021). For the analysis, each device is weighted equally, regardless of whether it is a chipset or receiver and no matter what its sales volume is. The results should therefore be interpreted as the split of constellation support in manufacturers’ offerings, rather than what is in use by end users. The analysis includes all major receiver manufacturers in Europe and worldwide.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	For Galileo receivers the market share shall increase gradually. For EGNOS receivers the market share is stabilised and is not expected to increase substantially for the reasons explained in the performance section.

Specific Objective 2: To deliver accurate and reliable Earth Observation data, information and services integrating other data sources, supplied on a long-term sustainable basis, to support the formulation, implementation and monitoring of the Union and its Member States' policies, and actions based on user requirements

Indicator 1: Number of EU users of Copernicus Services, Copernicus data, and Data and Information Access Systems (DIAS) providing, where possible, information such as the type of user, geographical distribution and sector of activity

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
400 000					1 000 000					1 200 000
	Actual Progress									Final
	857 273									
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Number of users (registered)
Cut-Off Date	30/01/2028
Data source	Quarterly and Semester reports and data dissemination dashboards
Link to the objective	To provide, or contribute to the provision of, high-quality and up-to-date and, where appropriate, secure space-related data, information and services without interruption and wherever possible at global level, meeting existing and future needs and able to support the Union's political priorities and related evidence-based and independent decision making, inter alia for climate change and, transport, security. To enhance safety, the security of the Union and its Member States, and reinforce its autonomy, in particular in terms of technologies.
Link MFF 14-20 / MFF 21-27	Indicator replacing the former Objective 1 - indicator 1 of last MFF “Number of engaged users showing sustained uptake through registered data download”
Other methodological comments	EU users (27) for this indicator are considered to be users from EU Member States (and their oversea

	territories), and include EFTA users and users from other participating states, EU agencies and institutions.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Vast number of registered users expected to grow steadily with a further increase once the Copernicus CO2 missions are launched and will be delivering data.

Indicator 2: Where applicable, number of activations of Copernicus Services requested and/or served

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
76	300									500
	Actual Progress									Final
	76									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of requests for services (cumulative)
Cut-Off Date	31/01/2028
Data source	Quarterly and Semester reports of the Copernicus Services
Link to the objective	- to provide, or contribute to the provision of, high-quality and up-to-date and, where appropriate, secure space-related data, information and services without interruption and wherever possible at global level, meeting existing and future needs and able to support the Union's political priorities and related evidence-based and independent decision making, inter alia for climate change and, transport, security; - to "enhance safety, the security of the Union and its Member States, and reinforce its autonomy, in particular in terms of technologies
Link MFF 14-20 / MFF 21-27	New indicator under MFF 21/27
Other methodological comments	The indicator is the number of on-demand services for EMS service (not limited to rapid mapping) and security services, all types included. In the future, this indicator may also possibly include other services in case they develop on-demand services.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Based on the 2012-2021 trend

Indicator 3: EU User satisfaction with respect to Copernicus Services and DIAS

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
90%	95%									98%
	Actual Progress									Final
	90%									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage, based on index value satisfaction survey
Cut-Off Date	31/01/2028
Data source	Based upon a yearly user survey
Link to the objective	To maximise the socio-economic benefits, in particular by fostering the development of an innovative and competitive European upstream and downstream sectors, including small and medium-sized enterprises and start-ups, thereby enabling growth and job creation in the Union and promoting the widest possible uptake and use of the data, information and services provided by the Programme's components both within and outside the Union; while ensuring synergies and complementarity with the Union's research and technological development activities carried out under the Horizon Europe Regulation
Link MFF 14-20 / MFF 21-27	Replacing the former objective 1- indicator 2: "Progression in number of satisfied users expressed by the percentage of returning and engaged users"
Other methodological comments	Complex calculation because it will be based on different user satisfaction surveys.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Copernicus is a user-driven programme and seeks to maximise the satisfaction of its users.

Indicator 4: Reliability, availability and continuity of the Copernicus Services and Copernicus data stream

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Availability of the Copernicus Services and Copernicus data stream										
2019	Milestones									2029
94				97						99

	Actual Progress								Final
	99.97								
Are we on track :	On track								
Reliability of the Copernicus Services and Copernicus data stream									
2022	Milestones								2029
95					97				99
	Actual Progress								Final
Are we on track :	No data								
Continuity of the Copernicus Services and Copernicus data stream									
2022	Milestones								2029
95					97				99
	Actual Progress								Final
Are we on track :	No data								

Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/01/2028
Data source	Copernicus Data dashboards, Quarterly Implementation Reports and Semestrial reports
Link to the objective	- to provide, or contribute to the provision of, high-quality and up-to-date and, where appropriate, secure space-related data, information and services without interruption and wherever possible at global level, meeting existing and future needs and able to support the Union's political priorities and related evidence-based and independent decision making, inter alia for climate change and, transport, security; - to "enhance safety, the security of the Union and its Member States, and reinforce its autonomy, in particular in terms of technologies.
Link MFF 14-20 / MFF 21-27	Replacing the former objective 2 - Indicator 1: "The accomplishment of the space infrastructure in terms of satellites deployed and data it produces for integration into geo-information services" and Objective 3- Indicator 1: "Sustained availability of in-situ data for supporting Copernicus services"
Other methodological comments	On availability: complex calculation as it will be a combined indicator based on the availability of the different Copernicus services and Copernicus data stream. Reliability and reliability indicator values are indicative and remain tbc.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Maximising the availability, reliability and continuity.

Indicator 5: Number of information products delivered in the portfolio of each Copernicus Service

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones								2029	
88					96					100
	Actual Progress								Final	
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/01/2028
Data source	Copernicus Services Data/information products' dashboards
Link to the objective	- to provide, or contribute to the provision of, high-quality and up-to-date and, where appropriate, secure space-related data, information and services without interruption and wherever possible at global level, meeting existing and future needs and able to support the Union's political priorities and related evidence-based and independent decision making, inter alia for climate change and, transport, security; - to "enhance safety, the security of the Union and its Member States, and reinforce its autonomy, in particular in terms of technologies
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The indicator will be a combined/composed indicator because each of the 6 Copernicus services produces information products.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Number of information products are based on the available budget which allows mainly for (enhanced) continuity. Additional information and data will become available once the Copernicus CO2 missions are launched.

Indicator 6: Amount of data generated by the Sentinels

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
35.000.000 data products corresponding to more than 330 million Gigabytes					85.000.000 data products					125.000.000 data products
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	IT data amount (volume of data in Pbytes per year, number of data products generated per year)
Cut-Off Date	31/01/2028
Data source	Quarterly reports and data dissemination dashboards
Link to the objective	- to provide, or contribute to the provision of, high-quality and up-to-date and, where appropriate, secure space-related data, information and services without interruption and wherever possible at global level, meeting existing and future needs and able to support the Union's political priorities and related evidence-based and independent decision making, inter alia for climate change and, transport, security; - to "enhance safety, the security of the Union and its Member States, and reinforce its autonomy, in particular in terms of technologies
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The calculation is based on ESA dashboard. Increase is due to the launch of Sentinel4, Sentinel5 and CO2 expansion mission. Other candidate missions are not taken into account since their launch is expected after 2028. The possible launch of C/D units do not affect the calculation since they will replace A or B units at end of lifetime.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Steady increase with spikes in the years where new Sentinels are launched.

Specific Objective 3: To enhance Space Surveillance and Tracking (SST) capabilities to monitor, track and identify space objects and space debris, with the aim to further increase the performance and autonomy of SST capabilities at Union level, to provide space weather services and to map and network Member States Near-Earth Objects (NEO) capacities

Indicator 1: Number of EU users of SSA components providing, where possible, information such as the type of user, geographical distribution and sector of activity.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Number of users (Organisations)
Cut-Off Date	
Data source	EU SST Consortium, EU SST Front Desk
Link to the objective	Enhance safety, security and sustainability of all outer space activities pertaining to space objects and debris proliferation, as well as space environment, by implementing appropriate measures, including development and deployment of technologies for spacecraft disposal at the end of operational lifetime and for space debris disposal.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The baseline for the indicator measuring the number of EU users of SSA components will be set at zero (0) as the future SST Partnership does not exist yet. First data expected in the course of 2022.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: Availability of services

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of available services
Cut-Off Date	
Data source	EU SST Consortium, EU SST Front Desk
Link to the objective	Enhance safety, security and sustainability of all outer space activities pertaining to space objects and debris proliferation, as well as space environment, by implementing appropriate measures, including development and deployment of technologies for spacecraft disposal at the end of operational lifetime and for space debris disposal.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	Considering the lack of historical data, the baseline and target values remain tbd and will depend on the type of EU SSA/SST and Space Weather Service selected. First data are expected by 2023.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Specific Objective 4: To ensure the long-term availability of reliable, secure and cost-effective satellite communications services for GOVSATCOM users

Indicator 1: Number of EU users of GOVSATCOM providing, where possible, information such as the type of user, geographical distribution and sector of activity.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Number of users
Cut-Off Date	
Data source	European Commission, GOVSATCOM Hub
Link to the objective	Provide, or contribute to the provision of, high-quality and up-to-date and, where appropriate, secure space-related data, information and services without interruption and wherever possible at global level, meeting existing and future needs and able to support the Union's political priorities and related evidence-based and independent decision making, inter alia for climate change and, transport, security; Enhance safety, the security of the Union and its Member States, and reinforce its autonomy, in particular in terms of technologies;
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	This indicator is not yet applicable, as the services will start to be provided in 2024.

Indicator 2: Availability of Services

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of available services
Cut-Off Date	
Data source	European Commission, GOVSATCOM Hub

Link to the objective	Provide, or contribute to the provision of, high-quality and up-to-date and, where appropriate, secure space-related data, information and services without interruption and wherever possible at global level, meeting existing and future needs and able to support the Union's political priorities and related evidence-based and independent decision making, inter alia for climate change and, transport, security; Enhance safety, the security of the Union and its Member States, and reinforce its autonomy, in particular in terms of technologies.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	This indicator is not yet applicable, as the services will start to be provided in 2024.

Specific Objective 5: To support an autonomous, secure and cost-efficient capability to access space, taking into account the essential security interests of the Union

Indicator 1: Number of launches for the Programme (including numbers by type of launchers)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	1 Soyuz (Galileo#L11)	2 Soyuz (Galileo#L12 and L13)	1 Ariane6 (Galileo#L14) 1 Vega-C (Copernicus Sentinel-1C)	2 Ariane6 (Galileo#L15 and L17) 1 Vega-C (Copernicus Sentinel-2C)	2 Ariane6 (Galileo#L16 & L18) 2 Vega-C (1 Copernicus Sentinel-3C and 1 Copernicus Sentinel-1C) 2 M-A)	2 Ariane6 (Galileo#L19 and L20) 1 Vega-C (Copernicus Sentinel-2M-B)	2 Ariane6 (Galileo#L21 and L22)	2 Ariane6 (Galileo#L23 and L24)	2 Ariane6 (Galileo#L25 and L26)	20 (15 Galileo, 5 Copernicus)
Actual Progress										Final
	1 Soyuz (Galileo#L11)									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number
Cut-Off Date	31/12/2029
Data source	European Commission
Link to the objective	To support an autonomous, secure and cost-efficient capability to access space, taking into account the essential security interests of the Union
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Based on the available and foreseen budget to maintain and ensure the current and new services under the EU space programme with the launch of satellites.

Specific Objective 6: To foster the development of strong Union, space economy including by supporting space ecosystem and by reinforcing the competitiveness, innovation, entrepreneurship, skills and capacity building in all Member States and Union, with particular regard to small and medium-sized enterprises and start-ups or legal and natural persons from the Union active or wishing to become active in that sector.

Indicator 1: Number and location of space hubs in the Union

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
38	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Number of space hubs, ecosystem impact
Cut-Off Date	
Data source	European Commission (with inputs from Member States + ESA + other stakeholders)

Link to the objective	To foster the development of a strong Union space economy including by supporting the space ecosystem and by reinforcing the competitiveness, innovation, entrepreneurship, skills and capacity building in all Member States and Union regions, with particular regard to small and medium-sized enterprises and start-ups or legal and natural persons from the Union active or wishing to become active in that sector
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The baseline was set out on the basis of an ad-hoc study (Mapping, Analysis and Characterization of “Space Hubs” in the EU, PwC, June 2019). To be noted, the number of European Digital Innovation Hubs (EDIHs) will be counted under this indicator instead of ‘Space hubs’ as such given that these are interconnected and often overlap with the wider ICT and digital industrial ecosystem etc. More data on the milestones and the target value are expected by the end of 2022.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: Share of SMEs established in the EU as a proportion of the total value of the contracts relating to the programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	
Data source	European Commission
Link to the objective	To foster the development of a strong Union space economy including by supporting the space ecosystem and by reinforcing the competitiveness, innovation, entrepreneurship, skills and capacity building in all Member States and Union regions, with particular regard to small and medium-sized enterprises and start-ups or legal and natural persons from the Union active or wishing to become active in that sector
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	In absence of historical data, the baseline for this indicators remains to be determined on the basis of an ad-hoc study. The target will be determined taking into account the baseline and the programme’s technical expectations. First data are expected in the course of 2023.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No data available yet.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Implementation and exploitation of European satellite navigation systems (EGNOS and Galileo)

Specific Objective 1: To develop and provide global satellite-based radio navigation infrastructures and services (Galileo) by 2020

Indicator 1: Galileo infrastructure Cumulative number of operational satellites

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
4	Actual Progress									Final
	3	9	18	22	26	26	26	28		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of satellites
Cut-Off Date	31/12/2020
Data source	European Space Agency and European GNSS Agency
Narrative	This indicator was chosen as it impacts the quality and coverage of the GNSS services provided. The 30 satellite target includes allowance for in-orbit spares that ensure service continuity in case of unexpected events. Users are already experiencing excellent performance levels with the number of

	satellites that are currently in orbit.
Methodology	
Link MFF 14-20 / MFF 21-27	n/a
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Two Galileo satellites were launched in December 2021. Therefore the number of satellites in orbit has increased to 28. Of these, one satellite is unavailable for operational use, an additional satellite is available as in-orbit spare but not participating in the operational constellation. There are also 2 satellites that due to a launch anomaly in 2014 were placed into non-nominal eccentric orbits. These satellites have been contributing to the Search and Rescue service for several years. The 2 newly launched satellites are undergoing in-orbit testing and once they are successfully tested they are expected to contribute to the Galileo services including the SAR in early 2022. The next launches of satellites were planned in April 2022 (2 satellites) and in the second semester of 2022 (2 satellites). However, due to the crisis precipitated by the Russian invasion of Ukraine, these launches (which were scheduled on Russian Soyuz rockets) will not take place as planned.

Indicator 2: Galileo infrastructure New terrestrial infrastructure deployed version

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
June 2011	Milestones									2020
In orbit validation (IOV) initial configuration	IOV final configuration	Ground Segment Version 2.0	System Build 1.5.0	System Build 1.5.0	System build 1.5.1	System build 1.5.1	System build 1.5.1	SystemBuild 1.5.1 then SystemBuild 1.7	SystemBuild 1.7	System Build 2.0
	Actual Progress									Final
		GSM Version 2.1/GCS 2.0	SystemBuild 1.5.0	SB 1.5.0	SB 1.5.0	Migration ongoing to system build 1.5.1	Migration ongoing to system build 1.5.1	SystemBuild 1.7		
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	System build validation
Cut-Off Date	31/12/2021
Data source	European Space Agency and European Union Space Agency (EUSPA)
Narrative	This indicator was chosen as it impacts the quality and coverage of the GNSS services provided
Methodology	Once the System Build are deployed and validated, this ongoing metric monitors the status of the Galileo ground segment. Performance commitments are associated with System build validation
Link MFF 14-20 / MFF 21-27	n/a
Other methodological comments	The system upgrade System Build 1.5.1 which will improve the operability, robustness and security of the system was delayed in 2018 due to changes in the composition of the industry consortium due to BREXIT. The System Build 1.5.1 was expected be implemented in 2019 but the migration was further prolonged due to the impact of the technical incident of July 2019. The complete System Build 1.5.1 is now expected to be fully in operations by April 2021. The more recently defined System Build SB1.7, which provides all functionality necessary to support the upcoming satellite launches, was deployed in September 2021. System Build 2.0, which is the baseline for Galileo Full Operational Capability (FOC) will be deployed in Q4 2023, which is in line with the current roadmap to FOC.
Full metadata available at this address	
Justification of the trend	The system upgrade System Build 1.5.1 which will improve the operability, robustness and security of the system was delayed in 2018 due to changes in the composition of the industry consortium due to BREXIT. The System Build 1.5.1 was expected be implemented in 2019 but the migration was prolonged due to the impact of the technical incident of July 2019. The complete System Build 1.5.1 is now expected to be fully in operations by April 2021. System Build 1.7 was deployed is supporting the requirements associated with the launch in December 2021 and upcoming launches in 2022 and the increased number of satellites. The System Build 2.0, which is the baseline for Galileo Full Operational Capability will be deployed in Q4 2023 instead of by the end of 2020, due to reasons that are directly linked to the incident in July 2019 and delays due to the COVID-19.

Specific Objective 2: To provide satellite-based services improving the performance of GPS to gradually cover the whole ECAC (European Civil Aviation Conference) region by 2020 (EGNOS) and European neighbouring countries

Indicator 1: Progress of the EGNOS coverage extension versus agreed coverage extension

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2015	Milestones									2020

										98,2%
	Actual Progress									Final
		98,98%	98,9%	98,7%	99,1%	98,2%	97%			98,2%
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage of Geographical coverage
Cut-Off Date	31/12/2020
Data source	EUSPA Quarterly Implementation Reports
Narrative	The geographical area is where EGNOS services meet the accuracy, availability, continuity and integrity levels. The current EGNOS Service Evolution Plan (SEP) sets out the baseline for the implementation of the EGNOS mission and security requirements. It defines the extension of EGNOS services over the European territory in terms of their availability, which is depicted in a form of 'availability maps'.
Methodology	The progress of EGNOS APV-I coverage extension versus the Programme objective to cover EU28 states (plus Norway and Switzerland) is reported through the percentage of EU28-NO-CH land masses that effectively achieve APV-I 99% availability coverage (i.e. observed EGNOS performance). APV-I = Approach procedure with vertical guidance, category 1.
Link MFF 14-20 / MFF 21-27	A similar indicator will be reported in MFF 21/27 under Indicator 3: EGNOS services geographical coverage
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Trend is stable with a yearly variation depending on yearly circumstances. The 1-2% of EU land-masses not covered are known (Azores, north east part of Finland and eastern part of Cyprus) and will only be covered when the new generation EGNOS V3 will become operational.

Previous Program 2: European Earth Observation Programme (Copernicus)

Specific Objective 2: Providing sustainable and reliable access to spaceborne data and information from an autonomous European Earth observation capacity

Indicator 1: Accomplishment of the space infrastructure in terms of satellites deployed and data it produces for integration into geo-information services

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
	1	2	4	7	7	7	8	8		8
	Actual Progress									Final
	1	2	4	6	7	7	8	8		8
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of satellites deployed
Cut-Off Date	28/02/2021
Data source	ESA
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	n/a
Other methodological comments	Copernicus satellites: Sentinel 1 A&B, Sentinel 2 A&B, Sentinel 3A&B, Sentinel 5P, Sentinel 6A
Full metadata available at this address	
Justification of the trend	Following the deployment schedule

Specific Objective 3: Providing a sustainable and reliable access to in-situ data, relying, in particular, on existing capacities operated at European and national levels, and on global observation systems and networks

Indicator 1: Sustained availability of in-situ data for supporting Copernicus services

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
	2	4	6	6	6	6	6	6		6
	Actual Progress									Final

	2	4	6	6	6	6	6	6	6
Are we on track :	On track								

Indicator type	Result
Unit of measurement	Number of Services receiving in-situ data
Cut-Off Date	28/02/2021
Data source	Quarterly implementation Reports by EEA on the cross-cutting in situ component
Narrative	All 6 services use service-specific in-situ data within their service;.The Copernicus In Situ Component coordinated by the EEA maps the landscape of in situ data availability, identifies data access gaps or bottlenecks, supports the provision of cross-cutting data and manages partnerships with data providers to improve access and use conditions.
Methodology	
Link MFF 14-20 / MFF 21-27	n/a
Other methodological comments

Justification of the trend	Following the planned activities.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	254.25	288.80	305.10	313.80	316.50	327.80	333.50	2139.75	15%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

The entire Copernicus programme (and its budget) is set up to provide the necessary data and information services based on satellite and in situ data to observe and monitor our planet and its (changing) environment. The different Copernicus services provide consistent and quality-controlled information to closely monitor the climate crisis.

Part of the investment on the Copernicus component of the EU Space programme support the implementation of climate-related policies. This share is estimated to be approximately **EUR 2 162 million for the period 2021-2027**.

The mission of the Copernicus Climate Change is to support adaptation and mitigation policies of the European Union by providing consistent and authoritative information about climate change. Climate Data Store (CDS) provides a wealth of information about the past, present and future climate, on global, continental and regional scales. CC3S provides access to several climate indicators (e.g. temperature increase, sea level rise, ice sheet melting, warming up of the ocean) and climate indices (e.g. based on records of temperature, precipitation, drought event) for both the identified climate drivers and the expected climate change impacts¹⁷. These activities come up to approximately **EUR 241 million in the MFF 2021-2027**

More than 40% of the Copernicus Atmosphere Monitoring Service activities are linked directly or indirectly to climate change monitoring. CAMS provides information related to air pollution and health, solar energy, greenhouse gases and climate forcing, everywhere in the world. CAMS will develop a new portfolio for the assessment of the anthropogenic emissions, based on existing third-party data and on the new CO2 candidate mission which is scheduled end 2025.

The climate-related activities come up to approximately **EUR 68 million in the MFF 2021-2027**

More than 40% of the The Copernicus Marine Environment Monitoring service activities are climate mainstreamed: CMEMS operates an Ocean Climate Service and will develop with other services a knowledge hub dedicated to Arctic changes mainly due to climate change. These activities come up to approximately **EUR 91 million in the MFF 2021-2027**

More than 40% of the The Copernicus Land Monitoring service activities are linked directly or indirectly to climate change monitoring. CLMS supports the requests for land-related information to monitor (changes in the) biodiversity and ecosystems, relevant aspects of the circular economy (e.g. a sustainably built environment), land degradation. These activities come up to approximately **EUR 80 million in the MFF 2021-2027**

¹⁷ The European Commission signed a Delegation Agreement with ECMWF (European Centre for Medium-Range Weather Forecasts) for the implementation of the Copernicus Climate Change service. It is operational since June 2018.

About 40% of the The Copernicus Emergency Management system activities are linked directly or indirectly to climate change monitoring. The CEMS provides critical information and early warnings regarding floods, droughts and forest fires. These activities come up to approximately **EUR 31 million in the MFF 2021-2027**

All these services rely heavily on space-borne observation data. We assume that the related investment is about 40% of the space component dedicated to these observations (e.g. Sentinels 1, 3, 5P, 6 and CO₂ mission). The corresponding share of the space component funding is expected to be about **EUR 1 651 million in the MFF 2021-2027**.

6.1.3. Key achievements

Thanks to the near real time production of the reanalysis, the Copernicus Climate Change Service (C3S) was the first to call 2020 as the joint warmest year on record (on a par with 2016). C3S contributed with temperature data and graphics, as well as an “Arctic side-bar” section to the preliminary WMO statement on the State of the Climate in 2020. C3S is represented at international climate fora and events such as the Partner Advisory Committee of the Global Framework for Climate Services and the Climate Coordination Panel of WMO. C3S was also approached by WMO to explore the possibility for the service to become a GCOS endorsed global data repository of for upper air humidity data for GNSS.

The Copernicus Climate Change Service (C3S) works together with businesses across the globe to turn raw climate data into sector-specific information aimed at users within the field, such as businesses, researchers and policymakers. One of these projects is the Global Biodiversity service which aims to support those working to preserve species, to protect the areas that are most climate sensitive, to increase the resilience of ecosystems, to reduce biodiversity loss around the world by providing the information needed to create plans to sustain ecosystems in present and future climate conditions.

In addition, Galileo and EGNOS, the EU’s Global navigation satellite systems also contributed towards tackling climate change by supporting environmentally friendly transport solutions, sustainable agriculture and meteorological monitoring. For example:

1. **Reduced fuel consumption:** satellite navigation enables optimal routes for cars, buses, boats and airplanes by providing accurate positions. This allows significant reduction of the fuel required to go from A to B and thus contributes to the reduction of CO₂ emissions.
2. **Sustainable agriculture:** As the centrepiece of precision farming, use of satellite navigation reduces the need for fertilisers. In turn, this means a reduction of greenhouse gases such as CO₂, nitrous oxide and ammonia in the atmosphere.

6.1.4. Performance

The Copernicus programme contributed EUR 1 408 million in the 2014-2020 period to support the implementation of climate-related policies.

The mission of the Copernicus Climate Change Service (C3S) is to support adaptation and mitigation policies of the European Union by providing consistent and authoritative information about climate change. Climate Data Store (CDS) provides a wealth of information about the past, present and future climate, on global, continental and regional scales. C3S provides access to several climate indicators (e.g. temperature increase, sea level rise, ice sheet melting, warming up of the ocean) and climate indices (e.g. based on records of temperature, precipitation, drought event) for both the identified climate drivers and the expected climate change impacts. These activities came up to approximately EUR 218 million in the MFF 2014-2020.

Around 50% of the Copernicus Atmosphere Monitoring Service (CAMS) activities are linked directly or indirectly to climate change monitoring. CAMS provides information related to air pollution and health, solar energy, greenhouse gases and climate forcing, everywhere in the world. The climate-related activities came up to approximately EUR 30 million in the MFF 2014-2020.

Around 50% of the Copernicus Marine Environment Monitoring service activities are climate mainstreamed. The activities came up to approximately EUR 70 million in the MFF 2014-2020.

About 50% of the the Copernicus Land Monitoring service activities are linked directly or indirectly to climate change monitoring. CLMS supports the requests for land-related information to monitor (changes in the) biodiversity and ecosystems, relevant aspects of the circular economy (e.g. a sustainably built environment), land degradation. These activities came up to approximately EUR 60 million in the MFF 2014-2020.

About 50% of the Copernicus Emergency Management system (CEMS) activities are linked directly or indirectly to climate change monitoring. The CEMS provides critical information and early warnings regarding floods, droughts and forest fires. These activities came up to approximately EUR 30 million in the MFF 2014-2020.

All these services rely heavily on space-borne observation data. We assume that the related investment is about 50% of the space component dedicated to these observations. The corresponding share of the space component funding was about EUR 1000 million in the MFF 2014-2020.

In the near future, the high-priority satellite mission “Copernicus Carbon Dioxide Monitoring” is foreseen to be launched in 2025.

Under the Paris climate accord, countries must compile CO₂ inventories. The Copernicus CO₂ mission will provide supporting data.

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution	120.00	120.00	120.00	120.00	120.00	165.00	165.00	930.00
Share compared to total envelope	6.07 %	5.98 %	5.87 %	5.75 %	5.85 %	7.88 %	7.77 %	6.46 %

(*)These amounts include NextGenerationEU top-ups if any

6.2.2. Explanation On the financial contribution

Part of the investments into the Copernicus component of the EU Space programme support the implementation of biodiversity-related policies. This share is estimated to be approximately **EUR 930 – 1 130 million for the period 2021-2027**.

- More than 70 % of the Copernicus Land Service activities are linked directly or indirectly to biodiversity monitoring and maintenance.¹⁸
- Some products are directly linked to Biodiversity/eco-system scale patterns, such as the monitoring of green infrastructure, the riparian areas and the Natura 2000 sites in Europe for DG ENV, and the monitoring of key ecological landscapes and protected areas in Africa for DG INTPA.
- Others are indirectly supporting the biodiversity policies and strategy such as the monitoring of woody feature for the CAP or the provision of biophysical variables for the UN SDG 15 assessment.
- Overall the land cover mapping and land cover change mapping at European and Global scale carried out by the land service is an essential element for monitoring the evolution of biodiversity and for supporting its conservation and sustainable use. These activities come up to approximately **EUR 130 million in the MFF 2021-2027**.
- In addition, there are smaller activities indirectly related to marine biodiversity in the Copernicus Marine Environment Service and the Copernicus Climate Change Service is providing specific sectoral indices for biodiversity. The latter two are less important in budget and difficult to disentangle and to quantify.
- All these services rely heavily on space-borne observation data. Similar to the approach taken for the last exercise to estimate biodiversity related spending in the MFF 2014-2020, we assume that the related investment is about 30-40% of the space component dedicated to optical observations (Sentinels 1, 2 and 3 to monitor ecosystem-scale patterns). The corresponding share of the space component funding is expected to be about **EUR 800 – 1 000 million**.

6.2.3. Key Achievements

Copernicus products and services in the Copernicus land monitoring service support Biodiversity policies in EU. Land cover products and specific products related to Natura2000 sites, land degradation, monitoring of riparian and coastal zones, forest change are amongst those that are supporting to protect biodiversity in Europe. The Copernicus land monitoring service provides the High Resolution Layer Small and Woody features: small woody landscape features are important for a number of ecosystem services, among others related to biodiversity and habitat connectivity. They also improve air quality, water quality, water quantity, reduction of greenhouse gas emissions, carbon sequestration, climate change adaptation, regulation of soil erosion and soil quality, support biodiversity and pollination, and are important for cultural and recreational reasons. This CLMS information product helps to monitor the green infrastructure strategy of the EU the effectiveness of the Common Agricultural Policy (CAP). Furthermore, the CLMS continued to provide contributions to conservation efforts at global level with the Copernicus Hot Spot Monitoring component.

6.2.4. Performance

Part of the investments of the Copernicus programme has supported the implementation of biodiversity-related policies. This share amounted to approximately **EUR 700 million for the period 2014-2020**.

2014-2020 programming							Total
2014	2015	2016	2017	2018	2019	2020	
63	91	98	98	105	140	105	700

- More than 70 % of the Copernicus Land Service activities are linked directly or indirectly to biodiversity monitoring and maintenance.¹⁹

¹⁸ There are currently two principal paradigms for mapping biodiversity patterns with EO. First is to directly measure species, community or ecosystem-scale patterns. Second is to model biodiversity patterns indirectly using EO as predictive environmental features. Source: <https://onlinelibrary.wiley.com/doi/10.1111/ele.13106> - see figures featuring Sentinel 1A and 2A.

¹⁹ <https://onlinelibrary.wiley.com/doi/10.1111/ele.13106> - see figures featuring Sentinel 1A and 2A.

- Some products are directly linked to Biodiversity/ecosystem scale patterns, such as the monitoring of green infrastructure, the riparian areas and the Natura 2000 sites in Europe for DG ENV, and the monitoring of key ecological landscapes and protected areas in Africa for DG INTPA.
- Others are indirectly supporting the biodiversity policies and strategy such as the monitoring of woody feature for the CAP or the provision of biophysical variables for the UN SDG 15 assessment.
- Overall the land cover mapping and land cover change mapping at European and Global scale carried out by the land service is an essential element for monitoring the evolution of biodiversity and for supporting its conservation and sustainable use. These activities came up to approximately **EUR 100 million M in the MFF 2021-2027**.
- In addition, there are smaller activities indirectly related to marine biodiversity in the Copernicus Marine Environment Service and the Copernicus Climate Change Service is providing specific sectoral indices for biodiversity. The latter two are less important in budget and difficult to disentangle and to quantify.
- All these services rely heavily on space-borne observation data. We assume that the related investment is about 30-40% of the space component dedicated to optical observations (Sentinels 1, 2 and 3 to monitor ecosystem-scale patterns). The corresponding share of the space component funding is expected to be about **EUR 600 – 700 million**.

6.4. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0* : 0.29 Score 0: 1977.05							

(*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme **in EUR Million**)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significantly impacted**, score 0*: **impact on gender equality to be determined ex post**, score 0: **no significant impact on gender equality**.

By the end of 2021, DG DEFIS procured a pioneering project, financed under the EU space programme for a total value of 289 400 EUR to set out a demographic categorisation of the workforce employed in the defence, aeronautics and space sector, with a special focus on Equality, Diversity & Inclusion (ED&I). The results are not yet known since the main activities will be rolled out in 2022. The database expected to result from the data collected via anonymous, individual responses will cover the six dimensions of equality will be complemented by a mapping of best-case initiatives on ED&I, at global, international, regional and EU level in these and other related/linked industries.

The project contributes to SDG 5 aimed to achieve gender equality and empower all women and girls and to the Commission’s high-level objective of fostering a Union of Equality, complementing initiatives in place to support all people in all their diversity to pursue any chosen path in life, free from discrimination and other unjust biases.

The remaining part of the voted budget for implementation in 2021 under EU Space Programme (1977, 05 million EUR) was not directly targeted at gender equality initiatives. Nevertheless, indirect contributions supporting the gradual awareness raising of this horizontal Commission priority are continuously made as opportunities arise and when identified by the DG equality coordinator and other staff of the DG. For instance, special mention of gender equality aspects in communication activities and at events on various matters related to the EU space components, when promoting the competitiveness and innovation of the EU space industry or when promoting the market uptake of relevant space-based applications.

6.5. Contribution to the sustainable development goals

6.5.1. Goals

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Copernicus Land monitoring information is highly valuable for agricultural activities, monitoring crop conditions, providing early warnings on failing crops and predicting crop yields (food security). As agriculture is a crucial economic activity worldwide, providing livelihoods and employment for many, these monitoring activities can help reduce hunger.

SDG 3 Ensure healthy lives and promote well-being for all at all ages

The [Copernicus Atmosphere Monitoring Service](#) provides daily air quality forecasts that account for pollutants’ emissions and for the consequences of events such as large wildfires or volcanic eruptions. This information supports the SDG of good health and wellbeing (SDG 3) by enabling informed decision-making, providing data for smartphone applications and websites, and as a way to notify the public or to assess health impacts.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

Copernicus Land Monitoring Service (CLMS) systematically provides in near real time information on global inland water bodies and their seasonal replenishment, lake and river water levels, temperature, turbidity and trophic state, including potential water availability from snow and ice cover helping to protect and restore water-related ecosystems, including mountains, forests, wetlands, rivers, aquifers and lakes.

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

Copernicus Atmosphere Monitoring Service (CAMS) provides global 5-day forecasts of desert dust and the other main aerosols (sulphates, sea salts, black and organic carbon).

Copernicus Climate Change Service (C3S) provides climate indicators of electricity consumption, alongside estimates of the combined production from all renewable sources.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

SDG 11.4 Strengthen efforts to protect and safeguard the world's cultural and natural heritage.

The Copernicus Emergency Service can contribute to safeguarding cultural heritage by monitoring and documenting the impact of earthquakes through interferograms, which depict where the earthquake impact is most severe along with information for emergency response to different types of disasters, including floods, as well as related prevention, preparedness, response and recovery activities.

SDG 13 Take urgent action to combat climate change and its impacts

Copernicus Climate Change Service provides routine access to key indicators on a number of Essential Climate Variables i.e. temperature levels, sea-ice extension, CO₂, etc.)

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Copernicus Marine Monitoring Service offers monitoring of the oceanic carbon cycle, ocean PH and acidity, monitoring of fishing grounds. Effective maritime surveillance can help combat illegal, unreported and unregulated fishing, thereby contributing to sustainable fisheries goals. Copernicus Maritime Surveillance Service, can supply satellite data to ensure that fishing is carried out safely and sustainably.

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Copernicus Land Monitoring Service delivers products for the protection of Natura2000 areas for instance their grassland status and information on vegetation index, land degradation, deforestation and loss of biodiversity. DG ESTAT is assessing the possibility to introduce in the future new Copernicus based sub-indicators for various SDGs.

6.5.2. Key achievements and performance

In 2021, the EU space programme started a traveling exhibition "Space for our Planet - People and Space Solutions: Together for Change" <https://www.space4ourplanet.org/about/>. The exhibition in physical format will travel for about 3 years in city centres and major strategic events around the world. It is based on a digital platform highlighting how the EU Space programme can provide innovative solutions to achieve the 17 Sustainable Development Goals (SDGs). It shows real life testimonies from scientists and users across the world.

The Copernicus programme is a powerful instrument to help reporting on the SDG indicators and to provide the relevant information in support of effective monitoring of progress towards the SDG targets and compliancy with International Agreements. Moreover, the Copernicus full, free and open data and information policy reduces considerably the cost of this monitoring the SDGs and International Agreements. The systematic Earth Observation data and information provision by Copernicus assist governments and stakeholders worldwide, in developing strategies and actions, to assess, track and attain the goals that are formulated in these different international agreements/conventions, like for example: the Ramsar convention on Wetlands, the United Nations Convention to Combat Desertification, United Nations Framework Convention on Climate Change to name a few.

SDG 2 – Zero hunger

Agriculture is a crucial economic activity worldwide, providing livelihoods and employment for many. Rising populations, changing demands and diets as well as environmental changes (e.g. extreme weather, climate change) put increasing stress on the world's food supply. In many countries affected by hunger, there are already significant efforts made to address these challenges, such as closing yield gaps (difference between current yields and what might be possible under optimum conditions) and implementing sustainable land management practices.

To monitor and respond to such needs, governments and aid workers need accurate, timely, systematic and comprehensive information. Dedicated products derived from Earth Observation satellites fulfil this requirement more and more. Copernicus data provided by the Copernicus Land Monitoring Service (CLMS), help national institutions in monitoring crop conditions, providing early warnings on failing crops and predicting crop yields. Crop indices, Dry Matter Productivity and Soil Moisture information are provided every ten days on a global scale. The NGO 'Action Against Hunger' and the 'Centre de Suivi Ecologique de Dakar' are using Copernicus indices such as the Dry Matter Productivity for pastoral Early Warning System in West Africa informing pastoral communities and Governments on biomass conditions.

Smart farming is emerging as a concept with huge potential of making agriculture more productive and sustainable. Using EU space services for precision agriculture can mean a considerable reduction in the use of fertilizers, fuel and pesticides. The result is healthier food and a reduced environmental impact which is for the benefit of millions of people worldwide. Galileo and EGNOS link data to specific geographical coordinates and provide geolocation, tracking and positioning. Copernicus generates valuable space data that when combined together with modern technologies are providing innovative solutions for smarter farming.

SDG3 – Ensure healthy lives and promote well-being for all at all ages

The Copernicus Atmosphere Monitoring Service (CAMS) provides daily air quality forecasts at global scale and, with higher resolution, over Europe. These forecasts, derived from satellite observations, account for routine pollutants' emissions but also for those related to exceptional events such as large wildfires or volcanic eruptions. The forecasts are used daily by a wide range of public and commercial entities for decision-making, smartphone applications and websites, or for downscaling to local areas in order to inform the public or assess health impacts.

Data from EU Space Programme are key for the development of smart health services. Nowadays used in combination with in situ data or with other technologies such as 5G, Internet of things, Artificial Intelligence, for any physical device that can become a connected device, Copernicus and Galileo enable new applications to facilitate the end user's day-to-day life. To mention but a few examples, there are numerous consumer apps for checking daily sport and fitness activity and performance levels, encouraging a healthy lifestyle. There are apps used for patients monitoring like for instance for local-izing patients with Alzheimer's, to oversee patients with cardiac conditions and help with issuing emergency call warnings if needed, or apps used for guidance to support for instance the visually impaired.

eCall devices using data from Galileo and EGNOS are now fitted in all new car types sold in the European Union to speed up emergency response times in case of a road accident. eCall is connecting the passengers of the car involved in an accident to the nearest emergency centre while also communicating their exact location. It is estimated that eCall, in its first 10 years of operation, will save more than 2000 lives in Europe, avoid almost 20,000 severe injuries and significantly reduce the severity of injuries in 15% of all accidents involving damage to health.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

The Copernicus Land Monitoring Service (CLMS) systematically provides in near real time information on global inland water bodies and their seasonal replenishment, lake and river water levels, temperature, turbidity and trophic state, including potential water availability from snow and ice cover. The product supports a wide range of applications in the field of food security, sanitation, energy, health, transport, preservation of biodiversity and natural risk management.

Space technologies play a crucial role in optimizing potable water processing operations in order to achieve higher quality. For instance, water utility services can benefit from early warning system that indicate incidences of water quality deterioration. Copernicus services help a broad range of water managers dealing with water allocation, flood management, ecological status and industrial water use. Better information and forecasts help them to adapt their strategies in order to mitigate the effects of climate change.

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

A serious issue for the productivity of solar power plants and their operators is desert dust. Deposition of dust blocks solar radiation, and this can affect the mirrors or photovoltaic panels, thus significantly reducing their efficiency. Airborne particles, also called aerosols, directly affect the amount of solar radiation reaching the Earth's surface: together with clouds, aerosols are one of the main variables determining the solar energy yield that can be obtained from a solar energy production facility.

To prevent power efficiency losses and improve the design and management of solar power plants, the Copernicus Atmosphere Monitoring Service (CAMS) provides global 5-day forecasts of desert dust and the other main aerosols (sulfates, sea salts, black and organic carbon).

The Copernicus Climate Change Service (C3S) provides climate indicators of electricity consumption, alongside estimates of the combined production from all renewable sources at national and sub-national level in Europe. These two sets of indicators help planners and policy makers identify the pros and cons of different energy mix options and optimise investment decisions accordingly.

Copernicus and Galileo provide information that is already used to create more resilient and efficient energy infrastructure. Space data is also improving the production of renewable energies, providing valuable insights about the energy potential of natural resources like sun and wind. Smart grids improve overall energy efficiency and are essential to ensure synchronization and adjust demand to distribution across a wide geographical area. Galileo supports the implementation of smart grids and efficient energy transmission through its precise synchronization services. In addition, Galileo authentication services contribute to a more resilient infrastructure with better synchronization and augment power system monitoring, control and protection functions.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

Many cities over the world are exposed to natural hazards, such as floods, which presently account for 31% of all economic losses worldwide resulting from natural hazards. As the frequency and magnitude of flood disasters is projected to increase due to climate change, soil sealing and growing population exposure, flooding is one of the key societal challenges of this century.

With Galileo & EGNOS, as one of the key technologies used within infrastructure design and mobility of smart cities, city services can be considerably improved and at a lower cost. Positioning and timing information is essential for instance for operating and managing public transportation, power supply, connectivity, waste management, and much more.

The Copernicus Emergency Management Service (CEMS) provides information for emergency response in relation to different types of disasters, including floods, as well as related prevention, preparedness, response and recovery activities. Copernicus images are also used to provide up-to-date urban maps, which allow for careful management and view of status of green areas and city infrastructure. This information is essential for making urban planning more efficient.

Another goal pertaining to SDG 11 is to strengthen efforts to protect our cultural heritage. Cultural heritage is often affected by natural disasters, in particular earthquakes. The Copernicus programme can contribute to safeguarding cultural heritage by monitoring and documenting the impact of earthquakes. Although damages to historical buildings cannot be reversed, the mapping of the severity of an earthquake and assessment of the resulting damage allows the competent authorities to safeguard the remaining buildings. One of the ways Copernicus can assist in this matter is by assessing the magnitude of the earthquake through interferograms, which depict where the earthquake impact was most severe.

SDG 13 - Take urgent action to combat climate change and its impacts

Climate change is affecting every country on every continent. It is disrupting national economies and affecting lives, costing people, communities and countries dearly today and even more tomorrow. To address climate change, countries adopted the Paris Agreement at the COP21 in Paris on 12 December 2015, which aims at keeping this century's global temperature rise well below 2 degrees Celsius above pre-industrial levels, and to pursue efforts to limit the temperature increase even further to 1.5 degrees Celsius. The Copernicus Climate Change Service (C3S) routinely monitors the Earth's climate and its evolution. It provides routine access to key indicators on a number of Essential Climate Variables (temperature, sea-ice, CO₂, etc.) and is therefore a powerful tool to monitor the success of the implementation of the Paris Agreement. These climate indicators will also support European adaptation and mitigation policies in a number of economic sectors.

In case of extreme weather events and associated natural disasters, the use of satellite signals is critical. The Galileo Search and Rescue service provide more precise positioning, helping to reduce response times and save lives.

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

The Copernicus Marine Environment Monitoring Service (CMEMS) produces ocean monitoring products based on satellite and in situ observations as well as numerical models.

Copernicus operates the Arctic Ocean forecasting centre to closely monitor the polar areas and the effects of climate change on the sea-ice extent and thickness, icebergs concentration and changes in temperature or salinity affecting the ocean circulation and the overall weather.

Through the Copernicus Maritime Surveillance Service, with the support of the European Fisheries Control Agency (EFCA) as well as EMSA, fisheries control administrations from across the EU can benefit from Copernicus satellite data in their efforts to ensure that fishing is carried out safely and sustainably. Effective maritime surveillance can help combat illegal, unreported and unregulated fishing, thereby contributing to sustainable fisheries goals. Copernicus satellite imagery, combined with information from vessel positioning from Galileo, monitor activities of fishing vessels at sea to detect and deter illegal, unreported and unregulated fishing practices. Thanks to Galileo, data can be provided to fishing authorities on the location, speed and course of fishing vessels operating in Europe, allowing authorities to detect and track movement and activity in restricted fishing grounds. In the EU, about 9000 fishing vessels are equipped with a satellite-based device (VMS) providing data to fishery authorities to support enforcement efforts. Copernicus Earth Observation data help anglers and aquafarmers to require accurate real time and forecasts information on fish growth rates and fish health.

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Europe's space technologies contribute to better understanding and protection of our wildlife and forests.

As part of the Copernicus Land Monitoring Service (CLMS), the European Environment Agency (EEA) delivers spatially detailed products on pan-European and local land cover and land use information. The local component focuses on areas that are prone to specific environmental challenges and issues in the European Union. Under this local component, EEA offers information on Natura2000 protected hotspots, which is used to assess the preservation and status of these sites, and whether the decline in the grasslands cover is evident. The status of Natura2000 hotspots will ensure that these are accurately mapped, and can be used to draw attention to events that threaten the preservation of the sites. The Global component of the Land Service is currently also mapping protected areas but in Africa to support the biodiversity strategy. Furthermore and recently the Global component extended its product portfolio to include a Global Land Cover Map in order to provide spatial information about land for applications ranging from global forest monitoring (REDD+), crop area monitoring, biodiversity conservation to land status and climate modelling. The new Land Cover Map is completing the current portfolio of vegetation products that are related to biomass dynamics. These products are clearly earmarked for addressing the SDG 15.3 on land degradation neutrality.

Smart farming can lead to about 20 % decrease in the consumption of water, fertilisers and pesticides, all whilst increasing production. Galileo-enabled drones assist with field monitoring before harvesting.

HEADING 2A: Economic, Social and territorial cohesion**Regional Policy (European Regional and Development Fund and Cohesion Fund)****Lead DG:REGIO**

3. How is the programme performing ?	314
3.1. Performance	314
3.2. Key achievements	317
3.3. Evaluations, studies and reports	318
4. Programme 2021-2027 - Key monitoring indicators	318
Specific Objective 1 :Enhance research and innovation capacities and the uptake of advanced technologies	318
Specific Objective 2 :Reaping the benefits of digitisation for citizens, companies and governments	319
Specific Objective 3 :Enhancing growth and competitiveness of SMEs	320
Specific Objective 4 :Developing skills for smart specialisation, industrial transition and entrepreneurship	321
Specific Objective 5 :Enhancing digital connectivity	321
Specific Objective 6 :Promoting energy efficiency measures and reducing green-house gas emissions	322
Specific Objective 7 :Promoting renewable energy	323
Specific Objective 8 :Developing smart energy systems, grids and storage outside TEN-E	323
Specific Objective 9 :Promoting climate change adaptation, risk prevention and disaster resilience	324
Specific Objective 10 :Promoting sustainable water management	325
Specific Objective 11 :Promoting the transition to a circular economy	326
Specific Objective 12 :Enhancing nature protection and biodiversity, green infrastructure in particular in the urban environment, and reducing pollution	326
Specific Objective 13 :Promoting sustainable multimodal urban mobility	327
Specific Objective 14 :Developing a sustainable, climate resilient, intelligent, secure and intermodal TEN-T	328
Specific Objective 15 :Developing and enhancing a sustainable, climate resilient, intelligent and intermodal national, regional and local mobility, including improved access to TEN-T and cross-border mobility	329
Specific Objective 16 :Enhancing the effectiveness of labour markets and access to quality employment through developing social innovation and infrastructure	330
Specific Objective 17 :Improving access to inclusive and quality services in education, training and lifelong learning through developing infrastructure	331

Specific Objective 18 :Increasing the socio-economic integration of marginalised communities, migrants and disadvantaged groups, through integrated measures including housing and social services	332
Specific Objective 19 :Ensuring equal access to health care through developing infrastructure, including primary care	332
Specific Objective 20 :Fostering the integrated social, economic and environmental development, cultural heritage, tourism and security in urban areas.....	333
5. Programme 2014-2020 - Key monitoring indicators	333
Previous Program 1 : European Regional Development Fund (ERDF)	333
General Objective 1 :To reduce disparities between the levels of development of the various regions, in particular for rural areas, areas affected by industrial transition, and regions which suffer from severe and permanent natural or demographic handicaps and to contribute to achieving the targets set out in the Europe 2020 strategy of smart, sustainable and inclusive growth, and in particular towards the achievement of quantitative headline targets identified in that strategy	333
Specific Objective 1 :Strengthening research, technological development and innovation	336
Specific Objective 2 :Enhancing access to, and use and quality of, information and communication technologies.....	338
Specific Objective 3 :Enhancing the competitiveness of small and medium-sized enterprises	339
Specific Objective 4 :Supporting the shift towards a low-carbon economy in all sectors	340
Specific Objective 5 :Promoting climate change adaptation, risk prevention and management	342
Specific Objective 6 :Preserving and protecting the environment and promoting resource efficiency	343
Specific Objective 7 :Promoting sustainable transport and removing bottlenecks in key network infrastructures	346
Specific Objective 8 :Promoting sustainable and quality employment and supporting labour mobility	348
Specific Objective 9 :Promoting social inclusion, combating poverty and any discrimination	349
Specific Objective 10 :Investing in education, training and vocational training for skills and lifelong learning	350
6. The programme contribution to horizontal policies	350
6.1. Contribution to climate mainstreaming	350
6.2. Contribution to biodiversity mainstreaming.....	352
6.3. Contribution to clean air financing.....	353
6.4. Contribution to gender equality	353
6.5. Contribution to the sustainable development goals.....	354

1. Overview

1.1. Challenges

Regional disparities show a generally decreasing trend among the EU regions, based on 2019 data, even though the pace of convergence was slower after the crisis of 2008. In 2000, GDP per head of the most developed regions accounting for 10% of the Union's population was 6.1 times higher than GDP per head of the least developed regions also accounting for 10% of the Union's population. In 2018, the ratio dropped to 3.4. However, significant disparities still remain and many regions still have a GDP per head and an employment rate below pre-crisis levels. Only in 2014, disparities in employment started to narrow, followed by disparities in GDP per head in 2015. Europe was severely affected by the COVID-19 pandemic. In response, the Commission proposed a strong and coordinated set of answers allowing for recovery measures as a reaction to the health crisis and its impact on Europe's economy and society.

Amidst the COVID-19 pandemic and other ongoing challenges, cohesion policy is crucial for ensuring a balanced recovery, fostering convergence and making sure no one is left behind. REGIO delivers on these objectives primarily through programmes financed from the European Regional Development Fund (ERDF) and the Cohesion Fund (CF). Together with the European Social Fund Plus (ESF+), the ERDF and CF (and, from 2021, the Just Transition Fund - JTF) comprise the European Union's cohesion policy funds. The implementation of these funds allows the Union to fulfil the long-term objectives of strengthening economic, social and territorial cohesion in the EU.

The main challenges that cohesion policy will have to face in the coming years relate to the socio-economic and territorial aspects of regional development. It is apparent that regions and sectors are unevenly affected by the crisis, which is likely to have a long-term impact on the pace and direction of convergence. The implementation of the Green Deal and the transition towards a climate neutral economy will also impact regions hosting highly emitting industries of fossil fuel extraction activities. The design of the 2021-2027 programmes, which focuses resources on environmental and climate spending under the second policy objective ('a

greener, low-carbon transitioning towards a net zero carbon economy and resilient Europe by promoting clean and fair energy transition, green and blue investment, the circular economy, climate change mitigation and adaptation and risk prevention and management, and sustainable urban mobility’) will allow regions to benefit from economic opportunities arising from the green transition. Funding from the ERDF and the CF together with the other cohesion policy funds played a central role in 2020 and will continue doing so in the years to come.

1.2. Mission (General objectives)

REGIO’s activities are guided by Article 174 of the Treaty. It provides that, in order to strengthen its economic, social and territorial cohesion, the Union is to aim at reducing disparities between the levels of development of the various regions and the backwardness of the least favoured regions, and that particular attention is to be paid to rural areas, areas affected by industrial transition and regions which suffer from severe and permanent natural or demographic handicaps. Thanks to the policy's specific features, e.g. redistribution of resources at EU level, alignment of investment to EU-wide priorities, concentration of resources on less developed and transition regions, multiannual programming, place-based approaches, multi-level governance, interregional cooperation, administrative capacity building, the supported investments bring strong European added value, while respecting the principle of subsidiarity.

The main characteristics of the policy:

1. **Aligning investment to EU priorities:** the political priorities of the von der Leyen Commission are implemented through the policy objectives and the role they play in programming as well as the thematic concentration requirements. This influences national investment policies, leading to coordinated EU-wide action that is critical to addressing global challenges.
2. **Contributing to economic governance:** There is a close relationship between regional policy funding and economic governance, including the macroeconomic conditionalities but also the programming process and implementation aligned with the European Semester process and taking due account of Country Specific Recommendations (CSRs). The framework conditions meant to ensure effectiveness of policy implementation ex ante (enabling conditions) expected to play a significant role in improving the strategic framework and the application of EU legislation in Member States - as well as in fostering structural reforms.
3. **Multiannual programming provides stability, certainty and sustainability to investments in Member States, reducing their vulnerability across economic and political cycles and improving implementation on the ground.** However, the policy’s flexibility was also shown during the COVID-19 crisis, demonstrating its ability to adapt quickly to new circumstances - funds were mobilised with unprecedented speed and flexibility.
4. **Concentration of resources on the less developed and transition regions:** support is provided to key investments, which would otherwise not take place in poorer regions. That concentration also produces spill-over effects to the rest of Europe, notably via increased connectivity and trade flows and thus supporting the Single Market.
5. **The “place-based” approach of ERDF programming allows the identification of specific development needs, the definition of appropriate investment strategies aligned to EU priorities and better conditions for sound implementation of investments on the ground.**
6. **Interregional cooperation and the exchange of experience:** Cooperation - both cross-border and across the EU - is an area where the ERDF brings clear European added value. REGIO makes a substantial contribution to identifying cross-border barriers to the Single Market and offers tailor-made solutions.

1.3. Specific objectives

In line with the cohesion policy legislative framework for the 2021-2027 period, the high-level policy objectives are proposed as follows:

1. A more competitive and smarter Europe by promoting innovative and smart economic transformation and regional ICT connectivity;
2. A greener, low-carbon transitioning towards a net zero carbon economy and resilient Europe by promoting clean and fair energy transition, green and blue investment, the circular economy, climate change mitigation and adaptation and risk prevention and management, and sustainable urban mobility;
3. A more connected Europe by enhancing mobility;
4. A more social and inclusive Europe implementing the European Pillar of Social Rights;
5. A Europe closer to citizens by fostering the sustainable and integrated development of all types of territories and local initiatives.

Policy objectives 2 and 3 above are proposed for the CF while all five objectives are proposed for the ERDF. The five policy objectives are broken down to 23 specific objectives for the ERDF and CF and there are 2 Interreg specific objectives. As an additional instrument the JTF follows a specific objective that is added to the above five and only the JTF implements it.

