A specific internal governance arrangement was put in place including a Steering Committee of the co-delegated authorising officers together with the SG (Secretariat- General) and DG BUDG (Budget) in order to provide strategic coordination of the instrument, in particular as concerns priority-setting and allocation of funding, without prejudice to the responsibilities of the authorising officers by co-delegation for the implementation of the funding allocated to them.

1.7. Graphic overview of the programme structure

	Allocation (million EUR) Total: 3 683.4
Mobility package	175.3
Facility for essential health-related products (i.e. masks, Remdesivir, and training of healthcare professionals in intensive care skills, rapid antigen tests)	201.97
Vaccine instrument	2 553.79
Treatment of COVID-19 patients (convalescent plasma)	35.15
Clinical trials for treatments	1.0
Increased testing capacity	35.47
Interoperability of tracing apps: <ul style="list-style-type: none"> - Federated gateway - Support to Member States 	13.02
UV disinfection robots for hospitals	12.0

Medical capacities for the reception facilities and their host communities in Greece	25.37
Common digital passenger locator form (PLF) exchange platform (including Pilot project)	2.8
Digital Green Certificates	37.1
EU wastewater monitoring system	21.2
Affordable tests within the scope of the EU Digital COVID Certificate Regulation	94.6
Contribution to vaccine doses in favour of 3 rd country vaccination	467.1
Revocation of false Digital COVID-19/Green Certificates and maintenance EU DCC	7.0
Characterisation of omicron variant	0.5

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Council Regulation (EU) 2016/369 of 15 March 2016 on the provision of emergency support within the Union (OJ L 70, 16.3.2016, p. 1). Council Regulation (EU) 2020/521 of 14 April 2020 activating the emergency support under Regulation (EU) 2016/369, and amending its provisions taking into account the COVID-19 outbreak (OJ L 117, 15.4.2020, p. 3).	2021 - 2027	

1.8.2. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total

Total	648.3							648.3

(*) Only Article 15(3) of the financial regulation.

Unlike other programmes, the Emergency Support Instrument is activated independently of the multiannual financial framework for a specific limited period of time to address the special needs of a particular crisis situation, in this case from 1 February 2020 to 31 January 2022. Voted budget appropriations of EUR 2 700 000 000 were made available from the Union budget 2020. The Member States used the possibility to contribute EUR 750 000 000 by 15 December 2020 as external assigned revenue in the context of the vaccines initiative. As many Member States faced at the time a third wave of infections, including as a result of new variants emerging, in the first quarter of 2021 the Commission proposed to reinforce the ESI in 2021 with an additional EUR 231 700 000 from the EU budget.

1.9. Link with the 2014-2020 MFF

The Emergency Support Instrument was activated independently from the multiannual financing framework and spans both the 2014-2020 period and the 2021-2027 period.

1.10. Relevant websites providing more information

Information about the activation and use of the Emergency Support Instrument in the response to the COVID-19 pandemic is available at: https://ec.europa.eu/info/live-work-travel-eu/coronavirus-response/emergency-support-instrument_en#general

2. Where are we in the implementation ?

2.1. Programme 2021-2027

There are no voted commitment appropriations in the Union budget 2021 for the Emergency Support Instrument. The voted payment appropriations for 2021 amount to EUR 90 000 000.

As mentioned above, many Member States faced a third wave of infections, including as a result of new variants emerging in the first quarter of 2021, so the Commission proposed to reinforce the ESI in 2021 with an additional EUR 231 700 000 in commitment appropriations (EUR 75 500 000 as a budgetary transfer from the Solidarity and Emergency Aid Reserve (SEAR) and EUR 156 200 000 under Draft Amending Budget 2021/2). The objective of this reinforcement was to support new actions in relation to the development of the EU Digital Covid Certificate system, waste water monitoring, and the further development of the passenger locator form exchange platform, as well as to fund the purchase for donation to Member States of specialised RT-PCR assays for identifying variants, and a reserve of EUR 100 000 000 for emerging needs. This reserve has been consequently allocated to grants to Member States to support accessibility of test for the delivery of EU Digital Covid Certificate. The budget that has not been implemented together with the unused external assigned revenue was allocated to donation of vaccines to low and middle income countries as well as characterization of the Omicron variant and the revoke of false certificates.

The instrument expired on 31 January 2022 and hence no commitment appropriations were requested for 2022.

2.2. Programme(s) 2014-2020: Cumulative implementation rate and explanations

Financial execution for the instrument – both in terms of commitments and payments – is on track. The Emergency Support Instrument was activated for a limited period of time with voted commitment appropriations for the financial year 2020 in order to meet the urgent needs associated with a rapidly-evolving pandemic. The implementation rate for commitment appropriations in 2020 was 100% as concerns the EUR 2 700 000 000 voted budget credits. For the EUR 750 000 000 in external assigned revenue from Member States' contributions received by 15 December 2020, some EUR 416 600 000 remained to be committed. These funds were used to further extend the portfolio of Advance Purchase Agreements with promising vaccine candidates so as to maximise the chances of benefiting from effective and safe vaccines, across a range of technological approaches, in the quantities necessary and in the timeliest manner.

As concerns payments, the initially voted budget credits of EUR 1 380 000 000 for 2020 proved inadequate, largely because the objective of the instrument is to provide emergency support and hence payments commitments are generally needed very shortly after contracts are signed. For example, for the urgent procurement and distribution of essential medical products, most payments needed to be made at the moment of delivery of the products. Similarly, in relation to the advance purchase agreements with vaccine producers, payments had to be scheduled almost immediately after contracts were signed, given that these agreements provided upfront funding to secure access to the eventual vaccines and to support the companies concerned with the investment needed to scale up production to be able to deliver adequate quantities to cover Union citizens whilst also delivering on the Union's firm commitment to the wider global community.

In July 2020 the budgetary authority agreed to the Commission's request to transfer of an initial EUR 140 000 000 in payments appropriations from DG HOME's budget lines to the European Support Instrument. In September, the budgetary authority approved the Commission's proposal for Amending Budget 8/2020 which transferred an additional EUR 1 090 000 000 in payments credits to the instrument, bringing the total available payments credits to EUR 2 610 000 000. Of this some EUR 2 231 000 000 had been executed by the end of 2020, which represents an implementation rate of 85% of available credits.

Due to delays in the reception of relevant supporting documents or in the finalisation of the contracts, some payments initially foreseen in 2020 were postponed to 2021:

the second down payment of one of the vaccines advance purchase agreements where the technical report submitted in 2020 was not considered satisfactory;

in the framework of the reimbursement of cargo operations by the Member States, beneficiaries of larger grants have reported delays, as they must wait for a Certificate on Financial Statement prepared by an independent auditor and some grants were not paid in 2020 due to the need to review documents submitted for the final report;

the procurement of rapid antigen tests, for which specific contracts and donation agreements have been signed in the first quarter of 2021.

On top of these, several payments were due in 2021 for other actions, including the interoperability of tracing applications, disinfection robots, the medical capacities for the reception facilities and their hosting communities on the Greek islands, as well as to cover the remaining commitments to be made under the vaccines initiative.

The 2021 voted payment appropriations (EUR 90 000 000) were not sufficient to honour all these outstanding commitments. Therefore, based on point (c) of the first subparagraph of Article 12(2) of Regulation (EU, Euratom) 2018/1046, some EUR 378 800 000 in payment appropriations was carried over in the context of the Commission decision on non-automatic carryover of appropriations 2020-2021. Most of the remaining payments were executed by end of 2021, however payment credits will still be needed in 2022 (and 2023) to honour obligations.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The rationale for the Emergency Support Instrument is needs-based, in the context of a quickly-evolving pandemic. No performance framework or indicators are prescribed in the legal base since the instrument has been designed to be adaptable to emerging needs.

3.1.2. Active programme performance

The Emergency Support Instrument has proven its effectiveness in terms of quickly mobilising resources towards the needs identified in the context of the COVID-19 pandemic and therefore met its objective, which is to respond to the urgent, evolving and diverse needs of Member States in responding to the crisis. All funds made available in 2020 were effectively committed and 85% of payments were made in the course of the year. The flexibility enshrined in the legal base, together with the mandate given to the Commission to centrally manage the funding, in cooperation and consultation with Member States, allowed the prioritisation of those actions where collective action could generate the most added value, more timely interventions, or indeed outcomes that could not have been achieved by Member States acting individually.

The instrument is unique in terms of its activation by the Council under the Emergency Support Regulation (No 2016/369) over a limited time frame, its mandate to adapt flexibly to needs at a time of medical and scientific uncertainty, but when rapid response was required and its limited time span. The ESI was activated in April 2020 in the context of the outbreak of COVID 19 crisis. Its initial budget was 2.7 billion EUR, intended to provide a needs-based emergency response, complementing the response of the affected Member States. The deployment took place in a rapidly-evolving environment marked by uncertainties about the nature of the virus, the appropriate medical response, and both supply and demand. The breadth of scope and possible interventions also required policy choices in the context of a quickly-evolving epidemiological situation, also taking into account the limited EU competences in the health domain. The initial budget was increased with 750 million EUR in December 2020 with the contributions from Member States. Moreover, subsequent actions as a result of the Health crisis were foreseen to be implemented under the EU4Health programme, therefore no commitment appropriations were voted under the Emergency Support Instrument as of 2021.

Particularly in the early phase of the crisis, there was a systemic lack of information about needs at both Union and national/sub-national level. To mitigate this, the work of the Clearing House for medical equipment, and in particular the results of the needs surveys and projections produced in that context, were fed into programming the instrument. The needs reported by Member States were also cross-referenced against the epidemiological methodology of the European Centre for Disease Prevention and Control, in order to ensure the equitable distribution of equipment and products for donation to Member States. The Commission regularly exchanged views with Member States on their needs and how these were being taken into account in programming, and informed them of the state of play of the actions to be financed by the instrument. This was done via written information, through Coreper and the Integrated Political Crisis Response (IPCR) meetings, as well as through dedicated meetings with Member States' contact points. The Health Security Committee, the eHealth Network and the Civil Protection Committee were also regularly engaged. This cooperation and exchange informed the choice of actions to be prioritised, in the absence of specific objectives in the legal base.

The major focus of the programme (around 70% of funding) has been on the vaccines initiative, which allowed the conclusion at an early stage of advance purchase agreements with pharmaceutical companies developing COVID-19 vaccines, providing the necessary investment to advance the scientific progress and production capacities, as a result of which 4.6 billion doses of COVID-19 vaccines were secured for Member States. The instrument provided the financial support to underpin Member States' agreement to a joint approach in this area, which: (a) allowed individual Member States who otherwise would have had different (or potentially zero) capacity to engage with developers of vaccines to secure supplies; (b) leveraged the scale offered by Union investment to reduce prices and obtain contractual conditions on issues such as liability and capacity increase which will mitigate Member States' risks going forward. At the same time, the advance purchase agreements funded by the instrument are by their nature risky investments. Whilst the Commission designed a portfolio of contracts with the most promising candidates across a wide range of technologies, there was no guarantee that individual vaccines would be successful and authorised in the EU, or that producers would be able to step up their production at the levels they had committed to. It could not be excluded that the risk of

having invested in a failed vaccine candidate materialised: this risk was mitigated in part by provisions in the advance purchase agreements requiring the reimbursement of part of the unused EU investment in any such case.

In line with its objectives, the instrument was deployed to meet urgent needs expressed by Member States in the context of tight supply and market uncertainty. The instrument delivered some 10 million masks to medical staff in the early phase of the crisis, when the pressure on supplies of equipment was intense. A first batch of 1.5 million masks purchased and distributed to Member States did not meet the necessary quality standards and was destroyed; under the terms of the contract the supplier provided replacements, and a quality control contract was put in place to ensure the necessary standards were met before export of the replacement and future batches.

The programme also allowed all Member States to have access to the therapeutic Remdesivir, the first EU-authorized medicine to treat COVID-19, at a time when national contracts with the sole producer were not on offer. The programme allowed the Union collectively to make necessary purchases which Member States acting alone were not able to access. The Emergency Support Instrument allowed the Union to respond to needs expressed by all Member States by delivering some 34 000 courses of the treatment, which at the time reflected the best available scientific evidence at the time, although this was subsequently challenged.

Also under the facility for essential health-related products, the instrument allowed the Union to procure and donate to the interested Member States over 23 million rapid antigen tests.

Clinical trials for testing repurposed medicines, use of convalescent Covid-19 patients' plasma and EU wastewater monitoring system or the urgent characterisation of the SARS/CoV2 omicron variant have been additional actions financed with this instrument and that not have been done otherwise.

Under the Mobility Package (ESI-MP), which provided support for cargo transport of COVID-19 related medical items, transport of medical personnel, and transfer of patients, three different invitations to submit applications were launched (June 2020, May 2021 and November 2021). In total, over 1,000 flights and 500 operations by road, rail and sea have been funded through 55 projects totalling approximately EUR 164 million in grants to support cargo transport of essential medical supplies (PPEs, medical equipment, medicines, etc.) into the EU. This was at a time when Member States were confronted with both limited cargo transport availability and accordingly higher costs. Furthermore, EUR 9 million have also been awarded through additional 18 projects for the cross border transport of medical teams and transfer of patients, supporting Member States' transport of more than 450 health workers and approximately 350 patients.

Through the instrument, the Union was able to provide solutions to other common challenges, such as the development of interoperability between national contact tracing apps. The system went live in October 2020.

Working with the national branches of the International Federation of the Red Cross, the instrument ensured the stepping up of testing capacity across the seven Member States that expressed an interest. 9 222 volunteers and professionals have been trained in testing techniques, and 1 795 mobile testing teams have been established and 1 263 309 tests conducted. The activities were implemented from July 2020 to end September 2021.

The action to provide training in intensive care skills has proved very successful to increase the available capacity to support the regular Intensive Care Unit staff to take care of COVID-19 patients. With the collaboration of the European Society of Intensive Care Medicine (ESICM), more than 17 000 professionals were trained in 24 EU Member States plus UK, in 7 17 hospitals in the period from August 2020 to May 2021. 5 696 medical doctors and 6 400 registered nurses were certified. The Commission received requests from third countries and international organisations to benefit from the established system and access the training platform. An assignment agreement which settles the transfer of rights from the EC to ESICM was signed.

The instrument has also funded the supply of at least 200 UV disinfecting robots to hospitals across the Union, providing efficient and effective solutions to ensure the safety of healthcare environments and their staff. 301 robots were delivered to hospitals in all the 27 Member States. 4 more robots need to be delivered to Greece and Netherlands however hospitals seem to be not interested any more despite having signed the donation agreement.

The instrument financed grants to 24 interested Member States to join the EU gateway for issuing Digital Covid Certificates as a proof of vaccination, recovery or negative test, between 29 March and 31 December 2021. The initial granted amount, for 24 MS, was 21 million EUR (3 MS did not apply for funding).

Additionally, grants to 18 interested Member States supported accessibility of tests for the delivery of the Digital Covid Certificate, for the period 1 June-31 October 2021. The initial granted amount, for 20 MS, was 95,3 million EUR (2 MS did not provided the final reports).

The instrument contributed 461 million EUR from 2021-2022 budget for the provision and delivery of 200 million COVID-19 vaccine doses and their auxiliary material in low and lower-middle income countries, the actions that will be implemented by DG INTPA in 2022.

ESI is an instrument for using in emergency situations therefore many of the actions had to be implemented immediately, according to the knowledge/situation in a given moment, and some with a retroactive effect. The initial demand for certain products/services did not always lead to concluded contracts/grant agreements for various reasons (inability of MS to respond within the required deadlines, inability to absorb the funds due to complicated political environment, etc). Even if the administrative process was quicker than in regular times, it still remained cumbersome when an urgent action had to be implemented.

Whilst the instrument had only been operational since April 2020, the European Court of Auditors’ review 01/2021 on the EU’s initial contribution to the public health response, published on 18 January 2021, addressed the state of play of the instrument as of 30 June 2020 and noted the role of the instrument in complementing Member States’ and other Union responses. The Court did not make recommendations but acknowledged that it was a challenge for the EU to complement rapidly the measures taken within its formal remit by additional actions, as public health is primarily a national competence. With regard to the Commission’s financial support to vaccine development, the Court highlighted that the Commission mitigated the inherent risk linked to vaccine development by investing in a range of vaccine technologies and companies.

3.2. Key achievements

>1 500	>800	34 000	Over 23 million	10 million	17 000
<p>Medical cargo transport operations supported more than 1 000 flights and 500 transports by road, rail and sea supported with grants to 55 projects since April 2020, delivering medical supplies including PPEs, medical equipment, medicines, etc</p>	<p>The total number of medical personnel (more than 450) and patients (approximately 350) transported with support via EUR 9 million awarded to 18 projects since April 2020 according to needs during 2020</p>	<p>courses of the therapeutic remdesivir purchased and distributed to Member States from August to October 2020</p>	<p>rapid antigen tests purchased with deliveries started in February 2021</p>	<p>masks for healthcare workers distributed to Member States from July to October 2020</p>	<p>doctors and nurses trained to support and assist Intensive Care Units in 750 hospitals across the EU from August 2020 to May 2021</p>

4.6 billion	150	301	16
<p>doses of vaccines against COVID-19 secured for delivery once vaccines have proven safe and effective, of which 2.2 billion doses funded with the help of ESI. Deliveries started in December 2020</p>	<p>local blood or plasma collection centres were awarded grants for blood-collection services to step up programmes for collecting plasma from recovered COVID-19 patients from January 2021</p>	<p>ultra-violet (UV) disinfecting robots, together with transport, installation and training of operating staff, delivered to hospitals in all 27 MS</p>	<p>national tracing apps are linked into the European Federation Gateway Service for interoperability of tracing apps. The system went live in October 2020.</p>

3.3. Evaluations, studies and reports

The Emergency Support Instrument was first activated in 2016-2019 in response to the refugee crisis in Greece and provided EUR 647 million of support. This activation was subject to an evaluation.

The key findings of the evaluation of the 2016 activation ([SWD\(2019\)97](#)) were that:

1. The activation of ESI should be accompanied by an obligation to develop an organisational framework outlining roles and responsibilities, tailored to each country of activation;
2. ESI should include an explicit requirement for the development of an overall exit strategy, as well as specific exit strategies by sector and at action level;
3. Further synergies with other funding mechanisms to complement emergency activities with longer-term actions should be sought systematically as part of any future activation;
4. Local partners should be more systematically involved in future ESI activations.
5. In any future activation, the ESI should continue to aim for cost-effectiveness among the different sectors targeted and by seeking further economies of scale.

Given the specific context and focus of the objectives of the first activation, the findings of the evaluation are of limited relevance to the present programme, with the exception of the action to be implemented as concerns the medical capacities for the reception centres and their host communities in Greece.

In this area, the first activation aimed to prevent and alleviate human suffering as a result of the emergency, and to restore and maintain the dignity of the affected populations. As regards healthcare, it focussed on emergency provision of primary health care, specialised healthcare (including mental health), psychosocial support and referral to hospital for people located in reception centres. The current action is complementary and builds upon the lessons learnt by providing structural investment to increase the capacity of local hospitals and within reception centres, geared towards the particular challenges related to the COVID-19 pandemic. The focus on structural investments increases the sustainability of the action, in line with the evaluation recommendations. Needs have been assessed jointly, consulting in a bottom-up approach with the local hospitals and Greek health partners, and the selection of partners for the grant ensures a combination of local involvement and relevant expertise. The action is implemented by the International Organisation for Migration and is currently running until 30 June 2022, where all the relevant procurement processes are expected to be completed and delivered to the Greek Authorities. Finally, the action has been designed to be complementary to the funding for healthcare in the Greek migration reception system under the Asylum, Migration and Integration Fund.

More widely, notwithstanding the different circumstances and scope of the first and present activations of the instrument, findings 3 and 4 were taken into account in the selection and implementation of ESI actions under the current programme. Complementarity and synergies with other mechanisms was a key test in the selection of actions, for example: there was no other EU instrument available to finance Advanced Purchase Agreements with vaccine developers; as concerns support to the medical facilities in Greece, no other instrument had the legal scope to provide funding to enhance the overall capacity of the local infrastructure to address the needs of hosting communities as well as those in reception centres. Actions such as the direct donations of UV disinfecting robots were delivered in partnership with the beneficiary local actors, at the level of individual hospitals. The action to increase testing capacity was implemented through the International Committee of the Red Cross, which was working through its national and regional branches to deliver localised increased testing.

4. The programme contribution to horizontal policies

4.1. Contribution to climate mainstreaming

4.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	0.33							0.33	

(*)These amounts include NextGenerationEU top-ups if any

4.4. Contribution to gender equality

4.4.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*: 8 Score 0: 224							

(*)Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

The actions under ESI are COVID related actions to fight the pandemics that were not designed with gender needs in mind, therefore a score 0 is attributed to the majority of them.

However, regarding two strands of the Mobility Package, i.e., transport of patients and transport of medical staff, a score of 0* can be attributed, because the beneficiaries of these operations were known at the time of the operations themselves, and therefore it is assumed that gender considerations were taken into account.

4.5. Contribution to the sustainable development goals

4.5.1. Goals

SDG 3 Ensure healthy lives and promote well-being for all at all ages

4.5.2. Key achievements and performance

The United Nations (UN) has acknowledged that COVID-19 is spreading human suffering, destabilising the global economy and upending the lives of billions of people around the globe, and that the pandemic provides a watershed moment for health emergency preparedness. The Emergency Support Instrument, deployed in response to the health crisis, supports the whole-of-government and whole-of-society response needed, matching the resolve of frontline health workers.

The Emergency Support Instrument provided 10 million masks for health workers in the early days of the crisis, and therapeutics to treat nearly 35 000 patients later. It has provided rapid antigen tests and also supported Member States to perform more tests. It has provided increased testing capacities and promoted the availability of treatments such as Remdesivir and convalescent plasma. It has trained more than 17 000 professionals in 700 hospitals in intensive care skills. It has provided solutions to support the interoperability of tracing and warning apps across border, helping to break the chain of coronavirus infections and helping to save lives. Most importantly, it has accelerated the development of vaccines and secured access to vaccines for EU Member States and – through COVAX – the wider world.

The Emergency Support Instrument supported EU Member States through grants to develop and join the EU Digital Covid Certificate system (EU DCC), a common framework for issuing certificates with a digital proof of vaccination, recovery or negative test for Covid. Launched in July 2021, it aimed at restoring the right to freedom of movement during the pandemic. As of 31 December 2021, 1 billion certificates were issued in the EU; with 60 countries connected worldwide, the EU DCC was the largest global system of interoperable digital Covid certificates, allowing interoperability among all countries connected, not only with and within the EU. As reported by a Bruegel study ¹, the EU Digital Covid Certificate has helped increased uptake for vaccines, avoiding thousands of deaths and improving public health and economic performance, preventing losses in the billions of euros.

1. Overview

1.1. Challenges

The European Union (EU) is at a crucial point in time where its relevance and success in the decades to come will be determined by its ability to remain competitive in the global economy and ensure high levels of employment, education and training, health, social inclusion and active participation in society. Ensuring EU's competitiveness, cohesion and resilience in the future means investing in its people: in their education and training, skills, creativity, potential to create businesses and to innovate, and in their health.

Furthermore, a number of challenges remain significant; despite improvements, tackling both unemployment and persistently high rates of poverty remains a priority throughout the EU. Social and employment issues are a primary concern of European citizens and an area where more is expected from the Union. Additional challenges that the Union faces are related to:

- shortfalls in skill levels;
- under-performance in active labour market policies and education systems;
- challenges arising from new technologies such as automation and the related new forms of work;
- social exclusion of marginalised groups, including Roma and migrants; and
- relatively low labour mobility.

1.2. Mission (General objectives)

There is a need both for policy initiatives and for targeted supporting actions to address the above challenges. Therefore, the objective of the European Social Fund+ (ESF+) is to make the EU more social and inclusive by implementing the principles enshrined in the European Pillar of Social Rights ⁽¹⁾ together with the Member States.

1.3. Specific objectives

The European Pillar of Social Rights consists of 20 principles. They include education, training and life-long learning; active support to employment; inclusion of people with disabilities and access to essential services. The ESF+ specific objectives aim at implementing all the principles of the Pillar and thus target:

- a. Improving access to employment and activation measures for all jobseekers in the labour market, in particular youth, through the implementation of the Youth Guarantee, long-term unemployed, disadvantaged groups and of inactive people, promoting self-employment and the social economy;
- b. Modernising labour market institutions and services to assess and anticipate skills needs and ensure timely and tailor-made assistance and support to labour market matching, transitions and mobility;
- c. Promoting a gender-balanced labour market participation, equal working conditions and a better work/life balance, including through access to affordable childcare and care for dependent people;
- d. Promoting the adaptation of workers, enterprises and entrepreneurs to change, active and healthy ageing and a healthy and well-adapted working environment that addresses health risks;
- e. Improving the quality, inclusiveness, effectiveness and labour market relevance of education and training systems, including through validation of non-formal and informal learning, to support acquisition of key competences, including entrepreneurial and digital skills, and through the promotion of the introduction of dual-training systems and apprenticeships;
- f. Promoting equal access to and completion of quality and inclusive education and training, in particular for disadvantaged groups, from early childhood education and care through general and vocational education and training, and to tertiary level, as well as adult education and learning, including facilitating learning mobility for all and accessibility for persons with disabilities;
- g. Promoting lifelong learning, notably flexible upskilling and reskilling opportunities for all, taking into account entrepreneurial and digital skills, better anticipating change and new skills requirements based on labour market needs, facilitating career transitions and promoting professional mobility;
- h. Fostering active inclusion with a view to promoting equal opportunities, non-discrimination and active participation, and improving employability, in particular for disadvantaged groups;

(¹) [European Pillar of Social Rights](#).

- i. Promoting socioeconomic integration of third country nationals, including migrants;
- j. Promoting the socioeconomic integration of marginalised communities, such as Roma;
- k. Enhancing the equal and timely access to quality, sustainable and affordable services, including services that promote the access to housing and person-centred care, including healthcare; modernising social protection systems, including promoting access to social protection, with a particular focus on children and disadvantaged groups; improving accessibility including for persons with disabilities, effectiveness and resilience of healthcare systems and long-term care services;
- l. Promoting social integration of people at risk of poverty or social exclusion, including the most deprived and children;
- m. Addressing material deprivation through food and/or basic material assistance to the most deprived, including children, and providing accompanying measures supporting their social inclusion.

As the ESF+ is primarily directed to people, the ESF+ common indicators under shared management will mainly measure change in the participants' labour market situation. For example, one of the outputs will be the number of unemployed or inactive participants supported, and one of the results will be the number of people in employment upon leaving ESF+ support.

The Employment and Social Innovation strand of ESF+ targets structural changes. Its indicators will monitor analytical activities and will serve supporting evidence-based policy making, social experimentations, capacity-building and mutual learning activities, as well as job placements under the targeted mobility scheme.

1.4. Public intervention context

The ESF+ is the main instrument of the Union for investing in people's employment, education and skills, and social inclusion ⁽²⁾ to support economic, social and territorial cohesion in the EU.

The responsibility for employment and social policy lies primarily with the Member States. The European Union mostly supports and complements Member States' efforts by co-financing projects with ESF+ resources at national and regional level, therefore operating under shared competence.

The EU may also adopt minimum requirements in the form of directives, which enable EU Member States to adopt additional stricter provisions. Still, no financing is directly linked to the implementation of directives.

Besides ESF+, the Union can also mobilise the European Globalisation adjustment Fund for displaced workers, a special instrument aiming to support the workers on short term. The fund helps Member States to overcome the worst of the short-term shock of mass redundancy and so it is limited to a 24 months period.

1.5. Actions

EU resources are used to support investments in human capital through grants and financial instruments. For the ESF+ the regulatory proposal defines 13 specific objectives under the policy objective of 'A more social and inclusive Europe - Implementing the European Pillar of Social Rights.'

The types of actions (e.g. vocational education and training, active labour market policies, capacity building of public employment services, social inclusion activities, distribution of food and goods) are selected by the Managing Authorities in the Member States and described in the national and regional programmes implemented under shared management.

Activities under the Employment and Social Innovation strand are implemented under direct management mostly through grants and procurement, following the adoption of an annual work programme.

1.6. Delivery mode

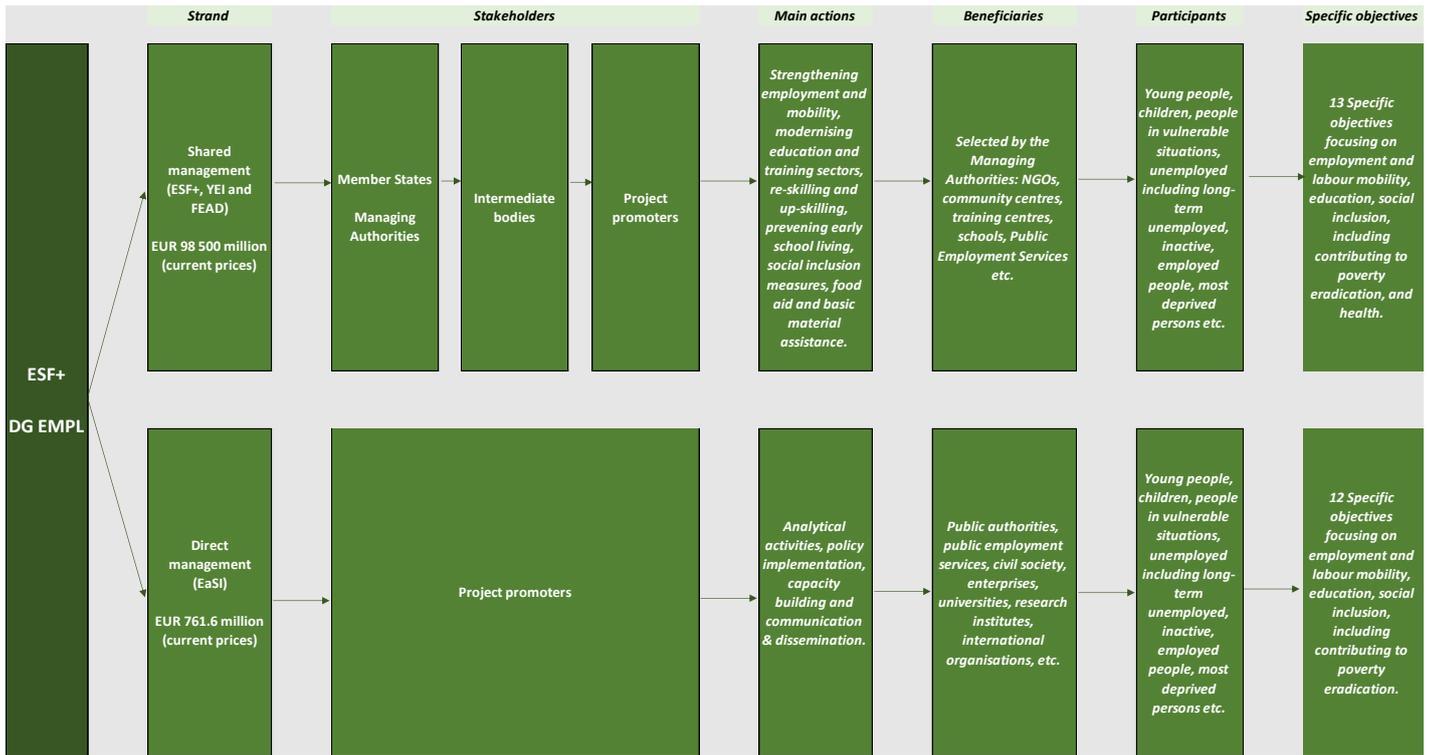

Shared and direct management.

The ESF+ is composed of two strands: the shared management strand encompassing the previous European Social Fund (ESF) and the Fund for European Aid to the most Deprived, and the direct management strand under which the Employment and Social Innovation programme is managed.

Lead DG: Employment, Social Affairs and Inclusion

1.7. Graphic overview of the programme structure

⁽²⁾ Articles 162 to 164 and 174 to 178 of the Treaty on the Functioning of the European Union.

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/1057 of the European Parliament and of the Council of 24 June 2021 establishing the European Social Fund Plus (ESF+) and repealing Regulation (EU) No 1296/2013 (OJ L 231, 30.6.2021, p. 21).	2021 - 2027	98 499.62

1.8.2. Legal basis explanation

In addition to the ESF+ Regulation, the shared management strand of the ESF+, as part of the Cohesion policy, is mainly regulated by the Common Provisions Regulation (CPR). The rules on management, programming, implementation, monitoring and auditing to be applied are provided for in the CPR, whereas the specific objectives, fund-specific rules on the methods of implementation, programming, thematic concentration, eligibility, indicators and reporting are provided for in the ESF+ Regulation.

1.8.3. Budget programming table

Budget programming of the ESF+ :

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming (**)	174.0	16 455.8	16 819.0	17 280.7	17 727.9	15 012.6	15 487.9	98 957.9
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities	2.7	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	2.7

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Total	176.7	16 455.8	16 819.0	17 280.7	17 727.9	15 012.6	15 487.9	98 960.7

(*) Article 15(3) of the financial regulation.

(**) These amounts take into account the contribution of the ESF+ to the Just Transition Fund, the Border Management and Visa Instrument and other instruments (if any). The total does not include financing under the recovery assistance for cohesion and the territories of Europe programme.

Budget programming of the recovery assistance for cohesion and the territories of Europe programme (REACT-EU) under the ESF:

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming (*)								
NextGenerationEU	15 918.1	3 243.3						19 161.4
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities								

The ESF+ is composed of two strands: the shared management strand encompassing the previous European Social Fund (ESF) and the Fund for European Aid to the most Deprived, and the direct management strand under which the Employment and Social Innovation programme is managed.

1.9. Link with the 2014-2020 MFF

On 2 May 2018, the Commission adopted a proposal for the multiannual financial framework (MFF) for 2021-2027, amended in 2020 in order to address the long-term challenges brought about by the COVID-19 pandemic. The proposal reflects the current social and economic context.

The ESF+ merges the following funds and programmes from the 2014-2020 programming period:

- the European Social Fund (ESF) and the Youth Employment Initiative (YEI);
- the Fund for European Aid to the Most Deprived (FEAD);
- the Employment and Social Innovation (EaSI) programme.

In the MFF 2014-2020, the above programmes were addressing similar policy objectives but were implemented independently according to different sets of rules, making it difficult to establish synergies. In the MFF 2021-2027, these funds are merged into a single programme to pool available resources to support integrated investments in people and avoid overlaps.

1.10. Relevant websites providing more information

<https://ec.europa.eu/european-social-fund-plus/en>

The ESF+ website is the main external communication channel for the multiannual financial period 2021-2027 and incorporates information on both shared management and direct management strands of the fund.

<https://ec.europa.eu/social/main.jsp?catId=86&langId=en>

The Employment, Social Affairs and Inclusion website provides an introduction to ESF+, including a link to the ESF+ website (see above) and information on previous programmes such as the EaSI Programme 2014-2020, the European Globalisation Adjustment Fund for Displaced Workers (EGF) and the Fund for European Aid to the Most Deprived (FEAD).

<https://ec.europa.eu/info/funding-tenders/opportunities/portal/screen/programmes/esf>

The funding & tender opportunities portal is the entry point (the Single Electronic Data Interchange Area) for participants and experts in funding programmes and tenders managed by the European Commission and other EU bodies.

It provides for the electronic management of EU programmes and tenders and facilitates the related interactions with the EU institutions. For the 2021-2027 programming period, the calls for proposals under the EaSI strand of ESF+ accompanied by some general information, news and information about the projects awarded can be found on the portal:

<https://ec.europa.eu/info/funding-tenders/opportunities/portal/screen/programmes/esf>

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate of the ESF+ at the end of 2021 (million EUR):

	Implementation	Budget	Implementation rate
Commitment	145.7	98 960.7	0%
Payments	5.4		0%

Cumulative implementation rate of the recovery assistance for cohesion and the territories of Europe programme (REACT-EU) under the ESF at the end of 2021 (million EUR):

	Implementation	Budget	Implementation rate
Commitment	15 434.9	19 161.4	81%
Payments	2 081.1		11%

Significant delays materialised in the start of implementation of ESF+ shared management. The most common factors that caused the delays in the preparations of 2021-2027 programming documents are:

- delays in the adoption of the ESF+ Regulation (adopted on 24 June 2021);
- priority given by the Member States to REACT-EU, under which the eligibility of expenditure elapses in 2023, and/or the Recovery and Resilience Facility (RRF);
- the Coronavirus Response Investment Initiative (CRII and CRII(+)) ⁽³⁾ extensive reprogramming efforts, which shifted the focus of programme authorities from ESF+ programming to CRII(+) amendments in order to provide an immediate response to the effects of the COVID-19 crisis;
- problems stemming from the need to activate different funding sources (e.g. REACT-EU, ESF, ESF+, RRF) for similar or complementary purposes;
- absence of agreement between national entities on the ESF+ allocation to different programmes;
- pending decisions on the Just Transition Fund (eligible area of support, scope for intervention, agreement after regional elections etc); and
- administrative delays due to governmental changes/reshuffles in 10 Member States.

⁽³⁾ Between March and April 2020, the Commission adopted a series of amendments (the Coronavirus Response Investment Initiative and the Coronavirus Response Investment Initiative Plus) which allowed for an unprecedented redirection of Cohesion policy funds, including the ESF/YEI, to address the effects of the public health crisis. This allowed simplifying administrative procedures and reducing administrative burden for Member States.

Therefore, the budget allocated in 2021 for the 2021-2027 ESF+ shared management programmes could not be utilised.

The implementation of the shared management strand of ESF+ is expected to start in 2022 with the adoption of operational programmes for which a pre-financing of 0.5% will be paid. In addition, first interim payments are expected in 2023, depending on the level of implementation on the ground.

As regards the ESF+ direct management strand (employment and social innovation), some delays in the implementation of activities were noticed in 2021 due to the entry into force of the Regulation only at the end of the first semester, as well as the impact of the pandemic on meetings and on the ability for some of the stakeholders to take part in the calls for proposals. However, the Commission anticipated the preparatory steps by initiating the programming exercise in May 2020 and was able to adopt the financing decision for 2021 in June 2021, so that implementation could start as soon as possible. Seven calls for proposals were published in 2021, all to be awarded in 2022. Therefore, this initial slow start is expected to be caught up in 2022 already, since the financing decision for 2022 was adopted in December 2021. In 2023, the level of payment needs is assessed to be similar to the one in 2016 for the 2014-2020 period.

In 2022 and 2023, EaSI will continue to support the implementation of the European Pillar of Social Rights, as part of the ESF+. Even though the implementation of the Pillar falls largely within the remit of the Member States, the EU and notably the EaSI programme can play an important supporting role. The Pillar illustrates a shared commitment to foster equal opportunities, to improve access to the labour market, to fair working conditions and social inclusion, to supporting people in the face of changing realities of work and to achieving new and more rights for Europeans, priorities to be addressed by EaSI in the coming years.

DG EMPL's proposal for Draft Budget 2023 fully acknowledges the difficulties encountered in 2021 and reflects the result of the assessment on the execution of the 2022 budget. Furthermore, it takes into account the urgent need for funding to support the people fleeing Russia's invasion of Ukraine. To this end, a special effort of rationalisation has been done on the 2022 budget to help other funds cope with the situation in Ukraine by returning EUR 12 million in commitment credits. Therefore, in order to ensure 100% execution from 2023 on, without any abnormal backlog, and to contribute to the common effort to pool funding for the war refugees, DG EMPL decided to reduce the amount of commitments requested. The cut has been carefully weighted so that it would not negatively affect the objectives of the programmes in the long term.

From 2024 on, it is key that we resume with the initially agreed profile of commitments in order to fully meet the objectives of the strand at the end of the period.

Activities will be programmed and implemented to support the effectiveness of employment and social policies through social experimentation and innovation. The EaSI strand will also keep supporting evidence-based policy making, notably through the funding of statistical data on working conditions, as well as various studies on e.g. the future of work and the social impact of climate change. Some activities will also tackle the crisis in Ukraine by measuring the impact of the crisis, such as modelling the socioeconomic effects of geopolitical developments and their impact on energy prices.

To implement these activities in 2022, the Commission will allocate EUR 48 million in grants, same in procurement and EUR 22 million in indirect management. The amounts will be used to:

- provide operating grants to support EU level Social NGO Networks;
- support networks active in the area of social enterprise finance/microfinance;
- support financial intermediaries that undertake long term risk capital investments in ticket sizes of less than EUR 500 000 in social enterprises;
- fund transnational cooperation initiatives to transfer the scaling up of innovative solutions;
- support the EURES Targeted Mobility Scheme to ensure around 4 000 placements over the duration of the action in economic sectors with hard to fill vacancies; and
- promote social innovations for a fair green and digital transition.

In 2023, the Commission will continue to pursue these objectives. For the multiannual financial framework 2021-2027, support structures are being established, like the EaSI National Contact Points in each country informing about EaSI calls, projects and results, to improve the participation in the EaSI strand and to assist in up-scaling, mainstreaming and/or replication of EaSI project results, for instance by using other funds (in particular ESF+).

In the struggle against abuse and for a better enforcement, EaSI will continue the ongoing activities to enhance cooperation in tackling undeclared work under Decision (EU) 2016/344. The EaSI strand will also continue to support the implementation of EURES Regulation 2016/589. Actions to support targeted mobility schemes and cross-border cooperation will be stepped up, building on the experiences gained in the previous years. The support to the EURES network will no longer be funded under EaSI as the European Labour authority will take it over under the current MFF.

REACT-EU will ensure a smooth transition between the periods 2014-2020 and 2021-2027, providing swiftly for financial support to the Member States to help them recover from the economic and social consequences of the COVID-19 crisis. In 2021, an initial pre-financing of 11% was paid upon adoption of the related operational programmes (both ESF and FEAD) to help Member States put in place a quick and efficient delivery of recovery measures. From 2022 onwards, the Member States' forecasts indicate that implementation will start with close to 30% of the financial envelope being declared to the Commission for reimbursement through interim payments. This would be on top of the payment of the annual pre-financing of 2%.

2.2. Programme(s) 2014-2020: Cumulative implementation rate and explanations

European Social Fund

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitment	93 619.5	93 630.5	100%
Payments	73 353.0		78%

Implementation of the ESF/YEI has progressed relatively well. The effects of the Coronavirus Response Investment Initiative (CRII and CRII+) and REACT-EU programme amendments and the higher flexibility provided positively impacted the financial implementation rate. By mid-January 2022, all amendments concerning the 2021 REACT-EU allocation were adopted. As regards the ESF, most REACT-EU allocations went to labour market measures (EUR 9.4 billion), including measures to short-term work schemes. EUR 2.8 billion were allocated to education and training and EUR 1.7 billion to social inclusion measures. DG EMPL has worked in close contact with the Managing Authorities of the operational programmes to make sure that ESF/YEI resources were swiftly mobilised on the ground to allow for a prompt response to the crisis and a swift recovery. The Managing Authorities have been supported through regular bilateral contacts with DG EMPL geographical units and through the dedicated Coronavirus Response Investment Initiative Platform. On 23 November 2021, the Commission adopted the breakdown by Member State of REACT-EU resources for the year 2022, based on the latest available socioeconomic data ⁽⁴⁾. Most Member States have started planning –and in some cases already decided- the allocation of this 2nd instalment between funds/operational programmes.

Thanks to the CRII and CRII+ initiatives, since the beginning of the crisis, about EUR 25.3 billion of Cohesion policy resources have been mobilised/reprogrammed to counter the crisis. The Coronavirus Dashboard ⁽⁵⁾ on the Open Data Platform provides up-to-date information on these resources.

The European Structural and Investment Funds (ESIF) 2021 Summary Report ⁽⁶⁾ of the programmes' Annual Implementation Reports covering implementation up to end 2020 was published and was accompanied by an update and further development of the ESIF Open Data Platform ⁽⁷⁾. This report underlines that, for all ESI Funds taken together, project selection (financing decided) amounted to EUR 676 billion (106% of the total allocation) by end 2020. This is a significant 17 percentage point increase compared to the situation at end-2019, confirming that the acceleration in project selection that started in 2016 continued in 2020. Most Member States have fully allocated the available budget for the 2014-2020 cycle. The explanation for the over-allocation resides in the practice of many programmes to award support to a volume of projects that exceeds the total planned cost of the programme. In terms of payments from the EU budget to the Member States, for all ESI Funds taken together a net total of EUR 253.8 billion was paid by end-2020 (55%, including pre-financing and interim payments of declared expenditure and deducting recoveries), which increased to EUR 331.1 billion until end-2021 (67%). This suggests that the rate of implementation has not slowed down in the exceptional circumstances of the crisis. In fact, considering both the high stage of maturity of the programmes and the immediate flexibility provided for the funds as crisis response under CRII, including 100% EU financing, there was a clear boost in terms of EU payments made to programmes. More in particular, the ESF has now reached cruising speed and the difficulties related to implementation, such as the late start of operational programmes at the beginning of the 2014-2020 programming period, have been addressed. Moreover, implementation progress and challenges are addressed in the ESF Technical Working Group and ESF Committee meetings, which take place five times a year and gather Commission officials, Member States representatives and representatives from the social partners. The main challenges identified were linked to a slow start of implementation and the high level of complexity associated with the management of the fund, as well as a greater need for active involvement of stakeholders and their representatives in all stages of projects. Discussions focused, among other aspects, on promoting the use of simplified cost options in ESF programmes, better involving social partners and all relevant stakeholders in the programming, implementation, and monitoring phases of the ESF programmes through sharing of best practices, for instance. These challenges will also be addressed in the next programming period, as the 2021-2027 Common Provisions Regulation and the ESF+ Regulation aim to further simplify implementation. Moreover, DG EMPL desk officers responsible for leading the negotiations on the ESF+ programmes in the Member States will address all relevant challenges identified by the evaluations and the ESF Committee and Technical Working Group during ESF+ programming by discussing bilaterally with the authorities.

By end-2021, the overall ESF project selection rate, including for the additional REACT-EU allocation, stood at 105%. In 2021, nearly EUR 14.6 billion have been paid to the 2014-2020 ESF programmes as well as nearly EUR 320 million for REACT-EU, lifting the absorption rate to 61% (total payments made compared to allocation, including REACT-EU). When considering the trend observed since the start of the current programming period, the level of ESF expenditure certified to the Commission

⁽⁴⁾ Commission Implementing Decision (EU) 2021/2055 of 23 November 2021 amending Implementing Decision (EU) 2021/182 to set out the breakdown by Member State of REACT-EU resources for the year 2022 (notified under document C(2021) 8271).

⁽⁵⁾ [Coronavirus Dashboard: EU Cohesion Policy Response to the Crisis.](#)

⁽⁶⁾ [Summary Report of the Programmes.](#)

⁽⁷⁾ [ESIF Open Data Platform.](#)

remained high in 2021, which is a confirmation that a mature phase of implementation has been reached for the majority of programmes. Implementation has not been impacted by the COVID-19 health crisis thanks to the effects of the CRII/CRII(+) programme amendments and the higher flexibility provided, as explained above for all ESI Funds.

In regard to the Youth Employment Initiative (YEI), the mature phase of implementation continued in 2021. By the end of 2021, the total eligible cost of YEI operations selected for support was EUR 11.3 billion and more than EUR 7.3 billion had been declared by beneficiaries. By end 2021, nearly EUR 4.5 billion had been paid to the Member States in relation to YEI (including interim payments and pre-financing).

Even though the differences among types of regions were significant in the early years of implementation, the figures reported in the 2020 Annual Implementation Reports suggest that these differences have almost entirely disappeared, with implementation of ESF/YEI picking up steam in Member States and regions that were lagging behind. Overall, the implementation has seen a positive trend across the EU, allowing the 188 ESF operational programmes to continue investing in promoting sustainable employment, social inclusion and investing in education and institutional capacity. However, some differences still exist. In terms of expenditure declared, the lowest implementation rate was observed in Croatia. The Croatian authorities had problems meeting the ex ante conditionalities at the start of the programming period, which continued to cascade into present-day delays. Moreover, Croatian authorities also indicate that their capacity to manage project calls and monitor the activities continues to face challenges (e.g. administrative and procedural issues, compliance with GDPR, delays at governance level due to a focus on preparations and not yet on attracting proposals etc.). Implementation weaknesses are regularly addressed bilaterally by DG EMPL's geographical desk officers in the context of ESF implementation as well as ESF+ programming negotiations with Managing Authorities.

Simplified Cost Options (SCOs)

Following the adoption of Delegated Regulation 2015/2195 ⁽⁸⁾ in July 2015, the Commission adopted nine amendments of the Regulation by the end of 2021. In total, 19 Member States and the UK benefit from the legal certainty of having their simplified cost methodology and amount defined in advance and also from the consequent reduction in the administrative burden associated with reduced documentation that needed to be retained for management verification. Since the start of the 2014-2020 programming period, the total ESF expenditure which has been reimbursed on the basis of unit costs and lump sums under Article 14(1) of the above Regulation is approximately EUR 12 billion.

Finally, in 2021 DG EMPL completed a study on the development of EU-level SCOs and financing not linked to costs schemes for the 2021-2027 period in the area of community social services and for ALMA (active inclusion measures for disadvantaged young people). In 2022 DG EMPL will adopt a delegated act and Member States will be able to make use of these off-the-shelf tools, if they so wish, so as to simplify implementation of their ESF+ programmes for both programme authorities and beneficiaries.

Information about financial instruments financed by the ESF

As of end 2020, 11 Member States have included financial instruments in their operational programmes for the 2014-2020 period. Some Member States committed resources to financial instruments from their regional programmes such as Germany, Italy and Poland. All other committed resources were from national programmes. EUR 785 million of operational programmes' resources were committed to financial instruments. This is nearly 0.6% of the ESF and YEI resources for the 2014-2020 programming period.

About EUR 377 million or over two thirds of ESF commitments to financial instruments were allocated to thematic objective 8 (employment), while EUR 90 million and EUR 75 million were committed for thematic objective 9 (social inclusion) and 10 (education). The highest ESF resources committed to thematic objectives 9 and 10 were in Italy and Poland.

ESF and YEI disbursements to final recipients were 22% of the respective amounts committed to the financial instruments. Over 7 960 final recipients were supported, of which 4 047 microenterprises and 3 557 individuals. Two out of three final recipients were provided with loans.

In the new programming period 2021-2027, the increased use of financial instruments will be a priority under the ESF+.

On the one hand, financial instruments cannot be taken as an alternative to ESF grants due to the specific nature of ESF activities (small projects, specific target groups, limited or no direct financial return on investment, etc.). On the other hand, for a number of operations with financial viability, they represent a resource-efficient way of deploying Cohesion policy resources in pursuit of the Commission political objectives.

Forthcoming implementation

Member States will submit their Annual Implementation Reports in 2022 with updated information as of end 2021. These will contain both quantitative and qualitative evidence on the implementation of the ESF.

Based on these reports, the four ESIF Directorate-Generals of the European Commission will prepare an Annual Summary Report to the attention of the European Parliament, the Council, the Economic and Social Committee and the Committee of the Regions.

⁽⁸⁾ [Commission Delegated Regulation \(EU\) 2015/2195 of 9 July 2015 on supplementing Regulation \(EU\) No 1304/2013 of the European Parliament and of the Council on the European Social Fund, regarding the definition of standard scales of unit costs and lump sums for reimbursement of expenditure by the Commission to the Member States](#)

To accompany this report, DG EMPL, together with the other ESIF DGs, will also continue making relevant data available to all on the ESIF Open Data Platform.

In 2022, DG EMPL will continue providing technical and policy guidance on the operational programmes through the monitoring committees to ensure that the programmes are on track to deliver the expected results. DG EMPL will run the ESF Transnational Cooperation Platform (TCP) until its conclusion, in July 2022. The TCP was set up in July 2020 for a duration of 24 months. It has been the framework for activities related to transnational cooperation, revolving around four communities of practice: employment, education and skills; social inclusion; social innovation; and result-based management. Its aim is to foster mutual learning and good practice between the Member States' ESF Managing Authorities and other stakeholders involved in ESF planning, implementation and monitoring, while paving the way for the 2021-2027 programming period and ESF+. Due to the pandemic, all activities took place online. After the end of the TCP in 2022 and during the 2021-2027 period, transnational cooperation activities will take place under the 'ESF Social Innovation+' initiative. With a budget of EUR 197 million, the initiative will be implemented under indirect management, i.e. by an entity entrusted by the European Commission to implement the initiative on its behalf. Following a call for expression of interest, the Lithuanian European Social Fund Agency (ESFA) was selected. The first activities of the initiative are expected to start in the second half of 2022, upon completion of the administrative procedures formalising the role of ESFA.

The implementation of the programmes is expected to continue at cruising speed in 2022, reinforcing the positive trend observed in 2021. Project selection rates and interim payment requests are expected to increase further. The gap between the project selection rate on the ground and the implementation rate of ESF is expected to reduce significantly in 2022 and 2023. According to the Member States' forecasts, an amount of EUR 13.4 billion is expected to be sent to the Commission for reimbursement in 2022, lifting the implementation rate to 75% of the total envelope. Additional EUR 12.5 billion is expected to be requested for reimbursement in 2023, further raising the implementation rate of ESF to 88%. The COVID-19 crisis is not expected to impact the level of interim payments in 2022 and 2023. Moreover, DG EMPL will continue its work on the assessment of programme amendment requests submitted by Member States to ensure the policy and result-orientation of the ESF and YEI programmes.

In March 2022, in order to help Member States and regions to provide emergency support to people fleeing from Russia's invasion of Ukraine, the Commission adopted the Cohesion's Action for Refugees in Europe (CARE) initiative. The initiative introduced the necessary flexibility in the 2014-2020 Cohesion policy rules to allow a swift reallocation of available funding to such emergency support. In practical terms, the Member States will have more flexibility to use the ERDF and ESF to support the integration of refugees. The ESF may provide diverse support to refugees in finding jobs, starting or continuing education and accessing childcare. They will also be able to receive support for counselling, training and psychological assistance. To complement this initiative, the Commission has proposed to increase by EUR 3.4 billion the total pre-financing from the Recovery Assistance for Cohesion and the Territories of Europe (REACT-EU). Once adopted by co-legislators, this immediate injection of liquidity, in combination with the flexibility introduced by the CARE initiative, will speed-up Member States' access to funds to spend on infrastructure, housing, equipment and services in employment, education, social inclusion, healthcare and childcare. The impact of the Ukraine crisis will be known in the coming years once the Member States submit their Annual Implementation Reports.

Fund for European Aid to the most Deprived

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitment	3 813.7	3 813.7	100%
Payments	2 931.1		77%

Note: this table represents the gross level of payments made by the Commission to the Managing Authorities for the period 2014-2020, not taking into account the amounts actually recovered by the Commission. For further detail on the implementation, please check the Open Data Platform: [Open Data Portal for the European Structural Investment Funds - European Commission | Data | European Structural and Investment Funds \(europa.eu\)](https://open-data-portal.ec.europa.eu/data-portal/data-sets/european-structural-and-investment-funds)

According to the 2020 FEAD Annual Implementation Reports, the fund contributed substantially to alleviate the worst forms of poverty in the EU and to promote social inclusion for those at the margin of society. Despite its limited budget, FEAD has shown that it successfully complements national efforts to address material deprivation and combat poverty and social exclusion. It notably addressed food deprivation, child poverty and homelessness.

In 2020, FEAD successfully delivered assistance in 27 Member States, making good progress to achieve its objectives. It supported almost 15 million people with food, approximately 1.96 million people with material assistance and 30 000 people with social inclusion assistance.

In regard to financial implementation, the total eligible public expenditure committed to FEAD support stood at EUR 643 million in 2020, up from EUR 608 million in 2019. At the end of 2020, the cumulative amounts committed (for 2014-2020) amounted to

approximately EUR 3.9 billion, or 85% of the total resources of the programmes (which include EU funds and national co-financing). An amount of approximately EUR 552.2 million was paid to beneficiaries in 2020, a notable increase with respect to previous years' levels (EUR 478.5 in 2019, EUR 501.2 million in 2018, EUR 412.8 million in 2017 and EUR 435.2 million in 2016). The increase is mainly due to the restart of operations in Romania in 2020. It also reflects the increased demand due to the COVID-19 health crisis that worsened the conditions for existing vulnerable people in receipt of FEAD support, while additional people also sought food aid, including people with precarious jobs (e.g. short-term contracts, temporary or informal work), independent workers and also disadvantaged tertiary education students. The increase in payments is consistent with the increase in end-recipients. The profile of target groups remained broadly stable, albeit with some small changes. In 2020, according to estimations of partner organisations about 47% of the end recipients were women (2 percentage points less than in 2019), 28% children aged 15 or below (also 2 percentage points less than in 2019), about 10% migrants, participants with a foreign background or minorities, 10% people aged 65 years or over (2 percentage points more than in 2019), 6% homeless people and another 6% people with disabilities.

According to 2020 data, the COVID-19 outbreak resulted in lower Member States' expenditure declarations. During the second quarter of 2020, those represented EUR 51 million - less than half of the corresponding amount from 2019 (EUR 128 million). However, the situation improved in the second part of the year. Eventually, the total FEAD amount declared during 2020 was only slightly lower than the total amount declared during 2019 (EUR 549 million ⁽⁹⁾ declared in comparison to EUR 573 million during 2019). The total amount paid for FEAD in 2021 increased to EUR 610.8 million due to the extra resources (EUR 81 million) made available under REACT-EU.

FEAD is well on track to reach its objectives. However, a few obstacles to implementation persisted, such as capacity issues of partner organisations and logistical challenges mainly related to the COVID-19 pandemic. These were partly tackled through the increased flexibility and reduced administrative burden offered by the 2020 FEAD amendments, which allowed to deliver food aid and basic material assistance through electronic vouchers, to provide personal protective equipment thus lowering the risk of contamination and to finance measures at 100% for the accounting year 2020-2021. Strong cooperation between Managing Authorities and partner organisations also proved to be essential to address new challenges.

Forthcoming implementation

In 2022 and 2023, the fund is expected to continue to support a similar number of people among the target group of the most deprived, as the consequences of the COVID-19 crisis continue to affect disproportionately the most vulnerable people in the society. Based on Member States' forecasts, including the REACT-EU additional credits, the implementation rate is expected to increase to 84% of the total envelope in 2022 and to be close to 100% in 2023.

The year 2022 will also be marked by the transition to the successor fund European Social Fund+ (ESF+), into which the FEAD is merged.

Part of the CARE initiative, funding from the FEAD will also be crucial to provide much-needed food and basic material assistance to the people fleeing Russia's invasion of Ukraine.

Employment and Social Innovation programme

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitment	882.7	899.6	98%
Payments	693.6		77%

Since its launch in 2014, EaSI has provided financial support to promote high-quality and sustainable employment, adequate and decent social protection, social inclusion, poverty reduction and prevention and fair working conditions. It is structured into three axes for the period 2014-2020:

- PROGRESS axis focuses on providing support to the policymaking and implementation process through production of policy evidence, organisation of information sharing and mutual-learning activities, funding social policy experimentation projects and providing capacity-building support to EU and national organisations;
- EURES axis aims to improve geographical labour mobility in the EU through making information on placements more transparent and accessible as well as funding the actual services for jobseekers and employers;

⁽⁹⁾ This amount includes an invoice for 2020 that Romania revised and resubmitted in February 2021 corresponding to EUR 40 665 406.17.

- Microfinance and social entrepreneurship (MF/SE) axis aims to improve access to finance for vulnerable people, micro- and social enterprises by providing funding for financial intermediaries and capacity building of relevant actors.

EaSI creates added value to national policies, for instance with regard to the exchange of good practices, the social policy innovations, the cross-border partnerships, the support provided to social enterprises as well as regarding the provision of loans to vulnerable people.

The Programme focuses on key actions with high European added value such as:

1. Supporting the EU policymaking process and a stronger EU policy coordination/economic governance, for example in the context of the European Semester;
2. Focusing on the transnational dimension of employment and social situation, working conditions, health and safety at work issues;
3. Ensuring development and proper application of EU laws in the field of employment, working conditions, health and safety at work, and social protection;
4. Promoting EU governance, mutual learning, inclusive information sharing and dialogue to consolidate cooperation between the Member States and achieve EU goals;
5. Making knowledge and expertise accessible at EU level through policy experimentation and transferring/up-scaling best practices;
6. Promoting workers' EU geographical mobility by developing services for the recruitment and placing of workers in employment (in particular young people and professionals) through the clearance at European level of vacancies and job applications;
7. Increasing the availability and accessibility of microfinance and the support to social entrepreneurship.

The implementation of activities linked to commitments made within the 2014-2020 programme has continued in 2021. As in previous years, PROGRESS concentrated in 2021 on gathering evidence through studies, analysis and EU statistics to shape policy developments. In connection to this, the axis fostered shared understanding of policy options and solutions by providing for high quality, inclusive and participatory policy debates. It also promoted the involvement of civil society through financial support for 23 key Union level NGOs via 23 operating grants. In 2021, the EURES axis supported the European job mobility portal, training courses on EURES services, as well as horizontal support to the member organisations of the EURES network. In this context, it continued financing cross-border partnerships supporting mobility for frontier workers in the cross-border regions along with targeted mobility schemes, following the preparatory action 'Your First EURES job'. The 13 EURES calls for proposals dealing with matters such as intra-EU mobility in general and targeted mobility schemes for youngsters and persons re-entering the labour market launched between 2014-2020 resulted in 94 contracts.

The Progress axis has supported actions in three thematic sections, exceeding the minimum shares of financial commitments foreseen per thematic section over the entire programme duration:

- employment, in particular, to fight youth unemployment: 28% (minimum share: at least 20%).
- social protection, social inclusion and the reduction and prevention of poverty: 50% (minimum share: 45%).
- working conditions: at least 10% (minimum share: 7%).

The EURES axis has supported actions in three thematic sections, with the following minimum shares of financial commitments foreseen per thematic section over the entire programme duration:

- transparency of job vacancies, applications and any related information for applicants and employers: 33% (minimum share: at least 15%).
- development of services for the recruitment and placing of workers in employment through the clearance of job vacancies and applications at Union level, in particular, targeted mobility schemes: 49% (minimum share: at least 15%).
- cross-border partnerships: 10 % (minimum share: at least 18%).

The committed funding for the two first thematic sections was well in line with the indicative minimum percentages set in the EaSI legal basis, while activities under the thematic section focusing on cross-border partnerships have not reached the minimum indicative target, mainly due to the quality of applications received under the call for proposals.

The Microfinance and Social Entrepreneurship axis supported actions in two thematic sections, with the following minimum shares of financial commitments foreseen per thematic section over the entire programme duration:

- microfinance for vulnerable groups and micro-enterprises: 52% (minimum share: at least 35%).
- social entrepreneurship: 33% (minimum share: at least 35%).

Regarding the financial commitments for social entrepreneurship (33%), this percentage excludes reflows from the previous financial instruments. Overall, EUR 166.9 million were allocated to the microfinance and EUR 95.1 million to social entrepreneurship, corresponding to a share of 36.2%.

In general, the COVID-19 pandemic has given rise to extending deadlines allowing the applicants to duly prepare high quality and relevant proposals under the 2020 launched calls for proposals. This, subsequently, has caused some delays in the award of grants that were finalised in 2021. Out of the seven calls under the 2020 work programme, six have been launched in 2020, resulting in 132 agreements.

In 2020, the COVID-19 pandemic also caused some delays in the implementation of projects. In the beginning of the pandemic, some projects postponed face-to-face meetings and study visits in the hope to hold these later on but, eventually, had to cancel or transform them into online events.

In order to support the organisations, notably those benefitting from an operating grant, the payments were processed more speedily. In addition, the use of e-signatories, acceptance of e-documents where in the past only hard copies were accepted, and relying more on ex post instead of ex ante verifications also contributed to swifter processing of invoices and payment requests. In addition, a specific call strengthening the role of the social partners in mitigating the economic and social impact of the COVID-19 crisis was introduced in the 2020 work programme and was launched in February 2021.

The EaSI Financial Instruments (encompassing the EaSI Microfinance and Social Entrepreneurship Guarantee, the Capacity Building Investments Window and the Funded Instrument) continued in 2021 to support microenterprises and social enterprises improving their access to finance and helping them start up and grow their businesses, thereby creating and sustaining jobs. The three instruments are implemented by the European Investment Fund (EIF).

The Delegation Agreement between the Commission and the EIF for the EaSI Guarantee was signed in 2015 with technical amendments in 2016 and further amendments in 2017 and 2018 allowing for an additional top-up of EUR 300 million from EFSI. A fifth amendment was signed in 2020 to introduce the COVID-19 support measures allowing for higher risk sharing. The main changes introduced were an increase in the ceiling of the guarantee rate from 80% to 90% for the COVID-19 support period final recipient loans, a one year extension of the guarantee coverage, a six months extension of the availability period for loan inclusions under existing guarantee agreements, lower risk retention for financial intermediaries and an increase of the maximum exposure in respect of a final recipient loan from EUR 25 000 to EUR 50 000 for the microfinance guarantee and for the social entrepreneurship guarantee from EUR 500 000 to EUR 1 million. The initial financial envelope of EUR 96 million has been extended to a current financial envelope of EUR 131 million (out of which EUR 1 million committed for the Business Development Services Support pilot and on top of EUR 300 million from EFSI).

From its launch until 30 September 2021, guarantee agreements worth of EUR 401 million were signed with 114 financial intermediaries in 31 countries which resulted in a total of 154 137 loans to micro- and social enterprises worth of EUR 2.5 billion.

The EaSI capacity-building instrument with a financial envelope of EUR 45 million aims at building the institutional capacity of selected financial intermediaries in Europe for both microfinance and social entrepreneurship, primarily through equity and quasi-equity investments. Capacity building investments can be used for several purposes, depending on the intermediaries' needs (investment in branch expansion, scaling up of IT infrastructure and investment in human resources). This instrument is also implemented by the EIF. At 30 June 2021, 17 transactions for an aggregated amount of EUR 39 million were signed with financial intermediaries in 10 countries, out of which 9 in the EU and 1 in a candidate country (Serbia).

The EaSI Funded Instrument is a EUR 200 million loan fund aiming at promoting microfinance and social entrepreneurship in the Member States and other participating countries, by encouraging microfinance institutions and social enterprise lenders to increase funding for microenterprises as well as social enterprises as a means of supporting financial and social inclusion. The loan fund provides senior and subordinated loans to microfinance institutions and social enterprise lenders in order to boost their lending capacity. The EU budget resources available to the EaSI Funded Instrument are set at EUR 67 million as a first-loss piece investment. The EU is the only equity-holder in the sub-fund. The European Investment Bank (EIB) and the European Investment Fund (EIF) will provide funding respectively under a senior loan facility of EUR 110 million and a mezzanine loan facility of EUR 23 million. At the end of 2021, 13 transactions for an aggregate amount of EUR 83.6 million had been concluded and 4 additional transactions worth EUR 19.9 million were in the pipeline.

Forthcoming implementation

The EaSI Programme brought together three EU programmes managed separately between 2007 and 2013 (PROGRESS, EURES and Progress Microfinance) as the three axes of EaSI. For the period 2021 – 2027, the EaSI programme is a strand for the direct and indirect management of the European Social Funds Plus and is not structured anymore in three axes. It maintains the focus on evidence-based policy-making and social experimentation, support to job mobility and the non-financial instrument activities related to the former Microfinance and Social Entrepreneurship axis. However, under the programming period 2021-2027, the successor of the EaSI financial instruments for microfinance or social entrepreneurship will be implemented under the InvestEU Fund and will no longer be part of the ESF+ EaSI strand.

The EaSI financial instruments will continue to be implemented until the end of their implementation period and they will continue to implement the support measures which were introduced in 2020 in order to counter the impact of COVID-19 outbreak at least until 30 June 2022 (in line with the extension of the State Aid Temporary Framework). As for EaSI technical assistance, some operations under the existing framework contracts will still be supported in 2022. However, the advisory services and technical support to microfinance intermediaries and social enterprise finance providers will be offered under the InvestEU Advisory Hub.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

ESF+ will support investment in job creation, education and training, as well as social inclusion, access to healthcare, and measures for eradicating poverty in the EU. As such, it will make a decisive contribution to mitigate the negative consequences of the COVID-19 crisis by promoting employment and reducing poverty levels, creating better opportunities for all, especially young people and children.

3.1.2. Active programme performance

Performance assessment for the shared management strand of ESF+ will be provided once the implementation will have started. At the reporting date, none of the ESF+ programmes was adopted by the Commission. However, as the eligibility of expenditure on the ground started on 1 January 2021, Member States will have a backlog of ongoing operations. As soon as adopted, the programmes may cover and finance operations that are already being implemented on the ground but are not yet completed at the time of programme approval, therefore partially mitigating the delays in programmes' approval.

Article 32 of the ESF+ Regulation establishes the monitoring dispositions for the implementation of the EaSI strand and, as a novelty, annex IV the primary indicators to report on the progress of the strand.

To monitor the strand in greater detail, additional subsets of indicators have been designed by DG EMPL as part of the performance framework of the EaSI strand ⁽¹⁰⁾.

Input and output indicators will become available at the end of 2022, when actions of the work programme 2021 will be implemented and finalised.

3.1.3. Previous Programme Performance

European Social Fund

With an overall budget of EUR 133.7 billion (EU + national share) ⁽¹¹⁾, the programme has recorded a positive trend in implementation, allowing Member States to continue investing in sustainable and quality employment, social inclusion, education and vocational training, and institutional capacity. Reported data by Managing Authorities through their 2020 Annual Implementation Reports has increased significantly after some late reporting observed in the previous years.

Available data related to ESF financial implementation by end 2021 suggests that, thanks to the CRII/CRII(+) and REACT-EU initiatives, the rate of implementation has not slowed down in the exceptional circumstances of the COVID-19 pandemic (see section 2.2).

Data from the latest Annual Implementation Reports show that the project selection rate increased steadily, reaching 100% at EU level by end-2020 (EU + national share), which means an increase of 15 percentage points compared to last year's reporting. Declared expenditure rates also rose steadily, reaching 54% at the EU level by end-2020. Though differences among types of regions were quite pronounced in the early years of implementation, these have almost entirely disappeared, both in terms of project selection rates and declared expenditure (see section 2.2). The factors driving these results are outlined in detail in the following paragraphs for each specific objective.

The use of financial instruments also increased with 11 Member States having included them in their operational programmes for 2014-2020 period by the end of 2020, mainly under thematic objective 8 employment (EUR 377 million) with the remainder being committed under thematic objective 9 social inclusion (EUR 75 million) and thematic objective 10 education (EUR 90 million). Financial instruments can support a broad range of development objectives to the benefit of a wide range of recipients with the potential for funds to be reused for further investments. In 2014-2020, recognising the advantages of financial instruments, their use was extended to all thematic objectives and was intensified thanks to improved and more flexible implementation options. Increased financial instruments take up was also due to advisory and technical support provided in the context of the fi-compass ⁽¹²⁾, a joint initiative provided by the European Commission together with the European Investment Bank aiming at building capacity within the ESF managing authorities.

⁽¹⁰⁾ These indicators are divided in the following categories:

- input indicators, measuring the performance in relation to the financial implementation of the strand.
- output indicators, related to the direct deliverables of the strand and are directly linked to the eligible actions defined in Article 26 of the ESF+ Regulation; for example the number of studies published, the number of events organised or the number of participants to the events.
- results indicators, looking forward to the immediate effects of the EaSI strand activities; for instance, the number of participants reached through the EaSI strand activities.
- outcome indicators, measuring the extent to which the strand effectively implements the specific objectives defined in Article 4(1) of the ESF+ Regulation and the operational objectives defined in Article 25 of the ESF+ Regulation.

⁽¹¹⁾ Not including the Youth Employment Initiative (YEI), which receives an EU contribution of EUR 8.9 billion.

⁽¹²⁾ [FI-compass](#)

By end 2020, ESF/YEI actions helped 5.4 million participants find a job, while another 7.4 million participants gained a qualification and 2.2 million were in education or training. Additionally, a total of 5 million disadvantaged participants achieved one of these positive results.

The ESF has been successfully promoting sustainable and quality employment (specific objective 1) by supporting 17 million participants under this thematic objective, by end 2020. This has steadily increased since 2016 and represents a significant improvement compared to end-2019, when data showed that 14 million participants had been supported. The trend reflects the performance observed in the previous programming period: an acceleration in implementation and in the achievement of outputs and/or results typically takes place after the mid-term. Moreover, all Member States implemented projects/operations under this specific objective by end 2020 and these types of projects are usually relatively short interventions. Therefore, results/outputs are materializing faster. Another reason for this improvement is that, by this time in the programming period, the ESF programmes from the 2007-2013 period have been fully implemented and Managing Authorities now only focus on the implementation of the 2014-2020 ESF programmes. Under this objective, more than 5.2 million participants achieved positive results. This consist of people that found a job, gained a qualification or were able to improve their labour market position by means of ESF interventions. The total allocated ESF investments under thematic objective 8 amounts to EUR 40.1 billion for ESF 2014-2020 (EU + national co-financing), of which 96.8% was committed (for selected operations) by the end of 2020. The project selection rate is relatively uniform in the Member States, showing an overall steady pace of implementation at the EU level (96.8% at end 2020).

In the field of social inclusion (specific objective 2), the ESF has been contributing to the EU2020 headline target of reducing poverty in the EU by targeting various specific groups such as low-skilled, (long-term) unemployed, elderly, disabled and people with a migrant/foreign background. In order to ensure that a sufficient share of resources is allocated to promoting social inclusion and combating poverty, Article 4(2) of the ESF Regulation requests that at least 20% of the total ESF resources in each Member State shall be allocated to this thematic objective. Member States allocated a variety of interventions to this objective also evidenced by its highest allocated budget. This specific objective has been allocated a total of EUR 34.1 billion (EU + national co-financing), of which 98.1% had been selected for projects by the end of 2020. This project selection rate shows that progress is relatively well underway, with only limited differences among Member States. In Italy, for instance, the average project selection rate remained below the EU average (70.9%) in 2020. A number of Managing Authorities were counting on an increase in project calls, which did not materialise by end-2020. No specific reasons were mentioned in the Annual Implementation Reports. In 2021 the selection rate increased significantly, with an average of 100%. DG EMPL accompanied the Managing Authorities in the reprogramming of the different programmes to include COVID-19 support measures, notably short-time work schemes, and the option of 100% co-financing in the 2020-2021 accounting year. DG EMPL geographical desk officers are always in close bilateral contact with Managing Authorities to ensure all implementation challenges are effectively addressed. At EU level, by end 2020 social inclusion investments supported 10.8 million participants, which led to 3 million positive results, such as finding a job, gaining a qualification or other improvements in terms of one's position on the labour market. Moreover, 40% of all ESF participants supported by end 2020 were considered as part of disadvantaged groups. The figure is slightly lower than in 2019 (42%). This may be due to the COVID-19 crisis, as ESF resources were partially shifted to direct anti-crisis measures such as job maintenance, resulting in a focus on employed participants, among whom disadvantaged are less represented. The increase in the share of employed participants from 21.7% by 2019 to 24.3% by 2020 is an indication to that. However, the ESF has maintained a strong focus on disadvantaged participants and the 2020 value is in line with the target of 40%. The indicator shows that the ESF is successfully reaching and supporting the most vulnerable groups and thus provided an important contribution to the headline target of lifting people out of the risk of poverty or social exclusion. The evaluation of ESF support for social inclusion finalised in 2020 showed that the provision of personalised support is costly and requires more intense training of providers. Yet, sufficient time and personalised support for participants are crucial to ensure needs are met and to generate the desired results. For these reasons, DG EMPL will continue promoting the use of long-term strategies on long-term unemployment, the implementation of more person-centred approaches, and advocate against the use of institutional care, also under the ESF+. Moreover, under the ESF+ Member States will have to allocate at least 25% of their ESF+ resources to promote social inclusion. DG EMPL will use evidence on costs from the current programming period and will continue advocating for personal support in the ESF+ programmes negotiations, because this approach has proven to be more effective in the long run. However, it is worth remembering that under shared management the final decision on how to use the resources on the ground lies with the Managing Authorities from the Member States.

With regard to education and training (specific objective 3), a total amount of EUR 37.1 billion (EU + national share together) was allocated, which makes it the ESF's second largest specific objective, slightly lower than the employment-related one. Implementation is relatively high across all regions, with a project selection rate by end 2020 at or above 100% in most Member States and types of region. In terms of participation and target achievement rates, no substantial differences were observed. All Member States that programmed interventions under this objective now report participations. In total, 16.9 million participants were recorded for all operations in the field of education by end 2020, of which 6.2 million have reached an individual short-term result. This represents an improvement compared to 2019, when 13.4 million participants were reported under this specific objective. The increase in the rate of implementation and in the achievement of outputs and/or results is attributable to the same reasons as for specific objective 1. In terms of immediate results, more than 4.3 million participants gained a qualification with support of ESF investments with an education objective, while another 1.2 million participants were in education/training upon leaving the intervention. As could be expected for operations that focus on education, these results are higher than the results related to the number of participants that engaged in job searching or entered employment. In addition, 2.8 million participants recorded an improvement in their skills (not necessarily leading to a qualification). In all Member States, COVID-19 measures had an impact on progress in implementation of education investments. For instance, many education providers were unable to offer

training, there were less face-to-face lessons and more difficulties in the planning and execution of projects due to the multitude of unforeseen events. Projects adapted to these consequences, through adjustments of training offers and education programmes, introducing distance-learning, the design of e-learning modules and other responses. The conclusions of the evaluation on ESF support to education and training show that, compared to the other specific objectives, the lower percentage of the positive results after six months is an inherent result. The reason is that longer-term common result indicators are oriented towards employment and measure the extent to which the employment situation of participants has improved, while actions under specific objective 3 support mostly skills development and, to some extent, labour market relevance of education and training. Moreover, the lower success rates reported for low qualified adults, people not in employment, education or training (NEETs), and disadvantaged groups are due to the fact that, to effectively support these target groups, it is necessary to intervene ad hoc, which is typically more expensive. DG EMPL advocates for a more person-centred approach, an increased focus on the most vulnerable groups and on digital skills across all ESF programmes. This is done through bilateral discussions between DG EMPL desk officers and Managing Authorities in the context of the ESF+ programming negotiations and ESF implementation, as well as in the ESF Committee and the Technical Working Groups.

Institutional capacity investments (specific objective 4) receive the lowest budget allocation with an overall EUR 4.4 billion. The implementation of these investments moves relatively in line with the other thematic objectives and reported a total of 95.4% of the allocated amounts as eligible costs by end 2020. This type of investments supported 61 365 projects targeting public administrations or public services at national, regional or local level. The number of projects supported has significantly increased since 2018 (27 644 projects supported). In terms of individual results, such interventions mainly contributed to public officials gaining a certain type of qualification (229 277), but most meaningful results in this area are procedural in kind, such as shorter time required for certain operations or specific positive results for organisations, public administrations, the judiciary and civil society organisations such as implementation of certain IT systems, revision and/or simplification of procedures and increased regulatory scrutiny.

As regards investments in specific support to young NEETs (specific objective 5), on average over 100% of the total budget was already reported as eligible costs by end 2020. In regard to outputs, by the end of 2020, a total of 3.4 million young people had benefitted from YEI support. At EU level, participants are well balanced from a gender perspective, with an approximately equal share of men (51%) and women (49%) reached by the interventions. The immediate results of YEI support point to 2.5 million unemployed or inactive persons having completed a YEI intervention. Moreover, around 1.6 million were in education or training, had gained a qualification or were in employment, including self-employment at the end of the YEI-supported measure. These outputs and results indicate a positive trend in implementation and good progress in reaching the targets. The findings of the evaluation on ESF/YEI support to youth employment highlight, among other elements, that integrated pathways are needed to better support disadvantaged groups across all ESF programmes. This will be addressed in the ESF+, where there will be a specific focus on youth employment. Member States with a level of NEETs above the EU average should devote at least 12.5% of their ESF+ resources to help these young people find a qualification, or a good quality job. All other Member States must allocate an appropriate amount of their ESF+ resources to targeted actions to support youth employment measures. Moreover, under the ESF+, DG EMPL intends to support better outreach of NEETs, a person-centred approach and more inclusive measures. In this regard, DG EMPL will launch the ALMA initiative, working on the scaling-up of a cross-border youth mobility scheme for most disadvantaged NEETs (for personal or structural reasons) that has already been implemented by some Member States under the ESF since 2008. By giving to most marginalized NEETs the opportunity to create new connections across Europe, ALMA will foster their inclusion into society and help them find their way to the job market in their home countries more easily. Member States will be able to programme ALMA activities in their ESF+ programmes at national and/or regional level as from 2022. A call for proposals as a one-off initiative in order to help implement the transnational partnerships and do some piloting for few Member States facing obstacles in the ALMA programming in 2022 will be also launched in Q4 2022, in order to foster first placements of participants.

Overall, the main challenges encountered are linked to a slow start of implementation in the first years of the programming period and the high level of complexity associated with the management of the fund. These will be addressed in the next programming period as the adopted legislation further simplifies implementation by facilitating the roll-over of existing designations of implementing authorities. Programming will also be simplified through simpler Partnership Agreements and programmes in content, including lighter procedures for programme amendments. The 2021-2027 rules will also allow for an increased focus on results and simpler ways to claim payments by making more extensive use of simplified cost options and financing not linked to costs. This will further reduce the need for beneficiaries to document detailed costs for each operation and will allow both beneficiaries and programme authorities to better focus on the quality and intended results of the funded actions.

The COVID-19 pandemic has shown that special attention needs to be paid to vulnerable groups such as women, people at risk of poverty or social exclusion and NEETs, among others. They are the ones who had been hardest hit by the crisis and risk being left behind. The need to further support the development of digital skills across the EU also became evident. Member States should focus on these target groups and priorities in the medium and long-term recovery through ESF, REACT-EU and ESF+ programming. The ESF+ Regulation sets out thematic concentration requirements that will ensure an increased focus on actions promoting social inclusion, fighting poverty and developing the skills needed for the digital and green transitions. It also includes a more ambitious requirement for investing in young people and addressing child poverty. Moreover, learning from the COVID-19 crisis, a derogation article was added to the ESF+ Regulation setting out the possibility to adopt temporary measures to respond to possible future exceptional and unusual circumstances.

As for the response to the pandemic, the ESF was primarily used to support people affected by the crisis and to increase the capacity of social and health care services, notably through support to short-time work schemes, to supplementary wage for healthcare personnel and healthcare equipment, and to improve access to healthcare and social services for vulnerable groups. Overall, thanks to the flexibility and additional resources introduced by the CRII(+) and REACT-EU initiatives, no negative effect on ESF performance was noticed by end-2020, according to information submitted by the Member States through the latest Annual Implementation Reports.

Fund for European Aid to the most Deprived

FEAD is effectively providing much needed food and basic material assistance to a large number of most deprived, complemented by accompanying measures providing guidance and advice aiming at their social inclusion. During the 2014-2020 programming period, FEAD support was present in 27 Member States. Most Member States (23 out of 27) distributed food and/or basic material assistance and provided accompanying measures. Four Member States (Denmark, Germany, the Netherlands and Sweden) ran social inclusion programmes. In 2020, almost 16.97 million people received FEAD support⁽¹³⁾, from which approximately 15 million people benefited from FEAD food assistance (distributing around 430 000 tonnes of food up from approximately 350 000 tonnes in 2019), approximately 1.96 million received material assistance (up from 800 000 in 2019) and around 30 000 benefited from social inclusion support. This increase is mainly due to the resumption of operations in Romania. It also reflects the COVID-19 health crisis that worsened the conditions for existing of vulnerable people in receipt of FEAD support, while new people also sought food aid, including people with precarious jobs (e.g. short-term contracts, temporary or informal work), independent workers and also disadvantaged tertiary education students. FEAD is coherent with the Europe 2020 Strategy and the European Pillar of Social Rights Action Plan⁽¹⁴⁾ (targeting a reduction of at least 15 million people at risk of poverty or social exclusion by end 2030), by aiming to foster social inclusion and protection. It complements other EU funds, notably the ESF and the Asylum, Migration and Integration Fund (AMIF), by targeting other groups or providing complementary measures.

Based on the Staff Working Document on the mid-term evaluation of FEAD⁽¹⁵⁾, stakeholders value and stress the need to preserve the fund specific aspects such as flexibility and generally the less stringent administrative requirements compared to the mainstream ESF programmes, along with the established networks and operational Delivery modes. Low thresholds allow aid to be provided to persons not reached by the social services such as homeless, new or undocumented migrants or elderly people at risk of poverty. It also allows responding quickly to emerging needs and crisis situations. The preliminary findings of the ongoing 'Study supporting the monitoring of FEAD – data collection systems implemented by Member States' confirms the findings of the mid-term evaluation of FEAD and will provide good practices as regards monitoring systems.

In the mid-term evaluation of FEAD it was recommended that the future programmes continue focusing on those who are most in need and maintain flexibility to implement both types of programmes. A merger of FEAD with ESF will allow synergies and open up potential pathways for basic support to social inclusion that lead to people getting training and finding work, when the target groups are the same. It was seen as a scope for requiring more evaluations from Member States. In addition, it was advocated that Member States are encouraged to follow the Regulation closely to avoid the introduction of requirements at national levels, which go beyond the requirements of the Regulation as much of the administrative burden stems from requirements imposed at Member States' level, such as narrow definitions on eligibility.

These challenges were tackled in FEAD evaluation partnership meetings and in the 2021-2027 Regulation, whereby FEAD operations are integrated with ESF. In addition, simplified monitoring requirements are applied for specific objectives targeting the most deprived. For output indicators, it is no longer necessary to report which types of goods have been purchased and there is no longer a distinction between the quantity of meals and food packages distributed. If data is coming from registers, Member States can use national definitions, they do not have to align with the toolbox definitions. In addition, there is an enabling clause allowing Member States to use registers or equivalent sources. There will be no Annual Implementation Reports anymore. Instead, the reporting of data will be made via the IT tools for regular exchanges between the Commission and the programme authorities, i.e. SFC2021. Evaluations are mandatory for all specific objectives.

The aid delivery is mostly based on NGOs relying on volunteers and generally cost-efficient.

To improve FEAD's efficiency by building the capacity of programme authorities and partners and to further strengthen performance, between 2017 and 2019, 18 FEAD Network meetings were held, dedicated to various challenges of FEAD implementation including targeted outreach to the most deprived such as children, homeless and older people. A dedicated session took place in 2019 on monitoring and evaluation of FEAD. The meetings allowed participants to present case studies, share challenges and solutions on issues of common interest in the delivery of FEAD activities. In line with the Regulation, the Commission also hosted annual EU-level meetings in 2018 and 2019, steered by representatives of the partner organisations. During the years 2020 and 2021, mutual learning activities under the FEAD community replaced the FEAD network meetings. Three online thematic seminars, three peer exchanges and two conferences were held during this period, in the course of which the remaining implementation challenges and the opportunities offered by the ESF+ were discussed. In particular, the seminars and peer exchanges discussed the characteristics of the new end-recipients of FEAD-funded measures and new practices implemented during the COVID-19 crisis; possible integrated approaches to support beneficiaries towards their social inclusion; monitoring and

⁽¹³⁾ A person may be recipient of multiple forms of FEAD support and thus reported for more than once.

⁽¹⁴⁾ [The European Pillar of Social Rights Action Plan.](#)

⁽¹⁵⁾ [FEAD Mid-Term Staff Working Document.](#)

outreach; social inclusion accompanying measures during and after the pandemic; the implementation of vouchers/e-voucher schemes; and the involvement and role of stakeholders and end-recipients.

FEAD has proven to be adaptable and responsive to emerging needs, such as the COVID-19 crisis. The FEAD Regulation was first amended in April 2020 as part of the CRII+ initiative, making it possible to use indirect Delivery modes, e.g. vouchers or cards (to lower the risk of contamination) and to buy personal protective equipment for organisations delivering FEAD support. Moreover, the amendments strengthened liquidity in Member States, making it possible to provide 100% co-financing rate for one accounting year. By the end of 2021, 12 FEAD programmes had been amended: 8 to benefit from the 100% co-financing rate and 4 to introduce emergency measures to respond to the COVID-19 pandemic.

A second amendment to the FEAD Regulation was adopted at the end of 2020 as part of the Commission's recovery plan, i.e. REACT-EU. This amendment allows Member States to allocate additional funding to ESF, FEAD and European Regional Development Fund programmes. Additional resources can provide top-ups to existing support, such as food and/or basic material assistance or social inclusion actions. They should be in line with each Member State's specific needs, and take into account the increased number of the most deprived since the outbreak of the COVID-19 pandemic. Under REACT-EU, 13 operational programmes (Belgium, Bulgaria, Estonia, Spain, France, Croatia, Italy, Latvia, Luxembourg, Austria, Romania, Slovenia and Slovakia) were amended with a top-up of EUR 506 million.

Since July 2020, the effects of these programme amendments and the higher flexibility provided started to show the impact on financial implementation figures, as presented under section 2.2.

In line with the Regulation requirements, Managing Authorities implementing food and/or basic material assistance operational programme (Operational Programme I) carried out a structured survey on end recipients in 2017. These surveys, together with the findings of an external evaluation⁽¹⁶⁾ and the results of the open public consultation were used for the Commission mid-term evaluation of FEAD and have fed into the negotiations for the 2021-2027 programmes. Furthermore, the second round of structured survey on FEAD end recipients is to be carried out by the Managing Authorities of type I programmes (i.e. providing food and/or basic material assistance and accompanying measures) in 2022. The results of this survey can be used by the Managing Authorities to conduct evaluations and draw lessons learned at national level and will allow aggregation of survey results at EU level to feed into the FEAD ex post evaluation, to be conducted by the Commission.

In the new ESF+ Regulation, ESF and FEAD objectives are merged in a single, integrated list. This is expected to simplify funding and increase synergy and complementarity between employment, education, social inclusion and support to the most deprived. It is worth noting that specific rules apply to the support to material deprivation to keep it as streamlined as possible.

Employment and Social Innovation programme

Up to end 2020, the Commission has committed close to EUR 879 million under EaSI. Funding has targeted the modernisation of employment and social policies with the PROGRESS axis (57.51% of total 2014-2020 budget), job mobility with the EURES axis (20.45%) and access to microfinance and social entrepreneurship with the Microfinance and Social Entrepreneurship axis (22.04%). The programme has improved the distribution of the EaSI funds over the whole period between its axes being at least 55% to the Progress axis; at least 18% to the EURES axis, and; at least 18% to the Microfinance and Social Entrepreneurship axis⁽¹⁷⁾.

A large number of respondents (73%) to the EaSI stakeholders' survey agree that the Commission is an effective source of guidance and support for social and labour innovation (see 2019-2020 monitoring report), as well as for improving understanding and ownership of EU objectives and policies. More than 91% of participants of EaSI funded events declared that they gained a better understanding of EU policies and objectives as a result of participating in the event (91% also in 2017-2018 and 87% in 2015-2016).

According to the 2019-2020 monitoring report, 76% of stakeholders declared that they have already used or intend to use information acquired during the events for policymaking or advocacy purposes. Indeed, the programme has supported data collection and simulation, notably the (i) Labour Force Survey as an important source of information about the situation and trends in the EU labour market, (ii) Classification of European Skills, Competences, Qualifications and Occupations, (iii) EUROMOD, (iv) Mutual Information System on Social Protection and (v) European System of Integrated Social Protection Statistics.

Overall, the integration of all EaSI horizontal issues remains high: values showed an increasing trend in comparison to 2019, paying particular attention to vulnerable groups. Young people was seen as the most mainstreamed principle (80% of respondents to the stakeholders' survey), followed by promoting equality between women and men (79%) and combating discrimination. Since

⁽¹⁶⁾ The external study was carried out by Metis GmbH in cooperation with Fondazione Giacomo Brodolini and Panteia B.V. and covered data reported by the Member States in their Annual Implementation Reports for the period 2014-2016. The contract was implemented during period of October 2016 and May 2018. It served as input for a Staff Working Document (FEAD mid-term evaluation).

⁽¹⁷⁾ These implementation percentages are not final; they are based on information available for the study team at the time of writing each individual EaSI Performance Monitoring Report for 2014, 2015-2016, 2017-2018 and 2019-2020. As the programme continued to be implemented after the latest report available, the implementation of financial commitments could change. The EaSI final activity report, to be finalised in 2022, will include the final implementation percentages per axis.

2019, the highest increase in the values were noted for two horizontal principles: combating long-term unemployment (by 7%) and guaranteeing adequate and decent social protection (by 7%).

The programme also supported fair labour mobility through the EURES network and portal, and the Electronic Exchange of Social Security Information. Initiatives were geared to provide easier access to microfinance and social entrepreneurship.

In the period 2014-2020, 56 calls for proposals were launched with 1 092 applications leading to 451 projects. Overall, these EaSI grant projects involved over 1 693 beneficiaries coming from all participating countries (65 from the candidate and potential candidate countries, 24 from the EEA countries, 39 from the UK and the rest from EU). Since a number of projects are follow-up projects involving the same beneficiaries and co-beneficiaries, the programme supported over 640 different organisations. In addition, the programme assisted 38 EU sector organisations via operating grants. Almost 32% of the grants awarded involve public authorities and their agencies, some 24% of the funds supported the Social Partners such as trade union organisations (15%) and employers' organisations (9%), and 24% went to foundations/NGOs. The rest was for enterprises (9% for profit making and 2% for non-profit making) and higher education and research institutes (9%).

The EaSI calls addressed matters like (i) development of tailored learning provision in the implementation of 'Upskilling Pathways', (ii) enhancing administrative cooperation and access to information concerning posting of workers, (iii) social protection reforms, (iv) undeclared work (v) work-life balance (vi) reforms in social services (vii) Youth Guarantee offers (viii) European Solidarity Corps pilot and (ix) integration into the labour market of third country nationals.

The efforts for scaling-up of projects are hindered by a lack of adequate follow-up in terms of promoting the projects and their results as well as insufficient opportunities for linking the promoters with stakeholders who can assist in their follow-up. For the current programming period, the Commission will put in place a European Competence Centre on Social Innovation, a database of social innovation projects to be published on the ESF+ website, next to the creation of National Contact Points to guide applicants and beneficiaries. Also the switch to the Funding and Tenders portal of the EaSI calls for proposals would mean that each project will have its own place to make its results available to a wider audience on Europa pages, beyond those consulting the projects' webpages. Furthermore, the incorporation of EaSI as a strand of ESF+ will mean that it will share its objectives and governance with the shared management strand, which could facilitate the uptake of EaSI projects by the ESF+ Managing Authorities for further support.

PROGRESS axis

Evidence based EU policies and legislation developed: EaSI supported the development and dissemination of high-quality comparative analytical knowledge. This is to ensure that the EU policies and legislation in the fields of employment and social affairs are based on sound evidence and are relevant to the needs, challenges and conditions in individual Member States and other countries participating in the programme.

Effective and inclusive information sharing, mutual learning and dialogue facilitated: the EaSI Programme remained strong in facilitating effective and inclusive information sharing, mutual learning, and dialogue on the EU policies in the target fields.

Testing of social and labour market policy innovation provided: EaSI provided financial support to test social and labour market policy innovations and contributed to building up the main actors' capacity to design and implement social policy experimentations and to make the relevant knowledge and expertise available.

Greater capacities of national and EU-wide organisations to develop provided, implementation of EU policies supported: EaSI provided EU and national organisations with financial support to increase their capacity to develop, promote and support the implementation of EU policies and law in the area of employment and social affairs.

EURES axis

In 2020, there were 1 189 798 jobseekers registered on the EURES portal. This marks a significant increase of 110.2% since 2019. On the contrary, the number of employers registered increased only by 3%. In 2020 for every registered employer there were on average 76 registered jobseekers. The major increase in the registered jobseekers on the EURES Job Mobility Portal can be directly related to the changes made in the labour market due to the COVID-19 pandemic and the dampening immediate effect it had on mobility patterns.

EURES acted not only as a catalyst for providing transparent labour market information but also for effective recruitment and placing of workers. Cross-border partnerships reported 195 060 contacts with jobseekers and job changers in 2019-2020. Targeted mobility schemes ('Your First EURES Job'), in comparison, provided services to several hundreds of jobseekers per year / per scheme, but were more targeted and customised. While all cross-border partnerships which finalised their activities in 2019 translated into 0.76% of contacts into placements, targeted mobility schemes facilitated 29.1% of contacts into actual placements.

Microfinance/Social Entrepreneurship axis

A significant increase in support for persons from non-EU countries was observed (22.1% in 2020, 14.3% in 2019 and 11.9% in 2018). A slight but steady increase in the category of people aged 51 years and above is noticed as well. On the contrary, the

support for women, unemployed or inactive, and persons aged less than 25 years is decreasing, while people with disability received a somewhat equal amount of financing from 2018 to 2020 ⁽¹⁸⁾.

Overall, EaSI provided a real added value to better access and the availability of microfinance. It's support for the overall availability and access to finance for social enterprises increased significantly.

EaSI focused on supporting the improvement of microcredit providers' infrastructure to better assist the final recipients; and on supporting persons who are in a disadvantaged position to access the conventional credit market, such as women, unemployed, those with no or only primary education, young and older people.

3.2. Key achievements

European Social Fund

45.3 million	5.4 million	7.4 million	2.2 million	3.4 million
people were supported by the ESF and YEI actions by end 2020.	people found a job (including as self-employed) thanks to ESF and YEI support by end 2020.	people gained a qualification thanks to ESF and YEI support by end 2020.	participants were in education or training thanks to ESF and YEI support by end 2020.	young people benefitted from the YEI by end 2020.

Fund for European Aid to the most Deprived

15 million	1.96 million	30 000	2.4 million
people benefitted from FEAD food assistance in 2020.	people received material assistance under FEAD in 2020.	benefitted from social inclusion support under FEAD in 2020.	tonnes of food were distributed amongst end recipients between 2014-2020 from which 428 000 tonnes in 2020.

Employment and Social Innovation programme

76%	62%	12 149	10 926	EUR 1.2 billion	EUR 4 billion
of EaSI stakeholders declared they have used/will use EaSI outputs in 2019-2020.	of stakeholders declared in 2019-2020 that they have/will use EU funded social policy innovation for policy making or implementation.	job placements were obtained from the start of the targeted mobility schemes in 2015 and Your first EURES job, until the end of the first semester of 2021.	vacancies were handled in the first semester of 2021 by 8 EURES cross-border partnerships.	worth of loans were awarded to 97 271 microenterprises between 2014 and 2020 thanks to EUR 222.7 million of guarantees for 104 microfinance intermediaries.	of financing for micro- and social enterprises is expected to be unlocked at the end of the borrowing period thanks to the 141 contracts under EaSI MF/SE.

3.3. Evaluations, studies and reports

European Social Fund

Four thematic evaluations on ESF support between 2014-2018 were finalised in 2020, namely:

⁽¹⁸⁾ A large number of applicants for the EU microfinance and social entrepreneurship support under EaSI programme are legal persons (enterprises). As these do not provide their social data (e.g. gender, age, employment), there are limitations to assess the outreach of the EU microfinance and social entrepreneurship support to specific groups, including vulnerable persons. The data provided corresponds to natural persons.

- Evaluation of the ESF/YEI support to youth employment ⁽¹⁹⁾;
- Evaluation of the ESF support to employment and labour mobility (Thematic Objective 8 excluding support to youth employment) ⁽²⁰⁾;
- Evaluation of ESF support to social inclusion (Thematic Objective 9) ⁽²¹⁾; and
- Evaluation of ESF to education and training (Thematic Objective 10) ⁽²²⁾.

Their key findings were presented in the Programme Statement for Draft Budget 2022.

In 2022, DG EMPL will carry out an evaluation and a study in preparation to the ESF ex post evaluation, namely:

- The evaluation of the CRII and CRII+ initiatives, which will focus on the relevance of ESF support and specifically on whether the ESF has been able to provide the necessary type of support to the right target groups in a timely manner or not. The related Staff Working Document will be finalised by the second quarter of 2023.

The meta-analysis of ESF evaluations, which will attempt to generalise national ESF evaluations’ findings through statistical methods. It will be finalised by the end of 2022.

Fund for European Aid to the Most Deprived

The key findings of the latest evaluation (SWD(2019)148) ⁽²³⁾ have been presented in the Programme Statement accompanying the Draft Budget 2020.

In 2022, Managing Authorities of FEAD operational programmes type I (i.e. providing food and/or basic material assistance and accompanying measures) shall carry out a structured survey on end recipients, to be reported to the Commission in 2023.

According to Article 18 of FEAD Regulation, the Commission shall carry out an ex post evaluation to assess the effectiveness and efficiency of the fund and the sustainability of results obtained, as well as to measure the added value of the fund. This ex post evaluation shall be completed by 31 December 2024.

Employment and Social Innovation programme

The EaSI programme’s mid-term evaluation covered the implementation period 2014-2016 ⁽²⁴⁾ and the findings were included in the Programme Statement for Draft Budget 2020.

In 2021, the EaSI ex post evaluation, covering the overall implementation period 2014-2020, and the European Progress Microfinance Facility final evaluation have been launched. The two evaluations will be completed by December 2022. As part of the evaluations, the Commission launched an online open public consultation (October - December 2021) seeking the views of the EaSI and European Progress Microfinance Facility stakeholders.

The 3rd EaSI performance monitoring report covering the activities 2017 and 2018 was published in March 2020 ⁽²⁵⁾ and the conclusions were presented in the Programme Statement accompanying Draft Budget 2022.

The next performance monitoring report on the period 2019-2020 will be published in the first quarter of 2022. As for the previous performance monitoring reports, surveys have been held to obtain the views of stakeholders as well as organisations who were beneficiaries of EaSI grants, but also from persons who took part in events organised by projects using EaSI financing.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Policy area - Employment and labour mobility

Indicator 1: Participants in employment, including self-employment, upon leaving

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

⁽²⁴⁾ [EaSI Mid-Term Evaluation](#)
⁽²⁵⁾ [EaSI Performance Monitoring Report](#)

Are we on track :	
-------------------	--

Indicator type	Result
Unit of measurement	Number of participants (cumulative)
Cut-Off Date	31/12/2021
Data source	ESF+ Managing Authorities from the Member States.
Link to the objective	Improve workers' mobility and employment opportunities.
Link MFF 14-20 / MFF 21-27	The indicator was followed also in the 2014-2020 period.
Other methodological comments	For the estimation of result indicator targets, DG EMPL will use historical success rates reported by Member States in the current 2014-2020 programming period. The ESF result indicators refer to the outputs directly. E.g. 'participants in employment' can be expressed as a direct function of 'unemployed' and 'inactive' in percentages. The historical success rates are adjusted downwards or upwards, if necessary, on the basis of assumptions. In line with the Common Provisions Regulation, the result indicators will not have milestones. With the adoption of the Regulations by June 2021 only and with the Member States' focus on programming and implementing CRII, REACT-EU as well as RRF resources, the ESF+ programmes sub mission is only starting beginning of 2022. DG EMPL expects most programmes to be adopted by the end of 2022. These programmes will show the thematic focus chosen by Member States and allow the Commission to estimate indicative EU level targets in 2023.

Justification of the trend	

Indicator 5: Young people aged 18-29 years reached

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Output
Unit of measurement	Number of participants (cumulative)
Cut-Off Date	31/12/2021
Data source	ESF+ Managing Authorities from the Member States.
Link to the objective	Improve workers' mobility and employment opportunities.
Link MFF 14-20 / MFF 21-27	The indicator was followed also in the 2014-2020 period.
Other methodological comments	For the estimation of all EU-level output indicator targets, DG EMPL will use historical unit costs reported by Member States in the 2014-2020 programming period. In line with Article 15 of the ESF+ Regulation, the baseline of the output indicators is 0. Their milestones at EU level will be estimated on the basis of historical trends. If the rate of implementation in time shows similar patterns over programming periods, the milestone will represent the same proportion of the target in the post 2021 programmes as in the 2014 programmes. With the adoption of the Regulations by June 2021 only and with the Member States' focus on programming and implementing CRII, REACT-EU as well as RRF resources, the ESF+ programmes submission is only starting beginning of 2022. DG EMPL expects

	most programmes to be adopted by the end of 2022. These programmes will show the thematic focus chosen by Member States and allow the Commission to estimate indicative EU level targets in 2023.

Justification of the trend	

Specific Objective 2: Policy area - Education

Indicator 1: Participants with lower secondary education or less (ISCED 0-2) reached

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Output
Unit of measurement	Number of participants (cumulative)
Cut-Off Date	31/12/2021
Data source	ESF+ Managing Authorities from the Member States.
Link to the objective	Improve workers' mobility and employment opportunities.
Link MFF 14-20 / MFF 21-27	An almost equivalent indicator ('with primary (ISCED 1) or lower secondary education (ISCED 2)') was followed in the 2014-2020 period.
Other methodological comments	For the estimation of all EU-level output indicator targets, DG EMPL will use historical unit costs reported by Member States in the 2014-2020 programming period. In line with Article 15 of the ESF+ Regulation, the baseline of the output indicators is 0. Their milestones at EU level will be estimated on the basis of historical trends. If the rate of implementation in time shows similar patterns over programming periods, the milestone will represent the same proportion of the target in the post 2021 programmes as in the 2014 programmes. With the adoption of the Regulations by June 2021 only and with the Member States' focus on programming and implementing CRII, REACT-EU as well as RRF resources, the ESF+ programmes submission is only starting beginning of 2022. DG EMPL expects most programmes to be adopted by the end of 2022. These programmes will show the thematic focus chosen by Member States and allow the Commission to estimate indicative EU level targets in 2023.

Justification of the trend	

Specific Objective 4: Policy area - Employment and social innovation

Indicator 1: Number of analytical activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Output
Unit of measurement	Number of activities
Cut-Off Date	31/12/2021
Data source	Administrative and quantitative data from the European Commission.
Link to the objective	Develop high-quality comparative analytical knowledge in order to ensure that policies are based on sound evidence and are relevant to needs, challenges and local conditions.
Link MFF 14-20 / MFF 21-27	No direct link. The new regulation introduces a monitoring based on the number of activities (output), which is new. For the 2014-2020 EaSI programme, the analytical activities were monitored based on inputs and outcomes. Therefore, data cannot be compared as there is no continuation.
Other methodological comments	The performance monitoring framework of the preceding Employment and Social Innovation programme 2014-2020 as well as the mid-term and (upcoming) ex post evaluations will form the basis for establishing the new performance framework with updated baselines, milestones and targets. First estimations will be available in the second semester of 2022 and adjusted in 2023. The average number of activities implemented during the previous programming period will be used as baseline with the target to at least maintain this number. Examples of activities covered: · surveys, studies, statistical data, methodologies, classifications, micro-simulations, indicators and support for European-level observatories and benchmarks; · social experimentation evaluating social innovations; · monitoring and assessment of the transposition and application of Union law.

	Actual Progress									Final
Are we on track :										

Indicator type	Output
Unit of measurement	Number of activities
Cut-Off Date	31/12/2021
Data source	Administrative and quantitative data from the European Commission.
Link to the objective	Facilitate effective and inclusive information sharing, mutual learning, peer reviews and dialogue in order to assist the design of appropriate policy measures.
Link MFF 14-20 / MFF 21-27	No direct link. The new regulation introduces a monitoring based on the information-sharing and mutual learning activities (output), which is new. For the 2014-2020 EaSI programme, the information-sharing and mutual learning activities were monitored based on inputs and outcomes. Therefore, data cannot be compared as there is no continuation.
Other methodological comments	The performance monitoring framework of the preceding Employment and Social Innovation programme 2014-2020 as well as the mid-term and (upcoming) ex post evaluations will form the basis for establishing the new performance framework with updated baselines, milestones and targets. The average number of activities implemented during the previous programming period will be used as baseline with the target to at least maintain this number. Eligible actions: mutual learning through exchange of good practices, innovative approaches, results of analytical activities, peer reviews, and benchmarking.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 3: Number of social experimentations

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Output
Unit of measurement	Number of experimentations
Cut-Off Date	31/12/2021
Data source	Administrative and quantitative data from the European Commission.
Link to the objective	Increase in social innovation uptake and effect on policies.
Link MFF 14-20 / MFF 21-27	The indicator was followed also in the 2014-2020 period.

Other methodological comments	The performance monitoring framework of the preceding Employment and Social Innovation programme 2014-2020 as well as the mid-term and (upcoming) ex post evaluations will form the basis for establishing the new performance framework with updated baselines, milestones and targets. The average number of activities implemented during the previous programming period will be used as baseline with the target to at least maintain this number. Eligible actions: Social experimentation actions (a policy intervention that aims to provide an innovative response to social needs, implemented on a small scale and in conditions that enable its impact to be measured, prior to being implemented in other contexts including geographical and sectorial ones, or implemented on a larger scale, if the results prove to be positive).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 4: Number of capacity building and networking activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Output
Unit of measurement	Number of activities
Cut-Off Date	31/12/2021
Data source	Administrative and quantitative data from the European Commission.
Link to the objective	Effect on stakeholders.
Link MFF 14-20 / MFF 21-27	The indicator was followed also in the 2014-2020 period.
Other methodological comments	The performance monitoring framework of the preceding EaSI programme as well as the mid-term and (upcoming) ex post evaluations will form the basis for establishing the new performance framework with updated baselines, milestones and targets. The average number of activities implemented during the previous programming period will be used as baseline with the target to at least maintain this number. Eligible actions - capacity building, in particular of: • networks at Union level related to the policy areas set out in Article 4(1); • national contact points providing guidance, information and assistance related to the implementation of the EaSI strand; • the national administrations, social security institutions and employment services responsible for promoting labour mobility, of microfinance institutions and institutions providing finance to social enterprises or other social investment actors, as well as networking; • stakeholders in view of transnational cooperation.

Justification of the trend	

Indicator 5: Job placements effected as a result of recruitment and placement activity

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Number of effected job placements
Cut-Off Date	31/12/2021
Data source	EURES performance measurement system.
Link to the objective	Effect on labour mobility and access to employment.
Link MFF 14-20 / MFF 21-27	The indicator was followed also in the 2014-2020 period.
Other methodological comments	The performance monitoring framework of the preceding Employment and Social Innovation programme 2014-2020 as well as the mid-term and (upcoming) ex post evaluations will form the basis for establishing the new performance framework with updated baselines, milestones and targets. The EURES performance measurement system that is based on a Commission implementing act, as foreseen under the EURES Regulation, provides the necessary baseline, milestones and targets for the Targeted Mobility Scheme based on its ultimate objective: the number of placements. First estimations will be available in the second semester of 2022 and adjusted in 2023. Eligible actions: recruitment and placement activities.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: European Union Programme for Employment and Social Innovation (EaSI)

Specific Objective 3 :Promote employment and social inclusion by increasing the availability and accessibility of microfinance for vulnerable people who wish to start up a micro-enterprise as well as for existing micro-enterprises, and by increasing access to finance for social enterprises (Microfinance Axis)

Indicator 1: Number of businesses created or consolidated that have benefitted from EU support

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
EaSI Microfinance Guarantee										
2012	Milestones									2020
			21 000				41 000			41 000
	Actual Progress									Final
		416	12 743	25 830	44 780	69 770	97 271	131 769		
Are we on track :	On track									
EaSI Social entrepreneurship Guarantee										
2012	Milestones									2020
			500				1 100			1 100
	Actual Progress									Final
			63	250	864	2 020	3 337	4 783		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Business, Micro-enterprises and Social enterprises taken together on cumulative basis.
Cut-Off Date	30/09/2021
Data source	2021 EASI Guarantee Financial Instrument and Funded Instrument Operational Report, European Investment Fund.
Narrative	The milestones and targets have been based on the past experience with Progress Microfinance. There was no such support offered by the European Commission to social enterprises in the past.
Methodology	
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, this part of the EaSI programme will not be included in the ESF+ EaSI strand, therefore DG EMPL will not continue reporting on this indicator in the Programme Statement.ent.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The target has been exceeded.

Previous Program 2: European Social Fund (ESF)

Specific Objective 1: Promoting sustainable and quality employment and supporting labour mobility

Indicator 2: Participants (unemployed or inactive) in employment, including self-employment, upon leaving

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2023
					24%		24%			24%
14%	Actual Progress									Final
	7,7%	10,30%	16,50%	17,10%	24,17%	23,19%	29,11%			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Ratio
Cut-Off Date	31/12/2020
Data source	Annual Implementation Reports from the Member States.
Narrative	Baseline: Employment result estimate for participants in activities in 2007-2013 period. For the period 2014-20, success rates were reported for participants in all investment priorities until reporting year

	2017. While reporting the absolute number of participants in employment for the whole ESF remains relevant and continues to be reported in the ESIF Open Data Platform, for reporting success rates (number of job placements compared to unemployed + inactive participants at entry to ESF) it is more relevant to report the value for the employment objective only. The break in the series starts from 2018 onwards.
Methodology	Employment results depend on the nature of investment priorities (IP) and interventions. For comparative purposes, in Employment, results for participations in 'Access to Employment' activities during 2007-2013 period were 28%, while for 'Human capital and Social Inclusion' activities employment results made up 10% and 26% of all reported results and correspondingly lower employment rates. However, especially in the education (TO10) and in the institutional capacity-building (TO11) thematic objectives, and to a lesser extent, in social inclusion (TO9) too, placement into job is not among the typical, intended outcomes of the operations.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will continue reporting on this indicator in the Programme Statement.
Other methodological comments	Data reliability: intended to improve data reliability, the official platform for exchanging data on the programme implementation between the Member States, SFC2014, has applied automatic validation rules based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator reached its target in 2018 and only slightly decreased in 2019 and 2020. The decrease experienced in 2020 may be due to the COVID situation. During the pandemic the focus of the actions funded under the programme has been more on maintaining jobs (for the employed) and providing services on the other target groups (including the inactive), rather than on pure activation measures. Moreover, based on the past programming period experience, the achievement of results linked to multiannual projects occurs late in the period and the project selection rate suggests that the target will be achieved.

Specific Objective 2: Promoting social inclusion, combating poverty and any discrimination

Indicator 2: Inactive participants engaged in job searching upon leaving

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2023
							16%			16%
	Actual Progress									Final
	1,40%	5,50%	6,80%	12,20%	16%	14,4%	14,2%			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage of inactive participants
Cut-Off Date	31/12/2020
Data source	Annual Implementation Reports from the Member States
Narrative	The indicator shows the percentage of inactive participants engaged in job searching after receiving support from the ESF. It has been selected because they are an important target group and helping them back into employment is a relevant outcome of a number of ESF operations.
Methodology	This indicator had not existed in the previous programming period. The evidence from the current programming period shows that the target had to be revised. Under-reporting has to be taken into account too in the interpretation of the achievement: in operations where the intended outcome is other than job-search, data on job-search may not be collected in some operations. Another element to be considered is that in many cases there may have been a change in the target groups and only those who are most difficult to reach have remained. Depending on the level of difficulty of the target group, the fluctuation of this success rate indicator is normal, as it is a cumulative figure since 2014. One contributing factor for a temporary decrease may also be the performance review in 2019, which provided a strong incentive to Member States to increase outputs. Proper analysis will be drawn after the ex post evaluation.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement; it will report on the number of participants engaged in job searching upon leaving.
Other methodological comments	Data reliability: intended to improve improving data reliability, the official platform for exchanging data on the programme implementation between the Member States, SFC2014, has applied automatic validation rules based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator reached its target in 2018 and only slightly decreased in 2019 and 2020. The decrease

	experienced in 2020 may be due to the COVID situation. Moreover, based on the past programming period experience, the achievement of results linked to multiannual projects occurs late in the period and the project selection rate suggests that the target will be achieved.
--	---

Specific Objective 3: Investing in education, training and vocational training for skills and life-long learning

Indicator 2: Participants gaining a qualification upon leaving under this thematic objective

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2023
					48%		23%			23%
	Actual Progress									Final
	18,8%	20,4%	21,1%	22,3%	24,38%	23,95%	25,73%			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Ratio
Cut-Off Date	31/12/2020
Data source	Annual Implementation Reports from the Member States.
Narrative	More than 4.3 million participants gained a qualification with support of ESF investments with an education objective, while another 1.2 million participants were in education / training upon leaving the intervention.
Methodology	The target was revised based on the evidence of the 2016, 2017 and 2018 reporting years. The original target estimation was based on 2007-2013 data. However, in that programming period common indicator definitions did not exist and the reporting of results was not so reliable. As planned in the beginning of the 2014-2020 MFF, all Programme Statement targets were revised following the operational programmes' performance review, on the basis of the achievements until 2018.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement; it will report on the number of participants gaining a qualification upon leaving under all ESF+ specific objectives.
Other methodological comments	Data reliability: intended to improve data reliability, the official platform for exchanging data on the programme implementation between the Member States, SFC2014, has applied automatic validation rules based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator has already reached its target and will continue its positive evolution.

Specific Objective 5: Promoting specific support to young NEETs (15-24)

Indicator 3: Unemployed participants in education/training, gaining a qualification or in employment, including self-employment, upon leaving the YEI supported intervention

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
			347 000				1 100 000			1 100 000
	Actual Progress									Final
	8 843	74 052	266 754	622 687	876 937	1 155 541	1 373 011			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of participants (cumulative)
Cut-Off Date	31/12/2020
Data source	Annual Implementation Reports from the Member States.
Narrative	The indicator has been selected because it represents some of the main intended outcomes of YEI interventions.
Methodology	This indicator is not a direct subset of another indicator as it may also include participants who did not complete the intervention.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme

	Statement.
Other methodological comments	Data reliability: intended to improve data reliability, the official platform for exchanging data on the programme implementation between the Member States, SFC2014, has applied automatic validation rules based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator has already reached its target and has shown a steady increase since 2016.

Indicator 5: Inactive participants not in education or training in education/training, gaining a qualification or in employment, including self-employment, upon leaving the YEI supported intervention

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
			107 000				260 000			260 000
	Actual Progress									Final
	2 395	23 439	79 320	153 788	203 964	243 106	263 639			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Participants
Cut-Off Date	31/12/2020
Data source	Annual Implementation Reports from the Member States.
Narrative	The indicator has been selected because it represents some of the main intended outcomes of YEI interventions
Methodology	This indicator is not a direct subset of another indicator, as it may also include participants who did not complete the intervention. The target and the 2020 milestone have been reviewed downwards on the basis of the implementation results of the previous years. Moreover, YEI-supported participants are typically the farthest away from the labour market and therefore more difficult to be reached.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement.
Other methodological comments	Data reliability: intended to improve data reliability, the official platform for exchanging data on the programme implementation between the Member States, SFC2014, has applied automatic validation rules based on the definition of the indicators. Moreover, plausibility checks have been carried out horizontally and by the geographical desks. Potential issues have been raised to the authorities before the Annual Implementation Report adoption as well as during performance data reliability audits.
Full metadata available at this address	
Justification of the trend	The indicator achieved the target and its value has been growing steadily since 2017. Moreover, based on the past programming period experience, the achievement of results linked to multiannual projects occurs late in the period and the project selection rate suggests that the target will be exceeded.

Previous Program 3: Fund for European Aid to the Most Deprived

Specific Objective 1: Alleviating the worst forms of poverty in the Union by providing non-financial assistance to the most deprived persons

Indicator 1: Number of persons receiving assistance from the Fund

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0	8	12.7	12.7	12.7	12.7	12.7	12.7			12.7
	Actual Progress									Final
	8.19	13.76	15.92	12.92	12.85	12.5	16.97			
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of persons receiving assistance from the Fund reported annually (in million).
Cut-Off Date	31/12/2020
Data source	Annual Implementation Reports from the Member States.
Narrative	The number of persons receiving assistance from the Fund represents the main result of the operations financed from the fund.
Methodology	FEAD was a new fund in the 2014-2020 period, hence with a baseline at 0. The figures used in the framework of the food assistance programme are established through a methodology which does not

	yield figures that could be comparable to the one of the new FEAD, thus they cannot be used as a baseline. In 2014, the Commission and the Member States agreed on a common set of output and result indicators on which the Member States report annually (in the Annual Implementation Reports) from 2015 to 2024 for both OP I type of programmes (food aid and/or basic material assistance) and OP II type of programmes (social inclusion support). The reporting is performed at programme level. In terms of target and milestones, there is no requirement in the FEAD performance framework for Member States. The Commission made an adjusted forecast of 12.7 million annually based on the actual performance between 2014-2017, as stated also in FEAD mid-term evaluation.
Link MFF 14-20 / MFF 21-27	In the period 2021-2027, DG EMPL will not continue reporting on this indicator in the Programme Statement.
Other methodological comments	A person may be recipient of multiple forms of FEAD support and thus reported for more than once.
Full metadata available at this address	
Justification of the trend	The indicator surpassed its target. On average, the FEAD supported 13.3 million persons each year between 2014 and 2020 and almost 17 million in 2020 alone.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
0.22	0.22	1075.00	1075.00	1075.00	1075.00	1075.00	1075.00	6450.22	7%
REACT EU Climate contribution	Implementation	2022-2027 Estimates (EUR million)						Total	
	2021	2022	2023	2024	2025	2026	2027		
	1 202.18								1 202.18

6.1.2. Explanation on the financial contribution

Climate change expenditure within ESF can be tracked through the ESF secondary theme 01 'Supporting the shift to a low-carbon, resource efficient economy' indicated in the Implementing Regulation (EU) No 215/2014. The intervention fields in Annex I of Regulation (EU) No 215/2014 match the ESF investment priorities defined in Article 3 of the ESF Regulation. Unlike for the ERDF categories of intervention, which have the support to climate objectives as their primary objective, one cannot establish ex ante an automatic link between one ESF investment priority and the impact on climate objectives.

Climate actions can be undertaken under the majority (if not all) of the ESF investment priorities (whether it is in the context of SME support, vocational education and training systems, life-long learning, youth employment measures, etc.). It is for this reason that the Commission decided to use for the ESF an additional dimension to track climate change expenditure: the ESF secondary theme. All expenditure under the ESF secondary theme has a 100% coefficient.

For the programming period 2014-2020, Member States have earmarked in their operational programmes EUR 1.6 billion (EU allocation) for the shift to a low-carbon and resource efficient economy. This represents a conservative estimate based on Member States' declarations in their operational programmes.

Here, Member States set estimates for the EU share and not for the EU and national share together. However, reporting is done solely on the basis of total costs (EU and national share together). In order to follow the progress towards the target, the ESIF-related DGs of the Commission have created a report that allows for the systematic application of the co-financing rate from the programmes to the information declared in the financial data. It provides a more accurate picture of the ESF contribution (EU only) to low-carbon, resource efficient economy and allowed for comparison with the amounts programmed.

At the beginning of 2022, Member States detailed programming intentions for 2021-2027 operational programmes are not yet known. DG EMPL calculated the estimates by extrapolating the climate-related expenditure allocated on the ground under the 2014-2020 ESF operational programmes. For this purpose, DG EMPL used the amounts earmarked with the ESF Secondary Theme 01 'Supporting the shift to a low-carbon, resource efficient economy' reported by the Member States. According to Member States' reports, the climate-related allocation under the 2014-2020 period is up to 8% of the total ESF envelope. The 8% was applied to the ESF+ allocation after deduction of technical assistance at Member States disposal (4% of ESF+ allocation). The resulting amount was spread equally on the years of the programming period from 2022 to 2027, as there was no implementation in 2021 (no programme has been adopted by the end of 2021 and only few have been formally submitted to the Commission). This estimation will be updated in the Programme Statement for Draft Budget 2024 with the actual programmed contribution to climate objectives after all the ESF+ programmes are submitted to the Commission (2022).

As for REACT-EU, the 8% was applied to the REACT-EU 2021 allocation to ESF (EUR 15.1 billion), which resulted in the expected climate contribution of EUR 1.2 billion.

6.1.3. Key achievements

European Social Fund 2014-2020

Relevant objective/output	Budget 2019 (million EUR)	Budget 2020 (million EUR)
Climate actions under ESF investment priorities	1 600	2 133

Following the ECA Special Report on Climate in 2022, the Commission has corrected and revised the estimated contribution for the period 2014-2020, also using the most up-to date information available. Based on the latest estimates available, the ESF (including YEI) contributes to climate objectives with approximately EUR 7 035 million, through support to a wide range of projects. For example, in Sardinia, Italy, thousands of jobseekers have been taking training courses designed to help them find work in Europe's green and blue economy. Training is provided by accredited vocational education and training professionals. Courses are split into two sets: one set is designed to strengthen people's skills and knowledge in a subject area with job coaching, internships, and training leading to certification, and the second set is designed to help people to start up their own business. Thanks to an ESF contribution of EUR 56.5 million, over 5 000 people have participated in the project since its start in 2016.

6.1.4. Performance

European Social Fund 2014-2020

By end of December 2021, already more than EUR 7 billion of eligible ESF expenditure declared (EU share) was reported by Member States as having contributed to the shift to a low carbon, resource efficient economy. This represents 437% of the amount set in the operational programmes. In terms of projects selected, the EU share was already EUR 13.4 billion, which is significantly above the amount set in the programmes.

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution		0.00	0.00					0.00
Share compared to total envelope		0.00 %	0.00 %					0.00 %

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
REACT EU Biodiversity contribution		0.00	0.00					0.00
Share compared REACT EU total implementation and programming	0.00 %			0.00 %	0.00 %	0.00 %	0.00 %	

6.2.2. Explanation On the financial contribution

The ESF+ contributes to green skills and jobs and the green economy by:

1. Supporting the labour force by enhancing knowledge and skills and matching skills to develop, produce, use and apply new efficient and low-carbon technologies in a broad range of sectors.
2. Offering support to the labour force to alleviate any negative impact on employment as a result of shifting to a low-carbon and climate-resilient economy, i.e. jobs cuts in energy-intensive industries.

Through this type of investments, the programme may also partially support the development of biodiversity-relevant skills and jobs. However, the contribution of the ESF+ to biodiversity is only marginal, compared to the broader Contribution to climate mainstreaming, and cannot be tracked as such tracking is not foreseen in the Regulation.

6.4. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	

Score 0*: 143.1

Score 1: 0

(*Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significantly impacted**, score 0*: **impact on gender equality to be determined ex post**, score 0: **no significant impact on gender equality**.

Gender mainstreaming is a horizontal principle of the ESF+. It needs to be taken into account throughout the preparation, implementation, monitoring and evaluation of all ESF+ programmes.

ESF+ Shared management strand: score 1

Under the ESF+ shared management, Member States have the obligation to programme targeted actions aimed at increasing the sustainable participation and progress of women in employment and all ESF+ selection criteria and procedures must ensure gender equality. It is also important to underline that all ESF+ personal data and indicators will be broken down by gender (female, male, 'non binary'). For all these reasons, in order to estimate the contribution of the ESF+ under shared management to gender equality, a 40% marker (score 1 in the table above) has been applied for the entirety of the programme. Once information from programming and implementation becomes available, and in line with the tracking by the Member States through the dedicated Common Provisions Regulation gender equality dimension code, score 2 will be applied to those amounts related to specific targeted actions.

To strengthen gender equality in the 2021-2027 partnership agreements and programmes, DG EMPL has given dedicated presentations on this topic in several technical webinars and meetings addressed to the managing authorities of all Common Provisions Regulation funds. DG EMPL requested all Member States to include a strong commitment in their partnership agreements that they will respect this horizontal principle. It also asked the Member States for more specific information in each Common Provisions Regulation programme to make sure that gender mainstreaming is taken into account at all stages of programming and implementation. Specific questions on this topic have been included in the partnership agreements and programme internal checklists to ensure that this is assessed by all geographical desk officers. The arrangements set out by managing authorities are also assessed in the context of the Charter horizontal enabling condition for which a dedicated procedure was set up, which involves all relevant Commission services both at technical and Cabinet levels.

The COVID-19 crisis has disproportionately affected people in our society including women, in particular single mothers, the low skilled, those with a migrant background or with a disability as well as older women living in institutional care. Member States have been invited to pay particular attention to the needs of these groups when programming the additional resources provided for through the funding instruments aiming to support the repair and recovery from the crisis, including REACT-EU and ESF+.

Given the late adoption of the ESF+ Regulation (June 2021) and the priority given by the Member States' authorities to other instruments to tackle the consequences of the COVID-19 outbreak (REACT-EU, Recovery and Resilience Facility and Coronavirus Response Investment Initiative CRII and CRII+), the adoption of the ESF+ programmes was delayed to 2022 and the 2021 tranche of the allocation re-programmed. As a result, no expenditure was adopted, estimated or programmed in 2021 under the ESF+ shared management strand. The table above will therefore be updated following the adoption of all ESF+ programmes.

ESF+ Direct management strand: score 0*

Gender equality is a horizontal priority also for the direct management strand of ESF+ and should be taken into account in all activities. To identify to what extent the Employment and Social Innovation strand is successful in mainstreaming horizontal principles in EaSI-supported activities, the Performance Framework of the strand includes an indicator on the percentage of stakeholders who declare that the activities funded through EaSI promote gender equality and non-discrimination. This indicator is directly linked to SDG 5 ⁽²⁶⁾.

European Social Fund 2014-2020

Gender mainstreaming is a horizontal principle of the ESI Funds. The Member States and the Commission must promote it throughout the preparation, implementation, monitoring and evaluation of the operational programmes. Moreover, under ESF, Member States have the obligation to programme targeted actions aimed at increasing the sustainable participation and progress of women in employment. In the period 2014-2020, the dual approach (i.e. gender mainstreaming and specific actions) is being pursued together with other requirements, such as a dedicated investment priority on gender equality and relevant general ex ante conditionalities. The strong emphasis of the ESF on gender equality has been maintained and even reinforced for the period 2021-2027.

The ESF has a dedicated investment priority for equality between men and women in all areas, including in access to employment, career progression, reconciliation of work and private life and promotion of equal pay for equal work. Member States have earmarked EUR 1.4 billion for 2014-2020 (EU share) under this priority.

Specific targeted actions can yet be programmed under any other ESF investment priority. Across all investment priorities, the indicative amount for targeted actions for gender equality captured through the ESF secondary theme in programmes was EUR 5.4 billion (EU share).

In their operational programmes, Member States set a target for the EU share and not for the EU and national co-financing. However, reporting is done solely on the basis of total costs (EU and national share together). In order to follow progression

⁽²⁶⁾ More information is available below in the section on SDGs, under SDG 5 Achieve gender equality and empower all women and girls.

towards the target, the ESIF-related DGs have created a report ⁽²⁷⁾ that allows for the systematic application of the co-financing rate from the programmes to the information declared in the financial data. It provides a more accurate picture of the ESF contribution (EU only) to gender equality.

By end of December 2021, the volume of the projects supported under the dedicated gender equality investment priority (EU share) was EUR 846 million of declared EU eligible expenditure. In total, EUR 2.3 billion under the ESF have effectively been dedicated to projects for gender equality between 2014 and 2020 across all investment priorities (EU expenditure declared). In terms of selected projects, EUR 3.4 billion have been committed to gender equality projects across all investment priorities.

It is also important to underline that all ESF personal data (annex I ESF Regulation) is broken down by gender. The participation of women and men in ESF supported activities is almost equally distributed at EU level (48% men and 52% women). There are however some differences between the Member States depending notably on the types of activities at stake. In terms of reporting, all personal data will continue to be broken down by gender (female, male, 'non binary') under the ESF+ shared management strand in the 2021-27 programming period.

Gender equality aims at ensuring that all people regardless of their gender have access to equal rights, responsibilities, and opportunities. Gender equality mainstreaming implies that the interests, needs and priorities of all genders are taken into consideration, recognising the diversity of different groups of genders. The ESF+ can be used as a tool to support gender-relevant policies, and specific interventions to address gender gaps and differences in the areas of social inclusion, education and employment for all in the EU. Women in particular still remain underrepresented in the labour market and are at greater risk of social exclusion, unemployment and low-quality jobs. Women also remain, on average, slightly more likely to be unemployed than men with the same level of education. The challenges and risks women typically face are addressed through the ESF as follows:

- At programming level: by involving all relevant stakeholders, including gender equality bodies, in the preparation of the partnership agreements and programmes. For the 2021-2027 period, a specific enabling condition is also provided for and needs to be fulfilled throughout all the stages of implementation of ESF+ investments. Moreover, ESF+ specific objective 3 clearly refers to the promotion of a gender-balanced labour market.

- At implementation level: by involving partners in monitoring committees notably to assist with a range of tasks such as approving the methodology and criteria used for the selection of operations, examining the implementation of the programmes and the fulfilment of enabling conditions.

Implementing specific additional training measures for staff within the managing authority or providing targeted support and guidance to beneficiaries to sufficiently integrate a gender equality perspective in their projects are some of the specific actions taken to integrate the gender perspective in ESF programmes and projects. To support Member States in their efforts to mainstream gender equality at all stages of the programme, the European Community of Practice on gender mainstreaming, supported by the ESF, developed by end 2013 a gender mainstreaming standard ⁽²⁸⁾ in view of the future programming period.

Fund for European Aid to the Most Deprived 2014-2020

Article 5(11) of the FEAD Regulation obliges Member States to ensure that equality between men and women and the integration of the gender perspective are taken into account during the various stages of programme implementation. In their Annual Implementation Reports, Member States have to report information on and assessment of the actions which take into account the principle set out in Article 5(11) of the FEAD Regulation. Also, the common result indicators on food support and basic material assistance distributed are broken down by gender.

In 2020, the overall profile of end recipients of FEAD support remained unchanged. As in previous years, just about half (47%) of all those supported - were women. In the majority of cases, the most deprived individuals are identified on the basis of economic criteria, which prevent discrimination in access to aid based on gender, origin, religion or belief, disability or sexual orientation. The specific needs attached to each gender are also considered. For example, in some Member States such as Hungary and Poland, women, notably pregnant ones are explicitly targeted. In Sweden, FEAD focuses on women's health.

Non-discrimination is, however, a general principle applied across the implementation of the programme and it is not relevant to produce estimates of budget contributions.

Employment and Social Innovation programme 2014-2020

EaSI is expected to contribute to strengthening ownership of EU objectives among policy-makers at all levels to the extent that horizontal issues, such as gender equality, non-discrimination and inclusion of vulnerable groups, are regularly taken into account.

Horizontal issues have been addressed in designing, implementing and reporting on the activities. For instance, the terms of reference for all procurement under the programme should describe how those issues should be considered in the objectives and how to include them in the tasks to be performed.

⁽²⁷⁾ [ESIF 2014-2020 categorisation ERDF-ESF-CF planned vs implemented](#)

⁽²⁸⁾ [Gender mainstreaming standard](#)

EaSI funded projects have mainstreamed gender equality, non-discrimination and inclusion as shown by the project ‘EQW&L-Equality for work and Life’, aiming to elaborate and test a set of strategies, a new model of intervention and a toolkit to facilitate the access to labour market of unemployed persons (women, but not only) who are hindered from getting and keeping a job by their work-life balance needs (project implemented between February 2018 – February 2021, with EUR 862 014.73 from EaSI). Another relevant example is the project ‘MASP - Parenting as a Master in a new ‘work-life’ synergy perspective’ that helped strengthen existing corporate commitments to gender equality and women's empowerment with an explicit ambition to help reduce and redistribute the responsibility for unpaid care work (project implemented between February 2019 - March 2021, with EUR 1 368 322 from EaSI).

The integration of horizontal principles during the MFF period shows an increasing trend. The results of the latest EaSI Stakeholder Survey (2021) highlights that two of the most mainstreamed horizontal objectives integrated by the programme are ‘promoting equality between women and men, including through gender mainstreaming and gender budgeting’ (79%) and ‘combating discrimination based on sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation’ (77%).

6.5. Contribution to the sustainable development goals

6.5.1. Goals

SDG 1 End poverty in all its forms everywhere

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

SDG 3 Ensure healthy lives and promote well-being for all at all ages

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

SDG 5 Achieve gender equality and empower all women and girls

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

SDG 10 Reduce inequality within and among countries

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

SDG 12 Ensure sustainable consumption and production patterns

SDG 13 Take urgent action to combat climate change and its impacts

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

SDG 17 Strengthen the means of implementation and revitalize the global partnership

6.5.2. Key achievements and performance

European Social Fund and Fund for European Aid to the Most Deprived 2014-2020

SDG 1 End poverty in all its forms everywhere

Sustainable development is embedded in the ESF's and FEAD's mission. More specifically, FEAD promotes social cohesion, enhances social inclusion and ultimately contributes to achieving the EU2020 poverty reduction target. FEAD contributes to the specific objective of alleviating the worst forms of poverty by providing non-financial assistance to the most deprived. In all programmes, FEAD strives to offer pathways out of poverty to the most deprived, according to the target groups of the programme.

During the COVID-19 pandemic, the French Food Banks Network experienced an increase of almost 20% in the demand for food aid (from March to June 2020). By the end of 2020, around 7 million people in France were estimated to be experiencing food deprivation. The health crisis worsened the conditions for existing vulnerable people in receipt of FEAD support, while new groups – such as students - also sought food aid. The project ‘Distribution of food parcels to students’, that ran from March 2020 to December 2021 with a budget of EUR 1.4 million co-funded by FEAD, identified and targeted the most disadvantaged students in third-level education in the Nouvelle-Aquitaine region of France. As the crisis persisted, its remit was broadened in October 2020 to young people aged 15-30 in precarious circumstances with a new scheme called ‘Rebound for youth’. Depending on the week, between 800 and 1 400 students receive food parcels and in total, nearly 52 000 packages have been distributed to date.

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Both the ESF and FEAD contribute directly to ending hunger across the EU. The funds invest in measures promoting job creation, quality employment, education and measures combating social exclusion and discrimination, which also target the most marginalised members of European societies.

For example, in Hungary an ESF-funded project has been offering tailored employment support for people with disabilities. Through coaching and support activities for people with chronic health conditions or disabilities, it aims to find sustainable,

worthwhile employment that is tailored to the participants' specific needs. The project involves local businesses that are interested in employing people with disabilities, also due to financial incentives. Backed by EUR 41.2 million of ESF support, the project is running until end 2022, and by end 2021 has already supported over 19 000 people and helped over 14 000 people find a job.

SDG 3 Ensure healthy lives and promote well-being for all at all ages

The ESF also contributes to ensuring healthy lives and promoting the well-being for all at all ages by investing in projects promoting job creation, quality employment, education, training and vocational training for skills and lifelong learning, and combating social inclusion and discrimination. FEAD focuses on support to the most vulnerable groups. For example, in Sweden the 'Pentru Tine - För Dig' (For You) project provides health and social information to mobile EU citizens living in vulnerable conditions in four different cities. Through the provision of community and health information, the project aims to increase autonomy and reduce vulnerability among these citizens, as well as decreasing the risks associated with exploitation, ill health and hate crimes. The long-term goal is to improve health and increase inclusion and empowerment through increased knowledge of their rights, opportunities and obligations in Sweden, their home country and the EU. Due to the COVID-19 related crisis, the project adapted the health information provided including ways to prevent the spread of the virus and how to seek healthcare for symptoms or illness. A number of other measures were taken, including: updating the target group on restrictions and adjustments in Sweden, Romania and Bulgaria; pausing some group activities and focusing on outdoor outreach activities; holding all planning meetings online; and using a car for outreach activities, minimising the use of public transport. The project ran between March 2019 and June 2021 with a total amount of funding of EUR 1.2 million. The outreach teams have provided information to approximately 1 600 individuals through over 5 000 meetings. An internal user survey of participants found that 99% of participants agreed they had benefitted from the information received, with 98% feeling that the conditions for taking care of their own health and hygiene have improved.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

ESF investments under the education thematic objective contribute to ensuring inclusive and equitable quality education and promote lifelong learning opportunities for all. For example, thanks to ESF funding, people in north-east Italy could take a number of free training courses to develop and improve their digital skills. Some EUR 4.5 million from the ESF allowed participants to adapt to the constantly changing work environment, including the new business models and new ways of working that are required in a digital economy. In total, over 5 000 people benefited from 505 training courses in the field of lifelong learning. The project ran from 2017 to 2021.

SDG 5 Achieve gender equality and empower all women and girls

Importantly, the ESF Regulation strongly reflects the EU's commitment to eliminate inequalities between women and men following a combined approach of gender mainstreaming and specific activities for women in different fields. The principle of equality between the sexes is a key horizontal one of ESF programmes, thus contributing to achieving gender equality and empowering all women and girls.

For example, in Sweden an ESF-funded project helped newly arrived migrant women between 25 and 65 years old to speed up the process of finding work or training while also breaking down gender stereotypes. Practical aspects to the programme included individual coaching from a personal mentor as well as networking events and study visits with potential employers. With an ESF contribution of EUR 1.6 million, the project ran from 2016 to 2019 and benefited around 700 participants.

In Croatia, an ESF-funded project delivered free training on permaculture and urban horticulture to women and young people of school age. Backed by EUR 95 529 of ESF funding, the project ran from 2018 to 2020 and provided free training to 49 unemployed women, covering not only practical gardening knowledge but also wider employability skills. By the end of their training, women were qualified to work in the relevant industries and had also gained the extra knowledge, motivation and confidence needed to apply for jobs.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

ESF investment in the adaptation of workers and reskilling is crucial. While jobs may be created, other jobs will be lost, and thus other jobs will require different skills as they are 'greened' in order to promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all (SDG 8) and make cities and human settlements inclusive, safe, resilient and sustainable (SDG11). For example, the Finnish University of Vaasa is developing a project, with funding from the ESF, which will offer a framework and digital app to help businesses manage staff wellbeing. Its innovative crisis management tools should also help companies respond better to COVID-19 pandemic. With an ESF contribution of EUR 1 million, the project, running until 2023, will help managers to recognise wellbeing development needs, set targets, use relevant tools and build management systems for workplace wellbeing, supported by an innovative digital app for smartphone and laptops.

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

ESF investments under education thematic objective contribute to building resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation (SDG 9), by supporting the development of necessary skills in the transition to a low carbon economy. The transition will have consequences for the labour market, for employment and for the skills required for the new 'green' jobs and the greening of existing jobs in the future. For example, in Croatia an ESF-funded project provided training covering practical gardening knowledge and wider employability skills for women and young people. By the end of their training,

participants were qualified to work in the relevant industries and had the extra knowledge, motivation and confidence needed to apply for jobs. With an ESF contribution of around EUR 97 000, the project ran from 2018 to 2020 and benefited 139 participants.

SDG 10 Reduce inequality within and among countries

The ESF is the EU's main fund to reduce the gap in living standards between regions and between people and to promote economic and social cohesion across Europe thus aiming to reduce inequality within and among countries.

The FEAD finances specific actions to promote the social inclusion of the end recipients through dedicated outreach to specific target groups. In Germany, Denmark, the Netherlands and Sweden, where FEAD support funds social inclusion measures, the homeless and impoverished migrants are the primary target groups, thereby aiming to reduce inequalities and unequal access to social services. For example, in Denmark, the Kompasset (Compass) project provides services for hard-to-reach and destitute EU mobile citizens, many of whom struggle to access low-threshold services due to marginalisation, mental health issues or substance abuse. Kompasset is a FEAD-funded project with a budget of EUR 2 million, which started in 2016 to address the challenge of an increasing number of migrants experiencing homelessness on the streets of Copenhagen. Kompasset seeks to build relationships with marginalised, homeless migrants and connect them with services that can support them in their daily life: providing them a place to get some sleep indoors, health clinics, counselling and legal assistance. It also aims to create a welcoming and friendly environment for migrants who arrive in Copenhagen. Kompasset has provided support to people from approximately 55 countries: 75% EU citizens and 25% third-country nationals, reaching over 800 participants in 2019 and 2020.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

See under SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all.

SDG 12 Ensure sustainable consumption and production patterns

The European Social Fund can support efforts to strengthen sustainable consumption and production patterns (SDG 12) and action to combat climate change and its impacts (SDG 13) at all stages of life from raising children's awareness in schools, to supporting trainings for green skills and green entrepreneurship and also social inclusion through green careers. For example in Belgium (Wallonia) training centres designed in response to local socio-economic needs provide training in a variety of sectors. Thanks to ESF support, three of these centres, representing the food chain industry "from field to fork", offered professional training courses for unemployed people. Backed by EUR 8.4 million of ESF co-financing, the project ran from 2014 to 2020 and supported 13 182 participants.

SDG 13 Take urgent action to combat climate change and its impacts

See above.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

The ESF contributes to promoting peaceful and inclusive societies for sustainable development, providing access to justice for all and build effective, accountable and inclusive institutions at all levels (SDG 16) through investment under the Institutional Capacity Thematic Objective. The ESF finances the strengthening of institutional capacity and the efficiency of public administration regarding reforms, better regulation and good governance, especially in the economic, employment, education, social, environmental and judicial fields through measures mainly consisting of training for public institutions. For example, thanks to an ESF contribution of over EUR 8.5 million, in Bulgaria, in the last four years, the e-Government Agency has introduced more than 859 online services, which are already making life easier for thousands of citizens and businesses. Documents are submitted securely and instantly, without the need to travel. Upgrading horizontal e-government systems allows digital, remote and secure access to the databases of various administrations, which has enabled more efficient and effective public services and reduced administrative burden for citizens and businesses. The project will run until 2023.

Employment and Social Innovation programme 2014-2020

SDG 1 End poverty in all its forms everywhere

Fighting poverty is at the heart of EaSI, which does this by analytical work as well as via projects. Such projects seek to improve service provision, offer education and training, as well as hands-on support to bring people (back) to employment as one of the main means to take them out of poverty. For example, 'FEBA - Reducing poverty through food redistribution 2020 actions', funded with EUR 250 172 for a duration of one year (2020) with the key objective of strengthening the activity of the European Food Banks Federation and its members, contributed to the reduction of poverty and social exclusion through the redistribution of food in partnership with charitable organisations that assist the most deprived in Europe.

SDG 3 Ensure healthy lives and promote well-being for all at all ages

The project 'Strengthening Action on Health and Social Equity in the EU – EuroHealthNet Proposal for 2020' has been funded by EaSI with EUR 561 668 (January 2020 – December 2020). Coordinated by EuroHealthNet, it provided input on how different policy initiatives (European Semester, the development of an Action Plan for the EU Pillar of Social Rights, the emergence of the

Recovery and Resilience Funds and the programmes of the multiannual financial framework, including ESF+) could be designed and applied to maximise impact on health and well-being and reduce health inequities across the EU.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

As part of the promotion of high quality and sustainable employment, EaSI supported actions aiming at upskilling and reskilling the workforce, notably helping national authorities devise adequate policies through the upskilling pathways calls.

EaSI also contributed to develop the multilingual classification system for skills, competences, qualifications and occupations, ESCO, that are relevant for the EU labour market and education and training.

EaSI funded with EUR 308 080 (April 2019 – March 2021) the project ‘Blueprints for basic skills development in Slovakia’ coordinated by the State Vocational Education Institute and Centre for Labour, Social Affairs and Family. The project (i) initiated national-level discussions on the issues related to adult literacy, (ii) mapped the current landscape of basic skills such as literacy, numeracy and digital skills of the Slovak adult population, focusing mainly on low-skilled individuals, (iii) developed tools and methodologies for identification of the needs of low-skilled job seekers and (iv) trained individuals involved in dealing with issues related to basic skills of the adult population.

SDG 5 Achieve gender equality and empower all women and girls

This is achieved indirectly by the fact that EaSI, in pursuing its general objectives, aims to equally fulfil its horizontal objectives, one of them being targeted at promoting equality between women and men, including through gender mainstreaming and, where appropriate, gender budgeting.

EaSI funded with EUR 1 368 322 the project ‘MASP - Parenting as a Master in a new ‘work-life’ synergy perspective’ that was implemented between February 2019 and March 2021 and helped strengthen existing corporate commitments to gender equality, women's empowerment, and the Sustainable Development Goals with an explicit ambition to help reduce and redistribute the responsibility for unpaid care work.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

EaSI work programmes contribute to the implementation of a number of legislative and non-legislative measures such as the proposal for a Council Recommendation on Integration of the long term unemployment, the New Skills Agenda for Europe, the Labour Mobility Package, the review of the EU Health and Safety Legislation, and to the European Pillar of Social Rights.

EaSI funded with EUR 256 025 (April 2020-March 2021) the project ‘Euclid Network – Empowering Social Enterprises for a vibrant social enterprise finance market 2021’. Coordinated by EUCLID Network and with eight participating countries (Denmark, Germany, Estonia, Spain, Croatia, Portugal, Sweden, and the United Kingdom) the project (i) improved the access to social finance for social enterprises supporting the implementation of the European policies in the social enterprise finance market, with a focus on the demand side, (ii) reinforced the capacity of Euclid Network members to empower social enterprises to access the social finance market and to repay social finance thanks to a sustainable business model, (iii) voiced the concerns and expectations of social enterprises and potential future social entrepreneurs, including from disadvantaged groups, and (iv) provided high-quality data and research on developments on social enterprises finance with a focus on the demand side.

The Network supported and strengthened the capacity of the demand side of the social finance market across Europe, focusing on the frontline organisations that could benefit from this investment. These include social enterprises and their support structures such as national federations, networks, universities, social funds, accelerators and incubators.

It launched the Top 100 Women in Social Enterprise Initiative, celebrating women in the SE sector, spotlighting their impact journey and achievements, connecting them to learn from and inspire each other.

It also launched the European Social Enterprise Monitor in 2020, a cross-country survey, to uncover social enterprise insights for evidence-based policymaking and investor decision-making. A total of 1 990 responses were collected from social entrepreneurs, which were presented and launched at the European Commission European Social Economy Summit on 26 May 2021. In total, nine monitor reports are expected to be produced.

SDG 10 Reduce inequality within and among countries

EaSI contributes to the implementation of several principles of the European Pillar of Social Rights, including the right to equal treatment and opportunities regarding employment, social protection, education, and access to goods and services available to the public.

EaSI funded with EUR 415 612 (January 2020 - December 2020) the project ‘ERGO - Roma included in Social Europe 2020’. The work programme aimed to ensure that EU social policies work for Roma, Europe’s largest and most discriminated ethnic minority. The main beneficiaries were the Roma people in the EU whose needs were better taken into account in policy processes and who were represented by a more effective civil society.

SDG 13 Take urgent action to combat climate change and its impacts

Several EaSI financed projects have a ‘green’ component by developing the role of social enterprises in the circular economy.

EaSI has a crucial role to play in promoting the involvement of civil society through financial support for the key EU-level NGO networks. The programme supports these networks with the aim of boosting their capacity to participate in and influence decision-making and policy implementation at both EU and national levels. Furthermore, such involvement fosters the accountability and transparency of authorities and increases the relevance of policy responses.

The project ‘Developing the role of Social Enterprise in the Circular Economy’, funded with EUR 273 025 from EaSI and coordinated by RE-USE and Recycling European Union Social Enterprises in 2020, included within its objectives to (i) inform and improve the effectiveness of EU funding mechanisms in supporting the establishment and development of social enterprises active in re-use, repair and recycling, and (ii) to contribute to the fulfilment of the UN Sustainable Development Goals by monitoring and influencing the development and implementation of policy proposals under the EU Commission's Circular Economy Package. Green Agenda is growing in importance in Europe. The green and circular priorities of the Commission, coupled with the Social Economy action plan, instil a sense of optimism that the society is moving in the right direction. However, what is also evident is that ensuring social value is retained as an intrinsic part of the green and digital transitions need more action. 2020 has seen a particular surge in interest in tackling fast fashion and over-consumption in textiles and RE-USE will continue supporting social enterprises active in this sector, following a number of policy proposals and interventions.

General Objective 1 :The Programme shall contribute to the achievement of the objectives of the Europe 2020 strategy, including the headline education target; the objectives of the strategic framework for European cooperation in education and training ("ET 2020"), including the corresponding benchmarks; the sustainable development of partner countries in the field of higher education; the overall objectives of the renewed framework for European cooperation in the youth field (2010-2018); the objective of developing the European dimension in sport, in particular grassroots sport, in line with the Union work plan for sport; and the promotion of European values in accordance with Article 2 of the Treaty on European Union.....	561
Specific Objective 1 :to improve the level of key competences and skills, with particular regard to their relevance for the labour market and their contribution to a cohesive society, in particular through increased opportunities for learning mobility and through strengthened cooperation between the world of education and training and the world of work;	563
Specific Objective 3 :to promote the emergence and raise awareness of a European lifelong learning area designed to complement policy reforms at national level and to support the modernisation of education and training systems, in particular through enhanced policy cooperation, better use of Union transparency and recognition tools and the dissemination of good practices;	564
Specific Objective 4 :to enhance the international dimension of education and training, in particular through cooperation between Union and partner-country institutions in the field of VET and in higher education, by increasing the attractiveness of European higher education institutions and supporting the Union's external action, including its development objectives, through the promotion of mobility and cooperation between the Union and partner-country higher education institutions and targeted capacity-building in partner countries.	565

Specific Objective 5 :to improve the teaching and learning of languages and to promote the Union's broad linguistic diversity and intercultural awareness;	566
Specific Objective 6 :to promote excellence in teaching and research activities in European integration through the Jean Monnet activities worldwide	566
Specific Objective 7 :to improve the level of key competences and skills of young people, including those with fewer opportunities, as well as to promote participation in democratic life in Europe and the labour market, active citizenship, intercultural dialogue, social inclusion and solidarity, in particular through increased learning mobility opportunities for young people, those active in youth work or youth organisations and youth leaders, and through strengthened links between the youth field and the labour market;	567
Specific Objective 9 :to complement policy reforms at local, regional and national level and to support the development of knowledge and evidence-based youth policy as well as the recognition of non-formal and informal learning, in particular through enhanced policy cooperation, better use of Union transparency and recognition tools and the dissemination of good practices.	568
Specific Objective 10 :to enhance international dimension of youth activities and the role of youth workers and organisations as support for young people in complementarity with the Union's external action, in particular through the promotion of mobility and cooperation between the Union and partner-country stakeholders and international organisations and through targeted capacity-building in partner countries.	568
Specific Objective 12 :to promote and support good governance in sport and dual careers of athletes;	568
6. The programme contribution to horizontal policies	569
6.1. Contribution to climate mainstreaming	569
6.2. Contribution to biodiversity mainstreaming.....	570
6.4. Contribution to gender equality	570
6.5. Contribution to the sustainable development goals.....	571

1. Overview

1.1. Challenges

Erasmus+ is the EU's flagship programme to support and strengthen education, training, youth and sport in Europe.

For over three decades, Erasmus+ and its predecessors have been offering opportunities to close to 12.5 million youth, students and adults to study, train, gain work experience, and volunteer abroad, in Europe or beyond.

In a fast-changing world – with rapid demographic, societal and technological changes - there is a clear need to provide individuals with the right set of knowledge, skills and competences, with a lifelong learning perspective, to make them more resilient and sustain current standards of living, support high rates of employment and foster social cohesion. Closing the skills and competences gap is a crucial challenge.

Challenges include social exclusion, driven by family, social, and physical environments that can hinder access to quality education and the chances to successfully complete education and training programmes. Social exclusion is at the same time the result and the cause of education poverty, a vicious circle perpetuated from one generation to the next. Learners with fewer opportunities remain over-represented among the low achievers on basic skills, show high rates of early school-leaving and low higher education completion.

Another important challenge is a widespread lack of awareness and understanding of the EU's basic functioning, objectives, 'raison d'être', as well as of the EU's added value for its citizens. This can lead to misinformation and hinders the development of informed opinions on EU actions.

COVID-19 resulted in millions of Europeans depending on digital tools to communicate with their loved ones, however, many lack the skills or material needed to stay connected and fully depend on solidarity actions.

Millions of Europeans also depended on distance and online learning and teaching. The crisis did reveal several challenges for educators and learners across sectors, including

- lack of digital capacity and of distance learning systems,
- lack of adequate pedagogical methods and insufficient guidance and skills of educators and youth workers, e.g. in the context of delivering high quality online courses/content and to carry out on-line assessments,
- lack of robust online learning support and guidance, safeguarding equity, quality and privacy.

The digital and green transitions require adequate means to deliver in an impactful manner. Schools, training institutions, higher education institutions, and youth/ sports organisations need to constructively engage young people and the wider community on

changes that need to take place for a successful transition. The actions supported by the programme contribute to the overall climate and biodiversity objective, both by the prioritisation of the green transition in the cooperation activities, and by the promotion of green practices at the level of projects throughout the programme. Erasmus+ contributes to enhance the knowledge of learners and young people and raise awareness regarding sustainability and environmental challenges.

1.2. Mission (General objectives)

The general objective of the Erasmus+ Programme is to support, through lifelong learning, the educational, professional and personal development of people in education, training, youth and sport. This applies to Europe and beyond, thereby contributing to sustainable growth, quality jobs and social cohesion, to driving innovation, and to strengthening European identity and active citizenship.

As such, the Programme shall be a key instrument for building a European Education Area, supporting the implementation of the European strategic cooperation in the field of education and training, with its underlying sectoral agendas, advancing youth policy cooperation under the European Union Youth Strategy 2019-2027 and developing the European dimension in sport.

Within this context, the European added value of the programme is uncontested. The latest mid-term evaluation found that in the absence of the programme, the mobility of learners and staff, as well as European cooperation in the sectors covered by the programme, would be substantially reduced.

The Programme has a key role in strengthening European identity and values and in contributing to a more democratic Union; it can reach out and engage many different actors in our societies through its activities and sectors, in order to raise awareness of European common values, history and culture from an early age on.

Moreover, the programme continues to strengthen its innovation dimension and promote transformation by rolling out initiatives such as the European Universities and the Centres of Vocational Excellence, the Erasmus+ Teacher Academies, the Digital Education Hub and by increasing investments in forward-looking study subjects.

To contribute to building a more digitally prepared Europe, the programme supports students, school pupils, young people, teachers, educators, youth workers and learners of all ages in adapting to digital ways of teaching and learning.

To make Erasmus+ greener, the programme offers more opportunities for learners and organisations to develop knowledge and skills in sustainability related matters and to develop environmental-friendly approaches, while acting more sustainably.

1.3. Specific objectives

The Programme has the following specific objectives:

1. Promote learning mobility of individuals and groups, as well as cooperation, quality, inclusion and equity, excellence, creativity, and innovation at the level of organisations and policies in the field of education and training;
2. Promote non-formal and informal learning mobility and active participation among young people, as well as cooperation, quality, inclusion, creativity and innovation at the level of organisations and policies in the field of youth;
3. Promote learning mobility of sport staff, as well as cooperation, quality, inclusion, creativity and innovation at the level of sport organisations and sport policies.

1.4. Public intervention context

Pursuant to Article 6 of the Treaty on the Functioning of the European Union, the EU has the competence to carry out actions to support, coordinate or supplement the actions of the Member States in the field of education, vocational training, youth and sport.

In accordance with Article 165 of the Treaty on the Functioning of the European Union, Member States have the exclusive competence over the content of the teaching and the organisation of their education systems. The mission of the European Union in this field is to encourage cooperation among Member States and to support and supplement their actions where necessary.

To fulfil its mission and achieve its objectives, the EU supports Member States in their efforts to provide the best education and training for their citizens, setting joint goals and sharing good practices.

The Erasmus + programme is a cornerstone for the implementation of the priorities and activities set out in the European Education Area, Digital Education Action Plan, the European Skills Agenda and the European strategy for universities. The programme contributes to the European Pillar of Social Rights and is preparing Europe to face a green transition.

At Member State level, countries participating in the Erasmus+ programme continue implementing reforms of their education and training systems, in accordance with their needs, simultaneously benefiting from the policy support of the new European Education Area's framework.

In line with the Digital Education Action Plan priorities, the programme will develop accessible and high-quality digital learning, foster the capacity of teachers, trainers, youth workers, etc. to use digital tools, services, platforms and content, and to test and

promote distance and blended learning. The mobility and cooperation actions of the programme will provide an increased number of opportunities to build knowledge and help acquire and develop digital skills.

In line with the European Green Deal, the programme supports the green transition and sustainability of education and training systems, youth work and sport by providing incentives to green travel, resources for networking, and support to creative approaches.

Erasmus+ is also instrumental for the implementation of the European Skills Agenda that aims to support the development of the skills needed to ensure a prompt recovery and take full advantage of the opportunities provided by the green and digital transitions, and to the New European agenda for adult learning.

The programme is also advancing youth policy cooperation and the European Youth Work Agenda under the European Union Youth Strategy 2019-2027, while contributing to develop and foster the European dimension of sports.

1.5. Actions

The objectives of the Programme shall be pursued through the following three key actions:

1. Key action 1: Learning mobility
2. Key action 2: Cooperation among organisations and institutions
3. Key action 3: Support to policy development and cooperation

The objectives shall also be pursued through Jean Monnet actions, which support teaching, learning, research and debates on European Integration matters, including on the Union’s future challenges and opportunities.

1.6. Delivery mode

The Erasmus+ programme is implemented under the leadership of the Directorate-General for Education, Youth, Sport and Culture (DG EAC), in co-operation with DG Employment Social Affairs and Inclusion (DG EMPL) for the parts of the programme which concern skills and qualifications policy, adult learning and vocational education and training.

The programme’s activities are implemented through direct and indirect management. Direct management is used by the European Commission services in both DG EAC and the European Education and Culture Executive Agency (EACEA). The Erasmus+ National Agencies operate under indirect management, which brings the programme closer to its target audience, adapts to the diversity of national education systems, and offers the possibility to align the Erasmus+ activities with national priorities. DG EAC bears the overall responsibility for the supervision and coordination of the agencies in charge of implementing the Programme.

Some actions under Key Actions 2 and 3 in the fields of adult education, vocational education and training as well as skills and qualifications are partly or fully co-delegated to the Directorate-General for Employment, Social Affairs and Inclusion (DG EMPL). Some actions under Key Action 3 related to multilingualism are co-delegated to the Directorate-General for Translation (DGT). In the implementation of certain international actions, DG EAC liaises with external action DGs, notably the Directorate-General for International Partnerships (DG INTPA) and the Directorate General for Neighbourhood and Enlargement Negotiations (DG NEAR) and the Delegations of the European Union in the third countries not associated to the Programme. Some actions are also indirectly managed by Pillar Assessed international organisations via the conclusion of contribution agreements.

1.9. Link with the 2014-2020 MFF

Based on lessons learned from the previous programme, Erasmus+ 2021-2027 is more inclusive and accessible, more forward-looking, more digital, simpler and greener, more international, while continuing to support lifelong learning and innovative education and training in Europe and beyond.

It offers reinforced opportunities for transnational learning mobility and cooperation, including new mobility opportunities for school pupils, adult learners and sport staff. The programme gives more attention to fields that are strategic to Europe's knowledge creation and sustainable growth, by targeting mobility and cooperation projects in strategic forward-looking sectors (climate change, sustainability, clean energy, digitisation, artificial intelligence, bioscience, etc.) thus contributing to crucial skills development, increasing Europe's innovation capacity, tackling societal challenges and promoting equal opportunities.

1.10. Relevant websites providing more information

These websites offer an entry point to the programme opportunities and architecture and provide an overview of the funded projects results:

https://ec.europa.eu/programmes/erasmus-plus/node_en

https://ec.europa.eu/programmes/erasmus-plus/projects_en

In the field of sport, all updates concerning the policy framework and financing options are available at the following website:

https://ec.europa.eu/sport/node_en

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	2 812.2	25 372.7	11%
Payments	1 842.2		7%

Erasmus+ has an estimated budget of around €26.2 billion for the period 2021-2027, nearly doubling the funding compared to its predecessor programme (2014-2020), complemented by around €2.2 billion from EU external cooperation instruments.

This programme is the cornerstone for the implementation of the ambitious policy agenda of the European Education Area, Digital Education Action Plan, European Skills Agenda, but also the EU Youth Strategy and the EU Work Plan for Sport. It also contributes to other EU initiatives such as the EU Strategy on the Rights of the Child, the EU equality agenda or the New European Bauhaus.

Out of this financial envelope, 70% supports mobility opportunities in a lifelong learning perspective. The remaining 30% is invested in cooperation projects and policy development activities, allowing organisations to gain experience in international cooperation, strengthen their capacities, produce innovative approaches, exchange of good practices and network.

The programme is not only more inclusive and innovative, it mobilises the education, training, youth and sport sectors for a rapid post-pandemic recovery and helps steer the European Union's economic model towards more sustainability, with green and digital transitions as drivers of transformation. The inclusiveness dimension of the programme will make it more accessible to people with fewer opportunities and for smaller organisations and newcomers to the programme. This is done through appropriate financial mechanisms, targeted communication and outreach measures, as well as actions that offer enhanced flexibility adapted to the needs of staff and learners who face obstacles in participation, for example the new small-scale cooperation partnerships, flexible mobility formats (short term, group, or blended mobility).

Nevertheless, continuity remains the watchword. The Erasmus+ programme builds on the success of the previous programme and retains all of its strengths – including the integration of all sectors of formal, informal and non-formal education and youth and sport into a single programme, while providing opportunities for lifelong learning, as well as the articulation in three key actions.

Inclusion is an overarching principle: the programme aims to improve access to the learning opportunities offered by rolling out dedicated inclusion measures covering all fields of education, training, youth and sport. A Commission decision on the framework of inclusion measures for Erasmus+ adopted in October 2021¹ outlines a set of measures to be implemented over the 7-year period in order to improve outreach and facilitate the participation of people with fewer opportunities. The National Agencies translate this European framework into the needs in their local, regional and national contexts, building on these general measures to rollout specific actions on the ground. Finally, the Inclusion and Diversity Strategy provides practical guidance on how to implement these measures for those carrying out Erasmus+ and activities. Furthermore, the programme aims to support more and better projects focussing on inclusion and diversity, opening doors to enhanced participation of newcomers and to small grassroots organisations, notably through the launch of simpler actions that more accessible.

Under the programme 2021-2027, main novelties include opportunities for mobility for school pupils and adult learners possible directly under Key Action 1. Furthermore, simplification measures – such as the extended use of simplified grants² and the reinforced use of mobility accreditation processes (Charters) - will enhance the inclusiveness and accessibility of the programme.

In line with the Digital Education Action Plan in particular, but also the European Education Area, the European strategy for universities, the renewed EU Youth Strategy, the Updated Skills Agenda and the **digital dimension** are part of the programme's design, activities and underlying processes. Concretely, digital transformation incentives are mainstreamed throughout all sectors and key actions, and dedicated initiatives are supported. The digital dimension of the programme ranges along the following lines: mobility and cooperation projects, thematic priorities across the sectors, continued support to IT platforms, communities and tools, policy support, as well as digitalisation of the programme's implementation.

The Digital Education Action Plan 2021-2027 includes, among others, the following actions funded by Erasmus+: launching a strategic dialogue with Member States in order to prepare two possible proposals for Council Recommendations: one on the enabling factors for successful digital education and another one on the provision of digital skills in education and training; implementing the Council Recommendation on Online and Distance Learning for Primary and Secondary Education; creating a European Digital Education Content Framework and launching a targeted European exchange platform to promote cooperation between higher education institutions.

At the same time, the programme **raises awareness and promotes knowledge and understanding of the Union and of European values**. In order to strengthen European identity and active citizenship, young people are encouraged to participate in democratic life, like during the European Year of Youth in 2022.

¹ <https://erasmus-plus.ec.europa.eu/document/commission-decision-framework-inclusion-2021-27>

² Commission decision https://ec.europa.eu/info/funding-tenders/opportunities/docs/2021-2027/erasmus/guidance/ls-and-unit-cost-decision_erasmus_en.pdf

The programme is a key instrument for the building of knowledge, skills and attitudes on **climate change and sustainable development** both within the European Union and beyond. It increases the number of mobility opportunities in green forward-looking fields, which foster the development of competences, enhance career prospects and engage participants in subject areas, with special attention to rural development (sustainable farming, management of natural resources, soil protection, bio-agriculture) all of which are strategic for the sustainable growth of our planet. To promote green transition in line with the Green Deal, the programme promotes the integration of green practices in all projects and support measures, and reinforces its support projects aimed at developing skills in various sectors related to sustainable development, environmental and climate issues. The programme also builds on policy initiatives such as the proposal for a Council Recommendation on learning for environmental sustainability, which supports Member States to cooperate and develop stronger policies on education for the green transition, and the European sustainability competence framework, that provides common ground for education stakeholders on the knowledge, skills and attitudes needed to live, work and act more sustainably.

The programme raises awareness and supports the use of innovative practices to learners and educators across the sectors into real agents of change. Erasmus+, with mobility at its core, should strive for carbon-neutrality by promoting sustainable transport modes and more responsible behaviour, and activities such as DiscoverEU are leading by example. The Education for Climate Coalition as a community-led participatory initiative, gathers students, teachers and stakeholders to co-create innovative approaches to sustainability education and to cooperate on concrete participatory challenges to support the green transition.

The environment and the fight against global warming is a horizontal priority for the selection of projects. **Priority is given to projects aimed at developing competences in various environmental sustainability-relevant sectors**, including those within the framework of contribution from education and culture to sustainable development goals, developing green sectorial skills strategies and methodologies, future-oriented curricula that better meet the needs of individuals, as well as initiatives that support the planned approaches of the participating organisations regarding environmental sustainability.

2021

The first year of implementation of the Erasmus+ programme has been exceptionally challenging in terms of budget management. The late adoption of the programme Regulation has pushed forward the start of the activities (calls, selection, contracts, payments) to the second part of the year, affecting the budget management in 2021 and shifting some payments initially planned in 2021 to 2022.

As a result, a very close monitoring approach, namely towards National Agencies, allowed to promptly return the unnecessary payment appropriations detected in the revision of forecasts and ensured to fully use the remaining available payment appropriations in EU budget at year end. Moreover, this exceptional situation had no influence on the funding absorption capacity of the Erasmus+ programme, for which all the commitments appropriations of the 2021 EU voted budget have been implemented. In 2021, more than 65% of the budget committed (€2.812 billion) has already been paid (€1.842 billion)

2022

The total programmed adopted EU budget for Erasmus + in 2022 represents an amount of €3.402 billion, a further amount of €364,41 million will constitute the external instruments' contribution to the programme.

In 2022's programming (excluding the external dimension), indirect management (mainly through National Agencies) will represent around 75% of the operational budget. As regards direct management, EACEA will implement around 22%, leaving 3% to be implemented centrally by the Commission.

The implementation of the external component will have a slightly different breakdown, with indirect management representing 49% of the operational budget, and EACEA taking the remaining 51%.

The 2022 payment appropriations will be used on one hand to cover the payments on the 2022 commitments, as well as the payments on ongoing projects from 2021, including some payments initially planned in 2021 and shifted to 2022 for the reasons exposed above.

2023

The total EU budget requested for 2023 amounts to € 3.548 million, which represents an increase of 4,3% compared to 2022, fully aligned with the financial programming (2021-2027).

In 2023's initial estimated programming , indirect management through National Agencies) will represent around 83% of the operational budget. As regards direct management, EACEA will implement around 14%%, leaving 3% to be implemented centrally by the Commission.

2.2. Programme(s) 2014-2020: Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

Implementation	2014-2020 Budget	Implementation rate
----------------	------------------	---------------------

Commitments	14 958.1	14 958.1	100%
Payments	14 179.3		95%

With a total financial envelope of around €14.96 billion under Heading 1 and €1.7 billion under Heading 4 to support its strong international dimension, the implementation of Erasmus+ started successfully in 2014.

The programme is implemented under indirect management (approximately 78% through National Agencies) and direct management modes (20% through the Executive Agency for Education, Audiovisual and Culture and 2% mainly through DG EAC). Despite Heading 4 funds being only available at the end of 2014, delaying the launch of some international actions such as capacity building in higher education and international credit mobility, the programme was able to achieve a full budget absorption capacity.

The total C1 credits for the period 2014-2020 amounted to €14 958 095 673 and were implemented at 100%. During the period 2014-2021, the total payments amounted to €14 179 309 909. The programme has managed to consume almost all of its payment appropriations, reaching a cumulative implementation rate of 95 per cent. Therefore, only 5% of the previous programming period still remains to pay on the completion budget lines which demonstrate the fast implementation of the programme.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

Erasmus+ is not only one of the EU flagship programmes, it is also one of the best known by citizens.

Over more than 30 years of existence, the programme has increased its scope, involving more and more citizens to reach about **940 000 individual mobility opportunities** in 2019 for a total of close to 12.5 **million** mobility periods since 1987.

It is important to note that 2021 was a very atypical year for for the Erasmus+ programme. The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency.

Given the delay in the negotiation of the external instruments and the adoption of the legal basis, only a limited number of Heading 6 funded international actions were made available in the Erasmus+ 2021 Annual Work Programme (e.g. Capacity in Youth and Erasmus+ Virtual Exchanges, as well as a top-up for the Erasmus Mundus Joint Masters). The whole range of international actions (including new actions such as capacity building in VET and sport) have become available as of the 2022 Erasmus+ calls.

Finalised and consolidated data will thus only become available at a later stage regarding this year.

In 2021, the Covid-19 pandemic still had a strong impact on mobility opportunities, and the programme implementation had to be adapted accordingly; this was translated in budgetary terms as an overall reduction of the mobility budget foreseen under Key Action 1, to the benefit of partnerships under Key Action 2. Moreover, the budget profile was overall less favorable in 2021 compared to 2020, the budget increase at programme level having more impact on annual funding in subsequent years (2022-2027).

The programme should be in a position to support a resumed demand for mobility in 2022, after the restrictions it suffered in the context of the COVID-19 pandemic, and provided that the sanitary situation allows for it.