1.4. Public intervention context

The ERDF and CF, together with the JTF and the ESF, are the budgetary instruments of the EU's cohesion policy. Article 174 TFEU establishes cohesion policy and describes its objectives.

According to Article 175 of the TFEU, the formulation and implementation of the Union's policies and actions and the implementation of the internal market shall take into account the objectives of cohesion policy and shall contribute to their achievement.

The allocated budget for the ERDF and the CF amounts to EUR 262.7 billion (in current prices without JTF) in the 2021-2027 period, which represents 21.3%¹ of the EU budget (ie excluding Next Generation EU) for this period.²

1.5. Actions

Through the ERDF and CF, a critical mass of investment is delivered in key priority areas, to bring structural change and respond to the needs of the real economy by supporting job creation, business competitiveness, economic growth, sustainable development, and by improving citizens' quality of life.

Cohesion policy addresses disparities through multi-thematic strategies, supporting multi-annual investments across diverse categories of regions (less developed regions, transitional regions and more developed regions). The policy is distinguished by the diversity of activities and actions.

Both **ERDF and CF** (and from 2021 the JTF) provide investments to develop infrastructures, productive investments in enterprises and "soft" support (consultancy services and advice), thus strengthening public policies. EU support is predominantly provided through grants but also through financial instruments.

The **CF** is distinguished by its geographical coverage (only for the 15 Member States of the Union having a Gross National Income per inhabitant not exceeding 90% of the EU average) and sectorial focus; this fund needs to be spent on environmental and transport investments under policy objective 2 – Greener Europe and policy objective 3 - Connected Europe. The ERDF is supporting all Member States and is implemented through national, regional and interregional (Interreg) programmes.

1.6. Delivery mode

Cohesion policy funds are delivered through shared management. Under the shared management mode, the co-legislators fix the legal framework and the overall funding and determine the allocations by Member States³ and category of region. The Commission adopts the programmes. As regards implementation, the Commission cooperates with Member States' administrations (at national and regional level), which are in charge of the operational implementation. REGIO leads on the Commission's side.

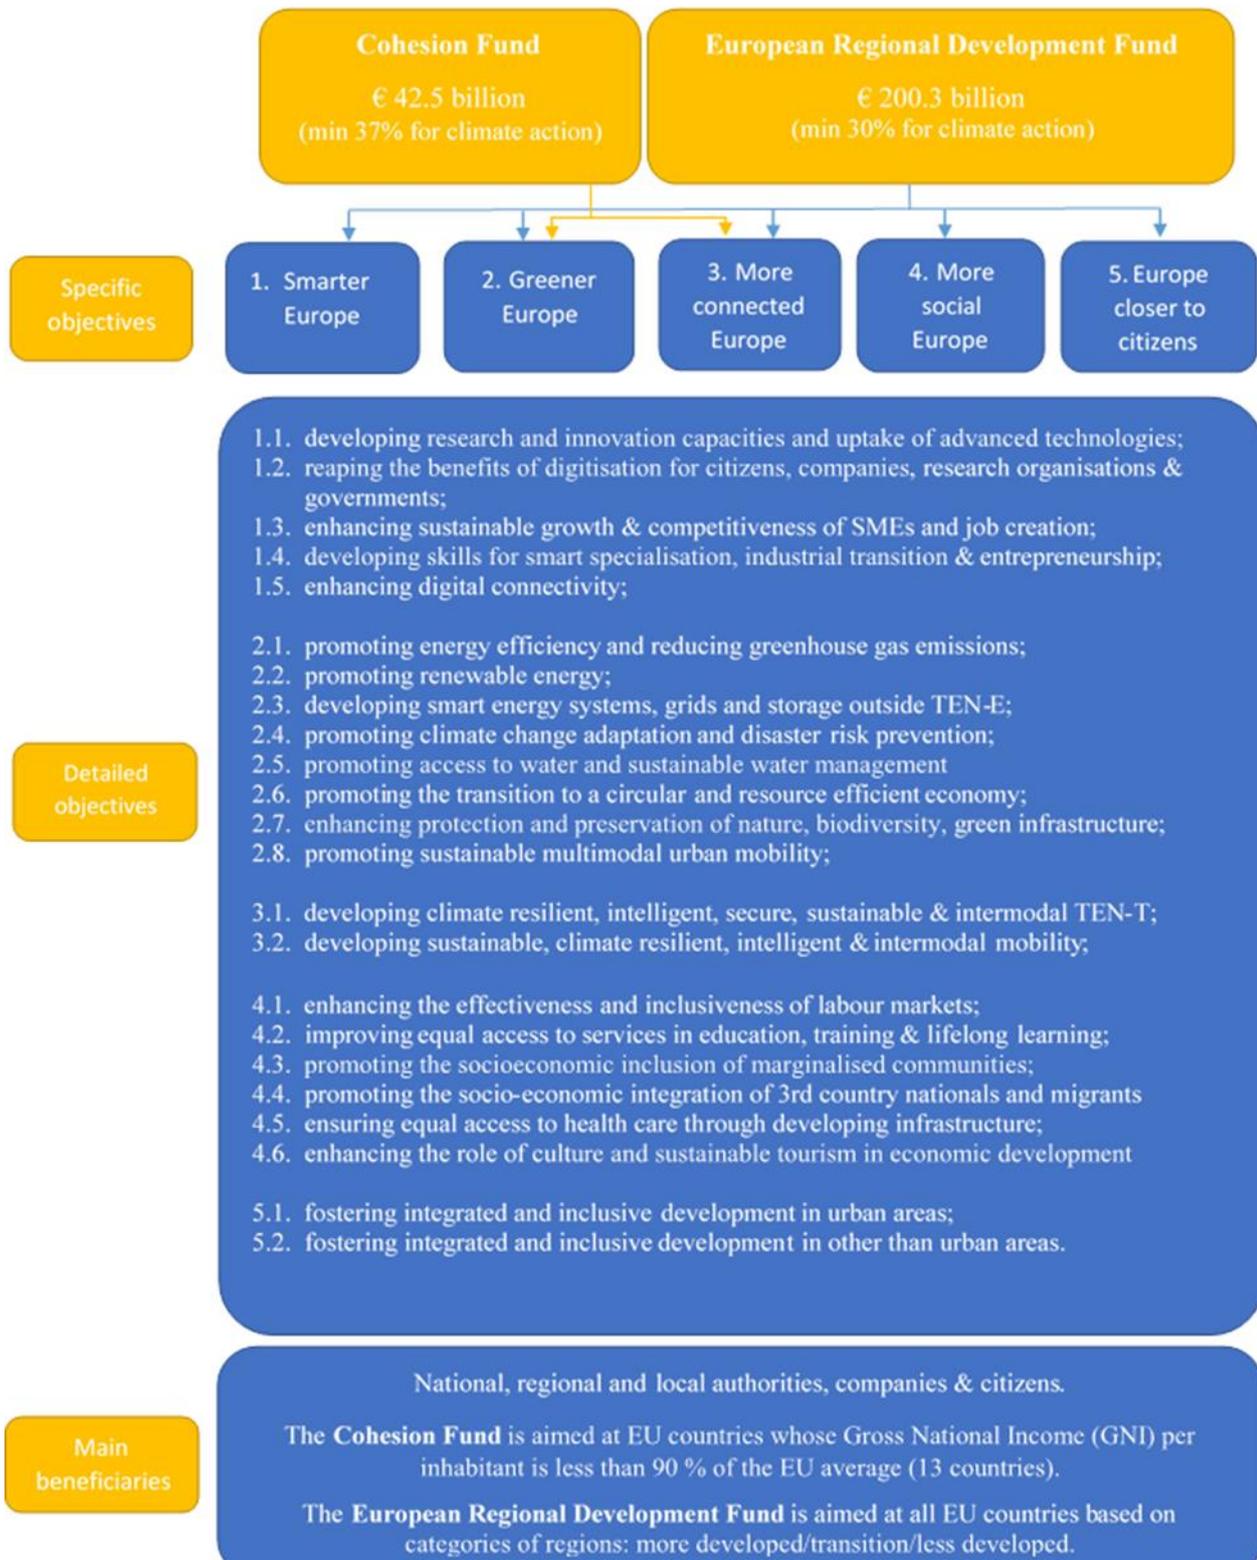

1.7. Graphic overview of the programme structure

¹ EUR 1 211 billion

² ERDF (including Interreg), CF (without transfer to CEF), JTF (excluding NGEU resources) and without REACT-EU

³ Where appropriate and for reasons of brevity, the term 'Member States' includes the United Kingdom, although the country has left the Union in 2020

Implemented via shared management* between European Commission - DG Regio & Member State authorities

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/1058 of the European Parliament and of the Council of 24 June 2021 on the European Regional Development Fund and on the Cohesion Fund (OJ L 231, 30.6.2021, p. 60).	2021 - 2027	48 026.16
Regulation (EU) 2021/1058 of the European Parliament and of the Council of 24 June 2021 on the European Regional Development Fund and on the Cohesion Fund (OJ L 231, 30.6.2021, p. 60).	2021 - 2027	226 047,5

Contributions from other countries and entities								

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The ERDF in 2021-2027 will focus on investing in five policy objectives: a smarter (1), greener (2), more connected (3), more social (4) Europe that is closer to its citizens (5). These correspond to the 11 thematic objectives in 2014-2020 presented in a new structure. With this structure the funds are leaner while maintaining the logic of the previous period. Via the thematic concentration, the CF will focus on two main objectives: a smart and digital transformation of the regional economies (Policy Objective 1) as well as a green transition towards a climate neutral economy (Policy Objective 2).

ERDF and CF sustain a link to the Country Specific Recommendations through the mechanisms of programming, macro-economic conditionality and mid-term reviews. In addition, programmes financed by the funds need to be based on the European Pillar of Social Rights and the National Energy and Climate Plans (under the energy Union).

The 2021-2027 regulation introduces new initiatives under direct or indirect management:

- European Urban Initiative: a tool integrating existing tools for cities and towns (continuation of Urban Innovative Actions).
- Interregional Innovative Investment: initiative that targets cooperation in research and innovation.

In relation to financial management, the logic of many targets was maintained from the 2014-2020 framework while the targets for the new programmes are more ambitious:

- EU-level targets for climate expenditure for ERDF and CF was set in the Common Provision Regulation (at 30% and 37% respectively);
- Flexibility amount, corresponding to 50% of the 2026 and 2027 commitments has been introduced (such amount will be definitively programmed at the mid-term review in 2025);
- N+3 rule has been maintained for decommitment (as for 2014-20) and except for the last year, where the end date of eligibility is set for 31 December 2029;
- Co-financing rates are stratified and slightly reduced compared to 2014-20. They were set out at 85% for less developed regions; 70% for transition regions that were classified as less developed in 2014-20; 60% for transition regions; 50% for more developed that were classified as transition in 2014-20, and 40% for more developed region

1.10. Relevant websites providing more information

The main websites on the cohesion policy funds provide all the necessary details about their nature and structure, their legal basis, news and further practical guidance. Currently it presents narratives for more than 290 ERDF and CF programmes under the 2014-2020 MFF here:

https://ec.europa.eu/regional_policy/index.cfm/en/funding/erdf/

https://ec.europa.eu/regional_policy/index.cfm/en/funding/cohesion-fund/

The Cohesion Open Data Platform <https://cohesiondata.ec.europa.eu/> - provides data on investment financing and achievements under the ESI funds 2014-2020 and the extension of coverage to the 2021-2027 programmes already planned for second semester of 2022.

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate of regional policy at the end of 2021 (million EUR):

	Implementation	Budget	Implementation rate
Commitments	260.8	262 066.6	0%
Payments	37.6		0%

Cumulative implementation rate of REACT-EU under regional policy at the end of 2021 (million EUR):

	Implementation	Budget	Implementation rate
Commitments	24 038.4	31 458.2	76%
Payments	4 926.4		16%

The results for the ERDF and CF are presented in a single programme statement from 2022. It presents global figures for both funds together (especially on performance), as the funds' logic and objectives are similar. However, key budgetary and performance figures will continue to be presented separately by fund. This allows for a shorter, more focused presentation of the performance of both funds.

As foreseen, the adoption process of the 2021-2027 programmes has been slower than expected. For reasons see section 3.1. As a consequence the whole 2021 allocation (EUR 34.9 billion) is to be reprogrammed in four equal tranches for the years 2022-2025.. In the 2022 budget, the allocation for ERDF and CF together equals EUR 35 billion (ERDF EUR 29.9 billion and CF EUR 4.8 billion) in commitment appropriations. Both the 2021 commitments and first pre-financing payments for all the MFF instruments will take place once the new programmes for the 2021-2027 period are adopted. An amount of EUR 2.6 billion is available in payment appropriations for pre-financing.

2.2. Programme(s) 2014-2020: Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	262 530.3	262 533.4	100%
Payments	227 999.5		87%

Note: this table represents the gross level of payments made by the Commission to the managing authorities for ERDF and the Cohesion Fund for the period 2014-2020, not taking into account the amounts actually recovered by the Commission. For further detail on the implementation, please check the Open Data Platform: [Open Data Portal for the European Structural Investment Funds - European Commission | Data | European Structural and Investment Funds \(europa.eu\)](https://open-data-portal.ec.europa.eu/).

At the end of December 2021, the overall implementation of the EU budget for the 2014-2020 period stands at 65% on average for CF and ERDF. In the first half of the 2014-2020 period, EU payments were modest, but broadly in line with the previous programming periods. This slow start was due, firstly, to the nature of cohesion policy investments, which have a long start-up phase (planning, programming, authorisations) without significant financial execution. Secondly, the impact of the 2008-2010 crisis slowed the execution of 2007-2013 national and regional programmes, leading to the late completion of those programmes (in 2014 and 2015) overlapping with the start of the 2014-2020 programmes. Finally, the regulatory provisions of the 2014-2020 period (e.g. the level of pre-financing, the N+3 de-commitment rule) did not provide incentives for a fast start of implementation in Member States.

In 2020 and 2021, there was a significant increase in EU payments which was partly triggered by the progress in project selection rates in recent years. Moreover, the prompt cohesion policy response to the COVID-19 pandemic has played an important role in the accelerated implementation of the funds. In particular, the Coronavirus Response Investment Initiative (CRII(+)) measures provided for 100% co-financing for expenditure declared during the accounting year 2020-2021, while 2019 annual pre-financing amounts were not recovered in 2020 in order to ease budgetary pressure at national level. Financial implementation has also been impacted by some revised allocations due to the performance review exercise and CRII(+) transfers. Considering all those aspects, ERDF and CF show respectively EU payments implementation rates of 64% and 70% at the end of 2021, substantially higher than the rates registered at the end of 2019 (ERDF 35% and CF 39%). (For the ERDF, the calculation of the absorption rate includes the REACT-EU allocations added in 2021 – see below.)

In addition to CRII(+) measures, the Commission also proposed additional financing under “Recovery Assistance for Cohesion and the Territories of Europe initiative” (REACT-EU). Over 2021-2023, original 2014-2020 EU financing will be topped up with EUR 50.4 billion (in current prices) under REACT-EU to finance crisis repair measures. This will contribute to a green, digital and resilient recovery of the economy by adding fresh additional resources to existing cohesion policy programmes. The progress with the adoption of REACT-EU allocations, which will continue during 2022, is presented in the [REACT EU Dashboard](#).

With regard to financial instruments, almost EUR 31 billion of ERDF and CF resources are planned to be delivered through financial instruments by 2023, constituting over 8% of the overall EU allocation, creating an efficient and sustainable alternative to traditional grants. Almost EUR 14 billion of support is allocated to finance the competitiveness of SMEs under thematic objective 3. Programmes in 24 Member States and the UK benefit from these instruments. The total amount of ERDF+CF resources invested in final recipients by the end of 2021 amounted to almost EUR 18 billion. Loans accounted for 53% of eligible costs for all selected instruments, followed by guarantees (28%) and equity-type instruments (17%).

In 2022 the COVID-19 related economic crisis and the parallel implementation of other instruments (e.g. REACT-EU and the start of the 2021-2027 programming period) might affect implementation progress in some Member States. The addition of the REACT-EU resources during 2021 in particular the on-going 2014-2020 programmes, has had a dilution effect on the relative pace of financial implementation due to the increased base amount.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The submission, approval and implementation of the 2021-2027 national and regional programmes is so far negatively affected by the following elements (in addition to disruptions caused by the pandemic, in particular in terms of human resources in administrations):

1. The delayed agreement on the MFF 2021-2027 and adoption of the legislative proposals for the ERDF-CF meant that the Member States' partnership agreements and programmes could only be officially submitted as from mid-2021.

2. Recovery instruments supported from Next Generation EU, in particular the financially most prominent instrument, the Recovery and Resilience Facility (RRF) and their shorter spending horizon have often led to decisions at national level to prioritise those programmes before presenting cohesion policy programmes (including ERDF-CF).

3. NGEU grants and loans under RRF are expected to have an impact on the implementation of 2021-2027 cohesion programmes because of the accelerated RRF delivery timetable, overlaps between important investment components and the additional RRF incentive of 100% EU co-financing and different Delivery model based on financing not linked to costs.

4. The 2014-2020 ERDF/CF programmes will continue until end-2023 under the n+3 rule. That rule will also apply for most of the 2021-2027 period. It reduces pressure on national and regional programmes to implement promptly.

The MFF 2021-2027 provides for the total budget appropriations available by fund, Member State and category of region. It is only with the formal adoption of the national and regional programmes that the budget, the indicators and target values for each specific objective becomes available. Until the formal shared management programmes are adopted, it is therefore not possible to detail the budgets set by specific objective nor the indicator targets.

In the programme statement for the draft budget 2024, the Commission will set out the degree of progress made in the shared management programming and provide an explanation of the progress in setting up the performance framework based on adopted programmes.

3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

3.1.3. Previous Programme Performance

The 2014-2020 ERDF and CF programmes contribute principally to four of the policy priorities of the von der Leyen Commission: a European Green Deal, a Europe fit for the Digital age, an Economy that Works for People and a Stronger Europe in the world. The programming was aligned to contribute to the EU's effort to overcome the structural weaknesses in its economies, improve competitiveness and productivity and underpin a sustainable social market economy.

The efforts of the 2014-2020 programmes to set clearer intervention logics and to use fund-specific "common output indicators" led to more robust and coherent performance reporting on the investment actions and outputs. The programme implementation reports submitted in May 2021 present a rich source of information on performance, in terms of common indicator achievement values at the end of 2020 (including the first information on the measures taken in 2020 to respond to the COVID-19 pandemic). Generally, the reported values show a strong upward progress in implementation by end-2020 and a plausible relationship between the indicator targets and values from selected projects.

In response to the COVID-19 outbreak, the Commission proposed specific measures to broaden the list of eligibility measures in the healthcare systems to support the public health response in Member States and to encourage reprogramming in other sectors of their economy, while providing exceptional flexibility for the use of the ESI funds under CRII(+). Specific measures adopted in CRII(+) have enabled Member States to mobilise support from ERDF, ESF and CF and focus it on the most urgent needs (saving lives, preventing job losses through short-time work schemes and supporting SMEs).

The vast majority of Member States have used at least one or another form of CRII(+) flexibility, such as extended deadlines for project implementation and for project calls, accelerating payments to beneficiaries and have used the opportunity to submit COVID-19 related expenses for reimbursement with retroactive eligibility since 1 February 2020. The use of financial instruments have also accelerated due to CRII(+) measures.

The Commission also worked with programmes to use COVID-19 programme specific indicators in order to understand their main priorities and achievements in terms of supporting the health response, SMEs and people. By December 2021, 165 ERDF programmes had set targets using those ad hoc COVID-19 indicators. See the cohesion policy [CORONAVIRUS DASHBOARD](#) for more details.

More generally, the more extensive use of EU common indicators for 2014-2020 has significantly improved the information available on performance. The data reported by Member States and the United Kingdom in May 2021 reflect the situation at the end of 2020.

It is expected that there will be significant changes (increases and decreases) in a number of targets linked to (1) changing priorities in response to the pandemic, (2) the addition of EUR 10 billion of REACT-EU resources during 2022 and (3) the negative effects of the crisis. Overall, the uncertain socio-economic conditions, reduced demand, high unemployment and uncertain prospects for the relaunch of the economy mean that the uncertainty around performance is high. The Commission will monitor closely the programmes until closure.

When interpreting performance against targets over time, some general aspects should be recalled:

1. The multi-annual character of interventions (especially in case of infrastructure interventions) and long programme cycle need to be factored in. Actual achievements were not visible in early years. The experience from 2007-2013 is that many infrastructure investments are fully implemented only by the end of the period. The implementation of the 2014-2020 programming period lasts until 2023, therefore the 2020 achievement values refer to the situation at the 7th year of a 10 year implementation cycle.

2. Milestone-values (2018) were not available for most indicators as milestone values were required only for a subset of the indicators in the programmes. Where at the EU aggregate level the subset for a certain indicator represents a small share of the total, the milestone value was not representative to illustrate performance objectives.
3. The common indicators covered an estimated 50-60% of the actions funded and they give a partial picture on the performance. Programmes also use over 8 000 specific indicators beyond the 46 common indicators, which cannot be aggregated at EU level due to their specific nature.
4. Target values for common indicators can change (the EU legislation allows for programme amendments during the implementation period) and are mainly driven by changes in national or regional development needs, changing economic conditions, variability in demand for different supports and the reallocation of funding within and across theme.

At EU level, the following overall performance trends are evident from the monitoring of the ERDF and CF based on 2020 achievements reported:

- Overall project selection rates is at nearly 100% of planned investment everywhere by end 2021⁴ (the main exception relates to the REACT-EU resources only added to the programmes in 2021. EU interim payments at end 2021 were at 64% for ERDF and 70% for CF. High project selection rates do not automatically translate into prompt expenditure. Expenditure is slower to materialise for projects that are still in the planning or procurement stage, projects with multi-annual implementation periods or projects that are otherwise immature.
- By thematic objective, project spending is above average in areas such as SME competitiveness, sustainable transport and education infrastructure. On the other hand, the average spending rates are lower than average for low-carbon economy, environmental investments and social inclusion. The bulk of countries are clustered around the EU average spending rate at the end of 2021. That said, there are differences in reported progress with important beneficiaries SK, ES and RO lagging under the ERDF and HR, BG and EL lagging under the Cohesion Fund.
- The performance data below reflects the end-2020 reporting on common indicators (reported in May 2021). Overall, positive implementation trends are registered for most indicators (see “key achievements”).
- For some indicators with more important gaps between the decided and implemented, the forecast indicator values from selected projects are close to or exceed the target values, raising the prospect that the targets could still be achieved. In many of those cases, the high level of project selection is expected to translate into achieved outputs only late in the period. That phenomenon of late achievement of indicator values was evidenced by the trend in reporting in the 2007-2013 period. The 2020 reporting exercise suggested that at the end of 2020 many of the 2023 targets for those indicators could still be achieved.
- For some common indicators (i.e. those measuring population benefiting from wastewater, water supply, risk prevention and health interventions), the decided values from selected projects, compared to targets at the end of 2019, showed a prospect of overachievement. This led to important increases in certain target values during 2020 (these are highlighted in section 5 below). Deviations from targets are scrutinised and followed-up in cooperation with the Member States affected by implementation difficulties.
- The impact of the COVID-19 pandemic led to increased uncertainty and sharp changes in needs. A wave of programme modification in 2020 and 2021 led to a rise in some common indicators target values, particularly in the areas of enterprise support linked to crisis support during the pandemic. However, the uncertain socio-economic conditions, reduced demand, high unemployment and uncertain prospects for the relaunch of the economy mean that the Commission will continue to monitor carefully the programmes until closure

CRII(+) and REACT-EU

In relation to the reprogramming since 2020 to support the immediate response to the pandemic and its effects, the new COVID-19 specific indicators were introduced to give an important insight into the supported actions and their target outputs. By the end of 2021 the total targets set under CRII and REACT-EU allocations for key indicators were as follows:

- 3.2 billion items of personal protective equipment for the health services;
- 13 170 ventilators, 12 400 additional bed spaces and 374 ambulances supported;
- Over 25.8 million people were targeted to receive a vaccination with ERDF support under REACT-EU;
- 754 000 SMEs targeted with grant support to working capital;
- 246 000 SMEs targets with repayable working capital

The progress in delivering the targets set by the end of 2020 was reported to the Commission for the first time during 2021. Many ERDF programmes were in a position to report some monitoring values on the implementation of pandemic

⁴ after adjusting for overbooking effects

measures. However, many 2020 implementation values appear to be under reported. EC services therefore see the 2020 implemented values for COVID-19 indicators as giving a preliminary picture to be completed in future reporting rounds. The reported values are presented in this open data tool - [Overview of COVID-19 indicator values](#).

For the general objective the indicators and their values presented below are statistical in nature, many being provided by EUROSTAT.

For the specific objectives the indicators presented below are 27 ERDF and CF common output indicators reported by the national and regional authorities. The target values have been corrected to the values set under the adopted programmes as of end 2020 (changes take place over time linked in particular to the reallocation of finances between themes impacting the targets or to correct errors). With over 290 programmes the achievement values can also be corrected over time (for instance in case of previous under reporting or in order to correct implemented values when operations are no longer EU funded). The most recent public values are visualised on the [ERDF](#) and [CF](#) pages on the Cohesion Open Data Platform under "achievements" and the data is found in [this data file](#). The platform offers transparency and provides additional encouragement through ‘peer pressure’ in reporting timely and reliable data.

By the end of 2020, a majority – 55% or 15 of 27 indicators – show strong or over performing trends. 26% of indicators show a moderate trend and 15 % a weak trend that require accelerating annual growth rates in order to achieve their 2023 targets. Under achievement of the target is likely for the indicator Rehabilitated housing in urban areas.

Table: performance of (common) indicators per specific objective (SO)

(Green colour shows positive performance, yellow and orange weak/at risk performance)

	SO 1	SO 2	SO 3	SO 4	SO 5	SO 6	SO 7	SO 8	SO 9	SO 10	Total	%
Outperforming						1			1	1	3	11%
Strong trend	3		3	1	2		2	1			12	44%
Moderate trend	2	1		1		2	1				7	26%
Weak Trend				2		1	1				4	15%
At risk of underachievement									1		1	4%
											27	100%

Overall, most indicators were on track to meet their targets at the end of 2020. For the few indicators that are not performing the reasons are diverse. Indicators linked to urban investments in renovated building and housing show low achievement but have project selection rates that approach or exceed the target values.

Several indicators reported in PS 2022 have a limited use and representativeness and are not presented in this synthesis (those indicators were - building new railway tracks, additional energy users connected to smart grids and building / renovating buildings in urban areas). The implementation values are published on the Open Data platform.

3.2. Key achievements

SMART GROWTH:

5.5 million	1.4 million	238 000	10 900
households have access to broadband of at least 30 Mbps by the end of 2020	enterprises were supported by the end of 2020	jobs were created in supported enterprises by the end of 2020	researchers were employed in supported entities by the end of 2020

SUSTAINABLE GROWTH

4.4 million	358 000	1 890	1.7 million	1 540
tonnes of CO2 equivalent were saved by the end of 2020	households saw an improvement of their energy consumption classification by the end of 2020	GigaWh/year of annual primary energy consumption of public buildings were saved by the end of 2020	tonnes/year of additional waste recycling capacity were implemented by the end of 2020	km of railway lines were reconstructed or upgraded by the end of 2020

INCLUSIVE GROWTH

52 million
people benefitted from new or modernised health services by the end of 2020

3.3. Evaluations, studies and reports

The key findings of the 2007-2013 ex post evaluation were presented in [Staff Working Document \(SWD\(2016\) 318](#) of September 2016 and in the Programme Statements 2018.

The Common Provisions Regulation 2014-2020 requires Member States to carry out evaluations in order to improve the quality of the design and implementation of programmes, as well as to assess their effectiveness, efficiency and impact. The number of evaluations carried out so far on actions supported by ERDF and CF in 2014-2020 programmes has reached almost 1 000 (not counting evaluations of the period 2007-2013 completed since 2015). The evaluations published in the first years of the 2014-2020 period were mostly concerned with assessing implementation progress and monitoring of the programmes. However, the number of evaluations focused on the impact of the supported actions has grown significantly for the past two years, topping 30% of the evaluations completed more recently and reaching over 50% in a some Member States. Impact-oriented evaluations are in general well designed and some apply advanced techniques to distinguish the effects of the measures examined from other factors. In parallel, implementation-oriented evaluations have supported the managing authorities for the necessary adjustments of the interventions in order to maximise their benefits. While the evaluation findings are mostly specific to the individual evaluations, as they are strongly dependent on the local implementation context, some common findings are starting to emerge, showing positive results in many areas and effective support to beneficiaries. The Commission [2021 synthesis of evaluation findings](#) provides more details.

The Commission is finalising two evaluations. The ex-post evaluation of investment projects in infrastructures, competence centres and activities for research and technological development financed by the ERDF in the 2007-2013 period started from the collection of detailed data on projects and beneficiaries. The analysis has led to the production of a manual in the form of a cookbook. It details the underlying mechanisms of the main work funded by the policy and summarises the key ingredients for an effective policy. The Commission will publish the evaluation report in 2022. At the end of 2020, the Commission launched the evaluation of e-Cohesion, the electronic data exchange system to make it easier to exchange documents and data between ESI Funds beneficiaries and the relevant authorities. This evaluation is progressing on schedule. The main data collection is complete and the analysis phase has begun. The Commission will publish the evaluation report in 2022.

The Commission has started the ex post evaluation of the 2014-2020 period, which is structured in cross-cutting and thematic work packages covering the various sectoral domains supported by cohesion policy. The findings of the ex post evaluation will be published in 2025. It is during the evaluation phase that the wider impacts and achievements of programming can be assessed.

The [8th Cohesion Report](#) was published in February 2022. The Report assesses economic, social and territorial cohesion in the EU. It shows that less developed regions have been catching up, but that many transition regions have been stuck in a development trap. Furthermore, the growing innovation divide will make it harder for both types of region to catch up. At the EU level, employment rates are now higher than before the economic crisis in 2008, but regional disparities are still above their pre-crisis level. Demographic change will affect all regions in the coming decades. Regions will have to adjust to a shrinking labour force and student body and a growing population that is aged 65 and over. Fiscal consolidation after the crisis in 2008 reduced public investment and has not yet regained its pre-crisis levels. As a result, cohesion policy funding has become ever more important, growing from the equivalent of 34% to 51% of public investment between the 2007-2013 and the 2014-2020 periods. The report highlights that the green and digital transitions will be key drivers of EU growth, but argues that, without appropriate policy action, new economic, social and territorial disparities may appear.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Enhance research and innovation capacities and the uptake of advanced technologies

Indicator 1: Enterprises supported to innovate

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
----------	------	------	------	------	------	------	------	------	------	--------

	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Output
Unit of measurement	Enterprises
Cut-Off Date	31/12/2022

Justification of the trend	

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: European Regional Development Fund (ERDF)

General Objective 1: To reduce disparities between the levels of development of the various regions, in particular for rural areas, areas affected by industrial transition, and regions which suffer from severe and permanent natural or demographic handicaps and to contribute to achieving the targets set out in the Europe 2020 strategy of smart, sustainable and inclusive growth, and in particular towards the achievement of quantitative headline targets identified in that strategy

Indicator 1: Employment rate by sex, age group 20-64

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target	
2016	Milestones									2020	
71.1%							75%				75%
	Actual Progress									Final	
	69.2	70.1	71.1	72.2	73.2	73.9					
Are we on track :											

Indicator type	Impact
Unit of measurement	Percentage of population 20-64
Cut-Off Date	08/02/2021
Data source	Eurostat lfsi_emp_a
Narrative	In 2019, the employment rate of the 20-64 year old population increased by 0.6% to 74%. Despite the slowdown in 2019 (the employment rate increased by 0.7% instead of 1% in 2018), the trend remains positive and the 2020 target of 75% is still within reach. However, these figures do not take into account the impact of the COVID-19 pandemic. With major impacts already visible across Europe, we expect the target set to be missed.
Methodology	Labour Force Survey
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	http://ec.europa.eu/eurostat/cache/metadata/en/lfsi_esms.htm
Justification of the trend	Cohesion policy contributes to improving the labour market situation through various strands. Relevant Specific Objectives: SO 2

Indicator 2: Gross domestic expenditure on R&D (GERD)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target	
2016	Milestones									2020	
2.03%							3%				3%
	Actual Progress									Final	
	2.03%	2.04%	2.04%	2.08%	2.11%	2.14%					
Are we on track :											

Indicator type	Impact
Unit of measurement	% of GDP
Cut-Off Date	08/02/2021
Data source	Eurostat RD_E_GERDTOT
Narrative	In 2019, gross domestic expenditure on R&D (GERD) increased by 0.03%. With the very slow increase of 0.02% on average between 2015 and 2019, the overall situation remains unsatisfactory, if not critical.
Methodology	Statistical indicator
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/eurostat/cache/metadata/en/rd_esms.htm
Justification of the trend	Cohesion policy makes an important contribution to the sector and is even an important source of a large part of public investment in R&D in some countries. But it is also clear that these efforts are not enough. Especially since, in view of the pandemic, it is to be expected that the figures will initially fall (especially in the private sector) before they rise again. Public investment therefore remains critical in this area and the increased efforts through REACT-EU and the new programmes are an essential but probably insufficient contribution to raising the rate to a satisfactory level. Ultimately, however, Europe will not be able to avoid a joint effort by all actors to give this area the boost it needs. Relevant Specific Objectives: SO 1

Indicator 4: Share of renewables in gross final energy consumption

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target	
2015	Milestones									2020	
16.7%							20%				20%
	Actual Progress									Final	
	16.2%	16.73%	16.98%	17.48%	18.01%	18.87%					
Are we on track :											

Indicator type	Impact
Unit of measurement	% of gross final energy consumption
Cut-Off Date	08/02/2021
Data source	European Environment Agency (EEA) (NRG_IND_REN)
Narrative	In 2019, Europe will reach a share of renewable energies in gross final energy consumption of almost 19%. Projection shows that due to the moderate increase in the renewable energy sector in recent years, with an average increase of plus 0.5% between 2015 and 2019 and the overall positive trend, the achievement of the 2020 target (20%) remains within reach.

Justification of the trend	In view of the upcoming funding period, the current 2030 climate and energy framework and the Green Deal, this figure needs to increase even more significantly to avoid reputational damage for the EU. Cohesion policy will continue to make an important contribution to ensuring the performance of the sector. However, the expectations and targets set will necessarily remain challenging. This is the main reason why performance under the heading "European Green Deal" has become the top priority in DG REGIO's strategic plan for the next five years. Relevant Specific Objective: SO 4

Indicator 5: Energy intensity of the economy (proxy indicator for Energy savings, which is under development)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Primary energy consumption										
2015	Milestones									2020
1 529.1							1 483			1 483
	Actual Progress									Final
	1 511.78	1 535.98	1 544.2	1 561.82	1 552.8	1 526.12

	1 069	1 091.07	1 111.48	1 123.25	1 124.9	1 117.71				
Are we on track :										

Indicator type	Impact
Unit of measurement	Million tonnes of oil equivalent (TOE)
Cut-Off Date	08/02/2021
Data source	Eurostat NRG_IND_EFF
Narrative	Both Europe's primary and final energy consumption decreased in 2018, and for the first time relative to final energy consumption levels in 2014-2018. Our projection shows that a continuation of this trend could lead to the achievement of 2020 targets for both categories. While this is clearly a positive and necessary trend, it remains unclear how sustainable this trend is. Together with the indicators on renewable energy consumption and greenhouse gas emission reductions, the picture is slightly positive of a trend pointing in the right direction, but deserving further attention in the coming years.
Methodology	Statistical indicator

Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/eurostat/cache/metadata/en/sdg_07_10_esmsip2.htm https://ec.europa.eu/eurostat/cache/metadata/en/sdg_07_11_esmsip2.htm
Justification of the trend	Cohesion policy contributes to improving energy consumption through various strands. In its focus on sustainable growth, it will play its part in ensuring that the positive trend continues. Whether this alone will be sufficient cannot be answered at this stage. Relevant Specific Objective: SO 4

Indicator 6: Early leavers from education and training by sex; Tertiary educational attainment by sex, age group 30-34

	33.6%	34.0%	34.4%	34.9%	35.7%	36.6%				
Are we on track :										

Indicator type	Impact
Unit of measurement	% of the population
Cut-Off Date	08/02/2021
Data source	Leavers: Eurostat (EDAT_LFSE_14) tertiary education Eurostat (EDAT_LFSE_04)
Narrative	As for the 2019 figures, the numbers of early school leavers have decreased by 0.2 percentage points (overall) and the proportion of the population with tertiary education has increased by 0.9 percentage points. A clear gender gap is evident in the figures for primary and tertiary education. However, leaving aside the significant role of gender in education, which is well documented by many studies, the overall trend is positive. Thus, while the outcome for males will fall well short of the 2020 target, it can be extrapolated that if the trend continues, the targets will likely be met in 2023 (early school leavers) or 2024 (tertiary education).

Are we on track :	On track
-------------------	----------

Indicator type	Output
Unit of measurement	Researchers (Full time equivalent)
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Impact of R&D funding on researcher employment. We see a significant increase of 25% from 2019 to the 2020 figures now available, resulting in an achievement rate of 42% compared to the 2023 target. On the other hand, the level of project selection is high (28 000 new researchers are already forecast from selected projects) which raises the prospect that the target could be achieved.
Methodology	Data collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Moderate trend. The national and regional programmes could still meet the 2023 target based on the forecasts from the selected projects.

Indicator 2: Number of enterprises cooperating with research institutions

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023

Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of researchers (Full time equivalent)
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Impact on improving facilities for R&D funding researchers. In the latest numbers, we see almost an increase from 2019 to the 2020 resulting in a target achievement of 52.5% compared to the 2023 target. The level of project selection is very high (over 112 000 researchers are forecast under projects already selected) which raises the prospect that the targets could be achieved.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq

Justification of the trend	Moderate trend. The national and regional programmes could still meet the 2023 target based on the forecasts from the selected projects.
----------------------------	--

Indicator 5: Number of enterprises supported to introduce new to the market products

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
										29740
	Actual Progress									Final
	23	70	595	3013	11830	17498	23800			
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of enterprises
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Measurement of uptake of innovation. Until end-2020, roughly 23 800 new products were introduced to the market by enterprises supported by ERDF and CF. From 2019 to the 2020, there has been a significant increase in the achievement rate to 80% against the 2023 target. The programmes are well on their way to meeting their goal.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Strong trend. Projections show that the 2023 target will be met or exceeded.

Indicator 6: Number of enterprises supported to introduce new to the firm products

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
										51 150
	Actual Progress									Final
	23	89	619	3 334	14 317	23 331	35 640			
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of enterprises
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Measurement of uptake of innovation. By 2019, approximately 35 600 new products had been introduced in ERDF and CF-funded companies. From 2019 to 2020, there has been a significant increase in the achievement rate to 70 % against the 2023 target. This means that the programmes are on their way to meeting their revised goal.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Strong trend. The projections show that the national and regional programmes will meet the 2023 target. To note that the target was reduced during 2020 by 15%. This is partly explained by transfers of EU funds towards working capital support to SMEs during the Coronavirus crisis.

Specific Objective 2: Enhancing access to, and use and quality of, information and communication technologies

Indicator 1: Additional households with broadband access of at least 30 Mbps

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
										11939000
	Actual Progress									Final
		0	863916	1395775	2989418	4571786	5518000			
Are we on track :	On track									

track :	
Indicator type	Output
Unit of measurement	Number of households
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Measurement of outreach of support to broadband. Until 2020 over 5.5 million additional households received broadband access of at least 30 Mbit/s with the help of regional funding. From 2019 to 2020 there was only a small increase in the absolute achievement. This was despite an increase in the 2023 target. The project pipeline is available to meet their 2023 goal .
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	No milestone figure concerning this indicator associated with specific objective 2 is included in the table above, as the programmes which include this indicator in the performance framework where milestones are set represent a small share of the total, which render the milestone value available not representative at EU level.
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Moderate trend. Past experience show that the national and regional programmes may meet the overall 2023 target if the slower progress in 2020 is replaced by rapid completions in 2022-2023.

Specific Objective 3: Enhancing the competitiveness of small and medium-sized enterprises

Indicator 1: Number of enterprises receiving support

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
0	181831									1780000
	Actual Progress									Final
	11203	32882	94617	201348	414302	612813	1428748			
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of enterprises
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Measurement of scope of all support to SMEs for growth & competitiveness. Approximately 1.4 million enterprise were supported with the help of regional funding. From 2019 to 2020 the figures show a significant increase in the target and achievements. This is strongly correlated with the Covid reprogramming to provide working capital support to SME using grants and financial instruments. There has been a significant increase in the achievement rate to 80% of the target buy the end of 2020. The previous target was far over achieved. The national programmes are on track to meet their revised 2023 goal.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Strong trend. Projections show that the national and regional programmes will meet the higher 2023 target.

Indicator 5: Number of new enterprises supported

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
	177 000									177 000
	Actual Progress									Final

Are we on track :	On track									

Indicator type	Output
Unit of measurement	Enterprises
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Measurement of scope of support to new enterprises. Approximately 124 200 new SMEs were

	supported with the help of regional funding. From 2019 to 2020 there has been an increase in the achievement rate to 70% of the 2023 target (which was also increased in 2020).
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	Due to an encoding error, the figure for 2018 has been changed, to correspond to the actual figure existing in the open data portal
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Strong trend. Projections show that the national and regional programmes will meet the 2023.

Indicator 8: Employment increase in supported enterprises

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
0	Actual Progress									Final
		4052	11898	4049	108654	184529	238300			
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Full time equivalent (FTE)
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Effects on employment in enterprises supported. By 2020, over 238 000 jobs were created in mainly in SMEs supported by regional funding. The cumulative achievements rate increased by more than 60 000 jobs, to 66% of the 2023 target. The rate of achievement was partly influenced by the reduction of the target by 9%.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Strong trend. Projections show that the national and regional programmes need to maintain the current rates of achievement to meet the revised target. This could be challenging, especially in view of the general decline in employment growth rates in 2020-2021 and the uncertainties of the COVID-19 pandemic.

Specific Objective 4: Supporting the shift towards a low-carbon economy in all sectors

Indicator 1: Additional capacity of renewable energy production (MW/MWH)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
European Regional and Development Fund										
2014	Milestones									2023

2014	Milestones									2023
0	Actual Progress									Final
	0	0	0	3	110	176	328			
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Megawatts (MW)
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Contribution to renewable energy capacity. Until 2020, a cumulative increase of 2735 mega watt of additional capacity of renewable energy production was achieved thanks to regional funding. From 2019 to the 2020 24% of the 2023 target has been implemented. The target was decrease by about 5% during 2020.

Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	ERDF and CF programmes contribute to the target.
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Moderate trend. The project pipeline shows that the national and regional programmes could reach the 2023 target. However, a strong rate of implementation will be needed in the last years of implementation. Based on past experience the achievement of outputs linked to multi annual infrastructure projects occurred late in the period.

Indicator 2: Number of households with improved energy consumption classification

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
European Regional and Development Fund										
2014	Milestones									2023

Cohesion Fund										
2014	Milestones									2023
0	Actual Progress									45600
	0	42	833	5490	9938	17811	21850			Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Households
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Measurement of scope of energy efficiency measures for households. Over 358 000 additional households have achieved an improved energy consumption classification with the help of regional funding. By the end of 2020 the achievement rate has reached 59% against the 2023 target, which however was reduced by 14% during 2020. As part of the CRII pandemic response funding under the CF was transferred to ERDF and ESF, which correlated with the reduction of the CF target for this indicator. The programmes are on track to meet the revised 2023 goal.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	ERDF and CF programmes contribute to the target.
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Strong trend. Projections show that the national and regional programmes will meet the 2023 target.

Indicator 3: Decrease of annual primary energy consumption of public buildings

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
European Regional and Development Fund										
2014	Milestones									2023
0	Actual Progress									4732400000
		111729	1174311	24559136	240217919	784640956	1326050000			Final
Are we on track :	On track									
Cohesion Fund										
2014	Milestones									2023
0	Actual Progress									1750000000
				134461	295986122	447390529	565660000			Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	kWh/year
Cut-Off Date	31/12/2020
Data source	EC/Member States

Narrative	Contribution to energy efficiency in public buildings. A cumulative decrease of over 1.9 billion kWh of annual primary energy consumption of public buildings was so far achieved with the help of ERDF and CF funding. By end 2020 the 2023 target achievement rate has reached 29%.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	ERDF and CF programmes contribute to the target.
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Moderate trend. The decided values in selected projects suggest that the target may be achieved by end-2023. Based on past experience the achievement of outputs linked to multi-annual infrastructure projects tends to occur late in the period.

Indicator 5: Estimated annual decrease of GHG

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
European Regional and Development Fund										
2014	Milestones									2023
0	Actual Progress									16828700
	10197	31836	87612	365881	1138534	2532712	3939200			Final
Are we on track :	Moderate progress

2014	Milestones									2023
0	Actual Progress									3969870
			0	6995	142035	331348	519760			Final
Are we on track :	Moderate progress									

Indicator type	Output
Unit of measurement	Tonnes of CO2 equivalent
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Outcome of measures to reduce GHG emissions. By 2020, a reduction of over 4.4 million tons of CO2 equivalent per year had been achieved with the help of ERDF and Cohesion Fund investments. The rate of achievement has reached 21% of 2023 target. Based on past experience the achievement of outputs linked to multi-annual infrastructure projects tends to occur late in the period. The decided values in selected projects suggest that the target may be achieved by end-2023.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	"ERDF and CF programmes contribute to the target. Aggregate target is not considered robust and likely to be exceeded due to difficulties forecasting ex ante the population covered by projects later selected."
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Weak trend. Although the achievement rate remains well below the set target, the forecasts from selected projects show that the 2023 target could be achieved.

Specific Objective 5: Promoting climate change adaptation, risk prevention and management

Indicator 1: Population benefiting from flood protection measures

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Are we on track :	On track
-------------------	----------

Indicator type	Output
Unit of measurement	Persons
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Measurement of scope of flood protection measures. Until 2020, almost 11.3 million people are reported as benefitting from flood protection measures supported by regional funding. The cumulative achievement rate now reaches 41% against the 2023 target. The Target was increased by 67% in 2020 linked to revisions of the population covered by selected measures. The programmes are on track to meet their 2023 goal.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	ERDF and CF programmes contribute to the target. Aggregate target is not considered robust and likely to be exceeded due to difficulties forecasting ex ante the population covered by projects later selected.
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Strong trend. Projections show that the national and regional programmes could meet or exceed the 2023 target.

Indicator 2: Population benefiting from forest fire protection measures

Are we on track :	On track									

Indicator type	Output
Unit of measurement	Persons
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Measurement of scope of fire protection measures. By the end of 2020, almost 16.1 million people are benefitting from forest fire protection measures supported by ERDF/CF regional funding. That achievement almost equals the 2023 target set at the end of 2019. During 2020 the cumulative target was raised to 29.7 million people (an increase of 80% in target, under the ERDF). The end-2020 achievement rate is therefore 54% of the new 2023 target.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	ERDF and CF programmes contribute to the target. Aggregate target is not considered robust and likely to be exceeded due to difficulties forecasting ex ante the population covered by projects later selected.
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Strong performance. Projections show that the national and regional programmes could reach or exceed the higher revised 2023 target.

Specific Objective 6: Preserving and protecting the environment and promoting resource efficiency

Indicator 1: Additional waste recycling capacity

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
European Regional and Development Fund										
2014	Milestones									2023

Are we on track :	Moderate progress								

Indicator type	Output
Unit of measurement	Tonnes/year
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Outcomes of supported projects on waste recycling. By 2020, additional waste recycling capacity for over 1.7 million tons of waste per year has been created with regional funding. The achievement rate of nearly 30% is now measured against the 2023 target which was increased in 2020. Despite the low achievement rate, the projections from the project pipeline show that the 2023 target could be reached.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	ERDF and CF programmes contribute to the target.
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Weak trend. Based on past experience the achievement of outputs linked to multi annual infrastructure projects occurs late in the period.

Indicator 2: Additional population served by improved water supply

Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Output of supported projects for tram and metro lines. By the end of 2020, over 130 km of new or reconstructed tram and metro lines were completed with support from regional funds. From the 2020 figures now available, there has been an increase in this figure of 36%, resulting in an achievement rate of approximately 29% against the 2023 target.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	ERDF and CF programmes contribute to the target.
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Moderate trend. Projections show that the 2023 could be met as the forecasts from the selected projects exceed the 2023 target.

Specific Objective 8: Promoting sustainable and quality employment and supporting labour mobility

Indicator 1: Employment increase in supported enterprises

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
	Actual Progress									361878
		4052	11898	40490	108654	184529	238344			Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Jobs (FTE)
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Effects on employment in enterprises supported. By 2020, over 238 000 jobs were created in mainly in SMEs supported by regional funding. The cumulative achievements rate increased by more than 60

	000 jobs, to 66% of the 2023 target. The rate of achievement was partly influenced by the reduction of the target by 9%.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	No milestone figure concerning indicator 1 above is included in the table above, as the programmes which include this indicator in the performance framework where milestones are set represent a small share of the total, which render the milestone value available not representative at EU level.
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Strong trend. Projections show that the national and regional programmes need to maintain the current rates of achievement to meet the revised target. This could be challenging, especially in view of the general decline in employment growth rates in 2020-2021 and the uncertainties of the COVID-19 pandemic.

Specific Objective 9: Promoting social inclusion, combating poverty and any discrimination

Indicator 1: Population covered by improved health services

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
0	Actual Progress									66469968
		1590288	5552309	15256131	27458607	38716940	52024551			Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Persons
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Outreach of supported projects for health care facilities. Until the end of 2020, over 52 million people were covered by improved health services thanks to support from cohesion funds. From 2019 to 2020 there has been an increase of 34%, resulting in an achievement rate of around 78% against the 2023 target. The target was increased in several MS in 2020.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will report a variation on the indicator in 2021-2027
Other methodological comments	Aggregate target is not considered robust and likely to be exceeded due to difficulties forecasting ex ante the population covered by projects later selected.
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Very strong trend. Projections show that the 2023 target will be met. Measures related to the Corona pandemic response will help to raise these numbers further, even above the now higher target set for 2023.

Indicator 4: Rehabilitated housing in urban areas

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
	Actual Progress									23896
				289	1837	3354	7618			Final
Are we on track :	Deserves attention**									

Indicator type	Output
Unit of measurement	Housing Units
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Outreach of supported projects for housing services. Until the end of 2020 around 7 600 housing units have been rehabilitated in urban areas with the support of regional funding. Looking at the latest figures, a significant increase in achievement of 127% is recorded between 2019 and 2020. However, this only leads to an overall achievement rate of about 14% compared to the 2023 target. In other words, the current achievements are still significantly below the target. On the other hand, the level of project selection is promising: projects representing nearly 21 000 housing units were already selected.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will not report the indicator in 2021-2027

Other methodological comments	
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	At risk of underachievement. Projections show that the national and regional programmes need to significantly increase achievement rates to still reach the target.

Specific Objective 10: Investing in education, training and vocational training for skills and lifelong learning

Indicator 1: Capacity of supported childcare or education infrastructure

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2020
							6 900 747			17 839 592
	Actual Progress									Final
		2 663	32 642	166 450	6 799 156	15 550 946	19 756 762			
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Places
Cut-Off Date	31/12/2020
Data source	EC/Member States
Narrative	Outreach of supported projects for enhancing access to education infrastructures. By end-2020, over 19.75 million places had been created or modernised in childcare and education facilities thanks to support from the regional funds. From 2019 to 2020, there has been a significant increase in numbers resulting in an achievement rate of around 110% against the 2023 target.
Methodology	Collected from supported operations
Link MFF 14-20 / MFF 21-27	We will continue to report the indicator in 2021-2027
Other methodological comments	No milestone figure concerning this indicator associated with specific objective 10 is included in the table above, as the programmes which include this indicator in the performance framework where milestones are set represent a small share of the total, which render the milestone value available not representative at EU level.
Full metadata available at this address	https://cohesiondata.ec.europa.eu/d/xiq3-56nq
Justification of the trend	Very strong trend. Projections show that the 2023 target are likely to achieved and even exceeded.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Climate contribution	37.02	13 309.34	13 659.09	14 043.39	14 440.56	12 256.17	12 679.39	80 424.95

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
REACT EU Climate contribution	4 559.46	2 037.38						6 596.84

6.1.2. Explanation on the financial contribution

The ERDF and CF are important contributors to the overall EU tracking target - 20% of the EU budget 2014-2020 – given the scope of their objectives and the scale of their total budgets. Cohesion policy funding is delivering more than EUR 51 billion in investment in climate action in the 2014-2020 period (i.e. almost 20 % of the total ERDF/CF planned budget). With the establishment of a legally binding budget share for climate-related investments of 30% for the ERDF and 37% for the CF, the ambitions for the period 2021-2027 in this area have even increased.

In order to support the delivery on the ground of the European Green Deal, we need to be in close partnership with regions and cities. Cohesion policy is expected to invest more than EUR 78.2 billion in projects related to climate and environment over the next 7 years (2021-2027) in this partnership approach. The draft regulation sets out that “[t]he ERDF and the Cohesion Fund shall contribute with 30% and 37% respectively of the Union contribution to expenditure supported for the achievement of the climate objectives set for the EU budget”. Based on these values, we estimate an annual share of 30% and 37% of Union contributions for

this area. A more detailed projection will be possible only once the programming of the funds at national and regional level is more advanced.

The methodology used for tracking the ERDF and CF contribution to mainstreaming of climate action in 2022 remains stable and coherent with last year's programme statement. Based on the categories of intervention reported directly by the Member States, REGIO identifies the relevant financial allocations and tracks financial implementation as reported from the Member State level and the amounts can be explored using this [Climate tracking tool](#).

With regard to the 2014-20 programmes, the tracking of the contribution of ERDF and CF to the mainstreaming of climate action is done through the weighting of selected thematic allocations (100%-40%-0%) in the Member States' funding priorities reflected by the categories of intervention, which is then expressed as a percentage of the budget to be made available by year (latest data is from the end of 2021).

6.1.3. Key achievements

At the end of 2019 the ERDF and CF share of the EU planned support allocated to climate action was over 21% of the combined budget of the funds (EUR 55.2 billion). By end 2020, the ERDF and CF climate action share had fallen to EUR 51.3 billion or 20% as a result of the reallocations linked to the CRII(+) initiative to support the pandemic response, in particular to reinforcing allocations to the immediate public health response and support to SMEs. The total budget for climate action under the original 2014-2020 programmes had recovered somewhat to EUR 52.3 billion by the end of 2021.

The thematic distribution of the EU climate amount at end 2021 is distributed as set out in the table below.

	2014-2020 planned EUR m	Share of EU planned climate action - ERDF/CF
I. Productive investment	26.9	0.1%
II Infrastructure providing basic services and related investment: Energy infrastructure	19,407.8	37.9%
II Infrastructure providing basic services and related investment: Environmental infrastructure	1,391.3	2.7%
II Infrastructure providing basic services and related investment: Transport infrastructure	9,430.7	18.4%
II Infrastructure providing basic services and related investment: Sustainable transport	7,136.5	13.9%
IV Development of endogenous potential: Research and development and innovation	2,240.0	4.4%
IV Development of endogenous potential: Business development	3,039.7	5.9%
IV Development of endogenous potential: Environment	8,480.3	16.6%
IV Development of endogenous potential: Other	14.2	0.0%
Total	51,167.5	100.0%

The high share of ERDF and CF resources allocated and tracked for climate action has led to the selection of indicators and target values and leads to annual reporting on progress in implementation. The most relevant common indicators presented in detail in section 5 above are as follows:

- Specific Objective 4 : Low carbon economy
Indicators on new renewable energy capacity, GHG emission reductions, energy savings
- Specific Objective 5: Climate action
Indicators on population benefitting from climate related risks (wild fires and floods)
- Specific Objective 7: Network Infrastructure
Indicators on rail investments

Under the REACT-EU initiative the objective is that 25% of the additional EU financing be committed to climate action, which should redress the climate action reduction in 2020 linked to the immediate pandemic response. The full REACT-EU allocations will be only finalised during 2022. As of end 2021 more than EUR 5 billion was allocated to climate action under the additional REACT-EU allocation. This [REACT-EU Dashboard](#) provides a regularly updated presentation on the formally allocated amounts.

The following example shows how climate protection and regional development can go hand in hand.

The “[Smart Solar Charging](#)” project in the city of Utrecht (West-Netherlands) develops a bidirectional charging system for shared electric cars, where car batteries can either charge or deliver energy back to the electricity grid. This way sustainable energy can be

used when there is a high demand for energy in the local district. The project has contributed to installing 200 smart bidirectional charging points and is still scaling up.

6.1.4. Performance

Of the 10 indicators presented above and relevant for Climate mainstreaming (Specific Objectives 4, 5 and 7), seven show a moderate or strong trend in terms of achieving their 2023 targets. Overall, performance on the climate-related indicators can be described as satisfactory.

Performance on the following indicators by the end of 2020 illustrates the scale and scope of the investments being completed:

- Until 2020, an increase over 2 735 MWH of additional capacity of renewable energy production was achieved thanks to regional funding.
- A decrease of over 1.9 billion kWh of annual primary energy consumption of public buildings was achieved with the help of regional funding.
- By 2019, a reduction of over 4.4 million tons of CO2 equivalent per year had been achieved with the help of regional funds.

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution	0	2 050.00	2 424.10	2 826.10	3 252.60	3 704.70	4 183.90	20 138.20
Share compared to total envelope		4.56 %	5.25 %	5.95 %	6.66 %	8.87 %	9.68 %	7.04 %

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
REACT EU Biodiversity contribution		0.00	0.00					0.00
Share compared REACT EU total implementation and programming	0.00 %			0.00 %	0.00 %	0.00 %	0.00 %	

6.2.2. Explanation on the financial contribution

Europe is currently not on track to halt biodiversity loss. The underlying causes (e.g. urban sprawl, intensive agriculture, pollution and invasive species) will probably persist, and the impact of climate change is projected to intensify. Cohesion policy investments support the EU's nature and biodiversity policies, for instance by strengthening the Natura 2000 network of protected areas. Such investments also contribute to EU objectives in the fields of water quality, air quality and climate change adaptation, which in turn are important for regional development.

The methodology used for estimating ERDF and CF contribution to financing biodiversity in 2022 remains stable and coherent with last year's programme statement and the 2014-2020 values presented in this [Biodiversity tracking tool](#). Based on the categorisation of the planned and implemented expenditure reported directly by the Member States, DG REGIO calculates the relevant financial allocations based on weighting agreed with expert Commission services (no target was set in the legislation).

In relation to the 2021-2027 MFF the overall objective is to provide 7.5% of annual spending under the MFF to biodiversity objectives in the year 2024 and 10% of annual spending under the MFF to biodiversity objectives in 2026 and 2027.

Based on the 2014-2020 planned values (end 2020) the share of the total ERDF and CF budget allocated to biodiversity related activities is 4%. At this early stage of programming, precise figures on future commitments are not available, and a more reliable projection will only be available when programming of the 2021-2027 funds is further advanced. Maintaining at least the 4% share for the 2021-2027 period would result in a total allocation of EUR 10 billion to biodiversity objectives from ERDF and the Cohesion Fund. The Commission will work with the Member States during the programming towards securing a higher share of cohesion policy funding to biodiversity activities, than in the 2014-2020 period.

6.2.3. Key Achievements

Relevant objective/output	Budget 2020	Total 2014-20
II Infrastructure providing basic services and related investment: Environmental infrastructure	€ 560 19	€ 3.920
IV Development of endogenous potential: Environment	€ 1.010 97	€ 6.434
Total	€ 1.571 16	€ 10.354
In million		

Protection against floods for the inhabitants of Ermitage les Bains and Saline les Bains on the island of La Réunion, France. The objective of the project was to carry out the studies and necessary works for the protection against floods for the two districts housing more than 5 000 people and which are regularly inundated during heavy tropical and cyclonic rains.

6.2.4. Performance

The allocation of ERDF and CF resources to biodiversity actions have led to the selection of indicators and target values and leads to annual reporting on progress in implementation. The most relevant common indicator presented in detail in section 5 above is funded under Specific Objective 6: Environment - "Area of habitat with improved status".

The key areas of investment lie in two categories, i.e. (i) protection and enhancement of biodiversity, nature protection and green infrastructure and (ii) protection, restoration and sustainable use of Natura 2000 sites.

However, the full range of investments that are indirectly related to biodiversity reach more than EUR 10.3 billion once the allocations to three other related interventions, indicated below, are taken into consideration:

- waste water treatment
- adaptation to climate change, prevention and management of climate risks
- development and promotion of tourism potential of natural areas

Strong performance is evident in these areas:

- By 2019, nearly 4.1 million additional people had been served by improved wastewater treatment with the help of regional funds.
- By 2019, nearly 6.8 million hectares of habitats have achieved better conservation status with support from regional funds.

6.3. Contribution to clean air financing

6.3.1. Contribution

2021-2022 Estimates		2023-2027 programming (EUR million)					Total
2021	2022	2023	2024	2025	2026	2027	
3 868.70	3 994.80	4 124.60	4 267.30	4 414.20	4 565.80	4 722.40	29 957.80

(*)These amounts include NextGenerationEU top-ups if any

6.3.2. Explanation On the financial contribution

Clean air is essential to our health and to the environment. But as a result of rising industrial and energy production, the burning of fossil fuels and biomass, as well as the dramatic rise in traffic on our roads, our towns and cities suffer from air pollution. Investing in the reduction of air pollution therefore not only fosters human wellbeing and supports the protection of natural resources, but also makes economic sense and contributes to regional development.

Cohesion policy, through the ERDF and the CF, supports European regions and Member States in their efforts to reach the European clean air targets set for 2030. In the 2014–2020 period the policy has allocated more than EUR 29.8 billion to investments directly aimed at reducing pollution or 11% of the total EU budget. The methodology used for estimating the ERDF and CF contribution to financing clean air was introduced in 2020 through this [Clean air tracking tool](#). Based on the categorisation of the planned and implemented expenditure reported directly by the Member States, DG REGIO tracks the relevant financial allocations based on weightings in line with the common methodology established via the NEC Directive 2016/2284 (no target was set in the 2014-2020 regulation). Cohesion policy investments contribute to improving air quality, for instance through reconstruction of building heating systems or clean urban transport infrastructure. The methodology used for estimating ERDF and CF contribution to clean air remains stable and coherent with last year's programme statement. Based on the 2014-2020 planned values we have projected an estimated annual share of 11% of ERDF and CF contributions for clean air over the entire period 2021-2027. A more reliable ERDF and CF projection will be possible when the programming of the 2021-2027 funds is more advanced. The first estimate is that cohesion policy could/will contribute an additional EUR 30 billion to improving air quality between 2021 and 2027.

6.4. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates	2022-2027 programming					Total	
2021	2022	2023	2024	2025	2026		2027
Score 0* 260.8							

(*)Consolidated information about the annual commitments implemented (total per score by programme **in EUR Million**)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

Gender equality is a horizontal principle of the ERDF and CF (including REACT-EU) in the 2014-2020 and the 2021-2027 period. This means that gender equality and a gender perspective are taken into account and promoted throughout the preparation and implementation of the programmes. Bodies responsible for promoting social inclusion, fundamental rights, gender equality and non-discrimination are among the key partners who have to be involved by Member States and the Commission in the partnership process.

For the 2021-2027 period, there was no expenditure on programmes in 2021. However, EUR 260.8 million have been committed for technical assistance. The exact Contribution to gender equality will be defined ex-post.

Also, for the 2021-2027 period, the legal requirements as regards gender equality have been further strengthened in two ways. First, a new funding precondition for Member States, called an enabling condition, was introduced on ensuring the effective application of the EU Charter on Fundamental rights, containing also the requirement on equality between men and women; and the thematic enabling condition related to gender equality was further strengthened. Second, a requirement to track the support to gender equality has been adopted for all cohesion policy funds which will allow for better monitoring of the gender targeted and mainstreaming investments.

The ERDF directly contributes to gender equality by improving the quality and access to childcare and by improving business support measures for women entrepreneurs. 2014-2020 data are available only for early childhood education and care infrastructure with EUR 1.3 billion. ERDF and CF investments also contribute to gender equality indirectly through improvements in education, research, business, health and other infrastructure, enhancing opportunities for women. Examples include ERDF projects supporting women entrepreneurship, return of women to labour market, reproductive health, equality in employment for women in specific (traditionally male) sectors and others.

Better business environment for women in border regions between Croatia and Serbia

The [Women Business HUB](#) project co-financed by the Interreg-IPA cross-border cooperation programme contributes to a better business environment for women in border regions between Croatia and Serbia. The partnership of the WBH project is determined to foster economic empowerment of women entrepreneurs in the project area and minimize impact of the obstacles for women to start their own businesses. Partners aim to establish two women's business centres in Erdut and Novi Sad offering a program of tailored trainings, mentoring, networking and promotion services that seek to educate more than 700 women and set up a cross-border network of women entrepreneurs.

6.5. Contribution to the sustainable development goals

6.5.1. Goals

SDG 1 End poverty in all its forms everywhere

SDG 3 Ensure healthy lives and promote well-being for all at all ages

SDG 3

The newly opened [Geriatric Care Centre](#) in the Polish coastal city of Sopot is designed to provide the Pomorskie region's older residents with access to a comprehensive range of specialised medical services that were not previously available locally. The establishment of the centre provides elderly people in the region with easy access to geriatric, psychogeriatric and rehabilitation services. In addition, the establishment of the Centre is generating employment: in total, 70 new jobs.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

SDG 4 and SDG 8

The **House of Digitalisation** is a regional ecosystem in the field of digitalisation to promote education and training, science, industry and administration in the region of Lower Austria. Its objective is to provide cross-sectoral support to the domestic industry to increase the speed and efficiency of its digital transformation. During the COVID-19 lockdown, House of Digitalisation project supported regional companies in strengthening their online trading opportunities. The mobile application, developed by the students in Lower Austria allowed small shops to quickly and easily enter online retailing and keep in touch with the customers. The ERDF contribution amounts to EUR 1.2 million.

SDG 5 Achieve gender equality and empower all women and girls

SDG 4 and SDG 5

The [Remote School initiative](#) in Poland was launched in response to difficulties of continued school education during the coronavirus pandemic. Many children were left without access to the Internet or equipment on which they could continue their studies. Thanks to the initiative, Polish municipalities were able to equip over 23 000 schools with laptops, tablets or mobile internet for children who did not have them. Over 330 000 Polish pupils have benefitted so far.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

SDG 7, SDG 11 and SDG 13

Resource efficiency investments in the greenest company in Estonia: “Estonian Cell AS” The project invested in innovative technology that is more efficient in terms of energy and resource use. Estonian Cell produces biogas from wastewater using anaerobic wastewater treatment technology, which is a cutting-edge technology and an innovative solution alongside wood pulp production. It is the largest biogas production reactor in Europe. High methane biogas is fully utilized in the production of wood pulp and replaces a significant part of previously purchased natural gas. Wastewater treatment takes place in an oxygen-free or anaerobic environment, which does not require large amounts of electricity and does not generate sludge, unlike an aerobic environment. The processes produce valuable biogas with an average methane content of 75%. The new water treatment solution saves 5.5 GWh of electricity per year.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

SDG 8, SDG 9 and SDG 11

[Office for Innovation](#), located in the Badajoz Science and Technology Park in Extremadura, Spain. The Office for Innovation is an instrument to promote innovation in the less developed region of Extremadura based on the exchange of knowledge. The Office facilitated access for 283 companies to support for R&D activities.

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

SDG 10 Reduce inequality within and among countries

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

SDG 12 Ensure sustainable consumption and production patterns

SDG 13 Take urgent action to combat climate change and its impacts

SDG 13 and SDG 15

[PANDA: protecting Polish cities against heavy rainfall](#). The PANDA project represents the first up-to-date rainfall mapping system for urban areas in Poland, due to collaboration between rainwater and snowmelt management company Retencjapl, and the Polish Institute of Meteorology and Water Management – National Research Institute. The Polish Atlas of Rains Intensities (PANDA) project is the first online, digital and comprehensive rainfall mapping system in Poland. It is designed to help develop urban storm water and drainage systems that better protect Polish towns, cities and their residents against the effects of heavy rainfall.

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

SDG 17 Strengthen the means of implementation and revitalize the global partnership**6.5.2. Key achievements and performance**

The cohesion policy funds (ERDF, CF, ESF) are contributing substantially to the SDG. In 2014-2020 95% of the planned financial resources support the achievement of 11 SDGs out of the total of 17 SDGs.

REGIO maps the contribution of its funds to the SDGs on the basis of the intervention codes that each Member State provide along with the data of its programmes. In the table below, we present the list of those SDGs that are of key relevance for the 2014-2020 programmes.

The 2021-2027 cohesion policy will enable the EU to continue to deliver on the 2030 Agenda for Sustainable development and will help further the localisation of the SDGs, since cohesion policy is delivered in close cooperation with regions and local authorities. The mapping of SDGs will be made in the same way to the programmes of the 2021-2027 period. For 2021-2027 the mapping will be possible once the national and regional programmes are adopted with information on the specific allocation of EU funds.

ERDF and CF investment mapped to relevant SDGs (at end 2021) - In million EUR

SDG	SDG title	Planned Total Amount (EU+National)	Total Eligible Costs selected	Total Eligible Expenditure Declared	Selection rate	Spending rate	Share of planned total investment
SDG1	No poverty	9,892.4	11,125.5	5,587.3	112%	56%	3%
SDG3	Good health and well being	14,788.2	14,994.2	9,098.7	101%	62%	4%
SDG4	Quality education	9,588.3	11,806.0	6,801.7	123%	71%	3%
SDG6	Clean water and sanitation	17,130.7	23,492.2	10,008.2	137%	58%	5%
SDG7	Affordable and clean energy	34,376.9	40,981.0	21,105.5	119%	61%	10%
SDG8	Decent work and economic growth	74,365.3	94,489.1	57,967.8	127%	78%	21%
SDG9	Industry, innovation, infrastructure	137,618.8	170,108.6	93,908.6	124%	68%	39%
SDG11	Sustainable cities and communities	6,901.0	6,902.5	3,625.1	100%	53%	2%
SDG12	Responsible consumption and production	7,544.8	8,493.5	4,271.2	113%	57%	2%
SDG13	Climate action	8,855.9	11,957.6	5,767.9	135%	65%	3%
SDG15	Life on land	9,321.1	9,155.7	4,572.5	98%	49%	3%
	No SDG assigned	19,821.5	20,855.8	11,980.3	105%	60%	6%
	Grand Total	350,204.9	424,361.6	234,694.7	121%	67%	100%

(1) Due to the overlap among SDGs, SDG11 and SDG13 are underestimated (a significant share of investments assigned to SDG6, SDG9 and SDG12, for instance, are planned for urban areas and investments in SDG7 are relevant for climate action).

Cohesion policy's overall mission to reduce economic, social, and environmental territorial disparities between the EU regions is largely in line with the principles underpinning the SDGs, which allows for an assessment of how the Policy contributes to them.

In the long term, cohesion policy contributes to *reducing inequality within and among countries* (SDG10). The overarching mission of the funds is to *reduce economic, social, and environmental territorial disparities between the EU regions*. It can be deduced that cohesion policy aims at contributing to SDG10 in the medium to long term. However, its contribution to SDG10 cannot be quantified on the basis of monitoring data, but must be assessed through evaluations. Based on monitoring data, it is, nonetheless, possible to reliably estimate and assess how cohesion policy, across all its funds, contributes to the thematic chapters of the SDGs, as explained below.

The distribution of investments across the SDGs is shown in the table above. Here it can be seen that more than 70% of the investments are invested in the goals "affordable and clean energy" (SDG7), "decent work and economic growth" (SDG8) and "industry, innovation, infrastructure" (SDG9). In terms of implementation by December 2021, project selection data shows significant progress, with selection rates at or above 100% of planned allocation for almost all SDGs.

Section 6.5.1. serves as a pool of examples for the variety of the different projects funded under cohesion policy and their contribution to the different SDGs.

6.5. Contribution to the sustainable development goals.....	374

1. Overview**1.1. Challenges**

The Aid Programme aims to facilitate the reunification of Cyprus by encouraging the economic development of the Turkish Cypriot community.

Revision of the programme can only occur in the case where a reunification is achieved during the MFF period (in the absence of this, no major changes of strategy can be made).

1.2. Mission (General objectives)

The programme is the only EU funding for the Turkish Cypriots, who are EU citizens. There is very little assistance from individual Member States due to difficult legal and political circumstances in the de-facto divided island. The EU programme supports reunification efforts and prepares the Turkish Cypriots for the lifting of the suspension of the application of the *acquis* in those areas of the Republic of Cyprus in which the Government of the Republic of Cyprus does not exercise effective control. The EU contribution, in supporting the political process, economic integration and improved living standards, is vital. Economic development of the Turkish Cypriot community in order to facilitate the reunification of Cyprus is mentioned very prominently in the Aid Regulation.

1.3. Specific objectives

The Aid Regulation was adopted in 2006. On this basis, the Commission continues to deliver assistance to facilitate the reunification of Cyprus by encouraging the economic development of the Turkish Cypriot community and working under six objectives:

- Objective 1: Developing and restructuring of infrastructure;
- Objective 2: Promoting social and economic development;
- Objective 3: Fostering reconciliation, confidence building measures and support to civil society;
- Objective 4: Bringing the Turkish Cypriot community closer to the EU;
- Objective 5 and 6: Preparing the Turkish Cypriot community to introduce and implement the *acquis*, in view of the withdrawal of its suspension in accordance with Article 1 of Protocol No 10 to the Act of Accession.

Specifically, the Aid Programme contributes significantly through support to private sector development, facilitating the involvement of the World Bank and the European Bank for Reconstruction and Development, and human capital development. Measures to be financed under the Aid Programme are exceptional and transitional in nature and are intended, in particular, to prepare and facilitate, as appropriate, the full application of the EU *acquis* in the areas where the Government of the Republic of Cyprus does not exercise effective control, in view of the withdrawal of its suspension in accordance with Article 1 of Protocol No 10 to the Act of Accession, following a solution to the Cyprus problem.

The Aid Programme remains ready to accommodate developments in the settlement process and to finance confidence-building measures resulting from this process.

1.4. Public intervention context

The assistance programme is of an exceptional, transitional and temporary nature, aiming to facilitate the reunification of Cyprus. The Aid Regulation has no end date. Revision of the programme can only occur in the case a reunification is achieved during the MFF period (in the absence of this, no major changes of strategy can be made).

1.5. Actions

The assistance is implemented through direct and indirect management, taking account of the different types of constraints. Recently, innovative mechanisms on delivering aid have been initiated with the purpose of bringing coherence and streamlining priority infrastructure actions (Local Infrastructure Facility), improving the entrepreneurship ecosystem through enhanced linkages between research and business (Innovative Entrepreneurship), and supporting the bi-communal Technical Committees to carry out their activities more effectively. The underlying aim is to bring more tangible and visible impact in the priority areas with an annual programming resulting in a streamlined and compact set of actions.

Several infrastructure investments, with a strong environmental and bi-communal focus, are under implementation and will continue to be programmed through the Local Infrastructure Facility and/or through targeted direct interventions. Continued support is provided for strengthening the private sector and labour market, with an emphasis on innovation and increasing employability. Likewise, concrete measures have been put in place aimed at eradicating animal disease and improving food safety standards. The 'confidence building measures' (support for the Committee on Missing Persons and for the Technical Committee for Cultural Heritage) have shown solid progress and good bi-communal acceptance. Two new Green Line crossing points, specifically requested as a confidence building measure were opened in 2018 and in July 2019. The Commission played an active role in reaching a technically acceptable solution to both communities on the interoperability of mobile phones across the island. Intensive efforts continue on the preparation for the implementation of the *acquis*.

On 12 April 2021 the Commission adopted two measures regarding an important Cypriot heritage food product, namely Halloumi/Hellim cheese, which has been registered as a Protected Designation of Origin. After 1/10/2021 only producers in Cyprus who comply with the product specification are allowed to market their cheese under the name Halloumi/Hellim within the EU.

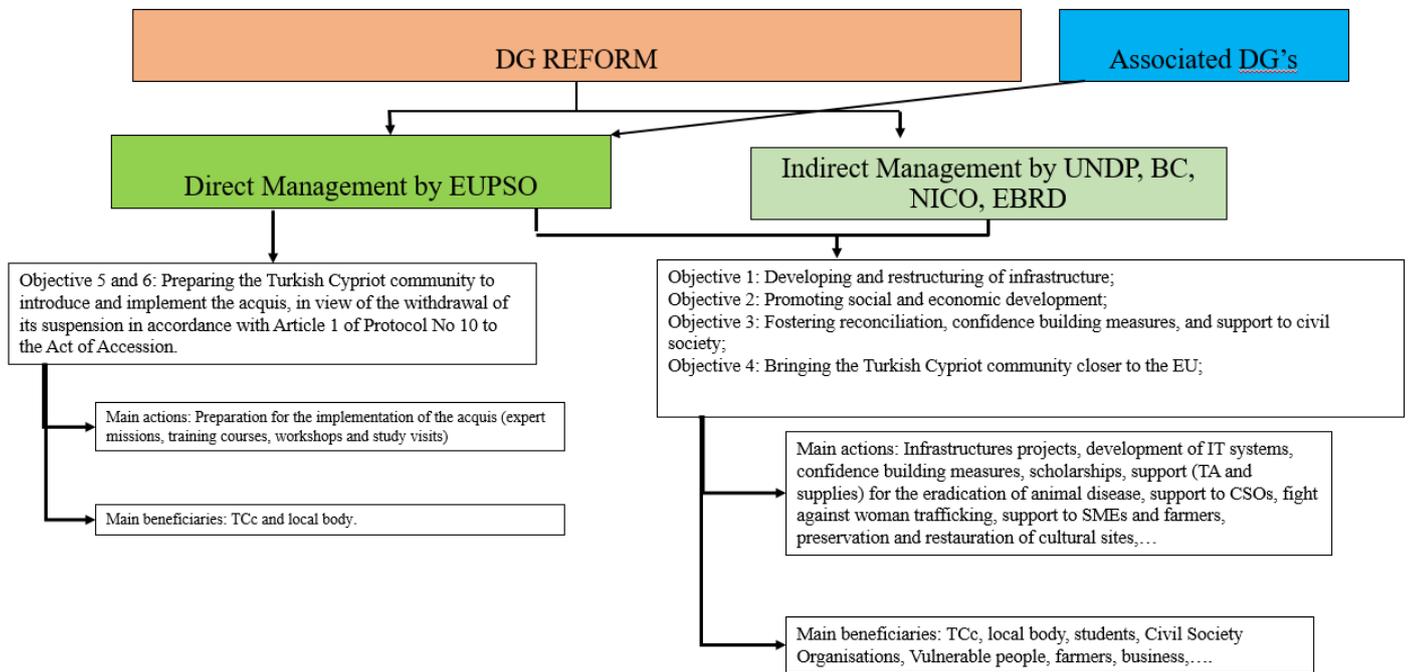

Another instrument allows Turkish Cypriot PDO compliant Halloumi/Hellim to be traded across the Green Line and thus into the EU market provided it fulfils all relevant EU animal and public health standards. The Commission will financially support the implementation of the Halloumi/Hellim package in the Turkish Cypriot community through the Aid programme. The Aid Programme remains ready to accommodate developments in the settlement process and to finance confidence-building measures resulting from this process

The EU contribution, in supporting the political process, economic integration and improved living standards, is and will remain vital.

1.6. Delivery mode

DG REFORM is the lead service for the programme implementation. The programme is implemented through direct management (procurement contracts and grants) and indirect management (contribution agreements with International Organisations and Member State Agencies).

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Council Regulation (EC) No 389/2006 of 27 February 2006 establishing an instrument of financial support for encouraging the economic development of the Turkish Cypriot community and amending Council Regulation (EC) No 2667/2000 on the European Agency for Reconstruction	2021 - 2027	193.04

1.8.2. Legal basis explanation

Council Regulation (EC) No 389/2006 and amending Council Regulation (EC) No 2667/2000

The assistance programme is of an exceptional, transitional and temporary nature, aiming to facilitate the reunification of Cyprus. The Aid Regulation reflects this particularity. It has been adopted in 2006 and remains in force until a comprehensive settlement of the Cyprus problem has been achieved.

1.8.3. Budget programming table:

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
---------------	------	------	------	------	------	------	------	-------

NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities								

(*) Only Article 15(3) of the financial regulation.

1.8.4. Financial Programming Explanation

The programming of the financial assistance under the Aid Programme is based on a number of established programming principles such as project maturity, policy relevance and track-record of past implementation. The underlying aim is to bring more tangible and visible impact in the priority areas with an annual programming resulting in a streamlined and compact set of actions. In addition, under this programming approach, the beneficiary is involved at an early stage which includes the submission of 1-page project outlines and a series of direct exchanges. Continued efforts are being made to instil more ownership in the process from the beneficiary coordinating body, the EU Coordination Centre, that takes a more active role in prioritisation and self-assessment of projects.

1.9. Link with the 2014-2020 MFF

The Multiannual Financial Framework (MFF) 2014-2020 provided a multi-annual perspective to the programme with a provision for stable, funding amounting to EUR 236 million.

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	32.0	241.0	13%
Payments	3.9		2%

The MFF 2021-2027 sets the funding to EUR 241 million. The 2021 Annual Action Programme was adopted on 16 December 2021 with implementation of the first projects in 2022.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	235.5	235.5	100%
Payments	211.5		90%

The Aid Programme is implemented in a unique diplomatic, legal and political context. Major difficulties encountered in the implementation of the programme arise from the unrecognised status of the beneficiary as well as from disputes with contractors, notably when it comes to works contracts. Those challenges are further exacerbated by the lack of absorption capacity and resources on the beneficiaries' side as well as by the deficiencies in available data and statistics. This often results in serious delays in the preparation of projects and in bringing them to maturity, which – over the years – has led to a substantial amount of uncommitted funds. This 'backlog' was successfully addressed in the recent period through better programming, more efficient handling of tendering procedures, and smoother internal procedures and coordination within DG REFORM. The situation is now fully under control.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

- Section 2.2 highlights the specificities in which the Aid Programme is implemented.
- Since the Aid Regulation has been adopted, the Turkish Cypriot community has benefited from a financial assistance amounting to EUR 623 million. The Aid Programme is implemented in a territory whose existence is not recognised internationally (with the exception of Turkey) and whose 'institutions' should therefore not be strengthened. This means that the Commission is operating with perennially weak partners and this negatively affects the efficiency and effectiveness of our intervention. The paradox is of course that such bodies often have an important role to play in implementing the policies required for closer integration with the EU acquis, particularly in areas such as animal health and food safety. This unique situation has a certain number of consequences when it comes to programme implementation:
 - Property rights have to be respected when it comes to works contracts. This limits, in terms of geographical areas, the scope of our intervention. In addition, the procedure for property clearance (via the Ministry of Foreign Affairs of the Republic of Cyprus) is long and cumbersome and is delaying the implementation of our works contracts.
 - Development of IT systems is an area where we have encountered difficulties and inefficiency. As a recent example, in our support to the eradication of animal disease, we have financed the development of an Animal Identification Registration database. The database is not yet functional. As a consequence, it was decided to refrain from supporting development of IT systems except in very well justified circumstances.
 - For almost 10 years, the EU has supported the Turkish Cypriot community with a number of projects related to improving solid waste management, with an overall investment exceeding EUR 30 million. Despite all the efforts to engage and support the beneficiaries, several challenges are still present, and the sector is poorly managed, coordinated and still not socially, financially and environmentally sustainable. This is notably shown by the situation of the landfill in Koutsoventis/Güngör. The Commission is accordingly in the process of conducting an overall independent and critical assessment of the past performance of the all EU-funded interventions in the waste sector in the Turkish Cypriot community, paying particular attention to its results measured against its expected objectives. The outcomes of this project are essential for the Commission to evaluate the effectiveness of all previous interventions in the field of waste. It will also identify barriers and obstacles, as well as structural weaknesses in the beneficiary that will need to be corrected if future investments in the area of waste are required. Depending on the results of this evaluation, the Commission may decide on a more conservative approach with regard to financing future interventions in the field of waste.
 - In animal health and food safety policy area, the progress in practical implementation of EU standards relies on prior enforcement of relevant legal text, which demonstrated to be an obstacle due to lengthiness of the process, as the aforementioned text are not prioritised in the Turkish Cypriot community legal texts adoption plan.
- In an attempt to overcome those challenges, the programme choices reflect a renewed approach towards programming of the financial assistance with a view to bringing more tangible and visible impact in the priority areas. The overarching aim is that the presented proposals follow a strategic approach based on the key programming principles as follows:
 - Political priority and ownership: projects proposed for financing should be in line with political priorities and provide assurance of ownership and local support in order to ensure their successful implementation and sustainability.
 - Project maturity: the principle of maturity should become the sine qua non for any EU funding under the Aid Programme. Lack of project maturity is one of the major reasons for the existing backlog and considerable procurement delays; therefore, all not-yet-mature and/or adequately advanced projects at the time of programming will not be accepted.
 - Implementation record: programming of assistance should be based on a positive track record of past project implementation.
 - Logical sequencing: any multi-phase/recurring projects should be planned in a sequenced manner. A multi-annual sector-planning framework needs to be developed on the beneficiary side so as to ensure that funding is allocated only when projects are mature.
 - Streamlining: taking into account the different types of constraints, including our respective capacities in terms of implementation, and the need for prioritisation, the focus should be on programming better targeted (fewer but larger) actions, which will also limit the number of related tendering procedures

3.1.2. Active programme performance

The Annual Action Programme for 2021 has been adopted on 16 December 2021, with the first projects expected to be implemented in 2022. Performance assessment will be provided once the implementation of the programme 2021-2027 will have started.

The Key monitoring indicators have nevertheless been amended for the period 2021-2027 in order to better target the achievements of the Aid Programme, notably in order to render them as tangible and concrete as possible.

3.1.3. Previous Programme Performance

The main policy objective under the legal base (Regulation (EC) No 389/2006) is to facilitate the reunification of Cyprus by encouraging the economic development of the Turkish Cypriot community (TCc). The Aid Programme has supported this with a distribution of resources among the six objectives specified in the Regulation. The below provides some illustrations of what has been achieved for each of the objective:

An independent evaluation of the Aid Programme for the period 2013-2018 concludes as follows “EU-funded interventions were generally well-aligned with local needs and EU priorities. Overall, the EU programme was mostly able to achieve the intended results (although often with significant delays) and beneficiaries are generally satisfied with the assistance received. The support provided to bi-communal initiatives played an important role in keeping the reunification option open, whereas the impact on economic development was more modest, mainly due to the scarce assistance to more dynamic sectors. Sustainability is affected by Turkish Cypriot community's limited capabilities and financial resources, and in certain areas (e.g. EU acquis) progress would likely stall without continuing EU support.”

The programme is on track. Nevertheless it has to be said that ultimate success will depend upon the will of both sides in the Cyprus dispute to arrive at a settlement. This is a sine qua non for success. The programme assumes that such a willingness to arrive at a solution exists and is building the capacity of the Turkish Cypriot side to integrate in a bi-communal bi-zonal federation, with adoption of the EU acquis. This can be shown in terms of hard support – i.e. physical infrastructure notably in the environmental field, bringing the Turkish Cypriot community closer to European norms and standards, but also with technical assistance in important sectors. One such sector is animal health and food safety. The Commission will financially support the implementation of the Halloumi/Hellim package, adopted in April 2021 (see section 1.5) in the Turkish Cypriot community, with the stated intention of allocating up to EUR 40 million to this end over the next four financial years, with EUR 7.5 million already allocated under the AAP 2021 and an indicative envelope of EUR 7.8 million provisionally earmarked for the Halloumi/Hellim package in the AAP 2022. This comes on top of the more than EUR 30 million for Halloumi/Hellim PDO relevant projects under the aid programme in previous years. This assistance will target traceability of the animals concerned, the eradication of animal diseases and hygienic production methods with the aim to secure compliance with the EU food safety standards, health and phytosanitary requirements and thereby enhancing the public's everyday life, health and well-being.

The EU continued to implement EUR 15.2 million worth of support to the Turkish Cypriot Community, allocated in 2020, to combat COVID-19 (EUR 5 million) and to assist businesses in weathering the negative socio-economic impact of the pandemic (EUR 10.2 million). In 2021, TAIEX experts continued to provide advice, including on elaborating a vaccination strategy, and the Commission continued to implement economic support packages providing emergency relief and encouraging economic stability. Overall, around 2 300 small businesses and industries have received grants of an average EUR 1,500 each, while 86 larger SMEs are in the process of receiving up to EUR 60 000 based on growth plans to safeguard and create employment, innovate and for green/digital transition.

When it comes to project implementation and the consequences of COVID 19, the situation reached in 2021 a certain level of normality allowing implementation of the projects, notably when it comes to supply and works. For technical assistance project (service contracts) and grant agreements, the impact of the COVID 19 on project implementation has been limited since the beginning thanks to the remote alternatives available.

1. Objective 1: Developing and restructuring of infrastructure.

Major infrastructure investments, with a strong environmental and bi-communal focus, have been funded and will continue to be programmed through the Local Infrastructure Facility and/or through targeted direct interventions. In total, 260 kilometres of water supply networks and some 100 kilometres of sewerage pipes have been financed through the Aid Programme.

Since 2014, some EUR 80 million have been invested in projects mainstreaming climate actions and contributing to the Europe 2020 priorities, notably through the following:

- The large wastewater treatment plant in Nicosia was inaugurated in 2014. This is the largest such plant on the island and serves 300,000 ‘population equivalent’ in both communities.
- Actions to set up a sustainable integrated waste management plan have been funded allowing for the collection and transport of solid waste to the central landfill to be optimised and the recycling of valuable resources).

The EU remains committed to providing the citizens of Famagusta with a functional and hygienic sewerage system. An initial work contracts, for an approximate value of EUR 10 million has been concluded in 2009. The Contractor has built a sewer

network and pumping stations that both Parties agree are riddled with defects (such as reverse slopes and defects joints). As a consequence of the importance of the defects and the impossibility to fix them, the EU has decided to launch a tender aiming at repairing the existing one by constructing a network in parallel with the defective one. A contract has been awarded for an approximate value of EUR 20 million. The implementation started in 2021 following the clearance from the Republic of Cyprus on the use of the land, and the validation of the “design visa” by the Turkish Cypriot chamber of civil engineers.

The European Commission has since 2018 concluded a "Local Infrastructure Facility" contribution agreement – totalling EUR 28.2 million - with the United Nations Development Programme to continue supporting the well-established mechanism for EU-funded infrastructure investments. The facility aims to provide support for the identification, screening, development, procurement, and physical implementation of relevant local infrastructure investments. With fifteen significant ongoing projects, 2021 saw an additional three important infrastructure projects being added to the LIF pipeline.

2. Objective 2: Promoting social and economic development.

The main achievements are the following:

- EU actions support the development of rural areas, human resources and regions. In total, since 2006, more than 3,000 grants have been awarded to farmers, local communities, schools, and SMEs.

More specifically, 286 rural development grants have been concluded for an approximate value of EUR 32.3 million and 200 farmers received training in husbandry practices to improve water use efficiency and farm hygiene. The targeted support to farmers through facilitating investments and purchase of equipment enables them to upgrade their material and to secure their survival in a difficult and closed economic environment. Concrete measures have been put in place, aimed at eradicating animal disease and improving food safety standards.

- Access to credit has been and remains a major problem in the Turkish Cypriot community. The Aid Programme has supported the promotion of innovation, growth and job creation through more than 2,700 grants to SMEs and start-ups, complemented capacity building. The SME grant scheme permitted companies to benefit from EU support enabling them to improve their competitiveness and thereby ensuring their survival in a difficult economic environment.
- Capacity of veterinary services to design and implement EU aligned animal diseases surveillance, control and eradication programmes has been strengthened. EU intervention helped reduce the prevalence of brucellosis in the northern part of Cyprus. For example, the prevalence of the disease dropped (in the period 2016 to 2021) from 10.4% to 5.82% among cattle herds, and from 10.4% to 5.09% among sheep and goats herds. This is a significant decrease of animal diseases prevalence and the positive trend is expected to continue in the future through EU targeted interventions. This is of significant importance for local farmers and consumers as brucellosis causes economic losses in animal production and presents a risk to human health. In addition, zero prevalence was achieved for the bovine tuberculosis and the enzootic bovine leucosis. Over 800 farmers were informed on animal diseases risks and prevention and long term benefits of elimination of diseases in food producing animals.
- The ongoing annual work programmes for the Aid Programme (AAPs) have been arranged to ensure a timely contribution for emergency SME support following the COVID-19 pandemic. Since it was not possible to mobilise additional Aid Programme funding for emergency economic measures, the support had to come through the existing envelopes. The Commission reassessed priorities, aiming to ensure the most efficient and optimal use of available resources. Part of these came from cancelling a number of actions which had not yet been financially committed where either beneficiaries had lost interest or more preparatory work was needed and thus projects could be postponed for future years. The rest was covered by savings and reserve funds under the support and settlement facility. Overall, the proposed changes involved a global reshuffling within and between the Annual Action Programme whose end dates for contracting were not expired, while keeping the respective annual budgetary envelopes unchanged. An economic emergency package (EUR 10.2 million) was established to help address the broader socio-economic impact of the Covid-19 pandemic in the Turkish Cypriot community. It included grants allowing self-employed and micro and small businesses to restock their supplies and cover other ad-hoc costs necessary to restart their operations, as well as emergency economic support including grants to small and medium businesses.

3. Objective 3: Fostering reconciliation, confidence building measures, and support to civil society.

The main achievements are the following:

- A high level of output was achieved by the Committee on Missing Persons (CMP), which has exhumed 1,183 sets of remains, of which 1,023 were genetically identified (January 2022 figures). The CMP’s objective is a humanitarian one, bringing closure to thousands of affected families through the recovery, identification, and return to their families the remains of 2,002 persons that went missing as a consequence of the tragic events of 1963-64 and 1974.
- The bi-communal Technical Committee for Cultural Heritage (TCCH) was established in 2008 for the promotion and protection of the rich and diverse cultural heritage of the island. The work of the Technical Committee on Cultural Heritage provides technical support and helps building trust between the two communities. The work of the Committee is

supported by archaeologists, architects, art historians and town planners from both communities. The Technical Committee works to provide a mutually acceptable mechanism for the implementation of practical measures for the proper preservation, physical protection and conservation of the cultural heritage of Cyprus. The protection of cultural heritage is an integral part of the ongoing process of broadening areas of cooperation between Greek Cypriots and Turkish Cypriots. The protection of cultural heritage in the specific context of Cyprus instils the desire for social coexistence, mutual understanding and reunification. The conservations include religious sites (Orthodox, Muslim, Latin, Armenian and Maronite), but also mills, fountains and hamams. Local communities not only attend completion of works events, but are also increasingly involved in the rehabilitation, preservation and maintenance of these sites.

Since 2011 the EU contributions under the Aid Regulation reached an amount of approximately EUR 22.4 million. More than 107 cultural heritage sites have been conserved, structurally supported, physically protected or restored island-wide with funding from the EU. The aid programme supports strengthening civil society as a key factor in the development of a culture of dialogue, participation in the community life and the promotion of values of tolerance, peace and active citizenship and the promotion of reconciliation, closer relationship and trust between the Turkish Cypriot and Greek Cypriot communities. 71 projects and more than 80 civil society organisations have been supported since the inception of the Aid Programme with a total support of EUR 11 million. These grants fund a variety of actions in the fields of environment, human rights, art and sport and encourage citizens’ engagement and cross-community exchanges. A seventh *Cypriot civil society in action* call for proposals has been launched in July 2020 for EUR 2 million and raised a very high interest, leading to the conclusion of 11 grant agreements in 2021. In 2021 the Aid programme further awarded a direct grant to the Human Rights Platform for EUR 700,000. The Platform is bringing together very active human rights-based Civil Society Organisations and is open for more CSOs to join. It will address in particular: anti-trafficking, refugee rights, LGBTI+ rights, democratic participation in the decision making process – including freedom of association and freedom of expression, and detention conditions and freedom from torture. The active citizenship mechanism is a component of the technical assistance (TA) that supports Civil Society Organisations in the Turkish Cypriot community (Civic Space). It has proven to be particularly successful from the perspective of the final beneficiaries. Also called **Grow Civic**, it is an ‘in-kind’ support for the rights-based actions or projects of activists, citizen’s initiatives, platforms, networks, and civil society organizations (CSOs). The maximum amount that an activist/CSO can request at one time is EUR 5 000 (and up to EUR 15 000 over the TA’s duration). Greek Cypriots can apply in collaboration with a Turkish Cypriot partner. This mechanism has supported 92 actions since 2016 in very different areas (e.g. peace and reconciliation, human rights, health, wild life protection, art, youth, environment, sports). Out of the 92 actions, 44 (48%) were either bi-communal or involving peace and reconciliation. This programme is continuing under the new TA, which started in December 2020 with Civil Society Organisations and activists applying and starting implementing their rights-based ideas and projects.

4. Objective 4: Bringing the Turkish Cypriot community closer to the EU.

The Aid Programme provides scholarships for Turkish Cypriot students and professionals, with the aim of bringing the community closer to the EU values and way of living. Since 2007, more than 1,800 grants have been awarded, involving more than 100 universities, covering 23 EU countries of destination and securing training in 20 different professions. In addition, in 2021, the EU Scholarship Programme offers up to three scholarships to exceptional Turkish Cypriot individuals to study at the College of Europe during the academic year 2022-2023. Scholars will have the opportunity to complete a one-year Master programme in one of six academic fields. After the successful implementation of a pilot bi-communal scholarship scheme by the United World Colleges (UWC), in 2020, a new agreement was signed allowing 10 more students from both communities to undertake in 2021 the International Baccalaureate Diploma programme in different countries. The actions implemented by UWC also includes cross-community youth engagement activities and short courses aiming at empowering the youth.

5. Objectives 5 and 6: Preparing the Turkish Cypriot community to introduce and implement the acquis, in view of the withdrawal of its suspension in accordance with Article 1 of Protocol No 10 to the Act of Accession.

Preparation for the acquis takes place mainly through the Technical Assistance and Information Exchange (TAIEX) instrument and is provided through expert missions, training courses, workshops and study visits. With around 4,000 TAIEX events since 2006, TAIEX allowed for the drafting of more than 240 legal texts covering 23 areas of the EU acquis. TAIEX remains an important element of the Aid Programme, providing continuous support for trade across the Green Line and regular assistance by the health experts in the context of the Covid-19 pandemic.

3.2. Key achievements

Summary of key achievements since the inception of the Aid Programme starting in 2006.

Developing and restructuring infrastructure	Promoting social and economic development	Encouraging reconciliation, building confidence, supporting civil society and bringing the Turkish Cypriot community
---	---	--

<p>263 km of water supply distribution networks renewed</p> <p>3 waste water treatment plants constructed</p> <p>99 km of sewage networks constructed</p> <p>23 refuse collection vehicle supplied</p> <p>2 incinerators for animal by-products supplied</p>	<p>286 rural development and local community development projects supported</p> <p>138 projects for schools, lifelong learning organisations and the labour market supported</p> <p>More than 2,700 grants to SMEs / start-ups</p> <p>Consultancy services and training provided for more than 1 000 businesses and entrepreneurs</p> <p>Training provided for almost 200 farmers to improve water use efficiency and farm hygiene</p> <p>Over 800 farmers informed about disease-related risks, disease prevention and the long-term benefits of disease elimination among livestock</p> <p>COVID 19 urgency measures : PPE and medical equipment, support to preparing vaccination and testing and more than 800 business assisted</p>	<p>closer to the EU:</p> <p>1 EU Infopoint established to proactively inform the Turkish Cypriot community about EU policies and the Aid Programme, via events, social media and web-based information activities</p> <p>60 projects for civil society organisations supported</p> <p>More than 80 training sessions carried out to strengthen the work of civil society organisations</p> <p>1,023 missing persons identified and their remains returned to their families</p> <p>More than 1 800 Turkish Cypriots given educational opportunities in EU Member States through EU scholarships</p> <p>107 cultural heritage sites supported island-wide</p> <p>5 new Green Line crossing points opened</p> <p>All bi-communal committees helped to better operate</p> <p>Around 4,000TAIEX events allowing the drafting of more than 240 legal texts covering 23 areas of the EU acquis.</p>
---	---	---

The Commission reports annually on implementation of the Regulation¹. Some examples and more details of the recent programme achievements are:

- The contract for the construction of the New Nicosia Trunk Sewer was signed in 2018 and the works are under implementation since summer 2019. The Nicosia branch includes the construction of approximately 13 km of sewers and force mains and four pumping stations. The works include odour treatment systems to avoid odour nuisance for the citizens and have been completed early 2022. A contract for the irrigation works in Morphou was also awarded in 2018 and the implementation of the works has been finalised in 2020.
- The contract for the remedial works of the Famagusta sewerage network, amounting to EUR 20.5 million, was signed in April 2019. The remedial works at the sewerage network include parallel replacement of 31 kilometres of existing sewers in corrugated polyethylene, renewal of 2 347 existing house connections, and replacement of approximately 326 "blind" tee pieces. It also includes the remedial works at the pumping stations. The contract entered into force in 2021 following clearance from the Republic of Cyprus on the use of the land and validation of the "design visa" by the Turkish Cypriot Chamber of Civil Engineers.
- The works for the construction of an irrigation system for the reuse of the Morphou/Guzelyurt waste water treatment plant (WWTP) treated wastewaters was completed in March 2020. In addition, the detailed design and associated tender dossier were finalised for the project 'reuse of treated wastewater and sludge generated from the new Nicosia WWTP'.
- The two works contracts concerning the projects "Extension to the Koutsoventis/Güngör landfill" and "Landfill Degassing Plant" were amended, now representing an investment of over EUR 4.5 million in solid waste management, progressed well despite the difficulties caused by the Covid-19 pandemic. The amendments are to result in renewable energy being produced, ensuring the continued sustainable operation of the landfill and treatment of the wastewaters (leachate). Despite the significant EU investment, the operation of the landfill are at risk in the absence of proper initiatives from the Turkish Cypriot community on correcting and remediating the long-standing poor operation conditions of the landfill in Koutsoventis/Güngör. This naturally includes the lack of strategic decisions to establish competent administrative bodies that ensure the technical appropriateness of such operation practices, absence of training of competent staff to manage the leachate treatment plan as well as absence of financial capabilities to finance the operating costs and appoint a proper operator for the management of the landfill.
- The European Commission has since 2018 concluded a "Local Infrastructure Facility" contribution agreement with the United Nations Development Programme to continue supporting the well-established mechanism for EU-funded infrastructure investments. The initial contribution agreement, for EUR 17.7 million over a four year period (December

¹ The 15th annual report, covering 2020, was published on 02/06/2021 (COM(2021) 272 final).

2018 – December 2023), was revised and amended in 2020 increasing the overall budget to EUR 23.4 million over five years; complemented by a further replenishment of EUR 4.7 million in 2021. The facility aims to provide support for the identification, screening, development, procurement, and physical implementation of relevant local infrastructure investments. With fifteen significant ongoing projects, 2021 also saw the completion of a third ‘Local Infrastructure Facility’ call for proposals directed at the local communities resulting in the identification of four projects potentially to be added to the LIF pipeline.

- Around 500 grants have been given to diverse beneficiaries including farmers, schools, small businesses and business and community development and other civil society organisations. These helped farms and businesses to modernise and improve competitiveness, and schools along with other educational establishments to improve teaching methods and meet the labour market needs. Work in the communities and with civil society organisations helped develop advocacy, improve community services and civic engagement and bi-communal relations. In particular a number of Non Governmental Organisations worked in combatting human trafficking, resulting in the practice being recognised as a criminal offence. Major efforts have continued to improve animal health and food safety requirements in order to bring these into line with the standards prevailing in the EU.
- In 2018/2019, EU further contributed strengthening capacities of veterinary specialists to prevent, control and eradicate animal diseases. EU project enabled sampling of around 300 000 animals and implementation of 380,000 diagnostic tests to detect and eliminate priority diseases (such as brucellosis). As a result brucellosis prevalence in the northern part of Cyprus is in decline. In addition, a number of serological surveys, implemented by EU technical assistance in 2019, demonstrated absence of economically important animal diseases such as foot and mouth disease and “*peste des petites ruminants*”. In 2021, animal disease eradication related activities resulted in further decrease in prevalence of brucellosis. In the period 2019-2021, the EU also contributed to long-term engagement of private veterinarians to implement sampling and testing of animals and other veterinary measures to protect animal and public health.
- In 2020 and 2021 EU supplied range of field and laboratory tests and consumables to help continued implementation of animal health programmes in the northern part of Cyprus. It also supplied range of equipment for food and health laboratories. This increases scope of the laboratory testing and helps better reliability of test results produced in these laboratories.
- It should be noted that in 2020 the Aid Programme has been substantially mobilised to address the impact of the Covid-19 pandemic crisis on the Turkish Cypriot community. In March 2020, EUR 3 million were provided (through an existing contribution agreement with the UNDP) to cover the needs identified by the health sector and the local communities in terms of equipment and supplies for the health sector including Personal Protective Equipment, laboratory devices, testing kits and ventilators.
- An Economic emergency package (EUR 10.2 million) was established to help address the broader socio-economic impact of the Covid-19 pandemic in the Turkish Cypriot community. The ongoing annual work programmes for the Aid Programme (AAPs) have been arranged to ensure a timely contribution for emergency SME support following the COVID-19 pandemic. It includes grants allowing self-employed and micro and small businesses to restock their supplies and cover other ad-hoc costs necessary to restart their operations, as well as emergency economic support including grants to small and medium businesses and a new instrument to create jobs through innovation and green/digital transition.
- With respect to confidence-building measures, the interoperability of mobile phones across the island was established on 11 July 2019, with the aim of improving communication between the communities and bringing all Cypriots closer together. The Commission played an active role in facilitating the discussion between actors of the two communities and acted as catalyser and facilitator to secure a solution that could be implemented technically.
- With respect to confidence-building measure, both Cypriot leaders confirmed in November 2021 an agreement that will make way for the introduction of 5G across the island. TV broadcasting systems was removed from the 700 MHz frequency band, transitioning from analogue to digital broadcasting, with the support of the EU, allowing the allocation of the 700 MHz frequency band to 5G mobile services. The Commission played an active role in facilitating the discussion between actors of the two communities and acted as catalyser and facilitator to secure a solution that could be implemented technically.
- A high level of output was achieved by the Committee on Missing Persons (CMP), which has exhumed 1 183 sets of remains, of which 1 023 were genetically identified (January 2022 figures). The CMP’s objective is to recover, identify, and return to their families, the remains of 2 002 persons. The CMP establishes the fate of those persons declared missing by both communities as a consequence of the tragic events of 1963-64 and 1974. The Aid Programme has financed more than 75% of the CMP costs since 2006.
- The bi-communal Technical Committee for Cultural Heritage (TCCH) was established in 2008 with the goal of preserving, promoting and protecting the rich and diverse cultural heritage of the island. EU contributions under the Aid Regulation started in 2011 reaching an amount of nearly EUR 22.4 million to date. By the end of 2021, a total of 107 cultural heritage sites have benefitted from this assistance.

- In 2019, a support facility to the bi-communal Technical Committees was created with a budget of 1 million to support projects of all bi-communal Technical Committees assisting them in overcoming structural and practical obstacles, which they face in their daily operations. Since then, six projects were completed, while other four are ongoing for a total of seven committees supported. The facility has been widely acknowledged as revitalising their work.
- The Commission, through its EU Infopoint and other projects, has carried out a range of communication and visibility actions (2,100) providing information about EU policies, priorities and actions in support of the Turkish Cypriot community (TCc), and promoting European culture. This has considerably enhanced the visibility of the EU in the northern part of Cyprus.
- The Aid Programme provides scholarships for Turkish Cypriot students and professionals, with the aim of bringing the community closer to the EU values and way of living. Since 2007, more than 1 800 grants have been awarded. In the year 2019 a new scholarship programme was established as a pilot programme, giving the opportunity to three Greek Cypriots and three Turkish Cypriots to go for two academic years to attend the United World College (UWC) for the International Baccalaureate diploma. After the successful implementation of this pilot scholarship scheme, a new agreement was signed with UWC and a call launched in 2021 is allowing 10 students from both communities to undertake the International Baccalaureate Diploma programme in different countries. The actions implemented by UWC also includes cross-community youth engagement activities and short courses aiming at empowering the youth.
- With the aim of highlighting that a settlement of the Cyprus problem could bring economic benefits, the PRIO Cyprus Centre was funded to update their 2014 reports, quantifying and helping to deliver the sizeable "peace dividend" that is achieved with a comprehensive settlement of the Cyprus Problem and the reunification of the island. The new study highlighted that a solution will be good for business, addressing the concerns of ordinary Cypriots about the economic impact of a settlement. The study was published in three languages (Greek, Turkish and English) and was presented to the public and to the international community in February 2020.
- In March 2020, thanks to the EU funded grants working on fighting trafficking in human beings, the support of a Technical Assistance and Information Exchange (TAIEX) expert and of the Technical Assistance for Civil Society Organisations (Civic Space), the local legal text has been amended and now includes trafficking in human beings and hate speech as crimes that can be prosecuted. This important step paves the way for a full-fledged legal text addressing all four 'Ps' of anti-trafficking (prevention, protection, prosecution and partnership). In 2021, the EU funded grant beneficiaries continued their advocacy towards this aim.
- Intensive efforts continue on the preparation for the implementation of the acquis in the areas of the Republic of Cyprus where the government does not exercise effective control upon the entry into force of a comprehensive settlement of the Cyprus problem. Preparation for the acquis takes place mainly through the Technical Assistance and Information Exchange (TAIEX) instrument and is provided through expert missions, training courses, workshops and study visits. In total, TAIEX allowed for the drafting of 241 legal texts covering 23 areas of the EU acquis. In 2021, TAIEX organised nearly 150 events for the benefit of the Turkish Cypriot community. Thanks to the TAIEX support, the beneficiary made good progress in a number of areas and acquired a firmer understanding of the challenges linked with the implementation of legal texts aligned with EU standards.

Contribution to policy achievements

The main policy objective under the legal base (Regulation (EC) No 389/2006) is the reunification of Cyprus and the Aid Programme has supported this with a distribution of resources among the objectives specified in the Regulation.

3.3. Evaluations, studies and reports

In 2018, DG REFORM concluded a contract for the implementation of the first Results Oriented Monitoring (ROM) exercise aiming at reviewing a minimum of 16 actions in terms of relevance, efficiency, effectiveness and sustainability. The goal was to assist DG REFORM with respect to the monitoring of and reporting on EU funded projects under the Aid Programme for the Turkish Cypriot community.

The ROM reviews and support missions to be carried out are the following:

- a) ROM reviews of strategic projects for which such ROM reviews may have a particular usefulness or for innovative projects.
- b) ROM reviews of projects signalled as having implementation problems and where EC services or DG REFORM have identified a need for an outside expert review to assist in addressing the problems, identifying causes and options for solution and making recommendations.
- c) Support to improve the current monitoring systems of projects and, where relevant, to help operational Programme Managers to set-up a ROM-compliant monitoring system.