It accompanies thus the recovery, builds on the lessons learnt to increase the implementation flexibility and prepare European Society for the future, including the major priorities of the EU. It is also mobilised to contribute to the European Year of Youth 2022.

The Erasmus+ programme will also contribute to address the arrival in the EU of millions of refugees, including many children and young people, compelled to flee Ukraine as a consequence of the Russian invasion. As underlined by the Commission Communication adopted on 23 March 2022, Erasmus+ will play a key role to help the education and training systems to cope, supporting learners and teachers, schools, vocational education and training institutes and higher education institutions, as well as youth organisations and NGOs, in order to ensure continued learning.

3.1.2. Active programme performance

Building on the success of the programme in the period 2014-2020, Erasmus+ strengthens its efforts to increase the opportunities offered to more participants and to a wider range of organisations, focusing on its qualitative impact and contributing to more inclusive and cohesive, greener and digitally fit societies.

As the COVID-19 pandemic has shown, access to education is proving, more than ever, to be essential to ensuring a swift recovery, while **promoting equal opportunities for all**.

As part of this recovery process, the Erasmus+ programme takes its inclusive dimension to a new horizon by supporting opportunities for personal, socio-educational and professional development of people in Europe and beyond, with the aim of leaving no-one behind.

To increase the qualitative impact of its actions and ensure equal opportunities, the programme will reach out more and better to people of different ages and from diverse cultural, social and economic backgrounds.

It is at the heart of the programme to come closer to those with fewer opportunities, at risk of discrimination or exclusion, including people with disabilities, migrants, ethnic and racial minorities, as well as European Union citizens living in remote areas and/or facing socio-economic difficulties. In doing so, the programme will also encourage its participants, in particular young people, to engage and learn to participate in civic society, raising awareness about European Union common values; .

In order to implement this dimension, Erasmus+ will support easier access to funding for a wider range of organisations. To improve outreach to more participants with fewer opportunities, the programme did also set up a framework for those projects which intend to work on inclusion, equality and diversity related issues³. Erasmus+ increases investment in initiatives that support learning opportunities for all, educational equity and increase participation rates of people with fewer opportunities, through flexible and simple participation formats, more help prepare and accompany participants in their Erasmus+ learning adventure, but also through financial support for those who thought Erasmus+ is not for them.

Furthermore, developing digital skills and competences, and skills in forward-looking fields, such as combating climate change, clean energy, artificial intelligence, robotics, big data analysis, etc. is essential for Europe's future sustainable growth and cohesion.

The COVID-19 crisis shed light on the importance of digital education for the digital transformation that Europe needs. In particular, it emphasised the increased need to harness the potential of digital technologies for teaching and learning and to develop digital skills for all.

In line with the strategic priorities of the Digital Education Action Plan (2021-2027)⁴, the programme aims to support this endeavour to engage learners, educators, youth workers, young people and organisations on the path to a digital transformation. The programme will continue to focus on two strategic priorities (fostering the development of a high performing digital ecosystem and enhancing digital skills and competences for the digital transformation). These include further implementation of the Digital Education Hub (established in Q1 2022) - including support to the work of the network of National Advisory Services - the support to Digital Opportunity Traineeships and the development of digital transformation plans of education institutions , the rolling out of a different implementation model of the Digital Education Hackathon, the launching and rollout of a targeted European exchange platform to promote cooperation and interoperability between higher education institutions and dedicated policy experimentations on digital education.

Physical mobility remains key to the success of the programme, yet blended intensive programmes, which allow for groups of higher education institutions to jointly develop blended mobility curricula and activities for students as well as academic and administrative staff, will be strongly supported.

Many people are reluctant, or face difficulties, in actively engaging and participating in their communities or in the European Union's political and social life. Strengthening European identity and the participation of young people in democratic processes is of paramount importance for the European Union's future. This issue can also be targeted through non-formal learning activities, which aim at enhancing the skills and competences of young people as well as their active citizenship, such as the youth participation activities launched in 2021.

In line with the objectives of the European strategy for universities, the programme supports and enables universities to adapt to changing conditions, to thrive and to contribute to Europe's resilience and recovery.

Some key achievements include:

Education and training

2021 was a year of action, turning the **European Education Area (EEA)** vision into first tangible results. The Commission successfully concluded negotiations with the Member States on the new framework for European cooperation in education and training for the next decade. With a view to effectively contributing to the achievement of the European Education Area by 2025, seven EEA Strategic Framework Working Groups have been launched in November 2021 as part of the strategic framework for European cooperation in education and training towards the European Education Area and beyond (2021-2030). The overall objective is to promote mutual learning on policy reform of national education systems and through tangible outputs support the EU Member States and the Commission to make the European Education Area a reality in tune with the Digital Education Action Plan, the European Skills Agenda, the Union of Equality and other EU policy flagships in education, training and skills.

³ <https://erasmus-plus.ec.europa.eu/document/commission-decision-framework-inclusion-2021-27>

⁴ https://ec.europa.eu/education/education-in-the-eu/digital-education-action-plan_en

Throughout 2022 and 2023, a monitoring upgrade will be developed and tested for the majority of EU-level target domains. Following a new approach that was endorsed in late 2021, the Standing Group on Indicators and Benchmarks (SGIB) will advise on supporting indicators. In addition, indicator development continues throughout 2022 and 2023 in the area of inclusion and equity, the teaching profession and education for environmental sustainability.

The **European Universities initiative** is paving the way for higher education transformation, by building the universities of the future; so far 41 European Universities were selected under Erasmus+.

The initiative on **Centres of Vocational Excellence** aims to be a driving force for reforms in the Vocational Educational and Training (VET) sector, ensuring high quality skills and competences that lead to quality employment and career-long opportunities, meeting the needs of an innovative, inclusive and sustainable economy.

European Student Card Initiative aims at making it as easy as possible for students across Europe to be mobile. Through its key components, the Erasmus+ Mobile App, the European Student Card and the digitalisation of the student mobility management, the initiative constitutes a real revolution for the simplification of the way universities manage the student mobility. By the end of 2021, the **Erasmus+ Mobile App**, had been downloaded more than 138 800 times and more than 2 600 000 European Student Cards were produced by higher education institutions/student card issuers.

In 2021, much progress was made with the **Erasmus Without Paper** network that aims to switch to digital mobility management and enable transfer of Erasmus+ participant data between different higher education institutions in Europe. By the end of the year, there were 2376 nodes in production network corresponding to individual higher education institutions enabling the connecting of their IT systems to the EWP Registry, 1847 of which are ready to exchange Online Learning Agreements and 2246 universities ready to exchange Interinstitutional Agreements. The deadline for connecting and starting exchanging has been set for December 2022.

The Commission provides support to the Member States for putting in place the conditions that will make **automatic mutual recognition** possible by 2025. The Commission also implemented the European Parliament Preparatory Action Expert network on recognition of outcomes of learning periods abroad in general upper secondary education which aimed to and support to the development of automatic recognition of long term mobility of pupils.

Higher education institutions also had to reapply for the **Erasmus Charter for Higher Education (ECHE)** to participate in the new programme. Institutions who were awarded the Charter have committed to reach out to underrepresented groups in mobility through inclusion strategies, to ensure green practices in organising Erasmus+ activities, the implementation of digitalisation through the European Student Card Initiative, as well as the commitment to enhance the civic engagement of mobile students.

In the fields of **School Education, Vocational Education and Training and Adult Education**, a modernised accreditation system was successfully introduced and the first organisations were accredited to participate in the new programme. The Erasmus+ accreditation confirms that organisation has set up a plan to implement high quality mobility activities and to use them to improve its education and training offer.

In 2021, DG EAC started the implementation of the **Digital Education Action Plan 2021-2027, building on the achievements of the previous plan**. One of the main actions led by DG EAC was the publication and award of an open call for support services for the Digital Education Hub, which will see its full roll out in 2022. Other key actions were the extension of the successful SELFIE self-reflection tool to teachers (SELFIE for Teachers) to help them further develop their digital skills; and the Digital Education Hackathon, which took place on 9-10 November for a third year in more than 50 locations across 32 countries globally, engaging almost 2 500 participants from education stakeholders (schools, higher education institutions, research centres, innovation labs, private sector).

The 2021 call for **Erasmus Mundus** included major changes, in order to make its Joint Masters more attractive, sustainable, inclusive and international, and to simplify its application process and management. These changes are symbolised in the move from the Erasmus+ Key Action 1 to Key Action 2, highlighting the component of cooperation between higher education institutions while still maintaining the mobility of students. The new lot created, Erasmus Mundus Design Measures, proved the demand for such bridging activity, with 148 applications received, including 41 from third countries not associated to the programme.

In 2021 the new **Jean Monnet** activities for other levels of education and training were launched for the first time: 20 Jean Monnet Teacher Training activities and 2 Jean Monnet Networks for other levels of education and training could be selected for funding under the Erasmus+ call for 2021. In the Erasmus+ call 2022 the third element, Jean Monnet Learning EU Initiatives completed the new programme architecture aiming at promoting better teaching and learning about the EU in schools and VET institutions.

Youth

The EU Youth Strategy 2019-2027 was rolled out and adapted to take into account the major impact of COVID-19 on the youth sector. The EU Youth Report 2021 was adopted on 14 October, it takes stock of progress on the implementation of the EU Youth strategy during 2019-2021, including the Council Work plan and national plans. The report confirms that the Strategy provides a strong and impactful roadmap to foster cooperation and support youth policies both at EU and national level.

Despite the disruptive impact of the COVID-19 pandemic, the youth sector could rely on the instruments developed over the last years, and in particular on the key European youth programmes, to implement the strategy.

The Council has adopted a review of the 2008 Council recommendation on the mobility of young volunteers across the EU, to remove obstacles and to further support opportunities for mobility and volunteering. This review is relevant and timely in the context of the pandemic and its emerging priorities (health and safety of volunteers, inter-generational solidarity), and explores **new forms of volunteering including digital volunteering**.

DiscoverEU was heavily impacted by the pandemic. The three application rounds (planned in March and November 2020 as well as March 2021) had to be cancelled. Travellers awarded under the 2019 November round got an extension of their travel period up until summer 2022. After the forced break of the action, the call in October 2021 saw an overwhelming success with three times more participants (over 330 000) and nearly as many young people as in the previous four rounds together. The 60 950 selected participants included exceptionally also the birth years who turned 18 in 2020 and who were not able to apply. They will travel between March 2022 and end February 2023. The spring call 2022 will be rolled out for the first time under Erasmus+ conditions and rules.

Youth Exchanges bring together young people from different countries to exchange and learn outside their formal educational system. The action enabled more than 763 000 young people to take part and acquire or further develop skills, competences and European values. Since the start of Erasmus+ in 2014, Youth Worker Mobility has also offered opportunities for over 280 000 youth workers to develop their key competences through transnational training courses and seminars, contact-making events, study visits and job shadowing, contributing to the development of quality youth work and enriching the work of almost 80 000 organisations involved. With an average mobility project grant of €25 000 and more than 200 000 organisations involved, the programme demonstrated its capacity to reach out and impact a large number of young participants and organisations working with them, through grassroots projects. Erasmus+ Youth puts also particular emphasis on promoting equal opportunities, inclusion and fairness and involving some 400 000 participants in youth mobility activities of which 39% had fewer opportunities.

The programme financed projects promoting quality, innovation and recognition of youth work, as well as projects supporting empowerment and active citizenship of young people, thus contributing to the Youth Work Agenda and the implementation of the EU Youth Strategy. The Sub-Group on Youth Work was launched in November 2021 to accompany and advise on the process of creating and implementing a dedicated digital platform on youth work with the aim to share information, knowledge and good practices, engage in cooperation and peer-learning.

The **European Youth Portal** offers European and national information and opportunities that are of interest to young people who are living, learning and working in Europe. It encourages participation of young people in democratic life notably via the EU Youth Dialogue and other initiatives to engage with young people to influence policymaking. The European Youth Portal was thoroughly revamped, with a view to adapting its layout to reflect today's user expectations. A dedicated **European Year of Youth** section was also launched on the European Youth Portal, which will be the main communication hub of the Year and which will provide young people across Europe with information on opportunities and activities available in the context of the Year.

In 2021, the tenth edition of **the European Youth Week** was organised virtually due to the COVID-19 situation and no central event took place. The theme of the 2021 European Youth Week was 'Our future in our hands'. Under this topic, young people and stakeholders were invited to organise and engage in activities on a variety of topics. These included active participation in society with its digital dimension, inclusion and diversity, climate change, environmental protection and sustainability, and health and recovery. The European Year of Youth is taking place in 2022, which means that plenty of activities will be organised at local, regional, national and European level throughout 2022.

On 15 September 2021, during the State of the Union address, President von der Leyen stated that the Commission would propose to make 2022 a **European year of Youth**. With the Year's positive and uplifting spirit, it is a key moment to fully dedicate 2022 to a generation that has suffered so much from the COVID-19 pandemic. The overall objective of the European Year is to boost the efforts of the European Union, the Member States, regional and local authorities together with civil society actors to enable, honour, support and engage with young people, including those with fewer opportunities, with a view to having a long-term positive impact for young people.

In 2021, more than 200 project proposals for **Capacity building** in Youth were received, out of which 45 were retained. These cover two regions, namely the Western Balkans and the South Mediterranean.

Building on the 2018-2020 pilot with the Southern Mediterranean, the Erasmus+ Virtual Exchanges in Higher education and Youth became a full-fledged action under the 2021-2027 Erasmus+ programme with a broader geographical coverage (Western Balkans, Eastern Partnership, Russia, South Mediterranean and Sub-Saharan Africa).

Sport

2021 marked a new phase in EU sport policy with the adoption of the Fourth **EU Work Plan for Sport** (2021-2024). Following the adoption, the European Commission launched two expert groups on Recovery from COVID-19 and Green Sport. In addition to this, two Peer Learning Activities were organized by Bulgaria and Germany. The Bulgarian Ministry of Youth and Sports organised a conference that took place on 30-31 August 2021 with the following title: Collaborate to Innovate: Boosting Innovation in Elite and Grassroots Sport in Europe. The German Federal Institute of Sport Science organised a conference on 16-17 September 2021 named Sustainability of Sports Facilities: Ecological, Economical and Social Aspects.

On 23 September 2021, Commissioner Gabriel launched the **HealthyLifeStyle4All** initiative, aiming to build on the successful Tartu Call for a Healthy Lifestyle. Moreover, the High-Level Group on gender equality in sport has gathered in six meetings and various working sessions over 2021 in order to deliver recommendations on more gender balanced sport sector in Europe.

The **European Week of Sport** saw national coordinating bodies and partners organising 42 620 events all over Europe and beyond. The #Beactive Awards supported projects and individuals dedicated to promoting sport and physical activity across Europe. To highlight inspiring examples of promoting equality, diversity and social inclusion in sport, DG EAC, with the support of EACEA, launched a new edition of the #BeInclusive EU Sport Awards.

The SHARE initiative published new background documents on how sport and physical activity could contribute to the **New European Bauhaus** initiative as well as opportunities for the sport sector within the Next Generation EU package.

3.1.3. Previous Programme Performance

Erasmus+ is the EU programme in the fields of education, training, youth and sport, projecting a positive image of the Union, well beyond its borders.

The 2014-2020 Erasmus+ programme has built on the experience of previous programmes that have been, for the first time, brought together under the name of Erasmus+, bringing massive simplification of the transnational support for education and training, youth and sport. Through immersive learning experiences, Erasmus+ has contributed to developing skills and competences, while offering - over the last three decades - life-changing experiences to close to **12.5 million people** to study, train or learn abroad. Along the years, the programme has demonstrated an outstanding track record not only in terms of numbers, delivering constantly up to or above expectations across fields and actions, but also in terms of social impact.

After a learning exchange abroad, participants declare that they feel more prepared to take on new challenges, have better career prospects, and are more aware of the benefits the EU brings to their daily lives. The programme has not only contributed to building a stronger European identity, but also enhancing active citizenship as Erasmus+ participants are more likely to vote in the European elections than peers in their age group. The programme has had a concrete, positive effect on the professional, social, educational and personal development of the beneficiaries by improving employability, developing new knowledge, skills and competences, closing skills and competency gaps; improving the quality of education, helping confidence-building and independence, creating a greater open-mindedness and curiosity about new challenges, boosting innovation and entrepreneurship and enhancing tolerance and understanding towards other people.

The Erasmus+ programme has therefore proven to be an important contributor to preparing future generations of Europeans to evolve in a changing world of work, to contribute to tackling climate challenge, to be ready for the digital transformation of our societies, as well as to strengthen solidarity.

The main positive achievements and effects of the programme encompass the unique combination of actions targeted at the individual, organisation and system levels in education and training, youth and sport, the support for key competences, basic and transversal skills development, active citizenship, increased employability or career development, but also increased opportunities for networking and mutual learning for organisations involved. The programme is perceived as sufficiently flexible to allow for adaptation to emerging policy challenges, while its integrated architecture and management modes are considered appropriate and fit for purpose.

In particular, a cross-cutting priority over the past years was to ensure that the Erasmus+ programme was an important instrument for inclusion.

The programme also highlighted the key role of formal and non-formal education in the development of the values and attitudes underlying active citizenship, in line with the Paris Declaration, the Council Recommendation on Common values, Inclusive Education, and the European Dimension of Teaching.

The programme has already exceeded its target of supporting 4 million learning mobilities. With the capacity to **fully absorb funds** and an **error rate below 2%**, the programme was well placed to upscale further in the next Multiannual Financial Framework. Harmonized reporting tools, analytics and business intelligence support the steering of the programme in tight collaboration with the different stakeholders, in particular the Education and Culture Executive Agency and 60 National Authorities, present in the 27 Member States and 7 Partner Countries.

To respond to the emergency in the early days of the COVID-19 pandemic, maximum flexibility and support measures within the applicable legal framework were applied to the participants and beneficiary organisations to adapt to the extraordinary circumstances. These included amongst others:

Priorities were reshaped with the aim of protecting the beneficiaries and participants and to support Member States and third countries associated to the programme to communicate and exchange practices needed for the immediate response, but also in view of setting new and innovative policies in education and training, youth and sport.

International actions with partner countries were more severely affected by the COVID-19 pandemic than those affected in Europe. Some reasons include the closing of borders, the disruption of air routes, the limited functioning of consulates and the difficulties to obtain visas. **Flexibility arrangements** for the participant **Higher Education Institutions and individuals** were put

in place, students have been allowed to keep their Erasmus+ grants while completing their course through remote studying arrangements and/or in case they still have expenses linked to their stay in the destination country such as rent.

In addition, in August 2020, the Erasmus+ programme announced two new calls for proposals, each providing €100 million to respond to the educational challenges resulting from the COVID-19 pandemic.

- The call on digital education readiness supports projects in school education, vocational education and training, and higher education. It aims to enhance online, distance and blended learning, support teachers and trainers, and ensure inclusivity in digital learning opportunities, in line with the strategic objectives of shaping Europe’s digital future as set in the European Commission’s ‘A Europe fit for the digital age’ and the Digital Education Action Plan.
- The second call related to funding for partnerships for creativity support projects in the fields of youth, school education and adult education, aimed to develop skills and competences that encourage creativity, boost quality and innovation, while linking education, training and youth organisations with the cultural and creative sectors.

The two calls received a total of 4430 applications, out of which 1201 projects were contracted.

EACEA produced a study on the impact of the COVID-19 pandemics on the Erasmus Mundus Joint Masters Degrees action:

https://www.eacea.ec.europa.eu/news-events/coronavirus-impact_en

3.2. Key achievements

2.6 million	138 800 downloads	280 higher education institutions	5 200	270 000
European Student Cards were produced by higher education institutions/student card issuers by the end of 2021	of the Erasmus+ Mobile App	higher education institutions took part to the European Universities initiative by the end of 2021.	institutions hold an Erasmus Charter for Higher Education (ECHE)	awarded short term mobilities between Programme and Partner countries under the 2014-2020 programme
1.2 million	1 million	36 000	900 000	42 620
Erasmus+ participants took an online language course as part of their mobility	teachers, headmasters and other school staff registered in eTwinning by the end 2021.	school participations in school strategic partnerships	VET learner mobilities were awarded under the 2014-2020 programme	number of events at the European Week of Sport (23-30 September 2020)
760 000	Nearly 290 000	39%	94%	400 000
young people involved in Youth Exchanges under the 2014-2020 programme	youth workers involved in youth workers mobility activities	of participants in youth mobility activities with fewer opportunities under the 2014-2020 programme	of participants in youth mobility activities having declared that they have increased skills under the 2014-2020 programme	young people engaged in Youth Dialogue projects with decision makers

3.3. Evaluations, studies and reports

The programme actively builds positive attitudes towards the European Union and contributes to the development of a European identity across all sectors funded, while improving knowledge and understanding of the EU through the Jean Monnet strand. The mid-term evaluation found a positive association between participation in the programme and the feeling of belonging to the EU across all sectors and all forms of participations. The current programme supports more disadvantaged young people than its predecessors (11.5% of the total number of participants and up to one third in the Youth strand). Nevertheless, more needs to be done to reach out to the more vulnerable in society and to facilitate the participation of smaller-size organisations. The mid-term evaluation also recommended that procedures and IT management tools should be made easier to use to reduce the administrative burden on implementing bodies and beneficiaries.

These findings and recommendations have guided the programme implementation over the last few years, while constituting a solid basis for proposing new actions and ambitious measures for the programme 2021-2027. The mid-term evaluation, complemented by the results of a broad public consultation, fed into the 2021-2027 Erasmus+ programme impact assessment⁵

⁵ <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A52018SC0277>

The interim evaluation of the Erasmus+ 2021-2027 programme starts in 2022, and it will be accompanied by a final evaluation of the 2014-2020 programme. The results of this evaluation are expected by the end of 2024. The interim evaluation of the programme will assess the overall effectiveness and performance of the programme, including the new initiatives, as well as the delivery of the inclusion and simplification measures.

The Education and Training Monitor offers a comprehensive yearly analysis on developments in education and training in Europe. With its international comparison and country analysis, the Monitor informs the debate on priority themes for education and training and informs national education reform debates. The country profiles of the Monitor also feed into the analytical work under the European Semester process. The 10th edition of the Monitor was released on 9 December 2021 at the Fourth European Education Summit. It presented the progress towards the EU-level targets as adopted in the strategic framework for European cooperation in education and training towards the European Education Area and beyond (2021 – 2030)⁶. The Monitor also gives an account of the developments of investment in education and analyses in detail a specific topic. In 2021, the Monitor examined the topic of well-being in education. It also provided an overview of how Member States will make use of the Recovery and Resilience Facility to support the modernisation of education and training systems. The 11th edition of the Monitor is scheduled for publication in late 2022.

A range of studies in the area of quality and relevance of higher education were conducted. The study on enhancing relevance of higher education aimed to define relevance and unpick the different components of it in order for institutions to be able to address them. This study informed the initiation of the questionnaire for the European graduate survey and its findings also led to the design of another study on performance-based funding of higher education based on performance indicators related to the quality and relevance of higher education. A separate study on admission systems in higher education looked at the effect admission policies have on the success of students and the study on quality assurance systems provided an overview of policy developments in this area and fed into the Bologna communiques, in addition to the regular Bologna Implementation Report.

In 2019, the results of two new Erasmus+ Impact studies were communicated and disseminated: Erasmus+ makes students more successful in their personal and professional lives, and Erasmus+ helps universities to become more innovative.

In 2021, a study demonstrated and illustrated how the Erasmus+ programme contributes to achieving policy objectives in the field of early childhood education and care (ECEC)⁷; e.g. through the professionalisation of ECEC staff.

In the field of Youth, two studies were launched and finalised in 2019: one on the landscape of youth representation in the EU and another on removing obstacles to cross-border solidarity activities. Furthermore, the results of the Eurobarometer survey ‘How do we build a stronger, more united Europe? The views of young people’ was released in April 2019, showing that young people consider that protecting the environment and fighting climate change, along with education and training; and fighting poverty and social inequalities should be the top priorities for the EU in the years to come.

In 2020, ten different impact studies were produced for each of the Erasmus+ regions involved in the Capacity Building for Higher Education action since 2015: https://www.eacea.ec.europa.eu/grants/2014-2020/erasmus/capacity-building-field-higher-education-2020_en

Moreover, a Mapping study on the fight against anabolic steroids and human growth hormones in sport was published on 12 July 2021. The study maps EU legislation on performance enhancing drugs and formulates recommendations at EU but also national level. The third edition of the Physical Activity Fact Sheets are the result of the collaboration between Member States, WHO and the EC. The fact sheets provide a snapshot of the epidemiology of physical activity in EU and related supportive policy initiatives.

In relation to learning for environmental sustainability, several studies were conducted in 2021. A [mapping of curricula, policies and other measures in the Member States](#), including a literature review, national and policy research mapping, a review of school curricula, teacher survey, cases studies and focus groups looked at how education and training policies and practices related to sustainability are implemented across the EU. A [mapping of Erasmus+ projects](#) related to learning for environmental sustainability provided policy pointers and good practice examples on effective learning for environmental sustainability across all education and training levels. A study on education and training for sustainable development addressed the impact of COVID-19 on learning for the green transition.

In 2020, in the field of higher education, a study mapped and analysed [student-centred learning and teaching practices](#), in order to provide guidance to higher education institutions for more inclusive and high-quality higher education. Another study analysed [community engagement trends, practices and policies in higher education](#). The arguments present in both studies are relevant to policymakers and university leaders developing plans for the recovery and development of higher education in the post-COVID-19 period. A third study investigated the road [towards a European approach to micro-credentials](#), proof of the learning outcomes that a learner has acquired following a short, transparently-assessed learning experience. Finally, another study scrutinized the [impact of the COVID-19 pandemic on higher education](#), focusing on the impact on teaching and learning, the social dimension of higher education and international student mobility. In 2021, also in the field of higher education, main studies starting included a study on the state and effectiveness of national funding systems, a study on the road towards a European degree, a study on the necessity and feasibility of a legal statute for alliances of universities, a study on the impact and the transformational potential of the European

⁶ [Council Resolution on a strategic framework for European cooperation in education and training towards the European Education Area \(EEA\) and beyond \(2021-2030\) \(2021/C 66/01\)](#)

⁷ [Erasmus+ and Early Childhood Education and Care \(ECEC\) - Publications Office of the EU \(europa.eu\)](#)

Universities initiative, and a study on the implementation of the Council Recommendation on Promoting Automatic Mutual Recognition of Higher Education and Upper Secondary Education and Training Qualifications and the Outcomes of Learning Periods Abroad. These studies are still ongoing.

Studies were also undertaken on gender equality: a study on [Gender differences in tertiary education](#) explained STEM participation, and an on-going study on Girls’ career aspirations in STEM stresses the importance of providing support for co-design and co-delivery of guidance and mentorship programmes focusing on pathways to the job market, focusing on female students in engineering and ICT fields of study.

EACEA, with the support of the Eurydice network, published a study which presents the state of play and the lessons learned from the delivery of the Erasmus Mundus Joint Master Degrees (EMJMD) in the Erasmus+ Programme Countries.

End of 2021, in the youth field, a study of the existing Support Advanced Learning and Training Opportunities (SALTOs) was launched through an external consultancy to review the evolution of the SALTOs and reflect new priorities for the new programme period 2021-2027. The conclusions are expected by end of July 2022.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Promote learning mobility of individuals and groups, as well as cooperation, quality, inclusion and equity, excellence creativity, and innovation at the level of organisations and policies in the field of education and training

Indicator 1: Number of participants in learning mobility activities in the Education and Training strand of the programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
HE learners										
2021	Milestones									2027
0	250 000	330 000	400 000	430 000	460 000	480 000	600 000			2 950 000

Indicator type	Result
Unit of measurement	Number of participants (thousands, yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary module and e-Grants
Link to the objective	The provision of Erasmus gives opportunities for learners and staff to be equipped with the skills to thrive in a society which is increasingly mobile, multicultural and digital.
Link MFF 14-20 / MFF 21-27	Based on lessons learned from the past programme, Erasmus+ 2021-2027 will be more inclusive and accessible, more forward-looking, more digital, simpler and greener, more international, while continuing to support lifelong learning and innovative education and training in Europe. Reporting will continue on this indicator in the new Programme. Apart from adjustments in the Programme's implementation that could lead to changes for some actions, the absence of methodological change will ensure the continuity of the performance monitoring.
Other methodological comments	Estimations will be based on the forecasts provided by organisations during the application phase of the projects. Numbers will be refined once all projects are closed (between 2 to 4 years after the project starts)". The current targets include only EU27 budget. Other programme countries budget and the international part of Erasmus+ will be added in 2023 when known.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	2021 programming was characterised by a strong focus to cooperation rather than mobility, to cope with Covid-19 impact on mobility opportunities – this strategy has been reversed in 2022 and following years. The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 2: Number of participants in virtual learning activities under key action 1 of the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027

Unit of measurement	Number of participants (thousands, yearly)
Cut-Off Date	
Data source	Beneficiary Module and e-Grants.
Link to the objective	Erasmus+ should contribute to delivering on the Digital Education Action Plan and respond to the necessary digital transformation of education and training, youth and sport.
Link MFF 14-20 / MFF 21-27	This indicator is new
Other methodological comments	This indicator will report only on the blended mobility periods (having a share of virtual activities). It is consequently a subset of mobility periods already counted in the 'Number of participants' indicator. Number of users of online platforms (list to be revised annually) is not linked to blended mobility and is reported in another indicator under Key action 2.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised

and consolidated data at a later stage regarding this year.

Indicator 3: Number of people with fewer opportunities taking part in activities under key action 1 of the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
HE										
2021	Milestones									2027
0	24 000	35 000	37 000	39 000	41 000	43 000	55 000			274 000
	Actual Progress									Final

	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of funded participants indicated as participants with fewer opportunities (thousands, yearly)
Cut-Off Date	
Data source	Beneficiary module and e-Grants
Link to the objective	Promote learning mobility of individuals and groups, as well as cooperation, quality, inclusion and equity, excellence, creativity and innovation at the level of organisations and policies in the field of education and training.
Link MFF 14-20 / MFF 21-27	Fewer opportunities was already a core performance indicator of the previous programme. Organisation of the Programme's activities has still to be defined and could lead to methodological changes in the calculation of this indicator.
Other methodological comments	Estimations will be based on the forecasts provided by organisations during the application phase of the projects. Numbers will be refined once all projects are closed (between 2 to 4 years after the project starts)
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 4: Share of participants that consider they have benefited from their participation in learning mobility activities under key action 1 of the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	95%	95%	95%	95%	95%	95%	95%			95%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Percentage of participants providing a positive answer to survey (yearly)
Cut-Off Date	
Data source	Participant Survey
Link to the objective	The provision of Erasmus gives opportunities for learners and staff to declare the benefits which contribute to the skills to thrive in a society which is increasingly mobile, multicultural and digital.
Link MFF 14-20 / MFF 21-27	The formulation of the indicator has been revised from 'Percentage of participants declaring that they have increased their key competences' to the actual form.
Other methodological comments	The information is available once all participants have filled in a survey following their mobility. Estimations will be provided and updated once full data becomes available.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 5: Share of participants that consider they have an increased European sense of belonging after participation in activities under key action 1 of the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027

	Actual Progress									Final

Are we on track :	No data
-------------------	---------

Indicator type	Result
Unit of measurement	Number of organisations' participations (thousands, yearly)
Cut-Off Date	
Data source	Online Registration System, Project Management Module, PDM URF, eGrants
Link to the objective	An increase in the number of organisations demonstrates the achievement of inclusion, collaboration and synergies for providing opportunities for learning mobilities.
Link MFF 14-20 / MFF 21-27	The number of organisations' participations was monitored in the previous MFF (14-20). No methodological change is expected in the calculation, allowing continuity for the analysis.
Other methodological comments	The number of organisations' participations in contracted projects is counted. As a consequence, an organisation participating several times will be counted multiple times. The current targets include only EU27 budget. Other programme countries budget and the international part of Erasmus+ will be added in 2023 when known.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 7: Share of organisations and institutions that consider they have developed high-quality practices as a result of their participation in key action 2 of the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	65%	65%	67%	69%	71%	73%	75%			75%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Percentage of organisations providing a positive answer in their final report (yearly)
Cut-Off Date	
Data source	Beneficiary module and e-Grants
Link to the objective	A high share of organisations demonstrates the achievement of increased innovation in education. The sharing of best practices ensures that high quality becomes ingrained in educational offerings.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	New metric. Data will be captured from projects final reports once projects are closed.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 8: Number of users of virtual cooperation platforms supported under key action 2 of the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
SEG										
2021	Milestones									2027
0	111 000	127 000	143 000	159 000	175 000	191 000	207 000			207 000

Are we on track :	On track									

eTwinning										
2021	Milestones									2027
0	1 030 000	1 130 000	1 260 000	1 390 000	1 520 000	1 650 000	1 800 000			1 800 000
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of participants registered on an online platform (yearly)
Cut-Off Date	31/03/2022
Data source	eTwinning, the Electronic Platform for Adult Learning in Europe (EPALE), the School Education Gateway (and its successor the European School Education Platform), the European Youth Portal and Erasmus Virtual Exchanges. List will be revised annually.
Link to the objective	Erasmus+ should contribute to delivering on the Digital Education Action Plan and respond to the necessary digital transformation of education and training, youth and sport
Link MFF 14-20 / MFF 21-27	New indicator based on lessons learned from the current programme, Erasmus+ 2021-2027 will be more inclusive and accessible, more forward-looking, more digital, simpler and greener, more international, while continuing to support lifelong learning and innovative education and training in Europe.
Other methodological comments	School Education Gateway platform will be replaced by the "European School Education Platform"
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 9: Number of newcomer organisations and institutions taking part in the Programme under key actions 1 and 2 of the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
KA1										
2021	Milestones									2027
0	4 200	5 000	5 300	5 500	5 700	5 900	6 500			6 500
	Actual Progress									Final
Are we on track :	No data									
KA2										
2021	Milestones									2027
0	1 000	1 000	1 100	1 150	1 190	1 230	1 400			1 400
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of organisations (yearly)
Cut-Off Date	
Data source	Online Registration System, Project Management Module, PDM URF, e-Grants
Link to the objective	Inclusion is a clear objective. The programme aims at eliminating barriers for organisations with a lower organisational capacity to take-part, which never received funding from the programme or with little or no experience in transnational cooperation.
Link MFF 14-20 / MFF 21-27	New indicator. Based on lessons learned from the current programme, Erasmus+ 2021-2027 will be more inclusive and accessible.
Other methodological comments	The number of unique organisations in contracted projects is counted. The current targets include only EU27 budget. Other programme countries' budget and the international part of Erasmus+ will be added in 2023 when known.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 10: Number of small-scale partnerships supported under key action 2 of the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027

0	1 800	900	1 200	1 200	1 200	1 200	1 200			8 700
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of partnerships (thousands, yearly)
Cut-Off Date	
Data source	Project Management Module, e-Grants
Link to the objective	Erasmus+ 2021-2027 will offer simpler and more accessible Actions - Achievement of simplification of procedures.
Link MFF 14-20 / MFF 21-27	New indicator. Based on lessons learned from the current programme, Erasmus+ 2021-2027 will be more inclusive and accessible.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 11: Share of organisations and institutions that consider that the procedures for taking part in the Programme are proportionate and simple for the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	60%	60%	61%	62%	63%	64%	65%			65%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Percentage of organisations providing a positive answer to selected questions in their final report
Cut-Off Date	
Data source	Project Management Module, e-Grants
Link to the objective	Higher share reflects the achievement of simplification of procedures through the grant management process.
Link MFF 14-20 / MFF 21-27	New indicator. Based on lessons learned from the current programme, Erasmus+ 2021-2027 will offer simpler and more accessible Actions.
Other methodological comments	As the information is extracted from projects' final reports, it will only be available once all projects of the call are closed (2-4 years after call). Estimations will be provided where possible.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 12: Share of activities addressing climate objectives under key action 1 of the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	15%	15%	15%	17%	18%	19%	20%			20%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Share of KA1 activities contributing to the climate priority (yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary Module, e-Grants
Link to the objective	The Commission recalled that Erasmus+ remains instrumental in achieving the objectives for quality and inclusive education, training and lifelong learning, and in preparing Europe to face the digital and green transitions.

Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The methodological approach to assess contribution will be based on KA1 contracted projects mapping to the climate priority using content provided by the organisations at application phase.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 13: Share of projects addressing climate objectives under key action 2 of the Education and Training strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	15%	15%	15%	18%	20%	22%	25%			25%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Share of projects contributing to climate priority (yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary Module, e-Grants
Link to the objective	The Commission recalled that Erasmus+ remains instrumental in achieving the objectives for quality and inclusive education, training and lifelong learning, and in preparing Europe to face the digital and green transitions.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The methodological approach to assess contribution is based on KA2 contracted projects mapping to the climate priority using content provided by the organisations at application phase (indirect and direct management).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Specific Objective 2: Promote non-formal and informal learning mobility and active participation among young people, as well as cooperation, quality, inclusion, creativity and innovation at the level of organisations and policies in the field of Youth.

Indicator 1: Number of participants in learning mobility activities in the Youth strand of the programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Learners										
2021	Milestones									2027
0	120 000	140 000	160 000	170 000	180 000	185 000	230 000			1 185 000
	Actual Progress									Final
Are we on track :	No data									
Staff										
2021	Milestones									2027
0	30 000	40 000	50 000	55 000	60 000	65 000	80 000			380 000
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of participants (thousands, yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary module and e-Grants
Link to the objective	Promote non-formal and informal learning mobility and active participation among young people.

	Provide young learners and staff with opportunities to be equipped with the skills to thrive in an increasingly mobile, multicultural and digital society.
Link MFF 14-20 / MFF 21-27	Based on lessons learned from the past programme, Erasmus+ 2021-2027 will be more inclusive and accessible, more forward-looking, more digital, simpler and greener, more international, while continuing to support lifelong learning and innovative education and training in Europe. Reporting will continue on this indicator in the new programme. Apart from adjustments in the programme's implementation that could lead to changes for some actions, the absence of methodological change will ensure the continuity of the performance monitoring.
Other methodological comments	Estimations will be based on the forecasts provided by organisations during the application phase of the projects. Numbers will be refined once all projects are closed (between 2 to 4 years after the project starts). The current targets include only EU27 budget. Other programme countries budget and the international part of Erasmus+ will be added in 2023 when known.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 2: Number of participants in virtual learning activities under key action 1 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of participants (thousands, yearly)
Cut-Off Date	
Data source	Beneficiary module and e-Grants
Link to the objective	Erasmus+ should contribute to delivering on the Digital Education Action Plan and respond to the necessary digital transformation of education and training, youth and sport.
Link MFF 14-20 / MFF 21-27	The indicator is new
Other methodological comments	Blended activities as such are not available in 2021 in the youth field. Virtual / blended mobilities are not foreseen for the time being in the Youth strand (possibility to finance hybrid / blended activities is under discussion)
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 3: Number of people with fewer opportunities taking part in activities under key action 1 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	25 000	30 000	35 000	40 000	46 000	68 000	78 000			322 000
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of funded participants indicated as participants with fewer opportunities (thousands, yearly)
Cut-Off Date	
Data source	Beneficiary module and e-Grants
Link to the objective	Promote non-formal and informal learning mobility and active participation among young people, as well as cooperation, quality, inclusion, creativity and innovation at the level of organisations and policies in the field of youth.
Link MFF 14-20 / MFF 21-27	Fewer opportunities was already a core performance indicator of the previous programme. Organisation of the Programme's activities has still to be defined and could lead to methodological changes in the calculation of this indicator.
Other methodological comments	Estimations will be based on the forecasts provided by organisations during the application phase of

	the projects. Numbers will be refined once all projects are closed (between 2 to 4 years after the project starts)
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. This target represents 20% of learners mobilities in 2022 and 30% in 2027 – this does not include DiscoverEU.

Indicator 4: Share of participants that consider they have benefited from their participation in learning mobility activities under key action 1 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	90%	90%	91%	92%	93%	94%	95%			95%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Percentage of participants providing a positive answer to survey (yearly)
Cut-Off Date	
Data source	Participant Survey
Link to the objective	Promote non-formal and informal learning mobility and active participation among young people. Provide young learners and staff with opportunities to be equipped with the skills to thrive in a society which is increasingly mobile, multicultural and digital.
Link MFF 14-20 / MFF 21-27	The formulation of the indicator has been revised from 'Percentage of participants declaring that they have increased their key competences' to the actual form.
Other methodological comments	The information is available once all participants have filled in a survey following their mobility. Estimations will be provided and updated once full data becomes available.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. Too early to report. Data will be captured from projects final reports once projects are closed.

Indicator 5: Share of participants that consider they have an increased European sense of belonging after participation in activities under key action 1 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	60%	60%	60%	62%	64%	66%	68%			68%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Percentage of participants providing a positive answer to survey (yearly)
Cut-Off Date	
Data source	Participant Survey
Link to the objective	Erasmus + gives learners the opportunities to get to know Europe and European projects better and thus increase their sense of belonging to a place which has provided them with learning and development opportunities.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The information is available once all participants have filled in a survey following their mobility. Estimations will be provided and updated once full data becomes available.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. Data will be captured from projects' final

reports once projects are closed.

Indicator 6: Number of organisations and institutions taking part in the Programme for Youth activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
KA1										
2021	Milestones									2027
0	13 000	16 000	17 000	18 000	19 000	20 000	22 000			22 000
	Actual Progress									Final
Are we on track :	No data									
KA2										
2021	Milestones									2027
0	3 500	4 000	4 500	4 800	5 100	5 400	6 000			6 000
	Actual Progress									Final
Are we on track :	No data									
KA3										
2021	Milestones									2027
0	80	90	95	100	105	110	135			135
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of organisations' participations (thousands, yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary Module
Link to the objective	Promote cooperation, quality, inclusion, creativity and innovation at the level of organisations and policies in the field of youth.
Link MFF 14-20 / MFF 21-27	The number of organisations was monitored in the previous MFF (14-20).No methodological change is expected in the calculation, allowing continuity for the analysis.
Other methodological comments	The number of organisations' participations in contracted projects is counted. As a consequence, an organisation participating several times will be counted multiple times. The current targets include only EU27 budget. Other programme countries' budget and the international part of Erasmus+ will be added in 2023 when known.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 7: Share of organisations and institutions that consider they have developed high-quality practices as a result of their participation in key action 2 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	65%	65%	67%	69%	71%	73%	75%			75%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Percentage of organisations providing a positive answer in their final report (yearly)
Cut-Off Date	
Data source	Beneficiary module and e-Grants
Link to the objective	A high share of organisations demonstrates the achievement of increased innovation in education. The sharing of best practices ensures that high quality becomes ingrained in educational offerings.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	New metric. Data will be captured from projects final reports once projects are closed.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en

Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. Data will be captured from projects final reports once projects are closed.
----------------------------	---

Indicator 8: Number of users of virtual cooperation platforms supported under key action 2 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	400 000	450 000	500 000	550 000	600 000	650 000	700 000			700 000
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of participants registered on an online platform (yearly)
Cut-Off Date	31/03/2022
Data source	European Youth Portal. List will be revised annually.
Link to the objective	Promote non-formal and informal learning mobility and active participation among young people, as well as cooperation, quality, inclusion, creativity and innovation at the level of organisations and policies in the field of youth.
Link MFF 14-20 / MFF 21-27	New indicator. Based on lessons learned from the current programme, Erasmus+ 2021-2027 will be more inclusive and accessible, more forward-looking, more digital, simpler and greener, more international, while continuing to support lifelong learning and innovative education and training in Europe.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 9: Number of newcomer organisations and institutions taking part in the Programme under key actions 1 and 2 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
KA1										
2021	Milestones									2027
0	1 800	1 900	2 200	2 300	2 400	2 500	2 700			2 700
	Actual Progress									Final
Are we on track :	No data									
KA2										
2021	Milestones									2027
0	1 600	1 700	1 900	2 000	2 100	2 200	2 400			2 400
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of organisations
Cut-Off Date	
Data source	Online Registration System, Project Management Module, PDM URF, e-Grants
Link to the objective	Inclusion is a clear objective. The programme aims at eliminating barriers for organisations with a lower organisational capacity to take-part, which never received funding from the programme or with little or no experience in transnational cooperation.
Link MFF 14-20 / MFF 21-27	New indicator. Based on lessons learned from the current programme, Erasmus+ 2021-2027 will be more inclusive and accessible
Other methodological comments	The number of unique organisations in contracted projects is counted. The current targets include only EU27 budget. Other programme countries' budget and the international part of Erasmus+ will be added in 2023 when known.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national

	authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.
--	---

Indicator 10: Number of small-scale partnerships supported under key action 2 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	400	450	500	500	500	500	500			3 350
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of partnerships (thousands, yearly)
Cut-Off Date	
Data source	Project Management Module, e-Grants
Link to the objective	Erasmus+ 2021-2027 will offer simpler and more accessible Actions - Achievement of simplification of procedures.
Link MFF 14-20 / MFF 21-27	New indicator. Based on lessons learned from the current programme, Erasmus+ 2021-2027 will offer simpler and more accessible Actions.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. Based on stable budget of 20 million euro per year.

Indicator 11: Share of organisations and institutions that consider that the procedures for taking part in the Programme are proportionate and simple for the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	60%	60%	62%	66%	66%	68%	70%			70%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Percentage of organisations providing a positive answer to selected questions in their final report (yearly)
Cut-Off Date	
Data source	Project Management Module, e-Grants
Link to the objective	Higher share reflects the achievement of simplification of procedures through the grant management process.
Link MFF 14-20 / MFF 21-27	New indicator. Based on lessons learned from the current programme, Erasmus+ 2021-2027 will offer simpler and more accessible Actions.
Other methodological comments	As the information is extracted from projects' final reports, it will only be available once all projects of the call are closed (2-4 years after call). Estimations will be provided where possible.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. Data will be available once all projects of the call are closed.

Indicator 12: Share of activities addressing climate objectives under key action 1 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	15%	15%	16%	17%	18%	19%	20%			20%
	Actual Progress									Final

Are we on track :	No data
-------------------	---------

Indicator type	Result
Unit of measurement	Share of KA1 activities contributing to the climate priority (yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary Module, e-Grants
Link to the objective	The Commission recalled that Erasmus+ remains instrumental in achieving the objectives for quality and inclusive education, training and lifelong learning, and in preparing Europe to face the digital and green transitions.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The methodological approach to assess contribution will be based on KA1 contracted projects mapping to the climate priority using content provided by the organisations at application phase.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 13: Share of projects addressing climate objectives under key action 2 of the Youth strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	15%	15%	17%	19%	21%	23%	25%			25%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Share of projects contributing to green priority (yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary Module, e-Grants
Link to the objective	The Commission recalled that Erasmus+ remains instrumental in achieving the objectives for quality and inclusive education, training and lifelong learning, and in preparing Europe to face the digital and green transitions.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The methodological approach to assess contribution is based on KA2 contracted projects mapping to the climate priority using content provided by the organisations at application phase (indirect and direct management).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Specific Objective 3: Promote learning mobility of sport staff, as well as cooperation, quality, inclusion, creativity and innovation at the level of sport organisations and sport policies.

Indicator 1: Number of participants in learning mobility activities in the Sport strand of the programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0		0	2 500	4 000	5 000	6 000	7 500			25 000
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of participants (thousands, yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary module and e-Grants
Link to the objective	The provision of Erasmus gives opportunities for staff to be equipped with the skills to thrive in a

	society which is increasingly mobile, multicultural and digital.
Link MFF 14-20 / MFF 21-27	All activities under KA1 for sport are new and will be introduced around 2023. Therefore there is no link with the previous MFF.
Other methodological comments	Estimations will be based on the forecasts provided by organisations during the application phase of the projects. Numbers will be refined once all projects are closed (between 2 to 4 years after the project starts). The current targets include only EU27 budget. Other programme countries budget and the international part of Erasmus+ will be added in 2023 when known.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. Reporting begins in 2024 as the key action 1 activities in Sport is planned to start in 2023.

Indicator 2: Number of participants in virtual learning activities under key action 1 of the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	0	0	100	160	200	240	300			1 000
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of participants (thousands, yearly)
Cut-Off Date	
Data source	Beneficiary module and e-Grants
Link to the objective	Erasmus+ should contribute to delivering on the Digital Education Action Plan and respond to the necessary digital transformation of education and training, youth and sport.
Link MFF 14-20 / MFF 21-27	The indicator is new. All activities under KA1 for sport are new and will be introduced around 2023.
Other methodological comments	This indicator will report only on the blended mobility periods (having a share of virtual activities).It is consequently a subset of mobility periods already counted in the 'Number of participants' indicator. Number of users of online platforms (list to be revised annually) is not linked to blended mobility and is reported in another indicator under Key action 2
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. Reporting begins in 2024 as the key action 1 activities in Sport is planned to start in 2023.

Indicator 3: Number of people with fewer opportunities taking part in activities under key action 1 of the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	0	0	250	400	550	660	900			2 760
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of funded participants indicated as participants with fewer opportunities (thousands, yearly)
Cut-Off Date	
Data source	Beneficiary module and eGrants
Link to the objective	Promote learning mobility of sport staff, as well as cooperation, quality, inclusion, creativity and innovation at the level of sport organisations and sport policies.
Link MFF 14-20 / MFF 21-27	All activities under KA1 for sport are new and will be introduced around 2023. Therefore there is no link with the previous MFF.

2021	Milestones									2027
0	40	40	40	40	40	40	40			40
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of organisations' participations (thousands, yearly)
Cut-Off Date	31/03/2022
Data source	Online Registration System, Project Management Module, PDM URF, eGrants
Link to the objective	An increase in the number of organisations demonstrates the achievement of inclusion, collaboration and synergies for providing opportunities for learning mobilities. Organisations collaborate to create new policies, assess / develop existing policies and measure the inclusive implementation of the Programme.
Link MFF 14-20 / MFF 21-27	For KA1, this is an entirely new activity that will start around 2023. For KA2, due to the specificity of eGrant system, the data on actual progress will be available later in 2022. This action is expected to be on track and to continue in the current MFF similarly as in the previous one. Nonetheless, due to the specificity of eGrant system the data on actual progress will be available later in 2022. For KA3, the figures will be available at a later stage.
Other methodological comments	The number of organisations' participations in contracted projects is counted. As a consequence, an organisation participating several times will be counted multiple times. The current targets include only EU27 budget. Other programme countries budget and the international part of Erasmus+ will be added in 2023 when known.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 7: Share of organisations and institutions that consider they have developed high-quality practices as a result of their participation in key action 2 of the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	65%	65%	65%	65%	65%	65%	65%			65%
	Actual Progress									Final
Are we on track :	No data

Unit of measurement	Percentage of organisation providing a positive answer in their final report (yearly)
Cut-Off Date	
Data source	Beneficiary module and e-Grants
Link to the objective	A high share of organisations demonstrates the achievement of increased innovation in education. The sharing of best practices ensures that high quality becomes ingrained in educational offerings.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	New metric. Data will be captured from projects final reports once projects are closed.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en

Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. Reporting starts in 2023-24 following the availability of data provided at the end of projects.
----------------------------	---

Indicator 8: Number of newcomer organisations and institutions taking part in the Programme under key actions 1 and 2 of the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
KA1										
2021	Milestones									2027
0	0	0	500	100	120	140	160			160
	Actual Progress									Final
Are we on track :	No data									
KA2										
2021	Milestones									2027
0	130	160	165	165	190	200	215			215
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of organisations (yearly)
Cut-Off Date	
Data source	Online Registration System, Project Management Module, PDM URF, e-Grants
Link to the objective	Inclusion is a clear objective. The programme aims at eliminating barriers for organisations with a lower organisational capacity to take-part, which never received funding from the programme or with little or no experience in transnational cooperation.
Link MFF 14-20 / MFF 21-27	For KA1, this is a new activity that will start around 2023. For KA2, due to the specificity of eGrants system, the data on actual progress will be available later in 2022. This action is expected to be on track and to continue in the current MFF similarly as in the previous one. Nonetheless due to the specificity of eGrants system the data on actual progress will be available later in 2022.
Other methodological comments	The number of unique organisations in contracted projects is counted. The current targets include only EU27 budget. Other programme countries' budget and the international part of Erasmus+ will be added in 2023 when known.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. As regards KA1, reporting begins in 2024 as the key action 1 activities in Sport is planned to start in 2023. As regards KA2, data for 2021 not available yet.

Indicator 9: Number of small-scale partnerships supported under key action 2 of the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	120	165	175	175	195	205	220			1 255
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of partnerships (thousands, yearly)
Cut-Off Date	31/03/2022
Data source	Project Management Module, e-Grants
Link to the objective	Erasmus+ 2021-2027 will offer simpler and more accessible Actions - Achievement of simplification of procedures.
Link MFF 14-20 / MFF 21-27	Based on lessons learned from the current programme, Erasmus+ 2021-2027 will offer simpler and more accessible Actions.

Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 10: Share of organisations and institutions that consider that the procedures for taking part in the Programme are proportionate and simple for the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	55%	61%	55%	57%	59%	61%	63%			63%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Percentage of organisation providing a positive answer to selected questions in their final report (yearly)
Cut-Off Date	
Data source	Project Management Module, e-Grants
Link to the objective	Higher share reflects the achievement of simplification of procedures through the grant management process.
Link MFF 14-20 / MFF 21-27	New indicator. Based on lessons learned from the current programme, Erasmus+ 2021-2027 will offer simpler and more accessible Actions.
Other methodological comments	As the information is extracted from projects' final reports, it will only be available once all projects of the call are closed (2-4 years after call). Estimations will be provided where possible.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. The dip in 2023 takes into account the start of the new action on sport mobility which is expected to run on a new IT system with new procedures that sport stakeholders are not expected to be familiar with.

Indicator 11: Share of activities addressing climate objectives under key action 1 of the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	0%	0%	15%	16%	17%	18%	20%			20%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Share of KA1 activities contributing to the climate priority (yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary Module, e-Grants
Link to the objective	The Commission recalled that Erasmus+ remains instrumental in achieving the objectives for quality and inclusive education, training and lifelong learning, and in preparing Europe to face the digital and green transitions.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The methodological approach to assess contribution will be based on KA1 contracted projects mapping to the climate priority using content provided by the organisations at application phase.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. Reporting will start in 2024 as the key action 1 in Sport is planned to start in 2023.

Indicator 12: Share of projects addressing climate objectives under key action 2 of the Sport strand

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	10%	15%	15%	15%	15%	15%	15%			15%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Share of projects contributing to climate priority (yearly)
Cut-Off Date	31/03/2022
Data source	Project Management Module, Beneficiary Module, e-Grants
Link to the objective	The Commission recalled that Erasmus+ remains instrumental in achieving the objectives for quality and inclusive education, training and lifelong learning, and in preparing Europe to face the digital and green transitions.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The methodological approach to assess contribution will be based on KA2 contracted projects mapping to the climate priority using content provided by the organisations at application phase (indirect and direct management).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. Data not yet available.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1 : The Union Programme for Education, Training, Youth and Sport (Erasmus+)

General Objective 1 :The Programme shall contribute to the achievement of the objectives of the Europe 2020 strategy, including the headline education target; the objectives of the strategic framework for European cooperation in education and training ("ET 2020"), including the corresponding benchmarks; the sustainable development of partner countries in the field of higher education; the overall objectives of the renewed framework for European cooperation in the youth field (2010-2018); the objective of developing the European dimension in sport, in particular grassroots sport, in line with the Union work plan for sport; and the promotion of European values in accordance with Article 2 of the Treaty on European Union.

Indicator 5: Number of staff supported by the Programme, by country and by sector

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
HE										
2013	Milestones									2020
46	49		50				70			70
	Actual Progress									Final
	43	45	47	55	65	76	78

16	21	21	22	23	24	25	26			26
	Actual Progress									Final
	34	31	29	32	34	40	42			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of staff participants (thousands, yearly)
Cut-Off Date	21/12/2021
Data source	Detailed breakdown can be found in the Erasmus+ Annual Report.
Narrative	
Methodology	The number of participants is extracted from the forecasts provided by the organisations on project awarded.
Link MFF 14-20 / MFF 21-27	This indicator will be monitored and reported in a different way in the MFF 2021-2027.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The number of participants is extracted from estimations provided by organisations and related to call years. In 2020 and in relation to COVID-19, organisations received more flexibility for the organisation of projects and forecasted less participants.

Indicator 6: Number of participants with special needs or fewer opportunities

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Total										
2013	Milestones									2020
8	15			15			40			40
	Actual Progress									Final
	19	22	24	30	36	33	24			
Are we on track :	On track									
Youth										
2013	Milestones									2020
18.7	47			21.6			37			37
	Actual Progress									Final
	26	31	37	43	44	39	19			
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	Number of participants (thousands, yearly)
Cut-Off Date	21/12/2021
Data source	Detailed breakdown can be found in the Erasmus+ Annual Report.
Narrative	
Methodology	Calculation method has been improved in 2019 and is now based on realised mobility periods. All EU28 past values have been recalculated. Values covering recent year might not include all numbers: these will be updated once projects are closed.
Link MFF 14-20 / MFF 21-27	This indicator will be monitored and reported in the MFF 2021-2027.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	This data is extracted from actual mobility data. The decrease in 2019 and 2020 is mostly due to COVID 19 (mobility periods take place between one and three years after project stars), projects deadlines have been extended for 2019/2020 calls to allow postponed mobility periods to take place. Results will be updated once all projects are closed and final numbers available. For youth, the decrease is also related to the creation of the European Solidarity Corps under which voluntary activities are now carried out from 2019.

Indicator 7: Number and type of organisations and projects, by country and by action

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
National Agencies										
2014	Milestones									2020
Projects: 11/Organisations: 32	11 994									
	Actual Progress									Final
	18/69	19/67	20/73	21/80	23/90	24/73	25/82

	0.7/2.2	0.9/3.9	1.1/5.6	1.0/4.4	1.3/4.9					
Are we on track :										

Indicator type	Result
Unit of measurement	Number of projects/Organisations taking part in the programme (thousands, yearly)
Cut-Off Date	21/12/2021
Data source	EACEA data and Project monitoring tool from EAC
Narrative	
Methodology	Projects/Organisations
Link MFF 14-20 / MFF 21-27	This indicator will be monitored and reported in the MFF 2021-2027.
Other methodological comments	Numbers include all programme countries
Full metadata available at this address	
Justification of the trend	Values for centralised activity (EACEA) will be available later

Specific Objective 1 :to improve the level of key competences and skills, with particular regard to their relevance for the labour market and their contribution to a cohesive society, in particular through increased opportunities for learning mobility and through strengthened cooperation between the world of education and training and the world of work;

Indicator 1: Percentage participants declaring that they have increased their key competences

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
0.81		0.83		0.85			0.88			0.88
	Actual Progress									Final
	0.93	0.93	0.94	0.91	0.93	0.94	0.94			
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Percentage of participants with positive answers to a survey (yearly)
Cut-Off Date	21/12/2021
Data source	Erasmus participant surveys
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	No direct link with MFF 2021-2027. In the new programme, there is a new indicator (i.e., “Share of participants that consider they have benefited from their participation in learning mobility activities...”) that demonstrates what percentage of the participants have stated that they have benefited from their participation through questions in the participant surveys where declarations of improved language levels, learning to learn, cultural awareness, certification and other relevant benefits from the key competences framework
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The weighted average over the total population (Education & Training, Youth) is 95% compared to a 88% target.

Indicator 2: The number of pupils, students and trainees participating in the Programme, by country, sector, action and gender

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
HE										
2013	Milestones									2020

41	78	78	80	87	99	121	131			131
	Actual Progress									Final
	90	96	105	127	137	153	150			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of participants (thousands, yearly)
Cut-Off Date	21/12/2021
Data source	Project monitoring tool from EAC (Eplus Link)
Narrative	
Methodology	The number of participants is extracted from the forecasts provided by the organisations on project awarded.
Link MFF 14-20 / MFF 21-27	This indicator will be monitored and reported in a different way in the MFF 2021-2027.
Other methodological comments	Detailed breakdown can be found in the Erasmus+ Annual Report. Milestones foreseen - In line with DG EAC Strategic Plan 2016-2020. Actual results - EU28 preliminary results calculated for awarded projects in a given call year.
Full metadata available at this address	
Justification of the trend	The number of participants is extracted from estimations provided by organisations and related to call years. In 2020 and in relation to COVID-19, organisations received more flexibility for the organisation of projects and forecasted less participants, as more budget was allocated to KA2.

Specific Objective 3 :to promote the emergence and raise awareness of a European lifelong learning area designed to complement policy reforms at national level and to support the modernisation of education and training systems, in particular through enhanced policy cooperation, better use of Union transparency and recognition tools and the dissemination of good practices;

Indicator 1:Percentage of participants who have received a certificate, diploma or other kind of formal recognition of their participation in the Programme

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
HE										
2013	Milestones									2020

65%		68%		70%			75%			75%
	Actual Progress									Final
	71%	74%	73%	76%	75%	75%	91%			
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Percentage of participants with positive answers to a survey (yearly)
Cut-Off Date	21/12/2021
Data source	Data is extracted from completed participant surveys.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	No link with MFF 2021-2027.
Other methodological comments	Milestones foreseen - In line with DG EAC Strategic Plan 2016-2020. Result indicator: the final results can only be provided when all the formal recognitions have been delivered (year N=3).

Full metadata available at this address	
Justification of the trend	The weighted average over VET and Youth populations is 91% compared to a 69% target (excluding HE as it is always at 100%).

Specific Objective 4 :to enhance the international dimension of education and training, in particular through cooperation between Union and partner-country institutions in the field of VET and in higher education, by increasing the attractiveness of European higher education institutions and supporting the Union's external action, including its development objectives, through the promotion of mobility and cooperation between the Union and partner-country higher education institutions and targeted capacity-building in partner countries.

Indicator 1:The number of partner country higher education institutions involved in mobility and cooperation actions

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020

Other methodological comments	
Full metadata available at this address	
Justification of the trend	A high number of applications have been received and selected compared to the previous years. The increasing trend of actual results mirrors the increasing trend of the annual budget available over the

	programme period.
--	-------------------

Specific Objective 7 :to improve the level of key competences and skills of young people, including those with fewer opportunities, as well as to promote participation in democratic life in Europe and the labour market, active citizenship, intercultural dialogue, social inclusion and solidarity, in particular through increased learning mobility opportunities for young people, those active in youth work or youth organisations and youth leaders, and through strengthened links between the youth field and the labour market;

Indicator 1:Percentage of participants declaring that they have increased their key competences

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020

Indicator type	Result
Unit of measurement	Number of youth participants (thousand, yearly)
Cut-Off Date	21/12/2021
Data source	EAC project monitoring tool
Narrative	
Methodology	The number of participants is extracted from the forecasts provided by the organisations on project awarded.
Link MFF 14-20 / MFF 21-27	This indicator will be monitored and reported in a different way in the MFF 2021-2027.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The decrease in results observed in 2017 and 2018 is due to the transfer of funds for the volunteering activities to the new spending programme – European Solidarity Corps. The new regulation was adopted in October 2018. The number of participants is extracted from estimations provided by organisations and related to call years. In 2020 and in relation to COVID-19, organisations received more flexibility for the organisation of projects and forecasted less participants.

Specific Objective 9 :to complement policy reforms at local, regional and national level and to support the development of knowledge and evidence-based youth policy as well as the recognition of non-formal and informal learning, in particular through enhanced policy cooperation, better use of Union transparency and recognition tools and the dissemination of good practices.

Indicator 1:Percentage of participants who have received a certificate 'for example a Youthpass', diploma or other kind of formal recognition of their participation in the Programme

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010	Milestones									2020

Justification of the trend	

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	169.43							169.43	1%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

Erasmus+ is a powerful instrument to reach out to and engage with a wide spectrum of players in our society (schools, universities, VET providers, youth and sport organisations, NGOs, local and regional authorities, civil society organisations, etc.), contributing with its own instruments (mobility, cooperation, policy support) to reaching the Green Deal objectives, as well as the overall target of 30% climate spending in the EU budget.

Regarding climate spending, the programme contribution will be monitored through dedicated indicators set in the legal basis in line with the programmes main objectives of skills, development and young people mobility. For these purposes, we will increase our efforts to monitor the share of activities addressing climate objectives under key action 1 and the share of activities addressing climate objectives under key action 2. Additional indicators will be developed in the context of a monitoring and evaluation framework.

Erasmus+, with mobility at its core, will strive for carbon-neutrality by promoting sustainable transport modes and more responsible behaviour. The European Year of Rail 2021 was an excellent platform to promote the efforts to green Erasmus+ and encourage participants to choose rail or other low-carbon means of transport.

Environment and fight against global warming will be a horizontal priority for the selection of cooperation projects. Projects will support the creation of networks and partnerships of various actors in the field of education, including schools and the local communities and industries, working together on raising awareness of environmental issues, teaching and practicing what is taught (for example social responsibility; waste reduction; clean transport etc.). Platforms such as the European School Education Platform (successor of the School Education Gateway), eTwinning and EPAL will continue to produce support materials and facilitate the exchange of effective educational practices and policies on environmental and sustainability matters.

The Erasmus+ programme will help develop knowledge, skills and attitudes on climate change and sustainable development and support whole-institution approaches to education for environmental sustainability. The programme will increase the number of mobility opportunities in green forward-looking fields, i.e. those study periods abroad, traineeships, youth or classrooms exchanges, etc. which foster the development of competences, enhance career prospects and engage participants in subject areas, with special attention to rural development (sustainable farming, management of natural resources, soil protection, bio-agriculture) all of which are strategic for the sustainable growth of our planet.

The programme will as such contribute to the implementation of the proposal for the Council Recommendation on learning for environmental sustainability, which was adopted in January 2022.

6.1.3. Key achievements

41 European Universities have now been selected under Erasmus+; these are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. They will work on a challenge-based approach, meaning that students cooperate with academics, researchers and companies from various disciplines, and cities, regions, civil society organisation and countries to tackle big societal challenges, addressing sustainable development at large, including climate change. For example, the **ENLIGHT European University** will inter alia focus on the impact of climate change on regional ecosystems. ENLIGHT will use its local environments (cities and regions) across Europe as living laboratories for lifelong learning and research in this area.

The **Centres of Vocational Excellence** have supported various projects in the field of Green Skills. These include: GREENOVET fostering the development of Vocational Excellence in Green Innovation across Europe enabling an innovative, inclusive and sustainable economy. It provides a platform to interconnect the European VET schools at regional, national and transnational level together with key partners in the local innovation and skills ecosystem. Some examples include:

- EPLUG a European Platform for Urban Greening aiming to increase the knowledge and skills required to address biodiversity, climate adaptation and well-being in the urban green living environment, and to broaden the expertise among professionals in Europe;
- 3LOE addressing the challenges of energy, climate and environmental protection, 3LoE establishes Centres of Vocational Excellence on green economy and implements a wide range of vocational education, training and higher education measures concerning green economy, digitalisation and entrepreneurship.

In 2023 the **Alliances for Innovation** will continue to foster cooperation between Higher Education, Vocational Education and Training and enterprises in order to boost innovation and entrepreneurship. The action has proved popular in the previous years, with Lot One, the Alliances for Education and Enterprises, having only a 8% success rate in 2021. Lot Two, the Alliances for Sectoral Cooperation in Skills, will continue to support future-proof skills development, including both green and digital skills, and entrepreneurship competences of graduates and the co-designing of curricula between industry - including SMEs - and higher education institutions in the strategically important industrial sectors identified in the updated industrial strategy.

The aim of the youth workers training ‘**Green living in the rural area**’ is to empower youth workers and their organisations to support social and environmental responsibility, saving and optimising resources. The project trains youth workers to reuse and recycle materials and provide them with the competences to act as multipliers in their own organisations. The main objectives are to raise awareness of participants on sustainable development of rural areas and on reusing and recycling of materials; provide participants with knowledge, skills and competences regarding the reusing of wood and other materials for a tree-house construction; stimulate the spirit of entrepreneurship of the participants; encourage creativity, leadership skills, innovative attitude and environmental responsibility of participants, to act as multipliers of the knowledge acquired in the training course.

Several Erasmus Mundus Joint Master Degrees work directly on Climate Change issues, for example the Master of Urban Climate and Sustainability - MURCS 1.5 (€4.4 million) or the EMJMD Renewable Energy in the Marine Environment REM+ (€3 million). Building on the success and lessons from MURCS, the aim of the new Master of Urban Climate and Sustainability 1.5 (MURCS1.5) is to produce high calibre graduates to understand, assess and manage climate resilience in cities to live within a 1.5°C warmer world. The Master in Renewable Energy in the Marine Environment (REM+) is an MSc Joint Degree coordinated by the University of the Basque Country in partnership with the Norwegian University of Science and Technology, École Centrale de Nantes and the University College, Cork. The Programme has been tailored to meet companies’ needs in the area of Offshore Renewable Energy, and will have an international orientation underpinned by the direct participation, as Associate Partners, of world-renowned Research Centres, SMEs, and Large enterprises within industry.

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution		0.00	0.00					0.00
Share compared to total envelope		0.00 %	0.00 %					0.00 %

(*)These amounts include NextGenerationEU top-ups if any

6.3. Contribution to gender equality

6.3.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*: 2 663							

(*)Consolidated information about the annual commitments implemented (total per score by programme **in EUR Million**)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

Gender equality between men and women is a broad EU objective, and is explicitly stated in the Erasmus+ programme. Erasmus+ aims at promoting equity and inclusion by facilitating the access to participants with disadvantaged backgrounds and fewer opportunities compared to their peers, whenever disadvantage limits or prevents participation in transnational activities for reasons such as social obstacles caused by discrimination based on gender. In the field of higher education, provisions supporting gender equality through Erasmus+ have strong synergies with the European strategy for universities, which aims to address persistent gender gaps in higher education. The programme aims to building more inclusive higher education systems, fostering gender balance in higher education institutions, across fields of study and in leadership positions.

In the field of higher education, provisions supporting gender equality through Erasmus+ have strong synergies with the European strategy for universities, which aims to address persistent gender gaps in higher education. The programme aims to building more inclusive higher education systems, fostering gender balance in higher education institutions, across fields of study and in leadership positions.

In the field of Youth, Erasmus+ supports non-formal learning for young people and equips youth workers with the necessary competences to better work with them, with the objective to engage and empower young people to become active citizens, connect them to the European project as well as to help them acquire and develop competences for life and their professional future. Projects supported are particularly suitable to strengthen European values and breaking down prejudices and stereotypes, raise awareness about socially relevant topics such as gender equality and make young people actors of change.

In addition, Erasmus+ supports projects dealing with the issue of gender equality; e.g. focusing on changing mentalities through reflection and the exchange of best practices, sensitising children to gender and diversity and by developing new and innovative methods to break down barriers for young girls in science and technology education. Erasmus+ supported initiatives aimed at addressing the underrepresentation of women in the area of STEM education, contributed to reinforcing quality early childhood education and care through actions such as fighting gender stereotypes from an early age and addressing underrepresentation of men in this field. The youth strand of Erasmus+ activities contributes to the implementation of the EU Youth Strategy 2019-2027 with the objective 'Ensuring equality of all genders and gender-sensitive approaches in all areas of life of a young person'.

In the period 2014-2020 Erasmus+ funded over 3 100 projects addressing gender equality.

Erasmus+ has funded several Strategic Partnerships and Capacity building Projects on gender equality in STEM in higher education. In addition, forward-looking cooperation projects also focus on STEAM education, such as the project 'Innovating STE(A)M in Higher Education with Transdisciplinary Talent Programs', '[EU STEAM](#) Towards a European STE(A)M Platform' and '[ArtIST](#) Integrated Interdisciplinary Education Module on Art, Entrepreneurship, Innovation and Science'. The projects promote innovative and cross-disciplinary approaches to STEAM curricula and teaching in higher education. The common cross-cutting objectives of these projects are to: i) contribute to increasing the participation of girls and women in STEM fields of study and jobs and; ii) reinforce cooperation between schools, higher education institutions, non-academic partners and businesses.

The Youth mobility project 'Soul has no gender: Working together to promote gender equality and end violence towards women' brought together young people from different countries for the purpose of addressing human rights, gender equality and violence against women in their home communities. Young participants were given the opportunity to actively participate in non-formal activities and to engage in a dialogue about gender equality and gender roles in their social environment. Their perception of the gender roles were challenged and they were provided with tools to combat gender discrimination, contribute to raise awareness and trigger behavioural changes around them.

In the field of sport, in addition to the regular activities, the programme contributed to cooperation with the Council of Europe, the United Nations Office on Drugs and Crime (UNODC), the World Health Organisation and the National Football Information Points (NFIP) network, with dedicated projects to tackle key issues such as gender equality, match-fixing and violence in sport.

The [Erasmus Mundus Master's Degree in Women's and Gender Studies](#) (GEMMA) has been funded with a total budget of €4.5 million.

[GEMMA Master's Degree in Women's and Gender Studies](#) provides high quality academic education and professional competencies in the areas of Women's Studies, Gender Studies and Equal Opportunities across Europe and beyond. It collects the best offer from the humanities, social sciences and health sciences, making it attractive to students worldwide and offering a wide range of options. GEMMA's mission is to form much needed gender experts who will be able to contribute to greater equality between men and women, taking into account the intersections of ethnicity, race, class and sexuality and contributing to citizenship in the broadest sense of the word. The consortium consists of six universities in Spain, Italy, Poland, Netherlands and UK.

The [Young Man Interested in Early Childhood Education \(YOMAI\)](#) project aims to make working with children, up to the age of 10 attractive to men to encourage them to start a job or training in early childhood education. The targeted professions are educators, teachers and social workers.

6.4. Contribution to the sustainable development goals

SDG 1 End poverty in all its forms everywhere

Through its activities to achieve social inclusion through education, Erasmus+ contributes to achieving Goal 1 of the SDGs, in particular its target of reducing at least by half the proportion of men, women and children of all ages living in poverty in all its dimensions according to national definitions.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 1, the European University of Post-Industrial Cities (UNIC European University) will focus its activities inter alia on post-industrial challenges and diversity, taking into account also the needs of socio-economical disadvantaged areas.

The [ASEAN Network for Green Entrepreneurship and Leadership \(ANGEL\)](#) aims to build the capacity necessary in eleven ASEAN Universities for balancing the high potential economic growth and innovation in partner countries. These partner countries lack capacities in green entrepreneurship as well as resolving entrenched issues and challenges in relation to poverty, low quality jobs in the informal sector, digital divide and leadership gaps.

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 2, the selected European University of Technology (EUT) will work on sustainable agriculture from a technological point of view.

Capacity Building for Higher Education (CBHE) project [Enhancing Food Safety in the Mediterranean](#) (FoSAMED) (€0.9 million)

The [FoSaMed project](#) brings together Moroccan HEIs promoting inclusive education through curriculum development and teacher education on Food Safety. It aims to train teachers within the framework of a new Master on Food Safety, to enable students to develop and upgrade their knowledge and technical skills on food safety issues. This will allow them to acquire new methodological and technical abilities to face the upcoming challenges in the Food Industry sector. The project foresees training of teachers in four Moroccan HEIs, which will have upgraded food safety labs for hands-on training of teachers and students.

SDG 3 Ensure healthy lives and promote well-being for all at all ages

Through its education, training and sport activities, Erasmus+ promotes healthy habits and well-being, particularly among youth, hence contributing to SDG 3. The HealthyLifestyle4All, a follow-up to the Tartu Call for a Healthy Lifestyle, is a 2-years' campaign that aims to link sport and active lifestyles with health, food and other policies. Launched by Commissioner Gabriel at the Opening of the 2021 European Week of Sport the HealthyLifeStyle4All showcases the Commission's commitment to promoting healthy lifestyles for all, across generations and social groups, noting that everyone can benefit from activities that improve health and well-being.

The initiative is shaped around three pillars:

- increased awareness for healthy lifestyles across all generations;
 - easier access to sport and physical activities, with special focus on inclusion and non-discrimination to reach disadvantaged groups;
 - teaming up for a holistic approach to food, health, well-being and sport.
- The initiative is open to all organisations interested in contributing to a healthy lifestyle, including the sport movement, civil society, national, local and regional authorities and international bodies.
 - A Pledge Board, unveiled at the time of launch of the initiative on 23 September 2021 collects the pledges of Member States, international organisations and civil society,

The HealthyLifeStyle4All promotes the intergenerational dimension of sport and contribute among other to the Gender Equality Strategy, the Health Union and the "EU beating Cancer" initiatives.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 3, the European University Alliance for Global Health (EUGLOH) will have a special focus on global health.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Much like the Sustainable Development Goal 4, the strategic framework for European cooperation in education and training towards the European Education Area and beyond (2021-2030) is designed to support Member States in ensuring inclusive and equitable quality education and in promoting life-long learning opportunities for all. The European Education Area priorities, reflected in the EU-level targets, have a direct influence on the Erasmus+ programme. Erasmus + provides funding to support initiatives such as social inclusion through education and training, promoting inclusive practices in early childhood education and care, addressing early school-leaving and low achievement in reading, mathematics, science and digital competences; fostering employability of graduates and adult participation in learning, and enhancing democratic citizenship, social, civic and intercultural competences and common EU values.

On the international scene, the EU has an active policy supporting cooperation in education and training with third countries by promoting peer-to-peer learning and comparing education systems worldwide. In particular, the EU's Erasmus+ mobility and inter-university cooperation programme is an invaluable instrument for establishing lasting academic and cultural ties, also promoting the EU in partner countries. Overall Erasmus+ funding for third countries will support around 200 000 mobility exchanges of university students and staff, 1 000 capacity building in higher education projects and around 27 000 scholarships and teaching staff

within Erasmus Mundus Joint Master Degrees, primarily for partner countries across the world. Support is also provided to higher education in Africa through the Joint Africa-EU Strategy.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 4, the EUNICE - European University for Customised Education will have a special focus on customised education and life-long learning for part-time and non-traditional students.

[Supporting Social and Emotional Competences of Pre-School Children from Disadvantaged or Culturally Different Environments](#). Pre-school and kindergarten classrooms are among the earliest social environments that a child encounters outside the family. For young children with different cultural backgrounds and social disadvantages, this transition can be a challenging one. Five partner organisations from four European countries have teamed up to develop and implement innovative methodology of inclusive pre-school education to support children with special needs, especially those coming from socially disadvantaged or culturally different environments.

[New didactical models for initial VET training of young disadvantaged persons to reduce drop out](#). The NEW-D project set out to develop an innovative didactical model to be used in the VET training of disadvantaged young learners (the final beneficiaries of the project) - in order to keep them in or, even, to bring them back into initial VET.

[Teacher's training to the inclusion of the children of foreigners](#). The aim to exchange inspiring experience for professionals of partner organisations, and create a common, practical, freely available tool for teachers/workers who have to adapt their teaching practice to include children of foreigners.

The Education for Climate Coalition is a bottom-up, co-created initiative aiming to engage the education community at EU, national and local level and will be a key instrument for effectively capturing and sharing initiatives and projects of the educational community in support of the transition to climate neutrality, particularly in relation to green skills development and change in behaviour. By this, the Coalition supports SDG 4.7 (Education for sustainable development and global citizenship) as it enables and empowers young people to cooperate on sustainability-related projects in the field of education and training. SDG 4.7 is further supported by the [proposal for a Council Recommendation on learning for environmental sustainability](#) which aims to support Member States, schools, higher education institutions, non-governmental organisations and all education providers in equipping learners with understanding and skills on sustainability, climate change and the environment.

SDG 5 Achieve gender equality and empower all women and girls

The Erasmus+ Programme aims at removing social obstacles for participation in it for people facing discrimination because of gender, among other reasons. Strategic partnerships in the field of Youth give priority to projects that promote the empowerment of all young people, with a special focus on access to rights, autonomy and participation. The promotion of gender equality and equal opportunities is a specific objective in the field of sport.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 5, the European Space University of Earth and Humanity (UNIVERSEH European University) will focus its activities inter alia on gender equality in the space sector.

[WEMag](#) aims to help reduce the obstacles to entrepreneurship for young educated women in Tunisia and Morocco by providing them with entrepreneurial knowledge, experience and access to networks for business purposes.

The [Giritech project](#) set itself the goal of supporting the participation of women in the field of Science, Technology, Engineering and Mathematics (STEM). The project focuses on peer learning activities, getting inspired by strategies from other countries and finding out which approaches from the partner countries might be suitable for others.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 6, INnoVations of REgional Sustainability: European University Alliance (Invest European University) will focus its activities sustainable regional development, inter alia on water, energy, food and environment nexus.

CBHE project [Inow Asia: Development of innovative multilevel formation programs for the new water leading professionals in South East Asia](#) (€0.9 million).

[Inow Asia](#) will transfer to participating EU HEIs the knowledge and experience available about the implementation of innovative master programmes on water resources management. The main idea is to jointly design an innovative training programme based on modular and flexible water resources combining the on-line and problem-based methodology to complement some of the existing postgraduate programs, and also to co-design and implement water-oriented living labs in the campus of each PC HEI.

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 7, Ulysseus, an open to the world, persons-centred and entrepreneurial European University for the citizenship of the future will focus its activities inter alia on energy, transport, mobility and smart cities.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

All actions of the Erasmus+ Programme contribute to increase the employability of the young people that participate in it, as shown by several studies. This is achieved through a combination of several outcomes, e.g. the acquisition of new skills, increased autonomy, increased knowledge of foreign languages, etc. The emphasis on inclusion aims to ensure that all can reap these benefits irrespective of disadvantage.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 8, the European University of Post-Industrial Cities (UNIC European University) will focus its activities inter alia on post-industrial challenges and diversity, taking into account also the needs of socio-economical disadvantaged areas.

CBHE project [University Student Capacity Building: Towards Readiness for Sustainable Development-Oriented Regional Job Market](#) (€1 million)

The aim of the project is to develop a generation of globally-exposed higher education graduates, equipped with essential character, social and cognitive skills blended with academic competencies, with a higher degree of readiness for the fast-evolving community and job market, and who are capable to integrate effectively in multi-cultural, diverse eco-system.

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

CBHE project [strENGtHening skills and training expertise for TunisiAN and MorroCan transition to industry 4.0 Era](#) (€0.8 million)

This project focuses particularly on Production, Maintenance and Quality engineering processes, which represent key industrial business processes that need attention, investment and improvement. The overall objective is to contribute to strengthening the skills and training expertise of both Tunisian and Moroccan universities in the three targeted topics for inciting and assisting the Partner Countries (PC) transition to industry 4.0 era.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 9, the European Engineering Learning Innovation and Science Alliance (EELISA European University) will focus its activities inter alia on sustainable and smart industry.

SDG 10 Reduce inequality within and among countries

In general, the Erasmus+ Programme aims at promoting equity and inclusion by facilitating access to it to participants with disadvantaged backgrounds and fewer opportunities compared to their peers. More specifically in the field of Youth, an Inclusion and Diversity Strategy has been designed as a common framework to support the participation and inclusion of young people with fewer opportunities.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 10, the European Digital UniverCity (EDUC European University) will focus its activities inter alia on justice, inequality and inclusion.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 11, the European Consortium of Innovative Universities (ECIU European University) will focus its activities specifically around SDG 11 on sustainable cities and communities.

CBHE project [Urban Resilience and Adaptation for India and Mongolia: curricula, capacity, ICT and stakeholder collaboration to support green & blue infrastructure and nature-based solutions](#) (€1 million)

The project aims to promote green and blue infrastructure and nature-based solutions (GBI&NBS) for resilient, climate-friendly and liveable cities in Indian and Mongolia through ICT-enhanced tertiary education linked to labour markets and wider stakeholder circles.

SDG 12 Ensure sustainable consumption and production patterns

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 12, The European University Alliance on Responsible Consumption and Production (Eureca-Pro) will focus its activities on responsible consumption and production.

CBHE project [Development of Higher Education Content Aimed to Support Industries for Sustainable Production of Qualitative Agri-food](#) (€0.9 million)

The project aims to modernise HE content for promotion of development of such national agro-food production systems, where farm-enterprises will apply internationally recognised good agricultural practices and sustainable agro-business management principles and approaches, thus increasing agro-food production industry effectiveness and competitiveness.

SDG 13 Take urgent action to combat climate change and its impacts

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 13, the ENLIGHT European University will inter alia focus its activities on the impact of climate change on regional ecosystems. ENLIGHT will use its local environments (cities and regions) across Europe as living laboratories for lifelong learning and research in this area.

CBHE project [New Courses in Geospatial Engineering for Climate Change Adaptation of Coastal Ecosystems](#) (€0.8 million)

The youth mobility project 'Green Light' aims to raise awareness among young people on waste and to foster reflection about their shopping habit and focuses on environmental pollution, more specifically on the household waste recycling. The program draws attention to the importance of environmentally conscious lifestyle. The purpose is to show young people that a conscious consumption and creative waste management is easy to implement in daily habits.

The project activities will deliver the following main results: developed and accredited innovative regional joint interdisciplinary MSc program (120 ECTS, 2-year duration) in the field of Maritime Environmental Protection and Management (MEP&M) in English language at Partner countries (PC) HEIs; enhanced human capacities in the field of MEP&M and e-learning methodology through tailored trainings at PC HEIs; enhanced technical capacities of PC HEIs through installed new e-learning platform; increased networking among PC HEIs, governmental institutions, Blue economy sector companies and NGOs in order to act regionally to prevent and cope with consequences of global climate change and local/regional marine pollution.

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 14, the European University for Smart Urban Coastal Sustainability (EU-CONEXUS) will focus its activities on blue Growth, bio-economy, environmental protection, sustainable tourism, Coastal civil engineering, Sustainable aquaculture and Marine biotechnology.

CBHE project [Building a Comprehensive Mechanism for Preserving Marine Ecosystems and Life from the negative consequences of Climate Change and the disposal of Plastic Debris](#) (€0.9 million)

The project involves the development of a comprehensive mechanism combining capacity building and institutional development for marine ecosystem monitoring, capitalizing on the relevant expertise and know-how from EU higher education institutions and organisations.

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 15, the 4EU+ European University will focus its activities inter alia on biodiversity and sustainable development.

CBHE project [Developing Curricula for biodiversity monitoring and conservation in Tanzania](#) (€0.8 m)

The project aims at building a network of HEIs and natural science museums in the EU and the three major Partner Country HEIs to implement state-of-the-art HE training so to boost capacity and curricula in biodiversity science, hence improving the country's HE offer.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

One of the aims as regards students, trainees, apprentices, young people and volunteers participating in any of the mobility activities supported under Erasmus+ is a more active participation in society.

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 16, the European University in Social Science (CIVICA) will focus its activities inter alia on challenges to democracy in the 21st century.

CBHE project [The Academic Alliance for Reconciliation in the Field of Higher Education in Peace, Conflict Transformation, and Reconciliation Studies in the Middle East and North Africa](#) (€0.7 million)

The project aims at building capacity in the field of Higher Education (HE) in Peace, Reconciliation and Conflict Transformation Studies in the Middle East and North Africa (MENA) region.

SDG 17 Strengthen the means of implementation and revitalize the global partnership

European Universities selected under Erasmus+ are ambitious transnational alliances of higher education institutions developing long-term structural and strategic cooperation. For example, in relation to SDG 17, the Young Universities for the Future of Europe (YUFE) will focus its activities inter alia on European identity and responsibilities in a global world.

1. Overview

1.1. Challenges

The European Union is built on solidarity, a shared value that is strongly felt throughout our European society. Solidarity is a fundamental pillar of the European integration project, providing a clear compass to guide Europe's citizens, and especially the young ones, in their aspirations for a better EU.

Community needs can be addressed by involving younger generations in solidarity activities. Many young people wish to engage in such activities and organisations are looking for motivated youngsters to help their efforts. With the right support, these organisations could offer even more to communities.

The European Solidarity Corps was initially launched in 2018, building on the experience acquired with the European Voluntary Service (included in Erasmus+). The ex-ante¹ evaluation preparing the initial launch already identified some challenges.

One of the main challenges the programme has faced is **visibility**. Therefore, improving the promotion and communication to access a more targeted audience was one of the opportunities for the current programming period.

During the **transitional** phase there has been confusion among potential participants on the role of the European Solidarity Corps, especially in relation to the underlying programmes which were part of first phase, as well as the differences with regards to the European Voluntary Service (**EVS**), under Erasmus+ or other existing programmes (such as **EU Aid Volunteers**).

Overlaps with National frameworks, initiatives and schemes, such as civic service programmes or privately run initiatives have been a further challenge in terms of communicating the added benefit of the European Solidarity Corps.

Improved and simpler procedures is a factor to be addressed in the new programme, including improved access to e-forms and simplifying them to increase the submission of project proposals by organisations.

1.2. Mission (General objectives)

Against this background, the European Solidarity Corps engages young people and organisations, bringing them together to build a more inclusive society, supporting vulnerable people and responding to societal and humanitarian challenges. It offers an inspiring and empowering experience for young people who want to help, learn and develop themselves while at the same time providing a single entry point for solidarity activities across the EU and beyond.

The general objective of the programme is to enhance the engagement of young people and organisations in accessible and high-quality solidarity activities, primarily volunteering, as a means to strengthen cohesion, solidarity, democracy, European identity and active citizenship in the Union and beyond. It will address societal and humanitarian challenges on the ground, with a particular focus on the promotion of sustainable development, social inclusion and equal opportunities.

The European Solidarity Corps offers opportunities, which further energise solidarity between Europeans and mobilise young Europeans to support their local communities, bringing relief to one another during isolation or confinement, including helping older generations gain digital skills to stay connected and offering care for those hardest hit by the crisis. Overall, it enhances the European, cross-border dimension of solidarity, complementing existing national and regional public and private policies, programmes and activities without creating competition or substitution effects.

Actions to tackle socio-economic problem areas are primarily the responsibility of the Member States and regions and must be taken closest to the citizens at national and sub-national levels. The European Solidarity Corps addresses the role the EU has to play in identifying shared challenges, stimulating cooperation and transnational mobility, encouraging synergies, and promoting the sharing of good practices and mutual learning in addition to supporting a Europe-wide approach to social innovation, where there is clear value added for European solutions.

1.3. Specific objectives

The European Solidarity Corps has the following specific objectives:

1. Provide young people, including those with fewer opportunities, with easily accessible opportunities for engagement in solidarity activities in the Union and beyond.
2. Improve and properly validate their competences as well as facilitate their continuous engagement as active citizens.
3. Encourage cooperation on environmental challenges in all sectors, while gradually striving for carbon-neutrality by promoting and facilitating the use of low-carbon means transport modes (in particular by rail) - without imposing them, however.
4. Foster digital literacy and education while developing an understanding of the risks and opportunities of digital technology.

¹ <https://eur-lex.europa.eu/legal-content/EN/TXT/HTML/?uri=CELEX:52018SC0317&from=EN>

1.4. Public intervention context

Pursuant to Article 6 of the Treaty on the Functioning of the European Union (TFEU), the EU has the competence to carry out actions to support, coordinate or supplement the actions of the Member States in the field of education, vocational training, youth and sport. As laid down in Article 4(4) of the TFEU, the EU furthermore has the competence to carry out activities and conduct a common policy, in the areas of development cooperation and humanitarian aid.

The exercise of that competence shall not result in Member States being prevented from exercising their competences.

The European Parliament and the Council, in accordance with the ordinary legislative procedure, shall establish the measures defining the framework within which the EU's humanitarian aid operations are to be implemented. The EU may conclude with third countries and competent international organisations any agreement helping to achieve the objectives referred to in Article 214(1) of the TFEU and in Article 21 of the TEU, without preventing Member States from negotiating in international bodies and concluding agreements.

Regarding the European Voluntary Humanitarian Aid Corps, the European Parliament and the Council, acting by means of regulations in accordance with the ordinary legislative procedure, have determined the rules and procedures for the operation of the Corps.

1.5. Actions

In order to achieve its objectives, the European Solidarity Corps implements its Actions structured into two strands:

1) Participation of young people in solidarity activities:

- Volunteering;
- Solidarity Projects.

2) Participation of young people in humanitarian aid related solidarity activities ('Volunteering under the European Voluntary Humanitarian Aid Corps'):

- Humanitarian Aid Volunteering projects.

Additionally, the European Solidarity Corps supports a series of activities and measures aiming at providing high-quality solidarity activities:

- Networking activities;
- Quality and Support measures.

1.6. Delivery mode

The European Solidarity Corps is implemented under the leadership of the European Commission's Directorate-General for Education and Culture (DG EAC), which bears the overall responsibility for the supervision and coordination.

Activities are rolled out through direct management by DG EAC and the Education, Audio-visual and Culture Executive Agency, as well as through indirect management with the support of a network of National Agencies, which brings the programme closer to its target audience, adapts to the diversity of national education systems, and offers the possibility to align with national priorities.

1.9. Link with the 2014-2020 MFF

The European Solidarity Corps builds on the achievements of more than 25 years of European programmes in the field of youth and solidarity, especially on the success of the European Voluntary Service implemented under the Erasmus+ Programme from 2014 to 2018, on the EU Aid Volunteers initiative and on the previous European Solidarity Corps running from 2018 to 2020.

1.10. Relevant websites providing more information

European Youth Portal (https://europa.eu/youth/home_en)

The website provides information on the opportunities offered by the European Solidarity Corps for both organisations and young people, project examples and testimonies as well as the necessary information and links to apply for funding.

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	136.0	1 023.0	13%
Payments	75.4		7%

2021

The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

The first year of implementation of the European Solidarity Corps programme has been indeed exceptionally challenging in terms of budget management. The late adoption of the programme Regulation has pushed forward the start of the activities (calls, selection, contracts, payments) to the second part of the year, affecting the budget management in 2021 and shifting some payments initially planned in 2021 to 2022.

As a result, a very close monitoring approach, namely towards National Agencies, allowed to promptly return the unnecessary payment appropriations detected in the revision of forecasts and ensured to fully use the remaining available payment appropriations in EU budget at year end. Moreover, this exceptional situation had no influence on the funding absorption capacity of the European Solidarity Corps programme, for which all the commitments appropriations of the 2021 EU voted budget have been implemented. In 2021, about 55% of the budget committed (€136 million) has already been paid (€75,4 million).

2022

The total programmed adopted EU budget for ESC in 2022 represents an amount of €141,4 million, 4,2% increase compared to 2021.

In 2022's programming, indirect management (through National Agencies) will represent around 82% of the operational budget. As regards direct management, EACEA will implement around 15%, leaving 3% to be implemented centrally by the Commission.

The 2022 payment appropriations will be used to cover the payments on the 2022 commitments, as well as the payments on ongoing projects from 2021, including some payments initially planned in 2021 and shifted to 2022 for the reasons exposed above.

2023

The total EU budget requested for 2023 amounts to € 3.548 billion, complemented by a further amount of € 366,8 million for the external instruments' contribution to the programme, both fully aligned with the financial programming (2021-2027)

In 2023's initial estimated programming (excluding the external dimension), indirect management (mainly through National Agencies) will represent around 74% of the operational budget. As regards direct management, EACEA will implement around 25%, leaving 1% to be implemented centrally by the Commission.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

European Solidarity Corps

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	352.0	352.2	100%
Payments	276.0		78%

EU Aid Volunteers

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	89.2	89.5	100%
Payments	65.7		73%

European Solidarity Corps

The European Solidarity Corps programme started in 2018 for a period of 3 years (2018-2020).

During the period 2018-2020 the total EU budget amounted to €352 197 999 and was implemented at nearly 100% (€351 955 306). During the same period, the total payments amounted to €276 027 952, reaching about 78% of the total envelope.

The late adoption of the Regulation only in October 2018 delayed the effective start of the programme and consequently the launch of the 2018 and 2019 calls for proposals. This slow take-off impacted the implementation of the programme spread over more years than initially planned and the related payment consumption. Moreover, the COVID pandemic started in 2020 affected the solidarity activities the last year of the previous programming period. DG EAC granted extensions of the duration for on-going projects which had also a slight technical effect of reducing payments scheduled in 2021, moving them to 2022 and 2023. In some limited cases, the non-receipt of interim reports in time led to a reduced volume of payment appropriations consumed in 2021.

The payments appropriation in 2022 and 2023 will serve to support mainly last payments requests from National Agencies and final payments of projects and actions implemented by EACEA.

EU Aid Volunteers

The EU Aid Volunteers Initiative (EUAV) was managed by DG ECHO until the end of the MFF. During the period 2014-2020 the total EU budget was implemented at nearly 100% (€ 89 243 823) in terms of commitments and at about 73% (€ 65 661 635) in terms of payments

The COVID pandemic started in 2020 affected the Humanitarian Volunteering activities in the last year of the previous programming period: A call for proposals was cancelled and extensions of the duration for on-going projects were granted to beneficiaries reducing payments scheduled in 2021. The payments appropriation in 2022 and 2023 will serve to support final payments of projects and actions implemented by EACEA.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The European Union is built on solidarity, a shared value which is strongly felt throughout European society. Solidarity defines the European project and not only guides the European youth in their aspirations for a better Union but also provides the necessary unity to cope with current and future crises by holding a strong moral ground.

The European Solidarity Corps brings together young people to build a more inclusive society, supporting vulnerable people and responding to societal and humanitarian challenges. It offers an inspiring and empowering experience for young people who want to help, learn and develop and provides a single entry point for such solidarity activities throughout the Union and beyond.

The 2018-2020 European Solidarity Corps was created to merge several EU volunteering and solidarity traineeships/jobs schemes into one programme. The proposal for a Regulation was accompanied by an ex-ante evaluation, which demonstrated the need for a single EU programme acting as a "one-stop shop" for all solidarity related opportunities for young people. Thus, the European Solidarity Corps offers opportunities to further energise solidarity between Europeans and mobilise young Europeans to support their local communities, bringing relief to one another during isolation or confinement, including helping older generations gain digital skills to stay connected and offering care for those hardest hit by the crisis.

By extending its scope to cover volunteering activities in support of humanitarian aid operations, the European Solidarity Corps provides needs-based emergency aid and helps to deliver assistance, relief and protection where most needed. It thus helps addressing not only unmet societal needs in Europe but also humanitarian challenges in third countries.

The extended European Solidarity Corps also addresses current trends and new challenges that are of special interest to the post-2020 Multiannual Financial Framework. It directly contributes to reducing social divergences, as the projects contribute to address certain societal needs, while also providing an opportunity for young people to develop their skills, which will increase their employment prospects.

In particular, skills and competences development is at the core of the specific objective of the programme which is thus fully aligned with the way forward proposed in the Reflection Paper on the Social Dimension of Europe.

The activities of the European Solidarity Corps support the objectives of the EU Youth Strategy for 2019-2027², which encourages young people to become active citizens, agents of solidarity and positive change for communities across Europe, inspired by EU values and a European identity.

A Commission implementing decision adopted in October 2021 outlines general measures to be implemented over the 7-year period for the European Solidarity Corps³. A strategy for inclusion and diversity⁴ covering all fields of the programmes has been devised to increase the qualitative impact of the programme and to ensure equal opportunities by reaching out to people with fewer opportunities. Small-scale Partnerships is a new action designed to widen access to the programme to small-scale actors and individuals who are hard to reach. With lower grant amounts awarded to organisations, shorter duration and simpler administrative requirements compared to the Cooperation Partnerships, this action seeks to reach out to grassroots organisations, less experienced organisations and newcomers to the Programme, reducing entry barriers to the programme for organisations with smaller organisational capacity.

3.1.2. Active programme performance

The European Solidarity Corps 2021-2027 consolidates efforts to have one single entry point for young people ready to engage in solidarity. It brings together young people to build a more inclusive society, supporting vulnerable people and responding to societal and humanitarian challenges through the following actions:

Volunteering under the ‘participation of young people in solidarity activities’ strand, carried out through individual volunteering activities or activities by volunteering teams

- Individual volunteering activities are carried out as voluntary unpaid activities for a period of up to 12 months. This provides young people with the opportunity to contribute to the daily work of organisations in solidarity-related activities to benefit the communities within which the activities are carried out, either in a country other than the country of residence of the participant (cross-border) or in the country of residence of the participant (in-country)
- Activities by volunteering teams are designed to allow participants in the Corps carry out solidarity-related activities together (i.e. in teams) for a period of between 2 weeks and 2 months. Such activities contribute especially to the inclusion of young people with fewer opportunities in the Corps.

Solidarity projects, further fostering the inclusiveness of the Corps and empower young people to address unmet societal challenges. They consist of bottom-up, solidarity-related activities, for a period of up to 12 months, and are set up and carried out by groups of at least five Corps participants, addressing key challenges in their communities while presenting a clear European added value.

The late adoption of the programme’s legal base delayed the publication of the 2021 call and consequently the selection of the related proposals. As a result, projects were awarded and contracted later than in a usual year. At the time of the publication of this document, it is too early to report on the performance of the programme so far.

Building on the past experience, the programme implementation scheme is evolving to become more efficient and address issues noticed in the previous MFF (see challenges section page 1).

- For the Corps’ 2021 Annual Work Programme, a specific priority was added on ‘Prevention, promotion and support in the field of health’ to mobilise volunteers in addressing the impact of the pandemic and recovery.
- “European Youth Together” 2022, the 2022 call under the European Solidarity Corps,
- The main novelty is the launch of the European Voluntary Humanitarian Aid Corps, a new centralised action which will allow the deployment of young volunteers in third countries. Following intense preparatory work included in the 2021 Annual Work Programme, the 2022 work programme includes the first call for proposals enabling organisations to request funding for their projects in the area of humanitarian aid.

³ <https://erasmus-plus.ec.europa.eu/document/commission-decision-framework-inclusion-2021-27>

⁴ https://ec.europa.eu/programmes/erasmus-plus/resources/implementation-guidelines-erasmus-and-european-solidarity-corps-inclusion-and-diversity_en

Digital

- Digital transformation is one of the transversal priorities of the European Solidarity Corps programme, pursued in its general 2021 and 2022 calls for proposals. The Corps supports projects and activities that help improve digital skills, foster digital literacy and develop an understanding of the risks and opportunities of digital technology.

3.1.3. Previous Programme Performance

European Solidarity Corps

The European Solidarity Corps builds on the achievements of the European Voluntary Service and on the first phase of the European Solidarity Corps, launched in December 2016, whereby different Union programmes have been mobilised to offer volunteering, traineeship or job activities to young people across the EU.

In 2018, the first European Solidarity Corps Regulation⁵ created a new, coherent framework for solidarity-related activities, with a dedicated budget of €375.6 million for 2018-2020. It offered new formats and tools, with a sustained commitment to quality, in order to reach out to more young people and provide them with a valuable experience.

The European Solidarity Corps proved particularly successful in providing opportunities to address horizontal priorities such as inclusion (with more than 30% of participants with fewer opportunities) or climate change (13% of projects supported under the European Solidarity Corps address climate action, environment and nature protection).

It offered support for projects revolving around a range of solidarity (in the form of individual or team volunteering, traineeships, jobs and solidarity projects) involving young people between 18 and 30 years of age.

Traineeships and Jobs represented the biggest novelty under the European Solidarity Corps. While specific efforts were dedicated to promotion, ensuring understanding of the opportunities, reaching out to the relevant stakeholders and training the potential applicants, the Action was faced with challenges and did not take up as expected. In this regard, the number of projects and participants funded were lower than forecasted.

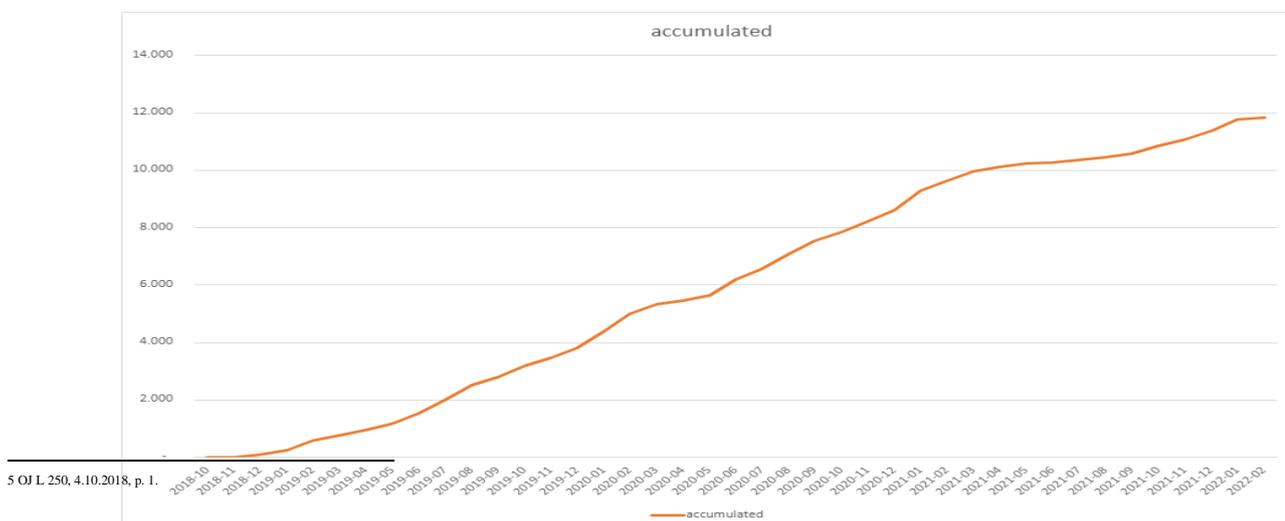

The performance targets had been designed with the expectation of a full three years of implementation over the period 2018-2020.

The short programme period (end of 2018-2020) impacted on the possibilities for successful outreach to an entirely new category of stakeholders (potential participating organisations) and the Traineeships & Job strand did not manage to carve out a niche in the relatively vast range of national or EU tools aimed at improving the employment prospects of young people. The employer/host organisations were required to pay salaries/remuneration of trainees and the Programme only supported certain associated costs, e.g. mentoring, relocation costs etc., also to minimise the risk of job substitution.

Despite the difficulties the programme has faced, including the late adoption of the legal base in October 2018 and the impact of the COVID-19 pandemic in 2020, the projects continued to be contracted at a steady rate throughout 2019 and 2020, showing a continuous increase highlighting that interest from organisations remains stable. The implementation of the 2018-2020 programme continued into 2021 due to the design and duration of the actions, the timing of the publication of the 2020 call, and the effects of the pandemic, which resulted in a delayed start of activities.

Since December 2021, over 400 projects are still active and they will extend into 2022.

Cumulative number of projects contracted per month

⁵ OJ L 250, 4.10.2018, p. 1.

In terms of participation rates, the number of young people in volunteering projects continued to raise. Since 2021, the total number of participants in the calls 2018 – 2020 exceeded 12 000. During the COVID-19 pandemic in 2021 alone, over 3 000 volunteering participants took part in the programme activities despite restrictions, showing the programme resilience, adaptability, and capacity to contribute to a stronger and more cohesive Union. The European Solidarity Corps continued to provide relief where possible through, for example, volunteers giving elderly people a hand with food and medical shopping or fighting loneliness.

Still, some activities had to be suspended or cancelled and the duration of projects extended to enable those young people who were prevented from taking part due to the crisis to have another opportunity to do so. This also implies that a number of deployments funded by the 2020 call took place later than initially foreseen.

The success of the Corps in terms of the uptake by young people is also a testimony of its significance as by the end of 2020, nearly 280 000 youngsters from across the EU had registered for participation in the Corps. Based on the positive reception of the initiative by young people and other stakeholders in the solidarity sector, the European Commission proposed an extension of the Corps to the programming period 2021-27.

EU Aid Volunteers Initiative

The EU Aid Volunteers Initiative (EUAV) was managed by DG ECHO until the end of the previous MFF.

After the launch of the initiative, the uptake of this new programme was below expectations. For the period 2014-2020, the EUAV Initiative was allocated €141 million to finance the training of an initial target of 4 400 volunteers and the deployment of 4 000 volunteers, the provision of technical assistance and capacity building to participating organisations, and the implementation of communication and other support activities. By end of 2020, only 1 173 deployments were financed amounting to 29% of the initial target and 788 deployments have taken place, 1 065 volunteers completed the EU Aid Volunteers training (20% of the target).

The EU Aid Volunteers initiative introduced a thorough certification mechanism that requires sending and hosting organisations to prove that they have procedures and policies in place to achieve the high volunteering standards of the programme. The certification mechanism had not existed during the pilot phase. Consequently, challenging targets were set in terms of certified organisations, volunteers trained and deployed, which did not materialise in satisfactory results.

In the report on the Interim Evaluation (COM(2018) 496), the Commission acknowledged the need to improve consistency of the approach to volunteering in third countries with other EU volunteering schemes. Coherence and synergies with the European Voluntary Service and the European Solidarity Corps were to be sought, resulting in the creation of a **new humanitarian aid strand** in the new European Solidarity Corps (MFF 2021-2027) replacing the EU Aid Volunteers Initiative.

Compared to its predecessor EU Aid Volunteers Initiative, corrective measures were put in place for in the new humanitarian aid strand to improve the low take-up of EUAV. Concerning training in particular, a new and much more effective training cycle was devised. A deeper integration with the features of other ESC strands was ensured. The deadline for the 2022 humanitarian aid applications is in May and it’s therefore not yet possible to provide any assessment at this stage, the corrective measures put in place are expected to gradually ensure a significantly higher take-up compared to EUAV.

3.2. Key achievements

European Solidarity Corps⁶

456 275	55 901	41%	90%
Young people expressed interest in joining by registering with the Corps 2018-2020 European Solidarity Corps programme	Opportunities for young people were created under European Solidarity Corps since October 2018 to date	Of participants involved in the 2018-2020 European Solidarity programme are young people with fewer opportunities	Of participants who finalised their activity declared being satisfied with their experience

⁶ Given the short timeframe of the programme, achievements presented refer to its entire duration (2018-2020)

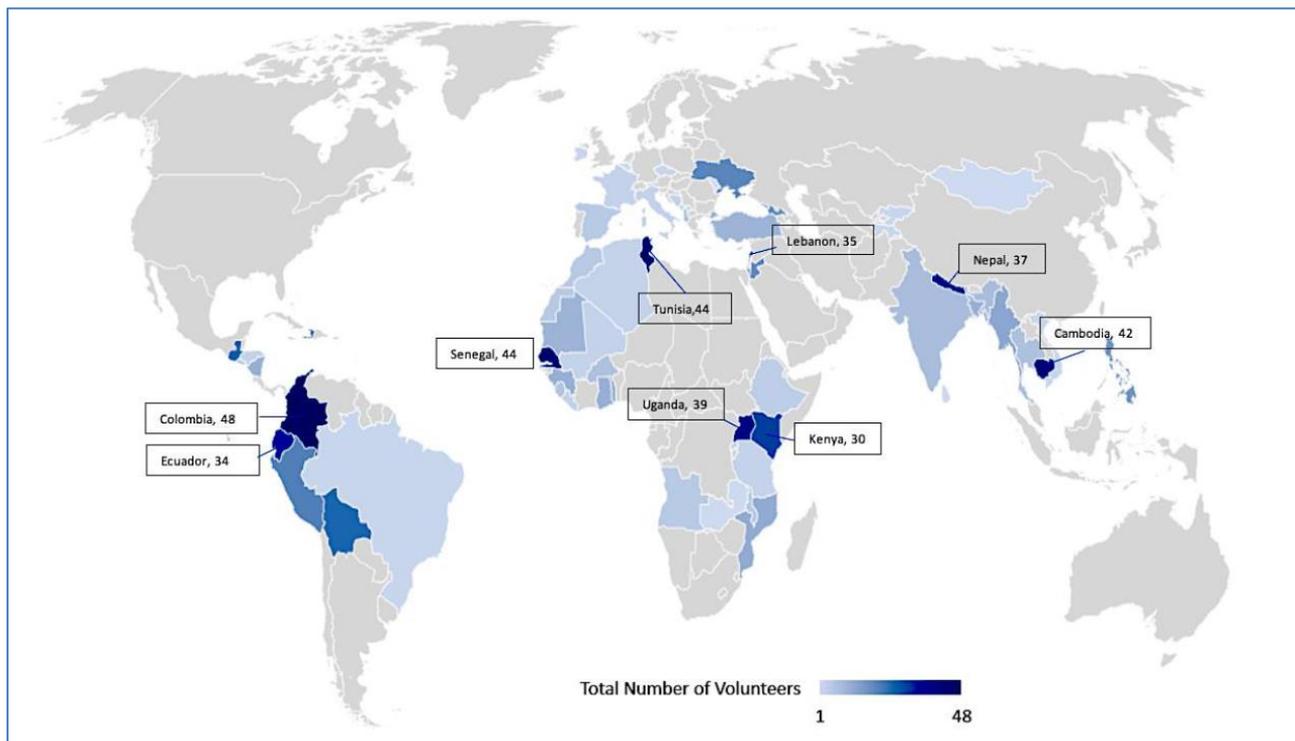

EU Aid Volunteers Initiative

1 173	200	32	72%
Deployments financed under 2014-20 EU Aid Volunteers programme throughout the overall period.	Organisations certified since 2017	Countries of origin of EU Aid Volunteers deployed (including third-country nationals who were long-term residents in the EU)	Percentage of women in the total number of EU Aid Volunteers deployed under the 2014-2020 programme

Until September 2020, 1 173 deployments have been financed and 788 have taken place, involving 705 volunteers (some of whom were deployed twice) and 1 065 volunteers have completed the EU Aid Volunteers training (24% of the target).

Overall, with regard to the certification of new sending and hosting organisations, the trend marginally increased with 63 organisations certified in 2017, 63 in 2018 and 74 in 2019.

Since the start of the initiative, the skills areas of volunteers most often requested for capacity building activities in third countries have been in communication (14%), disaster risk management (11%), project management (10%), finance and accounting (8%), monitoring and evaluation (6%), gender equality (6%), protection (5%), advocacy (5%) and community development (4%).

3.3. Evaluations, studies and reports

European Solidarity Corps 2014-2020

Since the European Solidarity Corps is largely based on the previous European Voluntary Service, which was implemented under Erasmus+, the Erasmus+ mid-term evaluation provides valuable insights. The main results highlight the effectiveness of Erasmus+ in developing skills and competences; its undisputable European added value; a high degree of coherence, in particular due to the pooling of programmes and the single brand name; and its efficiency and simplicity, underscoring the cost-effectiveness of mobility actions and the reduced management cost (less than half of similar national schemes). Further findings of the mid-term evaluation of the Erasmus+ Programme are available here:

https://ec.europa.eu/programmes/erasmus-plus/resources/documents/evaluations_en

An *ex ante* evaluation for the European Solidarity Corps 2021-2027 was carried out and examined challenges that may appear because of the expansion of the scope of activities and the geographical scope, as well as those identified in implementing the former European Solidarity Corps and the EU Aid Volunteers. The evaluation underlined the need for the EU to tackle a number of major challenges, challenges addressed under the new extended European Solidarity Corps. The evaluation is available here: <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=SWD%3A2018%3A318%3AFIN>

In accordance with Regulation, an interim evaluation of the European Solidarity Corps 2021-2027 should be carried out no later than 31 December 2024 and be accompanied by a final evaluation of the 2018-2020 European Solidarity Corps Programme. The interim evaluation of the Programme shall assess the overall effectiveness and performance of the Programme, as well as the delivery of the inclusion measures.

EU Aid Volunteers Initiative

An interim evaluation was carried out in 2017. The study prepared by an external contractor, as well the report and staff working document on the interim evaluation of the EU Aid Volunteers initiative for the period mid-2014 to mid-2017 adopted by the Commission are published on the following website: https://ec.europa.eu/echo/funding-evaluations/evaluations/thematic-evaluations_en. An ex-post evaluation of the initiative will be embedded into the interim evaluation of the European Solidarity Corps, with the same timing (completion by 31 December 2024).

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: To provide young people, including those with fewer opportunities, with easily accessible opportunities for engagement in solidarity activities in Europe and abroad while improving and properly validating their competences as well as facilitating their employability and transition into the labour market.

Indicator 1: Number of participants in solidarity activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Participants in volunteering solidarity activities										
2021	Milestones									2030
0	15 000	16 210	15 238	15 562	15 886	16 210	16 535			110 641
	Actual Progress									Final
Are we on track :	No data									
Participants in Solidarity Projects										
2021	Milestones									2027
0	9 000	9 726	9 143	9 337	9 532	9 726	9 921			66 385
	Actual Progress									Final
Are we on track :	No data									
Participants in humanitarian aid related solidarity activities										
2021	Milestones									2027
0	0	0	550	550	550	550	550			2 750
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number of Participants (yearly)
Cut-Off Date	
Data source	Project Management Module and e-Grants
Link to the objective	Reporting on this indicator will continue in the new Programme. Nevertheless, the Actions covered by the new Regulation (and thus scope of this indicator) are not fully aligned with the previous programme: Traineeships and Jobs have been discontinued and Volunteering in support of humanitarian aid activities were added.
Link MFF 14-20 / MFF 21-27	Reporting on this indicator will continue in the new Programme. Nevertheless, the Actions covered by the new Regulation (and thus scope of this indicator) are not fully aligned with the previous programme: Traineeships and Jobs have been discontinued and Volunteering in support of humanitarian aid activities were added.

Other methodological comments	Estimations are provided in April of Y+1. Numbers will be refined once all projects are closed (between 2 to 4 years after the project starts).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Figures refer to contracted projects and are below the target. Awarded projects show that the actual figures will be higher (at present, 9555 and 4488 respectively). The late publication of the calls (due to late adoption of legal base and publication of the Annual Work Programme) delayed the selection process. Activities under the humanitarian aid strand are starting in 2022 and first deployments will take place in 2023.

Indicator 2: Share of participants with fewer opportunities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	34%	30%	30%	30%	30%	30%	30%			30%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Percentage of Participants (yearly)
Cut-Off Date	
Data source	Project Management Module, Beneficiary module and e-Grants
Link to the objective	The European Solidarity Corps aims to provide young people, including those with fewer opportunities, with easily accessible opportunities for engagement in solidarity activities in the Union and beyond.
Link MFF 14-20 / MFF 21-27	Reporting on this indicator will continue in the new Programme. Nevertheless, the Actions covered by the new Regulation (and thus scope of this indicator) are not fully aligned with the previous programme: Traineeships and Jobs have been discontinued and Volunteering in support of humanitarian aid activities were added.
Other methodological comments	Estimations are provided in April of Y+1. Numbers will be refined once all projects are closed (between 2 to 4 years after the project starts).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 3: Number of organisations holding a Quality Label

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	3 000	3 000	3 000	3 000	3 000	3 000	3 000			21 000
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number of organisations (yearly)
Cut-Off Date	
Data source	Project Management Module and e-Grants
Link to the objective	The general objective of the Programme is to enhance the engagement of young people and organisations in accessible and high-quality solidarity activities, primarily volunteering, as a means to strengthen cohesion, solidarity, democracy, European identity and active citizenship in the Union and beyond, addressing societal and humanitarian challenges on the ground, with a particular focus on the promotion of sustainable development, social inclusion and equal opportunities.
Link MFF 14-20 / MFF 21-27	Reporting on this indicator will continue in the new Programme. Nevertheless, the Actions covered by the new Regulation (and thus scope of this indicator) are not fully aligned with the previous programme: Traineeships and Jobs have been discontinued and Volunteering in support of humanitarian aid activities were added.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 4: Number of participants who are young people with fewer opportunities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027

0	4 500	4 863	4 571	4 669	4 766	4 863	4 960			33 192
	Actual Progress									Final
Are we on track :	No data

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: EU Aid Volunteers initiative (EUAV)

General Objective 1: To contribute to strengthening the Union's capacity to provide needs-based humanitarian aid aimed at preserving life, preventing and alleviating human suffering and

maintaining human dignity and to strengthening the capacity and resilience of vulnerable or disaster-affected communities in third countries

Indicator 1: The number of people reached by humanitarian aid provided through the EU Aid Volunteers initiative and the average costs per person reached

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of people reached										
	Milestones									2020
	0	17 500	25 000	30 000	17 500	42 500	50 000			182 500
	Actual Progress									Final

Data source	
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The number of people reached by volunteers are based on the assumption that each volunteer reaches on average 50 persons (i.e. in 2015, 350 deployed volunteers would reach 50 persons each and therefore reach 17 500 people in total). The number indicated for the year 2018 – 8 104 persons - is the result of the first two deployment projects funded from the 2015 budget. These projects lasted 24 months and started to deploy volunteers from December 2015; the final reports from which the number 8 104 was retrieved were received end of 2018. The 2015 proposals foresaw the deployment of 44 volunteers (as indicated for the year 2015 in the programme statement). The actual deployment was in the end 55 volunteers (due to drop-outs and replacements). On average each of these volunteers reached about 147 persons (instead of 50 per volunteer as projected in the planning figures) and 8 104 in total.
Full metadata available at this address	
Justification of the trend	

Specific Objective 1: To contribute to increasing and improving the capacity of the Union to provide humanitarian aid.

Indicator 1: Number of EU Aid Volunteers deployed or ready for deployment with the required qualifications

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of EU Aid Volunteers trained ready for deployment with the required qualifications per year

Indicator type	Result
----------------	--------

Unit of measurement	Number of EU Aid Volunteers (yearly)
Cut-Off Date	31/12/2020
Data source	EACEA Project Database (Pegasus)
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Final figures have been captured. This indicator will no longer be reported.
Other methodological comments	The number of volunteers trained depends on the number of planned deployments as provided in the applications to the call for proposals. In 2017, six proposals were received proposing 175 deployments. As a result, 295 candidate volunteers were trained in 2018 for deployments and for the reserve list to cater for dropouts and cancellations. The call for proposals for deployment 2018 resulted in the funding of eleven projects (up from 6 in 2017) proposing the deployment of 368 volunteers. This figure is far below the MFF targets as explained in section II Implementation Update. However, this represents an increase of 110% compared to the previous year and sustains an upward trend. The average duration of a deployment was 9 months (most deployments were either 6 or 12 months deployments, average is 9 months).
Full metadata available at this address	Due to the outbreak of COVID-19 only one training cycle could be organised in 2020 and deployments were put on hold. The certification mechanisms did not exist during the pilot phase. Consequently, challenging targets were set in terms of certified organisations, volunteers trained and deployed
Justification of the trend	Due to the outbreak of COVID-19 only one training cycle could be organised in 2020 and deployments were put on hold. The certification mechanisms did not exist during the pilot phase. Consequently, challenging targets were set in terms of certified organisations, volunteers trained and deployed.

Indicator 2: Number of EU Aid Volunteers who have completed their contract of deployment

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020

Data source	EACEA Project Database (Pegasus)
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Final figures have been captured. This indicator will no longer be reported.
Other methodological comments	This indicator reflects the number of volunteers who stayed the whole duration of their contract and did not end their deployment earlier than planned. If volunteers drop out, organisations can fill the remaining volunteer months with reserve candidates. It is difficult to track in the course of a project which volunteers ended their contracts earlier, if other volunteers stayed longer in their placements instead or if reserve volunteers were recruited.
Full metadata available at this address	
Justification of the trend	The certification mechanisms did not exist during the pilot phase. Consequently, challenging targets were set in terms of certified organisations, volunteers trained and deployed.

Indicator 3: Number of hosting and sending organisations participating in the EU Aid Volunteers initiative per year.

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
	100		115	110	115	75	120			535

	88		41	179	73	58	0	0		
Are we on track :	Deserves attention**									

Indicator type	Output
Unit of measurement	Number of organisations (yearly)
Cut-Off Date	31/12/2020
Data source	EACEA Project Database (Pegasus)
Narrative	
Methodology	

Link MFF 14-20 / MFF 21-27	Final figures have been captured. This indicator will no longer be reported.
Other methodological comments	This indicator reflects the work done in capacity building / technical assistance provided to organisations, which increases the capacity of the sector to provide humanitarian aid. The figure does not include the organisations active deployment projects. The lower figure in 2018 is due to a lower number of projects funded than planned in order to enable more deployments of volunteers (planned 250; result 368). Budget was therefore moved from the capacity building/technical assistance strand to the deployment strand and fewer projects than planned were funded.
Full metadata available at this address	
Justification of the trend	This is an annual figure relating to organisations selected through the calls for proposals. In 2020 and 2021 no calls for proposals were awarded and no new organisations selected to participate. The certification mechanisms did not exist during the pilot phase. Consequently, challenging targets were set in terms of certified organisations, volunteers trained and deployed.

Specific Objective 2: Improvement of the skills, knowledge and competences of volunteers in the field of humanitarian aid and the terms and conditions of their engagement.

Indicator 1: The degree of satisfaction of the EU Aid Volunteers trained and deployed, of the sending and hosting organisations with regard to the quality of the training, level of knowledge and competences of volunteers, the fulfilment and adequacy of the standards and procedures for management of candidate and EU Aid Volunteers (overall satisfaction rate out of 100%)

Methodology	
Link MFF 14-20 / MFF 21-27	A similar indicator will be captured as part of the European Solidarity Corps 2021 - 2027 "Degree of satisfaction of volunteers deployed in the humanitarian aid field and of participating organisations with regard to the effective humanitarian contribution of the activities on the ground". For the purposes of EU Aid volunteers, final figures have been captured. This indicator will no longer be reported.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The certification mechanisms did not exist during the pilot phase. Consequently, challenging targets were set in terms of certified organisations, volunteers trained and deployed/No targets set in 2021 as this programme was absorbed into the European Solidarity Corps.

Previous Program 2: European Solidarity Corps (ESC)

Specific Objective 3: To ensure that particular efforts are made to promote social inclusion and equal opportunities, in particular for the participation of young people with fewer opportunities, through a range of special measures such as appropriate formats of solidarity activities and personalised support

Indicator 1: number of participating young people with fewer opportunities

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
					25%	25%	25%	34%		25%
	Actual Progress									Final
						32%	41%	57%		
Are we on track :	On track									

Indicator type	Result
----------------	--------

Unit of measurement	Number of Participants
Cut-Off Date	01/03/2021
Data source	Eplus Link and Mobility Tool
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Actual participants are considered for actions ESC11, ESC13, ESC21 and ESC31. Final figures will be updated once all projects are finalised. These are provisional figures as most of the projects funded in 2018 and 2019 are still ongoing (figures provided cover about 1% of granted projects and about 10% of granted participants). A meaningful comparison of results against milestones is, therefore, not yet possible.
Full metadata available at this address	
Justification of the trend	The Corps offers inclusive formats and support measures to reach out to young people with fewer opportunities. The milestone has been set based on a target percentage of 25% (9 275) of the forecasted participants. While the percentage of participants with fewer opportunities is much higher in 2020 (41% 7 494 participants) the actual number of participants is lower because of the underperformance in traineeships and jobs.

Specific Objective 4: To contribute to European cooperation relevant to young people and to raise awareness of its positive impact

Indicator 1: number of people supported directly or indirectly through solidarity activities

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
							150 000			150 000
	Actual Progress									Final
						5 419	646 200			
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Number of people impacted by the programme (cumulative)
Cut-Off Date	15/01/2021
Data source	Mobility Tool
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Considering the short duration of the European Solidarity Corps (end 2018-2020), targets for these indicators have been set over the entire programming period.
Full metadata available at this address	
Justification of the trend	The 2020 number covers projects closed in 2020 (including projects 2018 and 2019). In 2019, very few projects were closed due to the late start of the programme. The target was an estimate as the indicator also relies on beneficiaries' declarations (in final reports) in terms of indirectly supported.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	15.65	16.40	16.42	16.63	16.98	17.33	17.67	117.08	12%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

Europe's future will be built by young people. The European Solidarity Corps can make a meaningful contribution to the Commission's commitment to tackling climate and environmental-related challenges. To contribute to the European Green Deal, the Programme aims at integrating green practices into all projects and activities as well as promoting environmentally sustainable

and responsible behaviour among participants and participating organisations. Organisations and participants should thus have an environmental-friendly approach when designing and implementing their activities.

The Programme also supports projects and activities addressing the topic of environmental protection, sustainability and climate goals and aiming to protect, conserve and enhance natural capital. In this context, the Programme aims at raising awareness about environmental sustainability and enabling behavioural changes for individual preferences, consumption habits and lifestyles.

6.1.3. Key achievements

European Solidarity Corps 2018-2020

Since 2018, the European Solidarity Corps has supported more than 1 200 projects addressing climate action, environment and nature protection.

In the ‘Climate Awareness’ project in Sweden, volunteers help with organic food growing, restoring biodiversity and create edible landscapes in an ecovillage. They also run awareness raising activities.

‘Urban Ecology’ in Bulgaria focuses on raising awareness and offering sustainable models for environmental protection and a healthy lifestyle in Varna. Through the development of three different spaces, urban, rural and virtual, the project reaches out to the local community and make citizens aware of their own responsibility and contribution to the green footprint.

The solidarity project ‘Mare d’Inverno’ aims to recover a natural coastal area nearby the urban centres of Trani and Barletta in Italy. The project promotes environmental protection and works on placing pathways for cyclists and pedestrians, cleaning beaches and replanting native tree species.

EU Aid Volunteers Initiative

The project ‘Forests’ that started in 2019, foresees the deployment of 27 EU Aid Volunteer to support forest management in Congo, Ghana, Guinea and Vietnam. Volunteers will conduct mapping studies to assess the vulnerability of forest-dependent communities taking into account effects of climate change (increasing of natural disasters) and will organise seminars with local actors to plan together intervention strategies. The contribution of the programme in the 2014-2020 period has been of EUR 6.1 million.

6.1.4. Performance

European Solidarity Corps 2014-2020

Through the European Solidarity Corps, 18-30 year old young people can carry out volunteering activities, traineeships and jobs and run their own solidarity projects (small-scale initiatives run by young people themselves in their local community).

Climate action, environment and nature protection were increasingly popular Solidarity Corps topics representing 16% by the end of 2020 and showing an upward trend. Since 2018, €30,5 million were awarded to 1 200 projects addressing climate, environmental and nature protection involving 9 000 participants. The contribution of the "early ESC", i.e. the value of activities with a climate dimension in the European Voluntary Service under E+ in the years 2017-2018 – **EUR 27,8 million**.

Green dimension is a transversal priority of the European Solidarity Corps and strengthened efforts in this field are pursued in the general calls for proposals 2021 and 2022.

Gradually striving for carbon-neutrality by promoting and facilitating the use of low-carbon means transport modes (in particular by rail) - without imposing them, however. This includes the introduction since 2021 of financial incentives as an extra economic help for the travel costs for those participants using low-carbon means of transport, together with the possibility of having more days for travelling.

European Solidarity Corps project examples with green dimension:

- In “Climate Awareness” in Sweden, volunteers help with the organic food growing, restore biodiversity and create edible landscapes in an ecovillage. They also run awareness raising activities.
- “Urban Ecology” in Bulgaria focuses on raising awareness and offering sustainable models for environmental protection and a healthy lifestyle in Varna. Through the development of three different spaces, urban, rural and virtual, the project reaches out to the local community and make citizens aware of their own responsibility and contribution to the green footprint.
- The solidarity project “Mare d’Inverno” aims to recover a natural coastal area nearby the urban centres of Trani and Barletta in Italy. The project promotes environmental protection and works on placing pathways for cyclists and pedestrians, cleaning the beaches and replanting the native tree species.

6.2. Contribution to gender equality

6.2.1. Key achievements and performance

2021 estimates	2022-2027 programming					Total
	2022	2023	2024	2025	2026	
2021						

Score 0*: 136							
---------------	--	--	--	--	--	--	--

(*)Consolidated information about the annual commitments implemented (total per score by programme **in EUR Million**)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

Gender equality is an important element of the European Solidarity Corps. Project promoters are invited to consider this when developing their project proposal and demonstrate how they will ensure gender balance among participants. The Corps also supports projects dealing with the issue of gender equality; e.g. focusing on changing mentalities, sensitising communities to gender and diversity, contributing to breaking down barriers for women's access to employment.

The Inclusion and Diversity Strategy of the programme also contributes to implementing equal opportunities. In this framework, young people who are at a disadvantage compared to their peers because of discrimination, for instance against their gender, are considered priority participants ('with fewer opportunities') and focus in funding is put on projects supporting the strategy.

A specific topic on gender equality has been added for the European Solidarity Corps 2021-2027 that will enable to track the number of projects, involved participants and related funding, addressing this policy.

European Solidarity Corps 2018-2020

The European Solidarity Corps supports a range of projects with a thematic coverage on gender equality.

The Solidarity Project 'Change. Digital strategies for gender equality' aims to train women in disadvantaged situations by attending the local 'Women's Counters' on the use of digital technologies and to strengthen the network of solidarity between women of different ages. The project offers tools to address the issue of the gender gap in the digital environment.

The Solidarity Project 'End of taboo. End violence.' Addresses the topic of violence experienced by homeless women. With the support of European Solidarity Corps volunteers, workshops will be organised and tackle the topic of abuse of homeless women through arts. In the safe space of the community centre, homeless women will be able to share their personal stories and help them cope with their emotions and look for solutions. The outcomes of the workshops will be authentic exhibitions full of impressions and positions towards violence.

The main objective of the project 'YOUth impACT through Volunteering' is to inform and change the attitudes of adolescents and youth from Bulgaria on topics related to human rights and healthy lifestyle (focusing on sexual and reproductive health and rights, including HIV / AIDS, gender equality, family planning, sexually transmitted infections, gender identity, etc.) as well as support the empowerment of young people, encouraging them to talk about their needs and to protect their rights. European Solidarity Corps volunteers will be supporting the workshops and awareness raising campaigns.

EU Aid Volunteers Initiative

Of all volunteers deployed so far, around 72% are female and 28% male.

6.3. Contribution to the sustainable development goals

SDG 1 End poverty in all its forms everywhere

Through its activities to achieve social inclusion through solidarity activities, the European Solidarity Corps contributes to SDG 1, in particular its target of reducing at least by half the proportion of men, women and children of all ages living in poverty in all its dimensions according to national definitions.

Resilience aims at protecting vulnerable populations from the shocks and stresses that keep people in poverty, whilst providing services, livelihoods and opportunities to address the underlying causes of their vulnerability – to 'leave no-one behind'. EU Aid Volunteers work together with volunteers in vulnerable communities to strengthen their resilience to disasters and to build local capacity.

SDG 3 Ensure healthy lives and promote well-being for all at all ages

The European Solidarity Corps can play an important role in supporting the health and social care system, improving people's experience of care, building stronger relationships between services and communities. Through its activities, it also aims at mobilising volunteers around key health challenges, such as those related to cancer, mental health and well-being overall.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

The European Solidarity Corps aims, amongst other things, at developing the skills and competences of participants for professional, social and civic development. In addition, given its strong focus on inclusion, this is also achieved for young people with fewer opportunities, including young people with disabilities.

SDG 5 Achieve gender equality and empower all women and girls

The European Solidarity Corps aims at removing social obstacles for participation in it for people facing discrimination because of gender, among other reasons. It also supports projects dealing with the issue of gender equality; e.g. focusing on changing

mentalities, sensitising communities to gender and diversity, contributing to breaking down barriers for women's access to employment.

EU Aid Volunteers are for example recruited as gender experts to promote gender sensitivity and mainstreaming of gender considerations in disaster risk management in affected communities.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

All the actions of the European Solidarity Corps contribute to increase the employability of the young people who participate, as shown by several studies. This is achieved through a combination of outcomes, e.g. the acquisition of new skills, increased autonomy, increased knowledge of foreign languages, etc. Additionally, solidarity projects can help further the entrepreneurial and innovative spirit of young participants. Finally, the emphasis on inclusion aims to ensure that all can reap these benefits irrespective of disadvantage.

SDG 10 Reduce inequality within and among countries

Through its activities, the European Solidarity Corps aims to strengthen cohesion and solidarity. It supports projects and activities actively addressing the issue of inclusion in the society.

Special attention ensures that activities supported by the European Solidarity Corps are accessible to all young people, notably the most disadvantaged ones. To this end, special measures are in place to promote social inclusion, the participation of disadvantaged young people, as well as to take into account the constraints imposed by the remoteness of the outermost regions of the Union and the Overseas Countries and Territories. Similarly, the participating countries should endeavour to adopt all appropriate measures to remove legal and administrative obstacles to the proper functioning of the European Solidarity Corps. These include resolving, where possible, and without prejudice to the Schengen acquis and Union law on the entry and residence of third-country nationals, administrative issues that create difficulties in obtaining visas and residence permits.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

Through its activities aiming at addressing societal challenges, the European Solidarity Corps supports efforts to promote sustainable development of urban areas, and to protect and safeguard Europe's cultural heritage.

SDG 13 Take urgent action to combat climate change and its impacts

The European Solidarity Corps can make a contribution to SDG 13. The Programme aims at integrating green practices into all projects and activities as well as promoting environmentally sustainable and responsible behaviour among participants and participating organisations. Organisations and participants should thus have an environmental-friendly approach when designing and implementing their activities.

The Programme also supports projects and activities addressing the topic of environmental protection, sustainability and climate goals and aiming to protect, conserve and enhance natural capital, to raise awareness about environmental sustainability and to enable behavioural changes for individual preferences, consumption habits and lifestyles.

6.5. Contribution to the sustainable development goals	623

1. Overview

1.1. Challenges

The cultural and creative industries ecosystem was amongst the worst hit by the COVID-19 crisis. The crisis has accelerated the existing trends driven by globalisation and the digital transition. There is a need to support initiatives that promote the resilience and recovery of cultural operators, artists and cultural professionals which have been profoundly affected by lockdown and physical distancing measures.

The digital transition - also accelerated by the COVID-19 pandemic - is bringing about a change in paradigm, having a massive impact on how cultural goods are created, managed, disseminated, accessed, consumed and monetised, changing the value propositions which prevailed in the analogue era. Digitisation has facilitated the distribution of cultural and creative content and services, but it has also intensified competition of content across borders on a global scale.

The market for cultural and creative works is highly fragmented, stemming largely from Europe's cultural and linguistic diversity, which results in the cultural and creative sectors being essentially limited into focused on national and linguistic lines areas and lacking a European scale critical mass. At the same time, this diversity is part of Europe's cultural richness. The transnational circulation of artistic works remains thus limited. It is therefore important to stimulate the transnational circulation and co-production of works across borders and to develop more effective solutions to reach audiences across borders.

The European audiovisual industry is internationally recognised for its quality, but is not taking full advantage of the single market. Beyond the EU, European film exports represent 3% in the US and in the other main international markets. In contrast, US films represent 66% of the EU box-office and are also exported to other major film markets.

Freedom of expression and artistic freedom are at the core of vibrant cultural and creative industries, including the news media sector sectors, and the Creative Europe programme should thus contribute to promote a free, diverse and pluralistic media environment. Furthermore, the news media sector has been facing continuous change because of evolving revenue models and the digital transition. Facing monetisation difficulties, in some cases, media outlets have had to close down, weakening media pluralism.

1.2. Mission (General objectives)

The general objectives of the Programme are:

- (a) To safeguard, develop and promote European cooperation on cultural and linguistic diversity and heritage;
- (b) To increase the competitiveness and the economic potential of the cultural and creative sectors, in particular the audiovisual sector.

1.3. Specific objectives

The Specific Objectives of the Programme are:

- (a) Enhancing artistic and cultural cooperation at the European level, in order to support the creation of European works and strengthen the economic, social and external dimension of and innovation and mobility in Europe's cultural and creative sectors;
- (b) Promoting the competitiveness, scalability, cooperation, innovation, and sustainability, including through mobility, of the European audiovisual sector;
- (c) Promoting policy cooperation and innovative actions supporting all strands of the programme, including the promotion of a diverse, independent and pluralistic media environment, and media literacy, thereby fostering freedom of artistic expression, intercultural dialogue and social inclusion. To be effective, the Programme takes into account the specific nature and challenges of the different sectors, their different target groups and their particular needs through tailor-made approaches within a strand dedicated to the audiovisual sector, a strand dedicated to the other cultural and creative sectors and a cross-sectoral strand.

To be effective, the Programme takes into account the specific nature and challenges of the different sectors, their different target groups and their particular needs through tailor-made approaches within a strand dedicated to the audiovisual sector, a strand dedicated to the other cultural and creative sectors and a cross-sectoral strand.

Thus the Programme covers the following strands:

- (a) 'CULTURE' covers cultural and creative sectors with the exception of the audiovisual sector;
- (b) 'MEDIA' covers the audiovisual sector;
- (c) 'CROSS SECTORAL strand' covers activities across all cultural and creative sectors.

1.4. Public intervention context

Cultural and creative sectors (CCS) have intrinsic cultural and social value, expressing European identity and values and display economic value through an important contribution to jobs and growth with additional spill over effects on other sectors. In addition, the European Union promotes a free, diverse and pluralistic media environment. In this context, support is vital to protect cultural diversity and strengthen competitiveness.

It is therefore important that the Creative Europe Programme addresses the structural challenges of Europe's cultural and creative sectors, significantly exacerbated by the impacts of the COVID-19 pandemic. The cultural and creative industries are recognised as one of the 14 main ecosystems of the European economy. The Programme, together with other relevant EU funding programmes and Next Generation EU, shall support the short-term recovery and longer-term resilience and competitiveness. Additionally, there is an urgency to increase support to the European audiovisual industry because of competition in global audiovisual markets intensified by the deepening digital disruption shift.

Also, this Programme will contribute to mainstreaming climate actions in the Union's policies and to achieving an overall target of 25-30% of the Union budget expenditures supporting climate objectives.

The main EU added value comes from the strong transnational dimension of the Programme as already demonstrated in the Creative Europe programme 2014-2020. The multilateral transnational nature of Creative Europe provides a distinctive offer that is rarely matched by national funding, which tends to focus more on domestic activities and – and to a lesser extent – on bilateral transnational cooperation. This multilateral transnational focus is highly valued by stakeholders and beneficiaries as a unique element of Creative Europe. Only a few other existing international funds support transnational cooperation in the cultural and creative sectors at all and those that do are of significantly smaller scale.

Support to the cultural and creative sectors at European level needs to have a clear European added value, which is ensured, inter alia, through:

- (a) The transnational character of actions, which complement regional, national, international and other Union programmes and policies,
- (b) cross-border cooperation,
- (c) the economies of scale and growth and jobs which Union support fosters, creating a leverage effect for additional funds,
- (d) providing a more level playing field through the MEDIA strand by taking into account the specificities of the different countries.

The budgetary authority increased the budget of Creative Europe by over 80% on an EU 27 basis, in recognition of the value of the programme in addressing the unprecedented challenges faced by Europe's cultural and creative sectors.

The Creative Europe programme is based on Articles 167 and 173 of the Treaty on the Functioning of the European Union (TFEU) of which Article 167 specifies the Union's competences in the cultural field and calls for action by the European Union to contribute to the flowering of the cultures of the Member States, simultaneously respecting their national and regional diversity, bringing the common cultural heritage to the fore and, if necessary, to support and supplement Member State action in the area listed by this provision.

Article 173 TFEU states that the Union and the Member States shall ensure that the conditions necessary for the competitiveness of the Union's industry exist, including taking action to encourage an environment favourable to initiative and to the development of undertakings.

Other policy tools that will receive financing from Creative Europe and their legal bases:

- Decision No 1194/2011/EU of the European Parliament and of the Council of 16 November 2011 establishing a European Union action for the European Heritage Label
- Decision No 445/2014/EU of the European Parliament and of the Council of 16 April 2014 establishing a Union action for the European Capitals of Culture for the years 2020 to 2033 and repealing Decision No 1622/2006/EC

1.5. Actions

The programme is divided into three strands: Culture, MEDIA, and Cross-Sectoral. The three strands account respectively for 33%, 58%, and 9% of the Creative Europe budget.

The CULTURE strand consists of the following actions:

- Horizontal actions covering all cultural and creative sectors: support to cultural **cooperation projects, networks** of professional organisations, **platforms** for the promotion of European artists and works, **individual mobility scheme**;
- **Sector-specific support** to complement horizontal actions in music, book & publishing, cultural heritage and architecture as well as other sectors; and

- **Special actions** to reward and promote excellence and creativity such as the **awards** for literature, music, architecture and cultural heritage, **European Capitals of Culture**, and the **European Heritage Label**.

The **MEDIA** supporting actions are divided into four thematic clusters:

- **Content**: encouraging collaboration and innovation in the creation and production of high-quality works (including for the first time in the new financing period in 2022 the call for video games development with the new opportunity for immersive experience production companies);
- **Business**: promoting business innovation, competitiveness, scalability and talents to strengthen Europe's industry vis-à-vis global competitors (in 2022 for the first time the 360 degrees call and for the first time in the new period the Distribution Selective call);
- **Audience**: strengthening the accessibility and visibility of works for their potential audiences, through distribution channels and audience development initiatives; and
- **Policy**: supporting policy discussion/exchange fora, studies and reports. Promoting awareness-raising activities.

The **MEDIA** strand will focus on:

- Encouraging **cooperation** both across the value chain and at EU level in order **to scale up audio-visual enterprises and European content globally**;
- Nurturing **talents**, wherever they come from, and broadening participation and collaboration across countries;
- Supporting the use of new technologies to ensure the full exploitation of the **digital transformation**; and
- Fostering the **greening** of the industry and including societal objectives such as **gender balance and diversity**.

The **CROSS-SECTORAL** strand's supporting actions focus on:

- **Transnational policy cooperation**: promoting knowledge of the Programme and supporting the transferability of results;
- Common challenges and opportunities for the CCS through **Creative Innovation Labs**: promoting innovative approaches to content creation, access, distribution and promotion across cultural and creative sectors. **News media**: supporting media literacy, quality journalism, media freedom and pluralism (quality journalism has been supported since 2021, the first open calls for proposals for media freedom and literacy will be launched in 2022).

1.6. Delivery mode

The programme is managed jointly by DG EAC and DG CNECT and implemented by EACEA, DG EAC and DG CNECT. Blended support of financial instruments will be managed by the European Investment Fund. Audiovisual policy actions and some news media actions are implemented by DG CNECT. DG EAC manages directly policy actions, cultural prizes and special actions such as the European Capitals of Culture and the works of the Panel of Experts in charge of the European Heritage Label. Cross-sectoral policy actions are implemented by DG EAC and DG CNECT.

The Culture and MEDIA administrative budget lines are implemented by DG EAC and DG CNECT respectively.

1.7. Graphic overview of the programme structure

Domain	Culture		
Programme	Creative Europe		
	Culture strand Budget share: 33% All cultural sectors (except audiovisual)	Media strand Budget share: 58% Audiovisual	Cross sectoral strand Budget share: 9% Cross-sectoral collaboration News media

1.9. Link with the 2014-2020 MFF

The aim of this initiative is to build on the achievements of the Creative Europe Programme's 2014-2020 and scale up efforts whilst increasing the intensity of support in key areas. The new programme has a wider scope as it also covers audiovisual policy and support to the news media sector.

The mid-term evaluation of the programme outlined its achievements whilst addressing some shortcomings. Overall, the programme was effective and had a clear European added value.

1.10. Relevant websites providing more information

The Creative Europe website on Europa (https://ec.europa.eu/programmes/creative-europe/node_en)

Contains information on the specific actions of the programme, provide links to the respective policy areas and to other EU programmes and information that could be interesting for the sector.

The Creative Europe website run by EACEA (https://eacea.ec.europa.eu/creative-europe_en)

Provides information on calls for proposals.

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	314.7	2 036.5	15%
Payments	60.5		3%

2021

The first year of implementation of the Creative Europe has been exceptionally challenging in terms of budget management. The late adoption of the programme Regulation has pushed forward the start of the activities (calls, selection, contracts, payments) to the second part of the year, affecting the budget management in 2021 and shifting some payments initially planned in 2021 to 2022. As a result, a very close budget monitoring approach allowed to promptly return the unnecessary payment appropriations detected in the revision of forecasts and ensured to fully use the remaining available payment appropriations in EU budget at year end. Moreover, this exceptional situation had no influence on the funding absorption capacity of the programme, for which all the commitments appropriations of the 2021 EU voted budget have been implemented.

In 2021, due to this delay in the implementation, only about 19% of the budget committed (€314,7 million) has been paid (€60,5 million).

2022

In 2022, Creative Europe has an adopted EU budget of EUR406.5 million. The year-by-year spread of the 2021-2027 budget is heavily frontloaded and the budget of 2022 is the highest of all the 7 years. This additional strengthening of the first years are aimed at helping the beneficiaries sectors to recover from the COVID-19 crisis. The CCS were amongst the hardest hit sectors of the economy. The budget of 2022 is significantly higher than that of 2021, as it is the first regular year budget (as in 2021 the works started with delay).

In 2022's programming, EACEA will implement approximately 90% of the budget, while about 10% will be implemented in a centralised manner.

2023

The total EU budget requested for 2023 amounts to € 325,3 million, about 20% less than 2022, fully aligned with the financial programming 2021-2027 which was heavily frontloaded in 2021 and 2022 to tackle the COVID-19 crisis.

In 2023's initial estimated programming, about 90% of the operational budget will be delegated to EACEA and 10% implemented in a centralized manner.

The work programme 2023 is planned to be adopted in early autumn 2022 together with the delegation to EACEA. Most actions and calls will be launched thereafter.

Creative Europe has an estimated budget of around EUR2.44 billion for the whole period 2021-2027.

With a 68% budget increased compared to its predecessor programme (2014-2020), Creative Europe invests in actions that reinforce cultural diversity and respond to the needs and challenges of the cultural and creative sectors. Its novelties will contribute to the recovery of these sectors, reinforcing their efforts to become digital, greener, more resilient and more inclusive

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	1 487.6	1 488.0	100%
Payments	1 258.1		85%

The total C1 credits for the period 2014-2020 amounted to EUR 1 487 956 887 and were implemented at nearly 100% (EUR 1 487 619 769). During the period 2014-2021, the total payments amounted to EUR 1 258 130 362 162. The percentage indicated above (85%) corresponds to the ratio between the implemented payments and the total financial envelope. This implementation ratio is in line with the normal payment pattern of the programme where some cooperation projects are running over a 48-months period. We can therefore expected payments on the completion line at least until 2025. In 2021, payments were used to cover obligations resulting mainly from ongoing (interim payments) or closure (final payments) of projects implemented by EACEA.

Approximately 90% of the budget is implemented by EACEA, while approximately 10% is implemented in a centralised manner.

Furthermore, please note that the late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

2021 was a transition year for Creative Europe, during which the focus was implementing the legal basis into operational terms. The Work Programme 2021 was challenging, as it included numerous novelties, such as accounting for inclusiveness and sustainability measures and introducing new calls for proposals and new support measures of an innovative nature (MediaInvest). Additionally, within 2021, not only the first but also the second Work Programme (for 2022) was prepared and accepted. WP 2022 builds on the solutions established in 2021, developing them further. Due to delay in the adoption of the legal basis and the Work Programme 2021, there was a subsequent delay with publishing the 2021 Calls for proposals. Therefore, not all evaluations of the 2021 Calls have been finalised and it is not possible yet to provide the results. The implementation of the Calls for proposals also required more work than in previous years, as 2021 was the year of the rollout of eGrants system. Altogether the year was demanding for the Programme, but the significant preparations laid the ground for smoother, more streamlined implementation adapted to the needs of the sectors.

3.1.2. Active programme performance

- In 2021, exceptional efforts were made to catch up with the delays in the MFF package by proposing two annual Work Programmes. This determined that the focus of implementing the Programme was on management aspects. As a result, the legal base of Creative Europe was successfully translated into a practical new set of actions.
 - The two Work Programmes processed in 2021 had an important policy angle related implementing the European Democracy Action Plan (EDAP) and the Media and Audiovisual Action Plan (MAAP), adopted by the Commission in December 2020. One of the objectives of the EDAP is to strengthen media freedom and pluralism as well as to support media literacy. The MAAP proposes steps, combining investment with other policy actions and mobilising a variety of relevant EU regulatory and funding instruments, to support the recovery and transformation of the media and audiovisual sectors and provides a framework to ensure focus, coherence and complementarity. In full respect of Creative Europe's legal base, the Programme, as reflected already in the WP 2021 and 2022 will play a key role in taking these two Plans forward. The MEDIA and CROSS-SECTORAL strands, alongside other funding instruments, will finance key initiatives which will complement other types of measures such as research and innovation or strengthened cooperation amongst regulators.
- In May 2021, the Creative Europe Annual Work Programme 2021 was adopted and allocated around EUR 300 million to promote the diversity and competitiveness of the cultural and creative sectors across Europe, contributing to recovery and resilience in the wake of the COVID-19 pandemic. More than EUR 80 million (almost a 30% increase compared to 2020) were allocated to CULTURE strand: the extra budget was used to increase our existing support and introduce novelties. For instance, more budget was allocated to cooperation to co-finance more projects and raise co-financing rates (up to 80% for small-scale partnerships) so that our funding is more accessible for micro/small cultural organisations (particularly hit by the pandemic). Our scheme to support the circulation of literary works was enhanced to encourage

more cooperation between publishers. The platforms scheme - successfully introduced in the previous programme for the promotion of emerging artists in Europe - has been increased and will help artists to reconnect with the audience after two years of Covid-related restrictions. The support to European professional networks in the culture field - a key tool for knowledge sharing and the dissemination of practices - was also increased to encourage the development of the cultural and creative sectors and accompany their digital and environmental transition. Promoting young musical talent throughout Europe was achieved by launching a successful new action consisting of support to pan-European cultural entities, in this case, orchestras.

- For the MEDIA strand, more than 154 million EUR were dedicated to open calls for proposals in 2021 budget compared to 125 million EUR in the 2020 budget. Several significant innovations were successfully introduced as regards MEDIA. One such innovation was streamlining the calls for proposals into thematic clusters. Another was restructuring of the calls related to the development stage of audiovisual production chain. The development schemes were adapted to better reflect the needs of different market players. Yet another significant change, relating to the ongoing digital transition, was the launch of a new call for proposals aimed at developing innovative tools and business models for European content and companies to thrive in the digital economy.
- For the cross-sectoral strand, its open calls for proposals budget grew from 3 million EUR in 2020 to 13.9 million EUR in 2021, as a brand new action (Journalism Partnerships) was added. This action signifies opening the Programme to a brand new type sector of beneficiaries: news media.
- The total budget (including non-open calls for proposals grants and procurements in addition to open calls) in 2021 was 172.6 million EUR for MEDIA, 27.7 million EUR for cross-sectoral and 97.4 million EUR for CULTURE.

In November 2021 the Programme Committee gave a positive opinion on the Creative Europe Work Programme 2022. This allowed to gradually catch up the programming delays by allowing the formal adoption in January 2022 and the launch of the Calls in February. The WP 2022 represents the biggest annual budget in the MFF, approximately 30% more than 2021. The frontloading in 2021 and 2022 and corresponding budgetary profile was the result of a political decision of the budgetary authority in order to support recovery of the sector hit by the pandemic, with a peak in 2022 (further reinforced by the 2022 Conciliation top up).

- The very uneven annual budget profiles has required a special budget management and programming effort. To avoid funding volatility, which could destabilise stakeholders, multi-annual programming has been used in both the WP 2021 and WP 2022. In some cases this has meant that the support measures were not financed every year as in the past.
- Furthermore, the document of the Commission Financing Decision for the Work Programmes was streamlined, in line with the legal base and Financial Regulation, thus allowing a more strategic overview and enabling more operational flexibility on technical details.
- In 2021, following political agreement, the association agreements for 10 countries already associated to the Creative Europe programme, were signed and the process of associating other countries that have an expressed an interest to join the programme was started.
- Immediately after the adoption of the Work Programme 2021 the open Calls for proposals were launched. There were 5 calls under the CULTURE, 14 calls under the MEDIA strand and 2 open calls for proposals under the CROSS-SECTORAL strand.
- More than 660 applications were submitted under the Culture strand, totalling a demand of more than 378 million EUR. The high volume of demand and the ensuing competition for funding proved the relevance of the Programme's objectives and priorities. The introduction of a medium-scale cooperation project category proved particularly appealing and the higher co-funding rates reflected the sector's current needs in a clear manner. The introduction of new priorities and award criteria including on digital transition, environmental sustainability, social cohesion and inclusion resulted in more applications and better projects contributing to key transversal Commission priorities. At the same time, the essence of the programme – promoting cultural diversity – was respected by the selection of many projects on transnational artistic co-creation, circulation of artists and cultural works and audience development. The selection of organisations in the framework of the new action in the form of pan-European entities will allow stable support to orchestras whose unique way of working will allow young talent to be showcased and promoted and find an audience across borders. This new support mechanism is particularly relevant to take off in the European Year of Youth 2022.
- Altogether 1212 applications were submitted to the MEDIA open calls for proposals for the total amount of 271 million EUR and 85 applications to the Cross-Sectoral calls for the total amount of 50 million EUR. Although the period of applying (mostly summer months), caused by the delay in the Programme adoption, was not the most convenient to the applicants, the number of applications as well as the amounts that were requested by the applicants were overall satisfactory although varying from one Call to another. The quality of the applications in those Calls that have already been fully evaluated (before February 2022) is considered high.
- Under the MEDIA calls special new measures were introduced for ensuring a broadened participation for applicants from countries with smaller scale and level of development of audiovisual industry, who have had problems with benefitting from the Programme so far. Broadening the participation and collaboration between organisations from diverse countries is a MEDIA priority, increasing the European added value of the Programme. A lot has been done to address the issue of the level playing field in the past and results have been successful. During the period 2014-2020 countries were assigned to one of three groups: high-, medium-, or low-capacity. Data collected in 2018 and 2020 showed that medium capacity and some of the low capacity countries have been significant beneficiaries, receiving much more than would be proportionate to their share in EU population. Therefore, since their situation improved since when the measures were launched, this classification was no longer justified. The new categorisation introduced in 2021 differentiated between two

types of low-capacity countries instead of low- and medium- and introduced appropriate measures to increase their participation.

- MEDIA has included in the Work Programme 2021 for the first time an innovative support measure for the audiovisual industry: the MediaInvest blending facility. The European audiovisual sector faces several simultaneous challenges: it is highly dependent on public funds; the independent European companies are put under ever greater competitive pressure by the huge US-based companies to raise the average production budgets and; private investors consider the audiovisual industry to be risky and avoid the much needed capital investments. The MediaInvest blending facility aims at encouraging private investment in the sector. The MediaInvest offers blending of public funds: from Creative Europe, Invest EU and EIF with private investments into commercially viable, European-scale audiovisual projects. The backing of public funds will multiply the effect a private investor can have with their funds, therefore decreasing their perceived risks, allowing the projects to reach the critical scale. It will strengthen the position of independents by giving them access to increased capital resources. Throughout 2021 preparations were taken forward for the launch of the MediaInvest equity investment platform. It will be implemented by EIF through a Delegation Agreement regarding InvestEU. Negotiations between the European Commission and the EIF were ongoing in 2021. A product fiche was developed at technical level. The call for proposals is expected to be launched in Q1 2022 and will be valid for 6 years.
- The WP 2022, prepared in 2021, builds on the WP2021, but enriches it with additional calls using the fact that it has a much higher budget: in MEDIA 3 calls which had predecessors in 2014-2020 will be re-introduced, after some important changes: 360 degrees (for B2B activities); video games (with the addition of immersive content); Automatic Distribution. In CROSS-SECTORAL the News Media Literacy and Pluralism calls will be launched for the first time, expanding the offer for news media sector stakeholders.

3.1.3. Previous Programme Performance

3.1.3. A. Summary of 2014-2020 achievements

The 2014-2020 programme progressed toward the achievement of its overall objectives, i.e. safeguarding and promoting cultural diversity and strengthening competitiveness. The measurement through key performance indicators shows how diversity was strengthened by helping European content (films, music, books, ...) reach wider audiences and how Creative Europe played an important economic role in leveraging investment by acting as a guarantee for quality. The quality of received applications can be considered high and the success rate relatively low, given the restricted budget, with some schemes being more competitive than others. Overall during 2014-2020 Creative Europe received more than 32 000 eligible proposals and awarded 13 476 grants. Creative Europe supported:

- around 650 cultural cooperation projects between 3 760 organisations across Europe;
- the development and/or distribution of over 5 000 films and the operations of 1 144 cinemas;
- the translation of 3 500 books all over Europe.

The MEDIA Sub-programme performed very well with respect to promoting European cultural and linguistic diversity, by supporting the development and distribution of hundreds of audiovisual works, thus helping them find their audiences. Through the support, development and distribution of about 25% of European films produced every year, MEDIA plays a significant role in creating a European ecosystem, which allows films to go beyond their domestic markets. MEDIA helped the audiovisual industry to grow by addressing different stages of audiovisual value creation chain:

- Fostering **talent and skills** at international level through supporting 261 training projects over 2014-2020 which equipped over 16 000 professionals with content-related, business and technological skills. In 2021 48 training projects committed in 2020 were implemented.
- Fostering **high quality, innovative content creation**. MEDIA supports the creation of films, TV series and video games, which have the potential to travel, by helping them to achieve the quality needed to attract international audiences. It can be considered a success that a very high share of content created with the support of MEDIA are co-productions as it is proven that they have bigger budgets, travel more broadly and attract bigger audiences. Considering the European market is fragmented and operating on a small-scale, increased average budgets and reach is a step towards market structuring. MEDIA is also present (through cascading grants to national funds) in the cooperation between filmmakers from the EU and developing countries. In 2021, 245 development and 46 production projects for almost 33 million EUR committed in 2020 were being implemented.
- Increasing **circulation and cross-border access**. MEDIA makes an essential contribution to making European films available beyond their domestic markets. It supports the theatrical release of several hundred films across borders every year. It also co-finances the growing Europa Cinemas network of cinema theatres (1 149) which excel in the exhibition of European titles. Members of Europa Cinemas serve local communities as unique venues for film culture, animation and education.
- Increased **promotion** of European works. MEDIA supported promotion activities in several ways: support to festivals to give visibility to newly released works; promotion of European works online, through innovative VOD services as well as cross-border collaboration between VOD platforms; audience development through education; promotion of European films at exhibitor conventions; facilitating access to and strengthening the visibility of European professionals in

audiovisual markets and exhibitions, in Europe and beyond. In 2021, despite COVID-related restrictions, 81 film festivals and 51 markets were organised (partly in hybrid or online forms) with the support of 14 million EUR committed in 2020.

The Culture Sub-programme progressed towards the achievement of its key objectives, such as encouraging transnational cooperation in the cultural field:

- More than 1 100 projects have been funded and more than 647 cooperation partnerships have been created between 3 760 organisations across Europe by the Creative Europe programme – culture strand.
- Simplifications of procedures, more guidance to applicants and increased budget have resulted in a better access to Creative Europe support for smaller organisations: more than 70% of the beneficiaries are small or medium size organisations.
- The European platforms scheme has been a success. The scheme was introduced at the beginning of the programme to stimulate the transnational programming and promotion of European emerging artists: the number of supported platforms has grown from 5 in 2014 to 15 platforms in 2020.
- The support to European networks of cultural and creative organisations has been an efficient capacity-building tool: CE has supported over 30 European networks connecting more than 4 000 organisations across Europe with a view to disseminate good practices and innovations and structure the different culture and creative sectors.
- The literary translation scheme has efficiently contributed to increasing the diversity of European literature through the translation and promotion of more than 3 500 books. With more than 30 different ‘less represented’ languages, the scheme has a clear added value in comparison to the market dominated by translations from English. Finally, the programme demonstrated its ability to innovate and respond to the demand by testing a new mobility scheme for artists and professionals.

As part of the support for Special Actions, the Culture Sub-programme supported the organisation of four European prizes in the areas of music, literature, architecture and cultural heritage. All Prizes organised award ceremonies together with side events to celebrate their winners, gather stakeholders and attract media attention:

- The Music Moves Europe Talent Awards. By awarding young artists from all over Europe who reached audiences outside their own countries, the EU prize for popular and contemporary music puts a spotlight on Europe’s vibrant music scene. Since 2019, the prize celebrated 28 artists (36 awards) who represent the sound of today and tomorrow. Among the award winners of the recent years were for instance Dua Lipa, Alice Merton, Rosalia or Lou and the Yakuza.
- The European Heritage Awards is the most prestigious prize in the field and contributes to a stronger public recognition of cultural heritage as a strategic resource for Europe’s society, economy and environment. It rewards each year up to 30 heritage achievements, which have the power of example. Since 2002, independent expert juries have selected 533 award-winning projects from 34 countries.
- The European Union Prize for Literature. With more than 135 authors rewarded showcasing 33 different European languages, the European Union Prize for Literature gives visibility to emerging European writers, encourages translations and promotes the diversity and excellence of European literature.
- The EU Prize for Contemporary Architecture: Three editions (2015, 2017, 2019) were organised during the lifetime of the programme: 1 158 works from 37 countries were nominated, among which 10% of transnational works (i.e. built by architects from a different CE country). Over the years, the prize has rewarded excellent examples of the contribution of transformative architecture to the circular economy, energy efficiency and sustainable development. The EU Mies Award was complemented by the launch in 2016 of the Young Talent Architecture Award (YTAA), which rewards the best graduation projects from European architecture, urban planning and landscape schools.

Among the Special Actions, the European Capitals of Culture (ECOCs) have had a significant leverage effect on long-term cultural, social and economic benefits to the cities which have held the title. From 2014 to 2020, the Melina Mercouri Prize was awarded to 14 cities as European Capitals of Culture, to stimulate culture-led investments by national, regional and local public authorities: as an example, the two 2018 ECOCs invested approximately EUR 104.6 million in Leeuwarden (The Netherlands) and EUR 26.5 million in Valetta (Malta). One euro of public money invested in an ECOC project can generate up to 6 euros in return for the local economy (as was for example the case in Mons, ECOC 2015) and overnight visitors increase on average by 12%. In Leeuwarden, overnight stays in hotels showed an increase from 0.8 million in 2017 to 2.1 million in 2018.

3.1.3 B. The 2014-2020 MFF results manifested in 2021:

Most of the projects financed in the final years of the previous programme were multi-annual and therefore continue to provide funding and effects on the Culture and Creative sectors: Co-creation, mobility for artists, access to culture and cultural works for Europeans. Development of new business models and innovative practices.

In **Culture** for instance, the 74 publishers selected in 2020 will launch the translation and the promotion of nearly 600 books in 2021 and 2022. The 16 platforms selected in 2018 will have their final year of operation in 2021 and will provide many

opportunities for emerging European artists to perform outside borders and reconnect with the audience after many months of lockdown and covid-related restrictions.

Another example is the new mobility instrument launched in the last years of the previous programmes: i-Portunus was a short-term pilot project, to trial a mobility scheme in 41 countries directly targeting individual artists and culture professionals (A&CP). After a first pilot edition (2018-2020) focusing on Performing and Visual arts, the project continued for a second edition (2020-2022) focusing on A&CPs in the Architecture, Cultural Heritage, Music and Literary Translators sub-sectors. The mobility scheme i-Portunus, based on a demand-led approach, was managed by a Consortium headed by Goethe-Institut with Istitut français and Izolyatsia.

Between December 2020 and December 2021, when the pandemic of Covid-19 was still severely impacting people worldwide, and particularly the Cultural and Creative Sector, i-Portunus issued 5 Calls for Applications and received over 1 800 applications from more than 3 600 individuals requesting almost 6 million EUR of support, hence proving the need for artistic mobility. A team of ten independent experts evaluated the applications. Nearly 320 individual artists and culture professionals completed a mobility with i-Portunus for a total amount of 514.023,64 €.

As a result of the mobility, 93% of the selected A&CP acquired new skills/knowledge, 73.2% developed new audiences/outlets or possibility for new co-productions/creations, and 38.7 % received a job offer. Over 91% would have not undertaken a mobility without i-Portunus. This is a most impressive impact considering the limited financial support provided by the project, with a maximum of 3 000 EUR per individual.

In addition yearly flagship actions such as EU cultural prizes (Music, literature, architecture and cultural heritage), European capital of Culture or Heritage label have contributed - in 2021 - to highlight and concretely showcase the excellence and diversity of European creativity or common heritage in Europe.

The agreements for the **Cultural and Creative Sectors (CCS)** Guarantee Facility signed between the EIF and financial intermediaries before the end of 2020 brought their largest results so far in 2021. Only in 2021 460 million EUR was made available to 2,272 CCS SMEs, bringing the overall results since the start of the activity to 1.29 billion EUR and 5,898 SMEs.

Year after year **MEDIA**-supported audiovisual works receive some of the most prestigious recognitions in the world. Some notable examples in 2021 included 3 awards Oscars and additional 11 Oscar nominations, for films supported still under the 2014-2020 period. Another outstanding work appeared in the video games genre: the *It Takes Two* video game about solving family problems by cooperation, created by Swedish Hazelight Games, which had been developed with the support of MEDIA grant, won 3 awards in the globally most important The Game Awards (including the main one: game of the year, as well as in the categories: multiplayer and family). Sometimes the period between finalising a grant for development and the moment of receiving awards for a finished work can extend to several years. In the Autumn 2021 festivals season 6 new titles supported by MEDIA in development received nominations at the Venice Film Festival.

It is important to illustrate the scale of the substantial reach of MEDIA strand by the available qualitative, ad-hoc data. The final reports of several dozen of beneficiaries of the TV content call for proposals from 2020 (which were submitted by the end of 2021) indicate that as far as they were aware, their MEDIA-supported works in 2021 reached at least 29 million national viewers and almost 20 million audiences in other countries. This ad-hoc data only sheds some light on the scale of the total audiences. Due to industry practices (the distributors are not obliged to share data with the producers, who are MEDIA beneficiaries) it is impossible to acquire the information on all TV and online audiences in a regular, systematic manner.

3.2. Key achievements

2 European Capitals of Culture	3 Oscars	22 Calls for Proposals	36 European networks
European Capitals of Culture: Rijeka(Croatia) and Galway (Ireland) 2021 European Capitals of Culture	3 Oscars awarded to in 2021	22 calls for proposals have been published in 2021 to launch the implementation of the new programme	European networks representing 4 000 organisations across all cultural sectors under the 2014-2020 programme.
68 European Cinema Night screenings	460 million EUR	Nearly 13 500 awarded grants	Nearly 650 partnerships
In 2021	of new debt financing by the end of 2021	to support projects and initiatives in the culture and audio-visual field under the 2014-2020 programme.	with long-term effects on 3 760 organisations across Europe under the 2014-2020

				programme.
--	--	--	--	------------

Common areas

The Programme has a comprehensive outreach strategy, making it well recognisable amongst cultural, audiovisual and other creative professionals as well as general public (audiences of European works). The regularly edited Instagram account @creativeEU arrived at 16 000 followers in 2021.

CULTURE Sub-programme

The year 2021 was devoted to launch the new programme and publish the calls for proposals planned in the 2021 annual work programme. The programme offers continuation and novelties that were presented to potential applicants.

Despite late adoption of the work programme the following calls were launched as planned in the work programme and were well subscribed showing the relevance of the programme for the sectors: European cooperation, pan European entities, networks of professional organisations, platforms for the promotion of emerging artist and circulation of literary works. Selected projects under Networks and pan European cultural entities were contracted late 2021 to offer continuity of funding for some of the organisations funded under the previous programme. While it was particularly relevant to achieve support for those networks representing precious partners for European policy development, it was at the same time important to allow for the selection of new networks in policy areas not yet covered to be able to contribute to policy in a similar manner. The high quality of projects submitted for pan-European cultural entities reflected the existence of organizations potentially not covered by other horizontal actions due to their way of functioning, fulfilling an important role as enshrined in the new legal base. The 2021 selection confirmed the need for such support and can be further developed based on the implementation results of this first selection round.

The programme continued to build on the European Year of Cultural Heritage (EYCH) to promote and safeguard cultural heritage on many levels. For instance, the Commission's Cultural Heritage Expert Group, composed of Member States, key stakeholders as well as several individual experts, maintain the spirit of cooperation and policy dialogue achieved during the Year. In addition to providing advice and expertise the Commission, the Group also serves as a platform for consultation and the exchange of information on cultural heritage policies in order to support the implementation of the **European Framework for Action on Cultural Heritage (EFACH)**. Many activities have been put in place to maintain the momentum of the Year and harness its benefits. **Over 60 actions of the EFACH respond to five pillars pertaining to inclusiveness, sustainability, resilience, innovation and global partnerships.** They include Creative Europe funded actions such as joint EU-UNESCO project on engaging youth and schools for heritage (300 000 EUR), which came to an end in April 2021, or the 'Cultural Heritage in Action', launched by the Commission in 2020, a peer-learning programme for local and regional policymakers to exchange knowledge on cultural heritage. **It produced a first catalogue of 32 local and regional best practices on participatory governance of cultural heritage, adaptive reuse of built heritage and quality of interventions on cultural heritage.**

MEDIA Sub-programme

Throughout 2021, with the COVID-19 pandemic continuing to cause sudden lockdown of cinemas and disrupting the production of new content (cash-flow shortages, problems with shooting) the success of the Programme was to maintain the financial backing for the industry stakeholders, which was highly appreciated.

The MEDIA strand, in addition to overall Programme communication activities, undertook several special ones in 2021. MEDIA runs its own account on Twitter (@mediaprog) where in 2021 its number of followers exceeded 16 000. The outreach events in 2021 included the European Cinema Night film screenings in collaboration with Europa Cinemas members especially in non-capital cities and towns and *A season of classics* screenings in collaboration with film libraries and archives. MEDIA executed two communication campaigns online: CaractHER on gender equality in the audiovisual industry and the campaign celebrating 30 years of the Programme ([We All Love Stories](#)).

Cross – sectoral strand

The first edition of the Journalism Partnerships call was very successful, proving how much the investigative and quality journalism organisations needed and awaited it. The call aims to improve the exchange of news of cross-border importance, of cross-border nature and to enhance the qualitative journalism offer in Europe. In total 32 applications were submitted out of which 18 scored above 70% points, showing high quality. Due to the budget constraints, only 7 of the 18 could be funded. Similarly, the 2021 edition of **Creative Innovation Labs**, just like the previous preparatory ones (called *Bridging Culture and Audiovisual through Digital*), was met with an enthusiastic response from the sector.

The key achievement of Creative Europe Desks in 2021 was the successful work they put into training the stakeholders, and later applicants into using the new eGrants system.

Project '**Cultural and Creative Spaces and Cities**' (2018-2021, EUR1.5 million) continued the implementation of its activities in 2021: The wider context of cultural centres were explored for a **better use of public spaces for social regeneration through culture**. Cities and regional authorities were actively involved in the project and a series of urban labs and co-creation labs were organised to develop new ways of working together and involving 'creative commons'. Due to the COVID-crisis the remaining urban labs and other workshops took place virtually, including the project closing conference, which was held at the beginning of February 2021.

3.3. Evaluations, studies and reports

Evaluations:

The Creative Europe Programme 2014-2020 was evaluated on a mid-term basis, with results published in 2018. The feasible recommendations from the evaluation were incorporated into the implementation of the Programme 2018-2020 (where possible) and into the 2021-2027 Programming Period. The final evaluation of the 2014-2020 Programme will start in 2023.

2021 studies and reports:

1. The Monitoring Reports, published every year since 2017, present in-depth analysis of the programme’s performance. They feature both quantitative as well as qualitative information on the implementation processes, outcomes and broader impact. The edition covering 2020, prepared and published in 2021 can be found at: <https://op.europa.eu/en/publication-detail/-/publication/49a05a63-1b4d-11ec-b4fe-01aa75ed71a1/language-en>

2. The study on the potential impact and opportunities of **Artificial Intelligence** for creative sectors, funded under 2020 Work Plan, was ongoing throughout 2021 (to be finalised and published in 2022).

3. The European Audiovisual Observatory, co-financed by Creative Europe, as every year was commissioned to prepare regular studies (MAVISE database update; studies tracking the production, promotion, circulation and availability of European audiovisual works) and ad-hoc briefing notes on the trends in the audiovisual industry.

4. Each year, ex-post evaluations of the Capitals of Culture of the previous year are conducted. For instance the external ex post evaluation conducted in 2019 has shown that the two title-holders in 2018 – Valletta (Malta) and to a higher degree Leeuwarden-Friesland (the Netherlands) – derived substantial economic, social and cultural benefits from the title.

5. In the context of the Work Plan for Culture 2019-2022, the following **studies** have provided useful findings for stakeholders and policy makers.

- Role of culture in promoting citizenship, values and democracy (launched end of 2021)

6. In the context of the Work Plan for Culture 2019-2022, the Commission has cooperated with the Member States in the form of the following **Open Method of Coordination (OMC)** working groups in 2021:

- Gender equality in the cultural and creative sectors (report published)
- High quality architecture and built environment for everyone (report published)
- Audiovisual coproductions (report published)
- Multilingualism and translation (report published)
- Strengthening resilience of cultural heritage in light of climate change (report in mid/end 2022)
- The Cultural dimension of sustainable development (report in mid-2022)

7. On MEDIA side, preparatory works were done in 2021 for the study on providing a level playing field for audiovisual players from countries with different audiovisual capacities accounting for the changes in relative market sizes after Brexit. The study will be launched in 2022.

8. A study was launched in 2021 to identify good practices and measures to improve the “green dimension” of Creative Europe.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Enhancing artistic and cultural cooperation at the European level, in order to support the creation of European works and strengthen the economic, social and external dimension of and innovation and mobility in Europe’s cultural and creative sectors

Indicator 1: Number and scale of transnational partnerships created with the support of the Programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Partnerships										
2021	Milestones									2027
0	132	147	145	128	146	142	150			990
	Actual Progress									Final
	136									
Are we on track :	On track									

Organisations										
2021	Milestones								2027	
0	772	861	846	867	736	829	876			5 787
	Actual Progress									Final
	774									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of Partnerships (yearly)
Cut-Off Date	31/03/2022
Data source	e-Grants
Link to the objective	Enhance artistic and cultural cooperation at European level; support the creation of European works; strengthen the economic, social and external dimension of Europe’s cultural and creative sectors.
Link MFF 14-20 / MFF 21-27	Previous Indicator: 'the scale of international activities of cultural and creative organisations and the number of transnational partnerships created'. Reporting will continue on this indicator, which has been simplified to report on the number and size of transnational partnerships.
Other methodological comments	This composite indicator will combine the numbers and geographic origins of the partnerships created under all three strands of the programme to show the overall effect on internationalising and scaling-up the activity of CCS actors. The baseline figure for 2020 comprised 130 (COOP + PLAT) partnerships involving 635 beneficiary organisations (COOP + PLAT Coordinators + partners) and additional 274 associated partners. However changes adopted for the calls (AWP, discussions SJ on Platforms etc.) has resulted in LIT being open to consortia, COOP allowing for 3 scales of project (Large, Medium and Small) compared to 2 in the previous MFF (Large and small) and PLAT being fully mono-beneficiary with cascading grants which makes it difficult to count the number of partners for this scheme. The indicator now only takes into account the number of multi-beneficiary contracts and the number of co-beneficiaries selected under COOP and LIT annual calls.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The number of partnerships is above the target due to additional funds being allocated to the LIT call than planned. The number of organisations involved is slightly above the target due to additional funds being allocated to the LIT Call

Indicator 2: Number of artists & cultural &/or creative players (geographically) mobile beyond national borders due to Programme support, by country of origin (including the proportion of women)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Artists										
2021	Milestones								2027	
0	22 549	47 934	72 830	98 398	119 834	144 189	170 053			170 053
	Actual Progress									Final
Are we on track :	No data									
Women										
	Milestones									
										Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number of participants (cumulative)
Cut-Off Date	
Data source	e-Grants
Link to the objective	Enhance artistic and cultural cooperation at European level; support the creation of European works; strengthen the economic, social and external dimension of Europe’s cultural and creative sectors with an emphasis on innovation and mobility.
Link MFF 14-20 / MFF 21-27	This rephrased indicator was introduced by the 2019 delegated act amending the indicators of the previous programme.
Other methodological comments	The Milestones are based on historical data from COOP projects funded in 2017 and completed by February 2021. This is the year for which the data is most complete in terms of beneficiaries who have submitted their eReport. The milestones extrapolate the mobility achieved from the 2017 COOP projects and represents the number of mobilities achieved per 1M€ of grant awarded to those projects (370) across all projects closed. This is likely to be a conservative estimate since there is significant mobility in the PLAT and NET schemes (most of which have not submitted their eReports for the full funding period), plus the specific mobility action. Data for Women will be calculated in 2022.

Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year. Full data on mobility achieved will be available once reported by the beneficiaries.

Indicator 3: Number of people accessing European cultural and creative works generated by the Programme, including works from countries other than their own

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	73	155	236	319	389	468	552			552
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of people (cumulative, millions)
Cut-Off Date	
Data source	e-Grants
Link to the objective	Enhance artistic and cultural cooperation at European level; support the creation of European works; strengthen the economic, social and external dimension of Europe’s cultural and creative sectors with an emphasis on innovation and mobility.
Link MFF 14-20 / MFF 21-27	This rephrased indicator was introduced by the 2019 delegated act amending the indicators of the previous Programme.
Other methodological comments	Based on the average reported ticket sales per project. If the online audience is included, the baseline will increase to 26 million people.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 4: Number of projects supported by the Programme addressed to socially marginalised groups

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	37	42	41	42	35	40	42			279
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of Projects (yearly)
Cut-Off Date	31/03/2022
Data source	e-Grants
Link to the objective	Enhance artistic and cultural cooperation at European level; support the creation of European works; strengthen the economic, social and external dimension of Europe’s cultural and creative sectors with an emphasis on innovation and mobility.
Link MFF 14-20 / MFF 21-27	Previous Programme indicator: 'the number of projects addressed to children, young people and under-represented groups and the estimated number of people reached'. This indicator was rephrased and introduced by the 2019 delegated act amending the indicators of the previous Programme. The initial baseline was extrapolated from the self-declarations of applicants to a list of priorities / topics with no specific limitations.
Other methodological comments	As of 2021 only those selected COOP projects for which the applicant has ticked social cohesion as a first or second priority in their application form will be counted. The milestones have been established based on the provisional list of selected projects from the 2021 COOP call and scaled up proportionally according to the planned budget per year. These estimates however are conservative as it is also possible that projects under other calls will address socially marginalised groups even if this is not a stated priority of the call. These additional projects will become clear in the reporting phases for the calls. This is more specific than in the past when all projects addressing the issue directly or indirectly were considered. See baseline.

Justification of the trend	

Indicator 5: Number of projects supported by the Programme involving third countries organisations

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	58	64	63	64	56	62	65			432
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of Projects (yearly)
Cut-Off Date	
Data source	e-Grants
Link to the objective	Enhance artistic and cultural cooperation at European level; support the creation of European works; strengthen the economic, social and external dimension of Europe’s cultural and creative sectors.
Link MFF 14-20 / MFF 21-27	New Indicator for 21-27
Other methodological comments	Number of partnerships projects (COOP and LIT) including entities based in non-EU 27 participating and non-participating countries (as Associated partners) . Milestones have been calculated based on the number of projects projected for selection under LIT and COOP that include non EU27 organisations as Coordinators, partners or associated partners. The milestones are conservative as they will grow as more countries sign association agreements with the programme and due to a small number of additional mono-beneficiary agreements with non EU-27 for calls based on multiannual commitments (PECE, NET and PLAT) for which a second call is planned in for 2024. The milestones consider the fluctuations in budgets planned annually for COOP and a steady stream of LIT budget allocation.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Specific Objective 2: Promoting the competitiveness and, scalability, cooperation, innovation, and sustainability, including through mobility in the European audiovisual sector

Indicator 1: The number of people accessing European audiovisual works from countries other than their own and supported by the Programme

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027

	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of people (yearly, millions)
Cut-Off Date	
Data source	Applications and final reports from beneficiaries (e-Grants)
Link to the objective	Exposure to audiovisual non-national European content increases the effective pluralism and cultural diversity in Europe. Through dynamic adaptation, consumption of cultural materials creates appetite for more of this type in the future, creating a virtuous cycle of supply and demand. The consumption of European films will contribute to strengthened European identity and sense of belonging to European community and proximity with other nations. Increased viewership means increased revenues and possibility to scale-up for the industry.
Link MFF 14-20 / MFF 21-27	New Indicator for 21-27
Other methodological comments	This composite indicator will combine the numbers and geographic origins of the partnerships created under all three strands of the programme to show the overall effect on internationalising and scaling-up the activity of CCS actors. The baseline figure for 2020 comprised 130 (COOP + PLAT) partnerships involving 635 beneficiary organisations (COOP + PLAT Coordinators + partners) and additional 274 associated partners. However, changes adopted for the calls (AWP, discussions SJ on

	Platforms etc.) has resulted in LIT being open to consortia, COOP allowing for 3 scales of project (Large, Medium and Small) compared to 2 in the previous MFF (Large and small) and PLAT being fully mono-beneficiary with cascading grants which makes it difficult to count the number of partners for this scheme. The indicator now only considers the number of multi-beneficiary contracts and the number of co-beneficiaries selected under COOP and LIT annual calls.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The number of partnerships is above the target due to additional funds being allocated to the LIT call than planned. The number of organisations involved is slightly above the target due to additional funds being allocated to the LIT Call r.

Indicator 2: Number of participants in learning activities supported by the Programme who assess they have improved their competences and increased their employability (including the proportion of women)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

	Actual Progress									Final
Are we on track :	On track									
Budget										
2021	Milestones									2027
0	160	170	165	166	167	168	169		169	166
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Budget Million EUR, number and countries of co-productions (yearly)
Cut-Off Date	31/03/2022
Data source	Applications and final reports from beneficiaries (e-Grants)
Link to the objective	Co-productions travel better than single-country productions. The design of a co-production entails an international marketing attitude. Budgets of co-productions are usually higher, and in the audiovisual sector the rule of the thumb is that the higher the budget, the greater the chance of recouping it. Therefore, co-productions contribute to increasing the competitiveness of producers by scaling-up and adopting customer-centric orientation. The countries defined in the Programme as 'Low Capacity' should especially increase their output of co-productions in order to increase the competitiveness of their industries. The Programme assists this goal, in addition to the expansion of film industries and cultural diversity in countries, which have more difficulties of manifesting their cultures in the form of films due to language barriers (there are few native speakers).
Link MFF 14-20 / MFF 21-27	New Indicator for 21-27
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year (the contracts committed under 2021 budget will only be implemented from 2022)Due to much larger budget in 2022 than in other years the expected number of projects resulting in this year should be higher. The target is a cumulative number.

Indicator 4: Number of people reached by Business to Business promotional activities in major markets

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027
0	180 000	220 000	280 000	280 000	280 000	280 000	280 000			257 000

Link to the objective	Collaboration increases competitiveness allowing organisations to scale-up in the cultural and creative sectors (CCS) which are generally small and micro-organisations. Collaboration also widens the circulation of cultural content: co-produced cultural projects have a wider potential for public access. Further, collaboration increases the internationalisation of CCS organisation activities and facilitates creating European identity through closer bonds with content created in other Member States. The Cross-Sectoral collaboration allows for faster spreading of the most innovative and creative approaches and cross-fertilisation.

Justification of the trend	The late adoption of the legal basis in May 2021 (linked to the delayed adoption of the Multiannual Financial Framework) resulted in some delays in implementation even though the Commission took mitigating measures to minimise consequences as much as possible, in cooperation with national authorities, national agencies and the Executive Agency. We will thus only be able to add finalised and consolidated data at a later stage regarding this year.

Indicator 2:Qualitative evidence of success stories in the field of artistic, business and technological innovation due to the programme support

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2027

Indicator type	Result
Unit of measurement	Number of cases of good practices and excellence (yearly)
Cut-Off Date	
Data source	e-Grants
Link to the objective	The Cultural and Creative Sectors (CCS) have a value which lies in their symbolic influence on audiences and ability to innovate. The Programme has a much smaller scale compared to the size of the sector and measuring its impact is difficult. It is crucial that the Programme leverages its support to critical parts of the sector. This indicator monitors qualitative challenges tackled and changes which have been achieved within key areas of the CCS resulting from support of the Programme.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Creative Europe Programme

Specific Objective 2: To promote the transnational circulation of cultural and creative works and transnational mobility of cultural and creative players, in particular artists, as well as to reach new and enlarged audiences and improve access to cultural and creative works in the Union and beyond, with a particular focus on children, young people, people with disabilities and under-represented groups

Indicator 1: MEDIA Sub-programme: the number of admissions for non-national European films in Europe and European films worldwide (10 most important non-European markets) in cinemas

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Europe										
2010	Milestones									2020
69			71	71	71	71	71			71
	Actual Progress									Final
	103	91	89	98	94

Worldwide										
2010	Milestones									2020
61			80	85	85	85	85			85
	Actual Progress									Final
	82	106	68	97	87					
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of admissions (yearly, millions)
Cut-Off Date	31/03/2022
Data source	European Audiovisual Observatory (EAO) Yearbook Keytrends 2019/2020, p. 22
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The definition of the indicator as defined by the legal basis specifies the meaning of 'worldwide' (=10 most important non-European markets).
Full metadata available at this address	
Justification of the trend	Europe: In 2019, a total of 86 million tickets were sold in non-national European markets Worldwide: In 2019 export admissions outside Europe (34 markets) amounted to at least 94 million tickets. This outgrew the expectations set in 2014. No results are officially available for 2020 yet, however for sure the growing trend was severely disrupted by COVID-19 crisis, unpredictable and uncontrollable by the Programme.

Indicator 5: Culture Sub-programme: the number of people directly and indirectly reached through projects supported by the Programme

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2017	Milestones									2020
6.7					To be assessed in the performance monitoring report to be published in the first quarter of 2019		Increase of 5% in comparison to 2017 results			Increase of 5%
	Actual Progress									Final
				3.2	4		17			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of People in Millions (yearly)
Cut-Off Date	31/03/2022
Data source	Reports from cooperation project beneficiaries (2014-2016). Creative Europe Culture Sub-Programme.
Narrative	No baseline, first known results (2017) were available in 2018. Target is an increase from baseline (2017)
Methodology	
Link MFF 14-20 / MFF 21-27	

Other methodological comments	The actual figure for 2020 is an estimation based on average: A sample of 163 projects (funded under CE 2014-20) has given an average of 151 065 persons (tickets/admissions/visitors) reached directly and 385 468 reached online per project.
Full metadata available at this address	
Justification of the trend	The trend is proportional to the number of projects funded by year. Baseline figures: Indirect - includes total online audience reached (5 million); Direct - predominantly ticket sales (1.7 million)

Specific Objective 3: To strengthen the financial capacity of SMEs and micro, small and medium-sized organizations in the cultural and creative sectors in a sustainable way, while endeavouring to ensure a balanced geographical coverage and sector representation

Indicator 4: Number of SMEs and micro, small and medium-sized organisations benefiting from the Guarantee Facility, categorised by national origin, size and sectors

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Indicator type	Result
Unit of measurement	Number of Beneficiaries / Sub sectors / Member States (yearly)
Cut-Off Date	31/03/2022
Data source	European Investment Fund: Q3/2018 EIF Operational Report of the guarantee facility
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Beneficiaries: 86.6% of benefitting companies had <10 employees, 11.6% had 10-50 employees and 1.8% had 50-250. Sub-sectors: the highest uptake of the tool can be assigned to: audiovisual (NACE J59 and J60.2 - 40%), print and publishing (C18 and J58 - 16.4%), computer programming (J62- 8.7%) and specialised design (M74- 7%). Participating Countries: 3 626 beneficiaries in 12 countries (AT, BE, BG, CZ, DK, FR, IT, PL, PT, RO, ES, SE), with the highest uptake through FR, ES and IT and PT intermediaries (altogether 77% value of the loans). Targets: Beneficiaries and Member States - accumulation of the MFF, Sub-sectors - goal set for the final year of the programme.
Full metadata available at this address	
Justification of the trend	Breakdowns by national origin, size and sectors of SMEs or organisations are provided in the annual report from the European Investment Fund. The results of the CCS, Guaranteed Facility (GF) are lower than planned due to budget profile of Creative Europe. Budget for the CCS GF was only available as from year 2016 (and not 2014 as originally planned). Due to a delay in launching the Instrument, we expect to reach the target in 2022.

Specific Objective 4: To foster policy development, innovation, creativity, audience development and new business and management models through support for transnational policy cooperation

Indicator 1: Number of Member States making use of the results of the open method of coordination in their national policy development

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
10	12	13	14	15	16	17	20			107

Cut-Off Date	31/03/2022
Data source	Media and Audiovisual Action Plan
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The MAAP is composed of 10 complex initiatives.
Full metadata available at this address	
Justification of the trend	The number of initiatives is lower than expected, however the complexity of each initiative has grown over time. Creative Europe is both channelling and kindling other policy initiatives.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	6.89	7.30	7.30	7.40	7.50	7.60	7.70	51.69	3%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

The Programme does not directly support initiatives climate mitigation; however, the priority of environmental sustainability is mentioned in the Call objectives. Financial contribution to climate mitigation is limited within the proposed activities. The Culture sub-programme continuously co-funds projects encouraging the sector to adopt more environmentally friendly practices and business models Further, collaborative efforts within MEDIA are ongoing to set standards for calculating and reducing CO2 emissions within the audiovisual production chain.

6.1.3. Key achievements

- Environmental sustainability and the fight against global warming have been set out as a specific priority for the selection of cooperation and network projects in the new Creative Europe. In addition, all projects have to explain in their application how their projects will contribute to the green deal even though it is not the main objective of their projects.
- A study was launched in 2021 to identify good practices and measures to improve the “green dimension” of Creative Europe.
- Under most MEDIA calls the applicants can be awarded up to 5/100 points if they propose a sound, active sustainability strategy in their overall business and in the project in question.
- Also under MEDIA, collaboration and dialogue with the industry is ongoing about how to set common standards for CO2 emissions calculation in the audiovisual production chain.

In the new 2021-27 programme environment, taking ecological concerns into account in terms of design and implementation is considered a cross cutting issue for all funded projects, in order to reduce their impact on the environment. The environmental aspects are systematically assessed in the evaluation of the proposals.

In addition, to accelerate the green transition of the culture and creative sectors, the cooperation and network schemes of the culture stand will include an explicit “green deal” priority to encourage projects to explore, test and disseminate innovative greener practices.

In parallel to funding, policy actions such as studies, dialogues with stakeholders or coordination with Members States are held. For instance, in accordance with the Work Plan for Culture 2019-2022, a group composed of Member States’ experts (Open Method of Coordination working group - OMC) in 2021 was working on “Strengthening Cultural Heritage Resilience for Climate Change”. The group was actively working on identifying and exchanging good practices and innovative measures for safeguarding cultural heritage in relation to climate change. The group was also examining the contribution cultural heritage can make to mitigating and combating climate change in line with the European Green Deal’s goals. The final report, including recommendations, will be published at the end of 2022.

As a cross-sectoral effort and corresponding to a respective report by the European Parliament, a study was launched in 2021 to identify good practices and measures to improve the “green dimension” of Creative Europe and a brochure presenting key projects recently funded is in preparation and will be published early 2022.

In 2021 MEDIA, based on the study prepared in previous year (Philipp Gassmann, *Greening the European Audiovisual Industry – the Best Strategies and their Costs*), deepened dialogue with the industry to come up with standards of calculating the CO2 emissions in the whole audiovisual production chain, in line with the Action 6 of the Europe's Media in the Digital Decade: An Action Plan

A stakeholders’ dialogue on *Greening the audiovisual sector* was launched in June 2021, gathering audiovisual professionals across the value chain and representatives from the public sector. Participants agreed on the need to take actions to reduce carbon emissions, starting by carbon emissions’ measurement. Measuring emissions with different calculators does not allow comparability and benchmarking of results, ultimately weakening their effectiveness. Consistent measurement methodologies and benchmarks are crucial for the sector to reduce its carbon impact.

Thanks to the meeting prepared since the Autumn of 2021, in February 2022 the owners of existing calculators have agreed to work together **towards the development of a unified measurement methodology of CO2 emissions**, which will focus on a limited number of categories and work either as a stand-alone initiative or as a plug- in for existing calculators. The harmonisation of data informing carbon factors and benchmarks for each parameter is instrumental to allow comparability and readability across borders. The Commission will back this industry initiative by supporting as from 2022 the development of an open-source methodology, in cooperation with existing calculators; incentivizing the use of minimum standards of measurement and benchmarking via Creative Europe MEDIA programme; and facilitating further work on common methodologies on new carbon factors.

The European methodology for calculation of carbon impact will be a first step towards the development of a unified label for green production.

Also, since 2022 additional MEDIA calls for proposals will be eligible for the possibility to receive points by the applicants in the evaluation for including greening in the company strategy and project. MEDIA will also continue to raise awareness about comprehensive sustainability in the whole audiovisual production chain (including also such elements as training of audiovisual professionals) through its communications.

The Culture Sub-programme has continuously co-funded projects encouraging the sector to adopt **more environmentally friendly practices** and business models. For instance, the project Creative climate Leadership, a EUR2 million pan-European, interdisciplinary programme, connects and enables a community of cultural leaders to take an active role in shaping an environmentally sustainable future for the European cultural sector. Other projects such as the cooperation project ‘ACT’ (Art, Climate, Transition) run by a 10 organisations consortium led by Theatre Rotterdam aims at **raising awareness and launching debates** on climate issues.

6.2. Contribution to gender equality

6.2.1. Key achievements and performance

2021 estimates	2022-2027 programming	Total
----------------	-----------------------	-------

2021	2022	2023	2024	2025	2026	2027	
1 Score 1: 4 Score 0*: 302							

(*)Consolidated information about the annual commitments implemented (total per score by programme **in EUR Million**)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

In the 2021-2027 programme, **gender equality is considered as a cross cutting issue for all strands of the programme**: all funded projects consider equality in the design and implementation of their project and this aspect will be given attention in the evaluation of the proposals.

In addition, to accelerate practice changes in the culture and creative sectors, the cooperation scheme of the Culture strand will include an **explicit inclusiveness priority** to encourage projects to explore, test and disseminate innovative gender equality practices.

The strategy for 2021-2027 in the audiovisual sector foresees further policy development by including gender activities in all European actions towards the AV sector. The focus of the strategy has moved from gender alone to the broader concept of diversity. In 2021 MEDIA:

- introduced an encouragement for companies to include gender and inclusiveness strategies in their businesses. Creative Europe applicants are requested to show the actions taken in their companies in support of diversity and gender equality
- introduced support actions targeting women under MEDIA (in the skills scheme, through capacity building and mentoring),
- continued awareness raising (with an ambitious campaign CaractHER in the social media, promoting women increasing audiovisual workforce in non-obvious positions) and data collection. The materials of the campaign, including videos, are available at the dedicated website <https://character.eu/>. They were also broadcasted in France by the public service broadcasters.

In the next years MEDIA will continue structured dialogue with the stakeholders and exchange of good practices.

The content of the works supported under MEDIA strand is completely independent of the Programme and not evaluated. However, it happened that one of high-quality proposals selected under the TV scheme in the 2021 call is a documentary dedicated to the role of influential female animators. This coincidence is an example of how MEDIA priorities are aligned with the industry's, and social interests.

Equality between women and men is a fundamental EU value and a driver of more diverse content and connecting with wider audiences. The Commission has recognised the strategic importance of gender diversity to sustain a rich, highly creative audiovisual industry and cultural and creative sector as well as more open, inclusive and competitive societies. In recent years also the stakeholders in the audiovisual and other cultural and creative sectors became very aware of the challenges in this respect. In 2014-2020 progress was achieved through policy dialogue with stakeholders and Member States and funding of concrete actions and projects.

In the area of culture, the Council's Work Plan for Culture 2019-2022, implemented jointly by the EU Member States and the Commission, includes gender equality among its five priorities. The following actions have been implemented

Exchange of experience between the Member States: The OMC experts' group on gender equality discussed gender gaps and their drivers in the CCS in the Member States and provided policy recommendations and concrete actions under the Creative Europe programme. **The OMC group published a report in June 2021** with recommendations to different stakeholders (policy makers, cultural institutions etc.) on how to achieve gender equality and foster the use of culture as a means to promote equality and diversity. The challenges addressed include data collection, gender stereotypes and gender violence, access to resources and to the labour market, gender pay gap and access to leadership positions.

Dialogue with the sector: Key issues for gender equality were addressed in the Voices of Culture structured dialogue in 2019 as well as through an action plan with the audiovisual industry. The resulting report proposed targeted measures and initiatives.

Project funding: Several projects promoting gender equality have received co-funding under Creative Europe, and the new Creative Europe programme will be strengthening the aspect of gender equality across the programme. For example, the Live DMA network published a Diversity Roadmap, which makes recommendations on diversity and gender equality in live music venues, clubs and festivals.

6.3. Contribution to the sustainable development goals

SDG 3 Ensure healthy lives and promote well-being for all at all ages

The CCS GF (through its capacity building line) financed a study on the social impacts of news media in 2021. The preliminary results shows that healthy, thriving news media ecosystems increases the wellbeing of citizens. The final report will be published in 2022.

Example: support to cross-border investigative journalism calls, started in 2021. Budget in 2022: 7.5 million EUR

SDG 5 Achieve gender equality and empower all women and girls

As described in point 6.4.2.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

The programme contributes to the political priorities of the Commission, in particular relating to jobs, growth and investment and the European Digital Single Market by supporting the competitiveness of the cultural and creative sectors, in particular the audiovisual sector, through capacity building and skills development and through testing new business models in a rapidly evolving digital context. By allowing participation of non-EU cultural and creative operators and the participation of third countries, the programme also contributes to making the EU a stronger global actor. At another level, Creative Europe helps address current political and societal challenges through the power of culture to reach the hearts and minds of citizens and boost confidence in our shared European values.

Example: increasing skills of the AV professionals 2021-2027. Budget of the dedicated call for Training in 2022: 20.4 million EUR.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

In the WP2022 prepared in 2021 the Creative Innovation Labs call has a special angle: the projects should contribute to the New European Bauhaus framework for inclusive and sustainable product and experience design.

Example: Creative Innovation Labs budget 2022: 13.6 million EUR.

SDG 12 Ensure sustainable consumption and production patterns

As described in point 6.1.3.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Under the cross-sectoral strand, Creative Europe supports journalism. Free, pluralistic and thriving news media constitute a "fourth power" – a counterweight monitoring the legislative, executive and judiciary structures, ensuring a well functioning democracy. They inform and educate the citizens.

Example: support to cross-border investigative journalism calls, started in 2021. Budget in 2022: 7.5 million EUR

SDG 17 Strengthen the means of implementation and revitalize the global partnership

MEDIA supports co-production funds located in the EU aimed at cooperating with film institutions in developing countries. With the support from MEDIA in 2014-2020 they supported 114 co-productions between EU and developing countries partners in production and 83 in distribution. No data is available yet for the 2021.

Example: funding co-productions with developing countries. Budget for 360 call for proposals in 2022: 20 million EUR.

HEADING 2B: Resilience and Values**Justice Programme****Lead DG:JUST**

6.4. Contribution to gender equality	643
6.5. Contribution to the sustainable development goals.....	644

1. Overview**1.1. Challenges**

A working European area of Justice and effective national justice systems are necessary for a flourishing internal market and for upholding the common values of the EU. Promoting EU values also means protecting them and ensuring an environment respectful of the rule of law and the independence of the judiciary, where mutual recognition and mutual trust among Member States are enhanced. In this context, the following persisting challenges have been identified:

- Judicial cooperation in civil and criminal matters still faces various obstacles, and access to justice across Member States remains difficult. One of the recurrent obstacles to mutual recognition and judicial cooperation is a lack of trust in other Member States' judicial systems. There is also a need to simplify and digitise communications, access to procedures and legal information and connection to and between national systems in a cross-border context. Tools for collecting comparative information about the quality, independence and efficiency of Member States' justice systems need to be improved.
- The level of knowledge about EU acquis and EU instruments needs to be improved across the EU. However, national training providers tend to invest their scarce resources in trainings on national law rather than on EU law and in national training activities rather than cross-border ones.
- In the context of economic crises, persisting inequalities and challenges such as of migration put the fundamental rights and the EU fundamental values to the test. In some cases, the rule of law, access to justice, space for civil society and the independence of the judiciary are also challenged.

1.2. Mission (General objectives)

The Justice programme (here below the Programme) will support the further development of an EU area of Justice based on the EU's values, the rule of law, and mutual recognition and trust. It will facilitate access to justice and promote judicial cooperation in civil and criminal matters, and the effectiveness of national justice systems.

The challenges identified above are common to all Member States and have cross-border dimensions. While action at national level is important, individual Member States alone do not have sufficient leverage to tackle these challenges. It is through EU-funded initiatives that remaining inefficiencies related to improving access to justice, judicial cooperation in civil and criminal matters and the incomplete implementation of EU law can best be tackled.

1.3. Specific objectives

The Programme has the general objective of contributing to the further development of a European area of justice based on the rule of law, including independence and impartiality of the judiciary, on mutual recognition, mutual trust and judicial cooperation, thereby also strengthening democracy rule of law and fundamental rights.

The Programme has the following specific objectives:

- (a) (Judicial Cooperation) to facilitate and support judicial cooperation in civil and criminal matters, and to promote the rule of law independence and impartiality of the judiciary, including by supporting the efforts to improve the effectiveness of national justice systems, and the effective enforcement of decisions;
- (b) (Judicial Training) to support and promote judicial training, with a view to fostering a common legal, judicial and rule of law culture, as well as the consistent and effective implementation of the Union's legal instruments relevant in the context of this programme;
- (c) (Access to Justice) to facilitate effective and non-discriminatory access to justice for all, and effective redress, including by electronic means (e-justice), by promoting efficient civil, and criminal procedures and by promoting and supporting the rights of all victims of crime as well as the procedural rights of suspects and accused persons in criminal proceedings.

1.4. Public intervention context

The Justice programme will support the further development of an EU area of Justice based on EU's values, the rule of law, and mutual recognition and trust. The Treaty on the Functioning of the European Union (TFEU) establishes the creation of an area of freedom, security and justice, with respect for fundamental rights and the different legal systems and traditions of the Member States. Hence, the competence of the EU in this area is shared with Member States. The creation of a common area requires transnational cooperation mechanisms and networking opportunities, which can typically not be achieved by Member States acting alone. Principles such as mutual trust and mutual recognition of judicial and extra-judicial decisions can be supported more efficiently by action at EU level.

The Justice programme is a key player in the area of judicial training where the actual results demonstrate an improvement in the impact of the programme's actions in this field. In addition to this, the Justice programme is one of the tools to implement the [strategy on European judicial training for 2021-2024](#). In the area of victims' rights, the Commission will focus on the implementation of actions under the first-ever [EU Strategy on victims' rights](#) (2020-2025). Digitalisation of justice systems is another important objective as part of a new push for European democracy and in line with the political priority of a Europe fit for the digital age. The general objective for 2021-2022 is to support initiatives identified in the 2 December 2020 Commission

Communication on the [Digitalisation of justice in the European Union](#), and the Council [e-Justice Strategy](#) and [Action Plan 2019-2023](#)¹. This will be accomplished by implementing support actions for digitalisation of justice, introducing new features and enhancements to the [European e-Justice Portal](#), as well as supporting the implementation of e-Justice projects, insofar as project initiatives have a European dimension and bring added value.

Consistency, complementarity and synergies exist in particular within the Justice, Rights and Values Fund with the Citizens, Equality, Rights and Values Programme (under its Union Values Strand) but also with the Digital Europe Programme and the Recovery and Resilience Facility in the area of digitalisation of justice. To a lesser degree, synergies can exist between the Programme and the Single Market Programme, Border management and Security, in particular the Asylum and Migration ('AMIF') and the Internal Security Funds, the Erasmus+ Programme, the Framework Programme for research and innovation, the Instrument for Pre-accession Assistance, and the LIFE Regulation.

1.5. Actions

The Justice programme supports a broad range of beneficiaries that play an important role to the development of an EU area of justice. This includes, primarily, members of the judiciary and judicial staff, but also public authorities, academia/research institutes, training bodies, as well as civil society and non-profit organisations.

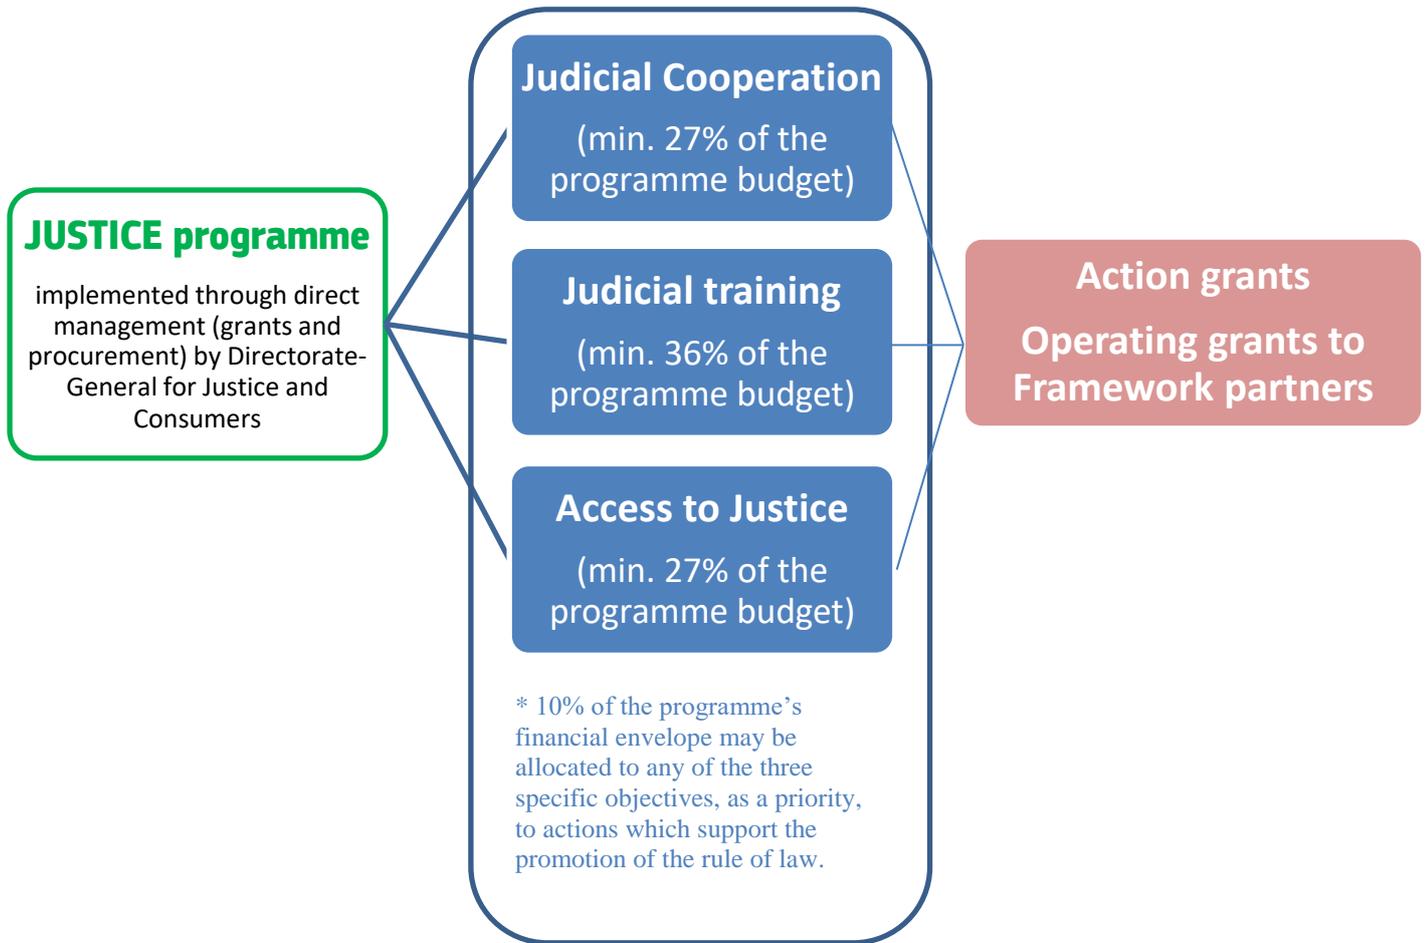

The Justice programme funds activities that ensure the full and consistent application of EU law and promote the smooth functioning of the EU area of justice. In particular, the following activities shall be eligible for funding:

- Awareness-raising, dissemination of information to improve the knowledge of Union policies and of Union law including substantive and procedural law, of judicial cooperation instruments, of the relevant case-law of the Court of Justice of the European Union, of comparative law and of European and international standards, including the understanding of the interaction between different areas of law.
- Mutual learning through exchange of good practices among stakeholders to improve knowledge and mutual understanding of civil and criminal law and the legal and judicial systems of the Member States, including the rule of law and access to justice, and enhancing mutual trust.
- Analytical and monitoring activities to improve the knowledge and understanding of potential obstacles to the smooth functioning of a European area of justice, to improve the implementation of Union law and policies in the Member States.
- Training relevant stakeholders to improve the knowledge of Union law and policies, including inter alia substantive and procedural law, fundamental rights, the use of Union judicial cooperation instruments, the relevant case-law of the Court of Justice of the European Union, legal language and comparative law.
- Information and Communication Technology (ICT) as well as e-justice tools development and maintenance, taking into account security, privacy and data protection considerations, to improve the efficiency of judicial systems and their cooperation by means of information and communication technology, including the cross-border interoperability of systems and applications.
- Developing capacity of key European level networks and European judicial networks, including networks established by Union law, to ensure the effective application and enforcement of Union law, to promote and further develop Union law, policy goals and strategies in the areas of the programme.
- Supporting civil society organisations and non-profit stakeholders active in the areas of the Programme to increase their capacity to react and advocate as well as to ensure adequate access for all citizens to their services, counselling and support activities, thereby also contributing to democracy, the rule of law and fundamental rights.
- Enhancing knowledge of the programme and dissemination, transferability and transparency of its results and fostering citizen outreach, including by organizing forums for discussion for stakeholders.

1.6. Delivery mode

The programme will be implemented through direct management (grants and procurement). Directorate-General for Justice and Consumers is the lead DG for the programme's implementation.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/693 of the European Parliament and of the Council of 28 April 2021 establishing the Justice Programme and repealing Regulation (EU) No 1382/2013 (OJ L 156, 5.5.2021, p. 21).	2021 - 2027	298.97

1.8.2. Legal basis explanation

Treaty on the Functioning of the European Union, and in particular, Article 81(1) and (2), Article 82(1)

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	46.7	43.6	42.2	41.8	41.8	41.7	41.4	299.3
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities	0.0	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	0.0

(*) Only Article 15(3) of the financial regulation1.9. Link with the 2014-2020 MFF

The programme's financial programming is linear. There are no contributions from other programmes.

The 2021-2027 Justice programme ensures the continuation of the Programme, whilst reinforcing efforts to promote the rule of law. The only change compared to as the 2014-2020 Multiannual Financial Framework (MFF) concerns the drugs prevention policy area (4th specific objective of the Justice programme in 2014-2020), which will be implemented in the 2021-2027 MFF via the Internal Security Fund.

1.10. Relevant websites providing more information

Information on the Justice programme, its priorities, allocated budget, publication of calls of proposals, project results, news and useful links are all available on the Funding & tender opportunities portal: <https://ec.europa.eu/info/funding-tenders/opportunities/portal/screen/programmes/just>.

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	46.7	299.3	16%
Payments	21.0		7%

The commitment appropriations **2021** were used for individual commitments for grants from the 2021 calls for proposals. 58 grants were signed in 2021 from the 2021 calls for an amount of EUR 26.09 million. At the end of 2021, a global commitment was made for the budget to be used in 2022 to sign the remaining grants from the 2021 calls: 12 grants still to be signed for an amount of EUR 3.14 million. The payment appropriations 2021 were used to pay the pre-financings of the grants signed in 2021 from the 2021 calls. The pre-financing rate for Justice action grants is 65% while it is 80% for operating grants.

After a successful 2021, the objective of DG Justice and Consumers for **2022** is to maintain the outstanding implementation in the years to come. Following the adoption of the 2022 EU budget, it is planned to implement EUR 42.5 million under the Justice programme. The 2022 calls for proposals were already published in November 2021 and the deadlines for submissions have been planned for the first semester 2022 in order to allow for the respect of budget annuality, while taking into account that 2022 will still be still a transitional year in the beginning of the new MFF.

The level of commitment appropriations requested in the context of the draft budget **2023** will be in line with the Financial Programming of the Justice Programme (as presented in the Draft Budget 2022 while accounting for the adoption of any new legislative proposals). The payment appropriations requested for 2023 are calculated based on a precise planning and taking into account the pre-financing rate to be paid. More specifically, it includes final payments for some grants signed in 2021, pre-financings for grants to be signed in 2023 (related to 2022 calls) and pre-financings for grants signed in 2023 linked to 2023 calls.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	317.0	318.0	100%
Payments	241.9		76%

2020 was the last year of the 2014-2020 MFF and of the Justice Programme 2014-2020. 10 grants from the 2020 calls under the Justice Annual Work Programme for 2020 remained to be signed in 2021 for an amount of EUR 3.85 million.

The completion line (legacy line) of the Justice programme is used to pay final payments from past commitments. In 2021, 50 final payments for grants from the old Justice programme were paid for an amount of EUR 4.05 million. In 2021, the payment appropriations were also used to cover final payments on pre-2021 commitments still outstanding. As regards 2022, the payment appropriations will be used to cover the remaining final payments still outstanding.

The Justice programme was affected by the COVID-19 crisis. By 31 December 2021, 138 amendments were made, out of which 42 related to reasons linked to the pandemic, mostly to request and extension of the eligibility period. This significant number of

amendments signed following requests for extending the duration of grant agreements due to the COVID-19 crisis, will mechanically lead to delayed budgetary execution of the corresponding payment credits.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

2021 has been an extremely challenging year, in particular due to the transition between two Multiannual Financial Frameworks, the very late adoption of the Justice Programme Regulation (28 April 2021), and the continuation of the COVID-19 pandemic. Nevertheless, DG Justice and Consumers has ensured an exceptional implementation of the Justice programme, providing funding to public entities, NGOs, EU networks, IT systems, and funding several key activities in support of policy and legislative developments.

3.1.2. Active programme performance

The work programme 2021-2022 of the Justice programme has provided around EUR 45.3 million for 2021 in support to actions promoting judicial cooperation, promoting judicial training and implementing projects in support of access to justice for all. Funds committed in the work programme were planned to be deployed via grants (about 73% of the total allocation), procurement (almost 27% of the total allocation).

2021 calls for proposals were launched as early as possible in 2021. Altogether, 7 calls for proposals have been organised in the first year of the Justice programme for the total budget of approximately EUR 33 million. Under these calls, 198 proposals have been received, from which 77 projects have been awarded for funding. These projects started only at the end of year 2021 or in 2022; for this reason, they have not produced results yet.

By January 2022, 57 grant agreements have already been signed.

These actions include trainings, seminars and mutual learning events, research and studies, development of IT tools, awareness raising and media campaigns to the ultimate benefit of the general public.

3.1.3. Previous Programme Performance

The Justice programme overall has been successful so far and provided added value.

The outputs of the Justice Programme in 2014-2020 are closely linked to the Commission activity on preparing, supporting and ensuring the correct implementation of an important number of EU legal instruments in civil and criminal law, improving their enforcement and remedy capacities in Member States, and ensuring an adequate cross border and EU level cooperation.

The Justice Programme contributes to the development of a European area of justice based on mutual recognition and mutual trust, by supporting judicial cooperation and judicial training.

The Justice Programme helped ensuring the correct implementation of existing EU legislation in various ways. It has supported conformity check studies for EU legislation transposed in the EU Member States. It has equally successfully supported judicial networks and judicial training. Proper application of EU law is in fact a key element to allow EU citizens and business to benefit from EU law. This is achieved through both preventive actions (workshops, expert meetings, stakeholder dialogue, technical guidelines for national authorities and training of justice professionals financed through the Programme) and infringement procedures. The activities funded by the Programme resulted in better implementation and functioning of EU justice instrument (e.g. European Investigation Order, European Arrest warrant and surrender procedures, European Protection Order, European Account Preservation Order, family law). Positive effects of the funded activities come from the training activities supported, which contribute to a better application and use of the EU justice instruments. A better implementation and functioning is achieved also by e.g. bringing practitioners of different Member States together and by identifying issues that could then be addressed in an updated EAW handbook. Analytical activities (i.e.: studies and expert meetings, either under the Framework Contract to assess the implementation of directives, or under projects supported by action grants and feeding into our policy reflection) also helped prepare or accompany new legislation or respond to policy changes in the areas covered by the programme.

The Justice programme also supported activities related to the promotion of rule of law via all its instruments and spanning three specific objectives. Namely, action grants on judicial training offered training to the judiciary on the main principles and values stemming from the CJEU and European Court of Human Rights case law and international documents, but also action grants funded projects to improve the quality of national judicial systems. Operating grants have supported the co-operation with European networks in the field of judicial cooperation and in the field of access to justice directly feeding into the work of the rule of law report. Via the European Judicial Training Network (EJTN) operating grant, EJTN prioritised as part of its activities the topic of the rule of law by making it part of the human rights sub-working group of EJTN and organising dedicated judicial training activities. The programme has also funded data collection necessary for the production of the annual report on the rule of law and the European Justice Scoreboard which evaluates and compares the effectiveness and efficiency of national judicial systems and which feeds into the European Semester. Funding has also facilitated the organisation of mutual exchanges of information between Member States, in particular through a network of national contact persons. Preparation has also started for the funding of follow-up (communication) activities to the 17 July 2019 Communication on *"Strengthening the Rule of Law within the Union – A*

blueprint for action" which specifically refers to an annual rule of law event open to national stakeholders and civil society organisations and communication activities to promote a rule of law culture among the general public, and to promote awareness about the relevant CJEU case law and Council of Europe standards are in preparation.

The actions of the programme as far as the *Specific Objective 1: Judicial cooperation in civil and criminal matters* is concerned are on track to achieving their goals:

- The Programme has helped to improve the implementation and functioning of existing legislative cooperation instruments. This applies both to older instruments where the Programme allowed to identify shortcomings or problems in implementation and application, and more recent ones, where it allowed to equip practitioners with better knowledge on how to apply them. Through procurement actions, regular meetings gathering practitioners from Member States were organised, and compliance studies were financed. Action grants to cross-border projects and operating grants to key European networks and stakeholders have also contributed to making Member States work together better and improved mutual trust. In general, the financial tools offered by the Programme can be seen as a useful complement to the Commission's infringement powers. Moreover, the Justice Programme has also helped, through the identification of gaps and problems in the existing legal framework, through action grants, but also studies and expert meetings, to prepare new legislation proposed by the Commission (e.g. Regulation on mutual confiscation of freezing and confiscation orders, e-evidence package). It has demonstrated the necessary flexibility to allow the Commission to take action to react to events like terrorist attacks, e.g. by funding activities on radicalisation in prisons or projects improving cooperation and information exchange between Member States, often in response to calls from Council or European Parliament. The Programme has also allowed to strengthen cooperation with international organisations such as the Council of Europe, e.g. on prison monitoring.
- In 2016, pursuant to the Council Conclusions from 9 June 2016 on the European Judicial Cybercrime, IT development activities have started towards the establishment of a common e-Evidence Digital Exchange System (e-EDES). The Commission completed the software development of the first version of e-EDES in 2021. This first version of the system enables the secure electronic communication between the competent national authorities, digitalising exchanges between competent authorities of European Investigation Orders and Mutual Legal Assistance requests. The system will significantly facilitate and expedite cross-border cooperation in criminal matters. While software development is completed, Member States needed additional time to test the system and to make all the necessary arrangements at administrative level. The COVID-19 pandemic had an impact on the possibility to deliver training on the system. While development activities have been completed, the rollout of the system was delayed, due to difficulties encountered by Member States, e.g. reduced training possibilities caused by the COVID-19 pandemic. Therefore, the system's rollout is expected in 2022.
- The programme has supported the development of ICT tools with the purpose of enhancing access to information. Under ECRIS, the European Criminal Records Information System, a decentralised IT system operated by the central authorities of the EU Member States, in 2020 the increase in the number of exchanges of information was more than tenfold compared to the 2012 baseline. The programme also supported projects implementing the needed adaptations of the national criminal records systems for the linking and exchange of fingerprints with the ECRIS-TCN central system.
- The Programme has also contributed to the effective, comprehensive and consistent implementation of Union law policies and in particular it has funded projects in the area of fight against radicalisation in prisons. Improving prison conditions has become a political priority at EU level because they affect the efficient operation of EU mutual recognition instruments such as the European Arrest Warrant (EAW), and because of the risk of radicalisation in prisons.

The Justice Programme has overall performed very well in achieving its goals as far as the *Specific Objective 2: Judicial training* is concerned. Training is an important instrument of the Programme with a view to supporting judicial cooperation in civil and criminal matters and fostering a common legal and judicial culture and effective access to justice in Europe. Training activities ranged from seminars, e-learning, webinars, to conferences, compilation of guidelines and training methodologies, organisation of staff exchanges and support for the European Judicial Training Network (EJTN). In 2020 and in 2021, most training activities took place online, adapting delivery to the pandemic and the travel restrictions. Online activities gave a tremendous boost to participation in the training activities supported by the Programme, especially regarding lawyers' attendance: the overall number of participants reached a record number of 22 423 in 2020: around 7 % of all the justice professionals who received training on EU law that year. Under the EJTN's annual training programmes (also supported via the Justice Programme), the number of participants dropped to 5 074 in 2020 as all activities cannot be transformed in online ones; for e.g. most face-to-face exchanges could not take place. However the 'cost-to-serve' ratio (i.e. the price per person for one training day offered by the EJTN) decreased to an exceptional level of EUR 239 as online activities are cheaper than cross-border face-to-face ones. The mid-term evaluation and the ex-post evaluation of the 2014-2020 Justice programme confirmed a positive effect of the financial support under the judicial training specific objective: trainings led to the increase of knowledge and know-how of the practitioners, as well as of mutual trust as far as the operating grant of the EJTN is concerned (through the exchanges).

The actions of the programme as far as the *Specific Objective 3: Access to justice* is concerned are on track to achieving their goals to facilitate access to justice for all, including to promote and support the rights of victims of crime, while respecting the rights of the defence.

- The Programme has helped to improve the implementation and functioning of existing instruments on procedural rights and victims' rights, e.g. the Victim's Rights Directive (establishing minimum standards on the rights, support and protection of victims of crime) and the development and implementation of the measures related to the 2009 Roadmap on strengthening the procedural rights of suspects and accused persons in criminal proceedings. This applies both to older instruments, where the Programme allowed to identify shortcomings or problems in implementation and application, and more recent ones, where it allowed to equip practitioners and national authorities with better knowledge on how to apply them. Through procurement actions, regular meetings gathering practitioners from Member States were organised, and compliance studies were financed. Action grants to cross-border projects and operating grants to key European networks and stakeholders have also contributed to making Member States work together better and improved mutual trust. The activities financed aimed at capacity-building of professionals, multi-disciplinary cooperation, exchanges of good practices, dissemination and awareness-raising, etc. The financial tools offered by the Programme can be seen as a useful complement to the Commission's infringement powers. Moreover, the Justice Programme has also helped, through the identification of gaps and problems in the existing legal framework, through action grants, but also studies and expert meetings, to prepare new legislative initiatives.
- e-Justice related actions have contributed in a tangible way towards achieving the goals of this Specific Objective. In particular:
 - The European e-Justice Portal⁽²⁾, a one-stop shop for justice matters, contributes significantly to improving and facilitating the access to justice for citizens, businesses, national authorities, legal practitioners and the judiciary. Over the years, it has grown to cover more than 150 topics in a wide variety of areas. The Portal gives access to information on a number of EU cross-border proceedings, as well as national information such as sources of case law, information on judicial systems in the EU, rights of victims and defendants, training material and many others. Thanks to the continuous enhancements to the Portal, it now sees a gradual and steady increase in terms of annual visits (4.4 million visits in 2021). Good examples of successful projects today hosted on the Portal are the 'Find a lawyer' and 'Find a notary' search tools, the interconnection of the business and insolvency registers, the search engine for European and national case law (the ECLI Search Engine), etc. In the period 2014-2021, an important activity has been the modernisation of the interface of the e-Justice Portal, including new functionalities and online tools, which went live in June 2021.
 - The e-Justice Action Grants supported delivering on the priorities in this domain, namely by providing eligible national entities with financing towards supporting the implementation of the e-Justice Action Plans for the periods 2014-2018 and 2019-2023.
 - The Commission also carried out relevant studies under the Justice Programme, aiming to support the implementation of the e-Justice Action Plans, such as the study on the use of innovative technologies ('Legal Tech') in the justice field. In 2021, the Justice Programme also financed the Impact Assessment on the [Commission's initiative for the digitalisation of cross-border judicial cooperation](#) (SWD(2021) 392 final).

The COVID-19 pandemic has continued to have an impact on the implementation of the programme in relation to funds awarded via action grants or operating grants, however this cannot be fully assessed yet since reporting for this period will only be done later at project closure or final report time. Many of our beneficiaries converted activities such as training to online events as much as possible however much less funding is needed for such events, which will result in recovering funds in upcoming years. In some cases activities have not been completely cancelled, just reduced in scope (e.g. the parts that were only meaningful in case of physical interaction have been delayed or cancelled in some cases). EJTN's case provides a clearer picture on the COVID impact, which is representative of the situation for other beneficiaries as well: when the pandemic hit in spring 2020, most stakeholders, including the training ones, postponed their events, mostly to the 2nd half of 2020, and then to the 1st half of 2021, hoping that face-to-face activities could resume by then. Eventually this led to requesting changes or even amendments to the work programme to change the timeline of the activities and sometimes the duration of the projects. The reason for wanting to postpone activities and not transforming them straight away into online ones is that certain activities were planned face-to-face, with a mutual trust building and/or networking component. So the training providers hoped to avoid having to organise the events online, as they are less efficient for that aspect of the objectives. In addition, as activities have to be advertised months in advance to attract justice professionals, the autumn was not enough to organise – even online – all the activities planned for the whole 2020. Some activities took place in early 2021 however requests were received from some beneficiaries to start projects later than planned, in the hope that face-to-face activities would resume in autumn 2021, which was only partially the case.

e in autumn 2021, which was only partially the case.

⁽²⁾ <https://e-justice.europa.eu/>

3.2. Key achievements

4.1 million	22 423	4.6 million / 1.3 million	27
Exchanges of information in 2020 in the European Criminal Records Information System (ECRIS)	Justice professionals were trained in 2020 through the Justice Programme’s financial support to cross-border training activities, to the European Judicial Training Network (EJTN) and to the contract on anti-money laundering training for lawyers	Hits on the e-Justice Portal in 2020 / pages addressing the need for information on cross-border civil and criminal cases	Victim Support Organisations with national coverage were established

For the Justice programme 2021-2027, data for most indicators is not available yet because the data collection tools were being developed throughout 2021 and are expected to be deployed in 2022. This delay does not significantly impact reporting on the achievements because most of the projects funded by the first calls of the Justice programme 2021-2027 have a start date between the end of 2021 and the first quarter of 2022.

Specific objective 1: Judicial cooperation in civil and criminal matters

The Justice Programme finances the European Judicial Network (EJN) in civil and commercial matters, which strengthens cooperation between national judicial authorities. By improving the practical application and implementation of EU civil justice instruments ⁽³⁾, EJN contributes to building bridges between the justice systems of the Member States and thereby creates mutual trust ⁽⁴⁾. In civil justice, the family law instruments, the insolvency regulation, the European Account Preservation Order, the European Small Claims procedure and mediation in civil and commercial matters have been promoted through programme funding since 2014. That has contributed to raising awareness among the legal practitioners and the general public so as to enable their correct application.

Furthermore, the funding has been used to support the application of many EU legal instruments in judicial cooperation in criminal matters, such as the European Arrest Warrant (EAW), which with over 20 000 issued EAWs per year is the most successful EU instrument in criminal matters. The European arrest warrant has replaced the lengthy extradition procedures that used to exist between EU Member States.

In 2019, the surrender procedure when a requested person consented lasted on average 16,7 days after the arrest (14,99 days in 2017, 16,4 days in 2018). This indicator is calculated on the basis of statistics we receive from the Member States, however, there is no legal obligation for them to provide this data and, consequently, we do not have the full picture (22 Member States provided replies).

The result of 2019 of 16,7 days was above the milestone of 14 days for 2018 (and also above the target for 2020). According to Article 17(2) of the Framework Decision on the EAW, in cases where the requested person consents to his surrender, the final decision on the execution of the EAW should be taken within a period of 10 days after consent has been given.

Delays in some Member States might be explained by additional requests for information, as a result of case law of the CJEU, in particular after the Aranyosi judgment of 2016 on detention conditions, as well as the LM judgment on independence of the judiciary in 2018.

It is expected that the average time will improve after infringement proceedings concerning transposition of the Framework Decision on EAW by Member States. The Commission launched infringement proceedings in 2020. It is expected that concrete positive results would be visible only in 2024.

The Commission is still collecting the data for 2020. The report for 2020 is scheduled for summer 2022.

⁽³⁾ A [study](#) feeding into the 2016 Commission Report on the activities of EJN-civil, found that 96 % of professionals felt that EJN was successful in facilitating judicial cooperation between judicial authorities. Also, to-date EJN-civil has contributed to the European e-Justice Portal with 10 695 individual pages of practical information on national laws of the Member States relevant to the civil and commercial law acquis through 22 public factsheets, as well as with 16 guides on EU law. During the study, 70 % of interviewees indicated that the practitioners’ guides correspond to their needs and 60 % perceived their needs are met with the factsheets.

⁽⁴⁾ Report from the Commission to the European Parliament, the Council and the European Economic and Social Committee on the Activities of the European Judicial Network in Civil and Commercial Matters [https://eur-lex.europa.eu/legal-content/EN/TXT/?qid=1458206470776&uri=CELEX %3A52016DC0129](https://eur-lex.europa.eu/legal-content/EN/TXT/?qid=1458206470776&uri=CELEX%3A52016DC0129)

The European Criminal Records Information System (ECRIS), a decentralised IT system operated by the central authorities of the EU Member States has registered an increase in the number of exchanges of information extracted from national criminal records registers. In 2020, the number of such exchanges via ECRIS was 4 136 249 (with the record number of 4 179 614 in 2019) exceeding its 2020 target of 3 500 000. After the dramatic growth of the number of exchanges in 2019, since 2020 the yearly increase in the exchanges has been considerably slowed down. The affecting factors were: the UK leaving ECRIS, as well as the COVID-19 pandemic that has negatively influenced the movement of persons between the EU Member States.

Further to the Council Conclusions from 9 June 2016 on improving criminal justice in cyberspace, the common e-Evidence Digital Exchange System was established, enabling secure electronic communication between the competent national authorities in the context of the European Investigation Order procedure and Mutual Legal Assistance. This system, is a first step to digitalise judicial cooperation procedures in both civil and criminal matters. The system is underpinned by e-CODEX as a secure transmission channel, a system that was developed by several Member States with support from the Justice Programme. The e-Evidence Digital Exchange System will become operational in 2022 with additional improvements and developments planned in the 2021-2027 period.

Projects were funded via the Justice Programme to enhance the use of alternatives to imprisonment both in the pre-trial and post-trial stage and to improve detention conditions in the Member States. Funding has also focused on projects relating to the judicial responses to terrorism, notably on reinforcing the prevention of radicalisation, especially in prisons. Improving prison conditions has become a political priority also at EU level because they affect the efficient operation of EU mutual recognition instruments such as the European Arrest Warrant (EAW), and because of the danger of radicalisation in prisons. The Justice Programme has financed also the cooperation with the Council of Europe to set up a network of prison monitoring bodies and the SPACE report, an annual report on prison statistics, providing clear insights into the detention situations in the different Member States, which have a direct impact on judicial cooperation in criminal matters.

Specific objective 2: Judicial training

In 2020, the number of trained justice professionals reached a new remarkable level: more than 318 000 justice professionals or 25.2 % of all EU justice professionals received training on EU law. This is mainly due to the increase of lawyers' EU law training, which is the only profession to have surpassed the target set by the European judicial training strategy for 2021-2024. A record number of 22 423 justice professionals were trained thanks to the financial support to cross-border training projects and to the European Judicial Training Network (EJTN), and to the funding of lawyers' training on anti-money laundering, whose training activities turned online attracted thousands of lawyers. On the other hand, many of the mutual trust building activities of the EJTN could not take place or be replaced by online activities to the number of trained judges and prosecutors, judicial trainers and trainees from all EU Member States dropped to 5 074 in 2020. However the training activities have been organised in an increasingly efficient manner – its 'cost-to-serve' ratio (i.e., the price per person for one training day offered) decreased to EUR 239 EUR in 2020 thanks to improvements in its administrative and financial management and the lower costs of the online activities that took place. In 2020, the Justice programme also continued to fund the creation and launch of the beta version of the European Training Platform on the European e-Justice Portal: a search tool for justice professionals to find training courses and training materials for self-learning on EU law⁵.

Specific objective 3: Access to justice

The Justice Programme has contributed to the effective and coherent application of EU criminal law in the area of the rights of victims of crime, e.g. Council Directive 2004/80/EC relating to compensation to crime victims, Directive 2011/99/EU in the European Protection Order, Directive 2012/29/EU establishing minimum standards on the rights, support and protection of victims of crime, and Regulation (EU) 606/2013 on mutual recognition of protection measures in civil matters. Via the 2014-2020 annual work programmes, 14.9 million euro were awarded to 50 projects aiming at capacity-building for professionals, multi-disciplinary cooperation, exchanges of good practices, dissemination and awareness-raising to give a few examples. Almost all of these projects involved cross-border cooperation. DG Justice and Consumer has also signed Framework Partnership and awarded operating grants to umbrella organisations that contribute to the implementation of the Victims' Rights Directive at European level, e.g. Victim Support Europe, the European Forum for Restorative Justice and more recently the Association of the European Network on Victims' Rights, which gathers national experts from Members States.

Similarly, the Justice Programme has supported the development and implementation of the measures related to the 2009 Roadmap on strengthening the procedural rights of suspects and accused persons in criminal proceedings (Directives on the right to interpretation and translation in criminal proceedings, on the right to information in criminal proceedings, on the right of access to a lawyer in criminal proceedings, on the strengthening of certain aspects of the presumption of innocence and of the right to be present at the trial in criminal proceedings, on procedural safeguards of children suspected or accused in criminal proceedings and on legal aid for suspects and accused persons in criminal proceedings). Via the 2014-2020 annual work programmes, 13.4 million euro were awarded to 40 projects aiming at capacity-building for professionals, mutual learning, exchanges of good practices, data collection, dissemination and awareness-raising, etc. Almost all of these projects involve cross-border cooperation.

⁵ https://e-justice.europa.eu/european-training-platform/home_en

DG Justice and Consumer has also signed Framework Partnership Agreements and awarded operating grants to judicial networks active at European level, e.g. European Network of Councils for the Judiciary, the Network of the Presidents of the Supreme Judicial courts of the European Union, the Association of the Councils of State and Supreme Administrative Jurisdictions. These networks are essential to promote the EU policy on rule of law and on justice reforms and to collect data on structural judicial independence, which is a precondition for effective access to justice. The data collected by the networks have been used in every EU Justice Scoreboard – an annual information tool with comparable data on the independence, quality and efficiency of national justice systems – since 2014.

The Justice Programme has also financed the cooperation between the European Commission and the Council of Europe's European Commission for the Efficiency of Justice (CEPEJ). CEPEJ collects data on the functioning of the justice systems of its members according to its well-established and recognised methodology. This data has enabled the European Commission to successfully expand the EU Justice Scoreboard which is an information tool that helps the EU achieve more effective justice.

The Justice Programme finances the maintenance and extension of the European e-Justice Portal, a joint initiative between the Commission and the Council of the EU, which provides a host of multilingual informational content, as well as a number of electronic services, such as interconnections of national registers. Over time, the e-Justice Portal has evolved to offer increased and wider content, also incorporating results and tools developed under other projects funded via the Justice Programme, to become a one-stop shop for citizens, businesses, legal professionals and the judiciary. In 2021, a major redesign of the e-Justice Portal was completed, offering users a modern user experience.

Procurement

Budget line 070701: 13 contracts were signed for EUR 1.96 million and 2 co-delegations (DGT and DIGIT, for E-Justice Portal) for EUR 0.2 million each. Therefore, the total consumption amounts to EUR 2.36 million.

The major part of the budget was consumed for e-Justice portal and to support some policy initiative (such as "Parenthood initiative" or "Mutual recognition of Judgements").

One procurement procedure for EUR 0.25 million will be awarded soon for the "Civil aspects of the cross-border protection of vulnerable adults".

Budget line 070702: three contracts were signed for an amount of EUR 0.41 million, mostly destined to a conference on rule of law. Two open call for tender procedures for trainings e-capsules are under preparation.

Budget line 070703: 21 contracts were signed for a value of EUR 2.36 million. The main topic of these contracts was related to the Victims' Rights.

One procurement procedure of EUR 2 million for a "Communication campaign on Awareness of Victims' Rights was launched in November 2021 but it was unsuccessful. It has now been relaunched and it is currently still on-going.

3.3. Evaluations, studies and reports

The key findings of the interim evaluation of the implementation of the Justice Programme 2014-2020 which started in 2017 and was completed in 2018 ⁽⁶⁾ have been presented in the Programme Statement 2020. The ex-post evaluation of the programme assessing the long-term impact and the sustainability of the effects of the Programme will be completed in 2021.

The 2021 report on European judicial training published by DG Justice and Consumers in December 2021⁷ underlined again the indispensable character of the EU intervention and its clear benefits to enable the organisation of cross-border training activities and judicial exchanges. The report shows that more than 318 000 justice professionals or 25.2 % of all EU justice professionals received training on EU law in 2020, mainly thanks to the increase of lawyers' EU law training. Between 2011 and 2020, the number of justice professionals taking part in training on EU law increased by 316 %. Over to 1.5 million justice professionals took part in such training activities. Nevertheless, the COVID-19 pandemic affected training activities severely and led to a substantial drop in the numbers of professionals trained on EU law for most professions and Member States. This applies in 2020 especially to judges, prosecutors and bailiffs' training. Some professions and Member States (mainly Italy for lawyers and Estonia and the Netherlands for judges and prosecutors) were able to maintain or even increase the number of participants by shifting training activities to online training activities. Training for more than 28 000 participants – 8.8 % of all the justice professionals who received training on EU law – and 2.2 % of all EU justice professionals – was (co)-funded by the EU in 2020. In particular, 85.2 % to those were (co)-funded by the Justice programme, i.e. more than 22 000 participants – 7 % of all the justice professionals who received training on EU law in 2020.

4. Programme 2021-2027 - Key monitoring indicators

⁽⁶⁾ Report from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions on the interim evaluation of the implementation of the Justice Programme 2014-2020 COM(2018) 507 final).

⁷ <https://ec.europa.eu/info/sites/default/files/european-judicial-training-2021-web-final.pdf>

Specific Objective 1 :Facilitate and support judicial cooperation in civil and criminal matters, and promote the rule of law independence and impartiality of the judiciary, including by supporting the efforts to improve the effectiveness of national justice systems, and the effective enforcement of decisions

Indicator 1:Exchanges of information in the European Criminal Records Information System (ECRIS)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
4 136 249			4 400 000		4 800 000		5 200 000		5 600 000	5 200 000
	Actual Progress									Final
	4 047 463									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of exchanges
Cut-Off Date	30/10/2021
Data source	EC DG JUST.
Link to the objective	This indicator is linked to the specific objective 2(a) “to facilitate and support judicial cooperation in civil and criminal matters, and to promote the rule of law independence and impartiality of the judiciary, including by supporting the efforts to improve the effectiveness of national justice systems, and the effective enforcement of decisions” The purpose of ECRIS is to improve the security of citizens within the European Area of Freedom, Security and Justice, by enabling an efficient exchange between the Member States of information on previous criminal convictions handed down by criminal courts in the EU. This indicator is an indication of the level of judicial cooperation in criminal matters which contributes to providing citizens with a high level of safety.
Link MFF 14-20 / MFF 21-27	YES. Same name of indicator. No change in the methodology.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	After the dramatic growth of the number of exchanges in 2019 from 2,9 M to 4,1 M, since 2020 the yearly increase of the number of exchanges has been considerably slowed down. The affecting factors were: the UK leaving ECRIS, as well as the Covid-19 pandemic that has negatively influenced the movement of persons between the EU Member States

Indicator 2:People reached by awareness raising, information and dissemination activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

	Actual Progress								Final
Are we on track :	On track								

Indicator type	Result
Unit of measurement	Number of hits
Cut-Off Date	31/12/2021
Data source	EC DG JUST.
Link to the objective	This indicator is linked to the specific objective 2(c). This indicator gives an indication of the level of need of information on cross-border civil matters as well as of the level of relevance of these e-pages favouring a larger and easier access to justice by citizens. The European e-Justice Portal is a one-stop shop in justice matters available in 23 languages. The Portal aims at interconnecting existing national justice applications, facilitating judicial cooperation, as well as providing information to a wide variety of stakeholders.
Link MFF 14-20 / MFF 21-27	No. Under MFF 14-20 we monitored the "Number of hits on the e-justice portal" as a core performance indicator. It will be still monitored under the Justice programme 2021- 2027 but not as a core performance indicator anymore as the legislator decided to be more specific and to monitor only the pages related to cross-border civil and criminal topics which makes only a part of the e Justice Portal.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	It should be noted that due to a technical issue the reported 2021 figure does not account for the traffic received in the July-September 2021 period. The total visits for 2021, including extrapolated figures for the omitted period, would amount to an increase in the number of visits in the 10-15% range compared to the 2020 baseline.

Indicator 3: People reached by awareness raising, information and dissemination activities

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Justice Programme

Specific Objective 1: To facilitate and support judicial cooperation in civil and criminal matters

Indicator 1: Average time of the surrender procedure (time between the arrest and the decision on the surrender of the person sought) under the European Arrest Warrant in cases where the person consents to the surrender

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2005-2013	Milestones									2024
14	Actual Progress									Final
	19	14	16	15	16.4	16.7				
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of days (yearly)
Cut-Off Date	31/12/2019
Data source	EC DG JUST and Member States
Narrative	The result of 2019 of 16,7 days was above the milestone of 14 days for 2018 (and also above the target for 2020). According to Article 17(2) of the Framework Decision on the EAW, in cases where the requested person consents to his surrender, the final decision on the execution of the EAW should be taken within a period of 10 days after consent has been given (this is why we have set the 2020 target to 10 days).
Methodology	This indicator is calculated on the basis of statistics we receive from the Member States.
Link MFF 14-20 / MFF 21-27	We will not continue to report on this indicator (neither in the draft Regulation nor in the performance framework).
Other methodological comments	
Full metadata available at this address	
Justification of the trend	This indicator is calculated on the basis of statistics we receive from the Member States, however, there is no legal obligation for them to provide this data and, consequently, we do not have the full picture (22 Member States provided replies in 2019). In 2019, the surrender procedure when a requested person consented lasted on average 16,7 days after the arrest (14,99 days in 2017). In 2019, the highest reported average duration of the procedure, where the requested person consented to the surrender, was 60 days for Cyprus. Cyprus did not provide an explanation for the sharp increase in this average compared with 2018 (when its reported average was 15 days). Moreover, an average of 38 days was registered by Slovakia and 37 days for Poland, both showing a significant increase compared to 2018. The lowest reported average durations of the surrender procedure were 0.97 days in Luxembourg, 3 days in Malta, 2 days in Lithuania and 2.5 days in Slovenia. Delays in some Member States might be explained by additional requests for information, as a result of case law of the CJEU, in particular after the Aranyosi judgment of 2016 on detention conditions, as well as the LM judgment on independence of the judiciary in 2018. The statistics for 2020 would be published in June/July 2022. It is expected that the average time will improve after infringement proceedings concerning transposition of the Framework Decision on EAW by Member States. The EC launched infringement proceedings in 2020

Indicator 2: Number of exchanges of information in the European Criminal Records Information System (ECRIS)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
300 000	2 400 000 2 750 000 3 125 000 3 500 000									3 500 000
	Actual Progress									Final
	1 250 000	1 811 546	1 978 104	2 571 991	2 963 789	4 179 614	4 136 249	4 100 000		4 136 249
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of exchanges in the system
Cut-Off Date	31/12/2020
Data source	EC DG JUST
Narrative	This indicator measures the level of judicial cooperation in criminal matters, which contributes to providing citizens with a high level of safety.
Methodology	Quantitative
Link MFF 14-20 / MFF 21-27	We will continue to report in the next MFF 21/27.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	After the dramatic growth of the number of exchanges in 2019 from 2,9 M to 4,1 M, since 2020 the yearly increase of the number of exchanges has been considerably slowed down. The affecting factors were: the UK leaving ECRIS, as well as the Covid-19 pandemic that has negatively influenced the movement of persons between the EU Member States

Specific Objective 2: To support and promote judicial training, including language training on legal terminology, with a view to fostering a common legal and judicial culture

Indicator 1: The number and percentage of members of the judiciary and judicial staff that participated in training activities, staff exchanges, study visits, workshops and seminars funded by the Programme

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number										
0	Milestones									2020

Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number and percentage of participants to training
Cut-Off Date	09/02/2021
Data source	EC DG JUST
Narrative	The indicator measures the number and percentage of members of the judiciary and judicial staff that participated in training activities, staff exchanges, study visits, workshops and seminars funded by the Programme including those organised by the European Judicial Training Network;
Methodology	Data collected from the grants applications and contracts
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	The percentage is the ratio between the number of supported participants and the total number of legal practitioners in the EU (Source of data: 2018 CEPEJ Report).
Full metadata available at this address	
Justification of the trend	2020 was an exceptional year, as thousands (instead of hundreds planned) of lawyers took part in online training on anti-money laundering under the Justice programme contract. The data for 2021 (based on the action grant calls launched under the new Justice programme 2021-2027 which include training activities) will be available by June 2022 following the preparation of the annual report on European judicial training.

Specific Objective 3: To facilitate effective access to justice for all, including to promote and support the rights of victims of crime, while respecting the rights of the defence

Indicator 1: Number of hits on the e-justice portal

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
441 000	992 250	1 488 375	2 232 563	2 679 075	3 214 890	3 857 868	4 629 442			4 629 442
	Actual Progress									Final
	1 136 849	1 751 180	1 884 600	2 690 574	2 962 558	4 343 547	4 619 548	4 395 089		4 619 548
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of hits on the portal
Cut-Off Date	31/12/2021
Data source	EC DG JUST
Narrative	For most of the period the actual results outperformed the set milestones, demonstrating an improvement in the impact of the programme’s actions in this field. The 2020 target has been met.
Methodology	Target: (+20% per year)
Link MFF 14-20 / MFF 21-27	We will continue to report on this indicator. In the draft Regulation “Number of hits on the e-Justice portal / pages addressing the need for information on cross-border civil and criminal cases”. This indicator will address the need of information on cross-border civil matters as well as of the level of relevance of these e-pages favouring a larger and easier access to justice by citizens.
Other methodological comments	The table above provides data according to different calculation methods. As of 2017, the data are obtained from a new tool for website statistics tracking, with a different calculation method. The targets for period 2014-2016 were adjusted to the new calculation method. N.B. The lower 2021 figure is predicated by loss of search engine indexation for 3 months (July-September 2021) due to a technical misconfiguration, leading to an approximate estimated loss of 650.000 visits. If these figures are considered, the Portal would have served approximately 5.050.000 visitors – which would represent an increase compared to 2020.
Full metadata available at this address	
Justification of the trend	The number of hits on the e-Justice Portal have been increasing steadily over the years. The only divergence was registered in 2018, due to a change in the corporate system for gathering statistics. The new system was introduced in 2017 and registers hits based on a different algorithm, which resulted in a discrepancy of 20-30%. The 2020 target is practically reached. For the 2019-2021 period, the growth trend, however, demonstrates a slowdown.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	0.21							0.21	0%

(*)These amounts include NextGenerationEU top-ups if any

6.2. Contribution to gender equality

6.2.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*: 46.7							

(*)Consolidated information about the annual commitments implemented (total per score by programme **in EUR Million**)
 The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

The Justice Programme regulation stipulates in Article 4 that gender equality should be promoted in all funded activities. Paragraph 18 of the Justice Programme regulation complements Article 4 by underlining the importance of gender mainstreaming in all programme activities and the Programme's commitment to evaluate its gender impacts. Thus, gender quality and mainstreaming are cross-cutting themes.

A key area for advancing gender equality is the promotion of victims' rights under the specific objective 'access to justice for all'. Gender-sensitive support to victims of crimes such as victims of hate crimes, trafficking in human beings and gender-based violence is essential to enable victims to know and exercise their rights. To a lesser extent, also judicial cooperation can promote gender equality. For example, the social rehabilitation and re-integration of persons, who are subject to measures in the field of judicial cooperation in criminal matters provides scope to provide gender-sensitive support. Judicial cooperation in civil matters has also the potential to promote gender equality, as for example, by providing legal insights into and raising awareness among professionals of the phenomenon of social parenthood. Judicial training has also the potential to raise awareness of gender inequalities among legal professionals. As a result, judicial training can help judges interpret EU directives where relevant in a gender-sensitive way.

Key achievements:

- The justice 2021 calls (7 in total) were systematically gender-mainstreamed. Applicants were asked to demonstrate in their proposal how gender equality will be respected during project implementation. They were also asked to outline how gender equality is tracked in their project monitoring and results. This resulted in stronger attention of applicants to gender equality aspects in the design of their projects;
- Gender equality was mainstreamed in the evaluation methodology, criteria and templates for justice calls. As a result, applicants' attention to gender aspects in their proposals has a direct impact on their performance in the evaluation;
- Improved collection of data through a new application form, facilitating the collection of sex-disaggregated data and more in-depth insights into the impact of justice funding.
- Contracted experts to evaluate proposals were made aware about the central role of gender equality for their work and briefed about the Gender Equality Tracking Methodology that the Commission pilots. As a result, the programme contributed to capacity building among experts that work across different Commission funding programmes.

6.3. Contribution to the sustainable development goals

SDG 5 Achieve gender equality and empower all women and girls

The programme in all its activities will support gender mainstreaming: the Justice Programme regulation stipulates in Article 4 that gender equality should be promoted in all funded activities. Information on the key achievements on gender equality and empowerment of all women and girls is given in section 6.4.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Through the Justice Programme's financial support to cross-border training activities and to the European Judicial Training Network (EJTN), 22 423 justice professionals participated in judicial training programmes in 2020 thereby fostering a common legal and judicial culture.

Under the Justice programme about 10 new projects promoting access to justice are awarded each year for a total budget of 3 - 3.5 million EUR.

The European e-Justice Portal established to inter alia facilitate access to justice throughout the EU, served 4.3 million visitors in 2021.

6.1. Contribution to climate mainstreaming	671
6.4. Contribution to gender equality	671
6.5. Contribution to the sustainable development goals	672

1. Overview

1.1. Challenges

The EU aims at promoting peace and the well-being of its people. It is founded on the values of respect for human dignity, freedom, democracy, equality, the rule of law and respect for human rights, including the rights of persons belonging to minorities.

To live up to its vocation, the EU needs to remember and learn from its history and to involve people in strengthening democratic societies. Yet emerging movements challenge the idea of open, inclusive, cohesive and democratic societies and threaten the enjoyment of rights and civic participation. In this context, the Citizens, Equality, Rights and Values (CERV) Programme responds to persisting gaps and emerging challenges:

- Inequalities and discrimination on the grounds of sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation still persist. Data show that discrimination against LGBTI ¹people, Roma², persons with disabilities³, elderly people or, on the ground of religion⁴, as well as violence against women⁵ and children, still persist; racism, xenophobia and hate speech are often amplified by the use of social network and new technologies; sensitive social and societal issues related to religion and beliefs are rising up in parallel. Significant gender inequalities persist⁶.
- More needs to be done to raise citizens' awareness of the values of the EU and the benefits of EU citizenship, to increase knowledge of the EU, its history, cultural heritage and diversity and to encourage a higher level of political and societal participation ;
- The rights stemming from EU citizenship are still not fully implemented, thus hindering citizens' political and societal participation.
- Economic crises, rising inequalities and new or persisting challenges such as migration, nationalism and populism have led some people to question the fundamental rights and the values on which the EU is founded, including the rule of law, access to justice, space for civil society and the independence of the judiciary.

These challenges could jeopardise democracy and fundamental rights. Furthermore, they are common to all Member States and have cross-border dimensions. While action at national level is important, individual Member States do not have sufficient leverage to tackle these challenges. Therefore, concerted efforts at EU level are required.

1.2. Mission (General objectives)

CERV is a key instrument to protect and promote rights and values as enshrined in the EU Treaties, the EU Charter of Fundamental Rights (the Charter) and in the applicable international human rights conventions.

1.3. Specific objectives

Programme objectives

1. The general objective of the Programme is to protect and promote rights and values as enshrined in the Treaties, the Charter and in the applicable international human rights conventions, in particular by supporting civil society organisations and other stakeholders active at local, regional, national and transnational level, and by encouraging civic and democratic participation, in order to sustain and further develop open, rights-based, democratic, equal and inclusive societies based on the rule of law.

2. Within the general objective set out in paragraph 1, the programme has the following specific objectives which correspond to strands:

- (a) to protect and promote Union values (Union values strand),

¹ http://ec.europa.eu/justice/discrimination/files/thematic_factsheet_lgbt_en.pdf

² <http://fra.europa.eu/en/publication/2016/eumidis-ii-roma-selected-findings>

³ In 2016, a majority of respondents to a public consultation considered that people with disabilities cannot fully participate in society, do not enjoy the same rights as other citizens and face discrimination. The results of this public consultation were analysed in the Commission Staff Working Document, "Progress Report on the implementation of the European Disability Strategy (2010-2020)", SWD(2017) 29 final of 2.02.2017.

⁴ http://ec.europa.eu/justice/fundamental-rights/files/factsheet_eurobarometer_fundamental_rights_2015.pdf

⁵ One in three women in the EU have experienced physical and/or sexual violence since the age of 15.; Fundamental Rights Agency (2014), Violence against women: an EU-wide survey http://fra.europa.eu/sites/default/files/fra-2014-vaw-survey-main-resultsapr14_en.pdf.

⁶ The current context is characterised, for instance, by an unequal participation of women and men in the labour market.

- (b) to promote rights, non-discrimination, equality, including gender equality, and advance gender and non-discrimination mainstreaming; (Equality, Rights and Gender Equality strand),
- (c) to promote citizens engagement and participation in the democratic life of the Union and exchanges between citizens of different Member States and to raise awareness of the common European history (Citizens' engagement and participation strand),
- (d) to fight violence, including gender-based violence (Daphne strand).

Union values strand

Within the general objective set out in Article 2(1) and within the specific objective set out in point (-a) of Article 2(2), the Programme shall focus on protecting, promoting and raising awareness on rights by providing financial support to civil society organisations active at local, regional and transnational level in promoting and cultivating these rights, thereby also strengthening the protection and promotion of Union values and the respect for the rule of law and contributing to the construction of a more democratic Union, democratic dialogue, transparency and good governance.

Equality, Rights and Gender Equality strand

Within the general objective set out in Article 2(1) and within the specific objective set out in point (a) of Article 2(2), the Programme shall focus on:

- (a) promoting equality and preventing and combating inequalities and discrimination on grounds of sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation and respecting the principle of non-discrimination on the grounds provided for in Article 21 of the Charter;
- (b) supporting, advancing and implementing comprehensive policies
 - (i) to promote women's full enjoyment of rights, gender equality, including work-life balance, women's empowerment and gender mainstreaming;
 - (ii) to promote non-discrimination and its mainstreaming;
 - (iii) to combat racism, xenophobia and all forms of intolerance including homophobia, biphobia, transphobia and interphobia and intolerance on the basis of gender identity, both online and offline;
 - (iv) to protect and promote the rights of the child;
 - (v) to protect and promote the rights of persons with disabilities;
- (c) protecting and promoting Union citizenship rights and the right to the protection of personal data.

Citizens engagement and participation strand

Within the general objective set out in Article 2(1) and within the specific objective set out in point (b) of Article 2(2), the Programme shall focus on:

- (a) supporting projects aimed at commemorating defining events in modern European history, including the causes and consequences of authoritarian and totalitarian regimes, and at raising awareness among European citizens, of their common history, culture, cultural heritage and values, thereby enhancing their understanding of the Union, its origins, purpose, diversity and achievements and of the importance of mutual understanding and tolerance;
- (b) promoting citizens and representative associations' participation in and contribution to the democratic and civic life of the Union by making known and publicly exchanging their views in all areas on Union action;
- (ba) promoting exchanges between citizens of different countries, in particular through town-twinning and networks of towns, so as to afford them practical experience of the wealth and diversity of the common heritage of the Union and to make them aware that these constitute the foundation for a common future;

Daphne strand

Within the general objective set out in Article 2(1) and within the specific objective set out in point (c) of Article 2(2), the Programme shall focus on:

- (-a) preventing and combating at all levels all forms of gender-based violence against women and girls and domestic violence, also by promoting the standards laid down in the Council of Europe Convention on preventing and combating violence against women and domestic violence (the Istanbul Convention); and
- (a) preventing and combating all forms of violence against children, young people, as well as violence against other groups at risk, such as LGBTQI persons and persons with disabilities;

(b) supporting and protecting all direct and indirect victims of such violence, such as domestic violence exerted within the family or violence in intimate relationships, including children orphaned by domestic crimes, and supporting and ensuring the same level of protection throughout the Union for victims of gender-based violence.

In pursuing its mission, CERV targets the following specific objectives, which correspond to action strands:

1. CERV contributes to protecting and promoting Union values (Union Values strand) by providing financial support to civil society organisations active at local, regional and transnational level.
2. CERV aims to promote equality and rights (Equality, Rights and Gender Equality strand). In particular, it contributes to preventing and combating inequalities and discrimination on grounds of sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation. It supports the development of comprehensive policies to promote gender equality and anti-discrimination and their mainstreaming as well policies to combat racism and all forms of intolerance. Moreover, CERV contributes to protecting and promoting the rights of the child, the rights of people with disabilities, EU citizenship rights and the right to the protection of personal data;
3. CERV promotes citizens engagement and participation in the democratic life of the EU (Citizens' engagement and participation strand). In particular, CERV contributes to increasing citizens' understanding of the EU, its history, cultural heritage and diversity. In addition, it promotes exchange and cooperation between citizens of different countries as well as citizens' civic and democratic participation allowing citizens and representative associations to publicly exchange their views in all areas of EU action
4. It contributes to the fight against violence, including gender-based violence (Daphne strand). In particular, CERV contributes to preventing and combating all forms of violence against children, young people and women, as well as violence against other groups at risk. Furthermore, it contributes to supporting and protecting victims of such violence.

1.4. Public intervention context

The policy challenges identified and addressed by the CERV programme, and in particular the promotion and protection of rights and values, require transnational cooperation mechanisms and networking opportunities, which can typically not be achieved by Member States acting alone. In that respect, action at EU level is needed following the subsidiarity principle and the principle of shared competences between EU and Member States in the area of freedom, security and justice (Article 4 of the TFEU). In many areas, such as equality and non-discrimination or citizenship, individuals are protected by European legislation, but are not sufficiently aware of their rights. Awareness raising actions, exchanges of best practices and training at EU level can help ensuring that persons in all Member States are reached, and that administrative structures/authorities are informed. Moreover, Member States can be supported to ensure consistent interpretation and coherent application of legislative instruments throughout the EU. In the area of rights, equality and, in particular, in combatting violence against women, there is EU-added value to work with national authorities and all stakeholders to find adequate solutions to remaining challenges at European level. EU funding is crucial to support civil society directly.

The programme will ensure consistency, complementarity and synergies with other funding programmes supporting policy areas with close links to each other, in particular with the Justice programme, Erasmus+ programme, the European Social Fund+ as well as with Creative Europe programme. Synergies will be explored and created with other European funding programmes, in the fields of employment and fight against social exclusion, youth, health, citizenship, justice, migration, security, research, innovation, external relations and sustainable development.

The programme supports the implementation of many Commission's strategic policy initiatives, such as the EU anti-racism action plan 2020-2025⁷; the LGBTIQ Equality Strategy 2020-2025⁸; the EU Roma strategic framework on equality, inclusion and participation⁹, the Gender Equality Strategy 2020-2025¹⁰, the EU Strategy on combating antisemitism and fostering Jewish life¹¹; the EU Strategy on the rights of the child¹² and Strategy for the rights of persons with disabilities 2021-2030¹³. The programme is also fully in line with the political priorities of the Commission, as highlighted in the European democracy action plan¹⁴, Rule of Law report¹⁵ and the Strategy to strengthen the application of the Charter of Fundamental Rights in the EU¹⁶.

¹⁶ [Strategy to strengthen the application of the Charter of Fundamental Rights in the EU](#)

CERV supports a wide range of organisations that play an important role at EU, national and local level for promoting and protecting EU values and rights.

This includes non-governmental organisations at local, national and transnational level as well as European networks, public administration including the equality and human rights bodies, national, regional and local authorities and institutions.

The CERV funds actions that:

- Increase awareness of rights, values and principles underpinning the EU as well as of EU culture, and history;
- Increase knowledge of EU law and policies as well as of potential obstacles to the exercise of rights and principles guaranteed by the EU Treaties, the EU Charter of Fundamental Rights, international conventions to which the EU has acceded, and secondary EU legislation;
- Increase capacity to act in order to better implement EU law instruments and policies in the Member States;
- Foster cross-border cooperation, exchange and debate, improving mutual knowledge, mutual understanding and enhancing mutual trust among all stakeholders.

Main activities supported by the programme are:

(a) awareness raising, promotion and dissemination of information to improve the knowledge of the rights and values and policies, within the areas and objectives covered by the Programme;

(b) mutual learning through the exchange of good practices among stakeholders to improve knowledge and mutual understanding;

(c) analytical monitoring activities to improve the understanding of the situation in Member States and at Union level in the areas covered by the Programme as well as to improve implementation of EU law, policies and Union values within Member States, such as activities to include for instance the collection of data and statistics; the development of common methodologies and, where appropriate, indicators or benchmarks; studies, research, analyses and surveys; evaluations; impact assessment; the elaboration and publication of guides, reports and educational material;

(d) training relevant stakeholders to improve their knowledge of the policies and rights in the fields covered by the Programme;

(e) information and Communication Technology (ICT) tools development and maintenance;

(e a) supporting civil society organisations and non-profit stakeholders active in the areas of the Programme to increase their capacity to react and to ensure adequate access for all citizens to their services, counselling and support activities;

(e b) supporting civil society organisations and non-profit stakeholders active in the areas of the Programme to carry out advocacy activities to promote rights, thereby also strengthening the protection and promotion of Union values and the respect of the rule of law and contributing to democratic dialogue, transparency and good governance, including in cases of shrinking space for civil society;

(f) strengthening awareness among citizens, especially young people, of European culture, cultural heritage, identity and history including with regard to totalitarian and authoritarian regimes and other defining moments of recent European history so as to strengthen remembrance and European citizens' commitment to the Union and to encourage tolerance, mutual understanding, intercultural dialogue and respect for diversity;

(g) bringing together citizens of different nationalities and cultures by giving them the opportunity to participate in town-twinning activities and civil society projects, thus creating the conditions for a stronger bottom-up approach and fostering civic and democratic engagement;

(h) encouraging and facilitating active and inclusive participation in the construction of a more democratic Union, as well as raising awareness on rights and values through support to civil society organisations;

(j) developing the capacity of European networks to promote and further develop Union law, values, policy goals and strategies;

(k) financing the technical and organisational support to implement Regulation [(EU)No 211/2011], replaced, as of 1 January 2020, by the Regulation (EU) 2019/788, thereby underpinning the exercise by citizens of the right to launch and support European citizens' initiatives;

(l) enhancing knowledge of the Programme and dissemination and transferability of its results and fostering outreach, including by setting up and supporting programme contact points;

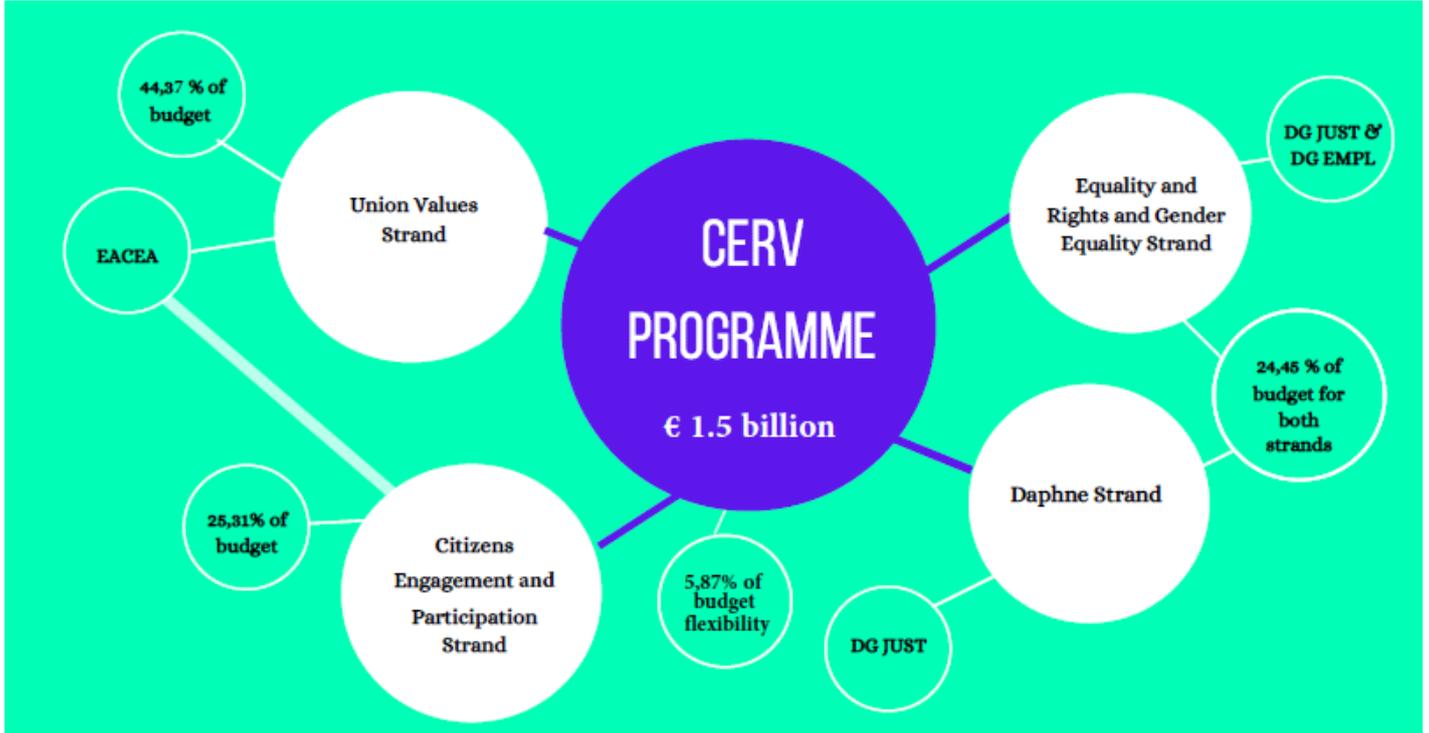

1.6. Delivery mode

The programme will be implemented through direct management by the Directorate-General for Justice and Consumers (DG JUST). In particular, the implementation of actions under the specific objective to protect and promote the rights of persons with disabilities will be managed by the Directorate-General for Employment, Social Affairs and Inclusion (DG EMPL). The Commission delegates powers to implement actions in the Citizens engagement and participation strand and in the Union values strand to the European Education and Culture Executive Agency (EACEA).

1.7. Graphic overview of the programme structure

Citizens, Equality, Rights and Values Programme

The implementation of actions is directly managed by the Directorate-General of Justice and Consumers (DG JUST). In particular, the implementation of actions under the specific objective to promote and protect the rights of persons with disabilities is managed by the Directorate-General of Employment, Social Affairs and Inclusion (DG EMPL). The Commission delegates powers to implement actions in the Citizens engagement and participation strand and in the Union values stand to the European Education and Culture Executive Agency (EACEA).

1.8. Legal basis and budget programming

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The 2021-27 CERV programme is the result of merging two former funding programmes¹⁷, namely the Rights, Equality and Citizenship programme and the Europe for Citizens programme, which had both a strong societal focus and were clearly related to the promotion of rights and EU values.

This merge is expected to bring more visibility, simplification, and mutual reinforcement. While CERV increases the potential of the EU to promote and protect values by developing synergies between previous funding programmes, it acknowledges and maintains the specificities of the single policies. A novelty introduced in the programme is the new Union Values strand that will specifically provide support to civil society organisations active at local, regional and transnational level, strengthening the protection and promotion of Union values and the respect for the rule of law.

regional and transnational level, strengthening the protection and promotion of Union values and the respect for the rule of law.

1.10. Relevant websites providing more information

https://ec.europa.eu/info/departments/justice-and-consumers/justice-and-consumers-funding-tenders_en

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitment	98.9	894.1	11%
Payments	19.3		2%

The commitment appropriations 2021 were used for individual commitments for grants from the 2021 calls for proposals. 101 grants were signed in 2021 from the 2021 calls for an amount of EUR 17.6 million. At the end of 2021, a global commitment was made in ABAC. This global commitment will be used in 2022 to sign the remaining grants from the 2021 calls: 267 grants are still to be signed in 2022 from the 2021 calls for an amount of EUR 48.9 million. The payment appropriations 2021 were used to pay the pre-financings of the grants signed in 2021 from the 2021 calls. The pre-financing rate for CERV grants is 80%.

After a successful 2021, the objective is to maintain such outstanding implementation in the years to come. Following the adoption of the 2022 budget, DG JUST will have to implement in 2022 EUR 206.4 million under the CERV programme, which also includes the additional reinforcements voted by the European Parliament. It should be noted that part of the CERV budget is implemented by EACEA. The CERV 2022 calls for proposals were published in November 2021 and a detailed planning for the publication of 2022 calls for proposals has also been agreed with EACEA. The call deadlines have been planned for the first semester of 2022 in

¹⁷ In the Multiannual Financial Framework 2014-2020.

order to respect the annuality of the budget and to take into consideration that 2022 is still a transitional year in the beginning of the new MFF.

The level of commitment appropriations requested in the context of the draft budget 2023 will be in line with the Financial Programming of the CERV Programme (as presented in the Draft Budget 2022 while accounting for the adoption of any new legislative proposals). The payment appropriations requested in 2023 are calculated based on detailed planning and accounting for the pre-financing rates to be paid. In brief, the requested appropriations include final payments for some grants signed in 2021, pre-financings for grants to be signed in 2023 stemming from the calls 2022 and pre-financings for grants signed in 2023 from 2023 calls. DG JUST request will also integrate the estimations from EACEA, SG and DG EMPL.

The table below is based on an earlier version of the work programme and does not take into account the subsequent amendments.

[Work programme 2021-2022](#)

Budget lines	2021 (€)	2022 (€)
Budget line 07 06 04: Protect and promote Union values	31 298 481	91 137 552
Budget line 07 06 01: Promote equality and rights	27 899 300	39 860 945
Budget line 07 06 02: Promote citizens' engagement and participation in the democratic life of the Union	13 407 679	40 321 295
Budget line 07 06 03: Daphne	19 189 700	29 581 401
TOTAL	90 564 152	200 822 000

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate for the Rights, Equality and Citizenship programme for 2014-2020:

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	432.5	435.3	99%
Payments	350.5		81%

2020 was the last year of the previous MFF and of the REC Programme. In 2021, 29 grants from the 2020 calls of REC remained to be signed in 2021 for an amount of EUR 10.2 million.

The completion line (legacy line) of the REC programme is used to pay final payments from past commitment. In 2021, 114 final payments for 114 grants from the old REC programme were paid for an amount of EUR 5.6 million. In 2021, 169 amendments were made in REC projects.

Cumulative implementation rate for the Europe for Citizens programme for 2014-2020:

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	195.3	195.5	100%
Payments	172.6		88%

In 2021, the payment appropriations were used to cover final payments on pre-2021 commitments still outstanding. Numerous projects were funded in the following areas: remembrance, civil society, structural support for think tanks organisations at EU level. As regards 2022, the payment appropriations will be used to cover the remaining final payments still outstanding.

The Europe for Citizens programme was affected by the COVID-19 crisis. By 31 December 2021, 402 amendments were made, most of them related to the extension of the eligibility period. This significant number of amendments signed, following requests for extending the duration of contracts due to the COVID-19 crisis, will mechanically lead to delayed budgetary execution of the corresponding payment credits.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

2021 has been an extremely challenging year, in particular due to the transition between two Multiannual Financial Frameworks, the very late adoption of the CERV Programme Regulation (28 April 2021), and the continuation of the COVID-19 pandemic. Nevertheless, DG Justice and Consumers has ensured an exceptional implementation of the CERV programme, providing funding to grass-root organisations, EU network, IT systems, and funding several key activities in support of policy and legislative developments.

3.1.2. Active programme performance

The work programme 2021-2022 of the CERV programme has provided around EUR 91.8 million for 2021 in support to actions promoting citizens' engagement, promoting equality for all and implementing projects in support of EU rights and values. Funds committed in the work programme were planned to be deployed via grants (about 80% of the total allocation), procurement (almost 19% of the total allocation) and by awarding prizes (about 0.4% of the total allocation). The remaining part of the total allocation (about 0.7%) was planned for 'other expenditure' (contracting external experts).

2021 calls for proposals started to be launched already as from April 2021. Altogether, 14 calls for proposals have been organised in the first year of the CERV programme for the total budget of approximately EUR 73 million. Under these calls, 1084 proposals have been received, from which 368 projects have been awarded for funding. By January 2022, 101 grant agreements have already been signed. We will start receiving the first project results in one year time, but most probably we will need to wait for 2 years to have meaningful data because the projects run for 20-24 months on average.

These actions include trainings, seminars and mutual learning events, research and studies, awareness raising and media campaigns to the ultimate benefit of the general public.

Union values strand

The Union values strand is new for the CERV programme and did not exist under the predecessor 'Rights, Equality and Citizenship' and 'Europe for citizens' programmes. In 2021, the strand provided more than EUR 31 million for actions promoting and protecting fundamental rights, the rule of law and democracy. The objective is to nurture and sustain a rights-based, equal, open, pluralist, inclusive and democratic society and to empower independent civil society organisations facing increasingly challenges.

In 2021, 59 framework partners have been selected for a four year long cooperation. The budget which was made available for the operating grants for the first year of the framework partnerships amounted to EUR 26.7 million. In addition to the operating grants managed by DG JUST / EACEA, DG EMPL is about to select a number of framework partners for the operating grants in the area of disability (the selection process for framework partners for the period 2022-2025 should be finalised by end February 2022; there will be between 7 and 11 partners).

EUR 3 million were made available for the programme contact points in Member States. By the end of 2021, 17 Member States have already designated their contact points.

For procurement, 1 subdelegation has been done in 2021 for a value of EUR 0.2 million (to DIGIT).

Equality, rights and gender equality strand

In 2021, about EUR 27.9 million have been provided to support actions promoting equality, tackling discrimination and improving responses to racism and xenophobia in the form of hate speech and hate crime, both on- and offline. Altogether four calls for proposals have been organised under this strand.

The biggest call for proposals under this strand, with a total budget of EUR 9.9 million, aimed to support actions, which promote equality and fight against racism, xenophobia and discrimination. Under this call, 219 proposals have been submitted, from which 32 projects have been awarded a grant. The projects are expected to address the vulnerabilities of specific groups and communities particularly affected by discrimination, such as Roma, Jews, Muslims, migrants, people of colour and people of African descent. Most awarded projects are led by civil society organisations and aim at improving the situation of vulnerable groups in the EU, which deteriorated during the COVID-19 pandemic.

The call for proposals to protect and promote the rights of the child had a total budget of EUR 2.1 million. Under this call, 126 applications have been submitted, from which 7 projects have been awarded due to scarcity of funding under this CERV strand (in the new work programme 2023-2024 we look for possibilities to allocate more funding to this policy area).. Funding for protecting children's rights will respond to the current situation and address children's needs arising from the impact of COVID-19, as well as generally promoting mechanisms to safeguard children's rights in time of crisis.

The call for proposals restricted to national Data Protection Authorities, with a total budget of EUR 1.85 million (2021 and 2022 budget allocations combined), aimed to support the implementation of the General Data Protection Regulation¹⁸ at national level. Under this call, 14 applications have been submitted (evaluation is finalised in 2022).

A four years framework partnership has been concluded with the partner named in the Regulation - EQUINET, the European Network of Equality Bodies. The operating grant, amounting to EUR 1.2 million to support EQUINET's operating programme in 2022, will help to increase capacity of experts from national equality bodies to address issues related to non-discrimination and the implementation of EU legislation in the field.

For procurement, 16 contracts have been awarded and 1 subdelegation (to DGT) has been done in 2021 for a total value of EUR 3.7 million with an aim to deliver on a number of initiatives foreseen in the recent policy initiatives in the area of equality¹⁹.

Contracts were also concluded to support, advance and implement comprehensive policies to protect and promote the rights of persons with disabilities. Namely, the annual conference on the occasion of European Day of People with Disabilities and the Access City Award (ACA) was held on 2-3 December 2021.

In 2021, the CERV programmes also financed prizes. The Access City Award recognises leading European cities in terms of accessibility. It promotes cities that contribute to improve accessibility following a "design-for all" approach, so that everybody, regardless of mobility or ability that could be related to age, has equal access to all the resources and venues cities have to offer. The 2022 ACA ceremony, held on 03 December 2021, awarded monetary prizes (for a total value of EUR 350 000) to the first three winning cities: (1) Luxembourg City; (2) Helsinki; (3) Barcelona.

Citizens' engagement and participation

The strand is a successor of the previous 'Europe for citizens' programme. The strand provides an opportunity to Europeans to take part in the debate on Europe and its history and to play a strong role in developing the EU. It is part of the common effort to uphold rights and values by reinforcing a rule of law culture in the EU. Its activities promote cultural diversity and the knowledge of shared history. They encourage EU citizens' responsible, democratic civic participation in shaping the future of the EU and foster their feeling of belonging in the EU. More than EUR 13.4 million have been allocated to this strand in 2021. Most of the funding was made available through calls for proposals.

In the area of town twinning and networks of towns, two calls for proposals with a total budget of almost EUR 7 million have been organised in 2021. Under the town twinning call, 119 proposals have been submitted, from which 91 proposals were funded. Under the networks of town call, where 26 out of the 68 proposals submitted have been selected for funding, exchanges between people of different countries will be supported, and the objective of the call is to reinforce mutual understanding and tolerance and give them the opportunity to broaden their perspective and develop a sense of European belonging and identity.

In the area of European remembrance, a call for proposals with a budget of almost EUR 4.5 million has been organised in 2021. The commemoration of and research and education about crimes committed under totalitarian regimes, particularly the Holocaust, as well as resistance, democratic transition and democratic consolidation in the EU were the two priorities of the call. A horizontal priority on the role, representation and perspective of women in these important historical events and developments has been introduced to allow for a more gender-balanced understanding of history. 95 proposals have been submitted, from which 27 have been awarded funding.

Finally, the programme supported the implementation of the European Citizens' Initiative (ECI) in line with the requirements of Regulation (EU) 2019/788, the ECI regulation, by allowing for the maintenance and further development of the IT tools underpinning the management of the ECI (ECI register, ECI Forum, the central online collection system, the modules for administrating the initiatives by the Commission, the module dedicated to organisers and the module dedicated to managing data controller responsibilities). The programme also supported the continuation of the 'EU Take the Initiative' communication campaign with targeted social media and local promotion activities in the Member States, which led to a 66% increase of the traffic to the ECI website (compared to the previous year) and an overall positive trend in terms of new requests for registrations (11 new requests compared to 5 in 2020). In addition, the ECI Forum funded through the same ECI-dedicated budget continued to provide legal and practical guidance to citizens interested in or running a European Citizens' Initiative.

Daphne: preventing and combatting gender-based violence and violence against children

This strand continues the work that has been carried out under the former Rights, Equality and Citizenship programme. More than EUR 19.1 million were allocated for this strand in 2021, mostly for grants. The dedicated call for proposal, with budget of EUR 17.7 million, finances projects on early detection, prevention and/or support to women, children and LGBTIQ victims or potential

¹⁸ Regulation (EU) 2016/679 as GDPR on the protection of personal data (General Data Protection Regulation).

¹⁹ Communications adopted under the Union of Equality: [EU anti-racism action plan 2020-2025 COM\(2020\)656](#), [EU Roma strategic framework for equality, inclusion and participation COM\(2020\)620](#), [Gender equality strategy 2020-2025 COM\(2020\)152](#), [LGBTIQ Equality Strategy 2020-2025 COM\(2020\)698](#),

victims of violence, with specific attention to situations emerging from the COVID-19 pandemic. Another priority targeted by the call is to prevent gender-based violence by addressing masculinities and the engagement of men and boys. Altogether, 154 proposals were submitted under the call, of which 40 were funded.

For procurement, 1 contract has been awarded and 1 subdelegation (DIGIT) has been done in 2021 for a total value of EUR 0.36 million

Challenges in 2021

2021 has been an extremely challenging year, in particular due to the transition between two Multiannual Financial Frameworks, the very late adoption of the CERV Programme Regulation (28 April 2021), and the continuation of the COVID-19 pandemic. In order to avoid delays in implementation, a number of mitigation measures were put in place. First of all, the development/finalisation of the work programme and of the call documents was done in parallel to finalisation of the MFF and CERV Regulations. Secondly, as soon as the CERV Regulation was adopted, targeted communication activities were launched starting with the first CERV Civil Dialogue week organised on 25-28 May 2021 to present the programme and the upcoming calls for proposals to the stakeholders and potential beneficiaries. Around 1000 participants attended the different sessions of the event, which along with a high-level panel with Commissioner Reynders, also included technical hands-on sessions.

Another challenge in 2021 was the increased budget of the CERV programme, in comparison with its predecessor programmes. The (new) CERV programme with its new architecture and with new policy areas, as well as the fact that around 60% of the programme is implemented by EACEA, required putting in place a solid cooperation mechanism. The COVID-19 crisis had also impact on the way in which the information was made available to the stakeholders and potential applicants, with all the information sessions being held online (interactive activities were held during the information sessions, recordings of the sessions as well as replies to frequently asked questions were published, etc.).

3.1.3. Previous Programme Performance

Rights, Equality and Citizenship

The Rights, Equality and Citizenship (REC) programme provided around EUR 430 million in the period 2014-2020 in support of actions promoting justice and fundamental rights. These actions included trainings, seminars and mutual learning events, research and studies, awareness raising and media campaigns to the ultimate benefit of EU citizens. The programme succeeded in contributing to the further development of an area where equality and the rights of persons are promoted, protected and effectively implemented.

The REC programme focused on fundamental rights in nine areas, corresponding to its specific objectives: non-discrimination; racism and other forms of intolerance; rights of persons with disabilities; gender equality; preventing violence (Daphne); rights of the child; data protection; EU citizenship; and consumers' rights.

A total of 81 calls for proposals were planned during 2014-2020. The largest number of these calls covered the specific objective to 'prevent violence (Daphne)', with 18 calls. Overall, 942 action grants and operating grants were awarded by the programme.

Procurement was an important funding mechanism for a number of specific objectives, amounting to a total of 345 contracts over the entire period. In total, approximately EUR 81 million was allocated to procurement contracts and services. The most common type of procurement was for analytical and monitoring activities.

In the last year, due to the COVID-19 crisis, the Commission found solutions to accommodate REC beneficiaries on a case-by-case basis to ensure, via individual grant agreement amendments, that their grant would continue despite the lockdown-related difficulty or impossibility to execute the work programmes as defined in the grant agreements. In procurement, there was also a need to extend the duration of some actions or to postpone the organisation of policy meetings due to the COVID-19 pandemic.

In 2021, the ex post evaluation looked into the performance and results of the 2014-2020 REC programme. The results of the evaluation showed that despite the effects of the economic crisis, which led to a general reduction in the amount of national resources and funding available for social and fundamental rights issues, the programme has proven its EU added value and its crucial role in developing a European area of equality and rights. Throughout the years of implementation, the REC programme continued to be relevant to the (changing) needs of stakeholders and the EU public. This was ensured via its flexible programming nature, including the annual prioritisation of emerging policy needs and issues, and the dialogue with civil society organisations.

Based on the qualitative evidence collected, the implementation of the REC programme was successful and helped achieve the overall objectives. In particular, this success was due to the quality of most of the projects implemented with REC funding, enabling the implementation of concrete actions, directly relevant to the evolving needs on the ground. Almost all finalised projects have achieved the expected results.

Progress was also recorded in terms of the legal base indicators (identified by the Regulation), concerning in particular:

- the number of people that were reached by information and dissemination campaigns or that took part in awareness-raising events (at least 80 million people);

- the number of stakeholders participating in training activities (at least 1.5 million individuals) and in exchanges, study visits, workshops and seminars (at least 85 000 individuals) funded by the programme.

Overall, the evidence gathered suggests that the REC programme has helped increase the knowledge of EU soft and hard law.

Key activities implemented matched to a large extent the specific objectives. Furthermore, the activities and achievements of all projects sampled were directly relevant to the calls' objectives. The calls' priorities helped the beneficiary organisations to align their actions with the REC programme's objectives.

Qualitative evidence collected by the study suggests that the benefits of the REC programme outweighed the costs.

A complex interplay of internal and external factors supported and hindered the programme's performance. Internal factors mainly relate to the difficulties linked with the application process, internal capacity of project partners, and the type and quality of consortium. Common external factors relate to the impact of external shocks such as the COVID-19 pandemic and the challenge of involving public entities and stakeholders in the activities planned.

The evaluation found that the success factors in REC projects include the quality of partnerships, bringing together organisations with complementary expertise, covering managerial and coordination skills with experience of working with target groups on the ground. Another element of success is the capacity of the projects to respond to the aims of the calls while also pursuing the longer-term strategies of the implementing organisations.

As regards the baseline situation, as described in the 2011 impact assessment and the 2015 ex post evaluation of the three predecessor programmes (Daphne III, fundamental rights, and citizenship and progress), the evaluation evidence shows that almost all difficulties identified at that time have been overcome in the REC programme, except for the geographical imbalance which still persisted.

Europe For Citizens

The Europe for Citizens programme played a positive overall role in encouraging civic participation and democratic engagement, while strengthening the sense of belonging together and supporting mutual understanding and identification with Europe, thereby helping to support the European integration process in the longer term. By working directly with citizens, the programme offered a forum for involving European citizens through a grassroots approach. In the area of European remembrance, the Europe for Citizens programme added value to the debates by encouraging exchange beyond national boundaries and promoting a European vision of history. Europe for Citizens offered a new approach through the development of activities linking remembrance with civic participation and democracy.

As evidenced by the mid-term evaluation, Europe for Citizens has successfully demonstrated its added value at EU level both in terms of its impact on participants and its complementary role to other EU funding programmes and policy initiatives in the fields of education, culture and EU citizenship. Aspects which have been identified for improvement mostly relate to increasing the programme's visibility, amending the monitoring indicators and strengthening the synergies with other relevant EU funding programmes and initiatives.

Out of 1 761 applications received, 419 projects were selected, and around 1 250 000 participants are expected to have been involved in the activities of the programme. The number of projects funded, as well as the number of participants that has been continuously increasing since 2014, suggests that the programme has contributed to the achievement of its general objectives.

The Europe for Citizens programme was affected by the COVID-19 crisis. This resulted in delays in implementing a certain number of projects. However, this should not impact the overall performance of projects. Where possible, projects changed their onsite events to online or hybrid meetings while staying in line with planned themes and content which impacted the schedule less heavily. For some projects however this was not an option and they had to delay the projects until sanitary conditions would allow for physical meetings in order to deliver quality results.

3.2. Key achievements

Rights, Equality and Citizenship

33.3%	81%	27	96%	139
Percentage of women among non-executive directors on boards of listed companies (in 2020, from 16% in 2014)	Percentage of Europeans who consider themselves as well or very well informed of the rights they enjoy as citizens of the Union (in 2020,	Number of Member States that set up structural co-ordination mechanisms with all stakeholders, including Roma, on the implementation of the	Percentage of people that consider that domestic violence against women is unacceptable (in 2018, from 84% in 2014)	Number of grants awarded to prevent and combat racism, xenophobia, homophobia and other forms of intolerance (in

from 32% in 2014)

Integration Strategies
(in 2020)

the period 2014-2020)

For the CERV programme, data for most indicators is not available yet because the data collection tools were being developed throughout 2021 and are expected to be deployed in 2022. This delay does not significantly impact reporting on the achievements because most of the projects funded by the first calls of the CERV programme have a start date between the end of 2021 and the first quarter of 2022.

Europe For Citizens

976 331	1 180 000	419	2378	28

The Europe for Citizens programme played a positive overall role in encouraging civic participation and democratic engagement, while strengthening the sense of belonging together and supporting mutual understanding and identification with Europe, thereby helping to support the European integration process in the longer term. By working directly with citizens, the programme offered a forum for involving European citizens through a grassroots approach. In the area of European remembrance, the Europe for Citizens programme added value to the debates by encouraging exchange beyond national boundaries and promoting a European vision of history.

3.3. Evaluations, studies and reports

Rights, Equality and Citizenship

The report on ex post evaluation will be available in Q1 2022. The results of the evaluation show that the REC programme has proven its EU added value and its crucial role in developing a European area of equality and rights. The programme continued to be relevant to the changing needs of stakeholders and the EU public. This was ensured via its flexible programming nature, including the annual prioritisation of emerging policy needs and issues, and the dialogue with civil society organisations. Overall, based on the qualitative evidence collected, the implementation of the REC programme was successful and helped achieve the overall objectives. In particular, this success was due to the quality of most of the projects implemented with REC funding, enabling the implementation of concrete actions, directly relevant to the evolving needs on the ground. Qualitative evidence collected by the ex post evaluation study suggests that the benefits of the REC programme outweigh the costs.

Europe For Citizens

The key findings of the latest mid-term evaluation of the implementation of the Europe for Citizens programme 2014-2020 (SWD(2018)86) were already presented in the Programme Statement 2019.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Protect and promote Union values

Indicator 1: People reached by training activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0				35 206			80 871			80 871
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number of persons
Cut-Off Date	08/02/2022
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objectives of the programme. This indicator is useful to tell

	about : • the increase of knowledge of Union law and policies as well as of the rights and values underpinning the Union; • the increase of understanding of the situation in Member States and in participating countries;
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	This indicator will be broken down per sex whenever possible.

Justification of the trend	2021 value still not available due to technical development still ongoing under eGrants

Indicator 4: Civil society organisations reached by support and capacity building activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0				3 000			6 300			6 300
	Actual Progress									Final

	60									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of organisations
Cut-Off Date	08/02/2022
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objectives/strands of the programme. This indicator is useful to tell about the support dedicated to civil society organisations active in the areas of the programme at European, national regional and local level.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No call for actions grants has been launched in 2021 therefore the number of CSOs supported in 2021 is lower than in a “full-speed “ year

Specific Objective 2: Promote rights, non-discrimination, equality, including gender equality, and advance gender and non-discrimination mainstreaming; (Equality, Rights and Gender Equality strand)

Indicator 1: People reached by training activities Support

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0				16 174			31 852			31 852
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number of persons
Cut-Off Date	08/02/2022
Data source	EC DG JUST.
Link to the objective	This indicator is linked to all the specific objectives of the programme. This indicator is useful to tell about : • the increase of knowledge of Union law and policies as well as of the rights and values underpinning the Union; • the increase of understanding of the situation in Member States and in participating countries.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	This indicator will be broken down per sex whenever possible.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	2021 value still not available due to technical development still ongoing under eGrants

Indicator 2: People reached by mutual learning and exchange of good practices activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0				5 299			10 434			10 434
	Actual Progress									Final

Justification of the trend	On track

Indicator 5: Transnational networks and initiatives focusing on European memory and heritage as a result of programme intervention

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0				1 866			3 786			3 786
	Actual Progress									Final
	152									
Are we on track :	Moderate progress									

Indicator type	Output
Unit of measurement	Number of “action” supported be it:• transnational networks of towns and town twinnings;• projects and organisations focusing on European memory and heritage. An action can be in the form of an action grant or an operating grant; it includes a set of activities.
Cut-Off Date	08/02/2022
Data source	EC DG JUST.
Link to the objective	This indicator is linked to the strand/specific objective “to promote citizens engagement and participation in the democratic life of the Union and exchanges between citizens of different Member States and to raise awareness of the common European history”. Co-ordinated transnational mutual learning activities implemented by transnational networks of towns and town twinnings and by European memory and heritage initiatives are necessary to promote exchanges between citizens of different countries on the wealth and diversity of the common heritage of the Union and to make them aware that these constitute the foundation for a common future. The above-mentioned objectives can

	only be reached by enabling individual citizens, towns and citizens' associations to interact, build capacity and exchange experiences at a transnational level. Action at national and local levels alone would be insufficient and ineffective.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	This indicator will be calculated for strand/specific objective "Citizens engagement and participation" only.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Moderate progress due to several reasons : Due to covid pandemic, many ongoing projects granted under the predecessor programme EfC extended their duration to 2022 and 2023 ; it is unlikely that the related organisations had the capacity to apply in 2021; As of 2021, the new corporate submission tool (eGrants) was used; this is far more complex for applicants, especially for TOWN – involving small local municipalities; Applicants benefited from a weaker support from programme Contact Points in 2021 (compared to predecessor programme), as only 14 contact point were nominated in the first half of 2021 and started their activity later in the year.

Specific Objective 4: Fight violence, including gender-based violence (Daphne strand)

Indicator 1: People reached by training activities

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Rights, Equality and Citizenship programme

General Objective 1: To contribute, to the further development of an area where equality and the rights of persons as enshrined in the Treaty on European Union, in the Treaty on the Functioning of the European Union, in the Charter of Fundamental Rights of the European Union and in the international human rights conventions to which the Union has acceded, are promoted, protected and effectively implemented

Indicator 1: Progress towards equal participation in the labour market

Are we on track :	Moderate progress									

Indicator type	Impact
Unit of measurement	Percentage and rate
Cut-Off Date	08/02/2021
Data source	Eurostat, Eurostat European Union Statistics on Income and Living Conditions (EU SILC) 2018 and European Institute Gender Equality (EIGE), gender statistics database.
Narrative	Target: Female employment rate 20-64 age group: 75% (for both women and men), Europe 2020 headline target; 71% for women. Target: Employment rate of people with disabilities 55% for both women and men, Europe 2020 headline target. Target :Gender pay gap 14%, Europe 2020 headline target. Target: Percentage of women among non-executive directors on boards of listed companies, Europe 2020 headline target.
Methodology	Quantitative and qualitative methodology. For instance, gender pay gap is calculated as the difference in average gross hourly earnings between women and men. It is based on salaries paid directly to employees before income tax and social security contributions are deducted. Only companies of ten or more employees are taken into account in the calculations.
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	Concerning the employment rate of people with disabilities, the Eurostat EU SILC 2018 report shows that for EU 28 in 2018: 52% employment rate for persons with disabilities as compared to 76.2% of those without disabilities and for EU 27 in 2018: 50.8% employment rate for persons with disabilities as compared to 75% of those without disabilities. It should be noted that persons with disabilities living in institutions are not included in these statistical data. Data for 2020 are for EU27. As regards Employment rate of people with disabilities, data for 2018 and 2019 are also for EU27.
Full metadata available at this address	https://ec.europa.eu/eurostat/databrowser/view/LFSQ_ERGAN_custom_159206/default/table?lang=en https://www.disability-europe.net/downloads/1046-edc-task-2-1-statistical-indicators-tables-eu-silc-2018 https://ec.europa.eu/eurostat/statistics-explained/index.php/Gender_pay_gap_statistics https://eige.europa.eu/gender-statistics/dgs/indicator/eustrat_sege1619_eqldcsn_wmid_comp_compex/bar/year:2020-B1/geo:EU28,EU27_2020/EGROUP:COMP/NACE:TOT/POSITION:NON_EXEC/UNIT:PC/sex:W
Justification of the trend	There has been a moderate progress on the female employment rate 20-64 age group for the entire period of programme implementation. The progress was characterized by a steady increase until 2018 that was followed by a slight drop in the preceding years. Similarly, there has been a steady increase in the percentage of women among non-executive directors on boards of listed companies. However, there are not recent data on the progress of gender pay gap, the last available data indicate a narrowing of the gap by 1,8 %. Lastly, the progress on the employment rate of people with disabilities has been quite moderate.

Indicator 2: Percentage of Europeans who consider themselves as well or very well informed of the rights they enjoy as citizens of the Union

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010	Milestones									2020
32%	Actual Progress									Final
		42%		54%	55%		81%			81%
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Percentage of people out of total number of people interviewed
Cut-Off Date	31/07/2020
Data source	Flash Eurobarometer 485: Report EU citizenship and democracy (July 2020)
Narrative	Target: percentage of Europeans who consider themselves as well or very well informed of the rights they enjoy as citizens of the Union 51 %, Europe 2020 headline target.
Methodology	Combined qualitative and quantitative methods
Link MFF 14-20 / MFF 21-27	NA
Other methodological comments	Data from Flash Eurobarometer (2015) and are not included in the Standard Eurobarometer.
Full metadata available at this address	https://data.europa.eu/euodp/en/data/dataset/S2260_485_ENG
Justification of the trend	No new eurobarometer in 2021. Beyond the target in 2020. There has been a significant increase in the percentage of Europeans who consider themselves as well or very well informed of the rights they enjoy as citizens of the Union. The progress has been highly significant, surpassing the set target by 30%. The causes of the strong increase are difficult to identify as they can be multiple: this indicator is an average of 5 sub-indicators, relative to five different rights conferred by EU citizenship, measured in the 28 Member States. In addition, the framing of this question has changed in the last survey. Therefore, comparisons with results from earlier surveys are not possible.

Specific Objective 1: To promote the effective implementation of the principle of non -discrimination on grounds of sex, racial or ethnic origin, religion or belief, disability, age or sexual orientation, and to respect the principle of non-discrimination on the grounds provided for in Article 21 of the Charter

Indicator 2: Number of Member States that set up structural co-ordination mechanisms with all stakeholders, including Roma, on the implementation of the National Roma Integration Strategies

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020

	Actual Progress									Final
	0.7		0.76		0.72		0.8069			0.8069
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentages for data up to 2018. Difference between 2020 and 2018 in pp (percentage points) for the figure in 2020.
Cut-Off Date	08/02/2022
Data source	Consumer Conditions Scoreboard (Survey on consumer attitudes towards cross border trade and consumer protection).
Narrative	Survey based indicator. Percentage of consumers who agree that retailers and providers respect their rights as consumer.
Methodology	Telephone survey covering all the EU MS, plus IS, NO and UK.
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	The methodology was slightly revised as of 2016. Data until 2018 are on the EU28 (including the UK). Conversely, the difference 2020-2018 (in percentage points) is on the EU27 (without the UK).
Full metadata available at this address	The 2020 edition of the consumer conditions scoreboard has not been published yet. The final report for the 2018 edition of the survey on consumers is available here: https://ec.europa.eu/info/policies/consumers/consumer-protection/evidence-based-consumer-policy/consumer-and-retailer-surveys_en
Justification of the trend	The target has been reached.

Indicator 2: Consumer and retailer awareness of rights and obligations:

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Percentage of consumers who are aware of their right to keep the unordered product sent to them together with an invoice										
2011	Milestones									2020
36%	32%			37%			39%			39%
	Actual Progress									Final
	34%		34%		35%		29%			29%
Are we on track :	Moderate progress									

Indicator type	Result

The final report for the 2018 edition of the survey on consumers is available here: https://ec.europa.eu/info/policies/consumers/consumer-protection/evidence-based-consumer-policy/consumer-and-retailer-surveys_en
Justification of the trend	The target has nearly been reached. This indicator is subject to a wide discrepancy between Member States : 45 ppt difference with Austria highest with 52% correct reply and Malta lowest with 9%. For these reasons, it is more easily subject to fluctuations. Also the context of this survey has to be taken into consideration. The fieldwork was done in Q4 2020, the first year of the pandemic. Consumers were then faced with a number of issues: reimbursement right of flights transformed in vouchers for a lot of flights; explosion of on-line scams, etc.

Indicator 3: Level of consumer confidence in cross-border online shopping, as measured by the percentage of consumers who feel confident purchasing via internet from retailers/service providers from another country

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
----------	------	------	------	------	------	------	------	------	------	--------

2012	Milestones								2020
34%				45%			50%		50%
	Actual Progress								Final
	37%		58%		48%		43%		44,11%
Are we on track :	Moderate progress								

Indicator type	Result
Unit of measurement	Percentages for data up to 2018. Difference between 2020 and 2018 in pp (percentage points) for the figure on 2020.
Cut-Off Date	08/02/2022
Data source	Consumer Conditions Scoreboard (Survey on consumer attitudes towards cross border trade and consumer protection).
Narrative	Survey based indicator. Percentage of consumers who feel confident purchasing via internet from retailers/service providers from another EU country.
Methodology	Telephone survey covering all the EU MS, plus IS, No and UK.
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	The methodology was slightly revised as of 2016. Data until 2018 are on the EU28 (including the UK). Conversely, the difference 2020-2018 (in percentage points) is on the EU27 (without the UK).
Full metadata available at this address	The 2020 edition of the consumer conditions scoreboard has not been published yet. The final report for the 2018 edition of the survey on consumers is available here: https://ec.europa.eu/info/policies/consumers/consumer-protection/evidence-based-consumer-policy/consumer-and-retailer-surveys_en
Justification of the trend	The target has nearly been reached. The context of this survey has to be taken into consideration. The fieldwork was done in Q4 2020, the first year of the pandemic. E-commerce accelerated: a significant number of consumers started buying online and frequency increased as well .(for more details see ICT annual surveys). Also consumers were faced with a number of on-line issues: explosion of on-line scams related to masks, hand-cleaning liquid, etc which then moved to other fields. Result: the consumer confidence of e-commerce decreased overall: ecommerce from retailers/service providers in own country 63% (-6ppt versus 2018) as well as from another EU country 43% (-4ppt versus 2018). It has to be noted that confidence in retailers / service providers in own country has always been much stronger than confidence in retailers/service providers in another country.

Previous Program 2: Europe for Citizens

Specific Objective 1: To raise awareness of remembrance, the common history and values of the Union and the Union's aim, namely to promote peace, the values of the Union and the well-being of its peoples, by stimulating debate, reflection and the development of networks

Indicator 1: Number of participants who are directly involved

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones								2020	
100 000	100 000			100 000			100 000			100 000

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	0.06							0.06	0%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

All numbers are provisional. A call for proposals on citizen’s engagement has a priority on climate and environment. The call closed in February 2022 with an indicative budget of 17.4 MEUR. The proposals are under evaluation however, their contribution will be marked as 40%. All other activities under CERV are currently considered as contributing 0%.

6.2. Contribution to gender equality

6.2.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 2: 22							
Score 1: 69							
Score 0: 8							

(*)Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

The programme is one of the Commission’s flagship initiatives to implement its Gender Equality Strategy²⁰. The promotion of gender equality and gender mainstreaming is a building block of the programme and enshrined within Article 2(b) of the programme regulation.²¹ Article 2(d) of the regulation also identifies the fight against gender-based violence as a specific objective (Daphne strand, EUR 19.1 million earmarked in 2021). In addition, the programme also advances gender equality through its holistic and intersectional approach to funding projects under the other three strands: Citizens’ engagement and participation (EUR 13.4 million), equality, rights and gender equality (EUR 27.9 million) and EU values strand (EUR 31.3 million) earmarked in 2021. In addition, EUR 8 million of the total budget were allocated for administrative expenditure and therefore listed with a score 0.

Paragraph 18 of the programme regulation underlines that ‘(...) the Programme in all its activities should support gender mainstreaming and the mainstreaming of non-discrimination.’ Although gender equality is not always the focal point of projects funded under these strands, they contribute significantly to promoting gender equality. By combating discrimination, xenophobia, racism and all forms of intolerance, the programme leverages its potential to fight and forestall intersectional discrimination. Areas of intersectional discrimination and inequalities are for instance, omitted narratives of Roma women about the holocaust, awareness raising activities that shed light on hate crimes and hate speech against people of colour, people of a certain religious belief or living with a handicap. Through the promotion of democratic principles and the rule of law, the programme also makes sure that women and men can equally enjoy their rights.

²⁰ A Union of Equality: Gender Equality Strategy 2020-2025.

²¹ REGULATION (EU) 2021/692 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL.

The programme underlines the importance of gender equality as a cross-cutting theme in its provisions, on its performance indicators and evaluation. All data collected has to be sex-disaggregated and the evaluation of the programme's strands is to include a gender equality perspective outlining gender equality results.²²

Key achievements:

- The CERV 2021 calls (14 in total) were systematically gender-mainstreamed. Applicants were asked to demonstrate in their proposal how gender equality will be respected during project implementation. They were also asked to outline how gender equality is tracked in their project monitoring and results. This resulted in stronger attention of applicants to gender equality aspects while designing their projects;
- Gender equality was also mainstreamed in the evaluation methodology, criteria and templates for CERV calls. As a result, applicants' attention to gender aspects in their proposals has a direct impact on their performance in the evaluation;
- Contracted experts to evaluate proposals were made aware about the central role of gender equality for their work and briefed about the Gender Equality Tracking Methodology that the Commission pilots. As a result, the programme contributed to capacity building among experts that work across different Commission funding programmes;
- Improved collection of data through a new application form, facilitating the collection of sex-disaggregated data and more in-depth insights into the impact of CERV funding.
- The information session on the citizen's engagement and participation strand, with some 500 registered participants, raised further awareness of the advantages to include a gender perspective into proposals among potential applicants and elicited multiple questions on gender equality and gender mainstreaming, which were summarized in a Q&A, publically available, for future reference for applicants.

The budgetary planning for the multi-annual financial framework 2021-27 allocates a total of EUR 169 410 120 to the promotion of gender equality, gender mainstreaming and combating gender-based violence.

6.3. Contribution to the sustainable development goals

6.3.1. Goals

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

The programme will support projects for the inclusion of all to quality education, including minority groups such as Roma youth, and organisations promoting lifelong learning opportunities at all ages.

SDG 5 Achieve gender equality and empower all women and girls

The programme in all its activities will support gender mainstreaming and the mainstreaming of non-discrimination objectives. In particular, the programme, within its specific objective on rights, non-discrimination and equality has a focus on promoting women's full enjoyment of rights; gender equality, including work-life balance; women's empowerment; and gender mainstreaming". Projects will fund activities to tackle gender stereotypes and address silent and intersectional discrimination, as well as awareness raising and other policy activities for the promotion of equal opportunities and the empowerment of women and girls in all their diversity, including with the view to achieve equal participation/representation of women and men in decision-making in politics and economics.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

Via the Equality, Rights and Gender Equality strand, the Programme will support projects for equal access to work, equal participation in labour market and the elimination of barriers to career progression in all sectors.

SDG 10 Reduce inequality within and among countries

The programme, through transnational projects sharing good practices, trainings and awareness rising activities, will contribute to the reduction of inequalities and eliminating discrimination between EU citizens and among countries.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Via the Citizens engagement and participation strand and the Union values strand, the programme will promote inclusive society and the rule of law. Funds will support entities which contribute to make our common values, rights and equality and rich diversity alive and vibrant.

SDG 17 Strengthen the means of implementation and revitalize the global partnership

6.3.2. Key achievements and performance

Rights, Equality and Citizenship

²² Annex II to Regulation (EU) 2021/692.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

By promoting youth Roma integration in the funded activities of non-discrimination, the programme contributed to the goal that all girls and boys have access to quality early childhood development, care and education. Through tackling gender stereotypes, the programme contributed to the goal of creating education facilities that are child-friendly, accessible and gender-sensitive, providing thus safe, nonviolent, inclusive and effective learning environments for all.

SDG 5 Achieve gender equality and empower all women and girls

Via actions funded under gender violence and gender equality calls for proposals, the programme contributed to the goals to end all forms of discrimination against all women and girls and to eliminate all forms of violence against all women and girls. In particular, the programme contributed to the goals to ensure women's equal opportunities for leadership at all levels and to adopt enforceable legislation for the promotion of gender equality.

SDG 8 Decent work and economic growth

The programme contributed to the goal to achieve full and productive employment and decent work for all women and men, including for young people and persons with disabilities, and equal pay for work of equal value. It funded activities sharing best practises on work-life balance and supported persons with disability in terms of awareness raising, capacity building, monitoring of their situation in terms of employment and foster education. Learning opportunities were provided to legal and policy practitioners on legal instruments that serve to protect and promote employment of persons with disabilities.

SDG 10 Reduce inequality within and among countries

The programme ensured equal access for travellers with disabilities to a number of benefits in the areas of culture, leisure, sport and transport, thus contributing to the inclusion of people with disabilities in society, via funding the European Disability Card project. It also helped in monitoring the poverty situation of persons with disabilities through supporting the Academic Network of European Disability experts and exchange of good practices in the social protection field.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

The programme supported the empowerment of Roma women through increasing their awareness about discrimination, complaint mechanisms, the justice system and human rights institutions/equality bodies. The programme also financed projects focusing on a child-friendly justice, to support children before, during and after judicial proceedings and to provide capacity-building to judicial practitioners on individual assessments specified in EU law.

SDG 17 Strengthen the means of implementation and revitalize the global partnership

Via the European network of academic experts in the field of disability, the Programme ensured the collection of essential data, analysis and monitoring on the situation of people with disabilities related to, among others, employment, education and poverty risk.

HEADING 2B: Resilience and Values

Communication

Lead DG: COMM

 Specific Objective 2 :College receives strategic advice on communicating the headline ambitions and on media landscapes in the Member States 681

 Specific Objective 3 :Corporate communication of the Commission's headline ambitions is aligned across the Commission's departments 682

 Specific Objective 4 :Meaningful and tailored messages, focussed on the Commission's headline ambitions, are communicated to citizens, media, multipliers and stakeholders 682

 Specific Objective 5 :Citizens engage with the EU through face-to-face events and online interactive platforms, such as the Conference on the Future of Europe, thus stimulating the sharing of EU values and interest in and ownership of EU topics 683

 Specific Objective 6 :A modern, high-performing and sustainable European Commission (general objective) 684

6. The programme contribution to horizontal policies 685

 6.1. Contribution to climate mainstreaming 685

 6.4. Contribution to gender equality 685

 6.5. Contribution to the sustainable development goals 686

1. Overview

1.1. Challenges

In the next years, DG Communication will focus on:

- listening to citizens across all Member States developing opinions and making sure that their concerns and ideas are fed into policy-making;
- communicating on the Commission's policy priorities and headline ambitions, taking into account the post-COVID-19 economic and social context and highlighting the recovery plan and NextGenerationEU, implementing the European Green Deal, and making Europe fit for the digital age;

- engaging with citizens and the players using all available channels of the overarching media landscape citizens in all Member States in a clear and concise manner.

1.2. Mission (General objectives)

DG Communication, as a corporate communication service, brings Europe closer to its citizens by:

- **LISTEN** : providing intelligence to the College, Cabinets and Services
- **ADVISE** : ensuring coherence in Communication and domain leadership
- **ENGAGE** : reaching out and engaging with citizens.

1.3. Specific objectives

DG Communication has defined in its Strategic Plan 2020-2024 the following five Specific Objectives:

1. College and services use country specific intelligence, Eurobarometer results, media analysis and stakeholders'/citizens' feedback to inform political decision-making;
2. College receives strategic advice on communicating the political headline ambitions and on media landscapes in the Member States;
3. Corporate communication of the Commission's political headline ambitions is aligned across the Commission's departments;
4. Meaningful and tailored messages, focussed on the Commission's political headline ambitions, are communicated to citizens, media, multipliers and stakeholders;
5. Citizens engage with the EU through face-to-face events and online interactive platforms, such as the Conference on the Future of Europe, thus stimulating the sharing of EU values and interest in and ownership of EU topics.

1.4. Public intervention context

Communication interventions falls under the institutional prerogatives of the Commission.

1.5. Actions

In the next years the Directorate-General for Communication will provide:

1. Executive and corporate communication services: providing executive services to the President and the College in support of their communication efforts and to the Spokesperson's Service and European Commission senior management by ensuring political and economic intelligence and media advice, and by feeding high quality country specific information and analysis from a variety of sources into the European Commission's decision-making process. Furthermore, providing corporate communication products and services to the external communication domain of the European Commission.

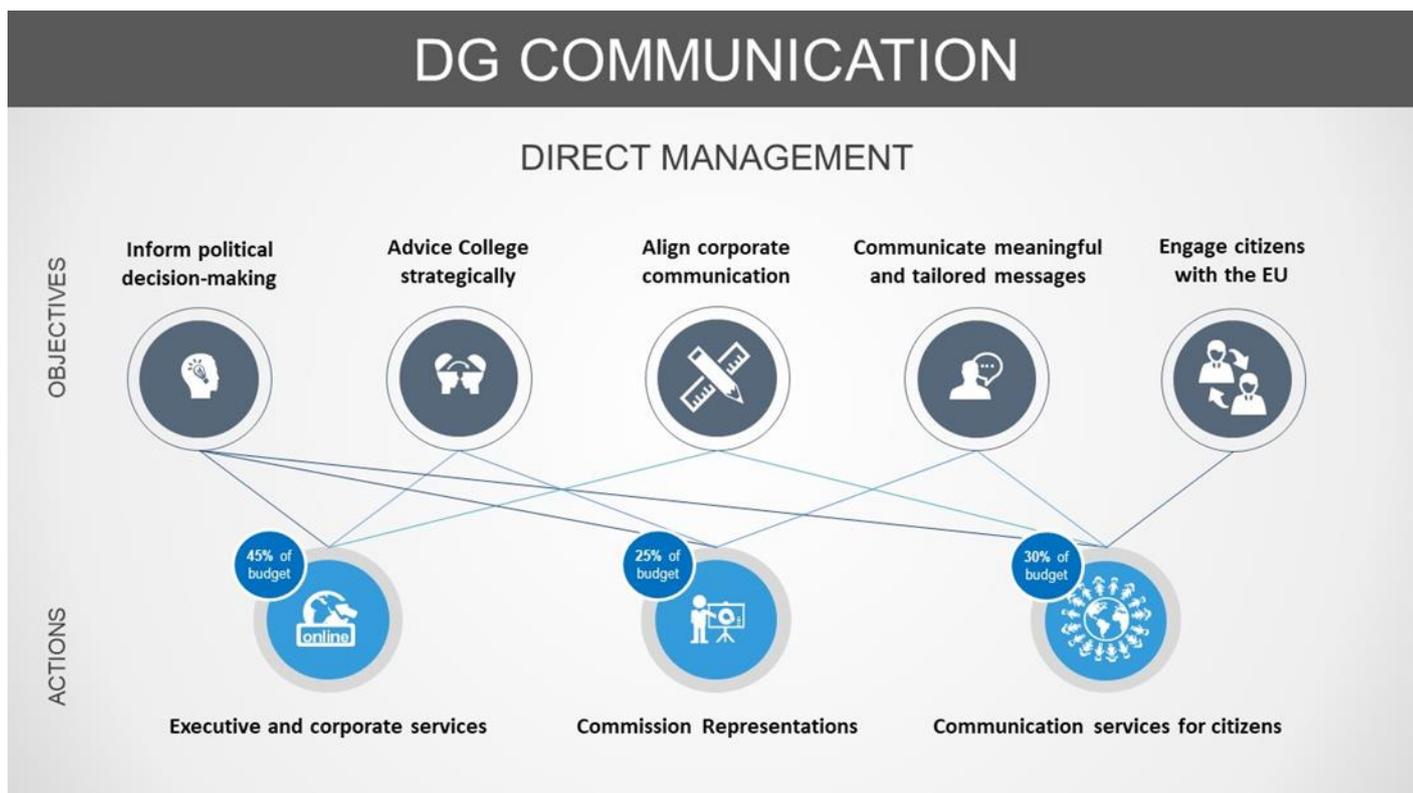

2. Representations of the European Commission in the Member States: acting as the official representatives of the Commission in the Member States and serving the interests of the whole Institution and the Union by connecting with national, regional, and local authorities, media, and stakeholders, and by reaching out to citizens in general.

3. Communication services for citizens: providing communication products and services directly addressed to citizens and ensuring that communication services for citizens are made available through simple, clear, and understandable messages, either via a mix of channels and media (traditional and new) or by directly communicating with citizens and stimulating exchange and engagement face to face.

1.6. Delivery mode

DG Communication is the lead Directorate-General for implementing the above-described activities, implementation through direct management.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Tasks are resulting from the European Commission’s prerogatives at institutional level, as provided for in Article 58(2) of Regulation (EU, Euratom) 2018/1046 of the European Parliament and of the Council of 18 July 2018 on the financial rules applicable to the general budget of the Union, amending Regulations (EU) No 1296/2013, (EU) No 1301/2013, (EU) No 1303/2013, (EU) No 1304/2013, (EU) No 1309/2013, (EU) No 1316/2013, (EU) No 223/2014, (EU) No 283/2014, and Decision No 541/2014/EU and repealing Regulation (EU, Euratom) No 966/2012 (OJ L 193,30.7.2018 p. 1).

1.8.2. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	106.7	107.6	108.5	109.5	110.4	111.4	112.2	766.3
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities								

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

Throughout the MFF 2014-2020, DG Communication was under Title 16 of the Commission budget. Under the new MFF 2021–2027 communication activities are included within Heading 2b “Cohesion and Values” under the policy cluster 7 “Investing in people and values”.

1.10. Relevant websites providing more information

DG COMM activities:

https://ec.europa.eu/info/departments/communication_en

The Eurobarometer website provides key statistical information:

<https://europa.eu/eurobarometer/screen/home#p=1&instruments=STANDARD>

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	106.7	766.3	14%
Payments	92.1		12%

The commitment appropriations needs for 2022 amount to €113,574,500 as defined in the Directorate-General for Communication Work Programme 2022¹. Indicated figure includes the following:

- 107,599,000 envisaged as annual DG COMM budget in MFF 2021-2027,
- 2,795,000 EUR envisaged for Information policy and strategic communication for external action under Communication on Corporate communication action in 2021-2023 under the 2021-2027 multiannual financial framework, C(2020)9390 of 18 December 2020, and
- 3,180,500 EUR envisaged for pilot projects.

Their implementation is through direct (public procurement) management and grants.

Pilot projects, for which commitment appropriations are allocated in 2022, are the following:

- PP072109 - Temporary citizens' assemblies (1,990,000 EUR), and
- PP072114 - BELE - Building Europe with Local Entities (1,190,500 EUR).

Payment needs for 2022 and following years are estimated considering the average implementation rates of previous years, by budget line. Fresh commitments made in 2022 will implement payment appropriations between 30% and 60% of the amount committed – depending on the budget lines. The RAL (Reste à Liquider) carried over from previous years is implemented at around 80%.

Commitment appropriations and payment appropriations have been used, with a 100% implementation rate, to finance DG COMM activities stretching along three activity strands: Corporate services, Representations and Services to citizens. In 2021, significant budget redeployments (about 10% of DG COMM yearly operational budget), were made in favour of the Conference on the Future of Europe project, for which specific funding had not been foreseen during the 2021 budget procedure.

In 2023, DG COMM will maintain communication activities specified under current budget sub-lines (i.e. communication channels and form will be maintained). However, topics (actual content of communication messages) will be updated and reviewed to consider shifting communication priorities.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

DG Communication is the corporate communication service of the European Commission. Acting under the authority of the President, DG Communication leads the Commission's communication about the headline ambitions of the College and EU

¹ C(2021) 8346 dated 25.11.2021.

policies. It aims to inform and engage citizens on the EU role and policies based on common values and enable them to participate in European democracy.

3.1.2. Active programme performance

For general objective “*A modern, high-performing, and sustainable European Commission (general objective)*” achievements are evaluated by measuring positive and fairly positive views on the image for the European Union. In 2021, achieved result is 45% of respondents had either positive or fairly positive image against target value of also 45%.

Being a Presidential service, in 2021, DG Communication contributed to this general objective by ensuring that the College receives high quality communication advice and intelligence, and by providing information and communication services addressing citizens directly, with messages aligned to the Commission priorities. This, in turn, has an impact on how well-informed European citizens feel and whether they consider their voice heard in the EU. These factors consequently helped to reinforce the Union’s positive image (expressed by an indicator for all services contributing to this general objective). At the same time, DG Communication contributed to a more modern, high-performing Commission by continuously adjusting its communication-related tools and activities (such as the Commission websites, digital outreach, and the social media presence) to adapt to the constantly evolving communication environment.

To reach this general objective, DG COMM defined several specific objectives depending on the targeted client groups. As detailed in DG COMM Strategic Plan 2020-2024 intervention logic, there are 3 main focus groups: 1) College, Cabinets and Services; 2) line DGs, and 3) citizens, media, multipliers and stakeholders.

In 2021, the second year of the von der Leyen Commission focused on paving the way out of the global pandemic and the economic crisis to a greener, more digital, and more socially just Europe. In this challenging context, tailored made communication campaigns launched throughout the year by DG Communication were essential in raising awareness on why the European Union’s Recovery Plan is a once-in-a-lifetime opportunity for Europe to emerge stronger, greener, and more digital. These external communication actions focused on highlighting the EU’s response to the crisis by disseminating inspirational ‘recovery stories’ with real examples of EU support across Europe, while in parallel preparing the launch of the most ambitious corporate campaign, NextGenerationEU. The objective of the campaign was raising awareness of the EU’s Recovery Plan.

The campaign kicked off in May 2021 with a series of adverts in newspapers across Europe targeting political stakeholders, with ‘Make it Real’ as the main tagline. In June 2021, another campaign was launched on social media channels and online media targeting public and young Europeans aged 16 - 24 - Europe’s next generation. This ad wave was linked to the President’s visits to EU countries whose national recovery and resilience plans were being endorsed by the Commission.

The campaign’s ‘Make it Green’ strand launched in October 2021, was featuring ‘sustainability’ themed assets, and disseminated on various social media channels. In this context, a 30-second ad clip on climate action was produced in partnership with the Union of European Football Associations (UEFA) and advertised on television, social media and in football stadiums. Working with third parties was challenging in terms of legal constraints and political messaging and required a creative approach.

In 2021, DG Communication continued making significant progress in the fight against disinformation, which was especially relevant in the context of the infodemic related to the COVID-19 pandemic.

For specific objective No 1 “*College and services use country specific intelligence, Eurobarometer results, media analysis and stakeholders’/citizens’ feedback to inform political decision-making*” achievements were evaluated by counting the political reporting products. These were provided by the Representations and covered reactions in all Member States on various EU topics. In 2021, the achieved amount of political reporting products was 1.430 which is more than planned 1.060. This reflects intensified efforts of Representations to improve quality and timeliness of information for decision-making at College level. The Representations influenced EU decision-making by reporting on the situation on the ground across the Member States. This helped increase outreach at national, regional, and local levels. They continued playing a key role in communicating the EU’s role in the fight against the pandemic and communicated the recovery from the crisis through the NextGenerationEU and the Recovery and Resilience Facility (with a focus on rebuilding the economy through the twin green and digital transitions). In addition, the Representations amplified the political messages of the President, with a focus on the National Recovery and Resilience Plans as well as the Green Deal, Digital Decade, Rule of Law, and Europe as geopolitical actor. They also engaged in targeted communication in the Member States by promoting the Conference on the Future of Europe and activities on the New European Bauhaus.

For specific objective No 2 “*College receives strategic advice on communicating the headline ambitions and on media landscapes in the Member States*” achievements were evaluated by counting audio-visual products provided to the College (messages, interviews, statements, clips). In 2021, achieved output is 1.925 against planned 850. This has been mainly driven by COVID-19 pandemic: the demand for audio-visual services and video productions replacing face-to-face meetings and events has increased. For instance, the use of the TV studios and video production at the Commission headquarters increased by over 200% in 2021. The corporate Audio-visual Service organised photo and video coverage for more than 280 missions by College members outside of Belgium. The successful coordination and integration of audio-visual products with social media continued and resulted in more than 110 corporate videos and around 180 social media videos. In addition to the factsheets on the ‘Safe COVID-19 vaccines for Europeans’ website, in 2021 DG Communication disseminated a total of 5.6 million publications and online material, out of which 68% in digital formats.

For specific objective No 3 “*Corporate communication of the Commission’s headline ambitions is aligned across the Commission’s departments*” achievements were evaluated by counting specific contracts concluded using Corporate

Communication Framework Contracts. In 2021, achieved output was 590 against targeted 300. Corporate Framework contracts are managed by DG Communication Corporate Communication Contracts and Evaluation teams. The higher achieved output compared to target was due to the diversification of the services offered to Directorates-General, via the new ‘Digital Communication’ framework contract. The support and advisory services for these contractual solutions are managed by the Corporate Communication Contracts Team. The Corporate Communication Contracts team concentrated on service improvement in 2021. Two new framework contracts were offered in 2021 (covering digital services and outreach and media relations), along with a new special procurement procedure: the Dynamic Purchasing System. The increased offer led to significant uptake, with almost 600 individual contractual solutions offered throughout the Commission.

For specific objective No 4 “*Meaningful and tailored messages, focussed on the Commission’s headline ambitions, are communicated to citizens, media, multipliers and stakeholders*” achievements are evaluated by measuring:

- a) target audience able to recall the messages of corporate campaigns. In 2021, achieved result was 47 % against planned value of 22%. The indicator measures the recall of the corporate campaigns’ messages of the audience reached. This is an average percentage for all campaigns per calendar year. Specifically, this figure refers to general asset recall, and not to message recall. Hence 47% of young respondents aged 16-34 stated that they have seen at least one of the NextGenerationEU campaign assets.
- b) users satisfied with the answers received from the Europe Direct Contact Centre. In 2021, achieved result is 90% of users against planned value of 83 %. This reflects higher than expected efficiency of communication activities implemented in the framework of work programme.

For specific objective No 5 “*Citizens engage with the EU through face-to-face events and online interactive platforms, such as the Conference on the Future of Europe, thus stimulating the sharing of EU values and interest in and ownership of EU topics*” achievements are evaluated by measuring engagement rate on social media. In 2021, achieved result was 36 seconds against a planned value of 64.2 seconds. It should be noted that engagement rate on Youtube is calculated based on Youtube Analytics: ‘Average view duration (seconds) on YouTube’ (calculated as the total watch time of the video divided by the total number of video plays, including replays). YouTube has optimized its algorithm to promote videos with a high average view duration, this indicator is thus an important metric to track.

In 2021, and in view of a 2022 re-opening, a comprehensive refurbishment of the Visitors’ Centre was launched. The New European Bauhaus inspired premises, design, concept, and visitor journey further improve the Centres capacity to receive physical, virtual and hybrid visitors in future. Furthermore, DG Communication worked on a new corporate Commission information centre, Experience Europe Brussels, opened in February 2022.

DG Communication continued providing an enhanced range of media monitoring and analysis products for different internal audiences, particularly the President and the College. As vaccination against COVID-19 became a priority, DG Communication ensured constant monitoring and analysis of related media coverage in the EU. It provided summaries and analysis of online and social media content, including identifying potential disinformation and misinformation. Additionally, Eurobarometer continued delivering data and intelligence on the state of public opinion in Member States, including through two standard Eurobarometer surveys, one special survey on the Future of Europe and a flash survey on vaccination.

3.2. Key achievements

1 430	1 925	590
political reporting products provided by the Representations covering reactions in all Member States on EU topics in 2021.	audio visual products (messages, interviews, statements, clips) were provided to the College in 2021.	specific contracts were concluded using Corporate Communication Framework Contracts in 2021.
47%	90%	110 000 000
of target audience was able to recall the messages of corporate campaigns in 2021.	of users were satisfied with the answers received from the Europe Direct Contact Centre in 2021.	visits (including repetitive visits) were made to the European Commission core site (ec.europa.eu) in 2021.
36	18 000	8 000
seconds was estimated as an actual engagement rate in 2021 on Youtube based on Youtube Analytics data.	visitors (including virtual visitors) have visited visitors’ centre in 2021.	Events were organized by Europe Directs in 2021.

3.3. Evaluations, studies and reports

In 2021, DG Communication concluded two studies, the ‘Review of EC publications for citizens’ and the ‘Study on youth audience sub-segmentation’. The key findings of the studies were the following:

The ‘**Review of European Commission publications for citizens**’ managed by unit COMM.A2 is part of the Commission’s effort to take stock of its publications for citizens and to consolidate and improve its offer. The review looked at print and online publications produced by all Directorates-General for the general public - citizens of all ages, genders and socio-economic backgrounds. The study did not look at expert publications and reports. It provided an assessment of the extent to which Commission publications for citizens are user-friendly and tailored for their readers in terms of language, visuals, and ease of access, including for people with disabilities. It also assessed the extent to which services within the Commission and beyond cooperate when developing and distributing their publications for non-specialist audiences. The study’s findings can definitively contribute to the professionalisation of those involved in the drafting, production and dissemination of citizen publications.

The ‘Review of European Commission publications for citizens’ managed by unit COMM.A2 is part of the Commission’s effort to take stock of its publications for citizens and to consolidate and improve its offer. The review looked at print and online publications produced by all Directorates-General for the general public - citizens of all ages, genders and socio-economic backgrounds. The study did not look at expert publications and reports. It provided an assessment of the extent to which Commission publications for citizens are user-friendly and tailored for their readers in terms of language, visuals, and ease of access, including for people with disabilities. It also assessed the extent to which services within the Commission and beyond cooperate when developing and distributing their publications for non-specialist audiences. The key findings are:

- Commission publications for citizens were considered relevant by readers and users, answering most of their information needs;
- There were good complementarities, and no major overlaps, between Commission publications for citizens and those produced by other main EU, national, regional, and local sources.
- The Commission used a range of online and offline channels to promote and distribute its publications to EU citizens, with social media regarded as the most effective approach. However, the Commission’s information multipliers also emphasised the continued importance of face-to-face contact and distribution of printed Commission publications
- Commission publications for citizens were largely perceived to be appropriate for their target audiences in terms of readability and usability;
- EU added value of Commission publications for citizens could be maximised by conducting more thorough audience research during early planning stages to ensure that the information needs of targeted audience segments are adequately met.

The study’s findings can definitively contribute to the professionalisation of those involved in the drafting, production, and dissemination of citizen publications.

The study on ‘Follow-up review and sub-segmentation of Commission materials and activities targeting 5–18-year olds’ also commissioned and managed by unit COMM.A2, tackles a very timely topic of sub-segmentation in the context of the ongoing European Year of Youth 2022. It is a follow-up to an earlier study requested at the time by the CCSC-sub-group “youth” on the Commission’s youth materials and activities, which concluded that – while in general the materials produced were appropriate and effective - there was a need for a deeper look at the different youth sub-segments. Therefore, the follow-up study looked into these sub-segments for communicating with children and adolescents through printed and online materials. The study resulted not only in a set of recommendations, but also offers operational, hands-on guidance to the whole communication community, in a forward-looking outreach strategy and contains a toolkit. The key findings are:

- Commission materials for children are largely relevant in terms of topics and address children’s EU-related information needs. The content of materials for 5–18-year-olds is easy to read and most of the materials can be accessed by their users in their preferred language,
- Overall, there is a good level of coherence and complementarity in terms of topics covered. Stakeholders appreciate the breadth of materials that the Commission offers by type and diversity of formats. There is a complementary approach to materials between the Commission’s materials and other EU institutions or organisations,
- Despite reach limitations, when known, the Commission materials for children are generally perceived to be engaging, of good quality and useful for them.
- There is good and efficient cooperation between author services and DG COMM in the development, revision and distribution of materials targeting 5–18-year-olds. Cooperation among Commission services has improved in recent years thanks to the availability of DG COMM for advice and support,
- Commission materials and activities for children provide added value in the following main areas: Providing up-to-date and complete, filling an information gap, in relation to national curricula, covering topics in an impartial and objective way and providing an EU perspective on the topic.

Concerning the forthcoming studies there are four on-going studies:

- ‘Study on target audience analysis for communicating Europe’ (September 2021 - July 2022);
- ‘Study on prizes and awards in the Commission’ (September 2021 - June 2022);

- ‘Study on Europe by satellite’ (2021 - 2022);
- ‘Study on the citizens panels as part of the Conference on the Future of Europe’ (September 2021 - May 2022).

The planned studies to start in 2022 or later:

- ‘Monitoring and evaluation of the communication actions under the NextGenerationEU umbrella’ (February 2022 - October 2024);
- ‘Study on the future of omnichannel digital communication in DG Communication’ (2022 - 2023);
- ‘Evaluation/Study on the Europe Direct Contact Centre’(October 2023 - March 2024);
- ‘Evaluation/Study on the Europe Direct Information Centres’ (2023 - 2024);
- ‘Evaluation/Study on EC Visitors’ Centre and on Experience Europe RP14’ (2024 - 2025);
- ‘Evaluation/Study on the joint strategy for the House of Europe (Before the EP elections of 2024);
- ‘Evaluation/study - European Elections 2024’ (June 2024 - August 2024);
- ‘Evaluation/study of the corporate minimum requirements for communication and visibility under the long-term budget 2021-27’ (2025 – 2026).

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: College and services use country specific intelligence, Eurobarometer results, media analysis and stakeholders’/citizens’ feedback to inform political decision-making

Indicator 1: Political reporting products provided by the Representations covering reactions in all Member States on EU topics

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2029
0	1 060	1 200	1 200	1 200	1 200	1 200	1 200	1 200	1 200	1 200
	Actual Progress									Final
	1 430									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of Reports - Annual
Cut-Off Date	31/12/2021
Data source	EC DG COMM, Political reporting tool
Link to the objective	This indicator is directly linked to Specific Objective 1
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	N/A
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	This indicator is also an annual milestone.DG COMM has a goal of actively maintaining current intensity of political coverage. This approach requires constant communications effort.

Specific Objective 2: College receives strategic advice on communicating the headline ambitions and on media landscapes in the Member States

Indicator 1: Audio visual products provided to the College (messages, interviews, statements, clips)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2029
0	850	1 000	1 000	1 000	1 000	1 000	1 000	1 000	1 000	1 000
	Actual Progress									Final
	1 925									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of audio-visual products - Annual
Cut-Off Date	31/12/2021
Data source	EC DG COMM, Survey

Link to the objective	This indicator is directly linked to Specific Objective 2
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	N/A
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	This indicator is also an annual milestone. Due to the COVID-19 pandemic, the demand for audio-visual services and video productions replacing face-to-face meetings and events has increased. For instance, the use of the TV studios and video production at the Commission headquarters increased by over 200% in 2021.

Specific Objective 3: Corporate communication of the Commission’s headline ambitions is aligned across the Commission’s departments

Indicator 1: Specific contracts concluded using Corporate Communication Framework Contracts

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2029

Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	N/A
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The overall number of contractual solutions offered by DG Communication significantly surpassed the target: instead of the initially planned 300 specific contracts, DG Communication offered 590 such solutions. The increase was due to the diversification of the services offered to Directorates-General, in particular via the new ‘Digital Communication’ framework contract. The support and advisory services for these solutions are managed by the Corporate Communication Contracts Team.

Specific Objective 4: Meaningful and tailored messages, focussed on the Commission’s headline ambitions, are communicated to citizens, media, multipliers and stakeholders

Indicator 1: Target audience able to recall the messages of corporate campaigns

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2029

Other methodological comments	N/A
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	This indicator is also an annual milestone; therefore, it is equal to target (after the initial increase).

Indicator 3: Visits to the European Commission core site (ec.europa.eu)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2029
0	42 000 000	100 000 000	100 000 000	100 000 000	100 000 000	100 000 000	100 000 000	100 000 000	100 000 000	100 000 000
	Actual Progress									Final
	110 000 000									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of visits - Annual
Cut-Off Date	31/12/2021
Data source	EC DG COMM, EUROPA Analytics
Link to the objective	This indicator is directly linked to Specific Objective 4
Link MFF 14-20 / MFF 21-27	Due to technology update this indicator will measure visits and not unique visitors ; Link to MFF 14/20 Sp 1 Indicator 6: Number of unique visitors to the EUROPA website.
Other methodological comments	N/A
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	As the European Commission core site provides the main sources of information in reply to the COVID-19 pandemic, the traffic has increased considerably more than estimated. In particular, information related to the vaccination and the EU digital COVID certificate increased the traffic to the site.

Specific Objective 5: Citizens engage with the EU through face-to-face events and online interactive platforms, such as the Conference on the Future of Europe, thus stimulating the sharing of EU values and interest in and ownership of EU topics

Indicator 1: Engagement rate on social media

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2029
0	60	60	60	60	60	60	60	60	60	60
	Actual Progress									Final
	36									
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	Average view duration (seconds) on YouTube Average view duration in seconds -- Annual
Cut-Off Date	31/12/2020
Data source	DG COMM social media metric
Link to the objective	This indicator is directly linked to Specific Objective 5
Link MFF 14-20 / MFF 21-27	Link MFF 14/20 SP 1 Indicator 7: Number of followers/fans/subscribers of the EU Commission social media corporate accounts including the Representations
Other methodological comments	The engagement rate on YouTube is 'Average view duration (seconds) on YouTube (calculated as the

	total watch time of the video divided by the total number of video plays, including replays). YouTube has optimized its algorithm to promote videos with a high average view duration, this indicator is thus an important metric to track.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Given its peculiarity, less resources have been invested in managing the YouTube account of the Commission which has resulted in lower-than-expected engagement rate. However, the target is to have a stable engagement rate of 60 seconds. There is a difference in baseline of 2019 compared to target since:-) YouTube has optimized its algorithm to promote videos with a high average view duration which has an effect of the result,-) DG COMM seeks to maintain average view duration of 60 seconds on YouTube which is directly related to available financing (this is evidenced by lower 2021 result).

Indicator 2: Visitors to the Visitors' Centre per year

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2029
0	24 000	24 000	24 000	24 000	24 000	24 000	24 000	24 000	24 000	24 000
	Actual Progress									Final
	18 000									
Are we on track :	Moderate progress									

Indicator type	Output
Unit of measurement	Number of visits - Annual
Cut-Off Date	31/12/2021
Data source	EC DG COMM, Visitors' centre statistics
Link to the objective	This indicator is directly linked to Specific Objective 5
Link MFF 14-20 / MFF 21-27	Link to MF 14/20 SP 1 Indicator 4: Percentage of visitors to the Commission very satisfied with the visits
Other methodological comments	Due to the uncertainty caused by the pandemic, physical visits did not take place in the same way with a significant impact on the numbers of groups and visitors. However, DG Communication expects this to be counterbalanced by a new strategy on virtual visits which are included in calculation of indicator.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Due to the uncertainty caused by the pandemic, physical visits were not carried out in the same way during 2021 with a significant impact on the number of groups and visitors.

Indicator 3: Events organised by EDs

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2029

Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The Europe Direct Information Centres generation's 'shelf life' was extended until 30 April 2021. The next generation EUROPE DIRECT (note change of name) started operations on 1 May 2021. The management process of the next generation hinges upon the organisation of events with long-lasting impact, targeting wider sub-sets of the population. Higher quality, involving significant organisation efforts, will inevitably lead to fewer events as compared to the numbers produced by the current generation on yearly basis. In addition, the unprecedented sanitary situation will result in fewer events staged by the current generation as compared to previous reference periods.

General objective: A modern, high-performing and sustainable European Commission

Indicator 1: Positive and fairly positive views on the image for the European Union

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2029
0	45%	45%	45%	45%	45%	45%	45%	45%	45%	45%
	Actual Progress									Final
	45%	-	-	-	-	-	-	-	-	
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Annual
Cut-Off Date	31/12/2021
Data source	EC Eurobarometer
Link to the objective	The indicator gives the share of positive and fairly positive views on the image of the European Union.
Link MFF 14-20 / MFF 21-27	Link to MFF 14/20 General Objective 1, Indicator 1: Percentage of EU citizens having a positive image of the EU
Other methodological comments	N/A
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	This indicator is also an annual milestone; therefore, it is equal to target. DG COMM has a goal of actively maintaining current situation on the image for the European Union. This approach requires constant communications effort. After a large increase between summer 2020 and winter 2020-2021, the positive image of the EU remains at a relatively high level (45%) and at its' highest level since 2009 (20 EU Member States have positive image of the European Union, 6 Member States have neutral image and 1 Member State has negative image). The highest results are observed in Ireland (70%) and Portugal (62%).

5. The programme contribution to horizontal policies

5.1. Contribution to climate mainstreaming

5.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	2.44	18.00	18.00					38.44	5%

(*)These amounts include NextGenerationEU top-ups if any

5.1.2. Explanation on the financial contribution

Climate spending is very volatile and moving target, hence, specific thematic focus of corporate communication campaigns is currently under discussions. Provided yearly figures are, therefore, a preliminary estimation. In general, climate change is extremely high on the campaign agenda, including the expected energy crisis which may increase it even more.

5.1.3. Key achievements

Examples include communication events, include those financed via corporate communication campaigns, during which specific topics on climate change are presented and discussed. DG COMM uses available communication channels to disseminate different communication messages, including messages on climate change and the effect this change has on everyone involved.

5.2. Contribution to gender equality

5.2.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*: 106.7							

(*)Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

The COMM Working Group on Equality was created in March 2021 (with note from the D-G, Ares(2021)1574087 of 2/3/2021) and includes representatives of all COMM Directorates and most units ([list of members](#)). It has met initially every month on 22/3, 28/4 and 25/5/2021 to prepare the COMM Equality Working Plan requested by SG by mid-2021; after the finalisation and

endorsement of the [COMM Working Plan on Equality by SMM](#) on 5 July 2021, it is meeting approximately every 3 months to monitor implementation: on 10/11/2021 and will meet again on 28/2/2022.

On monitoring, the [COMM Working Plan on Equality](#) adopted on 5 July, states that “The actions included in the Work Plan [...] will be monitored annually against the targets and deadlines mentioned in the tables. The COMM Equality Working Group will remain mandated to ensure implementation and reporting on the actions listed, and propose amendments and integrations if needed. [...] The Equality Coordinator will report to DG COMM’s Senior Management meeting once or twice a year to inform and seek guidance about the state of play. The Coordinator will also report regularly to the secretariat of the Task Force on Equality.”

The working group has prepared a first update of the reporting table for all the actions included in the plan by the end of 2021, as an intermediary step to keep a close monitoring of the implementation of the plan.

A new update will be produced in July 2022 as the planned annual report.

5.3. Contribution to the sustainable development goals

DG Communication is the corporate communication service of the European Commission. Acting under the authority of the President, DG Communication leads the Commission’s communication about the headline ambitions of the College and EU policies. As such, it is not directly contributing to sustainable development goals.