The ROM reviews focussed on service contracts and grants schemes and covered a significant number of contracts, both recently closed and ongoing. The implementation of the Results Oriented Monitoring contract has started in end 2018 and was due to be finalised by end 2020. Due to the Covid-19 pandemic, the contract was prolonged up to 20/03/2022 so that the final project management trainings for the EC programme managers can be delivered.

All the 16 projects have now been reviewed and assessed. The first project management training took place in November 2019 and was delivered to more than 30 participants.

The recommendations issued by the ROM experts have been very useful for the project managers to improve the implementation of the projects. A few illustrations:

- Further EU support is needed to ensure the capacity increase of Turkish Cypriot civil society organisations (CSOs). The current project provides a comprehensive ‘toolbox’ that largely responds to the needs of the Turkish Cypriot CSO community. As recommended, the project design has been improved in the new project.
- For the EU Info Point contract, it was considered that the scope could be expanded in terms of the support it provides to other EU funded projects with communication and visibility rather than just sharing visibility products developed by projects. The content of the actions should reflect better the Turkish Cypriot community (please spell out the abbreviation) context e.g. by ensuring more input from local partners. These issues are being dealt with in the inception phase under the new EU Info Point contract.
- For the assistance to grant beneficiaries and the Contracting Authority regarding grant agreements, monitoring and evaluation experts have been mobilised, procedures have been simplified and workshops for experts have been organised.

The project management training combined theoretical and practical knowledge which was tailored to the need of the participants. Project managers from EU Coordination Centre, EUPSO and grants implementing partners benefited from this hands-on training. Another final project management training is planned to take place in February 2022 for the new programme managers. Following this, four targeted workshops will be organised for all programme manager on four different projects in implementation. These will be the final activities under the ROM contract.

A contract for the evaluation of the Aid Programme provided during the period 2013-2018 was concluded in December 2019. The purpose of the evaluation was to provide an overall independent assessment and to gather evidence on progress made towards the objectives set in the Aid Regulation during the 2013-2018 period. The evaluation concluded that the Aid Programme remains highly relevant and, given the particular circumstances of the Turkish Cypriot community context, is a successful initiative. It has been a generally coherent and efficient programme, through which the EU has added substantial value. However, prospects for sustainability in most areas primarily rely on continued EU support. The final report was published on 22 February 2022².

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Promotion of social and economic development including restructuring, in particular concerning rural development, human resources development and regional development

Indicator 1: Number of enterprises having received EU support in the form of a grant

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2029
1 913	2 700	2 790	2 940	3 000	3 500	3 600	3 700	3 750	3 800	3 800
	Actual Progress									Final
2 704										
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of farmers, SMEs, entities awarded - Cumulative
Cut-Off Date	13/12/2021
Data source	European Commission
Link to the objective	Reducing the gaps in the socio-economic conditions of the Turkish Cypriot community is an objective of the Aid Programme with a view to facilitate the reunification of the island
Link MFF 14-20 / MFF 21-27	Unchanged
Other methodological comments	The Aid Programme aims at supporting the economic development of the TCc and under normal circumstances, the annual programme will continue supporting private sector developments. The estimates will be based on what has been achieved so far under the MFF 2014-2020, taking into consideration the portion of the future programmes to be allocated to support enterprises.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Positive trend and a high number of small and micro business has been supported under the Aid Programme. The 2020 pandemic required a prompt response to support businesses. An Economic emergency package (EUR 11 million) was established to help address the broader socio-economic impact of the Covid-19 pandemic in the Turkish Cypriot community (see more details in section

² [Aid Programme for the Turkish Cypriot community | European Commission \(europa.eu\)](https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en)

	3.1.3). EUR 3.5 million has already been disbursed in favour of some 2,300 micro and small business to keep them open while enabling them to restock and pay bills which they would otherwise have been unable to do. In the Turkish Cypriot community, the EU financial assistance package was the sole source of help provided to the business in the absence of any support provided by the local administration. Without this EU economic emergency package, many micro and small businesses would have been unable to survive. A similar exercise was implemented with medium-sized businesses in a number of key sectors. This short-term, “emergency” support has been followed up by bespoke support to 84 specific businesses on a strategic basis.
--	--

Indicator 2: Cross-green-line trade volume in process of progressive increase

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2029
4 693 898	5 000 000	5 500 000	6 000 000	6 500 000	7 000 000	7 500 000	8 000 000	8 500 000	9 000 000	9 000 000
	Actual Progress									Final
6 151 022										
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Volume of trade expressed in EUR
Cut-Off Date	31/12/2021
Data source	RoC statistics
Link to the objective	Increasing trade across the Green Line is one of the key driver of economic growth of TCc.
Link MFF 14-20 / MFF 21-27	Unchanged
Other methodological comments	Mostly based on past volume, taking into consideration a marginal yearly increase
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	A number of obstacles to trade remain, notably the prohibition of crossings for commercial vehicles above 7.5 tonnes, the Republic of Cyprus does not allow the crossing of processed food products and materials for contact with food due to concerns raised by health services. More details are available in the report issued by the Commission on the implementation of the Green Line Regulation.

Specific Objective 3: Reconciliation, confidence building measures, and support to civil society

Indicator 1: To increase EU visibility in northern Cyprus: Communication actions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2029
429	250	300	300	300	300	300	300	300	300	300
	Actual Progress									Final
394										
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of actions carried out per year
Cut-Off Date	31/12/2021
Data source	Internal
Link to the objective	Increasing EU visibility of the interventions operated by the Aid Programme in northern Cyprus and therefore increasing level of understanding of how the EU works among the TCc
Link MFF 14-20 / MFF 21-27	Unchanged
Other methodological comments	Based on our past experience which can be considered as a benchmark for the future targets
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The expected number of actions is due to a highly active "Infopoint" project, and various EU-funded projects incorporating comprehensive communication and visibility activities with the aim to improve the EU visibility of EU-funded projects in the Turkish Cypriot community. We expect this trend to be continued in 2022 with approximately 300 actions on a yearly basis.

Indicator 2: Number of Civil Society Organisations having received EU support in the form of a grant

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2029

Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of individuals awarded (yearly)
Cut-Off Date	31/12/2021
Data source	Internal
Link to the objective	Support scholarships for Turkish Cypriot students and professionals, which both provide experience and a route to qualifications abroad and contribute to the image of the EU among Turkish Cypriots. It also brings the Turkish Cypriot community closer to the EU, which is one of the objective of the Aid Programme
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	Based on our past experience which can be considered as a benchmark for the future targets
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The targets set have been achieved through proper internal monitoring

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1 : Instrument of financial support for encouraging the economic development of the Turkish Cypriot community and amending Council Regulation (EC) No 2667/2000 on the European Agency for Reconstruction

Specific Objective 1: To facilitate the reunification of Cyprus by encouraging the economic development of the Turkish Cypriot community with particular emphasis on the economic integration of the island, on improving contacts between the two communities and with the EU, and on preparation for the *acquis communautaire*.

Indicator 1: Reconciliation and confidence building: "Tendency to trust the EU as an institution"

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
57%	Actual Progress									Final
	66%	51%	52%	52%	53%	47%	43%	38%		
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	Percentage based on polling

Cut-Off Date	01/05/2021
Data source	Eurobarometer
Narrative	Pooling of the TCc in the trust of EU Institution
Methodology	Independent polling of opinion
Link MFF 14-20 / MFF 21-27	Same indicator
Other methodological comments	The 2014 figure may have been the result of re-starting the settlement talks and high optimism.
Full metadata available at this address	https://europa.eu/eurobarometer/surveys/detail/2355
Justification of the trend	The continued decreasing trend since 2019 can be explained by the absence of concrete progress in the resolution of the Cyprus problem and to the perception from the Turkish Cypriot community of the EU siding with the Republic of Cyprus on many issues, including hydrocarbons. The situation has even further deteriorated since then due to the COVID 19 pandemic, which has further exacerbated this trend due to the deteriorating economic and overall health situation, despite our assistance package to support local businesses. This has further enhanced the perception of isolation from the Turkish Cypriot community and the impression that the EU has not been active enough in keeping its long-term promises, specifically with respect to the Direct Trade Regulation. This impression has been further enhanced by the local rhetoric in favor of a two-state solution, with the political scene largely dominated by a Turkish Cypriot leadership whose public stance is much more closely aligned to that of Turkey than the EU. The fact that the vaccines were not delivered directly from the EU but from the Republic of Cyprus through the Green Line did not contribute locally to an enhanced image of the EU. We are doing our best in order to improve the overall image and perception of the EU in the eyes of the TCc by boosting the visibility of the interventions made within the scope of the Aid Programme.

Indicator 2: Number of enterprises having received EU support in the form of a grant

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022
290		330		370	370	420	420	3 000	2 790	2 790
	Actual Progress									Final
		330	330	330	380	407	1 913	2 704		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of enterprises/businesses
Cut-Off Date	31/12/2021
Data source	European Commission
Narrative	Number of enterprises having benefited from EU support
Methodology	In addition to the previous SME grant schemes and the proactive development of an entrepreneurial ecosystem, the 2020 pandemic required a prompt response to support businesses by providing emergency working capital to specific sectors/SMEs, safeguard and/or create jobs, and support business development (more recently with focus on innovation, green economy and digital transition).
Link MFF 14-20 / MFF 21-27	Unchanged
Other methodological comments	The actual results for the period 2015-2017 have been adjusted to reflect the effective number of enterprises having received EU funding. The recently launched “Safeguarding & Creating Employment Grant Scheme for SMEs in the TCc” has the objective to safeguard and/or create jobs in 770 SMEs in Phase 1. Phase 2 will support business development of 86 SMEs.
Full metadata available at this address	https://ec.europa.eu/info/sites/default/files/about_the_european_commission/eu_budget/2021-2027_indicator_metadata_set.xlsx
Justification of the trend	The 2020 pandemic required a prompt response to support businesses. An Economic emergency package (EUR 11 million) was established to help address the broader socio-economic impact of the Covid-19 pandemic in the Turkish Cypriot community (see more details in section 3.1.3). EUR 3.5 million has already been disbursed in favor of micro-business to keep them open while enabling them to restock and pay bills which they would otherwise have been unable to do. A similar exercise was implemented with medium-sized businesses in a number of key sectors. This short-term, “emergency” support has been followed up by bespoke support to 84 specific businesses on a strategic basis.

Indicator 3: Cross-green-line trade volume in process of progressive increase

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
3 411 593				6 500 000	5 270 000	5 500 000	8 500 000	5 000 000	5 500 000	8 500 000
	Actual Progress									Final
	3 520 045	3 613 989	4 374 968	4 790 964	4 856 892	5 423 076	4 693 898	6 151 022		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Volume of trade expressed in EUR
Cut-Off Date	31/12/2021
Data source	Republic of Cyprus
Narrative	Volume of trade over the Green Line
Methodology	Mostly based on past volume, taking into consideration a marginal yearly increase
Link MFF 14-20 / MFF 21-27	Same indicator
Other methodological comments	Trade across the Green Line has developed more slowly than anticipated as a number of obstacles to trade, identified in the annual reports on the implementation of the Green Line Regulation, remain in place. To take one example, the Republic of Cyprus still does not allow the crossing of processed food products and materials for contact with food. The Commission is engaged in contacts with the Republic of Cyprus to address this issue. Trade across the Green Line increased by 1.4 % last year. The 2017 targets were set too high and the targets for the years 2020 are most probably too ambitious as we expect a roughly similar increase in the years to come. All Green Line trade has to be carried out with cash.
Full metadata available at this address	
Justification of the trend	A number of obstacles to trade remain, notably the prohibition of crossings for commercial vehicles above 7.5 tonnes, the Republic of Cyprus does not allow the crossing of processed food products and materials for contact with food due to concerns raised by health services. More details are available in the report issued by the Commission on the implementation of the Green Line Regulation. In 2020 the trade was negatively affected by the COVID19 pandemic as a consequence of the closure of the crossing points.

Indicator 4: To increase EU visibility in northern Cyprus: Communication actions

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
49			50	90	90	90	90	250	300	90
	Actual Progress									Final
	53	188	138	120	330	343	429	394		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Actions/year
Cut-Off Date	31/12/2021
Data source	European Commission
Narrative	Number of communication activities
Methodology	Based on our past experience which can be considered as a benchmark for the future targets
Link MFF 14-20 / MFF 21-27	Same indicator
Other methodological comments	The high results obtained as of 2015 is due to a very active, "Infopoint" project, and various EU-funded projects incorporating comprehensive communication and visibility activities. The COVID-19 challenge for physical events was transformed into opportunities of engagement for online activities and campaigning for the EU's work in the TCc, under various EU funded projects as well as the EU Infopoint project which extensively carried out communication and visibility actions in various online platforms. We expect this trend to be continued in 2022 with approximately 300 actions on a yearly basis. This is the consequence of the increased level of activity with the aim to improve the EU visibility of EU funded projects in the Turkish Cypriot community.
Full metadata available at this address	https://ec.europa.eu/info/sites/default/files/about_the_european_commission/eu_budget/2021-2027_indicator_metadata_set.xlsx
Justification of the trend	Due to COVID-19 pandemic, the EU funded projects continued communication and visibility actions extensively in online platforms, with online events and campaigns, throughout 2020 as well with physical events in 2021, as the relevant COVID-19 restrictions permit.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution		5.00						5.00	2%

(*These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

The installation of solar panels in SMEs, farms and solid-waste management facilities is part of wider support actions, whose total combined value is EUR 5.7 million. This contribution is split in 26% for the SME actions, 6% for the rural development support grants, and 68% for the solid-waste management facilities.

6.1.3. Key achievements

“The programme contributed EUR 70,5 million in the 2014-2020 period”. As previously mentioned, achievements in climate mainstreaming focused on setting the ground for wider-scope energy efficiency measures, as well as increasing the uptake of renewable energy in the local energy mix by supporting small operators and farmers.

6.1.4. Performance

Efforts to support renewable energy and reduced dependence on fuel for producing electricity.

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution		0.00	0.00					0.00
Share compared to total envelope		0.00 %	0.00 %					0.00 %

(*)These amounts include NextGenerationEU top-ups if any

6.2.2. Explanation On the financial contribution

The contribution of the European Commission was EUR 0.15 million and was funded through the annual action plan of 2014.

6.2.3. Key Achievements

The main achievements of this project involved the construction of walking trails, bird watching observatories, screening points for vegetation, information boards and points.

6.2.4. Performance

Limited assistance provided

6.3. Contribution to clean air financing

6.3.1. Contribution

2021-2022 Estimates		2023-2027 programming (EUR million)					Total
2021	2022	2023	2024	2025	2026	2027	
0.40	0.00	0.00					0.40

(*)These amounts include NextGenerationEU top-ups if any

6.3.2. Explanation On the financial contribution

The total financial contribution to Clean Air related projects equals EUR 1.9 million. Of this contribution, 55% corresponds to the renovation of the existing air quality stations, 11% to the procurement of a mobile air monitoring station, 26% to the procurement of analytic instruments for the reference laboratory and 8% to the installation of the laboratory infrastructure.

6.4. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 1: 0,5							
Score 0*: 31,5							

(*)Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

In March 2020, thanks to the EU funded grants working on fighting trafficking in human beings, the support of a TAIEX expert and of the TA for CSOs (Civic Space), the local legal text has been amended and now includes trafficking in human beings and

hate speech as crimes that can be legally prosecuted. This important step paves the way for a full-fledged legal text addressing all four 4 'Ps' of anti-trafficking (prevention, protection, prosecution and partnership). In 2021, the EU funded grant beneficiaries will continue their advocacy towards this aim.

The Aid Programme has provided grants to associations fighting domestic violence to support survivors of domestic violence, prepare draft legal text on domestic violence, raise awareness about domestic violence and gender violence and promote sex education in the community and among youth.

The Aid programme has contributed to the building of a shelter for victims of domestic violence in the northern part of Nicosia (in collaboration with the Nicosia local community).

6.5. Contribution to the sustainable development goals

6.5.1. Goals

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Through objective 2 of the Aid Programme, special support has been provided through the form of grants for farmers, aimed at increasing productivity of agricultural and dairy produce, as well as the competitiveness of farms. In addition, the European Commission has invested approximately EUR 4.9 million between 2014 and 2020 in supporting the testing and eradication of animal diseases such as brucellosis in local sheep, goat and cattle herds, as well as the training of local veterinarians.

In addition, the Commission has played a crucial role in facilitating trade of Cyprus potatoes between the Greek Cypriot and Turkish Cypriot communities, through Green Line trade.

SDG 3 Ensure healthy lives and promote well-being for all at all ages

The Aid Programme has funded grants that promoted patients' rights in the medical system and managed to secure the creation of a patients' rights unit in the local hospital.

The Aid Programme is funding grants that promote elderly rights and support the rights of people living with HIV/AIDS.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

The aid programme has provided training for teachers in curriculum development, invested in vocational education and training as well as providing equipment for schools, including science laboratories. In addition, the Aid Programme provides every year scholarships to study and work in EU countries, with two programmes: the EU Scholarship programme for the Turkish Cypriot community, addressed to students and professionals from universities, and the UWC scholarship programme, that provides scholarships for high school students

SDG 5 Achieve gender equality and empower all women and girls

The Aid Programme has provided grants to associations fighting domestic violence to support survivors of domestic violence, prepare draft legal text on domestic violence, raise awareness about domestic violence and gender violence and promote sex education in the community and among youth.

It has contributed to the building of a shelter for victims of domestic violence in the northern part of Nicosia (in collaboration with the Nicosia local community).

All the actions that the technical assistance for civil society (Civic Space) supports, including via its active citizenship component promote gender equality and encourage gender mainstreaming.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

Through objective 1 of the Aid Programme, the upgrade of water treatment, distribution and sanitation infrastructure is a priority. Between 2014 and 2020, the European Commission has allocated approximately EUR 38.6 million for water-related project, accounting for approximately 19% of the total investment of the Aid Programme in that period. The most relevant projects in this field are the construction of the North Nicosia Trunk Sewerage pipe and the Famagusta Sewerage Remedial Works.

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

Between 2014 and 2020, the European Commission focused in introducing energy efficiency measures for buildings by conducting an energy audit on 10 schools. The objective of this project was to identify the scope for possible interventions aimed at improving the schools' envelopes and heating/cooling systems. In addition, the Aid Programme has supported an increased uptake of renewable energies by local businesses, farmers and solid-waste facilities for up to 1.6 MW of installed solar power.

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

The Aid Programme has assisted through objective 1 in providing solid waste disposal sites compliant with EU standards as well as tackling the problem of disposal of animal by-products. This involved the construction of seven waste transfer stations for both, domestic/municipal waste and animal by-products between 2017 and 2020. In addition, the European Commission has supported local communities with the provision of up to 23 waste collection trucks and increased the capacity of the landfill in Koutsoventis/Güngör to 2.3 million cubic metres.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

The Aid Programme has supported projects to monitor, check and control environmental quality in urban environments with the objective to improve living conditions. Through the annual activity programmes of 2017 and 2018, the air quality monitoring network has been expanded and strengthened. In addition, further monitoring capabilities have been provided to the relevant control bodies to check on the quality of fuels being sold for residential combustion and transport, as well as to better manage the quality of water.

SDG 12 Ensure sustainable consumption and production patterns

The SME grant scheme permitted companies to benefit from EU support enabling them to improve their competitiveness and to upgrade and improve their production patterns.

SDG 13 Take urgent action to combat climate change and its impacts

The actions described in SDG 7 are of immediate application to combat climate change and its impacts. A reduced primary energy consumption produced by an energy-efficient building, as well as an increased use of renewable energy all result in less CO₂ emissions from combustion. This in turn contributes less to climate change.

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

In line with the interventions described under SDG 11, the Commission has supported in 2020 a project intended to procure water sampling and monitoring equipment for the relevant control body in the Turkish Cypriot community. The equipment will allow the control body to gauge the quality parameters of waters of coastal waters with the objective to take corrective action in the presence of pollution.

The Aid Programme has supported grants that bi-communally address the issue of marine litter, raise awareness among youth and work with fishers and coastal businesses to encourage litter collection and lower-waste, environmentally friendly practices

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

The Commission financed a grant in 2014 aimed at strengthening conservation of bird species nesting in the Kouklia/Köprülü water reservoir, increasing awareness amongst locals, and registering relevant environmental conditions.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

The programme has specifically targeted the problem of human trafficking and awarded grants to organisations working on both awareness-raising and legal changes. Thanks to the support, human trafficking has become a crime in the local legal text, and potential victims have received assistance

The Aid Programme has supported grants that help address discrimination against LGBTIQ, combat hate crime, hate speech, violence and harmful practices against LGBTIQ people.

The Aid programme, in addition, provides support to a series of Confidence Building Measures that support intercommunal dialogue: the support to the Technical Committee on Cultural Heritage, the support to the Committee on Missing Persons and the facility to support the bicomunal Technical Committees. In the 2020 the Aid programme funded a study to promote and disseminated the peace dividend of a settlement of the Cyprus problem.

1. Overview**1.1. Challenges**

The Recovery and Resilience Facility, as the centrepiece of NextGenerationEU, will jointly with the regular MFF programmes support the Union's recovery from the Covid-19 crisis and strengthen resilience against future shocks. It provides a mid-term response to the damage caused by the crisis, and is intended to support the recovery in the mid- to long-term by enabling Member States to implement reforms and investments responding to their country's specific challenges. In a context of a global climate emergency and the fast-paced digital transition, the Facility is further intended to support both the green and digital transitions, helping to foster sustainable and forward-looking implementation economic and social structures across the EU.

1.2. Mission (General objectives)

The Recovery and Resilience Facility (the 'Facility') offers large-scale financial support for public investments and reforms that make Member States economies more resilient, and better prepared for the future. Each Member State puts forward a national Recovery and Resilience Plan to access this financial support, which is assessed by the Commission. Payments are made against the achievement of agreed milestones and targets set out in a Council Implementing Decision. The Facility can support recovery and resilience within the scope of the following policy areas of European relevance ('six pillars'): (1) green transition; (2) digital transformation; (3) smart, sustainable and inclusive growth, including economic cohesion, jobs, productivity, competitiveness, research, development and innovation, and a well-functioning internal market with strong small and medium enterprises (SMEs); (4) social and territorial cohesion; (5) health, and economic, social and institutional resilience with the aim of, inter alia, increasing

crisis preparedness and crisis response capacity; and (6) policies for the next generation, children and the youth, such as education and skills.

In line with the six pillars, the general objective of the Facility is to promote the Union's economic, social and territorial cohesion by improving the resilience, crisis preparedness, adjustment capacity and growth potential of the Member States, by mitigating the social and economic impact of that crisis, in particular on women, by contributing to the implementation of the European Pillar of Social Rights, by supporting the green transition, by contributing to the achievement of the Union's 2030 climate targets set out in point (11) of Article 2 of Regulation (EU) 2018/1999 and by complying with the objective of EU climate neutrality by 2050 and of the digital transition, thereby contributing to the upward economic and social convergence, restoring and promoting sustainable growth and the integration of the economies of the Union, fostering high quality employment creation, and contributing to the strategic autonomy of the Union alongside an open economy and generating European added value.

1.3. Specific objectives

The specific objective of the Recovery and Resilience Facility is to provide Member States with financial support with a view to achieving milestones and targets of reforms and investments as set out in their recovery and resilience plans

1.4. Public intervention context

The Recovery and Resilience Facility supports Member States to implement reforms and investments in a broad range of policy areas ("six pillars"). Specifically, it provides both non-repayable and repayable (loans) financial support to Member States, to implement reforms and investments set out in their Recovery and Resilience Plans. The Facility is the EU's main instrument for the mid-term response to the crisis caused by the Covid-19 pandemic. Past experiences have shown that investment is often drastically cut during crises. However, it is essential to support investment in this particular situation to speed up the recovery and strengthen long-term growth potential. A well-functioning internal market and investing in green and digital technologies, in innovation and research including in a knowledge-based economy, in the clean energy transition, and in boosting energy efficiency in housing and other key sectors of the economy are important to achieve fair, inclusive and sustainable growth, help create jobs, and reach EU climate neutrality by 2050.

The Facility is intended to work in conjunction with the other programmes under NextGenerationEU, other shorter-term repair actions such as the European instrument for temporary Support to mitigate Unemployment Risks in an Emergency (SURE) and the wider set of MFF programmes. It also comes in a framework of other measures taken to alleviate the damage and enable countries to respond to the crisis, such as a temporary state aid framework and the activation of the general escape clause under the stability and growth pact.

1.5. Actions

The Facility provides non-repayable financial support under direct management and repayable financial support (loans) to Member States to support public investments and reforms, as set out in recovery and resilience plans prepared by the Member States. Repayable financial support (loans) will complement the non-repayable support and will be provided to Member States that demonstrate additional financial needs and commit to implement suitable reforms and investments beyond those that already benefit from the non-repayable financial support.

The envelope is financed from the borrowing operations of the Union as set out in Regulation (EU) 2020/2094 (EURI regulation). Given the temporary nature of the financing provided by the Facility in relation to support the Covid-19 crisis linked economic recovery of the Member States, the availability period of these resources is limited. 70% of non-repayable support is available for commitments until 31 December 2022, the remaining 30% of the non-repayable financial support will be calculated by June 2022 and available until 31 December 2023. The allocation per country is determined through allocation keys foreseen in Annex II (for the 70%) and Annex III (for the 30%) of the Regulation. Annex IV of the Regulation provides a table with the indicative allocation of the non-repayable financial support per Member State.

If necessary and justified by the cost of additional reforms and investments included in the Plan, Member States may in addition to the grant also request the additional repayable financial support (loan). Each Member State may request up to 6,8% of its 2019 GNI in current prices. Subject to the availability of resources, in exceptional circumstances the amount of the loan support may be increased. All the same rules and requirements of the Regulation apply as to non-repayable financial support, and Member States may request this additional loan support either at the time of submission of their Plan or, with a revised Plan, at a different moment in time until at the latest 31 August 2023.

The ultimate implementation and decision on which measures to include in the national Recovery and Resilience Plan and when to submit this Plan, within the requirements of the Regulation, lies with the relevant Member State. The ultimate decision on when to request payment also lies with the Member State. The Commission will monitor implementation and disburse funds when the relevant Member State submits a duly justified payment request that demonstrates that an agreed set of milestones and targets has been achieved.

1.6. Delivery mode

The Recovery and Resilience Facility will be implemented by the Commission in direct management in accordance with the Financial Regulation (Article 6). The specific objective of the Facility will be pursued in close cooperation with the Member States concerned.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)

(*) Loans committed in 2021 for adopted plans. The available budget for 2021-27 for loans is EUR 385 855.2

(**) Only Article 15(3) of the financial regulation.

(***) The total available budget for 2021-27 includes loans committed in 2021 for adopted plans. This total will be updated yearly if loans are committed in subsequent years

The 22 RRFs approved by the Council in 2021 account for a total allocation of EUR 291 billion in non-repayable financing and EUR 154 billion in loans. Six Member States have an adopted plan including a loan (Cyprus, Greece, Italy, Portugal, Romania, and Slovenia).

Payments under the RRF are bound to the approval of the plan and signature of the necessary agreements (for pre-financing), as well as the submission and positive assessment of payment requests (for other payments).

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate (excluding loans) at the end of 2021 (million EUR):

	Implementation	Budget	Implementation rate
Commitment	98 034.0	337 969.0	29%
Payments	46 374.6		14%

The Regulation establishing the Recovery and Resilience Facility has come into force on 19 February 2021. Since April 2021, 26 Member States have formally submitted their plans, 22 of which have already been positively assessed by the Commission and endorsed by the Council. The Netherlands is the only Member State not to have submitted a plan yet, as the timeline of the submission of the Dutch RRF was affected by the March 2021 election and the subsequent government formation process.

The Commission's assessment is still ongoing for four plans (submitted by Bulgaria, Hungary, Poland and Sweden). For these four plans, the Commission is continuing its assessment, as expected and foreseen in Article 19(1) of the RRF Regulation.

The formal submission of national Recovery and Resilience Plans and related adoption of implementing decisions by the Council allows the Commission to make pre-financing payments of an amount of up to 13 % of the financial contribution and, where applicable, of up to 13 % of the loan (Article 18). In 2021, the Commission disbursed EUR 54.3 billion as pre-financing to 20 Member States upon the adoption of a Council Implementing Decision approving the assessment of the Recovery and Resilience Plan and the signature of the necessary financing agreement and where relevant a loan agreement: EUR 36.4 billion in the form of grants, EUR 18 billion in the form of loans. In addition, EUR 10 billion of non-repayable support were disbursed to Spain following the positive assessment of its first payment request (December 2021). Four payment requests were submitted in total in 2021 and one was already assessed positively and the relevant payment made in December 2021. As the RRF is a performance-based programme, any subsequent disbursement is conditional to fulfilling the relevant milestones and targets.

The RRF has now entered in the implementation phase and Member States have started to report on the implementation of their RRFs. Delegated Act 2021/2106, entered into force on 2 December 2021, sets out the way Member States shall report on the overall performance of the RRF and the state of progress towards the achievement of its objectives and sets out common reporting indicators and the details of the Recovery and Resilience Scoreboard. It specifies that Member States will report biannually, by April and mid-October each year, on the progress made in the achievement of their recovery and resilience plans. This bi-annual reporting consists in providing summary information on the achievement of regarding the milestones and targets due by the quarter preceding the reporting, as well as those due in the four quarters following the reporting period. Member States also have to report on the common performance indicators defined by the delegated act twice a year (by February and August). The first reporting will take place in February 2022.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The Recovery and Resilience Facility is performance based. Disbursements by the Commission to a Member State are made only when that Member State fulfils a pre-defined set of agreed milestones and targets, which represents progress towards achieving the reforms and investments in the Member State's Recovery and Resilience Plans.

The performance reporting system of the Facility is the Recovery and Resilience Scoreboard, a public online platform, which presents available information on the implementation and performance of the RRF. More precisely, it displays the progress of the implementation of the recovery and resilience plans in relation to the common indicators (Delegated Regulation 2021/2106), the impact of the Facility across the six policy pillars (Article 3 RRF Regulation), and information on social expenditure (Delegated Regulation 2021/2105).

3.1.2. Active programme performance

In 2021, the Commission proceeded with a pre-financing payment of up to 13% of the financial contribution to 21 Member States which requested it. Payments of the pre-financing were executed within 5 business days after the signature of a financing agreement and where relevant a loan agreement between the Commission and the Member State. All payments were made well ahead of the 2-month deadline foreseen in the RRF Regulation.

As required under the RRF Regulation (Art 20(6)), the Commission will agree with each of the Member States operational arrangements setting out the modalities for monitoring and cooperation and covering essential aspects of the implementation. The operational arrangements provide for regular exchanges between the Commission and Member States, with at least quarterly exchanges to take stock of progress on the implementation of the RRP. They also clarify the verification mechanism for each milestone and target and, and when necessary, additional monitoring steps on which Member States will report to allow the Commission to monitor the implementation of the plan. Four operational arrangements were signed in 2021 and published on the Commission’s RRF website. To date, [xxx] operational arrangements have been concluded. The signature of the operational arrangements is a key step, as it is required before the Member State may submit its first payment request.

In 2021 the Commission disbursed a first payment of EUR 10 billion to Spain following the fulfilment of 52 milestones and targets. Three other Member States submitted their first payment requests by end of 2021 (EL, FR, IT), and 11 more are expected in the first half of 2022 (CY, HR, PT, EE, FI, LU, LV, MT, RO, SK, SI), along with three second payment requests (ES, IT, EL). . Updated information on the adoption of RRFs, achievement of milestones and targets and disbursements are available in the Recovery and Resilience Scoreboard.

The Commission’s review of the first set of bi-annual reporting information reveals a positive picture regarding the implementation of milestones and targets. This reporting exercise concerned all Member States with for which the necessary Council Implementing Decision had been adopted. These Member States reported on progress regarding all milestones and targets with an indicative date of completion up to Q3 2022 and closed, exceptionally, by end November. Overall, of the milestones and targets with an indicative date of completion up to Q3 2021, 91% (266) were reported as “completed” and only 9% (25) were not completed. Of the forward-looking milestones and targets with an indicative date of completion up to Q3 2022, 4.4% (41) were reported as delayed, 79.7% (741) as “on track” and 14.9% (139) were already reported as “completed”. The next bi-annual reporting exercise on the progress of milestones and targets will take place in April 2022. Data related to the bi-annual reporting is self-reported by Member States and does not prejudice the assessment of the Commission in the context of payment requests. Thus, it does not provide any indication regarding the Commission assessment of the satisfactory fulfilment of milestones and targets.

3.2. Key achievements

22	40%	26%
Number of RRFs adopted as of 31/12/2021	Climate target achieved by 22 adopted RRFs compared to overall target of 37%	Digital target achieved by 22 adopted RRFS compared to overall target of 20%

In the framework of the RRF, key achievements consist in the satisfactory fulfilment of agreed milestones and targets as set out in the respective Council Implementing Decisions. The Member States report the completion of milestones and targets in the context of payment requests. The Commission then assesses whether the milestones and targets are satisfactorily fulfilled.

As of 31 December 2021, the Commission has received four requests for payments, of which one was assessed and the corresponding disbursement made by the end of the year. All 52 milestones included in this first payment request have been assessed as ‘satisfactorily fulfilled’. The assessment for the remaining payment requests continued beyond this date. Latest information on fulfilled milestones and targets and payments made is available on the Recovery and Resilience Scoreboard.

3.3. Evaluations, studies and reports

As required by Article 31 of the RRF Regulation, the Commission has on XXX XXX 2022 published the first annual report on the implementation of the RRF

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: To provide Member States with financial support with a view to achieving milestones and targets of reforms and investments as set out in their recovery and resilience plans.

Indicator 1: Savings in annual primary energy consumption

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	MWh/year

To allow showing an overall impact of the RRF, the co-legislators established that the Commission sets out a set of common indicators, intended to show overall programme performance. All Member State with a plan assessed positively by the Commission and adopted by the Council will report twice a year on the common indicators.

Justification of the trend	N/A (first reporting in February 2022)
----------------------------	--

5. The programme contribution to horizontal policies

5.1. Contribution to climate mainstreaming

5.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate	99133.08	54251.80	42183.90					195568.78	40%

(*)These amounts include NextGenerationEU top-ups if any

5.1.2. Explanation on the financial contribution

The RRF Regulation requires that at least 37% of the cost of each RRP contributes to climate objectives, based on a methodology for climate tracking set out in Annex VI of the Regulation. The RRFs adopted in 2021 exceeded this target as 40% of the total allocation supported the climate objectives.

According to the climate tracking methodology, for each investment and reform, Member States should select a single intervention field from Annex VI of the Regulation. The coefficient associated with the chosen intervention field expresses whether the measure contributes fully (100%), partly (40%) or has no impact (0%) to the climate objective. Consequently, the Commission will assess whether the chosen intervention field is in line with the nature of the measure (i.e., whether it is aligned with its focus, objective or expected outcome) and validate such choice. Combining the relevant coefficient for each measure with the associated cost estimates and summing these up allows assessing to which extent the plan contributes to the climate objectives.

The figures for the climate contribution are based on the yearly commitments. Consequently, the fixed climate share of each RRP is multiplied with the yearly commitments and then aggregated to obtain the total RRF figure. As by now (15 February 2022), only 22 RRFs have been adopted, a conservative assumption was taken for the five remaining RRFs by multiplying the yearly commitments with the minimum 37% climate target.

5.2. Contribution to biodiversity mainstreaming

5.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution	6 255.50	2 512.40	2 299.20					11 067.10
Share compared to total envelope	2.5 %	2.1 %	2.2 %					2.3%

(*)These amounts include NextGenerationEU top-ups if any

5.2.2. Explanation On the financial contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Climate contribution – grants	40 177.65	162 826.89	79 519.12					282 523.66
Climate contribution – loans	58 955.4							
Share compared to total envelope								

The figures for the biodiversity contribution are based on the yearly commitments. Consequently, the fixed biodiversity share of each RRF is multiplied with the yearly commitments and then aggregated to obtain the total RRF figure. As by now (15 February 2022), only 22 RRFs have been adopted, a conservative assumption was taken for the five remaining RRFs by not including any estimates, as there is no minimum biodiversity target.

5.3. Contribution to clean air financing

5.3.1. Contribution

2021-2022 Estimates		2023-2027 programming (EUR million)					Total
2021	2022	2023	2024	2025	2026	2027	
45 062.20	18 863.90	17 665.00					81 591.10

(*)These amounts include NextGenerationEU top-ups if any

5.3.2. Explanation On the financial contribution

The figures for the clean air contribution are based on the yearly commitments. Consequently, the fixed clean air share of each RRP is multiplied with the yearly commitments and then aggregated to obtain the total RRF figure. As by now (15 February 2022), only 22 RRPs have been adopted, a conservative assumption was taken for the five remaining RRPs by not including any estimates, as there is no minimum clean air target.

5.4. Contribution to gender equality

5.4.1. Key achievements and performance

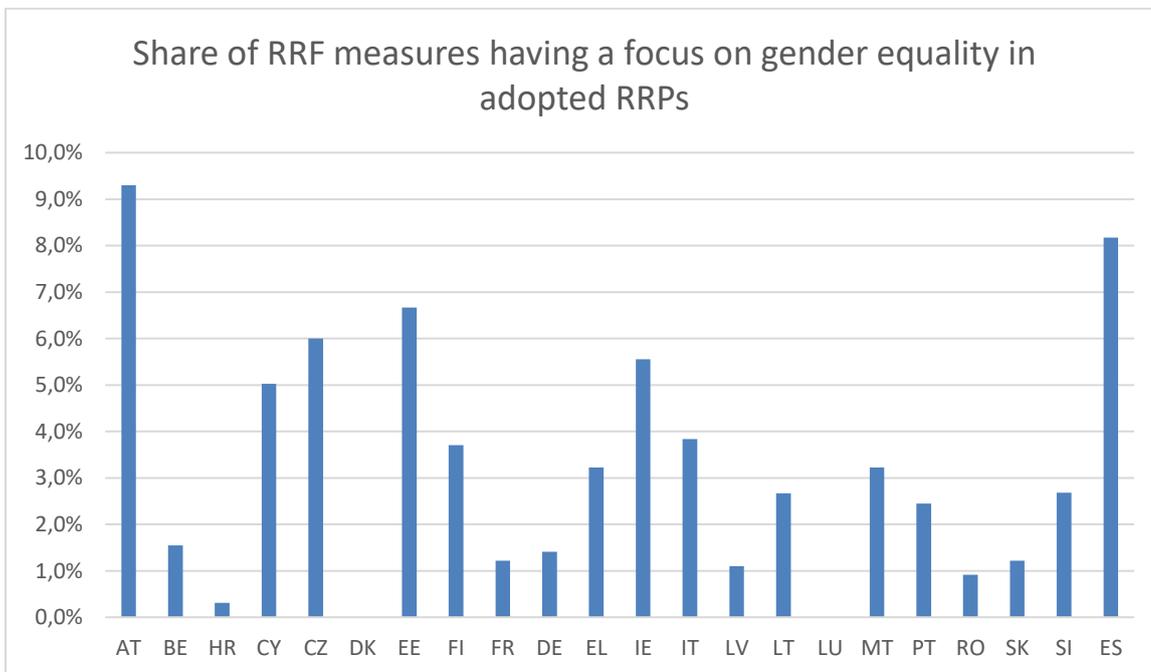

2021 estimates		2022-2027 programming					Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*	N/A	N/A	N/A	N/A	N/A	N/A	N/A
251 910							

(*)Consolidated information about the annual commitments implemented, including loans (total per score by programme in EUR Million)
 The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

Mitigating the social and economic impact of the COVID-19 crisis on women is a clear objective of the EU Recovery and Resilience Facility, as set out in Article 4 of its founding Regulation (RRF Regulation). The RRF Regulation requires Member States to explain how the measures in their Recovery and Resilience Plans (RRPs) contribute to gender equality and equal opportunities for all and the mainstreaming of these objectives.

For the purposes of Draft Budget 2023, the potential contribution to gender equality reported under score 0* for 2021, includes all grants and loans committed in 2021, as all RRF measures may have an impact on gender equality. That said, the evaluation of the impact of RRF measures on gender equality is not envisaged by the RRF Regulation.

However, in order to track the number of measures with a focus on gender equality and the share of such measures out of all measures included in each RRP, the Commission, in consultation with Member States, has assigned a flag to relevant measures, based on the methodology set out in the Delegated Act on social expenditure reporting under the RRF (Delegated Regulation 2021/2105). As a result, 115 measures are considered to have a focus on gender equality, as shown in the Recovery and Resilience Scoreboard. It is worth stressing that this estimate might change in case of amendments of plans by Member States and/or following the update of the maximum financial contribution for each Member to be performed by the Commission by 30 June 2022.

Flagged measures include reforms to reduce the gender pay gap, combat inequality between women and men, support upskilling of women and encourage flexible working arrangements. As regards investments, the RRF will contribute to a wide range of interventions. For instance, it will help Member States in improving social and early childcare infrastructures, introducing gender-equality certificate for companies, delivering trainings to boost women’s entrepreneurial skills, establishing a support line for women in rural and urban areas and improving the regulation of professions being traditionally taken up by women (domestic

works, social care etc.). It is now crucial that the Member States follow through with these plans and the Commission will monitor progress on the commitments made by the Member States, as legally set out in the Council Implementing Decisions on each adopted plan.

5.5. Contribution to the sustainable development goals

5.5.1. Goals

SDG 1 End poverty in all its forms everywhere

Several recovery and resilience plans include measures to introduce National strategies to tackle poverty and improve the equal distribution of income throughout the population.

Example: the Lithuanian plan envisages an assessment of the effectiveness of the tax and social insurance contributions in preventing poverty and reducing income inequality. The aim of this measure is to adjust the personal income tax and social insurance contributions in order to better prevent poverty and reduce income inequality. Based on this study, the Ministry of Finance will assess possible adjustments to the personal income tax and social insurance contributions and propose amendments to the current legislation to be adopted by the Parliament by December 2022 with a view to coming into effect in 2024.

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

The RRF provides support to a number of measures, which aim to improve food security and nutrition, and to foster the development and management of rural areas.

Example: Portugal aims to strengthen its agricultural sector, and to ensure food and nutrition security, contribute to health and well-being, to improve the management of rural areas, to further the conservation of biodiversity, to tackle the effects of climate change, with the necessary adaptations and contributions to mitigate its effects and to boost other economic activities, such as, among others, agricultural services and even catering and tourism. To that end, one of the reforms included in its RRP supports the implementation of the Innovation Agenda for Agriculture 20|30, and will consist of providing the necessary means for updating and preparing existing infrastructure as well as promoting functional alliances along the agro-food chain, businesses and research, in order to promote the development and integration of R&I targeted to the needs of the agricultural sector with a view to green and digital transition

SDG 3 Ensure healthy lives and promote well-being for all at all ages

The measures included in the plans contribute to a variety of health objectives, such as the improvement of primary healthcare, the reorganisation of hospital networks, the upscaling of prevention, the increase in the quality of diagnosing and treating patients, the strengthening of the healthcare workforce and the modernisation of healthcare facilities.

Example: The Greek plan includes a measure aimed at public health and prevention. An ambitious set of measures focusing on public aims to improve access to high-quality health services for all citizens. This includes the implementation of a system of primary, secondary and tertiary prevention as envisaged in the National Public Health Prevention Program “Spiros Doxiadis”. These are expected to support the resilience of the health care system by reducing morbidity, for instance through the promotion of physical exercise and healthy eating, by supporting the early detection of diseases, for instance through screening programmes, and by interventions aimed at preventing disability and supporting individuals with long-term conditions, with a view to improving their autonomy, quality of life and life-expectancy. Lastly, these measures envisage the modernization of the public health system to improve its capacity to emergencies and threats

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Member States have chosen to use the Facility primarily to improve the resilience of their education systems with a strong focus on digital education. Some Member States will also use the Facility for targeted measures to compensate for the learning loss resulting from the pandemic. The investments and reforms address all levels of education and training (i.e. pre-primary, primary, secondary, tertiary, adult education and training) with country-specific variations linked to national priorities and challenges.

Example: the Slovak recovery and resilience plan includes a component dedicated to curricular reform in primary and lower secondary education. The aim is to create new learning content, including textbooks, to develop pupils’ key competences, cognitive and soft skills, and to improve teachers’ skills. The implementation of the reform will be supported by the creation of 40 regional centres for mentoring and counselling for schools, as well as by setting up a favourable digital ecosystem. This will include a network of digital methodological coordinators in schools, to improve digitalisation in education and to enable the upper secondary school leaving exam (‘baccalaureate’) to move online. To complete the curricular reform, changes in initial teacher education and continuous professional development are planned. By the end of 2023, at least 60% of teachers in primary and lower secondary education are expected to receive training. At the same time, complementary investments are planned to increase the percentage of schools with highly equipped and connected classrooms from 30% to at least 90% and to improve school infrastructure, including establishing or renovating school libraries. Slovakia also plans to improve the inclusiveness of education, including via relevant

legislative changes, a catalogue of mainstream and targeted inclusive measures in education, training of teaching and non-teaching staff, as well as making school buildings barrier-free

SDG 5 Achieve gender equality and empower all women and girls

Gender equality considerations feature prominently in the Regulation establishing the RRF. Many plans include measures to support women's labour market participation, by promoting better access to childcare and long-term care facilities or reducing the female employment, pay or pension gap.

Example: The Italian RRP puts forward an investment to increase the integration of women in the labour market and, in particular, to support women's participation in entrepreneurial and business activities. The investment shall support the creation of women's enterprises by supporting the implementation of innovative business projects, including mentoring schemes, technical-managerial support, and measures to improve work-life balance in the private sector and communication actions to promote a women's entrepreneurship culture.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

On the sustainable use and protection of water, a significant part of measures focuses on water management, also by including metering devices for water abstraction, thereby combining both climate and digital objectives. Other types of water management include measures to target the supply of safe, clean and abundant drinking water as well as the treatment of wastewater collection. Some measures have also related to the enhancing irrigation efficiency. Pollution prevention and control measures relate to the implementation of low emission zones or the reduction of pollution in ports.

Example: The Romanian RRP includes a measure, which aims at strengthening the regulatory framework for the sustainable management of the water and wastewater sector and accelerating public access to quality services. The objective of this reform is to improve the capacity of regional water infrastructure operators, and to improve the quality and efficiency of cooperation between them and local authorities/inter-community development associations (IDAs), water and channel infrastructure owners, by implementing a number of legislative and regulatory changes

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

Energy efficiency accounts for 29% of the total expenditures under the green transition pillar. Most investments concern the energy efficiency of private buildings, typically targeting a reduction in primary energy demand of 30% or more. These investments also include measure aimed at addressing energy poverty, by targeting vulnerable groups for whom the significant upfront costs make it almost impossible to invest in the energy efficiency of their homes. Renovations of public buildings are also well represented across the plans, such as in schools, sport halls and historical buildings. Lastly, there are also investments for the construction of new highly energy efficient public and private buildings.

Example: Spain will support more than half a million energy renovation actions in residential buildings by 2026. These energy renovations will achieve on average a primary energy demand reduction of at least 30%. The investments are complemented by a coherent package of reforms, including tax incentives and renovation offices ("one-stop-shops") to facilitate renovations.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

The plans include in particular measures to support job creation and the transition to new sectors and job types, boost employment and improve labour market performance and resilience, focusing in particular on improving the efficiency of their public employment services, activation support for jobseekers, and increasing participation of women, young people, and vulnerable groups in the labour market.

For example, the Slovenian plan includes financial incentives for employers to hire young people up to 25 years of age on open-ended contracts. Employers should also commit to provide an appropriate mentor, to assist and train young people in a specific job. During the 18-month subsidy period, young people are expected to acquire additional competences to exercise the profession and enhance their theoretical knowledge with work experience. During this period, the new employee and their mentor should be involved in training of at least 30 hours with a focus on improving digital competences.

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

As one of the pillars of the RRF, Member States have put forward measures to support smart, sustainable and inclusive growth, incl. promoting innovation, industrialisation, and productivity, to make their economies more resilient, competitive and enable a sustainable and inclusive recovery.

Example: Spain aims to promote industrial development with the adoption of the "Strategy to boost Industry 2030", which foresees to adapt the regulatory framework to help industry face the challenges of digitisation, environmental sustainability and the circular economy. The objective of the reform included in their RRP is improve the coordination mechanisms between the different levels of government in industrial policy, and to improve industrial quality and safety through a strengthened market surveillance system

SDG 10 Reduce inequality within and among countries

The COVID-19 crisis has exposed and exacerbated inequalities in the EU. The RRF will support measures to strengthen resilience and reduce inequalities and divergences between and within Member States.

For example, Belgium aims to tackle discrimination in the labour market by strengthening the social and labour market integration of vulnerable groups, including people with a migrant background, women, people with disabilities, prisoners and people at risk of digital exclusion. The corresponding reform consists of improving the regulatory framework of discrimination tests, improving the available tools and data for targeted checks, and training and strengthening social law monitoring services of the Federal Public Service for Employment, Labour and Social Dialogue in order to improve the effectiveness of discriminatory tests.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

Example: Croatia has included in its RRP a reform which aims to develop a framework for the design and implementation of green urban renewal strategies. The new framework will provide the foundation for the development of sustainable space with a focus on developing green infrastructure and integrating nature-based solutions, models for circular management of space and buildings, strengthening resilience against risks and climate change, and supporting the overall sustainable development. The reform will be available to all local government units in Croatia, but priority will be given to those in earthquake-stricken areas

SDG 12 Ensure sustainable consumption and production patterns

Example: To reach the targets of reducing greenhouse gas emissions by 70% by 2030 and to reach climate neutrality in 2050, the Danish plan includes a number of investments in research and development to complement existing climate policies, create long-term growth potential, frontload the green transition by investing in new green technologies and diversify research by encouraging private and public entities to collaborate. One of these investments is dedicated to climate- and environment friendly agriculture and food production to accelerate the development of climate-friendly technology solutions. The aim of this specific investment is to increase investments in new technology to further reduce emissions in the agriculture and food sectors, while maintaining a sustainable production and earnings. The type of activities that will be funded include research and innovation in new breeding techniques, development of precision agriculture and the establishment of new, more efficient cultivation and fertilisation systems.

SDG 13 Take urgent action to combat climate change and its impacts

Reflecting the European Green Deal as Europe's sustainable growth strategy and the importance of tackling climate change, the RRF contributes to the mainstreaming of climate action and environmental sustainability.

Example: Cyprus included in its RRP a measure to reduce CO₂ emissions in industries, businesses and organisations, with the objective to encourage industries, businesses and organisations to engage in transformations targeting decarbonisation and to implement action plans to reduce greenhouse gas emissions in their operations and/or supply chains. The investment entails setting up a support scheme, which will provide financing, equivalent to the cost for the purchase of greenhouse gas emission allowances to be avoided due to the reduction in emissions resulting from the beneficiaries' actions. Cyprus aims to reduce at least 354.566 tons of CO₂eq as a result of the support received from the RRF.

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Example: The Spanish recovery and resilience plans includes reforms and investments, which aim at the conservation of terrestrial and marine biodiversity. One reform will update the biodiversity and natural heritage legislation to support meeting commitments stemming from the Convention on Biological Diversity and the recently adopted EU Biodiversity Strategy for 2030. It will also include the adoption of the Royal Decree approving the Plan for the Marine Protected Areas Network that shall promote an ecologically coherent network contributing to the conservation of areas of natural heritage and marine biodiversity, fostering a planned, effective and coherent management of marine protected areas. Investments are moreover contributing to the conservation of marine biodiversity, by establishing a system to digitalise the management, control and monitoring of natural heritage, covering both the terrestrial and marine fields, and putting forward a conservation plan for 30 % of the sea area by 2030, which shall protect at least 18 % of the Spanish marine territory by 2025.

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Example: As one measure of the component "Nature protection and adaptation to climate change", which aims at addressing the challenges arising from climate change in several priority areas (among which are forest management, agriculture, water management and biodiversity), Czechia will invest in building forests resilient to climate change. The investment aims at restoring a stable forest by planting native and heterogeneous species, while aiming for multigenerational and spatial composition of the forest to be resilient to climate change. In addition, Czechia will implement an amendment to the ministerial decree on forest management planning, which will pave the way for multigenerational, multispecies and resilient forests.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

A number of Member States have included in their recovery and resilience plans measures to improve the effectiveness of their judicial systems, including the quality of services as well as access to justice.

Example: Romania will invest in improving judicial infrastructure, the efficiency of the judicial system and access to justice through the construction of 3 new court buildings. Access to the buildings will be adapted to persons with disabilities, and priority will be given to the locations of judicial authorities in economically less developed parts of Romania. This adaptation will in addition be accompanied by compliance with fire and technical protection standards, including seismic resilience.

1. Overview**1.1. Challenges**

The outbreak of the COVID-19 pandemic has changed the economic outlook for the years to come in the EU and in the world. The medium and long-term effects of the crisis will depend on the resilience of Member States' economies. There is a need to plan strategically the recovery, revitalise our economies and getting back on a path of sustainable and inclusive growth, geared towards the green and digital transition objectives.

Smart, sustainable and socially responsible reforms help **to strengthen the resilience of our economies and societies**. They contribute to keeping our economies flexible and competitive and help to improve the quality of public services. Given that the economies of Member States are strongly intertwined, the successful implementation of well-designed reforms benefits is a matter of common concern and helps to strengthen the EU's social, economic and territorial cohesion.

However, **the process of designing, developing and implementing reforms is complex**. Member States have different levels of technical expertise and administrative capacity to address the reform challenges that lie ahead. Therefore, strengthening Member States' capacity to implement reforms is crucial.

In line with the subsidiarity and proportionality principles, the EU's intervention brings added value by offering Member States technical expertise to enhance their capacity to carry out reforms and to foster the exchange of good practices across the EU.

Building on the success of the Structural Reform Support Programme (2017-2020), with the Technical Support Instrument (TSI), the European Commission will continue accompanying Member States' efforts to tackle reform challenges.

1.2. Mission (General objectives)

The Technical Support Instrument is the main EU funding programme providing technical support to EU Member States to support them in their reform agendas. The TSI provides **tailor-made technical expertise** to Member States for the design and implementation of institutional, administrative and resilience-enhancing reforms. The support is **on-demand** and does not require co-financing from Member States.

Member States can request technical support under the TSI for implementing growth-sustaining and resilience-enhancing reforms in the context of EU economic governance, such as European Semester country-specific recommendations and the implementation of EU law. In addition, Member States can also request technical support to prepare, amend, implement and revise national recovery and resilience plans under the Recovery and Resilience Facility. Lastly, support can be requested for implementing economic adjustment programmes or reforms undertaken at Member States' own initiative.

The TSI covers a wide range of policy areas, which include revenue administration and public financial management, governance and public administration, sustainable growth and business environment, education and skills, labour market, migration, healthcare and social security systems, financial sector, and preparation for euro-area membership. In addition to this, there is specific focus on the actions that foster the green and digital transitions. These include actions in the area of climate change mitigation, environmental protection, energy transition, e-governance and artificial intelligence.

The general objective of the TSI is to promote the EU's economic, social and territorial cohesion by supporting Member States' efforts to implement reforms. This is necessary to encourage investment, to increase competitiveness and to achieve sustainable economic and social convergence, resilience and recovery. This is also necessary to support Member States' efforts to strengthen their institutional and administrative capacity, including at regional and local level, to facilitate socially inclusive, green and digital transitions, to effectively address the challenges identified in the country-specific recommendations and to implement EU law.

1.3. Specific objectives

To achieve its general objective, the TSI shall have the specific objectives of assisting national authorities in improving their capacity to:

- (a) design, develop and implement reforms
- (b) prepare, amend, implement and revise recovery and resilience plans pursuant to Regulation (EU) 2021/241.