HEADING 3A: Market related expenditure and direct payments**Common Agricultural Policy (CAP)****Lead DG: AGRI**

3.3. Evaluations, studies and reports	712
4. Programme 2021-2027 - Key monitoring indicators	714
Specific Objective 1 :Support viable farm income and resilience of the agricultural sector across the Union to enhance long-term food security and agricultural diversity as well as ensuring the economic sustainability of agricultural production in the Union.	714
Specific Objective 2 :Enhance market orientation and increase farm competitiveness both in the short and long term, including greater focus on research, technology and digitalisation.....	715
Specific Objective 3 :Improve the farmers' position in the value chain	716
Specific Objective 4 :Contribute to climate change mitigation and adaptation, including by reducing greenhouse gas emissions and enhancing carbon sequestration, as well as promote sustainable energy.....	716
Specific Objective 5 :Foster sustainable development and efficient management of natural resources such as water, soil and air, including by reducing chemical dependency	717
Specific Objective 6 :Contribute to halting and reversing biodiversity loss, enhance ecosystem services and preserve habitats and landscapes	721
Specific Objective 7 :Attract and sustain young farmers and other new farmers and facilitate sustainable business development in rural areas.....	722
Specific Objective 8 :Promote employment, growth, gender equality, including the participation of women in farming, social inclusion and local development in rural areas, including circular bio-economy and sustainable forestry	723
Specific Objective 9 :Improve the response of Union agriculture to societal demands on food and health, including high quality, safe, and nutritious food produced in a sustainable way, the reduction of food waste, as well as improving animal welfare and combatting antimicrobial resistances	724
Specific Objective 10 :Modernising the sector by fostering and sharing of knowledge, innovation and digitalisation in agriculture and rural areas and encouraging their uptake by farmers, through improved access to research, innovation, knowledge exchange and training	726
5. Programme 2014-2020 - Key monitoring indicators	726
Previous Program 1 : European Agricultural Guarantee Fund (EAGF).....	726
General Objective 1 :To promote a viable food production.....	726

General Objective 2 :To promote a sustainable management of natural resources and climate action.....	727
General Objective 3 :To promote a balanced territorial development	727
Specific Objective 1 :To improve the competitiveness of the agricultural sector and enhance its value share in the food chain	728
Specific Objective 2 :To foster market stability.....	729
Specific Objective 3 :To better reflect consumer expectations	729
Specific Objective 4 :To sustain farmers' income stability by providing direct income support	730
Specific Objective 5 :To promote a more market oriented agriculture, by ensuring a significant level of decoupled income support	730
Specific Objective 6 :Contribute to the enhancement of the environmental performance of the CAP through the greening component of the direct payments. Contribute to the development of sustainable agriculture and to making the Common Agricultural Policy more compatible with the expectations of the society through the cross compliance system. Contribute to preventing soil erosion, maintaining soil organic matter and soil structure, ensuring a minimum level of maintenance and avoiding the deterioration of habitats, and protecting and managing water through the standards of good agricultural and environmental condition of land	731
Specific Objective 7 :To promote local agricultural production and to ensure a fair level of prices for commodities for direct consumption and for processing by local industries in the Outermost Regions of the EU and in the Aegean Islands	733
Specific Objective 8 :To provide the Commission with reasonable assurance that Member States have put in place management and control systems in conformity with EU rules designed to ensure the legality and regularity of the underlying transactions financed by the EAGF, EAFRD, SAPARD and IPARD and, where this is not the case, to exclude the expenditure concerned from EU financing so as to protect the EU's financial interests.....	733
Specific Objective 9 :To inform and increase awareness of the CAP by maintaining an effective and regular dialogue with stakeholders, civil society, and specific target audiences.....	734
Previous Program 2 : European Agricultural Fund for Rural Development (EAFRD).....	734
Specific Objective 1 :Fostering knowledge transfer and innovation in agriculture forestry and rural areas (Priority 1).....	734
Specific Objective 2 :Enhancing farm viability and competitiveness of all types of agriculture in all regions and promoting innovative farm technologies and sustainable management of forests (Priority 2).....	736
Specific Objective 3 :Promoting food chain organisation, including processing and marketing of agricultural products, animal welfare and risk management in agriculture (Priority 3).....	736
Specific Objective 4 :Restoring, preserving and enhancing ecosystems related to agriculture and forestry (Priority 4).....	737
Specific Objective 5 :Promoting resource efficiency and supporting the shift towards a low carbon and climate resilient economy in agriculture, food and forestry sectors (Priority 5).....	739
Specific Objective 6 :Promoting social inclusion poverty reduction and economic development in rural areas (Priority 6) ...	742
6. The programme contribution to horizontal policies	743

6.2. Contribution to biodiversity mainstreaming.....	745
6.3. Contribution to clean air financing.....	746
6.4. Contribution to gender equality	747
6.5. Contribution to the sustainable development goals.....	747

1. Overview

1.1. Challenges

Europe needs a smart, resilient, sustainable and competitive agricultural sector in order to ensure the production of safe, high-quality, affordable, nutritious and diverse food for its citizens and a strong socio-economic fabric in rural areas.

A new context emerged, characterised by a shift from multilateral to bilateral and regional agreements and new EU international commitments on Climate Change and on Sustainable Development Goals.

The European Green Deal reinforced the need to support the transition towards a knowledge-based fully sustainable agricultural sector. In that context, EU's agriculture and rural areas face challenges related to:

- the economic health of the farm sector, both at the level of income and competitiveness, in the current uncertain global context;

- the need to preserve natural resources in a context of climate change (requiring action both regarding mitigation and adaptation); and
- the need to preserve the economic and social fabric for the EU's rural areas.

The CAP had to be reformed to meet these challenges and be even more coherent with other EU policies to maximise its contribution to the Sustainable Development Objectives. The new CAP, agreed in 2021, will enhance its European added value by reflecting a higher level of environmental and climate ambition and addressing citizens' expectations for their health, the environment and the climate.

1.2. Mission (General objectives)

The global and cross-border nature of the challenges faced by the EU agricultural sector and rural areas requires a strong common policy at EU level.

EU Budget support from the European Agricultural Guarantee Fund (EAGF) and the European Agricultural Fund for Rural Development (EAFRD) aims to further improve the sustainable development of farming, food and rural areas and shall contribute to achieving the following EU objectives, defined for the period 2023-2027:

- to foster a smart, competitive, resilient and diversified agricultural sector ensuring long-term food security;
- to support and strengthen environmental protection, including biodiversity, and climate action and to contribute to achieving the environmental- and climate-related objectives of the Union, including its commitments under the Paris Agreement;
- to strengthen the socio-economic fabric of rural areas.

1.3. Specific objectives

Ten key objectives will be the basis upon which the future common agricultural policy (CAP) strategic plans will be built and will be the cornerstone of a more results-oriented policy. The objectives are:

- a) to support viable farm income and resilience of the agricultural sector across the Union in order to enhance long-term food security and agricultural diversity as well as to ensure the economic sustainability of agricultural production in the Union;
- b) to enhance market orientation and increase farm competitiveness both in the short and long term, including greater focus on research, technology and digitalisation;
- c) to improve the farmers' position in the value chain;
- d) to contribute to climate change mitigation and adaptation, including by reducing greenhouse gas emissions and enhancing carbon sequestration, as well as to promote sustainable energy;
- e) to foster sustainable development and efficient management of natural resources such as water, soil and air, including by reducing chemical dependency;
- f) to contribute to halting and reversing biodiversity loss, enhance ecosystem services and preserve habitats and landscapes;
- g) to attract and sustain young farmers and new farmers and facilitate sustainable business development in rural areas;
- h) to promote employment, growth, gender equality, including the participation of women in farming, social inclusion and local development in rural areas, including the circular bio-economy and sustainable forestry;
- i) to improve the response of Union agriculture to societal demands on food and health, including high-quality, safe and nutritious food produced in a sustainable way, to reduce food waste, as well as to improve animal welfare and to combat antimicrobial resistance
- k) to modernise agriculture and rural areas by fostering and sharing of knowledge, innovation and digitalisation in agriculture and rural areas and by encouraging their uptake by farmers, through improved access to research, innovation, knowledge exchange and training.

1.4. Public intervention context

European policy with a single European budget. The objectives of the CAP as laid out in Article 39 of the Treaty of the Functioning of the European Union (TFEU) are:

- to increase agricultural productivity;
- to ensure a fair standard of living for the agricultural community;
- to stabilise markets;
- to assure the availability of supplies;
- to ensure that supplies reach consumers at reasonable prices.

The Treaty objectives, together with horizontal policy clauses (e.g. on the protection of the environment, consumer protection and animal welfare), provide the framework for all EU initiatives and activities.

The CAP is financed through two funds:

- the European Agricultural Guarantee Fund (EAGF) and

- the European Agricultural Fund for Rural Development (EAFRD).

By its assurance and audit activities, the Directorate General for Agriculture and Rural Development (DG AGRI) verifies that the conditions under which controls and payments have been carried out by the Member States give reasonable assurance that the CAP expenditure has been effected in conformity with EU rules and, where it is not the case, exclude the expenditure concerned from EU financing.

DG AGRI contributes to the negotiation of international agreements impacting on agricultural policy (trade in agricultural products, quality policy, food security etc.), contributes to the implementation of such international agreements, and manages the relations with third countries related to agriculture.

By its regulatory and enforcement actions, DG AGRI prepares legislative proposals, negotiates these with the other EU institutions, and monitors their implementation to ensure a harmonised application. The DG manages various Commission regulations laying down detailed implementing rules as well as their adaptation over time. DG AGRI also deals with infringements, control of implementation of the acquis, complaints and Ombudsman inquiries.

1.5. Actions

As from 2023, the implementation of bulk of the measures under the Common Agricultural Policy will take place in the form of 28¹ different CAP Strategic Plans. These plans will be programming instruments where Member States will present their proposed interventions to achieve the EU specific objectives.

The interventions will include actions funded by both the EAGF and the EAFRD. CAP Strategic Plans will be assessed and formally adopted by the European Commission and, once established, Member States will periodically report on the progress made in the implementation using a system of common indicators.

The EAGF will fund under the CAP Strategic Plans (CSP) the following types of interventions:

1. Direct Payments: a) Decoupled direct payments: the basic income support for sustainability; the complementary redistributive income support for sustainability; the complementary income support for young farmers; the schemes for the climate and the environment; b) Coupled direct payments

2. Sectoral interventions: a) fruit and vegetables sector; b) apiculture products sector; c) wine sector; d) hops sector; e) olive oil and table olives sector; f) other sectors (from 2024).

The EAFRD will fund the following types of interventions:

(a) environmental, climate and other management commitments; (b) natural or other area-specific constraints; (c) Area-specific disadvantages resulting from certain mandatory requirements; (d) investments; (e) installation of young farmers and rural business start-up; f) risk management tools; g) cooperation; h) knowledge exchange and information.

The implementation of the new CAP Strategic Plans begins as of 2023. At time of adopting the draft budget 2023, all Member States have submitted their CAP Strategic Plans. The intention is to approve all plans in time for the start in 2023.

A number of schemes financed from EAGF will continue to be implemented outside the CAP strategic plans, i.e.: private and public storage measures, exceptional measures; EU school scheme; information and promotion measures and support for the outermost regions and smaller Aegean islands.

For financing the private and public storage and exceptional measures, the new Union agricultural reserve is established for the first time at the beginning of 2023.

1.6. Delivery mode

Shared management; DG AGRI is the leading DG.

1.7. Graphic overview of the programme structure

¹ For constitutional reasons, Belgium will submit 2 CAP strategic plans.

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/2115 of the European Parliament and of the Council of 2 December 2021 establishing rules on support for strategic plans to be drawn up by Member States under the common agricultural policy (CAP Strategic Plans) and financed by the European Agricultural Guarantee Fund (EAGF) and by the European Agricultural Fund for Rural Development (EAFRD) and repealing Regulations (EU) No 1305/2013 and (EU) No 1307/2013 (OJ L 435, 6.12.2021, p. 1). Regulation (EU) 2021/2116 of the European Parliament and of the Council of 2 December 2021 on the financing, management and monitoring of the common agricultural policy and repealing Regulation (EU) No 1306/2013 (OJ L 435, 6.12.2021, p. 187). Regulation (EU) 2021/2117 of the European Parliament and of the Council of 2 December 2021 amending Regulations (EU) No 1308/2013 establishing a common organisation of the markets in agricultural products, (EU) No 1151/2012 on quality schemes for agricultural products and foodstuffs, (EU) No 251/2014 on the definition, description, presentation, labelling and the protection of geographical indications of aromatised wine products and (EU) No 228/2013 laying down specific measures for agriculture in the outermost regions of the Union (OJ L 435, 6.12.2021, p. 262).	2021 - 2027	290 533.95

1.8.2. Legal basis explanation

Regulation (EU) 2021/2115 lays down rules on general and specific objectives to be pursued with the support granted under the common agricultural policy (CAP), through the CAP Strategic Plans; types of intervention and common requirements for Member States to pursue those objectives as well as the related financial arrangements; CAP Strategic Plans, which are to be drawn up by

Member States and which set targets, specify conditions for interventions and allocate financial resources, according to the specific objectives and identified needs; coordination and governance as well as monitoring, reporting and evaluation.

Regulation (EU) 2021/2116 lays down rules on the financing of expenditure under the CAP; the management and control systems to be put in place by the Member States; clearance and conformity procedures.

Regulation (EU)1308/2013 establishes a common organisation of the markets for agricultural products, as listed in Annex I to the Treaties (with the exception of the fishery and aquaculture products).

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	55 712.9	53 096.6	53 626.9	53 757.9	53 890.9	54 021.9	54 155.9	378 262.9
NextGenerationEU								8 070.5
	2 387.7	5 682.8						
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities	0.0	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	0.0
Total	58 100.7	58 779.3	53 626.9	53 757.9	53 890.9	54 021.9	54 155.9	386 333.4

(*) Only Article 15(3) of the financial regulation.

The financial programming is set in regulation (EU, Euratom) 2020/2093 of 17 December 2020 laying down the multiannual financial framework for the years 2021 to 2027.

Regulation (EU) 2020/2220² ensured the continuity in granting income support to farmers and in supporting rural development measures in 2021 and 2022.

Transfers between funds are possible according to Regulation (EU) 2021/2115, article 103. The amounts shown in the budget programming table reflect the decision of some Member States to make use of the flexibility transfers between both Pillars of the CAP, as notified to the Commission (up to financial year 2022).

EAFRD financial programming shows a frontloading in 2021 decided in the framework of the multiannual financial framework negotiations in July 2020.

1.9. Link with the 2014-2020 MFF

Regulation (EU) 2020/2220 prolongs the current CAP regulations in 2021 and 2022, within the budgetary framework of Council Regulation (EU, Euratom) 2020/2093 of 17 December 2020 laying down the multiannual financial framework for the years 2021-2027.

The new CAP, which will apply as of 1 January 2023, has been designed to cope with the challenges identified for the period 2023-2027. The central elements of the CAP are a new performance-based Delivery model, focussing on results rather than on compliance and 28 national CAP strategic plans. To support the elaboration of the CAP Strategic Plans, DG AGRI established a Structured Dialogue with Member States as well as prepared recommendations. DG AGRI, in close cooperation with other Commission services, coordinated the establishment of this Structured Dialogue and the adoption of the Recommendations³. As stated in the Farm to Fork Strategy⁴, the recommendations address the specific economic, environmental and social objectives of the future Common Agricultural Policy and in particular the ambition and specific targets of the Farm to Fork Strategy and the Biodiversity Strategy for 2030. The recommendations describe the main challenges per Member State and how they can be

² Regulation (EU) 2020/2220 of the European Parliament and of the Council of 23 December 2020 laying down certain transitional provisions for support from the European Agricultural Fund for Rural Development (EAFRD) and from the European Agricultural Guarantee Fund (EAGF) in the years 2021 and 2022 and amending Regulations (EU) No 1305/2013, (EU) No 1306/2013 and (EU) No 1307/2013 as regards resources and application in the years 2021 and 2022 and Regulation (EU) No 1308/2013 as regards resources and the distribution of such support in respect of the years 2021 and 2022.

<https://ec.europa.eu/info/food-farming-fisheries>

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	57 388.9	386 333.4	14%
Payments	54 006.2		13%

EAGF

Market related expenditure

Within the Common Market Organisation (CMO), sector-specific support programmes are operating at various points in their respective life cycles.

- For example, for the wine national support programmes, 2019-2023 is the third programming period since the reform in 2009. Support in the wine programmes is concentrated in restructuring of vineyards, investments and wine promotion.
- The apiculture programmes follow a three-year programming period. In 2021, the current programmes (period 2020-2022) were amended⁵ to cater for the extension until the end of 2022 (as provided for in the transitional regulation) and the increase in budget set in the multiannual financial framework for the years 2021 to 2027.
- Support for producer organisations in the fruit and vegetables sector is implemented via operational programmes carried out over annual plans. As of 2023 Producer organisations will have the possibility for the already ongoing operational programmes to implement them under the provisions of the Common Market Organisations or to modify them in order to be compliant with the CAP Strategic Plans provisions.
- Before 2023, the support programmes to producers' and inter-branch organisations in the olive oil and table olives sector were implemented under a three-year programming period. Three Member States (France, Greece and Italy) benefit of this support programme. The current programming period started in April 2021 and runs until December 2022, as it was extended in the frame of the CAP transitional rules (Regulation (EU) 2020/2220). As of 2023 all new operational programmes will be implemented under the provisions of the CAP Strategic Plans Regulation.
- The EU school fruit, vegetables and milk scheme, bringing together the former school fruit and school milk schemes under a single legal framework, applies since school year 2017/2018. All Member States participate in it (the UK ceased to participate in 2021).

The EU no longer offers agricultural export refunds. However, with fairness and economic efficiency, the CAP strengthens the farm and agri-food sectors' ability to compete on overseas as well as domestic markets. European agriculture showed its resilience after the recent crises, finding alternative domestic markets and abroad (in particular in Asia and the US), as evidenced by the trade statistics.

Total export values from January to September reflect an increase in 2021 compared to 2020 (+ EUR 10.5 billion of agri-food exports, +8%) largely driven by a significant increase in wine (including vermouth, cider and vinegar) and spirits (contributing by 41% of the increase) also due to the gradual reopening of the hospitality industry. 2021 has been marked by the global economic recovery that, in turn, pushed upward commodity prices globally. This contributed to an increase in exports for cereals other than wheat (driven by barley) rapeseed and sunflower oil, while wheat exports declined both in volume and value. The rise in prices had also an impact on the EU import value that rose by 3.5% (+ EUR 3.2 billion) compared to the first nine months of 2020. The United Kingdom remains the main export destination of EU-27 agricultural products because of the Trade and Cooperation Agreement concluded after the UK withdrawal from the EU. However, the UK has still not introduced full third country checks and controls on imports from the EU. In 2019, the Commission reported on the implementation of the apiculture programmes in previous years⁶.

⁵ Commission Implementing Decision (EU) 2021/974 of 9 June 2021 approving the amended national programmes to improve the production and marketing of apiculture products submitted by the Member States under Regulation (EU) No 1308/2013 of the European Parliament and of the Council

⁶ Report from the Commission to the European Parliament and the Council on the implementation of the apiculture programmes, [COM\(2019\)635](https://ec.europa.eu/commission/presscorner/detail/en/COM(2019)635) final of 17.12.2019

The report shows that the uptake of the programmes remained high, showing their relevance. The number of beehives, one indicator of the impact of the EU support measures, continued its long-term increase, reaching approximately 17.5 million beehives in 2018. The latest available reporting by Member States on the number of beehives in 2020 (18.9 million hives) further confirms this upward trend.

The implementation of the EU school fruit, vegetables and milk scheme reached 19 million children in the 2019/2020 school year⁷ or around 18,9 % of the total number of children aged 0 to 18 in the EU-28. School children received more than 53 million kilos of fresh fruit or vegetables as well as 131 million litres of milk. They were involved in several educational measures - lessons, lectures or workshops; tasting classes; cooking workshops; school gardens; visits to farms, dairies, farmers' markets and similar activities.

Direct payments

Beyond the compulsory elements of the direct payments schemes, Member States have considerable flexibility in the implementation, which allows them to target support at their specific priorities.

The Commission services have assisted Member States in preparing and implementing the direct payments through, for example, guidance documents or discussions in expert group meetings. Implementation of the direct payments has steadily improved over the years and has stabilised at a very high level. This implementation of the direct payments has been also accompanied by a green Declaration of Assurance from the European Court of Auditors since 2016 - the first year of implementation of the 2013 reform of the direct payments schemes.

Transitional rules have been adopted to ensure the continuation of the system from financial year 2021. In particular, Member States had the possibility to take decisions in terms of the flexibility between the CAP pillars. As regards the process of convergence of the basic payment per hectare in those Member States using the system of payment entitlements for which Member states had set targets up to 2020, it was ensured that this can also be continued, although such continuation is only optional for Member States.

In claim year 2020 (corresponding to financial year⁸ 2021), the sixth year of implementation of the reformed system and the first year of the three years of transition to the future system, about 5.9 million farmers benefited from direct payments. A large share of this significant drop is actually due to the Brexit as for claim year 2019, almost 142 thousand UK farmers benefited for the last time from EU direct payments. Based on comparable data (i.e. excluding UK farmers for both years), the decrease is -1.4%, in line with the average declining trend⁹ in the total number of farmers). The total determined area (144.7 million hectares, relatively stable¹⁰ since the entry into force of the 2013 CAP reform) covered about 89% of the EU Utilised Agriculture Area (162.9 million hectares for EU 27).

Direct payments claimed by farmers in 2020 fall under the first year of the new multiannual financial framework (2021-2027). Claim year 2020 is the first year of transition between the system implemented following the 2013 reform, and the new direct payments that will result from the implementation of the CAP Strategic Plans from claim year 2023. In this context, a political agreement was found to make the technical adjustments needed to ensure continuation of the existing rules¹¹.

Direct Payment Schemes (Calendar year 2020/Financial year 2021)	Number of beneficiaries (in millions)	Determined area (in millions of hectares unless otherwise stated)
Basic Payment Scheme/Single Area Payment Scheme	4.5	135.1
Redistributive payment	2.0	36.0
Young farmers payment	0.4	7.1
Small farmers scheme	1.4	3.4
Voluntary Coupled Support (hectares - CY2019)	1.3	9.1
Voluntary Coupled Support (animals - CY2019)	1.1	57.3(*)

Source: DG AGRI.

(*) Number of heads.

⁷ Source: Member States monitoring reports sent by 31.1.2021, available at: https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/market-measures/school-fruit-vegetables-and-milk-scheme/country_en. Selected data in agri food data portal, <https://agridata.ec.europa.eu/extensions/SchoolSchemeMonitoring/SchoolSchemeMonitoring.html>.

⁸ The agricultural financial year covers expenditure paid and revenue received and entered in the accounts of the Funds budget by the paying agencies in respect of financial year "N" beginning on 16 October of year "N- 1" and ending on 15 October of year "N".

⁹ The number of beneficiaries declines regularly (on average between -2.3% since 2012). This reflects the trend in the total number of farms (see for example [farm-structures_en.pdf \(europa.eu\)](#)). The number of new farmers is always below the number of farmers exiting.

¹⁰ Since the first year of application of the CAP reform, the determined area has been relatively stable at 144-145 million ha (for EU 27).

¹¹ Regulation (EU) 2019/288 of the European Parliament and of the Council

The ‘greening’ layer of direct payments accounts for 30 percent of Member States’ annual direct payment ceilings and covers annual obligations beneficial for the environment and climate (crop diversification, maintenance of permanent grassland, and the dedication of five per cent of arable land to ecologically beneficial areas ("ecological focus areas" or EFAs). As of 2020, 79% of the total EU agricultural area was subject to at least one "greening" obligation.

Common monitoring and evaluation framework

On 6 December 2021, the Regulation (EU) 2021/2115 of the European Parliament and of the Council establishing rules on support for CAP Strategic Plans has been adopted. This Regulation is part of a legislative package that introduces the performance monitoring and evaluation framework (PMEF), which takes the place of the common monitoring and evaluation framework (CMEF). The PMEF is intended to help the CAP to move from compliance to results and therefore to explain the achievements of the CAP rather than just reporting on CAP compliance and implementation.

This framework includes a set of output, result and impact/context indicators, each of which makes a specific contribution to assessing the implementation of the CAP, its progress towards targets, its impacts and contribution to the common objectives. Whilst impact/context indicators will help assess the overall achievement of CAP general and specific objectives, result indicators will be used to monitor progress in implementation towards the specific objectives in the CAP Strategic Plans, also in view of undertaking, where needed, remedial actions. Finally, output indicators, which keep track of the implementation of the interventions in the CAP Plan, will be used primarily in the context of the performance clearance. A selection of these indicators are presented visually and interactively in the [dashboard by theme](#), where a new dashboard on food and health quality protection has been published in 2021. These dashboards were completed in 2020 with an attractive visualisation of [context indicators](#), including maps at regional level. In these dashboards and in the [analytical factsheets](#) organised by the objectives of the new CAP and by countries, Member States used a large part of the information they needed for the elaboration of their Strategic Plans and notably for the SWOT analysis. In 2021 a new project has started to create [country factsheets](#), a dynamic dashboard based on the analytical factsheets, with a first release done before the end of the year.

In December 2021, a [report](#) to the European Parliament and the Council on the assessment of CAP performance between 2014 and 2020 and its impact across the EU has been published. The report provides an assessment of the implementation of the CMEF over 2014-2020.

Forthcoming implementation

Financial year 2023 will be the last year of implementing the direct payment under the direct payment regulation (EU) 1307/2013. The implementation of the CAP strategic plans will start with calendar year 2023, i.e. financial year 2024 for direct payments.

Justification of changes to the financial programming and/or to the performance information for market measures

08 02 01 – Agricultural reserve	(appropriations + EUR 450.0 million)
Appropriations in 2022 budget:	-
Appropriations requested in 2023 DB:	450.0 ¹²

This Article finances private and public storage measures and exceptional measures, adopted after 15 October 2022

08 02 02 – Types of interventions in certain sectors under the CAP Strategic Plans	(appropriations + EUR 613.2 million)
Appropriations in 2022 budget:	-
Appropriations requested in 2023 DB:	613.2

This Article finances interventions for the fruit&vegetables, apiculture, wine, hops and olive oil&table olives sectors under the CAP Strategic Plans.

08 02 03 – Market-related expenditure outside the CAP Strategic Plans	(appropriations - EUR 577.2 million)
Appropriations in 2022 budget:	2 661.1
Appropriations requested in 2023 DB:	2 083,9

In 2023, expenditure for the fruit&vegetables, apiculture, wine, and olive oil&table olives sectors can be made both under and outside the CAP Strategic Plans.

This budget article finances market related expenditure outside the CAP Strategic Plans. This budget article finances also support for the outermost regions (POSEI), smaller Aegean islands, agricultural information and promotion actions as well as the school schemes, with 2023 budget needs for these schemes showing overall only a minor variation compared to 2022.

¹² The Agricultural reserve will be financed on one hand from the 2023 EAGF availabilities under the margin (C1 appropriations) and on the other hand from part of the appropriations of the crises reserve carried over from 2022 (C2 appropriations).

The pigmeat sector has been in serious difficulties for a number of months. Severe slowdown of exports to China, further spread of African swine fever to more Member States and continuing impact of Covid-19 restrictions are causing pressure on the Union market for slaughter pigs. Additionally, Russia's invasion of Ukraine has created additional market disturbance and impacted severely the Union pigmeat exports. In order to reduce the current supply-demand imbalance, 2023 DB contains appropriations for granting aid for private storage for pigmeat.

The 2023 budget appropriations for agricultural markets amounts to EUR 3 147 million, representing an increase of EUR 486 million. This is mainly due to the agricultural reserve that is counted under market measures as of DB 2023.

As usual, the Commission will update its estimates in an Amending Letter to the Draft Budget 2023, which will then take into account latest market developments and perspectives.

Justification of changes to the financial programming and/or to the performance information for direct payments

08 02 05 – Direct payments	(appropriations - EUR 133 million)
Needs in 2022 budget before financial discipline (incl. crisis reserve):	38 494
Needs in 2022 budget after financial discipline:	37 997
Appropriations in 2022 budget after financial discipline:	37 446
Estimated assigned revenue available in 2022 budget:	551
Amount of financial discipline in 2022 budget (incl. crisis reserve):	497.3
Needs in 2023 DB:	37 770
Appropriations requested in the 2023 DB:	37 313
Estimated assigned revenue available in 2023 DB:	457

The maximum amount of direct payments which a Member State may pay in a financial year is limited by the ceiling set in Annex III to Regulation (EU) No 1307/2013. For calendar year 2022 (financial year 2023), the initial total of Annex III amounted to EUR 38 475 million. By 1 August 2021, certain Member States¹³ notified their decision to transfer amounts between direct payments and rural development, which overall resulted in a net decrease of EUR 826 million in the direct payment ceilings for calendar year 2022. The allocation of the national envelopes to the different schemes depends to a large extent on Member States' decisions. Within the changes due to the decrease in the overall amount, certain changes between schemes have occurred, reflecting Member States' implementation choices.

In financial year (FY) 2022, the financial discipline mechanism¹⁴ had to be applied to set up the crisis reserve (EUR 497.3 million in current prices). In FY 2023, the financial discipline is not needed: the crisis reserve will be discontinued. Instead there will be a new agricultural reserve of EUR 450 million established according to article 16(2) of Regulation 2012/2116.

For direct payments (chapter 08 02 05), compared to the 2022 budget before financial discipline, the 2023 budgetary needs decrease by EUR 227 million to an amount of EUR 37 770 million. It corresponds to an increase of EUR 270 million if compared to the 2022 amounts after financial discipline. Requested appropriations for this article decrease by EUR 133 million, due to the smaller amount of assigned revenue expected to be available to finance the Basic payment scheme (from EUR 551 million in FY 2022 to EUR 457 million in FY 2023). As a consequence, the requested appropriations amount to EUR 37 313 million in FY 2023.

The following comparisons are made without taking into account the effect of financial discipline in budget 2022, so as to show the actual trends for each scheme. The needs for the Basic payment scheme are estimated at EUR 14 810 million, which is EUR 182 million less than in FY 2022. The needs for the Single area payment scheme (SAPS) amount to EUR 4 475 million, an increase by EUR 27 million compared to budget year 2022. For the Redistributive payment, needs increase by EUR 23 million to EUR 1 659 million and the needs for the young farmers scheme decrease by EUR 51 million to EUR 487 million. For the Payment for agricultural practices beneficial for the climate and the environment, the needs decrease by EUR 10 million at EUR 10 912 million. Other schemes show minor changes compared to financial year 2022, reflecting the stabilisation in the execution of these schemes. The Voluntary coupled support scheme increases slightly by EUR 8 million to EUR 4 079 million. The Small farmers scheme is financed from the ceilings available for other schemes. Based on the experience with the execution in previous years showing a decreasing trend, the budget needs for this scheme are estimated at EUR 653 million, EUR 27 million lower than in 2022.

If compared with the 2022 budget after financial discipline, all schemes increase, except the Basic payment scheme (stable), and the Young farmer scheme and the Small farmer scheme that both decrease.

¹³ Croatia, Luxembourg, Hungary, Malta, Poland, Portugal and Slovakia notified transfers to rural development, while Czechia, Denmark, Germany, Greece, France, Latvia and the Netherlands notified transfers to direct payments. In addition, Bulgaria, Czechia, Denmark, Estonia, Ireland, Greece, Spain, Italy, Latvia, Hungary, the Netherlands, Poland, Portugal, Slovakia and Finland notified an amount for the estimated product of reduction of direct payments to be transferred to rural development.

¹⁴ Article 26 of Regulation (EU) No 1306/2013

Justification of changes to the financial programming and/or to the performance information for SO 7 (POSEI)**Market-related expenditure**

08 02 03 01 – POSEI + Smaller Aegean Islands	(appropriations - EUR 3 million)
Appropriations in 2022 budget:	229
Appropriations requested in 2023 DB:	226

Direct payments

08 02 05 01 – POSEI + Smaller Aegean Islands	(appropriations + EUR 7 million)
Appropriations in 2022 budget after financial discipline:	437
Appropriations requested in 2023 DB:	444

For the support to the outermost regions (POSEI) and smaller Aegean islands, the programmes are divided into two types of measures: specific supply arrangements financed under item 08 02 03 01 and support for the local products which are split into market aids (item 08 02 03 01) and direct payments (item 08 02 05 01).

The requested appropriations for DB2023 remain almost unchanged for the market-related expenditure and for direct payments, as the Member States concerned notified only minor modifications of their programmes.

Justification of changes to the financial programming and/or to the performance information for SO 8

To assist Member States carrying out on the spot checks on aid applications, satellite imagery acquired is made available to the national authorities allowing them to determine the area of agricultural parcels, to identify crops and verify their status. Compared to budget 2022, the costs for the acquisition of satellite images and data management for 2023 has been decreased to EUR 2.35 million in commitments and payment appropriations – against the EUR 3.95 million commitment appropriations of 2022 and EUR 6.35 million in payments - as result of the increased use of free Copernicus Sentinel data by MS opting for checks by monitoring controls and the streamlining of control methods. EUR 1.4 million in payment appropriations have been assigned for a co-delegation agreement between DG AGRI and DG DEFIS. This is divided into EUR 0.4 million to provide MS with DIAS (Data and Information Access Services) by using the framework agreement with the Copernicus Entrusted Entities and the remaining EUR 1 million to cover payment appropriations related to an area measurement study on the feasibility of automated area measurements from satellite imagery. In addition, for Draft Budget 2023, commitment appropriations (EUR 1.7 million) and payment appropriations (EUR 1.67 million) are requested for the administrative arrangement for related technical support needed to ensure and strengthen the quality and the technical implementation of the Integrated Administration and Control System (IACS) as well as EUR 0.4 million of additional payment appropriations for the transition from CAPISA2 to CAPISA3.

Justification of changes to the financial programming and/or to the performance information for SO 9

Budget item 08 02 06 03 - EAGF operational technical assistance will also finance the communication efforts of the Commission in relation to the CAP. The overall needs for Draft Budget 2023 for communication are estimated at EUR 19.7 million in commitment appropriations and 18.7 million in payment appropriations. This includes EUR 4.0 million destined for grants to third party organisations. Other external communication actions in 2023 financed under this budget item, such as conferences, media activities, attendance in fairs, publications, web and social media activities, will focus on the relevance of the CAP in particular in relation with the growth, jobs and investments priority theme and will amount to EUR 4.5 million, which includes 0.5 million for Information Measures relating to the Common Agricultural Policy (IMCAP) and contributions from the programmes to eGrants/SEDIA Central Validation Service. The scope, choice and intensity of these communication actions will be in line with the 2023 External Communication Action Plan of the Directorate General for Agriculture and Rural Development.

In 2023 the EAGF will also contribute in full to the Corporate Communication Strategy of the Commission with around EUR 11.2 million in commitment appropriations and 8.8 million in payment appropriations.

Justification of changes to the financial programming and/or to the performance information for SO 10

The **Farm Accountancy Data Network (FADN)** data are essential tools for the monitoring of agriculture income and business which are used for the evaluation and the impact analysis of the agricultural measures. They provide support to the decision-making process related to the CAP. The appropriations requested for 2023 for the FADN (EUR 16.7 million) are intended to finance the standard fee for FADN farm returns transmitted by the Member States (81 795 * EUR 180) and the development and maintenance of the information system used for the collection, processing, analysis, publication and dissemination of the farm accountancy data and analysis results (EUR 2.0 million).

Information from **Farm Structure Surveys** is systematically used in extended impact assessments, evaluation and policy conception, particularly regarding the regional situation of specific sectors. The content of the surveys is regularly adapted to answer new needs for agricultural and rural development policy and other policies (in particular regional, social and environmental policy). In 2023, there are no new commitment appropriations required for the agricultural census 2023-2026 as the amount for the whole period was already requested in 2022. Payment appropriation needs for 2023 are EUR 2.0 million to cover payments against past commitments.

Under **restructuring of systems for agricultural surveys**, the Draft Budget 2023 includes EUR 2.5 million in commitment and payment appropriations for the MARS agro-meteorological system used for monitoring crops and forecasting yields of the main crops in Europe and its neighbourhood. Furthermore, EUR 0.4 million in payment appropriations is included for the LUCAS project for Europe surveys gathering information on land cover, land use and landscapes, while EUR 6.5 million in commitment appropriations and EUR 4.3 million in payment appropriations is destined for the maintenance, development and use of modelling tools used by the Commission in its agricultural economic and policy analysis including MARS neighbourhood.

EAFRD

The EAFRD funding in budget years 2021 and 2022 is implemented under the CAP transitional rules, as agreed by the co-legislators at the end of 2020 (Regulation (EU) 2020/2220). This regulation aims to extend the rural development programmes by 2 years, whereby the extended programmes follow the existing legal framework, and adds the EAFRD allocation for the years 2021 and 2022 ('old rules – new money' principle). Furthermore, this transitional regulation also sets out the legal basis to introduce the part of the European Union Recovery Instrument earmarked to be implemented via the EAFRD into the rural development programmes in 2021 and 2022. These additional financial resources are implemented through RDP measures that are directed at addressing the impact of the COVID-19 crisis.

The reform of the CAP, with the introduction of Member States' CAP Strategic Plans, will be implemented as of 2023.

The total EAFRD budget request for 2023 amounts to EUR 12.9 billion in commitment appropriations and EUR 14.6 billion in payment appropriations, mainly to finance EAFRD support under the rural development programmes and payments under the CAP Strategic Plans for 2023, including a 1% pre-financing payment. A minor part of these amounts also covers the technical assistance at the initiative of the Commission (EUR 30.3 million in commitment appropriations and EUR 25.2 million in payment appropriations).

As from 2023, only payment appropriations in the form of external assigned revenues stemming from the European Union Recovery Instrument will be requested in line with the n+3 rule applicable to those funds (EUR 2.4 billion).

Implementation Status

The implementation of the 2014-2022 rural development programmes (RDPs) remains at cruising speed. In 2021, Member States submitted their sixth Annual Implementation Reports (AIRs) on the implementation of the RDPs covering implementation until 31 December 2020.

For the 2014-2022 period, a number of initiatives were launched to improve efficiency and effectiveness of EAFRD expenditure and to ensure a smooth transition with the CAP Strategic Plans:

- To facilitate the implementation of the EU funds, the EAFRD implementing regulation was already modified in April 2016. In addition, the EAFRD basic act was modified in 2017 through the so-called Omnibus Regulation¹⁵, amongst others to improve risk management tools for farmers, reduce administrative burden for beneficiaries and simplify conditions for financial instruments. Finally, the implementing regulation on administration and control systems (Regulation (EU) No 809/2014) was also modified in July 2017 to simplify control rules for non-area related measures.
- Simplified Cost Options (SCOs) are being increasingly used by Member States and regions in order to improve the efficiency and effectiveness of EAFRD support and to reduce the administrative burden. In 2019, around 76% of the RDPs were using at least one type of SCOs and the number is expected to increase. As an example, flat rates are used to cover indirect costs, unit costs for training activities or investments and lump sums for cooperation actions. Member States and regions are introducing more SCOs in the context of RDPs amendments and this trend is expected to continue. The Commission has greatly promoted the use of SCO through dedicated seminars and other networking activities.
- Since 2015, the European Network for Rural Development (ENRD) organised over 50 events (workshops and capacity building) in order to share best practices and experiences between stakeholders (including, among others, managing authorities, paying agencies, EU-wide organisations, LEADER local action groups, evaluators, etc.). In 2021, 24 different events provided support to stakeholders regarding the performance of the rural development programmes 2014-2020 (extended to 2022), but they also addressed the implementation of the Transition Regulation and EURI funding, and the preparation and drafting of the national CAP Strategic Plans 2023-2027. The events were coordinated with the Commission services (in particular the Directorate General for Agriculture and Rural Development), ensuring that key issues (such as the Green Deal and rural areas or operational design of CAP SP) were addressed. In addition, the ENRD significantly supported the networking and exchanges with stakeholders related to the Commission's Long Term Vision for Rural Areas (e.g. 4-day long Rural Vision Week conference), as well as some other specific issues of political relevance (e.g. the voice of regions and stakeholders in CAP SP preparation process). As the new CAP foresees the creation of a new EU-level CAP Network (to include current ENRD and EIP-AGRI networks), the work of the EU CAP Network in 2023 will include the scope for reinforced networking activities across the full breadth of the CAP SP, as well as a strong focus on support for innovation and knowledge sharing.
- An increased awareness of implementation feasibility and possible errors is guaranteed through an ex-ante assessment of the rural development measures by Member States, aiming to ensure they are verifiable and controllable and taking into account the results of controls in the previous programming period.

¹⁵ Regulation (EU) 2017/2393, OJ L 350, p.15

- Regulation (EU) 1303/2013 was amended by Regulation (EU) 2020/558 of 23 April 2020 as a response to the COVID-19 outbreak. To facilitate the implementation of the EU funds and support final recipients affected by the Covid-19 health crisis the modified Common Provision Regulation allows the provision of a stand-alone working capital through EAFRD supported financial instruments. This had a significant positive implication with regards the demand for any of the instruments introducing this new possibility, reduced the administrative burden associated with control and monitoring of the instruments, and simplified the conditions for financial instruments.
- Subsequently, Regulation (EU) 1305/2013 was also amended by Regulation (EU) 2020/872 as a response to the COVID-19 outbreak. In particular, an exceptional temporary measure was introduced aimed at providing relief to farmers or small-medium sized agri-businesses affected by COVID-19, and to ensure liquidity over the crisis period (max EUR 7 000 per farmer and max EUR 50 000 per SME). The EAFRD support for these measures is limited to a maximum of 2% of the total 2014-2020 EAFRD contribution to the rural development programmes. As part of the CAP transitional rules, the implementation of this exceptional measure was subsequently prolonged until 30 June 2021 (with expenditure for this measure now eligible if paid by latest 31 December 2021). 41 rural development programmes in 14 Member States (out of the 115 total RDPs in 28 countries) implemented this measure) for a total amount of EUR 628,6 million.
- Broadband access in rural areas continues to improve, with an increase of 42 percentage points in 8 years, but is still lagging behind urban areas. In 2020, 60% of rural households had next generation access compared to 87% of total EU households. There is a clear improvement on the previous year's results, though closing the connectivity gap of rural areas remains a challenge. The level of broadband access depends significantly on general developments in telecoms markets (and finance from other policy tools – including the European Regional Development Fund). The CAP plays its part by offering explicit support for setting up, expanding and improving broadband infrastructure, as well as for the provision of broadband internet access (i.e. improved connections to infrastructure), and access to e government. According to targets aggregated from the 2014-2020 RDPs, in the current programming period, the CAP will help nearly 13 million people living in rural areas to benefit from improved access to ICT services and infrastructure. In 2021, DG AGRI continued to work closely with DG REGIO, CNECT and COMP to further develop the network of Broadband Competence Offices (BCOs) in Member States and their regions, as well as a Brussels-based Support Facility, contracted and managed by DG AGRI. By the end of 2021, the BCO network was comprised of 27 National and 88 Regional BCOs in the EU, plus 6 BCOs in the Western Balkan countries and one BCO in Norway. In 2021, DG AGRI continued its application of the rural proofing checklist in cases where MS requested programming changes to broadband funding. Given the situation with Covid, training activity switched successfully to virtual training while it was not possible to carry out missions on the spot.

Programmes' implementation 2014-2022 (Common Strategic Framework), without pre-financing*

Thematic objectives of the Common Strategic Framework	Commitments 2014-2022 EUR million (1)	Cumulative payments declared by Member-states at end 2021 (2)	(2)/(1)%
1. Strengthening research, technological development and innovation	2 679.40	788.78	29.4%
2. Enhancing access to and use and quality of information and communication technologies (ICT)	1 009.22	382.87	37.9%
3. Enhancing the competitiveness of small and medium-sized enterprises (SMEs)	40 008.71	20 560.29	51.4%
4. Supporting the shift towards a low-carbon economy in all sectors	5 463.01	2 731.66	50.0%
5. Promoting climate change adaptation, risk prevention and management	29 298.92	19 400.22	66.2%
6. Preserving and protecting the environment and promoting resource efficiency	34 893.87	22 206.82	63.6%
8. Promoting sustainable and quality employment and supporting labour mobility	2 896.40	1 332.82	46.0%
9. Promoting social inclusion, combating poverty and any discrimination	14 999.26	7 055.45	47.0%
10. Investing in education, training and vocational training for skills and lifelong learning	1 052.75	433.72	41.2%
TOTAL	132 301.53	74 892.64	56.6%

*The above breakdown of the financial plan among the thematic objectives is indicative and based on Member States' programmes (as of end 2021). The breakdown may still change due to possible changes in the Member States' programmes. The cumulative amounts declared by Member States are indicated up to Q3 2021. Cumulative payments do not include pre-financing as they cannot be broken down by thematic objective. Amounts for technical assistance and discontinued measures are not included as they do not contribute to any of the thematic objectives.

Overall, latest monitoring data on RDP budget execution shows that the year-on-year increase in expenditure is slowing down, confirming that implementation reached its cruising speed. By Q3 2021, 100% of EAFRD allocation for 2014-2020 was committed, representing more than 80% of the EAFRD allocation for the extended 2014-2022 period. By the end of Q3 2021, public expenditure declared by Member-States represented more than 75% of 2014-2020 programmed amounts, and 57% of the programmed amounts for the extended 2014-2022 period. This implementation level for the EAFRD stands above the average implementation rate of other ESI Funds in terms of payments declared. The implementation rate should be assessed considering different factors. First, the implementation period for the programmes runs until 2025 (except for UK). Second, the overall level of commitment at EU level reached 100% of the initial 2014-2020 EAFRD budget allocation by Q3 2020. Finally, in the case of rural development, a significant part of the expenditure is typically realised during the last years of implementation. The latter is mainly related to the late realisation of some investment projects, such as the ones for broadband development, which contribute to the relatively low implementation of thematic objective (TO) 2. The rather low execution rate of local development strategies (TOs 8 and 9) can be explained by a later implementation. Area related payments, generally associated with agri-environmental-climate commitments follow a more regular (annual) path, which explains the better implementation in TOs 5 and 6. For TO 1, the uptake and achievement of results is not yet fully in place. This is explained by the late start the measures chosen by MS, partially due to the need to adapt to the changes in the legal framework and the fact that some measures are new and have a longer project lifetime (e.g. cooperation projects and the new measure European Innovation Partnership for Agricultural Productivity and Sustainability).

Information about financial instrument(s) and trust fund(s) financed by the Programme

Financial instruments (FI) are a key tool for providing access to finance for the farming sector and the rural economy. They also allow, by leveraging with private capital and by their revolving nature, to complement the rural development budget. EAFRD already met the target of doubling the use of FIs as compared to the 2007-2013 programming period.

By end 2021, FIs supported by the EAFRD are programmed in 32 RDPs in 13 Member States with a total EAFRD allocation of EUR 609 million. The amount declared to the Commission until end of 2020 equals EUR 291 million. By end 2021, 25 Paying Agencies declared expenditure for FIs under RDPs.

Under the technical assistance programme fi-compass, in total 38 cases of targeted coaching on financial instruments for EAFRD managing authorities' were carried out over 2016-2021 of which 4 new were done in 2021. We undertook 7 EU-wide conferences with 974 attending participants in total. They formed part of the 29 conferences on EAFRD-supported financial instruments organised in the period 2015-2021. In 2021, 5 new case studies featuring the implementation of EAFRD financial instruments in 5 Member States were prepared and published, bringing the total number of analysed and published EAFRD case studies to 14. The activities related to dissemination of information were adapted to the new way of online working during the Covid-19 health crisis period and were provided through social media, specific brochures, websites, communication newsletters, etc. Moreover, in 2021, a new activity was initiated, covering 3 fi-compass Jam Sessions Podcast Episodes featuring financial instruments in action and the new rules for implementing EAFRD financial instruments under the MSs CAP Strategic Plans, alongside 3 videos.

The Commission continued the discussions with the Council and the EP on the new CAP proposal and its secondary legislation, where FIs will continue to play an important part to foster investments (including in green and digital transition) in agriculture and rural areas, and which also introduced further legal and implementation simplifications. Contributions were also made to the operations of the Just Transition Mechanism, the launch of the Recovery and Resilience Fund (February 2021) as well as to finalisation and launch of various work streams of InvestEU such as the Sustainability Proofing Guidance, the Climate and Environmental Tracking guidance, product fiches, the InvestEU contribution agreement template, etc.

Forthcoming implementation

As a result of the implementation of rural development programmes, the following targets, amongst others, are expected to be achieved at the level of the Union at the end of the implementing period, which is extended to 2025: 30.5 million hectares of agricultural land concerned by commitments targeting biodiversity; 53% of the total rural population (159.1 million inhabitants) living in areas for which local development strategies are implemented by selected LEADER Local Action Groups (LAGs); investments in improved energy efficiency for a 22 000 farms; support for more than 230 000 young farmers to set up their businesses and for more than 400 000 farmers to modernise and improve their production facilities. As for the rural business outside the farm's gate, some 42 000 rural entrepreneurs are to receive support to develop their businesses.

Throughout 2021, Member States continued to amend their rural development programmes in response to the persisting COVID-19 pandemic. In many cases, this implied changes in the RDP strategies and respective adaptations to the target values in the indicator plan as well as financial reallocations.

In the light of the **Russian invasion to Ukraine**, the European Council called upon the Commission to take urgent action to present options to address the rising food prices and the issue of global food security as soon as possible. The Commission reacted immediately, with a broad package of measures, included in the Communication on "**Safeguarding food security and reinforcing the resilience of food systems**", adopted on the 23th March 2022. This communication 1) tackles the immediate engagement to safeguard food security in Ukraine and around the world; 2) examines the challenge of food affordability in the EU and a range of measures to support the EU agricultural sector and 3) presents a mid-term agenda for action to make our food system sustainable and less dependent on import of energy and feed.

The **European Food Security Crisis preparedness and response Mechanism (EFSCM)**, is up and running and will increase cooperation to mitigate food security risks, and monitor the situation. To improve our monitoring ability, the Commission has

proposed that Member States communicate data on their private stocks of essential food and feed to have a timely and accurate overview of their availability.

To support EU farmers, the Commission has adopted the **following exceptional measures**:

- support measures of EUR 500 million to directly assist farmers most affected by the higher input costs and the closure of export markets. The Commission will submit its proposal to use the crisis reserve for this support package to the European Parliament and the Council. Member States can exceptionally complement this EU support by up to 200% with national funds. The Commission will also allow Member States to pay increased levels of CAP direct payments in advance to address the cash-flow difficulties that farmers are facing.
- exceptional and temporary derogation to allow the production of any crops on fallow land, while maintaining the full level of greening payment for farmers.
- In view of the particularly difficult situation of the pigmeat sector, the Commission has opened a new private storage aid scheme to stabilise markets.

Member States can also take **measures at national level**: a Temporary Crisis Framework for State Aid has been put in place to allow Member States to better support companies affected by the crisis, including farmers and fertiliser producers; also, Member States are using specific derogations and flexibilities to existing import requirements on animal feed.

The Commission is taking into account the war in Ukraine when assessing **the new strategic plans**: There is a clear need to strengthening resilience, reducing energy dependence and preserving and expanding the sustainable production capacity. These are all core elements of sustainable agriculture and also of the Farm to Fork approach. That's why the Commission will support activities such as boosting sustainable biogas production and use, improving energy efficiency, extending the use of precision agriculture, fostering protein crop production or spreading through the transfer of knowledge the widest possible application of best practices.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

EAGF

	Implementation	2014-2020 Budget	Implementation rate
Commitments	301 337.7	301 950.3	100%
Payments	301 193.8		100%

EAFRD

	Implementation	2014-2020 Budget	Implementation rate
Commitments	100 294.4	100 312.3	100%
Payments	65 102.2		64.9%

Implementation Status

The implementation of the 2014-2020 rural development programmes (RDPs) remains at cruising speed. In 2020, Member States submitted their fifth Annual Implementation Reports (AIRs) on the implementation of the RDPs covering implementation until 31 December 2019.

For the 2014-2020 period, a number of initiatives were launched to improve efficiency and effectiveness of EAFRD expenditure:

- To facilitate the implementation of the EU funds, the EAFRD implementing regulation was already modified in April 2016. In addition, the EAFRD basic act was modified in 2017 through the so-called Omnibus Regulation¹⁶, amongst others to improve risk management tools for farmers, reduce administrative burden for beneficiaries and simplify conditions for financial instruments. Finally, the implementing regulation on administration and control systems (Regulation (EU) No 809/2014) was also modified in July 2017 to simplify control rules for non-area related measures.
- Simplified Cost Options (SCOs) are being increasingly used by Member States and regions in order to improve the efficiency and effectiveness of EAFRD support and to reduce the administrative burden. Currently around 76% of the RDPs are using at least one type of SCOs and the number is expected to increase. As an example, flat rates are used to cover indirect costs, unit costs for training activities or investments and lump sums for cooperation actions. Member States

¹⁶ Regulation (EU) 2017/2393, OJ L 350, p.15

and regions are introducing more SCOs in the context of RDPs amendments and this trend is expected to continue. The Commission has greatly promoted the use of SCO through dedicated seminars and other networking activities.

- More than 30 workshops and capacity building events have been organised by the European Network for Rural Development since 2015 in order to share best practices and experience and to help stakeholders (including, among others, managing authorities, paying agencies, EU-wide organisations, local action groups, evaluators, etc.) to work together in a strategic manner and enhance the performance of rural development programmes. The timing and the content of the events has been specifically designed in agreement with the Commission services (in particular the Directorate General for Agriculture and Rural Development) according to the different stages of the programming cycle (e.g. defining selection criteria at the launching phase of the programmed, or addressing bottlenecks in RDP implementation in view of preparing for the Performance Review or starting the discussions on the CAP reform) and to better exploit the potential of the programmes to deliver on specific issues of political relevance (e.g. generational renewal, Smart Villages, biodiversity or farm resilience).
- An increased awareness of implementation feasibility and possible errors is guaranteed through an ex-ante assessment of the rural development measures by Member States, aiming to ensure they are verifiable and controllable and taking into account the results of controls in the previous programming period.
- Regulation (EU) 1303/2013 was amended by Regulation (EU) 2020/558 of 23 April 2020 as a response to the COVID-19 outbreak. To facilitate the implementation of the EU funds and support final recipients affected by the Covid-19 health crisis the modified Common Provision Regulation allows the provision of a stand-alone working capital through EAFRD supported financial instruments. This has a significant positive implication with regards the demand for any of the instruments introducing this new possibility, reduces the administrative burden associated with control and monitoring of the instruments, and simplifies the conditions for financial instruments.
- Subsequently, Regulation (EU) 1305/2013 was also amended by Regulation (EU) 2020/872 as a response to the COVID-19 outbreak. In particular, an exceptional temporary measure was introduced aimed at providing relief to farmers or small-medium sized agri-businesses affected by COVID-19, and to ensure liquidity over the crisis period (max EUR 7 000 per farmer and max EUR 50 000 per SME). The EAFRD support for these measures is limited to a maximum of 2% of the total EAFRD contribution to the rural development programmes. As part of the CAP transitional rules, the implementation of this exceptional measure was subsequently prolonged until 30 June 2021 (with expenditure for this measure now eligible if paid by latest 31 December 2021).
- Under the technical assistance programme fi-compass, in total 34 cases of targeted coaching on financial instruments for EAFRD managing authorities were carried out over 2016-2020 of which 4 new were done in 2020. We undertook 4 EU-wide conferences with 561 attending participants in total. They formed part of the 22 conferences on EAFRD-supported financial instruments organised in the period 2015-2020. In 2020, a study assessing the gaps in financing agriculture and agro-food sectors in 24 Member States was published and the 24 national reports were disseminated. The activities related to dissemination of information were adapted to the new way of online working during the Covid-19 health crisis period and were provided through social media, specific brochures, websites, communication newsletters, etc.
- Considering the state of play in the discussions with the co-legislators on the future CAP and in order to ensure continuity in support to CAP beneficiaries in 2021 and 2022, Regulation (EU) 2020/2220 was adopted of 23 December 2020 providing certain transitional rules for the CAP for 2021-2022. This regulation aims to extend the rural development programmes by 2 years, whereby the extended programmes shall follow the existing legal framework, and adding the EAFRD allocation for the years 2021 and 2022 ('old rules – new money' principle). Furthermore, this transitional regulation also sets out the legal basis to introduce the part of the European Union Recovery Instrument earmarked to be implemented via the EAFRD into the rural development programmes. These additional financial resources shall be implemented through RDP measures that are directed at addressing the impact of the COVID-19 crisis.
- In addition, a regulation was adopted by the co-legislators end January 2020¹⁷ to provide amongst others the flexibility for Member States to transfer funds between the CAP pillars for calendar year 2020.

Programmes' implementation 2014-2020 (Common Strategic Framework), without pre-financing*

Thematic objectives of the Common Strategic Framework	Commitments 2014-2020 EUR million (1)	Cumulative payments declared by Member-states at end 2020 (2)	(2)/(1)%
---	--	---	----------

¹⁷ Regulation (EU) 2020/127 of the European Parliament and of the Council of 29 January 2020 amending Regulation (EU) No 1306/2013 as regards financial discipline as from financial year 2021 and Regulation (EU) No 1307/2013 as regards flexibility between pillars in respect of calendar year 2020, [OJ L 27, 31.1.2020, p. 1-5](#)

Thematic objectives of the Common Strategic Framework	Commitments 2014-2020 EUR million (1)	Cumulative payments declared by Member-states at end 2020 (2)	(2)/(1)%
1. Strengthening research, technological development and innovation Outputs:	2 127.65	531.08	25.0%
2. Enhancing access to, use and quality of, information and communication technologies Outputs:	922.21	298.66	32.4%
3. Enhancing the competitiveness of the agricultural sector Outputs:	28 916.93	16 130.17	55.8%
4. Supporting the shift towards a low-carbon economy Outputs:	4 074.55	2 227.96	54.7%
5. Promoting climate change adaptation, risk prevention and management Outputs:	21 306.47	16 134.09	75.7%
6. Protecting the environment and promoting resource efficiency Outputs:	25 452.96	18 449.04	72.5%
7. Promoting sustainable and quality employment and supporting labour mobility Outputs:	2 303.25	990.53	43.0%
8. Promoting social inclusion and combating poverty Outputs:	11 792.63	5 461.02	46.3%
9. Investing in education, training and vocational training for skills and lifelong learning Outputs:	888.10	346.65	39.0%
TOTAL	97 784.73	60 569.22	61.9%

*The above allocation of commitments into thematic objectives is indicative based on the Member States' programmes, situation at the end of 2020. The breakdown can be subject to changes due to possible modification of the RDPs. The cumulative amounts of payments declared by Member States are provided until Q3 2020. The cumulative payments **do not include pre-financing**, as they cannot be split per thematic objective. The amounts for Technical Assistance Measures and Discontinued Measures are not included as they do not contribute to any of the thematic objectives.

Overall, the Annual Implementation Reports screening for 2019 confirms a steady acceleration in spending levels compared to the first years of implementation. By end 2020, the budgetary commitments reached 100% of allocations for 2014-2020. Spending levels reached around 65% of total EAFRD resources for the same period (percentage of interim payments made to MS in comparison to total allocation). This is still a lower pace of implementation compared to the one reached at the equivalent point in time of the previous programming period (75%). This is due to the one year delay of the start several of the 2014-2020 rural development programmes. This implementation level for the EAFRD stands above the average implementation rate of other ESI Funds in terms of payments declared. The implementation rate should be assessed considering different factors. First, from the end of 2020, there remain still three years of the implementation period. Second, the overall level of commitment at EU level reached 100% until Q3 2020. Finally, in the case of rural development, a part of the expenditure is realised during the last years of implementation. The latter is mainly related to the late realisation of some investment projects, such as the ones for broadband development, which contribute to the relatively low implementation of thematic objective (TO) 2. The rather low execution rate of local development strategies (TOs 8 and 9) can be explained by a later implementation. Area related payments, generally associated with agri-environmental-climate commitments follow a more regular (annual) path, which explain the better implementation in TOs 5 and 6. For TO 1, the uptake and achievement of results is not yet fully in place. This is explained by the late start the measures chosen by MS, partially due to the need to adapt to the changes in the legal framework and the fact that some measures are new and have a longer project lifetime (e.g. cooperation projects and the new measure European Innovation Partnership for Agricultural Productivity and Sustainability).

Information about financial instrument(s) and trust fund(s) financed by the Programme

Financial instruments (FI) are a key tool for providing access to finance for the farming sector and the rural economy. They also allow, by leveraging with private capital and by their revolving nature, to complement the rural development budget. EAFRD already met the target of doubling the use of FIs as compared to the 2007-2013 programming period.

By end 2020, FIs supported by the EAFRD are programmed in 33 RDPs in thirteen Member States with a total EAFRD allocation of EUR 609 million. The amount declared to the Commission till end of 2020 equals to EUR 185 million. By end 2020, 19 Paying Agencies declared expenditure for FIs under RDPs.

Under the technical assistance programme fi-compass, in total 34 cases of targeted coaching on financial instruments for EAFRD managing authorities' were carried out over 2016-2020 of which 4 new were done in 2020. We undertook 4 EU-wide conferences with 561 attending participants in total. They formed part of the 22 conferences on EAFRD-supported financial instruments organised in the period 2015-2020. In 2020, a study assessing the gaps in financing agriculture and agro-food sectors in 24 Member States was published and the 24 national reports were disseminated. The activities related to dissemination of information were adapted to the new way of online working during the Covid-19 health crisis period and were provided through social media, specific brochures, websites, communication newsletters, etc. The Commission also continued the discussions with the Council and

the EP on the new CAP proposal where FIs will continue to play an important part to foster investments in agriculture and rural areas, and which also introduced further legal and implementation simplifications.

Contributions were also made to the launch of the Just Transition Mechanism the Recovery and Resilience Fund as well as to the various work streams of InvestEU such as the Sustainability Proofing Guidelines (taxonomy), the Climate and Environmental Tracking, product fiches, etc.

Forthcoming implementation

As a result of the implementation of rural development programmes, the following targets, amongst others, are expected to be achieved at the level of the Union at the end of the programming period (target 2023 based on 2014-20 MFF allocations, as RDPs are not yet amended for the two-year transitional period): 28 million hectares of agricultural land concerned by commitments targeting biodiversity; 53% of the total rural population (147.5 million inhabitants) living in areas for which local development strategies are implemented by selected LEADER Local Action Groups (LAGs); investments in improved energy efficiency for more than 17 000 farms; support for about 176 000 young farmers to set up their businesses and for more than 320 000 farmers to modernise and improve their production facilities. As for the rural business outside the farms gate, some 33 000 rural entrepreneurs are to receive support to develop their businesses.

The expected achievements, such as referred to above, depend on appropriate implementation rules for the EAFRD 2014-2020 expenditure, balancing purposeful policy framing and procedural simplification. The first effects on the simplification actions adopted through the Omnibus Regulation, namely regarding the use of simplified costs options and financial instruments as well as support for risk management could already be noticed in 2018: several Member States have requested to amend their rural development programmes in order to use these possibilities, while more and more Member States are extending the use of simplified cost options.

Throughout 2020 the majority of Member States amended their rural development programmes to include also short and long term responses to the COVID-19 pandemic. In many cases, this implied changes in the RDP strategies and respective adaptations to the target values in the indicator plan as well as financial reallocations.

3. How is the programme performing ?

3.1. Performance

3.1.1. Active programme performance

Performance assessment will be provided once the implementation of the programme 2023-2027 will have started

3.1.2. Previous Programme Performance

To promote a viable food production

Between 2013 and 2019, the average EU factor income¹⁸ per worker increased by 15% in real terms. This increase was mainly due to major gains in labour productivity, mostly as a result of an outflow of labour from the agricultural sector.

The CAP as a whole has helped support and stabilise farm income. Market measures have helped limit domestic price volatility of most agricultural products and facilitated price recovery in sectors affected by a market crisis. Since 2014, EU price volatility has been lower than prices for all products on the international market (except butter and skimmed milk powder in recent years). Direct income support – representing around 25% of EU factor income (2014-2018 average) and reaching over 6 million beneficiaries (2019) – enabled farmers to cope better with the fall in income caused by falls in agricultural prices.

20% of CAP beneficiaries receive 80% of direct payments, which has raised questions about the fairness of the distribution of direct payments. However, this ratio essentially mirrors the distribution (and in some Member States the concentration) of land ownership; most large beneficiaries are family farms of between 20 and 100 hectares and receive more than EUR 7 500. About half of all beneficiaries are very small farms, with less than 5 hectares.

The 2014-2020 CAP resulted in a significant redistribution of direct payments to smaller farmers and to areas facing natural constraints. Between 2017 and 2019, the payments per hectare to farmers in the smallest category (producing under EUR 8 000 of standard output) increased by 18% compared to between 2011 and 2013.

Direct payments and rural development support represent close to 50% of farmers' income in mountain areas and CAP funding helps to make farms viable in the most remote rural areas. Nevertheless, the high level of total income support in mountain areas does not compensate fully for the income gap with non-mountain areas.

An analysis of income and distribution of direct payments by income shows room for improvement in targeting the support to those who need it most. In certain cases, the policy has had too limited an effect on reducing disparities between regions in a Member State, on the gradual reduction of payments, and on capping the level of payments per farm. Direct payments received by smaller

¹⁸ Agricultural factor income ([Eurostat](#)) measures the income derived from agricultural activities that can be used for the remuneration of own and rented production factors: labour, land and capital. See General objective 1, indicator 1.

farms remain below or just around the national average income in a number of Member States. In addition, there is no proof that the current provisions targeting support to active farmers have been effective.

The CAP continued to make a significant contribution to food security by achieving productivity gains and resilience in trade markets. The total factor productivity of EU agriculture increased by 6% from 2013 to 2019¹⁹ (EU-27). The CAP supported significant labour productivity gains (+24% from 2013 to 2020). By increasing the relative amount of capital available for farms and thus boosting their competitiveness, support for farm investments had an indirect positive effect on farm income.

The CAP also provided support to improve supply chain organisation, with the number of recognised producer organisations and associations of producer organisations being 7% higher in 2020 than 2016 and the share of fruit and vegetables production marketed by these organisations growing by 2.3 percentage points between 2014 and 2019 (to 45.6%).

The EU accounted for 18% of global agri-food exports in 2019²⁰. External factors (including the Russian import ban on EU products) weakened to some extent the competitive position of the EU's agricultural farm sector in most of the years from 2014 to 2020, but EU agri-food trade displayed a strong degree of resilience. Since 2018, the EU's competitive position improved slightly, adding one percentage point to the EU's share of world exports.

To promote a sustainable management of natural resources and climate action

The CAP provides an extensive level of 'baseline protection' for the environment via mandatory cross-compliance (on 84% of the EU's agricultural land in 2019) and greening obligations (80%, up from 76% in 2015)²¹. It then provides for more targeted but voluntary commitments under rural development (12-15% for agri-environment-climate measures and 3-5% for organic farming)²². The CAP's income support and support for areas with natural handicaps help prevent land abandonment, slow down intensification and specialisation of farming systems and maintain crop diversification and permanent grasslands²³.

All farms receive basic payments, irrespective of their degree of input use. As a result, these payments are often perceived as conflicting with the sustainable management of natural resources. The facts do not always support this perception. By decoupling support from production and linking it to compliance with standard environmental and climate practices, basic payments are not an incentive to increase production intensity. Proof of this is the level of direct payments per hectare received by the 10% most intensive farms, which fell by 12% to EUR 451 per hectare (between 2017 and 2019) compared to the level prior to the CAP reform from 2011 to 2013. By contrast, direct payments increased by 23% for the 10% most extensive EU farmers, to EUR 154 per hectare. At EUR 1 900, direct payments per worker on the most intensive farms are almost 78% lower than for the most extensive farms (EUR 7 700).

The cross-compliance mechanism makes CAP payments conditional on respecting a basic set of rules stemming from environmental (and other) EU legislation and good agri-environmental practice established under the CAP. Consequently, the CAP helps enforce the implementation of existing legislation relevant for the environment, with notable exception for soil, as this is not covered by specific EU legislation.

The new greening scheme brought in by the 2013 CAP reform tried to tackle this issue with an additional incentive, linking 30% of direct support to practices conducive to sustainable management of natural resources. 'Greening' was successful in preventing further environmental damage, but the incentive to change farming practices (in particular the obligation to diversify crops or to maintain ecological focus areas) was not relevant for all farmers. Although the greening scheme had the potential to promote environmental and climate practices, the choices made by Member States and farmers did not fully unlock this potential.

Given their tailored and targeted design, voluntary measures under rural development were the most effective in encouraging sustainable management of natural resources. Implementation choices greatly influenced the overall impact of these measures. Furthermore, their uptake by farmers and foresters was limited, notably due to complex eligibility conditions and premiums that are too low to stimulate change, particularly in certain productive areas. Agri-environment-climate commitments supported practices that limit the loss of soil organic matter, foster soil biodiversity and reduce soil pollution (even though reduced tillage on arable land was limited to specific areas).

By 2019, 8% of EU agricultural land was under organic farming. 66% of this land is farmed with CAP support. Organic farming clearly produces benefits for biodiversity, soil and water, climate mitigation and animal welfare, while reducing the use of chemical pesticides and antimicrobials.

EU greenhouse gas emissions from agriculture²⁴ have fallen by more than 20% since 1990, but they have stagnated since 2010. While reducing total emissions in agriculture remains essential to achieve the EU's climate objectives, it is worth highlighting the

¹⁹ https://agridata.ec.europa.eu/extensions/DashboardIndicators/Productivity.html?select=EU27_FLAG,1

²⁰ See EAGF Specific objective 1, indicator 1.

²¹ See EAGF Specific objective 6, indicator 5.

²² Organic farming, compared to conventional farming, resulted in a mean increase of 34% in the abundance and richness of species, and a mean increase of 23.5% in soil carbon stocks (kgC/ha) for cropland.

²³ Also highlighted in [Scenar 2030 - Pathways for the European agriculture and food sector beyond 2020](#), which assessed the implication of a counterfactual 'no CAP' scenario on land use and the environment (among other aspects). This showed that without CAP, land abandonment (including grassland) would be higher (with a reduction of 6.9% in utilised agricultural area and 8.8% in grassland area).

²⁴ See General objective 2, indicator 1.

significant increase in output efficiency (i.e. lower emissions per unit of output): agricultural production has increased by 9% since 2010. This strengthens the resilience of the sector and food security.

Overall, the CAP provides a wide range of tools for sustainable management of natural resources and climate action, but Member States did not seize all opportunities to improve the environmental sustainability of farming and to step up climate action. The CAP could have been more effective with a more strategic approach, more targeted measures and funding, and if beneficiaries had been more ambitious in implementation rather than minimising changes. Nevertheless, the CAP did provide EU added value by raising ambition and laying down minimum spending levels for this general objective.

To promote a balanced territorial development

The decline in the labour force in EU agriculture has slowed down from -3.8% per year between 2005 and 2011 to -1.4% per year between 2011 and 2019. Employment reached 9.1 million full-time equivalents by the end of 2019. The ageing farming population is one of the top challenges facing EU rural areas, as only 11% of EU farmers are under 40 years old (2016).

The CAP has facilitated generational renewal by supporting the economic sustainability of jobs. However, it is insufficient on its own to remove the main entry barriers to farming, which are access to land and capital and the attractiveness of working and living conditions of rural areas.

CAP support mainly targets farming, but evidence shows the significant spill-over effects on the wider rural economy, notably because it boosts local spending and provides employment. The agri-food sector provides 40 million jobs in rural areas. In addition, despite the low share of funding, CAP support can be key to improve infrastructure, services and connectivity, especially in remote areas.

The CAP helps slow the rate of depopulation and land abandonment in the EU. It also plays a social role and the distribution of CAP support is very inclusive (with half of recipients receiving less than EUR 1 250 per year). Agriculture and the CAP significantly help reduce poverty in rural areas²⁵.

EAFRD

The EAFRD allocates the largest share of public expenditure (EU funding plus national funding) to Specific objective 4 ‘restoring, preserving and enhancing ecosystems’ and the initial targets set for 2023 (prior to the 2-year extension of the programming period) to support land management practices beneficial for the biodiversity, water and soil have all been reached.

Measures specifically designed to address climate action (Specific objective 5) only represent a small share of the total public support of rural development. However, the number of planned hectares under management contracts to address the reduction of greenhouse gas emission has been reached, whereas for example investments in renewable energy (indicator 3) continue to lag somewhat behind.

In general, investment type of measures take a longer time to be fully implemented compared to annual type of measures, which explains to a large extent the persistent gap to the targets.

	planned 2014-2022 (billion EU)	% of total ²⁶	realised expenditure (end Q3 2021, as percentage of 2014-2022 planned expenditure)
SO1	cross cutting objective		
SO2	41.7	22%	50%
SO3	20.3	10%	50%
SO4	88.6	46%	66%
SO5	11.6	6%	45%
SO6	26.4	14%	45%

Further progress has been made in terms of programme performance. For example, by end 2020, about 200 000 farms have been selected to receive financial support to restructure and modernise their holdings, and to achieve productivity gains. On climate and environmental actions in agriculture (e.g. carbon sequestration, reduction of greenhouse gases and ammonia emissions), good progress has been made, in particular with farmers joining voluntary agri-environment-climate schemes to develop environmentally-friendly farm management. The targets to reach by end of 2025 are: (i) 19% of EU agricultural land under

²⁵ As shown in several studies, including 2 recent evaluations: https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/rural-areas/impact-cap-territorial-development-rural-areas-socioeconomic-aspects_en and https://ec.europa.eu/info/news/commission-publishes-study-impact-leader-balanced-territorial-development-2022-mar-17_en.

²⁶ Total is less than 100% because approx. 3% of planned total public expenditure cover technical assistance and implementation of discontinued measures carried over from previous programming period.

management for biodiversity, (ii) 16% for better soil management, and (iii) 17% for better water management. Two of the 2023 targets for these indicators were reached by the end of 2020 and the third one was over 98% of completion.

At the end of 2020, the European Innovation Partnership for Agricultural Productivity and Sustainability (EIP-AGRI) was supporting more than 9 000 interactive innovation projects, against an overall target at the end of the implementation period of more than 14 000 projects. Knowledge and innovation developed through the EIP-AGRI projects are shared through national innovation and rural networks and the EIP-AGRI network. By end 2020, nearly 1.8 million people had taken part in vocational training activities supported by the EAFRD. In the same period, 4.9 million people had benefitted from improved infrastructures for information and communication technologies, against an overall target of 12.1 million people, by the end of 2025.

The implementation of area and animal-related support in 2014-2020 (e.g. related to environmental commitments and animal welfare) is well advanced. In this context, rules concerning the EAFRD payment deadlines to the beneficiaries were already introduced as from calendar year 2019, in order to align with direct payments and with a view to ensure timely disbursement of the Union support to EAFRD beneficiaries. This is also expected to further facilitate the implementation of those commitments. Some delays are still observed in relation to measures that can take several years to be completed (long-term investments such as broadband, other infrastructures) or that are conditional to the implementation of a business plan, which can take up to five years to be 'completed' (business start-up). Significant progress in the implementation of those measures has been made.

The CAP measures on generational renewal continue to have a positive impact on attracting and keeping young farmers in rural areas and improving employment, despite the difficulty to isolate the effects of individual CAP measures addressing generational renewal and the strong influence of external factors. However, these measures are often insufficient on their own, to address two main barriers to generational renewal: access to land and capital that depend mostly on national legal, social and fiscal policies.²⁷

The 2023-2027 CAP takes into account the main lessons learnt so far from the current rural development programming period, amongst others by reducing the level of prescription of the interventions and improving the synergies with the other instruments of the CAP (i.e. direct payments and sectoral programmes). This new CAP will have to pay specific attention to attracting young farmers and will also promote employment, growth, social inclusion and local development in rural areas.

The rural development support will also provide a decisive input into the new call for enhanced environmental and climate actions linked to the green deal initiative. The 2023-2027 CAP plans will include the following types of interventions, funded by the EAFRD: (i) environmental, climate and other management commitments; (ii) compensation for natural or other area-specific constraints; (iii) area-specific disadvantages resulting from certain mandatory requirements; (iv) investments; (v) installation of young farmers and rural business start-up; (vi) risk management tools; (vii) cooperation; (viii) knowledge exchange and information.

Performance related to Specific Objective 1

This Specific Objective aims at transferring knowledge and fostering innovation in rural areas, with a focus on the following areas:

- Fostering innovation, cooperation, and the development of the knowledge base in rural areas (Focus Area 1A);
- Strengthening the links between agriculture, food production, and forestry and research and innovation (Focus Area 1B);
- Fostering lifelong learning and vocational trainings in the agricultural and forestry sector (Focus Area 1C).

The specific objective is cross-cutting which is why no public expenditure has been attributed to it as such.

Indicator 1 (percentage of RDP expenditure planned for the three measures Knowledge transfer & information action, advisory services and cooperation) shows that by end 2020, 32% of the target planned for 2023 has been realised, corresponding to 37% of the 2025 target.

Indicator 2 (number of cooperation operations) shows that by end 2020, 54% of the target planned for 2023 has been achieved, corresponding to 44% of the 2025 target.

Indicator 3 (total number of participants trained) shows that by end 2019, 51% of the target planned for 2023 has been achieved, corresponding to 47% of the 2025 target.

The uptake and achievement of results is not yet fully in place. Part of this can be explained by the fact that cooperation and EIP-AGRI projects feed into this specific objective, which require a lot of preparatory work in the setting up phase, including the search for project partners. This leads to longer project lifetimes with reportable results emerging only at a later stage. Other factors explaining also the low implementation are the long administrative procedures that the Member States have put in place and which may discourage potential beneficiaries to apply, the lack of dissemination of information and publicizing of such measures, and in general, the fact that implementation of the related measures has started relatively late. Remedial actions have included the revision of the legal provisions governing the provision of advisory services to farmers and forestry holders, in 2017 (less stringent procedural requirements for the selection of advisors) and continuous dialogue with the Member States in view of correcting the limiting factors mentioned above. Several seminars have been organised by the European Network for Rural Development in 2019, 2020 and 2021 to exchange good practices related to improved efficiency under these measures.

Performance related to Specific Objective 2

²⁷ See the summary of the support study for the evaluation of the impact of the CAP on generational renewal in the agricultural sector in the EAGF programme statement.

Specific Objective 2 aims at improving farm viability and competitiveness, with a focus on

- improving the economic performance, restructuring and modernisation of supported farms in particular through increasing their market participation and agricultural diversification (Focus Area 2A)
- facilitating the entry of adequately skilled farmers into the agricultural sector and in particular, generational renewal (Focus Area 2B)

For the period 2014-2022, Member States planned EUR 41.7 billion of public expenditure for this specific objective, corresponding to 22% of the total rural development planned public expenditure. By Q3 2021, 50% of the planned public expenditure has been realised.

Indicator 1 (share of agricultural holdings received support for investments in restructuring and modernisation) shows that by end 2020, 70% of the target value planned for 2023 had been achieved corresponding to 66% of the 2025 target.

Indicator 2 (share of agricultural holdings with support to business development/investments for young farmers) shows that by end 2020, 87% of the target value planned for 2023 had been achieved corresponding to 89% of the 2025 target.

The level of achievement of the targets continues to be satisfactory. It should be noted that for investment operations, normally implementation takes several years. In general, investment support increases the economic performance and market participation of the supported farms. Investments may also imply environmental benefits. Support to the entrance of adequately skilled farmers, including young farmers, can have positive effects on farm viability, especially in relation to farm productivity and competitiveness.

Additionally, operations under this specific objective contribute positively to the market participation of primary producers, farm diversification, maintenance of employment in rural areas, generational renewal in agriculture, environmental benefits, improvement of working and living conditions of farmers.

Performance related to Specific Objective 3

Specific Objective 3 aims at promoting food chain organisation, including processing and marketing of agricultural products, animal welfare and risk management in agriculture, with a focus on the following areas:

- Improving the competitiveness of primary producers by better integrating them into the agri-food chain through quality schemes, adding value to agricultural products, promotion in local markets and short supply-circuits, producer groups and organisations and inter-branch organisations (Focus Area 3A);
- Supporting farm risk prevention and management (Focus Area 3B).

For the period 2014 – 2022, Member States planned EUR 20.3 billion of public expenditure for this specific objective, which corresponds to 10% of the total rural development planned public expenditure. By Q3 2021, 50% of the planned public expenditure has been realised.

Indicator 1 (share of agricultural holdings receiving support for participating in quality schemes, local markets, short supply circuits, and producer groups/organisations) shows that by end 2020, 55% of the target value planned for 2023 has been achieved corresponding to 68% of the 2025 target.

Indicator 2 (share of farms participating in risk management schemes) show that by end 2020, 36% of the target value planned for 2023 has been achieved corresponding to 52% of the 2025 target. It is still lower than expected, mainly due to the fact that this type of support is still relatively new in the Member States and needs some time to be fully managed. In order to facilitate the uptake of risk management schemes, some changes in the design of the instrument were introduced in 2017 and 2020.

Member States report several achievements, such as in terms of competitiveness of primary producers by better integration in the food supply chain and introduction of quality schemes, quality of food production, promotion of local markets and short supply, participation of farms in risk prevention and management schemes and prevention of risks from flooding.

Additionally, contributions to this specific objective come from LEADER, vocational trainings, cooperation projects (including EIP-AGRI operational groups), and farm advisory services on the increase of food quality and the creation of added value, as well as on developing the knowledge base on risk prevention in the agricultural and forestry sectors.

Performance related to Specific Objective 4

Specific Objective 4 aims at restoring, preserving, and enhancing ecosystems related to agriculture and forestry, with a focus on the following areas:

- restoring, preserving, and enhancing biodiversity, including in Natura 2000 areas, and in areas facing natural or other specific constraints, and high nature value farming, as well as the state of European landscapes (Focus Area 4A)
- improving water management, including fertilisers and pesticide management (Focus Area 4B)
- preventing soil erosion and improving soil management (Focus Area 4C)

For the period 2014 – 2022, Member States planned EUR 88.6 billion of public expenditure for this specific objective, which corresponds to 46% of the total rural development planned public expenditure. By Q3 2021, 66% of the planned public expenditure has been realised.

Indicator 1a (percentage of agricultural land under management contracts to support biodiversity and/or landscapes) shows that by end 2020, 103% of the target value planned for 2023 has been achieved, corresponding to 89% of the 2025 target.

Indicator 2a (percentage of agricultural land under management contracts to improve water management) shows that by end 2020, 98% of the target value planned for 2023 has been achieved, corresponding to 84% of the 2025 target.

Indicator 3a (percentage of agricultural land under management contracts to improve soil management and/or prevent soil erosion) shows that by end 2020, 101% of the target value planned for 2023 has been achieved, corresponding to 90% of the 2025 target.

Member States report several achievements, such as in terms of agricultural and forest land covered with management contracts to enhance biodiversity and landscape, restoring, preserving, and enhancing biodiversity (e.g. Farmland Bird Index), improvement of water quality and management, especially through a better management of fertilisers and pesticides, prevention of soil erosion and improvement of soil management, and preservation of genetic species in grasslands and livestock.

Performance related to Specific Objective 5

Specific Objective 5 aims at promoting resource efficiency and supporting the shift towards a low carbon and climate resilient economy in agriculture, food, and forestry sectors, with a focus on the following areas:

- Increasing efficiency in water use by agriculture (FA 5A)
- Increasing efficiency in energy use in agriculture and food processing (FA 5B)
- Facilitating the supply and use of renewable sources of energy, of by-products, waste and residues and other non-food raw material, for the purposes of the bio-economy (FA 5C)
- Reducing greenhouse gas and ammonia emissions from agriculture (FA 5D)
- Fostering carbon conservation and sequestration in agriculture and forestry (FA 5E)

For the period 2014 – 2022, the Member States planned EUR 11.6 billion of public expenditure under this specific objective, which corresponds to 6% of the total rural development planned public expenditure. By end 2020, 45% of the planned public expenditure has been realised.

- Indicator 1 (share of irrigated land switching to more efficient irrigation systems) shows that by end 2020, 66% of the target value planned for 2023 has been achieved, corresponding to 76% of the 2025 target.
- Indicator 2 (total investment for energy savings and efficiency) shows that by end 2020, 37% of the target value planned for 2023 has been achieved, corresponding to 29% of the 2025 target.
- Indicator 3 (total investment in renewable energy production) shows that by end 2020, 38% of the target value planned for 2023 has been achieved, corresponding to 32% of the 2025 target.
- Indicator 4a (percentage of livestock units concerned by investments in livestock management in view of reducing GHG and/or ammonia emissions) shows that by end 2020, 146% of the target value planned for 2023 has been achieved, corresponding to 87% of the 2025 target.
- Indicator 4b (percentage of agricultural land under management contracts targeting to the reduction of GHG and/or ammonia emissions) shows that by end 2020, 81% of the target value planned for 2023 has been achieved, corresponding to 94% of the 2025 target.
- Indicator 5 (share of agricultural and forest land under management contracts contributing to carbon sequestration and conservation) shows that by end 2020, 82% of the target value planned for 2023 has been achieved, corresponding to 94% of the 2025 target.

In general, indicators relating to area- or animal-based management commitments are closer to the targets than those relating to investment support, where uptake in general is, for the time being, lower than planned, due to the different nature of the respective interventions (annual payments versus investment projects that can take some time to materialise). Implementation delays have been subject to continuous dialogue with the Member States.

Performance related to Specific Objective 6

Specific Objective 6 aims at promoting social inclusion, poverty reduction and economic development in rural areas, with a focus on the following areas:

- Facilitating diversification, creation, and development of small enterprises, as well as job creation (Focus Area 6A)
- Fostering local development in rural areas (Focus Area 6B)
- Enhancing the accessibility, use and quality of information and communication technologies (ICT) in rural areas (Focus Area 6C).

For the period 2014-2022, Member States planned EUR 26.4 billion of public expenditure under this specific objective, which corresponds to 14% of the total rural development planned public expenditure. By Q3 2021, 45% of the planned public expenditure has been realised.

- Indicator 1 (number of jobs created in supported projects) shows that by end 2020, 29% of the target value planned for 2023 has been achieved, corresponding to 23% of the 2025 target.

- Indicator 2a (percentage of rural population covered by local development strategies) shows that by end 2020, 113% of the target value planned for 2023 has been achieved, corresponding to 118% of the 2025 target.
- Indicator 2b (percentage of rural population benefitting from improved services/infrastructures) shows that by end 2020, 125% of the target value planned for 2023 has been achieved, corresponding to 141% of the 2025 target.
- Indicator 2c (jobs created in supported LEADER projects) shows that by end 2020, 84% of the target value planned for 2023 has been achieved, corresponding to 60% of the 2025 target.
- Indicator 3 (percentage of rural population benefitting from new or improved ICT services/infrastructures) shows that by end 2020, 31% of the target value planned for 2023 has been achieved, corresponding to 128% of the 2025 target.

Member States report achievements in several fields such as diversification, creation and development of small enterprises, jobs creation and maintenance in rural areas, development and access to services and local infrastructure in rural areas, participation in local development strategies, employment opportunities created via local development strategies, and broadband expansion and better use of ICT in rural areas.

The indicator value for services/infrastructures (ICT) is relatively low partly due to the fact that many of these projects are large and may require several years to be implemented.

Explanation on specific objectives and the establishment of targets

For the 2014-2022 rural development programmes, for each of the specific objectives, the Commission has defined result-type "Target Indicators" in the rural development (RD) Common Monitoring and Evaluation System (CMES). At least one target indicator is available for each of the 18 RD focus areas. The application of each of these indicators is mandatory for all the rural development programmes including the corresponding focus area. For each indicator target levels are established ex-ante for year 2025 and actual achievements are assessed regularly during the implementation period. It is therefore possible to aggregate at the level of the Union both their planned levels for the year 2025 and, through regular monitoring and reporting, their actual levels of achievement year by year. Therefore, these CMES Target Indicators represent an optimal way to monitor and report on the performance of the programmes.

The baseline is 0 at the start of the programming period. The information concerning the latest known results reflecting 2020 implementation became available to the Commission as of the annual implementation reports submitted by 30 June 2021.

For the EAFRD there is no ex-ante monitoring of the outputs via setting the annual forecasts for the implementation. The targets for the operational outputs are set for 2025.

NB: All targets and latest known results have been modified because the United Kingdom is no longer included in the aggregate. Certain targets have also been updated because of modifications in RD Programmes, which were made in accordance with the legislation for Rural Development. Only in the course of 2021 more than 180 programme amendments²⁸ were adopted by the Commission, some of them adjusting their 2025 target values. The justification for these amendments varies programme to programme, but they are mostly triggered by changes in national or regional development needs, changing economic conditions and the varying demand for different types of support, that necessitate reallocation of funding among the investment areas concerned, affecting obviously the targets set for the programmes.

When interpreting the actual results, caution should be applied as interventions tend to have a longer programme cycle – actual achievements may not be visible from the beginning. The implementation of the 2014-2022 programming period lasts until 2025 (n+3 rule), therefore the achievement values refer to the situation at the 7th year of a 12-year long implementation cycle.

3.2. Key achievements

EAGF

Market related expenditure

5.9 million	400 000	79%	18.9 million	19%
Farmers benefitted from direct payments in 2020	farmers benefitting from the young farmers scheme in 2020	of the total EU agricultural area was subject to at least one "greening" obligation in 2020	beehives supported in 2020	Of children in the EU benefit from the school scheme in 2019/2020

²⁸ Some programmes were amended more than once.

EAFRD

The results and outputs achieved by the end of 2020 (latest figures available²⁹) are fully representative of what is expected from the implementation. With programme implementation at cruising speed, the situation is likely to further improve in the next years, especially regarding operations linked to the creation of jobs, for which an improvement is already visible but more is expected in the coming years. The latter are operations that normally take more time to be completed and produce, with achievements materialising usually by the end of the programming period according to previous experience. Some positive results can already be pointed out, with 113% already achieved of the final target for rural population covered by local development strategies.

Key environmental and climate achievements in 2020³⁰ include:

2.0 million	869 000	17.1%	EUR 1 850 million	1 630 000	3.8 million
hectares of agricultural and forest land covered by management contracts contributing to carbon sequestration or conservation	hectares of irrigated land had switched to more efficient irrigation systems	of agricultural land were covered by management contracts contributing to biodiversity	investments in energy efficiency or renewable energy production reached	livestock units were concerned by investments in livestock management in view of reducing greenhouse gases or ammonia emissions	hectares were under land-management contracts targeting reduction of greenhouse gases or ammonia emissions

Key achievements regarding farm viability and competitiveness and knowledge transfer include (by 2020):

1.78%	1.41%	1.8 million
of the EU total agricultural holdings who received aid for investments support in restructuring and modernisation 2025 target is 2.70%	of the EU total holdings who received aid for a development plan for young farmers 2025 target is 1.59%	beneficiaries received vocational training in agriculture 2025 target is 3.9 million

3.3. Evaluations, studies and reports

The following evaluations were published in 2021, contributing to a report from the Commission to the European Parliament and the Council on the implementation of the common monitoring and evaluation framework including an assessment of the performance of the common agricultural policy 2014-2020 (COM/2021/815 final)³¹.

Commission staff working document on the evaluation of the impact of the CAP on generational renewal, local development and jobs in rural areas, published on 8 April 2021³². The evaluation concluded that the CAP’s impact on generational renewal is mostly positive, but remains limited notably in regions lacking basic infrastructure and services. The CAP on its own is not sufficient to address main entry barriers into farming, such as access to land and access to capital. The measures included in the CAP are supporting the economic sustainability of young farmers, but the full potential of such measures is not exploited.

Commission staff working document on the evaluation of the impact of the CAP measures on the general objective "viable food production", published on 12 May 2021³³. The evaluation concluded that direct income support strongly contributes to stabilising farm income, with direct payments and support to areas facing natural constraints playing an important role. Market measures, EU quality schemes and various rural development measures contributing to productivity growth also have a role in supporting farm income by limiting downward price volatility and improving competitiveness. However, despite a steady and continuous improvement, the income gap between agricultural and non-agricultural income remains considerable.

²⁹ Latest data are collected from the Annual Implementation Reports 2020 (submitted in 2021). The data on the implementation in 2021 will become available in the second half of 2022.

³⁰ Year on year drop due to removing UK figures.

³¹ <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=COM%3A2021%3A815%3AFIN>

³² https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/rural-areas/impact-common-agricultural-policy-generational-renewal-local-development-and-jobs-rural-areas_en

³³ https://ec.europa.eu/info/food-farming-fisheries/key-policies/common-agricultural-policy/cmef/products-and-markets/impact-cap-measures-general-objective-viable-food-production_en

Commission staff working document on the evaluation of the CAP's impact on climate change and greenhouse gas emissions, published on 1 June 2021³⁴. The evaluation concluded that CAP has helped reduce GHG emissions, improving the climate footprint per unit of agricultural output. Mitigation is mainly achieved by protecting existing carbon stocks, notably thanks to the maintenance of permanent grasslands supported by extensive livestock grazing systems. There is potential to further increase carbon storage in EU soils. In terms of climate adaptation, it is mainly achieved through support towards diversity of crops and farming systems, investment support for adaptation to new climate conditions, limiting soil erosion and improving resilience to floods. However, better targeting of CAP support would lead to an increase in efficiency.

Commission staff working document on the evaluation of the mandatory indication of the country of origin or place of provenance for fresh, chilled and frozen meat of swine, sheep, goats and poultry, published on 10 August 2021³⁵. The evaluation concluded that mandatory country-of-origin labelling provides for the meaningful information to consumers and for control of compliance by competent authorities. The effect of the country-of-origin labelling rules on market and trade dynamics was marginal, with the cost of adaptation absorbed in the supply chain and not transferred to consumers. Although the evaluation did not detect systemic issues with enforcement of the rules, it identified differences in the quality of controls between EU Member States. The evaluation also indicated that consumers' low understanding of the terms and definitions used on labels leaves room for improvement. In addition, growing demand for environmental care pushes for continuous efforts to better understand the environmental and market impact of origin labelling rules.

Commission staff working document on the evaluation of the information policy on the common agricultural policy, published on 8 December 2021³⁶. The evaluation concluded that information policy on the CAP plays an important role in increasing public awareness about the CAP and its role. The information actions on the CAP increase understanding of the policy and improve perception among stakeholders and EU citizens. Actions carried out by the Commission and the grants projects complement each other in order to reach wider audiences on CAP related topics, conveying messages that are relevant for their audiences. The evaluation also acknowledges scope to further improve the information measures and adapt them to the new CAP and to societal demands. Cooperation with the national authorities as regards communication to EU citizens might also be stepped up.

Commission staff working document on the evaluation of the impact of the CAP on territorial development of rural areas: socioeconomic aspects, published on 13 December 2021³⁷. The evaluation concluded that poverty and land abandonment would be more pronounced in the absence of the CAP, however administrative burden limits the efficiency of CAP support in rural areas. While the CAP is effective in strengthening farm viability and supporting the maintenance of farms in rural areas, the uneven distribution of support limits the CAP's effectiveness in reducing economic disparities between farmers and different areas. CAP support has a significant spill-over effect into the wider rural economy, especially in less developed regions, and generates gross-value added and employment in rural areas across the EU, and contributes to generational renewal. There is room for improvement regarding coherence and synergies with other EU funds, as well as national and regional policies. While direct payments are delivered with a relatively low administrative burden, they are not particularly targeted towards the social aspects of territorial development or the needs of vulnerable or socially-excluded rural groups.

Commission staff working document on the evaluation of the impact of the CAP on biodiversity, soil and water (natural resources), published on 17 December 2021³⁸. The evaluation concluded that the CAP provides EU added value by setting a higher level of ambition than might be available under a purely national approach, requiring minimum levels of financial support, and supporting knowledge sharing across Member States. However, the potential of the CAP in addressing sustainable management of natural resources was not fully exploited over 2014-2020. Member States did not allocate sufficient funding to the most targeted measures, and/or chose a minimalistic approach for cross-compliance and greening conditions. The evaluation reaffirms the continued relevance of the CAP's objective to address sustainable management of natural resources, and acknowledges the CAP's potential to effectively address sustainable management objectives by providing extensive protection through cross-compliance, greening obligations and more targeted voluntary commitments under rural development support. The evaluation also concluded that the CAP can prevent land abandonment and slow down specialisation of farming systems, contributing to the maintenance of diversified land use, farming and permanent grasslands.

Commission staff working document on the evaluation of Geographical indications and traditional specialities guaranteed protected in the EU, published on 21 December 2021³⁹. The evaluation concluded that Geographical Indications (GIs) and Traditional Specialities Guaranteed (TSGs) schemes offer a wide range of benefits for stakeholders, including a fair return and competition for farmers and producers. While they are not applied systematically in all Member States, and face low consumer

awareness and understanding in some Member States, they do provide a clear EU added value. GIs and TSGs ensure the integrity of the internal EU market and provide common standards for trade with third countries.

Two studies were commissioned in 2021 to contribute to the **synthesis of input from public consultations on organic farming** (SWD(2021)65)⁴⁰ **and the long-term vision for rural areas** (SWD/2021/167)⁴¹.

In addition the following studies were finalised in 2021, whose results will be published in 2022:

- Support study to the evaluation of the impact of LEADER towards the general CAP objective "balanced territorial development"
- Study on agri-food imports and their role in the EU supply chains
- Study (pilot project) on the restructuration of the Honey Bee chain and Varroa Resistance Breeding & Selection Program
- Study on the EU sugar sector's capacity to adapt to a post-quota market environment and strategies to strengthen its resilience sugar sector price volatility
- Synthesis report of Member States' POSEI reports
- Study on EU agri-food exports via e-commerce to China
- Study for the development of a common framework for the quantitative advice of crop nutrient requirements and greenhouse gas emissions and removal (FAST study)
- Study of the CAP measures and instruments promoting animal welfare and reduction of antimicrobials use

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Support viable farm income and resilience of the agricultural sector across the Union to enhance long-term food security and agricultural diversity as well as ensuring the economic sustainability of agricultural production in the Union.

Indicator 1: O.3 Number of CAP support beneficiaries

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Output
Unit of measurement	Number of beneficiaries
Cut-Off Date	
Data source	Annual performance reports
Link to the objective	Specific Objective 1: To support viable farm income and resilience of the agricultural sector across the Union to enhance long-term food security and agricultural diversity as well as to ensure the economic sustainability of agricultural production in the Union
Link MFF 14-20 / MFF 21-27	
Other methodological comments	- The detailed information by intervention and type of intervention relates to all beneficiaries who directly receive CAP support (not only farmers). - By contrast, the aggregated figures relate only to farmers- In order to avoid double counting, which means that where a given unit of output is covered by multiple relevant interventions, or by several operations within the same intervention, that unit of output is counted only once in the aggregate value, there will be the need for a unique identifier for each beneficiary. - Beekeepers are not accounted as farmers, i.e. they are not accounted in the aggregate.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: C.25 Agricultural factor income

⁴⁰ https://ec.europa.eu/info/law/better-regulation/have-your-say/initiatives/12555-Organic-farming-action-plan-for-the-development-of-EU-organic-production_en

⁴¹ <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A52021SC0167R%2801%29>

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	1: EUR (in real terms)/AWU2: Index 2010 =100%
Cut-Off Date	
Data source	1: Eurostat, Economic Accounts for Agriculture and Agricultural Labour Input Statistics2 - 3: Eurostat, Economic Accounts for Agriculture (EAA)
Link to the objective	Specific Objective 1: To support viable farm income and resilience of the agricultural sector across the Union to enhance long-term food security and agricultural diversity as well as to ensure the economic sustainability of agricultural production in the Union
Link MFF 14-20 / MFF 21-27	Similar indicator expressed as an index (2010=100)
Other methodological comments	Context indicator
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 3: R.6 Redistribution to smaller farms: Percentage additional direct payments per hectare for eligible farms below average farm size (compared to average)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	%
Cut-Off Date	
Data source	Annual performance reports
Link to the objective	Specific Objective 1: To support viable farm income and resilience of the agricultural sector across the Union to enhance long-term food security and agricultural diversity as well as to ensure the economic sustainability of agricultural production in the Union
Link MFF 14-20 / MFF 21-27	
Other methodological comments	- Coupled income support to livestock payments are accounted into the numerator. - Cotton is excluded from this indicator, as the Member States have no margin of manoeuvre on this intervention: the amounts to be paid are laid down in the legislation. - Support to Areas with Natural Constraints (ANC) is not included here because although supporting income, the indicator aims at measuring the redistribution of direct payments.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Specific Objective 2: Enhance market orientation and increase farm competitiveness both in the short and long term, including greater focus on research, technology and digitalisation

Indicator 1: R.9 Farm modernisation: Share of farms receiving investment support to restructure and modernise, including to improve resource efficiency

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	%
Cut-Off Date	

Data source	Annual performance reports
Link to the objective	Specific Objective 2: To enhance market orientation and increase farm competitiveness both in the short and long term, including greater focus on research, technology and digitalisation

Justification of the trend	

Specific Objective 4: Contribute to climate change mitigation and adaptation, including by reducing greenhouse gas emissions and enhancing carbon sequestration, as well as promote sustainable energy

Indicator 1: I.10 Contributing to climate change mitigation: Greenhouse gases emissions from agriculture

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	
Unit of measurement	1, 3, 4: Tonnes (Megatonnes) of CO2 equivalents per year for the absolute value and % for the change compared to baseline. 2, 5: %6: tonnes of CO2 equivalents/ha 7: tonnes of CO2 equivalents/LU
Cut-Off Date	
Data source	The indicator is based on the annual national inventory submissions to the EU and subsequently the UNFCCC through the Monitoring Mechanism Regulation (Regulation 2018/1999). This reporting framework moreover describes requirements for monitoring and reporting under the Effort Sharing Regulation and LULUCF Regulation, e.g., Geospatial data sources for meeting IPCC approach 3 for LULUCF, such as services from the Copernicus programme, IACS/LPIS, LUCAS and others compliant with the INSPIRE directive. The inventory is compiled by each Member State, and then collated and quality-assured by the European Environment Agency (EEA) and the European Topic Centre for Air Pollution and Climate Change Mitigation (ETC/ACM).
Link to the objective	To contribute to climate change mitigation and adaptation, including by reducing greenhouse gas emissions and enhancing carbon sequestration, as well as to promote sustainable energy
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Context indicator
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: R.14 Carbon storage in soils and biomass: Share of utilised agricultural area (UAA) under supported commitments to reduce emissions, maintain and/or enhance carbon storage (including permanent grassland, permanent crops with permanent green cover, agricultural land in wetland and peatland)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final
Are we on track :

Justification of the trend	

Specific Objective 5: Foster sustainable development and efficient management of natural resources such as water, soil and air, including by reducing chemical dependency

Indicator 1: O.34 Number of hectares under environmental practices (summary indicator on physical area covered by conditionality, eco-schemes, agri- and forest- environment- climate management commitments)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final
Are we on track :										

Indicator type	Output
Unit of measurement	Hectares
Cut-Off Date	
Data source	Annual performance reports
Link to the objective	Specific Objective 5: To foster sustainable development and efficient management of natural

	resources such as water, soil and air, including by reducing chemical dependency
Link MFF 14-20 / MFF 21-27	Similar indicator but at result level (share of area under environmental practices)
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: I.15 Improving water quality: Gross nutrient balance on agricultural land

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	kg N/ ha/ year
Cut-Off Date	
Data source	Statistical Office of the European Union (Eurostat), based on data reported by the countries (currently only available for those countries that report. Compulsory transmission of Gross Nutrient Balance data are planned to be part of the future legislation on agricultural statistics, in the Regulation on Statistics of Agricultural Input and Output (SAIO), planned to be adopted by the Commission by the end of 2020. Eurostat: Gross nutrient balance [aei_pr_gnb] https://ec.europa.eu/eurostat/cache/metadata/en/aei_pr_gnb_esms.htm https://ec.europa.eu/eurostat/cache/metadata/en/t2020_rm310_esmsip2.htm
Link to the objective	To foster sustainable development and efficient management of natural resources such as water, soil and air, including by reducing chemical dependency
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Data come from multiple sources including the consumption of mineral fertilisers and seeding and plant material, livestock population and manure import and exports, use of other organic fertilisers in agricultural production, atmospheric deposition, biological nitrogen fixation, crop and fodder production and crop/fodder residues removal or burning, and areas of various types of crops. The land types included are arable land, permanent crops and permanent grassland. Further, coefficients are required, among other to estimate nutrient excretion per livestock and fodder yields. For countries that do not provide data, estimates are calculated and published by Eurostat based on various available data sources, most importantly the Eurostat fertilizers, crop and livestock statistics, National inventory submissions to UNFCCC and CLRTAP, Fertilizers Europe and FAO database. The EU aggregate is also estimated.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 3: I.16 Reducing nutrient leakage: Nitrates in ground water - Percentage of ground water stations with nitrates concentration over 50 mg/l as per Directive 91/676/EEC

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	% of groundwater stations above the concentration threshold (50 mg NO3/l)
Cut-Off Date	
Data source	Data from the Nitrates Directive reporting system (DG Environment): national and river basin level. European Environment Agency (EEA) – Nutrients in freshwater: Data voluntarily reported by Member States (EEA Member Countries) via the WISE/SOE (State of Environment) data flow annually. EEA website, based on data reported to EIONET: Waterbase_rivers, Waterbase_groundwaters, CSI020 , http://www.eea.europa.eu/data-and-maps/indicators/nutrients-in-freshwater
Link to the objective	Specific Objective 5: To foster sustainable development and efficient management of natural resources such as water, soil and air, including by reducing chemical dependency
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en

Justification of the trend	
----------------------------	--

Indicator 4: I.14 Sustainable and reduced use of pesticides: Risks, use and impacts of pesticides

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final
Are we on track :										

Indicator type	Impact
Unit of measurement	1: kg2: Index based on annual quantities of active substances placed on the market in the form of plant protection products multiplied by the relevant weights100 (= average for the period 2011-2013)3: kg
Cut-Off Date	
Data source	1-3: Eurostat https://ec.europa.eu/food/plants/pesticides/sustainable-use-pesticides/harmonised-risk-indicators/trends-harmonised-risk-0_en All data not publicly available yet due to confidentiality reasons, but currently being addressed with the revision of annex 2 of Reg. (EC) No 1185/2009 concerning statistics on pesticides to overcome this problem and ensure that data will be publicly available. The trends (compared to a baseline of 100, rather than expressed in kg) for the EU, and for MS that agreed to have their national trends published, are available at the following webpage: https://ec.europa.eu/food/plants/pesticides/sustainable-use-pesticides/farm-fork-targets-progress_en
Link to the objective	Specific Objective 5: To foster sustainable development and efficient management of natural resources such as water, soil and air, including by reducing chemical dependency
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The HRI 1 indicator is based on the quantities of active substances sold in pesticides each year. Active substances are classified in 4 groups and 7 categories according to Annex IV to the Directive 2009/128/EC. A weighting is developed for each group: quantity sold of active substances are multiplied for the respective weights in order to calculate a harmonised index that can be monitored over time.

Justification of the trend	

Specific Objective 7: Attract and sustain young farmers and other new farmers and facilitate sustainable business development in rural areas

Indicator 1: R.36 Generational renewal: Number of young farmers benefitting from setting up with support from the CAP, including a gender breakdown

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
----------------	--------

Unit of measurement	Number of young farmers
Cut-Off Date	
Data source	Annual performance reports
Link to the objective	Specific Objective 7: To attract and sustain young farmers and other new farmers and facilitate sustainable business development in rural areas
Link MFF 14-20 / MFF 21-27	
Other methodological comments	A young farmer can set up on an existing farm. The reference to “young farmer” is to be understood as a reference to a beneficiary of the installation grant for young farmers (Article 75) and/or the complementary income support for young farmers (Article 30). This is the simplest solution to avoid double counting. The sub-indicators by gender are used only for monitoring purposes (i.e. they are not to be planned and they are not part of the performance review exercise).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Specific Objective 8: Promote employment, growth, gender equality, including the participation of women in farming, social inclusion and local development in rural areas, including circular bio-economy and sustainable forestry

Indicator 1: R.37 Growth and jobs in rural areas: New jobs supported in CAP projects

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Number of jobs created in full time equivalent (FTE)
Cut-Off Date	
Data source	Annual performance reports
Link to the objective	To promote employment, growth, gender equality, including the participation of women in farming, social inclusion and local development in rural areas, including circular bio-economy and sustainable forestry
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Only new jobs actually created should be counted, which excludes jobs maintained. It relates to employment when the project is up and running, i.e. if the project is creation of a farm shop, it does not include employment created during the design/construction phase – consultant/architect/builders, but the employment, which is created when the shop is running (manager, sales assistants, etc.) Voluntary work should not be counted but self-employment is included. The indicator is calculated in FTE; therefore, if an existing halftime job is transformed into a fulltime job, the value of the indicator is 0.5. When this information is not available (for CIS-YF) the farmer is accounted as 1 FTE. To count 1 FTE job created, the duration of the contract should be one year or more (e.g. a six-month contract at 100% is 0.5). This indicator covers jobs created via support from CAP strategic plans, which covers jobs created in the agricultural sector, and non-agricultural employment.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: R.38 LEADER coverage: Share of rural population covered by local development strategies

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	%
Cut-Off Date	
Data source	Annual performance reports
Link to the objective	Specific Objective 8: To promote employment, growth, gender equality, including the participation of women in farming, social inclusion and local development in rural areas, including circular bio-

	economy and sustainable forestry
Link MFF 14-20 / MFF 21-27	
Other methodological comments	While LEADER interventions can include ones for preparatory support, this indicator counts the population covered in the territories with approved LAG partnerships and strategies for implementation. For simplification at the initial planning stage the LEADER intervention could be attributed to only this indicator. LEADER intervention (Article 77) may be concerned in a number of other resulted indicators, which will be only indicated based on the approved strategies through a later modification of the Plans and through the annual reporting.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 3: R.41 Connecting rural Europe: Share of rural population benefitting from improved access to services and infrastructure through CAP support

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	%
Cut-Off Date	
Data source	Annual performance reports
Link to the objective	Specific Objective 8: To promote employment, growth, gender equality, including the participation of women in farming, social inclusion and local development in rural areas, including circular bio-economy and sustainable forestry
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The indicator refers to the potential beneficiaries in municipalities or in a given area (e.g. covered by the LAG).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Specific Objective 9: Improve the response of Union agriculture to societal demands on food and health, including high quality, safe, and nutritious food produced in a sustainable way, the reduction of food waste, as well as improving animal welfare and combatting antimicrobial resistances

Indicator 1:I.28 Limiting antimicrobial use in farmed animals: sales/use of antimicrobials in food producing animals

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Population Correction Unit (PCU)
Cut-Off Date	
Data source	European Surveillance of Veterinary Antimicrobial Consumption (ESVAC) project, started by the European Medicines Agency (EMA) upon a request from the EC in 2009 to develop a harmonised approach for the collection and reporting of data on the use of antimicrobial agents in animals from EU Member States. Data is collected on a voluntary basis on sales of antimicrobial veterinary medicinal products (VMP) at package level from the EU Member States (MSs), EEA countries and Switzerland. - European One Health Action Plan against Antimicrobial Resistance (2017) https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52017DC0339 - ESVAC interactive database https://esvacbi.ema.europa.eu/analytics/saw.dll?PortalPages - ESVAC Annual Reports http://www.ema.europa.eu/ema/index.jsp?curl=pages/regulation/document_listing/document_listing_000302.jsp#annual
Link to the objective	Specific Objective 9: To improve the response of Union agriculture to societal demands on food and health, including high quality, safe, and nutritious food produced in a sustainable way, to reduce food waste, as well as to improve animal welfare and to combat antimicrobial resistances

Link MFF 14-20 / MFF 21-27	
Other methodological comments	Once the new Regulation (EU) 2019/6 on veterinary medicinal products is to be applied (January 2022), all MS are obliged to collect data on sales and use of antimicrobials in animals, to enable in particular the direct or indirect evaluation of their use in food-producing animals at farm level, following a stepwise approach for different animal species, within the time limits set.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 2: R.43 Limiting antimicrobial use: Share of livestock units (LU) concerned by supported actions to limit the use of antimicrobials (prevention/reduction)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	%

Link to the objective	Specific Objective 9: To improve the response of Union agriculture to societal demands on food and health, including high quality, safe, and nutritious food produced in a sustainable way, to reduce food waste, as well as to improve animal welfare and to combat antimicrobial resistances
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In January 2022, the new Regulation (EU) 2019/6 on veterinary medicinal products will start to apply. It provides for a wide range of practices to promote a more prudent and responsible use of antimicrobials in animals, e.g. by restricting prophylactic and metaphylactic use. In order to help maintain animals healthy and prevent infections from occurring, therefore reducing the need to use antimicrobials, preventive measures may be taken, such as: improved biosecurity measures, improved animal husbandry, better hygiene practices, vaccination.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 3: R.44 Improving animal welfare: Share of livestock units (LU) covered by supported actions to improve animal welfare

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	%
Cut-Off Date	
Data source	Annual performance reports
Link to the objective	Specific Objective 9: To improve the response of Union agriculture to societal demands on food and health, including high quality, safe, and nutritious food produced in a sustainable way, to reduce food waste, as well as to improve animal welfare and to combat antimicrobial resistances
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In order to improve animal welfare, Member States may support actions (notably commitments or investments) such as: • supplying water, feed and animal care in accordance with the natural needs of animal husbandry; • improving housing conditions, such as increased space allowances, flooring surfaces, enrichment materials, natural light; • offering outdoor access; • promoting practices which avoid mutilation and/or castration of animals, or in specific cases when mutilation or castration of animals is deemed necessary, provide for the use of anaesthetics, analgesia and anti-inflammatory medication or immune-castration.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Specific Objective 10: Modernising the sector by fostering and sharing of knowledge, innovation and digitalisation in agriculture and rural areas and encouraging their uptake by farmers, through improved access to research, innovation, knowledge exchange and training

Indicator 1: R.1 Enhancing performance through knowledge and innovation: Number of persons benefitting from advice, training, knowledge exchange, or participating in European Innovation Partnership (EIP) operational groups supported by the CAP in order to enhance sustainable economic, social, environmental, climate and resource efficiency performance

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									
	Actual Progress									Final
Are we on track :										

Indicator type	Result
Unit of measurement	Number of persons
Cut-Off Date	
Data source	Annual performance reports
Link to the objective	Specific Objective 10: Modernising agriculture and rural areas by fostering and sharing of knowledge, innovation and digitalisation in agriculture and rural areas and by encouraging their uptake by farmers, through improved access to research, innovation, knowledge exchange and training
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Other cooperation than EIP, with a training and innovation dimension could be accounted here. Whatever the length of the training/advice action (hours or days), the beneficiary is accounted the same way (in full). There might be double counting of beneficiaries, as a person could benefit of training through various channels and several times during the programming period. However, avoiding double counting in the planning and reporting would be too burdensome in view of the benefit it would bring. Regarding the implementation of research programs in apiculture, all participants to the research activity (including scientists) are not accounted here.

Justification of the trend	

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: European Agricultural Guarantee Fund (EAGF)

General Objective 1: To promote a viable food production

Indicator 1: Agricultural factor income

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									
115										
	Actual Progress									Final
	116	114	113	129	126	132	131	132		
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Index (2010=100)
Cut-Off Date	07/02/2022
Data source	Eurostat - economic accounts for agriculture (online data code: aact_eaa06)
Narrative	Results show a growing trend despite annual variations inevitable in the economy.
Methodology	https://agridata.ec.europa.eu/Qlik_Downloads/InfoSheetSectorial/infoC25.html
Link MFF 14-20 / MFF 21-27	C24 Agricultural factor income in PMEF
Other methodological comments	As the trend is more important than a comparison across countries, the index is preferred over the absolute values. Figure for 2021: first estimate. Updated baseline and previous values due to change in Eurostat database.
Full metadata available at this address	https://ec.europa.eu/eurostat/cache/metadata/en/aact_esms.htm
Justification of the trend	

Indicator 2: Agricultural productivity

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2005	Milestones									
100	Actual Progress									Final
	101.1	102.7	104.1	104.5	105.2	107.5				
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Index (3-year moving average)
Cut-Off Date	14/01/2022
Data source	DG AGRI calculation based on Eurostat data
Narrative	Total factor productivity is increasing in the EU primarily with the increase in labour productivity and land productivity. Increase in labour productivity is due to a continuous agricultural labour outflow but also significant improvements in labour conditions with the help of machinery and equipment.
Methodology	Total factor productivity (TFP) compares total outputs relative to the total inputs used in production of the output. As both output and inputs are expressed in term of volume indices, the indicator measures TFP growth. The TFP a composite indicator for land, capital and labour productivity growth. This is an index, in the first step 2005 is set at 100, then 3 year-averages are calculated to smoothen the effect of weather for instance on the indicator.
Link MFF 14-20 / MFF 21-27	The current CAP regulations continue to apply in 2021 and 2022 (Regulation (EU) 2020/2220). Only as of 2023 the new CAP Strategic Plans will enter into force.
Other methodological comments	https://ec.europa.eu/info/sites/info/files/food-farming-fisheries/key_policies/documents/context-indicator-fiches_en.pdf Indicator C.27 - Total factor productivity in agriculture
Full metadata available at this address	
Justification of the trend	

General Objective 2: To promote a sustainable management of natural resources and climate action

Indicator 1: Greenhouse gas emissions from agriculture

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									Long term target
486 362	Actual Progress									Final
	441 058	434 343	435 190	443 293	435 483	428 420				
Are we on track :										

Indicator type	Impact
Unit of measurement	Thousand tonnes of CO2 equivalent
Cut-Off Date	14/01/2022
Data source	Annual European Union GHG inventory (sectors 3.a, 3.b, 3.c, 3.d, 4.c and 4.d). The inventory is based on national submissions to the UNFCCC and to the EU Monitoring Mechanism of CO2 and other GHG emissions. It is compiled and held by the European Environment Agency (EEA) and the European Topic Centre on Air and Climate Change (ETC/ACC) and data are published in the Eurostat database. - EU27 data
Narrative	Greenhouse gas emissions from agriculture declined over the period between 1990 and 2012 and stabilised over the period 2013 and 2019.
Methodology	https://agridata.ec.europa.eu/Qlik_Downloads/InfoSheetEnvironmental/infoC45.html
Link MFF 14-20 / MFF 21-27	C43 Greenhouse gas emissions from agriculture in PMEF
Other methodological comments	Values have changed compared to figures provided in the previous Programme Statement because the EEA has updated figures also for previous years. Qualitative target: To decrease
Full metadata available at this address	https://www.eea.europa.eu/data-and-maps/data/national-emissions-reported-to-the-unfccc-and-to-the-eu-greenhouse-gas-monitoring-mechanism-16
Justification of the trend	

General Objective 3: To promote a balanced territorial development

Indicator 1: Rural employment rate

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2023

0.63	Actual Progress								Final
	0.64	0.65	0.65	0.66	0.67	0.68	0.68		
Are we on track :	On track								

Indicator type	Impact
Unit of measurement	% Employment rate for the age group 15-64
Cut-Off Date	14/01/2022
Data source	Eurostat – Labour Force Survey - EU27
Narrative	Positive trend until 2019 closing the gap with urban employment rate.
Methodology	https://agridata.ec.europa.eu/Qlik_Downloads/InfoSheetSocioEconomic/infoC5.html
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/eurostat/cache/metadata/en/reg_lmk_esms.htm
Justification of the trend	

Specific Objective 1: To improve the competitiveness of the agricultural sector and enhance its value share in the food chain

Indicator 1: Share of EU agricultural exports in world market

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2016	Milestones									
0.195	Actual Progress									Final
				0.193	0.197	0.203	0.200			
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Percentage of total world agricultural exports
Cut-Off Date	14/01/2022
Data source	IHS Markit/Global Trade Atlas (GTA) (almost 98% world coverage)
Narrative	The EU27 has maintained and slightly expanded its worldwide market share, both according to the EU28 and EU27 calculation metric.
Methodology	(EU exports to Extra-EU)/(World exports incl. EU)
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Qualitative target: Share in world market maintained
Full metadata available at this address	
Justification of the trend	EU agri-food exports maintained and even slightly improved their world market share between 2017 to 2019.

Indicator 2: Share of value added for primary producers in the food chain

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									
0.29	Actual Progress									Final
	0.28	0.27	0.26	0.27	0.25					
Are we on track :										

Indicator type	Result
Unit of measurement	%
Cut-Off Date	14/01/2022
Data source	Eurostat – National Accounts, Structural Business Statistics
Narrative	After a period of decline, the situation recently stabilised concerning the value added retained by primary producers. The CAP provides for measures to help improving the position of farmers in the food value chain, by supporting farmers’ cooperation, encouraging the use of contracts and market transparency as well as supporting quality production with higher returns to farmers (e.g. organic, PGI, PDO). EU policies also regulate unfair trading practices that may penalise farmers as weaker operators within the food supply chain.
Methodology	The indicator looks at the structure of the food chain and calculates the share of the primary production (agriculture), processing sector and retail sector for the total value added generated by

	different participants of the food chain (primary production, food manufacturing, food distribution and food service activities).
Link MFF 14-20 / MFF 21-27	The current CAP regulations continue to apply in 2021 and 2022 (Regulation (EU) 2020/2220). Only as of 2023 the new CAP Strategic plans will enter into force.
Other methodological comments	Qualitative target: Improved situation of primary producers in food chain
Full metadata available at this address	https://ec.europa.eu/info/sites/info/files/food-farming-fisheries/key_policies/documents/result-indicator-fiches-pillar-i_en.pdf Indicator R.03_PI Value added for primary producers in the food chain
Justification of the trend	

Specific Objective 2: To foster market stability

Indicator 2: Public intervention, ratio of volume of the products bought in the intervention storage and the total EU production of those respective products (All sectors)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
All sectors										
2017	Milestones									
2.1%	Actual Progress									0%
					0%	0%	0	0		Final
Are we on track :										

Indicator type	Result
Unit of measurement	%
Cut-Off Date	14/01/2022
Data source	Market monitoring data DG AGRI and Eurostat (based on Member States' notifications) on Public Intervention stocks and agricultural production
Narrative	Public Intervention is used only in case of market crisis, that is why intended target is 0%
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	No quantity entered in public intervention and public storage in the animal products sectors in 2019, 2020 and 2021.
Full metadata available at this address	https://ec.europa.eu/info/food-farming-fisheries/farming/facts-and-figures/markets/production/production-sector/animal-products/milk-and-dairy-products_en
Justification of the trend	

Indicator 3: Private storage: number of products placed into the publicly aided private storage

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Milestones										
										0
Actual Progress										
	2	4	4	1	0	0	4	0		Final
Are we on track :										

Indicator type	Result
Unit of measurement	Number of products
Cut-Off Date	
Data source	Market monitoring data DG AGRI and Eurostat (based on Member States' notifications) on Private Storage Aid stocks and agricultural production
Narrative	Private storage aid (PSA) is used only in case of market crisis, that is why the target is 0.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	No PSA was available for animal products (dairy and meats) and olive oil in years 2018 and 2019. It was introduced in 2020 in the framework of low olive oil prices following high EU stocks and of the Covid-19 pandemic crisis for skimmed milk powder, butter, cheese, beef, sheep meat and goat meat.
Full metadata available at this address	https://ec.europa.eu/info/food-farming-fisheries/farming/facts-and-figures/markets/production/production-sector/animal-products/milk-and-dairy-products_en
Justification of the trend	

Specific Objective 3: To better reflect consumer expectations

Indicator 1: EU commodity prices compared to world prices - weighted average

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									
1.2	Actual Progress									Final
	1.09	1.06	1.1	1.13	1.19	1.11	1.16	0.98		
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Ratio (1 means "equal to world prices")
Cut-Off Date	14/01/2022
Data source	DG Agriculture and Rural Development, based on European Commission, USDA, World Bank, IGC, London International Financial Futures and Options Exchange, National sources (EU27).
Narrative	The indicator confirms that most of EU agricultural prices are close to the world prices, confirming the growing opening of the EU market, a dynamic that begun with the 1992 CAP reform and was amplified by the 2003 CAP reform. Sugar, the latest sector to be reformed, is a case in point, with the impact of the reform of the sugar market being reflected in the gap being closed between the EU and the world prices. Yearly variations occur, and the situation is different depending whether the EU is a price maker or a price taker for a specific market.
Methodology	
Link MFF 14-20 / MFF 21-27	The current CAP regulations continue to apply in 2021 and 2022 (Regulation (EU) 2020/2220). Only as of 2023 the new CAP Strategic plans will enter into force.
Other methodological comments	The ratio between EU and World agricultural commodity prices has changed from the data presented in the previous Programme Statement due to a change of the reference price for pigmeat (US). Qualitative target: Prices brought closer to world prices
Full metadata available at this address	
Justification of the trend	

Specific Objective 4 : To sustain farmers' income stability by providing direct income support

Indicator 1: Share of direct support in agricultural entrepreneurial income (family farm income)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									
0.4	Actual Progress									Final
	0.41	0.43	0.43	0.36	0.38	0.36	0.38			
Are we on track :										

Indicator type	Result
Unit of measurement	%
Cut-Off Date	07/02/2022
Data source	EAGF Financial Report and EUROSTAT Economic Accounts for Agriculture
Narrative	The indicator looks at the ratio of direct payments to agricultural income. Direct payments stay more or less stable but agricultural income changes annually. EU 27 figures for 2020.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Figures updated based on the latest updates from Eurostat. Qualitative target: To maintain the ratio stable
Full metadata available at this address	
Justification of the trend	

Specific Objective 5: To promote a more market oriented agriculture, by ensuring a significant level of decoupled income support

Indicator 1: Percentage of total direct payments which is decoupled

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0.9224	Actual Progress									Final

	0.9354	0.9269	0.8889	0.8887	0.8848	0.8855	0.8841	0.8746		
Are we on track :										

Indicator type	Result
Unit of measurement	%
Cut-Off Date	26/01/2022
Data source	Budget execution figures
Narrative	2012: 92.13%
Methodology	As from financial year 2016 the figures take into account that in accordance with the methodology for implementation of the Small farmers scheme, as chosen by the Member States, part of the expenditure under that scheme is "decoupled". Execution of the Budget 2021 provisional figures. The ratio has decreased with the introduction of voluntary coupled support in direct payments (first implemented in financial year 2016). It has remained fairly stable since then, with a slight decrease due to the progress in the execution of the scheme.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Qualitative target: To maintain the ratio stable
Full metadata available at this address	
Justification of the trend	

Specific Objective 6: Contribute to the enhancement of the environmental performance of the CAP through the greening component of the direct payments. Contribute to the development of sustainable agriculture and to making the Common Agricultural Policy more compatible with the expectations of the society through the cross compliance system. Contribute to preventing soil erosion, maintaining soil organic matter and soil structure, ensuring a minimum level of maintenance and avoiding the deterioration of habitats, and protecting and managing water through the standards of good agricultural and environmental condition of land

Indicator 1: Percentage of CAP payments covered by cross compliance

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									
0.824	Actual Progress									Final
	0.835	0.857	0.816	0.848	0.827	0.819	0.813	0.802		
Are we on track :										

Indicator type	Result
Unit of measurement	%
Cut-Off Date	09/02/2022
Data source	DG AGRI – Budget execution figures
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The percentage decreased slightly in 2021 (compared to 2020), mainly because of increased investment expenditure compared to annual measures under the EAFRD . Measures that are not falling under cross-compliance tend to have an increasing execution over the period and thus the % covered by cross-compliance usually decreases by the end of the programming period. Qualitative target: Maintain percentage
Full metadata available at this address	
Justification of the trend	

Indicator 3: Control rate for GAEC

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2016	Milestones									
100%	Actual Progress									Final
	100%	100%	100%	100%	100%	100%	100%			
Are we on track :										

Indicator type	Result
----------------	--------

Unit of measurement	%
Cut-Off Date	14/01/2022
Data source	Control statistics notified annually by MS
Narrative	Baseline: All paying agencies fulfilled the mandatory control rate.Target: 100% implementation of the minimum regulatory control rate.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In 2020, due Covid-19 restrictions, the minimum control rate was reduced to 0.5%.
Full metadata available at this address	
Justification of the trend	

Indicator 4: The ratio of permanent grassland within a Member State in relation to the total agricultural area

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Before 2015	Milestones									
Reference ratio:										Reference ratio should not decrease more than 5%
	Actual Progress									Final
	Ratio has not decreased beyond the limit of 5%	1 MS communicated decline above threshold of 5%, triggering a reconversion obligation	2 MS communicated decline above threshold of 5%, triggering reconversion obligation	No MS with ratio falling below the limit of 5%	1 MS communicated decline above threshold of 5%, triggering reconversion obligation	No MS with ratio falling below the limit of 5%	1MScommunicateddeclineabovethresholdof5%,triggeringreconversionobligation			
Are we on track :										

Indicator type	Result
Unit of measurement	
Cut-Off Date	14/01/2022
Data source	MS annual notification (ISAMM – Information System for Agricultural Market Management and Monitoring)
Narrative	The maintenance of the ratio of permanent grassland means that there should not be, at national or regional level, a decrease by more than 5% of the current ratio of permanent grassland in relation to the total agricultural area by comparison with a reference ratio reflecting this ratio at a reference period. Data before 2019 for EU28, data for EU-27 as of 2020.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In 2020, the data is available for 27 MS. As of 2020, the comparison ratio (rate of change compared to the reference) registered negative values in eight MS (in which one exceeding the -5% threshold, including 9 regions of the three MS with regional calculation. However, in most cases the changes of MS’/regional annual ratios under greening and of the ‘comparison ratio’ resulted from a reallocation of permanent grassland (PG) areas within the terms of the ratio rather than their actual decrease. Instead, the figures reflected combined effects of an increase of/conversion to organic PG and, to a lesser extent, of decreasing PG under SFS (these areas are exempted from greening rules thus not counted within the reference/annual/comparison ratios). It was also affected by changes to agricultural areas. While some MS deemed such situations sufficient to adapt the reference ratio, others did not do it, resulting in lower or negative figures of ‘comparison ratio’.
Full metadata available at this address	
Justification of the trend	

Indicator 5: Share of area under greening practices

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2015	Milestones									
0.75	Actual Progress									Final
		0.75	0.77	0.79	0.79	0.79	0.79			
Are we on track :										

Indicator type	Result
Unit of measurement	
Cut-Off Date	14/01/2022
Data source	MS annual notifications (ISAMM - Information System for Agricultural Market Management and Monitoring).
Narrative	The coverage depends on the areas under the direct payment system and on changes e.g. to the farm structure and farming system. The figures reflect the relatively stable share of areas under the greening.
Methodology	The share is calculated as total agricultural area for farms with at least one greening obligation on total agricultural area from Eurostat statistics revised by DG AGRI.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Provisional information based on communications from Member States, where the assessment of notifications remains to be completed in some cases. Data before 2019 for EU28, data as of 2020 for EU-27. Qualitative target: Maintain the share
Full metadata available at this address	
Justification of the trend	

Specific Objective 7: To promote local agricultural production and to ensure a fair level of prices for commodities for direct consumption and for processing by local industries in the Outermost Regions of the EU and in the Aegean Islands

Indicator 4: Execution rate of the POSEI budget

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Narrative	
Methodology	Execution of the POSEI budget under EAGF, comprising a part under market measures and a part under direct payments. The direct payment share of the expenditure includes the amount of financial discipline.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	

Specific Objective 8: To provide the Commission with reasonable assurance that Member States have put in place management and control systems in conformity with EU rules designed to ensure the legality and regularity of the underlying transactions financed by the EAGF, EAFRD, SAPARD and IPARD and, where this is not the case, to exclude the expenditure concerned from EU financing so as to protect the EU's financial interests

Indicator 1: Percentage of expenditure (EAGF+EAFRD) with statistics or 100 % check

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									
										95%

Indicator type	Result
Unit of measurement	%
Cut-Off Date	14/01/2022

Data source	CATS/COMBO database based on the Annual Declarations from the Paying Agency
Narrative	Percentage of expenditure (EAGF+EAFRD) with statistics or 100 % check (Art. 9(1) of Regulation (EU) No 809/2014)
Methodology	Data for Financial Year
Link MFF 14-20 / MFF 21-27	This indicator is a continuation from the period 2014-2020. This indicator will remain fully applicable and representative until FY 2022. In line with the CAP Post 2020 proposal, taking into account the transitional regulation, as of FY 2023 a gradually increasing amount of expenditure will not be covered by the obligation for the Member States to provide the control statistics. The use of this indicator for the future Programme Statements should therefore be carefully considered.
Other methodological comments	2021 not yet available, as 2021 Annual Declarations will only be received after 15.02
Full metadata available at this address	
Justification of the trend	The legislative framework provides for the obligation of the Member States to send control statistics for a major share of the CAP budget. Since FY2016, the target has been achieved. For a certain part of the schemes under market measures (ABB02), there is no requirement in the legislation for the Member States to provide control statistics. Given the decreasing trend of expenditure under ABB02 and the stable situation for ABB03 and ABB04, it is expected that the evolution of the indicator will remain stable.

Specific Objective 9: To inform and increase awareness of the CAP by maintaining an effective and regular dialogue with stakeholders, civil society, and specific target audiences

Indicator 1: Public awareness of CAP

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Percentage of Europeans who believe that agriculture and rural areas play important role for their future

Data source	Rural development programmes and annual implementation reports
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	90 programmes include this Focus Area and are concerned by this quantified target. For the Specific Objective 1 the indicators as set in the rural development common monitoring and evaluation system are identified and presented with targets for 2025. The common performance framework does not

	apply to Specific Objective 1, because no EAFRD budget is allocated to that cross cutting Priority. Therefore no information on the milestones is collected from the Member States. Nevertheless, as in case of the remaining specific objectives, the Commission will be able to collect and present the real outputs for these indicators in the future.
Full metadata available at this address	
Justification of the trend	

Specific Objective 2: Enhancing farm viability and competitiveness of all types of agriculture in all regions and promoting innovative farm technologies and sustainable management of forests (Priority 2)

Indicator 1: % of agricultural holdings with RDP support for investment in restructuring (Focus area 2A: facilitating the restructuring of farms facing major structural problems, notably farms with a low degree of market participation, market-oriented farms in particular sectors and farms in need of agricultural diversification)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2025

Other methodological comments	82 programmes include this Focus Area and are concerned by this quantified target. The indicative milestone (48% of the initial target for 2023), which represents an average for both Target Indicators, was based on the application of Performance Framework proxy indicator: Agricultural and forest land under management to foster carbon sequestration/conservation (ha) (5E) + Agricultural land under management contracts targeting reduction of GHG and/or ammonia emissions (ha) (5D) + Irrigated land switching to more efficient irrigation system (ha) (5A). This non mandatory indicator concerns 79 RDP. Although this Performance Framework Indicator also takes into account part of the Focus Area 5A operations, this milestone is not representative for indicator 1 which has a particular implementation process compared to other operations taken into account in this indicator.

(*These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

During the CAP transitional period 2021 and 2022, the following tracking method applied:

EAGF

The climate action contribution is calculated accordingly: the payment for agricultural practices beneficial for the climate and the environment (budget article 08 02 05) is split into three equal tiers, in analogy to the three compulsory farming practices applicable. The tiers receive the following Rio marker:

- the Rio markers take into account the climate contribution of the three compulsory green direct payment obligations: 1st tier 0% (crop diversification), 2nd tier 40% (ecological focus area), 3rd tier 100% (permanent grassland);
- plus a Rio marker of 40% applied to 20% of the remaining direct payments taking into account cross-compliance (i.e. 8% of budget article 08 02 05 direct payments without payment for agricultural practices beneficial for the climate and the environment and without payments for the Small farmers scheme which are not subject to cross-compliance).

EAFRD

Calculation⁴² based on the value of commitments respectively for Budget 2021 and DB 2022 indicative annual allocation to focus areas based on all 118 adopted rural development programmes.

The methodology for the calculation of the Contribution to climate mainstreaming is the following: 100% of the annual commitments in the Priority Area 4 and Priority Area 5, plus 40% of the annual commitments in the focus area 3B and 6B. The Commission's estimates of the overall climate contribution of both CAP funds are based on an EU wide agreed methodology. The method used by the Commission is sound, it has been prepared in a transparent and coordinated manner; it is based on Rio markers and it was communicated to the European Parliament and the Council. The tracking methodology for EAFRD is a reasonably reliable estimate for climate related expenditure and minimizes administrative burden.

For the financial year 2023 for the EAGF, the same methodology as for 2021 and 2022 is used. For the EAFRD, the methodology set in the CAP strategic plan regulation is used (see below).

From 2024, the estimate for both funds corresponds to the methodology set in Regulation 2021/2115, article 100(2):

- 40 % for the expenditure under the basic income support and the complementary income support (EAGF);
- 100 % for expenditure under the eco-schemes (EAGF);
- 100 % for expenditure for the interventions addressing environmental and climate-related specific objectives under EAFRD;
- 40 % for expenditure for natural or other area-specific constraints (EAFRD).

The estimate from 2023 is based on the figures submitted by Member States in their draft CAP plans at the date of 23/03/2022. The Commission has not formally approved the CAP plans. The amount per year is the average of the total amounts indicated for the total period.

The estimate will be updated after the approval of the Member States CAP strategic plans.

6.1.3. Key achievements

EU GHG emissions from agriculture have fallen by more than 20% since 1990, yet they have stagnated since 2010, while agricultural production has continued to grow. Although this highlights gains in climate footprint per unit of output, there is a need to reduce total emissions further to achieve the EU's ambitious climate targets for 2030. Based on the EU climate tracking methodology, the CAP contribution to climate action is estimated at 26% for the period 2014-2020 (EUR 103 198 million), well above the 25% commitments: EUR 45 504 million for EAGF (15%) and EUR 57 694 million for EAFRD (58%). Because of its nature, the CAP has better addressed reduction of emissions from managed agricultural soils, increased carbon sequestration or protection of carbon stocks, than for livestock. The Good Agricultural and Environmental Conditions (GAECs) and the Greening measures play a major role in protecting permanent grasslands and the EU soil carbon stock. GAECs include obligations to keep a minimum soil cover, maintenance of soil organic matter through appropriate practices, including banning the burning of arable stubbles and appropriate land management. These measures also significantly contribute to improve adaptation of soils to changing climatic conditions. Greening practices cover crop diversification, maintenance of permanent grasslands and establishing Ecological Focus Areas (EFAs) on 5% of arable land. A number of measures have significant effects on adaptation and mitigation. For the period 2021-2027 (from 2023 onwards), actions under the CAP are expected to contribute 40% of the overall financial envelope of the CAP, at EU level, to climate objectives. Using information provided by Member States the Commission will evaluate the contribution of the CAP to the climate objectives using a simple and common methodology based on the OECD Rio Markers. This so-calculated climate-relevant expenditure serves as input to monitor progress on the goal for climate mainstreaming across all EU programmes, with a target of 25% of EU expenditure contributing to climate objectives.

The actual share of the CAP budget contributing to climate objectives will be estimated ex-post by the Commission by applying a weighting factor to the actual expenditure for each type of intervention. Weighting factors (based on the international OECD Rio

⁴² In accordance with Annex II to Regulation (EU) No 215/2014 of 7 March 2014 laying down rules for implementing Regulation (EU) No 1303/2013 of the European Parliament and of the Council laying down common provisions on the European Regional Development Fund, the European Social Fund, the Cohesion Fund, the European Agricultural Fund for Rural Development and the European Maritime and Fisheries Fund and laying down general provisions on the European Regional Development Fund, the European Social Fund, the Cohesion Fund and the European Maritime and Fisheries Fund with regard to methodologies for climate change support, the determination of milestones and targets in the performance framework and the nomenclature of categories of intervention for the European Structural and Investment Funds.

Marker methodology) will be 0%, 40% or 100%, expressing respectively a nil, moderate or significant contribution to climate objectives. Article 100 of Regulation 2021/2115 lays down the coefficients to be used: 40% for Basic and Complementary Payments and 100% for Eco-scheme Payments. The European Parliament and the Council have fully endorsed the climate mainstreaming methodology for the CAP and any further changes to climate tracking in the Common Agricultural Policy have been postponed by the co-legislators to at least until after 31 December 2025.

6.1.4. Performance

The CAP evaluation⁴³ includes a modelling estimation of a reduction in emissions by 4.6% compared to a baseline without CAP (in a scenario with medium emission reduction coefficients and based on the 2016 uptake of Pillar II measures, raising to 8.8% in the highest scenario). Pillar I (EAGF) contributes most to this reduction (19.8 million tonnes CO₂eq corresponding to 3.5%), via greening and more specifically the protection of the environmentally sensitive permanent grasslands and the ecological focus areas. All actions also improve adaptation of these areas to climate change. As regards Pillar II (EAFRD), the measures for which impact was quantifiable (i.e. investments in physical assets - measure 4, investments in forest area development - measure 8, agri-environment-climate - measure 10.1, organic farming - measure 11 and Natura 2000 payments - 12.1) have helped to reduce GHG emissions by ~6.4 million tonnes CO₂eq/year. This corresponds to 1.1% of total emissions from agriculture based on 2016 measures uptake. The support to areas facing natural constraints prevents land abandonment and loss of grassland and thus protects carbon stocks in soil, which have a positive effects on the adaptation to climate change in these areas. The CAP post 2020 will have an increased ambition, based on an enhanced conditionality that will cover all Basic Payments and the new ecoschemes, which are fully contributing to the climate objectives of the CAP.

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

EAGF

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027

(*These amounts include NextGenerationEU top-ups if any

6.2.2. Explanation On the financial contribution

During the CAP transitional period 2021 and 2022, the following tracking method applied:

EAGF

The contribution to biodiversity is calculated as follows:

- for the payment for agricultural practices beneficial for the climate and the environment (budget item 08 02 05 05) a Rio marker of 40% is applied;
- plus a Rio marker of 40% is applied to 10% of the remaining direct payments taking into account cross-compliance (i.e. 4% of budget article 08 02 05) without payments for agricultural practices beneficial for the climate and the environment and without payments for the Small farmers scheme which are not subject to cross-compliance.

EAFRD

Calculation based on the value of commitment respectively for Budget 2021 and Draft Budget 2022 indicative annual allocation to focus areas based on 118 rural development programmes.

The methodology for the calculation of the contribution to biodiversity is the following: 100% of the annual commitments in the Priority Area 4 with exception of the amounts for the areas facing natural constraints plus 40% of the annual commitments in the focus area 5E.

⁴³ SWD in preparation.

The estimates from 2023 correspond to the extrapolation of average contribution of years 2021 and 2022 for the following years until 2027. An effective, transparent and comprehensive methodology on biodiversity mainstreaming will be set out by the Commission, in cooperation with the European Parliament and the Council.

6.2.3. Key Achievements

Protecting biodiversity and strengthening the resilience of ecosystems are indispensable for achieving our sustainable growth objectives. As foreseen in the Commission Communication ‘A budget for Europe 2020’, financing the EU Biodiversity Strategy to 2020 and its objective was to halt and reverse the decline of biodiversity in the EU requires the mainstreaming of biodiversity throughout the EU budget, both within the EU via the main funding instruments and through external action funding.

Based on the EU tracking methodology, the CAP contribution to biodiversity is estimated at EUR 66 billion for the period 2014-2020.

In 2020, the draft budget shows that the CAP has been central to achieving high levels of biodiversity spending of EUR 10 307 million of which EUR 5 891 million (EAGF) and EUR 4 416 million (EAFRD). The CAP contribution is estimated to be 75.8% of the total EU financing to biodiversity

Considering the two-year transitional period⁴⁴ agreed for the CAP, the current biodiversity tracking methodology should be maintained up to the end of 2022. From the year 2023 a new methodology more suitable to the new CAP should be agreed and applied.

The Commission’s proposals for the 2021-2027 EU Multi-annual Financial Framework (MFF) have retained the approach of mainstreaming biodiversity objectives in all major EU funding instruments. Following the Inter-institutional Agreement between the European Parliament, the Council of the European Union and the European Commission the EU is working towards the ambition of “providing 7,5 % in 2024 and 10 % in 2026 and in 2027 of annual spending under the MFF to biodiversity objectives, while considering the existing overlaps between climate and biodiversity goals”

This target should be operationalised under individual EU funds and programmes with an updated methodology to track biodiversity. For the Common Agricultural Policy (CAP) the Commission agreed that: “The revision will aim at more closely aligning the Commission’s methodology with new legislative changes, taking into account and backed by scientific evidence. This tracking methodology should be closely aligned with that of the OECD” in consistency with the recommendation in the special report of the European Court of auditors on farmland biodiversity.

6.2.4. Performance

The CAP for 2014-2020 plays an important role and provides a range of instruments that can contribute to supporting biodiversity. The cross-compliance system contributes to reaching ambitious biodiversity goals by linking some CAP payments to the respect of a set of environmental rules, and setting a baseline for other incentive measures supported by CAP funds. The wide area coverage and the compulsory nature of cross-compliance and greening measures amplify their positive effects. In addition, agri-environment-climate actions and organic farming as well as Natura 2000 payments are the main rural development measures contributing to biodiversity objectives and targets. They have significant effects in encouraging farmers to reaching ambitious biodiversity goals through the support for biodiversity-friendly agricultural practices such as maintaining existing semi-natural habitats and landscape features, or creating new habitats, which are very beneficial for biodiversity. More than 17% of EU agricultural land is under rural development management contracts supporting biodiversity and/or landscape through promoting management practices going beyond mandatory requirements and providing environmental public goods.

The potential of other relevant rural development measures should not be underestimated. In this context, the role of non-productive investments in establishing and/or restoring landscape features such as hedgerows, stonewalls, wetlands etc. can also play an important role as well as measures for knowledge-building, innovation and co-operation. Training and provision of farm advice also play a significant role in promoting biodiversity relevant farming practices and approaches.

For the CAP post 2020 the key changes that the biodiversity tracking should take into account are the move of certain elements of the greening measures of the current CAP to the enhanced conditionality, the new eco-schemes, and the more coherent overall structure of the interventions in the CAP Strategic Plans.

6.3. Contribution to clean air financing

6.3.1. Contribution

EAGF

2021-2022 Estimates		2023-2027 programming (EUR million)					Total
2021	2022	2023	2024	2025	2026	2027	
98.00	78.00	0.00					176.00

(*)These amounts include NextGenerationEU top-ups if any

EAFRD

2021-2022 Estimates	2023-2027 programming (EUR million)					Total
---------------------	-------------------------------------	--	--	--	--	-------

⁴⁴ Regulation (EU) 2020/2220 adopted on 23 December 2020

2021	2022	2023	2024	2025	2026	2027	
98.00	78.00	0.00					176.00

6.3.2. Explanation On the financial contribution

The contribution to clean air is calculated as follows for years 2021-2022:

40% of the expenditure of Focus Area 5B (energy efficiency) plus 40% of expenditure of Focus Area 5D (reducing greenhouse gases and ammonia emissions from agriculture).

The methodology is not yet available for the following years.

6.4. Contribution to gender equality

6.4.1. Key achievements and performance

Table for CAP, combining EARDF and EAGF

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*: 55 023.20							

(*)Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

Rural development policy contributes to gender equality as the gender perspective is considered during the preparation and implementation of the RDPs. Under Priority 6 of the Rural Development Policy, the CAP supports social inclusion, poverty reduction and economic development in rural areas. Under this priority, the European Agricultural Fund for Rural Development (EAFRD) supports inter alia, the development of basic services in rural areas as well as for local initiatives; it finances the start-up of non-agricultural and agricultural activities and promotes the cooperation between local actors. This can help to address the special challenges that women sometimes face in rural areas and in the agricultural sector, such as the lack of quality basic services in some rural areas (such as childcare services, broadband, transports). Moreover, all rural development measures have the potential to contribute to gender equality to a various extent, e.g. by providing support to improve skills, facilitate business development, etc. Besides that, Contribution to gender equality is specifically sought in the rural development policy through:

- the possibility to submit thematic sub-programmes for women in rural areas (although no Member State did so),
- the possibility to target rural development support to women through the application of selection criteria and,
- the obligation to respect an ex ante conditionality on gender equality.

It is currently not possible to establish accurate data on the portion of the CAP funding which goes to women as the data is not disaggregated by sex especially in the case of EAGF, direct payments and a number of the beneficiaries have a legal rather than natural identity.

The Commission enhanced gender dimension in the preparation of the Commission’s proposal for the CAP Strategic Plans. It is important also to note that the proposals for the future CAP require Member States to establish a partnership that shall include relevant bodies including those responsible for gender equality and non-discrimination. Member States shall involve those partners in the preparation of the CAP Strategic Plans. Furthermore, under the new Delivery model for the CAP, Member States will have greater flexibility to design their CAP interventions in line with their needs, but at the same time including gender issues, in respecting the EU Charter of the Fundamental rights. The Commission continuously invites Member States to consider gender in their SWOT analysis and address it in their needs assessment for the strategic plans. In the recommendations addressed to Member States as well as in the accompanying communication in the context of the European Green Deal and the Farm to Fork Strategy, the Commission asks Member States to give careful consideration of the specific needs of women in agriculture and rural areas in order to deliver on gender equality.

6.5. Contribution to the sustainable development goals

SDG 1 End poverty in all its forms everywhere

The CAP aims to ensure a **fair standard of living for farmers** – and more broadly, to **reduce poverty** in rural areas.

Relevant CAP tools include direct payments to farmers, market support instruments, and rural development support for job creation and training (agricultural and non-agricultural).

At global scale, with 80% of the very poor depending on agriculture for their livelihoods, the EU is facilitating responsible private investments in developing countries, notably in the agri-food sector to create growth and jobs and address root causes of irregular migration.

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

The CAP aims to help provide a stable (as well as safe and sustainably produced) supply of food at reasonable prices for consumers. Doing so for EU consumers contributes in itself to global food security. The EU makes a further contribution by supplying large amounts of food (worth around EUR 120 billion a year) according to global demand and without any export refunds, in contrast to previous decades.

Relevant CAP tools include direct payments and market instruments (to safeguard production potential against serious disruption), the EU School Scheme (which encourage healthy diets among schoolchildren), and various tools which foster the environmental aspect of sustainability (see SDG 15).

Illustrative example

The EU school scheme supports the distribution of fruit, vegetables and milk to schools across the European Union as part of a wider programme of education about European agriculture and the benefits of healthy eating. The consumption of fresh fruit and vegetables and of milk in the EU does not meet the international or national nutritional recommendations while that of processed food that is often high in added sugar, salt, fat or additives is on the rise. Unhealthy diets, together with low physical activity, result in overweight and obesity. This is why the EU takes action to help children follow a healthy diet and lead healthy lifestyles.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

The CAP aims to improve knowledge transfer in the farm and forestry sectors and in rural areas overall, as a means of improving sustainability and productivity of agriculture and the economic, environmental and social conditions in rural areas.

Relevant tools include support through rural development programmes for training, coaching, workshops, demonstration projects, use of tailored advice etc. – for persons engaged in the agriculture, food and forestry sectors, as well as for land managers and SMEs operating in rural areas.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

The CAP aims to foster sustainable management of natural resources. This explicitly includes the objectives of improving water management (including in terms of water quality) and making the farm sector more water-efficient.

Pertinent tools include the water-relevant components of cross-compliance and "greening" (see SDG 15 for further information), various payments through rural development programmes to make farming less intensive (especially agri-environment-climate measures), and support for investments in more efficient irrigation systems.

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

The CAP aims to increase efficiency of energy use in farming and food processing, as well as to facilitate the supply and use of renewable sources of energy.

Relevant tools include rural development support for investments in generating renewable energy (including on the farm) and in infrastructure for its distribution – with regard to biomass and other renewable sources (for solar, geothermal and wind power).

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

The CAP aims to improve the viability of all types of agriculture in all regions, as well as to foster wider social inclusion and reduce poverty in rural areas.

Relevant tools include direct payments and market instruments (for the development of the farm sector, to which many other sectors are connected), the recent initiative to tackle unfair trading practices, as well as risk management tools and rural development support for business start-ups (for new young farmers and non-agricultural businesses) and investments in further business development.

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

The CAP aims to foster innovation in agriculture, forestry and rural areas, as well as to help provide what is needed for general economic development in rural areas (including access to IT services).

Relevant tools include rural development support for the development of new products, practices, processes and technologies in the agriculture, food and forestry sectors (especially through the European Innovation Partnership for Agricultural Productivity and Sustainability) as well as for broadband infrastructure, general small-scale infrastructure and training.

Illustrative example

The CAP offers explicit support for setting up, expanding and improving broadband infrastructure, as well as for the provision of broadband internet access (i.e. improved connections to infrastructure), and access to e government.

According to targets aggregated from the 2014-2020 rural development programmes (**covering the current extended programming period 2014-2022**), the CAP will help **nearly 13 million** people living in rural areas to benefit from improved access to ICT services and infrastructure.

SDG 12 Ensure sustainable consumption and production patterns

One of the CAP's main objectives is to provide a stable, sustainably produced supply of safe food at affordable prices for consumers. This includes for examples an EU framework on organic farming, and the integration of environmental concerns, such as biodiversity, water management and use and climate change, into the CAP. The CAP is committed to sustainable use of natural

resources and the environmentally-sound management of waste, also for food losses. The objectives of the CAP are in line with, and work towards the achievement of the SDG commitments made at the 2021 UN Food Systems Summit. With regard to the key tools which help to ensure environmentally sustainable production, see SDG 15.

SDG 13 Take urgent action to combat climate change and its impacts

The CAP aims to assist **climate change mitigation** and **adaptation**.

Relevant tools include those elements of cross-compliance and "greening" (see SDG 15) pertinent to climate change - as well as rural development support for a range of practices and investments that cut greenhouse gas and ammonia emissions from farming (e.g. through more climate-friendly equipment), fix carbon in the soil (e.g. through forest-planting) and make farming more climate-resilient (e.g. with less water-intensive cropping patterns).

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

The CAP aims to ensure the **sustainable use of natural resources** – including in terms of biodiversity, soil, water and landscapes.

A wide range of tools are relevant. Within the system of direct payments to farmers, "cross-compliance" links payments to various basic environmental, public, animal and plant health and animal welfare standards. Beyond that, the "greening" layer of the system rewards farmers for implementing crop diversity, preserving permanent grassland and maintaining biodiversity-friendly zones or landscape features. Within rural development policy, various area-based payments help farmers to pursue organic farming, improve animal welfare, implement certain Natura 2000 requirements, farm sustainably in areas facing natural disadvantages (especially mountainous areas), and (through agri-environment-climate measures) make extra efforts to benefit soil, water, air and wildlife. Support for eco-friendly investments can cover resource-efficient technologies, establishment of landscape features, and various forest-related activities (planting, protection against fire and other natural threats etc.) Support for training, the use of advice, and innovation is also relevant.

Illustrative example

Recent production and market trends show the importance that organics has gained over the last decade. Organic farming responds to a specific consumer demand for sustainable food products, promoting more sustainable farming practices and contributing to the protection of the environment and improved animal welfare.

For the 2014-2020 period, the rural development support planned for organic farming amounts to EUR 11.2 billion.

The share of the EU's utilised agricultural area with organic farming has increased from 5.6% in 2012 to 8.5% in 2019 corresponding to an increase from 10.05 to 13.80 million hectare.

1. Overview

1.1. Challenges

As a global ocean actor and a major producer of seafood, the EU has a responsibility to protect and sustainably use the oceans and their resources. This is also in its socio-economic interest regarding the availability of food supplies, the competitiveness of the maritime economy and the livelihood of coastal communities.

In this respect, the European Maritime, Fisheries and Aquaculture Fund (EMFAF) for the 2021-2027 period supports the common fisheries policy (CFP), the EU maritime policy and the EU’s international commitments for international ocean governance. Such

support is an enabler for sustainable fisheries and the conservation of marine biological resources, for food security through the supply of seafood products, for the growth of a sustainable blue economy and for healthy, safe, secure, clean and sustainably managed seas and oceans. It also contributes to the achievement of Sustainable Development Goal 14 of the United Nations ('conserve and sustainably use the oceans, seas and marine resources'), to which the EU is committed.

1.2. Mission (General objectives)

The EMFAF supports the CFP, the EU maritime policy and the EU agenda for international ocean governance along the following four priorities:

1. fostering sustainable fisheries and the restoration and conservation of aquatic biological resources;
2. fostering sustainable aquaculture activities, and processing and marketing of fisheries and aquaculture products, thus contributing to food security in the Union;
3. enabling a sustainable blue economy in coastal, island and inland areas, and fostering the development of fishing and aquaculture communities;
4. strengthening international ocean governance and enabling seas and oceans to be safe, secure, clean and sustainably managed.

These are further explained in section 1.5. The EMFAF also contributes to the implementation to the European Green Deal, and in particular to the Farm to Fork Strategy and the EU Biodiversity Strategy for 2030, including their external dimension, but also for the preparation of the EU Strategy for Adaptation to Climate Change. For this purpose, the Commission prepared a new approach for a sustainable blue economy, to replace the Blue Growth strategy from 2012. This Communication¹ (adopted in May 2021) has a particular focus on the contribution of the blue economy to economic recovery).

1.3. Specific objectives

The following Specific Objectives for the EMFAF are established under shared management, as defined in Annex II of the Regulation.

- Strengthening economically, socially and environmentally sustainable fishing activities
- Increasing energy efficiency and reducing CO2 emissions through the replacement or modernisation of engines of fishing vessels
- Promoting the adjustment of fishing capacity to fishing opportunities in cases of permanent cessation of fishing activities and contributing to a fair standard of living in cases of temporary cessation of fishing activities
- Fostering efficient fisheries control and enforcement, including fighting against illegal, unreported and unregulated (IUU) fishing, as well as reliable data for knowledge based decision-making
- Promoting a level-playing field for fishery and aquaculture products from the outermost regions
- Contributing to the protection and restoration of aquatic biodiversity and ecosystems
- Promoting sustainable aquaculture activities, especially strengthening the competitiveness of aquaculture production, while ensuring that the activities are environmentally sustainable in the long term
- Promoting marketing, quality and added value of fishery and aquaculture products, as well as processing of those products
- Strengthening sustainable sea and ocean management through the promotion of marine knowledge, maritime surveillance or coast guard cooperation
- Enabling a sustainable blue economy in coastal, island and inland areas, and fostering the sustainable development of fishing and aquaculture communities

Under direct management, the areas to be supported are:

- Implementation of the CFP;
- Promotion of clean and healthy seas and oceans;
- Market intelligence;
- Maritime policy and development of a sustainable blue economy;
- European marine observation and data network;
- Maritime security and surveillance;
- International ocean governance.

1.4. Public intervention context

¹ https://ec.europa.eu/oceans-and-fisheries/ocean/blue-economy/sustainable-blue-economy_en

The EU has exclusive competence for the conservation of marine biological resources², both in EU waters and in relation to the international obligations deriving from UNCLOS³ and from other UN agreements to which the EU is a Party. The exclusive competence equally applies to the bilateral fisheries agreements signed with third countries. All these areas are regulated by the CFP. The EMFAF helps Member States, and thereby stakeholders, to comply with the rules of the CFP necessary for the attainment of the objectives of the policy, such as the sustainable management of fisheries. The EMFAF is directed at maintaining sustainable fisheries, aquaculture and processing sectors, as well as the local communities dependent on fisheries. This is supported through innovation and diversification of activities to reduce environmental impacts and enhance protection and biodiversity while sustaining this important economic sector. The EMFAF supports the implementation of programmes designed by MS to support the specific needs of the sector in the MS.

1.5. Actions

Article 3 of the EMFAF Regulation defines four distinct priorities for the programme.

Under priority 1, the EMFAF should ensure that fishing activities are environmentally sustainable in the long-term and managed in a way that is consistent with the objectives of achieving economic, social and employment benefits, and of contributing to the availability of food supplies. In particular, it aims to achieve and maintain sustainable fishing based on the Maximum Sustainable Yield and to minimise the negative impacts of fishing activities on the marine ecosystem. That support includes innovation and investments in low-impact, climate resilient and low-carbon fishing practices and techniques.

Under priority 2, the EMFAF may support the promotion of a sustainable aquaculture, and the promotion of marketing, quality and value added of fishery and aquaculture products, as well as the processing of these products.

Under priority 3, it may support actions that contribute to enabling sustainable blue economies in coastal, island and inland areas, and to fostering the sustainable development of fishing and aquaculture communities.

Under priority 4, the EMFAF may support actions to strengthen international ocean governance and enable safe, secure, clean and sustainably managed seas and oceans through the promotion of marine knowledge, maritime surveillance and coastguard cooperation.

Brexit has so far had a limited impact on programme planning and implementation. The Commission will continue to monitor its effects and will respond as appropriate.

1.6. Delivery mode

As during the 2014-2020 programming period, the EMFAF will mainly be managed under shared management (87% of the budget allocation), where the Common Provision Regulation (CPR)⁴ lays down common provisions on the European Regional Development Fund, the European Social Fund Plus, the Cohesion Fund, the Just Transition Fund, the EMFAF, plus the Asylum and Migration Fund, the Internal Security Fund and the Border Management and Visa Instrument. Thus, the EMFAF shares common rules with the other ESI funds covered by the CPR, providing for common objectives, principles and rules related to planning, programming, monitoring and reporting. The EMFAF further specifies details within this framework, including the common result indicators, types of interventions and climate coefficients which must be used when planning and reporting.

The remaining part of the financial envelope (13%) is implemented through direct or indirect management modes. The direct management part of the fund will be managed either directly by the Commission or delegated to an Executive Agency. The fund will finance CFP related projects, market intelligence, scientific advice, sustainable blue economy and International Ocean Governance, as well as contributions to international organisations or to the functioning of the Advisory Councils. The budget under direct management shares the same set of common result indicators and principles as shared management to allow full and consistent reporting on the achievements of the EMFAF as a whole.

		Implementation of ocean partnerships between the Union and relevant ocean actors
		Implementation of international agreements that aim to promote better ocean governance
		Implementation of international agreements to prevent, deter and eliminate illegal, unreported and unregulated fishing
International cooperation on ocean research and data		

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/1139 of the European Parliament and of the Council of 7 July 2021 establishing the European Maritime, Fisheries and Aquaculture Fund and amending Regulation (EU) 2017/1004 (OJ L 247, 13.7.2021, p. 1).	2021 - 2027	6 108.00

1.8.2. Legal basis explanation

REGULATION (EU) 2021/1139 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 7 July 2021 establishing the European Maritime, Fisheries and Aquaculture Fund and amending Regulation (EU) 2017/1004 (hereafter “the EMFAF regulation”) entered into force on 14 July 2021.

In addition to the legal basis mentioned above, the shared management strand of the EMFAF is regulated by the (CPR), which lays down common provisions on the European Regional Development Fund, the European Social Fund Plus, the Cohesion Fund, the Just Transition Fund, and the EMFAF. It also lays down financial rules for all the aforementioned Funds, plus the Asylum and Migration Fund, the Internal Security Fund and the Border Management and Visa Instrument.

The rules on management, programming, monitoring and auditing to be applied by the shared management strand of EMFAF are provided for in the CPR, whereas the rules for direct and indirect management are provided for either in the EMFAF Regulation itself or in the Financial Regulation 2018/1046 of 18 July 2018.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	109.1	1 133.9	1 100.7	1 067.7	980.0	834.4	846.7	6 072.6
NextGenerationEU								

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities	0.0	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	0.0

(*) Only Article 15(3) of the financial regulation.

The EMFAF programme combines implementation under three modes of management: shared, direct and indirect implementation mode. Shared management as implemented by the Member States, forms the biggest part of the programme and accounts for 87% of the total programme coverage.

The financial programming covering activities under direct and indirect management (a combined total of 13% of the programme) follows a very horizontal trend year after year, offering stability in the implementation.

When it comes to shared management, the multi-annual programming is presented in Annex V of the EMFAF Regulation, and presents an increase in the appropriations in 2022 and 2023, offering to the Member States sufficient financial resources to launch the EMFAF actions at the beginning of the programming period. However, by the end of 2021, no EMFAF programmes were adopted yet which resulted in re-programming of all 2021 appropriations to the period 2022-2025 in equal tranches. The same trend and delays in Member States' readiness in presenting mature drafts of their partnership agreements and operational programmes for the period 2021-2027 is observed for all European structural funds. The delays are to a large extent to be explained by the overlap of the two programming periods – EMFF 2014-2020 and EMFAF 2021-2027 where in 2021-2022-2023 the EMFF programme is still in full swing of implementation, leaving limited resources and time to the Member States to concentrate on the preparation of the new 2021-2027 period. The persisting Covid crisis also inevitably led to some delays in the preparation process. In addition, the Hellenic operational programme requested a transfer of €11.2 million from EMFAF to the BMVI fund, which also has an impact on the programming.

1.9. Link with the 2014-2020 MFF

The EMFAF maintains a similar overall range of support as the 2014-2020 EMFF. The structure has been simplified and streamlined, with increased commonalities with the common rules applied to other shared management funds set out in the CPR. The EMFAF has a more flexible structure with the elimination of detailed and specific measures, giving Member States more flexibility provided that support falls under the scope of the Priorities and Specific Objectives, is not explicitly ineligible and is in accordance with applicable Union law. The monitoring and reporting structure has also been simplified to align with the core performance structure of the MFF, to cover both shared and direct management, to use fewer, more targeted common result indicators, and deliver more frequent reporting.

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	106.5	6 072.6	2%
Payments	11.1		0%

Under **shared management**, no budget implementation was recorded under the EMFAF programme. For details refer to Section 1.8.4 Financial Programming Explanation.

The EMFAF and CPR regulations were both adopted in mid-2021. Although Member States had been submitting (initial and partial) drafts of their 2021-2027 programmes beforehand, and the Commission was already providing advice and guidance on these, efforts understandably stepped up in the second half of the year with extensive work conducted providing advice and informal observations to Member States. The EMFAF programming process was also slowed by the delayed work on Partnership Agreements, the emphasis given to the preparation of Recovery and Resilience Facility (RRF) plans, and the focus of the most impacted Member States on the Brexit Adjustment Reserve (BAR) support post-Brexit. Programme negotiation and adoption is a lengthy and complex process; experience from previous programming periods shows that it may last up to 2 years, depending on Member States' particular circumstances.

Successful implementation of fisheries, aquaculture and maritime policies, as well as coastal communities development, still continues, as Member States also remain focused on disbursement of EMFF funds.

When it comes to EMFAF **direct/indirect management**, 98% of the budgetary appropriations were implemented, thus achieving all objectives of the underlying work programmes. This resulted in various actions launched in the fields of maritime policy, scientific advice, international ocean governance, voluntary contributions to regional fisheries organisations and contributions to the actions managed by the UN agencies. For details and examples of the spending, refer to Section 3.1.2. The multi-annual financial programming for the period until 2027 foreseen a horizontal trend of financing, without any big fluctuations.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	6 368.7	6 381.6	100%
Payments	4 105.4		64%

By the end of December 2020 all commitments under shared and direct management actions were completed. All appropriations available under the EMFF fund were successfully committed. As of January 2021 no further commitments are possible for EMFF.

The implementation of the programme was however in full speed in 2021, both in terms of the fund executed under direct management actions, and the part implemented by the EU Member States.

When it comes to **shared management**, the above table covers the gross level of payments made by the Commission to the managing authorities in the Member States, not taking into account the amounts actually disbursed by the Member States or recovered by the Commission. For further detail on the implementation, please check the Open Data Platform: [Open Data Portal for the European Structural Investment Funds - European Commission | Data | European Structural and Investment Funds \(europa.eu\)](https://open-data-portal-for-the-european-structural-investment-funds-european-commission-data-european-structural-and-investment-funds.europa.eu).

For 2020 (the most recent year for which complete, validated data are available on the shared management implementation), the pace of implementation at the level of the Member States increased: EUR 797 million (14% of the total EMFF allocation) was committed into specific actions in 2020 (EUR 661 million in 2019). Cumulatively, EUR 4.1 billion of EMFF funding was committed by the MSs, corresponding to 71.6% of the total EMFF funding available. Payments claimed by beneficiaries continued to advance and reached EUR 2.4 billion (or 42% of the total EMFF funding). These sums concern approximately 68,000 operations.

At the end of 2021, as regards shared management, cumulative EMFF net payments to Member States totalled just under EUR 3 billion. This represents 53% of the total amounts allocated to the programmes, and shows progress from the position at the end of 2020 (43%).

Comparison of implementation with the 2007-13 European Fisheries Fund (EFF) programming period

The cumulative payment position is approximately eighteen percentage points lower than that for the corresponding point in the EFF payment cycle. Although COVID has undoubtedly hindered to some extent the implementation, other factors that are likely to have had an influence include:

- The pre-financing paid under EFF was higher than under EMFF;
- Late adoption of the EMFF regulation in 2014, 5 months into the programming period (the EFF regulation was adopted in 2006, i.e. before the programming period had started);
- The process of designation of authorities for the EMFF, which was placed under the control of Member States (under the EFF, Member States could not implement until the Commission had completed its systems compliance assessments). However, the process of designation often took longer still, leading to a late start in programme implementation;
- Tighter de-commitment rules under the EFF: n+2, rather than n+3. This was a natural “accelerator” for implementation of the EFF.

Decommitment

Key reasons

The cumulative EMFF amount that was de-committed in 2018, 2019 and 2020 totals EUR 97.6 million. At the end of 2021, the maximum de-commitment amounts could go up to an additional EUR 42.4 million. However, the final amount will only be known once the concerned MSs will have sent a justifications to reduce this amount following Art 87 of the CPR Regulation. The justifications will then be evaluated by the Commission.

Measures taken to keep decommitments at a reasonable level

MS are reminded each autumn during the Expert Group meeting of the n+3 decommitment risk, and geographical Units take all reasonable steps to encourage MS to submit claims in due time.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

2021 was another challenging year for Member States and the Commission. A complete picture of the effects of the outbreak on financial absorption and programme performance will not be available until later this year, when Member States submit their Annual Implementation Reports (AIRs).

Throughout 2021, the Commission continued to support the implementation of the fisheries and maritime policies through the EMFF, encouraging Member States to improve the absorption of the EU funds, including for dedicated climate and biodiversity related actions, and to help build resilience in the wake of the immediate impact of the COVID-19 pandemic. Continuous efforts are dedicated to encouraging and supporting Member States in reinforcing implementation of the EMFF, and in preparing and strengthening their EMFAF programmes prior to their adoption during 2022. The Commission is in very regular contact with Member States, not just via periodic Expert Group and annual review meetings, but also in handling Member States' ongoing EMFF programme amendments; it also provides advice and assistance to Member States as they develop their EMFAF programmes, providing prompt, clear feedback on the drafts.

The EMFAF Regulation was adopted in July 2021. Intensive work with the Member States, and the establishment of internal procedures for the assessment of EMFAF programmes took place throughout 2021. The necessary supporting secondary legislation was developed and discussed in the EMFF and EMFAF expert groups and committee. Most of the secondary legislation was adopted at the end of 2021 and beginning of 2022, the adoption process is expected to be completed early 2022.

Considering the approaching end of the financial period for the EMFF and its final stage of implementation as well as the fact that the EMFF due to its small size is only one of many tools that contribute to the wider policy objectives, the EMFF performance indicators have been updated as presented in Section 5 of this programme statement to provide a meaningful picture of the EMFF performance at this moment in time.

The revision of the EMFF performance indicators is based on the consideration that the performance framework for the 2014-2020 EMFF period entailed some weaknesses. In particular, the Implementing Regulation defining the indicators for the EMFF prominently included context indicators. These are independent of the impact of the EMFF and are related to the performance of the overall fisheries policy. One of the objectives of the EMFF is to contribute to the Common Fisheries Policy, however the EMFF with its small size is only one instrument among various other factors that has a direct impact on the Common Fisheries Policy. Therefore, the assessment of the performance of the EMFF programme could not be carried out based solely on the impact indicators which were proposed as EMFF key performance indicators, but had to also rely on additional information (such as the Member States' Annual Implementation Reports). This issue has been addressed in the legal base for the EMFAF programme by defining performance indicators which directly measure the performance of the EMFAF and are much less dependent on other factors than the indicators associated with the EMFF. They are defined in Annex I of the EMFAF Regulation and disclosed in section 4 of this programme statement.

The EMFF contributes to the achievement of the four overarching objectives of Art 5 EMFF Regulation in a targeted and incremental way, however EMFF impact alone is not sufficient to realistically affect the performance at the level of the CFP. In the EMFF Annual Implementation Reports, the Commission presents the limited and essential contribution of the fund towards the CFP objectives and the overarching policy objectives, in particular by linking the annual number of operations and financial allocations supported by the Fund to these objectives.

In addition to the EMFF related performance information disclosed in this section, the EMFF Implementation Reports (compiled by FAME) are published on the Fisheries and Maritime Affairs website of the Commission. They provide further information about the programme performance, based in particular on operation-level data reported by the Member States. Together these data provide a complete picture of EMFF performance⁵.

Performance indicators for the EMFAF in the programme statement are those listed in Annex I of the EMFAF Regulation. As the MSs are still in the programme negotiation process and no EMFAF programmes have been adopted yet by the Commission, targets for the EMFAF indicators cannot be provided at this point. The baseline and target related data will be completed once the programmes have been adopted. The overall targets will be established on the basis of the data as provided by the Member States in their national programmes. For those performance indicators, for which no data is provided by the Member States in their national programmes, the targets will be established based on specific methodology to be developed, and the historic data available from the previous programming period.

3.1.2. Active programme performance

Shared Management

Performance assessment will be provided once the implementation of the programme 2021-2027 has started. By the end of 2021, no single EMFAF Member State programme had been adopted. The Member States need to have their Programmes adopted by 31 December 2022. At the time of writing (March 2022), 9 Member States have formally submitted their EMFAF programmes, and the Commission is urging the other national authorities for submission by mid-2022 (to enable the programme decisions to be adopted in due time, thereby minimise the risk of loss of Funds). EMFF payments continue to be executed, however, which ensure the continuity of the policy achievements.

Direct and Indirect Management

As actions implemented under direct and indirect management provide for smooth continuity from the EMFF to and throughout the EMFAF fund it appears to be reasonable to merge the description of performance into a single section. This section therefore covers both EMFF and EMFAF activities without distinction. The description of programme achievements is organised by listing the priorities covered by the EMFAF legal basis.

Priority 1 of EMFAF Regulation 2021/1139 - Fostering sustainable fisheries and the restoration and conservation of aquatic biological resources

Consistent with the objectives of the CFP, voluntary contributions to **Regional fisheries management organisations** (RFMOs) contribute to the development of scientific knowledge and science-based management decisions, promote compliance and the fight against IUU fishing and further improve the impact of the operations of organisations like the General Fisheries Commission for the Mediterranean (GFCM), the International Commission for the Conservation of Atlantic Tunas and the Northwest Atlantic Fisheries Organization amongst others. In the specific case of the GFCM, the voluntary contributions have supported the implementation of selected activities approved by the GFCM at its annual sessions and in the framework of the mid-term strategy (2017-2020) towards the sustainability of Mediterranean and Black Sea fisheries, as well as in the context of the strategy for the sustainable development of Mediterranean and Black Sea aquaculture. They also contributed in identifying and developing new priorities beyond 2020 towards ensuring the sustainability of Mediterranean and Black Sea fisheries and aquaculture.

In 2021, the provision of regular **scientific advice** has been ensured through the renewal of the different administrative arrangements in place with International Council for the Exploration of the Sea (ICES), Scientific, Technical and Economic Committee for Fisheries (STECF) and JRC. The continuation of this support has been reinforced thanks to the publication of the call to select the new STECF (2022-2025) in the last quarter of the year. In addition, a total of six studies were launched in 2021 to cover knowledge gaps in relevant CFP fields such as climate footprint of postharvest activities related to fishing and aquaculture, the Marine Protected Areas or the management of fish stocks according to the EU sustainable management of external fishing fleets Regulation.

Priority 2 of EMFAF Regulation 2021/1139 – Fostering sustainable aquaculture activities and processing and marketing of fishery and aquaculture products, thus contributing to food security in the Union

In 2021 in the area of **market intelligence**, the Commission financed several actions like a Market Observatory (EUMOFA), a Eurobarometer (EU Consumer Habits Regarding Fishery and Aquaculture Products) and other studies (e.g. Assessment of the impacts of the policy options for the revision of the marketing standards for fisheries and aquaculture products). These actions could provide the Commission with analyses and advice focusing on economic and social aspects of the maritime economy.

⁵ https://ec.europa.eu/oceans-and-fisheries/system/files/2021-09/emff-implementation-report-2020_en.pdf

Priority 3 of EMFAF Regulation 2021/1139 – Enabling a sustainable blue economy in coastal, island and inland areas, and fostering the development of fishing and aquaculture communities

In 2021 the fund helped deliver maritime spatial planning (MSP) in the EU, on the one hand through the EU MSP Platform (<https://maritime-spatial-planning.ec.europa.eu/>), an assistance mechanism supporting Member States in the development of maritime spatial plans, on the other hand through MSP projects in various European sea basins, allowing an integrated cross-border approach to planning different uses at sea. Internationally, the MSPglobal project, produced jointly by the Intergovernmental Oceanographic Commission (IOC) of UNESCO and DG MARE, concluded after three years, delivered the “MSPglobal International Guide on Marine/Maritime Spatial Planning”, which will help governments, partners and practitioners worldwide in their MSP processes, moving away from isolated sectoral management to an integrated planning framework for their maritime jurisdiction.

Following the adoption of new Strategic Guidelines for competitive and sustainable EU Aquaculture by the Commission in May 2021, an aquaculture assistance mechanism will be set up to help support the implementation of the guidelines.

The Commission continued to support the hosting of the Sustainable Blue Economy Finance Principles, launched in 2018 by the UN Environment Finance Initiative UNEP FI. The project gathered further commitment from financial institutions and players. By December 2021, the number of signatories were increased from the 17 founding members to 70.

In 2021 the Black Sea Economic Cooperation (BSEC) finalized the Black Sea Virtual Knowledge Center (BSVKC) BSVKC website, a new modern interface, where regional stakeholders find information related to the Common Maritime Agenda (CMA) for the Black Sea and Blue Economy sector, improving synergies between maritime stakeholders and blue economy projects.

The Aspban project (About us – ASPBAN) was launched in May 2021. This project is one of the flagship initiatives in the Atlantic sea-basin that aims at the creation of an Atlantic port accelerator network. This project has already won an Atlantic Award in October 2021 at the Atlantic Stakeholder Forum event in Dublin.

The programme has supported during the same period the creation of a new initiative on ocean literacy, EU4Ocean, has renewed support via grants to 8 projects dealing with competences acquisition and training programmes in formal, non-formal and informal settings through another Call on Blue Careers, and has also provided grants through the dedicated Blue Labs Call to scientific consortia providing innovative Blue Economy products.

Within the contract with the European Maritime Safety Agency (EMSA) regarding the transitional phase of Common Information Sharing Environment (CISE), the Cooperation Agreement was adopted amongst CISE member states, and the second, improved version of the CISE node (through which member countries connect to CISE) was launched.

Priority 4 of EMFAF Regulation 2021/1139 – Strengthening international ocean governance and enabling seas and oceans to be safe, secure, clean and sustainably managed

The EMFAF budget line dedicated to **International Ocean Governance** continued to promote the objectives of the International Ocean Governance Agenda, notably providing support to international organisations, regional and sectoral bodies and entities that are active in the promotion of the conservation and sustainable use of the oceans. The actions carried out were also targeting important scientific gaps identified through the work and policies on the deep seas. For the first time, contributions to Trust Funds of the United Nations were possible, enhancing the EU’s role in multilateralism.

Support to the European Marine Observation and Data Network (EMODnet) has resulted in steady progress in terms of users and products since 2018: it has increased its users and visitors by a factor of at least 5 (with more than 200.000 unique visitors), across its 9 portals; has increased the number of services it provides, becoming an operational service and an EC asset, offering thousands of datasets, representing variables across the 7 thematic disciplines (Bathymetry, Biology, Chemistry, Geology, Sea Bed Habitats, Physics, Human Activities) and hundreds of Data Products, harmonised across the European Seas; has fully open access and follows international standards; has provided a number of reports regarding Ocean Observation in Europe, including targeted assessments and surveys, technical guidance and community recommendations.

In the framework of the support grant managed by CINEA, the European Coast Guard Functions Forum (ECGFF) held a plenary in Paris in July 2021 and a workshop (November 2021) on “Modern technologies in the Fisheries control system”. DG MARE prepared a Practical Handbook for Coast Guard Cooperation which was adopted as the Commission Recommendation in July 2021. The ECGFF comprises coast guards of EU MS and Schengen countries to promote understanding and development of maritime issues of common interest across borders and sectors, both civil and military, as well as to contribute to progress in the various Coast Guard Functions activities.

3.1.3. Previous Programme Performance

Programme performance in specific areas was as follows:

Direct and Indirect Management:

See up in the section 3.1.2.

Shared Management:

Operations financed via shared management continue to help improve the sustainability of fishing and aquaculture, as well as to maintain and protect the natural environment, encourage innovation and adoption of new technology and increase cooperation and partnerships between businesses, thus contributing to the achievement of these objectives.

The specific EMFF objectives and the Union Priorities to which they relate are listed in the table below.

Article 5(a): Promoting competitive, environmentally sustainable, economically viable and socially responsible fisheries and aquaculture	UP1, 2, 5
Article 5(b): Fostering the implementation of the CFP	UP3
Article 5(c): Promoting a balanced and inclusive territorial development of fisheries and aquaculture areas	UP4
Article 5(d): Fostering the development and implementation of the Union’s Integrated Maritime Policy in a manner complementary to cohesion policy and to the CFP	UP6

Some illustrative examples of projects under these four headings appear below.

Topic	MS	Project name	Description	Implementation period	Contribution to the topic
EMFF objective (a) Promoting competitive, environmentally sustainable, economically viable and socially responsible fisheries and aquaculture	BG	Lavrak. Adding value to fisheries products by introducing on board processing activities.	Increase the added value of catches, thanks to the purchase and installation of equipment to sort, shock-cool and store fish directly on board. The refrigeration rooms and fish holds were modernised and fitted with energy-efficient insulation. The purchase of a new specially designed refrigerated transport vehicle has further increased product quality and prolonged the shelf life of the catch.	2019	The combination of higher production volume and increased added value supports downstream employment in fish processing, distribution and tourism services. Climate change mitigation and adaptation is linked to Lavrak Ltd’s ability to diversify its catches thanks to the new equipment. Improved storage and processing conditions have reduced the quantities of discards. Reducing fishing effort.
	IT	Maricap, Marine aquaculture	Solar panels for the warehouse to improve energy efficiency, reduce greenhouse gas emissions and eliminate dependence on the power grid. The purchase of a refrigerated truck, which is needed to deliver a high-quality product to markets on the mainland, nearly 70 km away. The refrigeration system reduces problems due to ferries being delayed by bad weather. The modernisation of the aquaculture plant with two additional cages installed at sea. In addition, an innovative and patented feed distribution system was installed. By allowing a purpose-built boat to distribute pre-prepared feed to eight tanks at the same time, the system significantly reduces feed waste, environmental impact (fuel use) and working time.	2017-2018	25% increase in turnover between 2018 and 2019. In 2019 production was 230 tons. By 2024 Maricap expects to produce 700 tons per year. Energy consumption In 2019, electricity production from the new solar panels was 16.1 MWh. In 2020, production was 11.7 MWh up to mid-August. More than 35% of the power produced by the PV system is used on site, and the rest is exported. Recycling/waste Action was taken to eliminate the use of polystyrene fish storage boxes. Instead Maricap uses boxes made from recycled plastic or biodegradable boxes. This has solved all the issues related to recycling of the previously used polystyrene boxes. Waste has been reduced by 50,000 units/year, or a total weight of about 6000 kg of polystyrene. The company has three partners, eight employees, and three contract workers on call. Two of the contract workers – one with a fixed-term and one with an open-ended contract – owe their jobs directly to the EMFF support.

	DK	Producing fish and seaweed	A local company is piloting the integration a vertical seaweed cultivation system into the recirculated aquaculture system (RAS) industry to reduce the environmental impact of land-based fish production.	2019-2022	<p>As resource scarcity increases, nutrient flows from land to sea are contributing to marine eutrophication, and consequently to a loss of biodiversity. To address both issues, the Djursland FLAG in Denmark has supported a local company, Pure Algae, to introduce the vertical cultivation of Ulva - an opportunistic green macroalgae - to a land-based recirculated aquaculture system (RAS) that produces fin fish. The aim is to change the linear nutrient flows from land to sea into circular nutrient flows to conserve bioavailable nutrients, such as nitrogen and phosphorus, in the production facilities.</p> <p>This land-based fish production unit allows CO2 emissions and nutrients, produced from aquaculture activities, to be captured and used to grow the macroalgae through Integrated Multitrophic RAS (IMRAS). In this way, the waste water from aquaculture is prevented from escaping into the environment and damaging marine ecosystems; instead it is used to grow seaweed, thereby creating a valuable new revenue stream. This in turn, generates a double crop production.</p> <p>Seaweed cultivation is still a new field within aquacultural and moving seaweed cultivation from sea to land is a step further in this innovative sector. The selection of this particular seaweed species was based on its explosive growth under favourable conditions, and its potential to generate large quantities of biomass with numerous uses, including human food, pharmaceuticals and animal feed products.</p>
EMFF objective (b) Fostering the implementation of the CFP	DK	Real-time camera observation in the Danish trawl fishery— technology based intelligent fishery (TEKNOFISK)	Technology-based and intelligent fisheries enabled through real-time camera observations in the Danish trawl fishery. Start digitalising the fishery and the catch, thus creating a smarter and more sustainable way of trawling. By optimising what goes into the trawl, as close to real time as possible, unwanted catches are minimised and fuel consumption reduced.	2018-2020	With this technology, long trawling sessions with little result should be a thing of the past. Less by-catches, more sustainable fisheries and economically more viable for the fishers.
	NL	Pilot study-fully documented fisheries	This project aims to develop a digital tool to implement a ‘Fully Documented Fishery’ (FDF). This means automated recognition of the species and size of each fish, allowing a distinction between catches for human consumption (above minimum size) and unwanted catches (below minimum size). The tool will determine the weight of the total catch thanks to the use of remote electronic monitoring (REM) systems.	2019-2022	The introduction of the landing obligation across the EU obliges fishing vessels to land all fish under quota or with a minimum landing size. In the past, crew selected and stored fish above the minimum legal size, whereas the unwanted bycatches were discarded at sea. The landing obligation is a major additional task for the fishers on board in mixed species fisheries. The FDF project aims to digitally register all catches by species and quantity and to make a distinction between catches over and under the legal minimum conservation size. The project thus provides the needed data and transparency without the crew having to manually sort, store and land the undersized fish, leading to a fully documented fishery.

	FI	Mobile App for reporting catch data	The East Finland FLAG has supported the creation of a mobile app for Finnish inland fishers to register their catches. Developed by a University of Applied Sciences and introduced in May 2020, the tool will enhance catch-data collection and traceability along the fisheries value chain.	2017-2019	Initially, registering catches was done in paper format or through complex electronic systems that were time consuming for fishers to fill in. Then, at the initiative of the East Finland FLAG, the South-Eastern Finland University of Applied Sciences developed and tested a system allowing fishers to report these figures using a simple app on their smartphones. In addition to simplifying the work of fishers and the control authorities, the project aims to improve the ecological sustainability of inland fisheries by facilitating access to reliable and transparent catch-data in real-time. Fishers using the app upload their catch data at the end of each day, rather than just once a year as required by law. The information is fed directly into the database of the Finnish Natural Resources Institute, allowing catches and fish stocks to be monitored on a regular basis. The app has improved catch data collection, monitoring and management of fish stocks in inland waters. The project has also created synergies between the fishing sector and research, as well as improving communication between the parties involved.
EMFF objective (c) Promoting a balanced and inclusive territorial development of fisheries and aquaculture areas	IT	A coastal management plan by local fishers and fish farmers	Small-scale coastal fishers and fish farmers have been actively involved in the design of a coastal management plan for the Emilia-Romagna coastline. This stock management plan focused on three local high value species identified by the sector at regional level.	2018-2020	One of the main problems identified by the local community in the region was the lack of coordination in stock management of the nine different ports on the Emilia Romagna coastline. This was highlighted during the consultation process that the FLAG carried out with all the local stakeholders at the beginning of its activity. The FLAG decided to set up a working group, combining efforts from the fisheries and aquaculture sector and local experts, to develop a common management plan for three local species. The local fisheries and aquaculture sector decided to focus on them due to their nationwide presence, their important economic value and the need to protect them to guarantee healthy stocks. This bottom-up approach to participation and identifying relevant experts is new to the region and was managed by the FLAG. Representatives from the national Ministry of Food and Forestry Policies (MIPAAF) were present at the launch of the working group so they could learn more about the methodology. The MIPAAF is responsible for CLLD under the EMFF so there was interest in the methods potential implementation in other Italian regions. Such bottom-up approaches are also being used by the FLAG in tackling two of its other identified challenges: eutrophication and shellfish farming.
EMFF objective (d) Fostering the development and implementation of the Union's IMP in a manner complementary to cohesion policy and to the CFP	SI	MORIGENOS - Dolphin monitoring	Defining long-term conservation measures and preserving biodiversity through monitoring of dolphins in the Slovene coastal waters. The project enabled Morigenos to perform extensive fieldwork, collect further data all year round and assess population trends and dynamics.	2018-2019	Improving the knowledge on the state of the marine environment. The results of the project will help in the preparation of nature conservation guidelines for the Slovene coastal sea and various other Slovene reports.
	CY	Baseline Survey and Monitoring of Non-Indigenous Species in Cavo Greco and Nissia Marine Protected Areas in Cyprus	The project has provided vital information about two MPAs and about the presence as well as distribution of both indigenous and non-indigenous species. The survey design ensured a representative spatial coverage of the two research areas and sufficiently covered all the habitat types: soft substrate (sandy expanses), hard substrate (reefs) and seagrass meadows (i.e. Posidonia oceanica).	2017-2018	Improving the knowledge on the state of the marine environment. The results from this project will contribute to the implementation of national policies by the Republic of Cyprus, and the continuation of monitoring to protect and conserve the marine environment and its resources.

Financial contributions in notable key areas were as follows:

Support to the fishing fleet - UPI

Of a total EUR 4.1 billion committed by the Managing Authorities of the Member States, EUR 671.9 million (16.5%) was dedicated to 35 756 operations linked to vessels. EMFF spending on vessel-specific operations amounted to 21.1% of the total EMFF spending. During 2020, EMFF commitment and spending on these operations more than doubled, mostly in the form of compensation for temporary cessation related to the COVID-19 pandemic. As of the end of 2020 the EMFF supported 13 123 fishing vessels.

Natura 2000 - UPI

In total, EUR 414 million of the EMFF funding was committed, and EUR 229 million spent, under measures directly or potentially supporting the Natura 2000 network.

Biodiversity - UPI

A wide range of EMFF measures potentially contribute to protection and restoration of biodiversity and ecosystems. MSs committed EUR 1 637 million in EMFF funding over a total of 36 636 operations.

Small-scale coastal fisheries (SSCF) – Ups 1, 3, 4, 5

Of 35 756 operations linked to vessels, 13 580 (38.0%) were for SSCF vessels. This segment received 25% of the EMFF spending dedicated to vessels (EUR 124 million of EUR 500 million).

Landing obligation – UPs 1, 5

MS selected 4 111 operations related to the landing obligation (LO), based on the FAME “broad approach⁶”, with total EMFF funding of EUR 147.7 million. The FAME “narrow approach” identified 2 975 operations with total EMFF funding of EUR 102.5 million. Of these, 2 213 operations with EUR 50.6 million of EMFF funding committed were implemented in relation to added value, product quality and use of unwanted catches (Article 42).

Innovation – UPs 1, 2

Operations related to innovation were selected by all 27 MAs: overall 1 092 operations with a total EMFF budget of EUR 226.7 million. As of the end of 2020, nearly half of all the commitments to innovations related to aquaculture (Article 47).

Outermost regions

To support the offsetting of additional costs for the fishing, farming, processing and marketing of certain fishery and aquaculture products, and to retain the economic viability of operators from the outermost regions, ES, FR and PT selected 4 043 operations with a total budget of EUR 164.3 million.

Mitigation of the COVID-19 pandemic impact

Overall, EUR 108.7 million of the EMFF funding in 5 913 operations was committed to mitigating the impact of the COVID-19 pandemic. This corresponds to 2.7% of total EMFF funding committed at the end of 2020. 74.0% (EUR 80.5 million) of the funding was allocated via the temporary cessation of fishing activities (Article 33).

3.2. Key achievements

Concrete examples of achievements

13 123⁽¹⁾

At least 153 000⁽²⁾

68 413⁽³⁾

⁶ FAME developed two new ways to identify EMFF contributions to the LO implementation:

- A broad approach based on the measure alone (with the exception of Article 68: Marketing measures, where a combination of measure and operation implementation data is applied). The broad approach is easier to apply but might also include operations that are marginally relevant.
- A narrow approach combining the measure with Infosys operation implementation data. This is harder to apply, but more precise. However, it should be assumed that not all operations selected by the narrow approach contribute directly to the LO.

<p>Fishing vessels benefited from the EMFF between 2014 and 2020 (about 25% of the EU fleet). 41% of the vessels belonged to the small-scale coastal fishing fleet.</p>	<p>Fishermen and 460 000 members of producer organisations (41 000 from production and marketing plans and 419 000 from marketing measures) benefitted from the EMFF between 2014 and 2020. 111 000 employees of processing companies also benefitted from the EMFF between 2014 and 2020.</p>	<p>Operations were selected to receive funding under the EMFF between 2014 and 2020, almost 49 000 of them were addressed to SMEs or private persons.</p>
---	--	---

<p>EUR 227 million⁽⁴⁾</p>	<p>9 654⁽⁵⁾</p>	<p>6 067⁽⁶⁾</p>
<p>Was the contribution from the EMFF to support innovation and new technologies through 1 092 operations between 2014 and 2020.</p>	<p>Projects addressing environment and resources efficiency were selected between 2014 and 2020, with an EMFF contribution of EUR 1 513 million.</p>	<p>Operations were supported related to better management of Natura 2000 and other marine protected areas between 2014 and 2020, with an EMFF contribution of EUR 274 million.</p>

(1) Source: EMFF implementation report September 2021, p. 30.

(2) Source: Infosys reports as of 31/12/2020. Data regarding fishermen benefitting and members of producer organizations benefitting should be treated with caution as the values reported by MS are often subject to errors as double counting and over-reporting. Whereas, figures on employees in processing companies are less error prone.

(3) Source: Infosys reports as of 31/12/2020.

(4) Source: EMFF implementation report September 2021, p. 30.

(5) Source: EMFF implementation report September 2021, p. 26.

(6) Source: EMFF implementation report September 2021, p. 37. In relation to Natura 2000 only directly contributing EMFF Articles were selected (Art.40.1 b-g and i, Art. 40.1.h, Art.54, Art.80.1.b).The following formulation was suggested: "In 5 018 operations, the MS committed EUR 220 million to directly support the Natura 2000 network or to other Marine Protected Areas."

3.3. Evaluations, studies and reports

No studies were conducted for the shared management component of the EMFF since the 2018 impact assessment accompanying the proposal for a Regulation of the European Parliament and of the Council on the European Maritime and Fisheries Fund and repealing Regulation (EU) No 508/2014 ([EUR-Lex - 52018SC0295 - EN - EUR-Lex \(europa.eu\)](#)).

To provide quantitative and qualitative information on the projects implemented under EMFF direct management, and to determine whether the funding had a lasting impact on those receiving funds in terms of indicators such as market share, jobs created or induced investment, an interim evaluation was published in October 2020. It assessed the efficiency, effectiveness, relevance, coherence and added value of the measures managed under direct management. The results will be used to guide the implementation of the last year of the programme and its follow-up in 2021-2027.

The evaluation concluded that, overall, the direct management part of the EMFF is relevant to meeting the objectives of the EU’s maritime and fisheries policies. It is effective and efficient in that the results could not have been achieved at a lower cost and would not have happened without EU financial support. The actions are coherent with other EU initiatives.

For the rest of the direct management component of the EMFF, the table below represents the scientific studies launched in 2021, with a total of 6 new studies that were signed under CFP scientific advice and knowledge budget line (11 06 62 01). Some of them addressed the same topic in different sea-basins (split into lots) to better reflect the regional specificities of the matter under analysis. The topics covered by those studies are detailed below:

Study	Start date / duration
Sample elaboration, data analyses, results and conclusions from the sea-going MOSAiC and SAS-ODEN expeditions in the Central Arctic Ocean (CAO)	January 22 / 16 months

Adapting postharvest activities in the value chain of fisheries and aquaculture to the effects of climate change and mitigating their climate footprint through the reduction of greenhouse gases emissions (2 lots)	October 21 / 11 months
Mapping of marine protected areas and their associated fishing activities: Baltic and North Seas, Atlantic EU Western Waters and Outermost Regions – MAPAFISH (2 lots)	December 21 / 23 months
Scientific and technical knowledge of the EU-fisheries, exploited stocks and sensitive marine habitats in the high seas and third countries waters not subject to SFPAs and/or RFMOs jurisdiction	February 22 / 24 months

Providers of scientific advice, namely ICES and the JRC, have presented yearly reports on their activity in the implementation of the arrangements in place for the provision of this advice, which have been accepted. The STECF, as committee which supports the Commission in the specific task of obtaining scientific advice for policy support, has been delivering reports after each Plenary meeting (3/year) thus responding to DG MARE requests. The STECF outputs have been accepted and used by the Commission for policy drafting / support throughout the reporting period.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Fostering sustainable fisheries and the conservation of marine biological resources

Indicator 1: Businesses created

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final

Methodology	Operation implementation data from EMFF Article 97.1 reports combined with data on vessels from Common Fleet register. SSCF vessels defined according to Article 3 of the Regulation EU 508/2014
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The Commission has reconfigured the EMFF indicators for this and future reporting years, because there will be a milestone and a target for this indicator under the EMFAF. It is therefore introduced also for the EMFF to illustrate progress. As this is a new indicator this year, no milestones or targets have been established. However it was possible to extract the data from MS reports. Trend is steadily increasing.

Indicator 8: Number of SMEs supported.

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones

Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The Commission has reconfigured the EMFF indicators for this and future reporting years, because there will be a milestone and a target for this indicator under the EMFAF. It is therefore introduced also for the EMFF to illustrate progress. As this is a new indicator this year, no milestones or targets have been established. However it was possible to extract the data from MS reports. Trend is steadily increasing.

Specific Objective 2: Fostering the development and implementation of the Union's Integrated Maritime Policy in a complementary manner to Cohesion policy and to the Common Fisheries Policy

Indicator 1: Marine knowledge 2020 initiative: Degree of use of the European Marine Observation and Data Network (EMODnet) in terms of unique visitors to the Central Portal

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
1212	1212			5000			17000			120000
	Actual Progress									Final
	1234	2645	4967	20210	14536	42964	64041	89753		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Unique annual visitors to the EMODnet Central (measured since 2017)
Cut-Off Date	31/12/2021
Data source	VLIZ Matomo analytics since 2017 to 2020. Europa Analytics from 2021 (the Central Portal was repatriated under europa.eu domain)
Narrative	The indicator of Unique visitors shows the progress of EMODnet (Central Portal). Since the data and data products in EMODnet are increasing and the size of data is very variant, depending on the parameter, the introduction of a more consistent indicator is preferable.
Methodology	
Link MFF 14-20 / MFF 21-27	The Commission will continue reporting on this indicator for MFF 2021-2027.
Other methodological comments	This indicator has been changed since 2017. The actual progress (years 2017 to 2021) represent the unique visitors of EMODnet Central Portal. There is a steady to positive trend in the use of EMODnet which is much more than represented as this does not show the overall visitors in the thematic lots.
Full metadata available at this address	https://piwik.vliz.be/ and Europa Analytics for EMODnet.
Justification of the trend	For the purpose of the strategic plan 2016-2020 this indicator was revised and replaced by ' Degree of use of the European Marine Observation and Data Network (EMODnet) in terms of unique visitors of the Central Portal. The Unique visitors for EMODnet Central Portal were 64041 in 2020 and 89753 in 2021.

Indicator 2: Maritime Surveillance: Number of CISE nodes

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2021
						10	12	12		12
	Actual Progress									Final
						10	12	12		
Are we on track :	On track									

Indicator type	
Unit of measurement	This indicator "Percentage of available cross-sectorial and/or cross-border data, as a percentage of the total information gap identified in the Impact Assessment on CISE (Common Information Sharing

	Environment)" is outdated and it has been changed. The new indicator starting 2019 is: Number of established nodes connecting Member States' authorities or EU Agencies to the CISE network. Unit of measurement (since 2019): a tally of the number of CISE nodes. Maritime security measured by the number of nodes connecting Member States' authorities or EU Agencies to the CISE (Common Information Sharing Environment).
Cut-Off Date	31/12/2021
Data source	European Maritime Safety Agency (EMSA) report.
Narrative	Maritime security measured by the number of CISE (Common Information Sharing Environment) connections/nodes. Explanation: This indicator measures the capacity of Member States and other institutions (cf. European agencies) to connect to CISE and share maritime surveillance data.
Methodology	A simple tally of the number of CISE nodes
Link MFF 14-20 / MFF 21-27	The Commission will continue to report on this indicator in the MFF 2021-2027.
Other methodological comments	In April 2019, CISE entered in a transitional phase to operations, managed by EMSA under a Grant Agreement signed with MARE. The full impact of CISE will be measured only as of 2023, when CISE is expected to become operational. N.B. Up to 2019 the previous indicator was measuring % changes in data exchange (which is outdated/irrelevant). The transitional phase of CISE has been extended to 2023.
Full metadata available at this address	http://emsa.europa.eu/cise.html
Justification of the trend	

Specific Objective 3: Promoting a balanced and inclusive territorial development of fisheries and aquaculture areas

Indicator 1: Employment created in the fisheries and aquaculture sectors with support from the EMFF

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2023
							4 624			10 631
	Actual Progress									Final
			112	378	1 964	2 990	4 165			
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	
Cut-Off Date	
Data source	AIR 2020 - Three common result indicators: 1.7 Employment created (FTE) in the fisheries sector or complementary activities - for UP1 (fisheries) 2.8 Employment created - for UP2 (aquaculture) 4.1 Employment created (FTE) - for UP4
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Trend can be influenced by numerous factors (e.g. COVID pandemic, speed of finalising already started projects etc.). The progress in the subsequent years will be closely monitored.

Indicator 2: Employment maintained in the fisheries and aquaculture sectors with support from the EMFF

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2023
							26 550			41 665

Indicator type	Output
Unit of measurement	
Cut-Off Date	
Data source	FARNET database
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	368 FLAGs were approved by the end of 2017, however one in Bulgaria did not start up. No more FLAGs may be approved in the current programming period, therefore the figure of 367 will never increase. The withdrawal of the UK from the EU at the end of January 2020 effectively reduced the number of flags to 348.
Full metadata available at this address	
Justification of the trend	

Specific Objective 4: Fostering the implementation of the Common Fisheries Policy

Indicator 4: Degree of adequate responses to data calls under the data collection framework (100% minus failures to deliver the full data set required)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010	Milestones									2021
92%				96%			100%			100%
	Actual Progress									Final
	91%	81%	79%	78%	94%	89%	60%			
Are we on track :	On track									

Indicator type	
Unit of measurement	% (number of data transmission issues) - Based on the indicator RI_UP3.B1: increase in the percentage of fulfilment of data calls (%), provided by FAME (Definitions of Common Indicators, Version 4.0, Working Paper, October 2016)
Cut-Off Date	
Data source	STECF EWG 21-09 on the evaluation of the annual reports and data transmission issues (referring to 2020)
Narrative	The reduction in the degree of adequate responses to data calls in 2020 may to a certain extent reflect data collection challenges due to Covid-19. However, there are also methodological issues with this indicator that limit its reliability in assessing the performance of the data collection framework, further elaborated under the “other methodological comments” section.
Methodology	The number of “data transmission issues” in the Annual STECF Report on “Evaluation of DCF AR and transmission issues / Annex 2 – Data Transmission Results”
Link MFF 14-20 / MFF 21-27	EMFF 14-20 and EMFAF 21-27 are both under shared management. In this sense, similar facilities/difficulties are likely to be encountered, although the experience gained in the last programming period will help to address them. In terms of data collection, and although the framework regulation has not changed, the EU multiannual programme for the collection of biological, technical and socioeconomic data (EU MAP), and the templates for work plans and annual reports have been modified for 2022 onwards. This means that the evaluation by STECF of 2021 and 2022 annual reports will be different, and may trigger differences in the indicator
Other methodological comments	As already indicated previously, generally speaking the DCF has improved substantially over the period but the indicator does not reflect this adequately. For the coming period, we would therefore revise the indicator for a measurement that will give a more accurate and complete picture. When this indicator was originally proposed, the practice of the implementation by MS was different: under direct management during 2007-2013, the data transmission failures had direct implications for the

	reduction of funds to the MS. The current indicator is not suited for comparisons among MS, since not all MS are subject to the same number and type of data calls. It is only conditionally suitable to track change over years for the same MS, since both data calls and reports on data transmission issues vary strongly between years, and one data call can result in multiple data transmission failures. However, it poses an approximation of the capacity of the MS to respond satisfactorily to data calls.
Full metadata available at this address	The data transmission issues are first reported by end users of data; secondly commented by Member States; and finally assessed by STECF the working group evaluating annual reports and data transmission issues. This process is documented in the Data Transmission Monitoring Tool (DTMT), an online tool managed by JRC with restricted access.
Justification of the trend	In 2020, STECF expert working group on the fleet economics reported 391 data transmission issues, while in 2019 the same group reported 50. One reason for this is underperformance, most likely aggravated by Covid-related data collection challenges. However, it also needs to be considered that increased scrutiny and use of data may have increased the reported numbers. Overall, it is clear in the practical implementation of the DCF that the communication of data transmission issues to MS has helped them address issues. Additionally, the methodological issues referenced above limit the value of the indicator in assessing the performance of data collection.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	48.37	162.73	162.73	162.73	162.73	162.73	162.73	1024.75	17%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

The climate actions under the operational programmes of the MSs have not been launched yet as the OPS have not been adopted.

Reflecting the importance of tackling climate change in line with the Union's commitments to implement the Paris Agreement, and the commitment to the United Nations Sustainable Development Goals, the actions under the EMFAF should contribute to the achievement of a 30 % target of all MFF expenditure spent on mainstreaming climate objectives and should contribute to the ambition of providing 7.5 % of annual spending under the MFF to biodiversity objectives in 2024 and 10 % of annual spending under the MFF to biodiversity objectives in 2026 and 2027, while considering the existing overlaps between climate and biodiversity goals.

The first EMFAF Programmes will be in place by the end of 2022. The calculation of the contribution to climate change is based on historical estimates as EMFAF programmes do not include specific climate change targets. Values achieved will be updated in future.

6.1.3. Key achievements

Some examples of projects contributing to climate mainstreaming under the EMFF appear in the table below.

Topic	MS	Project name	Description	Implementation period	Contribution to the topic
Climate change	FR	Holofarm	This project focuses on a new and promising sector for aquaculture: sea cucumbers, a marine invertebrate that belongs to the same group as sea urchins and starfish. Improve sustainable sourcing options for markets around the world and relieve pressure on natural stocks. Enable diversification for aquaculture producers and provide new opportunities for profitable and sustainable production in France	2018-2021	It addresses what some people see as a crisis in shellfish farming caused by climate change, diseases and invasive species. This increases the pressure on producers to manage their resources in a reasoned and resilient way. Diversifying production to include new species becomes essential to sustain primary coastal aquaculture activities. Sea cucumbers are a new species in European aquaculture, and thanks to their many commercial advantages (as food, in traditional Chinese medicine and in modern pharmaceutical research), they represent a high-value-added resource that has yet to reach its full potential in Europe.

	PT	Decarbonising economic activities in Culatra Island	The Sotavento do Algarve FLAG supported investment to enable Culatra Island, Portugal’s most important location for aquaculture production, to transition to solar energy.	2020-2021	<p>The FLAG project, promoted by the Association of Culatra Island Residents (AMIC), was part of the bigger “Culatra 2030 - Sustainable Energy Community” initiative. This initiative aimed to install Culatra harbour with solar energy related equipment to support aquaculture and tourism activities in a sustainable way. It also promoted the creation of a local micro-grid concept that allows the intelligent use of energy through the identification of peak hours and efficient management of available energy resources.</p> <p>For the FLAG project, the beneficiary a Portuguese shipbuilding company that specialises in developing and manufacturing recreational and professional boats with solar-electric propulsion to acquire a solar-powered vessel to be used for aquaculture activities, and encourage the sector to transition from combustion engine vessels to solar-electric ones.</p>
	FR	Turning shellfish by-products into energy	Shellfish farming is an important economic activity on the Atlantic French coast. But it also generates undersized mussels as by-products which are usually thrown away. This project focuses on exploiting their potential by generating methane to produce energy.	2020-2021	<p>This project is proving the technical and economic feasibility of using mussels as an energy source. The cooperative carried out a pilot to establish whether adequate volumes of the shellfish biomass could be turned into the fatty acids required to yield methane as energy.</p> <p>The pilot plant is now running and able to process 50 kg of undersized mussels per day to turn them into methane. This is currently sold to external methane production plants, meaning that the shellfish farmers do not have to deal with the administrative burdens involved in producing methane. However, in the long term, this activity is seen as a potential new activity which can be added to the production chain in order to diversify and increase incomes.</p> <p>50 kg of mussels produces 0.63 m3 of methane, equivalent to 0.75 l of gas, or 6 kWh of electricity. This practice has the advantage of turning the biomass of undersized mussels into a valuable product.</p>

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution	16.79	128.94	128.94	128.94	128.94	128.94	128.94	790.43
Share compared to total envelope	15.39 %	11.37 %	11.69 %	12.05 %	13.13 %	15.42 %	15.20 %	13.00 %

(*)These amounts include NextGenerationEU top-ups if any

6.2.2. Explanation On the financial contribution

Reflecting the importance of tackling climate change in line with the Union's commitments to implement the Paris Agreement, and the commitment to the United Nations Sustainable Development Goals, the actions under the EMFAF should contribute to the achievement of a 30 % target of all MFF expenditure spent on mainstreaming climate objectives and should contribute to the ambition of providing 7.5 % of annual spending under the MFF to biodiversity objectives in 2024 and 10 % of annual spending under the MFF to biodiversity objectives in 2026 and 2027, while considering the existing overlaps between climate and biodiversity goals.

The first EMFAF Programmes will be in place by the end of 2022. The calculation of the contribution to biodiversity is based on historical estimates as EMFAF programmes do not include specific biodiversity targets. Values achieved will be updated in future.

As the Member States programmes have not been adopted yet, it is too early to make any estimate on the precise biodiversity contribution at the level of types of intervention. The assumption is that Member States will continue to finance similar operations under the EMFAF to those financed under the EMFF fund. The priorities of the Member States are likely to have shifted due to the lasting impact of Covid-19 on the sector. This will influence the types of operations planned. At this point no fully developed programmes have been submitted yet which prevents a clear picture of the degree to which the new programmes will diverge from those of the previous period.

6.2.3. Key Achievements

Some examples of projects contributing to biodiversity mainstreaming under the EMFF appear in the table below.

Topic	MS	Project name	Description	Implementation period	Contribution to the topic
Biodiversity	ES	Integrated, innovative and participatory management of the Natura2000 network in the Spanish marine environment.	The first integrated nature project in Spain and one of the largest marine conservation projects in Europe. It seeks to achieve an effectively managed network for marine areas of the Natura 2000 network, with the active participation of stakeholders and researchers, to take the best decisions.	2017-2024	With this project, Spain will be able to comply with the international commitment of protecting more than 10% of its marine areas, in line with Target 11 of the Aichi Biodiversity Targets (Convention on Biological Diversity – Strategy Plan for Biodiversity 2011-2020).
	PT	OtimO	The Mondego Mar FLAG financed a project to bring some unused salt pans back into use to produce an aquaculture product which is highly coveted by restaurateurs: the sea urchin, also known as ‘Portuguese caviar’.	2018-2021	The OtimO project – optimisation of sea urchin production processes – is developing, testing and disseminating an innovative production model for sea urchins. Sea urchin production is still quite limited due to low productivity, reproduction and growth. It is imperative to develop and validate methods that maximise the profitability of production processes, as well as aquaculture systems that minimise the environmental impacts of this activity. The Marine and Environmental Science Centre of the University of Coimbra was able to install in the MAREFOZ Laboratory an integrated multitrophic aquaculture pilot system (IMTA) with water recirculation (RAS) under regulated conditions of temperature, lighting and ventilation. In these systems, the waste derived from production is used as a resource for other organisms, which reduce environmental impacts and increase economic returns. These waste by-products can be used as food or exploited by other economic agents, promoting the circular economy.

6.4. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates	2022-2027 programming					Total
2021	2022	2023	2024	2025	2026	2027

Score 0*: 106.5

(*)Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

Fishing and fish processing are male-dominated activities in Europe⁷. Men provide the main labour on board fishing vessels, and the majority of fishing boats and aquaculture farms are owned by men⁸.

However, women play an important role in the fisheries sector, especially in small-scale family businesses. Either they are involved in the fishing activity itself, on board or on foot as shellfish gatherers, or they support the business through on-shore activities such as fishing gear preparation and maintenance, transporting fish to auctions, sales, administration, logistics or even the development of tourist activities⁹. This work is not always recognised. According to a study¹⁰ for the European Commission, the share of unpaid

⁷ https://www.europarl.europa.eu/doceo/document/A-7-2014-0070_EN.html?redirect

⁸ <https://eige.europa.eu/gender-mainstreaming/policy-areas/maritime-affairs-and-fisheries>

⁹ <https://epthinktank.eu/2021/10/15/women-in-fisheries/>

¹⁰ <https://stecf.jrc.ec.europa.eu/documents/43805/2485408/STECF+19-03+-+Social+data+in+EU+fisheries+sector.pdf/401568fd-3e48-4ddf-aabf-801cea045dce>

women in fisheries (6.6 %) is almost double their share in total employment (3.8 %). However, this level of employment is an underestimate, as the existing statistical data shows employment within the fisheries sector only if this employment is declared and remunerated.

Gender inequality in the fisheries sector is influenced by a set of factors¹¹, which are as follows:

- participation of women and men in fisheries subsectors
- women’s invisible work in the fisheries sector
- women’s participation in decision-making.

EU fisheries policy promotes sustainable fish stocks and sustainable marine ecosystems as a precondition for a competitive European fishing industry. Although the gender equality dimension is not present in the EMFAF in the form of gender-specific objectives and measurable gender commitments, the Fund covers broader gender-related aspects in line with the equality provisions set out in the CPR, such as recitals 6, 36 and 60, Articles 8, 9, 21, 22 and 73 as well as the relevant horizontal enabling conditions .

Furthermore, according to Article 46 of the EMFAF on the Monitoring and evaluation framework, the managing authority shall provide the Commission with relevant operation-level implementation data, which shall include key characteristics of the beneficiary (name, type of beneficiary, size of enterprise, gender and contact details).

The Member States therefore should provide the Commission with gender-related information linked to expenditure at operation level. This can be used to estimate the financial contribution relevant to gender and to identify examples of operations Member States consider as gender relevant in the area of fisheries, in line with the relevant CPR requirements.

Some examples of projects contributing to gender equality under the EMFF appear in the table below.

Topic	MS	Project name	Description	Implementation period	Contribution to the topic
Gender equality	ES	RedMarII Women on board	REDMAR II is an innovative project that promotes equal opportunities for women with an education in the maritime and fisheries sectors within a generally male-dominated sector. It is the first time in Spain that a project has looked into the employment of women on fishing vessels.	2018-2019	Get more women on board fishing vessels and improve the exchange of good practices in relation to equal opportunities.
	ES	A network for seafaring women	A cooperation project between two Catalan FLAGs has supported the creation of an association, which aims to increase the visibility of women from fishing and aquaculture and improve their ability to develop business projects that help diversify the sector.	2018-2019	The project has resulted in the creation of an association of 58 workers in the sector, from the entire Catalan coast, including areas that do not have a FLAG. Since 2019, the association has organised and/or participated in 14 regional, national and European events, including the 6th National Congress of Women in Fisheries and the relaunch of AKTEA, the European network for women in fisheries and aquaculture. This has helped energise women linked to fisheries and put in place the support network to foster the skills and confidence to undertake new activities. For example, the association informs and encourages women to participate in training that can help their activities (e.g., on entrepreneurship or digital communication), including those organised by the Spanish Network of Women in Fisheries and the Women’s Institute of Catalonia. It also contributes to youth participation, female empowerment and ultimately the fight against inequality at all levels.

6.5. Contribution to the sustainable development goals

6.5.1. Goals

SDG 1 End poverty in all its forms everywhere

¹¹ <https://eige.europa.eu/gender-mainstreaming/policy-areas/maritime-affairs-and-fisheries>

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

SDG 5 Achieve gender equality and empower all women and girls

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

6.5.2. Key achievements and performance

SDG 1 End poverty in all its forms everywhere

The EMFF contributes to SDG 1 (End poverty in all its forms everywhere), by: contributing to the improvements of the economic results of the EU fisheries sector, and to the improvements of the living standards of the coastal populations which depend on that sector; allowing operators to modernise their productive tools, to diversify their sources of income or to switch to alternative economic activities.

Some illustrative examples appear below.

Topic	MS	Project name	Description	Implementation period	Contribution to the topic
SDG 1 End poverty in all its forms everywhere	DK	A label for sustainable coastal fisheries	The organisation behind the project is the Danish producer organisation Foreningen for Skånsomt Kystfiskeri (FSK; Association of Low-Impact Small-Scale Coastal Fishers). FSK and its members want to ensure that the label is a success and that it benefits small-scale coastal fishers as much as possible. Their main goal is to ensure the future of Denmark's small-scale, low-impact coastal fishery and create better access to the market for sustainably caught fish.	2019-2022	The label helps small-scale coastal fishers and thereby helps maintaining the coastal communities.
	ES	Novelfish	As a result of the landing obligation many unwanted catches (low value species) are brought to port. The main concern of this project is to investigate how to turn these low-value species into innovative products with high added value. The project shows that many unwanted catches can be marketed with added value through a process that is profitable, relatively easy and generates zero waste. The objective is to encourage the landing and commercialization of these species and thereby create a win-win situation. Fishers will be able to improve their economic situation, while processing companies will have new raw materials to process and new products to introduce. Consumers gain new ways to add flavour to their dishes, and everyone benefits from increased sustainability of our fishing industry.	2019-2020	A part from the main objective of adding value to species of low commercial value, this project can improve the economic situation of fishers and thereby reduce poverty.
	EE	StoneFish	Given the increasing difficulty of making a living from fishing alone, a fisher on the small island of Hiiumaa, decided to diversify his activities and establish an innovative new business focusing on the production of fishing gear. StoneFish has helped a family business on the Estonian island of Hiiumaa to diversify their activities outside of the fishing season into the production of fishing gear and multi-purpose nets. As well as creating a part-time job for this fisher, it has also created four full-time jobs for local women. The resulting local shop also allows for fish processing for the first time on the island.	2015-2017	Supplements income from fisheries on an island where fishing is only seasonal. Thus, the project has increased incomes, employment and added value in the sector, and thereby reduced poverty.

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

By promoting the conservation of the marine living resources and the protection of the marine ecosystem, the EMFF contributes to the sustainability of the production of the EU fisheries sector of healthy quality food, and thus to SDG 2 (End hunger, achieve food security and improved nutrition and promote sustainable agriculture) and SDG 3 (Ensure healthy lives and promote well-being for all at all ages).

Some illustrative examples appear below.

Topic	MS	Project name	Description	Implementation period	Contribution to the topic
SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture	PT	Alga4food	The Alga4Food project – “Algae in gastronomy – development of innovative conservation and utilization techniques” – is exploring the benefits of edible macro algae – seaweed – from the Portuguese coast.	2017-2020	In a world where food resources are becoming scarce, conventional agriculture faces challenges in feeding 7 billion people and fish resources are running out. Algae are one promising route to an affordable global food supply with low environmental costs.
	FR	A social enterprise that places local fish in school canteens	A social joint venture between the Red Cross and a local fish auction helps the unemployed into work while securing a place to process undervalued local seafood.	2020	Seventy percent of seafood sold at the fish auction in Grau d’Agde, southeast France, is exported. To promote local consumption, this joint venture, “Terre et Mer”, has been launched to process fresh, local seafood into ready-to-cook products and ready-made meals. It is a social enterprise that also advocates inclusion for the unemployed by collaborating with the Red Cross to offer work to marginalised citizens under the supervision of a Production Manager and a Development Manager. The frozen food is supplied to local schools and retirement homes, while fresh production is sold to the general local public. The project includes a third component, that of associating seafood products and organic vegetable farming through a common trademark. The project does not compete with fishmongers or local distribution channels but responds to consumer demand for ready-made meals while encouraging locals to eat seafood caught nearby. Through its operations, Terre et Mer adds value to less-known species that are hard to sell, as well as helping the unemployed to gain work experience and skills in the processing workshop, set up in the fish auction.
	PT	From fishermen to you	Online sales have generated new interest since the COVID-19 pandemic, giving a renewed boost to projects such as Cabaz do Peixe. This virtual platform to sell fish to the general public from the local artisanal fishing fleet ensures the delivery of fresh and high-quality products, as well as consumer safety	2018-2021	Born from the cooperation between the local fishing boat owners’ association, AAPCS, and a local environmental NGO, Liga para a Protecção da Natureza, this platform facilitates the delivery of seafood to individual households in the area. Other local stakeholders, such as the Municipality of Sesimbra and Docapesca, a public company that manages fish landing sites and first sale system, have also been active in supporting the platform. The scheme provides local fish at a better price for the consumer while also guaranteeing a fair price to fishermen. Consumers order online and receive a delivery of 3kg of fish (flaked and gutted) for €25. Depending on the catch of the day, the basket will contain fish from a list of 26 possible species. Customers can indicate in advance up to three species that they do not want to receive.

SDG 5 Achieve gender equality and empower all women and girls

Please, see the section on gender mainstreaming above.

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

The main objective of the EMFF is to support the implementation of the Common Fisheries Policy (CFP) and the Integrated Maritime Policy (IMP), thereby contributing first and foremost to SDG 14 (Conserve and sustainably use the oceans, seas and marine resources for sustainable development). To date the EMFF has funded nearly 15 000 projects on preserving the marine environment and ensuring better resource efficiency. This has been supported with an EMFF contribution of EUR 532.42 million. The EMFF has also supported over 2 000 operations related to better management of Natura 2 000 areas, covering an area of at

least 74 000 km², and more than 1 500 operations associated with other marine protected areas, covering an area of at least 704 055 km².

The United Nations 2030 Agenda for Sustainable Development identified conservation and sustainable use of oceans as one of the 17 Sustainable Development Goals (SDG 14). The Union is fully committed to that goal and its implementation. In that context, it has committed to promote a sustainable blue economy which is consistent with maritime spatial planning, the conservation of biological resources and the achievement of good environmental status, to prohibit certain forms of fisheries subsidies which contribute to overcapacity and overfishing, to eliminate subsidies that contribute to illegal, unreported and unregulated fishing and to refrain from introducing new such subsidies. This outcome should result from the World Trade Organisation fisheries subsidies negotiation.

Some illustrative examples appear below.

Topic	MS	Project name	Description	Implementation period	Contribution to the topic
SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development	SE	Sustainable fisheries management	A co-management scheme which has given the various stakeholders a platform for dialogue and has had a significant impact on the purpose of the national park. The overall aim of the co-management is to achieve sustainable coastal fishing in biologically important areas, while promoting socio-economic development and cultural heritage among the coastal communities. Fishers, officials and researchers have received training to better understand each other.	2018-2020	Adaptive and sustainable fishing patterns are maintained. Economically beneficial conditions for local fishers strengthen local traditions and identity. Successful conservation of marine resources coexists with maintenance of traditional fisheries. Learning crosses the boundaries of traditional disciplines: biological experts learn about fishery methods, and fishers learn about the need to conserve valuable habitats and species.
	ES	Mar das Illas	The ‘Mar das Illas’ cooperation project sees three FLAGs in the Pontevedra province working together to support local fishers and families in their entrepreneurial efforts focused on marine and pesca-tourism.	2017-2020	The Marine and Land National Park of the Atlantic Islands (PNMTIAG) is one of the main tourist attractions in the Pontevedra area and key to the local economy. Over time, several artisanal fisheries and shellfish gathering activities have been developed. While these fisheries are still viable, as environmental standards become more important diversification into other sectors is now a priority for maintaining the local economy. There is tremendous commitment to maintaining the area’s marine and fishing culture. Fishers and their families are often at the forefront of protecting the region’s environment, and are ambassadors for its natural, cultural, and gastronomic values. ‘Mar das Illas’ helps new start-up businesses that give fishers’ earnings a boost, while also ensuring the continuity of traditional fishing practices and diversification into pesca-tourism. Mar das Illas also tried to increase the visibility and local awareness of the natural environment and its conservation.

HEADING 3B: Other programmes of Natural Resources and Environment**Sustainable Fisheries Partnership Agreements (SFPA) and Regional Fisheries Management Organisations (RFMO)****Lead DG: MARE**

1. Overview**1.1. Challenges**

While 79% of all EU catches are taken in EU waters, 13% come from the international high seas, and 8% are caught in the exclusive economic zones (EEZs) within 200 nautical miles of the partner countries' waters. For the latter, it is essential that appropriate regulation mechanisms are put in place to ensure that catches are sustainable. EU fishing in the high seas for straddling and highly migratory stocks is regulated through Regional Fisheries Management Organisations (RFMOs), while in the waters of non-EU countries, EU fishing is preferably taking place through bilateral agreements negotiated by the European Union with partner countries named Sustainable Fisheries Partnership Agreements (SFPAs).

1.2. Mission (General objectives)

The EU negotiates, concludes and implements bilateral Sustainable Fisheries Partnership Agreements (SFPAs) between the European Union and third countries and pays compulsory annual budget contributions deriving from EU membership in international bodies, including various RFMOs.

RFMOs are international bodies set up to promote the conservation and sustainability of straddling and highly migratory fish stocks. The EU is present in all of the world's oceans through its fleets and is obliged under the United Nations Convention on the Law of the Sea (UNCLOS) to cooperate with other parties by participating in these organisations.

Within the framework of the SFPAs, the Commission maintains a political dialogue on fisheries related policies with third countries concerned, in coherence with the principles governing the Common Fisheries Policy (CFP) and the commitments under other relevant European policies. In addition, SFPAs provide a financial contribution whose aim is to support the sustainable development of the fisheries sector in the partner countries and contribute to better governance of their fisheries. That includes notably the improvement of scientific and technical knowledge of relevant fisheries, the contribution to control and surveillance and the fight against illegal, unreported and unregulated (IUU) fishing and the support for better global governance of fisheries.

1.3. Specific objectives

To promote, through active involvement in RFMOs, the sustainable development for fisheries management and maritime governance in line with the CFP objectives, and ensure that fishery resources are maintained above or restored above levels capable of producing maximum sustainable yield and the conservation of marine ecosystems. This includes the promotion of decisions based scientific advice and improved science in those organisations, action against IUU fishing, compliance with the existing rules and regular performance reviews in line with the CFP objectives and the Ocean Governance communication. Consistent with the Green Deal objectives, RFMOs also promote the protection of the fragile ecosystems (Biodiversity Strategy) and ensure more sustainable food systems (Farm to Fork). Finally, RFMOs, as well as SFPAs offer an opportunity to strengthen the role of the EU as a global actor.

Sustainable Fisheries Partnership Agreements establish a legal, economic and environmental governance framework for fishing activities carried out by Union fishing vessels in third country waters, in coherence with other EU policies. In particular, the specific objectives pursued by SFPAs are:

- To give the European fleet access to fishing grounds under a clearly regulated and stable legal framework, offering legal certainty for European vessel owners, and contributing to their competitiveness;
- To foster scientific cooperation between the EU and its partner countries;
- To promote transparency and sustainability in the partner countries that also apply to other agreements between the partner countries concerned and other fleets present in their EEZ. This is therefore contributing to the sustainable management of fishing resources worldwide;
- To encourage improved governance and management of the local fisheries sector by supporting the monitoring, control and surveillance of national and foreign fleets' activities, contributing to the sustainable development of local fishing activities, and to the fight against IUU fishing.

1.4. Public intervention context

The fisheries policy is an exclusive competence of the European Union. The EU, represented by the Commission, plays an active role in 5 tuna and 13 non-tuna RFMOs and advisory bodies. The EU position in RFMOs is based on the principles and objectives of the CFP, the Ocean Governance communication, the Biodiversity and Farm to Fork strategies and the Council negotiating directives for each RFMO ('mandate') mirroring the CFP. The transposition into EU law of the provisions adopted by RFMOs is done through Regulations.

SFPAs are also negotiated by the Commission on behalf of the EU, in close cooperation with other EU Institutions. The Commission also ensures the monitoring of the implementation of SFPAs, in particular through regular Joint Committee meetings with partner third countries.

1.5. Actions

SFPAs: Under its exclusive competence of negotiating bilateral fisheries agreements the Commission negotiates, concludes and implements bilateral SFPAs between the European Union and third countries with the objective of contributing to a regulated framework for EU long-distance fishing fleet while ensuring a suitable exploitation of the third countries' relevant fisheries resources and supporting competitiveness of the Union's fishing fleet.

There are currently 13 active SFPAs, mostly in West Africa but also in the Indian and Pacific Oceans. In 2021, a new SFPA and its implementing protocol entered into force with Gabon, while the SFPA protocol with Mauritius has expired. At the same time, the SFPA protocols with Greenland, Mauritania and Cook islands have been renewed and a proposal for a 6-month extension of the SFPA Protocol with Mauritius has been prepared.

Each SFPAs is an exclusive agreement: once in place, EU vessels can only fish under this SFPAs, and cannot enter into private agreements with the partner country. The SFPAs ensures a level playing field and establishes minimum standards for sustainable resource management as it includes provisions prohibiting the granting of more favourable conditions to other foreign fleets. There are currently around 200 vessels from 12 EU Member States are benefiting from the SFPAs.

Following the withdrawal of the United Kingdom from the EU in January 2021, the Commission has adopted proposals for a Council Regulation to reallocate the fishing opportunities previously allocated to the UK in the SFPAs with Morocco and with Mauritania among interested Member States. Other SFPAs were unaffected by the Brexit.

RFMOs and international organisations: Given the exclusive competence of the EU for the conservation of marine living resources and international obligations deriving from the UNCLOS and the implementation of the United Nations Fish Stocks Agreement, to which the EU is a Party, the Commission pays compulsory annual contributions deriving from EU membership in international bodies. This includes various RFMOs where the EU has an interest and bodies set up by the UNCLOS, namely the International Seabed Authority and the International Tribunal for the Law of the Sea. In line with the external dimension of the CFP, the EU will promote better international fisheries and ocean governance, the sustainable management of international fish stocks, and defend EU economic and social interests within these organisations.

1.6. Delivery mode

SFPAs and RFMO agreements are managed under direct management. SFPAs consist of a part covering access rights, and other part on sectoral support which is devoted to sustainable development of the fisheries sector of the partner countries and enhancement of their overall fisheries governance capacity.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

The 2013 CFP Regulation¹ refers to the Sustainable Fisheries Partnership Agreements (SFPAs)² specifically, in its title II, Articles 31 and 32. The Regulation provides that SFPAs with third countries should ensure that Union fishing activities in third country waters are based on the best available scientific advice and relevant information exchange, ensuring a sustainable exploitation of the marine biological resources, transparency as regards the determination of the surplus and, consequently, a management of the resources that is consistent with the objectives of the CFP. Those agreements provide for access to resources commensurate with the interests of the Union fleet in exchange for a financial contribution from the Union and contribute to the establishment of a high-quality governance framework.

According to the UNCLOS, RFMOs are the responsible bodies for the sustainable management of straddling and highly migratory fish stocks. They play a critical role in promoting the preservation and restoration of marine ecosystems and biodiversity, while contributing to food security, fair, healthy and sustainable food systems, the fight against IUU fishing, as well as sustainable growth and jobs. RFMOs also offer an opportunity to increase the role of the EU as a global actor and to promote the same principles and standards as those applicable under Union law in the areas of the CFP and a level-playing field for Union operators in line with Article 28 of the CFP Regulation.

1.8.2. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total

1.9. Link with the 2014-2020 MFF

During the new period 2021-2027, the Commission will continue to monitor carefully the implementation of the SFPAs and will put emphasis on appropriate reporting of activities financed under the SFPAs sectoral support component, raising awareness on concrete actions achieved. The general objectives of the funding for the international dimension of the Common Fisheries Policy, as well as the Sustainable Fisheries Partnership Agreements for the new period does not substantially deviate from the 2014-2020. It seeks, however, to consolidate the achievements of the previous period (2014-2020) while it incorporates as much as possible into its actions the new priorities of the Commission for the 2014-2020 notably concerning climate change, the Biodiversity and the Farm to Fork strategies.

1.10. Relevant websites providing more information

<http://europa.eu/mH87VG>

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	151.5	1 053.0	14%
Payments	149.5		14%

3.5% of the above commitments (all paid by now) went into paying membership fees to Regional Fisheries and Management Organisations (RFMOs). The rest of the appropriations were spent on fishing access for the European fleet to the waters of third countries, mostly in West Africa and in the Indian and Pacific Oceans, and contributing to the sustainable development of their local fishing activities.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The actions to be implemented during 2021-2027 are the continuation of the 2014-2020 programme for international fisheries. The Commission will continue its activities in RFMOs, the regular renewal of expiring SFPAs protocols and the careful monitoring of the implementation of SFPAs, putting emphasis on appropriate reporting of activities financed under the SFPAs sectoral support component, and raising awareness on concrete actions achieved.

3.1.2. Active programme performance

Overall, the EU remains one of the key drivers for progress in RFMOs and for increasing their performance with concrete proposals. The EU's voluntary contributions to the scientific advice of RFMOs played a key role in several RFMOs. The Commission continued to deliver on its commitment to achieve more sustainable fisheries worldwide: 98% of all conservation measures adopted in 2021 by RFMOs to which the EU is a member were in line with scientific advice.

This outcome is higher than the results achieved in 2019 (88%) or 2020 (74%) and although in principle it is a positive outcome, it also reflects the fact that the total number of conservation measures adopted went down to 55 from 65 in the previous year, but

those that were adopted were in line with scientific advice. It also accounts for the impact of the pandemic on the work of RFMOs. Due to the virtual format of the meetings, scientific bodies could not cover their full agendas and the main bodies of RFMOs resorted, in some cases, to a roll-over of existing measures based on the precautionary approach, which is by any means a conservative decision.

Regarding the tuna and tuna-like stocks fished by the EU fleet in 2021, the figures are very similar to those in 2020: Of the total commercial tuna catch worldwide, 87% came from stocks at healthy levels of abundance. Out of 20 tuna and tuna-like stocks targeted by the EU fleet, 17 were fished at sustainable level and one stock continues to be on its way to sustainability thanks to the measures adopted in 2019. No further progress could be achieved in 2021, as the second year of the pandemic forced again many RFMOs to hold their meetings in a virtual format and limit their agenda to decisions essential for the functioning of those organisations. As a result, many key decisions could not be adopted, also because the complexity of the discussions were not suitable for a virtual format.

These outcomes do of course also reflect the reality that decisions within RFMOs are taken by the entire membership based on consensus.

Regarding SFPAs, the general objective followed has been to implement and renew the network of Agreements and active Protocols to ensure continuity in the activities of the EU long distant fishing fleet in third country waters, with strict respect to the sustainability and surplus principles.

On some occasions, negotiations have taken more time than expected because financial expectations of the third countries could not be met. The Covid-19 pandemic led to delays in concluding some new agreements like with Mauritius. As a result, ship-owners had to stop fishing or modify their strategies, in the context of sharp global competition between various long distant fishing fleets. Some ship-owners could find other fishing grounds in countries benefiting from an SFPA or sometimes in other countries under Regulation (EU) 2017/2403 on the sustainable management of external fishing fleets.

In the context of the implementation of the Protocols, which is an important part of the programme performance and concerns both access conditions for the EU vessels and the monitoring of the sectoral support, Joint Committee meetings (JCM) were held throughout the year with most of the partner countries, most of the time remotely. For the projects benefitting from sectoral support but delayed due to the Covid-19 pandemic, the Joint Committees had on several occasions to adjust the actions and calendar-foreseen initially.

3.2. Key achievements

98%	17
------------	-----------

of conservation measures adopted by RFMOs for the management of the stocks under their purview were in line with scientific advice.

out of 20 tuna and tuna-like stocks targeted by the EU fleet were fished at sustainable level and one is on its way to sustainability.

15 000	70%
---------------	------------

jobs created and maintained through SFPAs in the EU (6 000 directly, 9 000 indirectly)

of the tuna catches made in the context of SFPAs are processed in a partner country.

3.3. Evaluations, studies and reports

Not applicable for RFMOs.

A global evaluation of the implementation of the SFPAs, including a public consultation, has taken place in 2020 with the objective to provide with an overall analysis of the SFPAs features, content, implementation, results and impacts. The results of the evaluation should help the Commission to understand what has worked well, be considered of added value or a success and, what could be improved. These results will be presented in Commission Staff Working Document to be adopted in the first half of 2022 and will feed the Commission’s report on the common fisheries policy also planned for 2022. This process should lead to the identification of recommendations to improve SFPAs in the future.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: To establish, through Sustainable Fisheries Agreements, a legal, economic and environmental governance framework for fishing activities carried out by Union fishing vessels in third country waters, in coherence with other EU policies.

Indicator 1: Sustainable Fisheries Agreements in force

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027

Cut-Off Date	31/12/2021
Data source	Commission database
Link to the objective	To establish, through Sustainable Fisheries Agreements, a legal, economic and environmental governance framework for fishing activities carried out by Union fishing vessels in third country waters, in coherence with other EU policies.
Link MFF 14-20 / MFF 21-27	During the new period 2021-2027, the Commission will continue to monitor carefully the implementation of the SFPAs and will put emphasis on appropriate reporting of activities financed under the SFPAs sectoral support component, raising awareness on concrete actions achieved.
Other methodological comments	This corresponds to the number of EU vessels authorized to fish in the framework of SFPAs, considering only the multi-species SFPAs.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Increased in the number of SFPAs and level of utilization by the EU fleet

Specific Objective 2: To promote, through active involvement in international organisations, sustainable development for fisheries management and maritime governance in line with the Common Fisheries Policy objectives, and ensure that fishery resources are maintained above or restored above levels capable of producing maximum sustainable yield.

Indicator 1: Conservation measures based on scientific advice adopted, for all species under the purview of RFMOs to which the EU is a member

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
0%		90%		95%			95%			95%
	Actual Progress									Final
	98%									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	percentage of conservation measures based on scientific advice
Cut-Off Date	31/12/2021
Data source	RFMO Reports
Link to the objective	To promote, through active involvement in international organisations, sustainable development for fisheries management and maritime governance in line with the Common Fisheries Policy objectives, and ensure that fishery resources are maintained above or restored above levels capable of producing maximum sustainable yield.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The 'best available scientific advice' is the term used by the UN Fish Stock Agreement 1995. It is generally the advice provided by the Scientific Committee of the specific RFMO in line with international standards.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The Commission continued to deliver on its commitment to achieve more sustainable fisheries worldwide: 98% of all conservation measures adopted in 2021 by RFMOs to which the EU is a member were in line with scientific advice. This outcome is higher than the results achieved in 2020 (74%). It also reflects the fact the total number of conservation measures adopted went down, but those that were adopted were in line with scientific advice. See further analysis in the main text of the report.

Indicator 2: Sustainable management of emblematic tuna and tuna-like species as per relevant scientific advice, notably highly significant tuna and tuna-like species are fished at sustainable levels

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
17	Actual Progress									Final
	17									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	number of sustainable tuna and tuna-like stocks out of 20
Cut-Off Date	31/12/2021
Data source	Annual stock situation in scientific reports of RFMOs concerned.
Link to the objective	To promote, through active involvement in international organisations, sustainable development for fisheries management and maritime governance in line with the Common Fisheries Policy objectives, and ensure that fishery resources are maintained above or restored above levels capable of producing maximum sustainable yield.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	RFMOs which manage highly-migratory species, mainly tuna: http://iccat.int/en/ , http://iotc.org/ , https://www.wcpfc.int/ , http://iattc.org/ , http://www.ccsbt.org/site/
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	On track. The situation is very similar to the one in 2020. In 2021 of the total commercial tuna catch worldwide, 87% came from stocks at healthy levels of abundance. This is due to the fact that skipjack stocks contribute more than one half of the global catch of tunas, and they are all in a healthy situation. By contrast, the Atlantic Ocean bigeye and Indian Ocean yellowfin stocks are currently overfished although for Atlantic Ocean bigeye overfishing ended in 2019 and the probability of being in green zone exceeds 80%.

5. The programme contribution to horizontal policies

5.1. Contribution to climate mainstreaming

5.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	15.67	14.10	14.10	14.10	14.10	14.10	14.10	100.27	10%

(*)These amounts include NextGenerationEU top-ups if any

5.1.2. Explanation on the financial contribution

The actions financed by the European Commission support the integration of climate change considerations in the management of the marine biological resources, and their ecosystems, both in RFMOs with the final objective of promoting their adaptation and resilience towards climate change, and at bilateral level, through SFPAs.

SFPAs: contribution to climate action represents 40% of the sectoral support.

RFMOs: contribution to climate action represents 40% of the total amount allocated to RFMOs.

5.1.3. Key achievements

Climate change considerations are, where appropriate and available, incorporated into the scientific and stock management discussions in RFMOs. They are also reflected in SFPAs, which refer to management decisions of RFMOs, and contribute to their implementation.

5.1.4. Performance

Although there seems to be progress on the enhancing climate change considerations in RFMOs and SFPAs, it is too early to assess performance for the current period.

5.2. Contribution to biodiversity mainstreaming

5.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution	4.40	4.40	4.40	4.40	4.40	4.40	4.40	30.80
Share compared to total envelope	3.01 %	2.87 %	2.81 %	3.25 %	3.19 %	3.12 %	3.07 %	3.04 %

(*)These amounts include NextGenerationEU top-ups if any

5.2.2. Explanation On the financial contribution

The actions financed by the European Commission in RFMOs are consistent with the objectives of the EU Biodiversity Strategy to conserve marine stocks, prevent the loss of biodiversity and protect fragile ecosystems. In addition, actions supported through the sectoral support component of SFPAs, promote long-term resource conservation, good governance and the sustainable development of our partners' local fisheries sector, with a positive effect on biodiversity.

SFPAs: it is estimated that EUR 1 million per year concerns biodiversity (this is rather a conservative estimation).

RFMOs: 60% of the total amount concerns biodiversity.

5.2.3. Key Achievements

87% of the total commercial tuna catch worldwide, including the tuna and tuna-like stocks fished by the EU fleet in 2020, are at healthy levels of abundance. Out of 20 tuna and tuna-like stocks targeted by the EU fleet, 17 were fished at sustainable level. Additionally, fishing of one of tuna and tuna-like stocks is on its way to sustainability. Biodiversity is also taken into account in SFPAs as well which contribute to sustainable fishing, including through measures aimed at reducing by-catches of non-targeted species and marine mammals. In addition, part of sectoral support funds of SFPAs contribute to support actions contributing to biodiversity (e.g. creation and management of Maritime Protected areas, coral restoration, surveillance operations to fight illegal fishing).

5.2.4. Performance

The action is performing satisfactorily although there is room improvement to reach a higher percentage of tuna and tuna-stocks management sustainably and an increased impact of SFPAs on biodiversity protection. We continue to work towards the achievement of more sustainable fisheries worldwide.

5.3. Contribution to gender equality

5.3.1. Key achievements and performance

2021 estimates		2022-2027 programming				Total
2021	2022	2023	2024	2025	2026	

Score 0: 151.5

(*Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

The actions under this programme are related to negotiating, concluding and implementing international agreements relating to fisheries, and paying compulsory annual budget contributions. These actions were not designed with gender needs in mind, therefore a score 0 is attributed to them.

5.4. Contribution to the sustainable development goals

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Sustainable Fisheries Partnership Agreements provide the guarantee that only surplus resources will be fished by EU fishing fleet operating in third country waters. They therefore contribute to the sustainable management of fisheries resources and to food security for local population dependent on fishing resources. This is being reinforced in some SFPAs though provisions regarding compulsory landings, or in-kind donation of fish which also contribute directly or indirectly to improved nutrition in developing countries.

Likewise, RFMOs play a key role in promoting a sustainable access to affordable sources of protein.

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

SFPAs contribute to the achievement of the SD14 as they are a tool that promotes resource conservation and environmental sustainability, through guiding principles such as scientific management, transparency and non-discrimination. As a matter of fact, SFPAs endeavour that all similar vessels fishing in a partner country are subject to the same rules of control and transparency. By doing so, SFPAs have become a benchmark for supporting good fisheries governance at global level.

RFMOs have as their main mandate to promote the conservation and sustainable management of the stocks under their purview and their ecosystems.

1. Overview

1.1. Challenges

All current and future EU generations are affected by environmental and climate problems. These problems impact on citizens' health and quality of life, as well as the availability and status of natural resources, implying social and economic costs.

The EU confirmed its commitment to act with its multi-annual strategic general objective - the European Green Deal - a growth strategy that aims to transform the EU into a fair and prosperous society, with a modern, resource-efficient and competitive economy in which:

- (1) There are no net emissions of greenhouse gases in 2050;
- (2) Economic growth is decoupled from resource use;
- (3) The EU's natural capital is protected, conserved and enhanced;
- (4) The health and well-being of citizens is protected from environment-related risks and impacts.

Given the global challenges of climate change and environmental degradation require a global response, the EU will lead by example and continue to promote and implement ambitious environment, climate and energy policies across the world.

Action is needed to support environmental protection with respect to biodiversity, chemicals and health, water quality and management, waste management, ambient air quality, resource management, clean energy, climate change mitigation and adaptation.

In particular the EU agreed to make at least 30% of EU expenditure climate-related in the years 2021-2027 and to work towards the ambition of providing 7.5% of annual spending under the Multiannual Financial Framework (MFF) to biodiversity objectives in the year 2024 and 10% of annual spending under the MFF to biodiversity objectives in 2026 and 2027.

Ongoing challenges arising from public goods failure; imperfect information; negative externalities; government, institutional, regulatory or policy failure; eco-innovation failure; societal failure; infrastructure lock-in and investment failure need to be addressed.

1.2. Mission (General objectives)

EU level intervention is needed:

- To achieve the shift towards a sustainable, circular, energy-efficient, renewable energy-based, climate-neutral and -resilient economy.
- To protect, restore and improve the quality of the environment, including the air, water and soil.
- To halt and reverse biodiversity loss and to tackle the degradation of ecosystems.

The LIFE programme occupies a niche between EU programmes for research and innovation and large development programmes. As such, LIFE bridges the gap between research and policy implementation, addressing the external factors related to environmental and climate innovations by testing and demonstrating practical solutions.

1.3. Specific objectives

The LIFE Programme aims to facilitate the shift towards a sustainable, circular, energy-efficient, renewable energy-based, climate-neutral and climate-resilient economy. LIFE will contribute to reduce GHG emissions and our vulnerability to the harmful effects of climate change to protect, to restore and improve the quality of the environment, including air, water and soil, and to halt and reverse biodiversity loss. Moreover, it will tackle the degradation of ecosystems, including through supporting the implementation and management of the Natura 2000 network, thereby contributing to sustainable development.

The LIFE Programme shall also support the implementation of general action programmes adopted in accordance with Article 192(3) TFEU. The LIFE Programme shall have the following specific objectives:

- (a) To develop, demonstrate and promote innovative techniques, methods and approaches for reaching the objectives of the Union legislation and policy on the environment (including nature and biodiversity), and on climate action (including the transition to renewable energy and increased energy efficiency). In addition, the programme will contribute to the

knowledge base and to the application of best practice, in particular in relation to nature and biodiversity, including through the support of the Natura 2000 network;

- (b) To support the development, implementation, monitoring and enforcement of the relevant Union legislation and policy on environment, including nature and biodiversity, and on climate action and the transition to renewable energy and increased energy efficiency. This will be achieved by improving governance at all levels, in particular through enhancing the capacities of public and private actors, and involving civil society organisations;
- (c) To catalyse the large-scale deployment of successful technical and policy-related solutions for implementing the relevant Union legislation and policy on environment, including nature and biodiversity, and on climate action and the transition to renewable energy and increased energy efficiency. This will be achieved by replicating results, integrating related objectives into other policies and into public and private sector practices, and by mobilising investment and improving access to finance.

1.4. Public intervention context

Environment is an area of shared competence between the European Union and the Member States. The Union is therefore able to legislate and adopt binding acts. Its scope for action is limited by the principle of subsidiarity: the Union may act only when the objectives of an action cannot be sufficiently achieved at the Member States level, and could be better achieved at the Union level.

Articles 11 and 191 to 193 of the Treaty on the Functioning of the European Union (TFEU) define the scope of action of the Union.

The EU has some of the world's highest environmental standards, developed over decades. EU environmental legislation protect natural habitats and safeguards the health and wellbeing of people living in the EU, targeting clean air and water, proper waste disposal and management of toxic chemicals.

The EU formulates and implements environmental and climate policies and strategies, taking a leading role in international negotiations on environment climate. It is a party to numerous global, regional or sub-regional environmental agreements on a wide range of issues, such as nature protection and biodiversity, climate change, transboundary air or water pollution. It is committed to ensuring the successful implementation of the Paris Agreement and implementing the EU's Emissions Trading System (EU ETS). In this regard, EU countries have agreed to meet various targets in the years to come.

1.5. Actions

The financial envelope for the implementation of the LIFE Programme is implemented via four sub-programmes: (1) Nature and Biodiversity; (2) Circular Economy and Quality of Life; (3) Climate Change Mitigation and Adaptation; (4) Clean Energy Transition.

Funding can be mobilised via the following activities:

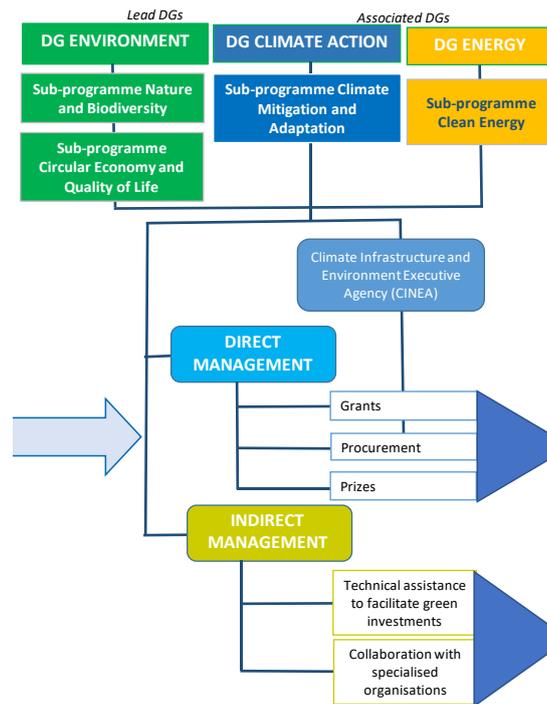

- Grants (which includes Strategic Nature Projects, Strategic Integrated Projects, Standard Action Projects, Technical Assistance Projects, Other Actions and Operating Grants);
- Procurement;
- Prizes;
- Support to investment operations, including technical assistance and blending.

1.6. Delivery mode

The budget of the LIFE programme is mainly implemented through direct management (grants, procurement and prizes). Indirect management can be used for specific activities e.g. to finance technical assistance services to support investment operations, activities of international organisations or other assimilated bodies.

For the programme implementation under direct management, the Directorate-General for Environment (DG ENV) is the lead Directorate-General with support from the Directorate-General for Climate Action (DG CLIMA) and the Directorate-General for Energy (ENER). The new Climate, Infrastructures and Environment Executive Agency (CINEA) is entrusted with the management of the bulk of grants and some procurement activities mainly linked to project management.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/783 of the European Parliament and of the Council of 29 April 2021 establishing a Programme for the Environment and Climate Action (LIFE), and repealing Regulation (EU) No 1293/2013 (OJ L 172, 17.5.2021, p. 53).	2021 - 2027	5 432.00

1.8.2. Legal basis explanation

According to Art 18 of the above mentioned Regulation, the programme is implemented through Multiannual Work programmes. The first Multiannual Work programme covers the years 2021-2024

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	738.8	755.5	728.3	751.6	783.5	826.6	871.4	5 455.8
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities	1.1	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	1.1
Total	739.9	755.5	728.3	751.6	783.5	826.6	871.4	5 456.9

(*) Only Article 15(3) of the financial regulation.

The financial programming for the LIFE programme under the Multi-annual financial framework is lower at the beginning and higher at the end. Increases in the core-funding of the European Environment Agency (EEA) and the European Chemicals Agency (ECHA) to cover new activities in the field of Environment and Climate action are being offset by transfers from the LIFE programme.

For 2021 and 2022, such transfers have been compensated by additional funds allocated by the budgetary authority to the LIFE programme during the budget procedure.

In comparison with the initial financial programming, the figures for the LIFE programme are at present the following:

- 2021:	EUR + 38.827.372	2022:	EUR + 40.545.484	2023:	EUR -7.681.546
- 2024:	EUR -10.112.533	2025:	EUR -11.296.604	2026:	EUR -10.257.086
- 2027:	EUR -11.457.508.				

1.9. Link with the 2014-2020 MFF

The number of sub-programmes has increased from two (Environment; and Climate Action) to four (Nature and Biodiversity; Circular Economy and Quality of Life; Climate Change Mitigation and Adaptation; and Clean Energy Transition).

Clean Energy Transition incorporates a set of actions for capacity-building supporting sustainable energy, energy efficiency and renewable energy, which was previously funded under Horizon 2020 (until 2020).

A reinforced focus on nature and biodiversity is ensured.

Building on the Strategic Integrated Projects first launched under the 2014-2020 LIFE programme, the 2021-2027 LIFE programme will continue to support this project type (to a slightly greater scale than previously). A dedicated source of funding to support strategic nature projects has been introduced under the Nature and Biodiversity sub-programme.

Financial instrument operations will be managed under InvestEU, while the programme, based on the lessons learnt from the pilot experiences run between 2014 and 2020, will support capacity-building by providing, on pilot basis, technical assistance for facilitating green investments and for greening other investments.

Taking into account the excellent results obtained with the BEST (Biodiversity and Ecosystem Services in Territories of European Overseas) programme, LIFE will ensure its continuation. This implies the expansion of the scope of the programme to Overseas Countries and Territories.

1.10. Relevant websites providing more information

The main website for the LIFE Programme is: https://cinea.ec.europa.eu/life_en

It provides information on the LIFE programme itself, funding opportunities, project management and links with the database including information on all LIFE projects ([LIFE 3.0 - LIFE Project Public Page \(europa.eu\)](#)), the best LIFE projects ([Best projects and LIFE Awards \(europa.eu\)](#)) and publications ([LIFE publications \(europa.eu\)](#)).

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	739.8	5 461.7	14%
Payments	22.8		0%

Despite the late agreement reached on the MFF, the Regulation for the LIFE Programme was adopted on 29 April 2021.

Thanks to a close collaboration with the Member States within the LIFE Committee, the Commission managed the adoption of the first Multiannual Work Programme on 9 July 2021. The calls for proposals for action grants, new framework partnership agreements and operating grants were launched immediately thereafter. A limited number of small technical assistance projects was signed in 2021, the bulk of grants agreements will be concluded throughout 2022. Procurement activities resumed in July, leading to the signature of service contracts, studies, etc that will underpin environmental and climate policies.

The calls for proposals for action grants, new framework partnership agreements and operating grants were launched immediately thereafter [the adoption of the first Multiannual Work Programme on 9 July 2021]. A limited number of small technical assistance projects was signed in 2021, the bulk of grants agreements will be concluded throughout 2022. Procurement activities resumed in July, leading to the signature of service contracts, studies, etc.. that will underpin environmental and climate policies

As usual, the bulk of 2022 appropriations - more than 80% of the budget - is used to finance different types of projects submitted by EU private and public organisations, about 17% of the budget is for the financing of procurement contracts to support the work on environment, climate and energy legislation and policies and 3% of the budget is devoted to the provision of technical assistance for facilitating green investments.

In 2023, about 600 million EUR will allow to finance indicatively 200 projects on nature and biodiversity (40% of the budget), on circular economy and quality of air, water, soils etc.. (26% of the budget) on climate mitigation and adaptation (18%) and on sustainable energy (16%). In addition, about 90 million EUR will be used to cover the activities necessary for the preparation, implementation, monitoring and evaluation of new legislation and policies in the environment and climate fields. This includes the legally required operations, mainly related to environmental reporting, that allow the Commission to exercise its duties of “Guardian of the Treaty” (in other words, to assess Member State implementation of EU environmental laws and report the results to the European Parliament and the Council). These outsourced activities are mainly procurement contracts with service providers or administrative agreements with the Joint Research Center. Finally, around 3% of the budget is required to support *green solutions*, where a lack of capacity to access funding constitutes the main barrier for the large-scale deployment of a technology, approach or policy, which proved to be effective. This kind of support is implemented via different technical assistance facilities: by the EIB, in the framework of Invest EU and by CINEA through Green Assist,

The required payment funds will be mainly used to finance on-going projects and relevant contracts. Most projects and contracts are in fact multi-annual and payments are made in instalments.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	3 464.4	3 466.4	100%
Payments	1 962.3		57%

The cumulative implementation rate is in line with expectations.

The last legal commitments (both grant agreements and procurement contracts) were signed in 2021. Implementation is in full swing. About 1400 projects were financed, and only a limited number have been completed. The payment rate reflects the project/contract life cycle.

In general, in the 2014-2020 period, a few novelties have been introduced (integrated projects and financial instruments). Both have an impact on the payment rate. Integrated projects are conceived to support the full implementation of plans and strategies and last longer (around eight years) than other types of projects. The implementation of two pilot innovative financial instruments (the Natural Capital Financing Facility (NCFF) and the Private Finance for Energy Efficiency (PF4EE) proved to be slower and more challenging than expected.

In 2020, projects financed under the Environment and Resource Efficiency priority areas and projects on climate change mitigation, have continued to register a high proportion of beneficiaries from the private sector (55% and 48% respectively). Under these areas, the LIFE programme is more attractive to private companies than to public bodies or to civil society organisations. Public sector organisations are the main beneficiaries of climate adaptation supports (57% of the total beneficiaries), and of nature and biodiversity projects (58% of the beneficiaries). Private non-commercial organisations account for 30% of the total number of beneficiaries for biodiversity projects.

In the last two years the programme implementation was somewhat affected by the COVID-19 pandemic, several measures have been introduced to support beneficiaries during this difficult period (e.g., increase in pre-financing, extended deadlines for submission of offers, information support to prepare proposals).

A substantial increase in the requests of modifications to the projects (amendments) was registered. Out of nearly 1.000 on going projects, nearly one out of two requested an amendment and almost one third of the projects was extended for COVID-19 -related reasons. Projects that requested an extension are mature projects, from calls 15, 16 and 17 mostly. Their implementation was on track until disrupted by COVID-19 measures. The delays in their implementation are linked to difficulties in launching stakeholder events, in obtaining permits and other administrative documents, or simply to lock-downs that prevented field activities.

Nevertheless, the available payment appropriations could be fully used.

Taking into account these delays, it is expected that at least 75% of payment appropriations will be used by end of 2027.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

We are in an early stage of implementation of the programme 2021-2027. Most projects financed on the 2021 budget have not started yet.

The definition of baselines, milestones and targets for the programmes is based on historical data collected per indicator on the performance of projects financed in 2014-2020.

Baselines for the outputs indicators and for the new indicators without available historical data, have been fixed at 0.

For all the other indicators, baselines have been fixed at the level of the actual results/impact of the projects 2014-2020. The figures could still evolve given not all the data on Key Performance Indicators for all the projects are validated, yet.

Milestones and targets in terms of expected outputs, results or impact per indicator have been defined taking into account the outputs, results and impact of projects 2014-2020. The indicative number of projects that will contribute to each indicator in the period 2021-2027 is identified based on projections on the average size and the estimated budget allocations per thematic areas (such as clean air, water savings, water quality, circular economy) in the coming seven years.

All forecasts for future milestones and targets are based on the assumption that projects will follow similar trends as in the programming period from 2014 to 2020. However, the LIFE programme has a bottom up approach. This implies that the Commission is not in the position to control neither the demand per area of financing nor the ambition of future projects. The actual outputs, results and impact of the LIFE projects in 2021-2027 will depend on the scope of projects retained for funding after the evaluation process and on all the variables mentioned above.

Future achievements might thus differ from the forecast, if the trends in the demand and in the projects awarded will differ.

In the forecast for future achievements (milestones and targets) another assumption is that projects will continue to show similar synergies as the ones registered in projects financed in 2014-2020. In the period 2014-2020 an important number of projects have contributed to more than one indicator (e.g. about 60 projects under Environment and Resource Efficiency have contributed to the reduction of CO2 emissions).

Future projects may not develop (similar) synergies than in the past, thus implying a sensible difference in the final achievements.

Milestones and target should therefore be considered as indicative. They could be revised during the implementation of the programme, taking into account the demand trends.

3.1.2. Active programme performance

The preparatory work for starting the implementation of the programme was successfully completed. The legal framework was finalised with the adoption of the Multiannual Work Programme 2021-2024. The transition to the Climate, Infrastructure and Environment Executive Agency (CINEA) that took over the implementation of the grants from the Executive Agency of Small and Medium Enterprises (EASME) happened in a smooth way. The calls for proposals were launched without delays.

Almost 40 calls for proposals have been launched in 2021, 19 of which under the new Clean Energy Transition Sub-programme.

Among the calls for proposals with higher financing

- The call for proposals for Standard Action Projects (SAP) registered more than 400 proposals under the sub-programmes Circular Economy and Quality of Life and Nature and Biodiversity. More than 170 proposals were received under the Climate Mitigation and Adaptation sub-programmes. More than 168 proposals as well were received under the Clean Energy Transition sub-programme. The evaluation of these calls for proposals is underway.
- The call for proposals for integrated projects launched in 2021 attracted 23 applicants. The second stage of this call for proposals is underway.

The LIFE Programme contributed to the New European Bauhaus (see related [infographic](#)).

Beyond projects, the LIFE programme financed several activities in support of environmental, climate and energy legislation and policies, including i.a:

- The “fit for 55 package”, in particular to deliver the new and more ambitious climate and energy targets to reduce net greenhouse gas emissions by at least 55% by 2030 (I.e., the revision of the EU Emission Trading System Directive, the Effort Sharing Regulation, the CO2 standards for cars and vans and the Land Use, Land Use Change and Forestry Regulation, as well as the establishment of a Social Climate Fund) , as well as the energy legislative revisions: the Energy Efficiency Directive, the Renewable Energy Directive and the Energy Performance of Buildings Directive)
- the COP 26 in Glasgow
- the new EU Strategy on Adaptation to Climate Change
- The Communication on Sustainable Carbon Cycles
- The implementation of the Renovation Wave Strategy;
- the update of concentration limit values of **persistent organic pollutants in waste**
- **the Zero pollution** action plan for water, air and soil
- the progress report on the implementation of **the EU Pollinators Initiative**
- the New **EU Forest Strategy**

- the EU **Soil Strategy**
- the revision of the Environmental Crime Directive to ensure **environmental protection through criminal law**

New challenges for next years are related to the association of third countries to the programme, the implementation of the Seal of Excellence and the promotion of the programme in the newly eligible Overseas Countries and Territories.

3.1.3. Previous Programme Performance

The LIFE Programme should act as a catalyst for changes in policy development and implementation by providing and disseminating solutions and best practices to achieve environmental and climate goals, and by promoting innovative environmental and climate change technologies.

It is extremely difficult to quantify the catalytic effect of the programme, particularly if the bulk of its activities are still on-going. This notwithstanding, the current performance of the programme can be measured mainly in terms of expected results of the projects (supported via grants), which represent more than 81% of the overall budget.

In terms of outputs, the LIFE programme financed in the period 2014-2020 more than 1400 projects that have contributed to the European Green Deal by mainstreaming Nature and Biodiversity and/or Zero Pollution and/or Circularity and/or climate action goals.

About one third of these projects are developing, demonstrating and promoting innovative techniques and approaches to achieve synergies between Climate Neutrality/Adaptation and Zero Pollution, Biodiversity or Circular Economy Goals, thus contributing to promote a holistic vision of the environment.

LIFE also promotes the mobilisation of additional funds for environment and climate action.

With the 11 additional integrated projects financed in 2021, the total LIFE financing for integrated projects amounts to EUR 110 000 000. These projects should facilitate the co-ordinated use of more than EUR 10 000 000 000 complementary funding. This implies that, for each euro financed by the LIFE programme in the years 2014-2020, additional EUR 45 are expected to be financed from other sources for the implementation of the targeted plans. Experience shows that the amount of additional funds mobilised by the integrated projects tends to increase during the project lifetime.

In terms of indicators, the 2020-2021 data continue the previous trends and largely confirm the results of the mid-term evaluation as regards as the effectiveness and the EU added value of the programme, confirming that the programme is performing well.

In particular, the LIFE programme 2014-2020 has already exceeded the 2020 targets related to a large part of indicators. Some of these indicators still show growing figures thanks to new projects and the on-going validation of performance data for previous on-going projects.

A selection of indicators related to the 2014-2020 programme is included in section 5 below.

The results of the [annual report of the Court of Auditors on the implementation of the budget concerning the financial year 2018](#) (2019/C 340/01) were presented in the previous programme statements. No new European Court of Auditors report on the budget performance of the LIFE programme was published.

3.2. Key achievements

The role of the LIFE Programme is not to solve all the environmental and climate problems but to address the market and institutional failures that limit the transition towards a sustainable, climate-neutral and resilient economy where economic growth is decoupled from resource use and natural capital is protected. The overall number of projects and the results below prove the role of the programme:

314	27. 000	1,7 million	12 million	300	1,8 million
Wildlife species populations are expected to improve their conservation status thanks to 175 on-going LIFE projects	Tons/year of waste are expected to be appropriately managed thanks to 178 on-going LIFE projects	Are the people whose vulnerability to the adverse effects of climate change is expected to be reduced thanks to 118 on-going LIFE projects	Tons/year of greenhouse gas emissions are expected to be reduced by 263 on-going LIFE projects	Tons/year of dangerous chemicals are no more used and/or produced thanks to 16 completed LIFE projects	People have benefitted from cleaner air thanks to 25 completed LIFE projects

Further results/impact of the LIFE programme 2014-2020 are included as baselines for the indicators of the current programme (see the tables in section 4).

3.3. Evaluations, studies and reports

The key findings of the latest evaluation ([COM\(2017\) 642 final](#) – [SWD\(2017\) 356 final](#)) have been presented in the Programme Statement 2018.

The impact assessment accompanying the Commission Proposal for the LIFE programme 2021-2027 (see [SWD\(2018\) 292 final](#)), takes stock of the programme 2014-2020 to plan for further improvements. Last years publications on the LIFE programme are available at [Publications \(europa.eu\)](#) and include the following:

- [Disrupting the linear model: LIFE and the circular economy](#)
- [The LIFE Programme and Energy](#)
- [LIFE Integrated projects](#)
- [Connecting the dots - LIFE lessons on ecological connectivity](#)

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Develop, demonstrate and promote innovative techniques, methods and approaches for reaching the objectives of the Union legislation and policy on environment, and on climate action, including the transition to renewable energy and increased energy efficiency, and to contribute to the knowledge base and to the application of best practice, in particular in relation to nature and biodiversity, including through the support of the Natura 2000 network;

Indicator 1: Number of projects that are developing, demonstrating and promoting innovative techniques and approaches to contribute to the shift towards a sustainable, circular, energy-efficient, renewable energy-based, climate-neutral and -resilient economy

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2030
0	0	0	0	145	273	399	517	636	756	875
	Actual Progress									Final
0	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of projects
Cut-Off Date	31/12/2030
Data source	LIFE project database / E-grant
Link to the objective	Link to Specific Objective 1: Contribute to the shift toward a clean, circular, energy efficient, low-carbon and climate resilient economy and in particular to "develop, demonstrate and promote innovative techniques, methods and approaches for reaching the objectives of the Union legislation and policy on environment and on climate action, including the transition to renewable energy and increased energy efficiency, and to contribute to the knowledge base"
Link MFF 14-20 / MFF 21-27	It was not included in the indicators reported in previous programme statements. Data on this indicator in the period 2014-2020 are available.
Other methodological comments	Taking into account the project life cycle and the delays in the start-up of the programme implementation, data will be available starting from 2024. Data are cumulative. Milestones and targets are based on historical trends and projections on the average size and the estimated budget allocations for these projects. The actual outputs will depend on these variables and on the scope of projects retained for funding after the evaluation process.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The data on the first projects following the 2021 calls for proposals will be available for the programme statement annexed to the 2024 Draft Budget.

Indicator 2: Number of projects, including strategic integrated projects, implementing key plans and strategies

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2030

Indicator type	Impact
Unit of measurement	Number of individuals
Cut-Off Date	
Data source	LIFE key performance indicator database / E-grant
Link to the objective	Link to Specific Objective 1: Contribute to the shift toward a clean, circular, energy efficient, low-carbon and climate resilient economy and in particular "Develop, demonstrate and promote innovative techniques, methods and approaches for reaching the objectives of the Union legislation and policy on environment and on climate action, including the transition to renewable energy and increased energy efficiency, and to contribute to the knowledge base"
Link MFF 14-20 / MFF 21-27	This is a new indicator introduced for the 2021-2027 programming period that cannot be compared with the previous one (2014-2020). Data on few projects are available for 2014-2020. Projections are based on a combination of former indicators.
Other methodological comments	Taking into account the project life cycle and the delays in the start-up of the programme implementation, data will be available starting from 2024. Data are cumulative. Milestones and targets are based on past project performance, number and size of selected projects and number/ambition of the proposals. The actual impact in 2024-2030 will depend on these variables and on the intervention area of projects retained for funding after the evaluation process.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The data on the first projects following the 2021 calls for proposals will be available for the programme statement annexed to the 2024 Draft Budget.

Indicator 12: Additional annual energy savings

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2030

Cut-Off Date	31/12/2030
Data source	LIFE key indicators database / E-grant
Link to the objective	Link to specific objective 3: Contribute to putting Union legislation and policy into practice, and to improving governance, and, in particular, “to support the development, implementation, monitoring and enforcement of the relevant Union legislation and policy on environment, including nature and biodiversity, and on climate action and the transition to renewable energy or increased energy efficiency, including by improving governance at all levels, in particular through enhancing capacities of public and private actors and the involvement of civil society”.
Link MFF 14-20 / MFF 21-27	Data on this indicator are not available for the period 2014-2020
Other methodological comments	Taking into account the project life cycle and the delays in the start up of the programme implementation, data will be available starting from 2024. Data are cumulative. Milestones and targets are based on historical trends and projections on the average size and the estimated budget allocations for these projects. The actual outputs will depend on these variables and on the scope of projects retained for funding after the evaluation process.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The data on the first projects following the 2021 calls for proposals will be available for the programme statement annexed to the 2024 Draft Budget.

Indicator 2: Cumulative investments triggered by the projects or finance accessed

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2030
0	0	0	0	480	881	1 260	1 656	2 070	2 484	2 898
	Actual Progress									Final
0	0									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Million EUR
Cut-Off Date	31/12/2030
Data source	LIFE key indicator database / E-grant
Link to the objective	Link to specific objective 4: Play a catalytic role in the replication and the triggering of large scale deployment of successful technical and policy-related solution and, in particular, “to catalyse the large-scale deployment of successful technical and policy-related solutions for implementing the relevant Union legislation and policy on environment, including nature and biodiversity, and on climate action and the transition to renewable energy or increased energy efficiency by replicating results, integrating related objectives into other policies and into public and private sector practices, mobilising investment and improving access to finance”.
Link MFF 14-20 / MFF 21-27	Data on this indicator are only partially available for the period 2014-2020.
Other methodological comments	Taking into account the project life cycle and the delays in the start up of the programme implementation, data will be available starting from 2024. Data are cumulative. Milestones and targets are based on past project performance, number and size of selected projects and number/ambition of the proposals. The actual result will depend on these variables and on the scope of projects retained for funding after the evaluation process.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en

Justification of the trend	The data on the first projects following the 2021 calls for proposals will be available for the programme statement annexed to the 2024 Draft Budget.
----------------------------	---

Indicator 3: Number of projects, including strategic integrated projects, implementing key plans and strategies

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2030
0	0	0	0	8	15	22	29	36	44	53
	Actual Progress									Final
0	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of projects
Cut-Off Date	31/12/2030
Data source	LIFE project database / E-grant
Link to the objective	Link to Specific Objectives 1 “Contribute to the shift toward a clean, circular, energy efficient, low-carbon and climate resilient economy”, 3 “Contribute to support the development, implementation, monitoring and enforcement of the Union legislation and policy on environment and climate action and to improve governance, including by improving governance at all levels, in particular through enhancing capacities of public and private actors and the involvement of civil society” and 4 “Play a to catalytic role in the replication and the triggering of large-scale deployment of successful technical and policy-related solutions”
Link MFF 14-20 / MFF 21-27	It was not included in the indicators reported in previous programme statements. Data on this indicator in the period 2014-2020 are available.
Other methodological comments	Taking into account the project life cycle and the delays in the start up of the programme implementation, data will be available starting from 2024. Milestones and targets are based on historical trends and projections on the average size and the estimated budget allocations for these projects. The actual outputs will depend on these variables and on the scope of projects retained for funding after the evaluation process.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Programme for the Environment and Climate Action (LIFE)

General Objective 3: To support better environmental and climate governance at all levels, including better involvement of civil society, NGOs and local actors

Indicator 1: Number of interventions to ensure better governance, dissemination of information and awareness of environmental and climate aspects

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				420			800			800
	Actual Progress									Final
	122	252	324	496	648	731	792	872		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of governance projects
Cut-Off Date	31/12/2021
Data source	Database of LIFE projects (Butler)
Narrative	One of the LIFE objective is to support better environmental and climate governance at all levels, including better involvement of civil society, NGOs and local actors;
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator will be used also for the LIFE Programme 2021-2027
Other methodological comments	Although all interventions contain an information, dissemination and/or awareness raising component, the interventions financed to "support better environmental and climate governance and information" (budget item 07 02 03 and 34 02 03), whether funded through grants or procurement, are specifically designed to address this objective and are therefore used as the reference indicator. They include the operating grants to NGOs. The figures are cumulative and in 2017 include the European Solidarity Corps initiatives financed by LIFE. 2021 data include the results of the ad hoc call for proposals to support NGOs for the Green Deal. No additional projects financed by the project 2014-2020 will be financed in 2022.
Full metadata available at this address	
Justification of the trend	The programme results are substantially in line with the expected target

General Objective 4: To support the implementation of the 7th Environment Action Programme

Indicator 1: Number of interventions to support the implementation of the 7th Environment Action Programme

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
				1 300			1 700			1 700
	Actual Progress									Final
		970	1 305	1 625	2 089	2 507	2 704	2 999		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of projects and other programme actions (e.g. prizes, procurement contract)
Cut-Off Date	31/12/2021
Data source	Database of LIFE projects (Butler) and database on the actions of the Annual Management Plan
Narrative	One of the objectives of the LIFE Programme 2014-2020 is to support the implementation of the 7th Environmental Action Programme. All types of LIFE interventions are supposed to contribute to the 7th Environmental Action Programme.
Methodology	This indicator monitors the number of LIFE interventions which are registering an improvement in comparison with their respective baselines.
Link MFF 14-20 / MFF 21-27	Other indicators were selected for monitoring the performance of the programme in the period 2021-2027.
Other methodological comments	All LIFE interventions, whether funded through grants, procurement or financial instruments, support the implementation of at least one of the priority objectives of the 7th Environment Action Programme. Figures include interventions over 100.000 EUR and are cumulative. For 2021 only

	projects financed through grants have been included in the calculation. No additional increase are foreseen on 2022.
Full metadata available at this address	
Justification of the trend	The data show an overachievement that could be linked to an initial underestimation of the number of LIFE interventions and/or the number of interventions producing results-

Specific Objective 1: Contribute to a greener and more resource-efficient economy and to the development and implementation of EU environmental policy and legislation (Environment and Resource Efficiency priority area)

Indicator 2: Population benefiting from improved air quality

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
				1 000 000			1 400 000			1 400 000
	Actual Progress									Final
	370 000	842 600	934 000	1 100 000	1 500 000	1 638 500	1 871 000			
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Persons covered by ongoing projects which progress towards or finalised projects which achieved improved air quality.
Cut-Off Date	31/12/2020
Data source	Database of LIFE Key Performance Indicators (KPIs)
Narrative	One of the objectives if the LIFE programme 2014-2020 is to help move towards a resource-efficient, low carbon and climate resilient economy, improve the quality of the environment and halt and reverse biodiversity loss;
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator is part of the core performance indicators selected for monitoring the performance of the LIFE Programme 2021-2027
Other methodological comments	Number of persons covered by ongoing/ finalised projects which progress towards improved air quality.
Full metadata available at this address	
Justification of the trend	The programme performance is exceeding the initial estimates

Indicator 3: Percentage of regions covered by waste IPs and thus progressing towards or having reached adequate waste management

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				2%			3%			3%
	Actual Progress									Final
		1,8%	2,5%	2,5%	3,9%	4,3%	8,6%			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage of regions that are covered by waster IPs and progress towards or achieved adequate waste management.
Cut-Off Date	31/12/2020
Data source	Database of LIFE projects (Butler)
Narrative	One of the objective of the LIFE Programme 2014-2020 is to help move towards a resource-efficient, low carbon and climate resilient economy, improve the quality of the environment and halt and reverse biodiversity loss
Methodology	This indicator monitors the regions targeted by LIFE integrated projects where comprehensive Waste Management plans are being implemented.
Link MFF 14-20 / MFF 21-27	This indicator has not been retained as core performance indicator for the evaluation framework of the LIFE Programme 2021-2027
Other methodological comments	Height integrated projects are focused on waste covering 21 regions (NUTS 2)
Full metadata available at this address	
Justification of the trend	The trend is exceeding with the initial estimates. The high number of integrated projects on waste and the ambition of the selected projects have contributed to this achievement.

Indicator 4: Percentage of River Basin Districts (RBD) covered by IPs and thus progressing towards or having reached adequate management

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				3%			5%			5%
	Actual Progress									Final
		2%	4%	5%	8%	8,3%	8,3%			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage of RBD are covered by integrated projects that progress towards or have achieved adequate management.
Cut-Off Date	31/12/2020
Data source	Database of LIFE projects (Butler)
Narrative	One of the objective of the LIFE Programme 2014-2020 is to help move towards a resource-efficient, low carbon and climate resilient economy, improve the quality of the environment and halt and reverse biodiversity loss
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator has not been selected as core-performance indicator for the monitoring of the performance of the LIFE Programme 2021-2027
Other methodological comments	Percentage of RBD covered by integrated projects and progressing towards adequate management. Ten integrated projects, out of twelve integrated projects on water, are addressing the management of river basin districts and have started their activities. No new integrated projects on Water have been financed with 2020 budget. The figures are not expected to increase in 2022.
Full metadata available at this address	
Justification of the trend	The data show an overachievement that could be linked to-- an initial underestimation of the potential project results and/or-- the high quality of integrated projects, and/or-- the fact that all integrated projects are still under implementation and few projects already ended.

Specific Objective 2: Halting and reversing the biodiversity loss, including the support of the Natura 2000 network and tackling the degradation of ecosystems (Biodiversity priority area)

Indicator 4: Percentage of the Natura 2000 sites covered by nature IPs and thus progressing towards the implementation of prioritised actions frameworks

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
0				4%			6%			6%
	Actual Progress									Final
			12%	20%	23.4%	34%	38%			
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Percentage of the Natura 2000 sites are targeted by nature IPs and progress towards or achieved the implementation of prioritised actions frameworks.
Cut-Off Date	31/12/2020
Data source	Database of LIFE projects (Butler)
Narrative	One of the objectives of the LIFE programme 2014-2020 is to contribute to improve the quality of the environment and halt and reverse biodiversity loss.
Methodology	The indicator monitors percentage of the Natura 2000 sites targeted by LIFE integrated projects implementing prioritised action frameworkq
Link MFF 14-20 / MFF 21-27	This indicator was not retained as core performance indicators for the programme 2021-2027.
Other methodological comments	At present n.25 integrated projects (IPs) are supporting the implementation of Prioritized Action Frameworks developed in Belgium, Czech Republic, Finland, Hungary, Italy, Germany, Latvia, Netherlands, Portugal, Slovenia, Slovakia Spain, France, Lithuania, Sweden, Greece, Denmark, Estonia, Ireland, Cyprus, France and Finland pursuant to Article 8 of the Habitats Directive. Source: Database of LIFE projects (Butler).
Full metadata available at this address	
Justification of the trend	At present n.23 integrated projects (IPs) are supporting the implementation of Prioritized Action Frameworks developed in Belgium, Czech Republic, Finland, Hungary, Italy, Germany, Latvia, Netherlands, Portugal, Slovenia, Slovakia Spain, France, Lithuania, Sweden, Greece, Denmark, Estonia, Ireland and Cyprus pursuant to Article 8 of the Habitats Directive. ; Source: Database of LIFE projects (Butler);

Specific Objective 4: Reduction of EU greenhouse gas emissions and development and implementation of EU climate policy and legislation (Climate Change Mitigation priority area)

Indicator 1: Number and coverage of climate change mitigation strategies or action plans developed or implemented through LIFE

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
							27			27
	Actual Progress									Final
	7	13	20	26	33	38	41			
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of climate change mitigation strategies or action plans covering at least one region and supported by LIFE projects
Cut-Off Date	31/12/2020
Data source	Database of LIFE projects (Butler)
Narrative	One of the objective of the LIFE Programme 2014-2020 is to contribute to move towards a resource-efficient, low carbon and climate resilient economy
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator has not been selected as core performance indicator for the evaluation framework of the LIFE Programme 2021-2027
Other methodological comments	Three new integrated projects on climate mitigation were financed in Hungary, Poland and Ireland to support the national climate action plans and started their activities in 2020.
Full metadata available at this address	
Justification of the trend	The data show an overachievement that could be linked to the increasing attention that is being devoted to the need to have climate change mitigation plans and strategies

Specific Objective 5: Increased resilience of the EU to climate change (Climate Change Adaptation priority area)

Indicator 3: Number of interventions to improve the knowledge base for Union climate policy and legislation, and for assessing and monitoring factors, pressures and responses having an impact on the climate resilience (cf. Article 15(b) Regulation 1293/2013)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
IPs										
	Milestones									2020
30%				80%	80%	80%	100%			100%
	Actual Progress									Final
		100%	100%	100%	100%	100%	100%			
Are we on track :	On track									
Traditional projects										
	Milestones									2020
				30%	30%	30%	25%			25%
	Actual Progress									Final
		37%	38%	36%	34%	41,2%	41,7%			
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of projects
Cut-Off Date	31/12/2020
Data source	LIFE project database
Narrative	One of the objectives of the LIFE Programme 2014-2020 is to contribute to move towards a resource-efficient, low carbon and climate resilient economy
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator has not been selected as core performance indicator for the evaluation framework of the LIFE Programme 2021-2027
Other methodological comments	Percentage of the traditional projects funded in climate change adaptation priority area in 2020 out of

	the overall number of traditional projects under the Climate change priority area: No 18 out of 41 traditional projects financed in 2020 are on climate change adaptation.
Full metadata available at this address	
Justification of the trend	The data show an overachievement that is probably linked to the increasing awareness related to the need to improve the adaptation to climate change and mitigate the consequences of extreme weather events

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	375.20	426.15	406.25	417.35	431.65	451.77	470.50	2978.87	55%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

The LIFE Programme contributes to the overall target of 30% climate spending in the EU budget for the 2021-2027 period through all its sub-programmes:

- the whole sub-programmes climate mitigation and adaptation and clean energy transition finances activities directly aimed at contributing to cut our greenhouse gas (GHG) emissions to net-zero and to improve preparedness and capacity to respond to the impacts of climate change ;
- the sub-programme nature and biodiversity aims to protect, maintain and restore Union’s natural capital in its marine, freshwater and terrestrial ecosystems. Some of its activities contribute substantially to the adaptation to the adverse effects of climate change and to mitigate GHG emissions;
- the sub programme circular economy and quality of life aims at facilitating the transition toward a sustainable, circular, toxic-free, energy-efficient and climate-resilient environment; by – i.a. reducing resource consumption, contributing to the quality of waters and air, preventing soil degradation and increasing their resilience. It will thus contribute to climate action.

6.1.3. Key achievements

The following projects provide examples of key achievements:

The **LIFE FORECCAsT** project provided forest owners and managers of the Parc Naturel Régional du Haut Languedoc in France with information, user-friendly tools and other means to tackle the challenges of climate change. The project partners developed a mobile phone application to help forest stakeholders to evaluate and manage the risk of forest dieback in a context of global climate change. The project team implemented 25 test sites to provide Parc Naturel Régional du Haut Languedoc (PNRHL) professionals with potential solutions to their issues. Its tools and methodology will help preserve forest ecosystems by adapting practices to climate change, the goal being to maintain the financial revenues of forestry stakeholders and tourism industry. Social benefits are related to the economic benefits through employment in the forestry and tourism sectors.

The **LIFE LowCarbon Feed** project aimed to implement new low-emission methods and innovative practices in agriculture and farming, in order to perform an effective recovery of agricultural waste from citrus and rice production, as an alternative to incineration. The aim was to convert this recovered waste into a new animal feed capable of reducing methane emissions in ruminants, so reducing GHG emissions and mitigating climate change in agriculture, specifically from goat farming. The beneficiaries developed two new feeds for ruminants based on citrus pruning waste and rice straw: (i) LCFeed, a climate-friendly formula for a complete goat diet; and (ii) LCCitrus, an ingredient for goat feed. The main characteristic of these feeds is that they result in between 8% and 22% reduction of GHG emissions in the digestion process of goats. Moreover, since they are produced from agricultural waste, the new valorisation process avoids their elimination by burning, thus significantly reducing the GHG emissions from their combustion. A major achievement was the formulation of the innovative feeds, along with the proved results obtained from the goat tests, the impact on local/regional policies, and the efforts made to replicate the approach.

6.1.4. Performance

LIFE projects are expected to contribute to:

- reduce GHG emission by about 12 million tons of CO2 equivalent by year.

- reduce vulnerability to the adverse effect of climate changes of about 1.7 million EU citizens.

The LIFE contributions to these projects is about 580 million EUR.

For the year 2021, the new tracking system and the time necessary for the implementation (the projects following the calls for proposals launched in 2021 have not started yet) are causing some delays and are not allowing to fully record the contribution of the LIFE programme to climate spending.

Once these issues will be solved, the contribution of the programme to climate mainstreaming should reach the 61% target of LIFE budget devote to climate spending mentioned in the LIFE Regulation.

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution	332.07	343.51	331.43	346.25	365.50	391.09	420.04	2 529.89
Share compared to total envelope	44.95 %	45.46 %	45.51 %	46.07 %	46.65 %	47.31 %	48.20 %	46.37 %

(*These amounts include NextGenerationEU top-ups if any

6.2.2. Explanation On the financial contribution

Three LIFE sub-programmes contribute to biodiversity financing:

- 100% of the sub-programme Nature and Biodiversity that aims to protect and restore Europe’s nature and halt and reverse biodiversity loss. It funds nature conservation projects, in particular in the areas of biodiversity, habitats and species. It also supports the implementation of the EU Birds and Habitats directives, and in particular the development and management of the Natura 2000 network, and the IAS Regulation through projects and studies. This sub-programme contributes in full to the objectives and targets of the EU’s biodiversity strategy for 2030.
- 50% of the projects of the sub-programme Circular Economy and Quality of Life is expected to provide a significant contribution (40%) to the biodiversity. This sub-programme targets, inter alia:
 - Water and seas. The protection and improvement of groundwater and surface water quality and the prevention and elimination of water and marine pollutants in view to achieve and maintain a good chemical and ecological status of water bodies;
 - Air. The protection of air and the improvement of air quality through the prevention and/or reduction of air pollutants;
 - Soil. The restoration, remediation, protection and improvement of soil health, within natural or managed ecosystem boundaries, in view to provide ecosystem services, including to sustain plant and animal productivity and maintain or enhance water and air quality and to prevent soil loss;
 - Chemicals management. A more sustainable use of chemicals substances and mixtures, on their own and in articles and final products (including e.g. pesticides, fertilisers, antimicrobials and nanomaterials).
- 50% of the projects financed under the sub-programme Climate mitigation and adaptation, are expected to provide a significant contribution (40%) to the achievement of biodiversity targets. It supports i.a.
 - the rollout of viable nature-based solutions in the management of land, coastal and marine areas including through assessments, guidance, capacity building, and suitable financial approaches and products;
 - approaches and solutions to ensure a stable and secure supply of high quality freshwater, prevent droughts, reduce water use, protect and restore wetlands, and prevent floods.

The parts of the sub-programmes indicated under 2 and 3 are expected to provide a significant contribution (40%) to the achievement of biodiversity targets.

Taking into account the bottom up approach of the programme and the fact that the 2021 calls for proposals are still under evaluation the figures for 2021 still represent an estimate.

ERRATA CORRIGE: In the contributions of the LIFE programme to biodiversity mainstreaming for the year 2020, there was an error in the amount of the achieved contributions in the table and in the text below the table. The contributions of the LIFE programme to biodiversity mainstreaming in the framework of the objective “Contribute to a greener and more resource-efficient economy and to the development and implementation of EU environmental policy and legislation” are EUR 52,4 million and not EUR 60,4 million, as erroneously indicated in the table. The contributions of the LIFE programme to biodiversity mainstreaming in the framework of the objective “Halting and reversing the biodiversity loss, including the support of the Natura 2000 network and tackling the degradation of the ecosystems” are EUR 221,1 million and not EUR 122,2 million, as erroneously indicated in the text below the table. As a consequence the LIFE programme provided in 2020 a contribution of EUR 303,7 million to biodiversity mainstreaming.

6.2.3. Key Achievements

Examples of on-going projects targeting nature and biodiversity are the following:

The LIFE IP - MarHa Nature Integrated Project for effective and equitable management of marine habitats in France aims at improving the conservation status of all French marine habitat types listed in Annex I of the Habitats Directive. The project is working towards a short-term goal of at least half the habitats having a good conservation status by 2025. By 2040, the project aims at achieving a favourable conservation status for all the habitat types. It is expected that the project will contribute significantly to the implementation of the Prioritised Action Framework (PAF) for Natura 2000 in France and, more specifically, to all the marine habitat actions being carried out. In addition to the IP budget itself, the project will facilitate the coordinated use of about 50 Million EUR of complementary funding from EAFRD, ERDF, and national funds.

The **LIFE DELFI** project targets the reduction of dolphin mortality caused by fishing activities. Specific objectives are to: 1. disseminate bycatch reducer devices to reduce interactions between dolphins and fishing gear; 2. replace traditional fishing gear with less impacting gear; 3. support fishermen in the development of dolphin watching as an additional economic activity, especially in dolphin hot spot areas; 4. support fishermen in adopting more sustainable fishing practices through information desks; 5. raise awareness on the role of fishing in the protection of the marine environment; and 6. help public authorities to support fishermen through the introduction of compensation measures for damage caused by dolphins

6.2.4. Performance

LIFE has been a key tool supporting the implementation of the Birds and Habitats Directives since 1992 and has been instrumental and, in some cases crucial, to ensure the establishment of the Natura 2000 network.

LIFE projects financed in 2014-2020 continue to be a small but effective source of financing for biodiversity:

- More than 15 000 km² of habitats are being restored or are improving their conservation status;
- More than 300 species have improved their conservations status thanks to LIFE;
- Over 1500 Natura 2000 sites have benefited from LIFE funding by the end of 2019.

6.3. Contribution to clean air financing

6.3.1. Contribution

2021-2022 Estimates		2023-2027 programming (EUR million)					Total
2021	2022	2023	2024	2025	2026	2027	
	0.00	0.00					0.00

(*)These amounts include NextGenerationEU top-ups if any

6.3.2. Explanation On the financial contribution

The table below provides a view of the expected contribution of the LIFE Programme 2014-2020 to air quality and indicates the way in which it is calculated:

Action	Marker	LIFE contribution
LIFE projects focused on clean air	100%	96.782.897 EUR
LIFE projects contributing to clean air as a secondary benefit	40%	32.849.832 EUR
Total LIFE contribution to clean air		129.632.729 EUR

The methodology for calculating air quality spending was defined at the beginning of 2020 based on Rio markers, with the intention to capture the contribution of the programme to “clean air”, thus encompassing actions towards increasing air quality and reducing air pollution.

The financing for air quality is assessed at project level as follows:

- LIFE spending for projects focused on clean air, including relevant climate change mitigation projects (100 %);
- LIFE expenditures for projects significantly contributing to clean air as secondary benefit (40 %) and
- other LIFE expenditures (0 %).

This is the third year that the contribution of the LIFE Programme to air quality is required, however there are limited data available on all the on-going 2014-2019 projects. In particular, data on projects focused on clean air and data on projects having clean air as secondary benefit (40%) are not available for 2020 and cover only three projects in 2019. As a consequence, the contribution of the LIFE programme to clean air which appears in the table is underestimated.

6.3.3. Key achievements

An example is the **PREPAIR LIFE** integrated project that aims to improve air quality on a wide scale in the territory of the Po Valley in Italy and in Slovenia. It focuses on four main areas – biomass burning, energy efficiency, transport and agriculture. Activities promoted include the creation of a network of bike stations of the main cities of the Po Basin and develop cycling infrastructure; the establishment of permanent infrastructure for sharing air quality and emissions data, including an accessible common database of observed and modelling air quality data; training of public officers and advisors, with the aim of raising awareness and providing technical information to the local authorities to ensure that their plans take into account all types of sustainable transports; the promotion of electric mobility and sustainable driving. The project will implement also one demonstration project to improve the quality and usability of the cycle paths and at least one electric vehicle public transport initiative as well as at least three demonstration actions aimed at improving short-range freight transport.

The **LIFE-MAPPINGAIR/PL** project currently implemented in Poland supports a broad air quality information and awareness-raising campaign linking air quality forecasts, expanded monitoring and modern methods of education. It builds on the work of a previous project, LIFE-APIS/PL, adding new awareness raising and information tools. The project will educate citizens about the air quality in urban areas, with a special focus on the types and scale of threats, on how to reduce the problem, on health advice and on the air quality law. The project will also develop an online educational platform for air quality in the regions of Lower Silesia and Kuyavia.

The LIFE Programme also contributed the Commission preparatory work related to the [Zero pollution action plan for water, air and soil](#) and the [Chemical strategy for sustainability](#).

6.3.4. Performance

LIFE projects are expected to improve the quality of the air of 2.7 million people. They are reducing for example particulate matter (PM) by more than 200.000 tons/year, Nitrogen Oxides (NOx) from automobiles trucks and various non-road vehicles by 5 million tons/year, Sulphur dioxide (SO₂) from fossil fuels by 5 million tons/year and ammonia (NH₃) from agricultural and non-agricultural sources by 50.000 tons/year.

6.4. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates		2022-2027 programming					Total
2021	2022N	2023	2024	2025	2026	2027	
Score 0*: 738.7							0*

(* Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

Although gender equality is not among the specific objectives of the LIFE programme, a gender dimension is specifically taken into account in some areas of intervention to identify how men and women relate to the environment and climate action in different ways, thus addressing specific gender vulnerabilities e.g. inherent to harmful chemicals such as endocrine disruptors and persistent organic pollutants.

The links between gender and chemicals are also outlined in the EU [Chemicals Strategy for Sustainability Towards a Toxic-Free Environment](#). On-going work in this area is related to the reinforcement of the legal framework, with particular reference to the [REACH](#) and [CLP](#) Regulations, to support innovation for safe and sustainable chemicals and to promote better knowledge through specific LIFE projects. Some 2021 LIFE-funded activities such as “The third annual forum on endocrine disruptors”, the 2nd meeting of the High Level Roundtable on the Chemicals Strategy for Sustainability and the study on a common open platform on chemical safety mention a gender dimension, identifying specific vulnerabilities linked to pregnancy.

A gender perspective is also included, where relevant, at project level, often as a component of multidimensional projects.

Taking into account the scope of the LIFE programme, its limited size and its bottom up approach, it would not be appropriate to provide annual estimates in line with the principle of proportionality. At present some options for the systematic collection of information and data on the programme’s contributions to gender equality are being analysed. This should allow the integration of the gender dimension in the programme performance, so as to have the possibility to report on these contributions by the end of the programme. In case this system will be not-cost-effective, taking into account the burden for the project beneficiaries, or the information collected will be not significant enough, the score of the programme could be revised.

6.5. Contribution to the sustainable development goals

6.5.1. Goals

SDG 1 End poverty in all its forms everywhere

The LIFE programme does not aim to directly address poverty. However, some projects may include activities directed at not leaving anyone behind and/or to promote social justice in reaching climate neutrality.

The project **LIFE DoppelPlus** empowered individuals in low-income households to contribute to the Province of Tyrol's energy and climate strategy (to reduce the energy and CO2 consumption) within their means and improve the quality of life and financial situation. This was achieved by individual consultations of the households through so-called energy/climate coaches, which visited the households up to three times during the project course and explained relevant energy saving methods. The households received a starter kit to enhance motivation. The overall objective of the project has been to initiate change in everyday action of low-income households. Taking social justice into account, it is of high importance to include low-income households.

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

The promotion of sustainable agriculture is pursued in the framework of the nature and biodiversity projects as well as in the framework of the projects pursuing resource efficiency, clean water and water savings, soils.

An example is the **LIFE to Grasslands** project that was implemented between 2015 and 2020 in Slovenia. It focused on the conservation and management of dry grassland species listed under the Habitats directive. While pursuing its nature conservation-related objectives by restoring 139,14 ha of habitats and securing the sustainable management of grasslands over a total of 678 ha, the project fostered the development of sustainable agricultural production methods by supporting farms with the development of 10-years management plans for the extensive use of species-rich grassland taking into account the economic viability of these measures for the farmers. During the project period, five farms switched to organic farming, with organic milk being sold at higher prices to local dairy. Other farms registered or planned to register a new complementary activity on the farm (fruit processing, tourism on the farm). The project activities demonstrated a new farming model and new opportunities for marketing products from dry grasslands by using the collective brand "From step meadows of Haloze". The ongoing project **Dinara back to LIFE** is replicating this approach in Croatia. In December 2021 the project received by the National Geographic Croatia the Yellow Frame award for Sustainable Development in the category "Promoting of sustainable agriculture".

SDG 3 Ensure healthy lives and promote well-being for all at all ages

LIFE funds projects that work on improving air quality and specific air pollutants.

LIFE IP CLEAN AIR is supporting the municipalities of Sofia, Burgas, Veliko Tarnovo, Montana, Ruse, and Stara Zagora in their efforts to reduce air pollution and decrease PM10 emissions from household heating and other sources. With a combination of different activities including capacity building, awareness raising and transfer of knowledge, LIFE IP CLEAN AIR aims to achieve the target of fewer than 35 days per year of above-average daily levels of PM10, as required by EU and national legislation; reach and maintain average annual PM10 concentrations below the annual target for human health as determined by EU and national legislation; decrease the highest registered 24-hour concentrations of M10; and decrease PM2.5 and Sulphur oxide (SO2) levels by reducing domestic coal and wood fire emissions".

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Some LIFE projects promote new sustainable practices by allowing knowledge sharing, awareness raising and training activities.

The LIFE CLIMATE SMART CHEFS, will enable chefs to better promote a climate-smart, sustainable and healthy food system in the EU. This will be achieved by mobilising the capacities of different stakeholders and incorporating new strategies of awareness raising, communication and education, with the aim of ensuring more sustainable and nutritious diets in the EU.

The **LIFE ENABLE** project that started in May 2021 aims to equip Natura 2000 site managers with the competencies they need now and for the future, by applying a blended learning approach. The project will create a European training system called the 'European Natura Academy', which will implement a range of actions to support practical capacity building for effective nature management.

SDG 5 Achieve gender equality and empower all women and girls

Examples of LIFE projects which foresee a gender dimension include:

"Mother and Infant dyads: Lowering the impact of endocrine disrupting Chemicals in milk for a Healthy Life ([LIFE18 ENV/IT/000460](#))". This project aims to improve knowledge about the correlation between levels of maternal exposure to EDCs/milk contamination and the health status of infants, in order to support public health policies.

"Phthalates and bisphenol A biomonitoring in Italian mother-child pairs: link between exposure and juvenile diseases ([LIFE13 ENV/IT/000482](#))" aims to estimate internal levels of di-2-ethylhexyl phthalate (DEHP) metabolites and Bisphenol A (BPA) among children and their mothers in view to reduce exposure and risks from endocrine disruptors (EDs).

"Linking Environment and Health: a Country-based Human Biomonitoring Study on Persistent Organic Pollutants (POPs) in Women of Reproductive Age (WOMENBIOPOP project [LIFE08 ENV/IT/000423](#))". This project aimed to respond to the increasing demand for information on POP exposure level (from environmental origins). It focused on a subpopulation covering women of reproductive age (20-40 years), whose exposure to POPs was assessed through biomonitoring. Project actions aimed to analyse POP blood concentrations and determine the 'internal dose' of selected contaminants resulting from all exposures sources and routes. Areas with different exposure zones were to be identified in nine regions and different monitoring plans were drawn up, according to the level of industrial activity.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

LIFE projects work to prevent pollution, ensure water savings and improve the ecological status of the water bodies.

The Maltese Integrated Project **LIFE-IP-RBMP-Malta**, which is working on the implementation of the second River Basin Management Plan in Malta, aims at reducing domestic water demand by ~ 5% resulting in estimated impact of 3.5 million m³ of water savings per year.

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

Under the LIFE-programme, aspects of sustainable energy have been considered within the sub-programmes on Circular Economy and Climate Mitigation and Adaptation.

Moreover, the LIFE programme 2021-2027 includes a dedicated sub-programme, the LIFE Clean Energy Transition Sub programme (“LIFE-CET”). LIFE-CET will continue market up-take and policy implementation actions for sustainable energy buildings on the successful approaches developed under the energy efficiency part of H2020. In this, the LIFE-CET programme will follow up specifically the market up-take and policy implementation dimension of actions, both, in the area of energy efficiency and, in yet a more pronounced way, in the area of decentralised renewable energy. In this very tradition, LIFE CET-projects are expected to support capacity building, effective policy implementation and robust planning; they will develop innovative methods and services for integration, standardisation, industrialisation, digitalisation and aggregation of sustainable energy projects, provide technical assistance and mobilise investments, support consumers and communities in taking an active role, increase market transparency etc.

As example of on-going LIFE projects, **LIWE LIFE** aims to demonstrate advanced wastewater treatment technologies that improve water quality while boosting both resource and energy efficiency. The so-called Circular Wastewater System (CWS) developed by the municipality of Lidköping will tackle emerging pollutants and pathogens in local effluents, notably removing pharmaceuticals, hormones and micro-plastics that conventional wastewater plants struggle to filter out of water supplies. The new ängen wastewater treatment plant will generate over 700 MWh of renewable energy each year through anaerobic digestion and sell this power to the grid. The project will also attempt to valorise resources (e.g. nutrients) recovered through its process. By implementing cost-effective, resource efficient wastewater treatment, the LIWE LIFE project will support the European Innovation Partnership on water and facilitate a more sustainable use of resources and energy as set out in the EU action plan for the circular economy.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

LIFE is a catalyst for investments in innovative green businesses that will help generate more jobs, both directly and indirectly. Replication of successful projects and ideas can lead to further green growth. LIFE funding has supported the upscaling of technologies and the replication of techniques, which have had a positive impact on employment, generating jobs for unskilled, semi-skilled and skilled workers, as well as highly qualified specialists.

Furthermore, under the LIFE programme, the so-called Close to Market initiative assists companies to bring their green products, technologies, services and processes to the market.

The project **LIFE Waste2Protein** aims to foster the use of biowaste as a resource to produce insect proteins from Black soldier flies (BSF). It will install a modular pilot plant to breed 300 tonnes of BSF larvae in different development stages. This will need an input of 20 tonnes of biowaste per day to feed the BSF larvae, delivered from local supermarket chains. The project installed a pilot plant for insect protein production at large scale with an estimated annual production capacity by 2022 of 730 tonnes of insect protein, 3 650 tonnes of substrate for fertilisers and 365 tonnes of high-value fat from 7 300 tonnes of biowaste. Compared to conventional method of fish and soy meal production, the project is expected to achieve environmental benefits including reduced CO₂ and methane emissions and water and energy consumption, as well as economic gains through a significant (80%) reduction of costs for the industrial production of 1 tonne of insect protein.

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

The main objective of the **LIFE-DIADEME** project was to demonstrate a new, cost-efficient street lighting dimming system that is designed to reduce energy consumption by 30% in comparison with state-of-the-art control systems. New cost-efficient distributed street lighting dimming systems were installed in full-scale demonstration sites in the Italian cities of Rome, Piacenza, and Rimini. The project team demonstrated that the adaptive DIADEME systems reduce energy consumption by 57% on average when compared to a full light system, and by almost 41% when compared to a pre-programmed system (where lighting intensity decreased according to a time schedule defined in advance on statistic basis). The technology automatically adapts the lighting intensity based on several parameters, including constantly-monitored traffic loads. The adoption of more than 19 000 systems after three years (foreseen in the project’s business plan) should reduce energy consumption and related CO₂eq emissions by, respectively, 1 238 MWh/year and 496 tons/year (compared to pre-regulated systems). As the new system enhances reliability and reduces maintenance, it will consequently reduce the quantity of electronic waste produced, by 542 kg/year during the demonstration.

In line with the objectives of South Tyrols climate plan, **Zero Emission LIFE IP** will be a catalyst for the development of a fully zero-emission road transport and mobility system across the region, along the Brenner corridor (a main European traffic axis) and in neighbouring regions. A crucial objective of the project is the implementation of hydrogen infrastructure and a project main aim is the reduction of traffic-based CO₂ emissions up to 15% by 2026 from the deployment of zero emission vehicles.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

LIFE supports many cities in their ambitions towards better health, increased sustainability or improved resiliency to climate change. Projects pursue different aims, ranging from improvements in air quality, including the transition to carbon neutrality, to sustainable management of water, to the integration of biodiversity conservation in urban landscape.

The project **LIFERADOKLIMA PL** is focusing on adaptation to climate change through sustainable management of water in urban areas. The project's overall objective is to make the city of Radom more resilient to climate change by building demonstration 'green/blue infrastructure' for managing extreme storm water flows and controlling local flood risks. The aim is to mitigate extreme flows of water coming from outside the city and increase storm water retention by restoring and creating multi-use retention areas (while creating habitats for biodiversity), and by re-naturalising the river to restore its natural retention capacity.

SDG 12 Ensure sustainable consumption and production patterns

LIFE contributes to the shift towards a sustainable, circular and climate-neutral economy. As a priority, it finances: (1) innovative solutions to support value-added recycled materials, components or products (2) the implementation of business and consumption models or solutions to support value chains, particularly the key product value chains set out in the new EU Action Plan for the Circular Economy, aiming at reducing or preventing resource use and waste (3) the identification, tracking, separation, prevention and decontamination of waste containing hazardous substances.

The **LIFE-ECOTEX** project is an example of this contribution. This project developed an innovative, eco-efficient and highly replicable recycling system for polyester textile waste. Polyester is the second largest family of plastics in terms of quantity used. Still, in the footwear industry, up to 7% of high-grade polyester textiles is lost during manufacture. This waste is difficult to recycle, making landfilling and incineration the most frequent solution. Spain's LIFE-ECOTEX project set out to find a sustainable solution for this polyester waste by chemically recycling it via catalytic glycolysis. The process resulted in high added value chemical monomers that were used again as a raw material to produce new footwear and insulation materials. This also increased the circularity of this industry and reduced Greenhouse gas (GHG) emissions. For example, manufacturing the new raw material cut emissions by 35% when compared to producing virgin polyester. Also, a pair of shoe insoles made from recycled polyester had a 23% lower carbon footprint than insoles commonly used in trainers. The new method implied a fall in the amount of polyester textile waste being landfilled by 750 kg. The project developed 330 prototype shoe insoles and 24 insulation panels, which were manufactured with chemically recycled polyester. Several companies in the textile, automotive and packaging industries have started projects to replicate this chemical process.

SDG 13 Take urgent action to combat climate change and its impacts

Although all LIFE subprogrammes contribute to prevent and mitigate the adverse effects of climate change, one LIFE subprogramme is fully dedicated to climate mitigation and climate and climate adaptation. The sub-programme on clean energy transition focus specifically in fostering the transition to more sustainable forms of energy consumption. Given that 75% of GHG emitted in the EU coming from energy consumptions, clean energy transition is a most fundamental area to address climate change.

An example of LIFE project addressing climate change mitigation is **LIFE Beef Carbon** that focused on emissions associated with livestock production. The project aim was to reduce beef carbon footprint by 15% over 10 years in four major EU beef producing countries: France, Ireland, Italy and Spain. Based on the activities tested during the project implementation which range from change of diets to manure management to improvement of animal performance, the beneficiaries also built national action plans to extend the Beef Carbon initiative to a larger panel of farms. In terms of GHG emissions reduction, the project showed positive results estimating a mitigation potential of 42,000 tons of CO₂-eq in the innovative farms engaged in the project. The benefits related to the replication activities also showed positive results. For instance, the carbon actions plans implemented in Nouvelle-Aquitaine and Pays de la Loire regions in France are expected to lead to a reduction of 800,000 tons of CO₂-eq.

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Established together with the Nature directives, the LIFE programme has among its core activities, the support to nature and biodiversity. Throughout the years, LIFE projects contributed to the identification and designation of both the marine and terrestrial Natura 2000 network, purchased tens of thousands of hectares of Europe's most rare and endangered habitat types and restored degraded ecosystems, safeguarded numerous species from extinction, ensured the recovery of many local and endemic species, supported practical measures on the ground to prevent, control and eradicate invasive alien species.

The ongoing project **LIFECALLIOPE** is working to protect coastal dunes, sublittoral sandbanks and marine reefs along the central Adriatic coast of Italy and the north-western coast of Cyprus, and especially to mitigate direct and indirect human threats (e.g. from conflicts with fishing and tourist activities). The project will implement integrated management for coastal and marine areas to conserve target habitats and species, in line with the European Integrated Coastal Zone Management (ICZM) strategy. In addition to ecosystem restoration activities, the project aims to establish a new Natura 2000 site (pSCI) in the coastal/marine area of the nature reserves "Punta dell'Acquabella" and "Ripari di Giobbe" in Italy and to enlarge the "Punta Aderci/Punta Penna" Natura 2000 site (SCI) towards the sublittoral zone thereby contributing to extending the spatial extent of marine protected areas under Natura 2000.

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

The LIFE programme plays a crucial role in helping Member States to achieve various targets of the EU Biodiversity Strategy for 2030. There are already numerous projects in place to assist in the recovery of highly threatened species and the restoration of

thousands of hectares of degraded habitats. LIFE projects are also helping to identify ‘high nature value’ (HNV) areas that are not yet protected, as well the ecological corridors needed to ensure connectivity between Natura 2000 sites and establish a coherent Trans-European Nature Network by 2030. Finally, the LIFE programme is delivering hundreds of kilometres of free-flowing rivers, planting hundreds of thousands of trees, working with stakeholders, building partnerships and increasing public awareness of the indispensable services that nature provides.

The **LIFE OSO COUREL** project focused on the Cantabrian bear population viability promoting its expansion towards the southwest and its permanent establishment in the Serra do Courel (Galicia, Spain). Although the real impact of the project will only be seen in a medium or long term, signs of bear presence have been regularly found within the project area, which gives good future prospects regarding bear crossing and permanent settlement in Serra do Courel and habitat connectivity. The project has had an important impact on the territory and contributed to improving the social acceptance of bears, by promoting coexistence between humans and bears in the Courel. The restored areas favoured other important species present in Special Area of Conservation Ancares-Courel, such as other protected mammals and birds, and their management was secured in the long term through Land Stewardship Agreements.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

LIFE projects have increased the capacity of a European network of environmental prosecutors to share information and develop best practice to tackle environmental crime. They have developed strategic partnerships with organisations representing inspectors (IMPEL), judges (EUFJE) and police and other enforcement agencies (EnviCrimeNet) and shared information relating to environmental prosecutions throughout the EU and the rest of the world.

The **LIFE-A2J-EARL** project that started in 2017 and ended in 2020 aimed to improve the implementation and enforcement of EU environmental law by providing the public with effective access to justice, such as judicial review, administrative review and complaints to other appeal bodies. In addition to the production of awareness-raising material on EU law and the Aarhus Convention (Handbook-Guide) and other toolkits in national languages of the eight participating countries (AU, EE, FR, DE, HU, PL, SK, ES), which allow members of the public to challenge violations of environmental law. The project created an online public interest lawyer database of which 117 lawyers from 15 countries are part. Additionally, a digital platform was established in Estonia, Poland and Hungary providing legal assistance to the public online and ensuring access to relevant information quickly. The project held a number of training sessions, workshop and webinars on access to justice in the field of environment objectives. Altogether, the project trained 2,090 people, including 1,257 experts (judges, lawyers).

6.5.2. Key achievements and performance

Taking into account its size, LIFE is providing a small but effective contributions to SDGs.

In particular LIFE projects are:

- improving the conditions of over 300 wildlife species, and the status of more than 1.6 million ha of natural and semi-natural habitats;
- saving 1.6 million cubic meters of water per year,
- improving the quality of the air breathed by 2.7 million people,
- improving the ecological status of 285 km of rivers.
- saving energy by 11 million MWh/year,
- triggering the recycling of 8,000 tons/year of waste.
- reducing greenhouse gas emissions by about 12 million tons/year (CO₂ equivalent) and sequester more than 50.000 tons/year (CO₂ equivalent).
- reducing the vulnerability to the adverse effects of climate change of about 1.7 million people
- improving soil quality in 4200 hectares.

HEADING 3B: Other programmes of Natural Resources and Environment**Just Transition Mechanism (JTM)****Lead DG: REGIO**

1. Overview**1.1. Challenges**

The Commission proposed in January 2020 a Just Transition Mechanism (JTM) as part of the European Green Deal Investment Plan, to make sure that no one and no region is left behind in the transition to a climate-neutral economy. The primary goal of the mechanism is to provide support to the most negatively affected regions and people and to help alleviating the socio-economic costs of the transition.

The transition towards climate-neutrality will provide opportunities, but it will also be a challenge for regions given the socio-economic costs involved in the transition process. It will also represent a number of challenges in the context of various economic sectors. The two main challenges are: expanding the **transition from fossil energy to other sectors** and **including the private sector, social partners and civil society in the transition**. Some regions will face more challenges than others and not all will have the same capacity to deal with the costs of adjusting to the climate transition.

1.2. Mission (General objectives)

For some Member States, the objective to support people, economy and environment of territories facing economic and social transformation in their transition to a climate-neutral economy cannot be sufficiently achieved alone. Disparities between the levels of development of the territories, workforce and population are significant. There is a need for a coherent implementation framework covering several European Union funds under shared management as well as technical assistance to support this complex process. Those objectives can be better achieved at European Union level.

Pillar I of the Just Transition Mechanism – Just transition Fund

The first pillar of the JTM is the **Just Transition Fund (JTF)**. It aims at **alleviating the economic, environmental and social costs** of the transition towards climate neutrality, for the benefit of the territories that are most negatively affected by the transition and in line with the objective of achieving EU climate-neutrality by 2050 in an effective and fair manner. The Fund's support is focused on economic reconversion measures, reskilling of affected workers and jobseekers, job seeking assistance and, when necessary, active inclusion measures.

The JTF is established within the framework of cohesion policy, which is the main EU policy instrument to reduce regional disparities and to address structural change in Europe's regions –sharing cohesion policy's objectives in the specific context of the transition towards climate neutrality. It comes in addition to the substantial contribution of the EU's budget through all instruments directly relevant to the transition, notably the European Regional Development Fund ('ERDF'), the Cohesion Fund and the European Social Fund Plus ('ESF+'). The resources from the JTF should complement the other resources available under cohesion policy. It will concentrate resources on territories most negatively affected, with a specific governance mechanism, dedicated funding, limited scope of intervention and specific programming framework - though Territorial Just Transition Plans (TJTps).

While the JTF will provide funding primarily in the form of grants, the two other financing streams (InvestEU scheme and public sector loan facility) planned as part of the JTM will leverage public and private investment by backing investment projects of financial partners such as the EIB.

Pillar II

The second pillar of the JTM is the dedicated **just transition scheme under InvestEU**. A portion of financing under InvestEU will be focused on just transition objectives to support economically viable investments by private and public sector entities. This pillar is not part of this programme statement (it is managed by another Directorate-General and is subject to another programme statement).

Pillar III - Public Sector Loan Facility

The third pillar of the JTM is the **public sector loan facility**. It will support projects that do not generate a sufficient stream of own revenues to cover investment costs. Loans (provided by finance partners such as the EIB) will be combined with grants to provide public sector entities with resources to meet the development needs in the transition towards a climate neutral economy. Supported investments will cover a wide range from energy and transport infrastructure, district-heating networks, energy efficiency, as well as up- and re-skilling, training and social infrastructure, including social housing.

The general objective of the public sector loan facility is to address serious social, economic and environmental challenges deriving from the transition towards the Union's 2030 climate and energy targets and the objective of climate neutrality in the Union by 2050 at the latest, for the benefit of the Union territories identified in the Territorial Just Transition Plans.

1.3. Specific objectives

Pillar I – Just transition Fund

The JTF shall contribute to the single specific objective of enabling regions and people to address the social, employment, economic and environmental impacts of the transition towards the Union's 2030 targets for energy and climate and a climate-neutral economy of the Union by 2050, based on the Paris Agreement.

Pillar III – Public Sector Loan Facility

The public sector loan facility has the specific objective of increasing public sector investments, which address the development needs of the territories identified in the Territorial Just Transition Plans, by facilitating the financing of projects that do not generate a sufficient stream of revenues to cover their investment costs, in order to prevent the replacement of potential support and investment from alternative resources.

1.4. Public intervention context

The Regulation establishing the JTF was adopted on 24 June 2021 (Regulation (EU) 2021/1056) The regulation on the public sector loan facility under the JTM was adopted on 14 July 2021.. To help Member States in drafting the TJTps, the Commission has developed and published (in all Community languages) in September 2021 a Staff Working Document, (SWD(2021) 275 final).

Only areas identified for support in the TJTPs included in the adopted programmes can receive support from the JTF. Where Member States want to make use of the possibility to receive support under the Invest EU scheme and the public sector loan facility (ie the other two pillars) , the TJTPs shall set out the sectors and areas envisaged to be supported under those pillars.

JTF resources could be reinforced on a voluntary basis with complementary funding from the ERDF and the ESF+. The respective amounts transferred from the ERDF and the ESF+ should be consistent with the type of operations set out in the Territorial Just Transition Plans.

1.5. Actions

The JTF programming process, including the identification of the territories for intervention and corresponding actions, is subject to a dialogue between the Commission and each Member State. It is steered by the European Semester process. The territories identified need to be those that are most negatively affected based on the economic and social impacts resulting from the transition, in particular with regard to expected job losses and the transformation of the production processes of industrial facilities with the highest greenhouse gas intensity.

The Commission services already included their preliminary views on the territories expected to be the most vulnerable to transition in a dedicated Annex D to the 2020 Country Reports. Taking into account the Commission's analysis in that exercise, in 2022 most of the Member States are advancing in the process of preparing one or more TJTPs. The plans are providing an outline of the transition process until 2030, consistent with the National Energy and Climate Plans and the transition to a climate-neutral economy.

Pillar I – Just Transition Fund

The actions under JTF give a unique opportunity to fulfil the aims connected with the European Green Deal.

The support from the JTF will be based on the TJTPs and programmed under mainstream cohesion programmes as one or more priorities. Only investments in accordance with the TJTPs should receive financial support from the JTF.

The TJTPs need to include commitments on key climate and energy transition steps and must be in line with national energy and climate plans. They should detail the challenges and needs of those territories (including island, insular areas and outermost regions), taking into account depopulation risks, and identify the type of operations needed to contribute to job creation at the level of the plan and in a manner that ensures the coherent development of climate-resilient economic activities. These need to be consistent with the transition to climate-neutrality and the objectives of the European Green Deal.

Actions financed from JTF can contribute to the recovery post the Covid-19 pandemic, as they will finance economic diversification and modernisation and mitigate job losses caused by the climate transition. The JTF will make these regions more resilient for the future.

All investments should support local economies through stimulating their endogenous growth potential in accordance with the respective smart specialisation strategies. The projects financed should contribute to a transition to a sustainable, climate-neutral and circular economy, including measures aiming at increasing resource efficiency.

The JTF supports investments in

- SMEs;
- research and innovation activities;
- affordable clean energy, including energy storage technologies, and in greenhouse gas emission reduction;
- renewable energy and in energy efficiency;
- smart and sustainable local mobility;
- digitalisation, digital innovation and digital connectivity;
- regeneration and decontamination of brownfield sites, land restoration;
- enhancing the circular economy, including through waste prevention, reduction, resource efficiency, reuse, repair and recycling;
- rehabilitation and upgrade of district heating networks;
- upskilling and reskilling of workers and jobseekers and job-search assistance.

Pillar III – Public Sector Loan Facility

The public sector loan facility will support public investments, through preferential lending conditions. These investments will benefit the territories most negatively affected by the climate transition as identified in the TJTPs. In this respect, the public sector loan facility will cover a wide range of sustainable investments, provided that such investments contribute to meeting the development needs of these territories caused by the transition towards the Union's 2030 climate target and climate neutrality in the Union by 2050 at the latest, as described in the TJTPs.

The public sector loan facility could support investments in renewable energy and green and sustainable mobility, efficient district heating networks, public research, digitalisation, environmental infrastructure for smart waste and water management, and could

support sustainable energy, energy efficiency and integration measures, urban renewal and regeneration, the transition to a circular economy, land and ecosystem restoration and decontamination, up-skilling and re-skilling, training and social infrastructure. Infrastructure development could also include cross-border projects and solutions leading to enhanced resilience to withstand ecological disasters, in particular those accentuated by climate change. A comprehensive investment approach should be favoured, in particular for territories with important transition needs. Investments in other sectors could also be supported if they are consistent with the approved territorial just transition plans.

1.6. Delivery mode

The JTF will be implemented through shared management in close cooperation with national, regional and local authorities and stakeholders. This will ensure ownership of the transition strategy and provide the tools and structures for an efficient management framework. Under the shared management mode, the co-legislators fix the legal framework and the overall funding and determine the allocations by Member States and category of region. The Commission will adopt all programmes in the course of 2022. As regards implementation, the Commission cooperates with Member States' administrations (at national, regional and local level), which are in charge of the operational implementation.

Pillar I – Just Transition Fund

Implementation of the JTF will only start after the JTF programmes at national or regional level are adopted and underpinned by a properly designed TJTPs detailing among others the envisaged transition pathway. In order to ensure proper design and implementation of the territorial plans including its ownership, it is crucial to involve local stakeholders and create a robust partnership around its programming and implementation.

Pillar III – Public Sector Loan Facility

The public sector loan facility will provide support in the form of grants provided by the European Union combined with loans provided by a finance partner. The grant component of the public sector loan facility will be implemented through direct management by REGIO and the European Climate, Infrastructure and Environment Executive Agency (CINEA). The management of the facility will take the form of financing not linked to costs. This form of financing will help incentivise project promoters to participate and contribute to the achievement of the facility's objectives in an efficient way relative to the size of the loan.

The loan component will be provided by the European Investment Bank. The public sector loan facility may also be extended to other finance partners, where additional resources for the grant component become available or where it is required for the correct implementation.

1.7. Graphic overview of the programme structure

Just Transition Mechanism - structure (Pillars I and III)

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/1056 of the European Parliament and of the Council of 24 June 2021 establishing the Just Transition Fund (OJ L 231, 30.6.2021, p. 1).	2021 - 2027	8 452.84

1.8.2. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	4.0	1 460.9	1 610.2	1 636.5	1 663.2	1 389.5	1 417.4	9 181.8
NextGenerationEU	10.7	5 385.6	5 472.2					10 868.5
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities	46.3	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	46.3
Total	61.0	6 846.5	7 082.4	1 636.5	1 663.2	1 389.5	1 417.4	20 096.5

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The JTM is a new programme. The JTF is a new cohesion policy fund for 2021-2027 and the Public Sector Loan Facility is a new Union instrument. They are complementary to each other and act in complementarity with the other cohesion policy funds.

1.10. Relevant websites providing more information

Just Transition Mechanism

https://ec.europa.eu/info/strategy/priorities-2019-2024/european-green-deal/actions-being-taken-eu/just-transition-mechanism/just-transition-funding-sources_en

Just Transition Platform

https://ec.europa.eu/info/strategy/priorities-2019-2024/european-green-deal/actions-being-taken-eu/just-transition-mechanism/just-transition-platform_en

Within the activities of the Just Transition Platform, in the course of 2022, there will be a new comprehensive website created. It will include, i.e. a multiactive map with JTF programmes, TJTPs depository, information funding opportunities and information about the events concerning just transition. It will also provide project and expert databases to guide stakeholders toward relevant knowledge, evaluations and project examples, therefore creating an expert network for EU countries, regions, agencies and stakeholders to exchange information and good practices.

Cohesion Open Data Platform - <https://cohesiondata.ec.europa.eu>

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	9.6	20 096.5	0%
Payments	1.6		0%

Pillar I – The Just Transition Fund

Implementation will only start after the JTF programmes are adopted. The programmes are expected to be adopted during 2022.

Pillar III – Public Sector Loan Facility

The first calls for proposals will be launched once a sufficient number of TJTPs are adopted, towards the middle of 2022 and the first grant agreements are expected to be signed in 2023.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

Common output and result indicators as well as programme-specific output and result indicators shall be established.

For output indicators, baselines shall be set at zero. The milestones set for 2024 and targets set for 2029 shall be cumulative.

3.1.2. Active programme performance

JTF is a newly created fund, there is not enough data regarding the TJTPs. The Commission therefore lacks the basis on which to assess the different investment priorities and intensities.

3.3. Evaluations, studies and reports

Given the newly established nature of the JTM, evaluations, studies and reports are not yet available. A JTF-related study (to be launched in 2022) will assess the outcome and impact of the establishment of Territorial Just Transitions Plans.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Enabling regions and people to address the social, employment, economic and environmental impacts of the transition towards the Union’s 2030 target for climate and a climate-neutral economy by 2050, based on the Paris Agreement

Indicator 1: Enterprises supported (of which: micro, small, medium, large)

Justification of the trend	

5. The programme contribution to horizontal policies

5.1. Contribution to climate mainstreaming

5.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	9.33	6846.50	7082.40	1636.50	1663.20	1389.50	1417.40	20044.83	100%

(*)These amounts include NextGenerationEU top-ups if any

5.1.2. Explanation on the financial contribution

According to Annex I of the CPR, JTF expenditure shall be counted as contributing 100% to climate mainstreaming.

5.1.3. Key achievements

As the JTM is a new instrument and no TJTPs have been adopted yet, details and predictions about the fund's contributions to this category cannot be made yet. More details will become available in the course of 2022.

5.1.4. Performance

To be reported from 2022 onwards

5.2. Contribution to biodiversity mainstreaming

5.2.1. Contribution

NA

5.2.2. Explanation On the financial contribution

As the JTM is a new instrument and no TJTPs have been adopted yet, details and predictions about the fund's contributions to this category cannot be made yet. More details will become available in the course of 2022.

5.2.3. Key Achievements

To be reported from 2022 onwards

5.2.4. Performance

To be reported from 2022 onwards

5.3. Contribution to clean air financing

5.3.1. Contribution

2021-2022 Estimates		2023-2027 programming (EUR million)					Total
2021	2022	2023	2024	2025	2026	2027	
	0.00	0.00					0.00

(*)These amounts include NextGenerationEU top-ups if any

5.3.2. Explanation On the financial contribution

As the JTM is a new instrument and no TJTPs have been adopted yet, details and predictions about the fund's contributions to this category cannot be made yet. More details will become available in the course of 2022

5.4. Contribution to gender equality

5.4.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*: 3.9							

(*)Consolidated information about the annual commitments implemented (total per score by programme **in EUR Million**)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

5.5. Contribution to the sustainable development goals

SDG 1 End poverty in all its forms everywhere

Pillar I and III of the JTM will, expectedly, contribute to these SDGs: 1, 3, 4, 5, 7-13, 15. However, this will depend on the TJTPs to be adopted and on the actual projects selected.

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

SDG 10 Reduce inequality within and among countries

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

SDG 12 Ensure sustainable consumption and production patterns

SDG 13 Take urgent action to combat climate change and its impacts

HEADING 4: Migration and Border Management**Asylum, Migration and Integration Fund (AMIF)****Lead DG: HOME**

3. How is the programme performing ?	859
3.1. Performance	859
3.2. Key achievements	865
3.3. Evaluations, studies and reports	868
4. Programme 2021-2027 - Key monitoring indicators	869
Specific Objective 1 :Strengthen and develop all aspects of the common European asylum system, including its external dimension.....	869
Specific Objective 2 :To strengthen and develop legal migration to the Member States in accordance with their economic and social needs, and to promote and contribute to the effective integration of third-country nationals.....	870
Specific Objective 3 :To contribute to countering irregular migration, enhancing effective, safe and dignified return and readmission, as well as to contribute to and to promote effective initial reintegration in third countries	872
Specific Objective 4 :To enhance solidarity and responsibility sharing between the Member States, in particular towards those most affected by migration and asylum challenges, including through practical cooperation	874
5. Programme 2014-2020 - Key monitoring indicators	876
Previous Program 1 : Asylum, Migration and Integration Fund	876
General Objective 1 :to contribute to the efficient management of migration flows and to the implementation, strengthening and development of the common policy on asylum, subsidiary protection and temporary protection and the common immigration policy, while fully respecting the rights and principles enshrined in the Charter of Fundamental Rights of the European Union	876
Specific Objective 1 :to strengthen and develop all aspects of the Common European Asylum System, including its external dimension.....	878
Specific Objective 2 :to support legal migration to the Member States in accordance with their economic and social needs, such as labour market needs, while safeguarding the integrity of the immigration systems of Member States, and to promote the effective integration of third-country nationals.....	880
Specific Objective 3 :to enhance fair and effective return strategies in the Member States which contribute to combating illegal immigration, with an emphasis on sustainability of return and effective readmission in the countries of origin and transit....	881
Specific Objective 4 :to enhance solidarity and responsibility-sharing between the Member States, in particular with those most affected by migration and asylum flows, including through practical cooperation.....	883
6. The programme contribution to horizontal policies	884
6.4. Contribution to gender equality	884
6.5. Contribution to the sustainable development goals.....	884

1. Overview

1.1. Challenges

The role of the EU budget has been pivotal in implementing the European Agenda on Migration (2015-2020), and will be a key to the implementation of the Pact on Migration and Asylum currently under negotiations and adopted by the Commission in September 2020. In this context, the EU has been supporting the management of asylum seekers and migrants, supporting legal migration and integration and managing effective returns. The EU budget has also been financing common measures for the effective control and surveillance of the Union's external borders to compensate the abolition of internal border controls.

However, the EU will continue to face major challenges in the area of migration in the 2021-2027 programming period. The regular reports compiled in the context of the delivery of the European Agenda on Migration confirmed the persisting need to reduce the incentives for irregular migration, to sustain efforts to save lives at sea and to secure the EU external borders, and to support actions for a strong common asylum policy and a new policy on legal migration. The Asylum, Migration and Integration Fund (AMIF) 2021-2027 has a key role to play in responding to these challenges and supporting the full implementation of the European migration policy for the next seven years.

The challenges in the areas of asylum and migration are, by their nature, interlinked, transnational phenomena and cannot be adequately addressed by the Member States acting alone.

1.2. Mission (General objectives)

The integrated management of the EU's external borders and the strengthening of the Common European Asylum System are the most effective ways to share these responsibilities and their financial implications between Member States fairly. EU funding in the area of integration of third country nationals is indispensable to increase the quality of support to newcomers in the early stages after their arrival. This is a crucial component to ensure their full inclusion in EU societies in the long- run, if they receive permanent protection.

The AMIF will aim to further increase the added value achieved in the previous programming period in terms of supporting actions with a transnational dimension. These actions aim at boosting national capacities and optimising procedures related to migration management, as well as enhancing solidarity and responsibility sharing between Member States, in particular through emergency assistance and the relocation mechanism as evidenced by the interim evaluation of the AMIF 2014-2020.

1.3. Specific objectives

The AMIF contributes to an efficient management of migration flows and to the implementation, strengthening and development of the common policy on asylum, and the common immigration policy, in line with the relevant EU acquis and fully respecting the international obligations of the Union and the Member States arising from international instruments to which they are parties. In this context, it pursues the following objectives:

- to strengthen and develop all aspects of the common European asylum system, including its external dimension;
- to strengthen and develop legal migration to the Member States, in accordance with their economic and social needs and to promote and contribute to the effective integration and social inclusion of third-country nationals;
- to contribute to countering irregular migration and enhancing effective, safe and dignified return and readmission as well as to contribute to and to promote effective initial reintegration in third countries;
- to enhance solidarity and responsibility sharing between the Member States, in particular towards those most affected by migration and asylum challenges, including through practical cooperation.

1.4. Public intervention context

The evolving migratory challenges addressed by the AMIF make it a key instrument in realising the Union's objective of constituting an area of freedom, security and justice under Article 67(2) of the Treaty on the Functioning of the European Union (TFEU), which is an area of **shared competence** between the EU and the Member States (Article 4 TFEU). The objectives of the AMIF support actions focusing on one or more target groups within the scope of Articles 78 and 79 TFEU, and in particular Article 78(2) and Article 79(2) and (4) thereof. Furthermore, the principle of solidarity and fair sharing of responsibility between the Member States, emphasised by the renewed AMIF, is established in Article 80 TFEU.

Since the overarching objective of the AMIF, namely to contribute to an effective management of migration flows in the Union, cannot be sufficiently achieved by the Member States acting alone and can be better achieved at Union level, the AMIF is based on the principle of subsidiarity as set out in Article 5 of the Treaty on European Union (TEU).

The AMIF is complemented by a range of other EU activities and instruments with an impact on developments in the policy area.

The Pact on Migration and Asylum covers all of the various elements needed for a comprehensive European approach on migration, asylum, integration, return, border management and cooperation with partner countries. It is accompanied by a number of legislative and non-legislative initiatives as well as proposals for other key actions.

Stronger cooperation with key partner countries in the area of migration is also essential. The Commission focuses on comprehensive, tailor-made partnerships with third countries on all aspects of migration. In that context, funding can be provided mainly by external instruments such as the NDICI.

1.5. Actions

The AMIF supports a broad range of actions in line with the principles highlighted in the Pact on Migration and Asylum. This includes in particular:

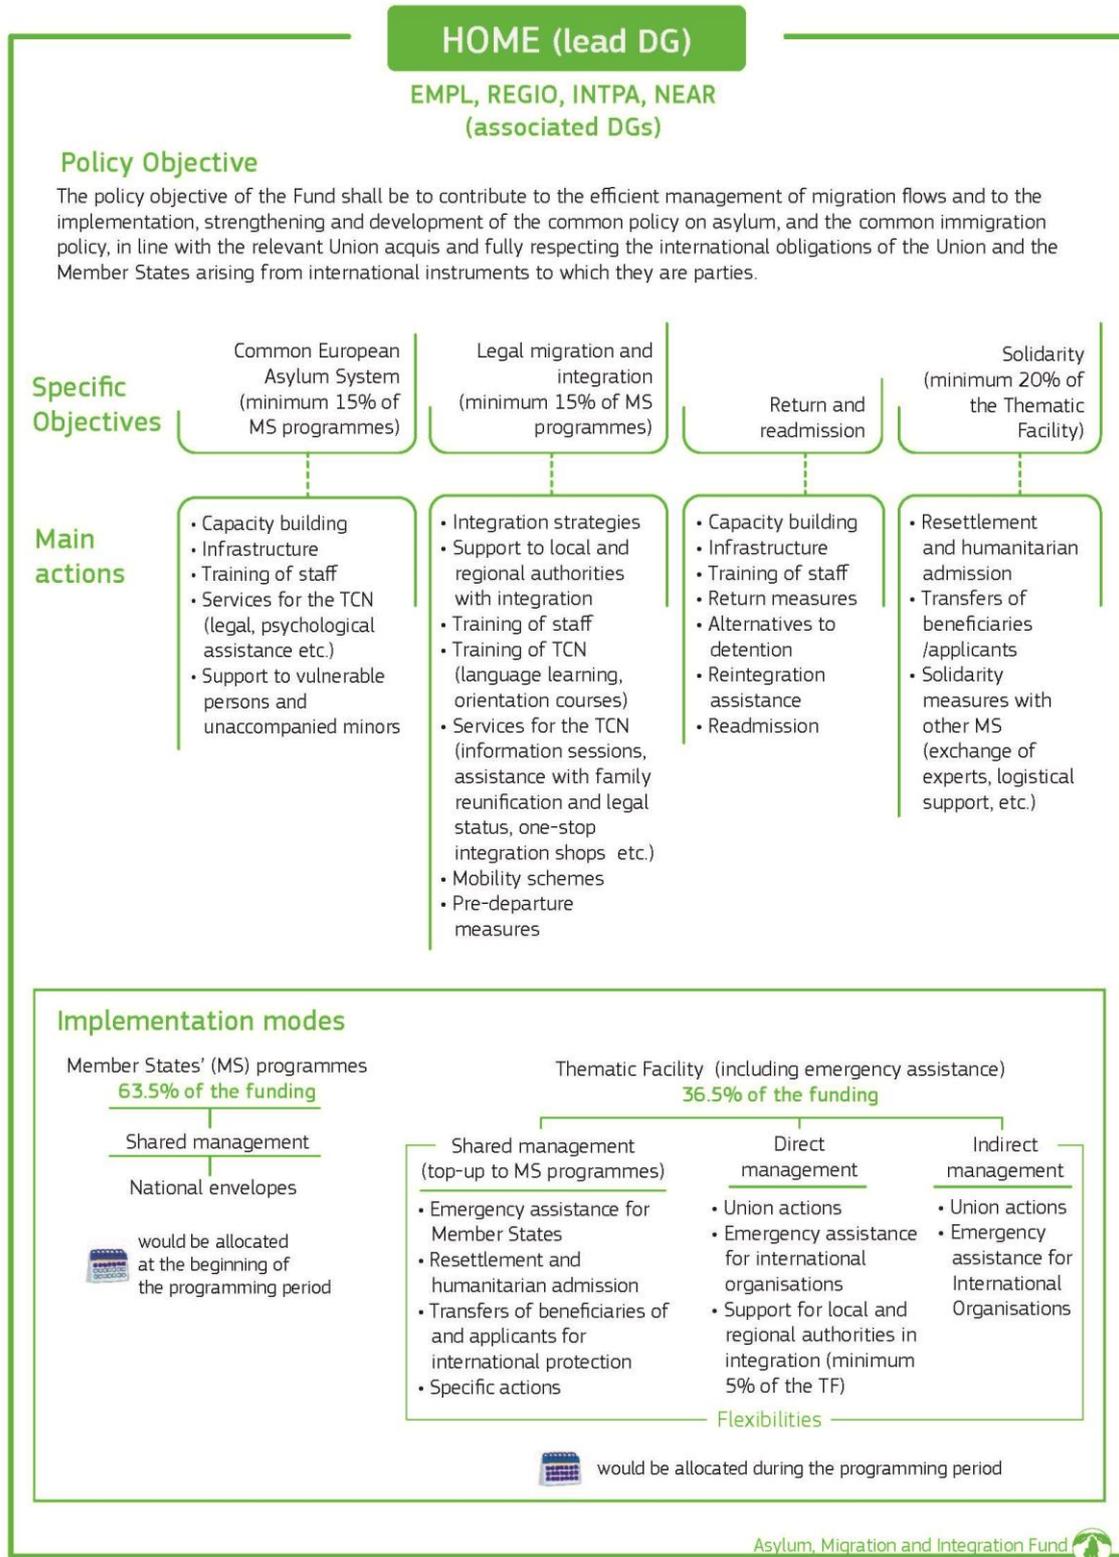

- ensuring a uniform application of the EU acquis and of the priorities related to the Common European Asylum System, legal migration and return;
- providing support and services consistent with the status and the needs of the person concerned, in particular the vulnerable groups;
- supporting resettlement, humanitarian admission and transfers of applicants for and beneficiaries of international protection;
- supporting the development and implementation of policies promoting legal migration, such as the development of mobility schemes to the EU and raising awareness of the appropriate legal channels for immigration;
- supporting integration measures such as tailored support in accordance with the needs of third-country nationals and integration programmes focusing on education, language and other training such as civic orientation courses and professional guidance preparing their active participation in and their acceptance by the receiving society.
- supporting infrastructures for the reception or detention of third country nationals, including the possible joint use of such facilities by more than one Member State;
- ensuring provision of legal remedies during the return procedures such as access to free legal aid;
- supporting the development and use of alternatives to detention;
- supporting an integrated and coordinated approach to return management at the EU and Member States' level, development of capacities for effective and sustainable return and reducing incentives for irregular migration;
- contributing to addressing key deficiencies and challenges for the Member States' return systems, identified during Schengen evaluations in the field of return, and requiring urgent action;
- supporting assisted voluntary return and reintegration;
- cooperation with third countries on asylum, legal migration, countering irregular migration and on effective return and readmission for the purpose of managing migration;

1.6. Delivery mode

The AMIF will be implemented under shared, direct or indirect management. The largest part of the resources (63.5% of the total budget) will be allocated to the Member States' programmes under shared management. The remaining part (36.5% of the total budget) will be allocated to a thematic facility to be used for specific actions (implemented by the Member States nationally or transnationally), Union actions (direct/indirect management), emergency assistance (shared, or direct or indirect management), transfers of beneficiaries of and applicants for international protection and resettlement (shared management) and the European Migration Network (direct management).

Technical assistance at the initiative of the Commission will be implemented by direct management. Since the AMIF is also covered by the Common Provisions Regulation (EU) 2021/1060, DG HOME closely coordinates with DG REGIO, EMPL and MARE. In relation to the external dimension, DG HOME closely coordinates with DG INTPA, NEAR and FPI.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
-------------	-----------------------	--------------------------------

Regulation (EU) 2021/1147 of the European Parliament and of the Council of 7 July 2021 establishing the Asylum, Migration and Integration Fund (OJ L 251, 15.7.2021, p. 1).	2021 - 2027	9 882.00
---	-------------	----------

1.8.2. Legal basis explanation

The legal basis of the AMIF is the Regulation ((EU) 2021/1147) of the European Parliament and of the Council Establishing the Asylum, Migration and Integration Fund. Since the Asylum, Migration and Integration Fund is majorly implemented through shared management, it is covered partially (financial, not policy provisions) by of the Common Provision Regulation ((EU) 2021/1060).

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	497.6	1 370.6	1 417.8	1 500.4	1 782.4	1 702.5	1 797.2	10 068.7

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The 2021-27 AMIF builds on the successful implementation of and lessons learnt from the AMIF 2014-2020. In this regard, it further strengthens the external dimension by adding areas under pre-integration, return and reintegration, which could not be fully covered in the programming period. The Pact on Migration and Asylum, published on 23 September 2020, confirms the importance of providing humanitarian legal pathways. The *Commission Recommendation on legal pathways to protection in the EU* calls on Member States to provide more places of admission for people in need of international protection through increasing their resettlement programmes but also through humanitarian admission and other complementary pathways.

The 2021-27 AMIF also ensures more flexibility in the implementation, by having a well-balanced mix of shared, direct and indirect management. This will also make it possible to steer the funds towards EU priorities as well as pressing challenges, which cannot always be predicted or planned for from the onset. Simplification is another important element of the new Fund, as common rules for programming, reporting and financial management for eight shared management funds¹ have been established and the Fund has been aligned with similar EU funding instruments. Finally, the common monitoring and evaluation framework has been further developed to ensure a strengthened performance orientation, as well as improved and more frequent reporting on the progress towards targets and milestones.

1.10. Relevant websites providing more information

On the Commission website, the reader will be able to see a description of the scope and the budget allocation of the Funds: [Asylum, Migration and Integration Fund \(2021-2027\) \(europa.eu\)](https://europea.eu)

2. Where are we in the implementation ?

2.1. Programme 2021-2027

¹ European Regional Development Fund, European Social Fund Plus, Just Transition Fund, European Maritime, Fisheries and Aquaculture Fund, Asylum, Migration and Integration Fund, Internal Security Fund, Instrument for Financial Support for Border Management and Visa.

The invasion of Ukraine by the Russian Federation on 24 February 2022 led to a mass influx of displaced persons from Ukraine to several EU Member States. This places renewed pressure on the Member States to deal with urgent migration management needs and face related financial needs. The increased migratory pressure, including reception and asylum processing procedures, particularly affects Member States bordering Ukraine but will likewise create pressure afield throughout the whole territory of the European Union. Given the uncertain nature of the situation the pressure is expected to persist beyond 2022 and into 2023.

With a view to providing immediate support to people arriving in the Union and showing concrete solidarity with the most affected Member States, the Commission has proposed to increase flexibilities in the use of 2014-2020 funds following the proposal of prolonging the implementation period. In addition, with the pledge made on April 9 2022, the Commission proposes to make EUR 400 million available for emergency assistance, consisting of redeployment within the Thematic Facility under AMIF and BMVI as well as reinforcement of AMIF from the margin under H4 and from the SEAR (internal strand). The Ukrainian crisis and the needs following are expected to be within the proposed total envelope of the AMIF in 2023.

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	496.8	10 068.7	5%
Payments	44.9		0%

The EUR 497 million implemented in 2021 in commitment represent the Thematic Facility envelope (including Emergency Assistance (EMAS) and European Migration Network) and supporting expenditure to the Fund.