The specific objectives shall refer to policy areas related to cohesion, competitiveness, education, productivity, research and innovation, smart, fair, sustainable and inclusive growth, jobs and investment, with specific emphasis on actions that foster the digital and just green transitions, and in particular focus on one or more of the following:

- **public financial and asset management**, budget process, including green and gender budgeting, macro-fiscal framework, debt and cash management, expenditure and tax policy, tax compliance, revenue administration and customs union, as well as fighting aggressive tax planning, tax fraud, tax evasion and tax avoidance;
- institutional reform and efficient and service-oriented functioning of **public administration and e-government**, simplification of rules and procedures, auditing, enhancing capacity to absorb Union funds, promotion of administrative cooperation, effective rule of law, reform of the justice systems, capacity building of competition and antitrust authorities, strengthening of financial supervision and reinforcement of the fight against fraud, corruption and money laundering;
- **business environment**, including for small and medium-sized enterprises, the self-employed, entrepreneurs and social economy enterprises, the re-industrialisation and relocation of production to the Union, private sector development, product and service markets, public and private investments including into physical and virtual infrastructure, project promoters and nurseries, public participation in enterprises, privatisation processes, trade and foreign direct investment, competition, efficient and transparent public procurement, sustainable sectoral development, and support for research, innovation and digitisation;
- **education**, life-long learning and training, vocational education and training, youth policies, labour market policies, including social dialogue, for the creation of jobs, increased labour market participation of under-represented groups, up- and re-skilling in particular digital skills, media literacy, active citizenship, active ageing, gender equality, civil protection, border and migration policies, the promotion of social inclusion and the fight against poverty, income inequality and all forms of discrimination;
- accessible, affordable and resilient **public healthcare, social security systems**, care and welfare, and childcare;
- policies for the **mitigation of climate change**, the digital and just green transitions, e-government solutions, e-procurement, connectivity, data access and governance, data protection solutions, e-learning, use of Artificial Intelligence based solutions, the environmental pillar of sustainable development and environmental protection, climate action, transport and mobility, promoting the circular economy, energy and resource efficiency and renewable energy sources, achieving energy diversification, tackling energy poverty and ensuring energy security, and for the agricultural sector, soil and biodiversity protection, fisheries and the sustainable development of rural, remote and insular areas;
- **financial sector policies and regulation**, including financial literacy, financial stability, access to finance and lending to the real economy, in particular for small and medium-sized enterprises, the self-employed and entrepreneurs;
- the production, provision and quality monitoring of **data and statistics**;

- preparation for **membership of the euro area**; and
- early detection of and a coordinated response to substantial **public health or security risks**, as well as ensuring business and service continuity for essential public and private institutions and sectors.

1.4. Public intervention context

The Regulation establishing a Technical Support Instrument (Regulation (EU) 2021/240) is adopted on the basis of the third paragraph of Article 175 and Article 197(2) of the Treaty on the Functioning of the European Union. Article 197(2) TFEU provides that the Union may support the efforts of Member States to improve their administrative capacity to implement Union law, inter alia, through facilitating the exchange of information and supporting training schemes. Article 175, third paragraph, TFEU provides that, if specific actions prove necessary outside the Funds and without prejudice to the measure decided upon within the framework of the other Union policies, such actions may be adopted by the European Parliament and the Council. The Technical Support Instrument aims at enhancing cohesion, through measures that allow recovery, resilience and convergence in/of the Member States concerned.

1.5. Actions

The specific objectives are pursued in close cooperation with the Member States concerned, including through exchange of good practices, processes and methodologies, stakeholder involvement, where appropriate, and a more effective and efficient human resources management.

The type of actions eligible for financing under the TSI include, among others:

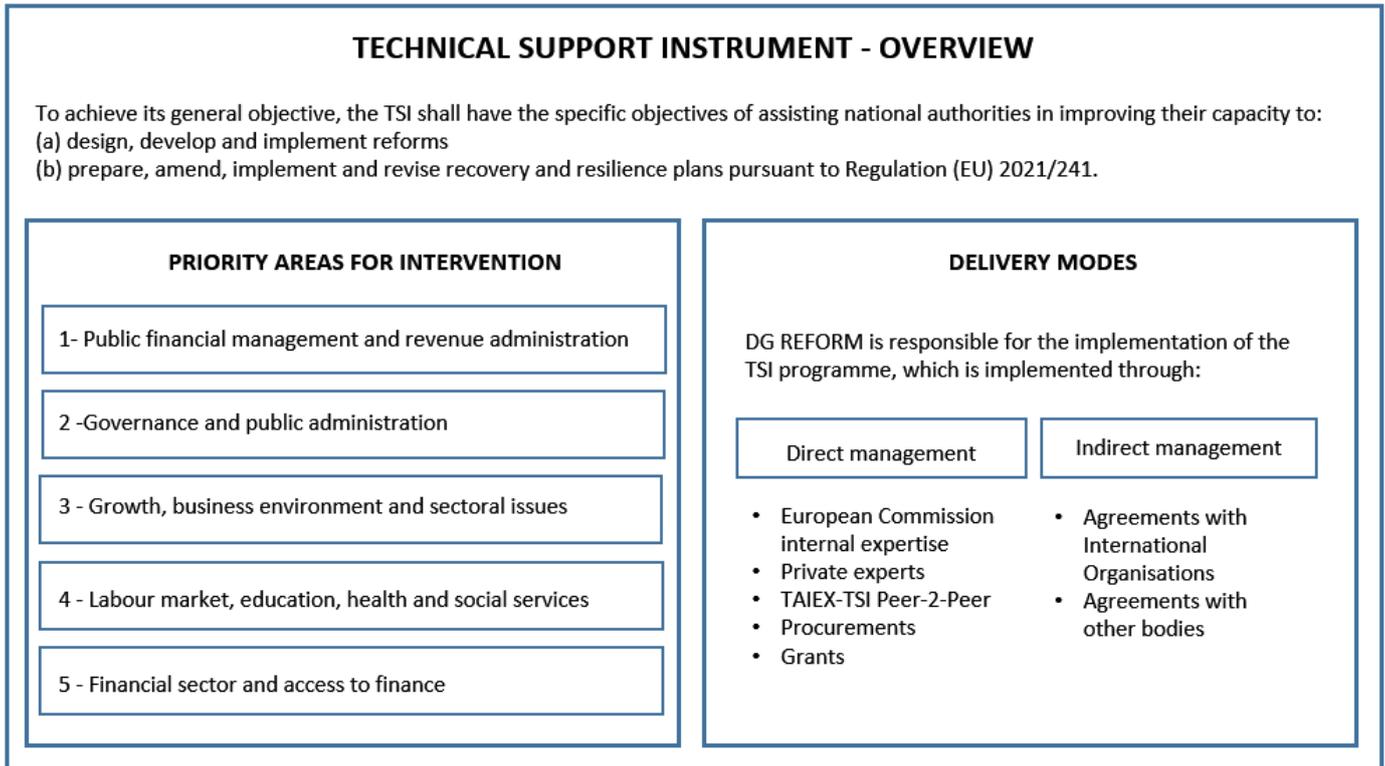

- Expertise related to policy advice, policy change, formulation of strategies and reform roadmaps, as well as to legislative, institutional, structural and administrative reforms;
- Provision of experts, from national administrations, international organisations, private firms and consultancies, or expertise directly from the European Commission;
- Institutional, administrative or sectoral capacity building (including workshops, exchange of best practices, and training) at all governance levels.
- Carrying out studies, including feasibility studies, research, analyses and surveys, evaluations and impact assessments.

1.6. Delivery mode

The Technical Support Instrument is mainly implemented by DG REFORM under direct management, i.e. through grants and procurements, but also through internal Commission-wide expertise.

In some cases, it is also implemented by DG REFORM through indirect management, entrusting tasks to international organisations or other bodies in accordance with the Financial Regulation.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/240 of the European Parliament and of the Council of 10 February 2021 establishing a Technical Support Instrument (OJ L 57, 18.2.2021, p. 1).	2021 - 2027	864.00

1.8.2. Legal basis explanation

The Technical Support Instrument is managed in accordance with the provisions of Regulation (EU) 2021/240.

One of the specific objectives of the Technical Support Instrument is assisting national authorities in improving their capacity to prepare, amend, implement and revise recovery and resilience plans pursuant to Regulation (EU) 2021/241.

In addition, resources allocated to Member States under shared management may, at their request, and in accordance with the conditions and the procedure set out in the Common Provisions Regulation for 2021-2027, be transferred to the Technical Support Instrument for the purpose of financing clearly identified technical support requests, and transferred back if not committed.

1.8.3. Budget programming table

The Technical Support Instrument is responding to an increasing interest from Member States, reflected in the numbers of requests submitted, as well as the number of Member States submitting requests. The financial programming corresponds to this trend and follows a constant increase from 2021 to 2027.

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	116.4	118.7	121.1	123.5	126.0	128.5	130.4	864.4
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Contributions from other countries and entities								

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The Technical Support Instrument is the successor of the Structural Reform Support Programme (SRSP) set for the period 2017-2020 and is part of the initiatives taken by the Commission in response to the outbreak of the COVID-19 pandemic, to help Member States mitigate the huge economic and social consequences.

The Technical Support Instrument builds on the success of the SRSP, which has funded since 2015 more than 1000 projects in 27 Member States, and has constantly experienced positive feedback from beneficiary Member States and excess demand in respect of the budgets available in the past selection rounds.

For the MFF 2021-2027, the Technical Support Instrument is scaled-up with a higher budget over the whole period of the MFF and a larger scope, including the support for preparing and implementing the recovery and resilience plans at national level. The Technical Support Instrument is consistent, coherent and complementary to the existing resources for capacity building and technical assistance, which are available within other Union financing programmes.

1.10. Relevant websites providing more information

Additional information about the programme can be found on the dedicated website – url below, which also provide links to projects examples and other relevant information sources.

https://ec.europa.eu/info/funding-tenders/funding-opportunities/funding-programmes/overview-funding-programmes/technical-support-instrument-tsi_en

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitment	116.1	864.4	13%
Payments	26.4		3%

2021 being the first year of implementation, 13% of the total envelope for the period 2021-2027 have been committed which is in line with the financial programming.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

In 2021, DG REFORM continued to build on its **unique position and expertise** developed so far, and ensured that the Technical Support Instrument continues delivering high-quality support to address Member States' demands to settle long-standing bottlenecks and undertake key reforms for their economic, social and territorial resilience. The results of the latest annual round of technical support requests (TSI 2022) is promising with 176 projects to satisfy 225 Member States' requests.

The Technical Support Instrument is an important pillar of the Recovery Plan for Europe, the EU's initiative to help Member States mitigate the economic and social consequences of the outbreak of the COVID-19 crisis. The TSI supports directly Member States for the implementation of their Recovery and Resilience Plans (RRPs). DG REFORM organised a call in 2021 specifically dedicated to this purpose.

Beyond the RRP, DG REFORM has continued supporting Member States in the **implementation of key EU priorities** such as the **green and digital transitions**. In addition to the traditional technical support under the TSI, some Member States have asked for further support through the transfer of national funds. The high satisfaction feedback provided by Member States' coordinating authorities is a recognition of DG REFORM work, which motivates to do more and always better.

In 2021, DG REFORM launched the **second round of Member States' requests for technical support (TSI 2022)**. Member States were asked to submit requests for technical support and to opt for one or more '**flagship technical support projects**'¹. Flagship projects were designed in a way to support resilience and growth enhancing reforms, which are largely needed across Member States and linked to top EU priorities. The selected projects will **contribute to key policy development and reforms** for – inter alia – advancing gender equality and the green transition, advancing digital finance and the integration of capital markets. The Member States particularly hit by the COVID-19 pandemic will also get support for revitalizing the tourism industry, modernizing their public administration or improving their tax system. DG REFORM stands ready to provide support for integrating migrants, contribute to the Year of Youth and advance digital finance and the integration of capital markets. All these reforms set the scene for European citizens' better life standards.

Member States were also given the opportunity to submit any "**multi-country requests**", which Member States had discussed or developed in collaboration with one or more authorities of (an)other Member State(s). Multi-country requests are not limited to neighbouring Member States, but could also concern entire regions of the Union as well as Member States in different regions. Such projects bring a **bigger EU 'added value', synergies and promote mutual learning** across several authorities/Member States with know-how and good practice exchanges.

As a result to the TSI 2022 round, **27 Member States submitted 512 requests for support**, for a total estimated value of EUR 230 million. DG REFORM identified **176 projects for funding satisfying 225 requests of technical support**. The selection followed a thorough prioritisation exercise carried out in line with the criteria set in the TSI Regulation and a wide consultation of 24 Commission's departments to find synergies and complementarities and avoid overlaps with other programmes.

In 2021, DG REFORM also managed to develop a **robust set of communication initiatives** to put the TSI under the spotlight, such as the organisation of a high-level conference for the launch of the TSI 2022 call or the creation of a new [Reform Support Website](#). For the first time DG REFORM also involved the Portuguese, Slovenian and French presidencies in its main annual events, demonstrating the relevance of DG REFORM and the TSI activities for the European political agenda.

In 2021 DG REFORM further enhanced its communication activities by developing and maintaining its [Reform Support Website](#) and ensuring daily social media dissemination of TSI projects via the official DG REFORM Twitter profile [@EU_reforms](#). DG REFORM produced [videos related to technical support projects² in the Member States and organised conferences to promote its activities \(2021 TSI Press Conference and 2021 TSI Annual Conference\)](#). In 2021, DG REFORM brochures were downloaded around 350 times; the Reform Support website recorded 35 000 visits; this shows good visibility by the end of 2021, considering that this was available for only six months. Since 2021 DG REFORM also publishes on the Europa website [Projects in the spotlight](#) (europa.eu) which are practical examples of the achievements made in the context of its technical support provided to Member States.

3.1.2. Active programme performance

DG REFORM's technical support projects aim to make a significant contribution to Member States' national authorities in their efforts to make reforms. Each reform project may be provided either directly by the Commission staff or by experts from EU Member States' national administrations, international organisations, private entities or individual experts from the private sector. The technical support provided by DG REFORM in 2021 included: expert and fact-finding reviews; diagnostic analyses and provision of recommendations on how to address problematic issues in Member States, sharing of best practices through (online) seminars, conferences and workshops, and development and implementation of targeted solutions for Member States.

Notwithstanding the provision of the Commission's support, it must be noted that the overall ownership and responsibility for the policies and reforms developed and implemented remain with the Member States themselves.

In 2021 DG REFORM continued to implement the technical support under the Structural Reform Support Programme and started the implementation of the 2021 work programme linked to the newly established Technical Support Instrument. The TSI has an increased budgetary envelope (EUR 864 million) spanning over the period of the multiannual financial framework (MFF 2021-2027).

Despite the persistent challenges of the COVID-19 pandemic, which, to some extent, continued to impact the Member States/providers ability to follow up on the implementation of some technical support projects as originally conceived, DG REFORM managed to reach the targets of technical support projects planned under the relevant work programmes.

¹ [Technical Support Instrument: Flagships support projects | European Commission \(europa.eu\)](#)

² [Deploying artificial intelligence at Flanders investments and trade in Belgium](#)
[Reforming the Greek reception system for Asylum Seekers](#)
[Modernising the Civil Procedure Rules in Cyprus](#)

DG REFORM continued to strengthen its **collaboration with international organisations**, such as OECD, EBRD and the Council of Europe by signing ‘umbrella agreements’ which capture several technical support projects for. The Technical Assistance and Information Exchange instrument (TAIEX³) was also available for implementing technical support projects. 59 TAIEX technical support activities were organised in 2021. These included 23 expert missions, 20 workshops, 9 study visits and 7 “*work from home*” activities. A new hybrid arrangement was adopted to facilitate technical exchanges between peers from public administrations in the Member States during the pandemic; this approach offered further flexibility for the organisation of events and contributed to more environmentally friendly solutions. Most of the events were organised *online* with some face-to face events resuming in September 2021. The feedback from experts and participants on the quality of the events organised is positive overall. This confirms that TAIEX exchanges remain an efficient and effective instrument for sharing best practices among Member States’ public administrations.

Achievements and technical support activities by policy area.

In the field of **migration**, DG REFORM helped public administrations in several Member States build their institutional and operational capacity to integrate migrants and refugees, with a view to boosting their inclusion in the labour market or helping their integration into society. In particular, it supported the Brussels’ Capital Region Employment Agency in setting up a coordination platform for all actors that facilitate new incoming migrants’ inclusion in the labour market. In Lithuania, Czechia and Slovakia, DG REFORM provided technical recommendations for strategies and schemes that could enhance labour mobility and the country’s ability to attract international talent in sectors lacking adequately skilled workers.

In Greece, DG REFORM helped the Ministry of Migration and Asylum to successfully transition the accommodation network for vulnerable asylum seekers to a state-managed scheme. It also helped the Ministry’s Reception and Identification Service to enhance its emergency preparedness capacity.

In the field of **public financial management**, DG REFORM continued to support Member States in improving the efficiency and effectiveness of their public expenditure policies. This was achieved mainly through support for the design, conduct and institutionalisation of spending reviews. For example, thanks to this support, the Belgian federal government integrated the use of spending reviews in its annual budget preparation process. Moreover, DG REFORM continued to support Member States to improve the quality of their national accounts and modernise their public accounting systems. This allowed, for example, Ireland, Italy and Luxembourg to take steps to design and plan a transition to an accrual-based accounting framework, in line with European Public Sector Accounting Standards. In 2021, DG REFORM continued to build the institutional and analytical capacity of independent fiscal institutions (IFIs) to enable them to carry out their mandate of independent public finance oversight more effectively. Such support enabled, for instance, the Latvian IFI to improve the quality of its independent fiscal forecasts.

Furthermore, DG REFORM supported several Member States through actions to develop fiscal risk management frameworks, upgrade macroeconomic and fiscal modelling capacities, and improve practices in subnational government finances. Finally, DG REFORM helped most Member States build capacity to use tools and methods to integrate green budgeting⁴ practices into national budget processes in line with the EU Green Deal.

In the field of **revenue administration**, DG REFORM continued to support Member States to boost the capacity of their tax and customs administrations. This support addressed a broad range of activities including but not limited to the administrations’ core IT and business processes, taxpayer services, customs control activities, and strategic and managerial functions. This support led, for example, to Belgian customs integrating new technologies that improve customs control, while Finnish customs acquired a new tool enabling better project portfolio management and cooperation.

Moreover, support was provided to improve Member States’ strategies for enhancing voluntary tax compliance, for instance introducing behavioural approaches to boost revenue collection and administrative cooperation in direct tax matters, and tackling tax fraud and evasion. This included strengthening capacity to curb aggressive tax planning structures or the design and application of anti-fraud strategies in some countries. Finally, DG REFORM provided support for assessing the socio-economic impact of alternative tax policies. Such support led, for instance, to upgraded modelling capacity to support the design of the tax, social security contributions and social benefits system in Lithuania, and to support the design of environmental tax policies in Italy.

³ TAIEX is available for implementing SRSP projects since 2017 and TSI projects since 2021. TSI Peer 2 Peer is an instrument managed in cooperation with DG European Neighbourhood Policy and Enlargement Negotiations (DG NEAR) to facilitate peer to peer exchanges between public sector experts of Member States’ administrations to build more effective institutions, stronger governance frameworks and efficient public administrations.

⁴ https://ec.europa.eu/reform-support/revenue-administration-and-public-financial-management/supporting-implementation-green-budgeting-practices-among-eu-member-states_en

DG REFORM supported Member States' efforts to improve their internal organisation and processes and strengthen the coordination and capacity of (local) **public administrations**. For example, in Bulgaria the legal framework and the working processes for certain 'life events' were reviewed and optimised to allow for better service delivery, their digitalisation and better management of resources.

In Greece, modernisation of civil service management was supported through the development of an action plan to implement modernised recruitment procedures for civil servants, the development of a new performance assessment framework for civil servants and the drafting of technical specifications for an IT tool for central and local authorities to best utilise the Common Assessment Framework.

In Lithuania, support was provided to STRATA, the Government Strategy Analysis Centre, to promote better evidence-based policy-making and policy evaluation. This should help reduce the administrative burden and costs, and improve public policies' effectiveness. In Cyprus, the coordination of EU affairs was enhanced with capacity building of the newly established General Secretariat for European Affairs, under the Ministry of Foreign Affairs. The project facilitated the development of a national strategy on EU affairs and a mechanism to improve Cyprus' input into EU processes. In Greece, Lithuania and Slovakia, DG REFORM supported local administration through analysis, peer reviews, training and specific advice on issues such as optimisation of structure and competences, participation of citizens, financing, inter-municipal cooperation and coordination with the regional and central government.

In 2021 there was a substantial increase in Member States' demand for support in the area of e-Government and **digital public administration**, particularly following the impact of the COVID-19 pandemic. Examples include projects on digital-ready legislation in Austria, streamlining employment services in Hungary, strategies on ICT development for the public sector in Czechia, Spain and Romania, sustainable digitalisation of the judiciary in Finland and improving public sector data exchange in Italy.

In the area of **judicial reforms**, DG REFORM supported several Member States to strengthen their justice systems, including by mediation, and to modernise their proceedings via digitalisation. In Malta, the support provided led to the adoption in December 2021 of the Digital Justice Strategy⁵. In Cyprus, DG REFORM concluded its multiannual support leading to the approval of the new Civil Procedure Rules by the Supreme Court of Cyprus in May 2021⁶. Their implementation will contribute to a fairer and more efficient justice system, strengthening the rule of law by speeding up justice and ensuring favourable investment conditions and the sustainability of growth.

In Slovenia, DG REFORM supported the design and development of a (physical) structure, providing better support by the criminal and justice system to child victims of crime, while also assisting the authorities in the reform of the juvenile justice system and the penitentiary system. In Bulgaria, DG REFORM concluded a project on the reform of the payment order procedure and support continues for the review of the legal framework of administrative penalty proceedings.

DG REFORM supported some Member States in the area of **anti-corruption and integrity**. To this end, it facilitated the review of procedures for the selection and appraisal of judges and prosecutors and the enforcement of anti-corruption measures in education, environment and sports. Some national authorities received support to establish monitoring mechanisms for their anti-corruption national plan; to revise their rules to manage conflicts of interest; to ensure supervision of public expenditure or to demonstrate preparedness to access the OECD Anti-Bribery convention⁷.

In the area of **public procurement**, DG REFORM continued to assist Member States in streamlining public procurement rules and applying innovative methodologies, such as agile procurement for IT products in Slovakia.

DG REFORM provided support to strengthen **innovation** capacity and performance in several Member States. For example, in Slovakia, DG REFORM supported the development of the national Smart Specialisation Strategy, while in Lithuania technical support focussed on improving the effectiveness of innovation policy. In the area of **state assets management**, for example, Croatia received support to improve the governance of its state-owned enterprises (SOEs) by revising and aligning national legislation with the OECD Guidelines on Corporate Governance of SOEs. DG REFORM implemented projects to promote Member States' **investments**, for instance, by reviewing the regulatory framework in Finland to reduce barriers to foreign direct investment. These Member States have also introduced relevant measures in their respective national recovery and resilience plans following the recommendations received under DG REFORM technical support. In the area of **competitiveness and productivity**, DG REFORM provided support to Cyprus in developing strategies and action plans including institutional changes to sustain robust, sustainable and inclusive growth in the long term. DG REFORM helped the Portuguese authorities to better evaluate the potential

⁵ <https://www.gov.mt/en/Government/DOI/Press%20Releases/Pages/2021/December/03/pr212167en.aspx>

⁶ <https://www.youtube.com/watch?v=Jbrwq8ajLAU> https://ec.europa.eu/commission/presscorner/detail/en/mex_21_6681

⁷ <https://www.oecd.org/corruption/oecdantibriberyconvention.htm>

effects of the structural reforms included in their National Reform Programme and forecast investments. These Member States also introduced relevant measures in their respective national recovery and resilience plans following the recommendations received under DG REFORM technical support.

In Greece, DG REFORM supported the improvement of the business environment and regulatory framework in seven thematic areas, covered by the World Bank Doing Business Report. National legislation incorporated several of the recommendations stemming from the project, while others are included in the national Recovery and Resilience Plan. DG REFORM provided support to the Spanish competition authority to enhance its capacity to assess the degree of compliance of its advocacy acts and develop a methodology for the ex-post evaluation of better regulation with the objective of improving the business environment

In the area of sustainable **transport and mobility**, DG REFORM supported a number of Member States in developing their national mobility systems, including through the implementation of mobility master plans and the promotion of innovative mobility solutions. In Belgium, DG REFORM supported the Brussels Capital Region in developing an efficient and resilient regulatory framework for mobility⁸.

DG REFORM assisted several Member States in the area of **energy**. For instance, in the area of building renovation, DG REFORM supported the setting up of a national decarbonisation fund to improve access to financing for the energy renovation of buildings. DG REFORM support led to the adoption of a national long-term renovation strategy in one Member State. In Estonia, DG REFORM supported the authorities in defining the pathway towards climate-neutral electricity production. In Slovenia, DG REFORM supported the reform of the energy legislative framework and the transposition of the ‘Clean energy for all Europeans’ package.

DG REFORM provided support to Member States in the area of **climate change mitigation and adaptation**, including for the preparation of long-term climate mitigation strategies, such as in Romania. The support extended to disaster risk management, such as prevention of floods and wildfires.

DG REFORM also supported Spain and Estonia in their efforts towards sustainable development and better economic opportunities, by addressing the twin challenge of **depopulation and demographic changes**.

In the area of **health**, DG REFORM provided support, for instance, to assess the performance of the health systems in several Member States and to support the digital transformation of healthcare systems. Support measures also aimed at improving the accessibility and quality of health and long-term care services, and at improving the efficiency of health systems through more effective clinical governance, costing and payment models. Furthermore, DG REFORM supported several health care reforms relating to national RRP. Close collaboration between DG REFORM, DG SANTE (Directorate-General for Health and Food Safety) and the Slovenian Presidency is reflected in the EPSCO Council’s conclusions, which invite Member States to make use of the TSI to increase the resilience of their health systems.

DG REFORM supported Member States in reviewing the operational structure and strengthening the administrative capacity of national and regional Public Employment Services. Support was further provided to design and pilot-test innovative active **labour market policies** and to strengthen the in-house analytical capacity of labour market and social security administrations.

In the area of **social protection**, DG REFORM intervened, for instance, to support the assessment and reform of national pension systems and to review the provision of social services at different levels of government. Furthermore, DG REFORM supported the reform of disability policy and assessment systems and contributed to the review of national frameworks for family support policies. DG REFORM’s contribution towards building a stronger social Europe is acknowledged in a series of initiatives adopted by the European Commission in March 2021 such as, the Action Plan on the Implementation of the European Pillar of Social Rights, the Strategy on the rights of persons with disabilities, and the Council Recommendation on the European Child Guarantee.

In the field of **education and training**, DG REFORM supported Member States on reforms introducing new curricula and making education more inclusive. Member States also benefited from support for higher education strategies, the (digital) modernisation of vocational education and training, the quality and integration of non-formal education and the engagement of local communities in education policy-making.

Throughout the year, DG REFORM continued to respond to Member States’ needs of support for reforms in the **financial sector**: banking, insurance and pensions, and capital markets. DG REFORM technical support covers several horizontal policy areas, of which the most important ones include: insolvency and debt restructuring, anti-money laundering, sustainable finance, supervision, financial literacy, digitalisation and access to finance.

A key example of an effective DG REFORM technical support project in this area is the national strategy for **financial literacy**, which is linked to a European Commission priority, in particular in the context of the Capital Markets Union and to the Sustainable

⁸ https://ec.europa.eu/reform-support/developing-innovative-mobility-solutions-brussels-capital-region_en

Development Goals. This project aimed to adopt and implement a national strategy to tackle the low rates of financial literacy in Austria. Evolving lifestyle, consumer behaviour, financial markets sophistication, innovation in financial services and even the COVID-19 pandemic crisis make financial literacy increasingly important because low levels have negative consequences for both individuals (irrational consumer behaviour, over-indebtedness, negative impact on investing and saving for retirement) and the entire society and economy.

Funded by the European Commission through the TSI, this project was implemented with the support of the OECD, which has substantial experience in financial literacy. In 16 months, the current financial literacy activities in Austria were analysed through a specific mapping and an assessment against international good practices; a written consultation with the relevant stakeholders, desk research and a workshop. Then, a high-level document and a roadmap with a proposed methodology and activities were designed, so that the national strategy could be launched. This national financial literacy strategy will increase financial literacy (i.e. financial awareness, knowledge, skills, attitudes, behaviours) in Austria. This will allow citizens and SMEs to take more informed decisions on purchasing financial products and services and to make sustainable financial choices.

In this same thematic area, DG REFORM also supported a project in Italy to empower people when managing personal finances. The project delivered a wide range of innovative and interactive digital ‘edutainment’ and ‘infotainment’ products ([Web TV series](#)) and approaches to foster curiosity and make fundamental financial concepts more accessible for citizens who are not necessarily knowledgeable on these topics, allowing them to make better financial decisions. This initiative was covered in the national press, included in the national website dedicated to financial education, and it is therefore available to a large audience ([link to the Video Corriere.it](#)).

Contribution to Recovery and Resilience Plans

In 2021, DG REFORM substantially **stepped up its support for the preparation and implementation of Member States’ Resilience and Recovery Plans under the Recovery and Resilience Facility**. Following the Commission’s endorsement of 22 RRP in 2021, DG REFORM estimated that around 60% of the projects selected in the first round of the TSI have been contributing to either to the preparation or implementation of the RRP. In particular, 120 projects related to the implementation of thematic reforms and investments in the RRP, while 11 additional projects concerned general support for the overall preparation or implementation of the RRP funded under programme or through the transfer of national funds.

DG REFORM has provided general support for the preparation of the RRP to Croatia, Cyprus, Czech Republic, Greece, Slovenia and Slovakia. The technical support provided depended on the specific request and needs of each Member State, and it took the form of: (i) administrative capacity building actions aimed for example at defining methodologies (e.g. for costing), (ii) harmonising the ‘Do No Significant Harm’ assessment, or (iii) coordinating stakeholders’ input into the drafting of the RRP.

In addition, between May and June 2021, DG REFORM organised an additional **dedicated call within the TSI 2021** for the implementation of the RRP. The objective of the dedicated call was to (i) provide general support to Member States in the implementation of their national Recovery and Resilience Plans (RRP) under the RRF and/or for the implementation of their (ii) green, (iii) digital and (iv) public administration measures. DG REFORM selected 25 projects. Through this dedicated call, DG REFORM notably scaled up general support for the overall implementation of the RRP, with 13 projects targeting a number of areas. These include: (i) monitoring and project management, (ii) reporting mechanisms, (iii) audit and control, (iv) overall governance structure for the RRP implementation, (v) data management, (vi) IT aspects or (vii) the application of the “Do No Significant Harm” (DNSH) principle. As such, the number of Member States benefitting from general technical support for the preparation or implementation of the RRP rose to 17. The remaining 12 projects selected through the dedicated call concerned capacity building support for green, digital and public administration RRP measures (e.g. support for the execution of a national artificial intelligence strategy, a coherent policy development for high-quality and sustainable living environment, measures to support the efficiency of the public procurement system, etc.).

Furthermore, in 2021, Cyprus, Greece, Croatia, and Romania decided to embed in their RRP additional technical support for the implementation of reforms or investments linked to their RRP, using Article 7 of the TSI Regulation in combination with Article 7(2) of the RRF Regulation. **Under TSI 2022, 57% of the requests selected⁹ will contribute to the implementation of the RRP.**

Support for green and digital transitions

In 2021, DG REFORM also continued to step up its support for the green transition in the Member States. **Under TSI 2021, 1 in 3 projects, or over 100 projects in total, contributed to the European Green Deal objectives.** In particular, DG REFORM supported Member States to help them unlock funding from the Just Transition Mechanism. To this end, DG REFORM continued its **support to 18 Member States in preparing of their territorial just transition plans.** With its in-house expertise DG

⁹ The final selection of the requests is confirmed by the adoption of the Financing Decision in the 1st quarter of 2022.

REFORM also supported the Greek authorities in shaping the Just Transition Fund Programme and underlying Just Transition Territorial Plans, while creating and building capacity in the relevant structures.

In line with the 2030-2035 EU waste management targets, the EU Action Plan for the Circular Economy and the Zero Pollution Action Plan, DG REFORM supported some Member States with draft plans or strategies for improving **waste management** and transitioning towards a **circular economy**. DG REFORM was also active in supporting Member States in water-related reforms to ensure compliance with the Water Framework Directive, the Drinking Water Directive and the Urban Waste Water Treatment Directive. For instance, Lithuania, received support to ensure the financial sustainability of water suppliers and water treatment, and the appropriate monitoring of water quality.

For the **digital transition**, DG REFORM provided support to Member States in a number of projects in line with the Europe Fit for the Digital Age Action Plan and the Digital Compass communication. In particular, DG REFORM provided expert advice to the Luxembourgish authorities on how to enhance their capacity to develop a national infrastructure strategy supporting the successful roll-out of 5G. DG REFORM also contributed to the digital transformation of Greek industry by supporting the shaping of a comprehensive Industry 4.0 strategy, including an operational plan with detailed measures and actions, which is now available to the Greek government for implementation.

3.2. Key achievements

512	27	176	18	57%
Requests received under TSI 2022	Members States requested support under TSI 2022	TSI reform projects to respond to 225 request selected under TSI 2022	Multi-country projects selected under TSI 2022	of the projects selected under TSI 2022 will contribute to the preparation or the implementation of the RRP.

3.3. Evaluations, studies and reports

While the Technical Support Instrument is a new programme designed for the 2021-2027 multi-annual financial framework, it is the successor programme of the Structural Reform Support Programme (SRSP) 2017-2020. As such, the TSI is also building on the lessons learned from the SRSP evaluations.

The [Structural Reform Support Programme mid-term evaluation](#) was published in September 2020. The mid-term evaluation covered the programme’s 2017 and 2018 budgetary cycles, and analysed over 300 technical support projects in 24 Member States. The evaluation findings show that the SRSP addresses the needs of Member States to a large extent and the programme is perceived as a significant tool for improving the Member States’ capacity to define more efficient processes and methodologies. Member States especially appreciated the high degree of flexibility, the simplicity of the contracting and implementing procedures managed by the Commission and the absence of co-financing requirements. The evaluation also highlights the programme’s clear EU added value. The technical support provided under the SRSP is intended to target those reform challenges that Member States cannot address at national level but for which they need to seek support at EU level due to capacity or knowledge constraints. In addition, the technical support projects very often provide a platform for sharing good practices and lessons learned among Member States.

In fall 2021, the ex-post evaluation of the Structural Reform Support Programme started, having been postponed by one year to increase the number of closed projects to be reviewed. The SRSP ex post evaluation findings, to be available end 2022, will feed into the TSI to improve further its efficiency and impact.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: To assist national authorities in improving their capacity to design, develop and implement reforms, including through exchange of good practices, appropriate processes and methodologies, and a more effective and efficient human resources management

Indicator 1: Cooperation and support plans concluded

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027

	20	20	20	20	20	20	20			20
	Actual Progress									Final
	27									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Units – yearly measurement
Cut-Off Date	25/01/2022
Data source	DG REFORM internal monitoring system
Link to the objective	To assist national authorities in improving their capacity to design, develop and implement reforms, DG REFORM signs cooperation and support plans with the supported Member States. This output indicator measures the number of Member States that benefit from the TSI support measure each year.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data is presented aggregated by funding year Data for year N is available the same year
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The TSI support is a demand-driven instrument, so it is up to the Member States to introduce requests for support, depending on their needs and priorities. Following a competitive procedure, requests for support are selected on the basis of their potential impact on the ground, as well as the strongest link to strategic Union priorities, therefore forcing the quality of the request over the number of Member States to be supported. With regards to the elements above, the target of CSPs per year has been set at 20.

Indicator 2: Number of support measures

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
		170	162	154	147	147	147			147
	Actual Progress									Final
	262	176								
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Units – yearly measurement
Cut-Off Date	25/01/2022
Data source	DG REFORM internal monitoring system
Link to the objective	The TSI aims at designing, developing, and implementing reforms in the Member States. The number of support measures aims at measuring the number of support projects selected in a given funding year.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data is presented aggregated by funding year Data for year N is available the same year
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	DG REFORM implements the TSI support projects under direct management. Therefore, the number of projects selected is depending on the internal capacity of the DGs to manage and deliver quality support on the ground. As of 2022, and the introduction of the flagships and multi-country projects, DG REFORM aims at focusing on projects that have high replicability across Member States and/or can be implemented in several Member States in parallel.

Indicator 3: Technical support activities carried out

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
	600	600	600	600	600	600	600			600
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Units
Cut-Off Date	25/01/2022
Data source	DG REFORM internal monitoring system
Link to the objective	In order to achieve the Technical Support Instrument specific objective, DG REFORM designs and carries out technical support activities under direct or indirect management. By measuring the number of technical support activities carried out financing in a given year, this output indicator measures the

	efficiency of TSI in improving Member States' capacity to design, develop and implement reforms.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data will be presented aggregated by funding year Data first estimates for year N will only be available by the end of year N+2.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No data available yet

Indicator 4: Deliverables provided by the technical support activities such as action plans, roadmaps, guidelines, handbooks, and recommendations

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
	300	300	300	300	300	300	300			300
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Units
Cut-Off Date	25/01/2022
Data source	DG REFORM internal monitoring system
Link to the objective	In order to achieve the Technical Support Instrument specific objective, DG REFORM designs and carries out technical support activities under direct management. By measuring the number of deliverables provided by technical support activities carried out per year, this output indicator measures the effectiveness of TSI in improving Member States' capacity to design, develop and implement reforms.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data will be presented aggregated by funding year Data first estimates for year N will only be available by the end of year N+2
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No data available yet

Indicator 5: Outcomes of the technical support activities provided, such as adoption of a strategy, adoption of a new law /act or modification of an existing one, adoption of (new) procedures and actions to enhance the implementation of reforms

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
	300	300	300	300	300	300	300			300
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Units
Cut-Off Date	25/01/2022
Data source	DG REFORM internal monitoring system
Link to the objective	In order to achieve the Technical Support Instrument specific objective, DG REFORM designs and carries out technical support activities under direct or indirect management. By measuring the number of outcomes of the technical support activities provided per year, this outcome indicator measures the level of implementation of the technical support in the Member States.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data will be presented aggregated by funding year Data first estimates for year N will only be available by the end of year N+2
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No data available yet

Indicator 6: The objectives set in the cooperation and support plans, which have been achieved due, inter alia, to the technical support received.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
	70%	70%	70%	70%	70%	70%	70%			70%
	Actual Progress									Final

-------------------	---------

Indicator type	Impact
Unit of measurement	Units
Cut-Off Date	25/01/2020
Data source	DG REFORM internal monitoring system
Link to the objective	In order to achieve the Technical Support Instrument specific objective, DG REFORM designs and carries out technical support activities under direct or indirect management. By measuring the number of objectives set in the cooperation and support plans, which have been achieved due, inter alia, to the technical support received, this impact indicator measures the Technical Support Instrument contribution to member States structural reforms.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data will be presented aggregated by funding year Data first estimates for year N will only be available by the end of year N+3 Data is gathered via DG REFORM internal feedback mechanism, which gathers feedback from the Beneficiary Authority on the level of achievement of the outcomes +/- 18 months after the closure of the project, capturing quantitative assessment on a scale of 1-10 and supporting qualitative comments for each outcome.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No data available yet

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	28.29							28.29	3%

(*These amounts include NextGenerationEU top-ups if any

6.2. Contribution to gender equality

6.2.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*: 116.1							

(*Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

Gender perspectives and impact could be mainstreamed into all relevant policy areas and reflected in budgeting. More information will become available during the runtime of the programme.

6.3. Contribution to the sustainable development goals

6.3.1. Goals

SDG 1 End poverty in all its forms everywhere

The support measures for **social protection and social welfare** should increase the competent authorities' capacity to prepare, monitor, and evaluate reforms of social policies and programmes. They should contribute to more integrated data collection, stronger analytical capacities and a more integrated administration and provision of benefits and services across various levels of government. The support measures are also expected to strengthen the capacity of the competent authorities to deliver social protection benefits and services, especially to the most vulnerable populations such as, for example, children, the unemployed, the elderly, ethnic minorities, people with a migrant background, people living in informal settlements, as well as people with disabilities and long-term care needs. By developing digital skills and the digital mindset of the providers of social services, the support measures should enable a swifter and better access of citizens to social services.

SDG 3 Ensure healthy lives and promote well-being for all at all ages

In the area of **health**, the measures are expected to contribute to: (i) the provision of strategic and operational tools for the governance, planning, monitoring and evaluation of health system resources in the areas of eHealth, emergency medicine, health system performance assessment, health technology assessment, cancer prevention and long-term care; (ii) the development and implementation of tools for improving the skills and expertise of the health workforce; (iii) recommendations and tools for improving the accessibility of healthcare and public health, and the effectiveness of payment models; (iv) the design and implementation of effective and efficient care Delivery models, including recommendation on the reorganisation of primary health care; (v) the development and implementation of tools for improving the skills and expertise of the health workforce; and (vi) the design of a concept for an EU Health Resources Hub, which would be a one-stop-shop for linking all available EU resources and expertise to foster innovative large-scale health system transformation.

The flagship technical support project “[Digital Skills For Digital Transformation of Health and Care System](#)” has the aim to provide support for the design of a National/Regional Roadmap for Digital Skills of the health workforce to support the digital transformation of health and care systems. The road map seeks to provide a basis for understanding the digital capability requirements of the health and care workforce, design and implementation of digital competencies of the health workforce through education and training including through relevant EU and MS initiatives.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

The support measures in the areas of **skills, education and training** are expected to contribute to increasing the quality, relevance and inclusiveness of education and training in the context of the recovery from the COVID-19 pandemic and the green and digital transition.

Support measures should contribute to: (i) enhanced effectiveness, efficiency and relevance of education and lifelong learning systems for the labour market, including validation systems of non-formal and informal learning for adult education; (ii) improved design and implementation of education and skills strategies and action plans, including governance and funding arrangements; (iii) improved legal frameworks and more effective measures on inclusive education and continuous training for teachers; (iv) efficient forecasting tools for teachers recruitment; (v) enhanced cooperation on digital and cybersecurity education, a widespread use of digital tools to support children with disabilities, and enhanced digital capabilities of elderly; (vi) design and implementation of individual learning accounts.

The flagship project “[Implementation of the European Child Guarantee](#)” aims at supporting Member States to implement the Council Recommendation establishing a European Child Guarantee. It offers technical support to implement actions and policies, which prevent and combat child poverty and social exclusion. Technical support can be used to complement other funding instruments such as the ESF+ or the ERDF. The target group are children at risk of poverty or social exclusion, with special attention paid to those experiencing specific disadvantages: homeless children or children experiencing severe housing deprivation, children with a migrant background or minority ethnic origin, children with disabilities, children with mental health issues, children in alternative, especially institutional, care, and children in precarious family situations.

SDG 5 Achieve gender equality and empower all women and girls

The flagship project “[Gender mainstreaming in public policy and budget processes](#)” targets the Member States wishing to understand ways of taking into account the gender impacts of policies and budgeting, or to address related gaps. It offers technical support to analyse policies and budgeting from the point of view of gender mainstreaming, helping to make sure that all citizens, regardless of gender, are able to fully participate and contribute to a fair society. Gender perspective/impact can be mainstreamed in all relevant policy areas and reflected in budgeting. The flagship technical support project will provide capacity development on latest trends/methodologies/tools for mainstreaming. The project will also help Member States for peer learning/exchanges per country and while improving their targeted approaches in chosen sectors, policy fields or regions.

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

The support measures for **energy and climate** are expected to contribute to greater energy efficiency, in particular in buildings, promote and deploy of renewable energy and hydrogen, set up a national decarbonisation fund, update energy and climate policies, implement and monitor energy and climate plans, and decarbonise specific sectors such as airports or energy sources such as gas. Furthermore, the support measures are expected to help authorities to implement territorial just transition plans, reduce energy poverty, enable citizen driven energy transition, improve the energy system integration, and reform the regulatory framework for network industries.

The flagship technical support “[Support to the implementation of the Just Transition](#)” is targeted at Member States wishing to address gaps in the implementation of the Just Transition in their regions. The implementation of the Just Transition Mechanism (JTM) on the ground will be key to ensure that the transition towards a climate-neutral economy happens in a fair way, leaving no one behind. To this end, the flagship offers activity packages to help Member States address specific challenges in the regions and sectors affected by the transition.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

The different measures supporting **labour market policies** are expected to help improve the quality of and better target ALMP measures, including through innovative, digital solutions. The support measures should help increase the competent authorities' administrative and analytical capacity in this area, including through: (i) the systematic collection of data needed for policy design purposes; (ii) new IT systems and platforms; and (iii) analytical tools to assess and anticipate labour market developments and profiling of job seekers.

The flagship technical support project "[Integration of Third Country Nationals in EU Member States](#)" is targeted at Member States wishing to benefit from the social and economic gains of migrant integration, also in light of the twin digital and green transitions. Successful integration of third country nationals (TCNs) will promote fairness and social cohesion while benefitting the economy and the society at large. To this end, the flagship offers activity packages targeted at different areas and functions of national administrations to enable Member States to engage in effective and sustainable reforms in the area of migrant integration.

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

The different support measures for **public assets**, are expected, among other things, to contribute to better strategic planning and improved capacity for preparing and managing public investments, in particular infrastructure investments and guidance on the introduction of public private partnerships, better governance of spatial planning, more effective State aid, a stronger policy on the management of state-owned enterprises and improved management of state assets, including ports

The flagship technical support request "[EU Supervisory Digital Finance Academy: Strengthening Supervisory Capacity in innovative Digital Finance](#)" is targeted at Member States wishing to strengthen supervisory capacity in the area of innovative digital finance, taking into account the objectives of the EU Digital Finance Strategy and the need to foster supervisory convergence across financial sector activities. Understanding the risks and opportunities posed by the latest application of technology to finance is key to enhance the supervisory framework on an EU-wide scale, and to ultimately maintain financial stability in a forward-looking manner while promoting business initiatives. To this end, the flagship will create a dedicated on-line platform which will facilitate the provision of a systematic training programme, aimed at enabling supervisory authorities and financial intelligence units to deepen their understanding of the complex FinTech world, and to establish advanced supervisory technologies and best practices

The flagship technical support request "[Support to the tourism ecosystem: towards a more sustainable, resilient and digital tourism](#)" is targeted at EU Member States wishing to build a more sustainable, resilient and digital tourism ecosystem. The flagship seeks to promote the digital and green transitions, strengthen regional cohesion and support the post COVID-19 recovery of tourism in Europe to make it fit for the future challenges in the global market. The flagship offers activity packages to enable Member States to engage in effective reforms in the area of the tourism ecosystem.

SDG 10 Reduce inequality within and among countries

The flagship project "[Regional and local authorities: Enhancing cooperation & Quality of public administration](#)" offers support to Member States on enhancing central coordination of the State with regional and local authorities and capacity building to reinforce their coordination structures. The COVID-19 crisis has highlighted the importance of quality of public administration through State capacity in terms of policy coordination, cooperation, responsiveness, and resource mobilisation. Yet weak coordination across different levels of government and the imbalanced allocation of competencies are still challenges that limit the impact of State policies. As such, the support provided with this flagship is highly relevant in the current context of recovery where coordinated planning and strategic foresight will be key for the implementation of the Recovery and Resilience Plans

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

The flagship technical support "[Support to the Renovation Wave](#)" is targeted at Member States wishing to design and implement reforms supporting building renovation and the EU Renovation Wave. A refurbished and improved building stock in the EU will help pave the way for a decarbonised and clean energy system. To this end, the flagship offers activity packages to help Member States address some of the key barriers to building renovation.

SDG 12 Ensure sustainable consumption and production patterns

The flagship technical support request "[Recharge and Refuel - Clean, smart and fair urban mobility](#)" is targeted at Member States, regions and cities wishing to promote future proof clean, smart and fair urban mobility. Sustainable accessible and smart transport and zero- and low-emission vehicles, supported by shared mobility services and recharging and refuelling infrastructure, will contribute to making cities and regions cleaner and reaching climate neutrality by 2050. To this end, the flagship offers activity packages for different areas to enable Member States to engage in effective and sustainable reforms and investments for cleaner, smarter and more integrated urban mobility

SDG 13 Take urgent action to combat climate change and its impacts

The support measures for **energy and climate** are expected to contribute to greater energy efficiency, in particular in buildings, promote and deploy of renewable energy and hydrogen, set up a national decarbonisation fund, update energy and climate policies, implement and monitor energy and climate plans, and decarbonise specific sectors such as airports or energy sources such as gas. Furthermore, the support measures are expected to help authorities to implement territorial just transition plans, reduce energy

poverty, enable citizen driven energy transition, improve the energy system integration, and reform the regulatory framework for network industries.

The flagship project “[Bridging the climate financing gap with public policy instruments](#)” aims at supporting Member States in optimising public spending, unlocking and redirecting public and private investment, as well as reviewing regulatory policies to channel financing towards climate mitigation and adaptation, in line with the goals of the European Green Deal. The EU increased the spending target for climate action to 30% in its multi-annual budgetary framework for 2021-2027 and earmarked 37% in the Recovery and Resilience Facility. The level of climate resilient public and private investments will therefore need to be scaled up over the next years. The Technical Support Instrument (TSI) can help Member States assess the effectiveness of current spending (including a “Do No Significant Harm” (DNSH) screening), identify investment gaps, analyse options and identify the right policy instruments to bridge those gaps.

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

The flagship technical support request “[Greening taxes – applying polluter pays principle in practice](#)” is targeted at Member States wishing to embark on greening the revenue side of their budgets. This flagship will help to build capacity to design and implement green structural fiscal reforms that generate revenues and support implementation of environmental objectives. It will operationalise implementation of the of ‘the polluter pays principle’ through a development of pricing instruments. The objective is to eliminate/reduce polluting behaviour or, if that is not fully achievable, to make sure that polluters pay for the damage they cause.

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Support measures for **natural resources**, are expected, for example, to help to advance the green transition as part of the resilience and recovery plans, develop and implement strategies for sustainable development and policy instruments to accelerate the circular economy, improve water monitoring and waste management, improve the efficiency of environmental permits and inspections, and develop green infrastructure for transport. In addition, support measures will help to (i) increase the capacity to manage coastal and marine areas, (ii) be better prepared for forest pest risk, and (iii) improve wildfire management. Furthermore, it is expected that support measures will help develop capacity, governance and methodologies to encourage sustainable and smart mobility, improved transport and offer a better public transport service, which includes better coordination of transport hubs.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

In the **fight against corruption**, the support measures are expected to raise awareness among public and private sector organisations and increase the capacity to prevent, investigate and prosecute corruption. The measures are also expected to support the development of strategic frameworks, rules, methodologies and systems to instil greater integrity, detect and limit cases of corruption and fraud and improve the quality²⁴ of cooperation between the relevant entities at national and European levels.

The support measures for **justice systems** are expected to help improve the functioning of justice systems, e.g. through measures that make justice systems more efficient and transparent, in particular by helping to build the capacity of judicial institutions and better implement e-justice systems and services. The support is also expected to help improve the quality of the work of the judges and court staff and strengthen the independence of justice systems. Finally, support should also help in achieving specific goals, in particular the protection of victims, and of vulnerable individuals and populations.

The support measures for **e-Government/digital public administration** are expected to help improve the ICT maturity of Member States, enabling them to deliver better digital public services to citizens and businesses²⁶ and to deploy suitable back-office solutions supporting a transformed and efficient public service. The support measures will also contribute to Member States' readiness to provide services on the EU Single Digital Gateway and prepare the implementation of the Once-Only Principle. The support measures for eID/trust services will contribute to timely implementation of the Wallet and its integration with existing Identity means, schemes and trust frameworks. This will support the adoption of citizen- centric identity schemes that put citizen in control of their data through privacy-by-design (promoting European values). Furthermore, the measures will help achieve the Digital Decade target of 80% of European citizens using a digital identity by 2030, allowing the public and private sector take advantage of the exchange of digital identity attributes across borders, such as proof of age and ushering in a new wave of digital services

The flagship project “[Development of resilient, innovative, and human-centric digital government services](#)” focuses on the development of strategies and action plans in specific areas, that will help achieve the digital transition of the EU public sector and, a, contribute to deliver a “Europe fit for the digital age”. The coordination of these strategies will foster exchange of best practices and help identify sustainable ways to further enhance services. The support will help Member States lead an in-depth analysis of their current systems, capabilities and gaps. It will then support the development of mechanisms to improve central digital functions, making them more user-centric, resilient and innovative.

HEADING 2B: Resilience and Values**Protection of the Euro Against Counterfeiting**

Lead DG: ECFIN

1. Overview**1.1. Challenges**

The use of the euro – Europe’s single currency – continues to grow, including as medium for international transactions and reserve currency. At the same time the euro continues to be exposed to the threat of increasingly sophisticated counterfeits.

The protection of the European single currency as a public good benefits all Member States, all EU citizens and all EU businesses. Given the cross-border circulation of the euro and the involvement of international organised crime in euro counterfeiting (production and distribution), the protection of the euro goes beyond the interests, means and responsibilities of individual Member States. Appropriately, Article 133 TFEU bestows the responsibility for the protection of the euro as the single currency to the EU. National protection frameworks are essential, but need to be complemented and coordinated by action at the EU level. Moreover, international cooperation is necessary to fend off emerging transnational risks.

1.2. Mission (General objectives)

The mission of the Pericles IV programme is to prevent and combat counterfeiting and related fraud, preserve the integrity of the euro banknotes and coins, thus strengthening the trust of citizens and business in the genuineness of these banknotes and coins and therefore enhancing the trust in the Union's economy, while securing the sustainability of public finances.

The programme will promote transnational and cross-border cooperation within the EU as well as internationally ensuring a global protection of the euro against counterfeiting, and will in particular, take responsibility for countering specific emerging threats and

the (challenging) relationship with certain countries (as it is difficult for individual MS to effectively address these threats on their own).

1.3. Specific objectives

The programme's specific objective is to protect euro banknotes and coins against counterfeiting and related fraud, by supporting and supplementing the measures undertaken by the Member States and assisting the competent national and Union authorities in their efforts to develop among themselves and with the Commission a close and regular cooperation and an exchange of best practice, where appropriate including third countries and international organisations.

1.4. Public intervention context

The protection of the European single currency as a public good has a clear transnational dimension, and therefore euro protection goes beyond the interest and the responsibility of individual EU Member States. Considering the cross-border circulation of the euro, the deep involvement of international organised crime in euro counterfeiting (production and distribution), national protection frameworks need to be complemented in order to ensure homogeneous national and international cooperation, and to face possible emerging transnational risks.

The Pericles programme for euro-area Member States (Regulation (EU) 2021/840) is based on Article 133 Treaty on the Functioning of the European Union (TFEU), as it lays down measures necessary for the use of the euro as the single currency. The application of the Pericles programme is extended through Council Regulation (EU) 2021/1696.

The Treaty provides that the European Parliament and the Council shall lay down the measures necessary for the use of the euro as a single currency (Article 133 TFEU). These measures include inter alia the protection of the euro against counterfeiting. Based on that Article, the protection of the euro as the single currency is a responsibility of the EU. In parallel, the national authorities issue euro banknotes and coins, in line with Article 128 TFEU.

Member States have adopted national legislation and established internal rules for its protection. EU secondary legislation on counterfeiting contains provisions on multidisciplinary cooperation; the analysis, identification and withdrawal of counterfeit banknotes and coins; and authenticity checks for the protection of the euro. The Pericles IV programme complements, through its specific objectives, these regulatory tools and national frameworks for the protection of the euro.

The European framework of the protection of the euro also includes the following tools:

- [Council Regulation \(EC\) No 974/98 of 3 May 1998 on the introduction of the euro](#)
- [2005/37/EC: Commission Decision of 29 October 2004 establishing the European Technical and Scientific Centre \(ETSC\) and providing for coordination of technical actions to protect euro coins against counterfeiting amended by Commission Decision \(EU\) 2017/1507](#)
- [2005/511/JHA: Council Decision of 12 July 2005 on protecting the euro against counterfeiting, by designating Europol as the Central Office for combating euro counterfeiting](#)
- [Regulation 1338/2001 protecting the euro from counterfeiting in the euro area and Amending regulation 44/2009](#)
- [Regulation 1339/2001 protecting the euro from counterfeiting outside the euro area and Amending regulation 45/2009](#)
- [2010/597/EU: Decision of the European Central Bank of 16 September 2010 on the authenticity and fitness checking and recirculation of euro banknotes \(ECB/2010/14\)](#)
- [Authentication regulation 1210/2010 on euro-coin authentication & handling of coins unfit for circulation](#)
- [Council Regulation \(EC\) No 2182/2004 concerning medals and tokens similar to euro coins \(6/12/2004\)](#)
- [Council Regulation \(EC\) No 2183/2004 extending to the non-participating Member States the application of Regulation \(EC\) No 2182/2004 concerning medals and tokens similar to euro coins \(6/12/2004\)](#)
- [Directive 2014/62/EU on the protection of the euro and other currencies against counterfeiting by criminal law](#)

1.5. Actions

The programme provides, under the conditions set out in the annual work programmes referred to in Article 10 of the Pericles IV Regulation, financial support for the following eligible actions.

- a) exchange and dissemination of information, in particular through organising workshops, meetings and seminars, including training, targeted placements and exchanges of staff of competent national authorities and other similar actions. The exchange of information shall, among others, be targeted at:
- best practices in preventing counterfeiting and fraud relating to the euro;
 - methodologies for monitoring and analysing the economic and financial impact of counterfeiting;
 - operation of databases and early warning systems;

- use of detection tools, including with computer back-up;
- enquiry and investigation methods;
- scientific assistance, including monitoring of new developments;
- protection of the euro outside the Union;
- research actions;
- provision of specific operational expertise.

(b) technical, scientific and operational assistance, as appears necessary as part of the programme including in particular:

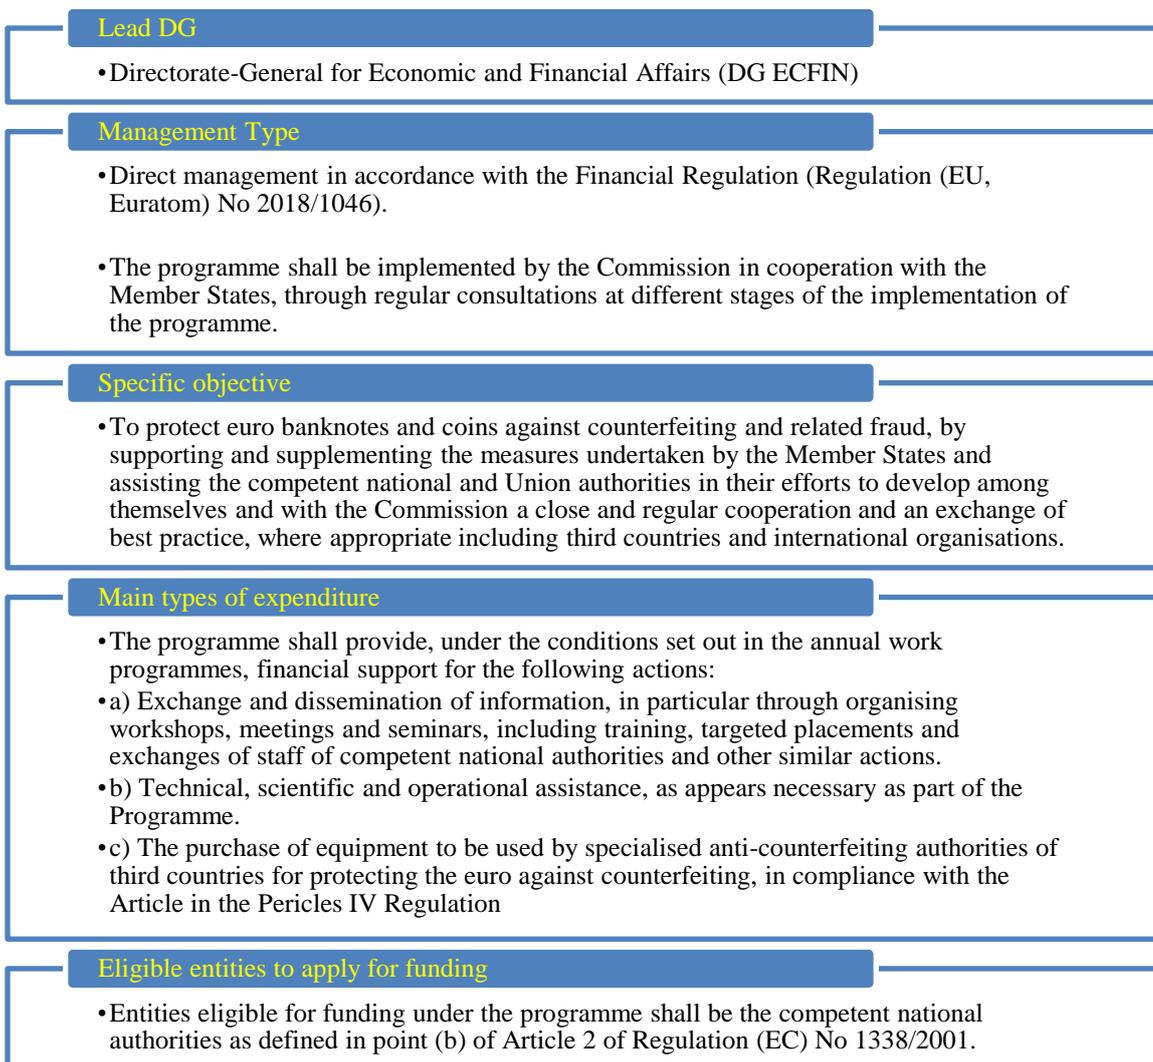

- any appropriate measure which establishes teaching resources at Union level, such as a handbook of Union legislation, information bulletins, practical manuals, glossaries and lexicons, databases, especially in the area of scientific assistance or technology watch or computer support applications, such as software;
- relevant studies with a multidisciplinary and transnational dimension, including research on innovative security features;
- development of technical support instruments and methods to facilitate detection actions at Union level;
- support for cooperation in operations involving at least two States when such support is cannot be made available from other programmes of European institutions and bodies.

(c) the purchase of equipment to be used by specialised anti-counterfeiting authorities of third countries for protecting the euro against counterfeiting, in compliance with Article 10(3)7 of the Pericles IV Regulation.

1.6. Delivery mode

The programme is implemented through direct management by the Commission. Directorate-General for Economic and Financial Affairs (DG ECFIN) is the lead DG for the programme implementation. Projects financed under the programme are implemented either directly by the Commission (DG ECFIN) or in the form of grants awarded to national competent authorities in the EU (both in the euro area and non-euro area Member States).

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/840 of the European Parliament and of the Council of 20 May 2021 establishing an exchange, assistance and training programme for the protection of the euro against counterfeiting for the period 2021-2027 (the 'Pericles IV' programme), and repealing Regulation (EU) No 331/2014 (OJ L 186, 27.5.2021, p. 1). Council Regulation (EU) 2021/1696 of 21 September 2021 extending to the non-participating Member States the application of Regulation (EU) 2021/840 of the European Parliament and of the Council establishing an exchange, assistance and training programme for the protection of the euro against counterfeiting for the period 2021-2027 (the 'Pericles IV programme') (OJ L 336, 23.9.2021, p. 1).	2021 - 2027	6.19

1.8.2. Legal basis explanation

The [Pericles IV programme](#):

- is an exchange, assistance and training programme for the protection of the euro against counterfeiting;
- replaces the previous [Pericles 2020 programme](#), which ran during the period 2014-2020;
- was created by Regulation (EU) No 2021/840 of the European Parliament and of the Council of 20 May 2021 establishing an exchange, assistance and training programme for the protection of the euro against counterfeiting (the 'Pericles IV' programme).
- was extended to the non-participating Member States by Council Regulation (EU) 2021/1696 of 21 September 2021.

Article 3(1) of Regulation (EU) No 2021/840 sets the financial envelope of Pericles IV within MFF 2021-2027 at EUR 6 193 284.

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

Pericles IV is a continuation of the Pericles 2020 programme. The main novelty is the simplification of the application process through the use of the eGrants system (fully electronic management system for grants) via the [Funding and Tenders Portal](#). Furthermore, the key performance indicators have been updated to more accurately measure the performance of the programme, thus strengthening the monitoring process.

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	0.8	6.2	13%
Payments	0.3		6%

2.1.1. Use of appropriations in 2021:

The **budgetary execution** was **100%** for **both commitments and payments** after return in payment appropriations:

Budget Line	Credit type	Management Centre	Commitments in EUR	%	Payments in EUR	%
06 03 01 00 Protection of the Euro against Counterfeiting	C1	ECFIN	813 650	100%	341 572	100%
	C1	DIGIT	20 432	100%		100%
	C4	ECFIN	219	100%	12 069	100%
Credit Type	C1	Appropriations for the year (initial budget + amending budget + transfers)				
	C4	Appropriations from internal assigned revenue of the year				
Management Centre DIGIT	Co-delegated appropriations for the year made available by DG ECFIN for other DG (DIGIT)					

The Pericles IV programme funded in 2021 through 2021 commitment appropriations the following actions:

a) Five grants to (co-financed) actions originating from the national competent authorities (NCA) in the Member States:

NCA - Country	Project Title
Bundeskriminalamt (BKA) Germany	COPE (counterfeit – OSINT – POST – enquiries) – Internet/darket investigation – protection of the euro 4 events (including workshops) will be organised, the main part of which will be a case study where participants go through the steps involved in a counterfeit money investigation. The events are envisaged to take place between April and September 2022. The results of the workshops will be summarised at the end of the event.
Banco de Portugal (BDP) Portugal	The protection of the euro - The fight against counterfeiting and fraud on euro banknotes (The euro knowledge) A three-day seminar from 26-28 October 2022 in Lisbon (PT) will be organised for experts from all euro area countries, Turkey and Croatia (in the process of adopting the euro).
CC AFM, II Comando Carabinieri Antifalsificazione Monetaria), Italy	Staff exchange on investigation techniques against currency counterfeiting (SEITA) The project is designed to strengthen the system for protecting the euro in Europe, particularly in the participating countries with which CC AFM already exchanges key operational information. The action, envisaged to take place in the second and third quarter of 2022, includes two phases: one national (training in Italy) and the other international (exchange visits).
Banco de España (BDE), Spain	Training activity on counterfeit coins analysis for technical experts (TA-coins) This project comprises a two-day technical training course on analysing counterfeit coins, to be held in 2022 in Madrid, Spain. The participants will come mainly from coin national analysis centres (NACs) and national centre offices (NCOs), which are responsible for analysing and classifying counterfeit euro coins, as well as undertaking relevant enquiries connected with ongoing investigations.
Brigada de Investigación del Banco de España (BIBE), Spain	2022 training course on currency counterfeiting for experts from Latin American countries A technical training course on combating currency counterfeiting will be held from 22 to 25 November 2022 in Lima, Peru. Participants will be specialists (police officers) involved in the prevention and prosecution of counterfeiting in Latin America. They will come from 16 Latin American countries and from the United States. BIBE will be assisted in running this event by police officers from France, Italy and Spain.

b) Three procured ‘Commission actions’, organised by DG ECFIN:

Action title

Final evaluation of the Pericles 2020 Programme	
Pursuant to Article 13(6) of the Regulation (EU) No 331/2014 of the European Parliament and of the Council on 11 March 2014, the Commission shall present to the European Parliament and to the Council, a final evaluation (hereinafter the ‘Evaluation’) report on the achievement of the objectives of the Programme. The evaluation will provide an assessment of the implementation of the programme.	
3rd Platform 1210 Meeting (virtual conference) 30 November 2021	
The ‘annual’ Platform 1210 gathers all parties involved in the authentication of euro coins. It also represents an example of successful and well-established cooperation with the partners belonging to private sector. Regulation (EU) No 1210/2010 aims at ensuring effective and uniform authentication of euro coins throughout the euro area by providing common authentication procedures and rules for the implementation of control mechanisms by the national authorities. In May 2017, the establishment of an annual platform was agreed by the participants in the ‘Workshop on the authentication of euro coins’. The first meeting of the 1210 Platform took place in Brussels on 16-17 May 2018. The second meeting of the 1210 Platform took place in Rome on 14-17 May 2019.	
Pristina-Tirana technical training on coin analysis and classification (webinar)	
The European Technical and Scientific Centre (ETSC) within unit ECFIN.C.5 provides coordination for technical actions of the competent national authorities to protect euro coins against counterfeiting. The ETSC organised the remote ‘Pristina-Tirana technical training on coin analysis and classification’. The action aimed to increase expertise (technical and operational) of the authorities taken part in the action with respect to counterfeit coin analysis and classification and dismantling of illegal mints.	

2.1.2. Planned use of appropriations for 2022:

The annual budget for implementing the Pericles IV programme in 2022 was set as follows:

2022 annual work programme C(2022)406 final of 28 January 2022: The annual work programme is a document that explains how the budget allocated for the Pericles IV programme will be spent in 2022.		Total appropriations in EUR
Commitments	Grants	500 000
	Commission actions	350 169
Total amount commitments (grants and Commission actions)		850 169
Payments		749 084

The Commission published the 2022 call for proposals on its [Funding & Tenders Portal](#) with two deadlines (21 April 2022 and 15 September 2021).

The call sets out the programme’s priorities for 2022 as listed in the update of the Pericles Strategy 2022 (Annex (Part 2/2) to the work programme). They have been endorsed by the Euro Counterfeiting Experts Group (ECEG), as provided for by [Regulation 1338/2001 protecting the euro from counterfeiting in the euro area](#).

The 2022 priorities are:

- conferences, seminars and workshops taking place in one of the following non-EU countries: China, Columbia, Peru or Turkey (see also [Pericles IV 2022 Strategy, priority action b and c](#)).
- actions specifically devoted to the distribution of counterfeits and high quality components on the darknet, and ‘movie money’ and ‘prop copy’ products online, including altered design notes (see also [Pericles IV 2022 Strategy, priority action d.I](#)).
- actions introduced by competent national authorities that did not apply for Pericles funding in 2019, 2020 and 2021.

2.1.3. Planned use of appropriations for the financial year 2023:

The appropriations requested as part of the 2023 DB (draft budget), for the financial year, 2023 are:

Budget heading 06 03 01: Protection of the euro against counterfeiting		
Commitments	EUR 667 060	The budgeted amount is in line with the financial programming for the ‘Pericles IV programme’ for the MFF (multiannual financial framework) 2021-2027
Payments	EUR 835 593	The budgeted amount covers: the pre-financing and possible interim payment of the 2023 actions (grants/commission actions) and the final payments of the outstanding 2021 and 2022 commitments
Budget heading 06 01 02: Support expenditure for the Protection of the euro against counterfeiting		
Commitments	EUR 200 000	ECFIN plans to commit a study to a framework contractor into 2023 to deliver the mid-term evaluation of the Pericles IV programme by the end of 2024 as requested by the legal basis (as Article 13.1 of the Pericles IV Regulation).
Payments	EUR 200 000	

2.2. Programme(s) 2014-2020: Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	6.9	7.1	97%
Payments	5.1		71%

In 2021, from the ongoing actions to be organised by the national competent authorities (NCAs) which were funded in 2019/2020 under the Pericles 2020 programme (Multiannual Financial Framework (MFF) 2014-2020):

- 2 of them were partially implemented in 2021 in a hybrid format and are planned to be finalised in 2022.
- 4 of them were implemented and finalised in 2021.
- 6 of them are still ongoing and will be finalised in 2022/2023.

Actions partially implemented in 2021 in a hybrid format and planned to be finalised in 2022				
Year of funding	NCA Country	Type Event	Project Title	Location and Date
2019	Banco de Portugal (BDP)	Conference	The knowledge of the euro and the fight against counterfeiting	Lisbon (PT) 7 October 2021
2020	National Police of the Netherlands	Conference	Awareness of forgery of value documents, the euro and the fight against counterfeiting	Breda (NL) 28 October 2021
Actions implemented and finalised in 2021				
Year of funding	NCA Country	Type Event	Title	Location and Date
2019	Croatian National Bank (CNB)	Conference	Fourth conference of the Balkan Network for Euro Protection	Zadar (HR) 21-24 September 2021
2019	Prosecutor's Office of the Republic of Bulgaria	Conference	General supervision of legality in compliance with legislation in the state	Sofia (BG) 25-28 May 2021
2020	Brigada de Investigación del Banco de España (BIBE), ES	Technical training	Training course on combating currency counterfeiting for experts from Latin American countries	Montevideo (UY) 23-26 November 2021
2020	CC AFM, Il Comando Carabinieri Antifalsificazione Monetaria, Italy	Staff exchange	Staff exchange on investigation techniques against money counterfeiting	Rome (IT) June-November 2021
Actions still ongoing and to be finalised in 2022/2023				
Year of funding	NCA Country	Type Event	Title	Location and Date
2019	Guardia di Finanza (GDF), IT	Conference	Combating Euro counterfeiting through seminars and staff exchanges between law enforcement and national central banks	Rome/Naples (IT): 27-28 March 2023 and Staff exchanges: May-October 2023
2019	Italian Central Office for Currency Counterfeiting (UCIFM)	Conference	Legal and operational framework on counterfeit currency in Europe and China	Rome (IT): Date to be defined
2020	Banco de España (BDE), Spain	Training	Training activity on counterfeit coins analysis for technical experts	Madrid (ES): 25-26 May 2022
2020	Banco de España (BDE), Spain	Staff exchange	Staff exchange on procedures, knowledge and experiences in order to improve internal	Paris (FR): 21-25 March 2022

			working methods in the French and Spanish national analysis centres (NACs)	Madrid (ES): 16-20 May 2022
2020	General Inspectorate of Romanian Police (GIRP)	Conference/ and staff exchange	ASPASIA - The Seven Seas Conference and staff exchange between South-East European countries and non-euro E.U. Member States	Bucharest (RO) and participating countries : February-November 2022
2020	Monnaie de Paris, FR	Study	Nanoguard 3, development and industrialisation of high security coins	Study involving mints from Austria, France and Germany Jan 2021-Nov 2022

The global COVID-19 pandemic has profoundly affected the implementation of the Pericles Programme in 2021. Pericles is an exchange, assistance and training programme that promotes transnational and cross-border cooperation within the EU, as well as internationally, in order to ensure a global protection of the euro against counterfeiting. The programme is implemented through actions with a wide intended range of participants from EU Member States and third countries, which therefore requires traveling and the conglomeration of groups. Due to the pandemic and the continued risks related to traveling and conglomeration, the safe implementation of these actions was no longer possible.

The ongoing epidemiological situation, which started in March 2020, has therefore resulted in the rescheduling of many actions to 2022 or later.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The Pericles IV programme is implemented through co-financed actions (grants) from the competent national authorities of the Member States (as defined in point (b) of Article 2 of Regulation (EC) No 1338/2001) and through Commission actions organised directly by the Commission, as adopted by Financing Decision C(2021) 2788 final of 28 April 2021.

3.1.2. Active programme performance

The implementation of the programme reflects the commitment of Member States and the Commission to protect the euro against counterfeiting. The identification of a clear annual strategy of implementation and the continuous coordination within the Euro Counterfeiting Experts Group made it possible to commit the overall allocated budget in 2021. The overall amount was as follows: three procured contracts for an amount of EUR 243,975.30, five grants for an amount of EUR 590,326.12 and the annual fee for e-grants (EUR 20,432).

Following calls for proposals inviting the competent national authorities of the Member States to submit proposals for actions that contribute to achieving the programme's objectives, grants were evaluated and awarded. Under the programme, grants may cover up to 75% of the eligible costs and up to 90% in exceptional and duly justified cases. The grant beneficiaries received 50% pre-financing for their projects and 70% pre-financing in exceptional and justified cases.

The 2021 call for proposals was published on the Commission's [funding & tender opportunities portal](#) on 27 May 2021 with two application deadlines (15 June 2021 and 21 September 2021). This portal is an IT tool for the electronic submission of applications for grants and for the management of grant contracts.

The call implemented the priorities of the Pericles IV programme for 2021:

- 1) Support activities aimed at improving cooperation among Member States that are particularly affected by the production and distribution of counterfeits.
- 2) Foster cooperation with authorities of non-EU countries where there is a suspicion or evidence of counterfeit euro production.
- 3) Maintain an efficient framework for the protection of the euro in south-eastern Europe.
- 4) Topical developments (security features of euro coins; distribution of counterfeits and high-quality components on the darknet, and 'movie money' and 'prop copy' products online (including altered design notes); implementation of Regulation (EU) No 1210/2010 concerning authentication of euro coins and handling of euro coins unfit for circulation; support for the establishment/reinforcement of national central offices.

Under the call, the Commission received five applications from four Member States (Germany, Italy, Portugal and Spain). An evaluation committee assessed each application against four criteria as detailed in the call specifications: admissibility, eligibility, exclusion and award. The applications were scored and ranked based on the award criteria: Relevance (45 points), Quality (30 points) and Impact (25 points).

Altogether, the five applications submitted were awarded a grant. The projects consist of two conferences/seminars, two technical training courses and one staff exchange. The actions are set to take place both inside and outside the EU depending on the specific needs to protect the euro against counterfeiting. For example, a grant was awarded for an action (organised by Spain) in Peru with participants from a total of 16 Latin American countries.

Three procured Commission actions were committed using existing framework contracts (from other DGs), namely:

- 1) Final evaluation of the Pericles 2020 programme: ongoing;
- 2) 3rd Platform 1210 Meeting (virtual conference): 30 November 2021;
- 3) Pristina-Tirana technical training on coin analysis and classification (virtual training): 27-28 October 2021.

This number of grants (5) awarded is lower than the 9 actions in 2020 and 13 actions in 2019, as the number depends on the size of the actions and the budget available: the available budget in 2021 (EUR 834 083) is lower than that of 2020 (EUR 1 100 000) and that of 2019 (EUR 1 072 400).

The Pericles IV programme is on track to achieve its objective of protecting euro banknotes and coins against counterfeiting and fraud by:

- supporting the Member States
- assisting national and EU authorities.

The programme has helped substantially in further improving coordination and cooperation at international, European and Member State level. This is underlined by the results of three key indicators:

In 2021, the number of authorities that applied to the programme reached the expected value. In addition, the satisfaction rate and the percentage of positive feedback received exceeded the targets.

The number of counterfeit coins, is close to the reference band (+/- 5% representing the target). On the other hand, the number of counterfeit bank notes and the dismantled workshops is lower than expected. It needs to be kept in mind, however, that the link between the programme and these indicators is only indirect, as a variety of external factors play an important role in the development of these indicators. In addition, the fact that there is less detection could well mean that there is less counterfeiting—unfortunately it is difficult if not altogether impossible to determine what is happening in practice, due to the unobservable nature of (undetected) counterfeits.

While the global COVID-19 pandemic has resulted in events scheduled for 2021 being postponed, as mentioned above in Section 2.2, four of these actions were finalised in 2021, with two partially taking place in a hybrid format.

3.1.3. Previous Programme Performance

Pericles 2020 achieved its objective of protecting euro banknotes and coins against counterfeiting and fraud by supporting the Member States and assisting the competent national and Union authorities. The programme made a substantial contribution to the further improvement of coordination and cooperation at international, European and Member States level, as well as the creation of more solid structures for the protection of the euro (e.g.: the establishment of a specialised investigation group in Chile in 2019, and the increased cooperation networks in the Balkans). The programme also contributed to the adoption of legislation aimed at improving euro protection and the establishment of national central offices (e.g.: the establishment of National Central Office in Argentina in 2018).

The mid-term evaluation of the programme concluded that all findings converge towards a positive overall assessment. In particular, it notes that in terms of effectiveness, Pericles 2020 actions were typically implemented as planned and achieved the intended outputs, and evidence suggested that the outputs delivered did translate into tangible outcomes. Participant feedback provided immediately after events shows a high degree of appreciation, with 97% expressing a positive or highly positive assessment. More importantly, survey results showed that a large share of participants claimed to have learned about best practices, acquired useful skills, and established contacts with colleagues in other countries. The quality of actions was also judged positively by the authorities involved.

Available evidence suggested that the outputs delivered did translate into tangible outcomes, although there were some variations across the various groups and the type of progress recorded. Improvements in operational capabilities and the adoption of improved methods were emphasised by third country authorities and by individual participants in the programme's initiatives. A different situation was found regarding the improvements in international cooperation. In this case, the most positive results were achieved by the competent national authorities (CNAs), ECB and Europol. Positive developments were also reported by third country authorities and by individual participants, but to a less extent. This dichotomy in results well illustrated the challenges faced by the programme, which is confronted with a widely diversified audience, with different agendas, levels of capabilities, and needs that are not always easy to reconcile.

One of the recommendations from the mid-term evaluation was to encourage more competent national authorities to apply to the programme. This could be achieved by a more intense marketing strategy and the establishment of contacts with high level

decision-makers to ensure the opportunities of the programme are well understood. In this respect, the advertising of the Programme and the increased co-financing rate for actions organised by new applicants led to several first time applicants.

Despite the fact that the phenomenon seems to be currently under control, counterfeiting continues to be a major threat to the euro. The increased number of counterfeit banknotes, the rise of ‘sophisticated’ counterfeits, the increasing availability of technology and the interest in counterfeiting of Organised Crime Groups requires a continuous attention.

The Pericles 2020 programme used a set of four specific quantitative performance indicators as laid down in the basic legal act: the number of (i) counterfeit banknotes detected, (ii) illegal workshops (print shops and mints) dismantled, (iii) individuals arrested, and (iv) penalties imposed.

Despite the fact that the performance indicators are linked to the protection of the euro and the results for these indicators are mainly on track to reach their targets, the primary challenge is that the link between the indicator results and Pericles 2020 actions is not direct as:

- other external factors can influence the indicators, and
- they primarily measure the repression (and not the prevention) aspect of the counterfeit phenomenon.

Quantifying the impact of a capacity building initiative in terms of operational results is an exercise fraught with difficulties due to the influence of a host of intervening factors (such as criminal intent of certain crime groups, priority set by Member States law enforcement, the length and scope of police investigations, etc.). This is particularly the case of initiatives intended to protect against criminal activities, the magnitude of which is almost by definition unknown.

Subject to this major caveat, there is evidence that, in selected situations, the programme has indeed exerted a direct tangible influence on euro protection operational activities (for example successful police operations in South America, following Pericles trainings as indicated in the mid-term evaluation of the programme). Moreover, for indicators (iii) and (iv) it has proved difficult to acquire the data and/or to adequately measure the indicator.

3.2. Key achievements

347 000	195 082	12	5	98.4%	95.83%
counterfeit euro banknotes were detected in 2021 ⁽¹⁾	counterfeit euro coins were detected in 2021 ⁽¹⁾	illegal workshops (mints and print shops) were dismantled in 2021 ⁽¹⁾	Competent Member State authorities applied to the Programme in 2021 ⁽¹⁾	of respondents across actions indicate being satisfied or highly satisfied	of respondents across actions indicate that the Programme has a moderate or high impact on their activities in protecting the euro against counterfeiting

(1) These indicators, while linked to the protection of the euro, are not directly related to the implementation of the programme.

3.3. Evaluations, studies and reports

Mid-term evaluation:

The key findings of the latest evaluation: Communication from the Commission to the Council and the European Parliament on the mid-term evaluation of the Programme for exchange, assistance and training for the protection of the euro against counterfeiting (‘Pericles 2020’ Programme) COM/2017/0741 final, have been presented in the Programme Statements of the Draft Budget 2020.

Final evaluation:

Pursuant to Article 13(6) of the Council Regulation (EU) No 331/2014, the Commission shall present to the European Parliament and to the Council by 31 December 2021, a final evaluation report on the achievement of the objectives of the programme.

The evaluation will cover the different types of actions committed or implemented under the programme, also taking stock of the work carried out during the mid-term evaluation, published in 2017.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: To protect euro banknotes and coins against counterfeiting and related fraud, by supporting and supplementing the measures undertaken by the Member States and assisting the competent national and Union authorities in their efforts to develop among themselves and with the Commission a close and regular cooperation and an exchange of best practice, where appropriate including third countries and international organisations

Indicator 1: Number of counterfeit euros detected

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Number of counterfeit euros detected (banknotes)										
	Milestones									2027
0	Actual Progress									671 000
	347 000									Final
Are we on track :	Moderate progress									
Number of counterfeit euros detected (coins)										
	Milestones									2027
0	Actual Progress									174 112
	195 082									Final
Are we on track :	Moderate progress									

Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	28/01/2022
Data source	ECB - Counterfeit Monitoring System (CMS)
Link to the objective	The number of counterfeit euros detected indicates the success of the Member States actions to protect the euro. There is only an indirect link between the number of counterfeit euros detected and the programme’s training activities. It depends on external factors which can affect the figures in both directions (such as criminal intent of certain crime groups, priorities set by Member States’ law enforcement bodies, and length and scope of police investigations). Therefore, the target is set as a reference band within which the criminal phenomenon of counterfeiting is assessed as being under control.
Link MFF 14-20 / MFF 21-27	Same indicator as in MFF 14-20.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The target for this indicator is to keep the number of counterfeit euros detected (banknotes and coins) under control within the range of +/- 5% compared to average 2014-2020 (671 000/174 112). While the number of coins is close to the reference band (+/- 5% representing the target), the number of counterfeit bank notes is lower than expected. The latter could be explained by other external factors such as the possible impact of restrictions due to the pandemic.

Indicator 2: Number of illegal workshops dismantled

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	Actual Progress									22
	11									Final
Are we on track :	Moderate progress									

Indicator type	Impact
Unit of measurement	Number

Cut-Off Date	01/01/2022
Data source	Feedback from the Member States' competent authorities.
Link to the objective	The number of illegal workshops dismantled indicates the success of the Member States actions to protect the euro. There is only an indirect link between the number of illegal workshops dismantled and the programme's training activities. Various external factors also play a role, which can affect the figures in both directions (e.g. aims of certain criminal groups, Member States' law enforcement priorities, length and scope of police investigations).
Link MFF 14-20 / MFF 21-27	Same indicator as in MFF 14-20.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The target for the number of illegal workshops dismantled is to keep number under control in an average +/- 10% compared to 2019 (22).The number of illegal workshops dismantled is lower than expected. This could be explained by other external factors such as the possible impact of restrictions due to the pandemic.

Indicator 3: Number of competent authorities applying to the Programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0				12						24
	Actual Progress									Final
	5									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number
Cut-Off Date	01/01/2022
Data source	The Commission shall collect the data for the number of competent authorities applying to the programme. Number of submitted applications.
Link to the objective	The number of unique competent authorities applying to the programme reflects the success of and the demand for the programme.
Link MFF 14-20 / MFF 21-27	No indicator of MFF 14-20.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The fact that the number of unique applicants reached in the first year almost 50% of the milestone for 2024 is in line with expectations and reflects the fact that this is the first year of a new programme.

Indicator 4: Satisfaction rate of participants in the actions financed by the Programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	75%	75%	75%	75%	75%	75%	75%			75%
	Actual Progress									Final
	98,4%									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	01/01/2022
Data source	The Commission shall collect the results of the evaluation of the participants' event feedback form.
Link to the objective	The satisfaction rate of participants in the actions financed by the programme is an indicator of the success of the programme supporting the Member States in the protection of the euro currency.
Link MFF 14-20 / MFF 21-27	This indicator did not exist in MFF 14-20.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The percentage of positive feedback is higher than the target.

Indicator 5: Feedback of participants that have already taken part in previous Pericles actions on the impact of the Programme on their activities in protecting the euro against counterfeiting.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0	75%	75%	75%	75%	75%	75%	75%			75%
	Actual Progress									Final

	95,8%								
Are we on track :	On track								

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	01/01/2022
Data source	The Commission shall collect the results of the evaluation of the participants' event feedback form.
Link to the objective	The Feedback of participants that have already taken part in previous Pericles actions on the impact of the Programme on their activities in protecting the euro against counterfeiting is an indicator of the success of the programme supporting the Member States in the protection of the euro currency.
Link MFF 14-20 / MFF 21-27	This indicator did not exist in MFF 14-20.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The percentage of positive feedback is higher than the target.

5. The programme contribution to horizontal policies

5.1. Contribution to gender equality

5.1.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0: 0,8							

(*)Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

The programme targets experts in protection of the euro against counterfeiting irrespective of gender.

HEADING 2B: Resilience and Values

1. Overview

1.1. Challenges

The European Union ('the EU') plays a key role in coordinating the response to disasters in Europe and beyond. Disasters have affected every region of Europe in recent years, causing hundreds of casualties and billions in damage to infrastructure and the environment. Epidemics, flash floods, storms, forest fires, earthquakes, and human-induced disasters are continuously putting countries' response capabilities under pressure. Additionally, security concerns have become more complex and climate change is expected to worsen the impact of disasters in the future.

Large-scale and multi-sectorial crises, such as the unprecedented Covid-19 pandemic, have overwhelmed the ability of Member States and Participating States to help each other, revealing the vulnerabilities of the system and underlining the need for enhanced cooperation and coordination at EU level. This is particularly true when several countries are simultaneously confronted with the same type of emergency, and are therefore not able to assist each other. In those circumstances, action at EU level can ensure a faster and more comprehensive response.

The Covid-19 emergency has revealed once more that disasters know no borders, and the importance to continue strengthening and promoting consistency to the international dimension of civil protection, in particular with the countries in the immediate neighbourhood (IPA countries and countries under the European Neighbourhood Policy).

In 2021, the UCPM continued stepping up disaster preparedness in the Union via the adaptation and further improvement of existing emergency response capacities under the European Civil Protection Pool, or via the development of new additional response capacities under the rescEU strategic reserve. The partnership with the Union for the Mediterranean on Civil Protection matters was reinforced with a view to launch operational joint initiatives in 2022 and beyond.

1.2. Mission (General objectives)

The Union Civil Protection Mechanism ('the UCPM') aims to strengthen the cooperation between the Union, the 27 Member States and the six Participating States currently taking part in the UCPM (North Macedonia, Iceland, Montenegro, Norway, Serbia and Iceland), as well as to facilitate coordination in the field of civil protection in order to improve the effectiveness of systems for preventing, preparing for and responding to natural and man-made disasters.

The UCPM promotes solidarity between the Member and Participating States through practical cooperation and coordination, without prejudice to the Member States' primary responsibility to protect people, the environment, and property, including cultural heritage, on their territory against disasters, and to provide their disaster-management systems with sufficient capabilities to enable them to cope adequately and in a consistent manner with disasters of a nature and magnitude that can reasonably be expected and prepared for.

Finally, the UCPM facilitates the cooperation in disaster response among the Member/Participating States, coordinating through the Emergency Response Coordination Centre (ERCC) the provision of assistance to disaster-stricken countries all over the world. The support provided through the UCPM can take the form of in-kind assistance, deployment of specially equipped teams, or assessment and coordination experts sent to the field.

1.3. Specific objectives

The specific objectives of the UCPM are:

1. to achieve a high level of protection against disasters by preventing or reducing their potential effects, by fostering a culture of prevention and by improving cooperation between the civil protection and other relevant services;
2. to enhance preparedness at Member State and Union level to respond to disasters (European Civil Protection Pool and rescEU);
3. to facilitate rapid and efficient response in the event of disasters or imminent disasters, including by taking measures to mitigate the immediate consequences of disasters;
4. to increase public awareness and preparedness for disasters;
5. to increase the availability and use of scientific knowledge on disasters; and
6. to step up cooperation and coordination activities at cross-border level and between Member States prone to the same types of disasters.

1.4. Public intervention context

Civil protection obtained Treaty recognition for the first time with the entry into force of the Lisbon Treaty, with a specific legal base: Article 196 TFEU. The Union holds a supporting competence in this area, which is also indicated in Article 6 TFEU.

The UCPM was established in 2013 by Decision No1313/2013/EU. The Decision was subsequently amended in 2019 by Decision (EU) 2019/420 and in 2021 with Regulation 2021/836. In addition, there are four implementing acts, which lay down the rules for

the implementation of the UCPM, namely Implementing Decision 2014/762, Implementing Decision (EU) 2019/570 , Implementing Decision (EU) 2019/1310 and Implementing Decision (EU) 2021/1956

1.5. Actions

The UCPM is divided into three strands of activities: prevention, preparedness and response. For each activity, it lays out different types of actions.

Prevention and preparedness activities mitigate the effects of disasters. A training programme for civil protection experts from EU Member States and Participating States ensures compatibility and complementarity between intervention teams, while large-scale exercises each year train capacities for specific disasters. The EU supports and complements prevention and preparedness efforts of its Member States and Participating States by focusing on areas where a joint European approach is more effective than separate national actions. These include risk assessments to identify the disaster risks across the EU, encouraging research to promote disaster resilience and reinforcing early warning tools.

For capacities, the UCPM preparedness relies primarily on the European Civil Protection Pool (ECP), which consists of response capacities that EU Member States and Participating States make available for UCPM deployments for an agreed number of years and which are certified, mostly by DG ECHO, to ensure that these capacities can operate in international contexts. One of the key innovations of the 2019 legislative revision was the creation of a second reserve of civil protection capacities, the rescEU reserve, as part of preparedness actions under the UCPM. rescEU is a European reserve of capacities to be mobilised as a last resort and to provide a safety net in case national capacities and the ECP are overwhelmed. The initial focus of the rescEU reserve is set around three main areas: aerial firefighting capacities, including firefighting planes and helicopters; emergency medical capacities, including medical evacuation capacities; stockpiles of medical equipment, as well as emergency medical teams type 2 with specialised care teams; and Chemical Biological Radiological and Nuclear (CBRN)-related capacities, such as for instance decontamination. In 2021, in the context of better anticipation of future large-scale disasters and based on lessons learnt from disasters, multi-purpose transport and shelter capacities have been added to this priority list.

Another main innovation of the 2019 legislative revision was the establishment of the Union Civil Protection Knowledge Network, bringing together civil protection and disaster management actors, centres of excellence, universities and researchers. Formally established through Commission Implementing Decision (EU) 2021/1956, the Knowledge Network was officially launched on 7 December 2021. It aims to become a central hub within the UCPM for the exchange of expertise and good practices in disaster management and disaster risk management.

Following the 2019 legislative revision, a second reform with targeted amendments entered into force in 2021 following the outbreak of the COVID-19 pandemic. The key rationale behind this reform focused on better prevention and preparedness for large-scale transboundary emergencies affecting several or all EU Member States at the same time. The corresponding targeted adaptations aim to improve anticipation, planning and response to these kind of emergencies.

The Mechanism will be better prepared, more flexible, respond faster and offer more comprehensive cross-sectoral support to Member States and their citizens, including through a significantly enhanced budget.

One of the novelties of the 2021 legislative revision is the development of Union Disaster Resilience Goals (DRGs) in the area of civil protection to support prevention and preparedness actions in the event of disasters, which cause or are capable of causing multi-country transboundary effects. These goals should be based on current and forward-looking scenarios, including the impacts of climate change on disaster risks, data on past events and cross-sectoral impact analysis, with particular attention given to vulnerable groups.

Under response, following a request for assistance by a Member State or third country through the UCPM, the Emergency Response Coordination Centre (ERCC) mobilises assistance or expertise. In addition, the ERCC monitors events around the globe 24/7 and ensures rapid deployment of emergency support through a direct link with national civil protection authorities. Specialised teams and equipment, such as forest firefighting planes, search and rescue, and medical teams can be mobilised at short notice for deployments inside and outside Europe.

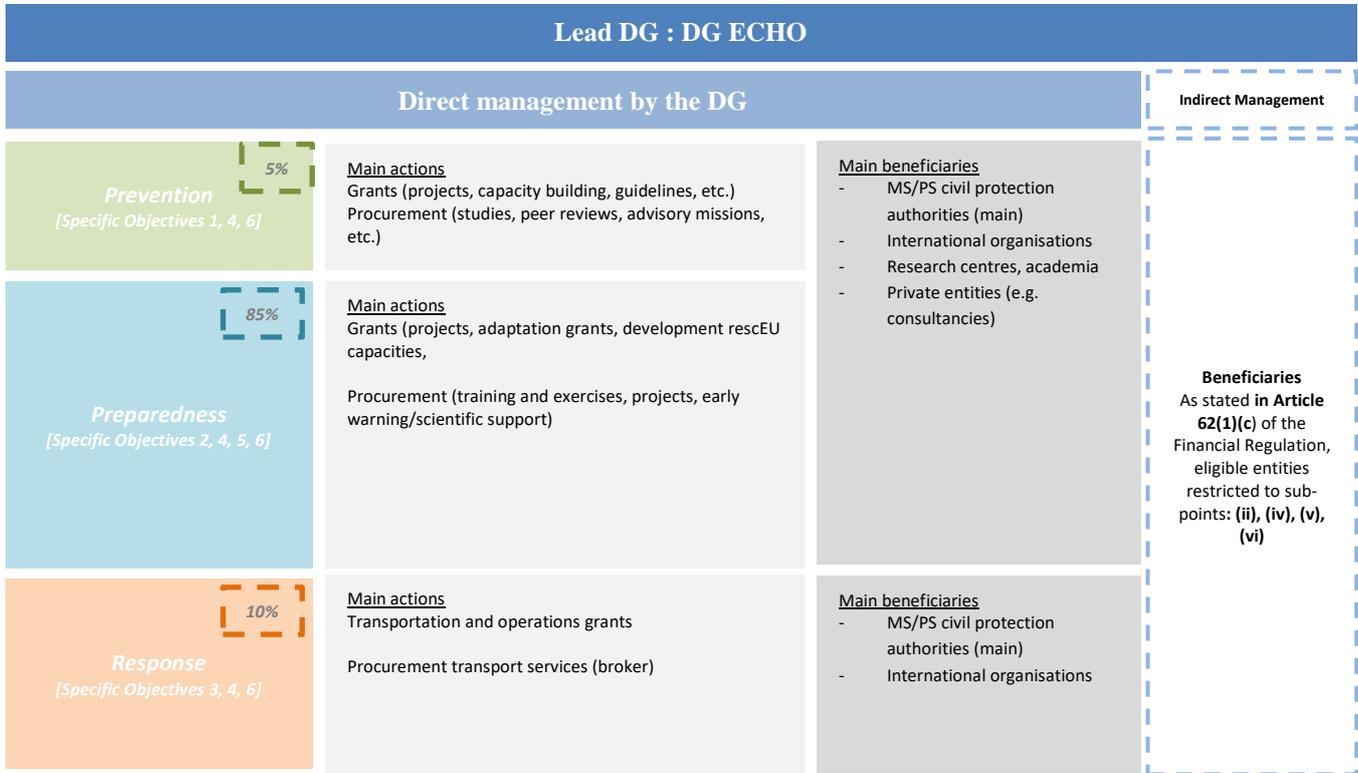

Under the NGEU UCPM budget transferred to HERA, two actions will be financed in 2022: the procurement and reservation contracts for the development of medical and CBRN stockpiles under rescEU (580,5 M); and the development of a stockpiling management system (49,4 M).

1.6. Delivery mode

The lead DG in the European Commission for the UCPM is DG ECHO. The management mode is direct management.

According to the provisions of the 2021 legislative revision, indirect management under the UCPM is also introduced as a possibility for certain cases foreseen in the Financial Regulation¹.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/836 of the European Parliament and of the Council of 20 May 2021 amending Decision No 1313/2013/EU on a Union Civil Protection Mechanism (OJ L 185, 26.5.2021, p. 1).	2021 - 2027	1 263.00

1.8.2. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	182.6	101.3	101.6	233.3	233.3	234.4	240.3	1 326.7
NextGenerationEU	684.6	679.8	682.8	2.3	2.3	2.3	2.3	2 056.5
Decommitments made available again (*)	N/A							N/A

¹ Following the political agreement reached in early February 2021, indirect management is expected to be introduced as a mode for budget implementation, albeit with limitations with respect to eligible bodies. Notably, the provision refers to sub-points (ii), (iv), (v) and (vi) of point (c) of Article 62(1)(c) of the Financial Regulation

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Contributions from other countries and entities	20.6	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	20.6
Grand Total	887.8	781.0	829.4	232.6	221.6	222.9	228.4	3 403.8

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The UCPM in the MFF 2021-2027 builds on the positive results achieved through MFF 2014-2020. While budget for the UCPM was split under two headings in the MFF 2014-2020 (internal – external), it is placed under one single heading in the MFF 2021-2027 ('Heading 2: Cohesion, Resilience and Values') to further improve an effective and efficient budget implementation.

Another significant difference compared to the previous MFF period is that the UCPM financial envelope is now composed by two funding sources: a) the MFF *classic* profile, and b) an allocation stemming from the 'Next Generation EU' (NGEU) funds. As part of the comprehensive recovery instrument adopted to face the consequences of the Covid-19 pandemic, the UCPM/rescEU was identified as a key instrument contributing to the rapid recovery from the crisis through the enhancement of its structures to be prepared for and respond to future crises. As such, an additional allocation of EUR 2 billion was proposed, which complemented the EUR 1.2 billion proposed under the MFF profile, bringing the overall financial envelope to EUR 3.3 billion for the 7-year period.

In order to translate this ambitious budget into reality, and building on the initial lessons learnt from the Covid-19 pandemic, the Commission tabled a new legislative proposal to further strengthen the UCPM in July 2020 [COM/2020/220]. Following intense negotiations throughout 2020 and in the beginning of 2021, the amended legislation entered into force in May 2021. The targeted amendments, which were introduced in the revised legislative framework, will strengthen European solidarity in particular in large-scale emergencies affecting several countries at the same time where voluntary and national assistance is not sufficient. The UCPM will be better prepared, more flexible, respond faster and offer more comprehensive cross-sectoral support to Member States and their citizens, including through the significantly enhanced budget. The main changes concern strengthened prevention and preparedness through Union-wide resilience goals and scenario plans together with Member States; more flexibility through enabling the Commission to directly procure rescEU capacities in duly justified cases of urgency; and additional possibilities to manage and implement the enlarged budget (e.g. through multi-annuality, indirect management, carry-over of budget reserves for response actions to the following year, etc.).

As main interface with the external public, DG ECHO main website provides an overview of the different activities carried out by the DG, as well as funding opportunities. The website also contains all key strategic documents and relevant legislative texts guiding the work of the DG.

ERCC portal: <https://erccportal.jrc.ec.europa.eu/>

The ERCC portal compiles all information products produced by DG ECHO and/or relevant partners supporting disaster management. Factsheets, daily maps, country-specific information and links to other relevant monitoring tools are found in the portal.

Union Civil Protection Knowledge Network online platform: <https://civil-protection-knowledge-network.europa.eu/>

This is the Knowledge Network's virtual interface that aims to bring together information, knowledge and news on capacity-development (including training, exercises and learning) activities as well as science and research activities and facilitate, exchanges, dissemination and networking among civil protection and disaster management stakeholders. The development of the Knowledge Network's online platform is in progress.

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	332.1	3 403.8	10%
Payments	45.4		1%

In 2021, the initial Civil Protection budget was EUR 768.8 million and the final budget stands at EUR 904.4 million (MFF strand: EUR 225.8 million / NGEU strand: EUR 678.6 million).

The crisis in Afghanistan and the forest fire events have triggered a reinforcement of EUR 57.8 million through an amending budget. The UCPM budget has also benefitted from a frontload within the MFF profile providing additional EUR 34.6 million. Additionally, EUR 18 million were received from DG NEAR as codelegated budget (Pre-accession Instrument and Southern Neighbourhood under NDICI). The budget was also complemented by EUR 20.45 million from EFTA countries contribution, and EUR 4.7 million of re-assigned revenue. This excludes the contribution of participating countries of approx. EUR 4.5 million.

The budget under the MFF strand has been implemented in full (EUR 224.5 million), except for some funds recovered late in 2021 (EUR 1.3 million), which are automatically carried over to 2022. Out of the EUR 224.5 million, EUR 57.6 million remain to be contracted (including EUR 33 million to cover Response transport and assistance, EUR 18 million co-delegated from DG NEAR (Pre-accession Instrument and Southern Neighbourhood under NDICI), and EUR 6.6 million to cover prevention and preparedness grants, UCPM exercises, and other smaller grants). All these credits will be committed as a priority in 2022.

On the NGEU strand, the budget execution presents a lower rate (EUR 128.5 million committed out of EUR 678.6 million) due to the funds being made available late (July) and the discussions on the scope requiring substantial adjustments by DG ECHO. The remaining NGEU funds (EUR 550.1 million) can be carried over to the following year as foreseen in the relevant (ERI) Regulation.

Payments: the MFF budget has been implemented in full, except for EUR 4.4 million composed from contributions of participating countries (EUR 4.1 million) and recovery orders (EUR 0.3 million) which are automatically carried over to 2022.

In 2021, the major part of appropriations were allocated to the rescEU medical stockpile to constitute an EU-level safety net aimed at combatting serious cross-border threats to health, and on the aerial forest firefighting capacities, including a grant agreement with Greece for the procurement of 2 airplanes (Canadair).

In addition, a number of other rescEU transition and other prevention and preparedness activities were funded, such as Prevention and Preparedness projects for Cross-Border risks and Marine Pollution, UCPM exercises, the renewal and reinforcement of early warning systems and scientific partnerships, the roll-out of the Knowledge Network, the organisation of the Civil protection Forum, etc.

On the response side, the UCPM was activated an unprecedented 114 times in 2021, for a wide range of disasters, facilitating the delivery of numerous items of critical personal protective and medical equipment, including almost 30 million of COVID-19 vaccine doses. 95 air operations were organised under the Mechanism to evacuate EU citizens and persons under EU duty of care from Afghanistan.

In 2022-2023, rescEU will continue to be the major spending field (Aerial Forest Fires, but also CBRN capacities, emergency shelter, stockpiling, emergency medical teams and multi-purpose transport and medevac).

Russia's unprovoked invasion of Ukraine since 24 February 2022, results in massive displacement, civilian deaths and suffering, large-scale humanitarian needs, and destruction of civilian infrastructure across the country. A massive amount of assistance is being channelled through the UCPM and delivered to Ukraine and to neighbouring countries affected by the unprecedented inflow of people fleeing the war. This has already triggered a reinforcement request of EUR 70 million in 2022, through a transfer of appropriations.

2.2. Programme(s) 2014-2020: Cumulative implementation rate and explanations

Union Civil Protection Mechanism – Heading 3

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	729.0	766.5	95%
Payments	429.5		56%

Union Civil Protection Mechanism – Heading 4

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	155.6	157.7	99%
Payments	123.9		79%

In a context in which the scope for action was widened considerably to foster the EU's capacity to respond to crises, with a substantially increased budget to fund new operations (the legal basis was amended in 2018), implementation under Heading 3 reached a level of 95%. The implementation under Heading 4 reached a level of 99%.

In 2020 the UCPM received several budgetary reinforcements (under both heading 3 and heading 4) totalling EUR 442 million. Such reinforcements funded the creation of the first-ever emergency stockpile of medical equipment (protective equipment, ventilators, etc.) and the repatriation of EU citizens stranded in non-EU countries. The increased budget largely explains the low implementation of payment appropriations in 2014-2020 (45%), as the majority of related payments weremade from 2021 onwards.

The unused amounts at the end of year 2020, corresponding to recovery orders cashed in 2020, were carried over in 2021 and fully used in 2021. In addition, the "Reste à Contracter" (RAC) amounted to EUR 7.2 million at the end of 2020 (already committed at level 1), and was fully contracted in 2021.

On the payment side, the "Reste à Liquidier" (RAL) amounted to EUR 282 million under heading 3 and EUR 22.4 million under heading 4.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The UCPM is not a regular programme funded by the Union, but rather a more complex policy instrument that supports Member States and Participating States in the area of civil protection, intervening in all phases of the disaster risk management cycle (prevention, preparedness, response). By its external dimension, the UCPM also supports the EU as a global actor, projecting EU solidarity in disasters beyond the EU borders.

3.1.2. Active programme performance

In 2021, the UCPM continued to be at the frontline of the response to the Covid-19 pandemic and its different waves using tools and capacities to respond both inside and outside the EU. From the 114 times the UCPM was activated (absolute record in the history of UCPM, even 12 activations more than in 2020), 36 were inside the EU. Out of 114 activations, 69 (61%) were Covid related. The UCPM had a 100% response rate inside Europe.

More concretely, in 2021, 69 requests have been received for in-kind assistance through the UCPM for personal protective or medical equipment, diagnostic tests, medicines, medical teams and vaccines (including from 6 EU Member States), 4 UCPM Participating States, 58 third countries and 1 International Organisation (UNICEF). Since then, most of the requests have been closed. 60 requests have been partially or fully met by offers of assistance from Member or Participating States or from the rescEU medical stockpile. In total, the UCPM facilitated the delivery of over 200 million items of medical equipment, including 6 million items from the rescEU stockpile.

Apart from Covid-19, assistance via the Mechanism was provided to Belgium (floods).

In general terms, the UCPM has shown a strong performance over recent years. Notably:

Performance in internal dimension:

- In the area of prevention, the UCPM has continued to be instrumental in fostering an EU-wide culture of prevention, supporting notably those Member States and neighbouring countries whose structures and policies were not sufficiently advanced. Through the compilation of national risk assessments, the dissemination of "EU Overview of Risks" and other advocacy/knowledge efforts spearheaded by the UCPM (e.g. the "Economics for Prevention and Preparedness" study, see section 3.2, Key Achievements), Member States have generally become more aware of the need to strengthen prevention policies and taken significant steps thereto. Over the past years, some Member States have undertaken bold reforms in their national civil protection structures to emphasise precisely the role of prevention. The UCPM has accompanied and supported such measures. The 2020 EuroBarometer survey (Q1 –What is the risk awareness level in your region?) reveals a positive trend between 2015 and 2020, with awareness level in 2020 at 64% – with an increase of 9 percentage points compared to 2015.

- Prevention strand of work has also included fostering cooperation and coordination of activities at cross-border level. One of the main tools for supporting cross-border cooperation in civil protection and risk management is UCPM prevention and preparedness grants. In 2021, over EUR 4,2 million were awarded to 9 projects implemented by partners from 16 Member States and Participating States and focusing on the development of cross-border risk assessments, improved regional and cross-sectoral coordination and preparation for marine pollution accidents. Attention to the cross-border cooperation issues has also been strengthened a result of the revision of the UCPM Decision in 2019: in line with the new reporting provisions, Member States are required to share regularly information on priority prevention and preparedness measures taken to address disaster risks with cross-border impacts. MS have identified in their summaries of risk assessments submitted some measures in case cross border risks are identified.
- In the area of preparedness, there is a clear trend that shows the growing importance the UCPM is having among Member States when it comes to being prepared for disasters. The number and diversity of registered capacities in the European Civil Protection Pool is the highest ever, reaching in certain areas the maximum required at EU level. Moreover, the concrete implementation of the revised UCPM legislation (amended in 2019 with Decision 2019/420 and in 2021 with Regulation 2021/836) has also strengthened the preparedness component of the UCPM through enhanced financing for the European Civil Protection Pool and the progressive development of rescEU capacities in different areas, complementing national capacities. A sophisticated training and exercises programme provides every year experts and capacities with the required competences to better respond to disaster through enhanced coordination, compatibility and complementarity. To support the coordination efforts of Member States/Participating states and the UCPM, the Knowledge Network was officially established in 2021 with Commission Implementing Decision (EU) 2021/1956. It brings together civil protection and disaster management experts and organisations, encouraging them to work together to increase knowledge within the UCPM and support the Union's ability and capacity to deal with disasters. In addition to an extensive training and exercises offer, the Knowledge Network makes scientific knowledge and expertise more widely available and understandable to decision makers.
- Concerning the increase of **public awareness and preparedness for disasters**, the various UCPM deployments and operations offered unprecedented opportunities for media and social media communication. DG ECHO has been working very closely and provided necessary support to communication activities by EU Delegations and Commission Representations and by communication multipliers in the Member States and Participating States, to increase the level of awareness of the UCPM. DG ECHO also ran several awareness campaigns in 2021. Despite the fact that the UCPM is more often activated by third countries, efforts to raise awareness of the UCPM in third countries should be continued so that institutions and citizens in third countries are better aware and informed about the assistance provided in their countries through the UCPM in times of emergencies and disasters. In this regard, the role of EU Delegations and the DG ECHO regional and country offices is essential.