The EUR 45 million implemented in 2021 in payments represent expenditures under EMAS and AMIF support budget line.

Shared management

For the Member States' programmes, due to the delays in the adoption of the legal basis for 2021-2027 and time needed for the programming procedure, shared management programmes may only be formally approved starting from the second quarter in 2022.

The Commission also prepared a 2021-2022 Work Programme for the Thematic Facility to ensure the programming of the funding for indirect/direct and shared management on top of the basic allocations for the national programmes. The Commission has adopted the financing components of the Thematic Facility and the Work Programme for 2021 and 2022 amounting to EUR 879 681 861 on 25 November 2021 (C(2021) 8458 Final)

Union Actions

As mentioned above as of 2021 the **Union Actions** have become a part of the Thematic Facility covered by the multiannual Work Programme for 2021-2022. In view of a very successful 2020 call, most of the actions have been pencilled in for 2022 with their implementation commencing in early 2022 and continuing in 2023.

In continuation of previous years, AMIF Union Actions will cover the area of integration of third-country nationals and prevention of irregular migration, the asylum and migration policy, including the external dimension of this component to enhance third countries' capacity to provide that asylum-seekers and refugees receive effective protection, assistance and durable solutions. To that end eight topics in open call for proposals have been established in the work programme and continued support to the multilingual online information portal for prospective migrants – Infomigrant, the Regional Development and Protection Programmes, the implementation of the Migration Partnership Facility is also foreseen as well as the Return and Reintegration Facility to support to the EU strategy on voluntary return and reintegration. These are complemented with procurements to support the Commission's activities.

As part of the Thematic Facility Work Programme for 2021-2022, an AMIF Union action is proposed to be specifically designed to deliver particularly high EU-added value. The objective of this action is to provide additional support to the reception, asylum and return systems of Member States particularly exposed to migratory pressure at the EU external borders, e.g. due to their geographical position. This action will contribute to enhancing solidarity with those Member States bearing high share of responsibility on behalf of the Union as a whole.

The AMIF also continues to support the European Migration Network (EMN) under the 2021-2022 work programme adopted on 26 November 2021 as a component of the thematic facility under the AMIF for an amount of EUR 23 million (C(2021) 8464 final). Grants for the National Contact Points for the work programme period as well as procurement actions to support the Network's activities are financed in this context. Another EUR 1 million has been set aside to be added co-finance the participation of Ireland in EMN once it joins AMIF.

Emergency assistance

The emergency assistance instrument provides financial assistance to Member States, International Organisations and (exceptionally) EU Agencies to address urgent and specific needs in the event of duly justified emergency situation, as defined in the Fund-specific Regulation, in particular in the areas of migration, border management and security. EMAS is one of the components of the Thematic Facility Work Programme and it takes form of grants and contributions (or grant agreements and contribution agreements). Under the new programming period two commitments were signed to support urgent needs in Ceuta, Spain and in Lithuania, reaching over EUR 56 million. The additional funds which will become available for EMAS in the context of the Ukraine crisis (described above) will contribute to the needs faced by Member States most affected by the crisis.

Spain

The Commission allocated in August 2021 emergency assistance grant of EUR 14 million to cover the provision of humanitarian assistance to the migrant population reaching the Autonomous City of Ceuta.

Lithuania

Lithuania experienced an unprecedented and disproportionate influx of third-country nationals through the border with Belarus in 2021. Lithuanian institutions were put under great pressure to provide reception and accommodation, catering, health care and education to asylum seekers. On 2 July the Government announced a state-wide emergency situation on the grounds of mass migratory influx. Lithuania also requested for support from the European Commission and three EU Agencies, as well as for activation of Union Civil Protection Mechanism. The situation was also exacerbated by the threat posed by the COVID-19 pandemic. To meet the growing needs and the problems arising from the exceptional pressure on the Lithuanian asylum and migration system, the Commission awarded EUR 42.1 million AMIF emergency assistance from the 2021 budget to: ensure the implementation of asylum procedures; ensure adequate reception and accommodation conditions for asylum seekers; create sufficient conditions for reception of families, minors and other vulnerable groups; strengthen crisis management and communication in emergency situation; facilitate and / or motivate persons to return voluntarily to the country of origin or transit. The project will run until May 2022. The project aims inter alia to secure access to basic safe and dignified shelter for 5000 persons.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	7 585.4	7 595.0	100%
Payments	5 678.0		75%

At the end of 2021, **for the national programmes only**, 75.18% of the total envelope of the fund has been paid, meaning that MS actually spent EUR 3.44 billion over the period 2014-2020 out of EUR 4.58 million allocated under the National Programmes.

In 2017, **the national programmes** were substantially modified to include additional funding linked to resettlement (EUR 455.6 million), return (EUR 140.8 million) and measures implementing the EU Action Plan on the integration of third-country nationals (EUR 140 million), in particular those carried out by civil society organisations and local authorities in the context of Member States' Migrant Integration Strategy.

In 2018, the national programmes were again revised:

- to include EUR 30 million and EUR 20 million to support respectively the integration of third country nationals and the return of irregular migrants.
- to reflect the outcome of the mid-term review exercise carried out in accordance with article 15 'Mid-term review' of the Regulation laying down general provisions on AMIF and ISF.

In December 2018, the AMIF Regulation was amended to allow the reuse of the non-consumed resources for the two Council Decisions dating from 2015 on relocation and the Council Decision dating 2016 on legal admission for other Union migration priorities beyond 2018.

Furthermore, in 2019, the national programmes were revised to include additional resources of EUR 97.6 million for resettlements to be carried-out by the Member States in 2020 and 2021. The national programmes were revised again in 2020, and increased by EUR 77.9 million, to include additional funding for resettlement.

By 15 February (or 1 March upon justified request) 2022, Member States submitted their annual accounts covering the financial year 2021; together they have requested a total amount of EUR 556 million. By 31 March 2022, the Annual Implementation Reports for AMIF were submitted by Member States. Over the period 2014-2020, EUR 3.44 billion was actually spent by the MS, equivalent to an absorption rate of 75%.

Implementation in the year 2020 and 2021 was marked by the effort to address the impact of the COVID-19 pandemic. Even though Member States largely managed to address the effects without any changes to the current budget, the pandemic led to some delays in project implementation and the procurement processes. The most affected types of intervention were those with actions where the final beneficiary needs face-to-face interaction with the target audience (asylum, integration, return, relocation, resettlement), those where NGOs and other organisations were prohibited to enter reception centres, the suspension of mental health services in the context of reception/asylum and the suspension of return flight operations.

Mitigating measures included an increase in the co-financing rates, an extensions of the duration of projects where needed, adaptations or modifications of project content. Project expenditure related to the COVID-19 pandemic, such as online training platforms and hardware, the procurement of masks, the installation of protective measures (windows, etc.) or the cancellation costs of defaulted measures were accepted as eligible. Member States also put in place measures to protect the health of vulnerable persons in reception centres, beneficiaries of international protection and other Third Country Nationals housed in reception centres.

The implementation of AMIF will run until end-2023, and thus 2 years of implementation remain. Up to 2021, AMIF has attained an overall absorption rate of 75%, which can be considered overall satisfactory. In 2021, Member States have submitted EUR 556 million of payments to the Commission.

The Commission made a proposal to make remaining funding under the HOME Affairs Funds for the 2014-2020 programmes, including AMIF, available for the acute migration and border management needs following the Russian aggression towards Ukraine. Through the proposal remaining funds would be more accessible and thereby provide immediate support to the Member States as it swiftly can be re-direct under existing national programmes. The proposal were adopted April 2022.

Trust Fund

AMIF has been contributing to the EU Emergency Trust Fund for stability and addressing root causes of irregular migration and displaced persons in Africa. From 2017 to 2020, AMIF contributed EUR 135 million in order to address funding gaps identified especially for the North Africa window of the EUTF, and where needs relating to the root causes of migration are more pressing. For 2020, AMIF contributes with EUR 5.2 million. Between 2017 and December 2020, EUR 50 million were paid (out of EUR 135 million available). The assumption is that payments will be made until 2024 and will exhaust the totality of the EUR 135 million committed.

Emergency assistance

By end-December 2021, the total amount of AMIF emergency assistance allocated to Member States since 2015 had reached EUR 2.4 billion. In 2021, 21 commitments were signed in relation to emergency assistance for programming period 2014-2020 for a total of EUR 407.65 million, of which EUR 143.58 million for actions implemented by three international organisations (UNHCR, UNICEF and IOM) for the benefit of Greece. Other commitments signed in 2021 in relation to programming period 2014-2020 were for the benefit of Malta, Cyprus and Spain.

Emergency assistance in Greece

Between 2015 and 2021, a total of approx. EUR 2.07 billion were allocated to Greece through emergency assistance grants. Significant improvements have taken place and currently, the islands have been largely decongested. As of 4 April 2022, there are less than 3 000 migrants present in reception centres on the Eastern Aegean Islands.

In 2022 so far (30 March), 1 561 arrivals have been recorded in Greece (895 by sea and 666 by land). In the course of 2021, arrivals sharply fell in the wake of Covid-19 and never reached previous levels (7 443 arrivals in 2021). When compared to 2020, arrivals decreased by both sea (-61%) and land (-20%). In 2021, 28 291 people applied for international protection, while 3 917 have applied in 2022 (as of 28 February).

The decrease in arrivals has created an opportunity to develop a more structural migration management scheme in Greece, through the support of the European Commission's Task Force for Migration Management and in line with the [Memorandum of Understanding](#) agreed between Greece and the Commission in September 2020. The next programming period will focus on improving living conditions for the hosted population including for unaccompanied minors, supporting asylum procedures, integration measures and enhancing the implementation of returns.

Amongst other support activities in Greece, the Commission, together with the Greek authorities, continues the coordination of the voluntary relocation scheme from Greece that has been supported via AMIF Emergency Assistance. The voluntary scheme started in March 2020. To date, a total 4 768 persons including 1 198 unaccompanied minors, 1 712 vulnerable asylum seekers (families) and 1 858 vulnerable beneficiaries, have been relocated as of 30 March 2022.

The creation of 5 new Multi-Purpose Reception and Identification Centres (MPRICs) in the five Eastern Aegean islands, funded under 2014-2020 Emergency Assistance, targets the improvement of the living conditions of the population residing in the Greek islands. The MPRICs of Samos, Kos and Leros are already established, while the establishment of the MPRICs of Lesbos and Chios is pending.

Emergency assistance in Italy

Between 2015 and October 2020, a total of approx. EUR 292 million were allocated to Italy through emergency assistance grants. The spectrum of the activities financed is extremely wide: emergency assistance to improve the performance of its asylum procedures through the provision of asylum experts, interim administrative staff, IT equipment, inter-cultural mediation and other services to assist with the registration and processing of asylum applications, activities of border control (including overtime of staff, vessels and flight hours), emergency assistance in health care (including COVID-19 emergencies etc).

Emergency assistance in Cyprus

The migratory situation in the Eastern Mediterranean route also led to the granting of further emergency assistance to Cyprus. More specifically, in December 2019 the Commission awarded an emergency assistance grant of EUR 1.8 million (with a request to increase the budget to 2,09 million, granted in December 2021) under AMIF to strengthen the existing structures and operational capacity of the Social Welfare Services to cope with the rapidly increasing numbers of asylum seekers and unaccompanied minors. Another emergency assistance grant of EUR 3.6 million under AMIF was awarded in April 2020 to strengthen the existing structures and operational capacity of the Asylum Service and Civil Registry and Migration Department with additional staff and equipment, as well as with infrastructure for the Asylum Service.

Moreover, the Commission awarded in July 2020 another emergency assistance grant of EUR 1.2 million under AMIF to cover the needs for staff, office space and equipment of the Law Office of the Republic of Cyprus.

Emergency assistance in Malta

Although there was a 33% decrease in the number of arrivals to Malta in 2020 (2 281) compared to 2019 (3 405), given its size, Malta consistently faces major challenges in the reception of those present on the island. In July 2019, the Commission awarded an emergency assistance grant under AMIF for the voluntary relocation of persons from Malta to EU Member States and Associated States of Relocation. The total amount granted, following two amendments to the grant agreement, was almost EUR 977 500.

A revision of the national programmes took place in 2020 in order to include the additional funding for resettlements to be carried-out by MS in 2020 and 2021.

Emergency assistance in Spain

AMIF Emergency assistance in Spain focussed since the beginning on actions deployed by the national authorities to deal with the irregular migration flow to Southern Spain and the Canarias islands, for a total EUR 109,7 million AMIF funds allocated by January 2021. In 2020, arrivals by sea (40 106) increased by 54% compared to 2019. 23 023 of those were arrivals to the Canary Islands, almost 9 times more than in 2019, raising a serious challenge to the capacity to provide reception and ensure effective procedures for migrants. A project operated by the Ministry of Inclusion, Social Security and Migration was amended with an additional EUR 42 million (bringing the total to 49 million) EU funds support to set-in place six temporary sheltering capacity of an overall capacity of 7 200 persons in the Canaries islands.

Union actions

Last year (2021) was a very active year for the Union actions. A vast majority of projects selected under the 2017 annual work programme was closed accompanied by a large number of grants for the recurring financing of European Migration Network National Contact Points. In 2018 programmes were still running, while those of 2019 has reached a cruising speed. The implementation of the Union actions have continued to be impacted by COVID-19 pandemic, which resulted in the modifications of originally approved grants, be it for the description of the actions or deadlines, hence no-cost extensions and amendments of the numerous grant agreements. New grant agreements and contribution agreements were concluded for actions under the 2020 annual work programme and their implementation started in principle in early 2022.

Apart from the open call for proposals mentioned above, this work programme also supported the multilingual online information portal for prospective migrants – Infomigrant, the Regional Development and Protection Programmes in North Africa and in the Horn of Africa, the implementation of the Migration Partnership Facility, as well as procurements to support the Commission's activities.

The AMIF also continued to support the European Migration Network (EMN) and under the 2019-2020 work programme for the EMN, for an amount of EUR 18 million, financed grants for the National Contact Points for the period which ended on 31 December 2020 as well as procurement actions to support the Network's activities.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

Performance assessment will be provided once the implementation of the programme 2021-2027 have properly started and the first performance reports received. The first reports should be received by 15 February 2023 and by 15 February of each subsequent year.

3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 have properly started and the first performance reports received

3.1.3. Previous Programme Performance

Taking into account the volatile and challenging migration situation throughout the 2014-2020 period, it is important to stress that the AMIF is achieving its objectives. AMIF provides the financial means to push forward the EU's agenda on migration. The Commission works to establish a comprehensive approach on this agenda, developing legislative proposals to establish and improve common EU action, monitoring and enforcing the correct implementation of applicable rules by the Member States.

The AMIF focuses on the three areas identified in its acronym: Asylum, Migration and Integration. It encompasses several domains in the Asylum Systems, fighting Irregular migration, whether through awareness raising information campaigns explaining the risks of embarking on a dangerous irregular migration route, or through voluntary return. It also included Resettlement and Relocation schemes, Legal Migration, and integration of third-country nationals in the EU, with the creation networks of national, regional or local public entities. Whenever appropriate, AMIF has also drawn the focus on some vulnerable groups, such as integration of victims of trafficking of human beings, or providing support to children or unaccompanied minors, women.

Whereas in the first years a stronger focus was placed in the Asylum schemes, e.g. via resettlement and relocation, the latter years have focused increasingly on legal migration and integration addressing different target groups as well as establishing legal pathways at European level, complementing and developing Member States' efforts.

Overall, AMIF has generated important EU added value, despite the relatively small size of the funds in comparison with the important challenges imposed by the crisis that occurred during this period. The main benefit at EU level arises from the transnational dimension of certain actions but also the benefit of burden-sharing at EU level, supported in particular by the Emergency assistance and the relocation mechanism.

The European Court of Auditors (ECA) concludes in its Report on the performance of the EU budget – Status at the end of 2019, published on 13 November 2020, that the AMIF provided substantial support to help Member States face the costs and challenges of asylum and migration action, such as relocation and resettlement, migrant support schemes and funding to build and upgrade accommodation. The ECA stresses that this support is provided in a sensitive political context characterised by diverse Member State positions.

Sustainability, in the sense of investment targeting structural changes, has been thoroughly considered by AMIF both at programming and implementation stages of national programmes, and to a lesser extent in the Emergency assistance due to the nature of the actions. Overall, most of the innovative measures (e.g. simplified cost-options, multiannual programming) are considered particularly beneficial by beneficiaries and appear to have achieved simplification. Room for improvement appears to exist, especially in what concerns the internal coherence of the fund (among AMIF management modes) because there is little awareness among beneficiaries about the actions and projects realised within the AMIF framework. Similarly, the administrative burden appeared to be the main factor that undermined the efficiency, including some control measures that appeared too stringent for the Member States even if AMIF has led to simplification relative to the past. Finally, the monitoring and evaluation system under AMIF in line with the Better Regulation guidelines needs further improvement, including in terms of definitions of its indicators and the collection of data. The European Court of Auditors identified room for improvement as regards data reliability. It specifically pointed out that information on EMAS funding is not covered by the performance indicators. Although the Court concluded that the information available points to the relevance of spending and its EU added-value, it stresses that the indicators defined do not provide evidence about economy and efficiency.

In terms of performance, most of the indicators set in the AMIF are on track to achieve their targets or have exceeded them. There are nevertheless areas impacted negatively by the consequences of the COVID-19 pandemic or where progress is more limited due to changes to the strategies or implementation issues. In any event, the extension of the implementation period will provide an opportunity for further target achievement.

Strengthening the Common European Asylum System (CEAS)

According to Eurostat data, in 2021 the number of asylum applications, after a drop in 2020, came nearly back to pre-pandemic values in 2021, driven by increases in the demands of Afghans and Syrians. At the end of 2021, in total around 759 thousand² applications for international protection were still under consideration by the national authorities, in line with 2020 values despite the increase in the number of applications filed.

The Commission continued to make efforts to facilitate discussions on the legislative package to reform CEAS, but the European Parliament and the Council could not reach an agreement. To respond to the need for structural reform of EU migration policy and building on progress made in this field since 2016, the Commission put forward a Pact on Migration and Asylum and a number of legislative proposals, adopted by the Commission in September 2020. The initiative covers all of the different elements needed for a comprehensive European approach to migration management based on solidarity and fair sharing of responsibility.

² 758 645 at the end of 2021 for EU-26 (pending LT, that reported around 2 000 pending applications at the end of 2020), compared to 765 665 in at the end of 2020. Data source: Eurostat. This figure refers to the total number of pending asylum applications

In the meantime, AMIF continued to provide the necessary emergency assistance to the Member States faced with migration pressure to improve their asylum systems and to reception capacities. Emergency assistance is the main tool of the Commission to provide strategic operational support of EU added value at short notice in the form of grants and contributions (or grant agreements and contribution agreements). The interim evaluation of the Fund also confirmed the emergency assistance as being one of the main benefits at EU level. By the end of December 2021, the total amount of AMIF emergency assistance since 2015 reached over EUR 2.4 billion.

In this context, special attention was paid to the most vulnerable, particularly the unaccompanied minors due to the high number of unaccompanied children present in the Member States. For example, in 2020, the Commission supported Greece, through the allocation of EUR 30 million in Emergency Assistance, in the relocation of unaccompanied minors, families, sick children and beneficiaries of international protection.

Via **voluntary relocations**, 13 Member States and three associated countries have offered (via pledges) a safe space in their countries for 5 285 unaccompanied minors, severely ill children together with their families, vulnerable persons and recognised refugees from Greece. DG HOME is in the forefront, coordinating the relocation exercise. The voluntary relocation scheme started in March 2020 following the dramatic events at the Greek-Turkish land border. Initially, 11 Member States had pledged to receive around 2 500 unaccompanied minors and minors with severe medical conditions and their core family members. Following the fire at the Moria camp on 9 September 2020, two more Member States, as well as three associated countries joined the scheme. It was agreed to expand the scheme to vulnerable asylum seeking families, as well as beneficiaries of international protection. Up to February 2022, 16 countries relocated 4 610 people, the remaining relocations, to fulfil the rest of the pledges, are taking place in 2022. Additionally, 30 vulnerable persons were relocated from Cyprus in 2020.

As regards the AMIF national programmes the Fund exceeds its targets in the field of **asylum**: 2 723 629 target group persons have received assistance in 2014-2021 as compared to the 2022 target of 1.26 million. Likewise, the target is surpassed also in relation to the the number of persons trained in asylum-related topics, with more than 70 000 persons trained since 2014 as compared to a target of 25 205 persons.

Regarding the creation of new asylum reception capacity, 2021 marked an increase of approximately one quarter compared to the 2018-2020 average, with nearly 5 000 places created. Although still far from the peak of over 16 000 in 2017, this result increases the chances that the cumulative target of 51 028 will be met, with cumulative values now at 41 266 and two additional years of implementation. A Commission taskforce on migration management has been working intensively, in close collaboration with the Greek authorities, EU Agencies and international organisations on the ground, to build new reception facilities in the Eastern Aegean.

Coordinated resettlement efforts, providing to persons in need of international protection a safe and legal way to reach the EU, have continuously increased since 2015 and were recognised as one of the ‘Top 20 achievements of the Juncker Commission’.³ Also in 2021, good progress was made on resettlement despite very difficult circumstances and disruptions caused by the Covid-19 pandemic. In total, 13 Member States welcomed 8,780 resettled migrants in 2021, mainly nationals from Syria (about 9 000 persons), Sudan (1 200), and Eritrea, Somalia and the Democratic Republic of the Congo (about 1 000 each)⁴. Taking into account the success of the previous schemes and the continuously high resettlement needs globally, a new **ad hoc resettlement scheme** was put in place for 2020–2021 in line with the Commission Recommendation on legal pathways to protection in the EU (part of the Pact). For 21-22, Member States collectively pledged 65 000 resettlement places. This generous pledge – going beyond initial expectations – confirms the Member States’ commitment to resettlement and their resolve to scale up safe and legal pathways to protection in Europe. The expansion of EU resettlement is in line with the UNHCR 3-year (2019-2021) Strategy and the EU’s call for more safe and legal pathways to protection.

Resettlement operations are an important part of the AMIF, with almost EUR 1.07 billion allocated to the Member States for this purpose under the national programmes in the 2014-2020 programming period, which constitute almost one fourth of the overall financial value for the Fund. This corresponds to 108 680 persons to be resettled, of which 86 243 persons have been reported in payment claims to the Commission up to 2021 included (79% implementation). Due to the delays in reporting, once the final accounts have been submitted in 2024, it is expected that also the latest resettlement scheme will reach a high implementation rate. In terms of resettlement, in their accounts, Member States reported a total of 8,780 persons resettled in 2021 in comparison to 14 812 in 2020. This brings the number of resettled persons for the period 2014-2021 up to a total of 86 243.

Effective integration and legal migration

The gap between the employment rates of third-country nationals compared to EU nationals is used as an indicator to measure progress in integrating third country nationals in EU societies. The gap between the employment rates of third-country nationals compared to EU nationals has effectively increased from 13.1 percentage points in 2014 to 15.6 in 2020.⁵ However, the increase was particularly significant from 2019 to 2020 (+1.8 %), likely due to the impact of COVID-19.

³ Communication from the Commission; Europe in May 2019: Preparing for a more united, stronger and more democratic Union in an increasingly uncertain world The European Commission's contribution to the informal EU27 leaders' meeting in Sibiu (Romania) on 9 May 2019, COM/2019/218 final, Annex III.

⁴ Data source: Member States' Annual Accounts for the financial year 2020 (16.10.2020–15.10.2021).

⁵ Data for 2021 not yet available in Eurostat.

The Commission supports the Member States in their efforts to integrate third-country nationals, through the use of EU funding, some of which is provided by the AMIF, more is provided by the European Structural and Investment Funds.

The Commission continued to work closely with North African Countries on migration and security. By supporting in 2017-2020 the EU-Emergency Trust Fund for Africa under the Union actions with an overall amount of EUR 135 million the Commission contributed to shaping the strategic approach to countries of North Africa.⁶ Financial support to specific areas in Morocco contributed to reducing the number of irregular migrants on the Western Mediterranean route from roughly 57 000 in 2018 to roughly 18 500 in 2021. To build up or strengthen asylum and reception systems and to address protection needs in African countries, the Commission contracted in 2020 EUR 30 million through the Regional Development and Protection Programme (EUR 20 million for North Africa, and EUR 10 million for Horn of Africa), rolling out new actions in Algeria, Egypt, Libya, Mauritania, Morocco, Niger, Tunisia and Sudan.

Under the AMIF national programmes, more than 7 million persons have received integration assistance already surpassing the target of 2.6 million. Moreover, number of local, regional and national policy frameworks already exceed the target: 12 786 were already put in place as opposed to the target of 7 443.

However, measuring the number of persons who participated in pre-departure measures, gives results far below the target set (114 659 persons supported versus a target of 240 920). The data up to 2021 shows very uneven results in Member States. There are Member States exceeding their targets significantly, others remain at zero or are at a very early stages of fulfilling their targets. The reasons can vary from Member State to Member State: the target have been largely overstated also due to competition with other public resources, lack of pre-departure programmes, lack of target groups, efficiency of national administrations, etc.

Of the 62 cooperation projects foreseen by Member States, 51 have been reported up to 2021. Nevertheless, it should be noted, that, through Union Actions, the Commission has promoted cooperation projects between local and regional authorities through targeted calls for proposals.

In the period 2014–2020, EUR 1,022 million have been allocated under the Asylum, Migration and Integration Fund to support measures on integration and legal migration. In 2021, Member States reported expenditure for EUR 147 million, reaching a cumulative value of EUR 649 million (63.52% absorption rate).

In November 2020, the Commission adopted the Action plan on Integration and Inclusion 2021-2027, COM (2020) 758, highlighting the horizontal and sectoral priorities for integration including the use of the different funding sources. The plan sets out a strong framework to strengthen and step up integration and inclusion policies across the EU. The implementation of the actions presented in the action plan will be monitored, progress will be reported and actions adapted where needed.

Effective return policies

For the asylum system to be credible, migrants with no right to stay in the EU need to be **returned**. However, return is seen as an area where further improvement should be made. Prospects of improvement depend both on better cooperation by third countries and on Member States' effectiveness in implementing returns. In this respect, Schengen evaluations in the field of return help to orient Member States on specific actions that have to be prioritised in order to achieve set objectives. Unsatisfactorily low return rates persist due to inefficient enforcement of existing instruments at EU and national level, and a common readmission policy that does not fully deliver, but also to the onset of the COVID-19 pandemic and related travel restrictions.

In total, EUR 1 billion have been allocated to priorities in return (voluntary and forced) under the national programmes in 2014–2020 and EUR 685 million have been spent so far, reaching an absorption rate of 67.7%. In 2021, Member States declared payments of EUR 108 million to the Commission returning 39 966 persons.

The AMIF supported Member States in the return of 27 709 persons in 2021, below both 2020 (39 966 persons) and 2019 (65 035 persons) levels. The 2021 data shows a decrease especially in the voluntary returns, down by 50% with respect to 2020 values (down by two thirds with respect to 2019). In 2020, latest available year, the rate of effective return of EU-27 to third countries dropped significantly to 17.72% (31.95% in 2018).

However, this marked drop should be seen in the context of the COVID-19 pandemic and the related travel restrictions introduced to contain it, placing further obstacles to the implementation of return operations. For example, Turkey suspended return operations from Greece in March 2020 on the grounds of the pandemic and they were not resumed in 2021 despite efforts from the EC.

Additional efforts are required to address key challenges to the effectiveness of returns through measures both in Member States and with third countries. Actions taken include the following:

- the Commission adopted in 2021 its first **Strategy on voluntary returns and reintegration**⁷. The Strategy provides among others tools and guidance to improve the sustainability of returns by increasing cooperation with partner countries. It also aims at increasing the proportion of voluntary returns, as those offer a more humane and cost-efficient way to return people.

⁶ No additional commitments in 2021

⁷ COM(2021) 120 final of 27.4.2021.

- DG HOME worked to improve cooperation with **key countries of origin**. Following-up on the recommendations in the **European Court of Auditors'** special report 17/2021 on readmission⁸, DG HOME works together with Member States on a more flexible approach in negotiations on readmission agreements. The approach of the Pact is followed, pooling different policies and instruments, and strengthening the incentives for third-countries to cooperate
- In 2021 with Frontex coordinated flights, over 18 000 non-EU country nationals returned (50% increase compared to 2020 and above 2019 levels too), out of which:
 - 10 200 persons by 337 charter flights;
 - 8 100 persons by scheduled flights to approx. 90 destinations
- DG HOME also worked on a continuous basis with Member States readmission practitioners and European Migration Liaison Officers to build and transfer good practices on readmission processes, and to give operational support to Member States
- In March 2022, a Return Coordinator was appointed in DG HOME to improve the effectiveness of the return system
- Enhance the Assisted Voluntary Return Programmes.

In their return activities Member States are encouraged to use the available support both from Frontex and through AMIF in a complementary way. AMIF contributed to the implementation of the national return strategies by providing Member States with the necessary assistance in different areas of the return policy: introducing assisted voluntary return and reintegration programmes, increasing detention capacity when insufficient and improving its conditions; ensuring the implementation of safeguards (e.g. free legal assistance), covering the costs of return operations in cases where Frontex could not offer support or where the Agency's assistance was not considered necessary by the Member States.

EU actions also support non-EU countries to improve their capacity to manage readmission processes effectively (identification, re-documentation) in their cooperation with Member States; such support is financed by the Readmission Capacity Building Facility under AMIF. There are 24 existing EU agreements and arrangements on readmission and the new Pact on Migration and Asylum will mobilise all EU policies, tools and instruments, to prioritise the effective implementation of these agreements, complete ongoing readmission negotiations, and explore options for new agreements.

Enhancing solidarity and responsibility-sharing between the Member States

As the 2016 Commission proposal for the recast Dublin Regulation aiming, inter alia, at ensuring fair sharing of responsibilities between Member States by complementing the system with a corrective allocation mechanism, has not been adopted by the European Parliament and the Council, there has been a need for emergency measures to support the Member States facing unproportioned numbers of arrivals. Therefore, in addition to their national allocations, several Member States, notably Greece, Italy and Spain, benefit from the AMIF emergency assistance, allowing them to save more lives at sea, receive the arriving migrants in conditions, attaining better humanitarian standards, ensure basic healthcare as well as protection to vulnerable groups. The emergency assistance amounts granted up to end-December 2021 to Greece are EUR 1.897 billion and to Italy EUR 186 million.

In addition, since 2019, the Commission has been coordinating the voluntary relocation of asylum applicants disembarked in Italy and Malta after rescue operations in the Central Mediterranean to other Member States who are voluntarily showing solidarity. 2 244 applicants have been relocated so far from Italy and Malta with the support of EUR 3.2 million AMIF emergency funding. More relocations are due to take place in the following months. In March 2020, following the dramatic events at the Greek-Turkish border and then the Moria campfire in September 2020, voluntary relocation started to be implemented also in Greece, with EUR 35.1 million AMIF support to put in place procedures for processing and relocation. 4 610 of the most vulnerable applicants have already been relocated, out of the 5 285 places pledged by Members States and associated countries. Additionally, 30 vulnerable persons were relocated from Cyprus in 2020.

As the arrival of migrants continues across the Mediterranean, voluntary solidarity in the shorter-term can help build confidence among Member States by demonstrating that solidarity is still working on the ground as an important way to support migration management in particular in Member States most affected by migratory flows. It can also assist in showcasing how the different elements of solidarity listed in the Pact can provide meaningful support as a precursor to the legal proposals.

The funding to support the emergency relocation scheme was allocated in the 2016 Budget for a total number of persons of 160 000 persons. On expiry of the scheme, the Commission proposed the amendment of Article 18 of the AMIF Regulation to open up the possibility for Member States to use the remaining unused funds for the relocation (EUR 505 million) for other actions. This was agreed by the co-legislators (Regulation (EU) 2018/2000). Accordingly, through revision of national programmes in 2019, this funding has been reallocated to voluntary relocation (EUR 26 million) and resettlement (EUR 116 million), among other key priorities in the migration area and the remaining amount to other policy areas such as asylum, integration or return. The national programmes of the receiving Member States set out to relocate a total number of 38 703 persons. This target includes voluntary relocation. Up to 2021, in the annual accounts, receiving Member States reported a total number of 35,451 relocated persons. This corresponds to a target achievement rate of almost 92%.

⁸ <https://op.europa.eu/webpub/eca/special-reports/readmission-cooperation-17-2021/en/>

It is to be noted that the role of the emergency assistance tool within the future AMIF will remain important for the period 2021-2027 in order to address unforeseen events linked to the volatile migration situation.

The European Court of Auditors issued recommendations on the **strengthening of the management of the AMIF emergency assistance and national programmes**. They cover in particular strengthening the performance monitoring framework by monitoring and reporting the outcomes achieved by EMAS funded projects, ensuring that EMAS project contain output and outcome indicators with clean targets and baselines etc. In that respect, it should be noted that the indicators below are only encompassing national programmes projects (see comments below the tables).

Lessons learnt

The new AMIF 2021-2027 provides financial resources to ensure a comprehensive approach to management of migration grounded on mutual trust, solidarity and fair sharing of responsibility among Member States and Union institutions, with the objective of ensuring a common sustainable Union policy on asylum and immigration. Lessons learned and incorporated into the design of the new AMIF include an allocation which reflects the different needs and pressures of Member States, and a thematic facility offering flexible funding for a number of priorities including support for solidarity and responsibility efforts between the Member States, specific attention to effective returns, and emergency assistance.

The main lessons learnt during the programming period 2014-2020 include:

Insufficient cooperation, coordination and strategic steering in the implementation of the AMIF with other EU level initiatives: This challenge was addressed by including eight shared management funds, including the AMIF, in a single legal framework. This allows for a closer coordination and cooperation of the shared management funds both at strategic level as well as at the level of implementation.

A need for simplification: in order to simplify and build on synergies, the rules applicable to the shared management funds will be aligned with rules applicable to the management of other Union Funds under shared management ('single rule book'). This provides better guidance on the management and control systems and audit requirements, and ensures that the eligibility rules under shared management make full use of simplified cost options (SCOs).

Insufficient flexibility to respond to changing needs during the programming period: This challenge was addressed in two ways. Firstly, Member States will be provided with around 52.9% to Member States programmes. An additional share of 10.6% of the total budget will be allocated at mid-term (technical adjustment of the distribution key subject to financial performance according to which a Member State should have submitted payment claims covering at least 10% of the initial amount of payment appropriations). Secondly, a financial envelope of 36.5% should be managed through the thematic facility, which will periodically provide funding for a number of priorities defined in Commission financing decisions. This facility in particular offers flexibility in the management of the instrument by allowing the disbursement of funds to the technical assistance at the initiative of the Commission and the following components of the thematic facility: support for specific actions, providing additional funding for dedicated actions of high EU added value, through the Member States' national programmes; support for Union actions, managed through direct and indirect management; and emergency assistance.

The third main challenge was the need to strengthen the performance monitoring in terms of quality and frequency of the fund in general. In order to address this challenge, the Commission proposed greatly improved performance monitoring with more regular and reliable data setting out common output and result indicators. In cooperation with the Member States, the Commission services has developed definitions for each of these indicators. This will ensure a common understanding of each indicator across all Member States and programmes. Moreover, it will not only greatly contribute to improving data quality, it will also enhance data comparability. Member States have been required to develop this performance framework for each of their programmes and underpin it by methodological considerations. The managing authority, in its yearly management declaration and as part of the annual assurance package, will have to confirm the reliability of submitted data relating to indicators and the progress of the programme. The annual performance review will be an occasion for a policy dialogue with the Member States on issues of programme implementation and performance. In particular, the annual performance reports will provide qualitative information on programme implementation going beyond the quantitative data submitted for the indicators. It will complement the bi-yearly transmission of structured data and strengthen the performance review process. In the context of the performance framework, Commission services will hold at least two meetings with Member States during the programming period. All data required for monitoring progress in programme implementation will be transmitted electronically. Twice a year, Member States will transmit to the Commission structured data on the common output and result indicators. Thus, the Commission services will have a much more updated picture of programme performance than in the current period. In addition, the AMIF programmes will now also use the open data platform, which had been established in the current programming period for the European Structural and Investment Funds. It will allow stakeholders to access almost real time data on programme implementation. This is an important novelty for the HOME funds, which in the current period do not publish data on the open data platform.

Moreover, Member States are now required to set up a system of electronic data exchange between beneficiaries and managing authorities, and between different authorities of the management and control system. This requirement builds on the current Common Provisions Regulation, which did not cover the 2014-2020 AMIF, and further develops certain aspects of data collection. It is thus a novelty for the HOME funds in general. Managing Authorities are being provided methodological support on the setting up and key elements of their monitoring system, with a view to improving data quality throughout the entire data supply chain.

Specific support on data validation is also planned. Beneficiary and project information, as well as the performance reports will be published on a dedicated website run by the managing authority. This will give greater visibility to achievements and allow better communication.

3.2. Key achievements

<i>2014-2020, incl. 2021, cumulative number</i>	<i>Explanation of the number</i>
41 266	Capacity (i.e. number of places) of new reception accommodation infrastructure set up in line with the common requirements for reception conditions set out in the Union acquis and of existing reception accommodation infrastructure improved in accordance with the same requirements as a result of the projects supported under the Fund
71 235	Number of persons trained in asylum-related topics with the assistance of the Fund
85 790	Number of country-of-origin information products and fact-finding missions conducted with the assistance of the Fund
86 243	Number of persons resettled with support of the Fund
114 659	Number of target group persons who participated in pre-departure measures supported under the Fund
12 786	Number of local, regional and national policy frameworks/measures/tools in place for the integration of third-country nationals and involving civil society and migrant communities, as well as all other relevant stakeholders, as a result of the measures supported under the Fund
34 314	Number of persons trained on return-related topics with the assistance of the Fund
140 395	Number of returnees who received pre or post return reintegration assistance co-financed by the Fund
347 387	Number of returnees whose return was co-financed by the Fund
39 021	Number of monitored removal operations co-financed by the Fund
35 451	Number of applicants and beneficiaries of international protection transferred from one Member State to another with support of the Fund

The Asylum, Migration and Integration Fund remained in 2021 a key source of financial assistance to cope with increased migratory flows and reception of asylum seekers.

Like in previous years, support to asylum seekers and support for the integration of third country nationals reached very high figures (at around 300 000 and 900 000, respectively), despite a modest contraction compared to 2020.⁹ Assistance covered, among others, language and civic orientation training, preparatory actions to facilitate access to the labour market and capacity building. Importantly, reception capacity was further increased by over 5 000 units in 2021, improving upon previous years.

Coordinated **resettlement efforts**, providing to persons in need of international protection a safe and legal way to reach the EU, have continuously increased since 2015 (14 812 in 2020 compared to 23 764 in 2019) and were recognized as one of the ‘Top 20 achievements of the Juncker Commission’. As indicated in section 3.1.3. above, although resettlements went down in 2021 due to the Covid-19 pandemic, 8 780¹⁰ migrants were still resettled to the EU. This leads to a cumulative target achievement of 79%, which, combined to the extension of the implementation period to 2023 pledges from Member States of almost 65 000 places for resettlement and humanitarian admission in 2021-2022, stresses the good performance of the fund in this respect.

In order to reduce incentives for irregular migration, the Fund contributed up to 2021 to the return of around 347 387 persons (both voluntary and forced), despite the difficulties in 2020 and 2021 with COVID-19 related travel restrictions. Among return related projects, it is important to mention the ERRIN project run by the Netherlands in cooperation with other Member States, which contributed to assistance with voluntary return of 11 000 persons to 17 third countries, with a perspective of 20 000 persons until June 2021. The EU funding for this project will be extended until 1 July 2022 for two purposes: (1) to allow for reaching the target

⁹ These figures should nevertheless be treated with some caution due to issue with the tracking of individual participants.

¹⁰ Data source: The Asylum, Migration and Integration Fund Programme Statement, based on Member States’ Annual Accounts for the 2021 financial year (16.10.2020–15.10.2021).

of 25 000 persons and (2) to prepare for the transition of the network activities to the European Border and Coast Guard Agency (EBCGA).

In 2021, 9 678 of the returned migrants received pre or post return reintegration assistance co – financed by the fund. The return operations organised by the Member States complement the return operations organised by the European Border and Cost Guard Agency. Over 18 000 non EU country nationals were returned with the support of Frontex coordinated flights, as already detailed in section 3.1.3, with an increase of around 50% on 2020.

It is worth recalling that the Agency can only assist Member States to implement enforceable return decisions issued by competent national authorities.

Examples of success stories under shared management

Germany

Terre des hommes Deutschland is running the project ‘Child-oriented reception of unaccompanied minors through qualification, knowledge and networking’ for a total EU Contribution of EUR 576 224. It was conceived in response to the increasing number of unaccompanied minors (UM) arriving in Germany since 2015, who were applying for asylum and the resulting high number of requests for advice, networking and training (pedagogical and legal, in particular) by all people involved in assisting UM, in particular employees of youth welfare institutions and social services, guardians, judges. The goal of the project is to improve the quality in assisting UM through specific education and training of relevant stakeholders involved with the reception and asylum procedures of UM. The project also enhances the networking among these stakeholders, thereby supporting the exchange of expertise on matters relating to child welfare and legal aid and representation for UM.

Sweden

The project ‘Stadsdelsmors’, for a total EU Contribution of EUR 513 991, is running from 2016 till 2020 and it aims to break down social isolation and increase the participation of a particular target group of third country nationals in society, namely those who are living in social exclusion (legally resident third-country nationals or those who are in the process of acquiring legal residence). The project is developed in close exchange with similar projects in other European and Schengen countries (Denmark, Norway and Germany). The aim is that the target group should have access to social and professional networks in order to extend their networks and social health and this is realised inter alia through the provision of information on social issues in easy Swedish. Until now, 1512 persons were helped in the context of this project.

Greece

Under the AMIF National Programme, Greece launched in February 2020 a call of EUR 10 million public contribution (EUR 7.5 million EU contribution) to subsidize the operation of **Semi-independent Living apartments (SILs)** for unaccompanied minors aged above 16 years old. The call was intended to cover the period until the end of 2022. The main purpose of this action is to support unaccompanied minors through personalized care and protection in the context of semi-autonomous living with a hosting framework that aims at their gradual autonomy.

The main goal of the action is to meet the basic needs of minors and to provide support services with a view to their protection, social inclusion and gradual autonomy. The specific model of hospitality promotes the support and empowerment of unaccompanied adolescents for the transition to adulthood, their gradual integration into the local community and the strengthening of the possibility of self-preservation. The current call covers 500 accommodation places.

Italy

In the context of its AMIF national programme, Italy attached particular attention to the **social integration of young migrants**. The project “Piano Regionale Multi-Azione CASPER II” (EU contribution: EUR 1.3 million) supported the promotion of young and second-generation migrants’ social inclusion by tackling early school drop-out and performance gap. It fostered integration paths through the establishment of an integrated system of territorial services for the provision of qualified information, the promotion of participation in the socio-economic and cultural life of the host society and the reinforcement of associations of migrants. The project, which is ongoing since October 2018, has so far achieved important results such as:

- support to over 400 minors for their integration in the national education system;
- 35 vulnerable migrants assisted by the medical and social services;
- 74 third-country nationals assisted with the procedures linked to their residence permit (particularly important in light of the recent important legislative changes in this domain);
- 90 media workers trained in communication in the field of migration;
- 11 migrants associations supported in the implementation of integration paths.

Another milestone of Italy’s activities under its AMIF national programme is the **assisted voluntary return and reintegration** in the migrants’ country of origin. For example, project ERMES 3 (EU contribution: EUR 0.5 million) builds upon three pillars of activities: a) dissemination of information in Italy; b) support to pre-departure phase in Italy and support to development of reintegration plan as well as c) assistance upon arrival and up to 6-months long support period in the country of return. The project concerns measures for the AVRR of 300 third-country nationals to their home countries by end of 2021. Two Italian NGOs, namely

Centro Informazione e Educazione allo Sviluppo/CIES ONLUS and Comitato Internazionale per lo sviluppo dei popoli/CISP, jointly manage the project.

Examples of success stories under emergency assistance

AMIF emergency assistance funding played an important role in supporting front line Member States facing increased numbers of arrivals. Below some successful examples of this funding:

Greece

To address this situation, the Commission has awarded towards International Organisations and Greek authorities a number of emergency assistance projects in order to alleviate the situation. EUR 125 million were granted to IOM to run the project for Site Management Support for the provision of accommodation and related services in 32 camps in the mainland for approximately 28 000 places. The project lasted the whole of 2020, and was extended until the end of March 2021. Furthermore, in March 2020 the Commission awarded 91.5 million in the Emergency Support to Integration and Accommodation (ESTIA) programme, for the year period 1 January 2020 to 31 December 2020. The project was implemented jointly by the Greek Ministry of Migration and Asylum and the United Nations Refugee Agency (UNHCR) and provided approximately 25 000 places in apartments and adequate shelters on the mainland and several islands for most vulnerable cases. During 2020, the programme was successfully transitioned from UNHCR to the Greek authorities, in line with the aim to maintain and enhance reception capacity in Greece by ensuring adequate and appropriate accommodation for vulnerable asylum seekers, in line with the EU Directive on Reception Conditions.

Moreover, in July 2019, the Commission awarded to the International Organisation for Migration (IOM) the HELIOS project, which is a pilot integration project composed of three different components: education, accommodation and employability. The beneficiaries enrolled (beneficiaries of international protection), have the obligation to attend language courses and simultaneously, with the assistance of IOM and its partners, find apartments for rent. For the period from 16 July until the end of January 2021, **25 541** were enrolled to HELIOS project and received support for independent living and 10 319 beneficiaries received rental subsidies upon finding independent housing. The aim is that in the next phase the beneficiaries will be able to integrate into the labour market. The amount of the project reaches EUR 57 million and the end of the project is scheduled for the end of February 2021 (the project is expected to be continued under ESF+ for the programming period 2021-2027).

In addition, since April 2020, the Relocation from Greece project is being implemented by IOM (in cooperation with UNHCR, UNICEF and EASO). The project amounts EUR 30 million and the end of the project is 30 April 2021. Until 22 January 2021, **2 269 beneficiaries have been relocated** (586 unaccompanied minors, 388 beneficiaries of international protection and 1 295 member of families with sick persons).

Italy

Italy has received AMIF emergency assistance to improve the performance of its asylum procedures through the provision of asylum experts, interim administrative staff, IT equipment, inter-cultural mediation and other services to assist with the registration and processing of asylum applications. Under two on-going EMAS projects, for a total amount of EU contribution of EUR 22.3 million, the Ministry of Interior receives support to implement the procedure for the recognition of international protection: 289 resources, among which inter-cultural mediators, legal and administrative officers, are deployed at the Immigration Offices at the local Questure and Air Borders offices to assist Police Officers in the immediate registration of asylum requests. The administrative activity at Police Offices, offices of the Territorial Commissions and of the National Commission has been simplified to reduce, for example, the average time dedicated to the analysis of requests and for first instance decisions.

Other successful EMAS actions were the project (EUR 0.7 million) for the humanitarian evacuation of up to 700 vulnerable migrants stranded in Libya to Italy with the support of UNHCR, as well as the project on assisted voluntary return and reintegration carried out with IOM (EUR 6 million) and the project (EUR 9 million) supporting emergency health assistance to vulnerable migrants hosted in Italy's reception system.

EUR 30.2 million of AMIF emergency assistance were deployed in 2020 to implement a pilot project to tackle the problem of migrant labour exploitation in Southern Italy. The project aims to eradicate the social emergency by providing appropriate housing, transportation, health and social assistance to victims of labour exploitation. Following the outbreak of the COVID pandemic and the immediate risks on the target population, in May 2020 anti-COVID prevention measures were put in place by the Italian Red Cross and NGO Intersos at the "Casa Sankara", where several hundred migrants were transferred from informal settlements.

Moreover, in August 2020 IOM received from the Commission EUR 2.2 million AMIF emergency assistance to carry out activities necessary for the voluntary relocation of 2 200 asylum seekers from Italy to other EU countries and Schengen Associated States. A total of 286 relocation transfers have been completed successfully through the project until 31/1/2021, in close cooperation with the Italian Ministry of Interior and the Commission.

Malta

In addition, throughout 2020 a number of MS, continued voluntary relocation supported by the AMIF emergency funding. For instance, in January 2020, the Commission extended the emergency support to the International Organization for Migration (IOM) under AMIF for the voluntary relocation of up to 1 000 persons from Malta to EU Member and Associated States of Relocation until end of February 2021 for an EU contribution of nearly EUR 1 million. By the end of 2020, a total of 600 persons had been

assisted in their relocation. The project is expected to be extended until end of May 2021 in order to carry out relocations from the remaining open pledges (estimated 260 persons) without additional funding awarded. Due to the ongoing pandemic the project also covered unforeseen COVID-19 related costs such as protective equipment, COVID testing, charter flights etc.

Union actions

Examples of AMIF funded Union actions can be found in the Snapshots and Factsheets published by the Commission at the following links:

https://ec.europa.eu/home-affairs/publications/amif-more-snapshot-e-book_en and https://ec.europa.eu/home-affairs/publications/amif-factsheet-compilation_en

In 2020, under 2019 AMIF call, five new projects have been selected and awarded touching for the first time upon the area of complementary pathways, for a total amount of EUR 3.8 million euro under the topic “Fostering the integration of persons in need of protection through private sponsorship schemes”. Such schemes, with strong involvement of local communities and civil society organisations, allow to strengthen capacities at local level to provide adequate support for integration. AMIF has also the external dimension – under 2019 AMIF call, six new projects have been selected and awarded in 2020 under the topic “Awareness raising and information campaigns on the risks of irregular migration in selected third countries and within Europe.” These projects, paired with a recurring support via a direct award grant for a consortium of leading EU public media led by France Médias Monde for the multilingual online information portal for prospective migrants Infomigrant, are part of the broader approach to prevent irregular migration and in particular migrant smuggling. The main goal is to provide potential migrants with trusted, factual, balanced information on the risks of irregular migration – during the journey (dangers of migrating irregularly) and after arrival (living in the EU irregularly and return). A total budget of EUR 6.5 million euro was allocated to these actions.

Examples of success stories under direct management:

Migrant women often find it harder to integrate into European society than migrant men do. This is down to the fact that these women tend to be charged with taking care of the entire family and as a result miss out on finding a job and integrating socially.

The 2016 action plan on integration showed that there was an urgent need for better measures to improve female migrant integration across the EU. Examples of good practice could feed back into government policy, helping to improve their lives in Europe. Urbagri4Women was a 2-year project that helped integrate migrant women into the labour market and society by encouraging them to participate in various urban farming initiatives. The women’s entrepreneurial spirit resulted in urban rehabilitation, which has in turn brought economic, environmental and social benefits. The project covered seven Member States: Austria, Cyprus, France, Greece, Italy, Portugal and the UK with a budget of 0.6 million EUR. The project promoted social inclusion, female empowerment and served to rehabilitate the abandoned or decaying urban areas. The local communities actively participated with more than 200 cultural organisations, educational establishments and businesses providing practical support.

The results of this project will feed into future national and European policy designed to help and integrate migrant women. From a wider angle, previously barren urban areas have been regenerated and transformed into areas with economic, environmental and social benefits.

3.3. Evaluations, studies and reports

The key findings of the latest Interim evaluation of the Asylum, Migration and Integration Fund 2014-2017 (SWD (2018) 340 final <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:52018SC0339&from=EN>) have been presented in the Programme Statements DB2020.

By 31 December 2023, the Member States will provide an ex-post evaluation report on the effects of actions under their national programmes and by 30 June 2024 the Commission will present an ex-post evaluation report on the effects of the legal bases.

At the same time, DG HOME implements the **Action Plan** following the internal audit findings on the monitoring and reporting on the implementation and performance of National Programmes. In particular, DG HOME has strengthened its processes for monitoring the National Programmes and increased its efforts to improve the reliability of performance data reported by the Member States in their Annual Implementation Reports submitted annually. More attention will be given to the consistency of data reported by the Member States. Together with the Member States, DG HOME will develop common definitions for each common indicator set out in the Fund Regulation.

Moreover, the European Court of Auditors issued recommendations on the strengthening of the management of the AMIF emergency assistance and national programmes. They cover in particular strengthening the performance monitoring framework by monitoring and reporting the outcomes achieved by EMAS funded projects, ensuring that EMAS project contain output and outcome indicators with clean targets and baselines etc.

While the Commission started implementing the ECA’s recommendations already under the ongoing programmes, the main structural recommendations will be put in place in the context of the next MFF, including on performance reporting on EMAS projects.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Strengthen and develop all aspects of the common European asylum system, including its external dimension

Indicator 1: Number of participants who consider the training useful for their work

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute Number of Participants
Cut-Off Date	31/12/2022
Data source	AMIF's monitoring systems, for each programme. The exact data collection method will vary depending on the choice of the Managing Authority, which remains responsible to ensure quality and accuracy of the data, and in line with the provisions in the legal basis.
Link to the objective	Improve the functioning of and develop the Common European Asylum System via training to the relevant staff
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020, Member States do not monitor this indicator
Other methodological comments	SM Baselines refer to the situation prior to the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 2: Number of participants who report three months after the training activity that they are using the skills and competences acquired during the training

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Participants (absolute value)
Cut-Off Date	31/12/2022
Data source	AMIF's monitoring systems, for each programme. The exact data collection method will vary depending on the choice of the Managing Authority, which remains responsible to ensure quality and accuracy of the data, and in line with the provisions in the legal basis.
Link to the objective	Improve the functioning of and develop the Common European Asylum System via training to the relevant staff
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020, Member States do not monitor this indicator
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before

	adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.

Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Specific Objective 4: To enhance solidarity and responsibility sharing between the Member States, in particular towards those most affected by migration and asylum challenges, including through practical cooperation

Indicator 1: Number of applicants for and beneficiaries of international protection transferred from one Member State to another

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute number of persons
Cut-Off Date	31/12/2022
Data source	AMIF's monitoring systems, for each programme. The exact data collection method will vary depending on the choice of the Managing Authority, which remains responsible to ensure quality and accuracy of the data, and in line with the provisions in the legal basis.
Link to the objective	Improve solidarity and fair sharing of responsibilities between Member States in the area of asylum and reception as per the specific objective
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020, Member States have monitored "the number of applicants and beneficiaries of international protection transferred from one Member State to another with support of the Fund"
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for

	the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 2: Number of persons resettled

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute number of persons
Cut-Off Date	31/12/2022
Data source	AMIF's monitoring systems, for each programme. The exact data collection method will vary depending on the choice of the Managing Authority, which remains responsible to ensure quality and accuracy of the data, and in line with the provisions in the legal basis.
Link to the objective	Increase the number of persons resettled to contribute to the enhancing of solidarity and fair sharing between MS with respect to migration and asylum challenges.
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020, Member States have monitored this indicator
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Asylum, Migration and Integration Fund

General Objective 1: To contribute to the efficient management of migration flows and to the implementation, strengthening and development of the common policy on asylum, subsidiary protection and temporary protection and the common immigration policy, while fully respecting the rights and principles enshrined in the Charter of Fundamental Rights of the European Union

Indicator 1: Effectiveness of return policy as reflected by the ratio between the number of irregular migrants returned to their country of origin compared to return decisions issued

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022
39.2%				Increased ratio						Increased ratio
	Actual Progress									Final
	31.91%	33.85%	45.15%	35.67%	31.95%	28.97%	17.72%			
Are we on track :	Deserves attention**									

Indicator type	Impact
Unit of measurement	Ratio
Cut-Off Date	31/12/2021
Data source	Eurostat
Narrative	
Methodology	The indicator measures the number of third country nationals who have been returned to third countries.
Link MFF 14-20 / MFF 21-27	This indicator is not included in the core performance indicators for the MFF 2021-2027.
Other methodological comments	Extract from Eurostat on 15/02/2022. Data are revised on a continuous basis according to the most recently updated data provided by the countries. There is a one year delay for this indicator due to data availability from Eurostat. For accuracy purposes, the indicator should be called: 'Effectiveness of return policy as reflected by the ratio between the total number of irregular migrants returned compared to return decisions issued'. All data, including historical data, refers to EU-27. The first result below the baseline is just the sign of a negative trend already in 2014.
Full metadata available at this address	
Justification of the trend	In light of the declining return rate, the Pact includes measures for stepping up returns, notably by closing loopholes between asylum and return procedures – including at the external borders by means of a border procedure – through the recast Return Directive and the amended proposal for an Asylum Procedure Regulation. The Pact announces a new strategy to reinforce voluntary return and reintegration, foresees the appointment of a Return Coordinator who will be supported by a High-Level Network which will provide technical support and bring together the strands of the EU return policy. Moreover, the implementation of the European Border and Coast Guard Agency (Frontex) mandate on returns and measures for enhancing cooperation with third countries will further contribute to returns. A further drop in 2020 is visible but the situation is clearly affected by the onset of the pandemic, as explained in section 3.1.3. In any event. This drop refers to 2020, latest available year, and not 2021.

Indicator 2: Ratio voluntary/forced return

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2022
45.5%				Increased						Increased ratio
	Actual Progress									Final
	58.4%	86.8%	133%	136%	109.2%	100.2%	99.5%			

Are we on track :	On track
-------------------	----------

Indicator type	Impact
Unit of measurement	Ratio
Cut-Off Date	31/12/2020
Data source	Eurostat
Narrative	This indicator is not included in the AMIF Regulation.
Methodology	The number of voluntary returns divided by the number of enforced returns.
Link MFF 14-20 / MFF 21-27	This indicator is not included in the core performance indicators for the MFF 2021-2027.
Other methodological comments	Please note that not all MS report this indicator. Also, some MS do not report it every year so the figures are not fully comparable. It will become obligatory to report this breakdown from reference year 2021. There is a one year delay in the reporting which depends on data availability from Eurostat.
Full metadata available at this address	
Justification of the trend	The Commission has always promoted the voluntary return as a preferred option for being more dignified concerning potential returnees. The Pact announces a new strategy to reinforce voluntary return and reintegration. Moreover, the implementation of the European Border and Coast Guard Agency (Frontex) mandate on returns implies also an increase of the support that the Agency is able to provide to MS in the field of Assisted Voluntary Returns including through the takeover of the European Return and Reintegration Network (ERRIN). The ratio is nevertheless substantially increased with respect to the 2014 and baseline values, although on a slightly negative trend ever since 2017. No significant variation is registered between 2019 and 2020, further suggesting that the sudden drop in the ratio between actual returns vs return decisions is not due to substantial changes in the system in place, but rather to the impact of the COVID-19 pandemic.

Indicator 4: Convergence of recognition rates for international protection by Member States for asylum applicants from the same third country

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022
				Lower (increased convergence)						Lower (increased convergence)
	Actual Progress									Final
	24	24.2	28.3	25.3	22.4	28.1	24.2	19.9		
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Decisions of the Member States' determining authorities on the applications for international protection of Afghan nationals, annual.
Cut-Off Date	31/12/2021
Data source	Calculations based on Eurostat data
Narrative	This indicator aims to measure the harmonisation of rules and practices in the EU regarding asylum procedures. This is done by using a proxy: the ratio between the number of Afghan nationals who are granted international protection at first instance in the Member States and the number of first instance decisions concerning Afghan nationals. The target is to reach a lower standard deviation than in 2014. Notwithstanding progress achieved in the development of the Common European Asylum System, there are still significant disparities between the Member States, and in 2019 the standard deviation increased compared to 2014. The New Pact on Migration and Asylum aims to further harmonise rules and practices in the EU and decrease the deviation.
Methodology	The standard deviation of the recognition rate of Afghan nationals, calculated among a pre-defined group of ten Member States that took the highest number of first instance decisions on asylum applications from Afghan nationals in the period from 2016-2018. To get the recognition rate, the number of positive decisions (refugee status and subsidiary protection, not including humanitarian status) granted in first instance for Afghan nationals are divided by the total number of decisions in first instance relating to this nationality.
Link MFF 14-20 / MFF 21-27	This indicator will continue to be reported. However, it is not included in the list of core performance indicators for the MFF 2021-2027
Other methodological comments	Under the previous methodology (considering Member States taking at least 100 decisions), the number and range of Member States considered varies from year to year, distorting the calculation.
Full metadata available at this address	
Justification of the trend	The objective to be reached is to have more streamlined asylum decisions across Member States' determining authorities, meaning that if e.g. an Afghani national makes an application for international protection in Member State X, he should have a similar outcome on his application were it made in Member State Y. Although the EU asylum acquis integrates this objective as an important

	one, and some convergence is starting to show, Member State practices still result in some divergence. With the New Pact on Asylum and Migration, adopted in September 2020, as well as instruments such as practical guidance developed by EASO, it was expected that further convergence will emerge; and in 2021 the impact seems that it is materialising. Overall, it can be concluded that the indicator is on track, as the elements for convergence are in place and the values are improving.
--	--

Specific Objective 1: To strengthen and develop all aspects of the Common European Asylum System, including its external dimension

Indicator 1: Number of target group persons provided with assistance through projects in the field of reception and asylum systems supported under the Fund

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
				643 350						1 263 700
	Actual Progress									Final
	155 246	396 734	898 859	1 351 630	1 712 157	2 089 764	2 442 908	2 723 629		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of persons, milestones and target are cumulative, actual results are cumulative
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will report on the following indicators: Number of participants supported; of which number of participants who received legal assistance; of which number of participants benefiting from other types of support, including information and assistance throughout the asylum procedure; of which number of vulnerable participants assisted; These indicators are, however not included in the list of core performance indicators.
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	The values are reflecting the crisis in 2016 and the current situation in migration flows which is decreasing. The target was achieved and the progress appears steady.

Indicator 2: Capacity (i.e. number of places) of new reception accommodation infrastructure set up in line with the common requirements for reception conditions set out in the Union acquis and of existing reception accommodation infrastructure improved in accordance with the same requirements as a result of the projects supported under the Fund and percentage in the total reception accommodation capacity

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
				25 389						51 028
	Actual Progress									Final
	1 533	3 068	8 668	24 868	28 325	32 453	36 346	41 266		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will report data on the following indicators: Number of newly created places in reception infrastructure in line with Union acquis; of which number of newly created places for unaccompanied minors; Number of renovated/refurbished places in reception infrastructure in line with Union acquis; of which number of renovated/refurbished places for unaccompanied minors. These indicators are not included in the list of core performance indicators. The following indicators are included in the list of core performance indicators. Number of persons placed in alternatives to detention; of which number of unaccompanied minors placed in alternatives to

	detentionof which number of families placed in alternatives to detention.
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	Values increased as of 2017 when implementation picked up. The indicator is not fully on track to reach the 2022 target but the extension of the implementation period means it should be possible to achieve it by 2023, if the 2021 is maintained. Delays in procurement and refurbishment projects meant limited progress in a number of Member States.

Indicator 3: Number of persons trained in asylum-related topics with the assistance of the Fund, and that number as a percentage of the total number of staff trained in those topics

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of persons trained in asylum-related topics with the assistance of the Fund										
	Milestones									2022
0	0			12 603						25 205
	Actual Progress									Final
	0	1 826	7 799	22 898	39 752	54 210	64 294	71 235		
Are we on track :	On track									
Percentage of persons trained in asylum-related topics with the assistance of the Fund of the total number of staff trained in those topics										
	Milestones									2022
0%	0%			28%						56%
	Actual Progress									Final
	0%	4,75%	9,33%	14%	16,66%	18,39%	20,34%	21,03%		
Are we on track :	Deserves attention**									

Indicator type	Result
Unit of measurement	Milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will report on the Number of participants in training activities. This indicator is, however not included in the list of core performance indicators. The following indicators for the period MFF 2021-2027 are included in the list of core performance indicators: Number of participants who consider the training useful for their work;Number of participants who report three months after the training activity that they are using the skills and competences acquired during the training
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement
Full metadata available at this address	
Justification of the trend	Initial target slightly underestimated, more personnel resources had to be trained on asylum-related topics.Percentage however is underachieved showing that resources other than the AMIF fund were also used to train the personnel. The trends remained stable in 2021.

Indicator 6: Number of persons resettled with support of the Fund

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2022
0	7 362			30 139						108 860
	Actual Progress									Final
	0	3 766	16 189	24 844	38 887	62 651	77 463	86 243		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	15/02/2022
Data source	Provided in the accounts submitted by Member States on 15/2 each year.
Narrative	
Methodology	

Link MFF 14-20 / MFF 21-27	Member States will continue to monitor this indicator in MFF 2021-2027
Other methodological comments	Although Member States report resettlement data also in their Annual Implementation Report, the Commission has decided to use the resettlement data provided by the Member States in their annual accounts for this purpose. It appears that the resettlement data submitted in the annual accounts is up to date and thus provides an accurate and updated picture of resettlement.
Full metadata available at this address	
Justification of the trend	Member States are committed to resettlement which is shown by the gradually increasing number of pledges and the very good implementation rates (almost 90% for the “50 000 scheme” in 2018-2019). In 2020 and 2021, the implementation of the pledges was disrupted by the COVID-19 pandemic. Despite these difficulties, 14 812 people were resettled in the EU in 2020, and around 9 000 in 2021. Considering the two additional years of implementation and the pledges for Member States for 2021, the indicator should be considered on track..

Specific Objective 2: To support legal migration to the Member States in accordance with their economic and social needs, such as labour market needs, while safeguarding the integrity of the immigration systems of Member States, and to promote the effective integration of third-country nationals

Indicator 1: Number of target group persons who participated in pre-departure measures supported under the Fund

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
0	0			120 460						240 920
	Actual Progress									Final
	0	9 259	20 573	33 039	52 800	71 135	88 608	114 659		
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	Milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Member States will continue to monitor this indicator in the MFF 2021-2027
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year’s programme statement.
Full metadata available at this address	
Justification of the trend	Underachieved. Member States often opt to provide comparable support after arrival. Hence, when setting this ambitious target, this approach may not have been known. Progress concentrated in a few Member States.

Indicator 2: Number of target group persons assisted by the Fund through integration measures in the framework of national, local and regional strategies

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
				1 312 031						2 618 062

Indicator type	Result
Unit of measurement	Number of returnees, milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will monitor the following indicators included in the list of core performance indicators: Number of returnees voluntarily returned; Number of returnees who were removed; Number of returnees subject to alternatives to detention
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	

Justification of the trend	Underachieved, in line with the implementation of return projects which is slow with difficulties reported more on forced return but also on voluntary return. Many return operations have been delayed or cancelled due to disagreements with the receiving countries or legal obstacles. Activities have been particularly hampered in 2020 and 2021 due to COVID-19 and related travel restrictions.
----------------------------	---

Indicator 4: Number of monitored removal operations co-financed by the Fund

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022

Indicator type	Result
Unit of measurement	Number of operations, milestones and target are cumulative, actual results are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Member States will not monitor this indicator in the MFF 2021-2027
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	Overachieved, original target set lower.

Specific Objective 4: To enhance solidarity and responsibility-sharing between the Member States, in particular with those most affected by migration and asylum flows, including through practical cooperation

Indicator 1: Number of applicants and beneficiaries of international protection transferred from one Member State to another with support of the Fund

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
0				16 000						38 703
	Actual Progress									Final
	0	34	5 175	24 523	31 375	32 069	32 256	35 451		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of persons, milestones and target are cumulative, actual results are cumulative
Cut-Off Date	15/02/2022
Data source	Provided in the annual accounts sent by receiving Member States on 15 February each year.
Narrative	
Methodology	This indicator monitors relocation operations under the two Council decisions of September 2015 as well as under ad hoc voluntary operations. It should be noted that the number of persons relocated under the two 2015 Council decisions is 34,708 persons, reported by Greece and Italy. It includes relocations to Schengen associated countries.
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member states will continue to monitor this indicator, which is included in the list of core performance indicators
Other methodological comments	Although Member States report resettlement data also in their Annual Implementation Report, the Commission has decided to use the data provided by the Member States in their annual accounts for this purpose. It appears that the data submitted in the annual accounts provides an up-to-date and accurate picture.
Full metadata available at this address	
Justification of the trend	On track - transfers are taking place under both shared and direct management. Increased disembarkations in frontline MS since 2018 increased the demand for pledges and actual persons transferred. After a drop in 2020, implementation regained momentum in 2021.

6. The programme contribution to horizontal policies

5.1. Contribution to climate mainstreaming

5.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	0.00 ¹¹							0.00	0%

(*)These amounts include NextGenerationEU top-ups if any

6.1. Contribution to gender equality

6.1.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*: 496.8							

(*)Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

On the 2014-2020 period, the AMIF Regulation (Regulation (EU) No 516/2014), covering the previous programming period, stipulates that eligible actions need to take account of the human rights-based approach to the protection of migrants, refugees and asylum seekers and should, in particular, ensure that special attention is paid to, and a dedicated response is provided for, the specific situation of vulnerable persons, in particular women, unaccompanied minors and other minors at risk. Support for third country national victims of trafficking is ensured on this ground.

The AMIF regulation for the MFF 2021-2027 stipulates under article 6 about gender equality and non-discrimination. The Member States and the Commission must ensure the integration of the gender perspective and that gender equality and gender mainstreaming are taken into account and promoted throughout the preparation, implementation, monitoring, reporting and evaluation of programmes and projects supported under the Fund. Moreover, the Member States and the Commission must take appropriate steps to exclude any form of discrimination prohibited by Article 21 of the Charter. The AMIF will apply a horizontal expenditure tracking methodology in order to assess impacts of gender mainstreaming in the AMIF.

6.2. Contribution to the sustainable development goals

6.2.1. Goals

SDG 1 End poverty in all its forms everywhere

AMIF supports the most vulnerable groups by providing material aid, providing assistance in housing, means of subsistence, health, psychological and social care including through adapting reception centres and services to the most vulnerable groups such as unaccompanied minors.

Under the national programme of Romania, a project ‘My place’ financed between 2017 and 2019 aimed at providing a bridge for the integration of beneficiaries of international protection and third-country nationals in Romania. The general objective of the project was to support the socioeconomic and cultural integration of beneficiaries of international protection and third-country nationals into Romanian society through an integrated approach by providing the necessary information and services and by enhancing the active collaboration and involvement of the authorities/institutions, the private sector and other entities with relevance to the field of migrant integration. The target group was beneficiaries of international protection and third-country nationals with the right of residence on the Romanian territory (long- or short-term residence permit), in need of support with accommodation and integration in a specific region. The project’s aim was to provide assistance to a group of at least 150 migrants receiving some form of protection in Romania, or granted refugee status or subsidiary protection, along with some 109 third-country nationals or stateless persons with the right of residence in Romania.

SDG 10 Reduce inequality within and among countries

AMIF makes a meaningful contribution to safe migration by supporting information campaigns on legal migration channels to the EU, legal migration through resettlement and family reunification and by promoting mobility schemes to EU such as circular or temporary migration schemes. AMIF also contributes to social inclusion of third country nationals by supporting their integration,

¹¹ Eur 0.000507564 mln

active participation in the society and their acceptance in the receiving society through for instance, actions focusing on civic orientation and training, including language trainings to newcomers, or promoting meaningful contact and constructive dialogue between third country nationals and the receiving society.

The project ‘Stadsdelsmammor 2.0’ (‘neighbourhood mothers 2.0’) financed between 2016 and early 2020 under the Swedish national programme was a project in the city of Helsingborg in southern Sweden. Helsingborg, like most major cities in Sweden, is characterised by great challenges of segregation and polarisation. The ‘neighbourhood mothers’ method was based on an existing need to reach those residents who were the most socially isolated. For many years, there has been an upward trend in societal disparities, for example between the economic and social resources of residents in different residential areas. The project aimed at reducing social and economic gaps by engaging local newly arrived mothers and creating meeting places and social activities for them, while at the same time contributing to city development.

6.2.2. Key achievements and performance

SDG 1 End poverty in all its forms everywhere

AMIF supports the most vulnerable groups by providing material aid, providing assistance in housing, means of subsistence, health, psychological and social care including through adapting reception centres and services to the most vulnerable groups such as unaccompanied minors.

SDG 10 Reduce inequality within and among countries

AMIF makes a meaningful contribution to safe migration by supporting information campaigns on legal migration channels to the EU, legal migration through resettlement and family reunification and by promoting mobility schemes to EU such as circular or temporary migration schemes. AMIF also contributes to social inclusion of third country nationals by supporting their integration, active participation in the society and their acceptance in the receiving society through for instance, actions focusing on civic orientation and training, including language trainings to newcomers, or promoting meaningful contact and constructive dialogue between third country nationals and the receiving society.

1. Overview

1.1. Challenges

The effective management and protection of EU external borders is a prerequisite for ensuring the safe area for the free movement of persons and goods within the Union. The achievement of an internal area without borders brings important benefits, both to European citizens as well as to businesses. The significance of the Schengen area makes it even more necessary to strengthen efforts aiming to safeguard its integrity, especially in times of challenges posed by migratory pressure, and reinforce it so that it can address serious cross-border crime and ensure a high level of internal security within the EU. Customs services help to safeguard the financial interests of the Union and of the Member States and, in their role as guardians of the external EU border for goods, also protect the public against terrorist, health, environmental and other threats.

The challenges in the areas of the management of the external borders and common visa policy cannot be adequately addressed by the Member States acting alone. The abolition of internal border controls must be accompanied by common measures for the effective control and surveillance of the Union's external borders as well as a common asylum and migration policy. At the same time, customs services, as gatekeeper for the passage of goods across the EU external borders, play a central role in protecting the external border of the internal market, safeguarding the financial interests of the Union, protecting the public, enabling the free flow of goods inside the market and managing the trade flows into the EU.

This is necessary to preserve the European Union as an area without internal border controls, preventing and addressing any secondary movements as well as ensuring the integrity of the single market. EU funding in this area is indispensable to ensure strong and effective integrated border management while safeguarding the free movement of persons and goods in the EU.

1.2. Mission (General objectives)

The Integrated Border Management Fund (IBMF) will address these challenges through its two instruments, namely the instrument for financial support for customs control equipment (CCEI) and the instrument for financial support for border management and visa policy (BMVI).

In particular, the mission of the newly established CCEI is to provide financial support to Member States customs administrations for the purchase, maintenance and upgrade of relevant state-of-the-art customs control equipment that should also be secure, safe, and environmental-friendly. CCEI will be deployed at for Border Crossing Points (BCPs) and customs laboratories. It is the first funding instrument dedicated entirely to strengthening Member States' capacities to perform customs controls and comes as a response to the long-standing calls by the Member States for a structured solution to provide national customs administrations with adequate and effective technical equipment for controlling goods entering and leaving the EU.

The CCEI supports actions aim at delivering on the Commission's Political Guidelines by equipping the Customs Union with a stronger framework to better protect EU citizens and the single market. CCEI is in full compliance with the Union's commitments on fundamental rights, as it contributes to guaranteeing a high level of security in the EU and aiming to provide vital and reinforced support to the Member States to secure the common external borders of the Union.

BMVI's mission is to provide support to Member States, to ensure strong and effective European integrated border management at the external borders, thereby contributing to ensuring a high level of internal security within the Union, while safeguarding the free movement of person within it and fully respecting the relevant Union *acquis* and the international obligations of the Union and the Member States arising from the international instruments to which they are party. Article 80 TFEU states that the common policies on asylum, migration and external borders are based on the principle of solidarity and fair sharing of responsibilities between Member States. EU funding through the BMVI is the mechanism, which gives effect to the financial implications of this principle.

1.3. Specific objectives

CCEI's mission is operationalised through:

- Its general objective to support the customs union and customs authorities to protect the financial and economic interests of the Union and its Member States, to ensure security and safety within the Union and to protect the Union from unfair and illegal trade while facilitating legitimate business activity.
- Its specific objective to contribute to adequate and equivalent results of customs controls through the transparent purchase, maintenance and upgrade of relevant, state-of-the-art, such as secure, safe and environmental-friendly, and reliable customs control equipment, thereby supporting the customs authorities acting as one to protect the interests of the Union.

BMVI's mission is operationalised through the pursuit of the following specific objectives:

- To support effective European integrated border management at the external borders, implemented by the European Border and Coast Guard, as a shared responsibility of the European Border and Coast Guard Agency and of the national authorities responsible for border management, to facilitate legitimate border crossings, to prevent and detect illegal immigration and cross-border crime and to effectively manage migratory flows.
- To support the common visa policy to ensure a harmonised approach with regard to the issuance of visas and to facilitate legitimate travel, while helping prevent migratory and security risks.

1.4. Public intervention context

EU powers regarding customs policy are of **exclusive** competence as per Article 3 TFEU. The Customs Union means that the customs authorities of all 27 EU countries work together as if they were one. They apply the same tariffs to goods imported into their territory from the rest of the world, and apply no tariffs internally. Customs administrations are involved in the implementation and enforcement of EU legislation on import and export from and to non-EU countries.

The Customs Control Equipment instrument has the general objective to support the customs union and customs authorities to protect the financial and economic interests of the Union and its Member States, to ensure security and safety within the EU and to protect it from illegal trade while facilitating legitimate business activity. The CCEI supports the Member States to purchase, maintain and upgrade customs control equipment that will enable them to improve the performance of the customs union and to contribute to adequate and equivalent results of customs controls. It will thus contribute to improving the performance of the customs union with a view to the long-term aim of harmonised application of customs controls by the Member States.

The IBMF is complemented by a range of other EU activities and instruments with an impact on developments in the policy area. EU powers regarding common policy on border management are **shared** with the Member States. While Article 71 TFEU facilitates cooperation among Member States to strengthen internal security, Member States retain the competence to exercise law-enforcement power when they enforce measures adopted pursuant to EU provisions on operational cooperation and border control (Article 72 TFEU) and on national security (Article 4(2) TEU) to engage in forms of administrative cooperation in matters of national security (Article 73 TFEU).

1.5. Actions

For the CCEI, this includes in particular actions supporting the purchase, maintenance or upgrading of customs controls equipment including innovative detection technology equipment that has one or more of the following customs control purposes:

- non-intrusive inspection;
- indication of hidden objects on humans;
- radiation detection and nuclide identification;
- analysis of samples in laboratories;
- sampling and field analysis of samples;
- handheld search.

The BMVI supports a broad range of actions, in line with the European Agenda on Migration and the Security Union Strategy. This includes, in particular, the following actions:

- support the capabilities of the Member States acting as national components of the European Border and Coast Guard;
- Support of large-scale IT systems and their interoperability;
- Support of training, exchange of information, innovation and studies;
- Support for infrastructure and equipment;
- Deployment of experts and immigration liaison officers.

1.6. Delivery mode

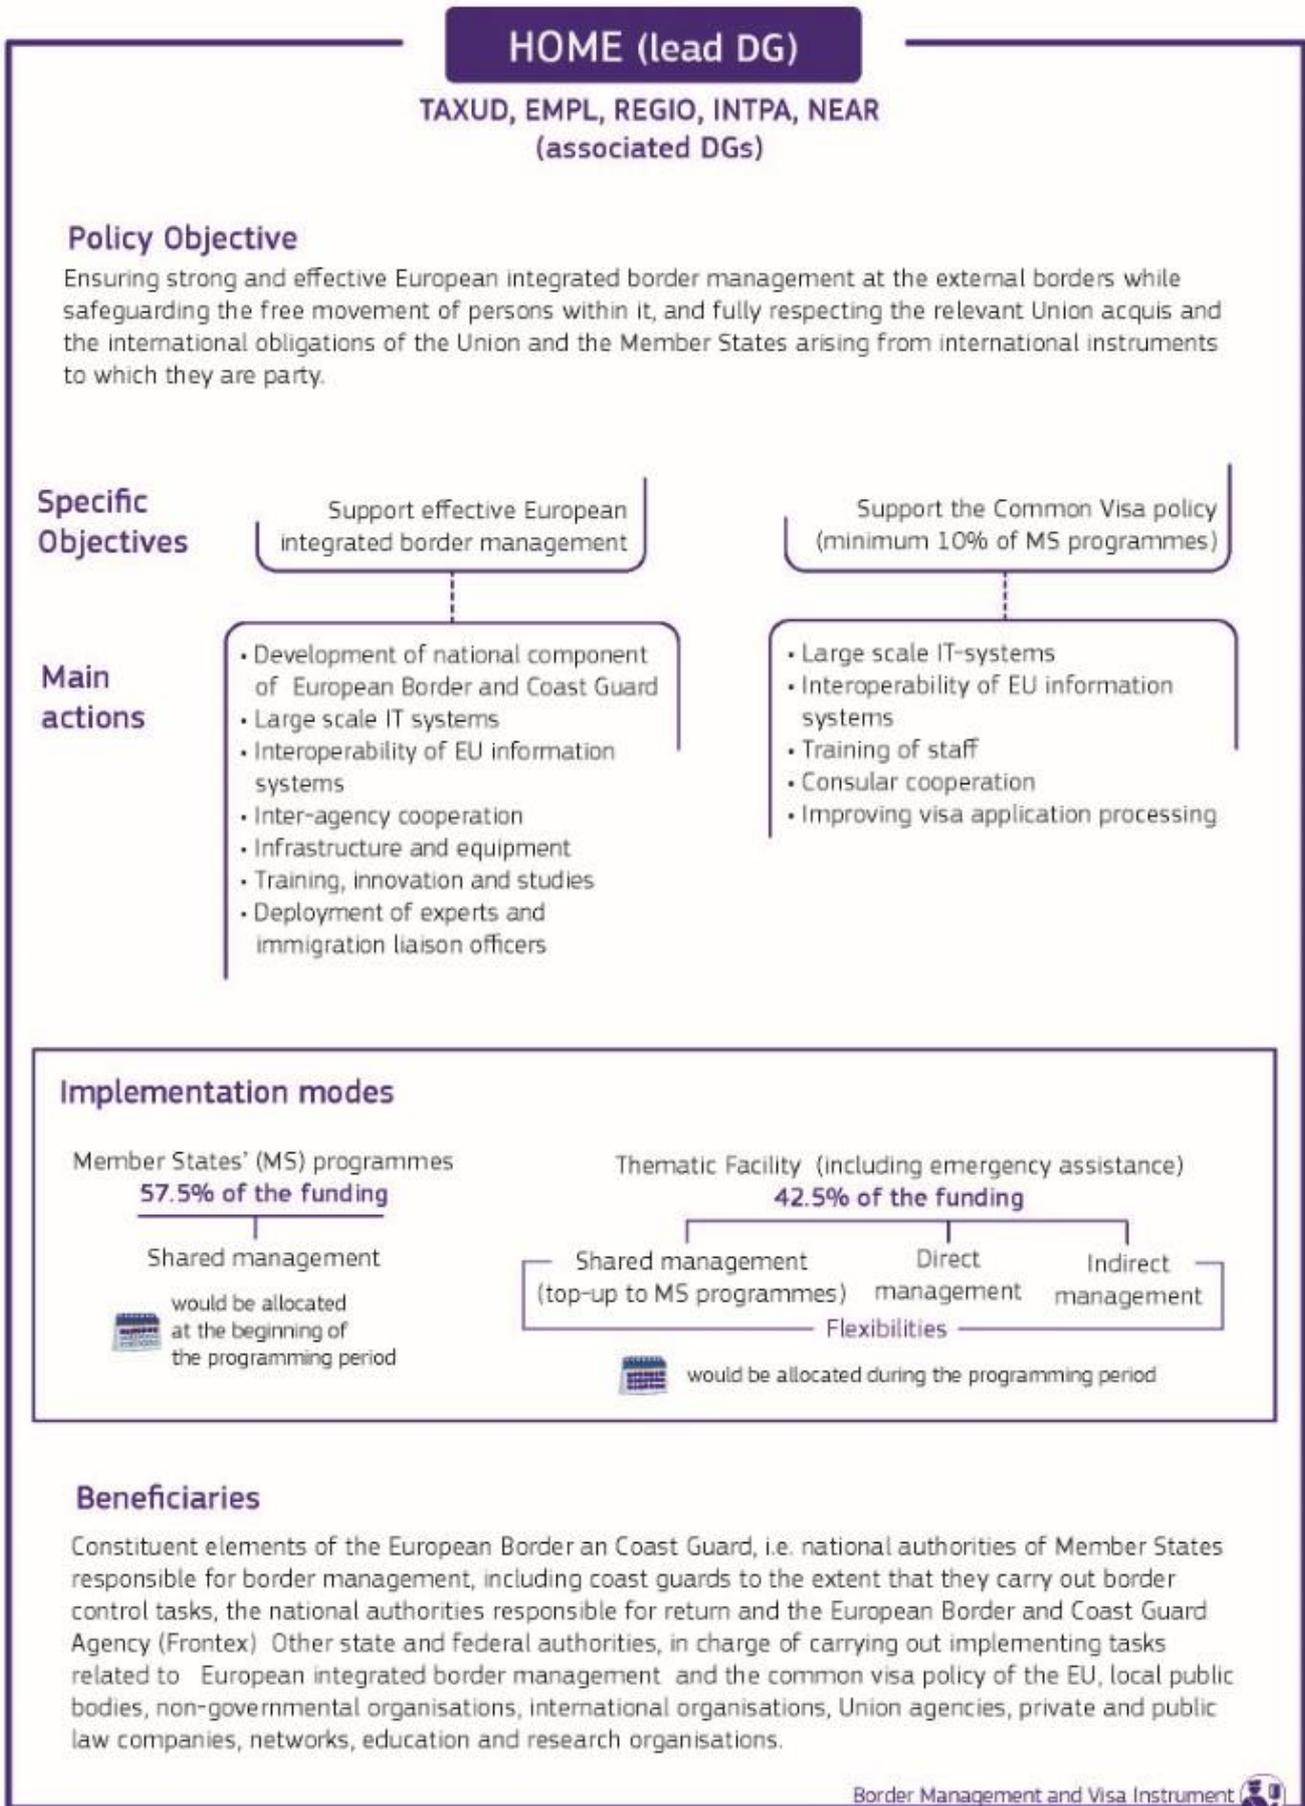

The Commission implements the actions under CCEI under direct management. The lead Directorate General is DG TAXUD. For the purposes of the CCEI, DG TAXUD closely cooperates with OLAF, in relation to the Anti-Fraud programme managed by the latter. Appropriate and adapted coordination takes place with services managing other complementary programmes: Customs programme, Recovery Resilience Facility and Horizon Europe. A constant coordination will ensure the complementarity of activities or/and equipment funded by the different programmes while excluding any double financing of the same equipment.

The BMVI is implemented under shared, direct or indirect management. The largest part of the resources (initially 57.5% of the total BMVI budget) will be allocated to the Member States' programmes under shared management. The remaining budget will be allocated to a thematic facility⁵ to be used for specific actions (implemented by the Member States nationally or transnationally), EU actions (direct/indirect management), and emergency assistance (shared, direct or indirect management). The lead Directorate General is DG HOME.

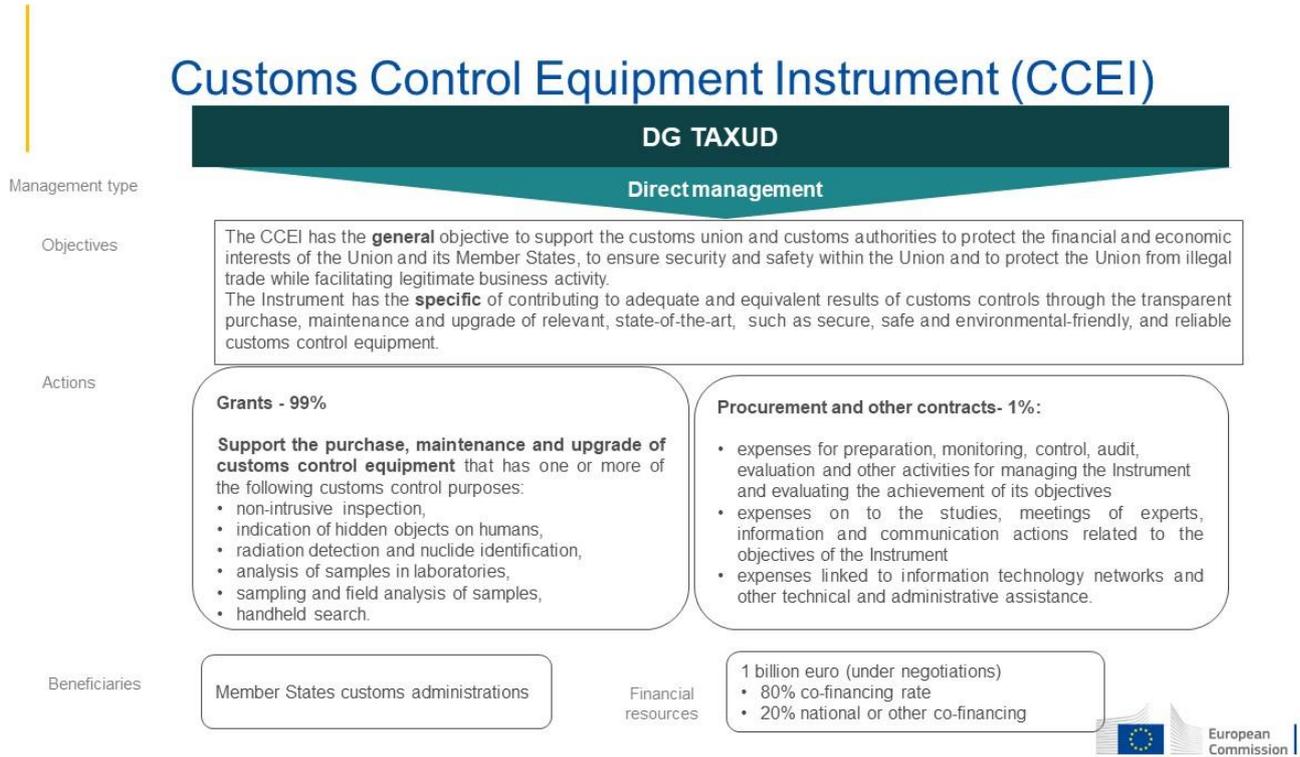

Since the BMVI is also covered by the Common Provisions Regulation (EU) 2021/1060, there will be close cooperation between the Commission services DG HOME, REGIO, EMPL and MARE. Close cooperation and coordination will be ensured between the two DGs managing the IBMF's instruments, DG TAXUD and DG HOME, e.g. by regular interservice meetings between the two Directorates, to provide for consistency in their implementation. In relation to the external dimension, DG HOME closely coordinates with DGs INTPA and NEAR.

1.7. Graphic overview of the programme structure

Instrument for Border Management and Visa (BMVI)

Customs Control Equipment Instrument (CCEI)

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/1148 of the European Parliament and of the Council of 7 July 2021 establishing, as part of the Integrated Border Management Fund, the Instrument for Financial Support for Border Management and Visa Policy (OJ L 251, 15.7.2021, p. 48).	2021 - 2027	5 241.00
Regulation (EU) 2021/1077 of the European Parliament and of the Council of 24 June 2021 establishing, as part of the Integrated Border Management Fund, the instrument for financial support for customs control equipment (OJ L 234, 2.7.2021, p. 1).	2021 - 2027	1 006,4
Regulation (EU) 2021/1060 of the European Parliament and of the Council of 24 June 2021 laying down common provisions on the European Regional Development Fund, the European Social Fund Plus, the Cohesion Fund, the Just Transition Fund and the European Maritime, Fisheries and Aquaculture Fund and financial rules for those and for the Asylum, Migration and Integration Fund, the Internal Security Fund and the Instrument for Financial Support for Border Management and Visa Policy, OJ OJ L 231, 30.6.2021, p. 159–706.		N/A

1.8.2. Legal basis explanation

The legal basis of the CCEI is the Regulation ((EU) 2021/1077) of the European Parliament and of the Council Establishing, as part of the Integrated Border Management Fund (which has no own basic act), the instrument for financial support for customs control equipment. The other part of the Integrated Border Management Fund is the Instrument for Financial Support for Border Management and Visa Policy ((EU) 2021/1148). Since the Instrument for Financial Support for Border Management and Visa Policy is majorly implemented through shared management, it is covered partially (financial, not policy provisions) by of the Common Provision Regulation ((EU) 2021/1060).

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	289.0	983.7	1 195.3	1 050.3	1 187.2	1 091.1	1 105.1	6 901.7
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities	0.5	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	0.5
Total	289.5	983.7	1 195.3	1 050.3	1 187.2	1 091.1	1 105.1	6 902.2

(*) Only Article 15(3) of the financial regulation.

CCEI

2021-2027 programme	2021	2022
Commitment appropriations	135 403 000	138 111 000
Payment appropriations	32 887 000	103 620 000

The Customs Control Equipment Instrument is a brand new programme with a total budget of EUR 1 006 407 000. There is no financial data of a predecessor programme that can be used for precise calculation of payment appropriations. It is expected that the bulk of payments of the initial 2021 grant agreements will only take place in 2022 and beyond.

BMVI

2021-2027 programme	2021	2022
Commitment appropriations	398 014 000	642 173 000
Payment appropriations	67 805 000	193 615 000

1.9. Link with the 2014-2020 MFF

The Commission proposal for the CCEI comes as a response to the long-standing calls by the Member States for a structured solution providing national customs administrations with adequate technical equipment to control goods crossing the EU's external borders. It is a newly established instrument that forms part of the EU Multiannual-financial framework for the first time.

The BMVI builds on the lessons learned during the programming period 2014-2020 such as the need to ensure sufficient cooperation, coordination and strategic steering between the HOME funds and other relevant EU funds, and the need to increase flexibility to address unforeseen needs. The BMVI addressed these challenges to facilitate the steering of the funds towards Union priorities, as well as towards pressing, yet unforeseeable challenges. Simplification is another important element of the new Fund, with the establishment of common rules for programming, reporting and financial management and the alignment of the Fund with similar EU funding instruments. Finally, a common monitoring and evaluation framework has been further developed to ensure a strengthened performance orientation, as well as improved and more frequent reporting on the progress towards targets and milestones.

1.10. Relevant websites providing more information

On the Commission website the reader will be able to see a description of the scope and the budget allocation of the Funds:

[Integrated Border Management Fund – Border Management and Visa Instrument \(2021-27\) \(europa.eu\)](https://ec.europa.eu/euifundamentals/en/integrated-border-management-fund-border-management-and-visa-instrument-2021-27)

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

The invasion of Ukraine by the Russian Federation on 24 February 2022 led to a mass influx of displaced persons from Ukraine to several EU Member States. This places renewed pressure on the Member States to deal with urgent migration management needs and face related financial needs. The increased migratory pressure, including reception and asylum processing procedures, particularly affects Member States bordering Ukraine but will likewise create pressure afield throughout the whole territory of the European Union. Given the uncertain nature of the situation the pressure is expected to persist beyond 2022 and into 2023.

With a view to providing immediate support to people arriving in the Union and showing concrete solidarity with the most affected Member States, the Commission has proposed to increase flexibilities in the use of 2014-2020 funds following the proposal of prolonging the implementation period. In addition, with the pledge made on April 9 2022, the Commission proposes to make EUR 400 million available for emergency assistance, consisting of redeployment within the Thematic Facility under AMIF and BMVI as well as reinforcement of AMIF from the margin under H4 and from the SEAR (internal strand). The Ukrainian crisis and the needs following are expected to be within the proposed total envelope of the BMVI in 2023.

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	288.6	6 826.8	4%
Payments	0.4		0%

In 2021, an amount of EUR 155.4 million was implemented in commitments under BMVI, of which EUR 154.1 million was related to the first Thematic Facility under BMVI and EUR 1.3 million was related to the support expenditure.

In 2021, an amount of EUR 0.45 million was implemented in commitments under BMVI, of which EUR 0.43 million was related to the support expenditure and EUR 0.02 million related to the first Thematic Facility under BMVI.

In case of CCEI, there were neither commitments nor payments granted in 2021.

Shared management

For the BMVI, due to the delays in the adoption of the legal basis for 2021-2027 and time needed for the programming procedure in shared management, shared management programmes may only be formally approved starting from the second quarter in 2022.

The Commission also prepared a 2021-2022 Work Programme for the Thematic Facility to ensure the programming of the funding for indirect/direct and shared management on top of the basic allocations for the national programmes. The Commission adopted the financing components of the Thematic Facility and the Work Programme for 2021 and 2022 amounting to EUR 496 770 573 on 25 November 2021 (C(2021) 8459 Final). Direct and indirect management (Union Actions) measures under the Thematic Facility include among others innovative methods for assessing the impacts of future border control systems, support for national components of the EBCG Standing Corps, EU-wide secure, interoperable Communication for all security practitioners (including Border and Coast Guard), communication campaigns on EES, ETIAS, SIS and ILO Network.

Union Actions

As mentioned above as of 2021 the Union Actions have become a part of the Thematic Facility covered by the multiannual Work Programme for 2021-2022. In view of delayed adoption of the legal basis of consequently the work programme, implementation of most of the actions is commencing in early 2022 and continuing throughout 2023.

In continuation of the experiences of its predecessor Internal Security Fund (ISF) – Borders and Visa instrument, BMVI Union Actions will cover the area of strengthening the external borders and supporting a common visa policy. To that end four topics in open calls for proposals have been established in the work programme and relevant actions to be undertaken by identified beneficiaries are also foreseen. These are complemented with procurements to support the Commission’s activities.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Given that the CCEI is a newly established programme, the information under this section is not relevant to it.

For 2014-2020, actions concerning the management of external borders and a common visa policy are financed under the Internal Security Fund (ISF) – Borders and Visa instrument.

Internal Security Fund – Border and Visa

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
--	----------------	------------------	---------------------

Commitments	2 689.8	2 732.4	98%
Payments	1 957.3		72%

The Commission made a proposal to make remaining funding under the HOME Affairs Funds for the 2014-2020 programmes, including AMIF, available for the acute migration and border management needs following the Russian aggression towards Ukraine. Through the proposal remaining funds would be more accessible and thereby provide immediate support to the Member States as it swiftly can be re-direct under existing national programmes. The proposal were adopted in April 2022

Shared management

After an initial delay in the adoption of the legal bases of the Home Affairs Funds by the co-legislators, all ISF Member State national programmes were adopted in 2015 with their implementation reaching a cruising speed in 2017.

The four Schengen Associated Countries (SAC), Switzerland, Norway, Iceland and Liechtenstein, also participate in the ISF-Borders and Visa instrument. The process regarding the participation of SAC has been successfully finalised.

Since 2017, the ISF national programmes have been revised on several occasions:

- for ISF-Borders and Visa, to include in 2017 an additional EUR 76 million and in 2018, EUR 128.7 million for the purchase of equipment to be put at the disposal of the EBCG Agency during joint operations;
- in addition, still in 2018, to include an overall amount of EUR 192.3 million allocated equally to all the Member States participating in the ISF-Borders and Visa instrument to cover certain costs for the implementation of the Entry/Exit System (EES): each Member State received a top-up to their national programme of EUR 6 million;
- in 2018, to include an additional overall amount of EUR 158.6 million (EUR 128 million foreseen in article 6(1)c) of the ISF-Borders & Visa regulation plus EUR 30.6 million as contribution from three SAC), through the revision of the national programmes;
- in 2019, to include an overall amount of EUR 212.4 million allocated to all the Member States participating in the ISF-Borders & Visa instrument, to cover costs related to the adoption of European Travel Information and Authorisation System (ETIAS) and the recast of the SIS II Regulations, as well other substantial costs incurred with the development of border management IT systems. Of the total amount, EUR 96.5 million was allocated for ETIAS, EUR 36.8 million for the SIS-recast, and EUR 79 million, funded from the SAC contribution to ISF-Borders & Visa, for IT systems in general;
- in 2020, to include an overall amount of EUR 78.9 million to seven Member States for support to border control activities, in particular in those Member States confronted with high migratory pressure at the external borders.
- In 2021, no revisions made.

As regards the **Internal Security Fund – Borders and Visa**, for the period 2014-2020, EUR 2.42 billion were allocated to the national programmes of the Member States. Up to 2021, Member States have actually spent EUR 1.61 billion equivalent to an absorption rate of 66.42%.

In terms of overall performance of the Fund, for many of the indicators set in the Regulation, either the milestones have been exceeded or even the targets have already been achieved. The implementation of ISF-Border and Visa will run until end-2022, and thus two years of implementation remain. Up to 2021 accounts, ISF-Borders and Visa has attained an absorption rate of 66.42% which can be considered overall satisfactory, given that the Fund is implemented mainly through long-term projects for heavy equipment or development of relevant large scale IT systems and the fact the national programmes were reinforced considerably with funding over period 2017-2020. In 2021 accounts, the Member States have submitted EUR 288.57 million of payments to the Commission, lower than the level of 2020 expenditure (EUR 385.63 million). The payments are broken down as follows: EUR 239.93 million in the area of border management, EUR 16.64 million for operating support, EUR 16.58 million for the Special Transit Scheme in Lithuania, EUR 7.92 million for common visa policy and EUR 7.50 million for technical assistance.

In the latest Annual Implementation Reports concerning 2021, Member States mostly reported that the COVID-19 pandemic meant delays in project implementation due to e.g. delays in public procurement procedures, travel restrictions, hiring processes of staff, construction works due to lockdown and other restrictions related to COVID-19. Training activities were particularly negatively affected by the travel restrictions imposed in the course of the COVID-19 pandemic. Mitigating measures included the extension of duration of projects, increasing the co-financing rates for some projects.

In order to strengthen external border checks and to close existing information gaps, including those necessary to detect identity fraud, the co-legislators adopted in May 2019 **the interoperability package**⁶, which encompasses Schengen Information System II (SIS II), Eurodac, Visa Information System (VIS), as well as the Entry/Exit System (EES) and the European Travel Information and Authorisation system (ETIAS), Interoperability will allow the front line law enforcement officers, border guards and migration officials to make the best use of the existing information in the systems in a timely manner, thus contributing to improving internal security and border management. The Fund's resources are used to support the implementation the interoperability of EU information systems and to meet the politically agreed timeline of end 2023.

Three new regulations on the operational and use of the Schengen Information System were adopted at the end of 2018 [SIS Recast]. One of the new elements is the deployment of a fingerprint search functionality of SIS in Member States, for which EU funding was used. The revised SIS should become operational in 2022.

In 2021, the implementation of the Funds has gained further momentum, notably as regards the absorption of the extra allocations provided for IT systems in late 2018 (EES) and late 2019 (ETIAS, SIS Recast and IT systems in general). The implementation of those IT systems has reached a critical phase, most of the development have to be complemented by end 2022/early 2023 and the use of these extra allocations reflects the progress of the different projects. In 2021, Member States prepared the integration of their national systems for the Schengen Information System, including SIRENE. They will continue working on the integration to the interoperability infrastructure and ETIAS in 2022. This is not a new policy initiative but the consequence of an ongoing policy initiative.

The Commission is steering the Member States to enhance the implementation of the programme in its final phase, among others through the (virtual) participation to national monitoring committee meetings, bilateral discussions, monitoring visits, messages at political level, etc. Great heed is now being paid by the Commission to help Member States best use the increased flexibility introduced by the amendments to the funds regulations related to the war in Ukraine. This is expected to further boost implementation on the ground, although changing priorities are likely to alter progress towards the targets originally set.

Union Actions

Due to their transitional character, the Union Actions have traditionally not been the most adequate instrument for the implementation of the ISF – Borders and Visa. 2021 has not been a very active year either. Nonetheless five new grant agreements were concluded for actions under the 2020 annual work programme and their implementation started in late 2021 and early 2022.

These five grant agreements support the activities of the European Network of Immigration Liaison Officers (ILO Network), one of the principal EU tools that contributes to building up partnerships with third countries. EUR 3.2 million will support capacity building activities for authorities involved in migration management and border control in third countries; assistance to consular authorities on document fraud detection related to visa applications; support to Common Airport Liaison Officers; support to the ILOs' return and readmission tasks in third countries; support for the promotion of legal pathways to the EU.

A vast majority of projects selected under previous annual work programmes, covering longer time span are still running. The implementation of the Union actions have continued also to be impacted by COVID-19 pandemic, which resulted in the modifications of originally approved grants, be it for the description of the actions or deadlines, hence no-cost extensions and amendments of the numerous grant agreements.

For the programming period 2014-2020, the ISF – Borders and Visa committed 453.24 million for **EMAS**. The largest beneficiaries of this funding over this period have been Bulgaria, Greece and Italy, but eleven Member States in total have benefitted. During 2021 the Commission awarded three Emergency Assistance grants under ISF-Borders and Visa: to Spain for the provision of assistance services and facilities for the police and border forces and migrants undergoing identification controls upon arrival in the Canary Islands; to Croatia for a project to support the reinforcement and continuation of border management activities at the external borders; and to Lithuania for urgent support to strengthen border protection at the border with Belarus.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

As the implementation of the CCEI has not started yet, information on it under this section is not relevant. The Monitoring & Evaluation Framework (MEF) to establish the indicators and intervention logic is currently being developed. It is based on a PMF study carried out by a contractor and finalised in December 2020. The MEF is expected to be finalised in Q2 2022.

For the BMVI, Performance assessment will be provided once the implementation of the programme 2021-2027 have properly started and the first performance reports received. The first reports should be received by 15 February 2023 and by 15 February of each subsequent year.

3.1.2. Active programme performance

Given that the CCEI is a newly established programme, the information under this section is not relevant to it.

For the BMVI, Performance assessment will be provided once the implementation of the programme 2021-2027 have properly started and the first performance reports received

3.1.3. Previous Programme Performance

Taking into account the difficult situation at the borders due to migration pressure as well as the continuous security challenges, it is important to stress that until the end of 2021, ISF-Borders and Visa has proven an efficient fund getting closer to its set objectives – ensuring an efficient protection of the EU's external borders and a high level of security in the Union.

The instrument for border and visa policy builds on the investment and achievements made with the support of the predecessors: the External Borders Fund, the Internal Security Fund - Borders and Visa. The fund has supported overall EU policies

in the area of external border management and visas, such as the uniform implementation of the Schengen acquis, Eurosur, the purchase of the border management equipment for the use by the European Border and Coast Guard Agency, the common visa policy and the relevant IT systems for Home affairs. Support under direct management has mainly contributed to the relevant supporting studies for the IT system, relevant evaluation mechanisms scheme, some transnational projects in the area of buying and employing the operational equipment and trainings.

Strengthening the protection of EU's external borders and supporting a common visa policy

The protection of the external border and supporting a common visa policy are closely intertwined objectives. Therefore, the section will first present achievements at the level of the fund overall and then present the achievements at the level of individual specific objectives.

In 2021, the Commission continued the work to address the root causes of irregular migration and strengthen the protection of EU's external borders. The total number of detected irregular border crossings remained at approx. 200 000, marking an increase compared to 2020 (125 000) and 2019 (142 000). The increases are mostly explained by increases in the number of Syrians and Afghans apprehended within the western Balkan route as well as migrants from Egypt in the Central Mediterranean route.¹

As pointed out in the impact assessment,² the **ISF-Borders and Visa** is making a crucial contribution to the application of the Schengen acquis. The Commission has considerably invested in the effective control of the external borders through the information systems at EU level and their interoperability (SIS II, VIS, Eurodac, EES and ETIAS), providing border guards and police officers with relevant information. Even though each of these systems created for a specific purpose, all together at EU level, have facilitated the sharing of information among but also within the Member States. The Fund has also contributed to the reinforcement of Member States' authorities component for border management which act as the national components of the European Border and Coast Guard, mainly through funding their technical capabilities and infrastructure.

In addition, the European Border Surveillance System (Eurosur) funded from the ISF-Borders and Visa provides further support to border authorities and helps to strengthen the external borders security.

As regards information systems, for the Schengen Information System and the Visa Information System, Member States have extensively used the Fund's resources to cover their needs in this area, including for operating support. For the new Information systems such as the Entry/Exit and the European Travel Information and Authorisation System, Member States required a lot of support on how to use the funds properly. Time is however short in particular for the Entry/Exit System that will enter into operation in the fourth quarter of 2022. The European Travel Information and Authorisation System will enter into operation in May 2023. The full implementation of all Information systems and their interoperability should be in place by the end of 2023. As the systems are not yet fully operational, it is too early to provide a comprehensive assessment of the efficiency of the related EU funding. Special attention will be paid to the use of funds also in this area, to ensure that all funding made available through the ISF National Programmes has been duly absorbed by December 2022. **However, the Commission's proposal to prolong the implementation period for the money available to Member States under the 2014-2020 Home Affairs funds by one year due to crisis in Ukraine, was adopted in April 2022.**

Member States have received additional support ('top-up') from the ISF-Borders and Visa for the upgrade of the Schengen Information System. Funding has also been provided for the maintenance and evolution of the national systems for Schengen Information System and the Supplementary Information Request at National Entries (SIRENE) Bureaux.

The Fund also fostered a better use of resources by increasing the capacity of Member States through e.g. specialised training of border guards or study visits to undertake border surveillance and by developing consular cooperation between Member States.

The 2014-2020 programme was also instrumental to help technological and knowledge update for European security, development of capabilities of European security authorities, and European strategic autonomy on critical security technologies. Member States used the 2014-2020 programme to take up innovations coming from Union-funded research for civil security of the past decades, under FP7 or Horizon 2020. Examples include: new detectors for Chemical, Biological, Nuclear, Radiological or Explosive substances; the Automated Border Control gates in airports and border crossing points; biometric technologies; or systems used by police and civil protection for sanitizing public areas during the COVID-19 pandemics.

Supporting a common visa policy

In 2021, Member States have implemented projects for a value of EUR 7.92 million under the specific objective "Support a common visa policy" and EUR 4.52 million under the specific objective "Operating Support" in relation to visa policy.

Between 2014 and 2021, a total of 449 consular cooperation activities have developed with the help of the Instrument. The trend shows that the cumulative values reported by Member States have steadily been increasing and have already exceeded the set milestones and targets. The forms of consular cooperation include co-locations, common application centres, representations and

¹ Increases in migrants apprehended might also follow from improved operational capacity of Frontex Services as well as increases in the push-pull factors at the global level.

others. The trend towards more cooperation between Member States is correlated with savings in this area and the need to achieve economies of scale in consular support.

However, training staff in the area of visa and border management is still below the targets. Up to 2021, 5 578 persons have been trained in the area of visa policy, which is about half of the target of 11 365 persons. If one looks at the number of hours of training delivered, the average target achievement is even lower, at 12%. However, the low aggregated target achievement hides important differences at the Member States level and it is mostly explained by too optimistic targets being set in two Member States. A simple average of the Member States' target achievement is in fact 98%, suggesting better overall performance. In addition, as pointed out above, training activities, were the most negatively affected by the COVID-19 pandemic.² Consequently, the number of persons trained decreased to 790 in 2020 compared to 1 222 in 2019, and only marginally improved to 901 in 2021.

With the support of the Instrument, a total of 720 specialised posts in third countries were supported by the Instrument, nearly doubling the target value. This is largely due to the fact that cooperation with third countries in the area of border management and tackling irregular migration has improved significantly in the past years. This coincides with the trend of deploying increasing numbers of ILOs and other specialised staff to third countries.

Strengthening the EU external borders

In 2021, Member States have implemented projects for a value of EUR 239.93 million in view of strengthening the EU external borders, EUR 16.58 million for the Special Transit Scheme for Lithuania, EUR 12.12 million for Operating support for borders and EUR and EUR 7.50 million for Technical assistance.

In the area of border management, 34 369 border guards have been trained up to 2021, already virtually achieving the target of 34 603. Data at Member State level shows different degrees in the delivery of training to staff on border management topics as compared to the target: some Member States have already attained or exceeded their targets, while others are yet to report projects for trainings or show more modest achievement ratios.

In total up to 2021, the instruments supported the development or upgrade of 38 901 border control (checks and surveillance actions) infrastructure and means, which is well above the target of 19 902, with several projects leading to upgrades and developments beyond the expectations especially in some MS.

It should also be noted that the number of incidents reported by Member States to the European Situational Picture is in line with the target set in the national programmes (with 149 897 incidents reported up to 2021 as compared to the target of 157 593). This actually represents a positive trend as it matches the situation on the ground with a significant decrease in the irregular border crossings observed since the peak of the migration crisis in 2015 and only a small increase due to the increased pressure at the borders in 2021.

Lessons learnt

Insufficient cooperation, coordination and strategic steering in the implementation of the ISF with other EU level initiatives: This challenge was addressed by including eight shared management funds, including the HOME funds, in a single legal framework. This allows for a closer coordination and cooperation of the shared management funds both at strategic level as well as at the level of implementation. A need for simplification: in order to simplify and build on synergies, the rules applicable to the shared management funds will be aligned with rules applicable to the management of other Union Funds under shared management ('single rule book'). This provides better guidance on the management and control systems and audit requirements, and ensures that the eligibility rules under shared management make full use of simplified cost options (SCOs). A closer coordination of IBMF with EU civil security research was also analysed in the Action Plan on Synergies between Civil, Defence and Space Industries.

Better exploitation of innovation opportunities from EU civil security research. Two challenges identified with the 2014-2020 programme to facilitate the take up by Home Affairs Funds of innovation coming from EU security research were that a) the mapping of innovations is difficult, and likely incomplete; b) innovations with a closer market and to be taken up directly by law enforcement agencies, risk not to be exploited. As the Commission indicated in the CSWD Enhancing Security Through Research and Innovation (SWD(2021) 422 final), and in the Action Plan on Synergies between Civil, Defence and Space Industries, achievements IBMF promoting new European security technologies coming from EU security research will be improved in the 2021-2027 period. This includes promoting a capability-based programming, better tracking of innovation going from EU research to IBMF support, stronger links and incentives to exploit security research results. To this aim, the Commission is assisting Member States to identifying opportunities, is planning Specific Actions focused on exploiting innovations based on previous Union-funded security research and is carrying out the Study on the EU Security Market.

Insufficient flexibility to respond to changing needs during the programming period: This challenge was addressed in two ways. Firstly, Member States will initially be provided with around 47.9% to Member States programmes. An additional share of 9.6% of

² This is confirmed e.g. in one MS that alone explains around 20 p.p. of the cumulate gap. The low target achievement in this specific case is explained by a combination of too optimistic target setting at the beginning of the programming period, and the negative effect of COVID on training activities.

the total budget will be allocated at mid-term (technical adjustment of the distribution key subject to financial performance according to which a Member State should have submitted payment claims covering at least 10 % of the initial amount of payment appropriations). Secondly, a financial envelope of 42.5% will be managed through the thematic facility, which will periodically provide funding for a number of priorities defined in Commission financing decisions. This facility in particular offers flexibility in the management of the instrument by allowing the disbursement of funds to the technical assistance at the initiative of the Commission and the following components of the thematic facility: support for specific actions, providing additional funding for dedicated actions of high EU added value, through the Member States’ national programmes; support for Union actions, managed through direct and indirect management; and emergency assistance.

The third main challenge was the need to strengthen the performance monitoring in terms of quality and frequency of the data. In order to address this challenge, the Commission proposed greatly improved performance monitoring with more regular and reliable data setting out common output and result indicators. In cooperation with the Member States, the Commission services has developed definitions for each of these indicator. This will ensure a common understanding of each indicator across all Member States and programmes. Moreover it will this not only greatly contribute to improving data quality, it will also enhance data comparability. Member States will be required to develop this performance framework for each of its programmes and underpin it by methodological considerations. The managing authority, in its yearly management declaration and as part of the annual assurance package, will have to confirm the reliability of submitted data relating to indicators and the progress of the programme. The annual performance review will be an occasion for a policy dialogue with the Member States on issues of programme implementation and performance. In particular, the annual performance reports will provide qualitative information on programme implementation going beyond the quantitative data submitted for the indicators. It will complement the biyearly transmission of structured data and strengthen the performance review process. In the context of the performance framework, Commission services will hold at least two meetings with Member States during the programming period. All data required for monitoring progress in programme implementation will be transmitted electronically. Twice a year, Member States will transmit to the Commission structured data on the common output and result indicators. Thus, the Commission services will have a much more updated picture of programme performance than in the current period. In addition, the HOME programmes will now also use the open data platform, which had been established in the current programming period for the European Structural and Investment Funds. It will allow stakeholders to access almost real time data on programme implementation. This is an important novelty for the HOME funds, which in the current period do not publish data on the open data platform.

Moreover, Member States are now required to set up a system of electronic data exchange between beneficiaries and managing authorities, and between different authorities of the management and control system. This requirement builds on the current CPR regulation, which did not cover the HOME funds, and further develops certain aspects of data collection. It is thus a novelty for the HOME funds. Beneficiary and project information, as well as the performance reports will be published on a dedicated website run by the managing authority. This will give greater visibility to achievements and allow better communication.

3.2. Key achievements

Given that the CCEI is a newly established programme, the information under this section is not relevant to it.

Cumulative number for 2014-2020 , incl. 2021	Number of hits in SIS: 222 967	Total number of alerts: Ratio: 0.25%	449	720	38 901
Explanation of the number	Number of hits in the Schengen Information Systems in relation to the total number of alerts. The number of hits dropped as a consequence of travel restrictions imposed under the Covid-19 crisis.	Cumulative number of consular cooperation activities developed with the help of the Instrument.	Cumulative number of specialised posts in third countries supported by the Instrument.	Number of border control (checks and surveillance) infrastructure and means developed or upgraded with the help of the Instrument	

BMVI

Following several reinforcements between 2017-2020, the total allocation to the national programmes under the **Internal Security Fund – Borders and Visa** instrument now reaches EUR 2.42 billion.

A lot of progress was reached in protecting the EU external borders through **building new and strengthening the existing IT systems and technologies**, increasing internal security and facilitating regular border crossings.

Examples of success stories

Shared management

Thanks to the ISF BV SA, there have been **7 Thermo-Vision Vehicles** purchased, as well as **14 Coastal Patrol Boats and Rigid Inflatable Boats, 9 Coastal Patrol Vessels, and 6 Fixed Wing Aircrafts**. These **36 large scale assets** have been registered in the **Technical Equipment Pool** of the Agency, and are to be made available to the Agency, in application of Article 64(14) of the EBCG 2.0 Regulation.

The example of the purchase of the **Thermo-Vision Vehicle** by Austria may serve as a success story. Awarded in 2015, delivered in 2017, this asset have been pledged for the **entire years of 2020, 2021, as well as 2022** in Greece.

Bulgaria

To protect an important part of the EU external border the ISF Borders and Visa has been supporting Bulgaria in the establishment and development of the Integrated Surveillance System at the Bulgarian-Turkish border with funding amounting to EUR 26.3 million. This is an example of a big action funded through various management modes – the national programme contributed EUR 6 million, EUR 26 million was provided from the emergency assistance envelope of ISF Borders and Visa and under Union Actions EUR 0.3 million. The surveillance system covers the main part of the 274 km Bulgarian-Turkish border from the Black Sea coast to the Bulgarian-Greek border, and includes stationary and mobile surveillance equipment. The Integrated Surveillance System will continue to be supported also under the new Border Management and Visa Instrument.

Germany

Another good example is the “Document and Visa advisors” project implemented by the German Bundespolizei (Federal Police) since 2015, with a total of 4 consecutive projects and a total allocated EU contribution of EUR 11.2 million. The project funds the posting of currently 53 Bundespolizei officers in 33 locations in 25 third countries, where they work to prevent travelling into the EU without valid documents, by training and advising personnel of visa offices (German and from other EU-MS or SAC) and airlines employees on the assessment of the authenticity of documents presented by visa applicants or travellers.

Greece

During 2020, Greece initiated the important project of extending the integrated border surveillance system in the Evros area using a number of autonomous automated border surveillance facilities at key points of the border between Turkey and Greece. After completion – estimated for 2022 – this will ensure the transmission of accurate information regarding the entire length of the border in real time to the staff dedicated to the control of the external borders at the Operations Centres. The project is implemented by the Hellenic Police Headquarters and the EU contribution amounts to EUR 11.24 million.

Direct management

In **Spain**, emergency assistance (EUR 28.5 under ISF – Borders and Visa from 2014-2020) mainly funded actions related to tackling irregular migration in Southern Spain. A new ISF – Borders and Visa project was selected in 2020, to help the national police to acquire necessary equipment (IT equipment, scanners and software) in view of an efficient registration of the irregular migrants in the EURODAC database.

On 19 December 2018, the Commission awarded an emergency assistance grant of EUR 3.15 million under ISF Borders to the Ministry of Interior of **Cyprus**, in order to support needs for staff, equipment and consumables for operating the ‘Pournara’ First Reception Centre. The project was completed in January 2021.

Union actions

Examples of ISF funded Union actions can be found in the Snapshot published by the Commission at the following link: https://ec.europa.eu/home-affairs/e-library/multimedia/publications/20190909_snapshot-2019-eu-asylum-migration-integration-internal-security-fund_en.

3.3. Evaluations, studies and reports

The key findings of the latest Interim evaluations of the Internal Security Fund - Borders and Visa 2014-2017⁸ and of the Internal Security Fund - Police⁹ have been presented in the Programme Statements DB2020.

By 31 December 2023, the Member States will provide an ex-post evaluation report on the effects of actions under their national programmes and the Commission will present by 30 June 2024 an ex-post evaluation report on the effects of the legal bases.

At the same time, the Commission is implementing the Action Plan following the internal audit findings on the monitoring and reporting on the implementation and performance of National Programmes. In particular, the Commission has strengthened its

processes for monitoring the National Programmes and increased its efforts to improve the reliability of performance data reported by the Member States in their Annual Implementation Reports submitted annually. More attention will be given to the consistency of data reported by the Member States. The Commission has provided guidance to the Member States with a view to ensure common understanding of the indicators established in the Fund and to establish better links with information provided in the accounts.

Moreover, the European Court of Auditors (ECA) issued recommendations on the strengthening of the management of the ISF emergency assistance and national programmes. They cover in particular strengthening the performance monitoring framework by monitoring and reporting the outcomes achieved by projects funded by emergency assistance, ensuring that such projects contain output and outcome indicators with clean targets and baselines etc.

While the Commission started implementing the ECA’s recommendations already under the ongoing programmes, the main structural recommendations will be put in place in the context of the next MFF.

A study on the Performance Measurement Framework on funding programmes managed by DG TAXUD was carried out in 2020 and finalised in December 2020. When designing the now called Monitoring and Evaluation Framework on the CCEI, the Commission will aim to take into account, to the extent possible, the recommendations provided by the contractor in this report.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Supporting effective European integrated border management at the external borders implemented by the European Border and Coast Guard as a shared responsibility of the European Border and Coast Guard Agency and of the national authorities responsible for border management, to facilitate legitimate border crossings, to prevent and detect illegal immigration and cross-border crime and to effectively manage migratory flows

Indicator 1: Number of persons who have applied for international protection at the border crossing points

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
NA	Milestones									2029
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Absolute number of persons
Cut-Off Date	31/12/2022
Data source	Data collected by the Member State. It is not generated by projects supported by BMVI.
Link to the objective	Support to the integrated border management as per the specific objective.
Link MFF 14-20 / MFF 21-27	This is a new indicator.
Other methodological comments	SM Baseline NA for output indicators. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024

Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 2: Number of items of equipment registered in the Technical Equipment Pool of the European Border and Coast Guard Agency

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on	No data									

track :	
Indicator type	Result
Unit of measurement	Absolute number of equipment registered in the TEP
Cut-Off Date	31/12/2022
Data source	BMVI's monitoring systems, for each programme. The exact data collection method will vary depending on the choice of the Managing Authority, which remains responsible to ensure quality and accuracy of the data, and in line with the provisions in the legal basis.
Link to the objective	Supporting integrated border management via registration of the relevant equipment, as per the specific objective
Link MFF 14-20 / MFF 21-27	This is a new indicator. It reflects the growing focus of the Commission to strengthen operational capacity of the EBCGA.
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.

Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 5: Number of border crossings through Automated Border Control gates and e-gates

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute number of crossings
Cut-Off Date	31/12/2022
Data source	Data collected by the Member State. It is not generated by projects supported by BMVI.
Link to the objective	Increases in the number of border crossings through automated border control gates and e-gates are a means to contribute to effective and integrated border management as per the specific objective.
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020 a similar indicator was monitored: Number of border crossings of the external borders through ABC gates supported from the Instrument out of the total number of border crossings
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Are we on track :	Deserves attention**									

Indicator type	Impact
Unit of measurement	Number of crossings
Cut-Off Date	31/12/2021
Data source	https://frontex.europa.eu/along-eu-borders/migratory-map/
Narrative	
Methodology	Cumulative numbers over the years
Link MFF 14-20 / MFF 21-27	Impact indicators no longer present in 21-27
Other methodological comments	Number of persons refused entry by border authorities' will be monitored in the MFF 2021-2027. The data will be provided by the Member States in their annual performance report.

Full metadata available at this address	
Justification of the trend	After the migration wave of 2015, the trend remained rather stable. A small increase in 2021 (from around 140 000 and 120 000 in 2019 and 2020, respectively, to 200 000 in 2021) is mostly due to stronger pressure on the western Balkan route (especially from Syrians and Afghans) and partly in the central mediterranean one (especially from Egypt). In general, the high volatility of the relevant external factors make forecasting difficult (political situation in the main third countries of transit and origin of irregular migration, the migration crisis due to the war in Syria, and the evolution of the COVID pandemic).. The partial lifting of border restriction measures in 2021 lifting of border restriction measures introduced for the COVID-19 pandemic might have led to an increase of migratory flows. The deep socio-economic impact of the pandemic in the third countries may also be factor at play in the increase of migration flows. In addition, the better availability of vaccines in the EU as opposed to third countries may constitute an additional pull factor, given that vaccine doses are likely to be generally available in receiving countries of migration, less so in countries of origin. Finally, several ongoing crisis situations in third countries (e.g. in Syria, Ethiopia or Libya) may lead to future flows towards the EU. In addition, the progressive strengthening of Frontex might contribute to increasing levels of irregular migrants apprehended. Please note that the number refe

Specific Objective 1: Supporting a common visa policy to facilitate legitimate travel, provide a high quality of service to visa applicants, ensure equal treatment of third-country nationals and tackle illegal immigration

Indicator 1: Cumulative number of consular cooperation activities developed with the help of the Instrument. Broken down in co-locations, common application centres, representations, others

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022
0	Actual Progress									Final
	14	60	105	178	269	400	431	449		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of consular cooperation, actual results, milestones and target are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator will not be monitored in MFF 2021-2027. However, cooperation in visa processing will be monitored through the following indicator: ‘Number of initiated / improved forms of cooperation set up among Member States in visa processing’
Other methodological comments	The cumulative number provides a cumulative picture without providing insight into the type of cooperation activities developed. Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year’s programme statement.
Full metadata available at this address	
Justification of the trend	The trend shows that the cumulative values reported by Member States have steadily been increasing and have already exceeded the set milestones and targets. The forms of consular cooperation include co-locations, common application centres, representations and others. The trend towards more cooperation between Member States is correlated with savings in this area the need to achieve economies of scale in consular support.

Indicator 2: Cumulative number of staff trained and number of training courses in aspects related to the common visa policy with the help of the Instrument

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Staff										
2013	Milestones									2022
0	Actual Progress									Final
	0	418	1 099	1 886	2 665	3 887	4 677	5 578		
Are we on track :	Moderate progress									
Regional training courses										
2013	Milestones									2022

0				92 137						184 273
	Actual Progress									Final
	0	173	2 446	5 456.5	8 333.5	10 872.8	17 383.8	22 061.8		
Are we on track :	Deserves attention**									

Indicator type	Result
Unit of measurement	Actual results, milestones and target are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	The indicator is based on the number of staff trained and related number of hours of training delivered. In the Annual Implementation Report, the Responsible Authority will indicate the cumulative amount of hours of training delivered during the financial year. In general, the duration of the training courses is limited to the hours spent for training purposes hence it is a good practice to take out lunch breaks if these last an hour or more. However, there is no need to deduct also the shorter breaks. If a person attends several course s/he is counted each time because s/he acquires different knowledge.
Link MFF 14-20 / MFF 21-27	Training remains an important area of support of the BMVI. Therefore, number of participants in training as well as the number of participants who report three months after the training activity that they are using the skills and competences acquired during the training will be monitored
Other methodological comments	Under the sub-indicator, it is not clear whether Member States provided data on whole courses, on training days or training hours. Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	The COVID 19 pandemic certainly continued to limit the number of trainings conducted in 2021. However, there is continuing progress of the indicator and in many Member States the targets have been achieved. In some cases, it is the too optimistic target setting which affects negatively the cumulative figures for target achievement, giving the somewhat misleading impression that the progress is overall limited. If target achievement is calculated as a simple, non weighted average across all Member States, values are significantly higher.

Indicator 3: Cumulative number of specialised posts in third countries supported by the Instrument. Broken down by ILOs, others

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022
0	Actual Progress									Final
	0	31	222	364	492	560	693	720		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Actual results, milestones and target are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Indicators under MFF 2021-2027 will continue to monitor the number of staff deployed to consulates in third countries with a specific focus on number of staff deployed for visa processing, as well as the number of joint liaison officers deployed to third countries
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement. The table above only shows the total number of specialised posts and not the breakdown.
Full metadata available at this address	
Justification of the trend	Cooperation with third countries in the area of border management and tackling irregular migration has taken a flight in the past years. This coincides with the trend of deploying increasing numbers of ILOs and other specialised staff to third countries. The set milestones and targets have been exceeded.

Indicator 4: Percentage and number of consulates developed or upgraded with the help of the Instrument out of the total number of consulates

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022

0				462						923
	Actual Progress									Final
	2	36	352	527	954	2 003	2 537	3 074		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, indicators will monitor the support setting up new or upgrading consulates outside the Schengen area, including the consulates, which upgraded to enhance client-friendliness for Visa applicants
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	The ISF-B has more than expected (looking at the milestones and targets) been used to develop or upgrade consulates. In principle the number of consulates in third countries is not necessarily increasing, but it is possible that Member States have reported a variety of expenditure under this indicator (even for small scale upgrades of consulates).

Specific Objective 2: Supporting integrated border management to ensure, on one hand, a uniform and high level of control and protection of the external borders, and on the other hand, the smooth crossing of the external borders in conformity with the Schengen acquis, while guaranteeing access to international protection for those needing it, in accordance with the obligations contracted by the Member States in the field of human rights

Indicator 1: Number of staff trained and number of training courses in aspects related to border management with the help of the Instrument

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Staff										
2013	Milestones									2022
0				17 302						34 603
	Actual Progress									Final
	43	2 303	5 414	8 260	13 268	15 949	30 214	34 369		
Are we on track :	On track									
Courses										
2013	Milestones									2022
0				167 162						334 323
	Actual Progress									Final
	34	352.5	10 231.5	28 857.5	49 232.5	88 874.5	130 687	142 514		
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	Actual results, milestones and target are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	The indicator is based on hours of training delivered. In the Annual Implementation Report, the Responsible Authority will indicate the cumulative amount of hours of training delivered during the financial year. In general, the duration of the training courses is limited to the hours spent for training purposes hence it is a good practice to take out lunch breaks if these last an hour or more. However, there is no need to deduct also the shorter breaks. If a person attends several course s/he is counted each time because s/he acquires different knowledge.
Link MFF 14-20 / MFF 21-27	Training remains an important area of support of the BMVI. Therefore, number of participants in training as well as the number of participants who report three months after the training activity that they are using the skills and competences acquired during the training will be monitored
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's

	programme statement.
Full metadata available at this address	
Justification of the trend	The cumulative number of trained staff has reached its target, although this value hides some variation across Member States. The number of training courses continues to be below its target, but this gap is largely explained by a calculation method used in one Member State. Simple (non weighted) average of MS level target achievement equals to 97%.

Indicator 2: Number of border control (checks and surveillance) infrastructure and means developed or upgraded with the help of the Instrument. Broken down by infrastructure, fleet (air, land, sea borders), equipment, others

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022
0	Actual Progress									Final
	348	1 159	7 091	10 697	22 352	27 815	34 190	38 901		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Actual results, milestones and target are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	a) Infrastructures are non-moveable objects, such as buildings. Equipment are moveable objects and should hence not be counted here. In the case of IT system, large-scale IT infrastructures are considered as infrastructure, small IT equipment are considered as equipment. b) The indicators should be counted until the end of the eligibility period (period covered: 1 Jan 2014 to 31.12.2022).c) All equipment should be counted, not high value investments only. d) Only the number of infrastructure should be counted, not the upgrades. Under this indicator it is possible to report border crossings where infrastructure will be replaced/upgraded as well as means (including e.g. replacement of vehicles, drug detectors et.). Member States can use both interpretations for the purpose of annual implementation reports as this indicator is broken down in sub-categories to measure, among others, infrastructure and means.
Methodology	The most important is to ensure consistency throughout the years. Member States were advised that methodology/interpretation used to set your targets during the programming phase should be the same used to report data.
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027 indicators will continue to monitor the number of facilities for border crossing points constructed / upgraded
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	Differently from the training of staff, that is more unpredictable and more significantly affected by contextual factors such as the COVID-19 pandemic, the number of infrastructures and means for border management to be upgraded can be planned more easily and it is visible from the trend that the data on the indicators is more or less aligned with the set milestone and target. The overachievement is mostly due to a single Member State.

Indicator 3: Number of border crossings of the external borders through ABC gates supported from the Instrument out of the total number of border crossings

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Baseline	Milestones									2022
0	Actual Progress									Final
	0	7 225 887	18 782 564	34 639 176	55 528 260	99 117 842	107 075 304	112 177 703		
Are we on track :	Deserves attention**									

Indicator type	Result
Unit of measurement	Absolute number of border crossings
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, an indicator will monitor the number of border crossings through Automated Border Control gates and e-gates
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data

	retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	The number of border crossing points through ABC gates is continuously growing. The peculiar thing about this indicator is the fact that the Fund cannot contribute to the number of border crossings as such. Instead, this indicator aims at showing that the ABC gates will contribute to a smoother crossing of the external borders – which is the case; an increasing number of border crossings is taking place through the ABC gates co-financed with the Fund. In addition, as in previous cases, distance to the target largely connected to the low performance of only one MS, hence not reflective of the overall performance of the fund.

Indicator 4: Number of national border surveillance infrastructure established/further developed in the framework of EUROSUR. Broken down by National Coordination Centres, Regional Coordination Centres, Local Coordination Centres, other types of coordination centres

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
19	30			30						30
	Actual Progress									Final
	30	30	30	30	30	30	30	30		
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Absolute Number of infrastructures of national border surveillance
Cut-Off Date	31/12/2014
Data source	Eurosur Regulation. The 19 MS having external borders to the east and to the south were required by the Eurosur Regulation to set up their NCCs by December 2013. All the NCCs were set up by December 2014.
Narrative	The indicator was set up to monitor the setting up of national coordination centres stipulated by the Eurosur Regulation.
Methodology	The Regulation stipulates only one national coordination centre per Member State
Link MFF 14-20 / MFF 21-27	This indicator will be not be monitored in MFF 2021-2027 as the target is already implemented. However, an indicator will be established to monitor the number of initiated / improved forms of cooperation of national authorities with the Eurosur National Coordination Centre (NCC).
Other methodological comments	The indicator reports the number of National Coordination Centres (1 NCC per Member State), which during these years were gradually upgraded and received more competencies. We consider setting up more relevant than the further developing of the NCCs. The data provided by Member States in the Annual Implementation reports is not presented here.
Full metadata available at this address	
Justification of the trend	There is no trend to be reported because the data remained stable.

Indicator 5: Number of incidents reported by Member States to the European Situational Picture. Broken down by illegal immigration, including incidents relating to a risk to the lives of migrants, cross-border crime, crisis situations

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2022
				78 797						157 593
	Actual Progress									Final
	12 005	21 986	34 190	47 172	64 613	90 862	116 453	149 897		
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Number of incidents, actual results, milestones and target are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, this indicator will be discontinued as the link with the support of the fund is rather weak.
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	This indicator is not linked to the Fund, but is rather a number collected by MS that is reported in the ISF-B annual implementation report for information purposes. The numbers depend on the pressure at

the border and cannot be planned in advance.
--

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	0.05							0.05	0%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

Horizontal climate mainstreaming (and biodiversity) targets are novelties in the IBMF funds in the 2021-2027 period. The IBMF Funds do not have a binding target (%) in the basic act, but a horizontal recital common for all funds in the EU budget indicating that the IBMF funds will contribute to the overall, horizontal, mainstream target within its potential. Since the ex-ante estimates/predictions do not qualify within the 40% or 100% markers in the case of IBMF, the contribution is calculated in the ABAC when the actual use of the appropriations is available.

6.1.3. Key achievements

It is still too early to provide examples and demonstrate concretely how any action funded in the programming period 2021-2027 served towards climate change mitigation or adaptation, since Member States' programmes have not yet been adopted.

6.1.4. Performance

Please see 6.1.3 above.

6.2. Contribution to gender equality

6.2.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*: 3 Score 0: 285.3							

(*)Consolidated information about the annual commitments implemented (total per score by programme **in EUR Million**)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

In 2021, the Commission committed 3million for the Union Actions which have a potential to impact on gender equality, to which a 0* score is assigned. However, these should be considered as proxies, as an exact monetary value of individual activities benefiting gender equality cannot be reliably estimated also due to the lack of disaggregated data on the voted budget implementation of 2021. The figure covers project actions, such as trainings and knowledge sharing which habitually tackle gender specific issues, amongst others. As regards shared management, the implementation of 2021-2027 funds has not started yet in 2021 and the current reporting tools do not allow to trace gender relevant contribution for the 2014-2020 funds. Therefore, the value for gender equality contributions by shared management activities in this context is reported as zero. The remaining voted budget implementation to which a score 0 is assigned should equally be considered as a proxy, due to the lack of granular data on actions, such as the purchase of equipment or support to infrastructures, which have no significant impact on gender equality.

6.3. Contribution to the sustainable development goals

SDG 10 Reduce inequality within and among countries

All actions funded under the Border Management and Visa Instrument, including those carried out in third countries, should be implemented in full compliance with the rights and principles enshrined in the Union acquis, the Charter of Fundamental Rights of the European Union, and should be in line with the international obligations of the Union and the Member States arising from international instruments to which they are party, in particular by ensuring compliance with the principles of non-discrimination and non-refoulement.

The Border Management and Visa Instrument is committed to the horizontal approach of the EU budget in which equality between women and men, as well as rights and equal opportunities for all, and the mainstreaming of these objectives should be taken into account and promoted throughout the preparation, implementation and monitoring of relevant programmes.

In the broader context, in order to receive payments from the Commission, Member States programmes for HOME funds will have to comply with the number of horizontal enabling conditions, one of which concerns the effective application and implementation of the EU Charter of Fundamental Rights, including the equality of men and women. The horizontal enabling conditions have to remain fulfilled throughout the entire programming period and MS have to report on their application to the programme monitoring committee and the Commission.

The BMVI facilitates orderly, safe, regular and responsible migration and mobility of people, including through the implementation of planned and well-managed migration policies.

SDG 13 Take urgent action to combat climate change and its impacts

In line with the Union's commitments to work towards achieving the United Nations Sustainable Development, the CCEI Regulation commits to contributing to the achievement of the Union's goal of spending at least 30% of the total amount of Union budget on supporting climate objectives and of the Union's ambition to spend 7.5% of the annual Union budget on biodiversity in 2024 and 10% in both 2026 and 2027, while considering the existing overlaps between climate and biodiversity goals.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

The policy objective of the Border Management and Visa Instrument is to develop and implement a strong and effective European integrated border management at the external borders, thereby contributing to ensuring a high level of internal security within the Union, while safeguarding the free movement of persons within it, and fully respecting the relevant Union acquis and the international obligations of the Union and the Member States arising from international instruments to which they are party.

The Fund facilitates legitimate travel, while preventing irregular migration and security risks, was identified as one the main objectives of the Union's approach presented in the Commission's Communication on *A New Pact on Migration and Asylum* ¹⁰.

6. The programme contribution to horizontal policies	937
6.1. Contribution to climate mainstreaming	937
6.4. Contribution to gender equality	938
6.5. Contribution to the sustainable development goals	938

1. Overview**1.1. Challenges**

Over recent years, security threats have intensified and diversified in Europe. They have come in the form of terrorist attacks, new types of serious and organised crime, as well as cybercrime. Security has an inherent cross-border dimension and therefore a strong, coordinated EU response is required. Beyond internal security challenges, Europe faces complex external threats that no Member State can meet on its own.

1.2. Mission (General objectives)

While terrorist and other serious and organised crime networks increasingly operate across borders/in a globalised manner, Member States remain with a responsibility towards their citizens to deliver public security, in full compliance with EU fundamental rights, but the EU can support these actions. In this regard, the Treaties envisage the need to ensure a high level of security, including through preventive measures and through coordination and cooperation between police, judicial and other competent authorities.

The Internal Security Fund is set up to contribute to a high level of security in the Union through facilitating cross-border cooperation and exchange of information between Member States' competent authorities, in particular by enabling the interoperability of the different security-relevant EU information systems and by facilitating joint operational actions, as well as by providing support for trainings, for the construction of essential security-relevant facilities, and for maintaining and upgrading the infrastructure necessary for the collection and processing of passenger name record (PNR) data. It aims at intensifying cross-border operational cooperation in relation to the prevention, detection and investigation of cross-border crime and at supporting efforts aimed at strengthening the capabilities to prevent such crime, including terrorism, in particular through increased cooperation between public authorities, civil society and private partners from across the Member States.

1.3. Specific objectives

There are three specific objectives:

1. To improve and facilitate the exchange of information among and within competent authorities of the Member States and relevant Union bodies, and where relevant, with third countries and international organisations;
2. To improve and intensify cross-border cooperation, including joint operations among and within Member States' competent authorities in relation to terrorism and serious and organised crime with a cross-border dimension;
3. To support the strengthening of the Member States' capabilities in relation to preventing and combating crime, terrorism radicalisation as well as managing security-related incidents, risks and crises, including through increased cooperation between public authorities, the relevant Union agencies, civil society and private partners across the Member States.

1.4. Public intervention context

The evolving security challenges addressed by the ISF make it a key instrument in realising the Union's objective of constituting an area of freedom, security and justice under Article 67(3) of the Treaty on the Functioning of the European Union (TFEU), which is an area of **Shared Competence** between the EU and the Member States (Article 4, TFEU). The ISF shall support measures to promote and support the action of Member States in the field of crime prevention, joint training and police and judicial cooperation in criminal matters in line with Articles 84 and 87 TFEU.

In 2021 DG HOME continued to focus on delivering actions in key areas of the Security Union Strategy 2020-2025 which are organised crime, terrorism and radicalisation and fighting crime in a digital age. The EU Strategy to tackle Organised Crime 2021-2025, which includes a Commission Staff Working Document on EMPACT (SWD(2021) 74 final), was presented together with the Strategy on combatting Trafficking in Human Beings in April 2021. The EU Action Plan for enhancing law enforcement capacity in digital investigations, which sets out mechanisms to identify gaps and needs, to oversee the development of new tools and trainings, and to ensure that core tools, services and trainings are accessible to law enforcement, was integrated into the EU Strategy to tackle Organised Crime, adopted in April. To improve efficiency in the fight against organised crime, DG HOME started work to deliver on two of the initiatives announced in the EU Strategy to tackle Organised Crime for 2022: the revision of the Directive on the freezing and confiscation of the proceeds of crime and of the Council Decision on Asset Recovery Offices, with an impact assessment and a back-to-back evaluation, including a public consultation. DG HOME continued supporting the work of the Council in preparing the EU Drugs Action Plan 2021-2025, published in July 2021.

In 2021, DG HOME also produced the Commission SWD(2021) 422 "Enhancing security through research and innovation", focusing on how to use EU research and innovation on civil security to develop and deploy technologies and knowledge for European law enforcement, stressing the role of Home Affairs Funds to support innovations from Union-funded research, in a capability-development approach.

In December 2021, DG also introduced the EU police cooperation package, in order to enhance law enforcement cooperation across Member States and give EU police officers more modern tools for information exchange. The package includes a proposal for a Council recommendation on operational police cooperation, a proposal for a Directive of the European Parliament and of the Council on information exchange between law enforcement authorities of Member States and a proposal for a Regulation of the European Parliament and of the Council on automated data exchange for police cooperation.

Since the overarching objective of the ISF, namely to contribute to ensuring a high level of security in the Union, cannot be sufficiently achieved by the Member States acting alone and can be better achieved at Union level, the ISF is based on the principle of subsidiarity as set out in Article 5 of the Treaty on European Union (TEU).

1.5. Actions

The Fund shall in particular support:

- setting up, adapting and maintaining IT systems and communication networks contributing to the achievement of the objectives of this Regulation, training on the use of such systems, testing and improving the interoperability components and data quality of such systems;
- actions supporting the set-up and development of effective and coordinated cooperation to anticipate and respond to cross-border crime and terrorism.
- monitoring of the implementation of Union law and Union policy objectives in the Member States in the area of security information systems, including data protection, privacy and data security;
- implementing or facilitating the implementation of the EU Policy Cycle / EMPACT¹ activities and operational actions;
- actions supporting an effective and coordinated response to crisis linking up existing sector-specific capabilities, expertise centres and situation awareness centres, including those for health, civil protection, terrorism and cybercrime;
- actions developing innovative methods or deploying new technologies with a potential for transferability to other Member States, especially projects aiming at testing and validating the outcome of Union-funded security research projects;
- actions that improve resilience to emerging threats including trafficking via online channels, hybrid threats, malicious use of unmanned aerial systems and chemical, biological, radiological and nuclear threats;
- support to thematic or cross-theme networks of specialised national units and national contact points to improve mutual confidence, exchange and dissemination of know-how, information, experiences and best practices, pooling of resources and expertise in joint centres of excellence;
- education and training of staff and experts of relevant law enforcement and judicial authorities and administrative agencies taking into account operational needs and risk analyses, and in cooperation with CEPOL and, when applicable, the European Judicial Training Network including on prevention policies with special emphasis on fundamental rights training;
- cooperation with the private sector, for instance in the fight against cybercrime, in order to build trust and improve coordination, contingency planning and the exchange and dissemination of information and best practices among public and private actors including in the protection of public spaces and critical infrastructure;
- actions empowering communities to develop local approaches and prevention policies, and awareness-raising and communication activities among stakeholders and the general public on Union security policies;
- equipment, means of transport, communication systems and essential security-relevant facilities;
- cost of staff involved in the actions that are supported by the Fund or actions requiring involvement of staff for technical or security-related reasons;
- addressing key deficiencies and challenges for the Member States, identified during Schengen evaluations in the field of Schengen Information System and police cooperation, and requiring urgent action.

1.6. Delivery mode

The Internal Security Fund will be implemented under shared, direct and indirect management. The largest part of the resources (70% of the total budget) will be allocated to the national programmes under shared management. The remaining part will be allocated to a Thematic Facility to be used for specific actions (implemented by the Member States nationally or transnationally), Union actions (direct/indirect management) and emergency assistance (shared, direct or indirect management). Technical assistance at the initiative of the Commission will be implemented by direct management.

The Union actions will be designed in the new tool, Thematic Facility, as a part of the overall strategy for the implementation of the Home Affairs budget, keeping the necessary links with the Member States' programming of the three Home Affairs Funds and other EU Programmes. They will follow clear and well identified needs and priorities for funding.

The lead DG is DG HOME. Since the ISF is also covered by the Common Provisions Regulation (EU) 2021/1060, DG HOME closely coordinates with DG REGIO, EMPL and MARE. In relation to the external dimension, DG HOME closely coordinates with DG INTPA, NEAR and FPI. It also coordinates with RTD and CNECT.

1.7. Graphic overview of the programme structure

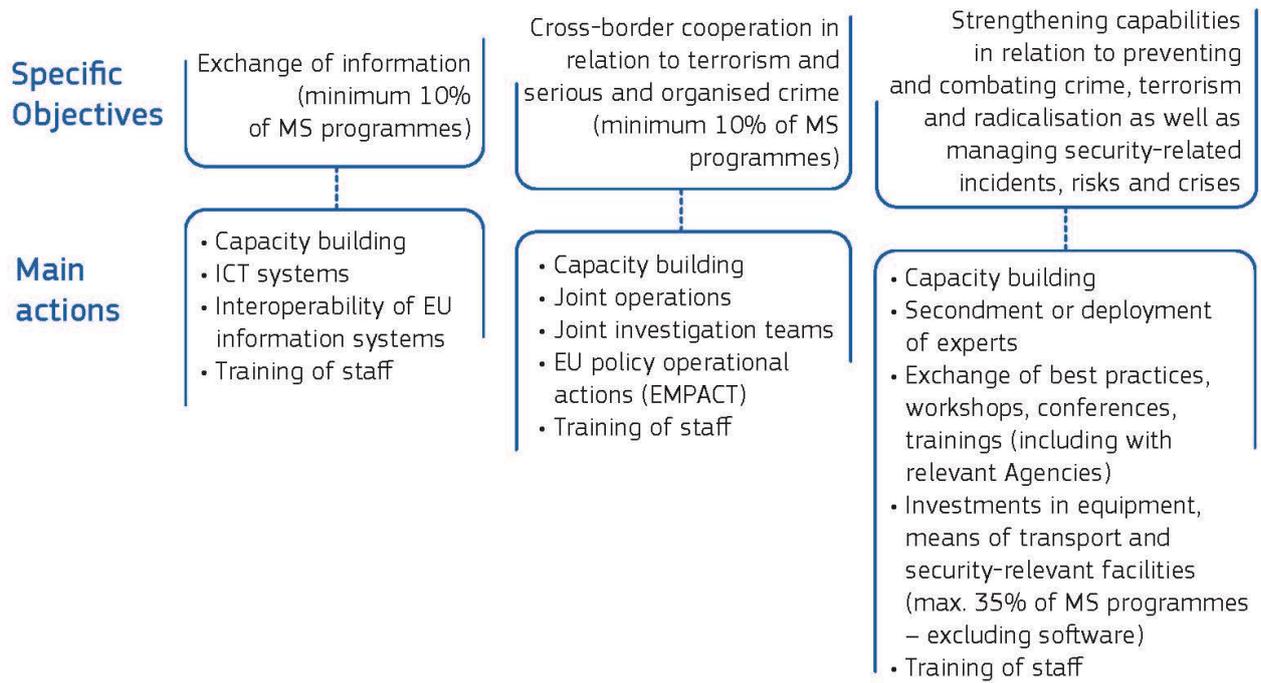

¹ EMPACT: European Multidisciplinary Platform Against Criminal Threats.

HOME (lead DG)

EMPL, REGIO, INTPA, NEAR, CNECT, RTD
(associated DGs)

Policy Objective

Contribute to ensuring a high level of security in the Union, in particular by preventing and combating terrorism and radicalisation, serious and organised crime, and cybercrime, and by assisting and protecting victims of crime as well as by preparing for, protecting against and effectively managing security related incidents, risks and crises within the scope of this Regulation

Implementation modes

Member States' (MS) programmes

70% of the funding

Shared management

would be allocated at the beginning of the programming period

Thematic Facility (including emergency assistance)

30% of the funding

Shared management (top-up to MS programmes) Direct management Indirect management

Flexibilities

would be allocated during the programming period

Beneficiaries

State/Federal Police, Customs and other specialised law enforcement services (including national cybercrime units, anti-terrorism and other specialised units), local public bodies, non-governmental organisations, international organisations, Union agencies, private and public law companies, networks, Research Institutes and Universities

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/1149 of the European Parliament and of the Council of 7 July 2021 establishing the Internal Security Fund (OJ L 251, 15.7.2021, p. 94).	2021 - 2027	1 931.00

1.8.2. Legal basis explanation

The legal basis of the ISF is the Regulation ((EU) 2021/1149) of the European Parliament and of the Council Establishing the Internal Security Fund. Since the Internal Security Fund is majorly implemented through shared management, it is covered partially (financial, not policy provisions) by of the Common Provision Regulation ((EU) 2021/1060).

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	70.0	254.1	309.9	314.9	337.2	321.7	285.4	1 893.1
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities	0.0	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	0.0

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

In the period 2014-2020, the support for police cooperation was financed through the police instrument of the Internal Security Fund, which also included an instrument for border management and visa. In the MFF 2021-2027, the Internal Security Fund is fully supporting police cooperation.

The policy objective of the Fund remains the same but with a new viewpoint taken on the specific objectives of the Fund. In particular, the specific objectives in the 2014-2020 period were focused on crime and crisis whereas the new objectives are more horizontal in nature. Its scope has been enlarged as it also includes the non-health related demand side of drugs, taking over a part of the drugs component of the former Justice programme.

The implementation modalities of the Fund will also remain the same – a split between shared and direct management.

1.10. Relevant websites providing more information

On the Commission website the reader will be able to see a description of the scope and the budget allocation of the Funds: [Internal Security Fund \(2021-2027\) \(europa.eu\)](https://europa.eu).

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	70.0	1 926.6	4%
Payments	0.1		0%

The EUR 70 million implemented in 2021 in commitments represent the Thematic Facility envelope (EUR 68.5 million) and supporting expenditure (EUR 1.5 million) to the Fund.

The EUR 0.1 million implemented in 2021 in payments represent expenditures under ISF support line.

The foreseen use of the 2022 and 2023 appropriations will cover initial allocations to Member States (EUR 155 million in 2022 and EUR 232 million in 2023), Thematic Facilities amounts for Specific Actions and Union Actions (EUR 96.4 million in 2022 and EUR 75 million in 2023), supporting expenditure for Technical assistance (EUR 2.45 million per year).

Shared management

For the Member States’ programmes, due to the delays in the adoption of the legal basis for 2021-2027 and time needed for the programming procedure, shared management programmes may only be formally approved starting from the second quarter in 2022.

The Commission also prepared a 2021-2022 Work Programme for the Thematic Facility to ensure the programming of the funding for indirect/direct and shared management on top of the basic allocations for the national programmes. The Commission adopted the financing components of the Thematic Facility and the Work Programme for 2021 and 2022 amounting to EUR 163 407 026 on 26 November 2021 (C(2021) 8460 Final).

Union Actions

As mentioned above as of 2021 the **Union Actions** have become a part of the Thematic Facility covered by the multiannual Work Programme for 2021-2022. In view of a very abundant Work Programme for 2020 and its successful implementation, most of the actions have been pencilled in for 2022 with their implementation commencing in early 2022 and continuing in 2023. Nonetheless, first activities (open calls for proposals) were initiated at the end of 2021 and are ongoing.

In continuation of previous years, ISF Union Actions will cover the area of police cooperation. The calls for proposals planned under the work programme will be progressively published and invitation of the beneficiaries of direct award of grants identified under the work programme to submit the grant applications are scheduled to roll out still in the course of the first half of 2023. In total 10 topics in open calls for proposals have been established in the work programme and continued support to various networks is also foreseen. These are complemented with procurements to support the Commission’s activities.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Internal Security Fund – Police (including drugs)

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	1 230.2	1 231.0	100%
Payments	916.8		74%

The table above presents the cumulative implementation rate of the Internal Security Fund 2014-2020, the Police strand.

Shared management

For the period 2014-2020, for the ISF-Police, EUR 751.56 million were allocated to the national programmes of the Member States. Up to 2021 MS spent EUR 572 million equivalent to an absorption rate of 76.21%, which can be considered satisfactorily. By 31 March 2022, the 2021 Annual Implementation Reports for ISF were submitted by Member States.

In 2017, the ISF-Police national programmes received a top-up of EUR 70 million for the Passenger Name Record (PNR) and EUR 22 million for information exchange and interoperability of information systems.

Information exchange projects under ISF P include on the one hand the inter-connection of national databases and IT tools of different national police entities, and on the other hand the connection of national databases and IT tools with their EU equivalents in view of cross-border exchange of structured data on crime. The data exchanged is for example in relation to the Prüm Decisions, to step up cross-border cooperation to combat terrorism and cross-border crime by fast and efficient data exchange of DNA analysis files, automated fingerprint identification systems and vehicle registration data. Other examples of data exchange projects could be related to the Passenger Name Record system, the Schengen Information System, the Europol Information System, the Interpol Stolen and Lost Travel Documents database, or related to the exchange of forensic data on the chemical composition of seized drugs, firearms, explosives, economic and financial crime related information, trafficking in human beings, environmental crime etc. Projects are also about better information exchange, namely finding technical solutions to filter results and to improve data quality.

The co-legislators adopted in May 2019 **the interoperability package**² to close existing information gaps. The law enforcement component of this package allows police authorities to perform identity checks in the territory of the Member States by querying the Central Identity Repository (CIR). CIR includes data from five central EU information systems: EES, VIS, ETIAS, Eurodac and ECRIS-TCN. Projects eligible under ISF P include for instance the purchase of software and hardware to query the CIR, thus allowing law enforcement officers to make the best use of existing information systems in a timely manner and contribute to improve internal security.

In the latest Annual Implementation Reports concerning 2021, Member States mostly reported that the COVID-19 pandemic did lead to delays in project implementation due to e.g. delays in public procurement procedures, travel restrictions, difficulties in the hiring processes of staff, construction works due to lockdown and other restrictions related to COVID-19. Training activities were particularly negatively affected by the travel restrictions imposed in the course of the COVID-19 pandemic. Mitigating measures included extension of duration of projects, a more widespread use of online trainings via e-learning platforms, increasing the co-financing rates for some projects. Especially in the area of training and capacity building, this allowed getting closer to the 2022 targets.

Union Actions/direct and indirect management

To support Member States, **ISF-Police emergency assistance** has been made available to address urgent and specific needs. The overall amount granted since 2014 amounts to EUR 12 million. No emergency assistance under ISF-Police was granted in 2021.

Last year (2021) was a very active for the **Union actions projects**. A vast majority of projects selected under the 2017 annual work programme were closed. In 2018 programmes were still running, while those of 2019 have reached a cruising speed. The implementation of the Union actions have continued to be impacted by COVID-19 pandemic, which resulted in the modifications of originally approved grants, be it for the description of the actions or deadlines, hence no-cost extensions and amendments of the numerous grant agreements. New grant agreements and contribution agreements were concluded for actions under the 2020 annual work programme and their implementation started in principle in early 2022.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

Performance assessment will be provided once the implementation of the programme 2021-2027 have properly started and the first performance reports received. The first reports should be received by 15 February 2023 and by 15 February of each subsequent year.

3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 have properly started and the first performance reports received.

3.1.3. Previous Programme Performance

Internal Security Fund: Police strand

The majority of security threats, which the EU is facing are cross-border by nature. Taking into account the continuous security challenges, it is important to stress that until the end of 2021, ISF-Police has proven an efficient fund getting closer to its general objective to contribute to a high level of security in the Union. In particular, the interim evaluation concluded that the Fund has been shown to be flexible enough to respond to the changing needs which emerged as a consequence of the security crises. This assessment was carried over into the impact assessment on which the new ISF is based.³

The ISF supports overall EU policies in the area of internal security, e.g. on police cooperation, preventing and combatting crime (including counterterrorism), protection of people and critical infrastructures and combatting illicit drugs trafficking. Through Union actions, transnational projects and projects of particular EU interest are being financed. The needs of both policy and its stakeholders evolve continually. Therefore, the (bi)annual programming for Union actions offers a unique chance to align the actions to most urgent and important needs identified on the ground (e.g. Trafficking in Human Beings, child sexual abuse and anti-corruption), as well as allowing continuity, for example on the European Crime Prevention Network.

The 2014-2020 programme were also instrumental to help technological and knowledge update for European security, development of capabilities of European security authorities, and European strategic autonomy on critical security technologies. Member States used the 2014-2020 programmes to take up innovations coming from Union-funded research for civil security of the past decades, under FP7 or Horizon 2020. Examples include: new detectors for Chemical, Biological, Nuclear, Radiological or Explosive

³ SWD(2018)347, 12.6.2018.

substances; the Automated Border Control gates in airports and border crossing points; new technologies used by Police forces for investigations in the Dark Web; new security systems to prevent and respond to terrorist attacks or incidents in long highway tunnels; or systems used by police and civil protection for sanitizing public areas during the COVID-19 pandemics.

In terms of overall performance of the Fund, for many of the indicators set in the Regulation, the targets have been either achieved or exceeded. **In addition, the Commission's proposal to prolong the implementation period for the money available to Member States under the 2014-2020 Home Affairs funds by one year due to crisis in Ukraine, was adopted in April 2022.** Hence, the implementation of ISF will run until end-2023. Up to 2021, ISF-Police has attained an absorption rate of 76.21%, which can be considered overall satisfactory. In 2021, the Member States have submitted EUR 70.3 million of payments to the Commission.

Lessons learnt

The ISF 2021-2027 provides financial resources with the objective to contribute to ensuring a high level of security in the Union, in particular by preventing and combating terrorism and radicalisation, serious and organised crime, and cybercrime and, by assisting and protecting victims of crime as well as by preparing for, protecting against and effectively managing security related incidents, risks and crises. Lessons learned and incorporated into the design of the new ISF include an allocation which reflects the different needs and pressures of Member States, and a thematic facility offering flexible funding for a number of priorities including support for solidarity and responsibility efforts between the Member States.

– The main lessons learnt during the programming period 2014-2020 include:

– *Insufficient cooperation, coordination and strategic steering in the implementation of the ISF with other EU level initiatives:* This challenge was addressed by including eight shared management funds, including the ISF, in a single legal framework (the Common Provision Regulation (EU) 2021/1060). This allows for a closer coordination and cooperation of the shared management funds both at strategic level as well as at the level of implementation. A closer coordination of ISF with EU civil security research was also analysed in the Action Plan on Synergies between Civil, Defence and Space Industries.

Better exploitation of innovation opportunities from EU civil security research. Two challenges identified with the 2014-2020 programmes to facilitate the take up by Home Affairs Funds of innovation coming from EU security research were that a) the mapping of innovations is difficult, and likely incomplete; b) innovations with a closer market and to be taken up directly by law enforcement agencies, risk not to be exploited. As the Commission indicated in the CSWD Enhancing Security Through Research and Innovation (SWD(2021) 422 final), and in the Action Plan on Synergies between Civil, Defence and Space Industries, achievements on ISF and BMVI promoting new European security technologies coming from EU security research will be improved in the 2021-2027 period. This includes promoting a capability-based programming, better tracking of innovation going from EU research to ISF and BMVI support, stronger links and incentives to exploit security research results. To this aim, the Commission is assisting Member States to identifying opportunities, is planning Specific Actions focused on exploiting innovations based on previous Union-funded security research, and is carrying out the Study on the EU Security Market.

– *A need for simplification:* in order to simplify and build on synergies, the rules applicable to the shared management funds will be aligned with rules applicable to the management of other Union Funds under shared management ('single rule book'). This provides better guidance on the management and control systems and audit requirements, and ensures that the eligibility rules under shared management make full use of simplified cost options (SCOs).

Insufficient flexibility to respond to changing needs during the programming period: This challenge was addressed in two ways. Firstly, Member States will be provided with around 58.3 % to Member States programmes. An additional share of 11.7% of the total budget will be allocated at mid-term (technical adjustment of the distribution key subject to financial performance according to which a Member State should have submitted payment claims covering at least 10 % of the initial amount of payment appropriations). Secondly, a financial envelope of 30% should be managed through the thematic facility, which will periodically provide funding for a number of priorities defined in Commission financing decisions. This facility in particular offers flexibility in the management of the instrument by allowing the disbursement of funds to the technical assistance at the initiative of the Commission and the following components of the thematic facility: support for specific actions, providing additional funding for dedicated actions of high EU added value, through the Member States' national programmes; support for Union actions, managed through direct and indirect management; and emergency assistance.

The need to strengthen the performance monitoring in terms of quality and frequency of the fund in general. In order to address this challenge, the Commission proposed greatly improved performance monitoring with more regular and reliable data setting out common output and result indicators. In cooperation with the Member States, the Commission services have developed definitions for each of these indicators. This will ensure a common understanding of each indicator across all Member States and programmes. Moreover, it will not only greatly contribute to improving data quality it will also enhance data comparability. Member States will be required to develop this performance framework for each of its programmes and underpin it by methodological considerations. The managing authority, in its yearly management declaration and as part of the annual assurance package, will have to confirm the reliability of submitted data relating to indicators and the progress of the programme. The annual performance review will be an occasion for a policy dialogue with the Member States on issues of programme implementation and performance. In particular, the annual performance reports will provide qualitative information on programme implementation going beyond the quantitative data submitted for the indicators. It will complement the biyearly transmission of structured data and strengthen the performance review process. In the context of the performance framework, Commission services will hold at least two meetings with Member States

during the programming period. Twice a year, Member States will transmit to the Commission structured data on the common output and result indicators. Thus, the Commission services will have a much more updated picture of programme performance than in the current period. In addition, the ISF programmes will now also use the open data platform, which had been established in the current programming period for the European Structural and Investment Funds. It will allow stakeholders to access almost real time data on programme implementation. This is an important novelty for the HOME funds, which in the current period do not publish data on the open data platform.

Moreover, Member States are now required to set up a system of electronic data exchange between beneficiaries and managing authorities, and between different authorities of the management and control system. This requirement builds on the current Common Provisions Regulation, which did not cover the ISF, and further develops certain aspects of data collection. It is thus a novelty for the HOME funds in general. Beneficiary and project information, as well as the performance reports will be published on a dedicated website run by the managing authority. This will give greater visibility to achievements and allow better communication.

Justice Programme: Drugs initiatives

The actions of the programme as far as the Specific Objective 4: Drugs initiatives is concerned - which was implemented in the 2014-2020 programming period - are achieving their goals. Several projects have been financed through the Justice Programme over the last years, which have lasting impact on the drug situation in the EU. A good example is a relevant initiative addressing the issue of methamphetamine use in the EU, which aims to provide an in-depth understanding of the translation processes of best practice prevention of methamphetamine use. The last call for proposals under the Justice Programme chapter on drugs was concluded in 2021 and grants were signed with beneficiaries before the end of 2021. In the 2021-2027 programming period, drugs-related activities are addressed by the Internal Security Fund with the focus on security-relevant measures, while the health-focused intervention at EU level is undertaken by the EU4Health Programme.

3.2. Key achievements

2014-2020 period

<i>Cumulative number for the period 2014-2020, incl.2021</i>	341	497	107	501	111	3 143
	Number of joint investigation teams (JITs) and European Multidisciplinary Platform against Criminal Threats (EMPACT) operational projects supported by the Instrument, including the participating Member States and authorities.	Number of projects in the area of crime prevention	Number of projects supported by the Instrument, aiming to improve law enforcement information exchange which are related to Europol data systems, repositories or communication tools.	Number and tools put in place and/or further upgraded with the help of the Instrument to facilitate the protection of critical infrastructure by Member States in all sectors of the economy	Number of projects relating to the assessment and management of risks in the field of internal security supported by the Instrument	Number of expert meetings, workshops, seminars, conferences, publications, websites and online consultations organised with the help of the Instrument. Broken down by relating to critical infrastructure protection, and relating to crisis and risk management

Internal Security Fund: Police strand

Shared management

Following a reinforcement in 2017, the total allocation for the **Internal Security Fund – Police** equals EUR 751.56 million.

In 2021, the Fund (Police part) significantly contributed to **enhancing exchanges of information and cooperation among national authorities** With the support of the ISF – Police, 32 165 law enforcement officers have received training on cross-border related topics in 2021, adding up to a cumulative value of 68 898 for the entire period. This is a stark increase compared to previous years.

A good example of how the Fund enhances exchange of information between police and other law enforcement authorities, is found under the National Programme of **Germany**. Through several activities over a number of years, the Programme supports the “Police Information and Analysis Network” (PIAV) for EUR 32 million (with 17 beneficiaries). The initiative consists of a number of projects implemented at Federal and Land level to improve police data exchange and information management by connecting all federal and regional police authorities in one system.

In the same vein, the establishment of **national PNR systems** and development of national Passenger Information Units were also supported by the Fund in all Member States with EUR 70 million in top-ups to the national programmes in 2017.

Moreover, ISF Police allowed to support actions implementing the **joint investigation teams (JIT)**. ISF Police also allowed to support activities of the **European Multidisciplinary Platform Against Criminal Threats (EMPACT)**, which led to tangible operational results and many achievements in various fields, such as training and capacity building, prevention, cooperation with non-EU partners, fighting online crime, arresting high-value targets⁴.

According to Europol Te-Sat report figures, in 2020⁵ the number of **terrorist attacks** remained stable at 119 (compared to the same 119 value in 2019 and 129 in 2018) and the number of terrorist related deaths slightly increased with respect to 2019, but remained in line with 2018, and far below values from 2015-2017.

Examples of national programme success stories

Italy

Under the Police component of its ISF national programme, in 2020 Italy completed the implementation of project **Strengthening of the information** and operational capacity of the Anti-Mafia Investigation Directorate *in relation to the functioning of the European anti-mafia network @ ON*. Through this project, the Italian Ministry of Interior acquired highly sophisticated hardware and software to fight crimes such as money laundering, corruption, weapons, drugs and waste smuggling. The project also enabled the MoI to enhance exchange of information with other MS and Europol, particularly in the framework of Europol-led coordination mechanisms such as the Operational Network/@ON established by the JHA Council Resolution of 4 December 2014.

Direct management

Examples of success stories under emergency assistance:

In **Spain**, the emergency funds (EUR 52 million for the years 2018 and 2019) mainly funded actions related to illegal migration. Under the ISF - Police, a software to detect terrorism activities in the internet and social media, as well as automatic number plate equipment have been acquired and used by the police.

Union and specific actions

Security has an inherently cross-border dimension and therefore a strong, coordinated EU response is required. Beyond internal security challenges, Europe faces complex external threats that no Member State can meet on its own. About 40% of the overall financial envelope of the Fund is managed through the thematic facility, which periodically provides funding for a number of priorities defined in the Commission financing decisions.

Examples of recently initiated activities at EU level include further strengthening of support to EMPACT, the European Multidisciplinary Platform Against Criminal Threats and law enforcement actions against illicit drug trafficking with support of Maritime Analysis and Operations Centre. Additional examples of ISF funded Union actions can be found in the Factsheets and Snapshots published by the Commission at the following link: https://ec.europa.eu/home-affairs/publications/snapshot-action-europe-eu-projects-enhance-security-and-effectively-manage-migration_en and https://ec.europa.eu/home-affairs/publications/isfp-and-just-drugs-factsheet-compilation_en.

To date there are **17 European networks** which are financed via direct grants under Union Actions for ISF-Police. The networks carry out activities with specific characteristics that require a particular type of body on accounts of its technical competence, its high degree of specialisation or its administrative powers and that do not fall within the scope of calls for proposals. The networks support co-operation between authorities across borders and carry out activities such as trainings and simulations, cooperation meetings, while producing together guidance manuals and operational tools. Without EU support, these cross-border activities are unlikely to materialise as they would be wholly dependent on the willingness of individual Member States to pay for the activity at European level, including notably the travel expenses of representatives of other countries involved. For example, in order for the European police cooperation to thrive in a world where crime is transnational, the network activities need to be financed on a regular basis by the EU. The networks also provide useful fora for exchange of good practices, the testing of new methods and tools

⁵ Latest available year at the time of writing

and exchanges of views with experienced practitioners on the relevance of new policies. They are crucial players and act as mediators between policy making and project development.

In addition to these established networks, Union actions support transnational projects selected through **calls for proposals**, for example:

In 2021 the Commission granted EUR 26 million to Member States and religious communities to enhance the protection of places of worship and other public spaces from terrorist threats, as part of the new Counter-Terrorism Agenda for the EU. Ten projects received EUR 22.7 million worth of funds and involve entities from 20 Member States. These projects focus on the protection of places of worship belonging to different faith communities (churches, synagogues, mosques); the protection of other types of public spaces such as public transport systems and major sports venues; and the detection of threats by detection dogs. Finally, EUR 3.3 million fund a project to test solutions countering possible threats posed by drones. The Commission organised a conference on the protection of public places and places of worship on 25 March 2021 to present some of the selected projects to the public. Given the importance of the topic, the Commission published on 8 February 2022 another call on the protection of public spaces, reinforcing the already allocated budget but additional EUR 14.5 million.

TRANSTUN stands for "TRANSnational TUNnel operational CBRN risk mitigation". It is a 2019 project selected under the ISFP-2018-AG-CT-Protect call and financed 90% by ISF Police Union Actions with a total budget of some EUR 1 million, that ended on October 2021.

TRANSTUN engaged private operators and end-users from France, Italy and Spain in an effort to define, produce and test standardized operational guidelines for effective response to chemical events affecting cross-border tunnels in the EU. It aimed to:

- Create a Network of Stakeholders to capitalize & consolidate knowledge;
- Develop a Harmonised Toolkit of Guidelines for use by tunnel operators and first responders across the EU;
- Improve Joint Operational Response, particularly amongst various national and transnational agencies.

In September 2021 the project completed a real-life CBRN exercise at the cross-border Bielsa-Aragouet Cross-Border Tunnel between France and Spain. More than 250 players joined their effort in this exercise, which tested their operational procedures in case of CBRN events within the framework the Binational Plan established between France and Spain. The event was also the opportunity to involve more than 50 observers from eight EU countries, and the European Commission.

During the two days of TRANSTUN real-life exercise, first responders and tunnel operators had the chance to test the operational guidelines and harmonised procedures drafted in the previous 24 months of project implementation by a pool of around 40 experts also engaged as official members of the TRANSTUN Network of Stakeholders.

The TRANSTUN exercise was a unique opportunity to outline current strengths and weaknesses of the main actors involved in such a peculiar emergency response, which is a fundamental achievement to increase not only better inter-agency coordination but also a multi-country response to a CBRN event towards a more CrossBorder SecurityUnion.