Key achievements in internal dimension:

The year 2021 was fundamentally shaped by the Covid-19 pandemic, which had a great impact on all UCPM activities (prevention, preparedness and response), as well as other large-scale disasters and sudden crisis situations requiring an EU response (e.g. Afghanistan, Haiti). This resulted in a necessary adaptation of initially programmed activities, as well as the rapid realisation of new initiatives needed to respond to the large-scale consequences of the pandemic. This section outlines some of the key achievements of 2021:

General

- From a communication perspective, the Coronavirus outbreak put on hold many of the initially planned communication actions. A large share of the delivered work focused on showing and explaining the EU response to the pandemic (including rescEU preparedness measures and deployments). Large-scale emergency deployments, such as the response forest fires in the Mediterranean, the floods in Belgium or the repatriations during the Afghanistan crisis, also triggered considerable communication needs.
- An overarching key achievement of 2021 is the legislative revision of the UCPM through Regulation 2021/836 amending Decision 1313/2013/EU. The revised legislation, which came into force on 26 May 2021, was adopted in record time. The key rationale behind this reform focused on better prevention and preparedness for large-scale transboundary emergencies affecting several or all EU Member States at the same time. The corresponding targeted adaptations aim to improve anticipation, planning and response to these kind of emergencies. Concretely, the highlights of the revised legislation are the introduction of disaster resilience goals and disaster scenario planning, strengthening preparedness by bolstering the rescEU reserve and a budget boost with more flexible financing rules.
- The transfer of 81 Romanian patients to Hungary, Austria, Poland, Germany, Denmark, Czechia, Italy has been organised. This demonstrates true European solidarity in the fight of the pandemic.
-

Prevention

- In 2021, the UCPM awarded 13 “Prevention and Preparedness Projects”, 9 projects under the cross-border financing track (‘Track 2’), and 6 projects under the single-country financing track (‘Track 1’) for leveraging investments for disaster risk management. In 2021, the latter were funded out of the “Next Generation EU” budget and, as such, had a more targeted thematic focus, namely on disaster risk management actions addressing pandemics and crisis of similar nature as Covid-19.
- Out of the 13 grants awarded under Track 1 and Track 2, 6 targeted primarily disaster prevention, while 7 targeted disaster preparedness.
- A joint DG ECHO-World Bank study focusing on the economic arguments for disaster prevention and preparedness, the need to develop financial preparedness instruments to face the next “worst case scenarios” and a set of recommendations for strengthening capacities of civil protection was completed and launched in June 2021. In October 2021, a dedicated, 6 hour technical training on the study targeted disaster risk management practitioners from Member/Participating States and the Commission. More than 1 000 people participated to the launch and the training and the report was downloaded approximately 10 000 times between June and December 2021 (World Bank and ECHO websites).
- The reporting guidelines for the submission of the summaries of risk assessments and risk management capabilities as foreseen in Article 6.3 of Decision 1313/2013/EU were published in December 2019 ahead of the 22 December indicative date. This can be considered a climate-related objective, as the new guidelines introduced climate adaptation as one of the criteria to be taken into account by Member States in the future.

Preparedness

- By the end of 2021, a total of 115 response capacities were committed to the European Civil Protection Pool, 82 of which were available for immediate deployment.
- European Civil Protection Pool: seven new adaptation grants with 5 Member States were granted in 2021 for a total amount of EUR 3.5 million for the upgrading and repairing of national capacities to allow for their international deployment.
- By end 2021, six European Emergency Medical Teams (EMTs) that received the WHO classification (verification) were registered in the European Civil Protection Pool. In 2021, two deployments of medical teams under the European Medical Corps were facilitated by the UCPM (to Haiti and Equatorial Guinea)
- The **rescEU** transition scheme continued to be implemented as foreseen in the legislation in 2021. The Commission signed grant agreements with Member States (Croatia, Italy, Spain, Greece, France and Sweden) to make aerial forest firefighting assets available at EU level during the 2021 forest fire season. This reserve consisted of 15 assets/6 capacities (8 Canadair, 1 Dash and 6 helicopters). Over EUR 9,7 million were dedicated to this action. This can be considered a climate related achievement, as it had a direct impact on the capacity of the Union to support Member States extinguishing forest fires.
- In parallel, the Commission put in place a number of dedicated Task Teams meetings to define all the technical and operational specifications to establish as rapidly as possible the rescEU capacities in the priority areas identified by the legislation: aerial firefighting capacities, medical capacities and CBRN capacities. A total of 8 Task Teams meetings were organised in 2021.
- In relation to CBRN capacities, two rescEU implementing acts were adopted in 2021 (Commission Implementing Decision (EU) 2021/88 and Commission Implementing Decision (EU) 2021/1886), which defined CBRN Decontamination and CBRN Stockpiling capacities as part of the rescEU reserve. The adoption of the mentioned implementing acts enables the implementation of those capacities, which will strengthen the CBRN component of rescEU.
- One grant agreement for the development of an additional aerial forest fire capacity (2 medium amphibious planes) was signed in 2021 with Greece (in addition to France and Sweden in 2020), for a maximum amount of EUR 100.000.000.
- During most of 2021, the COVID 19 pandemic still affected the training and exercises activities as they were suspended. Nevertheless, it was also an opportunity to transform some of the training courses and exercise into virtual/online and blended activities. These online or blended activities received very positive feedback. Participants were satisfied with the learning experience, on the other hand, the networking part was felt missing. A limited number of field exercises and training courses could also be conducted in late 2021 respecting strict sanitary measures and protocols to ensure a safe training and exercise opportunity in a pandemic situation. The revision work of the training programme continued during 2021, taking into consideration the lessons identified from the digitalisation of training courses and ensuring to adapt it to the future challenges. In 2021, 7 grants agreements were signed to carry out in 2022 and 2023 UCPM exercises and network partnership activities. In addition, 3 services contracts were signed to carry out in 2022 and 2023 specific exercises that will be conducted outside the EU or involving maritime incidents Following intense preparatory work and discussions with the Member States throughout the year, the Union Civil Protection Knowledge Network was officially established in November 2021, with the adoption of Commission Implementing Decision (EU) 2021/1956. The first Board meeting was held on 7 December. The Commission continued to work on the development of the Network’s structure and activities, including the publication of three Newsletters and launching of the Knowledge Network’s IT Platform

(<https://civil-protection-knowledge-network.europa.eu/>). The Platform will continue to be developed with additional collaborative features as from 2022.

Performance in external dimension:

- Concerning the external dimension of prevention and preparedness activities, the focus continued to be put on strengthening the cooperation with the immediate neighbourhood, notably with the IPA countries (Bosnia & Hercegovina, Albania, Kosovo and Turkey in particular) as well as the whole Southern and Eastern Neighbourhoods. With the aim to continue bringing these countries closer to the UCPM, new phases of regional programmes in the Western Balkans and in the Eastern neighbourhood were launched and/or are in preparation, despite the difficult Covid-19 crisis context and the lack of face-to-face meetings (PPRD East is in its first phase and PPRD South III is in its last phase that ended in September 2021). Also, two new flagship regional programmes are in preparation and will be launched in 2022). Moreover, the dialogue with the Union for the Mediterranean (UfM) has continued building on the positive exchanges from recent years, delivering concrete results in the form of specific workshops around different areas related to disaster management in general, such as working groups on volunteers and engaging citizens or workshops on the future of cooperation in the Mediterranean area. In addition, the emphasis was also put on continuing financing prevention and preparedness projects in third countries with a cross-border dimension. Such initiatives have been instrumental in promoting cooperation at technical level, developing networks and promoting capacity building. Moreover, continuous efforts were done to increase the availability and use of scientific knowledge on disasters. DG ECHO continued strengthening through the expansion of available data, the early warning and information systems for natural disasters (e.g. droughts, floods, forest fires, tropical cyclones or severe weather), and made extensive use of the services and information provided via the Copernicus programme for emergency management, climate change, and security, as well as the interfaces between these three areas. DG ECHO continued strengthening its Geographic and Information System (GIS) capacity to keep supporting operations by means of cartographical and geospatial products. Such services have supported the activities of the UCPM both inside and outside the EU.
- Concerning response, given the increasingly unpredictable nature of disasters inside and outside the EU's borders, the UCPM is activated more often to support both Member States and third countries. An activation of the UCPM and the offer of rapid support contributes to European solidarity among Member States and with third countries in times of crisis. Around two thirds of the activations of the UCPM are requested by third countries, which shows the international relevance that the UCPM has acquired and the capacity and will that EU Member States have to send assistance and expertise to third countries in need.

Key achievements in external dimension:

The UCPM intervenes in all phases of the disaster management cycle: prevention, preparedness and response. This section outlines some of the key achievements of 2021 in the three areas in external civil protection cooperation.

Despite the continuation of the pandemic, international civil protection cooperation further developed with a particular focus on the IPA (Pre-Accession Instrument) region and the EU Neighbourhood (Eastern and Southern) through the implementation of regional programmes:

IPA: Management of the regional programme on flood prevention and forest fires risk management covering the Western Balkans and Turkey (IPA FF) and co-delegated to DG ECHO for a total of 5 million EUR.

Eastern Neighbourhood: Management of the Prevention, Preparedness and Response to Disasters (PPRD EAST) co-delegated to DG ECHO for a total of 6 million EUR, as well as a health emergency Disaster Risk Management Action for European Neighbourhood and Enlargement Countries in Georgia (1,363 million EUR).

Southern Neighbourhood: Completion of the programme support to the PPRD SOUTH II managed by NEAR and covering the whole southern neighbourhood (5 million EUR). Continued management of a Preparedness action for European Neighbourhood Policy countries in Morocco, Algeria and Tunisia (1,499 million EUR).

The UCPM international team also provided technical CP support to the Early Warning Systems for Floods in the Middle East and its data-sharing managed by DG ECHO (humanitarian unit C3).

- In 2021, the UCPM continued to be at the frontline of the response to the Covid-19 pandemic using tools and capacities to respond both inside and outside the EU. From the 114 times the UCPM was activated (12 more than in 2020), 78 activations were outside the EU. Out of 114 activations, 69 (61%) were Covid related.
- The Commission continued strengthening the early warning and information systems for natural disasters (e.g. droughts, floods, forest fires, tropical cyclones or severe weather) and made extensive use of the services and information provided via the Copernicus programme for emergency management, climate change, and security, as well as the interfaces between these three areas, resulting in 53 **activations** of the Copernicus Emergency Management Service in 2021 for disasters outside the Union.

- The UCPM replied positively to 87% of the requests for assistance from outside Europe. The programme mainly supported Member States most heavily affected through the delivery of vaccines and personal protective/medical equipment under the framework of the rescEU stockpiling.
- In 2021, out of 114 requests for assistance, 45 cases were not-Covid related – this figure is twice the average of UCPM activations counted from 2014 to 2019 (average being 22.5 activations per year). The 45 requests resulted in support provided to EU Member States or Participating States or third countries for: repatriation of EU and third countries' nationals, volcanic eruptions, Ebola outbreaks, forest fires, floods, tropical cyclones, refugee influx, medicines shortage, oil spills and maritime pollutions, as well as technological disasters.
- Over 38 million vaccine doses have been offered for sharing through the UCPM, out of which almost 32 million doses have been already delivered to over 40 third countries.

Apart from Covid-19, assistance via the Mechanism was provided to Haiti (earthquake), with the deployment of 18 civil protection experts, 15 TAST members and an emergency medical team. Moreover, the Commission through DG ECHO has also been involved in the repatriation efforts of EU citizens stranded in South Africa, Mozambique and Morocco, who found themselves in difficult situations due to travel restrictions imposed by several EU countries after the outbreak of Omicron variant. The two flights organised by Romania from South Africa (30 December) and Morocco (2 December), and the flight organised by Spain from Mozambique (2 December) repatriated 375 people. In 2021, the UCPM has facilitated the repatriation of 10,481 passengers (including 327 EU citizens) to Europe in 103 repatriation operations.

Areas of improvements and external factors

While showing the added value that the 2019 reform brought to the UCPM, notably with the creation of the first ever emergency stockpile of medical equipment under rescEU, which is counting nine EU host countries on 31 December 2021, the large-scale and unforeseen nature of the Covid-19 pandemic put the UCPM to the test and revealed some areas for improvement. As such, in the aftermath of the first wave of the crisis, a new legislative proposal was tabled [COM(2020)220 final] with targeted improvements, for which a political agreement was reached by the co-legislators in early February 2021 and Regulation EU 2021/836 entered into force in May 2021. The legislative review was also aiming at aligning the financial envelope of the UCPM with the figures of the next MFF. The areas of improvement are related to three main domains:

- a) Although the development of rescEU capacities was an important step forward, it was clear that swift action in moments of emergency was needed. The previous scheme for the development of rescEU capacities involving necessarily a Member State was not always rapid enough, and as such, the new legislation proposed to grant the Commission with additional elements of initiative, such as the possibility to directly procure capacities in certain cases. A compromise was found during political trilogue granting the Commission a higher autonomy in certain cases.
- b) Another element that required further adjustment was the collective planning (prevention and preparedness) for large-scale and cross-boundary emergencies. With the latest revision of Decision 1313/2013 from 2021, the Commission and Member states will work together to develop Union Disaster Resilience Goals, to support prevention and preparedness actions in the event of disasters which cause or are capable of causing multi-country transboundary effects.
- c) Finally, another area where improvement was needed was related to the budgetary management and needed flexibility to rapidly react and adjust to major crises. As such, a much more flexible budget structure, and with in-built mechanisms (e.g. carry-over) was proposed under the recently adopted UCPM legislation to increase the efficiency of the UCPM in fulfilling its mandate. The new UCPM legislation adopted in May 2021 includes a new provision in Article 25(7) of Decision 1313/2013/EU to carry-over commitments and payment appropriations for response actions to the following budgetary year.

In addition to the areas of improvement revealed by the Covid-19 pandemic, the Commission continues to work on the development and further operationalisation of the Knowledge Network after its official launch on 7 December 2021, as one of the key innovations of the 2019 legislative revision. A complex activity, consisting of connecting several activities between disaster stakeholders, knowledge holders and governance structures; the success of the Knowledge Network will rely on its capacity to address the needs of its members and of the UCPM in an efficient and effective way. While the Commission is responsible for its establishment, the construction of the Knowledge Network will only be feasible with the active collaboration and involvement by the Member States and Participating States.

As far as the external dimension is concerned, the Commission should continue to reflect in structuring a coherent and proactive international strategy addressing the extension of the UCPM to new Participating States with clearly defined criteria and processes for joining the UCPM in accordance with the legislation, as well as the modalities of partnership with the non-participating States (third countries), regional and international organisations. This would also help in ensuring an efficient coordination with all other available tools and funding mechanisms under UCPM, such as rescEU, Knowledge Network, UCPM training programme, preparedness exercises, peer reviews etc... in a Team Europe approach.

In September 2021 the results of the evaluation on 'Prevention and Preparedness Projects (2014-2020)' were published. The evaluation provided as main recommendations the following points: Increase awareness, access to and engagement with ongoing and past EU-funded projects on civil protection prevention and preparedness and their results; establish an internal Planning,

Monitoring, Evaluation and Reporting (PMER) framework to assess the performance and quality of the PPP Programme; introduce the possibility to apply for project extensions and expansions or raise awareness on the PPP Programme and provide guidance on how to prepare successful applications.

Covid section

The Covid-19 pandemic continued to have a significant impact on the UCPM activities, due to the consequences generated by the new and multiple waves of the pandemic. Based on lessons learned during the previous year adaptation became easier. However, with the evolution of the pandemic different challenges occurred and needed to be tackled. Concerning new initiatives mainly related to vaccine sharing, the Covid-19 pandemic resulted in a new record number of 114 activations of the UCPM requesting the provision of medical equipment, vaccines as well as support for the repatriation of EU citizens (and others) stranded in third countries. While response time improved from 2020, internal and external response times of UCPM activations still remain higher than pre-pandemic levels. The UCPM facilitated the delivery of millions of personal protective equipment items, medical counter measures and vaccines, both to non-EU countries and to EU Member States and Participating States. This was made possible by the improved preparedness achieved through the rescEU stockpile established in March 2020 and further developed throughout 2020 and 2021. Other areas that have been particularly affected by the pandemic are for instance the ones related to training and exercises, given the restrictions in place. Another area whose normal development has been disrupted is the submission of prevention-related information. The pandemic also nearly brought to a standstill the certification of ECPP capacities. Given the crucial role that civil protection authorities play in the response to the pandemic, the management of this health crisis has forced some Member States to redirect all resources to response and coordination operations, at the expense of other less urgent tasks, such as reporting. However, this does not affect the validity of this Programme Statement as the deadline for reporting under discussion was 31 December 2021.

Finally, due to the ongoing Coronavirus pandemic, many of the initially planned communication actions had to be revised or postponed, while a large share of the delivered work focused on showing and explaining the EU response to the pandemic (including rescEU preparedness measures and deployments and Humanitarian Air Bridge operations).

3.1.3. Previous Programme Performance

UCPM projects under the previous MFF (2014-2020) have continued in the same conditions under the current MFF (2021-2027). For information on the Previous Programme Performance, please refer to the section above (3.1.2. Active programme performance).

3.2. Key achievements

Union Civil protection Mechanism – Internal

36	13	115	7
activations of the Union Civil Protection Mechanism inside the EU in 2021 (100% response rate)	Prevention and preparedness projects have been financed under the UCPM in 2021.	Response capacities committed to the European Civil Protection Pool, 82 of which were available for immediate deployment by the end of 2021	Grant agreements signed with Member States and Participating States for Knowledge Network related activities in 2021.

Union Civil protection Mechanism – External

78	10 481	2	53	5
Activations of the Union Civil Protection Mechanism outside the EU in 2021, 16 of which were non-Covid related.	Passengers repatriated to Europe, including around 327 EU citizens in 103 repatriation operations in 2021.	New regional programmes were successfully launched on prevention, preparedness and response (IPA countries; Eastern Partnership countries - PPRD EAST III) in 2021	Activations of the Copernicus Emergency Management Service in 2021	Regional programmes were successfully implemented in the Enlargement and neighbourhood East-South on prevention, preparedness and response in 2021

3.3. Evaluations, studies and reports

EU Civil protection Mechanism – Internal & External

Article 34(2) of the revised Decision 1313/2013/EU foresees the requirement to submit a report every two years to the European Parliament and to the Council on the ‘progress towards the capacity goals and remaining gaps’ regarding the European Civil Protection Pool, taking into account the establishment of rescEU capacities.

In order to fulfil this requirement, the Commission launched in 2018 a Capacities study, whose final report was published on DG ECHO’s website in December 2019. Based on this study, the ‘Capacity Gaps Report’ was supposed to be finalised during 2020. However, the Covid-19 pandemic led to some delays and the report will be prepared in 2022 taking for the first time into account both the capacities under the European Civil Protection Pool (ECP) and under rescEU.

During 2020, an external evaluation of the ‘Prevention and Preparedness Projects (2014-2020)’ was commissioned in order to extract key lessons from this activity over the past years and identify avenues for improvement. The results of the evaluation were published in September 2021, and provide clearly positive conclusions on the effectiveness and EU added value of the programme. Recommendations focus mainly on raising awareness of projects funded, and strengthening the Planning, Monitoring, Evaluation and Reporting framework.

An overall evaluation of the UCPM (2017-2022) will be launched in 2022.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: To achieve a high level of protection against disasters by preventing or reducing their effects by fostering a culture of prevention and by improving cooperation between the civil protection and other relevant services.

Indicator 1: Number of Member States that have made available to the European Commission a summary of risk assessments and assessment of risk management capability

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
27	27	27	27	27	27	27	27			27
	Actual Progress									Final
	26									
Are we on track :	Moderate progress									

Indicator type	Output
Unit of measurement	No of Member States
Cut-Off Date	31/12/2021
Data source	Member States’ reporting to the Commission
Link to the objective	European Green Deal
Link MFF 14-20 / MFF 21-27	This indicator is linked to Indicator 1 & 2 (Specific Objective 1) under the previous programming period.
Other methodological comments	Legal obligation for Member States to report first time by 31/12/2020 and every three years thereafter.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The first deadline for Member States’ and UCPM Participating States’ reporting under the revised UCPM Decision was 31/12/2020. Not all Member States have reported by the deadline due to the pre-occupation of civil protection services with the Covid-19 emergency, which came at the expense at other, less urgent reporting tasks. However, though with some delays, the reports are being submitted in 2021.

Specific Objective 2: To enhance preparedness at Member State and Union level to respond to disasters (European Civil Protection Pool and rescEU)

Indicator 1: Number of committed and certified capacities included in the European Civil Protection Pool (ECP)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
60	60	60	60	60	60	60	60			60
	Actual Progress									Final
	66									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of capacities

Cut-Off Date	31/12/2021
Data source	The registration of modules are found in Common Emergency Communication and Information System (CECIS) data base.
Link to the objective	Promoting our European Way of Life
Link MFF 14-20 / MFF 21-27	Continuation of indicator (Specific Objective 2 – Indicator 1)
Other methodological comments	The indicator covers the number of modules, as well as technical assistance and support teams and other response capacities registered in CECIS as part of the Pool. As Member States and Participating States are directly responsible for registering capacities in CECIS, DG ECHO uses an additional internal monitoring tool to verify and (where necessary) request MS/PS to correct their CECIS registrations.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Milestone achieved, therefore the indicator is on track.

Specific Objective 3: To facilitate rapid and efficient response in the event of disasters or imminent disasters, including by taking measures to mitigate the immediate consequences of disasters.

Indicator 1: Response time of the Union Civil Protection Mechanism to a request of assistance (inside and outside the EU)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Response time of the Union Civil Protection Mechanism to a request of assistance inside the EU										
2019	Milestones									2027
3	3	3	3	3	3	3	3			3
	Actual Progress									Final
	8									
Are we on track :	Moderate progress									
Response time of the Union Civil Protection Mechanism to a request of assistance outside the EU										
2019	Milestones									2027
10	10	10	10	10	10	10	10			10
	Actual Progress									Final
	68									
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	Hours
Cut-Off Date	31/12/2021
Data source	Common Emergency Communication and Information System (CECIS) database.
Link to the objective	Promoting our European Way of Life
Link MFF 14-20 / MFF 21-27	This indicator is linked to Indicator 1 (Specific Objective 3) under the previous programming period.
Other methodological comments	Measured as the duration between the moment a request for assistance has been received in the Emergency Response Coordination Centre and the first offer of assistance in CECIS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	While still hampered by a wide number of requests, in 2021, the response time related to non-COVID-19 activations improved in comparison to 2020. For assistance between Member States, the average response time decreased from 182 hours to just 8 hours. For assistance between Member States, the average response time decreased for activations outside Europe from 613 hours to 68. While the response time is still higher than the target, progress is being made. This improvement was made possible through lessons-learned exercises that took place from 2020, and especially through thematic meetings held between the commission and Member/Participating States. Nevertheless to further improve the UCPM’s response to large-scale emergencies, DG ECHO continues to work on inter alia strategic autonomy in building capacities under the rescEU reserve among other measures.

Indicator 2: Adequacy of response of the Union Civil Protection Mechanism (inside and outside the EU)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Adequacy of response of the Union Civil Protection Mechanism inside the EU										
2020	Milestones									2027
0	75%	75%	75%	90%	90%	90%	90%			90%
	Actual Progress									Final
	100%									
Are we on track :	On track									
Adequacy of response of the Union Civil Protection Mechanism outside the EU										

2020	Milestones								2027
0	86%	86%	86%	86%	86%	86%	86%		86%
	Actual Progress								Final
Are we on track :	On track								

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	Common Emergency Communication and Information System (CECIS) database.
Link to the objective	Promoting our European Way of Life
Link MFF 14-20 / MFF 21-27	This indicator is linked to Indicator 2 (Specific Objective 3) under the previous programming period.
Other methodological comments	This indicator measures the percentage of the request for assistance that has been successfully met with offers for assistance.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Milestone achieved, therefore the indicator is on track.

Specific Objective 4: To increase public awareness and preparedness for disasters.

Indicator 1: Level of awareness of Union citizens of the risk of their region

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
n.a.										64%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	Eurobarometer
Link to the objective	Promoting our European way of life.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	For this indicator available data and milestones will only apply the year an Eurobarometer is published. The target was established on the basis of the result for this indicator on the Special Eurobarometer survey no. 511 (fieldwork November-December 2020): 64%. Milestones when ever applicable shall also aim at having a result higher than 64% on the corresponding Eurobarometer.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No Eurobarometer in 2021, therefore no applicable milestone nor data available.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Union Civil Protection Mechanism - Heading 3

Specific Objective 3: To facilitate rapid and efficient response in the event of disasters or imminent disasters.

Indicator 1: Average speed of interventions under the EU Civil Protection Mechanism (from the acceptance of the offer to deployment).

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
36	24			18			12		3	12
	Actual Progress									Final
		21	20	11	13.7	7.4	27.6	8		27.6
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	Hours
Cut-Off Date	31/12/2020
Data source	Common Emergency Communication and Information System (CECIS) data base.
Narrative	
Methodology	Measured as the duration between the acceptance of the offer in CECIS and the time when the assistance is ready for transportation from the port of embarkation in the offering EU Member States for movement towards the affected Member State. The indicator covers modules, as well as for technical assistance, medical personnel (not EMT) and support teams and other response capacities corresponding to the categories defined for the European emergency response capacity (EERC – Voluntary pool) as defined by Commission Decision (2014/762/EU).
Link MFF 14-20 / MFF 21-27	
Other methodological comments	EU's Common Emergency Communication and Information System (CECIS) data base. Measured as the duration between the acceptance of the offer in CECIS and the time when the assistance is ready for transportation from the port of embarkation in the offering EU Member States for movement towards the affected Member State. The indicator covers modules, as well as for technical assistance, medical personnel (not EMT) and support teams and other response capacities corresponding to the categories defined for the European emergency response capacity (EERC – Voluntary pool) as defined by Commission Decision (2014/762/EU) of 16 October 2014 laying down rules for the implementation of Decision No 1313/2013/EU of the European Parliament and of the Council on a Union Civil Protection Mechanism. Results of this indicator are partly influenced by the number, severity, nature and the specific context of the emergencies for which the UCPM is activated in a given year.
Full metadata available at this address	
Justification of the trend	There were only two module/team deployments (EMT and Medical Personnel to Italy) inside Europe in 2020. EMTs normally need some preparation time before deploying and generally, they are not urgently needed at the very beginning of an emergency like a USAR Team.

Specific Objective 4: To increase public awareness and preparedness for disasters.

Indicator 1 Level of awareness of Union citizens of the risks in their region.

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
55%							75%			75%
	Actual Progress									Final
		55%					64%			64%
Are we on track :	No data									

Indicator type	
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	Special Eurobarometer survey no. 511 (fieldwork November-December 2020)
Narrative	Article 3.1(d) of the UCPM Decision specifies that one of the specific objectives of UCPM is to increase public awareness and preparedness for disasters. It also specifies that the progress in this area is measured by the level of awareness of Union citizens of the risks in their region.
Methodology	Public opinion survey
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	Report to be published on https://ec.europa.eu/commfrontoffice/publicopinion/
Justification of the trend	Overall positive trend to which recent disasters and EU communication campaigns might have contributed, though the role of different factors is difficult to establish. A positive trend can be observed between 2015 and 2020. Awareness level in 2020 was 64% - an increase of 9 percentage points compared to 2015.

Previous Program 2 : Union Civil Protection Mechanism - Heading 4

General Objective 1: The Union Civil Protection Mechanism shall aim at strengthening the cooperation within the EU and facilitating coordination in the field of civil protection in order to improve the effectiveness of systems for preventing, preparing for and responding to natural and man-made disasters in Third countries.

Indicator 1: Economic damage caused by natural disasters

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010-2012	Milestones									2020
155	93	93	93	93	93	93	93			93
	Actual Progress									Final
	91.3	78.9	136.1	332.7	105.5	95	144			144
Are we on track :	No data									

Indicator type	Result
Unit of measurement	USD billion
Cut-Off Date	31/12/2020
Data source	As recorded in the EM-DAT database
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Estimate based on the average of annual economic damage of the 2004-2014 years. The data reflects economic damage caused by natural disasters worldwide excluding the economic damage caused by natural disasters in the Member States of the European Union.
Full metadata available at this address	
Justification of the trend	The EM-DAT base is frequently updated and historical data revised. The annual results and evolution of this indicator depends on external factors (occurrence, frequency, severity and location of disasters) which are totally beyond the control of the Commission. In addition, the proportion of reported economic damages varies strongly by countries, disaster type, and time. The specific contribution of the Union Civil Protection Mechanism to the evolution of this indicator is difficult to assess.

Specific Objective 3: To facilitate rapid and efficient response in the event of disasters or imminent disasters.

Indicator 1: Average speed of interventions under the EU Civil Protection Mechanism (from the acceptance of the offer to deployment)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
36	24			60			48		10	48
	Actual Progress									Final
		22	20	48	75	31.1	40.8	68		40.8
Are we on track :	Deserves attention**									

Indicator type	Result
Unit of measurement	Hours
Cut-Off Date	31/12/2020
Data source	Common Emergency Communication and Information System (CECIS) data base
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The increase in response time is explained by the general principle that assistance can only be delivered after the requesting country has accepted the offer. In some situations, the request is made, but the acceptance is not immediate, as the requesting country might consider that it is not needed immediately. In such situations, this creates a distortion in the number of hours, which is not related to the performance of the Mechanism. The indicator is measured as a yearly average of the duration between the acceptance of the offer in CECIS and the time when the assistance is ready for transportation from the port of embarkation in the EU for movement towards the affected country. The indicator covers modules, medical personnel (not EMT) as well as for technical assistance and support teams and other response capacities corresponding to the categories defined for the European emergency response capacity (EERC – Voluntary pool) as defined by Commission Decision (2014/762/EU).
Full metadata available at this address	
Justification of the trend	In 2020, deployments outside Europe consisted mainly in MUSAR (Medium Search and Rescue Teams) teams deployed to Lebanon (Explosion emergency) and EMTs deployed to Azerbaijan and Armenia. MUSAR teams presented very fast deployments. However, the EMTs took more time to deploy given the specific preparations EMTs need to go through.

5. The programme contribution to horizontal policies

5.1. Contribution to climate mainstreaming

5.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	198.69	58.50	60.60	56.10	57.60	58.80	60.30	550.59	16%

(*)These amounts include NextGenerationEU top-ups if any

5.1.2. Explanation on the financial contribution

In the 2014-2020 period, the total contribution for climate mainstreaming was EUR 308.76 million. The figure for 2021 (EUR 198.86 million) is the result of the application of a more granular methodology that allows a more precise analysis of climate spending. DG ECHO is implementing the central tracking at commitment level, to improve the accuracy and reliability of the data on climate action. The tracking is based on EU climate markers methodology, made of three scores (0/40/100).

EUR 138.6 million spent in 2021 for climate mainstreaming correspond to 70% of funding, including activities under the 40% and 100% markers.

For NGEU funds, EUR 1 million was spent in 2021 for climate mainstreaming under the 40% marker representing almost a 100% of payments contemplated.

5.1.3. Key achievements

EU Civil protection Mechanism – Internal & External

The UCPM will continue contributing to the overall Commission objective to climate mainstreaming through its different activities.

A key achievement over the past years has been the creation of the dedicated reserve of rescEU capacities in the area of forest firefighting through the rescEU transition phase, resulting in an additional capacity of 15 capacities to support Member States in forest firefighting activities. Additional support provided to Member States to reduce the devastation that wildfires create, increasing CO2 emissions, is considered a key climate-related achievement.

UCPM direct grants to national civil protection authorities under the ‘Track 1’ programme, which was launched in 2019 as a pilot, can be considered a success story and an important achievement. This financing scheme provides ‘seed funds’ to carry out strategic disaster risk management activities in Member States. Supported by these grants, Member States have developed long-term disaster risk reduction strategies (Croatia), prepared conceptual basis for a legal reform of civil protection system (Czechia), identified investment needs to address CBRN risks (Lithuania), launched preparatory work for setting up unified disaster loss databases and improving early warning systems (Latvia).

Under the UCPM, a joint DG ECHO-World Bank study was carried out with the objective to provide some estimate of economic losses from climate-related hazards such as floods and forest fires. The study took as starting point the climate change scenarios developed by the PESETA study of the JRC. The study also intended to put forward recommendations for developing/improving financing instruments that can help the EU better manage climate risks in future. DG ECFIN, CLIMA, JRC, ENV and REGIO are members of the steering group that oversees the study.

Moreover, some specific projects financed under the prevention and preparedness ‘Track 2’ programme also contributed directly to the overall objective of climate mainstreaming. These included for instance, CASCADE - (Community Safety Action for Supporting Climate Adaptation and Development, 2019) (www.cascade-bsr.eu), which provided an assessment tool for integrated climate change risks and DRR management in urban contexts in the Baltic Sea Region, as well as prepared guidelines and training courses for local and national CPA, and organised policy dialogues between local, national, regional and international actors to develop policy recommendations for the region.

Another relevant example is the project WUIVIEW (Wildland-Urban Interface Virtual Essays Workbench, 2019), which has developed a risk management tool to help Wildland Urban Interface (WUI) communities adapting to forest fires due to climate change (www.wuiview.org/), as well as the project SAVEMEDCOAST, which mapped hotspots all along the Mediterranean coastline which are most exposed to sea level rise and therefore at risk from climate change impacts (costal floods, erosion etc.). The project also developed awareness raising campaigns (educations workshop with stakeholders) in communities in high risk flooding areas.

5.1.4. Performance

EU Civil protection Mechanism – Internal & External

Over the course of the past multi-annual financial framework 2014-2020, DG ECHO has successfully integrated climate action into its activities, primarily in terms of adaptation to climate change – both through the civil protection and humanitarian programmes.

Climate change is firmly integrated in the Union Civil Protection Mechanism legislation, and Member States are asked to take into account climate risks in their disaster risk management, particularly in the new Reporting Guidelines on Disaster Risk Management, Art. 6(1)d of Decision No 1313/2013/EU/2019/C 428/07 (Commission Notice C/2019/8929). Integrating climate risks in disaster risk management was proposed to be further strengthened in the Commission proposal from 2 June 2020 (COM(2020) 220 final) where climate change is explicitly mentioned in relation to disaster resilience goals, monitoring and providing advice based on scientific knowledge, and disaster resilience planning including scenario-building. Under the Prevention and Preparedness projects (“Track 2”), in the 2014-2020 Multi-Annual Financial Framework (MFF), out of 132 projects awarded overall, 15-16 focussed on climate change. All of this suggests a successful integration of climate action into the civil protection programme between 2014-2020. The 3rd edition of the report “Overview of natural and man-made disaster risks the EU may face” (SWD(2020)330) addressed climate change as a main driver for a changing risk landscape.

5.2. Contribution to biodiversity mainstreaming

5.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution	43.12	0.00	0.00					43.12
Share compared to total envelope	23.61 %	0.00 %	0.00 %					3.25 %

(*)These amounts include NextGenerationEU top-ups if any

5.2.2. Explanation On the financial contribution

For the work of DG ECHO only the response to forest fires should be considered at a level of 40% as contributing to biodiversity mainstreaming.

In this regard, EUR 43.12 million were estimated to have been allocated to contributing to biodiversity, out of the total EUR 225.80 million budgeted for UCPM in 2021. This represents a 19% of the total amount.

In the framework of the latest legislative revision, and following the provisional agreement reached in February 2021 by the co-legislators, the revised Decision No 1313/2013/EU should contribute to the overall EU ambition on biodiversity (i.e. 7.5% of the EU budget expenditure on biodiversity in 2024 and 10% in 2026 and 2027).

When implementing the revised Decision No 1313/2013/EU, the mainstreaming of biodiversity action in the Union policies shall be duly taken into account to the extent that the unpredictability and specific circumstances of disaster preparedness and response so allow.

5.2.3. Key Achievements

EU Civil protection Mechanism – Internal and external

Regarding the biodiversity mainstreaming methodology, it was assessed in 2021 in collaboration with DG ENV that DG ECHO’s actions contributing to biodiversity mainstreaming are actions to control forest fires. In this regard, rescEU transition capacities were again financed in 2021, with 15 aerial forest firefighting capacities including both airplanes and helicopters. Moreover, building on the first rescEU planes was concluded with France in 2021. An additional grant agreement was signed in December 2021 with Greece for the procurement of 2 such aircraft. In negotiating with the only worldwide manufacturer of relevant medium amphibious planes, DG ECHO agreed with interested Member States to coordinate the process closely and negotiate jointly to obtain the best possible deal.

5.2.4. Performance

EU Civil protection Mechanism – Internal

Progress on biodiversity actions is not yet measurable.

EU Civil protection Mechanism – External

Progress on biodiversity actions is not yet measurable.

5.3. Contribution to gender equality

5.3.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	

Score 0*: 182.6							
-----------------	--	--	--	--	--	--	--

(*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significantly impacted**, score 0*: **impact on gender equality to be determined ex post**, score 0: **no significant impact on gender equality**.

Within the framework of the 3rd phase of the regional programme for prevention, preparedness and response to natural and man-made disasters in the Eastern Neighbourhood (PPRD EAST 3), specific guidelines (in English and Russian) for the inclusion of gender equality have been developed in order to ensure gender mainstreaming throughout the project implementation. This covers areas such as training and exercises, multi-risk assessments, early warning systems, public awareness, volunteerism and host nation support.

The project PPRD EAST 3 disposes of a budget of EUR 6 000 000 and will be lasting until 2024. It sees gender mainstreaming as a cross-cutting theme integrated in all programme activities in line with the Sendai Framework for Disaster Risk Reduction which pays particular attention to all-of-society engagement. Gender analysis is being used as a tool for further understanding disaster risk, vulnerabilities and capacities in relation to disaster risk assessment. A gender-inclusive approach is also being applied in the training programme, where gender aspects will be mainstreamed in course curricula as well as delivery.

EU Civil protection Mechanism – Internal and external

DG ECHO commits to gender-sensitive civil protection, including addressing specific vulnerabilities, and exchange on the issue of support to victims of gender-based violence during disasters. DG ECHO prompts gender equality through the disaster risk cycle and raises awareness of the principle of non-discrimination and inclusiveness. DG ECHO promotes gender-inclusive approach in response activities and ensures that the gender component is considered.

5.4. Contribution to the sustainable development goals

5.4.1. Goals

SDG 6 Ensure availability and sustainable management of water and sanitation for all

DG ECHO and Participating States provide water, sanitation and hygiene (WASH) support through the UCPM response to those in need during humanitarian crises and ensure that the most vulnerable have access to WASH.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

By providing a faster response to natural and man-made disasters, the UCPM helps minimise their impacts on the economical means of the affected areas, and therefore helps preserve the employment of local workers.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

SDG 12 Ensure sustainable consumption and production patterns

Through preventing, preparing for and responding to marine pollution, the UCPM contributes to preserving from environmental degradation, including from marine ecosystems and biodiversity loss. DG ECHO is working on strengthening resilience and adaptive capacity in case of marine pollution.

SDG 13 Take urgent action to combat climate change and its impacts

Climate change is already affecting natural and human systems in every region across the globe, with some regions facing more severe impacts due to their higher levels of existing vulnerabilities and exposure. Climate change features as the key driver for risks in Europe² and in the world³. Through preventing, preparing for and responding to climate-related disasters, DG ECHO provide support both to EU Member States and third countries via the UCPM. With regards to the latter, DG ECHO also provides support through humanitarian aid. The UCPM contributes to combatting climate change and its impacts. DG ECHO works on strengthening resilience and adaptive capacity to climate-related hazards and natural disasters. While streamlining climate change in main UCPM activities, such as risk assessments, early warning systems, response capacities and funding calls for projects.

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Through preventing, preparing for and responding to marine pollution, the UCPM contributes to preserving from environmental degradation, including from marine ecosystems and biodiversity loss. DG ECHO is working on strengthening resilience and adaptive capacity in case of marine pollution.

² [Overview of natural and man-made disaster risks the European Union may face - Publications Office of the EU \(europa.eu\)](#)

³ By 2050, over 200 million people could need humanitarian assistance every year due to climate-related disasters

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Environmental degradation, in particular damage to ecosystems and biodiversity loss, is identified as a key driver for the heightening of disaster risks⁴. Through the promotion of short and long-term disaster-risk prevention measures, DG ECHO, in line with the Biodiversity strategy, promotes the use of ecosystem and nature-based solutions, in the context of the European Regional Development Fund (ERDF), the Cohesion Fund (CF) and the European Agricultural Fund for Rural Development (EAFRD). The UCPM is committed to protect people, the environment and property from natural and human-induced disasters, including the consequences of acts of environmental disasters.

SDG 17 Strengthen the means of implementation and revitalize the global partnership

Responding to disasters requires efficient collaboration and a multi-skilled approach, the EU Civil Protection Knowledge Network aims to bring together relevant national civil protection authorities, centres of excellence, researchers, universities, knowledge centres, third countries and international organisations to facilitate sharing of experiences and lessons learnt, and to enable better informed decision-making for more efficient and effective prevention, preparedness and response.

5.4.2. Key achievements and performance***SDG 6 Ensure availability and sustainable management of water and sanitation for all***

DG ECHO and Participating States provide water, sanitation and hygiene (WASH) support through the UCPM response to those in need during humanitarian crises and ensure that the most vulnerable have access to WASH.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

By providing a faster response to natural and man-made disasters, the UCPM helps minimise their impacts on the economical means of the affected areas, and therefore helps preserve the employment of local workers.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

DG ECHO promotes a more resilient and sustainable urbanisation and places urban resilience among focus areas in its work on disaster preparedness of its humanitarian interventions. DG ECHO supports the Making Cities Resilient 2030 (MCR2030) initiative⁵.

SDG 13 Take urgent action to combat climate change and its impacts

Through preventing, preparing for and responding to climate-related disasters, the UCPM contributes to combatting climate change and its impacts. DG ECHO works on strengthening resilience and adaptive capacity to climate-related hazards and natural disasters, while streamlining climate change in main UCPM activities, such as risk assessments, early warning systems, response capacities and funding calls for projects. The emergency toolbox for humanitarian aid is DG ECHO funding instrument designed to respond to unexpected emergencies, DG ECHO allocated €150 million in 2021. DG ECHO supports the implementation of a greener humanitarian response and reducing the environmental and climate footprint of EU-funded humanitarian operations.

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

DG ECHO is working on strengthening resilience and adaptive capacity in case of marine pollution.

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Through the promotion of short and long-term disaster-risk prevention measures, DG ECHO, in line with the Biodiversity strategy, promotes the use of ecosystem and nature-based solutions, in the context of the European Regional Development Fund (ERDF), the Cohesion Fund (CF) and the European Agricultural Fund for Rural Development (EAFRD). The UCPM is committed to protect people, the environment and property from natural and human-induced disasters, including the consequences of acts of environmental disasters.

SDG 17 Strengthen the means of implementation and revitalize the global partnership

DG ECHO launched the EU Civil Protection Knowledge Network that aims to bring together relevant national civil protection authorities, centres of excellence, researchers, universities, knowledge centres, third countries and international organisations to facilitate sharing of experiences and lessons learnt, and to enable better informed decision-making for more efficient and effective prevention, preparedness and response.

⁴ [Overview of natural and man-made disaster risks the European Union may face - Publications Office of the EU \(europa.eu\)](#)

⁵ Launched in October 2020 and operational in January 2021, the MCR2030 is an initiative led by the UN Office for Disaster Risk Reduction that reached more than 4,000 cities across the globe within the network of the Making Cities Resilient Campaign and supports cities in taking action to reduce disaster risk in alignment with the Sendai Framework for Disaster Risk Reduction 2015-2030

1. Overview**1.1. Challenges**

The COVID-19 pandemic has caused immense human suffering across the European Union and pushed the EU health systems to their limits. The crisis spotlighted the fragility of the national and local health systems and the need for a coordinated strong action at Union level in complementing the health policies of the Member States in order to improve people's health throughout the Union and ensure that public health protection is taken into account in all Union policies.

The EU4Health Programme is a key instrument for delivering a comprehensive response to the health needs of the European citizens, reflecting the lessons learned from both the COVID 19 crisis and previous health programmes.

The Programme contributes to build strong foundations for a European Health Union, in which the EU and Member States work together to reinforce their coordination and to strengthen existing structures and mechanisms for better protection, prevention, preparedness and response against risks to human health.

The EU4Health Programme is a unique opportunity to address critical EU health challenges and improve the access to health for all European citizens addressing health inequalities and inequities in relation to healthcare, making sure that Europe remains the healthiest region in the world

1.2. Mission (General objectives)

The EU4Health Programme brings a Union added value and complements the policies of the Member States to pursue the general objectives of:

- improving and fostering **health in the Union** to reduce the burden of communicable and non-communicable diseases, by supporting health promotion and disease prevention, by reducing health inequalities, by fostering healthy lifestyles and by promoting access to healthcare;
- protecting people in the Union from serious **cross-border threats to health** and strengthening the responsiveness of health systems and coordination among the Member States in order to cope with serious cross-border threats to health;
- improving the availability, accessibility and affordability of **medicinal products and medical devices**, and crisis-relevant products in the Union, and supporting innovation regarding such products;
- strengthening **health systems** by improving their resilience and resource efficiency, in particular through:
 - supporting integrated and coordinated work between Member States;
 - promoting the implementation of best practices and promoting data sharing;
 - reinforcing the healthcare workforce;
 - tackling the implications of demographic challenges; and
 - advancing digital transformation.

The Programme will create efficiency gains and value-added impacts that could not be generated by action taken at national level.

Where applicable, the Programme will keep the 'One Health' approach recognising the interconnection between human health, animal health and more broadly with the environment in tackling threats to health.

1.3. Specific objectives

The Programme will achieve its general objectives by means of ten specific objectives:

1. In synergy with other relevant Union actions, supporting actions for **disease prevention, for health promotion and for addressing health determinants**, including through:
 - the reduction of damage to health resulting from illicit drug use and addiction;
 - supporting actions to address inequalities in health, to improve health literacy, to improve patient rights, patient safety, quality of care and cross-border healthcare; and
 - supporting actions for the improvement of the surveillance, diagnosis and treatment of communicable and non-communicable diseases, in particular cancer and paediatric cancer, in synergy with other relevant Union actions;
 - supporting actions to improve mental health, with special attention given to new care models and the challenges of long term care, in order to strengthen the resilience of the health systems in the Union.
2. Strengthening the capability of the Union for **prevention of, preparedness for, and rapid response to, serious cross-border threats to health** in accordance with relevant Union legislation, and improving the management of health crises, particularly through:
 - the coordination, provision and deployment of emergency healthcare capacity;
 - supporting data gathering, information exchange, surveillance, the coordination of voluntary stress testing of national healthcare systems; and
 - the development of quality healthcare standards at national level.

3. Supporting actions to enhance the **availability, accessibility and affordability of medicinal products, medical devices and crisis-relevant products** by encouraging sustainable production and supply chains and innovation in the Union, while supporting the prudent and efficient use of medicinal products, in particular antimicrobials, and actions to support the development of medicinal products that are less harmful for the environment, as well as the environmentally-friendly production and disposal of medicinal products and medical devices.
4. Supporting actions complementing **national stockpiling of essential crisis-relevant products**, at Union level, where needed, in synergy with other Union instruments, programmes and funds, without prejudice to Member State competences, and in close cooperation with relevant Union bodies.
5. Establishing a **structure and training resources for a reserve of medical, healthcare and support staff** allocated voluntarily by Member States for its mobilisation in the event of a health crisis, in synergy with other Union instruments, programmes and funds, without prejudice to Member State competences and in close cooperation with the ECDC.
6. Strengthening the **use and re-use of health data for the provision of healthcare and for research and innovation**, promoting the uptake of digital tools and services, as well as the digital transformation of healthcare systems, including by supporting the creation of a European health data space.
7. Enhancing **access to quality, patient-centred, outcome-based healthcare and related care services**, with the aim of achieving universal health coverage.
8. Supporting the development, implementation and enforcement and, where necessary, the revision of **Union health legislation** and supporting the provision of valid, reliable and comparable high-quality **data** for evidence-based decision-making and monitoring, and promoting the use of health **impact assessments** of other relevant Union policies.
9. Supporting **integrated work among Member States, and in particular their health systems**, including
 - the implementation of high-impact prevention practices,
 - supporting work on HTA, and
 - strengthening and scaling up networking through the ERNs and other transnational networks, including in the area of diseases other than rare diseases, to increase the coverage of patients and improve the response to low prevalence and complex communicable and non-communicable diseases.
10. Supporting **global commitments** and health initiatives by reinforcing the Union's support for actions by international organisations, in particular actions by the WHO, and fostering cooperation with third countries.

The Programme will need to be dynamic and flexible to adapt to new emerging health challenges, and to serve the EU and the Member States in their evolving needs and priorities, making sure that the support provided by the EU4Health Programme is based on national needs.

1.4. Public intervention context

The new EU4Health Programme is a reinforced programme for the Union's action in the field of health, which will focus on EU-added value actions in line with the goals of the Union action and its competences in the area of public health.

Article 168 TFEU provides that the Union is to complement and support national health policies, encourage cooperation between Member States and promote the coordination between their programmes, while fully respecting the responsibilities of Member States for the definition of their health policies and for the organisation, management and delivery of health services and medical care.

A broad range of beneficiaries could access the EU4Health programme funds such as national, European, and international health institutions, but also public authorities, academia/research institutes, health practitioners, as well as civil society organisations when eligibility criteria are met. Natural persons are not eligible for grants under the Programme.

1.5. Actions

The Programme is going to be implemented through a variety of possible eligible actions (listed in Annex I of the Programme).

The actions expected to be addressed by the 2021 Programme implementation are clustered under four over-arching 'programme strands', along with a transversal priority for cancer:

- **Crisis preparedness** – including actions for prevention, preparedness and rapid response to serious cross-border threats to health; for mitigating risks of shortages of medicines; and for ensuring coordination, provision and deployment of

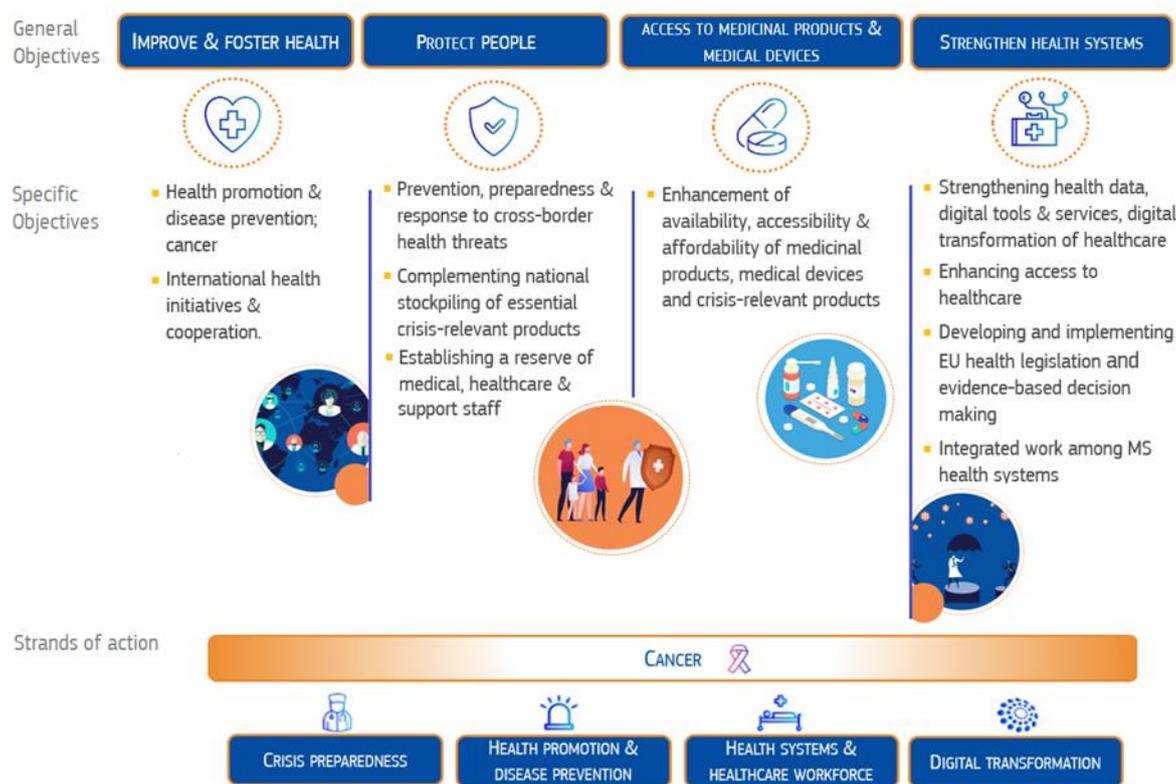

emergency healthcare capacity, including the preparatory actions for the European Health Emergency preparedness and Response Authority (HERA).

- **Disease prevention** – including actions enhancing the surveillance, diagnosis and treatment of communicable and non-communicable diseases; exchange of best practices and data; and health promotion.
- **Health systems and healthcare workforce** – including actions improving accessibility, efficiency and resilience of health systems; reducing inequalities in accessing health care; scaling up networking through the European Reference Networks.
- **Digital** – including actions strengthening the use and re-use of health data for the provision of healthcare and for research and innovation; advancing in the uptake of digital tools and services, as well as the digital transformation of healthcare systems; supporting the creation of a European Health Data space.
- **Cancer** is a major initiative and transversal priority, implemented by specific actions and actions under the other strands and linked to the Europe’s Beating cancer plan.

1.6. Delivery mode

The EU4Health Programme is mainly implemented by direct management, using in particular grants, prizes and procurement, as well as indirect management. Major part of the EU4Health Programme is expected to be delegated for implementation to the Health and Digital Executive Agency (HaDEA).

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/522 of the European Parliament and of the Council of 24 March 2021 establishing a Programme for the Union’s action in the field of health (‘EU4Health Programme’) for the period 2021-2027, and repealing Regulation (EU) No 282/2014 (OJ L 107, 26.3.2021, p. 1).	2021 - 2027	2 446.00

1.8.2. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total

(*) Only Article 15(3) of the financial regulation.

The EU4Health Programme is implemented mainly by the Commission (DG SANTE and HERA) through direct and indirect management, and the implementation of a large part of the direct management actions has been delegated to the executive agency HaDEA. The EU4Health Programme is cooperating closely with the European Commission's main research programme, Horizon Europe (HE), which includes a health cluster, and with the Union Civil Protection Mechanism (UCPM).

The European Health Emergency Preparedness and Response Authority (HERA) will implement, next to the EU4Health credits, mainly HE and UCPM/RescEU credits in order to achieve its mission to prevent, detect, and rapidly respond to health emergencies.

The Commission is currently in the process of amending the EU4Health Work Programme 2022 for funding a EUR 7 million contribution agreement with International Organisation (Red Cross) to provide mental health support to displaced people coming from Ukraine who have entered the Union or other neighbouring countries since the beginning of the Ukraine crisis.