Other examples of recently initiated activities at EU level include support to the fight against organised property crime. The SWORD project ("Struggling against widespread organized property crime at the root and in all its dimensions") supports EMPACT activities to tackle 'organised property crimes' in 2021-2022. Since January 2021, the project has already led to the dismantling of 18 criminal networks, supported 117 joint arrest operations, 61 serious crime investigations, seizure of 2,4 million EUR and over 20 events and operational meetings which allowed 123 investigators to travel and improve international cooperation.

3.3. Evaluations, studies and reports

Internal Security Fund: Police strand

The key findings of the latest Interim evaluations of the Internal Security Fund - Borders and Visa 2014-2017⁶ and of the Internal Security Fund - Police⁷ have been presented in the Programme Statements DB2020.

By 31 December 2024, the Member States will provide an ex-post evaluation report on the effects of actions under their national programmes and the Commission will present by 30 June 2025 an ex-post evaluation report on the effects of the legal bases.

At the same time, the Commission is implementing the Action Plan following the internal audit findings on the monitoring and reporting on the implementation and performance of National Programmes. In particular, the Commission has strengthened its processes for monitoring the National Programmes and increased its efforts to improve the reliability of performance data reported by the Member States in their Annual Implementation Reports⁸ submitted annually. More attention will be given to the consistency

⁶ SWD(2018)340final https://ec.europa.eu/home-affairs/sites/homeaffairs/files/what-we-do/policies/european-agenda-migration/20180612_swd-2018-340-commission-staff-working-document_en.pdf ;

⁷ SWD(2018)341final https://ec.europa.eu/home-affairs/sites/homeaffairs/files/what-we-do/policies/european-agenda-migration/20180612_swd-2018-341-commission-staff-working-document_en.pdf

⁸ Annual Performance Reports in the 2021-2027 period

of data reported by the Member States. The Commission has provided guidance to the Member States with a view to ensure common understanding of the indicators established in the Fund and to establish better links with information provided in the accounts.

Moreover, the European Court of Auditors has issued 16 new recommendations in 2021 concerning the Home Affairs funds in 2014-2020 and 2021-2027, the Emergency Assistance and the co-operation with the agencies. DG HOME has accepted all recommendations and started implementing them. In total, there are 23 open recommendations by the European Court of Auditors to date.

While the Commission started implementing the ECA’s recommendations already under the ongoing programmes, the main structural recommendations were put in place for the 2021-2027 programming period.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Better information exchange

Indicator 1: Number of ICT systems made interoperable in the Member States/with security relevant EU and decentralised information systems/with international databases

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute number of ICT systems made interoperable
Cut-Off Date	31/12/2022
Data source	Beneficiaries - national authority
Link to the objective	Interoperability has a direct link to the objective and it contributes through increased number of interoperable IT systems the aim at improving and facilitating the exchange of information between different bodies
Link MFF 14-20 / MFF 21-27	This indicator is new. It was not reported in the MFF 2014-2020.
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 2: Number of administrative units that have set up new or adapted existing information exchange mechanisms/procedures/tools/guidance for exchange of information with other Member States/EU agencies/international organisations/third countries

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute number of administrative units
Cut-Off Date	31/12/2022
Data source	public authorities -> managing authority

Link to the objective	Direct link to objective regarding improved exchange of information. Increased number of administrative units should automatically intensify exchange of information
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020, Member States report on the ‘Number of projects supported by the Instrument, aiming to improve law enforcement information exchange which are related to Europol data systems, repositories or communication tools.’
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 3: Number of participants who consider the training useful for their work

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	absolute number
Cut-Off Date	31/12/2022
Data source	participants of training -> Managing Authority
Link to the objective	direct link - training activity focusing on the substance of the objective
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020, Member States did not report on the effectiveness of the training, They only reported on the number of law enforcement officials trained
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 4: Number of participants who report three months after the training activity that they are using the skills and competences acquired during the training

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	absolute number
Cut-Off Date	31/12/2022
Data source	beneficiary -> Managing Authority

Link to the objective	direct link - training focusing on the substance of the objective
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020, Member States did not report on the effectiveness of the training, They only reported on the number of law enforcement officials trained
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Specific Objective 2: Increased operational cooperation

Indicator 1: The estimated value of assets frozen in the context of cross-border operations

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	euro
Cut-Off Date	31/12/2022
Data source	cross-operation teams -> Managing Authority
Link to the objective	The estimated value of assets frozen in the context of cross-border operations is a good and direct indicator indicating intensified cross border co-operation
Link MFF 14-20 / MFF 21-27	This is a new indicator not reported in the MFF 2014-2020
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 2: Quantity of illicit drugs seized in the context of cross-border operations by type of product

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Quantity of drugs, expressed in kg.
Cut-Off Date	31/12/2022
Data source	cross border operation teams -> Managing Authority

Link to the objective	direct link since the indicator measures the level of intensity of the cross border operations
Link MFF 14-20 / MFF 21-27	Drug related indicators with a different scope are reported in the MFF 2014-2020
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 3: Quantity of weapons seized in the context of cross-border operations by type of weapon

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute number of weapons
Cut-Off Date	31/12/2022
Data source	cross border operation teams -> Managing Authority
Link to the objective	seized weapons has a direct link to the level of intensity of cross border operations
Link MFF 14-20 / MFF 21-27	This is a new indicator not monitored in MFF 2014-2020
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 4: Number of administrative units that have developed/adapted existing mechanisms/procedures/ tools/guidance for cooperation with other Member States/EU agencies/international organisations/third countries

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute number of administrative units
Cut-Off Date	31/12/2022
Data source	Public administration -> Managing Authority
Link to the objective	Direct link - increased number of administrative units should increase intensity of cross border operations
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020, Member States report on the 'Number of projects supported by the Instrument, aiming to improve law enforcement information exchange which are related to Europol

	data systems, repositories or communication tools.’
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 6: Number of Schengen Evaluation Recommendations addressed

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute number of recommendation in the area of police cooperation with financial implications falling within the scope of ISF
Cut-Off Date	31/12/2022
Data source	Schengen evaluators -> Managing Authority
Link to the objective	Schengen evaluations focusing on external borders/Schengen area are closely linked to cross border

	activity/intensity of cross border operations
Link MFF 14-20 / MFF 21-27	This indicator is new as it reflects the growing focus the Commission puts on the recommendations of Schengen evaluation
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Specific Objective 3: Strengthened capabilities to combat and to prevent crime

Indicator 1: Number of initiatives developed / expanded to prevent radicalisation

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute number of initiatives
Cut-Off Date	31/12/2022
Data source	Public bodies/beneficiaries - > Managing Authority
Link to the objective	this indicator is directly linked to the objective, to the radicalisation element
Link MFF 14-20 / MFF 21-27	This is a new indicator not reported in the MFF 2014-2020
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 2: Number of initiatives developed / expanded to protect / support witnesses and whistle-blowers

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute number of initiatives
Cut-Off Date	31/12/2022
Data source	public bodies/beneficiaries - > Managing Authority
Link to the objective	the link between initiatives developed/expanded to protect/support witnesses and whistle blowers to

	capabilities in relation to preventing and combating crime, terrorism and radicalisation is obvious
Link MFF 14-20 / MFF 21-27	This is a new indicator not reported in the MFF 2014-2020
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 3: Number of critical infrastructure/public spaces with new/adapted facilities protecting against security related risks

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute number of infrastructure or public spaces protected against security related risks
Cut-Off Date	31/12/2022
Data source	Project promoters -> Managing Authority
Link to the objective	infrastructure or public spaces protected against security related risks directly linked to Member States' capabilities in relation to preventing and combating crime, terrorism and radicalisation as well as managing security-related incidents, risks and crises
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020, Member States reported on the number and tools put in place and/or further upgraded with the help of the Instrument to facilitate the protection of critical infrastructure by Member States in all sectors of the economy.
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 4: Number of participants who consider the training useful for their work

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute number
Cut-Off Date	31/12/2022
Data source	project beneficiaries - Managing Authority

Link to the objective	training activity is directly focused on the substance of the objective
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020, Member States did not report on the effectiveness of the training, They only reported on the number of law enforcement officials trained
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

Indicator 5: Number of participants who report three months after leaving the training that they are using the skills and competences acquired during the training

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2021	Milestones									2029
0	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Absolute number
Cut-Off Date	31/12/2022
Data source	Beneficiaries -> Managing Authority
Link to the objective	Training activity should focus on the substance of the objective, thus a direct link
Link MFF 14-20 / MFF 21-27	In the MFF 2014-2020, Member States did not report on the effectiveness of the training, They only reported on the number of law enforcement officials trained
Other methodological comments	SM Baseline sets out the situation prior the programme. A result indicator has to be linked to the support of the Instrument. Therefore, contextual information about the situation prior to the programme is not relevant and the baseline is zero. MS have to set indicator values in the programming process. The methodology for setting targets/milestones should be clear about evidence used for estimating the indicator values and about assumptions used. COM will assess the methodology proposed by MS as part of the assessment process of the draft programmes before adopting the programme. Direct and indirect mgt (<10% of the fund) EMAS is NA since emergency situations cannot be foreseen in advance. Union actions: WP 21-22 of the Thematic Facility was adopted in November 2021. Funding for DM is not known until next WPs. DG HOME needs aggregated data on baselines, milestones, targets from MS in order to finalise target setting process for the fund. This can be done for DB 2024 PS.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No values nor trends to be assessed as Member States programmes will only start to be adopted in the second half of 2022.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Internal Security Fund

General Objective 1: To contribute to ensuring a high level of security in the Union

Indicator 2: Volume of terrorism in the EU expressed by the number of failed, foiled or completed terrorist attacks in the EU

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Attacks										
2012	Milestones									2022
152	Actual Progress									120
										Final

	226	211	142	205	129	119	119			
Are we on track :	On track									
Deaths										
2012	Milestones									2022
7	0									0
	Actual Progress									Final
	4	119	261	329	342	352	376			
Are we on track :	Deserves attention**									

Indicator type	Impact
Unit of measurement	Annual Number of terrorist attacks, Cumulative Number of Victims
Cut-Off Date	31/12/2020
Data source	Annual EU Terrorism Situation & Trend Report (Te-Sat) produced by Europol in June each year.
Narrative	
Methodology	The Directive (EU) 2017/541 on combating terrorism and replacing Council Framework Decision (2002/475/JHA) and amending Decision (2005/671/JHA) define terrorist offences, as well as offences related to terrorist groups or offences linked to terrorist activities. The notion of terrorist offence is a combination of: objective elements (murder, bodily injuries, hostage taking, extortion, committing attacks, threat to commit any of the above, etc.); and subjective elements (acts committed with the objective of seriously intimidating a population, destabilising or destroying structures of a country or international organisation or making a government abstain from performing actions). A terrorist group as a structured group of two or more persons, established over a period of time and acting in concert to commit terrorist offences. Data relate to criminal preparatory acts as offences linked to terrorist activities - examples include public provocation to commit a terrorist offence.
Link MFF 14-20 / MFF 21-27	This indicator will not be reported by the Member States in the context of the data reporting requirements as the link to the support of the ISF is very weak. Europol will continue to collect this data
Other methodological comments	Data comes with a one year lag, as it is provided in the Te-Sat report produced by Europol in June. First results and target should be ideally below the baselines as the goal is to reduce the number of deaths.
Full metadata available at this address	
Justification of the trend	Following a series of deadly terrorist attacks in 2015 and 2016 (incl. in Paris, Brussels and Nice), the EU and its Member States stepped up their efforts in fight against terrorism. Actions have been implemented or proposed which include preventing and combatting radicalisation and terrorist financing, protecting public spaces and restricting the use of Chemical, Biological, Radiological, Nuclear and Explosive (CBRN-E) materials, improving the controls on explosives precursors. As a result, the number of deaths and terrorist attacks related to terrorism significantly decreased in the past three reporting years (2018 - 2020) with respect to 2015-2017.

Specific Objective 3: Crime prevention, combating cross-border, serious and organised crime including terrorism, and reinforcing coordination and cooperation between law enforcement authorities and other national authorities of Member States

Indicator 1: Cumulative number of joint investigation teams (JITs) and European Multidisciplinary Platform against Criminal Threats (EMPACT) operational projects supported by the Instrument, including the participating Member States and authorities. Broken down by Leader (Member State), Partners (Member State), participating authorities, participating EU Agency (Eurojust, Europol), if applicable

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022
0	108									216
	Actual Progress									Final
	6	6	7	114	202	253	287	341		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of JITs, actual results, milestones and target are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year.
Narrative	
Methodology	As the main principle, data should be reported only by the leaders of JITs and EMPACT projects therefore double counting should be avoided. Data on participating authorities include authorities from both leading and participating countries. The partners are the participating countries but the

	participating authorities should be indicated on the top of that.
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will report on the total number of cross-border operations, on the number of joint investigation teams as well as on EU policy cycle operational actions.
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	Overall, MS are well on track to achieve the target. No particular issues to report.

Indicator 2: Cumulative number of law enforcement officials trained on cross-border-related topics with the help of the Instrument, and the duration of their training (person days). Broken down by type of crime (Art. 83 TFEU), and horizontal area of law enforcement

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Officials trained										
2013	Milestones									2022
0				64 070						128 110
	Actual Progress									Final
	283	1 109	2 172	7 975	15 270	23 340	36 733	68 898		
Are we on track :	Moderate progress									
Person days										
2013	Milestones									2022
0				99 038						198 075
	Actual Progress									Final
	142	4 822	16 209	44 602.96	70 207.23	94 210.73	124 781.35	144 179.35		
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	Number of participants, actual results, milestones and target are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year
Narrative	
Methodology	Member States could chose the structure of data reporting by types of crime or horizontal area of crime, without double counting of outputs. The outputs can relate to any cross-border, serious and organised crimes, beyond those indicated in Article 83 TFEU• In principle, the structure should be kept for the entire eligibility period. If the focus areas of trainings change substantially during it, the structure of their reporting will be impacted a) The unit of measurement established by the basic acts is "persons/days". For instance - 20 officers x 5 days = 100 person days b) Double counting in the same operations should be avoided. The main topics/policy area should be identified if the training related to many issues.
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will continue to report on the number of participants in training activities. In addition, they will report on the number of participants who considered the training useful for their work as well as on the number of participants who report three months after leaving the training that they are using the skills and competences acquired during the training
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year's programme statement.
Full metadata available at this address	
Justification of the trend	Overall, MS are lagging behind with the provision of training in terms of numbers of persons trained. However, in terms of numbers of person days, the delay is far less. Target achievement appears within reach. In terms of backlog of persons trained, this may be due to a backlog in reporting for these indicator values, with some MS still waiting for a project to be finalised before reporting indicator values. In addition, the situation deteriorated as of March 2020 with the outbreak of COVID, which became a real obstacle to the provision of training. MS had to get organised to go virtual, which in addition is not possible for all types of training. For the training days, it appears that Member States had initially focused more on longer training activities than originally planned. 2021 marks a difference in this respect, as a significant increase in the number of persons trained is visible, whereas the increase in the number of person/days is less apparent. This is likely due to the implementation of shorter virtual trainings, to mitigate the impact of COVID-19.

Indicator 3: Number and financial value of projects in the area of crime prevention. Broken down by type of crime (Art. 83 TFEU)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number										

	Milestones									2022
0				189						375
	Actual Progress									Final
	5	35	137	252	360	431	470	497		
Are we on track :	On track									
Financial value										
	Milestones									2022
0				130 000 000						260 436 836
	Actual Progress									Final
	1 621 577	18 983 299	59 518 504	163 105 076	264 531 355	318 588 951	361 516 011	384 199 684		
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Number of projects and financial value of assets, actual results, milestones and target are cumulative.
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year
Narrative	
Methodology	Instruction to the Member States: On the breakdown of type of crime: If the project deals with multiple types of crime, the primary type of crime/the most important (financial value, operational importance) should be selected. If two or more crime types are the main focus, please categorise under one of these. Cybercrime/computer crime only includes cyber offences (i.e. attacks against information systems). It does not include other activities such as drug trafficking where elements such as the sale, payment, or organisation/logistics take place online.
Link MFF 14-20 / MFF 21-27	In the MFF 2021-2027, Member States will continue to report on the indicator ‘number of projects to prevent crime’
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year’s programme statement. Under this indicator, Member States provided decimal numbers. In the above table, we report rounded numbers. Reporting decimals under this indicator suggests that there is an issue with the reliability of data.
Full metadata available at this address	
Justification of the trend	Targets exceeded. Importance of crime prevention increased. Progressive increase of the indicator value as the projects implementation advances.

Specific Objective 4: Enhancing the capacity of Member States and the Union for managing effectively security-related risks and crises, and preparing for and protecting people and critical infrastructure against terrorist attacks and other security-related incidents

Indicator 1: Number and tools put in place and/or further upgraded with the help of the Instrument to facilitate the protection of critical infrastructure by Member States in all sectors of the economy

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2022
0			1	239						478
	Actual Progress									Final
	0	46	141	236	266	337	406	501		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number, actual results, milestones and target are cumulative
Cut-Off Date	31/12/2021
Data source	Provided in the annual implementation reports sent by Member States on 31 March each year
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	Member States will report on the following indicator in the MFF 2021-2027: Number of critical infrastructure/public spaces with new/adapted facilities protecting against security related risks
Other methodological comments	Every year, together with the Annual Implementation Report, Member States can update data retroactively. This explains why data for previous years are changed in comparison to e.g. last year’s programme statement. Under this indicator, Member States provided decimal numbers. In the above table, we report rounded numbers. Reporting decimals under this indicator suggests that there is an issue with the reliability of data.
Full metadata available at this address	
Justification of the trend	Target achieved. Some MS understood the definition of critical infrastructure protection (CIP) in a

	much wider sense, also including public spaces. Though it is correct that the ISF-P can in theory also be used to finance certain activities related to the physical protection of critical infrastructure, these are very limited amounts of funding and their use is further restricted by the focus on security. Resilience of critical infrastructures goes much further than security, however, and is therefore better covered by other complementary EU funding sources which include in their scope resilience against natural disasters, technological accidents, hybrid threats, business continuity, disaster mitigation strategies, etc.
--	--

Previous Program 2: Justice Programme

Specific Objective 4: To support initiatives in the field of drugs policy as regards judicial cooperation and crime prevention aspects closely linked to the general objective of the Programme, insofar as they are not covered by the Internal Security Fund or by the Health for Growth Programme

Indicator 1: Number of new psychoactive substances assessed (including through testing, if necessary) to enable the EU or the Member States to take appropriate action to protect consumers, depending on the type and level of risk that they may pose when consumed by humans

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target	
2012	Milestones									2020	
68				86				95			95
	Actual Progress										Final
	101	100	66	52	55	53	47	52		47	
Are we on track :	Moderate progress										

Indicator type	Result
Unit of measurement	See section “other methodological comments” below.
Cut-Off Date	31/12/2020
Data source	European Monitoring Centre for Drugs and Drug Addiction (EMCDDA)
Narrative	See section “other methodological comments” below.
Methodology	See section “other methodological comments” below.
Link MFF 14-20 / MFF 21-27	Efforts co-funded by the anti-drugs chapter of the Justice Programme will be mainly continued by demand-reduction relevant efforts co-funded by the Health Programme in 2021-2027. Complementary security-focused measures will be funded by the Internal Security Fund in 2021-2027.
Other methodological comments	The indicator is based on the actual number of New Psychoactive Substances detected and notified to the European Union Early Warning System Network. The data is provided by the European Monitoring Centre for Drugs and Drug Addiction (EMCDDA), an EU Agency based in Lisbon. Changes of this indicator as compared with previous years should be interpreted with caution – ideally we would prefer to see zero NPS substances reported, as ideally, there would be no illicit NPS on the market whatsoever. On the other hand, many of the newly reported substances – while fewer in number – are more dangerous, cause addiction more rapidly, and present more serious environmental harms.
Full metadata available at this address	NA
Justification of the trend	Despite the lower number of dangerous illicit New Psychoactive Substances (NPS), as compared to the baseline situation from 2012, the number of substances assessed does enable to EU and the Member States to take appropriate action to protect consumers, depending on the type and level of risk that they may pose when consumed by humans. It is important to highlight that the fact that we do not achieve the milestone should be considered as a good result: the fewer new psychoactive substances are on the market, the better. See also section “other methodological comments” above.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)	Total	Share
--	----------------	-----------------------------------	-------	-------

	2021	2022	2023	2024	2025	2026	2027		compared to total envelope
Climate contribution	0.00 ⁹							0.00	0%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

Horizontal climate mainstreaming (and biodiversity section 6.2.1) targets are novelties in the ISF in the 2021-2027 period. The ISF does not have a binding target (%) in the basic act, but a horizontal recital common for all funds in the EU budget indicating that the ISF will contribute to the overall, horizontal, mainstream target within its potential. Since the ex-ante estimates/predictions do not qualify within the 40% or 100% markers in the case of ISF, the contribution is calculated in the ABAC when the actual use of the appropriations is available.

6.1.3. Key achievements

It is still too early to provide examples and demonstrate concretely how any action funded in the programming period 2021-2027 served towards climate change mitigation or adaptation, since Member States’ programmes have not yet been adopted.

6.1.4. Performance

Please see 6.1.3 above.

6.2. Contribution to gender equality

6.2.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
	2022	2023	2024	2025	2026	2027	
Score 0*: 65 Score 0 : 5							

(*)Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

In 2021, the Commission committed 65 million for the Union Actions which have a potential to impact on gender equality, to which a 0* score is assigned. However, these should be considered as proxies, as an exact monetary value of individual activities benefiting gender equality cannot be reliably estimated also due to the lack of disaggregated data on the voted budget implementation of 2021. The figure covers project actions, such as trainings and knowledge sharing which habitually tackle gender specific issues, amongst others. As regards shared management, the implementation of 2021-2027 funds has not started yet in 2021 and the current reporting tools do not allow to trace gender relevant contribution for the 2014-2020 funds. Therefore, the value for gender equality contributions by shared management activities in this context is reported as zero. The remaining voted budget implementation to which a score 0 is assigned should equally be considered as a proxy, due to the lack of granular data on actions, such as the purchase of equipment or support to infrastructures, which have no significant impact on gender equality.

6.3. Contribution to the sustainable development goals

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

By supporting the fight against crime and terrorism, the ISF contributes to fighting and preventing organised crime and tackling radicalisation terrorist ideas and beliefs, while at the same time guaranteeing fundamental rights and values. As such it supports, the development of modern police and law enforcement authorities working together to contribute towards a more peaceful and inclusive society.

‘Keeping people save’ is a project, initiated in 2019 in IE which aims to combat intolerance and radicalisation and create positive relationships with community-based stakeholders form a key part of the project. To achieve this, one aspect of the project was the hosting of a conference that was attended by over 220 Garda diversity officers and regional inspectors, tackling themes such as combating radicalisation and intolerance, diversity in policing and hate crime. Over the course of 2 days, the conference saw 14 specialist speakers from across the diversity spectrum.

‘Change of viewpoint’ project in DE, implemented between 2016 and 2019 aimed to introduce lasting measures for de-radicalisation, the prevention of radicalisation, and the protection of the citizen against politically motivated crime, with the emphasis on work in and with the social media. The project is intended to enable members of the public more easily to recognise extreme right-wing propaganda, to offer alternative sources of information, to generate a better exchange of information by means of networking between public authorities and players in civil society, and to step up de-radicalisation measures in social networks.

6. The programme contribution to horizontal policies	948
6.4. Contribution to gender equality	948

1. Overview**1.1. Challenges**

The decommissioning of a nuclear installation such as a power plant or research reactor is the final step in its lifecycle. It starts with shutdown, then it proceeds with removal of nuclear materials, decontamination, dismantling and demolishing until the environmental restoration of the site. The aim of nuclear decommissioning is the progressive removal of hazards inherently associated with the concerned installations. The corresponding phasing out of the necessary safety measures and associated costs is stepwise in nature, mainly because the removal of major batches of radioactive materials is obtained over several stages.

At this point in time, the decommissioning operator in Ignalina (Lithuania) is focusing on dismantling activities. Dismantling and decontamination works are well advanced in the turbine hall and auxiliary buildings. In addition, the key safety-related project to remove the spent nuclear fuel from the Chernobyl type reactor buildings is planned to be completed in 2022. However, important technical and financial challenges remain: never before has a large power reactor with a graphite core been dismantled. The removal of the graphite is planned for after 2027. The focus of the programme over the 2021-2027 period will be the preparation of

this key task. While the funds dedicated by the EU and Lithuania cover the activities planned under this MFF, they are not sufficient to ensure the completion of the decommissioning programme until 2038.

1.2. Mission (General objectives)

The general objective of the Programme is to assist Lithuania in implementing the decommissioning of the Ignalina Nuclear Power Plant, with specific emphasis on managing the safety challenges in respect thereof, while creating knowledge with regard to the nuclear decommissioning process and the management of radioactive waste resulting from the decommissioning activities.

1.3. Specific objectives

The specific objective of the programme is to carry out the dismantling and decontamination of the equipment and reactor shafts of the Ignalina Nuclear Power Plant in accordance with the decommissioning plan, including the management of radioactive waste resulting from the decommissioning activities, and to continue with the safe management of the decommissioning and legacy waste.

The programme will assist with activities included in the decommissioning plan submitted by Lithuania, in particular the following:

- a) dismantling and decontamination of the reactor shafts' top and bottom zones and equipment in accordance with the decommissioning plan;
- b) the design for the dismantling and decontamination of the reactor shafts' central zones (graphite cores). This objective is to be accomplished before 2027, when the relevant authorisations will be granted to carry out the actual dismantling and decontamination, which is scheduled to occur after 2027;
- c) safe management of the decommissioning and legacy waste up to interim storage or to disposal (depending on the waste category), including the completion of the waste management infrastructure where necessary. This objective is to be accomplished in accordance with the decommissioning plan;
- d) implementation of the building demolition programme;
- e) obtaining the decommissioning licence once Unit 1 and Unit 2 of the Ignalina Nuclear Power Plant are defueled;
- f) downgrading of radiological hazards.

1.4. Public intervention context

The decommissioning of a nuclear installation such as a power plant or research reactor is the final step in its lifecycle. It involves activities from shutdown and removal of nuclear material to the environmental restoration of the site. The whole process is complex and lengthy (typically 20 to 30 years), and it is carried out with the highest safety standards.

In accordance with its Act of Accession to the Union, Lithuania anticipated the shutdown of the two nuclear reactors in Ignalina within the agreed deadlines (2004 and 2009). The Union committed to provide financial support for the decommissioning, in accordance with approved plans, while keeping the highest level of safety.

The Council Directives 2014/87/Euratom and 2011/70/Euratom establish the ultimate responsibility of Member States for the safety of nuclear installations and for the safe management of spent fuel and radioactive waste. That principle of national responsibility, as well as the principle of prime responsibility of the licence holder for the safety of its installations, include the decommissioning operations.

Lithuania has appointed a Programme Coordinator responsible for overseeing the programming, coordination and monitoring of the Ignalina decommissioning programme. The decommissioning operator, as the licence holder, is responsible for implementing the decommissioning programmes under the supervision of the Programme Coordinators. The decommissioning operator in Lithuania is the Ignalina Nuclear Power Plant (INPP).

1.5. Actions

The actions to be funded by the Ignalina programme are within the scope of the decommissioning plan presented to the Commission. The actions focus on activities related to the delivery of the general and specific objectives and with the highest EU added value, i.e. removal of radiological hazards and creation and dissemination of relevant knowledge. When preparing the multiannual work programme, the Commission, in close cooperation with Lithuania, will consider distributing the available funds as per the priorities identified in the legal basis.

1.6. Delivery mode

Indirect Management entrusted to the EBRD (European Bank for Reconstruction and Development) and CPMA (Central Project Management Agency – national agency in Lithuania).

In 2001, the Ignalina International Decommissioning Support Fund (IIDSF), a multi-donor fund managed by EBRD, was created to finance the decommissioning of the Ignalina Nuclear Power Plant.

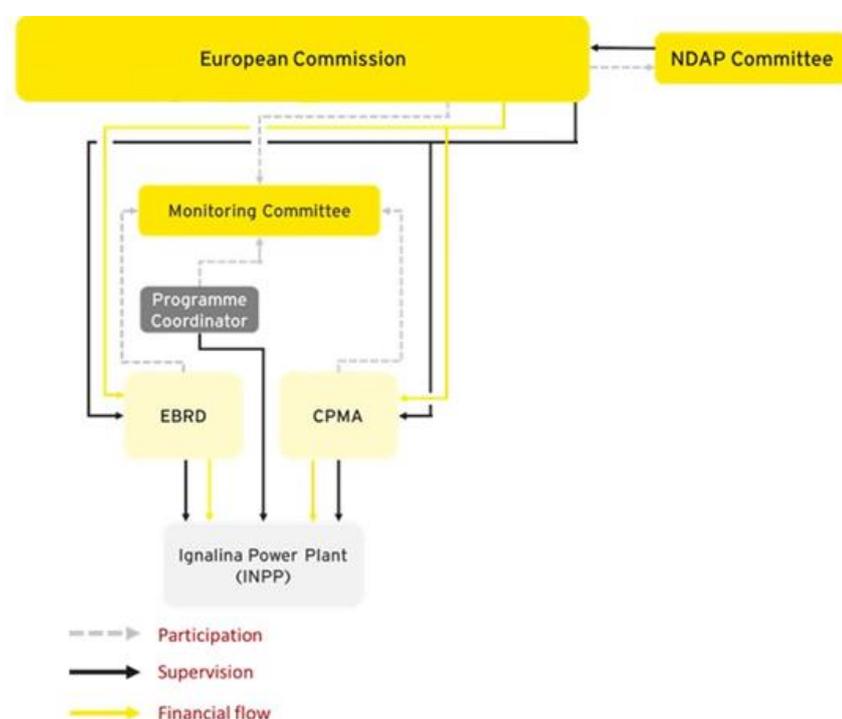

From 2005, the Commission channelled EU funds to the Ignalina Programme also via a national agency, a precursor of CPMA. From 2009, the Lithuanian authorities consistently supported assigning the management of new projects to CPMA instead of EBRD.

However, Lithuania expressed in March 2021 the view that EBRD should continue to be involved in the programme, in parallel to CPMA, and take over the dismantling of eight steam drum-separators from the two reactor units.

The Directorate-General for Energy manages directly a limited fraction of the funds for preparatory, monitoring, control, audit and evaluation activities.

1.7. Graphic overview of the programme structure

Graphic overview Ignalina NDAP structure:

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Council Regulation (EU) 2021/101 of 25 January 2021 establishing the nuclear decommissioning assistance programme of the Ignalina nuclear power plant in Lithuania and repealing Regulation (EU) No 1369/2013 (OJ L 34, 1.2.2021, p. 18).	2021 - 2027	552.00

1.8.2. Legal basis explanation

When joining the European Union in 2004, Lithuania committed to close and proceed with the decommissioning of its Chernobyl type nuclear reactors at Ignalina. The Union declared its willingness to provide financial assistance to Lithuania for the decommissioning of the nuclear power plant in accordance with its decommissioning plans.

Contributions from other countries and entities								

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The decommissioning of the Ignalina nuclear power plant (LT) has received EU support since 2001 under various instruments. The EU assistance in the MFF 2021-2027 is the continuation of the long-term programme scheduled over the period 2001-2038.

During the MFF 2014-2020, the Ignalina programme progressed steadily towards the decommissioning end state, in accordance with its decommissioning plan, whilst maintaining the highest level of safety. The process will continue in the MFF 2021-2027 and a new objective will be pursued: the dissemination of knowledge to all EU Member States on the decommissioning process. The activities funded in the period 2021-2027 will be subject to a EU co-financing rate of 86%. This rate was not explicitly set previously.

1.10. Relevant websites providing more information

https://ec.europa.eu/energy/topics/nuclear-energy/decommissioning-nuclear-facilities_en

<https://www.iae.lt/en/activity/decommissioning-projects/155>

2. Where are we in the mplementation ?**2.1. Programme 2021-2027**

Cumulative implementation rate at the end of 2021:

	Implementation	Budget	Implementation rate
Commitment	72.5	552.0	13%
Payments	0		0%

Regarding the Commitments, for the year 2021, one Contribution Agreement was signed with CPMA beginning of 2022 (total value EUR 62 500 000).

It was not possible to sign in 2021 a Contribution Agreement with EBRD (IIDSF), due to the ongoing negotiations for a Financial Framework Partnership Agreement between the European Commission and EBRD. However, it is still planned to sign during 2022 one Contribution Agreement for the implementation of the Ignalina programme with the EBRD (total value EUR 10 000 000).

For the year 2022, it is expected to commit EUR 98 640 000 to the CPMA for the implementation of the Ignalina programme. It is also planned to commit EUR 260 000 to studies and consultancy assessments performed under direct management. For the year 2023, it is expected to commit EUR 68 700 000 for the implementation of the Ignalina programme. It is also anticipated to commit EUR 100 000 in direct management studies.

The above allocation of funds will sustain the ongoing progress on the decommissioning programmes in Lithuania.

Regarding the Payments for the period 2021-2027, the total payments made during 2021 for the Ignalina NDAP was EUR 45 964 525. Moreover, EUR 70 555 were paid for the final payment of a direct management study. For the current year 2022, it is planned to perform payments for the value of EUR 52.1 million to CPMA and EUR 10.9 million to EBRD for the implementation of projects in the Ignalina programme. In addition, it is planned to perform payments in direct management contracts for the value of EUR 91 000 during 2022. For the Draft Budget 2023, it is anticipated a total amount of EUR 60 million in payments.

These payments will be performed from the 2014-2020 appropriations until its exhaustion. Decommissioning projects are, in many cases, highly complex from the procurement and implementation point of view and extend over a long period of time. This explains the inherent interval between the commitments and the payments of the programme.

On the overall progress of the programme, with the completion of the Interim Spent Fuel Storage Facility, the transfer of spent-fuel assemblies from the reactor buildings (units 1 and 2) to the new facility started in September 2016. By September 2022, the last fuel assemblies is planned to be transferred from the spent-fuel pools to storage casks and then to the interim spent-fuel storage facility. This will be a major milestone in terms of nuclear safety and reduction of the radiological risk, opening the way to the dismantling of the reactor core systems.

The next step, the dismantling of the Ignalina reactors is a first-of-a-kind challenge: never before has a large power reactor with a graphite core been dismantled. In a first phase (2020 to 2027), the decommissioning operator will remove all equipment around and on top of the reactor shaft. The subsequent removal of the graphite from the shaft is being prepared with an optioneering study and detailed design of the preferred solution and a facility for the temporary storage of irradiated graphite waste.

New radioactive waste processing and storage facilities have been completed during the period 2014-2020. They are now operational. The construction of the landfill facility for very low-level waste was completed and the procurement procedure of the near surface repository for low-level waste is under-way. With those two facilities, the decommissioning operators in Ignalina will have all the tools needed for the management, storage and disposal of the radioactive waste under the decommissioning plan.

In accordance with the updated performance baseline, the programme completion date remains for 2038. The selection of the technical solution for the dismantling of the reactor graphite cores will be decisive for the confirmation of the programme end-date and overall funding needs after 2027.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitment	450.8	450.8	100%
Payments	146.2		32%

Including the payments made during the period 2014-2020 on the previous MFF commitments, the total of payments made for the Ignalina NDAP programme is EUR 430 058 299, which represent 95.5% of the committed amount for the same period (EUR 450 448 000). Therefore, the rhythm of payments has been aligned with the commitments during the period 2014-2020. Decommissioning projects are, in many cases, highly complex from the procurement and implementation point of view and extend on a long period of time. This explains the inherent interval between the commitments and the payments of the programme, and that most of the payments during the 2014-2020 period were related to commitments from the previous period. The figures in the table above are expressed in EUR million.

The cost of work carried out since 2014 is within budget.

COVID-19 crisis affected the progress at the site, with limited temporary furlough for some staff in 2020 and restricted access to foreign experts and contractors. Measures to ensure that activities could continue safely included physical distancing, use of additional protective equipment and testing. These measures significantly reduced the short-term impact on project milestones. The EU supported during 2020 the salaries of the workers in these difficult times.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The Nuclear Decommissioning Assistance Programme (NDAP) in Lithuania has progressed despite of the COVID-19 pandemic, and continued to reduce nuclear and radiation safety risks related to the concerned reactors. However, during the starting year of the current MFF, the programmes did not progress as planned; in spite of a generally satisfactory and steady progress of works on the ground, preparatory activities of key upcoming projects progressed at a slower rate.

The most important achievement in 2021 was the continued removal of the spent fuel from the reactor-buildings. More than 99% of the spent fuel assemblies is now safely stored and the remaining elements will be stored away from the reactor-buildings in 2022.

3.1.2. Active programme performance

At Ignalina (Lithuania), decommissioning of the less radioactive areas of the plant nears completion. Moreover, in May 2021 the last cask with spent fuel from Unit 1 was transported to the new Interim Spent Fuel Storage Facility (ISFSF); Unit 2 will be fully defueled in 2022. Therefore, the programme will now enter the phase of extensive dismantling inside the reactor buildings, which is a first of a kind challenge due to the large graphite-filled reactor cores. Contracts to design dismantling options should be placed in 2022.

The procurement procedure for the construction of the near-surface repository for low- and intermediate-level waste has not been completed yet due to the legal action of an excluded tenderer, which was resolved only at the end of 2021. The landfill facility for very low-level short-lived waste commenced operations.

The first indicator of the MFF 2021-2027 (see section 4) represents the management of very-low-level short-lived waste. The amount registered for 2021 is 0, because the landfill repository was completed in 2021 and its operations will only start in 2022. With the start of the landfill operations, it is expected that the pace of disposal will progressively increase based on a learning curve.

The second indicator of the MFF 2021-2027 (see section 4) represents the management of low level, intermediate level waste and long lived waste to be placed into dedicated storage and, in the future, into deep geological repository. The amount registered is also 0 as the construction of the near-surface repository has not been completed yet due to the legal action of an excluded tenderer, which was resolved only at the end of 2021.

3.1.3. Previous Programme Performance

The general objective of the Ignalina programmes in the period 2014-2020 was to assist the Member State concerned in implementing the steady process towards the decommissioning end state of Units 1 and 2 of the Ignalina nuclear power plant in accordance with its decommissioning plan, whilst maintaining the highest level of safety.

This programme has achieved most of the principal objectives for the period 2014-2020. However, important delays occurred during the implementation of key projects, which could impact the end date of the programme.

Preparatory design activities for Dismantling in the Reactor Building have encountered challenges, because of poor relationship between the stakeholders. This issue has not significantly impacted Programme performance under the 2014-2020 MFF, but resulted in delays for the post-2020 stages of the decommissioning Programme.

For the Ignalina programme, the situation in 2014 was:

- Unit 1 reactor core was defueled, Unit 2 reactor core was partially defueled;
- the spent fuel ponds in units 1 and 2 were loaded to maximum capacity;
- facilities for waste management treatment and storage were being constructed;
- start of dismantling works in turbine hall of unit 1.

The first specific objective for the period 2014-2020 (dismantling and decontamination of the equipment and reactor shafts in accordance with the decommissioning plan, and to continue with the safe management of the decommissioning and legacy waste) is being achieved ahead of schedule. The reactor core of Unit 2 has been fully emptied of its spent fuel in 2018; by the end of 2020 all undamaged spent fuel assemblies had been transferred to the new safe storage facility and the transfer of damaged fuel assemblies had started. By end 2020, the removal of spent fuel assemblies from the Unit 1 and 2 spent fuel ponds had reached 109% of the cumulative planned amount in 2020 and 98% of the final target.

The second specific objective, safely maintaining the reactor units has been consistently achieved. No incidents were registered during the period 2014-2020.

Activities related to the third specific objective (performing dismantling in the turbine hall and other auxiliary buildings and safely managing the decommissioning waste in accordance with a detailed waste management plan) have progressed well. The dismantling operations in the 800 meters long turbine hall have been completed and it is proceeding as planned in auxiliary buildings. The lower than planned quantity of dismantled equipment is due to the overestimation of the material inventory: there is simply less material to dismantle in reality than in the plan.

Construction works at the interim spent fuel storage facility and the solid radioactive waste management facility were completed, and the facilities started operation in 2016 and in 2017 respectively. The design of the near-surface repository for low- and intermediate-level short-lived waste was completed. The construction of the landfill facility for very low-level short-lived waste was also completed.

Although knowledge sharing was not an explicit objective of the NDAP for the 2014-2020 period, several initiatives have been taken in favour of cooperation between the three NDAP Member States (Bulgaria, Slovakia and Lithuania). Decommissioning operators in the three NDAP programmes have engaged in several knowledge sharing actions at different levels, in order to both share their experience and gain knowledge from other stakeholders in Europe.

3.2. Key achievements

43 730	99%	191	42 703	0
tonnes of dismantled material from the turbine hall and auxiliary buildings by End 2020.	of spent-fuel assemblies safely stored away from the reactors.	new storage casks were delivered by February 2020, a year ahead of schedule.	m ³ of radioactive waste were processed and stored from the turbine hall and auxiliary buildings by the end of 2020 vs a target of 42 314 m ³ .	incidents were observed over the period 2014-2020. Maintaining the highest level of safety is part of the general objective of the Ignalina programme.

3.3. Evaluations, studies and reports

Nuclear Decommissioning Assistance Programme (NDAP)

The Commission, in close cooperation with the Member States, has launched an *ex post* evaluation on the effectiveness and efficiency of the Nuclear Decommissioning Assistance Programme for the period 2014 to 2020.

The evaluation will rely on existing reports on the progress of the technical and financial implementation of the programme.

The following studies are underway or recently finished:

- study to support the *ex post* evaluation of the nuclear decommissioning assistance programme 2014-2020;
- safety culture maturity of the NDAP operations, supporting the *ex post* evaluation 2014-2020;
- development and try-out of an on-site process for sharing knowledge created in the frame of the NDAP;
- gap analysis of Earned Value Management Systems in use by operators under the NDAP and a follow-up study on baselining policy and monitoring.

The following evaluations, studies and reports have been published in the past years:

- Progress report period 2010-2014 [COM(2015) 78];
- Progress report 2015 and previous years [COM(2016) 405];
- Progress report 2016 and previous years [COM(2017) 328];
- Mid-term evaluation [COM(2018) 468];
- Progress report 2018 and previous years [COM(2019) 215];
- Progress report 2019 and previous years [COM(2020) 82];
- Progress report 2020 and previous years [COM(2021) 235];
- support to the *ex post* evaluation of the NDAP Energy window 2007-2013 [ISBN 978-92-76-08716-8];
- support to the mid-term evaluation of the NDAP [ISBN 978-92-76-08717-5, 978-92-76-08789-2];
- assessment of the robustness of the NDAP financing plans and of the relevance and feasibility of the detailed decommissioning plans [ISBN 978-92-76-08798-4].

The results of the NDAP mid-term evaluation and of the latest report on NDAP from the European Court of Auditors were communicated in the Draft Budget 2020.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: To carry out the dismantling and decontamination of the equipment and reactor shafts of the Ignalina Nuclear Power Plant in accordance with the decommissioning plan, including the management of radioactive waste resulting from the decommissioning activities, and to continue with the safe management of the decommissioning and legacy waste.

Indicator 1: Safe management of the decommissioning and legacy waste up to interim storage or to disposal (depending on the waste category), including the completion of the waste management infrastructure where necessary: quantity and type of materials removed, with annual objectives by type, meeting the milestones of the Programme.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Very low level waste disposed (m3)										
	Milestones									2030
	1 787	3 911	5 429	7 603	10 379	13 155	16 610	21 685	27 410	29 020
	Actual Progress									Final
	0									
Are we on track :	Deserves attention**									
Low and intermediate level waste stored (m3)										
	Milestones									2030
	479	990	1 551	2 227	2 967	3 707	4 785	5 771	7 396	9 202
	Actual Progress									Final
	0									
Are we on track :	Deserves attention**									

Indicator type	Output
Unit of measurement	Tonnes or m3 (cumulative)
Cut-Off Date	31/12/2021
Data source	National authorities, decommissioning operator
Link to the objective	Indicator defined in the Council Regulation (EU) 2021/101.
Link MFF 14-20 / MFF 21-27	This indicator also supports the MFF 2014-2020 objective “Performing dismantling in the turbine hall and other auxiliary buildings and safely managing the decommissioning waste in accordance with a detailed waste management plan”. These figures are a cumulative value starting from year 2021 (waste accumulated until year 2021 not included).
Other methodological comments	Radioactive waste is classified as per national regulations.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The first indicator represents very-low-level short-lived waste volume of the waste, (Class A according to the national regulations for radioactive waste management). The waste counted is pure volume, i.e. without packaging prepared for Landfill repository. The amount registered for 2021 is 0, however there are 12 940 m3 of very-low-level radioactive waste safely stored but awaiting for disposal. The pre-disposal processing of very-low-level waste has taken place without major obstacles. The landfill repository was completed in 2021 and its operations will only start in 2022. With the start of the landfill operations, it is expected that the pace of disposal will progressively increase based on a learning curve. The second indicator represents low level, intermediate level waste and long lived waste to be placed into dedicated storage and, in the future, into deep geological repository (Class B, C, D, E and F according to the national regulations for radioactive waste management). The amount is registered is 0 as the construction of the near-surface repository has not been completed yet due to the legal action of an excluded tenderer, which has been resolved by the end of 2021.

Indicator 2: Dismantling and decontamination of the reactor shafts top and bottom zones and equipment in accordance with the decommissioning plan: quantity and type of materials removed, with annual objectives by type, meeting the milestones of the Programme.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Metal dismantled (tonne)										
	Milestones									2028

	Actual Progress									Final
	106									
Are we on track :	Deserves attention**									

Indicator type	Output
Unit of measurement	Tonnes (cumulative)
Cut-Off Date	31/12/2021
Data source	National authorities, decommissioning operator
Link to the objective	Indicator defined in the Council Regulation (EU) 2021/101.
Link MFF 14-20 / MFF 21-27	This indicator also supports the MFF 2014-2020 objective: to assist Lithuania towards the decommissioning end state of units 1 and 2 of the Ignalina nuclear power plant.

Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The figures of the first indicator relate to the dismantling activities in the reactor shafts by 2021. One of the reasons explaining the underperformance is that there is still some new equipment for dismantling pending to be received that will accelerate the works. In addition, dismantling in Reactor Shafts in Unit 1 started in late autumn 2021, instead of beginning 2021 as planned. This is because the nuclear regulator permit was not received much later than scheduled. These figures show a strong progress since the start of works, but the rate of dismantling should increase in order to achieve the overall objectives.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Nuclear decommissioning assistance programme in Lithuania

General Objective 1: To assist Lithuania towards the decommissioning end state of units 1 and 2 of the Ignalina nuclear power plant

Indicator 1: Number of major components and systems dismantled in all the concerned nuclear reactors in accordance with the respective decommissioning plans

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2020
Unit 1 reactor core is defueled, Unit 2 reactor core is partially defueled. (See narrative)				Start_commissioning_Int erim_Spent_Fuel_Storage_Facility	Unit2_reactor_core_fully_defueled		Start_of_transferring_damaged_fuel_from_Unit1	Completion_of_transferring_damaged_fuel_from_Unit1	Completion_of_Transferring_damage_d_Fuel_from_Unit1	Ref. Detailed Decommissioning Plan 2014
	Actual Progress									Final
			Start_commissioning_Int erim_Spent_Fuel_Storage_Facility		Unit2_reactor_core_fully_defueled		Start_of_transferring_damaged_fuel_from_Unit1	Completion_of_transferring_damaged_fuel_from_Unit1

Indicator type	Result
Unit of measurement	Info on achieved milestones (yearly)
Cut-Off Date	31/12/2021
Data source	National authorities, implementing bodies, decommissioning operator
Narrative	This is a general overview of the implementation of the Ignalina Detailed Decommissioning Plan, based on the main milestones to be achieved during the period 2014-2020 (e.g. start of transferring damaged fuel from Unit 1 by 2020). The planned completion date for the decommissioning of Ignalina units 1 and 2 is 2038.
Methodology	Data and information obtained from Monitoring Reports provided by National Authorities every 6 months.
Link MFF 14-20 / MFF 21-27	Updated indicators are defined for the period 2021-2027.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	By December 2020, the end of the 2014-2020 Multiannual Financial Framework, the transferring of damaged fuel from Unit 1 started, following the commissioning of trials of damaged fuel handling equipment in Unit 1. By December 2021, all fuel assemblies were removed from Unit 1 and the operator started transferring damaged fuel from Unit 2. The operator also started the spent fuel pools cleaning and debris collection in Unit 1, and commenced the dismantling of the Unit 1 reactor and its technological systems. Work is being carried out and progressing, but dismantling should be accelerated in order to achieve the targets of the decommissioning plan.

Specific Objective 1: Defueling of the reactor core of unit 2 and the reactor fuel ponds of units 1 and 2 into the dry spent fuel storage facility

Indicator 1: Cumulative number of unloaded fuel assemblies

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
----------	------	------	------	------	------	------	------	------	------	--------

Removal of spent fuel assemblies from Units 1 and 2 spent fuel ponds										
2014	Milestones								2022	
Unit 1 reactor core defueled	0	0	0	3519	7159	10799	13984	15461	15630	15630
	Actual Progress								Final	
	0	0	267	3519	7796	12255	15243			
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Spent fuel assemblies (cumulative)
Cut-Off Date	31/12/2021
Data source	National authorities, implementing bodies, decommissioning operator
Narrative	Safe storage of spent fuel from the operation of the nuclear power plant and the ability to safely handle and store radioactive waste produced during dismantling works are key prerequisites for the decommissioning activities.
Methodology	Data and information obtained from Monitoring Reports provided by National Authorities every 6 months, and the monthly report from the implementing body.
Link MFF 14-20 / MFF 21-27	The completion of this task is scheduled for 2022 and no progress indicator is defined for the period 21-27.
Other methodological comments	The removal of spent fuel assemblies could not start before the commissioning of the Interim Spent Fuel Storage Facility.
Full metadata available at this address	
Justification of the trend	The objective of removing spent fuel assemblies from Unit 2 reactor core (1 134 spent fuel assemblies) was achieved in 2018. Both reactors Units 1 and 2 are completely defueled. The removal of spent fuel assemblies from the Unit 1 and 2 spent fuel ponds has progressed ahead of schedule and reached up to 15 273 assemblies by December 2020 i.e. 109% of the cumulative planned amount in 2020 and 98% of the total amount planned for 2022 (15 630 assemblies).

6. The programme contribution to horizontal policies

6.1. Contribution to gender equality

6.1.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0: 73							

(*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme **in EUR Million**)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significantly impacted**, score 0*: **impact on gender equality to be determined ex post**, score 0: **no significant impact on gender equality**.

The gender equality perspective is considered in our financing by Council Regulation 2021/101. Nonetheless, we determined that nuclear decommissioning is the primary and sole objective of our programme and as such has no significant impacts on gender equality even though some minor indirect impacts might manifest.

Specific Objective 2 :(Kozloduy) Dismantling of large components and equipment in the reactor buildings of units 1 to 4 ..	964
Specific Objective 5 :(Bohunice) Dismantling of large components and equipment in the V1 reactor buildings	964
6. The programme contribution to horizontal policies	965
6.4. Contribution to gender equality	965

1. Overview**1.1. Challenges**

The decommissioning of a nuclear installation such as a power plant or research reactor is the final step in its lifecycle. It starts with shutdown, then it proceeds with removal of nuclear materials, decontamination, dismantling and demolishing until the environmental restoration of the site. The aim in nuclear decommissioning is the progressive removal of hazards inherently associated with the concerned installations. The corresponding phasing out of the necessary safety measures and associated costs is stepwise in nature, mainly because the removal of major batches of radioactive materials is obtained over several stages.

At this point in time, the decommissioning operators of the **Nuclear Decommissioning Assistance Programme (NDAP)** in Bohunice (Slovakia) and Kozloduy (Bulgaria) are carrying out decontamination and dismantling. In Bohunice the programme has advanced the most and is at the stage of dismantling in the reactor building, while in Kozloduy dismantling is well advanced in the auxiliary buildings and has started in the reactor buildings.

The **JRC's Decommissioning and Radioactive Waste Programme Management (D&WMP)** aims at the decommissioning of the nuclear research installations of the Joint Research Centre (JRC), and the management of their radioactive waste. They are located at four sites: Ispra (Italy), Geel (Belgium), Karlsruhe (Germany) and Petten (the Netherlands). Nuclear research installations at JRC sites are subject to the regulatory framework and supervision in the *host* country.

The implementation of the D&WM programme at the JRC-Ispra site has focused on the design and building of several waste handling and interim storage installations for waste sorting, characterisation, decontamination, material "clearance" from radiological control, and condition and temporary storage of radioactive waste until adequate radioactive waste interim long-term storage facilities or waste disposal facilities are available in Italy.

The other JRC's nuclear research installations, located in Petten, Geel and Karlsruhe, are still in operation. Decommissioning of the related operating facilities will not start before their shutdown. Waste management and pre-decommissioning activities are carried out including the dismantling of out-of-use equipment from past research work and for the removal off-site (including transfer of ownership) of obsolete nuclear spent fuel and nuclear materials.

1.2. Mission (General objectives)

The general objective of the Programme is to provide funding for the decommissioning of nuclear facilities and the management of radioactive waste, in line with the needs identified in the respective decommissioning plan.

On the basis of the current needs for the period from 1 January 2021 to 31 December 2027, the Programme, in addition to creating knowledge with regard to the nuclear decommissioning process and the management of radioactive waste resulting from the decommissioning activities, aims in particular to:

- (a) assist Bulgaria and Slovakia in implementing the Kozloduy programme and the Bohunice programme respectively, including with regard to the management and storage of radioactive waste in line with the needs identified in the respective decommissioning plan, with specific emphasis on managing the safety challenges in respect thereof;
- (b) support the JRC decommissioning and waste management programme.

This Programme is the continuation of the Nuclear Decommissioning Assistance Programmes in Bulgaria and Slovakia, and this last EU assistance will help bring both sites to their planned end state.

The JRC's Decommissioning and of Radioactive Waste Management Programme (D&WM) was formally launched in 1999 to eliminate historical and future liabilities at all nuclear sites of the JRC and will proceed under this instrument.

The decommissioning of nuclear facilities and the management of the arising waste under a common instrument aim to take advantage of **synergies and knowledge sharing** with a view to ensure dissemination of knowledge and return of experience in all relevant areas such as research and innovation, regulation, training, and to develop potential Union synergies.

1.3. Specific objectives

The specific objectives of the programme are as follows:

- (a) to carry out the activities included in the Kozloduy and Bohunice respective decommissioning plans, the dismantling and decontamination of Units 1 to 4 of the Kozloduy Nuclear Power Plant and Units 1 and 2 of the Bohunice V1 Nuclear Power Plant, including associated systems, structures and components and auxiliary buildings, the safe management of radioactive waste in line with the needs identified in the respective decommissioning plans, and human resources support; and to pursue the release of Units 1 to 4 of the Kozloduy Nuclear Power Plant and Units 1 and 2 of the Bohunice V1 Nuclear Power Plant from regulatory controls;
- (b) to support the decommissioning plan and to carry out the activities in accordance with the national law of the host Member State for the dismantling and decontamination of the Commission's nuclear installations at the JRC sites, to carry out the safe management of associated radioactive waste and, when appropriate, to prepare the optional transfer of the related nuclear liabilities from the JRC to the host Member State;
- (c) for the JRC to develop ties and exchanges among Union stakeholders on nuclear decommissioning, with a view to ensuring the dissemination of knowledge and the sharing of experience in all relevant areas, such as research and innovation, regulation and training, and developing potential Union synergies.

1.4. Public intervention context

The decommissioning of a nuclear installation such as a power plant or research reactor is the final step in its lifecycle. It involves activities from shutdown and removal of nuclear material to the environmental restoration of the site. The whole process is complex and lengthy (typically 20 to 30 years), and it is carried out with the highest safety standards.

In accordance with their respective Act of Accession to the Union, Bulgaria anticipated the shut down of units 1 to 4 in Kozloduy Nuclear Power Plant and Slovakia of units 1 and 2 in Bohunice V1 Nuclear Power Plant. The Union committed to provide financial support for the decommissioning, in accordance with approved plans, while keeping the highest level of safety. With the financial support provided under the MFF 2021-2027 bringing both Kozloduy and Bohunice programmes to completion, the Union will have fulfilled its commitment.

The Council Directives 2014/87/Euratom and 2011/70/Euratom, establish the ultimate responsibility of Member States for the safety of nuclear installations and for the safe management of spent fuel and radioactive waste. That principle of national responsibility, as well as the principle of prime responsibility of the licence holder for the safety of its installations, include the decommissioning operations.

Each Member State has appointed a Programme Coordinator responsible for overseeing the programming, coordination and monitoring of the respective decommissioning programme. In each concerned MS, the decommissioning operator, as the licence holder, is responsible for implementing the decommissioning programme under the supervision of the Programme Coordinator. The decommissioning operators are the State Enterprise for Radioactive Waste (SERAW) in Bulgaria, and the Nuclear and Decommissioning Company (Jadrová a vyrad'ovacia spoločnosť or JAVYS) in Slovakia.

The JRC was established under the Euratom Treaty and site agreements were signed during the period 1960-1962 between the Community, Germany, Belgium, Italy and the Netherlands. In the cases of Italy and the Netherlands, national nuclear installations were transferred to the Community. An infrastructure geared to nuclear research and comprising new installations was put in place at the four sites. Some of those installations are still in use today, while others have been shut down, in some instances more than 20 years ago, and have mostly become obsolete.

On the basis of the Euratom Treaty the JRC has to manage its nuclear liabilities and decommission its installations once they have been definitively shut down. The D&WM programme relates to all JRC nuclear installations at the sites of Ispra, Karlsruhe, Petten and Geel, either already shutdown or staying in operation.

1.5. Actions

The actions to be funded under the Kozloduy programme and the Bohunice programme are within the scope of the respective decommissioning plans presented to the Commission. The actions focus on activities related to the delivery of the general and specific objectives and with the highest EU added value, i.e. removal of radiological hazards and creation and dissemination of relevant knowledge.

During the 2021-2027 period, Ispra will be the main site for the decommissioning and waste management activities of the JRC. The gradual shift from safe conservation and pre-decommissioning to relatively large decommissioning and waste management tasks will continue, enabled by the relevant authorisations and licenses released by the safety authority and by the start of the operation of new supporting facilities. By 2024, all waste treatment facilities in Ispra should be ready for operation. In Karlsruhe, the requalification and removal of legacy low-level waste and glove boxes and the optimisation of spent fuel inventories will continue. In Petten, a multi-year campaign to dispose of the nuclear material/waste batches owned by JRC will be launched. Contacts with Dutch counterparts, aiming at defining an effective frame for the future decommissioning of the High Flux Reactor, will continue. In Geel, an effort to reduce/optimize the inventories of nuclear materials owned by the JRC and to remove waste will be implemented in agreement with the licensing authority.

1.6. Delivery mode

Kozloduy (BG) - NDAP

Indirect Management entrusted to EBRD (European Bank for Reconstruction and Development).

Bohunice (SK) - NDAP

Indirect Management entrusted to EBRD (European Bank for Reconstruction and Development) and the SIEA (Slovak Innovation and Energy Agency – national agency in Slovakia).

The Commission has selected the EBRD as entrusted entity for the NDAP since 2001. On the proposal of the Slovak authorities, the Bohunice programme funding is also channelled through a national implementation channel, the Slovak Innovation and Energy Agency (SIEA).

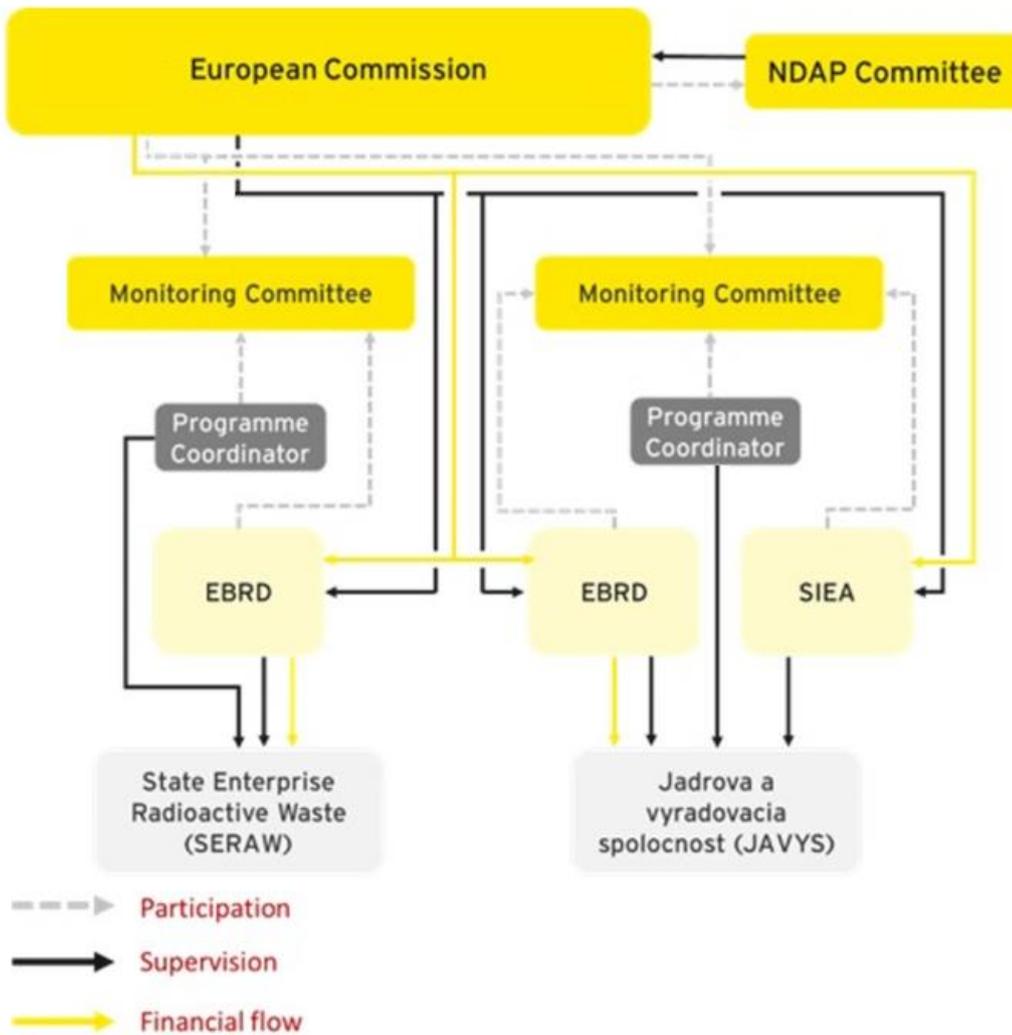

The Directorate-General for Energy is the lead DG for the implementation of the programme. It manages directly a limited fraction of the funds for preparatory, monitoring, control, audit and evaluation activities.

JRC (BE, DE, IT, NL) - D&WM programme

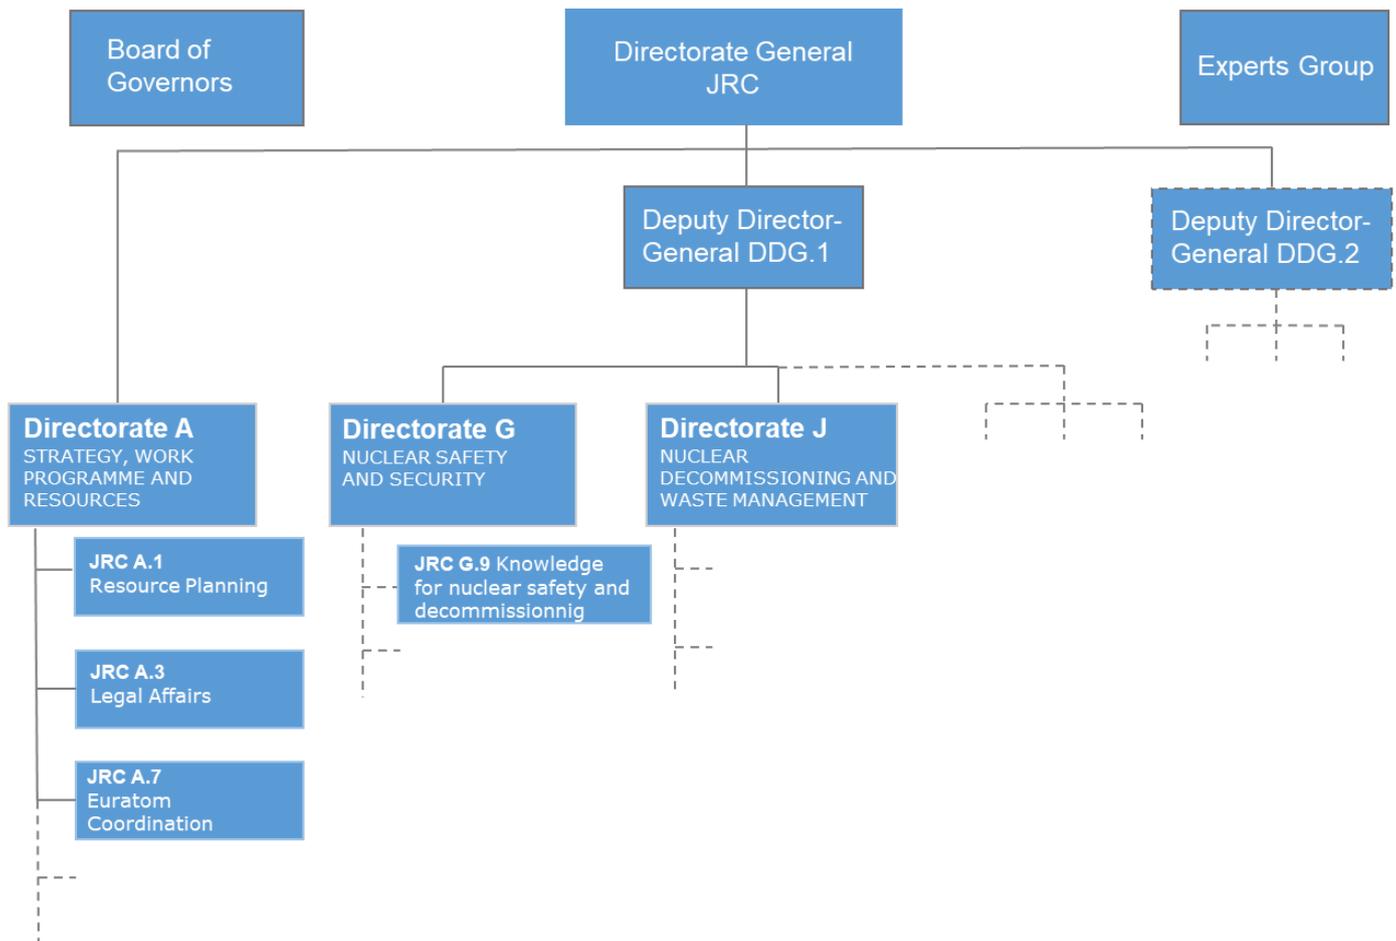

Direct Management by JRC.

1.7. Graphic overview of the programme structure

Graphic overview of NDAP structure (BG, SK):

A new Directorate for Nuclear Decommissioning and Waste Management has been established with the mission of implementing the JRC Decommissioning and Nuclear Waste Management (D&WM) programme in line with the identified needs.

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Council Regulation (Euratom) 2021/100 of 25 January 2021 establishing a dedicated financial programme for the decommissioning of nuclear facilities and the management of radioactive waste, and repealing Regulation (Euratom) No 1368/2013 (OJ L 34, 1.2.2021, p. 3). https://eur-lex.europa.eu/eli/reg/2021/100	2021 - 2027	466.00

1.8.2. Legal basis explanation

When Bulgaria and Slovakia joined the European Union, they committed to close and proceed with the decommissioning of six Soviet-designed, first generation nuclear reactors at two nuclear power plant sites. The Union declared its willingness to provide financial assistance to the concerned Member States for the decommissioning of Kozloduy units 1 to 4 and Bohunice V1 units 1 and 2 in accordance with their respective decommissioning plans.

On the basis of Article 8 of the Euratom Treaty and in line with Article 7 of Council Directive 2011/70/Euratom the JRC has managed its historical nuclear liabilities and decommissions its shut-down nuclear installations in accordance with the respective national legislation. Accordingly, the JRC decommissioning and waste management programme was launched in 1999.

JRC decommissioning programme concerns the nuclear decommissioning and radioactive waste management of the nuclear installations at the JRC sites, namely JRC-Geel in Belgium, JRC-Karlsruhe in Germany, JRC-Ispira in Italy and JRC-Petten in the Netherlands.

1.8.3. Budget programming table

(million)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	69.2	43.9	57.2	62.3	70.5	73.1	89.8	466.0

(million)	2021	2022	2023	2024	2025	2026	2027	Total
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities								

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The decommissioning of Bohunice (SK) and Kozloduy (BG) has received EU support since 2001 under various instruments. The co-funding in the MFF 2021-2027 is the last to complete the programme.

During the MFF 2014-2020, the Kozloduy and Bohunice programme progressed steadily towards the decommissioning end state, in accordance with their respective decommissioning plans, whilst maintaining the highest level of safety. The process will continue in the MFF 2021-2027 and a new objective will be pursued: the dissemination of knowledge to all EU Member States on the decommissioning process. The activities funded in the period 2021-2027 will be subject to a maximum EU co-financing rate of 50%. This rate was not explicitly set previously.

The JRC decommissioning programme was previously performed under direct management under a different financial instrument. It was launched in 1999¹ as an activity with separate ad-hoc budget line. Since the beginning, the Commission is regularly reporting to the Council and the European Parliament on its progress and status². Moreover, JRC reports on an annual basis on the mid-term targets and the progress achieved (JRC Management Plan, JRC Activity Report).

1.10. Relevant websites providing more information

NDAP (SK, BG): https://ec.europa.eu/energy/topics/nuclear-energy/decommissioning-nuclear-facilities_en

JRC: <https://ec.europa.eu/jrc/en/research-topic/nuclear-waste-management-and-decommissioning/road-to-green-fields>

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (EUR million):

	Implementation	Budget	Implementation rate
Commitment	69.1	466.0	15%
Payments	5.8		1%

Regarding NDAP commitments, two Delegation agreements were signed during 2021: one with EBRD (total value EUR 9 000 000 for the implementation of Kozloduy programme) and another one with SIEA (total value EUR 27 420 000 for the implementation of the Bohunice programme). In addition, a total amount of EUR 80 000 will be dedicated to a consultancy assessment performed under direct management. The cost of the work carried out during 2021 is within budget.

For the year 2022, it is expected to commit EUR 8 870 000 to the EBRD for the implementation of the Kozloduy programme, whereas no commitment are expected for the Bohunice programme. It is also planned to commit EUR 130 000 to studies and consultancy assessments performed under direct management.

¹ Historical liabilities resulting from nuclear activities carried out at the JRC under the Euratom Treaty – Decommissioning of obsolete Nuclear Installations and Waste Management, COM(1999)114 final

² Communication from the Commission to the Council and the European Parliament - Decommissioning of nuclear installations and waste management - Nuclear liabilities arising out of the activities of the Joint Research Centre (JRC) carried out under the Euratom Treaty: SEC(2004)621 final; COM(2008)903 final; COM(2013)734 final.

For the year 2023, it is expected to commit EUR 8 900 000 to the implementation of the Kozloduy programme, and to commit EUR 9 400 000 to the implementation of the Bohunice programme. It is also anticipated to commit EUR 200 000 in direct management studies.

The above allocation of funds will sustain the ongoing progress on the decommissioning programmes in Bulgaria and Slovakia.

Regarding the NDAP payments, the total payments made during 2021 for the Kozloduy and Bohunice programme implementation was EUR 47 388 301. Moreover, EUR 105 410 were paid for the final payment of a direct management study.

For the current year 2022, it is planned to perform payments for the value of EUR 9 500 000 for the implementation of projects in the Bohunice programme. In addition, it is planned to perform payments for the value of EUR 263 079 during 2022.

For the Draft Budget 2023, it is anticipated a total amount of EUR 15 million in payments.

These payments will be performed from the 2014-2020 appropriations until its exhaustion. Decommissioning projects are, in many cases, highly complex from the procurement and implementation point of view and extend on a long period of time. This explains the inherent interval between the commitments and the payments of the programme.

On the overall progress of the programme, the Kozloduy programme has received the necessary equipment and is prepared for the decontamination and dismantling of the reactors main pipes, pumps and valves (also reusing equipment and experience from the Bohunice programme). The programme progressed in dismantling in the auxiliary buildings. The plasma melting facility, a first-of-its-kind facility for the high-performance volume reduction of radioactive waste, is now in industrial operation. In parallel, construction works are underway for the National Disposal Facility, i.e. the low and intermediate level waste surface repository, which will receive large quantities of radioactive waste from 2024. In accordance with the updated performance baseline, the programme completion date remains 2030.

The Bohunice programme has entered the last phase of the decommissioning process. The dismantling of the large components in the reactor building is underway. After the removal of all steam generators, the decommissioning operator initiated the segmentation and packaging of the reactor pressure vessels, i.e. where the nuclear core was enclosed. The decommissioning operator prepared in 2021 a thorough review (“schedule stress test”) of the scheduling of the remaining tasks, which resulted in a modification in the end-date of the programme to 2027, from 2025 previously.

The nuclear Decommissioning and Waste Management Programme of JRC entails a complex set of specific activities and projects with related objectives. Different levels of advancement characterize the situation at the four nuclear sites of the JRC. In Ispra, where most of the nuclear facilities ceased to operate before 1999, the objectives include safe conservation, pre-decommissioning, decommissioning and waste management targets covering a variety of obsolete large installations and waste batches. For the other sites, in which nuclear research facilities are still in operation, the objectives are focused on legacy waste management, dismantling of obsolete equipment and relatively small facilities, and on the definition of plans and teams to implement future decommissioning and waste management activities. In the future (until 2060), significant decommissioning activities will need to be implemented also at the JRC sites in Karlsruhe, Geel and Petten.

During 2021, expenditure in the JRC Decommissioning and Waste Management Programme has been in line with the financial programming, except that expenses in the commissioning of auxiliary facilities for decommissioning and waste management have been significantly lower due to the poor performance in the commissioning of the grouting station to immobilize solid low-level waste, and the expenses in radiation protection have been significantly larger than planned as the relaxation of the pandemic constraints allowed more in-the-field work. The rest of the activities in waste and nuclear material management, decommissioning, safe conservation and utility services, general support and horizontal activities and others have progressed as planned.

Pre-decommissioning activities, characterisation and clean-up have well progressed in many facilities (cyclotron, LCRS) during 2021, and will continue in 2022. The transit safe area for temporary safe storage of irradiated nuclear material in INE has entered operation in May 2021. Work has progressed in the preparation of documentation for both license revocation of those facilities undergoing pre-decommissioning and decommissioning, as well as in the adaptation of currently in-force licenses to the Italian legal framework updated in 2020.

At the JRC sites of Karlsruhe, Petten and Geel, no disused equipment or legacy radioactive waste has been removed, stored or disposed of. Instead, progress has been achieved in desktop and planning activities, as well as in contract preparation.

During the 2023-2027 period, JRC Ispra (IT) will be the main site for the decommissioning and waste management activities of the JRC. The gradual shift from safe conservation and pre-decommissioning to relatively large decommissioning and waste management tasks will continue, enabled by the relevant authorisations and licenses released by the safety authority and by the start of the operation of new supporting facilities. By 2024, all waste treatment facilities in Ispra should be ready for operation. In Karlsruhe (DE), the requalification and removal of legacy low-level waste and glove boxes and the optimisation of spent fuel inventories will continue. In Petten (NL), a multi-year campaign to dispose of the nuclear material/waste batches owned by JRC will be launched. Contacts with Dutch counterparts, aiming at defining an effective frame for the future decommissioning of the High Flux Reactor, will continue. In Geel (BE), an effort to reduce/optimize the inventories of nuclear materials owned by the JRC and to remove waste will be implemented in agreement with the licensing authority.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (EUR million):

	Implementation	Budget	Implementation rate
Commitment	518.4	518.4	100%
Payments	313.6		60%

The figures relate only to the past implementation of the Kozloduy and Bohunice programmes. The JRC decommissioning programme was performed under a different financial instrument until 2021 and is not reported here. Including the payments made during the period 2014-2020 on the previous MFF commitments, the total of payments made for the Kozloduy and Bohunice programmes is EUR 858,528 million, which represents 165,8% of the committed amount for the same period (EUR 517,892 million). Therefore, the rhythm of payments has been aligned with the commitments during the period 2014-2020. Decommissioning projects are, in many cases, highly technical from the procurement and implementation point of view and extend on a long period of time. This explains the inherent interval between the commitments and the payments of the programme, and that most of the payments during the 2014-2020 period were related to commitments from the previous period. The figures in the table above are expressed in EUR million.

The cost of the work carried out since 2014 is within budget.

Progress at these two sites was affected by the COVID-19 crisis, which affected the supply chain of equipment and meant limited access by foreign experts and contractors to the sites. Measures to ensure that activities could continue safely significantly reduced the short-term impact on project milestones.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The Nuclear Decommissioning Assistance Programmes (NDAP) in Bulgaria and Slovakia have progressed in spite of the COVID-19 pandemic and achieved most of the 2014-2020 indicators. During the starting year of the current MFF, the programmes did not progress as planned; in spite of a generally satisfactory and steady progress of works on the ground, preparatory activities of key upcoming projects progressed at a slower rate.

The programmes continued to reduce nuclear and radiation safety risks related to the concerned reactors. Two important achievements in 2021 were:

- The substantial progress of the dismantling of the large components of the reactor coolant system in Bohunice (Slovakia) where the fragmentation of one of the two reactor pressure vessels was completed;
- The completion of the Plasma Melting Facility fourth operational campaign in Kozloduy (Bulgaria), which now will lead the operator to apply for the Operating License and to build a comprehensive analysis of its economic benefits.

Regarding the JRC decommissioning programme, the COVID-19 pandemic, as well as other unanticipated circumstances, have impacted the construction of support facilities for the decommissioning project in Ispra, which will delay waste management and, eventually, decommissioning activities. Pre-decommissioning activities and license applications preparations continue progressing as planned in Ispra and in the other sites with operating infrastructure.

3.1.2. Active programme performance

In **Kozloduy (Bulgaria)**, the similar designs of the Kozloduy and Bohunice reactors provided an excellent opportunity to share experience, methods and tools, thus reducing risks and cost. Decontamination of the primary circuits in of Kozloduy follows experience from Bohunice by reusing the decontamination equipment transported from the Bohunice site.

After the accumulation of delays in different projects, there is a deviation from the programme baseline. The works at the National Disposal Facility have continued in a safe manner under the highest health and safety measures. The pace of work at this key facility is low. There is a delay of the end-date of this project, which is however not on the critical path for the time being. The decommissioning operator has successfully completed the Plasma Melting Facility (PMF) fourth operational campaign, and will now finalise the report to the nuclear regulator to apply for the Operating License and conclude a comprehensive analysis of the PMF economic benefits.

Dismantling activities inside the reactor building Units 1-2 (Indicator 1 for 2021-2027 period – See Section 4) have started and are progressing according to the schedule of works in the Detailed Decommissioning Plan. Regarding the dismantling and

decontamination (Indicator 2 for 2021-2027 period included in section 4), the dismantling of systems (made of metal among other materials) is also progressing as per the Detailed Decommissioning Plan. The generation of concrete waste is not expected until planned for 2023, when the decontamination and dismantling of buildings and facilities activities will start.

The lower-than-planned rate of implementation and the complex interdependency of the activities on key projects lead to conclude that the risk of delay is increasing significantly and may affect the end-date (2030). A stress-test of the overall schedule is ongoing in order to assess whether the completion date of the programme can be met, what risks to the schedule can be identified and what mitigation measures need to be put into place.

In Bohunice (Slovakia), works continued on dismantling the reactor coolant system and auxiliary systems. The decommissioning operator transported the reactor pressure vessels to cutting workshops for size reduction and packaging. As of 31 December 2021, fragmentation of reactor pressure vessels was at 90% and 60% for each of the 2 reactors. The 12 steam generators, each made of 145 tonnes of steel, were dismantled and transferred to the former turbine hall to be fragmented in a purpose-built dry-cutting workshop.

At the end of 2020 the decommissioning operator signalled a possible delay on the end date of the Bohunice Programme because mitigation measures put in place to catch up the delay of a project on the critical path, were not as effective as initially expected. The decommissioning operator presented several scenarios that were critically reviewed by all stakeholders including the Commission. The scenario eventually proposed by the Programme Coordinator and included by the Commission in the work programme 2021-2022 has a target end-date in 2027 and involves no extra costs. This schedule remains very challenging and will need close monitoring involving all stakeholders to allow early detection of deviations and decide corrective actions timely. With that in place, an end of all dismantling and demolition activities by December 2027 is an achievable target. The finalisation of the mostly administrative process of delicensing may take some more months.

Regarding the Very Low Level radioactive waste (VLLW) indicator (Indicator 1 for 2021-2027 period - see Section 4), due to rescheduling of the completion date of this activity, the removal of concrete from the reactors' shafts is delayed. As a result, the disposal of the VLLW concrete in the national repository at Mochovce was lower in 2021 than planned.

Concerning the Low Level and Intermediate radioactive waste level indicator (Indicator 1 for 2021-2027 period - see Section 4), lower actual volume of LLW arising from decommissioning (compared to the planned volume) is related to higher volume of decontaminated metallic materials (compared to the planned volume) and, as a result, there was a higher amount of released material to the environment than the original planned value.

In respect of the removal of metal and concrete (Indicator 2 for 2021-2027 period – Section 4) the target value for dismantling and removal of concrete was not achieved. This is due to a change that was needed to maintain a high level of occupational Health and Safety during the demolition works removal and processing of concrete. However, this rescheduling has no impact on the critical path of the programme.

In relation to the decommissioning of the sites managed by the **JRC**, in Ispra (Italy), COVID-19 pandemic (which has jeopardised the access to the site, restricted to essential tasks) and the low performance of the contractor has impacted the construction of the grouting station to immobilize solid low level radioactive waste (LLW). The contract will be terminated and a new call for tender launched, covering the remaining parts of design and the construction of the facility. This will cause an estimated delay of 3 to 4 years in the commissioning of this facility and subsequently delay radioactive waste management activities. During the excavation and site preparation for the retrieval facility, unconditioned waste was found at the excavation yard. This waste was not detected despite the extensive characterization campaigns. During 2021, the construction works were halted, and immediate discussion with the competent authorities started, with a view of planning of the remediation activities, retrieval and characterization of the waste, and characterization of the soil. Works will restart in the second quarter of 2022, with the aim of completing the facility one year later. The Interim Storage Facility's license has been modified to store unconditioned low-level waste.

Pre-decommissioning activities are progressing well. In Ispra, donated cyclotron components left the site to the beneficiaries. Clean-up and characterization of the hot-cells laboratory has been completed, and the works will continue with the decontamination of active tanks. In the meantime the application for revoking the license of these two facilities is being prepared. In Petten, a framework contract to dispose of legacy radioactive waste from past experiments has been concluded with NRG. JRC maintains regular contacts with Dutch stakeholders regarding the future decommissioning of the High Flux Reactor.

At JRC Karlsruhe, a feasibility study on the characterisation of backlog drums was commissioned, and a new contract for dismantling gloveboxes was concluded.

As the timeframe envisaged for the JRC Decommissioning and Waste Management Programme covers several decades, the planning of the works is updated regularly to take due account of the progress, delays, unforeseen circumstances, etc. and to reschedule activities as appropriate.

The two new Council Regulations (Euratom) 2021/100 and (EU) 2021/101 adopted in January 2021 are framing the continuation of the EU support to the decommissioning programmes over the period 2021-2027. This is the final contribution to the Kozloduy and Bohunice decommissioning programmes. Finally, each of the NDAP decommissioning operators has created a decommissioning knowledge product, taking a first step towards the new objective of knowledge dissemination.

3.1.3. Previous Programme Performance

The JRC Decommissioning of Nuclear Facilities and Management of Radioactive Waste Programme (D&WMP) was previously managed under another instrument and its performance subject to a different framework. Therefore its past performance is not reported here.

The general objective of the Kozloduy and Bohunice programmes in the period 2014-2020 was to assist the Member States towards the decommissioning end state of Kozloduy units 1 to 4 (Bulgaria) and Bohunice VI units 1 and 2 (Slovakia), whilst maintaining the highest level of safety.

These two programmes have achieved most of the principal objectives for the period 2014-2020. However, important delays occurred during the implementation of key projects, which could impact the end date of the programme. Despite these delays, the NDAP is now more mature in managing complex decommissioning projects, and has demonstrated its adaptability and overall relevance.

For the Kozloduy programme, the situation in 2014 was:

- preparatory works had started for the decontamination and dismantling activities in turbine halls and auxiliary buildings;
- the dismantling of large components and equipment in the reactor buildings had not started;
- the facilities for the treatment and conditioning of waste were being put in place.

The first specific objective for the period 2014-2020 (performing dismantling in the turbine halls of units 1 to 4 and in auxiliary buildings) has been achieved with the decontamination and dismantling activities in the turbine halls completed in 2019.

Progress towards the second specific objective (dismantling of large components and equipment in the reactor buildings of units 1 to 4) was significant. Dismantling activities inside the reactor building Units 1-2 had started in 2015 and a total of 948 systems and equipment were dismantled in the reactor buildings of units 1 to 4, which was 79% of the target at the end of 2020. The activity had started at a slower pace than planned but recovered steadily over the years. However, the COVID-19 pandemic impeded the approval process by the nuclear regulator during the last years.

Activities related to the third specific objective (safely managing the decommissioning waste in accordance with a detailed waste management plan) have progressed well but some aspects stayed slightly below expectations. At the end of 2020, the quantity of material released from regulatory control (free release) has reached 39 320 tonnes i.e. 90% of the target. The COVID-19 pandemic worsened the production rate. At the same date, the production of final waste packages (i.e. Reinforced-Concrete Containers) for legacy waste and decommissioning waste was about 106% of the target at the end of 2020.

The plasma melting facility (a first-of-its-kind high-temperature incineration facility for volume reduction of radioactive waste) produces a waste form that is particularly stable and safe. The project was launched in 2009 and reached the operational stage in 2019. The first three operational campaigns demonstrated that it could reduce the volume of waste by a factor of 50, and an economic analysis is ongoing after the recent finalisation in 2021 of the fourth campaign.

Construction of the near-surface repository for low- and intermediate-level waste (National Disposal Facility) started in 2017. The large earth works are completed and the foundations have been laid down. The construction works do not imply any radiation or nuclear safety risk, however activities were suspended from December 2019 to June 2020 following a fatal accident on the building site. The works in the affected projects started again with a new enhanced health and safety plan. This project is critical to the progress of decommissioning in the MFF 2021-2027 and to meet the planned end-date in 2030.

For the Bohunice programme, the situation in 2014 was:

- dismantling of V1 turbine hall had started;
- dismantling of external buildings (phase 1) had started;
- preparation of decontamination of V1 primary circuits had started;
- stage 1 decommissioning waste management had started.

The first specific objective for the period 2014-2020 (dismantling in the turbine hall and auxiliary buildings of reactor V1) has been achieved. The dismantling in the turbine halls was completed in 2018. An important landmark was reached in 2018 with the demolition of the four cooling towers. Eventually the dismantling of the auxiliary buildings was completed in 2019.

The progress towards the second specific objective concerning the dismantling of large components and equipment in the V1 reactor buildings deserves attention. Important milestones were achieved with the dismantling of the Auxiliary Building Systems, Spent Fuel Pools and contaminated tanks in 2018; the transfer of the 12 steam generators, each made of 145 tonnes of steel, to the former turbine hall in 2019 and the transportation of the reactor pressure vessel and other activated components to pools reconfigured as underwater cutting workshops. However, previous milestones have been merged with the project 'Nuclear Steam Supply System' (original target date 2020) which has been rescheduled to the end of 2022.

Activities related to the third specific objective (safely managing the decommissioning waste in accordance with a detailed waste management plan) have progressed well but stayed slightly below expectations. By December 2020 the quantity of material released from regulatory control (free release) has reached 134 124 tonnes, i.e. 90% of the target. The production of hazardous waste and radioactive waste remained slightly under plan. This is the consequence of the lower than planned quantity of material to be removed from the site and also from slower operations due to the COVID-19 restrictions.

Although knowledge sharing was not an explicit objective of the NDAP for the 2014-2020 period, several initiatives have been taken in favour of cooperation between the three NDAP Member States (Bulgaria, Slovakia and Lithuania). Decommissioning operators in the three NDAP programmes (Kozloduy in Bulgaria, Bohunice V1 in Slovakia and Ignalina in Lithuania) have engaged several knowledge sharing actions at different levels, in order to both share their experience and gain knowledge from other stakeholders in Europe.

3.2. Key achievements

29 448	134 124	392	1 800
tonnes of metals were originated from the dismantling of the turbine hall in Kozloduy programme by end 2020.	tonnes of conventional recyclable material dismantled by end 2020 in the Bohunice programme.	reinforced-concrete containers of radioactive waste produced in the Kozloduy programme by end 2020.	tonnes of metals were recycled in Bohunice programme in 2021

3.3. Evaluations, studies and reports

Nuclear Decommissioning Assistance Programme (NDAP)

The Commission, in close cooperation with the Member States, has launched an *ex post* evaluation on the effectiveness and efficiency of the Nuclear Decommissioning Assistance Programme for the period 2014 to 2020. The evaluation will rely on existing reports on the progress of the technical and financial implementation of the programme.

The following studies are underway or recently finished:

- study to support the *ex post* evaluation of the nuclear decommissioning assistance programme 2014-2020;
- safety culture maturity of the NDAP operations, supporting the *ex post* evaluation 2014-2020;
- development and try-out of an on-site process for sharing knowledge created in the frame of the NDAP;
- gap analysis of Earned Value Management Systems in use by operators under the NDAP and a follow-up study on baselining policy and monitoring.

The following evaluations, studies and reports have been published in the past years:

- Progress report period 2010-2014 [COM(2015) 78];
- Progress report 2015 and previous years [COM(2016) 405];
- Progress report 2016 and previous years [COM(2017) 328];
- Mid-term evaluation [COM(2018) 468];
- Progress report 2018 and previous years [COM(2019) 215];
- Progress report 2019 and previous years [COM(2020) 82];
- Progress report 2020 and previous years [COM(2021) 235];
- support to the *ex post* evaluation of the NDAP Energy window 2007-2013 [ISBN 978-92-76-08716-8];
- support to the mid-term evaluation of the NDAP [ISBN 978-92-76-08717-5, 978-92-76-08789-2];
- assessment of the robustness of the NDAP financing plans and of the relevance and feasibility of the detailed decommissioning plans [ISBN 978-92-76-08798-4].

The results of the NDAP mid-term evaluation and of the latest report on NDAP from the European Court of Auditors were communicated in the Draft Budget 2020.

Decommissioning of Nuclear Facilities and Management of Radioactive Waste Programme (D&WMP)

The following evaluations, studies and reports are underway or recently finished:

- IAS audit report: IAS.C4-2017-JRC-002 Draft audit report on nuclear decommissioning and waste management programme (D&WMP) implementation in DG JRC;
- The organisational structure for the JRC nuclear decommissioning programme: an *ex-ante* assessment – Final report March 2019;
- Ares(2017)6208486 Budget requirements to implement the JRC Decommissioning & Waste Management Programme (D&WMP) strategy;
- Ares(2017)620848 Manpower needs to implement the JRC Decommissioning & Waste Management Programme (D&WMP) strategy;
- Ares(2017)3518519 Strategy for Decommissioning & Waste Management Programme (D&WMP) of JRC.

The following evaluations, studies and reports have been published in the past years:

- IAS audit report IA – 11 – 03 (206) Decommissioning – risk and project management at the Ispra site;
- Expert group reviews reported in CircaBC;
- Communication from the Commission to the Council and the European Parliament: Decommissioning of nuclear installations and waste management. Nuclear liabilities arising out of the activities of the Joint Research Centre (JRC) carried out under the Euratom Treaty (SEC/2004/621).

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: To carry out the activities included in the respective decommissioning plans, the dismantling and decontamination of Units 1 to 4 of the Kozloduy Nuclear Power Plant and Units 1 and 2 of the Bohunice V1 Nuclear Power Plant, including associated systems, structures and components and auxiliary buildings, the safe management of radioactive waste in line with the needs identified in the respective decommissioning plans, and human resources support; and to pursue the release of Units 1 to 4 of the Kozloduy Nuclear Power Plant and Units 1 and 2 of the Bohunice V1 Nuclear Power Plant from regulatory controls.

Indicator 1: (Kozloduy) Safe management of the decommissioning and radioactive waste and of activated materials and dismantling materials, including their decontamination up to interim storage or to disposal (depending on the waste category), as well as the completion of the waste and material management infrastructure where necessary

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Free release of materials (tonne)										
	Milestones									2030
	3 000	5 000	6 000	7 000	8 000	9 000	10 000	11 000	12 000	13 000

Data source	This indicator also supports the MFF 2014-2020 objective “Dismantling of large components and equipment in the reactor buildings of Kozloduy units 1 to 4”.
Link to the objective	Indicator defined in the Council Regulation (Euratom) 2021/100.
Link MFF 14-20 / MFF 21-27	This objective is the continuation of the objective “Dismantling of large components and equipment in the reactor buildings of Kozloduy units 1 to 4”.
Other methodological comments	The timeline extends to the scheduled completion of the decommissioning (2030).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The dismantling of systems (made of metal among other materials) is progressing as per the Detailed Decommissioning Plan. The generation of concrete waste is not expected until planned for 2023, when the decontamination and dismantling of buildings and facilities activities will start.

Indicator 3: (Bohunice) Safe management of the decommissioning and radioactive waste and of activated materials and dismantling materials, including their decontamination up to interim storage or to disposal (depending on the waste category), as well as the completion of the waste and material management infrastructure where necessary

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

Link MFF 14-20 / MFF 21-27	This objective is the continuation of the MFF 2014-2020 objective “Safely managing the decommissioning waste in accordance with a detailed waste management plan”.
Other methodological comments	The classification of radioactive waste follows the respective national regulations.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Regarding the Very Low Level radioactive waste (VLLW) indicator: Mainly activated concrete from dismantling/demolition of the two reactors’ shafts was planned for disposal in 2021. Due to rescheduling of the completion date of aforementioned activity (from 04/2022 to 01/2023) the removal of concrete from the reactors’ shafts is delayed (see also the indicator "Concrete removed" below). This change was needed to maintain a high level of occupational Health and Safety during the demolition works removal and processing of concrete. However, this rescheduling has no impact in the critical path of the programme. As a result, the disposal of the VLLW concrete in the national repository at Mochovce was lower in 2021 than planned. Regarding the Low Level and Intermediate radioactive waste level indicator: This type of waste is represented mainly by metallic components. Lower actual volume of LLW arising from decommissioning (compared to the planned volume) is

	related to higher volume of decontaminated metallic materials (compared to the planned volume) and, as a result, there was a higher amount of released material to the environment than the original planned value.
--	---

Indicator 4: (Bohunice) Dismantling and decontamination of the reactors' buildings and components in accordance with the decommissioning plan: quantity and type of materials removed, with annual objectives by type, meeting the milestones of the Programme.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

Link MFF 14-20 / MFF 21-27	This indicator also supports the MFF 2014-2020 objective “Dismantling of large components and equipment in the Bohunice V1 reactor buildings”.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Target value for dismantling and removal of concrete was not achieved. Mainly activated concrete from the two reactors’ shafts was planned for removal in 2021. However, due to rescheduling of the completion of this activity (from 04/2022 to 01/2023) the removal of concrete is lagging behind the target value of 490 tonnes. This change was needed to maintain a high level of occupational Health and Safety during the demolition works removal and processing of concrete. However, this rescheduling has no impact in the critical path of the programme.

Specific Objective 2: To support the decommissioning plan and to carry out the activities in accordance with the national law of the host Member State for the dismantling and decontamination of the Commission’s nuclear installations at the JRC sites, to carry out the safe management of associated radioactive waste and, when appropriate, to prepare the optional transfer of the related nuclear liabilities from the JRC to the host Member State

Indicator 1: Radioactive waste management: quantity and type of waste safely stored or disposed of , with annual objectives by type, meeting the milestones of the Programme

Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Decommissioning at JRC-Ispra site has focused on the design and building of several waste handling and interim storage installations for waste sorting, characterisation, decontamination, material clearance from radiological control, as well as condition and temporary storage of radioactive waste until adequate radioactive waste interim long-term storage facilities or waste disposal facilities are available in Italy. Progress in the outcome can be monitored through the amount of radioactive waste processed. The other JRC's nuclear research installations, located in Petten, Geel and Karlsruhe, are still in operation. Decommissioning of the facilities will not start before their shutdown. Waste management and pre-decommissioning activities include the dismantling of out-of-use equipment from past research work and for the removal off-site (including transfer of ownership) of obsolete nuclear spent fuel and nuclear materials, and this is done consistently with the implementation of the research programme.

Indicator 2: Dismantling and decontamination: quantity and type of materials removed, with annual objectives by type, meeting the milestones of the Programme.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

Other methodological comments	

Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	JRC Karlsruhe is still in operation, and decommissioning activities aim at the progressive dismantling of out-of-use equipment, which is carried out in full compatibility with the implementation of the research programme.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Nuclear decommissioning assistance programmes in Bulgaria and Slovakia

Specific Objective 2: (Kozloduy) Dismantling of large components and equipment in the reactor buildings of units 1 to 4

Indicator 1: Number and type of systems and equipment dismantled

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2020
0	0	200	400	600	800	1 000	1 200	1 200		1 200

Indicator type	Result
Unit of measurement	Number of dismantled large components and equipment in the reactor buildings of units 1 to 4 (cumulative)
Cut-Off Date	31/12/2021
Data source	National authorities, Implementing bodies, decommissioning operator
Narrative	Dismantling of large components and equipment in the reactor buildings of units 1 to 4 is part of the Detailed Decommissioning Plan of Kozloduy Programme.
Methodology	Data is based on the Monitoring Report provided by the national authority every six months.
Link MFF 14-20 / MFF 21-27	There is a specific indicator for the period 2021-2027 for the dismantling and decontamination in the reactors' buildings in accordance with the decommissioning plan.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Dismantling activities inside the reactor building Units 1-2 have started. The activity had started at a slower pace than planned but recovered steadily over the years. There was an underestimation of time needed for regulatory approval caused by the implementation of a procedure never used before for authorisation of activities associated to decommissioning and waste management. Furthermore, the COVID-19 pandemic has also impeded the approval process by the nuclear regulator.

Specific Objective 5: (Bohunice) Dismantling of large components and equipment in the V1 reactor buildings

Indicator 1: Number and type of systems and equipment dismantled

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2022

Indicator type	Result
Unit of measurement	Information on achieved milestones in dismantling of large components and equipment in the V1 reactor buildings (Yearly)
Cut-Off Date	31/12/2021
Data source	National authorities, Implementing bodies, Decommissioning operator
Narrative	Dismantling of large components and equipment in the V1 reactor buildings is part of the Bohunice Detailed Decommissioning Plan.
Methodology	Data is based on the Monitoring Report provided by the national authority every six months.
Link MFF 14-20 / MFF 21-27	There is a specific indicator for the period 2021-2027 for the dismantling and decontamination in the reactors' buildings in accordance with the decommissioning plan.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Although the majority of the system was dismantled as of December 2021, full dismantling of the system was slightly postponed to 03/2022. COVID-19 pandemic restrictions directly impacted performance of the contractor's (and subcontractor's) activities and caused this small delay. For this indicator, previous milestones have been merged with the project 'Nuclear Steam Supply System' (original target date 2020) which has been rescheduled to the end of 2022. This indicator is linked to the successful dismantling of radiologically contaminated components of the main reactor systems. Dismantling has started in Mid-2020 and major milestones have been achieved with the start of the size reduction of the reactor vessel and the steam generators. The tasks within the project for the dismantling of the Reactor Coolant System Large Components were re-ordered to reflect the actual material logistics, interfaces and prioritisation of specific activities with the overall objective to reduce the programme implementation time.

6. The programme contribution to horizontal policies

6.1. Contribution to gender equality

6.1.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	

Score 0: 69

(*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme **in EUR Million**)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significantly impacted**, score 0*: **impact on gender equality to be determined ex post**, score 0: **no significant impact on gender equality**.

DG ENER does consider gender equality perspective in the funding of Council Regulation 2021/100. Nonetheless we determined that nuclear decommissioning is primary and sole objective of our programme and as such has no significant impacts on gender equality even though some minor indirect impacts might manifest.

HEADING 5: Security and Defence**European Defence Fund (EDF)****Lead DG: DEFIS**

1. Overview**1.1. Challenges**

The European defence sector is essential for Europe's future. It plays a key role in ensuring the EU's strategic sovereignty and its capacity to act as a security provider. The sector nevertheless faces challenges that put into question the preservation of its competitiveness and its technological edge. These may weaken the technological advantage of the sector and hamper its ability to develop defence systems crucial for the security of the Union and its Member States. More particularly, these challenges are:

- For over more than a decade, defence spending by EU Member States has been subject to significant cuts that have particularly affected defence Research and Development (R&D). Despite increases in defence spending in recent years,

R&D is still lagging behind. Defence Research & Technology (R&T) for instance amounts to only 0.9% of defence expenditures against a target of 2% agreed between EU Member States.¹

- The costs of defence systems are raising and include a high proportion of R&D costs. Combined with limited spending, this increasingly puts the development of new high-end defence systems beyond the capacity of individual EU Member States.
- Cooperation in the defence sector remains very weak. European collaborative equipment expenditures stand at only 17.8% of defence equipment spending against a benchmark of 35%. Only 7.3% of defence research is collaborative, against a target of 20%. EU defence industry and markets remain fragmented along national borders with unnecessary duplications often present despite limited investments.

1.2. Mission (General objectives)

These challenges and trends provide strong reasons for intervention at the EU level to foster collaboration, overcome fragmentation and foster the competitiveness and the technological sovereignty of the European defence industry.

1.3. Specific objectives

The European Defence Fund (EDF), launched in May 2021 following the adoption of EU Regulation 2021/697 in April, supports both collaborative defence research and development actions. The Fund aims at providing consistent support throughout the full R&D cycle. It will thus ensure consistency and help to bridge the “valley of death” between research and development that entails important technical and financial risks, often preventing the maturation of promising new defence technologies and their effective integration in the development of new defence systems.

By supporting, through the EU budget, collaborative defence research and development, the EDF will help build an integrated defence industrial base across the EU. It seeks to foster open and dynamic supply-chains that include SMEs and new entrants. The Fund will enhance the competitiveness, efficiency and innovation capacity of the European defence technological and industrial base, which contributes to the Union strategic autonomy and freedom of action. Furthermore, by requiring common technical requirements, it will improve interoperability of developed products and technologies for the Member States, which are the end-users.

1.4. Public intervention context

The EU's action is based on the Treaty on the Functioning of the European Union, and in particular Article 173(3), Article 182(4), Article 183 and the second paragraph of Article 188 that supports both collaborative defence research and development actions. The EDF was launched as the cornerstone of the European Defence Action Plan and goes hand in hand with the Union's initiatives towards a more integrated European Defence Market, in particular the Directive on transfers of defence-related products within the Union and the Directive on defence and security procurement. By encouraging cooperation, the EU can help maximise the output and quality of Member States' investment in defence. The European Defence Fund will bring EU added value by incentivising joint research on and development of products and technologies in the area of defence to increase the efficiency of public expenditure and contribute to the EU's operational autonomy. The EDF should complement rather than substitute national funding already used for this purpose. It should act as an incentive for Member States to cooperate and invest more in defence.

1.5. Actions

The European Defence Fund provides financial support primarily in the form of grants. In principle, only actions undertaken in cooperation between at least three entities from at least three different Member States are eligible.

Cross-border participation of SMEs and mid-caps is further strengthened by the bonus system and the relevant award criterion with regard to participation of SMEs foreseen by the European Defence Fund Regulation, as well as by the introduction of dedicated call categories in the annual work programmes.

To enhance the innovation capacity of the sector and the emergence of new products and technologies, the EDF also supports disruptive defence technologies taking into account their specificities such as increased risk of project failure and the potential of attracting non-traditional players to the defence sector. In accordance with the EDF Regulation 4-8 % of the EDF's overall budget are to be dedicated to R&D in disruptive technologies.

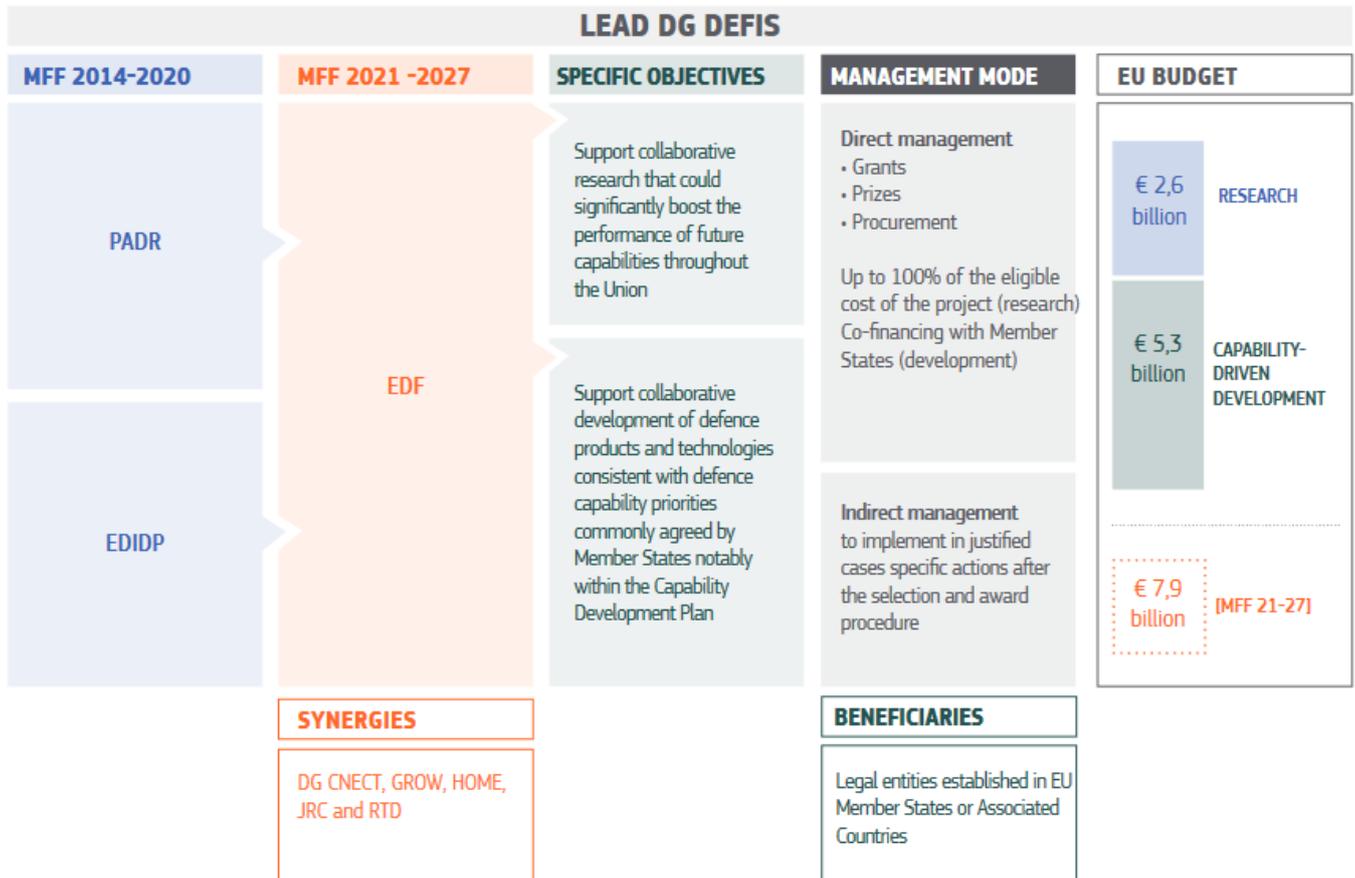

1.6. Delivery mode

The programme is implemented through direct management by the Directorate General for Defence Industry and Space. On an ad-hoc basis and if justified, specific actions may be implemented in indirect management.

¹ Council Recommendation of 15 October 2018 concerning the sequencing of the fulfilment of the more binding commitments undertaken in the framework of the permanent structured cooperation (PESCO) and specifying more precise objectives (2018/C 374/01).

1.7. Graphic overview of the programme structure

EUROPEAN DEFENCE FUND (EDF)

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/697 of the European Parliament and of the Council of 29 April 2021 establishing the European Defence Fund and repealing Regulation (EU) 2018/1092 (OJ L 170, 12.5.2021, p. 149).	2021 - 2027	7 953.00

1.8.2. Legal basis explanation

The European Defence Fund Regulation (EU) 2018/1092, under the Multiannual Financial Framework of the EU for 2021 -2027, was adopted by co-legislators on 29 April 2021, published on 12 May 2021 (OJ L 170, 12.5.2021, p. 149–177) and is applicable from 1 January 2021. The Regulation is designed to achieve efficiency in implementation: The creation of a single and coherent European Defence Fund will increase simplification compared to the existing situation where two separate defence industry programmes exist for research and development.

1.8.3. Budget programming table

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The EDF builds and expands on the experience acquired through two small-scale pre-cursor programmes implemented under the 2014-2020 MFF:

- The Preparatory Action on Defence Research (PADR) which supported collaborative defence research projects with an overall budget of EUR 90 million over 2017-2019;
- The European Defence Industrial Development Programme (EDIDP), which supports collaborative defence development actions with an overall budget of EUR 500 million over 2019-2020.

The design of the European Defence Fund (EDF) largely builds on the architecture of these two pre-cursor programmes, the PADR in a research window and the EDIDP in a development window, but it will be implemented as one single Fund. As an example of such integrated approach, EDF harmonises the eligibility and award criteria for funding projects. The EDF will lead to better exploitation of the defence research results, bridging the gap between the research and the development phases, and promoting all forms of innovation, including support to disruptive technologies for defence. The Action Plan on Synergies between civil, defence and space industries also helps to identify and foster the uptake of results generated in the civil programmes in a defence context and vice versa.

Several activities have been tested under the PADR and the EDIDP have been further adapted to the defence sector specificities in order to be used more extensively in the EDF. Examples include the ethics review for both research and development actions or improving the efficiency of the project management (e.g., by testing a more systematic use of lump sums to finance the projects). Together with supporting measures (setting up an information network in the Member States, organising or contributing to information and brokerage events), this should encourage, in particular, SMEs and entities not yet involved in defence-specific R&D to participate even more in the programme. In the EDF, open calls for innovative and future-oriented defence solutions as well as dedicated open calls for SMEs will be organised under the research and the development window.

1.10. Relevant websites providing more information

[The European Defence Fund \(EDF\) \(europa.eu\)](http://europa.eu)

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	969.4	7 576.7	13%
Payments	1.4		0%

Following the adoption of the European Defence Fund Regulation in 2021, the first annual 2021 EDF work programme was adopted on 30 June setting out the detailed objectives, activities and budget spending plans for 2021. Also, the first part of the 2022 annual work programme was adopted to complement the 2021 budget envelope to kick start ambitious EDF projects related to large-scale and complex defence capabilities. The first EDF calls for proposals were published on 30 June (11 calls targeting

research actions and 12 calls targeting development actions), addressing 37 topics with a total budget of more than EUR 1.2 billion², of which EUR 930.3 million from the 2021 budget and EUR 290 million from the 2022 budget. In this context, it is expected to sign the grant agreements and fully consume the commitment appropriations of the year 2022.

The PADR and EDIDP were fully implemented during the COVID-19 crisis. The crisis affected the evaluations of the 2020 EDIDP calls. Due to pandemic impacts combined with the complexity of processes, several EDIDP administrative processes were prolonged (e.g. informing applicants of the outcome of the evaluation). To support the defence industry during the COVID crisis, DG DEFIS decided to increase the pre-financing level of the proposals awarded under EDIDP 2019 call to up to 90% of the maximum grant, which had an impact on the rate of payment execution of the programme. The preparation of the EDF work programme for 2021 and subsequent publication of the relevant calls were implemented on time. However, the COVID had a substantial impact on the procedures and the working arrangements of the staff involved. The COVID-19 crisis will not impact the timing of the preparation and adoption of the 2022 EDF work programme.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	500.0	500.0	100%
Payments	375.8		75%

During the previous MFF, the EDIDP programme (2019-2020) committed EUR 500 million, thus achieving 100% cumulative implementation rate. In total, 44 grants have received Union funding as a result of EDIDP calls for proposals in 2019 and 2020. The pre-financing payments to these grants account for almost the total payment appropriations used until now, i.e. EUR 376 million, which represents 75% rate of payment execution for the programme.

The high payment rate at this stage of project implementation is due to a decision of DG DEFIS to provide a high pre-financing level to the proposals funded under the programme in order to support the defence industry in the context of the COVID-19 crisis.

3. How is the programme performing ?

3.1. Performance

3.1.1. Active programme performance

The EDF fosters the competitiveness and innovation capacity of the European defence technological and industrial base by supporting collaborative research and development actions.

Given that the Programme is in its early days of implementation, no implementation report is available. In the same vein, given that the indicators are set at the level of funded projects and no projects have been selected yet for funding, at this stage of implementation, it is not yet possible to report how the Programme is progressively delivering in addressing the identified problems.

Following the closure of the very first 23 EDF calls for proposals on 9 December 2021, 142 proposals were submitted among which more than 40% in relation with the non-thematic calls dedicated to SMEs and to disruptive technologies for defence. In total, 1 111 different entities, among which around 50% are SMEs, from 26 Member States and Norway are participating in the proposals submitted.

3.1.2. Previous Programme Performance

The Preparatory Action on Defence Research (PADR) has significantly contributed to foster collaborative defence research and technological development in Europe. The core of the PADR is a small-scale research programme with competitive calls for proposals defined in close consultation with the Member States. The main objectives of the PADR programme are: 1.) *Test mechanisms to prepare, organise and deliver EU-funded cooperative defence research;* 2.) *Improve competitiveness and innovation of the European defence industry;* 3.) *Stimulate cooperation amongst research & technological development actors across Europe.*

In the yearly PADR work programmes, the Commission adopts the calls for proposals. The implementation of the Preparatory Action on Defence Research (PADR) is ongoing, in total 10 calls for proposals were published in 2017, 2018 and 2019. This resulted in the selection for funding of 18 projects. Although, most of the projects are still ongoing, yet we can still draw the following initial conclusions:

² submission deadline 9 December 2021

- Calls attracted applicants previously not active in defence research.
- Funded projects included the participation of SMEs in 15 consortia.
- The PADR brought together stakeholders mainly from the private sector (64%), as well as research centres (23%) and academia (7%), roughly one-fifth of all applicants in the selected proposals are small or medium-size enterprises (22% SMEs).
- In the PADR 2019 call, the Commission launched for the first time an “open” call on “future disruptive technologies for defence” with the objective of cutting-edge and high-risk/high-impact research that could lead to a disruptive impact in a defence context. This resulted in the selection for funding of three promising projects.

Projects funded by the PADR cover a broad range of technological readiness levels, from proof of concept to demonstration in relevant environment. They also addressed different levels of system integration, from research on components to integration of multiple assets, such as the project OCEAN 2020, grouping 43 partners across the supply chain. The number of applications following the PADR 2019 calls on disruptive technologies showed a large interest of stakeholder; e.g. following the open call, three projects were funded out of more than 50 proposals received. In the framework of the preparatory action, reporting about the action’s performance is not included in the working programme statements. Nevertheless, the PADR will contribute to EDF indicators by setting several of the programme’s baselines, together with data from the EDIDP.

The EDIDP Programme is designed to target the defence sectors problems identified in ex-ante evaluation SWD (2017) 228³ and its annexes accompanying the legislative proposal of the EDIDP. The evaluation identified the following EU defence industry problems where the EDIDP creation could support the change: 1.) *low investments in innovative defence programmes*; 2.) *fragmentation of the defence industry and limited cooperation between undertakings*. Both problems can pose in longer terms substantial risks for the competitiveness of the EU defence industry. The EDIDP work programme was designed to foster the competitiveness, efficiency and innovation capacity of the European defence industry, to support and leverage cooperation and to ensure that results from the research phase are better exploited in the next phases of the development. Progress on reaching these long-term objectives is reflected in the quantitative milestones (see below).

Implementation of the EDIDP is in progress. Following competitive calls for proposals in the years 2019, 16 projects have been selected for funding. After comparison of EDIDP milestones with results of the 2019 EDIDP calls, following initial conclusions can be drawn:

- Due to the substantial oversubscription (only 16 out of 40 received proposals could be retained for funding), the total budget allocated to the 2019 EDIDP calls could be fully committed.
- The EDIDP calls have boosted cooperation between the Member States and their undertakings, which is clear on exceeding of assumed milestones. The calls for proposals were tailored in close cooperation with the Member States to meet their needs in terms of defence systems and technologies needed for their defence capabilities. This approach paid off, leading to larger consortia populated by entities established in more Member States than anticipated. At the same time, 80% of the 2019 EDIDP budget is allocated to EDIDP projects, which have a link to PESCO projects, i.e., joint projects initiated by Member States. The Regulation promoted such links by awarding a “PESCO-bonus” to such projects to increase the EU funding rate.
- The EDIDP Regulation has also focused on supporting the SMEs, i.e. the European defence industry's critical part. The planned number of SMEs involved in projects was surpassed by close to 40% (83 SMEs participated against a proposed milestone of 60). The EDIDP 2019 Work Programme included a call that was open to consortia composed of SMEs only, in which 21 SMEs received funding. However, 3 out of 4 SMEs receiving EDIDP funding, participate in projects resulting from the thematic calls. The Regulation promoted this involvement by awarding an increase in the EU funding rate for projects that invest in cross-border cooperation with SMEs.
- The share of the projects funded that involve prototyping (i.e. specifically sensitive phase of the project development) was surpassed by 6%, indicating that more than half of the funded projects contain activities related to advanced stages in developing defence systems or technologies.

Following the calls for proposals for the year 2020, 63 proposals have been received (an increase of more than 50% compared to 2019 EDIDP calls). As a result of the evaluation of the calls, grant agreements for 26 high-quality projects have been signed before the end of 2021 and will be supported with EUR 158.2 million. These projects are directly managed by the Commission services. In addition, the management of two projects that are strategic enablers for the European defence industry has been entrusted to the Organisation Conjointe de Coopération en matière d'Armement (OCCAR) for a total budget of almost EUR 133 million following the signatures of contribution agreements. After comparison with EDIDP milestones and results from the 2019 EDIDP call, the following initial conclusions can be drawn on the results of the 2020 EDIDP calls:

- The research and development entities keep their high interest for support from EDIDP (only 26 out of 63 proposals could be supported from the 2020 EDIDP budget). The total budget allocated to the 2020 EDIDP calls was entirely committed.

³ <https://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=SWD:2017:0228:FIN:EN:PDF>

- The Fund maintains its high focus on support of cooperation between the Member States and their undertakings. The trend of larger consortia populated by entities established in more Member States continued (16 entities from 7 Member States). At the same time, the programme contributed to the coherence of the EU defence initiatives and priorities defined at the EU level. 14 out of 26 supported projects have a link to PESCO projects. The projects with the link to PESCO projects are supported by EUR 97.7 million.
- The EDIDP continue to devote substantial support to SMEs. The programme is supporting 144 SMEs (16 of them in a call that was open to consortia composed of SMEs only) following the 2020 calls. 35% of entities in funded projects are SMEs, and 30% of total funding is dedicated to SMEs.
- The share of the projects funded that involve prototyping (i.e. specifically sensitive phase of the project development) was surpassed by 15%, indicating that the EDIDP increasingly aim its support to advanced stages in developing defence systems or technologies.

After the finalisation of the EDIDP calls, the impact evaluation of the initiatives foreseen in the EDIDP Regulation will be part of an implementation report at the end of the Programme. The retrospective evaluation of the EDIDP will be aligned with the interim evaluation of the European Defence Fund 2021-2027 and take place after at least four years of the beginning of the implementation of the latter.

3.2. Key achievements

EDIDP		
EUR 500 million	25 Member States	35%
is the budget allocated to the EDIDP to support - together with the Member States - the development of defence systems and technologies to be integrated in commonly agreed capabilities.	are countries of origin of the companies participating in proposals submitted to EDIDP calls in 2020.	is the rate of SMEs participating in selected proposals in the consortium during 2020 EDIDP calls.
PADR		
EUR 90 million	26 Member States	889 entities
is the budget allocated to support joint defence research projects following calls for proposals published between 2017 and 2019 under the PADR.	and Norway are countries of establishment of entities involved in PADR proposals submitted between 2017 and 2019.	submitted 127 proposals in response to PADR calls between 2017 and 2019, of which 22% applicants were SMEs, 23% research centres and 7% from the academia, while the remainder were large industrial stakeholders.

3.3. Evaluations, studies and reports

- SWD (2018) 345⁴: Final impact assesment accompanying the document Proposal for a Regulation of the European Parliamant and of Council establishing the European Defence Fund.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Support collaborative research that could significantly boost the performance of future capabilities throughout the Union

⁴ <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:52018SC0345>

Indicator 1: Participants: Legal entities involved

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0		200								
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	The number of unique entities involved in collaborative Research and Development (R&D) actions financially supported by the European Defence Fund (EDF)
Cut-Off Date	31/12/2022
Data source	European Commission, EDF grant agreements
Link to the objective	Outreach and inclusiveness of the actions financially supported by the EDF, therefore contributing to strengthening and improving the agility of both defence supply and value chains, widening cross-border cooperation between legal entities. This indicator also contributes to the specific objective 2 and the computation takes into account both research and development actions
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	Cumulative count for all the years for which data is available. The breakdown of the number of entities by size, type and country of establishment is also provided. The data will be reported with a two-year lag (i.e. data on 2021 will be reported in 2023).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	N/A

Indicator 2: Collaborative Research: Funded actions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0		30								
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number (count) and Value in EUR million of collaborative defence research actions financially supported by the European Defence Fund (EDF)
Cut-Off Date	31/12/2022
Data source	European Commission, EDF grant agreements
Link to the objective	The capacity of the EDF to achieve a genuine effect and efficiently deliver in supporting collaborative defence research that can maximise innovation and introduce new defence products and technologies (including disruptive ones) will strongly depend on the uptake of the Fund.
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	The data is presented as a cumulative value for all research actions funded and cumulative number for all the years for which data is available. The data will be reported with a two-year lag (i.e. data on 2021 will be reported in 2023).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	N/A

Indicator 3: Collaborative Research: Share of contracts awarded involving collaboration with cross-border SMEs and midcaps

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0										
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Percentage (share of the eligible costs of the actions that is allocated to cross-border SMEs and midcaps in research actions)

Cut-Off Date	31/12/2022
Data source	European Commission, EDF grant agreements
Link to the objective	Supporting collaborative actions and cross-border cooperation between legal entities throughout the Union, in particular SMEs and mid-caps as well as strengthening and improving the agility of both defence supply and value chains, widening cross-border cooperation between legal entities.
Link MFF 14-20 / MFF 21-27	MFF 14-20 precursor PADR will provide indication on the target.
Other methodological comments	The data is determined on the basis of the information provided by the beneficiaries. The indicator will present the average share for all the years for which data is available. The data will be reported with a two-year lag (i.e. data on 2021 will be reported in 2023).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	N/A

Indicator 4: Collaborative Research: Share of recipients that did not carry out research activities with defence applications before the entry into force of the Fund

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0		0								
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Share of recipients expressed as percentage.
Cut-Off Date	31/12/2023
Data source	European Commission, based on grant agreements and information provided by the beneficiaries on past research activities.
Link to the objective	By attracting and integrating non-traditional players in the defence industrial and technological base, robustness of the supply and expertise base increases. Moreover, synergies between civil and defence research can be exploited with the aim to increase the innovative potential of the defence industry.
Link MFF 14-20 / MFF 21-27	MFF 14-20 precursor PADR will provide indication on the target and will be taken into account as previous research activity with defence applications.
Other methodological comments	The share is based on a cumulative count of (unique) recipients for all the years for which data is already available. Data is partially based on information provided by the beneficiaries. The data will be reported with a two-year lag (i.e. data on 2021 will be reported in 2023).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	N/A

Indicator 5: Innovation products: New patents deriving from projects financially supported by the Fund

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0		0	0							
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number (of patent applications and patents awarded deriving from actions financially supported by the EDF).
Cut-Off Date	31/12/2026
Data source	European Commission, based on reports submitted by the beneficiaries.
Link to the objective	The number of patents deriving from actions supported by the EDF provides an indication of the generation of innovative results. Innovations generated in projects targeting defence applications can have spill-over effects to other sectors of the economy. This indicator also contributes to the specific objective 2 and the computation takes into account both research and development actions.
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	Data is gathered during the time where the consortia are subject to reporting obligations. Aggregated distribution of patents amongst mid-caps, SMEs and legal entities that are neither mid-caps nor SMEs and aggregated distribution of patents per Member State will also be provided. The data will be reported with a three-year lag. First data may be reported in 2024 but may stay at 0 for several years.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	N/A

Specific Objective 2: Support collaborative development of defence products and technologies consistent with defence capability priorities commonly agreed by Member States notably within the Capability Development Plan

Indicator 1: Collaborative capability development: Funded actions that address the capability shortfalls identified in the Capability Development Plan

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Collaborative capability development										
	Milestones									2027

Funded actions that address the capability shortfalls identified in the Capability Development Plan										
	Milestones									2027
0				80						
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Share of number (percent): Share of value, computed for all previous years (percent)
Cut-Off Date	31/12/2023
Data source	European Commission, EDF grant agreements
Link to the objective	The EDF should support collaborative development actions consistent with the defence capability priorities commonly agreed by Member States within the Framework of the Common Foreign and Security Policy and particularly in the context of the Capability Development Plan (CDP), whilst regional and international priorities serving the Union’s security and defence interest, may be taken into account.
Link MFF 14-20 / MFF 21-27	N/A
Other methodological comments	The indicator will provide the cumulative number and value (cost of the actions) of funded development actions addressing the capability shortfalls identified in the Capability Development Plan (CDP) and provide a comparison with the overall number and value of the development actions funded. The data will be reported with a two-year lag (i.e. data on 2021 will be reported in 2023).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	N/A

Indicator 2: Continuous support over the full R&D cycle: Share of projects building on the results of previously EU-supported defence R&D actions.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0		0								
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Share of research and development actions fulfilling the condition within the year relative to the total number of actions supported within the year. The same set of IPR can be counted multiple times across different supported actions.
Cut-Off Date	31/12/2023
Data source	European Commission, grant agreements and information provided by the beneficiaries.
Link to the objective	Support of collaborative research projects, aiming at introducing new defence products and technologies and to the specific objective to support collaborative development projects contributing to greater efficiency of spending and reducing the risk of unnecessary duplication. This indicator also contributes to the specific objective 1 and the computation takes into account both research and development actions.
Link MFF 14-20 / MFF 21-27	Projects supported by MFF 14-20 precursors PADR and EDIDP are considered as previously supported projects.
Other methodological comments	‘Previously supported actions’ refer to actions financially supported by the EDF, the PADR or the

	EDIDP for which the grant agreement or contract has been signed before the considered action. The data will be reported with a two-year lag (i.e. data on 2021 will be reported in 2023).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	N/A

Indicator 3: Job creation / support: Defence R&D employees supported in funded actions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2027
0		0								
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	Number of Annual Full-time equivalents aggregated over research and development actions, cumulated over years.
Cut-Off Date	31/12/2023
Data source	European Commission, EDF grant agreements
Link to the objective	Continuous support of the European Defence Technological and Industrial Base R&D capacity and of the highly specialised expertise in defence research and development. The number of supported R&D employees is linked to the undertakings' capacity to provide innovative products. This indicator also contributes to the specific objective 1 and the computation takes into account both research and development actions.
Link MFF 14-20 / MFF 21-27	MFF 14-20 precursors PADR and EDIDP will provide indication on the target.
Other methodological comments	The indicator measures the R&D employees costs directly supported within the consortium and subcontractors for the duration of the supported action. The data will be reported with a two-year lag (i.e. data on 2021 will be reported in 2023).

Justification of the trend	N/A

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: European Defence Industrial Development Programme

Specific Objective 1: To foster the competitiveness, efficiency and innovation capacity of the EU defence industry, by supporting actions in their development phase

Indicator 1: Total value of funded cooperative projects

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
						242.95	497.1			497.1
	Actual Progress									Final
						279.1	803.13			803.13
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number (count). Value in EUR million.
Cut-Off Date	31/12/2020
Data source	EDIDP Grant Agreements and EDIDP Contribution Agreement signed with OCCAR (for direct awards)
Narrative	
Methodology	The milestones are based on the accumulated budget appropriations published in the Commission Implementing Decision on the financing of the EDIDP and the adoption of the Work Programme for the years 2019 and 2020. The actual progress is the accumulated EU budget of the signed EDIDP grant agreements plus the budget appropriations reserved for the direct awards to be managed by OCCAR. The accumulated total eligible costs of the projects consist of the EU budget of the signed EDIDP grant agreements plus the co-funding received from the Member States. These figures are provided in notes below the table. The progress of this indicator is presented in a cumulative way.
Link MFF 14-20 / MFF 21-27	Data on actual progress for 2019: the accumulated EU budget of the signed EDIDP grant agreements is equal to EUR 200.37 million. The accumulated total eligible costs of these projects, including co-

	funding from the Member States, equals to EUR 279.11 million. Data for year 2020: the accumulated EU budget of the signed EDIDP grant agreements is equal to EUR 292.81 million. The accumulated total eligible costs of these projects, including co-funding from the Member States, equals to EUR 803.13 million. The figures reported for 2020 also contain information on programmes managed by OCCAR (Medium Altitude Long Endurance Remotely Piloted Aircraft System - MALE RPAS, European Secure Software Defined Radio - ESSOR). In the case of MALE RPAS, the data refer only to work packages 1 and 2. The data for actual progress in 2019 was changed to respect currently available data and coherent use of methodology (i.e. accumulated total eligible costs of all supported projects).
Other methodological comments	Data on actual progress for 2019: the accumulated EU budget of the signed EDIDP grant agreements is equal to EUR 200.37 million. Data for year 2020: the accumulated EU budget of the signed EDIDP grant agreements is equal to EUR 292, 81 million. The accumulated total eligible costs of these projects, including co-funding from the Member States, equals to EUR 803.13 million. The figures reported for 2020 also contain information on programmes managed by OCCAR (Medium Altitude Long Endurance Remotely Piloted Aircraft System - MALE RPAS, European Secure Software Defined Radio - ESSOR). In the case of MALE RPAS, the data refer only to work packages 1 and 2.
Full metadata available at this address	
Justification of the trend	The indicator is on track (the milestones for 2019 and 2020 has been achieved).

Specific Objective 2: To support and leverage the cooperation between undertakings, including small and medium-sized enterprises and midcaps, and collaboration between Member States in the development of defence products or technologies.

Indicator 1: Average number of Member States in which the undertakings participating in a consortium receiving funding are established

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
						5	5			5
	Actual Progress									Final
						7	7			7
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number (Rounded)
Cut-Off Date	31/12/2020
Data source	Signed EDIDP Grant Agreements
Narrative	
Methodology	The calculation includes beneficiaries, linked third parties, and subcontractors involved in the actions. The progress of this indicator is presented through growth over the years (it is not cumulative).
Link MFF 14-20 / MFF 21-27	The European Defence Industrial Development Programme (EDIDP) supports collaborative defence development actions with an overall budget of EUR 497.1 million over 2019-2020.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The indicator is on track (the milestones for 2019 and 2020 has been achieved).

Indicator 2: Average number of companies involved as consortium members in a funded cooperative project

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

6. The programme contribution to horizontal policies

6.2. Contribution to gender equality

6.2.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	

Score 0: 945.70							
-----------------	--	--	--	--	--	--	--

(*Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significantly impacted**, score 0*: **impact on gender equality to be determined ex post**, score 0: **no significant impact on gender equality**.

By the end of 2021, DG DEFIS procured a pioneering project (financed under the EU space programme for a total value of 289 400 EUR) to set out a demographic categorisation of the workforce employed in the defence, aeronautics and space sector, with a special focus on Equality, Diversity & Inclusion (ED&I). The results are not yet known since the main activities will be rolled out in 2022. The database expected to result from the data collected via anonymous, individual responses will cover the six dimensions of equality will be complemented by a mapping of best-case initiatives on ED&I, at global, international, regional and EU level in these and other related/linked industries. The project contributes to SDG 5 aimed to achieve gender equality and empower all women and girls and to the Commission’s high-level objective of fostering a Union of Equality, complementing initiatives in place to support all people in all their diversity to pursue any chosen path in life, free from discrimination and other unjust biases.

Under the EU COSME programme, dedicated activities were financed for example for the organisation of an event promoting best practices and to support the consolidation of the European Defence Skills Partnership (value EUR 10 000).

Under the Erasmus+ programme, a dedicated Assets+ project for the defence sector was rolled out (value EUR 200 000 for the period 2021-2023). To be noted, this is a co-funded project receiving EUR 4 million EU-contribution from Erasmus+ whereof 5% for equality.

Finally, under the ‘Aerospace & Defence Pact for Skills’, a contribution to the initiative for a ‘**Pact for skills**’ is made via the European Defence Skills Partnership that will be able to access funding made available under several funds i.e. the REACT-EU fund, the European Social Fund Plus and other new MFF programmes (2021-2027), Recovery and Resilience Facility.

COSME, ERASMUS + and Pact for Skills initiatives do not include the gender dimension in the sense of specific skills related to gender. However, several activities having a gender dimension were conducted in the framework of the European Defence Skills Strategy 2020-2024, delivering on the Industrial Strategy, the Skills Agenda, and the Action Plan on Synergies between Civil, Defence and Space Industries.

First, 20% of 2 contracts financed by COSME are spent on gender:

- 20% of a COSME contract for the organisation of an event promoting best practices (total budget EUR 33.000)
- 20% of EUR 15.000 COSME funding for Consolidating the European Defence Skills Partnership, including the identification and online promotion of best practices on gender equality.

Second, about 5% of EU contribution to the Assets+ project building skills in emerging technologies for defence (2020-2023), receiving EUR 4 million EU-contribution from Erasmus+, is spent in promoting gender equality in the sector, ensuring gender equality principles in all deliverables and activities, gender-neutral dissemination materials, etc.

Third, building on the Assets+ project and upscaling it, a partnership representing the entire aerospace and defence manufacturing ecosystem entered the Pact for Skills initiative in November 2020 to support a fair and resilient recovery and deliver on the ambitions of the green and digital transitions and of the Industrial and SME Strategies. The Pact is the first flagship action of the 2020 Skills Agenda and is firmly anchored in the European Pillar of Social Rights. The Aerospace & Defence Pact committed to address the low attractiveness of the sector to women and ensure a sustainable supply of skills with equality and diversity through upskilling and reskilling of 200.000 employees in the next 5 years, and 300.000 young talents to enter the sector by 2030. This represents a private and public investment of an estimated budget of €1 billion, based on an average cost per individual of EUR 2,000. Pact partners will complement own funding with EU funding available under React-EU, European Social Fund Plus, European Regional Development Fund, Recovery and Resilience Facility, Horizon Europe etc.

The overall voted budget for implementation in 2021 under European Defence Fund (945.70 million EUR) was not directly targeted at gender equality initiatives. Nevertheless, indirect contributions supporting the gradual awareness raising of this horizontal Commission priority are continuously made as opportunities arise and when identified by the DG equality coordinator and other staff of the DG. For instance, special mention of gender equality aspects in communication activities and at events on various matters related to the European Defence Fund.

HEADING 6: Neighbourhood and the World

Neighbourhood, Development and International Cooperation Instrument - Global Europe (NDICI - Global Europe)

Lead DG: INTPA

Associated DGs: EAC, ECFIN, FPI, NEAR, REGIO

1. Overview	982

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations	988
3. How is the programme performing ?	996
3.1. Performance	996
3.2. Key achievements	1008
3.3. Evaluations, studies and reports.....	1011
4. Programme 2021-2027 - Key monitoring indicators	1012
Specific Objective 1 :To support and foster dialogue and cooperation with third countries and regions in the Neighbourhood, in Sub-Saharan Africa, in Asia and the Pacific, and in the Americas and the Caribbean; to develop special strengthened partnerships and enhanced political cooperation with the European Neighbourhood, founded on cooperation, peace and stability and a shared commitment to the universal values of democracy, rule of law and respect for human rights, and aiming at deep and sustainable democracy and progressive socio-economic integration as well as people-to-people contacts	1012
Specific Objective 2 :At global level, to protect, promote and advance human rights, including gender equality and the protection of human rights defenders, including in the most difficult circumstances and urgent situations, democracy, and the rule of law, including accountability mechanisms, to support civil society organisations, to further stability and peace, prevent conflict, thereby contributing to the protection of civilians, to address other global challenges such as, climate change, protection of biodiversity and the environment, as well as migration and mobility;.....	1013
Specific Objective 3 :To respond rapidly to: situations of crisis, instability and conflict including those which may result from migratory flows and forced displacement and hybrid threats; resilience challenges, including natural and man-made disasters, and linking of humanitarian aid and development action; as well as the Union’s foreign policy needs and priorities.....	1019
5. Programme 2014-2020 - Key monitoring indicators	1020
Previous Program 1 : European Neighbourhood Instrument (ENI)	1020
General Objective 1 :Establishing an area of shared prosperity and good neighbourliness involving the Union and the partner countries by developing a special relationship founded on cooperation, peace and security, mutual accountability and shared commitment to universal values of democracy, the rule of law and respect for human rights in accordance with the Treaty on EU	1020
Specific Objective 1 :Promoting human rights and fundamental freedoms, the rule of law, principles of equality and fight against discrimination in all its forms, establishing deep and sustainable democracy, promoting good governance, fight against corruption, strengthening institutional capacity at all levels and developing a thriving civil society including social partners.	1022
Specific Objective 2 :Achieving progressive integration into the Union internal market and enhanced sector and cross-sectoral cooperation including through legislative approximation and regulatory convergence towards Union and other relevant	

international standards and improved market access including through deep and comprehensive free trade areas, related institution building and investments, notably in interconnections.	1022
Specific Objective 3 :Creating conditions for the better organisation of legal migration and the fostering of well managed mobility of people, for the implementation of existing or future agreements concluded in line with the Global Approach to Migration and Mobility, and for promotion of people-to-people contacts, in particular in relation to cultural, educational, professional and sporting activities.	1023
Specific Objective 4 :Supporting smart, sustainable and inclusive development in all aspects; poverty reduction, including through private-sector development and reduction of social exclusion; promotion of capacity building in science, education and in particular higher education, technology, research and innovation; promotion of internal economic, social and territorial cohesion; rural development; public health; environmental protection, climate action and disaster resilience.	1024
Specific Objective 5 :Promoting confidence building, good neighbourly relations and other measures contributing to security in all forms and the prevention and settlement of conflicts, including protracted conflicts.	1025
Specific Objective 6 :Enhancing sub-regional, regional and Neighbourhood wide collaboration as well as Cross-Border Cooperation.	1026
Previous Program 2 : European Instrument for Democracy and Human Rights (EIDHR)	1027
General Objective 1 :Enhancing the respect for and observance of human rights and fundamental freedoms, as proclaimed in the Universal Declaration of Human Rights and other international and regional human rights instruments, and strengthening their protection, promotion, implementation and monitoring, mainly through support to relevant civil society organisations, human rights defenders and victims of repression and abuse.	1027
General Objective 2 :Supporting, developing and consolidating democracy in third countries, by enhancing participatory and representative democracy, strengthening the overall democratic cycle, in particular by reinforcing an active role for civil society within this cycle, the rule of law and improving the reliability of electoral processes, in particular by means of election observation missions.	1027
Specific Objective 1 :Support to Human Rights and Human Rights Defenders in situations where they are most at risk.	1028
Specific Objective 2 :Support to other priorities of the Union in the fields of human rights	1029
Specific Objective 3 :Support to Democracy.	1030
Specific Objective 4 :EU Election Observation Missions	1031
Specific Objective 5 :Support to targeted key actors and processes, including international and regional human rights instruments and mechanisms.	1032
Previous Program 3 : Instrument contributing to Stability and Peace	1033
Specific Objective 1 :In a situation of crisis or emerging crisis, to swiftly contribute to stability by providing an effective response designed to help preserve, establish or re-establish the conditions essential to the proper implementation of the Union's external policies and actions in accordance with Article 21 TEU.....	1033
Specific Objective 3 :To address specific global and trans-regional threats to peace, international security and stability.	1034
Previous Program 4 : Partnership instrument for cooperation with third countries (PI)	1035
General Objective 1 :The Partnership Instrument shall support measures that respond in an effective and flexible manner to objectives arising from the Union's bilateral, regional or multilateral relationships with third countries and address challenges of global concern, or ensure an adequate follow-up to decisions taken at multilateral level.	1035
Specific Objective 1 :To support the Union's bilateral, regional and inter-regional cooperation partnership strategies, by promoting policy dialogues and by developing collective approaches and responses to challenges of global concern.	1036
Specific Objective 4 :Enhancing widespread understanding and visibility of the Union and its role on the world scene by means of public diplomacy, people to people contacts, education/academic/think tank cooperation and outreach activities to promote the Union's values and interests.	1036
Previous Program 5 : Development Cooperation Instrument (DCI)	1038
General Objective 1 :Fostering the sustainable and inclusive development in partner countries and regions and the promotion of democracy, the rule of law, good governance and respect for human rights, as foreseen in the TEU, with the primary aim of eradicating poverty.....	1038
Specific Objective 1 :Poverty reduction and fostering sustainable economic, social and environmental development.	1039
Specific Objective 2 :Consolidating and supporting democracy, the rule of law, good governance, human rights and the relevant principles of international law.	1041
6. The programme contribution to horizontal policies	1042
6.1. Contribution to climate mainstreaming	1042

6.2. Contribution to biodiversity mainstreaming.....	1044
6.4. Contribution to gender equality	1045
6.5. Contribution to the sustainable development goals.....	1046

1. Overview

1.1. Challenges

The challenges that need to be tackled by external action have increased over recent years. Rising fragility, instability and conflicts, persistence of authoritarian regimes, poor governance, hostile influence campaigns and disinformation, terrorism, violations of human rights and freedoms, inequalities, including gender inequalities and gender based violence, growing migratory pressures are all part of a complex reality that has been compounded by pandemics, population growth, climate change and environmental degradation. At the same time, the diversity of partners with which the EU cooperates has become much more apparent. Some partners, including some with large populations, are graduating out of the Development Assistance Committee's official development assistance (ODA) eligibility criteria. Other countries have made progress on poverty reduction, only to see it eroded due to economic and environmental shocks, notably in relation to COVID-19. Others are least developed countries that remain locked in fragility and poverty.

The Neighbourhood, Development and International Cooperation Instrument (NDICI) provides for a new broad framework through which the EU can address this evolving landscape and meet expectations and international commitments. With a coherent set of principles, the instrument will allow the EU to pursue and achieve its policy objectives and overcome gaps, overlaps and inconsistencies that exist between today's multitude of geographic and thematic instruments. One broad instrument does not mean a single policy. On the contrary, it will be an enabler for EU action around the world, without boundaries and across themes, depending on the needs of the different countries and regions. More flexibility will enable the EU to react swiftly to evolving needs and priorities, and a simplified management structure will reduce the administrative burden for EU institutions, Member States and implementing partners.

1.2. Mission (General objectives)

The objective of the NDICI is to uphold and promote the Union's values, principles and fundamental interests worldwide in order to pursue the objectives and principles of its external action, as laid down in Article 3(5), Articles 8 and 21 of the Treaty on European Union (TEU). The NDICI thus contributes to the reduction and, in the long term, the eradication of poverty, consolidating, supporting and promoting democracy, the rule of law and respect for human rights, sustainable development and the fight against climate change and addressing irregular migration and forced displacement, including their root causes.

The NDICI will contribute to the promotion of multilateralism, the achievement of the international commitments and objectives that the Union has agreed to, in particular the 2030 Agenda and its Sustainable Development Goals, and the Paris Agreement. It will promote stronger partnerships with third countries, including with the European Neighbourhood based on mutual interests and ownership with a view to fostering stabilisation, good governance and building resilience.

1.3. Specific objectives

The specific objectives of the NDICI are:

1. to support and foster dialogue and cooperation with third countries and regions in the Neighbourhood, in Sub-Saharan Africa, in Asia and the Pacific, and in the Americas and the Caribbean; to develop special strengthened partnerships and enhanced political cooperation with the European Neighbourhood, founded on cooperation, peace and stability and a shared commitment to the universal values of democracy, rule of law and respect for human rights, and aiming at deep and sustainable democracy and progressive socio-economic integration as well as people-to-people contacts;

2. at global level, to protect, promote and advance human rights, including gender equality and the protection of human rights defenders, including in the most difficult circumstances and urgent situations, democracy, and the rule of law, including accountability mechanisms, to support civil society organisations, to further stability and peace, prevent conflict, thereby contributing to the protection of civilians, to address other global challenges such as, climate change, protection of biodiversity and the environment, as well as migration and mobility;

3. to respond rapidly to: situations of crisis, instability and conflict including those which may result from migratory flows and forced displacement and hybrid threats; resilience challenges, including natural and man-made disasters, and linking of humanitarian aid and development action; as well as the Union's foreign policy needs and priorities.

Specific Objectives of NDICI are aligned for DG INTPA with the Specific Objectives (SO) defined in its Strategic Plan¹ 2020-2024. First Specific Objective covers all 16 SOs of the Strategic Plan, the second Specific Objective covers SO 3 to 16 of the Strategic Plan, and SO 3 of NDICI corresponds to SO 15 of the Strategic Plan.

Under the NDICI, priorities would be strengthened through horizontal spending targets:

- At least 93% of Official Development Assistance (ODA)
- At least 20% of the Official Development Assistance (ODA) spending dedicated to human development and social inclusion;
- At least 85% of new actions implemented under this Regulation, should have gender equality as a principal or a significant objective, as defined by the gender equality policy marker of the OECD DAC. At least 5% of these actions should have gender equality and women's and girls' rights and empowerment as a principal objective.
- 30% for climate change objectives; while contributing to the ambition of providing 7.5% of annual spending under the Multiannual Financial Framework to biodiversity objectives in the year 2024 and 10% of annual spending under the Multiannual Financial Framework to biodiversity objectives in 2026 and 2027, while considering the existing overlaps between climate and biodiversity goals.
- Indicatively 10% to support management and governance of migration and forced displacement, as well as to address the root causes of irregular migration and forced displacement when they directly target specific migration challenges.

1.4. Public intervention context

Part Five, Title III, Chapters 1 and 2 of the Treaty on the Functioning of the European Union, provides the legal framework for cooperation with partner countries and regions, for which the EU and its Member States have **shared competences**. The NDICI legislative proposal is based on Articles 209, 212 and 322 of the Treaty on the Functioning of the European Union. It is presented by the Commission in accordance with the ordinary legislative procedure laid down in Article 294 of the Treaty on the Functioning of the European Union and takes the form of a Regulation, ensuring its uniform application, binding nature in its entirety and direct applicability. In line with the principle of proportionality, the proposed Regulation does not go beyond what is necessary to achieve its objectives.

The EU is in a unique position to deliver external assistance for a number of reasons. Its status as a supranational entity brings with it political influence and consequent leverage. The EU has a global presence through its Delegations, which ensures a vast network of information on developments affecting countries worldwide. The EU is also a party to most multilateral processes aiming at addressing global challenges. This allows the EU to be constantly aware of new needs and problems and, therefore, to reallocate resources accordingly. The EU has the opportunity to establish dialogue and cooperation with international and regional organisations, and can provide added value based on the volume of resources channelled through its instruments, its relatively flexible modes of management and the predictability of resources over the period of the Multi-annual Financial Framework.

Coordination between EU action and the actions carried out by the Member States are increasing, taking the form of joint programming and joint implementation, where possible, as part of the Team Europe approach. This also enhances and facilitates dialogue and cooperation with partner countries. The NDICI supports the implementation of the reviewed European Neighbourhood Policy (ENP), which requires from EU institutions and Member States a mutual duty of cooperation. The EU is also able to complement Member States activities in dealing with crisis or in the event of particularly costly interventions. In some areas where Member States are not active, the EU remains the main, and sometimes the only actor to intervene. This is the case, for instance, in sensitive contexts such as the defence of human rights and electoral observation missions.

1.5. Actions

The NDICI will have three components:

1. a geographic pillar, which will cover cooperation with the European Neighbourhood, sub-Saharan Africa, Asia and the Pacific and the Americas and the Caribbean. This will account for at least 75% of the total funds available under the NDICI;

¹ **SO 1** - A new partnership agreement with the countries of the Organisation of African, Caribbean and Pacific States (OACPS) is concluded and operationalised; **SO 2** - A new joint AU-EU Partnership agenda is concluded and operationalised; **SO 3** - A Team Europe approach is strengthened by working better together with EU Member States in joint programming and joint implementation; **SO 4** - Sustainable Partnerships with International Financial Institutions (IFIs), the UN and other multilateral partners around EU Priorities are built; **SO 5** - Partner Countries capacities to adapt to climate change and reduce greenhouse gas emissions are increased; **SO 6** - An ambitious agenda for the conservation, restoration and sustainable management of natural resources and ecosystems, and for halting biodiversity loss and wildlife crime is adopted and implemented; **SO 7** - A partnership for a global green energy transition from fossil fuels to sustainable energy is mobilised; **SO 8** - Partner countries capacities in the transition toward green and circular economies are strengthened; **SO 9** - Digital governance, policy and regulatory frameworks are improved and digital infrastructure and affordable and secure broadband connectivity are enhanced; **SO 10** - The digital skills of individuals needed to fully capitalise on the digital transformation are improved; **SO 11** - The provision and quality of public and private digital services in partner countries are improved; **SO 12** - Mobilisation of public and private financing for sustainable development is enhanced contributing to decent jobs creation, and the reduction of inequalities; **SO 13** - Comprehensive and balanced Migration Partnerships with priority partner countries are supported in line with sustainable development and poverty reduction goals; **SO 14** - Human development for all is improved, in particular for youth, women and girls, and the most marginalised and vulnerable populations; **SO 15** - Governance, resilience and peace building is enhanced through all available instruments in fragile countries or affected by/under risk of conflict; **SO 16** - Promotion and protection of human rights and fundamental freedoms; equality, democracy and the rule of law are enhanced and civil society participates in democratic and development processes in an enabling environment

2. a worldwide thematic pillar that will complement the geographic pillar with specific programmes on human rights and democracy; civil society organisations, peace, stability and conflict-prevention as well as global challenges.

3. a worldwide rapid response pillar to contribute to: peace, stability and conflict prevention; strengthening resilience and linking humanitarian aid and development action; and addressing EU foreign policy needs and priorities.

The NDICI will also include an emerging challenges and priorities ‘cushion’, which will provide the opportunity to top-up any of the three pillars with extra resources, as and when necessary, thus enhancing the EU’s capacity to respond effectively.

Under the specific provisions for the Neighbourhood area, the NDICI would support implementation of the performance-based approach through supplementary allocations to the partner countries listed in NDICI Annex I and contribute to cross-border cooperation programmes.

The NDICI will contain an investment framework for external action to raise additional financial resources for sustainable development from the private sector. It will consist of the European Fund for Sustainable Development (EFSD+), which is part of the External Action Guarantee, with the aim to:

- support micro enterprises and SMEs;
- promote decent job creation;
- strengthen public and private infrastructure;
- foster the green and digital transition;
- foster renewable energy and sustainable agriculture, etc.;

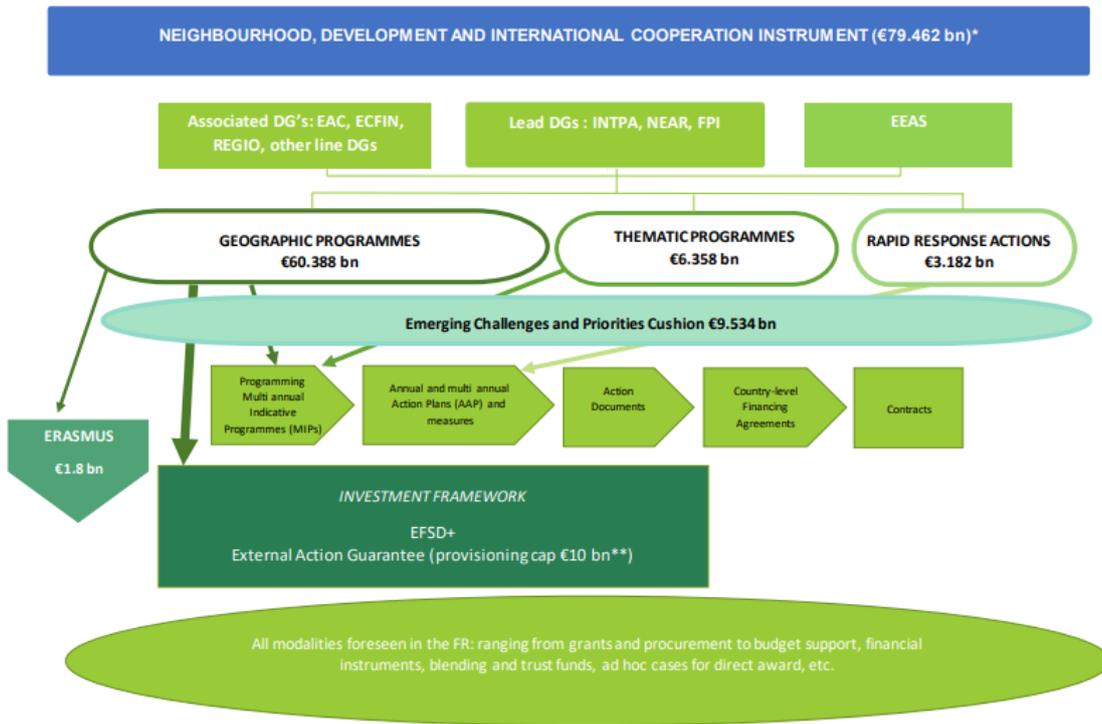

Together with the private sector and thanks to the leverage effect, this may mobilise more than half a trillion euro in investments for 2021-2027. To ensure that the EU supports those countries that need it most, particular attention is given to addressing investment needs in the Neighbourhood, Africa, as well as in countries experiencing fragility or conflict, least-developed countries and highly indebted poor countries, as well as on regions with critical infrastructure and connectivity needs.

1.6. Delivery mode

Direct management by the Commission from Headquarters and/or through the Union Delegations and under indirect management by entities, such as the EU member States agencies or international organisations, that ensure a level of protection of the EU’s financial interests equivalent to that under direct management. Indirect management may also be entrusted to partner countries or the bodies they designate. Innovative financial instruments including in partnership with the European Investment Bank, Member States’ financial institutions and other international financial institutions will be used for blending activities.

The lead services involved in implementing the instrument are DG INTPA, DG NEAR, and FPI, in cooperation with the EEAS and other Commission services, especially on external dimensions of internal policies like climate, environment, education, energy and digital.

1.7. Graphic overview of the programme structure

*Min. 93% of Official Development Assistance (ODA) eligibility
 ** from NDICI and IPA envelopes

Final structure of external instruments for the 2021-27 period

Total Heading VI: €110.597 bn in current prices

*Min. 93% of Official Development Assistance (ODA) eligibility

NDICI TARGETS 30% of total amount for climate-related actions, at least 20% of ODA-eligible funds for social inclusion and human development (including basic social services), indicatively 10% of total amount for migration-related actions, at least 85% of actions scoring G1 or G2 at the DAC gender equality marker (of which at least 5% for G2).

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
-------------	-----------------------	--------------------------------

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitment	10 834.0	79 756.3	14%
Payments	1 276.7		2%

The entry into force of the Neighbourhood, Development and International Cooperation Instrument-Global Europe paved the way for the adoption, in record time, of most of the relevant multi-annual indicative programmes (MIPs) and Annual Actions Plans (AAPs) as well as individual and special measures for countries, regions, ERASMUS+ and thematic programmes by the end of 2021. All these programmes will significantly contribute to climate actions, social inclusion and human development, including education, migration and forced displacement and to achieve gender equality and biodiversity targets. The MIPs include the identification of “Team Europe Initiatives” together with Member States, their agencies and European financial institutions, with the aim of achieving a maximum transformative impact in partner countries.

The operationalisation of the new external financing instruments required a timely completion of a number of procedural steps having budgetary, financial and legal implications. The legal and financial framework for the implementation of EU cooperation for the 2021-2027 period, in particular NDICI-Global Europe, was adopted in June 2021 and the complementing delegated act was adopted soon after in July.

In some cases, the policy framework were renewed either at regional and country level, while for the neighbourhood countries negotiations on the Joint Documents progressed at different speeds. In several instances the political relations with some partner countries did not allow for the rapid progress and required to constantly adapt programming to the evolving political situations. As a consequence, EUR 1.6 billion has been carried-over based on the Article 30 of the NDICI – Global Europe regulation and will be implemented in the first half of 2022.

In total, the services of the Commission involved (EEAS, DG INTPA, DG NEAR and FPI) managed to complete the adoption of 86 country, 1 multi-country² and 5 regional complemented by ERASMUS+ and 4 thematic MIPs and the subsequent Annual Action Plans (AAPs) and other measures authorising the use of funds. Their adoption has been preceded by thorough consultations with partner countries, Member States and other stakeholders (civil society organisations, including women and youth organisations, local authorities, representatives from the private sector, the UN and other like-minded partners). The total amount of MIPs adopted is EUR 30.6 billion. Here are the details:

MIPs	Country/multi-country	Regional	
Neighbourhood	2	2	4
Sub-Saharan Africa	44	1	45
Asia and the Pacific	24	1	25
Americas and the Caribbean	17	1	18
	87	5	92
MIPs amounts (EUR millions)	Country/multi-country (allocations 2021-2024) ³	Regional (allocations 2021-2024 for Neighbourhood, 2021-2027 for the others)	
Neighbourhood	820	3 284	4 104
Sub-Saharan Africa	9 274	10 242	19 516
Asia and the Pacific	2 320	2 344	4 664
Americas and the Caribbean	1 074	1 280	2 354
	13 488	17 150	30 638

² The multicountry MIP covers 13 Small Islands Developing States of the Pacific: Kiribati (LDC), Marshall islands (UMC), Micronesia (LMC), Nauru (UMC), Palau (UMC), Samoa (UMC), Solomon Islands (LDC), Tonga (UMC), Tuvalu (LDC), Vanuatu (LMC), Fiji (UMC), Cook islands (HIC) and Niue (UMC).

³ Costa Rica, Indonesia, Kazakhstan, Malaysia, Seychelles, Thailand and Turkmenistan have a MIP limited to a cooperation facility and an allocation decided for the whole 2021-2027 period. Mauritius has a full country MIP but an allocation decided for the whole 2021-2027 period, given its small size (EUR 9 million).

Ten MIPs under the geographic pillar remain in the pipeline for adoption in the first half of 2022 depending on the progress in negotiations with the partner countries.

Regarding the financial breakdown of the country MIPs per country classification⁴:

	Number of MIPs	Amounts in EUR million
High Income Countries	1	2
Upper Middle-Income Countries	25	1,080
Lower Middle Income Countries	23	3,936
Least Developed Countries	37	8,353
	86	13,371

The adopted country, multi-country and regional MIPs will deliver on the overarching EU policy objectives:

- Green deal features in all MIPs;
- Digital agenda features in over 80% of the MIPs;
- Sustainable growth and decent jobs features in around 70%;
- Migration and forced displacement is covered by more than half;
- Governance, peace and security features in nearly 90%;
- Social inclusion and human development covered in more than 90%; in particular education is addressed in 80%;
- Gender is well mainstreamed in all MIPs.

Four thematic MIPs complement these geographic MIPs: Human Rights and Democracy (EUR 1.5 billion); Civil Society Organisations (EUR 1.5 billion); Peace, Stability and Conflict prevention (EUR 871 million) and Global Challenges (EUR 3.6 billion). In addition, the Erasmus+ MIP was adopted earlier in 2021 and benefits from the financing coming from the non-neighbourhood geographic envelopes with an amount of EUR 1.79 billion, the complementary funding is coming from IPA III.

In addition, the 2021 Annual Action Plans for programmable actions for conflict prevention, peace-building and crisis preparedness and for addressing global, transregional and emerging threats were adopted. Furthermore, by the end of year, 42 new crisis response actions and 10 actions responding to global threats were launched under the rapid response pillar of NDICI-Global Europe. The Resilience component of the Rapid response actions was used to finance the individual measure to support inclusive quality education for refugees in Turkey.

In total, by the end of 2021, 14% of the total 2021-2027 envelop has been committed, which corresponds approximately to one seventh of the seven-year MFF.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

2.2.1 Previous programme 1: Development and Cooperation Instrument (DCI):

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitment	19 969.4	19 970.1	100%
Payments	13 221.3		66%

At the end of 2021, the total amount paid under the DCI is EUR 13.2 billion. The amount left to be contracted and/or paid is EUR 6.7 billion, of which EUR 2.0 billion expected to be paid in 2022 (voted budget) and EUR 1.3 billion in 2023 (payment appropriation request). These funds will be spent on the wide range of ongoing projects in all countries in which the DCI is still active. The payments on the DCI are expected to be closed by end 2027; payments should be decreasing in the coming years. The estimated breakdown of the funds to be disbursed by main programmes as from 2022 are as follows:

Asia	45 %
Latin America	13 %
Environment and climate change	8 %
Africa	8 %
Food and nutrition security and sustainable agriculture	8 %
Civil society and Local authorities in development	8 %
Sustainable energy	5 %
Migration and asylum	3 %
Human development	2 %

⁴ The allocation of EUR 117 million for multi-country covering 13 Pacific States is not included as the countries have different status.

2.2.1.1 DCI Geographic

2.2.1.1.1 DCI Latin America

The payments processed in 2021 under the Completion Budget Line represents the totality of allocations, amounting to EUR 303 million.

The importance of sustainable investments continues to grow. The DCI contribution through the Latin America Investment Facility (LAIF) continued during 2021. EUR 62.6 million were committed in 2021 with 9 new actions, 7 under the bilateral envelope (EUR 48.9 M) and 2 under a multi-country approach (EUR 13.7 M). The level of investments leveraged with this contribution amounts to approximately EUR 3 billion. As from 2021, Brazil, Colombia, Costa Rica, Cuba, Paraguay and Peru are benefiting from these new actions.

Budget Support remains an important implementation modality for the EU partnership with Latin America. In 2021, around 20% of all payments were related to Budget Support operations. The support to partners' policy implementation through the national systems continues to be a win-win approach. It caters for the strengthening of the policy dialogue, a focus on key reforms and on the improvement of public financial management systems, domestic revenue mobilisation, transparency and accountability.

The EU Trust Fund for Colombia continued to support the implementation of the peace agreement between the Colombian Government and the FARC (the Revolutionary Armed Forces of Colombia). The Trust Fund has currently 34 projects ongoing for a total amount of EUR 130 million. Main results achieved are in the area of sustainable rural development and socio-economic reintegration of former FARC-EP (the Revolutionary Armed Forces of Colombia – People's Army) combatants.

The payment appropriations for 2023 will be split between the continuation of actions under the 2014-2020 programme and the initial disbursements for the operationalisation of AAPs under the NDICI-Global Europe 2021-2027.

2.2.1.1.2 DCI Asia and Middle East

In 2021, a total amount of EUR 980 million was contracted in order to implement the decisions adopted under the DCI. Important contracts were signed, such as the ASEAN Catalytic Green Finance Facility (ACGF) (EUR 51.9 million), providing blended investment funds and technical assistance for origination, structuring and implementation of green infrastructure projects. The overall mission of the ACGF is to accelerate the development of green infrastructure in ASEAN by better utilizing public funds to create bankable projects and catalyse private capital, technologies and management efficiencies. The expected impact of the fund is to support 'ASEAN countries' shift to low-emission, climate-resilient infrastructure development. Another important contract was the support to Afghanistan (EUR 197 million).

Given front-loading of disbursements in 2020 to cope with the first impact of COVID as well as the cancellation of Budget support in Afghanistan and suspension in Myanmar, disbursements of EUR 291 million in 2021 were significantly lower than 2020 (EUR 578 million). Nevertheless, budget support represented 26% of all payments.

As far as support to investments through blending is concerned, there was full absorption of all related to blending available amounts under the MFF 2014 – 2020 by the end of 2020. The EU contribution to investment and blending under the investment facilities for Asia and Central Asia totalled EUR 423 million in the period 2017-2020, compared to EUR 193 million for the period 2014-2016. The amount for 2017-2020 has been fully contracted.

The requested payment appropriations for 2023 on the Completion line will cover the continued implementation of actions under the 2014-2020 programmes.

2.2.1.1.3 DCI South Africa

The DCI South Africa commitment appropriations 2014-2020 were fully used and implemented as planned through a comprehensive programming process. The result of the process has been a set of programming documents that define per bilateral/regional/thematic programme: the priority areas for financing, the specific objectives, expected results, indicators and indicative allocations. There is no need for corrective action at this stage.

In 2021, payment appropriations were used for Budget Support programmes such as: the Education for Employability Programme and the Support Programme to the implementation of the EU-SADC Economic Partnership Agreement. Other programmes not using Budget Support include the Dialogue Facility, the Capacity Building for Employment Promotion and the Accountability Programme.

In 2022, payment credits will be used for Budget Support programmes such as the Support Programme to the National System of Innovation, the Education for Employability Programme, the Support Programme to the Wine and Spirits Sector, and the Gender Equality and Women Empowerment Programme. Other programmes not using Budget Support include the Technical Assistance Facility to support sustainable infrastructure.

In 2023, payment credits will continue to be used for planned payments via remaining Budget Support programmes, and remaining programmes funded under other aid delivery mechanisms.

2.2.1.2 DCI Thematic

2.2.1.2.1 DCI Global Public Goods and Challenges (GPGC)

Environment and Climate change

For the 2014-2020 period, out of a total EUR 49.9 billion in EU development cooperation managed by DG INTPA (under DCI and EDF), climate change-related aid amounted to EUR 11.8 billion. This corresponds to 23.6% of total commitments.

In 2022, the remaining payment appropriations requested for the Environment and Climate Change DCI completion line, as well as those for Sustainable Energy DCI completion line, will be used to pursue the implementation of the existing projects under the DCI GPGC Environment and Climate Change.

The 2021 and 2022 payment appropriations for the completion budget lines will continue to cover the implementation of projects, such as on international environmental and climate governance through targeted support to multilateral environmental agreements and processes. This will promote a switch to green finance, enable a future with forests, support EU action for sustainable landscape management, develop knowledge-based management of natural ecosystems for sustaining green growth and ensure stability, tackle emerging threats to biodiversity and security in high value ecosystems, as well as ensure support to water for Prosperity, Peace and Planet.

Sustainable Energy

Programme implementation is on track and in line with the Multi-annual Indicative Programme 2019-2020 for Sustainable Energy.

Under the 2022 payment appropriations for the completion budget lines, the implementation of projects is on track. Payment appropriations for 2021 under DCI/GPGC have been disbursed. The smooth implementation of projects committed under the previous MFF will continue. The COVID-19 crisis did not have a major impact on the overall implementation, except for some delays in construction and refinancing needs. The payment appropriations requested for 2023 will also cover the implementation of projects committed under the previous MFF. Appropriation on this completion budget line will cover the continuation of the programmes in support of international partnerships in the area of sustainable energy, including for the successful continuation of investment de-risking programmes such as Climate Investor One or Electrification Financing Initiative.

Human Development

In line with the United Nations 2030 Agenda for Sustainable Development and the new European Consensus on Development⁵, the programme sought to systematically integrate and balance the economic, social and environmental dimensions of sustainable development in the implementation of the GPGC. Across its five action areas, it promoted human development, sustainable investments and job creation, strengthen state and societal resilience, and addressing irregular migration and forced displacement, contributing to sustainability and security. As per the recommendations of the Mid-term review⁶, more attention was given to promoting interlinkages and cross-sectoral action at the nexus between different action areas that could contribute to multiple SDGs; and to enhance complementarity, coherence and synergies between thematic and geographic programmes. Building on lessons learned, actions seek to 'enhance the role of the EU as a global actor in the delivery of the 2030 Agenda and the Paris Agreement to help eradicate poverty and achieve sustainable development'.

- Health

Implementation and associated payments continued in 2021. The Commission contributed to the Global Fund against AIDS, Tuberculosis and Malaria (the Global Fund) and to GAVI, the Vaccine Alliance (GAVI). The Global Fund has saved 38 million lives since 2002. Only in 2019, 18.9 million people were on life-saving HIV treatment; 5.7 million treated for tuberculosis; and 160 million mosquito nets distributed. Overall, the number of deaths caused by AIDS, TB and malaria went down by 40 % since 2002 in countries where the Global Fund invests. GAVI spends about USD 1.5 billion per year in the 73 poorest countries and helped to immunise 760 million children, preventing more than 13 million possible deaths, with the aim of vaccinating another 300 million children in 2021-2025. Today about half of the world's children receive vaccines supported by GAVI. It will also take on a new role in polio eradication. GAVI is also hosting the COVAX Facility as the leading global purchasing mechanism for COVID vaccines that by January 2022 has delivered more than 1 billion vaccine doses to the poorest countries with the aim to help all countries achieve the target vaccination rate of 70% by mid-2022 in every country.

Support to health systems strengthening including pandemic preparedness has been implemented through the Universal Health Coverage Partnership with the World Health Organisation. The programme has assisted ministries of health in 115 countries to build robust health systems and secure access to equitable health for 2 billion persons in order to respond and recover from the pandemic quickly.

The UNFPA Supplies Partnership delivers a choice of modern contraceptives and life-saving maternal health medicines into the hands of adolescents and women who need them most through strengthening supply chains and reproductive health services. Since 2008, UNFPA Supplies is estimated to have prevented: 89 million unintended pregnancies, 26.8 million unsafe abortions, 254,000 maternal deaths, 1.6 million child deaths.

2022 payment appropriations will cover implementation of ongoing contracts.

⁵ OJ 2006/C 46/01

⁶ COM(2017)720 of 15/12/2017

- Education

Commitments were adopted as planned and payments had to be frontloaded following increased disbursement by global education initiatives due to extraordinary COVID-19 responses. EU involvement in financing and governance of the Global Partnership for Education (GPE) and the Education cannot Wait (EcW) platform made it possible to make progress in addressing the global learning crisis, in particular regarding vulnerable groups in Low Income Countries (LICs) and children in situations of crises. Both initiatives put in place rapid COVID-19 responses during 2020 to help countries mitigate the impact of the pandemic and to ensure continued learning during school closures. GPE allocated additional grants to more than 66 countries, and this led to greater disbursements than planned. The EU's contributions to GPE contributed to achieving a large part of the GPE's milestones, across key dimensions such as education policy, management, access, quality, equity and learning outcomes. EcW has improved access to quality education for up to 3.4 million children and young people affected by crisis in more than 30 countries, of which nearly half are girls. In addition to first emergency responses, multi-year resilience programmes have been launched to address challenges in protracted crises situations.

2022 payments will honour remaining contracts from the previous MFF (such as the Teacher Initiative in Sahel, the Gender at the Centre Initiative and Building Resilience through Education in crises).

- Culture:

Since 2018 the "Investing in Culture and Creativity" programme funds three actions reinforcing cultural and creative sectors to enhance their contribution to sustainable development. The EU-UNESCO Expert Facility is supporting 12 countries to develop appropriate regulatory frameworks for cultural and creative sectors, to boost their revenue potential. The selection process was complex and delays incurred slowing down disbursements, however corrective actions were taken. The 'Investing in Culture and Creativity' programme with UNESCO shows promising results in relation to cultural tourism and community development along the Silk Roads and a top-up was committed as planned in 2020. The project reoriented to budget to adapt its activities due to COVID-19 pandemic. This complements another action with the International Trade Centre that is helping to provide livelihoods to women working in the textile and fashion sectors in African and Asian countries. Intercultural and interfaith dialogue projects support community dialogues and cultural interventions with and for disadvantaged communities, women, youth and refugees and are now reaching their final year of implementation, showing promising results for the promotion.

2022 payment appropriations will cover implementation of ongoing contracts.

- Gender equality (Gender Action Plan) and Elimination of Violence against Women and Girls (EVAWG)

The challenges to gender equality are as varied as the contexts in which they emerge and call for context specific responses. There is, however, not a single country in the world that is close to achieving by 2030 gender equality and empowerment of all women and girls. Some progress has been achieved, but deep-rooted inequalities persist aggravated by the current COVID crisis. The EU is a global front-runner in promoting gender equality as a key political objective of its external action and common foreign and security policy. The EU pursues a three-pronged approach, combining gender mainstreaming, targeted actions and political dialogue in its Gender Action Plan III (2021-2025) which was adopted on November 25, 2020 and which started implementation in 2021.