Ukraine is not associated to the EU4Health programme and hence cannot participate to any funded activity. However, many of the actions funded under the EU4Health programme will include also displaced people coming from Ukraine.

Moreover, the Commission is discussing the association agreement of Ukraine to the EU4Health programme.

1.9. Link with the 2014-2020 MFF

The EU4Health Programme is a new and stand-alone financial instrument that provides a solid basis for a coordinated Union action and an unprecedented EU investment in health; the new programme is also a response to lessons learned during the COVID-19 pandemic and adds actions to implement the Europe's Beating Cancer plan and the Pharmaceuticals Strategy. The EU4Health programme will ensure continuity with the work done under the MFF 2014-2020; in particular with the work for reducing the number of antimicrobial-resistant infections and improvement of vaccination rates. Building on the results of the Third Health Programme, the EU4Health programme will expand successful initiatives such as the European Reference Networks for rare diseases and will continue to pursue EU global commitments and health initiatives.

2. Where are we in the mplementation ?**2.1. Programme 2021-2027**

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	337.8	3 105.3	11%
Payments	11.6		0 %

Considering the late adoption of the 2021 Annual Work Programme in June 2021, the establishment of the new European Health and Digital Executive Agency (HaDEA) in February 2021 and of the new European Health Emergency Preparedness and Response Authority (HERA) on 16 September 2021, the actions envisaged under the EU4Health Programme have started with a slight delay. Therefore, and given the lead time for the signature of grant agreements (up to 9 months) and for procurement actions, only a small amount of payment appropriations were needed in 2021.

The 2022 Annual Work Programme was adopted on 14 January 2022.

In 2021, a major part of the fresh payment credits was addressed to the expert panel meetings on effective ways of investing in health, as well as for a few activities under the European database for Medical Devices (EUDAMED). To be noted that along with the start-up of the implementation of the EU4Health programme, in 2021 also a significant number of activities of the third Health Programme were finalised, with a total budget of EUR 47.1 million.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

1. Financial programming

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) No 282/2014 of the European Parliament and of the Council of 11 March 2014 on the establishment of a third Programme for the Union's action in the field of health (2014-2020) and repealing Decision No 1350/2007/EC	2014 – 2020	449.4

	Financial Programming (EUR million)							Total Programme

(*) Figure in 2014 prices

2. Implementation rates

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	452.1	452	100%
Payments	352.3		78%

As of first quarter 2021, 100% of the allocated budget (EUR 452.3 million on the period 2014-2020) has been committed through projects and other actions pursuing the Programme's objectives; 67% of the total budget (i.e. EUR 305.3 million) has been paid to participants/beneficiaries or for the procurement of services necessary for the implementation of the Programme. Outstanding payments (33% of the budget or EUR 147 million) account for projects or actions launched in the last 2-3 years which are not yet completed and therefore have not led to final payments by the Commission.

Objective 1: promote health, prevent diseases, and foster supportive environments for healthy lifestyles:

34 % of the overall Programme budget. From those, EUR 8 million were spent on cancer, inter alia to support screening programmes in MS, improve the quality of patients' lives, address survivorship issues, look into the impact of research in cancer and the uptake of innovative treatments; EUR 11 million were channelled towards the prevention of major risk factors i.e. on alcohol and tobacco control, physical activity and nutrition. Other activities addressed the prevention of chronic diseases, including through the promotion of uptake of validated best practices across the EU in cardiovascular disease or diabetes prevention.

Objective 2: protect Union citizens from serious cross-border health threats:

10 % of the overall budget; more than EUR 14 million were spent for projects to ensure that EU Member States are well prepared to respond to a possible major health threat. These included several table top or other types of exercises addressing generic preparedness; capacity building actions such a quality assurance for diagnostic capacity, as well as specific activities addressing the air transport and shipping sectors. They also included several actions supporting Member States in addressing the challenges of the migratory crisis of 2015-2016.

Objective 3: support public health capacity-building and contribute to innovative, efficient and sustainable health systems:

27 % of the operational budget. From those, EUR 30 million were invested in the collaboration on Health Technology Assessment, to develop commonly agreed tools and procedures, as well as carrying out joint assessments or early dialogues, in an approach recognizing the full life cycle of health technologies. Other actions supported the exchange of experience and best practices in addressing the ageing of the population, promoted integrated care models and practices (Joint Action on implementation of digitally enabled integrated person-centred care – JADECARE was launched in autumn 2020 and will run for three years) or supported the EU eHealth network in promoting the uptake of digital solutions. The Joint Action on health information helped to streamline and harmonise health information activities across Europe by working towards building a sustainable and solid infrastructure on EU health information and to enhance coherence and sustainability.

Objective 4: facilitate access to better and safer healthcare for Union citizens:

27 % of the overall budget. From that, EUR 26 million were invested for set up cost and coordination of the European Reference Networks, including through the assessment of the networks and their healthcare provider members. The effort to jointly address the effects and challenges of increased anti-microbial resistance and healthcare acquired infections; the support to the Member States' collaboration in the area of blood, tissues and cells; and rare diseases were key priority areas of the health programme spending.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The EU4Health programme was adopted on 24 March 2021, at a time when national health systems were facing unparalleled threats due to the COVID-19 pandemic. The programme brings an unprecedented level of EU investment (EUR 5.3 billion during 2021-27) to respond to the COVID-19 pandemic, but also to reinforce EU and Member States crisis preparedness and to EU's long-term response to health challenges by building stronger, more resilient and more accessible health systems.

The EU4Health Programme is one of the main instruments of the European Union to implement its policy objectives in the area of health and to pave the way towards a European Health Union.

The EU4Health Programme supports the implementation of Union priorities such as the fight against the COVID-19 pandemic, the establishment of European Health Emergency Preparedness and Response Authority ('HERA'), the Europe's Beating Cancer Plan, the Pharmaceutical Strategy for Europe and the implementation of Union health legislation.

The annual work programmes set out the priorities and actions for the year, including the resource allocation, for the implementation of the EU4Health Programme.

According to the Programme Regulation, health promotion and disease prevention actions are at focus, at least 20% of the programme's funding will be dedicated to this area. A maximum of 12,5 % of the amounts shall be reserved for complementing national stockpiling of essential crisis-relevant products at Union level; as well a maximum of 12,5 % shall be reserved for supporting global commitments and health initiatives; and a maximum of 8 % of the amounts shall be reserved for covering administrative.

The year 2021 was the first year of implementation of the programme, and the 2021 work programme was adopted only 3 months after the adoption of the legal base. In this year the processes for ensuring the functioning of the programme were put into operation:

- engaging with the Member States in the EU4Health Steering Group to identify the priorities and strategic orientations for the 2021 and 2022 annual work programmes;
- consulting stakeholders on the needs to be addressed through these annual work programmes, and informing the European Parliament on the outcome of the proceedings of the EU4Health Steering Group and of the stakeholder outreach activities;
- identifying and coordinating synergies and complementarities with other EU spending programmes, funds and initiatives; preparing agreements for association of interested Third Countries to the funding activities.

As well, in 2021 work programme actions have been included for key initiatives such as the preparations for the European Health Emergency Preparedness and Response Authority (HERA) and the European Health Data Space (EHDS), as well as for supporting initiatives under Commission priorities such as the European Beating Cancer Plan and the Pharmaceutical Strategy for Europe.

the majority of the actions included in the work programme 2021 have been launched.

On 24 June 2021, three months after adoption of the EU4Health Regulation, following the consultation with stakeholders and a positive opinion of the EU4Health Programme Committee, the Commission adopted the 2021 work programme. This first annual work programme provided around EUR 312 million for targeted investments in health with the main focus on actions to strengthen

the EU's crisis preparedness and management of cross-border health threats (EUR 106.0 million), and on health promotion and disease prevention activities (EUR 104.1 million) that included actions implementing the Europe's Beating Cancer Plan, one of the major EU public health initiatives of the Commission.

On 14 January 2022, the second annual work programme for 2022 was adopted, making available for investment a significant budget of EUR 815.2 million.

3.1.2. Active programme performance

Under the 2021 Work Programme, the European Commission has invested about EUR 312 million in 2021 to progress toward the achievement of the EU4Health programme objectives and in line with EU the long-term vision for a healthier Europe.

More than one third of the funds (34.0%) were allocated to safeguard, prepare, and respond to future health crises. Under the **crisis preparedness strand**, also drawing from the experience of the COVID-19 pandemic, actions funded aim to enhance preparedness of Member States to future health crises; to address medicine shortages; to support clinical trials for COVID-19 therapeutics; to improve capacity to detect infectious diseases; and to prepare the European Health Emergency and Preparedness and Response Authority (HERA). This work is of paramount importance to protect the health of people.

Another third of the 2021 Work Programme budget (32.5%) is aimed at actions under the **disease prevention and health promotion strand**, including flagship initiatives of the Europe's Beating Cancer Plan on the prevention and detection of cancer, as well as to collect, share and implement best practices on health promotion and prevention of non-communicable diseases (NCDs) and related risk factors. In addition, the 2021 Work Programme supported the creation of a Disease Knowledge Gate and the implementation of the Tobacco Products Directive. These interventions will contribute to improving and fostering health in the Union, as well as to reduce inequalities, promoting healthy lifestyles and access to healthcare.

Actions on **health systems and health workforce** with a budget of EUR 68.5 million were directed towards the strengthening of national health systems, the implementation of the new Pharmaceutical Strategy for Europe, the implementation of the pharmaceutical and medical devices legislations and to improve the European Reference Networks (ERNs).

The **digital strand** has been allocated around EUR 32 million for the establishment of the European Health Data Space, involving the infrastructure and governance of primary and secondary use of data. Patient access and data interoperability will be supported. This a first critical investment for advancing the digital transformation of health systems to complement healthcare, and make it more effective.

2021 EU4Health Work Programme

	EUR Million	%
Crisis Preparedness	106.0	34.0%
Health promotion & disease prevention	101.4	32.5%
Health systems & healthcare workforce	68.5	22.0%
Digital	32.5	10.4%
Other	3.3	1.1%
TOTAL	311.7	100%

The programming has been finalised in a record time, and implementation is now following and on the good track for its finalisation.

Funds committed in the 2021 Work Programme have been mainly deployed via grants (51% of total budget) and procurement (47%); the remaining budget has been deployed in prizes and other activities and expenditure. The implementation of the majority of the EU4Health Programme, has been assigned to the newly established [European Health and Digital Executive Agency \(HaDEA\)](#), while DG SANTE has a role in managing the EU4Health programme and adopting the annual work programmes as well as implementing a smaller part of the EU4Health programme.

According to the information available in January 2022, the implementation of the EU4Health Work Programme 2021 was well advanced, with almost 100% of Grant procedures launched, and with 7.7% of procurement actions launched (as recorded at 31 December 2021). In the first months of 2022, almost all remaining procurement actions have been launched.

2021 EU4Health Work Programme

	EUR Million	%
Grants	159.8	51.3%
Procurement	145.9	46.8%
Prizes	0.4	0.1%

Other activities and expenditure	5.6	1.8%
TOTAL	311.7	100%

The EU4Health Programme has already in place a sound performance framework, developed by the Commission and stemming out from the list of performance indicators listed in Annex II to Regulation (EU) 2021/522 agreed by the European Parliament and the Council.

Those indicators are complemented by a more comprehensive set of indicators, as part of the monitoring and evaluation framework of the EU4Health Programme. For each action (i.e. grants, procurement or prizes), meaningful indicators are systematically included, as necessary and beneficiaries are requested to collect data for measuring and monitoring progress of implementation and for highlighting the key results achieved.

The Commission and HaDEA will ensure that data and information are available for these indicators timely and that are of sufficient quality and reliability; given limited resources, indicators are selected for ensuring that the data collection is also cost-efficient.

3.1.3. Previous Programme Performance

In line with the results of the mid-term evaluation of 2017, the Commission (DG SANTE) considers that the Health Programme has been performing well and has been effectively implemented, contributing to better health protection through its policies and activities, in accordance with Article 168 of the Treaty on the Functioning of the European Union. The programme has addressed efficiently the Commission priorities on the implementation of best practices for health promotion and diseases prevention, crisis preparedness and risk management, relevant information in the framework of the EU semester, mental health, and health and innovation.

In the period 2014-2020, the Court of Auditors published several reports assessing the implementation of the Health programme. In the Special report no 07/2019¹ on Cross-border healthcare access, the Court of Auditors mentioned: 'EU actions in cross-border healthcare enhanced cooperation between Member States. The Commission has overseen the implementation of the Cross-border Healthcare Directive well'. This Special report (SR 07/2019) also identified certain shortcomings and improvements to be made in terms of administrative burden reduction and long-term financial sustainability of the European Reference Networks (ERNs). In the ECA's Special report no 21/2019 on Addressing Antimicrobial resistance² it is emphasized that 'Fighting against antimicrobial resistance is complicated. The Commission and ECDC support to strengthen Member States One Health approach to antimicrobial resistance was valuable'. However, the Court observed challenges, particularly with regard to the sustainable implementation of the results in the Member States. These were addressed in the EU4Health programme, which includes actions for supporting the prudent and efficient use of medicinal products, in particular antimicrobials.

While reorienting and gearing a proportion of its resources towards fighting the covid-19 pandemic, the 3rd Health Programme continued the implementation of main actions under the programme with a view to enhancing and further consolidating key achievements over the implementation period 2014-2020.

A majority of indicators and sub-indicators (except one sub-indicator³) for assessing the performance of the Programme's general and specific objectives showed positive trends over the implementation period 2014-2020, with many of them meeting their targets set out for the year 2020. The performance indicators linked to the programme's specific objectives are relevant, measurable and realistic.

Objective 1: promote health, prevent diseases, and foster supportive environments for healthy lifestyles:

Indicator: number of Member States involved in health promotion and disease prevention, using evidence-based and good practices through measures and actions taken at the appropriate level in Member States

This composite indicator reached in 2020, the value of 24 for most of its components except for the one relating the European accreditation scheme for breast cancer for which the number of involved Member States was 6.

Objective 2: protect Union citizens from serious cross-border health threats:

Indicator: number of Member States integrating coherent approaches in the design of their preparedness plans

This indicator reached its highest value of 28⁴ in 2020.

Objective 3: support public health capacity-building and contribute to innovative, efficient and sustainable health systems:

¹ https://www.eca.europa.eu/Lists/ECADocuments/SR19_07/SR_HEALTH_CARE_EN.pdf

² https://www.eca.europa.eu/Lists/ECADocuments/SR19_21/SR_Antimicrobial_resistance_EN.pdf

³ **Indicator** : number of Member States involved in health promotion and disease prevention, using evidence-based and good practices through measures and actions taken at the appropriate level in Member States, **Sub-indicator: Cancer**

⁴ UK included

Indicator: advice produced and the number of Member States using the tools and mechanisms identified in order to contribute to effective results in their health systems

This composite indicator reached in 2020 the value of 41 for the number of advice produced and 23 for the number of Member States using the tools and mechanisms identified in order to contribute to effective results in their health systems.

Objective 4: facilitate access to better and safer healthcare for Union citizens:

Indicator: number of European reference networks established in accordance with Directive 2011/24/EU; number of healthcare providers and centres of expertise joining European reference networks; number of Member States using the tools developed

This composite indicator reached in 2020, 30 for the number of European reference networks established in accordance with Directive 2011/24/EU, 1185 for the number of healthcare providers and centres of expertise joining European reference networks; and 28 for the number of Member States using the tools developed.

The following actions corresponding to the Commission priorities⁵ were taken:

(i) Health security and Covid-19

The Commission steered running actions in the area of health security to contribute to the fight against the pandemic. Key examples are: the [Joint Action Healthy gateways](#) supports the coordination among EU countries to improve capacity for combating cross-border health threats at points of entry, including ports, airports and ground crossings, and the [Joint Action on Strengthened International Health Regulations and preparedness \(SHARP\)](#)⁶ which collaborated with the European Centre for Disease Prevention and Control (ECDC) [EVD-LabNet \(Emerging Viral Diseases-Expert Laboratory Network\)](#) in ensuring quality control and capacity building for precise diagnostics at an early phase of the pandemic and demonstrated the importance of using laboratory networks as a preparedness and response tool.

(ii) Vaccination

Vaccination was already high on the EU political agenda before the emergence of COVID-19. Previous work carried out in this area demonstrated the added value of EU cooperation in this area.

In December 2019, the Health Programme launched a study **on an EU citizens' vaccination card**. The proposed templates resulting from this study are tested in a sample of 10 000 citizens per country across 10 Member States, this pilot testing covering a potential population of more than 200 million citizens. In 2020, the **Joint Action on Vaccination** focused specifically on vaccine hesitancy and uptake, identified by the WHO in 2019 as one of ten top health threats to global health and included in the Commission's roadmap on strengthening cooperation against vaccine preventable diseases.

Four projects were launched in 2021 on improving vaccination access and uptake. The IMMUNION project (Improving IMMunisation cooperation in the European UNION) focuses on increasing vaccine uptake and contributing to the 2018 Council Recommendation on vaccination while also adding value to EU and national initiatives - particularly the Coalition for Vaccination.

(iii) Implementation of best practices for health promotion and diseases prevention:

The online 'best practice portal' was launched in April 2018. Since June 2018, it counted more than 6 650 visitors from all EU Member States as well as neighbouring countries. Portal visitors can access good practices collected by previous Health Programme actions. Stakeholders can also submit a practice for evaluation.

As of 2020, more than 12 selected best practices are implemented across 75% of the EU countries, in areas such as integrated care; mental health and the fight against depression; nutrition and physical activity; prevention of alcohol abuse or chronic disease prevention and management. A joint action with EU countries was launched on the exchange and implementation of best practices in the field mental health, in particular regarding suicide prevention and the reform of mental health services.

Actions in the field of nutrition delivered important outputs and tools, justifying the need for public health decision makers to invest in prevention rather than cure. A review of the available evidence for cost-effective prevention interventions has identified the food reformulation as the 'best value for money' action to improve nutrition patterns. The Programme also supported the development of a database of nutritional information on processed food and drink products on the market in 16 Member States.

Actions to promote health and to prevent diseases also included the launching of a joint action with EU countries⁷ on the exchange of best practices for the implementation of the Tobacco Products Directive (2014/40/EU)⁸ and e-cigarette regulation.

(iv) The establishment of 24 European Reference Networks (ERNs):

⁵ Priorities are defined in the recent annual work programmes of the 3rd Health Programme and in

⁶ The JA SHARP supports coordination among EU reference laboratories to prevent, detect and respond to biological outbreaks, chemical contamination and environmental and unknown threats to human health

⁷ 'EU countries' includes all countries participating in the Third Health Programme.

⁸ [EUR-Lex - 32014L0040 - EN - EUR-Lex \(europa.eu\)](#).

ERNs are virtual networks involving healthcare providers across Europe. They aim to tackle complex or rare medical diseases or conditions that require highly specialised treatment and a concentration of knowledge and resources. To review a patient's diagnosis and treatment, ERN coordinators are convening a 'virtual' advisory board of medical specialists across different disciplines, using a dedicated IT platform and telemedicine tools. This way, the medical knowledge and expertise travel rather than the patients.

Using the clinical patient management system (CPMS), the members of the ERNs have already been able to consult, explore, diagnose and decide on cases of particular complexity. In February 2019, the ERNs had used 458 panels to discuss 444 patient cases, and the number of cases opened in the CPMS regularly evolves (see for example <https://ec.europa.eu/avservices/video/player.cfm?sitelang=en&ref=1164244>).

The first ERNs are up and running since March 2017. During the current MFF 2021-2027, as the ERNs reach full capacity, thousands of EU patients suffering from a rare or complex condition can expect to benefit. In addition, several networks received co-funding to set up disease and patient registries, building on the clinical patient management system provided through the DG SANTE IT platform.

(v) Crisis preparedness and management:

In 2018, the Joint Action EMERGE – Efficient response to highly dangerous and emerging pathogens at EU level – has delivered on its work for the improvement of capabilities for rapid laboratory diagnosis of new or emerging pathogens (e.g. sample sharing). The Joint Action also contributed to combating the outbreaks of ZIKA and Ebola.

The Health Programme is also playing a crucial role in addressing Antimicrobial Resistance (AMR), by defining common approaches to fight AMR and to control healthcare-associated infections in line with ongoing EU and international policies.

Funded under the AWP 2017 (EU contribution of EUR 6.9 million) the Joint Action on Antimicrobial Resistance and Healthcare-Associated Infections (EU-JAMRAI) supports EU Member States in developing and implementing effective one health action plans against antimicrobial resistance (AMR) and healthcare associated infections (HCAI).

(vi) State of Health in the EU - (1) Country Health Profiles 2019 and (2) Health at a Glance 2020: Europe

On 28 November 2019, the European Commission published 30 *Country Health Profiles* delivered as part of the *State of Health in the EU* cycle. The accompanying 'Companion Report' (a Commission Staff Working Document) and factsheet flagged five key challenges faced by EU health systems:

- Tackling the decline in vaccination confidence across the EU,
- Harnessing the digital transformation of health promotion & disease prevention,
- Strengthening the evidence base on access to healthcare,
- Shifting tasks and changing the skill mix to explore new ways of providing care,
- Breaking down silos for safe, effective and affordable medicines.

Several of these are closely linked to objective 3 of the Health Programme and to the key priorities of the 2019-2024 Commission as set out in the mission letter to Commissioner Kyriakides. Several of these actions were supported by the 3rd Health Programme (see below sections on health and innovation, vaccination and access to medicines).

In November 2020, the European Commission and the OECD published *Health at a Glance: Europe 2020*, which the first comparative study on how European countries have experienced and responded to the COVID-19 pandemic.

Delivered under the *State of Health in the EU* grant⁹, the joint EC-OECD report provided a much-needed preliminary assessment of the effectiveness of European countries' COVID-19 containment and mitigation measures; health systems capacity; testing strategies; measures to protect vulnerable groups; and continuity of care for non-COVID patients. The report provides policymakers with high-quality evidence and emerging insights on how to develop more effective health policy interventions to build greater resilience in the short and the long term.

In addition to the chapter assessing countries' resilience to the COVID-19 crisis, the 2020 edition of *Health at a Glance: Europe* provides an assessment of the health impact of air pollution on EU citizens. Lastly, the report also provides comparative analyses of the health status, risk factors, health expenditure, quality and access to care in 36 European countries.

(vii) Accessible and affordable medical technologies:

The *State of Health in the EU's* 'Companion Report' raised the issue of access to affordable medical technologies whether pharmaceutical products or medical devices, as being essential for the sustainability and resilience of health systems. This is a challenging area, combining implementation of legislation (notably for medical devices); common if not harmonized life-cycle

⁹ The *State of Health in the EU* cycle was created in 2016 with a view to develop "expertise on performance assessments of health systems, [...] and build up country-specific and cross-country knowledge which can inform health policies at national and European level - including the work of the European Semester of economic policy coordination".

based assessment methods; shared information and expertise on pricing and procurement methods, including joint procurement or other collaboration mechanisms.

The contribution of the health programme is important in this area, through the following:

- It supports the work of civil society and the contribution to the EU level policy dialogue in this field of stakeholder organisations, through the operating grants awarded to Health Action International; the European Public Health Alliance; and the European Organisation of Rare Diseases Associations.
- It provides continuing financial support to the work of the EUnetHTA 3 Joint Action: The piloting of the EU cooperation on Health Technology Assessment has proven successful. By the end of 2019, the EUnetHTA 3 Joint Action carried out 27 joint reports (13 assessments and 14 early dialogues).
- A service contract was concluded in 2021 for the provision of joint Health Technology Assessment (HTA) work supporting the continuation of EU cooperation on HTA. The scope of this tender is to address the existing methodological issues in order to foster joint work on HTA, while also supporting EU co-operation on HTA beyond the end of the Joint Action EUnetHTA. Therefore, this service provides relevant input for a potential new legal framework on HTA.

In particular, the tender shall lead to the further development of HTA methodology applicable to both Joint Clinical Assessments and Joint Scientific Consultations, a task of high significance in areas where divergent opinions persist. Furthermore, the HTA tender shall continue and advance work undertaken under the Joint Action EUnetHTA, through the coordination of the above-mentioned joint activities, the interaction with stakeholders' representatives (i.e. patients, health professionals and industry), academia and relevant EU/international organisations and initiatives on HTA.

viii) Digital innovation – paving the way to a European health data space

The Commission aims to support EU Member States in making the most of the potential of e-health to provide high-quality healthcare and reduce inequalities. Key to achieving this aim is the creation of a 'European Health Data Space', to promote health-data exchange and support research on new preventive strategies, as well as on treatments, medicines, medical devices and outcomes. The Joint Action TEHDAS (The European Health Data Space) was launched, with 25 participating countries, to facilitate the establishment of a European Health Data Space, a critical step for data sharing in the domain of health.

ix) Supporting the implementation of the new medical devices regulations

The Commission aims to support EU Member States in making the most of the potential of e-health to provide high-quality healthcare and reduce inequalities. Key to achieving this aim is the creation of a 'European Health Data Space', to promote health-data exchange and support research on new preventive strategies, as well as on treatments, medicines, medical devices and outcomes. The Joint Action TEHDAS (The European Health Data Space) was launched, with 25 participating countries, to facilitate the establishment of a European Health Data Space, a critical step for data sharing in the domain of health.

ix) Supporting the implementation of the new medical devices regulations

In 2019, through service contracts, the first communication and information campaign on Medical Devices was implemented, informing stakeholders about the legislative changes brought by the new EU legislation on Medical Devices and in-vitro Diagnostic Medical Devices which will enter into force in May 2020. The campaign mapped all relevant stakeholders, numbering more than 2000 contacts in and outside the EU. It produced eight informative factsheets translated in all EU languages, as well as in Chinese, Japanese and Arabic. The campaign also comprises the organisation of webinars addressed to stakeholders as well as other information material in a layman language.

In 2019, the Joint Action on Market Surveillance of Medical Devices (JAMS) came to its end, yielding significant added value by reinforcing the market surveillance system for medical devices and improving coordination and cooperation among all European Union's countries.

SCHEER (Scientific Committee on health, environmental and emerging risks) is providing the Commission with risk assessment and scientific advice on medical devices (like hip implants, breast implants, phthalates used in medical devices...).

x) Addressing health inequalities

The Joint Action on Health Equity (JAHE), funded under the 3rd Health Programme 2014-2020 has been an important opportunity for Member States to work jointly to address health inequalities and achieve greater equity in health outcomes across all groups in society, in all participating countries and in Europe at large. The general objective of this initiative is to improve health and well-being of European citizens across all groups in society. It also has a specific focus on both vulnerable groups and migrants.

xi) Tobacco control (JATC and JATC2):

In 2020 the Joint Action on Tobacco control (JATC) produced key deliverables fostering an harmonised implementation of the Tobacco products' directive across the EU: it mapped the implementation's state of play across the EU; it conducted a needs assessment identifying the areas of support for national competent authorities; it assessed the laboratory testing capacity of national regulators; it looked at emerging trends and new challenges, such as the electronic cigarettes; it reviewed the system of enhanced reporting of additives; and it developed guidelines both on the technical and legal dimensions for improving data sharing and

exchange from the EU-CEG across the Member States. The Health Programme also supported the **EU tobacco tracking and tracing system**, in cooperation with WHO and is implementing the development of a set of automatic alerts, exploiting the massive amount of traceability data so as to identify fraud patterns, suspicious behaviours and spot possible fraudsters¹⁰.

These actions were followed in 2021 by the launching with EU countries¹¹ of a joint action (JATC2) on the exchange of best practices for the implementation of the Tobacco Products Directive (2014/40/EU)¹² and e-cigarette regulation.

Amongst others, JATC2 aims to ensure greater consistency in the application of the Tobacco Products Directive to ensure a fair internal market for tobacco and related products, especially regarding market surveillance and enforcement. In that direction, it will identify and assess the existing legal framework regarding tobacco advertising and advertising of emerging products.

xii) *Facilitating access to better and safer healthcare for Union citizens*

A study supporting the impact assessment of the revision of Directive 2002/98/EC on safety and quality of human blood and blood components and of Directive 2004/23/EC on safety and quality of human tissues and cells and of their implementing acts was launched. The duration of the contract is nine months and the scope of the study is to support the European Commission in preparing an impact assessment supporting the Revision of the Union legislation on blood, tissues and cells.

The specific objectives are to:

- Provide a description of the baseline. Moreover, to summarize the key elements of the evaluation and complement the problem definition by gathering and analysing evidence on borderline technologies/therapies and the impact and lessons learned from the COVID-19 pandemic.
- Measure the likely economic, social and environmental impacts of each of the options. A preliminary identification of the key impacts is in section 1.6. of the study.
- Analyse the effectiveness, efficiency and coherence of policy options in order to achieve the objectives of the revision.

xiii) *Cooperation with Member States through joint actions*

To complement the above actions, a joint action was launched in 2021 on Increasing the capacity of National Focal Points to provide guidance, information and assistance to national applicants on the EU4Health programme and other EU funding instruments, and another joint action addressing the Differences in national implementation of the General Data Protection Regulation (GDPR) in the health sector-Development of a code of conduct for data processing.

Main achievements of the Health programme:

- Following the outbreak of the covid-19 pandemic in the first quarter of 2020, the Programme's on-going actions have been reoriented in emergency mode, towards combatting the pandemic. For example, the Healthy Gateways Joint Action¹³ organised training courses for trainers and specific webinars, providing guidance including questions and answers on points of entry and borders. The SHARP Joint Action¹⁴ (Strengthened International HeAlth Regulations and Preparedness in the EU) supported laboratory diagnostics for covid-19, and mapping the current existing facilities and clinical capacities. In addition to the Health Programme, and in the context of the Joint Procurement Agreement to procure medical countermeasures¹⁵ DG SANTE launched, in emergency mode, joint procurements for protective personal equipment (PPE), for ventilators/respirators, laboratory equipment, covid-19 treatments and vaccines.
- In April 2018 DG SANTE launched the online 'best practice portal'. Since June 2018, it counted more than 6 650 visitors from all EU Member States as well as neighbouring countries.
- Efficient response to highly dangerous and emerging pathogens at EU level (Joint Action EMERGE) and improvement of capabilities for rapid laboratory diagnosis of new or emerging pathogens (e.g. Ebola, Zika).
- Four projects funded in 2021 targeting the increase vaccination uptake. Three of them were focused on increasing access to vaccination for disadvantaged, isolated, difficult-to-reach groups and newly arrived migrants (taking into account a life-course approach). The fourth project ActToVax4Nam (Increased Access To Vaccination for Newly Arrived Migrants), targets exclusively newly arrived migrants – in first-line, transit and destination countries – and aims to make access to vaccination equitable and guaranteed.
- The establishment of 24 European Reference Networks (ERNs), which are providing greater access to high quality healthcare and information, accurate diagnosis and appropriate treatment to patients affected by rare or low prevalence diseases. In this first phase (2017-2018), ERNs include more than 900 highly specialised healthcare providers in 300 hospitals across the EU.

¹⁰ The current COVID-19 related restrictions are impacting progress in this work: the contractor cannot access the data room located in the Commission premises

¹¹ 'EU countries' includes all countries participating in the Third Health Programme.

¹² [EUR-Lex - 32014L0040 - EN - EUR-Lex \(europa.eu\)](https://eur-lex.europa.eu/lexuris/ui/entry.do?uri=EUR-Lex%3A32014L0040-EN-EN).

¹³ www.healthygateways.eu

¹⁴ www.sharpja.eu

¹⁵ https://ec.europa.eu/health/preparedness_response/joint_procurement_en

- In 2020 DG SANTE concluded a new call for expression of interest for healthcare providers (HCPs) wishing to join ERNs. CHAFEA subsequently launched a request for services to the Independent Assessment Bodies (IABs) to assess the compliance of the HCPs with the criteria included in the relevant EU legislation.
- 2020 also marked an acceleration of the work on patient registries within the ERNs, in line with the digital innovation priority: EUR 3,8 million were allocated through 19 grants.
- Effective evaluations and studies conducted: in 2020, DG SANTE/CHAFEA launched a request for services to prepare the impact assessment of the legislation on blood tissues and cells (BTC). An evaluation of this landmark legislation was carried out in 2019, leading to specific recommendations for its revision. CHAFEA signed two important service contracts targeting Antimicrobial resistance addressing both human and animal dimensions of the problem under the 'One Health' strategy. A review of the available evidence for cost-effective prevention interventions has identified the food reformulation as the 'best value for money' action to improve nutrition patterns. A service contract was concluded in 2020 to develop a database of nutritional information on processed food and drink products on the market in 16 Member States. This work is complemented by a second study which will map fiscal measures and pricing policies applied to alcohol and products high in fat, sugar and salt (HFSS), including non-alcoholic beverages. The study 'Support for the health workforce planning and forecasting expert network - SEPEN' concluded that 75% of EU countries have health workforce planning systems in place; but that their focus remains limited to planning medical professions (GPs, medical specialists), while an innovative approach would require an enlarged scope of planning, encompassing all five sectoral health professions (physicians, dentists, nurses, midwives, pharmacists). The tender on a EU citizens' vaccination card, started in December 2019 has already completed the mapping (both form and content) of existing vaccination cards and the development of three card templates (paper and digital). Currently, the proposed templates are being tested in a sample of 10 000 citizens/country across 10 Member States, this pilot testing covering a potential population of more than 200 million citizens.
- Establishment of an EU quality register ensuring the safety of medical devices.
- Establishment of an Organ Database, which has helped 34 000 transplants only in 2017.
- Set up of an EU-wide tobacco tracking and tracing system to combat illicit tobacco products trafficking.
- Second joint action on tobacco control (JATC2) was launched in order to facilitate the exchange of good practices between the Member States, therefore, aiming to improve the implementation of the Tobacco Products Directive (2014/40/EU)¹⁶ as well as implementing and delegated acts relating to e-cigarette regulation.
- Service contract signed for the provision of joint Health Technology Assessment (HTA) work supporting the continuation of EU cooperation on HTA. The scope of this tender is to address the existing methodological issues in order to foster joint work on HTA, while also supporting EU cooperation on HTA beyond the end of the Joint Action EUnetHTA. Therefore, this service provides relevant input for a potential new legal framework on HTA.
- Study supporting the impact assessment of the revision of Directive 2002/98/EC on safety and quality of human blood and blood components and of Directive 2004/23/EC on safety and quality of human tissues and cells and of their implementing acts with a view to preparing an impact assessment supporting the Revision of the Union legislation on blood, tissues and cells.

The experience from the ongoing Covid-19 crisis has demonstrated that the EU must improve health systems ready to provide state of the art services and care and to be prepared to cope with epidemics and other unforeseeable challenges.

The crisis showed for instance the importance of testing, contact tracing and public health surveillance as essential aspects of preparedness and response. It also uncovered the need for a smooth functioning single market and access to personal protective equipment, medicines and medical devices. Another the key lesson learned was that, whilst physical infrastructure could be expanded, the most pressing need became the availability of healthcare staff that were competent within intensive care units. In some instances, health care service reservists and medical students were called in and, where needed, rapid training was provided.

Maintaining rapid access to surge public health capacities, without neglecting other areas of healthcare is therefore essential, as well as non-pharmaceutical countermeasures, support to vulnerable groups (elderly, those with underlying health conditions, socially marginalised) and equitable access to vaccines.

Overall, the crisis spotlighted the fragility of the national and local health systems and the need for a coordinated strong action at Union level in complementing the health policies of the Member States in order to improve people's health throughout the Union and ensure that public health protection is taken into account in all Union policies.

3.2. Key achievements

¹⁶ [EUR-Lex - 32014L0040 - EN - EUR-Lex \(europa.eu\)](https://eur-lex.europa.eu/lexUri.do?uri=CELEX:32014L0040-EN)

Member States using the tools and mechanisms identified in order to contribute to effective results in their health systems	contacts with stakeholders in and outside the EU informing them about the legislative changes brought by the new EU legislation on Medical Devices and in-vitro Diagnostic Medical Devices which entered into force in May 2020	Joint Actions with the Member States reoriented in emergency to contribute to the fight against the Covid-19 pandemic

EUR 100 million	EUR 100 million	EUR 70 million
was dedicated to investment in crisis preparedness . The WP 2021 addressed the lessons learnt during the COVID-19 pandemic and provides EUR 106.0 million for shoring up MS preparedness against health crises	was afforded to support a decisive action against cancer . Cancer is among the main causes of death in the EU and with the WP 2021 the EU4Health brings a EU contribution of EUR 101.4 million to reduce the impact of cancer, also supporting actions presented in Europe's Beating Cancer Plan	was made available for joint actions with MS . In the Work Programme 2021, EUR 69.3 million have been made available for projects aimed to reinforce involvement and cooperation among Member States on health challenges, maximizing the impact for all European citizens

3.3. Evaluations, studies and reports

The Mid-term evaluation of the 3rd Health programme 2014-2020 was published in the Commission Report to the European Parliament and to the Council COM(2017) 586 final. The conclusion was that implementation of the Programme was on track, in alignment with the Commission’s main priorities under Article 168 TFEU and the SDG, striving to maximise synergies with other EU policies and financial instruments such as Horizon 2020. All thematic priorities remained valid and most actions delivered useful outcomes with high EU-added value, in particular for crisis management and for the safety and security in Europe.

The open public consultation provided strong support for continued cooperation through the Programme, particularly in areas such as health promotion, disease prevention and eHealth.

The Staff Working Document SWD(2017) 331 final accompanies the Commission’s report on the mid-term evaluation. It presents the main findings based on an independent external study conducted from May 2016 to May 2017.

The mid-term evaluation recommended to maintain a focus on thematic areas with strong EU added value (e.g. European Reference Networks – ERNs; Health Technology Assessment – HTA) and to strengthen the delivery of results in these areas. It also

suggested to refine the thematic priorities, as part of continuing effort to focus programme spending, and in the longer term to streamline thematic priorities, so as to avoid overlaps or redundancies. As regards programme management, the mid-term evaluation recommended to integrate multi-annual planning with existing programme processes and to refine the EU added value criteria so as to fully integrate them into the programme application processes. This should help potential applicants and assessment panels to build a common understanding of the EU added value criteria. The recommendations also addressed, inter alia, the necessity to develop a broader strategy to increase participation from lower GNI¹⁷ countries and from underrepresented organisations; the need to invest in resources for improvement of systems for programme implementation monitoring; the implementation and use programmatic and action-specific indicators; the rolling out of the newly communication strategy towards core stakeholders and wider audiences.

The conclusions of the evaluation were used to improve the implementation of the Health Programme in 2018-2020 and serve as a basis for the new Health Programme.

The evaluation indicated that major achievements were:

- establishing 24 European Reference Networks;
- supporting Member States to increase their capacity-building to respond to outbreaks (e.g. Ebola and Zika viruses);
- contributing to the EU's migration policy by supporting Member States to respond to the health needs of high influx of migrants and refugees;
- training health professionals and other front-line staff.

Other achievements of the health programme included exchanges of good practice in areas as diverse as alcohol reduction, cancer screening, HIV/AIDS and TB prevention, additional support for EU health legislation on medicinal products and medical devices, the eHealth Network activities and Health Technology Assessment.

A significant progress represented the joint work with the OECD and the European Observatory on Health Systems and Policies. This collaboration brought together internationally renowned expertise in the State of Health in the EU cycle to strengthen country-specific and EU-wide knowledge on health issues.

Compared to the second Health Programme, the 3rd Health programme design took a more strategic view of a mid-term perspective and has demonstrated its value as an effective and flexible management tool capable of covering unforeseeable needs (refugees' crisis).

The external mid-evaluation of the 3rd Health programme 2014-2020 ('3HP') concluded that the programme complemented and supported to the policies of Member States, in terms of improving the health of EU citizens and reducing health inequalities. The 3HP represented a major improvement. The new structure has increased the Health Programme's ability to target important health needs where it can add value (such as anti-microbial resistance and 'e-Health' in the context of the digital single market to name just a few). It demonstrated efforts to identify common, structural challenges facing Member States. The mechanisms for pooling expertise at EU level and supporting MS in their health reforms have been set up (namely the Expert Panel on Health and the Expert Group on Health Systems Performance Assessment) and the 3HP was providing direct financial support to the OECD and WHO to produce country profiles, giving a clear understanding of country specific needs. This focus was recognised by Member States: the consultation of Programme committee members and national focal points representing Member States' interests confirmed the 3HP structure matches the main health challenges in their country.

The Commission has launched the final (ex-post) evaluation of the 3HP, which will assess the relevance of its objectives, the added value of its actions, whether the programme delivered effectively and efficiently against its intended objectives, the coherence of the actions within the programme and of the whole programme with other relevant EU initiatives. The results of the evaluation are expected in the fourth quarter 2022.

The final evaluation of 3HP will also follow up on how the recommendations from its mid-term evaluation (2016) were taken into account and its results will serve as input to the implementation of the successor health programme (EU4Health Programme) over the period 2021-2027.

The Commission concluded in 2021 a service contract for the study supporting the final evaluation of 3HP. The inception phase of the study (July-September 2021) enabled to provide input to the contractor (scoping interviews with a number of Programme stakeholders and with relevant Commission/DG SANTE services), to refine the methodologies and to set up a data collection strategy.

From September 2021, the second phase of the study consisted of desk reviews and preparation of the field work, including consultation activities and the definition of themes and sub-themes for case studies to be included in the study. It has been followed in February 2022 by field work (open public consultation – OPC, targeted stakeholder surveys, stakeholder interviews, focus groups) and by data collection and validation. The analytical phase of the study will start in May 2022, enabling to draw conclusions and to reply to the evaluation questions included in the technical specifications of the study.

¹⁷ Gross national income

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Supporting actions for disease prevention, for health promotion and for addressing health determinants

Indicator 1: Actions contributing to the reduction of avoidable mortality in the area of non-communicable diseases and risk factors

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									1
0	Actual Progress									Final
Are we on track :										

Indicator type	Output
Unit of measurement	Number
Cut-Off Date	24/06/2021
Data source	DG SANTE
Link to the objective	GO: Improve & foster health SO: Health promotion & disease prevention; including cancer
Link MFF 14-20 / MFF 21-27	
Other methodological comments	This indicator has to be interpreted as a proxy of the investments in the field area. Due to the governance of the programme, the number of actions that are going to be included in each annual Work programme could not be estimated; however, the base numbers will emerge over the implementation of the programme. The target 1 indicates an ambition for progress and that the programme has funded action(s) in the field area.

Link MFF 14-20 / MFF 21-27	
Other methodological comments	This indicator has to be interpreted as a proxy of the investments in the field area. Due to the governance of the programme, the number of actions that are going to be included in each annual Work programme could not be estimated; however, the base numbers will emerge over the implementation of the programme. The target 1 indicates an ambition for progress and that the programme has funded action(s) in the field area.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 15: Actions addressing environmental risk factors for health

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									1
	Actual Progress									Final
Are we on track :										

Indicator type	Output
Unit of measurement	Number
Cut-Off Date	24/06/2021
Data source	DG SANTE
Link to the objective	GO: Improve & foster health SO: Health promotion & disease prevention; including cancer
Link MFF 14-20 / MFF 21-27	
Other methodological comments	This indicator has to be interpreted as a proxy of the investments in the field area. Due to the governance of the programme, the number of actions that are going to be included in each annual Work programme could not be estimated; however, the base numbers will emerge over the implementation of the programme. The target 1 indicates an ambition for progress and that the programme has funded action(s) in the field area.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Specific Objective 3: Enhancement of availability, accessibility & affordability of medicinal products, medical devices and crisis-relevant products

Indicator 1: Access to centrally authorised medicinal products: existing and new orphan authorisations

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									Progress
97										
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	

Data source	European Medicines Agency (EMA)
Link to the objective	GO: Access to medicinal products & medical devices SO: Enhancement of availability, accessibility & affordability of medicinal products, medical devices and crisis-relevant products
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Authorisation of new medicines is essential to advancing public health as they bring new opportunities to treat certain diseases; they represent significant progress in their therapeutic areas. This indicator has to be interpreted as a context indicator i.e. it gives information about the situation and its evolution; this indicators has no direct link with the funded actions and it could not be possible to estimate an "expected value". The most appropriate target is a trend, while zero is not a realistic target. The target will be refined along implementation. In 2020, EMA recommended 97 medicines for marketing authorisation. (2020 Annual report)
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: Access to centrally authorised medicinal products: Advanced therapy medicinal products (ATMPs) - Requests

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									Progress
74	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	
Data source	European Medicines Agency (EMA)
Link to the objective	GO: Access to medicinal products & medical devices SO: Enhancement of availability, accessibility & affordability of medicinal products, medical devices and crisis-relevant products
Link MFF 14-20 / MFF 21-27	
Other methodological comments	ATMPs are medicines based on genes or cells that have the potential for ground-breaking new treatments. They are particularly important for severe, untreatable or chronic diseases for which conventional approaches have proven to be inadequate. This indicator has to be interpreted as a context indicator i.e. it gives information about the situation and its evolution; this indicators has no direct link with the funded actions and it could not be possible to estimate an "expected value". The most appropriate target is a trend, while zero is not a realistic target. The target will be refined along implementation. In 2020, EMA received 74 requests for ATMP classification. (2020 Annual report - Workload indicators)
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 3: Access to centrally authorised medicinal products: Paediatric Use Medicinal Products

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									Progress
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	
Data source	European Medicines Agency (EMA)
Link to the objective	GO: Access to medicinal products & medical devices SO: Enhancement of availability, accessibility & affordability of medicinal products, medical devices and crisis-relevant products
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Paediatric-use marketing authorisations - This indicator has to be interpreted as a context indicator i.e. it gives information about the situation and its evolution; this indicators has no direct link with the funded actions and it could not be possible to estimate an "expected value". The most appropriate target is a trend, while zero is not a realistic target. The target will be refined along implementation.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 4: EU Laboratory capacity index (EULabCap)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
7,8	Milestones									8
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Index
Cut-Off Date	
Data source	European Centre for Disease Prevention and Control (ECDC)
Link to the objective	GO: Access to medicinal products & medical devices SO: Enhancement of availability, accessibility & affordability of medicinal products, medical devices and crisis-relevant products
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The EULabCap index is produced by the EDC and indicates the average capability and capacity with regard to its public health microbiology system, the range of the index is defined as: low level (index value range: 0 to 5.9), intermediate level (6.0 to 7.9) and high level (8.0 to 10). The target is the minimum high level.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 5: Shortages of medicinal products in the Member States as reported through the single point of contact network

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
52	Milestones									Reduction
	Actual Progress									Final
Are we on track :

Other methodological comments	The difference with regard to 2018 is due to cleaning of duplicate records. The stabilisation of this indicator around 950, after reaching in 2017 the milestone set out for that year, can be explained by external factors linked with the ERNs' infrastructure and work procedures – first, Member States took much longer to endorse Affiliated Partners (which only joined during 2021) and secondly new members can only be accepted after a long assessment process (which is coming to an end in 2021).

6. The programme contribution to horizontal policies

6.1. Contribution to gender equality

6.1.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*: 318 Score 0: 11.1							

(*Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)
The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

Tagged as 0 because these are administrative and support horizontal expenditure which do not promote gender equality.

6.2. Contribution to the sustainable development goals

SDG 3 Ensure healthy lives and promote well-being for all at all ages

The Health Programme contributes to EU efforts to achieve the Sustainable Development Goals in health and well-being by supporting actions to implement the EU's political commitments and legal obligations in health and work towards Sustainable Development Goal 3 on health. Examples of such support included funding for operating grants to NGOs. Specific Grant Agreements were signed with 15 NGOs in 2020.

Four direct grant agreements were also concluded with international organisations, as follows:

- Three direct grant agreements were signed with the OECD, on best practices implementation; on patient reported outcomes and on pharmaceutical products' accessibility.
- One direct grant agreement was signed with the Council of Europe to support the European Pharmacopeia work.

In order to maximise collective EU work towards the WHO's nine voluntary targets on non-communicable disease and the UN Sustainable Development Goals for health and well-being, DG SANTE works through the Steering Group on Health Promotion, Disease Prevention and Management of Non-Communicable Diseases (SGPP).

In 2019, mental health good practices identified by the Steering Group were selected for scale-up and transfer (Suicide Prevention in Austria, Mental healthcare delivery system reform in Belgium, and European Alliance Against Depression).

In 2020, the SGPP launched two joint actions with member state involvement, notably on mental health and on nutrition.

At the Steering Group's formal meeting in September 2020, anti-microbial resistance (AMR), cancer, and access and availability of medical products, followed by prevention of non-communicable diseases (NCDs) were identified as a priority area for population-level health interventions and best practices. After the priority assigned to prevention of NCDs, the next three priorities relate to risk factors on tobacco, environmental determinants of health (notably pollution) and obesity. For these four risk factors, a Best Practice call was published at the end of 2020 in the Best Practice Portal. In addition, a Best Practice call on Primary Care was opened.

Other projects on health promotion and disease prevention launched included projects on cardiovascular disease prevention; the prescription of physical activity; and on the promotion of whole grain consumption.

HEADING 2B: Resilience and Values**Emergency support within the Union (ESI)****Lead DG: SANTE**

1. Overview**1.1. Challenges**

COVID-19, declared a pandemic by the World Health Organization (WHO) on 11 March 2020, led to an unprecedented loss of life in the Union. Member States have adopted exceptional measures to limit the spread of the virus with unprecedented consequences for society and the economy. National healthcare systems in particular have been, and still are, under severe strain and Member States were faced with urgent and high needs for medical supplies, treatments and vaccines, additional hospital beds and the reinforcement of the workforce.

On 14 April 2020, the Council adopted Council Regulation (EU) 2020/521 activating emergency support under Council Regulation (EU) 2016/369 to finance expenditure necessary to address the COVID-19 pandemic. Unlike other programmes, the Emergency Support Instrument (ESI) is activated independently of the multiannual financial framework for the period 1 February 2020 to 31 January 2022. EUR 2 700 000 000 were mobilised under the 2020 budget. Furthermore, by 15 December 2020 the Member States made contributions of a total of EUR 750 000 000 as external assigned revenue. As many Member States faced at the time a third wave of infections, including as a result of new variants emerging in the first quarter of 2021, the Commission proposed to reinforce the ESI in 2021 with an additional EUR 231 700 000 from the EU budget to finance actions such as the interoperability of EU Digital Covid certificates, an EU waste water monitoring system, the further development of the passenger locator form exchange platform and digital platforms, grants to Member States to support accessibility of tests for the delivery of EU Digital COVID certificates. The situation was evolving in 2021 with a fourth, fifth and, in some countries, sixth wave, and it was decided to allocate the remaining ESI funds for donating vaccines to third countries as well as for characterisation of the highly contagious omicron variant that appeared end November 2021.

1.2. Mission (General objectives)

The nature and consequences of the pandemic are large-scale and transnational, affecting all Member States given the quick spread of the virus and requiring a comprehensive response to allow the Union as a whole to address the crisis in a spirit of solidarity. Actions taken by the Member States alone, including with Union financial support under other Union instruments, are not sufficient.

The general objective is to provide needs-based emergency support, complementing the efforts of Member States aimed at preserving life, preventing and alleviating human suffering, and maintaining human dignity, wherever the need arises as a result of the pandemic.

The Emergency Support Instrument provides added value by directly supporting the Member States through targeted measures that can be deployed strategically and in a coordinated manner to deliver greater impact in mitigating the large-scale consequences of the pandemic.

1.3. Specific objectives

The legal base of the Emergency Support Instrument is designed to allow for a comprehensive and flexible response to the urgent, evolving and diverse needs during the pandemic. It therefore does not set out specific objectives but rather provides the EU with a broad toolbox to support Member States, with an indicative and non-exhaustive list of the actions which may be funded. In line with the legal base, the Commission cooperated closely with the Member States in the implementation of the instrument. The Commission regularly exchanged views with Member States on their needs and how these were being taken into account in programming, and informed them of the state of play of the actions to be financed by the instrument. This was done via written information, through the Permanent Representatives Committee (Coreper) and the Integrated Political Crisis Response (IPCR) meetings, as well as through dedicated meetings with Member States' contact points. The Health Security Committee, the eHealth Network and the Civil Protection Committee were also regularly engaged. This cooperation and exchange informed the choice of actions to be prioritised. The European Parliament was also kept informed.

1.4. Public intervention context

Article 5(1) TFEU provides for the EU to take measures to ensure that Member States coordinate their economic policies. The Emergency Support Instrument is based on Article 122(1) TFEU, which allows the Council, on a proposal from the Commission, to decide, in a spirit of solidarity between Member States, upon the measures appropriate to the economic situation, in particular if severe difficulties arise in the supply of certain products.

Under its legal base, the Emergency Support Instrument complements the efforts of Member States, in close cooperation and consultation with them, and only in exceptional circumstances where no other instrument available to Member States and to the Union is sufficient. The nature and consequences of the COVID-19 pandemic are large-scale and transnational and, therefore, require a comprehensive response. While the EU already benefits from other Union instruments to respond to different types of internal challenges, for example the measures provided for under the Union Civil Protection Mechanism (UCPM) established by Decision No 1313/2013/EU, rescEU or the Joint Procurement Agreement for medicines and medical equipment, these instruments are limited in scale and do not provide a sufficient response to address the exceptional and wide-ranging needs resulting from the pandemic.

The Union is better placed than Member States, acting alone and in an uncoordinated manner, to mobilise appropriate levels of financing and use them to implement operations of a potentially life-saving nature in an economic, efficient and effective manner by reason of its scale, speed of deployment or capacity to provide Union-level solutions to underpin cross-border cooperation. Given the unprecedented consequences of the pandemic for all citizens and all sectors of the economy and considering the need for rapid and efficient action as well as the complementarity of the emergency support provided, the instrument does not go beyond what is necessary to achieve its objective.

1.5. Actions

In line with the broad scope of possible interventions provided for by the legal base and its needs-based rationale, the Emergency Support Instrument is financing a strategically-chosen range of actions, reflecting the needs expressed by Member States during consultations with them, and focussed on response and increased preparedness and bringing fast, targeted and tangible impact with maximum EU added value. The following actions were allocated funding in 2021:

1. Vaccine instrument: to fund Advanced Purchase Agreements with COVID-19 vaccine developers (procurement).
2. Development of digital green certificates underpinning free movement of persons.
3. waste water monitoring.
4. further development of the Passenger Locator Form exchange platform
5. funding the purchase for donation to Member States of specialised RT-PCR assays for identifying variants under the existing facility for essential health-related products.

6. supporting accessibility of tests for the delivery of EU Digital COVID Certificates.
7. vaccine procurement in order to contribute to the global immunisation efforts against the COVID-19 in low and lower middle income countries.
8. grants to research institutes to analyse the characteristics of the Omicron variant.
9. revocation of false Digital COVID-19 certificates and supporting the continuity and good functioning the EU DCC system.

1.6. Delivery mode

The Emergency Support Instrument is centrally managed by the Commission and implemented very largely through direct management (grants (9%) and procurement (89%)), with around 2% of the funding being implemented through indirect management via the International Federation of the Red Cross and the European Union Aviation Safety Agency (EASA) and International Organisation for Migration.

Given its broad scope, the authorising officers by delegation of five Commission departments (DGs SANTE (Health and Food Safety), GROW (Internal Market, Industry, Entrepreneurship and SMEs), ECHO (European Civil Protection and Humanitarian Aid Operations), HOME (Migration and Home affairs) and CNECT (Communications, Networks, Content and Technology) are co-delegated (type I). As a result of the selection of actions prioritised for funding, DG GROW is not implementing any of the budget. DGs DIGIT (Informatics), MOVE (Mobility and Transport), ENV (Environment) and JRC (The Joint Research Centre) also implement part of the budget for 2020 and 2021 through co-delegations type II, while DG INTPA (International Partnerships) implements one action from the budget for 2021 through cross sub-delegation.