In 2020, the number of new external actions that contributed to gender equality and women's empowerment increased up to 68% with gender sensitive commitment amounting to EUR 8.5 billion.

During 2021, EU Delegations have submitted country level implementation plans (CLIPs) with concrete actions to improve gender equality and women's and girl's empowerment and to roll out the Gender Action Plan in their country contexts through political and policy dialogues, outreach and communication activities, consultations and partnerships with the national gender machinery and women's CSOs and funding of specific actions. The CLIPs lead a more strategic EU approach, a better cooperation with EU Member States, strengthened partnership with and increased ownership by local actors.

Programmes that focus on preventing and responding to violence against women and girls continued to be one of the principal objectives. During 2021 the EU-UN Spotlight Initiative, launched at the end of 2017 with an investment of nearly 500mio EUR, continued its implementation in 26 countries and 6 regions, a mid-term assessment was finalized in 16 countries and all of these countries started to implement the second phase. The same exercise also started at the end of 2021 for the Caribbean, Pacific and Central Asia and the grounds were prepared for the extension of the current Initiative. The 2020 results showed solid results. Some examples: 84 laws and policies strengthened or signed across 17 countries, 22% increase in number of convictions of perpetrators compared to 2019 and over 650.000 women and girls were provided with support following gender-based violence.

- Child wellbeing

On child wellbeing, the previous years have been mainly dedicated to the implementation of four regional programmes to promote and protect specific children rights, which all ended in 2020 or before. These programmes are: the EU-funded Joint Programmes with UNICEF/UNFPA (United Nations Population Fund) to end Child marriage and to abandon Female Genital Mutilation (FGM), which have both played a key role in maintaining the momentum to end child marriage and FGM by promoting the global agenda and positioning policy and legislative support, as well as by demonstrating innovative community action. The EU-funded UNICEF programme "Towards Universal Birth Registration in Africa: Burkina Faso, Cameroon, Uganda and Zambia" which has recorded tangible results (see section Key achievements) and finally the "EU-funded Global Programme to Prevent Son Preference and Gender-biased Sex Selection: Improving the sex ratio at birth in selected countries in Asia and the Caucasus". A second phase of

this programme for Armenia, Azerbaijan and Georgia has started in September 2020. Details of these four programmes are in section Key achievements, below. Given that these projects ended in 2020 they were not affected by the COVID crisis as such.

In 2020, funding has been secured for four new projects starting in 2020 and 2021. All of them integrate the consequences of the COVID-19 and explore alternative modalities where needed. The four programmes are:

1. The "Access to Justice for Children in the move in West Africa" project with UNICEF (EUR 7.89 million) which aims at improving children's access to child-friendly justice through age and gender-sensitive juvenile justice mechanisms and alternatives to detention of children on the move and vulnerable children in West Africa.
2. The "Addressing Gender-Biased Sex Selection and Related Harmful Practices in the South Caucasus" project with UNFPA (EUR 2 million) is the continuation of the previous Programme on Son Preference and will scale up the successful results and effective practices achieved during Phase I, address gaps, and foster gender-transformative approaches to eliminate discriminatory social norms and harmful practices by scaling up effective, evidence-based interventions.
3. The "Reparations and redress for victims of conflict-related sexual violence" project with the Global Survivors Fund (EUR 2 million) aims to enhance survivors' of conflict-related sexual violence access to reparations and other forms of redress globally, including where the States or other parties responsible for the violence are unwilling or unable to provide reparations.
4. The "Joining Forces for Africa (JOFA) - protecting children during the COVID-19 crisis and beyond" project with Joining Forces (EUR 10 million) which aims at strengthening national and local child protection and response systems during the COVID-19 crisis and recovery phase. This action is implemented in Ethiopia, Mali, Senegal, Kenya and Uganda.

- Employment, decent work, skills, social protection and social inclusion:

Social Protection payment appropriations for 2021 and 2022 will be used to support the ongoing thematic programme "Improving synergies between Social Protection and Public Finance Management".

- Growth, jobs and private sector engagement

Many programmes funded under the Global Public Goods and Challenges (GPGC) of the previous Multiannual financial framework (MFF) and under 11th European Development Fund (EDF) are still running into new MFF.

Under the 11th EDF, contributions to global trust funds (Standard and Trade Development Facility, the Enhanced Integrated Framework and the Trade Facilitation Support Programme) and contributions to global flagships with international organisations, namely the contribution to the ITC Programme Market Access Tools, will continue to be implemented during the coming years. Similarly, 11th EDF intra-African, Caribbean and Pacific (ACP) programmes are being implemented (Investment Climate Reform Facility, Business Friendly, Rapid Response Window (RRW), Informal Economy) with implementing partners such as the World Bank, International Trade Centre, EU Member States development agencies and the UN agencies. In addition, several projects are in the pipeline to be contracted: EUR 7 million CaribeEquity project, EUR 2.8 million Investment Facilitation programme and EUR 20 million trade finance programme which scope and implementation is still to be discussed.

Under the Global Public Goods and Challenges of the previous MFF funds committed in 2020 could still be contracted until the end of 2021, which was the case for the second phase of the Trade, Private Sector Development and Engagement Facility, the implementation of which will cover next three years. Projects contracted under the previous MFF continued running; for example promotion of women's economic empowerment; promotion of benchmarking framework to compare companies' performance and impact towards the achievement of the SDGs; and strengthening the EU's engagement on the transparent, responsible and sustainable management of raw materials, through the support to the Extractive Industries Transparency Initiative (EITI), the European Partnership for Responsible Minerals (EPRM) for the 3TG, and its participation in the multi Donors Trust Funds on the Extractive Global Programmatic Support.

Food and nutrition security and sustainable agriculture

The 2021 payment appropriations on the DCI Food security, nutrition and agriculture budget line were fully executed. The 2022 and 2023 payment appropriations will cover actions in the areas of Sustainable Agri-Food Systems and Fisheries.

Migration and asylum

Migration and forced displacement remained as one of the key policy priorities for the EU and this was also reflected in the NDICI-Global Europe Regulation, which includes an indicative 10% spending target on migration. As a result, migration and forced displacement considerations were fully integrated into geographical programming documents, while the allocation for funding on migration under the Global Challenges MIP 2021-2027 was drastically reduced.

While no new migration actions were launched under Global Challenges in 2021, one action on Internal Displacement and in particular Disaster and climate related displacement, will be adopted in 2022.

Civil society in development

Engagement with civil society remained crucial in 2021 in response to the further deterioration of shrinking civil space. During 2021, EUR 153 million were contracted for the programme CSO-LA. The 2020 funds were fully committed at country and global level and the 2021 payments under the CSO budget line reached EUR 252,6 million; an increase compared to 2020 (EUR 221 million).

2021 was mostly dedicated to the preparation, finalisation and adoption of the CSO MIP and MAP of the new instrument NDICI.

At global and regional level, 2021 payment appropriations have been used in the context of existing Framework Partnership Agreements. 2 FPA were subject to new funding through grants. An evaluation of the support to the Framework Partnerships Agreements (FPA) was finalized early 2021. 2 technical assistance facilities were contracted. The Roadmap Facility pursued the assistance to EU Delegations in the renewal of their CSO Roadmaps (nearly 70 roadmaps have been renewed). Finally, the Commission pursued the support to the Policy Forum on Development. INTPA dialogue with civil society organisations and local authorities through the Policy Forum on Development focused on future EU priorities and programming.

At country level, during 2021, EU Delegations implemented the CSO programme with the priorities foreseen by the Multiannual Action Programme. 150 contracts were finalized for a total amount of EUR 86 million.

With regard to Development Education and Awareness Raising (DEAR), two contracts amounting to EUR 3,1 million were signed in 2021 (one contract with GENE and a presidency contract “Towards an open, fair and sustainable Europe in the world - Third Trio EU Presidency Project – Build up phase”).

Local authorities in development

Under the program Partnerships for Sustainable Cities a call for proposal was launched in February 2021 and successfully concluded in December 2021 with 15 new partnerships set up for a total budget of EUR 39 million and attributed to Delegations for management. With the Support measures of the MIP 2018-2020 and with ATA credits, the Commission established a coordination committee of the 57 partnerships grants, as well as an agreement with the OECD for a homogeneous monitoring of the partnership and their contribution to SDG 11 and SDG 17 implementation and SDGs localization.

In November, the Commission organized together with the Committee of Regions the last edition of the “Cities and Regions for International Partnerships” Forum - focusing on two key themes as “Sustainable & Green Recovery” and “Participatory Citizenship & Good Governance”. The Forum registered a record breaking of 700 registrations, representing local and regional authorities' representatives from more than 80 countries. The Forum was an excellent opportunity to assess the relevance of the support to be given to local and regional authorities and the potential of their peer-to-peer cooperation within the programming and implementation of EU funds under the 2021-2027 Multiannual Financial Framework.

The Specific Grant Agreements concluded with five signatories of the Framework Partnerships Agreements were implemented focusing most of their activities on support to Local Authorities and their associations in facing the COVID crisis and preparing the stakeholders to the new approach of the NDICI-Global Europe regulation with the geographisation of the Local Authorities thematic budget line. In 2022, the 5 Strategic Partnerships with the Regional and Global Associations of Local Authorities (operating and action grants) will be renewed under the Budget 2021-27 for a total amount of EUR 50 million.

2.2.1.2.2 DCI Panaf

The Pan-African Programme is mostly implemented by the African Union Commission or specialised International Organisations in fields where they provide an added-value or have a recognised international mandate. In areas such as higher education, statistics, digitalisation, economic integration, aviation, where the main objective is to share with the African partners our European expertise, technologies and know-how, the contribution to Commission implementing agencies or Member States' development agencies is the favoured modality.

Within the Pan-African Programme, the DCI budget financed programmes contributing to the strategic areas of the Multi-Annual Indicative Programmes 2018-2020, in line with the Joint Africa-EU Strategy (JAES). Over 2018-2020, actions were particularly focused on higher education, economic integration, migration, digitalisation, statistics, infrastructures and governance.

At the end of 2020 all budget of the Pan-African Programme has been committed. The implementation of related actions will continue at least for the next 5 years.

(The payment appropriations of the year **2022**, for DCI Panaf (on the completion line) will be used for ensuring the implementation of various projects mainly included in the Annual Action Plans for 2019 and 2020, in the areas of infrastructures, higher education, governance, statistics, economic integration and digital connectivity.)

Regarding the year **2023**, the request of payment appropriations for DCI Panaf reflects the need to continue the implementation of programmes in the above mentioned areas.

2.2.2 Previous programme 2: European Instrument for Democracy and Human Rights (EIDHR)

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitment	1 250.3	1 250.6	100%

Payments	972.0	78%
-----------------	-------	-----

The amount left to be contracted and/or paid is EUR 203 million, of which EUR 98 million expected to be paid in 2022 (voted budget) and EUR 30 million in 2023 (payment appropriation request). These funds will be spent on the wide range of ongoing projects in the countries in which the EIDHR is still active. The Commission expect the closure of the EIDHR by end 2027.

In 2021 the programme supported 132 new initiatives led by civil society organisations, in particular local ones, in over 70 partner countries under the 2020 CBSS (Country Based Support System, overall allocation EUR 99.8 million). They joined the portfolio of ongoing projects at country level that will be managed by EU Delegations.

The activities which are still to be done in 2022 and 2023 in relation to the 2014-2020 EIDHR are mostly:

- the implementation of a number of Flagship initiatives on topics such as emergency assistance to human rights defenders worldwide, the human rights crisis facility for the most difficult human rights situations, pilot projects on parliamentary strengthening (INTER PARES) through peer-to-peer support between EU Member States and parliaments from partner countries;
- the implementation of the four contracts awarded in the call for proposals launched in 2020 with the objective of countering the shrinking space for civil society (EUR 10 million);
- the implementation of the CBSS ongoing portfolio of projects managed by EU Delegations (699 projects);
- continue our support to raising the voice of indigenous people through the Navigator;
- Implementation of the actions described above will continue throughout 2023.

With respect to the Elections Observation missions’ component, Implementation depends on the actual deployment of missions. The total number of processes observed and assessed by the EU depends on:

- the political agenda, as defined by the High Representative/Vice President;
- any changes (postponements/cancellations) in the relevant electoral calendars/processes;
- the annual budget available;
- the EU’s capacity to deploy electoral missions in view of the operational and security (including health) conditions in the countries concerned.

Unstable security situations or changes in the electoral calendar may cause cancellations of the missions and thus lead to lower implementation rates.

The COVID-19 crisis has kept deteriorating the situation of Human Rights and Democracy worldwide in 2021. A number of emergency initiatives launched in 2020 after the start of the worldwide health crisis were implemented throughout 2021, such as the support to journalists in Africa and Latin-America and to child protection systems in Africa. The programme also contributed to greater democratic accountability of public institution through a pilot project (SANCUS).

In addition, in 2021 support was continued to the "Global Monitor of COVID-19’s Impact on Democracy and Human Rights", a “one-stop” online global monitoring platform (a "tracker of trackers"), implemented by International Institute for Democracy and Electoral Assistance (IDEA), with data and brief analysis by country, for 162 countries around the world.

The COVID-19 crisis has, however, inevitably affected project implementation and a number extension riders and budget reallocations had to be signed. Despite the ongoing pandemic, mitigation measures for security and safety enabled to support 12 electoral processes and to deploy 21 missions under the EIDHR. Several Election Follow-up missions were postponed to 2022.

2.2.3 Previous programme 3: European Neighbourhood Instrument (ENI)

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitment	17 566.3	17 568.3	100%
Payments	11 534.9		66%

As of 31 December 2021, the total ENI envelope was committed, and 66% were paid. It is explained by the fact that the ENI is an investment tool and finances projects that run over a long period of time. The financing agreements with the beneficiary countries must be signed by the end of the year following the year in which the budgetary commitment was made, while contracts implementing these agreements must be signed within the following three years with varying implementation periods. In addition, contracts are implemented in on average 3 years, while those with International Financial Institutions, such as blending and guarantees, have longer implementation periods (6-9 years).

Moreover, for Neighbourhood partner countries, priority areas for Union financing are selected mainly from those included in the association, partnership and cooperation agreements, jointly agreed association agendas and partnership priorities or other relevant, existing and future, jointly agreed documents between the Union and the partner countries in bilateral and multilateral formats, including, as relevant, within the Eastern Partnership and the southern dimension of the European Neighbourhood Policy.

On average, 3.3 years were needed to pay the total costs of legal commitments, much less than the target of 4 years. In recent years, the Commission accelerated the implementation in the Neighbourhood.

However, following the record year of 2020 when EUR 2.6 billion was paid including also payment linked to implementation of actions in response to the COVID-19 pandemic, the payment implementation decreased to EUR 1.9 billion in 2021.

While in 2021, ENI payments (EUR 1.7 billion) represented almost all executed payments, EUR 191 million was paid, in line with the planning, to cover for new commitments arising under the NDICI-Global Europe regulation adopted only on 9 June 2021 (for more information on the NDICI-Global Europe implementation please see section 2.1 “Programme 2021-2027”).

More than half (54%) of the ENI payments were dedicated in 2021 to actions in social infrastructure and services (included more than half for governments and civil society), 26% in multisector actions, 10% in economic infrastructure and services, and 7% in production sectors. Moreover, 66% of payment appropriations were implemented through direct management, while 33.3% through indirect management. 24% were implemented by trust funds, 20% through budget support, 17% by international organisations, 14% through grants and implementing agencies, 8% through procurements and 2% through indirect management with beneficiary countries.

The implementation of ENI payment appropriations will decrease to EUR 1.2 billion in 2022 and stabilise at EUR 1.1 billion in 2023. This should bring the implementation of ENI payment appropriations up to 73% of the total 2014-2020 envelope at the end of 2022 and 79% at the end of 2023.

2.2.4 Previous programme 4: Instrument contributing to Stability and Peace (IcSP)

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitment	2 366.9	2 367.1	100%
Payments	1 901.2		80%

The implementation of financial programming 2014-2020 was fully in line with the expectations. By end 2021, 100% of the envelope was committed and 80% paid.

The 100% execution of commitment appropriations reflects the full implementation of the allocated envelope for IcSP actions

The 81% execution of payment appropriations is explained by IcSP actions responding to conflict situations or situations at risk of conflict, with a high risk of unforeseen events impacting implementation and resulting in actions being consequently amended. Sometimes not all foreseen activities could be implemented, thus explaining underspending and the need to de-commit.

In 2021, an amount of EUR 19 Million was de-committed⁷.

The Reste à Liquider (RAL) at 01/01/2022 amounts to EUR 400 Million and is planned to go down to EUR 230 Million by end-2022. The estimated RAL is EUR133 Million by end-2023 and EUR 77 Million by end-2024.

Under IcSP, during the 2014-2020 period, more than 600 interventions were launched worldwide on crisis response, conflict prevention and peacebuilding with a further 300 covering global and trans-regional threats.

COVID-19 related restrictions continued to cause delays in implementation during 2021, but the vast majority of actions could adapt allowing activities to proceed to the extent possible. No-cost extensions were granted for many actions in 2021.

While IcSP ended on 31 December 2020, numerous interventions were launched and implementation continued under IcSP in parallel with those under the new NDICI-Global Europe thematic programme for peace, stability and conflict prevention. Throughout 2021, IcSP actions continued to display a high degree of flexibility and timeliness in order to respond to urgent needs across Europe, Asia, Africa and Latin America.

⁷ Future de-commitments will be done at the closure of projects and can therefore not be estimated at this stage.

The payment appropriations requests for 2022 and 2023 will allow to continue the implementation of IcSP actions committed. For example, the implementation of important actions focusing on challenges linked to counterterrorism, organised crime and disinformation, and making digital solutions, including social media, work for peace and stability, will continue in 2022 and 2023.

2.2.5 Previous programme 6: Partnership Instrument (PI)

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitment	961.3	961.7	100%
Payments	653.1		68%

At the end of 2021, 100% of the total envelope of the instrument was committed and 68% paid. The instrument was on high demand. The 100% execution of commitment appropriations reflects the full implementation of the allocated envelope for PI actions.

The 68% execution of payment appropriations reflects the way the PI is implemented through Annual Action Programmes and multi-year contracts (on average 4 years). Consequently, implementation of interventions will continue over the coming years, with the last contracts ending around 2025-2026.

The COVID-19 crisis continued to impact on financial implementation in terms of capacity to implement in-person activities and monitoring. Measures taken in 2020 (reallocation of funds and new virtual modalities of work) allowed interventions to continue implementation with a good rate of execution in 2021.

In 2021, the Partnership Instrument continued to contribute to the EU external action by supporting its foreign policy, articulating and implementing the external dimension of internal policies, leveraging the EU's influence, interconnecting different policy areas. Actions cover challenges of global concern like climate change and environmental protection; the international dimension of the Europe 2020 strategy for smart, sustainable and inclusive jobs and growth; improving access to markets and boosting trade, investment and business opportunities for EU companies (with particular emphasis on SMEs); and public diplomacy.

The payment appropriations requests for the Partnership Instrument in 2022 and 2023 will allow to continue the implementation of PI actions committed until the adoption of the NDICI-Global Europe Regulation. For example, the implementation of important actions in the domain of digital cooperation and public diplomacy will continue in 2022 and 2023.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The initial performance of the NDICI – Global Europe was marked by very important steps – adoption of most of its Multiannual Indicative Programmes (MIPs). Adoption of the country and regional MIPs will significantly contribute to climate actions, social inclusion and human development and migration and forced displacement and to achieve gender and biodiversity targets. The programming contributes to implementing the external dimension of the Commission priorities, as embedded for example in the Communication "Towards a Comprehensive Strategy with Africa issued in March 2020: green transition; digital transformation; sustainable growth and jobs; Governance, peace & stability and human development; and migration and mobility". Moreover, together with the EU Member States, programmes will support, through the 'Team Europe' approach, a sustainable recovery from the sanitary, social, and economic shocks caused by the COVID-19 pandemic.

In 2021 the COVID-19 crisis has been less disrupting compared to 2020, but gatherings and missions were still limited and had to be adapted to the special health context. That influenced greatly the process of the new MIPs design. In most of the countries targeted by the NDICI – Global Europe, the measures taken by governments to limit the spread of COVID-19 led to lower food productivity, drove inflation, and further constrained humanitarian assistance, exacerbating people's vulnerability.

Due to the delayed adoption of the NDICI-Global Europe, only limited actions made a difference on the ground, namely rapid response actions; the discussion on the guarantees also advanced much and their dedicated windows are close to their final scope.

3.1.2. Active programme performance

Regarding crisis response actions, the main results in 2021 have been the ability of the EU to put policy statements into action and deliver conflict prevention and crisis response to address needs such as the additional pressure on local communities and public services in eastern Sudan to respond to the needs of refugees from Tigray; support to civil society actors and to international accountability mechanisms in response to the military coup in Myanmar; support to the management of Tajikistan's border with Afghanistan and concrete support to host communities in Colombia, Ecuador and Peru as they welcome migrants and refugees from Venezuela; as well as a so far peaceful transition in Chad and an international monitoring mission on the contact line in Eastern

Ukraine (end of 2021 situation), despite of COVID-19 restrictions and a tense geopolitical context. The developments in Mali did not allow for the support to a peaceful and inclusive transition to take place.

Following the successful implementation of EFSD, which targeted investments in Sub-Saharan Africa and the EU Southern and Eastern Neighbourhood countries, a new European Fund for Sustainable Development Plus (EFSD+) is being set up under Global Europe and given a wider scope. This integrated financial package will supply financing capacity in the form of grants, technical assistance, financial instruments, budgetary guarantees and blending operations across Sub-Saharan Africa, the Neighbourhood and Enlargement countries, Asia and the Pacific, and the Americas and the Caribbean.

As regards the guarantees under the EFSD+, they are covered by the broader External Action Guarantee (EAG), for a maximum amount of EUR 53.4 billion, which supports mainly the EFSD+ guarantees, as well as MFA and Euratom.

Part of the EFSD+ Guarantee will finance private-sector oriented operations in our partner country through an ‘open architecture’ – a level playing field where our partner financial institutions will apply for the Guarantee coverage. In order to identify strategic areas for investment, the Commission combined the analysis of investment needs and the priorities with the programming process at country level, as conducted by the EU Delegations. The market intelligence gathered through the extensive network of our Brussels offices, EU Delegations, with the support of European DFIs, has resulted in the identification of six strategic areas for the EFSD+ Guarantee. These ‘Investment windows’ are (i) Micro, Small and Medium Enterprises (ii) Connectivity: Energy, Transport and Digital (iii) Sustainable Agriculture, Biodiversity, Forests and Water (iv) Sustainable Cities (incl. WASH) (v) Sustainable Finance and Impact Investing and (vi) Human Development. These six windows will contribute to three overarching priorities of the Global Europe Agenda: Green Deal; Global Gateways; and Jobs and sustainable and inclusive Growth.

Commission services are also working with the EIB to prepare new Guarantee Agreements within the framework of the European Fund for Sustainable Development Plus, including EUR 26.7bn of EIB-dedicated guarantee cover provisioned from the EU budget and an additional ACP window that will draw on reflows from the Africa, Caribbean and Pacific Investment Facility.

At the end of 2021, under the EFSD+, the Commission signed a contract with the EIB and GAVI, the Vaccine Alliance to renew support for enabling COVID-19 vaccine to low and middle income countries through another EUR 500 million backing for COVAX Advance Market Commitment (following the EUR 500 million package of December 2020). It means EUR 3000 million grant in support from the NDICI-Global Europe and EUR 200 million loan from the EIB.

3.1.3. Previous Programme Performance

3.1.3.1 Performance of corresponding 2014-2020 programme Development and Cooperation Instrument (DCI)

The specific, diverse and rapidly changing context of EU external action requires the use of all the existing implementation modalities and delivery methods to pursue the policy objectives and operational priorities. With a budget of approximately EUR 20 billion, the DCI has been a key financing instrument to support EU development policy. Many initiatives that were successful started under the DCI and they will provide a solid basis for future interventions planned under the NDICI. The main sources of information about the performance of the DCI are the annual reports on the implementation of the European Union’s instruments for financing external actions.

As shown in the section 2.2.1, and its performance over the years, DCI has effectively supported the implementation of the 2030 Agenda for Sustainable Development, the Addis Ababa Action Agenda on financing for development and the Paris Agreement on Climate Change, globally and directly with partner countries.

Accompanying the general objective to ‘Eradicate poverty’ were the following specific objectives: ‘Fostering sustainable development’ and ‘Consolidating and supporting democracy’. To achieve these, the DCI provided funding for: (1) geographical programmes covering mostly developing countries (approximately 60 % of the DCI budget); (2) thematic programmes (approximately 36 %); (3) the Pan-African programme which supports the Africa-EU Strategic Partnership (approximately 4 %).

The EU’s financial support via the DCI has helped to improve the lives of millions of people worldwide, enable youth to fulfil their potential, fight inequality and support equitable and sustainable growth.

As shown in the annual reports on the implementation of the European Union's instruments for financing external actions, the key successes of DCI, where the fund interventions had a clear direct and positive impact, is the one related to the SDGs for girls' access to education and reducing the prevalence of stunting among children under 5 years old.

As per the recommendations of the Mid-term review, more attention was given to promoting interlinkages and cross-sectoral action at the nexus between different action areas that could contribute to multiple SDGs; and to enhance complementarity, coherence and synergies between thematic and geographic programmes. COVID-19 pandemic did not hamper working toward achievements of the DCI objectives: on the contrary, it showed that DCI was a sufficiently flexible and fast reaction tool to respond to non-foreseeable needs.

Also, the mid-term evaluation conducted in 2017 considered the DCI generally efficient when looking at indicators measuring organisational performance.

It should be noted that it remains difficult to measure the direct impact of the DCI 2014-2020 on development outcomes such as poverty reduction because there are so many other actors and factors which have also contributed to achieving these results, consequently they cannot be directly attributable to the DCI.

By using the DCI, the EU financed actions aimed at supporting geographic and thematic cooperation with developing countries included in the list of aid recipients compiled by the OECD DAC.

Unlike other External Financing Instruments, the actions under the DCI geographic instruments had to be designed with the purpose to fulfil the eligibility criteria for Official Development Assistance (ODA) as published by the OECD DAC. These criteria are both geographic (list of eligible recipients) and related to the design of the project eligibility. Only a few exceptions existed in the case of the thematic Global Public Goods and Challenges programme and the Pan-African programmes, where a limited percentage (5 and 10 % respectively) could be used for non-ODA eligible activities.

Specific Objective 1: Poverty reduction and fostering sustainable economic, social and environmental development.

State of play: as of end 2021, without the possibility to establish a direct link with the actions of the fund, most of the population residing in DCI partner countries has experienced progress in poverty reduction and human and economic development over the last ten years. Indeed, the proportion of the world population below the international poverty line has dropped every single year since 2014, reaching 8.7 % in 2019 and staying there in 2021. Similarly, the under-five mortality rate, and the prevalence of stunting have also decreased every single year over the 2014-2021 period. Despite these positive trends, the rates of change have slowed over time as numbers have approached (but not reached) their ambitious targets. Prevalence of stunting is the exception for which targets have consistently been met.

Specific Objective 2: Consolidating and supporting democracy, the rule of law, good governance, human rights and the relevant principles of international law.

State of play: The international indicators monitoring the situation are not telling an encouraging story. For the World Bank's Rule of Law score, the situation deteriorated between 2014 and 2016 and has not significantly improved since. For the proportion of seats held by women in national parliaments, the progress has been so slow that if the current pace of change were to continue in the future, the 2020 target would be only met in 2035.

This is why the Commission has insisted and financed a number of projects to promote democracy, rule of law, good governance and human rights significantly above the initial target of 100 projects per year on average over the 2014-21 period.

Note on the DCI performance framework:

Annual results reporting exercises have been conducted since 2015 and monitoring of indicators have been constantly upgraded to ensure better and wider coverage of result achieved. Collected information feeds the External Assistance Annual Reports, DG INTPA's Annual Activity Reports, assessments of a particular implementation modality e.g. 'Budget Support - trends and results 2020' or assessments of thematic objectives achievement e.g. 'Action plan on nutrition: Fifth progress report April 2019 - March 2020' or '2019 Implementation Report on Gender Action Plan II Gender Equality and Women's Empowerment: Transforming the Lives of Girls and Women through EU External Relations 2016-2020'. Selected results have been also aggregated through the EU Results Framework (set up 2015, then revised in 2018).

To improve the consistency of performance monitoring of actions under the NDICI-Global Europe and make it aligned with the DGs Strategic Plans 2020-2024, the EU Results Framework was recently revised (to respond to the current EU policy priorities and taking into account the recommendations from various evaluations and audits). The framework is now called Global Europe Results Framework that constitutes part of the broader Global Europe Performance Monitoring System⁸.

Contribution of DCI to the Green Transition:

Good progress has been noted. In 2020, about 25% of DCI budget went towards climate-related actions, with a fairly equal distribution between mitigation and adaptation. This brought the overall contribution towards climate action to approximately 23.6% for the period 2014-2020 (against a target of 20%).

⁸ Staff Working Document of 25 January 2022, SWD(2022)22

In order to deliver on the contribution expected from the external dimension of the EU Green Deal in the area of climate change and the environment, more remains to be done to systematically integrate these themes across all areas of cooperation covered by the NDICI-Global Europe Global Challenges.

Within the EUR 100 million action on Disaster Risk Reduction (DRR) approved in 2020, DCI continued to support activities related to risk assessment and response to enhance the structural capacity of ACP countries to react and recover from disaster events – being climate related or pandemics like COVID-19. The Global Climate Change Alliance Plus (GCCA+) joined forces together with the Development-smart Innovation through Research in Agriculture (DeSIRA) initiative to support actions that jointly address climate change adaptation and mitigation, sustainable agriculture and food security issues

In the environment sector, the implementation of the NaturAfrica initiative started in 2021 in six regional landscapes and in several countries (Togo, Benin, Cameroon, DRC, Burundi, Congo). NaturAfrica aims to improve the livelihood of 65 million people, sequestering up to 21 billion tons of carbon, stabilising 3 million km² of land and ensuring water security. The Landscape Approach complemented the continuous EU support to land restoration and alternative livelihoods development under the Great Green Wall initiative. In total, more than 250,000 hectares of land were restored in 2021 under the Regreening Africa initiative, notably through agroforestry, in several Sahelian countries. Forest Partnerships were developed to support sustainable forest management in partner countries and progress was made on Voluntary Partnership Agreements (VPA) in the framework of the Forest Law Enforcement, Governance and Trade (FLEGT) Action Plan.

The Africa-EU Green Energy initiative (AEGEI) was developed in 2020 and 2021 and will be proposed as part of the multi-sectoral African Investment Package at the AU-EU Summit in February 2022. AEGEI will be a main component of the African Investment Package and in support of African Single Electricity Market and it will contribute to bridge the energy access gap in Africa while protecting the people, the climate and the environment and creating added value and opportunities for African and EU businesses. Additionally, the programme on Demand side management, Social Infrastructures, Renewables and Energy Efficiency (DESIREE), signed in 2020 and implemented with the EIB, started its implementation phase in 2021.

In the field of sustainable agriculture and food systems, COVID-19 has led to a deterioration of food security in many partner countries. The impact on malnutrition especially threatens to affect women and girls, who already represent 60% of the world's food insecure. DG INTPA has reacted to this challenge in the framework of the Team Europe global response to COVID-19, which channelled EUR 60 million fighting the pandemic and building resilience. The EU sustainable cocoa initiative launched in 2020 was further developed in cooperation with many partners, including notably the Governments of Cote d'Ivoire and Ghana, to provide a Living Income Differential to smallholder farmers. DG INTPA continued to address climate change adaptation and mitigation in agriculture through the DeSIRA (Development Smart Innovation through Research in Agriculture) initiative.

At the margins of the fifth meeting of the United Nations Environment Assembly in February 2021, the EU launched the Global Alliance on Circular Economy and Resource Efficiency (GACERE) in collaboration with UNEP and UNIDO. The initiative aims at boosting initiatives related to the circular economy transition, resource efficiency and sustainable consumption and production, building on efforts deployed internationally.

Contribution of DCI to the Digital transition

Digitalisation became a key priority for the Commission and it significantly boosted its engagement in the digital transformation via DCI support.

3.1.3.2 Performance of corresponding 2014-2020 programme European Instrument for Democracy and Human Rights (EIDHR)

The EIDHR was implemented against the backdrop of an overall slowdown or recess in the consolidation of democracy, rule of law, good governance and human rights globally. For the World Bank's Rule of Law score, the situation deteriorated between 2014 and 2016 and has not significantly improved since.

2021 has been the last year in which funds from the 2018-2020 Multiannual Indicative Programmes (MIP)⁹ could be contracted, completing the portfolio of the Multi-annual Financial Framework 2014-2020. For the full period of the EIDHR instrument (2014-2020) implementation was done through action plans for 2014 (special measure), 2015, 2016-2017, a special measure in 2018 and the multi-annual action plan covering 2018, 2019 and 2020.

Over the whole period, the EIDHR has been successful in delivering on its 5 objectives: i) support to human rights and human rights defenders in situations where they are most at risk; ii) support to other EU human rights priorities; iii) support to democracy; iv) EU election observation; and v) support to targeted key actors and processes, including international and regional human rights instruments and mechanisms.

It has been an enabling, flexible and responsive instrument that demonstrated its added value as a "niche" instrument to promote human rights and democracy, as highlighted in the Instrument's Mid-Term Review¹⁰.

Given the nature of the targeted activities, some confidential, the implementation of a small number of projects was delayed or could not fully address all its objectives. Actions had to be adapted in case of particularly difficult country situations.

⁹ Commission Implementing Decision C(2018) 6409 final of 5.10.2018.

¹⁰ https://ec.europa.eu/international-partnerships/system/files/swd-mid-term-review-eidhr_en.pdf

Implementation rates in term of commitments and payments have been overall very satisfactory. An important part of the EIDHR (65% - excluding the election observation mission's allocations and administrative costs) is implemented by our EU Delegations worldwide to address country-specific issues.

The EIDHR key-added value has been the independence of action and worldwide coverage, allowing for interventions in the most-difficult-country situations and without the consent of the host governments, and acting where other instruments and donors cannot or do not act. It has been able to address human rights and democracy challenges, even in the most difficult and challenging environments – confirming that EIDHR and the Human Rights and Democracy thematic programmes under the NDICI-Global Europe remain more relevant than ever to the political priorities of the EU.

The mid-term review conducted in 2017 also considered the EIDHR generally efficient thanks to a relatively low level of administrative expenditure and its essential in-built flexible tools (e.g. direct support to human rights defenders, direct small grants, working with informal partners, financial support to third parties).

As far as **the COVID response in 2021 is concerned, please refer to the narrative above** (section 2.2)

Main results over the whole period and some examples of "flagships" along the five axes of work, corresponding to the specific objectives of the EIDHR instrument:

- **Support to Human Rights Defenders at risk and other human rights**

The EIDHR support to human rights defenders (HRD) at risk (individuals, organisations and groups) is the basis for the EU world leadership in HRD support. The EIDHR provides emergency grants, physical/digital protection, legal and medical support, urgent relocation/sheltering, training or permanent (24h/7) helpline, psychosocial assistance for and support to family members of human rights defenders at risk so that they can continue their important work. This support has been and still is provided through two flagship programmes: Protect Defenders and the EU Emergency response, both projects were renewed in 2019 and will be running until 2022. Between 2014 and 2021 over 54,400 HRDs at risk have been supported mainly by these two programmes. In 2021 alone, more than 4 445 HRDs and family members have been supported.

The EIDHR Human Rights Crises Facility (EUR 3.5 million per year) was set up in 2014, in order to provide a flexible funding modality to respond to situations where there is a serious lack of fundamental freedoms, where human security is most at risk, where human rights organisations and defenders work in exceptionally difficult conditions and/or where the publication of a call for proposals would be inappropriate. In 2016-2020 period, a total of 24 projects have been supported in the Enlargement region, the Eastern and Southern Neighbourhood, Central Asia, Middle East, Sub-Saharan and East of Africa, and Asia (details of grants and countries of operation are confidential). In 2021, Crises Facility projects also addressed the human rights crises caused by the COVID pandemic, globally, regionally and at country levels, as well as reacting to sudden-onset crises.

From 2015 to 2020, six global calls were launched that provided for continued support to civil society working on a broad range of sensitive, innovative or priority issues, including human rights in most restrictive environments, human dignity, discrimination, economic, social and cultural rights, and democracy-related issues. Examples of these issues include: LGBTI human rights defenders, fight against the death penalty, support for civic activism and participation by leveraging digital technologies, business and human rights, combatting torture and increasing democratic accountability.

The EU has a longstanding engagement to further promote indigenous peoples' rights at bilateral and multilateral levels. During the period 2014-2020, the EU has supported through its European Instrument for Democracy and Human Rights:

- i. Docip, the Centre for Documentation, Research and Information for indigenous people that enables indigenous communities and leaders leading advocacy work in international fora in Brussels, Geneva and New-York (EUR 4 million);
- ii. The Indigenous Navigator, a framework where community-based data covering 216 000 people from 11 countries is used in advocacy and communication activities at the UN fora and to empower indigenous peoples through small development projects (EUR 2.2 million);
- iii. Global Call 2017- Lot 1 (EUR 5 million), Supporting HRDs in the area of land-related rights, indigenous peoples, in the context of inter alia 'land grabbing' and climate change.

An important part of the EIDHR instrument is implemented at country level. Implementation is done through calls for proposals or direct awards. Between 2014 and 2021, more than 1 800 contracts were concluded by EU Delegations. The priorities most worked on over all these years are, amongst others: women and children rights, democracy (election observation, freedom of expression) and anti-discrimination. During the last 3 years, the Commission strived to primarily focus its effort on the most pressing and sensitive human right needs in countries.

The delivery of the awareness raising and training for the operationalization of the rights based approach and gender mainstreaming started in 2017 and also continued throughout 2021 albeit through an adapted virtual approach. In 2021 14 trainings took place to support colleagues during the programming, 6 on the new toolbox adopted in June and 8 for specific countries¹¹, all of them virtual.

- **Support to Democracy**

¹¹ Turkey / Burkina Faso / Guyana-Surinam / Afghanistan / Algeria / Bolivia-Ecuador-Peru / Jamaica-Barbados / Eswatini-Lesotho

From 2015-2019 the “Supporting Democracy” project provided assistance to EU Delegations in improving their work with civil society, promoting democratic development and how to best counter the shrinking space that occurred in a number of countries through exchanges of best practises and networking. As an example, in 2019, its last year, "Supporting Democracy" has organised two regional events in Malaysia and Lebanon that brought together CSO representatives to discuss how to use new technologies to tackle shrinking space in their regions.

Other achievements include the Citizen Observers Forum in 2016, bringing together 250 domestic observer organisations from all over the world, facilitating peer-to-peer exchanges and promoting the Declaration of Global Principles for Electoral Observers, training domestic observers in Afghanistan, Democratic Republic of Congo, Lebanon, Madagascar, Maldives, and the launch of an annual worldwide 'EU4Democracy' campaign, promoting EU support to democracy in partner countries. In 2018, the "EU4Democracy" focused on civic activists, which use new technologies to promote democracy and six "CivicTech" prizes were awarded to projects selected from over 100 applications.

Another Facility which was put in place in 2017 was “Media4Democracy” to support EU Delegations to develop actions to promote the freedom of expression and media. Through this support the interest for the subject increased as well as the number of projects funded in this area. In 2020 the Media4Democracy comprehensive Handbook: Protecting the Safety of Journalists, Protecting Freedom of Expression was successfully launched. In 2021, Media4Democracy continued fellowships for journalists in the Maldives and supported EU Delegations in Congo Brazzaville, Djibouti, Mongolia and Columbia with legal analysis and expertise.

The EIDHR also funds 'V-DEM', one of the largest democracy indicators-related data collection efforts with a database containing over 18 million data points. In 2016, V-DEM received the most prestigious award for comparative datasets in political science: the Lijphart/Przeworski/Verba Best Dataset Award presented by the American Political Science Association. In 2020 and 2021, V-DEM produced reports on data relating to political risks in the countries receiving EU Budget Support, and country briefings for EU Delegations. Through the Case for Democracy project, V-DEM produced a new concept: providing positive narratives about Democracy. The project was quoted by high level officials, including US officials, in the framework of the Summit for Democracy 2021.

2018 and 2019, V-DEM produced two reports: one on shrinking space in Southern-Eastern Africa and South-Eastern Asia, and one on the topic of women political empowerment EU’s democracy support around the world and one on data relating to political risks in the countries receiving EU Budget Support.

Under the pilot programme to strengthen the capacity of political parties, a call for proposals was launched in 2017 and five grants were awarded for projects implemented in ten countries (Malawi, Bolivia, Morocco, Benin, Paraguay, Mongolia, Moldova, Tunisia, Kyrgyzstan, Georgia). These projects have contributed to strengthening the role of women in political party life and supporting multi-party systems, including inter-party dialogues on the legal, financial and/or policy framework for political parties and political party financing. They have also revealed the need to continue supporting this crucial aspect of democracy, often left behind. This need was taken on board in the NDICI-Global Europe by promoting a comprehensive approach for democracy report at country level, regional level and global level.

In 2019, the flagship project "INTER PARES | Parliaments in Partnership - EU Global Project to Strengthen the Capacity of Parliaments" on parliamentary strengthening through a peer-to-peer approach was launched. In 2020 and 2021, the project, like many other ones, had to adapt its delivery methods to continue facilitating peer-to-peer exchanges between EU Member States parliament and partner parliaments around the world. It has also contributed to collecting and sharing best practices on parliaments’ responses to the pandemic and has become a hub for across-the-broad cooperation on parliamentary development.

Finally, the Commission also refers to the action funded through global calls for proposals and country allocations mentioned in the previous point on human rights support.

- **Support to targeted key actors and processes**

Despite increasing attacks against the international human rights system and the international justice system, the EIDHR has continued to staunchly support the key institutions, including the International Criminal Court (ICC) (EUR 1 million per year) and the UN Office of the High Commissioner for Human Rights (OHCHR) (approx. EUR 4.5 million per year).

The 'Global Campus for Human Rights and Democracy' (approx. contribution of EUR 5 million a year) is a unique global network of more than 100 universities teaching and promoting human rights and democracy. Supported by the EU from its beginnings, the Global Campus confers master’s degrees in human rights and democracy to more than 250 students a year. It covers seven regions in the world and represents a beacon of excellence in human rights and democracy education. A 7th region (Arab region) was included in 2017.

Continued support to the Global Alliance of National Human Rights Institutions (GANHRI) and its four regional networks (Africa, Europe, Asia and Latin-America) of National Human Rights Institutions (NHRIs) (EU contribution EUR 3.75 million 2019-21). The three-year targeted programme is managed by the Danish Institute for Human Rights as mandated by GANHRI builds on the results of the previous programme, which ran from 2015-2019. It provides much needed trainings and capacity building opportunities, exchange and communication platforms, institutional development and rapid support for NHRIs in distress through re-granting.

Finally, the Commission successfully organised on a regular basis the EU-NGO Human Rights Forum event. In 2021 this was done through a virtual platform, the [23rd edition of the EU-NGO Human Rights Forum](#), which focused on Rebuilding Better – a human rights based recovery from the pandemic.

- **Election Observation Missions**

In 2021, despite the COVID-19 pandemic, mitigation measures for security and safety enabled to support 12 electoral processes and to deploy 21 missions under EIDHR. In addition, six missions financed from NDICI-Global Europe were deployed.

Two fully-fledged Election Observation Missions (EOMs) were deployed to observe elections in Zambia and Honduras. Deployed on average for 3 months, these missions included assessments of the campaign, the legal framework, the political environment and the overall electoral process.

Five Electoral Expert Missions (EEMs) were deployed in Kosovo (early parliamentary elections), Peru, Ecuador, El Salvador and Somalia.

Five Follow-up missions to assess to what extent the recommendations from previous missions were implemented were deployed in El Salvador, Sierra Leone, Liberia, Lebanon and Nigeria.

The mid-term review conducted in 2017 found evidence that election observation was effective in improving the reliability of electoral processes.

3.1.3.3 Performance of corresponding 2014-2020 programme European Neighbourhood Instrument (ENI):

The European Neighbourhood Instrument has proved to be a flexible and responsive instrument addressing the priorities established under the European neighbourhood policy framework and reacting to needs and challenges in the region, including protracted crises.

One of the essential elements of the ENI regulation is the incentive-based approach, also referred to as “more for more”. EUR 1.4 billion has been disbursed under the incentive-based approach 2014-2020. Indeed, the share of available resources offered to partner countries is adapted primarily to their progress in building and consolidating deep and sustainable democracy and in implementing agreed political, economic and social reform objectives. In cases of non-achievement or backsliding then “less for less” is applied to the available resources offered to partner countries, or resources are recalibrated towards civil society. A good example is Belarus where the EU has stepped up its support for the people of Belarus, while moving assistance away from the authorities.

On the other hand, the mid-term review of external action instruments, published in December 2017, has highlighted the need to strengthen the coordination and coherence between various external action instruments. This issue is addressed in the NDICI, which has been designed to reinforce a policy-driven approach to EU cooperation.

The mid-term review also noted that the efficiency of ENI delivery is positive in terms of procedures, processes and the ratio of administrative costs. EU Budget Financial Regulations, the Common Implementing Regulation (CIR) and DG NEAR’s administrative procedures and practices prevail over simplification, leaving the regulatory burden (formal and inherited from past practices) unchanged. In-house expertise was strengthened by the creation of Centres of Thematic Expertise (CoTE) and even if all of them do not yet possess the full set of resources needed to fulfil their tasks, progress in terms of coherence between sectoral and cross-cutting assistance and in terms of quality is taking place. A number of special measures are contributing to ENI’s timely delivery so that programming and allocation timelines are accelerated and sufficient flexibility is built into the EU response. The control systems are in place and are running at all levels; monitoring and evaluation systems provide the required feedback for adjusting implementation and targeting programming, though the culture of drawing lessons and experience from evaluations is still uneven.

Cooperation with EU neighbours will also gain from being financed by the NDICI by providing even more means and flexibility in support of the special relationship between the EU and its Neighbours. It will be better equipped to address challenges that span across regions covered currently by different instruments.

Some features currently reserved to the EDF would also be extended to the Neighbourhood, including the ability to carry over unused funds from one year to the following one or to re-use decommitted funds. This is particularly appropriate for the management of actions in the Neighbourhood, which is characterised by a highly volatile environment requiring continuous adaptation.

Specific Objective 1: Promoting human rights and fundamental freedoms, the rule of law, principles of equality and the fight against discrimination in all its forms.

One key indicator helping to assess the general trend toward this objective, is a weighted score based on eight publically available external sources, grouped under three components:

- Corruption Index (Transparency International) and Control of Corruption (World Bank);
- Press Freedom (Reporters without Borders) and Freedom of Press (Freedom House);

- Government Effectiveness (World Bank), Rule of Law (World Bank), Regulatory Quality (World Bank) and Voice and Accountability (World Bank).

These indicators are actually based mostly on perceptions and do not reflect the impacts made by the EU assistance and policy in these areas, but the improvement observed does reflect the sense of direction sought.

Overall, the trend in the Neighbourhood has been fluctuating, but last year the target was exceeded for the first time since the reporting period and the latest update sees this trend continuing.

For some countries in the Southern Neighbourhood, political instability and the security situation are hampering the progress. Notwithstanding moderate progress in countries like Egypt (where the State of Emergency has been lifted, although some of its provisions are introduced elsewhere) and Jordan (even if some concerns persist), political instability in Lebanon and Tunisia, and the continuation of the dire human rights situation in Syria, show that the challenges in the Region remain high.

In the East, the Lukashenka regime continued its wide-spread human rights violations and its brutal repression against all segments of the Belarusian society. Since summer 2021, and in response to the EU's united support for the democratic aspirations of the people of Belarus, the Lukashenka regime also engaged in the state-sponsored instrumentalisation of migrants, in a hybrid attack on the European Union. The human rights and democracy situation in Azerbaijan continues to be very poor, as reflected in the limited number of sectors and beneficiaries with which ENI engages. In the other partners, the security and political stability did not vary, and this in Armenia despite the Autumn-2020 war with Azerbaijan. To note that this comes before the Russian war of aggression that began on February 24 2022.

In the field of combating discrimination and hate speech/crime, the basic legal framework on combating discrimination is in place in most of the Eastern Neighbourhood partner countries. However, more efforts are needed to ensure that all vulnerable groups are protected, to align the legal framework to European standards, and to implement the relevant judgements of the European Court of Human Rights, the monitoring recommendations and prosecuting cases of violence.

What the instrument has as leverage is to promote the values of human rights and fundamental opinions of CSOs (interested and affected groups) for a policy initiative, freedoms, the rule of law, principles of equality and the anti-discrimination through its interventions notably by supporting the civil society. Over the period 2014-2020 some 2.2 billion was committed to human rights, good governance and mobility. Over the period 2013-2021, the EU supported 63 government policies with civil society throughout east and south neighbourhood. This means supporting public participation whereby the government actively seeks the opinions of interested and affected groups in the civil society for a policy initiative. Also more than 65 000 people benefited from legal aid interventions supported by the EU.

Specific Objective 2: Achieving progressive integration into the EU's internal market and enhanced sectoral and cross-sectoral cooperation.

Progressive integration into the EU's internal market and enhanced sectoral and cross-sectoral cooperation is being achieved in various domains.

First, the instrument is supporting almost all neighbourhood countries in strengthening their revenue mobilisation (how to collect taxes more and better), their public financial management and their budget transparency. During the period 2014-2021, the total support for public financial management is estimated at EUR 268 million. The results of this support are for example, more than 74 000 firms and more than 41 000 individuals with access to financial services with EU support.

The instrument is also supporting, notably via the EU4business initiative¹², the implementation of trade agreements with our partners. It notably helps to support studies and technical assistance for regulatory approximation in the areas of public procurement, technical barriers to trade, sanitary and phytosanitary measures, customs and services. Despite the difficulties and challenges due to the COVID-19 pandemic that have slowed down this positive trend, the progressive strengthening of the business environment and facilitation of trade and investment is supported while ensuring a level playing field and increasing trade between EU and partner countries.

As a result of this support, economic operators in Georgia, Moldova, Ukraine, Tunisia and Palestine obtained 158 conformity schemes-related certifications, accreditations, approvals or recognitions for their products, services or systems. Certification and accreditation are key to facilitate trade between Neighbourhood countries and the EU. In the Eastern Neighbourhood, this type of support has allowed an increase in the number of companies from DCFTA countries to export to the EU. Between 2014 and 2021, the number of companies exporting to the EU has increased by 65% in Georgia, 70% in Moldova and 42% in Ukraine.

Almost 200 000 people have benefited from institution- or workplace-based VET/skills development interventions supported by the EU in the neighbourhood countries. These interventions typically include areas such as job search assistance, job placement schemes, mentorship, support to entrepreneurship, etc. The objectives of such programmes are manifold, including economic, by increasing participant's employment chances and earnings, and social, by enhancing inclusion and participation associated with productive employment.

¹² <https://eu4business.eu/>

In the Neighbourhood South, although a number of deep and comprehensive free trade agreement (DCFTA) negotiation rounds took place over the period - especially with Morocco and Tunisia – no agreement on a DCFTA could be finalised.

Also, in 2021, a number of gap and impact analyses were carried out and trainings were performed on the most important legal aspects of DCFTA agreements (competition policy, public procurement, intellectual property protection, investment protection, etc.) thus laying the groundwork for future trade engagement (e.g. Investment Promotion Agreements as suggested in the most recent EU trade policy review).

Specific Objective 3: Creating conditions for the better organisation of legal migration and the well-managed mobility of people.

ENI contributes greatly to the achievement of this objective and will continue to do so as part of NDICI. The objective is formulated in an active form and it is in that sense still ongoing. Most of the work done on migration and forced displacement since 2015 in the Southern Neighbourhood was financed by approximately EUR 2 billion of ENI funds through the EU Emergency Trust Fund for Africa (North of Africa window), and the EU Regional Trust Fund in Response to the Syrian crisis. In the Eastern Partnership, at least EUR 230 million were spent focusing mainly on legal migration, including mobility, circular migration, diaspora cooperation, as well as on border management.

One of the sources to assess whether the activities of ENI are effective is the monitoring of the evolution of the number of mobility partnerships in place. Indeed, Mobility Partnerships declarations are the instrument through which the EU and its partners in the Neighbourhood intend to set a framework to manage migration flows with commonly agreed objectives and programmes. Mobility Partnerships follow the Global Approach to Migration and Mobility guidelines. With 6 mobility partnerships in place in the East and 3 in the South, the targets have been either met (Neighbourhood East) or almost (Neighbourhood South).

Moreover, more than 30 strategies and policies for migration management or forced displacement were developed/revised or are under implementation with EU support in the neighbourhood countries at the end of 2021. Examples of migration management/forced displacement strategy/policy areas include border management, labour and facilitated migration, assisted voluntary return, assistance for vulnerable migrants/displaced persons, socio-economic inclusion of migrants/forced displaced person, etc. Developed/revised strategies or policies are those endorsed by the authorities relevant to the local context.

During the period 2013-2021 almost 4.5 million migrants, forcibly displaced people or individuals from host communities have been protected or assisted with EU support in the neighbourhood regions.

However, the support has limits that can be illustrated by the number of readmission and visa facilitation agreements and Visa Liberalisation Action Plans (VLAP) in place between the EU and the partner countries, which does not show good results, in particular in the South.

Indeed, based on visa facilitation/liberalisation agreements, both the EU and the non-EU citizens benefit from facilitated procedures for issuing visas and, in return, procedures are established for the return of persons in irregular situation (own or third country nationals or stateless persons) to the EU or to the partner non-EU country.

Sensitive and complex negotiations in an uncertain political environment led to the fact that in the Southern Neighbourhood, no readmission and visa facilitation agreements have been concluded

Specific Objective 4: Supporting smart, sustainable and inclusive development in all respects.

In order to have an impact towards the achievement of this objective, ENI supported 14 countries in the Eastern and Southern neighbourhood to strengthen their investment environment by supporting reforms aiming to reduce business costs, risks and create a more conducive environment for competitiveness, sustainable and inclusive growth, and decent job creation during the period 2014-2021.

Additionally, more than 78 000 jobs were directly supported or sustained by ENI and, in that way, contributed to development and economic growth in the region. Despite difficult conditions linked to COVID-19, ENI, through various support mechanisms has been delivering help to SMEs in partner countries during the ongoing pandemic. In 2020, EU4Business projects supported 72 000 SMEs across the Eastern Partnership region, allowing these SMEs to maintain incomes and sustain more than 500 000 jobs. While data for 2021 are not yet available, it is expected that support to SMEs will be higher, due to the fact that in 2021 COVID-19 restrictions were partially lifted and more support activities have been deployed.

ENI has also continued to provide support to the green transition in Eastern partner countries in line with the external dimension of the European Green Deal and to ensure a sustainable and green economic recovery. Within this context, the regional programme EU4Climate which is financed from both the regional and bilateral budgets assisted Armenia, Belarus, Moldova and Azerbaijan in preparing their updated Nationally Determined Contributions (NDCs). In Georgia and Ukraine, EU4Climate assisted with awareness-raising and communicating the revised NDC targets. As a result of this EUR 1.2 million support, all Eastern Partnership countries increased their ambition in reducing GHG emissions by 2030, compared to the previous NDC cycle.

Specific Objective 5: Promoting confidence building, good neighbourly relations and other measures contributing to security in all its forms and the prevention and settlement of conflicts.

In order to have an impact towards the achievement of this objective, ENI supported over 1000 state institutions and non-state actors on security, border management, countering violent extremism, conflict prevention, protection of civilian population and

human rights during the 2014-2021 period for more than EUR 2.5 billion under the budget line for confidence building, security and the prevention and settlement of conflicts for ENI during the 2014-2020 period. Additionally, more than 245000 individuals directly benefited from EU-supported interventions that specifically aimed to support civilian post-conflict peacebuilding and/or conflict prevention.

As regards the East specifically, extensive ENI support was provided on building capacity to combat organised crime, cybercrime and hybrid threats, security sector reform, energy security and nuclear safety. Support was underpinning bilateral dialogues, based on each country's needs, complemented by initiatives at regional level. For the period 2014-2021, the amounts spent in the area are estimated at around EUR 295 million.

The results achieved include increased cooperation with EU Agencies that has led to the arrest of members of organised crime groups from Eastern Partnership countries, specialised cybercrime units have been set up in all six Eastern Partnership countries, capacity building and expert support has supported the security sector reform efforts in 4 of the Eastern Partnership countries. The EU has been a steadfast supporter not only of the territorial integrity of Ukraine in face of Russia's aggression, but also of building up resilience. Since 2014, the EU has provided almost one billion euro in conflict-related assistance to Ukraine: EUR 442.5 million in humanitarian and early recovery assistance and support to the reform processes in the conflict-affected regions, and EUR 540 million through European Investment Bank loans for investments in critical municipal infrastructure.

With regards to human rights, following the falsified 2020 presidential election in Belarus, the European Union has recalibrated its bilateral financial assistance to the greatest possible extent away from the central authorities and towards the people of Belarus. Cooperation is instead focused on non-state actors – particularly civil society, independent media, youth, SMEs, and cultural actors.

The Neighbourhood South continued to face serious challenges related to organised crime but above all terrorism and violent extremism. ENI support therefore focused on judicial and police cooperation, in particular at regional level and in cooperation with EU Justice and Home affairs Agencies and specialised international organisations such as INTERPOL, supporting national policies to counter violent extremism and capacity building to prevent and address financing of terrorism and anti-money laundering.

In the area of civil protection, specific dialogues have helped identify priority areas of cooperation. Disaster risk reduction and, climate resilience, as well as enhancing local authorities' capacities remained the main themes for cooperation and ENI assistance. For the period 2014-2021, the amounts spent in the area for regional programmes are estimated at more than EUR 10 million. The results achieved include the organisation of a large-scale regional disaster simulation exercise in Moldova, closer cooperation among all six Eastern partner countries as well as with the EU and UCPM; exercises, exchanges of experts, guidelines and tools have been developed in all EaP partner countries to further mainstreaming EU standards and practices in their national legislation.

Specific Objective 6: Enhancing sub-regional, regional and European neighbourhood-wide collaboration and cross-border cooperation.

ENI support towards cross-border cooperation amounts at EUR 482 million for the overall 2014-2020 period.

In the Southern Neighbourhood, there has been positive progress on increasing credibility of the Union for the Mediterranean through regular ministerial meetings and conferences (indicator 4). The UfM has proceeded according to the 2021 UfM Work Programme, organizing a number of events and three Ministerial meetings (Energy, Blue Economy, Environment and Climate Action). Due to the pandemic, there was a predominance of online and hybrid formats, which had an impact on the budget, as in 2020. On 29 November 2021, the Sixth Regional Forum of the UfM took place in Barcelona, back-to-back with the EU-Southern Neighbourhood Ministerial Meeting. In addition, four SOMs took place from February to December, the last one having approved the 2022 UfM Work Programme and the UfM Operating Grant to support the functioning of the UfM in 2022. Notwithstanding the pandemic situation, which made travelling and planning difficult, the UfM was able to continue its engagement on progress through projects.

Regarding indicator 2 "Number of ministerial, platform and panel meetings under the Eastern Partnership" there had been a substantial increase of the number of events up to 2019 (mainly due to requests coming from high-level decision-makers). However, in 2020 and 2021 the numbers dropped due to the COVID-19 crisis.

Last year, the implementation of the Eastern Partnership policy reached a new milestone. 2021 was primarily focused on the conceptualisation and political endorsement of the next stage of the EU's cooperation with the region, including setting new targets and adopting the Multiannual Action Programmes. A Joint Staff Working Document was adopted on 2 July 2021, laying out the post-2020 Eastern Partnership priorities (SWD 2021/186). Leaders of the EU and Eastern Partners endorsed this new agenda at the Sixth Eastern Partnership Summit in December 2021. The post-2020 Eastern Partnership agenda is built on the five policy priorities set out in the Joint Communication, and is structured around two equal pillars: Governance and Investment. The latter includes a EUR 2.3 billion Economic and Investment Plan for the Eastern Partnership region, which will leverage up to EUR 17 billion in private and public investments. Flagship projects have been identified under the EIP for each partner country, in order to kick-start implementation. Cooperation within the region also progressed, as the three associated partners formalised and intensified their joint work on their European path. Partners also undertook intense preparations and negotiations for launching regional roaming and spectrum agreements – both of which are expected to be finalised in 2022.

Conclusions

The Common Implementing Regulation (in Article 17) requires a mid-term review report of the EU's external financing instruments ('the instruments') to assess whether these instruments remain fit for purpose, with a view to ensuring the effective

implementation of the EU's assistance. The mid-term review COM(2017) 720 final and the related staff working documents were published on 15 December 2017, concluding that the current set of instruments were still relevant and has proved to be sufficiently enabling. The main findings of the evaluation point to a need to adapt the way the instruments are implemented, notably through a more strategic and overarching programming and ensuring coherent interactions at operational level in the renewed international context.

A series of external evaluations took place in 2016-2017 on all the instruments including the DCI, ENI, EIDHR, IcSP, PI and IPA II. The mid-term review final reports SWD (2017) 600, 602, 604, 607, 608 and 463 respectively, were presented by the Commission on 15 December 2017. The SWD (2019) 418 final, presented the findings of the evaluation of the EU's support to economic governance in enlargement and neighbourhood countries, finalised in August 2017. In addition, COM(2020) 224 final reported on the implementation of the European Fund for Sustainable Development that provides its initial assessment of the main evaluation criteria of relevance, efficiency, effectiveness, coherence and value added.

At the mid-term of their implementation (2014-2020), the instruments overall shown themselves to be fit for purpose. The DCI was found to be largely on track to deliver on its objectives and commitments. The ENI was found overall relevant and an instrument that allowed the EU to implement the reviewed Neighbourhood policy. The EIDHR with its wide and comprehensive scope, it was and has remained an enabling, flexible and responsive instrument to protect and promote human rights and democracy worldwide, at international, regional and local levels. The IcSP was found on track to achieve the objectives for which it was designed and it was considered to perform a unique function of crisis response and conflict prevention, triggered by EU political priorities, contextual needs and opportunities in fragile and conflict-affected contexts. The PI proved its continued relevance to long standing EU priorities and demonstrated its flexibility through responses to new and changed policy priorities that have arisen since its adoption.

As requested by the EU Regulation No 236/2014 laying down common rules and procedures for the implementation of the Union's instruments for financing external action, in its Art. 17, a final evaluation report on the period from 2014 to 2020 shall be established by the Commission within the interim review of the successor instruments in the next financial period. This evaluation is expected to be launched in 2023.

During 2021 one strategic evaluation in the neighbourhood region was completed. The Evaluation of the EU's external action support in the area of migration assessed EU's external action contribution in the policy area of migration in the period 2008-2018, in particular in the areas of labour legal migration, smuggling of migrants and trafficking in human beings, in Enlargement, Neighbourhood, Sub-Saharan Africa and Asia (Central and South) regions. DG NEAR was in the lead, in close collaboration with DG INTPA. The evaluation concluded that over the period reviewed, the EU developed an increasingly comprehensive approach to migration. The EU's Development and Enlargement policies, which themselves evolved over the reference period, offered a solid foundation for implementing the EU's external policy agenda. The range of financing instruments, modalities, and channels available is impressive (if sometimes confusing to outsiders). Yet, despite progress, the EU has found it challenging to deliver results in the three areas here covered – legal (labour) migration, trafficking in human beings, and smuggling of migrants – that are in line with its aspirations.

Seven strategic evaluations were under implementation during the reporting period (namely evaluations on Environment and climate change, TAIEX Instrument and EU cooperation with the United Nations and five country evaluations of Moldova, Morocco, Tunisia, Georgia). In addition, three new evaluations in neighbourhood region were launched in 2021 (evaluation of DG NEAR Blending Instruments, and country evaluations of Ukraine and Palestine).

3.1.3.4 Performance of corresponding 2014-2020 programme Instrument contributing to Stability and Peace (IcSP)

Between 2014 and 2020, the IcSP funded activities in the areas of (1) crisis response, (2) conflict prevention, peacebuilding and crisis preparedness, and (3) response to global, trans-regional and emerging threats. While IcSP ended on 31 December 2020, numerous launched activities will continue to be implemented in parallel with those under the new NDICI-Global Europe thematic programme for peace, stability and conflict prevention.

The instrument's activities are implemented in partner countries around the world, in conflict zones, in post-conflict environments and in emerging crisis settings.

With a view to allowing the EU to respond quickly to crises, 70% of IcSP funds (total IcSP funds of EUR 2.4 billion) was allocated to the non-programmable crisis response component (Article 3). Longer-term programmable actions to strengthen capacity for conflict prevention, peacebuilding and crisis preparedness (Article 4), as well as responses to global, trans-regional and emerging threats (Article 5) represented 9% and 21% of the overall budget respectively. This amount included EUR 100 million specifically for capacity building of military actors in support of development and security for development (CBSD) following the adaptation of the IcSP Regulation in 2016 to enable funding of such assistance.

The IcSP was a key element in EU's diplomatic efforts to respond to crises, promote peace-building and support conflict prevention efforts. Funding of actions was determined by EU's political priorities. Overall, in the period 2014-2020 EUR, 1.73 billion was committed under the crisis-response and peacebuilding components (IcSP Article 3 and Article 4), with over 300 financing decisions adopted and about 1 000 interventions implemented. For the responses to global, trans-regional and emerging threats, EUR 494 million was committed through 7 financing decisions.

The mid-term review conducted in 2017 noted that IcSP administrative costs were lower than other external financing instruments, that budget execution was satisfactory overall and that contractual procedures and direct selection of implementing partners promoted efficiency.

SO1 In a situation of crisis or emerging crisis, to swiftly contribute to stability by providing an effective response designed to help preserve, establish or re-establish the conditions essential to the proper implementation of the EU's external policies and actions in accordance with Article 21 of the Treaty on European Union

During the period 2014-2020, 364 IcSP crisis response actions (exceptional assistance measures (EAM) and interim response programmes (IRP)) were presented to EU Member States in the Political and Security Committee (PSC) via 43 IcSP Information Notes. These actions were guided by the EU policy priorities and objectives responding to developments in crisis and conflict affected countries and regions.

The IcSP delivered timely responses but on occasion, the percentage of actions adopted within 3 months of a crisis context (i.e. the period from date of presentation to PSC to date of adoption of the financing decision) dipped. The variations of results was mainly due to human resource limitations. For example, during the establishment of the FPI Regional Teams 13 (RTs) in 2017, a large number of staff moved to new workplaces which caused disruptions in workflows (from 61% in 2016 to 47% in 2017). However, in the longer term, the establishment of Regional Teams allowed a significant increase in performance. The establishment of the RTs allowed FPI staff to support all Delegations in a world region equally. Furthermore, the distribution of tasks between Headquarters and RTs staff was organised in order to improve work organisation. Where the KPIs before the establishment of the RTs were 68% (2014), 64% (2015) and 61% (2016), they improved to 82% (2018), 91.3% (2019) and 86% (2020) after their establishment.

Furthermore, the adaptations both in terms of actions and of working modalities in connection with the outbreak of COVID-19 in 2020 combined with the highest net amount of new crisis response actions, delayed the adoption of actions, while still remaining well above the objective of 75% of adoptions within three months of presentation to PSC.

In terms of emerging crises, the IcSP has been instrumental in the development of the EU Early Warning System, which subsequently allowed for mobilisation of timely and targeted IcSP actions in analysed countries.

In 2021, timely interventions under the Rapid Response Pillar of NDICI-Global Europe continued to be adopted, for example in the countries of the Sahel, Libya, Afghanistan, Ethiopia, Belarus, Moldova and Colombia. These actions contributed to conflict prevention, mediation and dialogue, confidence building and post-conflict peace building, and the promotion of effective global governance and multilateralism.

SO2: To contribute to preventing conflicts and to ensuring the capacity and preparedness to address pre- and post-crisis situations and build peace.

Actions contributed to strengthening dialogue and cooperation with civil society on issues pertaining to conflict prevention and peacebuilding, and to empowering local civil-society actors to play an active role in conflict-affected contexts, contributing to more resilient societies and to building long-term peace as shown by Financing decisions, annual action programmes and contracts. One example is the Recovery and Peace Building Assessment framework developed with the UN and the World Bank.

Actions also supported the EU commitment to multilateralism, including a successful strategic cooperation on peace-building and mediation with the United Nations and other international organisations. Through 75 action grants to civil society organisations from 2014-2020, IcSP has supported locally-driven-conflict-prevention actions in more than 30 countries, which strengthened the role of women and youth in confidence building activities and peace processes.

In 2021, work to coordinate international efforts in conflict prevention, peace building and post-conflict settings continued with the United Nations (UN), other international organisations as well as international and local civil society actors. The same applies regarding efforts to address global and trans-regional threats to security and peace, e.g. through support to the Global Community Engagement and Resilience Fund, an independent private-public partnership to support local, community-level initiatives aimed at strengthening resilience against violent extremist agendas, which continued in 2021.

SO 3: To address specific global and trans-regional threats to peace, international security and stability

Actions contributed to the establishment and expansion of sustainable cooperation frameworks and networks to address the most salient global and trans-regional threats to peace and security, in a rapidly evolving global security landscape. Ongoing complex conflicts and insecurity in and around the EU neighbourhood, compound-risks linked to climate change and the outbreak of the COVID-19 pandemic, combined with an increasingly agile, and often state-embedded transnational organised crime landscape put unprecedented pressure on the traditional concept and implementation of external policy.

Engagement in areas such as counter terrorism and prevention of violent extremism, the fight against organised crime, the protection of critical infrastructure and the mitigation of risks related to chemical, biological, radiological and nuclear (CBRN) risk

13 The FPI Regional Teams were set up in 2017 to group FPI staff in regional teams rather than in individual Delegations. This has opened up the use of actions to those Delegations that had not previously benefitted from FPI staff and it has added value by creating regional approaches in FPI's area of work.

mitigation and protecting critical infrastructure reinforced the EU’s role a credible and responsive external cooperation partner and a global security actor.

Certain IcSP actions also played a pioneering role, testing out approaches in different countries and regions that were subsequently scaled-up under the European Development Fund and are now integrated in the new NDICI-Global Europe instrument. Examples include actions in support of police cooperation and counter-terrorism in the Sahel, preventing and countering the financing of terrorism in the Horn of Africa, and police cooperation in Latin America. Pilot Actions also successfully responded to growing concerns about the role of climate change as a threat to peace and security and enabled EU to swiftly support partner countries in responding to the COVID-19 pandemic, notably via the EU CBRN Centres of Excellence initiative.

Recognising that internal and external security are ever more intertwined, IcSP actions also supported the external dimension and orientations of EU strategies and action plans on counter-terrorism, organised crime and trafficking in human beings, supporting partner countries in building and enhancing their prevention and response capacities.

3.1.3.5 Performance of corresponding 2014-2020 programme Partnership Instrument (PI)

During the period 2014-2020, the Partnership Instrument (PI) strengthened EU policy promoting its interests, values and visibility externally. It operated under the framework defined by the EU Global Strategy and other EU policies (Commission’s priorities, Agenda 2030 and the Sustainable Development Goals) and in wider support of EU foreign policy objectives. Programming centred on themes rather than country-focused considerations. For example, PI actions underpinned bilateral and regional dialogues in multiple areas of strategic EU interest and bilateral and multilateral negotiations by providing support for concrete policy deliverables, thereby strengthening the EU position as a credible partner. Other actions aimed at developing common approaches with key partners to influence international processes and agendas, thereby underpinning multilateralism, fostering the building of partnerships and alliances in a global context and contributing to the rules-based global order. In the area of trade policy, the PI provided unprecedented support to the EU’s trade agenda, focusing on countries/regions where trade and investment agreements exist or are being negotiated. Further actions enabled the EU to promote its standards abroad, help develop a level playing field and create opportunities for its companies. Public and cultural diplomacy actions enabled the EU to promote its image and understanding abroad, engaging with key decision-makers and target groups in strategic partner countries thereby fostering itself as an influential and reliable global partner.

The mid-term review conducted in 2017 considered that the programming and implementation arrangements set up for the PI reflect the instrument’s need for flexibility. The review also noted that administrative costs were proportionate and reasonable.

In 2021, the Partnership Instrument maintained a high level of operations with 25 stand-alone actions adopted with a budget of EUR 81.9 million covering the following areas: Sustainable development and the environment; Climate, energy action and urbanisation; Digitalisation; Trade agreements and market access; Raising the profile of the EU through Public and Cultural Diplomacy; Health; Promoting and upholding EU values.

These actions enabled and facilitated numerous strategic policy dialogues and information exchange activities with partner countries, thereby extending the reach and depth of EU foreign policy. Besides stand-alone actions which have a medium- to long-term nature, there are two tools for short-term actions under the Partnership Instrument (Policy Support Facility and TAIEX), where respectively 32 and 14 actions were contracted in 2021.

Activities under the Partnership Instrument contributing to addressing the COVID-19 under the Team Europe initiative continued by leveraging the EU’s role as policy maker and standard-setter to address and contain the negative impact of the pandemic on global health and in socio-economic terms.

3.2. Key achievements

3.2.1 Corresponding 2014-2020 programme: Development and Cooperation Instrument (DCI)

158	772 930 km ²	23.3 million	39 ¹⁴	3.4 million	20.1 million	At least 66	At least 35

57	Nearly 90
new partnerships of decentralized cooperation were established in 2021 among more than 100 local authorities of the EU Member States and those of partner countries in Africa, Latin America, Asia and neighbourhood to contribute to SDG 11 and SDG 17 achievements with a peer to peer approach	CSO Roadmaps have been renewed in 2021 with the assistance to the EU Delegations of the dedicated Roadmap Facility

Under the program Partnerships for Sustainable Cities, a call for proposal was launched in February 2021 and successfully concluded in December 2021 with 15 new partnerships set up for a total budget of EUR 39M million and attributed to Delegations for management. With the Support measures of the MIP 2018-2020 and with ATA credits, DG INTPA established a coordination committee of the 57 partnerships grants, as well as an agreement with the OECD for a homogeneous monitoring of the partnership and their contribution to SDG 11 and SDG 17 implementation and SDGs localization.

In November, the Commission organized together with the Committee of Regions the last edition of the “Cities and Regions for International Partnerships” Forum - focusing on two key themes as “Sustainable & Green Recovery” and “Participatory Citizenship & Good Governance”. The Forum registered a record breaking of 700 registrations, representing local and regional authorities' representatives from more than 80 countries. The Forum was an excellent opportunity to assess the relevance of the support to be given to local and regional authorities and the potential of their peer-to-peer cooperation within the programming and implementation of EU funds under the 2021-2027 Multiannual Financial Framework.

The Specific Grant Agreements concluded with five signatories of the Framework Partnerships Agreements were implemented focusing most of their activities on support to Local Authorities and their associations in facing the COVID crisis and preparing the stakeholders to the new approach of the NDICI-Global Europe regulation with the geographisation of the Local Authorities thematic budget line. In 2022, the 5 Strategic Partnerships with the Regional and Global Associations of Local Authorities (operating and action grants) will be renewed under the Budget 2021-27 for a total amount of EUR 50 million.

33	50
Number of actions requested under the EU-Latin America Policy Dialogue Support Facility in 2021	Number of guidelines drafted by the Cross Border Access to Electronic Evidence – SIRIUS project.

3.3. Evaluations, studies and reports

The Common Implementing Regulation (in Article 17) requires a mid-term review report of the EU’s external financing instruments (‘the instruments’) to assess whether these instruments remain fit for purpose, with a view to ensuring the effective implementation of the EU’s assistance. The mid-term review COM(2017) 720 final and the related staff working documents were published on 15 December 2017, concluding that the current set of instruments were still relevant and has proved to be sufficiently enabling. The main findings of the evaluation point to a need to adapt the way the instruments are implemented, notably through a more strategic and overarching programming and ensuring coherent interactions at operational level in the renewed international context.

A series of external evaluations took place in 2016-2017 on all the instruments including the DCI, ENI, EIDHR, IcSP, PI and IPA II. The mid-term review final reports SWD (2017) 600, 602, 604, 607, 608 and 463 respectively, were presented by the Commission on 15 December 2017. The SWD (2019) 418 final, presented the findings of the evaluation of the EU’s support to economic governance in enlargement and neighbourhood countries, finalised in August 2017. In addition, COM(2020) 224 final reported on the implementation of the European Fund for Sustainable Development that provides its initial assessment of the main evaluation criteria of relevance, efficiency, effectiveness, coherence and value added.

At the mid-term of their implementation (2014-2020), the instruments overall shown themselves to be fit for purpose. The DCI was found to be largely on track to deliver on its objectives and commitments. The ENI was found overall relevant and an instrument that allowed the EU to implement the reviewed Neighbourhood policy. The EIDHR with its wide and comprehensive scope, it was and has remained an enabling, flexible and responsive instrument to protect and promote human rights and democracy worldwide, at international, regional and local levels. The IcSP was found on track to achieve the objectives for which it was designed and it was considered to perform a unique function of crisis response and conflict prevention, triggered by EU political priorities, contextual needs and opportunities in fragile and conflict-affected contexts. The PI proved its continued relevance to long standing EU priorities and demonstrated its flexibility through responses to new and changed policy priorities that have arisen since its adoption.

During 2021 one strategic evaluation in the neighbourhood region was completed. The Evaluation of the EU's external action support in the area of migration assessed EU's external action contribution in the policy area of migration in the period 2008-2018, in particular in the areas of labour legal migration, smuggling of migrants and trafficking in human beings, in Enlargement, Neighbourhood, Sub-Saharan Africa and Asia (Central and South) regions. DG NEAR was in the lead, in close collaboration with DG INTPA.

Where ENI is concerned, sever strategic evaluations were under implementation during the reporting period (namely evaluations on Environment and climate change, TAIEX Instrument and EU cooperation with the United Nations and five country evaluations of Moldova, Morocco, Tunisia, Georgia). In addition, three new evaluations in neighbourhood region were launched in 2021 (evaluation of DG NEAR Blending Instruments, and country evaluations of Ukraine and Palestine).

As requested by the EU Regulation No 236/2014 laying down common rules and procedures for the implementation of the Union's instruments for financing external action, in its Art. 17, a final evaluation report on the period from 2014 to 2020 shall be established by the Commission within the interim review of the successor instruments in the next financial period. This evaluation

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: To support and foster dialogue and cooperation with third countries and regions in the Neighbourhood, in Sub-Saharan Africa, in Asia and the Pacific, and in the Americas and the Caribbean; to develop special strengthened partnerships and enhanced political cooperation with the European Neighbourhood, founded on cooperation, peace and stability and a shared commitment to the universal values of democracy, rule of law and respect for human rights, and aiming at deep and sustainable democracy and progressive socio-economic integration as well as people-to-people contacts

Indicator 1: Rule of Law score in relation to countries benefiting from EU assistance

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
Actual Progress										Final
Are we on track :										

Indicator type	Impact
Unit of measurement	percentile rank
Cut-Off Date	
Data source	https://info.worldbank.org/governance/wgi/Home/Reports
Link to the objective	This indicator measures the percentile rank for rule of law which is the expected impact of the cooperation between the EU and Partner Countries.
Link MFF 14-20 / MFF 21-27	This indicator was already used to monitor the 2014-2020 MFF, using the same name and methodology.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The Rule of Law score is expressed as a percentile rank and not an absolute measure of rule of law, thereby severely limiting its use in monitoring rule of law. Indeed the score for one set of countries depends upon the evolution of rule of law in the rest of the countries. For example, an improvement for one set of countries could be entirely due to a drop in the rule of law for the remaining countries. Moreover, when tracking the performance of a single country, statistically significant variations take about a decade to materialise. For more info, see: http://info.worldbank.org/governance/wgi/Home/Documents Consequently, this indicator will not be reported upon.

Indicator 2: Proportion of population below the international poverty line

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2017	Milestones									2030

	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2017
Data source	https://unstats.un.org/sdgs/indicators/database/
Link to the objective	This indicator measures poverty which is the expected impact of the cooperation between the EU and Partner Countries.
Link MFF 14-20 / MFF 21-27	This indicator was used to monitor the 2014-2020 MFF, using the same name and methodology.
Other methodological comments	Even though this data is only available with a long lag, poverty eradication remains the overarching objective of development cooperation.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The baseline is the value for 2017 because that is the most recent value available for the world. No more recent data is available.

Specific Objective 2: At global level, to protect, promote and advance human rights, including gender equality and the protection of human rights defenders, including in the most difficult circumstances and urgent situations, democracy, and the rule of law, including accountability mechanisms, to support civil society organisations, to further stability and peace, prevent conflict, thereby contributing to the protection of civilians, to address other global challenges such as, climate change, protection of biodiversity and the environment, as well as migration and mobility;

Indicator 1: Number of victims of human right violations directly benefitting from assistance funded by the EU

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2030
0	0	0	6 000	18 000	43 000	83 000	126 000	161 000	176 000	184 000
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number (of victims)
Cut-Off Date	31/12/2021
Data source	DG INTPA's intervention monitoring and reporting systems
Link to the objective	This indicator measures EU support to the protection of human rights.
Link MFF 14-20 / MFF 21-27	This indicator was not used to monitor the 2014-2020 MFF.
Other methodological comments	Milestones and target have been calculated using the partial data that was collected over 2018-20. Results data collection for this indicator only started in 2018 and improvements were made every subsequent year, but the total value for the period has significant limitations. Moreover, it is clear that setting milestones and target for an entire MFF with data for only 3 years imposes further limitations on the validity of these values.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Following the adoption of an MFF, projects need to be designed and implemented, which takes time. Furthermore, it also takes time for projects to generate and report results. Consequently, it is to be expected that there are no results to report in the first year of an MFF.

Indicator 2: Number of women of reproductive age, adolescent girls, and children under 5 reached by nutrition programmes with EU support

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2030

	Actual Progress									Final
	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number (of smallholders)
Cut-Off Date	31/12/2021
Data source	DG INTPA's intervention monitoring and reporting systems
Link to the objective	This indicator measures EU support to subsistence production, which is a component of one of the 30 human rights in the Universal Declaration of Human Rights, the right to a standard of living adequate for the health and well-being of himself and of his family.
Link MFF 14-20 / MFF 21-27	This indicator was not used to monitor the 2014-2020 MFF.
Other methodological comments	Milestones and target have been calculated using the partial data that was collected over 2014-20. Results data collection for this indicator only started in 2014 and improvements were made every subsequent year, but the total value for the period has significant limitations.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Following the adoption of an MFF, projects need to be designed and implemented, which takes time. Furthermore, it also takes time for projects to generate and report results. Consequently, it is to be expected that there are no results to report in the first year of an MFF.

Indicator 4: Number of 1-year olds fully immunised with EU support

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2030

	Actual Progress									Final
	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number (of 1-year olds)
Cut-Off Date	31/12/2021
Data source	DG INTPA's intervention monitoring and reporting systems
Link to the objective	This indicator measures EU support to basic health services, which is a component of one of the 30 human rights in the Universal Declaration of Human Rights, the right to a standard of living adequate for the health and well-being of himself and of his family.
Link MFF 14-20 / MFF 21-27	This indicator was not used to monitor the 2014-2020 MFF.
Other methodological comments	Milestones and target have been calculated using the partial data that was collected over 2014-20. Results data collection for this indicator only started in 2014 and improvements were made every subsequent year, but the total value for the period has significant limitations.

Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Following the adoption of an MFF, projects need to be designed and implemented, which takes time. Furthermore, it also takes time for projects to generate and report results. Consequently, it is to be expected that there are no results to report in the first year of an MFF.

Indicator 5: Number of individuals with access to improved drinking water source and/or sanitation facilitation with EU support

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2030
	0	0	101 000	519 000	2 340 000	4 563 000	6 903 000	8 825 000	9 677 000	10 095 000
	Actual Progress									Final
	0									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number (of individuals)
Cut-Off Date	31/12/2021
Data source	DG INTPA's intervention monitoring and reporting systems
Link to the objective	This indicator measures EU support to access to clean water, which is a component of one of the 30 human rights in the Universal Declaration of Human Rights, the right to a standard of living adequate for the health and well-being of himself and of his family.
Link MFF 14-20 / MFF 21-27	This indicator was not used to monitor the 2014-2020 MFF.
Other methodological comments	Milestones and target have been calculated using the partial data that was collected over 2018-20. Results data collection for this indicator only started in 2018 and improvements were made every subsequent year, but the total value for the period has significant limitations. Moreover, it is clear that setting milestones and target for an entire MFF with data for only 3 years imposes further limitations on the validity of these values.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Following the adoption of an MFF, projects need to be designed and implemented, which takes time. Furthermore, it also takes time for projects to generate and report results. Consequently, it is to be expected that there are no results to report in the first year of an MFF.

Indicator 6: Number of students enrolled in education: a) primary education b) secondary education and number of people who have benefitted from institution or workplace-based VET/skills development interventions, supported by the EU

										Final
Are we on track :	On track									

Indicator type	Input
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	DG INTPA's internal financial information management system
Link to the objective	This indicator measures EU support to gender equality.
Link MFF 14-20 / MFF 21-27	This indicator was not used to monitor the 2014-2020 MFF.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	No interventions with NDICI financing have entered implementation, so this indicator cannot yet be calculated. This indicator reports the number of interventions promoting gender equality and women’s empowerment achieved with NDICI financing divided by the total number of interventions financed by the NDICI. Since financing has not yet begun, both the numerator and denominator are zero, which thereby generates a value of N/A which is not allowed in this field.

Indicator 8: Number of migrants, refugees and internally displaced people or individuals from host communities protected or assisted with EU support

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2030

2017-2020	Milestones									2030
11.68		10	10	10	10	10	10	10	10	10
	Actual Progress									Final

Are we on track :	On track
-------------------	----------

Indicator type	Input
Unit of measurement	Ratio
Cut-Off Date	31/12/2021
Data source	DG INTPA's internal financial information management system
Link to the objective	This indicator measures the financial impact of EU support provided by financial institutions to promote human development in the broadest sense possible.
Link MFF 14-20 / MFF 21-27	This indicator was not used to monitor the 2014-2020 MFF.
Other methodological comments	Leverage will vary from one blending/guarantee to another. With this indicator we just want to monitor the leverage of the portfolio as a whole. The point is to ensure that a minimum level of leverage is being achieved on average. Therefore, at the beginning of the period when the portfolio is composed of few blendings/guarantees, it is entirely possible that important deviations from the milestones are observed. As time goes by and the portfolio grows there should be a convergence to a value that is at least 10.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	This indicator reports leverage achieved with NDICI financing. Since financing has not yet begun, we cannot measure the leverage yet. So, the target and value for 2021 is "N/A", which is not the same as zero.

Specific Objective 3: To respond rapidly to: situations of crisis, instability and conflict including those which may result from migratory flows and forced displacement and hybrid threats; resilience challenges, including natural and man-made disasters, and linking of humanitarian aid and development action; as well as the Union’s foreign policy needs and priorities.

Indicator 1: Number of individuals directly benefiting from EU supported interventions that specifically aim to support civilian post-conflict, peace building or conflict prevention

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020: 0	Milestones									2030

----------------	--------

Unit of measurement	Number (of processes)
Cut-Off Date	31/12/2021
Data source	DG INTPA's intervention monitoring and reporting systems
Link to the objective	This indicator measures the effort to promote EU foreign policy needs and priorities with the EU support provided to partner countries.
Link MFF 14-20 / MFF 21-27	This indicator was not used to monitor the 2014-2020 MFF.
Other methodological comments	This indicator is the same as KPI 11 identified in NDICI regulation (annex 6) as one of the overall indicators of NDICI. It is the only indicator on the NDICI KPI list which matches funding of actions channeled through FPI.4 (be these from FPN rapid response or geographical pillars). This means all FPI.4 actions contribute to this absolutely highest level of indicator for our FPI.4 actions. As it is an impact level indicator, results can be measured only after the actions have ended.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Following the adoption of an MFF, projects need to be designed and implemented, which takes time. Furthermore, it also takes time for projects to generate and report results. Consequently, it is to be expected that there are no results to report in the first year of an MFF.

Indicator 3: Number of EU funded initiatives supporting the implementation of political, economic and social reforms and joint agreements in partner countries

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

Indicator type	Output
Unit of measurement	Number (of initiatives)
Cut-Off Date	31/12/2021
Data source	DG INTPA's intervention monitoring and reporting systems
Link to the objective	This indicator measures the effort to promote EU foreign policy needs and priorities with the EU support provided to partner countries.
Link MFF 14-20 / MFF 21-27	This indicator was not used to monitor the 2014-2020 MFF.
Other methodological comments	It was not possible to set milestones and target as this is a new indicator without any historical data.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Following the adoption of an MFF, projects need to be designed and implemented, which takes time. Furthermore, it also takes time for projects to generate and report results. Consequently, it is to be expected that there are no results to report in the first year of an MFF.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: European Neighbourhood Instrument (ENI)

General Objective 1: Establishing an area of shared prosperity and good neighbourliness involving the Union and the partner countries by developing a special relationship founded on cooperation, peace and security, mutual accountability and shared commitment to universal values of democracy, the rule of law and respect for human rights in accordance with the Treaty on EU.

Indicator 1: Number of comprehensive agreements and individual ENP Action Plans in place with interested neighbouring countries

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Are we on track :	On track									

Indicator type	Result
Unit of measurement	Agreements (AA) or Partnership Priorities (PP) & Action plans (AP) in force
Cut-Off Date	31/12/2020
Data source	European Commission
Narrative	South: Baseline 2021: Association Agreements in force with 8 of the 10 southern partners (excluding Libya and Syria). Previous Partnership priorities valid until 2021 were extended for all countries, and new ones are being negotiated. Negotiations are concluded with Jordan and an agreement could be close with Egypt. An EU agreed text was concluded on Lebanon, but no agreement yet to transmit text to Lebanese authorities, given the political situation. Work is still ongoing for Algeria. PPs for Tunisia and Morocco are on hold due to the political context, although tensions with Morocco are easing. For Palestine and Israel there are valid Action Plans until end of 2021, and their extension until 2024 is waiting for formal agreement. For Syria and Libya no Joint Documents are under consideration, and programming is done under EU Special Measures. East: Three Association Agreements in force with Georgia, Moldova and Ukraine, a CEPA in force with Armenia, and PP with Azerbaijan.
Methodology	
Link MFF 14-20 / MFF 21-27	Discontinued for the next MFF
Other methodological comments	13 of 15 ongoing ENI CBC directly impacted by Russia's aggression against Ukraine. 9 FAs with Russia and Belarus suspended, 4 programmes with Ukraine under review to assess possible increased support/additional measures for Ukraine.
Full metadata available at this address	
Justification of the trend	East:2014-2020: three Association Agreements entered in force with Georgia, Moldova and Ukraine, a Comprehensive and Enhanced Partnership Agreement (CEPA) enter into force with Armenia, and Partnership Priorities (PP) concluded with Azerbaijan (with whom the Partnership and Cooperation Agreement in force since 1999 is still the basis for relations, while a new Agreement is being concluded). All the five countries count with equivalent documents to Action Plans (Association Agendas for Georgia, Moldova and Ukraine; a CEPA Roadmap for Armenia, and the PP for

	Azerbaijan. South: 2014-2018: 8 AA. 8 AP or similar documents (Partnership Priorities).No AA with Syria and Libya due to crisis situations in these countries. 2022: 8 AA still in force for the southern countries. 6 Partnership priorities validity extended until new ones are agreed upon and 2 action plans valid until end 2021 (IL, PS). Political instability in the Region, and some delay on the EU side led to slow progress in 2020/2021, but 2022 should allow for faster progress from both sides, and agreements are close with JO and EG, and could progress with DZ ad MO. TN and LB need for further political clarity on their domestic situation before further progress.
--	--

Specific Objective 1: Promoting human rights and fundamental freedoms, the rule of law, principles of equality and fight against discrimination in all its forms, establishing deep and sustainable democracy, promoting good governance, fight against corruption, strengthening institutional capacity at all levels and developing a thriving civil society including social partners.

Indicator 2: Weighted score based on eight external sources (Corruption Perception (Transparency International), Press Freedom (Reporters without Borders), Freedom of Press (Freedom House), Government Effectiveness (World Bank), Control of Corruption (World Bank), Rule of Law (World Bank), Voice and Accountability (World Bank) and Regulatory Quality (World Bank))

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2010	Milestones									2023

Indicator type	Impact
Unit of measurement	Values: 1 (Worst) - 100 (Best);
Cut-Off Date	31/12/2020
Data source	Source: Eight external sources:Corruption Index (Transparency International) - http://www.transparency.org/countryControl of Corruption (World Bank) - http://web.worldbank.orgPress Freedom (Reporters without Borders) - https://rsf.org/index2014Freedom of Press (Freedom House) - http://www.freedomhouse.org/Government Effectiveness (World Bank) - http://web.worldbank.orgRule of Law (World Bank) - http://web.worldbank.orgRegulatory Quality (World Bank) - http://web.worldbank.orgVoice and Accountability (World Bank) - http://web.worldbank.org
Narrative	
Methodology	The indicator is a weighted score based on 8 external sources taken in three groups, each weighted one third after normalisation:1. Corruption Index (Transparency International) and Control of Corruption (World Bank);2. Press Freedom (Reporters without Borders) and Freedom of Press (Freedom House);3. Government Effectiveness (World Bank), Rule of Law (World Bank), Regulatory Quality (World Bank) and Voice and Accountability (World Bank).
Link MFF 14-20 / MFF 21-27	Discontinued for the next MFF
Other methodological comments	It should be noted that the indicators are based mostly on perceptions and do not necessarily reflect the impacts made by the EU assistance and policy in these areas. There are also many external factors, such as political instability and security situation, which might influence overall scores. Therefore, these indicators only indirectly influenced by EU actions.
Full metadata available at this address	
Justification of the trend	Overall, the trend in the neighbourhood has been fluctuating, but the most recent development has seen a leap in the score and the target was exceeded for the first time since the reporting period.

Specific Objective 2: Achieving progressive integration into the Union internal market and enhanced sector and cross-sectoral cooperation including through legislative approximation and regulatory convergence towards Union and other relevant international standards and improved market access including through deep and comprehensive free trade areas, related institution building and investments, notably in interconnections.

Indicator 2: Number of Deep and Comprehensive Free Trade Agreements (DCFTA) and Agreements on Conformity Assessment and Acceptance of industrial products (ACAA)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Other methodological comments	
Full metadata available at this address	
Justification of the trend	Negotiations are ongoing with several Southern Partners, but notwithstanding EU's efforts and flexibility, progress is difficult, due to political tensions with MA, strong popular resistance and political uncertainty in TN. Ongoing trade disputes with DZ could be smoothed in 2022, and the conclusion of political agreements with JO and EG could lead to better trade and investment relations. East: Three AA/DCFTA in force with Georgia, Moldova and Ukraine

Specific Objective 3: Creating conditions for the better organisation of legal migration and the fostering of well managed mobility of people, for the implementation of existing or future agreements concluded in line with the Global Approach to Migration and Mobility, and for promotion of people-to-people contacts, in particular in relation to cultural, educational, professional and sporting activities.

Indicator 1: Number of Mobility Partnerships in place

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Neighbourhood East										
2012	Milestones									2023

	3	3	3	3	3	3	3	3		
Are we on track :	Moderate progress									

Indicator type	Impact
Unit of measurement	Mobility Partnerships
Cut-Off Date	31/12/2021
Data source	Information from Directorate-General for Migration and Home Affairs (DG HOME).
Narrative	South: Baseline 2012: Mobility Partnership signed with one country in 2013. Preparatory discussions launched with two countries. East: De facto suspension of the EU-BY Mobility Partnership: currently no cooperation/contacts are maintained under the EU-BY Mobility Partnership, in line with the October 2020 Council Conclusions. This applies also to the technical level.
Methodology	
Link MFF 14-20 / MFF 21-27	Discontinued for the next MFF
Other methodological comments	Mobility Partnerships declarations are the instrument through which the EU and its partners in the Neighbourhood intend to set a framework to manage migration flows with commonly agreed objectives and programmes. Mobility Partnerships follow the Global Approach to Migration and Mobility guidelines. Thus, they are a good measure of the achievements in this field.
Full metadata available at this address	
Justification of the trend	The first indicator (number of mobility partnerships in place) is an example of good performance where the targets have been either met (Neighbourhood East) or almost (Neighbourhood South).

Indicator 2: Number of readmission/visa facilitation agreements and Visa Liberalisation Action Plans (VLAP) in place

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Neighbourhood East										
2008	Milestones									2020

	Actual Progress									Final
	0	0	0	0	0	0	0	0		
Are we on track :										

Indicator type	Impact
Unit of measurement	Number of readmission/visa facilitation agreements and Visa Liberalisation Action Plans (VLAP) in place
Cut-Off Date	
Data source	Information from Directorate-General for Migration and Home Affairs (DG HOME).
Narrative	East: Visa liberalisation continues to be in place with Georgia, Moldova and Ukraine; Visa Facilitation and Readmission Agreements in place with Armenia, Azerbaijan and Belarus. There has been a partial suspension of the Visa Facilitation Agreement (VFA) with Belarus: in November 2021, the Council adopted the Commission proposal on the partial suspension of the EU-BY VFA [the suspension concerns government officials of Belarus (members of Belarus official delegations; members of Belarus national and regional Governments and Parliaments, Belarus Constitutional Court and Belarus Supreme Court)].
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	Based on visa facilitation/ liberalisation agreements, both the EU and the non-EU citizens benefit from facilitated procedures for issuing visas. Visa facilitation/liberalisation agreements are linked to readmission agreements which establish the procedures for the return of persons in irregular situation (own or third country nationals or stateless persons) to the EU or to the partner non-EU country. Readmission and visa facilitation/liberalisation agreements are key elements to assess progress regarding mobility and the promotion of people to people contacts.
Full metadata available at this address	
Justification of the trend	the target attained for the Eastern Neighbourhood. In the Southern Neighbourhood, no readmission and visa facilitation agreements have been concluded due to sensitive and complex negotiations in an uncertain political environment.

Specific Objective 4: Supporting smart, sustainable and inclusive development in all aspects; poverty reduction, including through private-sector development and reduction of social exclusion; promotion of capacity building in science, education and in particular higher education, technology, research and

innovation; promotion of internal economic, social and territorial cohesion; rural development; public health; environmental protection, climate action and disaster resilience.

Indicator 1: Inequality-Adjusted Human Development Index

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Unit of measurement	Number of countries
Cut-Off Date	31/12/2019
Data source	UNDP - http://hdr.undp.org/en/content/download-data
Narrative	There was no update of the report since 2020.
Methodology	Number of countries with indicator ≥ 0.7 (between high and very high human development).
Link MFF 14-20 / MFF 21-27	Discontinued for the next MFF
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The trend for this indicator, which is based on UNDP's human development index, has been stable and going towards the target.

Specific Objective 5: Promoting confidence building, good neighbourly relations and other measures contributing to security in all forms and the prevention and settlement of conflicts, including protracted conflicts.

Indicator 1: Political stability and absence of violence: number of countries in a percentile rank above 0-30 (lowest rank)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Are we on track :	Moderate progress									

Indicator type	Impact
Unit of measurement	Number of countries
Cut-Off Date	31/12/2020
Data source	The WB Worldwide Governance Indicators (WGI)
Narrative	This indicator measures perceptions of the likelihood that the government will be destabilised or overthrown by unconstitutional or violent means, including politically-motivated violence and terrorism.
Methodology	Baseline: Countries in a percentile rank above 0-30 (Armenia, Belarus, Moldova, Ukraine) and Countries in a percentile rank above 0-10 (Jordan, Morocco, Tunisia, Libya, Egypt, Israel) respectively. Milestone 2016 South: 6 and Algeria, Lebanon Target South: 8 countries + Syria

Link MFF 14-20 / MFF 21-27	Discontinued for the next MFF
Other methodological comments	This indicator measures perceptions of the likelihood that the government will be destabilized or overthrown by unconstitutional or violent means, including politically - motivated violence and terrorism. Higher values in percentile rank indicate better governance ratings. Source: Worldwide Governance Indicators (WGI) project (WB group).
Full metadata available at this address	
Justification of the trend	In comparison with the previous PS the value has been updated. 2020 is the latest value available on the WB WGI database. The most recent results under this indicator show stability in southern neighbourhood. However, in eastern neighbourhood Belarus score dropped below the threshold, while the score of Georgia increased just above the threshold.

Specific Objective 6: Enhancing sub-regional, regional and Neighbourhood wide collaboration as well as Cross-Border Cooperation.

Indicator 2: Number of ministerial, platform and panel meetings under the Eastern Partnership

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023

					87	110	85	48		
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	Policy dialogue events that were organised.
Cut-Off Date	31/12/2021
Data source	European Commission
Narrative	There has been a substantial increase of the number of events over the last years. This is mainly due to the increased number of the requests coming from high-level decision-makers. However, in 2020 the number dropped again due to the Covid crisis.
Methodology	
Link MFF 14-20 / MFF 21-27	Discontinued in the next MFF
Other methodological comments	
Full metadata available at this address	
Justification of the trend	There has been a substantial increase of the number of events in 2018 and 2019. This is mainly due to the increased number of the requests coming from high-level decision-makers. However, in 2020 and 2021 the number dropped again due to the continued effects of the Covid crisis.

Indicator 4: Increased credibility of the Union for the Mediterranean (UfM) through a high number of ministerial meetings establishing regional sector priorities and through the engagement of regional cooperation, finance and planning ministers via the holding of UFM ministerial conferences on regional cooperation and planning

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2014	Milestones									2023
3		3	6	9	12	15				24

Are we on track :	On track									

Indicator type	Result
Unit of measurement	Ministerial meetings establishing regional sector priorities.
Cut-Off Date	31/12/2021
Data source	European Commission
Narrative	Meetings chronologically: 2014 (Baseline): Three ministerial meetings establishing regional sector priorities Ministries of Finance, Planning and International Cooperation relatively un-engaged in regional cooperation. No cooperation ministerial ever held. 2016: Three new: UfM ministerial meetings organised in the field of cooperation and planning; energy; labour and employment took place in 2016. 2017: Three new: Youth; Water; Sustainable urban development; Women's Empowerment. 2018: One new: Trade 2019: One new: Ministerial Conference in the field of Employment and Labour. 2020: One new: trade ministerial. 2021 Four Ministerial meetings took place: Sustainable Blue Economy, Energy, Environment and Climate Change, and the Regional Forum (Foreign Affairs).
Methodology	Cumulative measurement of meetings.
Link MFF 14-20 / MFF 21-27	Discontinued for the next MFF

Other methodological comments	
Full metadata available at this address	
Justification of the trend	Notwithstanding the pandemic situation, which made travelling and planning difficult, the UfM was able to gather Ministers both in the EU and Cairo, or numerous activities took place also virtually, continuing UfM's engagement on progress through projects.

Previous Program 2: European Instrument for Democracy and Human Rights (EIDHR)

General Objective 1: Enhancing the respect for and observance of human rights and fundamental freedoms, as proclaimed in the Universal Declaration of Human Rights and other international and regional human rights instruments, and strengthening their protection, promotion, implementation and monitoring, mainly through support to relevant civil society organisations, human rights defenders and victims of repression and abuse.

Indicator 1: Level of implementation of United Nations Universal Periodic Review* recommendations which have been accepted by states in percentage

Justification of the trend	The data has not been available since 2017.

General Objective 2: Supporting, developing and consolidating democracy in third countries, by enhancing participatory and representative democracy, strengthening the overall democratic cycle, in particular by reinforcing an active role for civil society within this cycle, the rule of law and improving the reliability of electoral processes, in particular by means of election observation missions.

Indicator 1: Number of electoral processes and democratic cycles supported, observed, and followed

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2021
20	45	70	95	120	145	170	195	220		220
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Input
Unit of measurement	Cumulative number (of electoral processes)
Cut-Off Date	31/12/2021
Data source	The list of projects resulting from a search in CRIS using DAC code 15151

Narrative	This indicator informs us on how many different electoral cycles the EU has been supporting, including through election missions.
Methodology	Electoral processes and democratic cycles supported, observed and followed include: 1. EU Election Observation Missions (EOMs): fully-fledged election observation missions 2. EU Election exploratory missions.3. EU Election Expert Missions (EEMs): small-scale missions composed of electoral experts of assessment of the election process 4. Complementary activities (studies) which started in 2017: In addition to the electoral missions, preparation of a study or conducting a desk review on an electoral issue and any other activities linked to electoral missions 5. Election Follow up missions 6. Electoral assistance (eg technical assistance, provision of voting material & equipment, support to the registration of political parties and/or of voters, support to civil society organisations in areas such as voter & civic education or training of local observers, media monitoring, etc.) which is provided through a wide array of domain: EIDHR, CSO-LA, FED, ICSP, LA, and the ETF for Africa.
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	This indicator builds on the number of electoral process at national level that have been established by partner countries' own constitutional calendars. In 2021 electoral assistance or election observation projects were provided through EU external aid in Armenia Benin Bolivia Burkina Burundi, Colombia, DRC, Ecuador, Ethiopia, Gaza, Ghana, Honduras, Iraq, Kenya, Kosovo*, Liban, Liberia, Libya, Mali, Mozambique, Niger, Nigeria, Paraguay, Perù, RCA, RCI, San Salvador, Sierra Leone, Somalia, South Sudan, Sudan The Gambia Tanzania Uganda Venezuela Zambia Zimbabwe.
Full metadata available at this address	
Justification of the trend	The ability to have maintained the support to 35 election cycles, in spite of the pandemic, must be recognized as an unexpected success.

Specific Objective 1: Support to Human Rights and Human Rights Defenders in situations where they are most at risk.

Indicator 1: Number of Human Rights Defender individuals who have received EU support (being protected politically, legally and/or physically and pulled out of their position of abuses)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2021
230	1 200	1 200	1 200	1 200	1 200	1 200	1 200	1 200	1 200	1 200
	Actual Progress									Final

Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Fondation Internationale pour les Défenseurs des Droits de l'Homme (FIDDH) and Protect Defenders consortium (implementing partners of the EU Human Rights Defenders mechanism: EU Emergency Fund for human rights defenders at risk and ProtectDefenders.eu)
Narrative	
Methodology	<ul style="list-style-type: none"> The numbers under ProtectDefenders.eu and the Emergency Fund include individual human rights defenders (HRDs) and their family members, as well as organisations and groups, who received direct support. Training, capacity-building, outreach and advocacy activities conducted in the framework of ProtectDefenders.eu were not included. HRDs benefiting from projects under the human rights crisis facility were not included. HRDs supported by projects financed via global / local calls for proposals or via direct awards were not included.
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF
Other methodological comments	
Full metadata available at this address	
Justification of the trend	The number of human rights defenders at risk who receive EU support under the EU Emergency Fund for human rights defenders at risk and ProtectDefenders.eu steadily increases. This is due to increasing restrictions and clampdown on human rights defenders and their working environment.

Indicator 2: Number of crisis response projects implemented under the EIDHR

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2021

	Actual Progress									Final
	15	8	17	27	20	33	40	5		5
Are we on track :	On track									

Indicator type	Input
Unit of measurement	Number (of crisis response projects)
Cut-Off Date	31/12/2021
Data source	DEVCO B1 EIDHR project database
Narrative	
Methodology	In 2021: five crises facility projects in four different world regions. In 2020: 5 crisis facilities, 2 global projects and 40 projects under the Country Based Support Scheme in 28 countries. In 2019: 4 country-specific projects under the EIDHR Crisis Facility, 2 global projects (EIDHR Emergency Fund and the grant to the EU Comprehensive HRDs mechanism Protectdefenders.eu), and an estimated number of 27 projects under the Country Based Support Scheme (Honduras, Guatemala (2), Venezuela (2), Nigeria, Niger, Ukraine (2), Russia (2), Sudan, Syria, Serbia (3), Peru, Mexico, Iraq, Kenya (2), Colombia (2), Salvador (2), Bolivia, Myanmar). In 2018: five country-specific projects under the EIDHR Crises Facility and an estimated number of 15 projects under the Country Based Support Scheme (e.g. Syria, Congo, Philippines, Ethiopia, Yemen).
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF
Other methodological comments	In 2017: four country-specific projects under the EIDHR Crises Facility, one global project and 22 projects under the Country Based Support Scheme (e.g. Syria, Turkey, Philippines, Ethiopia, Yemen). In 2016: at least six projects, four in countries and two regional, under the EIDHR Crises Facility and eleven projects under the Country Based Support Scheme. In 2015: at least 6 in-country projects under the EIDHR Crises Facility and 2 global projects (EIDHR Emergency Fund and the grant to the EU Comprehensive HRDs mechanism Protectdefenders.eu). In 2014 : 9 in country projects (most difficult situations as Belarus, Syria, Ukraine) and 6 global projects were deployed offering a global coverage and compiling a mix of in-country and multi-country projects (most difficult type of HR violation and/or categories of defenders at risk) activities.
Full metadata available at this address	
Justification of the trend	An increase in polarisation and populist politics worldwide and a dearth of geopolitical actors criticising authoritarianism have brought rise to numerous human rights crises, at the same time making it even more difficult for CSOs to work in many countries. Restrictions on freedoms of assembly, association and expression as part of the COVID-19 response have exacerbated these trends.

Specific Objective 2: Support to other priorities of the Union in the fields of human rights

Indicator 1: Number of EIDHR projects in line with EU Guidelines

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2021
150	250	250	250	250	180	180	250	250		250
	Actual Progress									Final
	271	332	132	186	140	204	408	163		163
Are we on track :	On track									

Indicator type	Input
Unit of measurement	Number (of projects)
Cut-Off Date	31/12/2021
Data source	DEVCO G1 EIDHR project database
Narrative	
Methodology	EU guidelines are not legally binding, but because they have been adopted at ministerial level, they represent a strong political signal that they are priorities for the Union. Guidelines are pragmatic instruments of EU Human Rights policy and practical tools to help EU representations in the field better advance our Human Rights policy. They also serve as priorities for defining activities in order to put into practice the political orientation. There are 13 Human Rights Guidelines the EIDHR is delivering on: 1. Violence against women and girls and combating all forms of discrimination against them (2008, reviewed in 2021) 2. Human Rights dialogues with third countries (2008) 3. Children and armed conflict (2008) see below for more
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF
Other methodological comments	continued from above: 4. Human Rights defenders (2008) 5. International Humanitarian Law (2009) 6. Promotion and protection of freedom of religion or belief (2013) 7. Enjoyment of all Human Rights by lesbian, gay, bisexual, transgender and intersex (LGBTI) persons (2013) 8. Death penalty (2013) 9. Freedom of Expression Online and Offline (2014) 10. Promotion and Protection of the Rights of the Child (2017) 11. Torture and other cruel, inhuman or degrading treatment or punishment (2019) 12. EU Guidelines on Non-Discrimination in External Action (2019). 13. EU Guidelines on Safe Drinking Water and Sanitation (2019)
Full metadata available at this address	
Justification of the trend	Even though the target was not met in the final year, when considered over the entire period, the

	results obtained greatly exceed the targets set over the same period.
--	---

Indicator 2: Number of Human Rights victims benefitting from EIDHR projects

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
3 000	4 000	4 000	4 000	4 000	4 000	4 000	4 000			4 000
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Number (of human rights victims)

Justification of the trend	Data not available as there is no data collection tool available.

Specific Objective 3: Support to Democracy.

Indicator 1: Percentage of countries belonging to the Democracy Pilot Countries which have improved their V-DEM Electoral Democracy Index

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2021
0	0.15	0.3	0.5	0.65	0.75	0.9	1	1		1
	Actual Progress									Final
		0.416	0.429	0.6	0.3	0.3	0.31	0.27		0.27
Are we on track :	Deserves attention**									

Indicator type	Impact
Unit of measurement	Percentage (number of countries which have improved their VDEM index/total number of Democracy Pilot Countries)
Cut-Off Date	31/12/2021
Data source	The V-DEM Electoral Democracy Index can be found at V-DEM net (https://v-dem.net/about). This percentage includes both the 1st and 2nd generation of Pilot Countries, in total 13 countries.
Narrative	
Methodology	This indicator measures the Democratic progress in the following countries: Benin, Bolivia, Georgia, Ghana, Lebanon, Malawi, Maldives, Mongolia, Morocco, Mozambique, Myanmar, Kyrgyzstan, Paraguay, Philippines, Republic of Moldova, Solomon Islands, Tanzania, Timor Leste and Tunisia; based on data from the V-DEM index (electoral democracy indicator).
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF
Other methodological comments	The V-DEM Electoral Democracy Index can be found at V-DEM net (https://v-dem.net/about). This percentage includes both the 1st and 2nd generation of Pilot Countries, in total 13 countries.
Full metadata available at this address	
Justification of the trend	Decline of democracy in the world unrelated to our projects.

Indicator 2: Percentage of actions of the democracy support action plans implemented

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2021
0	0	0	0.15	0.25	0.45	0.6	1	1		1
	Actual Progress									Final
	0	0	0.25	0.3	0.35	0.4	0.4	0.4		0.4
Are we on track :	Deserves attention**									

Indicator type	Output
Unit of measurement	Percentage (number of actions implemented/total number of actions in democracy support action

	plans)
Cut-Off Date	31/12/2021
Data source	Data on implementation of Democracy Action Plans, Human Rights and Democracy Country Strategies and EOM recommendations follow-up plans
Narrative	
Methodology	Percentage of actions planned by Delegations in the framework of their Democracy Action Plans as reported in the Human Rights and Democracy country strategies.
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF
Other methodological comments	
Full metadata available at this address	
Justification of the trend	Stable situation in the last years.

Specific Objective 4: EU Election Observation Missions

Indicator 1: Number of electoral processes and democratic cycles supported, observed, and followed by means of Election Observation Missions, Election Assessment Teams and Election Experts Missions proposing recommendations to the host country

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
	Milestones									2020
17	19	21	22	23	18	18	23	7		23
	Actual Progress									Final
	17	16	16	19	21	16	14	5		14
Are we on track :	Moderate progress									

Indicator type	Output
Unit of measurement	Number (of electoral processes)
Cut-Off Date	31/12/2021
Data source	FPI
Narrative	The actual deployment of missions actually deployed contributes to the Specific Objective 4: EU Election Observation Missions
Methodology	Yearly indicator. The 2021 result reflect the missions delivered under the EIDHR. The electoral missions under NDICI-Global Europe are excluded from the result.
Link MFF 14-20 / MFF 21-27	Under the MFF 21/27, the indicator will be merged with Indicator 2 for further alignment with the Annual Activity Report.
Other methodological comments	The indicator includes the:- EU Election Observation Missions (EOMs): fully-fledged election observation missions;- EU Election Assessment Team missions (EATs): limited observation or assessment missions in countries with particularly difficult security situations;Since 2015, no EATs have been deployed. It has been decided either to deploy a fully-fledged EOM or an EEM;- EU Election Expert Missions (EEMs): small scale missions composed of electoral experts of assessment of the election process;- The studies or desk reviews on an electoral issue and any other activities linked to electoral missions that started in 2017.The indicator, however, does not take into account the Exploratory Missions, which aim at preparing EOMs and assess the usefulness, advisability and feasibility of the fully-fledged EOM.
Full metadata available at this address	
Justification of the trend	In the context of the global COVID-19 pandemic, travel restrictions, security and sanitary situation in the countries, many of the missions could not be deployed in 2020. While FPI put the necessary measures, the activities in 2021 were still influenced by travel restrictions due to the pandemic. Results in 2021 do not include the missions under NDICI-Global Europe.

Indicator 2: Number of Election Follow-up Missions (post-election expert missions) deployed in countries after an Election Observation Mission to assess the implementation of recommendations.

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
2	2	3	4	4	5	5	8			8
	Actual Progress									Final
	2	3	3	4	4	7	0	5		
Are we on track :	Moderate progress									

Indicator type	Output
Unit of measurement	Number (of electoral missions)
Cut-Off Date	31/12/2021
Data source	FPI

Narrative	The deployment of follow-up missions deployed contributes to the Specific Objective 4: EU Election Observation Missions. The aim of Election Follow-up Missions is to take stock of the state of implementation of the EOM/EAT recommendations. EFMs are conducted within a period of 2 to 3 years into the electoral cycle (which starts with the initial EOM/EAT mission). They serve to deepen the dialogue with partner countries on the recommendations, but also open up space for wider political dialogue on the governance and rule of law in partner countries. EFMs have been implemented since 2013.
Methodology	Yearly
Link MFF 14-20 / MFF 21-27	Under the MFF 21/27, the indicator will be merged with Indicator 1 for further alignment with the Annual Activity Report.
Other methodological comments	The aim of Election Follow-up Missions is to take stock of the state of implementation of the EOM/EAT recommendations. EFMs are conducted within a period of 2 to 3 years into the electoral cycle (which starts with the initial EOM/EAT mission). They serve to deepen the dialogue with partner countries on the recommendations, but also open up space for wider political dialogue on the governance and rule of law in partner countries. EFMs have been implemented since 2013. The target for 2020 will be difficult to reach since there will be many important elections that will absorb the Human Resources capacities and budget.
Full metadata available at this address	
Justification of the trend	After the slowdown of 2020 activities, FPI has set the necessary Covid mitigation measures and the deployment of the missions has increased with lifting of travel restrictions. In 2021, FPI set the necessary Covid mitigation measures and 5 follow-up missions were deployed, however the activities of 2021 were influenced by movements of travel restrictions due to the pandemic. The 2021 results do not reflect the missions under NDICI-Global Europe.

Specific Objective 5: Support to targeted key actors and processes, including international and regional human rights instruments and mechanisms.

Indicator 1: Number of States that have signed and ratified international & regional Conventions and related optional Protocols

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2021
5	10	10	10	10	10	10	10	10		10
	Actual Progress									Final
	34	53	49	27	24	24	12	15		15
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number (of states)
Cut-Off Date	31/12/2021
Data source	OHCHR website: http://indicators.ohchr.org/ and https://tbinternet.ohchr.org/SitePages/MonthlyReport.aspx
Narrative	
Methodology	This indicator will be based on the information in: https://indicators.ohchr.org/ and https://www.ohchr.org/EN/ProfessionalInterest/Pages/CoreInstruments.aspx
Link MFF 14-20 / MFF 21-27	This indicator will be not used to monitor the 2021-2027 MFF.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	COVID-19 crisis has made the ratification processes more difficult.

Indicator 2: Number of key actors supported, in particular international, regional and national organisations

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
10	15	15	15	15	15	15	15	15		15
	Actual Progress									Final
	15	11	10	15	15	15	19	20		20
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number (of key actors)
Cut-Off Date	31/12/2021
Data source	DEVCO G1 implementation data
Narrative	

Methodology	In 2021, 20 key actors: Global Campus of Human Rights (7 stakeholders), ILO-International Labour Organization, IMO-International Organisation for Migration, OHCHR-Office of the UN High Commissioner for Human Rights, ICC-International Criminal Court, IACHR-Inter-American Human Rights Court and Commission, Council of Europe, International IDEA, GANHRI-Global Alliance of National Human Rights Institutions, and four regional NHRI secretariats (5 stakeholders). Support has also been given to the participation of civil society in key processes, e.g. in human rights negotiations, dialogues, etc. In 2017, 2018, 2019, 2020, 19 key actors: Global Campus of Human Rights/Inter-University Centre for Human Rights and Democratisation (7 stakeholders), ILO, OHCHR, ICC, IACHR, Council of Europe, International IDEA, GANHRI, four regional NHRI secretariats (5 stakeholders). Support has also been given to the participation of civil society in key processes, e.g. in human rights negotiations, dialogues,...
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF
Other methodological comments	In 2014, 15 key actors: OHCHR-Office of the High Commissioner for Human Rights, EIUC-European Inter-University Centre for Human Rights and Democratisation, National Human Rights Institutes, ICC - International Criminal Court, International Organization for Migration. In 2015, 11 key actors: European Inter-University Centre for Human Rights and Democratisation-EIUC (7 stakeholders), IOM-International Organization for Migration, OHCHR-Office of the UN High Commissioner for Human Rights, UNICEF and indirectly the African Union. In 2016, 10 key actors: EIUC (7 stakeholders), ILO-International Labour Organization, OHCHR, UNHCR-UN Refugees Agency.
Full metadata available at this address	
Justification of the trend	Support to strategic stakeholders.

Previous Program 3: Instrument contributing to Stability and Peace

Specific Objective 1: In a situation of crisis or emerging crisis, to swiftly contribute to stability by providing an effective response designed to help preserve, establish or re-establish the conditions essential to the proper implementation of the Union's external policies and actions in accordance with Article 21 TEU.

Indicator 1: Percentage of projects adopted within 3 months of a crisis context (date of presentation to PSC).

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
69%	70%									75%
Actual Progress										Final
	68%	64%	61%	47%	82%	91,3%	86%	57%		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	FPI
Narrative	The adoption of decisions on projects (actions) within a limited time contributes directly to the objective to swiftly contribute to stability.
Methodology	Yearly values
Link MFF 14-20 / MFF 21-27	This indicator will not be followed under the MFF 21/27
Other methodological comments	Since the margin of progress between the baseline (of 69%) and the target (of 75%), it was considered relevant to set only one milestone of 70% in 2018.
Full metadata available at this address	
Justification of the trend	While there was no active financing instrument adopted for the first five and a half months of 2021, the service continued to deliver timely EU responses to high-priority crises on the EU political agenda by relying on the possibilities for retroactive funding confirmed by DG BUDG. The absence of an active financing instrument, meant that actions presented in the three first of the year's six information notes needed to await the adoption of the Regulation before the process for adoption of financing decisions could be launched. The performance for the period during which there was an active financing instrument remains well beyond the target of 75%. In 2021, out of the 43 crisis response financing decisions adopted under the Rapid Response Pillar of NDICI-GE 42 exceptional assistance measures are considered for this indicator (the support measure is not considered). Of those 42 decisions, 24 were adopted (Commission Decision) within 3 months of a crisis context (presentation to PSC), a percentage rate of 57.14%. Of the 42 decisions 24 were presented to PSC after the adoption of the NDICI-GE Regulation on 14 June 2021. Of these 24, 21 were adopted (COM Decision) within 3 months of a crisis context (presentation to PSC), a percentage rate of 87.5%.

Specific Objective 3: To address specific global and trans-regional threats to peace, international security and stability.

Indicator 1: EU contribution towards tackling global and transregional threats, measured as

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Risk Mitigation: Number of former weapon scientists talents redirected to peaceful activities (Astana and Kiev):										
2012	Milestones									2020
17 844							18 600			18 600
	Actual Progress									
	18 150	18 300	18 500	18 700	19 425	19 730	20 000	20 215		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	International Science and Technology Center (ISTC) and the Science and Technology Center Ukraine (STCU), project data and request of adhesion received and officially accepted
Narrative	The indicator measures the strengthened capacity beneficiaries of EU assistance to address global and trans-regional threats, more specifically the containment of sensitive (WMD or dual use), scientific and technical knowledge and know how. The figures are reported directly by the executive directors ISTC and STCU every year. This figure includes not only the scientists involved in Commission-funded activities but also activities funded by both governmental and non-governmental actors from the EU, while the Center’s share of the administrative costs are entirely funded by the Commission. In parallel the United States and Japan are also involved in similar redirection activities and they are accounted for separately.
Methodology	Yearly values
Link MFF 14-20 / MFF 21-27	This indicator will not be followed under the MFF 21/27
Other methodological comments	Including TACIS period (from1994). Target and milestones could not be set because it was not possible to estimate possible results for this indicator. Milestones could not be defined because it was difficult to estimate the number of weapon scientists from former soviet countries to be redirected in a specific year. Projects had a typical lifespan of 3 years, and in any given moment there we several projects implemented in simultaneously, in different phases, including also projects funded by other government or private donors from the EU, r from United States and Japan.
Full metadata available at this address	
Justification of the trend	The target was surpassed, with development of strong partnerships also with EU Member States public or private entities (governmental agencies, academia, industry), and also international actors.

Indicator 2: Number of partner countries in the EU Partner to Partner Export Control Programme adopting strategic trade controls over nuclear, chemical or biological weapons and their means of delivery.

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target	
2012	Milestones									2020	
10							18	18	18		18
	Actual Progress										Final
						16	16	16		16	
Are we on track :	On track										

Indicator type	Result
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	EU P2P Export Control Programme for Dual-Use Goods
Narrative	The indicator measures the enhancement of capacities on strategic trade controls of dual-use goods mainly through the number of partner countries using the EU Dual-use list as a reference after support received from the EU P2P Export Control Programme for Dual-Use Goods.
Methodology	Yearly values
Link MFF 14-20 / MFF 21-27	This indicator will not be followed under the MFF 21/27
Other methodological comments	Milestones were set only as of 2019 because it was difficult to estimate how many counties would carry out the necessary regulatory revisions at the beginning of the reporting period.
Full metadata available at this address	
Justification of the trend	In 2020 and 2021 a dramatic decrease of missions to partner countries impacted the amount of technical assistance that EU provided to reinforce legal capacities in partner countries to enable them to enhance strategic trade controls legal and regulatory frameworks. Morocco was expected to adopt its control list in 2021 (as requested by its Law, enacted in 2020). Lao PDR was expected to adopt a sub-decree on setting up a strategic trade control system since 2019, the decree being submitted to the

	prime minister's approval since that date. The pandemic, political willingness and political changes delayed the adoption of the legal and regulatory frameworks. Progress is expected in the course of 2022.
--	---

Indicator 3: Number of national CBRN action plans elaborated by partners in the EU CBRN Centres of Excellence initiative

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
0										20
	Actual Progress									30
	4	9	13	17	23	27	28	30		28
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Joint Research Center
Narrative	The indicator measures the increase of an effective CBRN risk mitigation and security governance mainly through the development of CBRN national action plans developed with the technical and scientific support provided by the EU CBRN Risk Mitigation Centres of Excellence initiative.
Methodology	Yearly indicator
Link MFF 14-20 / MFF 21-27	This indicator will not be followed under the MFF 21/27
Other methodological comments	The number of partner countries increased from zero in 2010 to 62 in 2020. It was therefore difficult to estimate the number of action plans to be elaborated, also considering that some of the partner countries which already had an action plan in place did not need to adopt one. For these reasons, only one milestone was set for 2018.
Full metadata available at this address	
Justification of the trend	In 2020 and 2021 the decrease of missions to partner countries has impacted the amount of technical assistance that EU was able to provide to support the elaboration of the plans. Nevertheless, through hybrid meetings and remote assistance some progress was still made and a few countries were able to finalise their plans. It is worth noting that some countries are in the process of updating or renewing their National Action Plans, which is not reflected in this indicator (it refers only to new partner countries developing National Action Plans for the first time).

Previous Program 4: Partnership instrument for cooperation with third countries (PI)

General Objective 1: The Partnership Instrument shall support measures that respond in an effective and flexible manner to objectives arising from the Union's bilateral, regional or multilateral relationships with third countries and address challenges of global concern, or ensure an adequate follow-up to decisions taken at multilateral level.

Indicator 1: Number of new relevant instruments and / or negotiation processes launched / on-going with EU's strategic partners, regional organisations and at multilateral level

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2020
0	0	2	4	8	9	23	3			3
	Actual Progress									Final
	0	2	4	9	9	25	2	3		3
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	Project Implementation Monitoring System (PIMS) reporting
Narrative	This indicator measures progress towards supporting the Union's bilateral, regional or multilateral relationships with non-EU countries and addressing challenges of global concern and adequate follow-up to decisions taken at multilateral level.
Methodology	Partnership Instrument Monitoring System reporting
Link MFF 14-20 / MFF 21-27	This indicator will not be followed under the MFF 21/27
Other methodological comments	None
Full metadata available at this address	

Justification of the trend	As of 2020, the methodology for the use of indicators was changed. Instead of ‘customised’ project-level indicators, which cannot easily be aggregated at programme/instrument level, there was a move to core indicators which are identical for the entire PI and can hence be easily aggregated. The target (2020) was adapted to the new methodology.
----------------------------	---

Specific Objective 1: To support the Union's bilateral, regional and inter-regional cooperation partnership strategies, by promoting policy dialogues and by developing collective approaches and responses to challenges of global concern.

Indicator 1: Progress made by key partner countries in the fight against climate change or in promoting the environmental standards of the Union, as measured by the following sub-indicators

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Number of local and regional authorities signing the Covenant of Mayors										
2014	Milestones									2020
6270	0	0	7000	7600	8100	9000	10270			10270
	Actual Progress									Final
	6270	6750	7193	7747	7755	11069	11577	11752		11577
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Numbers and percentages
Cut-Off Date	31/12/2021
Data source	https://icapcarbonaction.com – International Carbon Action Partnership (ICAP); http://energyatlas.iea.org . Latest data available 2018. https://www.covenantofmayors.eu/en/ .
Narrative	The data collected demonstrate that the PI is effective in influencing partner country approaches that are beneficial to the achievement of the Europe 2020 strategy and its uptake by partner countries.
Methodology	This indicator measures progress towards supporting the EU’s bilateral, regional and inter-regional cooperation partnership strategies, by promoting policy dialogues and developing collective approaches and responses to challenges of global concern, in particular climate change and environment.
Link MFF 14-20 / MFF 21-27	This indicator will not be followed under the MFF 21/27
Other methodological comments	The data is provided each year by the Covenant of Mayors Office.
Full metadata available at this address	
Justification of the trend	Results exceeded the target as of 2020.

Specific Objective 4: Enhancing widespread understanding and visibility of the Union and its role on the world scene by means of public diplomacy, people to people contacts, education/academic/think tank cooperation and outreach activities to promote the Union's values and interests.

Indicator 1: EU visibility

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	The study was carried out by a consortium composed of PPMI (Public Policy Management Institute), NRCE (National Research Centre for Europe) and NFG-Asian Perception of the EU in partnership with TNS Global.
Narrative	This indicator measures progress towards enhancing understanding and visibility of the EU and its role on the world scene by means of public diplomacy
Methodology	The indicator is based on an academic study on the perception of the EU in 13 key partner countries updated in 2021. A similar study was conducted in 2015 with the same methodology to ensure comparability and evolution of the data. The Update Study 2021 is an in-depth, multi-method analysis of the perceptions of the EU and Europe in 13 of the EU's key partners – 10 Strategic Partner countries that were included in the 2015 Baseline Study: Brazil, Canada, China, India, Japan, Mexico, Russia, South Africa, Republic of Korea and the US – as well as three additional countries: Colombia, Indonesia and Nigeria. The Update Study aims to contribute in a number of ways to EU public diplomacy: 1) it undertakes a systematic listening exercise; 2) it analyses the reception of the EU's messages and thematic projections factoring local conditions and evolving realities.
Link MFF 14-20 / MFF 21-27	The indicator will not be pursued under the 21/27 MFF.
Other methodological comments	None
Full metadata available at this address	https://ec.europa.eu/fpi/stories/analysis-perception-eu-and-eus-policies-abroad_en
Justification of the trend	The general knowledge and impression of the EU was assessed through capturing public perceptions of the role of the EU in the international system. The question used for visibility was "Have you read or heard about the EU?" The visibility of the EU has increased over time in almost all countries that participated in the 2015 Baseline Study, except for Canada and China, where it decreased.

Previous Program 5: Development Cooperation Instrument (DCI)

General Objective 1: Fostering the sustainable and inclusive development in partner countries and regions and the promotion of democracy, the rule of law, good governance and respect for human rights, as foreseen in the TEU, with the primary aim of eradicating poverty.

Indicator 1: SDG 1.1.1 Proportion of population below international poverty line

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
With graduated countries										
1990	Milestones									2030
0.477										0
	Actual Progress									Final
	0.116	0.098	0.095	0.09	0.088	0.087	0.087	0.086		
Are we on track :	Moderate progress									
Without graduated countries										
1990	Milestones									2030
0.477										0
	Actual Progress									Final
	0.115	0.11	0.112	0.1	0.092	0.091	0.087	0.082		
Are we on track :	Moderate progress									

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	World Bank (poverty rate); UN population division (population's weights)
Narrative	The indicator Proportion of population below the international poverty line is defined as the percentage of the population living on less than USD 1.90 a day at 2011 international prices. The 'international poverty line' is currently set at USD 1.90 a day at 2011 international prices. Monitoring poverty is important on the global development agenda as well as on the national development agenda of many countries.
Methodology	Indicator calculated on the basis of DCI eligible countries. The 2014 value was computed on country level data from 2012 or before, the 2015 value considers country level data from 2013 or before, the 2016 value considers data from 2014 before the 2017 value considers data from 2016 or before, the

	2018 value considers data from 2017 or before, the 2019 value considers data from 2018 or before, and the 2020 value considers data from 2018 or before. The 2021 value considers data from 2019 or before (data extracted in January 2022).
Link MFF 14-20 / MFF 21-27	This indicator will be used to monitor the 2021-2027 MFF, using the same name.
Other methodological comments	2030 is the target date set by world leaders for achieving Sustainable Development Goals (UN). Baseline taken from the previous MDG 1.1 Proportion of population below USD 1.25 (PPP) per day. All DCI budget contributes to this SDG. Eradicating poverty in all its forms remains one of the greatest challenges facing humanity. While the number of people living in extreme poverty has dropped by more than half – from 1.9 billion in 1990, to 836 million in 2015 – too many are still struggling for the most basic human needs. Globally, more than 800 million people are still living on less than USD 1.25 a day; many lacking access to adequate food, clean drinking water and sanitation. Rapid economic growth in countries like China and India has lifted millions out of poverty, but progress has also been uneven. Women are disproportionately more likely to live in poverty than men due to unequal access to paid work, education and property.
Full metadata available at this address	
Justification of the trend	2030 is the target date set by world leaders for achieving SDGs (UN). Baseline taken from the previous MDG 1.1 Proportion of population below USD 1.25 (PPP) per day. All DCI budget contributes to this SDG. Eradicating poverty in all its forms remains one of the greatest challenges facing humanity. The poverty rates for DCI countries both with and without graduated countries have dropped steadily over the years. It could be expected that the rate with graduated countries would be lower than the rate without graduated countries, and in most years this proves indeed to be the case. However, in the most recent year, the rate with graduated countries is higher than the rate without graduated countries. This is most probably due to the fact that the value for India is 22% and has not been updated since 2011. Since the population of India is very big, this number has a strong influence on the weighted average.

Specific Objective 1: Poverty reduction and fostering sustainable economic, social and environmental development.

Indicator 1: MDG 3.1 Ratio of girls to boys in primary, secondary, tertiary education

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Primary level

Indicator type	Output
Unit of measurement	ratio
Cut-Off Date	31/12/2019
Data source	MDG Report Statistical Annex 2014: Millennium Development Goals, Targets and Indicators, 2015: http://mdgs.un.org/unsd/mdg/Resources/Static/Products/Progress2015/Statannex.pdf . Updated results for this MDG indicator will not be published anymore in this place, so the data source has been redirected: https://unstats.un.org/unsd/publications/statistical-yearbook/files/syb63/T05_GPI_EDU.pdf
Narrative	
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	The data is always published with a two year lag. For the first two subindicators: In 2022, the most

	recent report was published in 2021 containing data from 2019. For the third subindicator: In the 2021 report, the indicator changed. Instead of measuring the ratio of girls to boys for tertiary education, this ratio was measured for upper secondary. So the last date for which data was published on this indicator is 2018.
Full metadata available at this address	
Justification of the trend	As is often the case with international statistics, the more recent historical values are updated annually to reflect data that is reported with a delay and related corrections. Consequently, the entire time series has been updated in order to preserve any trend present in the data. It is important to note that corrections to past values have been as big as 0.02, thereby suggesting a possible magnitude for the precision of the values reported. Given this rough estimate of the margin of error, the series of values reported remains compatible with performance that is on track.

Indicator 3: SDG 3.2.1 Under-five mortality rate (deaths per 1,000 live births)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2013	Milestones									2030
0.455	Actual Progress									Final
	0.44	0.426	0.413	0.4	0.388	0.377				
Are we on track :	Moderate progress									

Indicator type	Impact
Unit of measurement	Per 1 000 live births
Cut-Off Date	31/12/2019
Data source	http://apps.who.int/gho/data/view.main.CM1300R or https://unstats.un.org/sdgs/indicators/database/
Narrative	This indicator is aligned to SDG 3.2 which calls for an end to preventable deaths of new-borns and children under 5 years of age by 2030, with all countries aiming to reduce neonatal mortality to at least as low as 12 per 1 000 live births and under-five mortality to at least as low as 25 per 1 000 live births. The under-five mortality rate measures child survival. It also reflects more broadly the social, economic and environmental conditions in which children (and community) live.
Methodology	
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	In 2022, the most recent data available was from 2019.
Full metadata available at this address	
Justification of the trend	As is often the case with international statistics, the more recent historical values are updated annually to reflect data that is reported with a delay and related corrections. Consequently, the entire time series has been updated in order to preserve any trend present in the data.

Indicator 5: SDG 2.2.1 Prevalence of stunting (height for age <-2 SD from the median of the WHO Child Growth Standards) among children under five years of age

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2020
24.8%	Actual Progress									Final
	24,9%	24,4%	23,8%	23,4%	22,9%	22,4%	22,0%			22,0%
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	Figures are reported in the annual report « Joint Child Malnutrition Estimates » by UNICEF, WHO and World Bank and can be accessed using the following link: https://data.unicef.org/resources/dataset/malnutrition-data/ .
Narrative	WHO maintains the WHO Global Database on Child Growth and Malnutrition (www.who.int/nutgrowthdb), a repository of standardized anthropometric child data which has existed for 20 years. The methods have remained unchanged since 2012, except for some minor refinements: 1. Year assigned to each survey. When data collection is split between two calendar years the year where most of the data collection is done is the year that is reported. 2. Final reports only. Since 2014 only final reports are presented (rather than preliminary reports) 3. Updated data sources. Data has been reanalysed to ensure consistency of reporting. Some results in the JME database may differ from the reported results. 4. Since 2014 population coverage has been calculated to alert the user to where the data should be interpreted with caution due to low population coverage. 5. Prevalence thresholds for stunting (and wasting and overweight in children under 5 years have been redefined since 2018 by the WHO-Unicef TEAM.

Methodology	The joint global and regional estimates that make up the UNICEF/WHO/World Bank Group Joint Child Malnutrition Estimates have been generated using a country-level dataset which is mainly comprised of estimates from nationally representative household surveys (e.g. DHS, MICS, SMART). These data are collected infrequently (every 3 to 5 years in most countries) and measure malnutrition at one point in time (e.g. during one or several months of field work), giving an estimate of prevalence. These data are received and reviewed by UNICEF and WHO and checked for validity and consistency. The resulting raw data sets are analysed following a standard procedure to obtain comparable results.
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	In 2022, the most recent data available was for 2020. The values reported for this indicator are accompanied by lower and upper bounds for the 95% confidence interval. In 2020, these bounds were 21.3% and 22.7%, respectively. This means that the 2020 target of 20.0% has been technically missed, but only by a very small margin.
Full metadata available at this address	
Justification of the trend	As is often the case with international statistics, the more recent historical values are updated annually to reflect data that is reported with a delay and related corrections. Consequently, the entire time series has been updated to reflect the latest data available. Target for 2025: The EU committed to meet at least 10 % of the World Health Assembly’s global target to reduce stunting of 70 million children by 2025, pledging to reduce this number by at least 7 million. The updates in global stunting rates come from the March 2020 JME Edition. The WHO updates stunting data on a regular basis. They do this to produce standardised estimates over time and to ensure comparability between countries. This has included reanalysis of data from previous years for all countries as well as the removal of some surveys, due to quality issues, alongside new surveys being identified and added. These updates have led to slight changes to in global data for these estimates each year. The new data represents the March 2020 updates. The next update for which global data will be available will be March 2021, even though a further update was made in July 2020 – for which global estimates were not made (only country estimates). The global progress on reducing the prevalence of child stunting obscures the disparities in countries that are performing well and those that are making negligible progress. For example, considerably more progress has been made in Asia compared to Africa.

Specific Objective 2: Consolidating and supporting democracy, the rule of law, good governance, human rights and the relevant principles of international law.

Indicator 1: Average score in the Rule of law as measured by the World Bank's Worldwide Governance Indicator (DCI countries eligible for geographic cooperation)

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2008	Milestones									2021
-0.88		-0.82	-0.81	-0.8	-0.79	-0.78	-0.77	-0.77	-0.77	-0.77
	Actual Progress									Final
	-0.74	-0.75	-0.77	-0.77	-0.78	-0.77	-0.77	-0.77	-0.77	-0.77
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Number of standard deviations relative to mean for standard normal distribution
Cut-Off Date	31/12/2021
Data source	https://info.worldbank.org/governance/wgi/
Narrative	The Rule of Law indicator is one of the six aggregate indicators of the World Bank Worldwide Governance Indicators (WGI). It captures perceptions of the extent to which agents (i.e. firms, individuals and public officials) have confidence in and abide by the rules of society, and in particular the quality of contract enforcement, property rights, the police, the courts, as well as the likelihood of crime and violence. Consolidated figure for the 29 DCI countries. The 2020 value was computed with data from 2020 (data extracted in January 2022). World Bank’s Worldwide Governance Indicator currently covers the period 1996-2017. The dedicated webpages of the World Bank provide information about the methodology used for the World Bank WGIs (http://info.worldbank.org/governance/wgi/index.aspx#doc) and updated annually Country Data Reports (http://info.worldbank.org/governance/wgi/index.aspx#countryReports).
Methodology	https://info.worldbank.org/governance/wgi/Home/Documents https://europa.eu/capacity4dev/sites/default/files/4_final_rol_feb_2015.doc
Link MFF 14-20 / MFF 21-27	This indicator will continue to be used to monitor the 2021-2027 MFF, using the following name: Rule of Law score in relation to countries benefiting from EU assistance.
Other methodological comments	
Full metadata available at this address	
Justification of the trend	DG DEVCO monitors information for the countries available for DCI geographic funding under the Multi Financial Framework 2014-2020 (29 countries). The data shows the average index score for these countries. The index ranges from -2.5 (worst possible score) to +2.5 (best possible score) where

'0' means average score (across all the countries where the index is measured).

Indicator 2: Number of projects funded from the DCI to promote democracy, the rule of law, good governance and respect for human rights in the DCI beneficiary countries

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2011	Milestones									2021
70	70	75	80	85	90	100	100	100		100
	Actual Progress									Final
	84	310	391	76	352	102	106	64		
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of contracts
Cut-Off Date	31/12/2021
Data source	CRIS Data Warehouse
Narrative	
Methodology	In 2021, the same DAC sectors as in previous years were applied: 15110, 15111, 15112, 15113, 15114, 15130, 15150, 15151, 15152, 15153, 15160, 15170, 15180 to cover a broader range of sectors included in the indicator under ‘democracy, the rule of law, good governance and respect for human rights’: 64 contracts.
Link MFF 14-20 / MFF 21-27	This indicator will not be used to monitor the 2021-2027 MFF.
Other methodological comments	In 2017, we used the same methodology of 2016, using the following DAC sectors: 15110, 15111, 15112, 15113, 15114, 15130, 15150, 15151, 15152, 15153, 15160, 15170, 15180 to cover a broader range of sectors included in the indicator under ‘democracy, the rule of law, good governance and respect for human rights’: 391 contracts. In 2016, using the following DAC sectors: 15110, 15111, 15112, 15113, 15114, 15130, 15150, 15151, 15152, 15153, 15160, 15170, 15180 to cover a broader range of sectors included in the indicator under ‘democracy, the rule of law, good governance and respect for human rights’: 310 contracts. In 2015: 84 contracts were signed in total under the DCI, with the following detail: Democracy: 17 contracts; Democratic participation and civil society DAC 15150: 170 projects (8+24); Anti-corruption DAC 15113: 5 contracts; Justice DAC 15130: 17 contracts; HR: 21 contracts. Baseline is an average of 2010-2012.
Full metadata available at this address	
Justification of the trend	The decrease in the number of projects is likely due to the fact that 2020 is the end of the 2014-2020 financial cycle, with a decrease in the availability of funds. The assessment is on track because even though the number for 2021 is lower than the 2021 milestones, over the entire period the total results have more than exceeded the total milestones. Indeed, this indicator should have measured cumulative and not annual progress.

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	2036.94	4307.00	4307.00	4307.00	4307.00	4307.00	4307.00	27878.94	35%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

The amounts in the table above are provisional figures, with final data foreseen for July 2022, once data quality checks are concluded.

For the period 2021-2027, programming was completed in December 2021 for all geographic programmes (except Neighbourhood) and for all thematic programmes thus implementation has started late. NDICI-Global Europe has a Climate spending target of 30% for the whole instrument and for the whole MFF period. At SOTEU 2021, the Commission announced an additional EUR 4 billion to be spent on Climate through NDICI, equivalent to 35% of the overall instrument’s envelope. As the target has to be achieved over the entire seven years period, yearly figures 2022-2027 should be considered as rough estimates.

6.1.3. Key achievements

EU funded actions contribute to climate mitigation and adaptation goals as well as disaster risk reduction in line with international agreements such as the Paris Agreement and the Sendai Framework for Disaster Risk Reduction (DRR). Examples of adaptation and DRR actions under implementation in 2021 include the following.

The EU supports partner countries in implementing their Nationally Determined Contributions (NDCs) through existing programmes such as the Global Climate Change Alliance+ (GCCA+) via the EU budget programme DCI for a total amount of EUR 148 million since 2015. Adaptation is the climate top priority for most developing countries, in particular for the Small Island Developing States (SIDS) and the Least Developed Countries (LDCs). In this regard, the Global Climate Change Alliance (GCCA+) EU flagship initiative has continued to focus on SIDS and LDCs as priority beneficiaries. It has also contributed to setting up monitoring and evaluation systems for climate change mitigation, supporting national deforestation and forest degradation programmes as well as creating carbon sinks through reforestation, afforestation and rehabilitation of vegetation, as well as building coastal resilience through natural adaptation solutions. The GCCA+ has funded over 80 national, regional and worldwide projects in Africa, Asia, the Caribbean and the Pacific. So far, the results of these projects include significant contributions to more than 80 national climate change strategies, more than 40 awareness campaigns in over 60 countries, and more than 30 United Nations Framework Convention on Climate Change related strategies and programmes.

The programme Making Cities Sustainable and Resilient (EUR 3 million from DCI), which was jointly implemented with the UN-Habitat and United Nations Office for Disaster Risk Reduction (UNDRR), was concluded in 2021 successfully developing a strong and well-structured methodology for urban resilience. UN-Habitat developed an integrated City Resilience Profiling Programme methodology, hereinafter called “CRGP methodology” which was developed in collaboration with the city of Barcelona. The CRGP methodology was continuously developed in parallel with its implementation in the four pilot cities: Maputo, Asuncion, Port Vila and Dakar. In each of the cities, data were collected and analysed, producing a diagnosis and delivering recommendations for action. With regards to the UNDRR component of the programme, a total of 1 826 cities and local governments joined the Making Cities Resilient (MCR) Campaign and endorsed the “10 Essentials”. Capacities of local governments were strengthened in disaster resilience self-assessment and Disaster Risk Reduction (DRR) action planning in more cities than anticipated: 214 cities completed the self-assessment reports and 23 local governments developed climate and disaster risk reduction action plans and many initiated implementation.

The African-Caribbean-Pacific-EU Natural Disaster Risk Reduction (ACP-EU NDRR) programme (EUR 74.5 million from the EDF) aims to strengthen governments’ capacities to integrate disaster risk management into their development agendas. In 2020 it expanded its portfolio adding 17 new projects for a total of 147 projects benefiting over 70 countries since its inception in 2011. It has currently 31 active projects in Sub-Saharan Africa, 18 active projects in the Caribbean, and 10 active projects in the Pacific.

The Local Climate Adaptive Living Facility II (LoCAL II) is supported by the DCI for EUR 7.75 million. In 2021, it was active in 14 countries (Bangladesh, Benin, Bhutan, Cambodia, The Gambia, Ghana, Lao PDR, Lesotho, Mali, Mozambique, Nepal, Niger, Tanzania and Tuvalu). LoCAL II helps local governments to address climate change adaptation. LoCAL deployed country-based mechanisms to integrate climate change adaptation into local governments’ planning and contributed to channelling climate finance to over 240 local governments representing 6 million people. The LoCAL facility was specifically designed to work with – and complement – the climate adaptation programmes of other governments and donor partners. The grants have enabled local governments to tackle the effects of climate change – such as changing rainfall patterns and downstream run off as a result of it.

Conversely, on mitigation, the Technical Assistance Project on Capacity Building for CO₂ mitigation from international aviation (EUR 6 million from DCI) was under implementation in the course of 2021 and lead by the International Civil Aviation Organization (ICAO). It is currently assisting 14 selected countries from Sub-Saharan Africa and the Caribbean to develop and implement their State Action Plan on emissions reduction and to establish aviation environmental systems for CO₂ emissions monitoring and reporting. The 14 selected States have developed Action Plans fully compliant with ICAO’s guidelines including robust historical data and reliable base scenarios. Following the success of this project, the EU launched the second phase. The 2nd phase is implemented by the European Aviation Safety Agency (EASA) and ICAO.

Under the European Neighbourhood Instrument (ENI), bilateral and regional projects have been targeting climate adaptation and mitigation. For example, EU for Climate Action in the Southern Neighbourhood, known as Clima MED (2018 – 2025) with a total budget of EUR 9.5 million provides technical assistance to support the transition of Southern Neighbourhood countries towards sustainable, low-carbon and climate-resilient development. By 2020, the project has reached 9 million people in 8 countries through the development and implementation of Sustainable Energy and Climate Action Plan (SECAPs). 6 Communication campaigns have been held. 138 cities were trained and benefitted from help desk on Covenant of Majors. 420 cities’ staff trained on developing sustainable local actions. Another example is the EU4Climate project with a total EU contribution of EUR 8 million since 2018 has supported the development and implementation of climate policies by the Eastern Partnership countries in line with the Paris Agreement, EU acquis and European best practice. The programme supported the finalisation of the updated National Determined Contribution (NDC) for Moldova, with the other countries in the region on track to deliver updated NDCs in 2021. In addition, gap analyses of the national legislation against the EU acquis were developed in all six countries, and Azerbaijan developed a roadmap for Low Emission Development Strategy 2050 development. Work on these components is ongoing in all partner countries, as is support on MRV systems, climate mainstreaming, climate investment, and adaptation.

6.1.4. Performance

DG INTPA's contribution towards Climate Change in the period 2014-2020 amounted to EUR 11.8 bn, slightly above 22% of total INTPA commitments in the period and thus greater than the target of 20% set in the DCI. Namely, EUR 5.5 bn (47%) towards adaptation, EUR 3.1 bn (26%) to mitigation and EUR 3.2 bn (27%) contributing to both ("cross cutting").

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution	529.00	814.20	837.40	952.80	1 173.90	1 150.20	1 057.50	6 515.00
Share compared to total envelope	4.26%	6.40%	7.00%	8.38%	10.97%	11.44%	10.05%	8.17%

(*)These amounts include NextGenerationEU top-ups if any

6.2.2. Explanation On the financial contribution

The amounts in the table above are provisional figures, with final data foreseen for July 2022, once data quality checks are concluded.

The amounts in the above table, representing the estimated NDICI-Global Europe contribution to biodiversity, are calculated by applying an increasing yearly percentage to the yearly NDICI-Global Europe total amounts while taking into account variations due to programming, starting from 6.3% in 2022, 6.5% in 2023, 9% in 2024, 10% in 2025 to 10.4% in 2026 and 9.6% in 2027. President von der Leyen, furthermore, announced a doubling of biodiversity funding in external action vis-à-vis the 2014-2020 baseline, in particular for vulnerable countries. This would correspond to a total of EUR 7,000 million to be reached from NDICI-Global Europe and IPA III.

With the 2021-2027 MFF, to meet the target and the Pledge, biodiversity will be mainstreamed through all relevant interventions using all the available toolbox, from capacity building measures, investments, to Budget Support. In addition, specific programmes will be developed targeting biodiversity loss. For example in 2021, the preparation of new programmes under the NaturAfrica initiative will start, comprising Team Europe initiatives at country and multi-country level. They will promote a holistic approach to nature conservation, boosting job opportunities in the green sector/tourism and tackling illegal exploitation of natural resources and biodiversity loss. Forests protection and preservation should receive particular attention.

In order to implement the biodiversity target and commitment, biodiversity is being mainstreamed through all relevant interventions and instruments including investments and Budget Support. In addition, specific programmes have been developed targeting biodiversity loss. For example NaturAfrica is providing a holistic approach to nature conservation, boosting job opportunities in the green sector/tourism and tackling illegal exploitation of natural resources and biodiversity loss. Forests protection and preservation has also received particular attention with the development of forest partnerships. Sustainable land management is another important area of cooperation with e.g. the implementation of the programme Landscapes for our Future and further support to African initiatives such as the Great Green Wall. However, it will be crucial to maximise synergies with the climate target, e.g. promoting nature based solutions

In 2021, four actions implemented under the Neighbourhood geographic programme contributed to biodiversity as a significant objective, including individual measures in favour of Azerbaijan (EU Resilience Facility for Azerbaijan), in favour of Tunisia (Environmental action in Tunisia), in favour of Jordan (EU support to Green Economy in Jordan) and the multiannual action plan in favour of the NDICI Neighbourhood East Region part 1 for 2021-2022 (Strengthening Environmental Resilience and Maritime Safety for Black and Caspian Sea riparian states). For example, the Environmental action in Tunisia is expected to contribute to the decrease in CO₂ emissions in Tunisia from 34.9 million metric tonnes of carbon dioxide equivalents in 2021 to 5 million metric tonnes of carbon dioxide equivalents in 2028.

6.2.3. Key Achievements

For the period 2014-2020, the Partnership for Action on Green Economy supported 20 partner countries to contribute to 79 green economic policies and practices through knowledge development, policy dialogue and technical cooperation. Over the same period, seven African countries were supported through SWITCH Africa Green towards green business development with projects combining policy and regulatory guidance on partnerships with the private sector, in particular Small-and-Medium-Sized Enterprises.

With the overall objective of tackling illegal timber harvesting and trade, the Forest Law Enforcement, Governance and Trade (FLEGT) has helped improve forest policies and regulatory framework enabling better sustainable forest management and preservation of forest in some 20 partner countries. In these countries, the FLEGT process has facilitated the implementation of Reducing Emissions from Deforestation and Forest Degradation + (REDD+) strategy and contributed to the Nationally Determined Contributions (NDC).

The Commission is a proud and early supporter of the African-led Great Green Wall initiative, to which the EU budget contributed through a few dedicated programmes. The most ambitious EU contribution has been so far delivered through the Regreening Africa programme. Together with partner organisations, the EU has set an ambitious target of scaling-up of evergreen agriculture/agroforestry/farmer-managed natural regeneration techniques over at least 1 million hectares in eight African countries,

while contributing to climate action, providing livelihood opportunities for more than 500 000 households and informing policy-makers. The project is midway into implementation and has already contributed to the restoration of more than 600 000 hectares in the eight participating countries.

In the Eastern Neighbourhood, the EU Water Initiative Plus (implemented in 2016-2021) with a total EU contribution of EUR 23.5 million delivered hundreds of knowledge products and modernised 9 water laboratories. Some 40 surveys were carried out in rivers, ground and coastal waters, covering more than 1000 sites. Due to this support, the water monitoring in the EaP region is now closer to EU standards.

6.2.4. Performance

The EU supports biodiversity both through dedicated actions and by mainstreaming sustainable natural resource management and biodiversity protection/conservation in other sectors. Attention has been put on developing integrated responses that benefit people and the planet. As a result, actions carried out under the allocated budget has proven effective to respond to partners’ needs and to foster a green and inclusive post- COVID recovery. This is why under the NDICI, the Commission will continue to support actions that can tackle the climate and biodiversity crisis while at the same time creating better livelihoods for the populations.

6.3. Contribution to gender equality

6.3.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 2: EUR 200.1 million							
Score 1: EUR 8,453 million							
Score 0: EUR 2,180 million							

(*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million)

The financing is split among four categories: score 2: gender equality is principal objective, score 1: gender equality is significantly impacted, score 0*: impact on gender equality to be determined ex post, score 0: no significant impact on gender equality.

The table above shows provisional figures, with final data foreseen for July 2022, once data quality checks are concluded.

According to the NDICI – Global Europe Regulation, at least 85 % of new actions implemented should have gender equality as a principal or a significant objective, as defined by the gender equality policy marker of the OECD DAC. At least 5% of these actions should have gender equality and women’s and girls’ rights and empowerment as a principal objective. On 25 November 2020, the Gender Action Plan III (2021-2025), a joint Communication from the Commission and the HRVP, was adopted with the same objective of 85% towards the total number of projects.

Following the above, the attribution of the above scores is also in line with the OECD DAC Gender equality policy marker and methodology. The score 2 equals G2 and implies that gender equality is principal objective, the score 1 equals G1 and implies that gender equality is a significant objective, score 0 equals G 0 and means that gender equality is not targeted. This is also aligned with the Gender Action Plan III 2021-2025 for external relations adopted in November 2020. The score 0* is not used. For 2021, the Commission has 14 G2 projects, 220 G1 projects and 49 G0 projects. Under G0 scores, there are actions which relate to support measures, administrative costs action such as for example the deployment of digital health tools.

The challenges to gender equality are as varied as the contexts in which they emerge and call for context specific responses. There is, however, not a single country in the world that is close to achieving by 2030 gender equality and empowerment of all women and girls. Some progress has been achieved, but deep-rooted inequalities persist, including on basic access to health, education and jobs, but also with regards to widespread gender-based violence everywhere in the world. In many places, women’s and girls’ rights are called into question and often denied. Instability, fragility, conflict, climate change, environmental degradation, migration, forced displacement and lately the COVID-19 pandemic are among the critical factors exacerbating inequalities and threatening hard-won gains. Civil society organisations, including women’s rights organisations, are facing shrinking civil, civic and democratic space.

In its external action, the EU pursues a three-pronged approach, combining gender mainstreaming, targeted actions and political dialogue. Article 8 of the NDICI stipulates that programmes and actions funded under this Regulation shall promote gender equality, women’s and girls’ rights and empowerment and non-discrimination on any grounds, through targeted and mainstreamed actions.

In 2019, 64.71% of the Commission’s new external action programmes were marked ‘G1’ or ‘G2.’In 2020, the Commission reached 68% amounting to EUR 8.5 billion. Funding that specifically targets gender equality and women’s empowerment (i.e. ‘G2’) amounted to EUR 480 million (4.8% of the total) in 2020.

During 2021, the first year of implementation of the new funding instrument and of the GAP III, in which most of the year was allocated to the programming of new country, regional and thematic programmes, 82.7% of the total numbers of projects are having

gender equality as a principal or a significant objective (234 projects in total). Of these projects, 6% had gender as a principal objective (14 projects in total).

The Commission also increased the funding being paid to women's organisations and movements from nearly EUR 7 million EUR to 9 million EUR during 2021 (funded on instruments prior to NDICI).

6.3.2. Key achievements and performance

Achievements and performance against the indicators and a number of GAP III objectives are detailed above.

During 2021, EU Delegations have submitted country level implementation plans (CLIPs) with concrete actions to improve gender equality and women's and girl's empowerment and to roll out the Gender Action Plan in their country contexts through political and policy dialogues, outreach and communication activities, consultations and partnerships with the national gender machinery and women's CSOs and funding of specific actions. The CLIPs lead a more strategic EU approach in its external relations, a better cooperation with EU Member States, strengthened partnership with and increased ownership by local actors.

Some concrete examples

Programmes that focus on preventing and responding to violence against women and girls continued to be one of the principal objectives. During 2021 the **EU-UN Spotlight Initiative**, launched at the end of 2017 with an investment of nearly EUR 500 million, continued its implementation in 26 countries and 6 regions, a mid-term assessment was finalized in 16 countries and all of these countries started to implement the second phase. The same exercise was also started at the end of 2021 for the Caribbean, Pacific and Central Asia and the grounds were prepared for the extension of the current Initiative. The 2020 results were received showed solid results, some examples: 84 laws and policies strengthened or signed across 17 countries, 22% increase in number of convictions of perpetrators compared to 2019 and over 650.000 women and girls were provided with gender-based violence services. EUR 86 million was allocated to SHRH related activities.

The EUR 10 million project "**Women's Financial Inclusion Facility (WFIF)**", a blended finance operation to promote women's economic empowerment and financial inclusion in Sub-Saharan countries. With the Germans (KfW) as the implementing partner, the EU contribution consists of first loss risk capital in the Women's World Banking Capital Partners fund II and Technical Assistance. The fund invests in emerging market financial service providers that incorporate low-income women into their client base and expand gender diversity within their own management teams. The program conducts gender assessments at the organisational level and market level, which will result in a gender action plan for each portfolio company to close the gap on gender equality among the company's clients and in its own employee base.

Digital2Equal peer-learning initiative with World Bank IFC and online platform companies (such as Jumia, Uber, Facebook), aiming to increase the level and quality of women's engagement in the digital economy through online platforms by driving a step-change in best practice amongst global private sector leaders. Within this initiative one topic where training to platform companies was provided was on employer provided childcare, looking into private sector opportunities to support women's employment. Participating platform companies took also commitments on introducing improvements their gender performances, which included practices supporting motherhood and career progression, flexible family days and examining company disparities on pay following motherhood.

The project "Better Work" is focused on the garment sector and aims at improving working conditions and respect of labour rights for workers, **in particular women workers**, boosting the competitiveness of the sector, and enhancing compliance to fundamental international labour standards. Gender is an important cross-cutting theme in Better Work. Its gender strategy encompasses four pillars: discrimination, paid work and care, voice and representation and leadership and skills development. Under the pillar focused on paid work and care Better Work developed and implemented training on maternity protection, worked on improvement of childcare facilities. In Bangladesh Better Work launched a national programme to strengthen maternity rights, breastfeeding support, and childcare facilities in the workplace and support the retention of working mothers.

6.5. Contribution to the sustainable development goals

Introduction

The UN Sustainable Development Goals (SDGs) are a central priority for the EU. Commission President von der Leyen reaffirmed the EU's commitment to sustainability by placing the SDGs squarely at the heart of EU policy-making and action. All of the SDGs feature in one or more of the six headline ambitions in President von der Leyen's Political Guidelines. Among these, the European Green Deal is an ambitious new strategy for growth and will be an integral part of this Commission's strategy to implement the 2030 Agenda and SDGs, both at home and abroad.

In line with the new European Consensus for Development, the EU has continued to support the implementation of the 2030 Agenda, the Addis Ababa Action Agenda on financing for development and the Paris Agreement on Climate Change, both globally and with partner countries. Official development assistance (ODA), which still plays a significant role in many developing countries, will be used more catalytically to generate additional financing for sustainable development. The EU and its Member States are firmly committed to implementing the SDGs and to eradicating poverty.

While all Commissioners must ensure the delivery of the SDGs within their policy area pursuant to their mission letters, in the case of international partnerships there is an additional specific requirement to ensure that external finance contributes to the 2030

Agenda. SDGs play an important role in the NDICI, as well as in the EU's new partnerships with Africa, the Caribbean and the Pacific (the ACP countries). EU development cooperation pursues the eradication of poverty and fosters sustainable development in partner country, so by design it leads to international partnerships that contribute basically across all the SDGs. Furthermore, the Multilateralism Communication (adopted February 2021) presents a new strategy for a renewed rules-based multilateralism that also aims to have a more focused EU engagement in favour of 2030 Agenda and its SDGs.

The reporting systems for development cooperation require to report on the various relevant SDGs of each project. In this respect, as stated in the Consensus and more recently in the NDICI, development cooperation actions should pay particular attention to interlinkages between the SDGs and to integrated actions that can create co-benefits and meet multiple objectives in a coherent way. This is consistent with the objective stated in the Staff Working Document "Delivering on the UN's Sustainable Development Goals – A comprehensive approach"¹⁵, of capturing the transversal nature of the SDGs and the simultaneous contribution of most projects and programmes to different SDGs, in the light of interlinkages and co-benefits. This has to be taken into account in the following summary, which is presented along individual SDGs for practical purposes, even though most projects and programmes have actually contributed to several SDGs at once.

For the Neighbourhood South region, the 2022 programmes are guided by the post-2020 policy framework outlined in the Joint Communication on "A new Agenda for the Mediterranean" of February 2021, aimed at relaunching cooperation in a context of protracted conflicts, generating human suffering and forced displacement, and weighting heavily on the economic and social prospects of the region. The key challenges identified under the previous MFF remain broadly relevant, and have been exacerbated by the COVID-19 crisis, which has severely disrupted socio-economic activity and aggravated structural grievances across the Southern Neighbourhood. Therefore, the proposed objectives build on the achievements of previous cooperation, and on the need to mitigate the long-term impact of the pandemic. The programme proposes a range of actions contributing to the following SDGs: affordable and clean energy (SDG 7); decent work and economic growth (SDG 8); industry, innovation and infrastructure (SDG 9); reduced inequalities (SDG 10); climate action (SDG 13); peace, justice and strong institutions (SDG 16); partnerships for the goals (SDG 17).

For the Neighbourhood East region, the 2022 programmes are guided by the post-2020 policy framework outlined in the Joint Communication on the "Eastern Partnership policy beyond 2020" of March 2020. The concrete priorities are built on the EaP commitment "20 deliverables for 2020", and are based primarily on the Association Agendas and Partnership Priorities, while also taking into account the current post-COVID-19 context. The programme has a strong focus on economic recovery, building sustainable, modern and attractive economies, and promoting long-term jobs and sustainable growth, connectivity, greening, digitalisation and health resilience. Targeted support contributes primarily to the achievement of the following SDGs: affordable and clean energy (SDG 7); decent work and economic growth (SDG 8); digital transformation (SDG 9); reduced inequalities (SDG 10); climate action (SDG 13); peace, justice and strong institutions (SDG 16).

SDG 1 No poverty

The 2030 Agenda for Sustainable Development, with the 17 SDGs at its core, is the principal international blueprint for poverty eradication and sustainable development. Eradicating poverty in all its dimensions, tackling discrimination and inequalities and leaving no one behind are at the heart of the European Consensus on Development. Poverty is multidimensional and relates to economic, social, environmental, cultural and political aspects. Tackling the various dimensions of poverty requires actions on all fronts (including education, health, social protection, gender equality and strengthening resilience). The EU and Member States' actions under all SDGs contribute in some way to the core goal of eradicating poverty. Poverty eradication is the result of many interacting activities. This also means actions mentioned under most other SDGs (for instance in relation to access to social services and the promotion of growth) are designed to contribute across the board to this primary objective.

Launched in January 2015 and co-financed by the European Commission, the OECD and the governments of Finland and Germany, the "EU Social Protection Systems Programme" is a four-year programme supporting 10 low- and middle-income partner country governments and national expert institutions in their efforts to develop comprehensive social protection systems comprising social assistance, social insurance, active labour market measures and access to essential social services and care. Partner countries include Cambodia, Ethiopia, Indonesia, Kyrgyz Republic, Mozambique, Namibia, Tanzania, Togo, Vietnam and Zambia. One of the aims of the programme is generating evidence-based knowledge, for future EU cooperation and for use by other development partners, on the effectiveness of social protection in reducing poverty (SDG 1) and vulnerability, addressing inequality (SDG 10) and promoting social cohesion.

To reduce poverty, the EU supports development of policies that seek to maximise positive social outcomes and impacts. In this context, EU actions support national initiatives in partner countries for domestic resource mobilisation, which is key to ensuring long-term inclusive growth, sustainable development and the provision of social services.

The EU works to enhance social cohesion, to reduce inequality of outcomes and to promote equal opportunities for all, and has stepped up its efforts to mainstream the combat against inequality in its external action. EU actions in support of social protection systems, including minimum subsistence levels, are important to ensure that no one is left behind, as stated under SDG 1.3.

¹⁵ SWD(2020) 400 of 18.11.2020.

Universal, sustainable and equitable social protection systems are fundamental to prevent and reduce poverty across the life cycle, including cash transfers for children, for mothers with new-borns, for persons with disabilities, for those who are poor or without jobs, and for older persons. In line with the NDICI-Global Europe and the European Consensus on Development, the EU has confirmed its commitment to allocating at least 20% of its official development assistance to social inclusion and human development.

In social protection, the EU supports bilateral social protection programmes financed through geographic funding allocations in 29 partner countries. Half of this EUR 1 billion investment is implemented through Budget Support (direct transfers of funds to partner country authorities); the other half follows a programme approach.

In Morocco, the 2021 financial inclusion programme and in Algeria, the support to local development will help alleviate poverty (SDG1)

SDG 2 Zero hunger

World hunger and food insecurity have again been on the rise in the past few years. According to the 2021 Global report on food crises, more than 155 million people across 55 countries experienced acute hunger requiring urgent food, nutrition and livelihoods assistance in 2020. SDG 2 is therefore one of the goals where trends deteriorated in recent years, which have been aggravated by the COVID-19 crisis. The EU and its Member States remain strongly committed to achieving SDG 2 and therefore continued working with partners to collectively step up support to address hunger in all its forms, including by promoting sustainable and resilient agriculture.

Agriculture and rural development can be powerful drivers of growth, job creation and poverty reduction and thereby contribute to other SDGs. EU actions also target problems of malnutrition, particularly in children aged under five, and their negative consequences on their cognitive, social and economic development. For instance, the post-crisis response to food and nutrition insecurity in the Gambia (2017-2019) responding to the twin crisis of poor rains and an Ebola outbreak via a humanitarian-development nexus approach contributed to tackling the root causes of vulnerability to food insecurity and malnutrition. Stunting of children under five years old dropped from 23% in 2015 to 14% in 2018.

In the area of development smart innovation through research in agriculture (DeSIRA initiative launched at the One Planet Summit in December 2017), the EU has increased its efforts and helped energise support and action, by providing a platform and mobilising more than EUR 270 million by the end of 2020 to build capacities for research and innovation and responses at country, regional and global levels contributing to rural and agriculture transformation.

SDG 3 Good health and well-being

The central role of health has been put under the spotlight with the COVID-19 crisis, given the multiple impacts across economic and social aspects. At the same time, to ensure continued progress towards SDG 3, effective health policy and programmes require complementary work and progress in SDGs relevant to other sectors, such as SDG 2 (nutrition), SDG 4 (education), SDG 5 (gender equality and women's empowerment) and SDG 10 (reducing inequalities). Good health is a global public good and an essential component of the human development of each country, and hence a co-determinant for its economic and social development.

EU assistance for health issues amounts to EUR 2.6 billion in the period 2014–2020. 50% is allocated to global initiatives, while the other 50% is implemented through bilateral and joint EU actions in 17 countries aimed at strengthening country health systems and supporting countries to reach their SDG 3 targets, including universal health coverage. The EU plays a significant role in shaping the international policy agenda through its contributions to global initiatives such as the Global Fund to Fight AIDS, Tuberculosis and Malaria (GFATM); GAVI, the Vaccine Alliance; the Universal Health Coverage Partnership of the World Health Organisation (WHO); and the United Nations Population Fund (UNFPA). During 2019, the Commission pledged EUR 550 million to the Global Fund for the period 2020–2022.

In the Eastern Partnership, two major programmes worth EUR 75 million implemented by the WHO mitigate the impact of COVID-19. Additionally, a EUR 35 million EU grant reimburses EU Member States for their vaccine donations to the region. These actions ensure equitable access to COVID-19 vaccines and support effective response against COVID-19 while contributing to longer-term socio-economic and health resilience.

The Partnership Instrument (PI) to builds alliances and partnerships across the world to build resilience against global health threats. These initiatives have contributed to protecting millions of people in Latin America and will lead to significant cumulative savings for the economy. Key actions strengthen the joint work of the World Health Organisation, the UN Food and Agriculture Organization, and the World Organisation for Animal Health to fight antimicrobial resistance, strengthen national action plans and promote a prudent use of antimicrobials in the food industry and the private sector in Latin America.

The Supporting public health institutes programme (SPHIP) (2015–2020) strengthens institutes of public health in eight low-income countries so that they are better able to assist national authorities with evidence-based policy-making in key public health areas. In the SPHIP projects, knowledge translation influences public health policy development by guiding relevant health sector stakeholders on the use and communication of research data.

In addition, Chemical, Biological, Radiological and Nuclear (CBRN) risk mitigation actions contribute to SDG 3 “Ensure healthy lives and promote well-being for all at all ages” by promoting the development of national capacities to assist in reducing the risks

of illness and death from hazardous chemicals and air, water and soil pollution and contamination; and in strengthening national capacities for early warning, risk reduction, and the management of national and global health risks.

In Morocco, a budget support on Social Protection and in Egypt a support to the socio-economic response to COVID-19 are widely addressing health issues (SDG 3 Health).

SDG 4 Quality education

Access to quality education is an essential means of achieving sustainable growth and jobs: it helps citizens and professionals to grasp the opportunities created by digital technologies, strengthens societies' resilience to emergencies and crises, and contributes to sustaining peace and preventing violent extremism. It has also a powerful role to play on climate change, environment and gender equality through skills building, awareness raising and strengthening resilience. The EU continued its proactive engagement towards achieving SDG 4, supporting around 100 countries and offering support to global education partnerships such as the Global Partnership for Education (GPE) and Education Cannot Wait (ECW).

The EU, together with its Member States, is the biggest contributor to GPE, which supports basic education, focusing on the poorest countries and/or those in fragile situations. For 2018–2020 an additional EUR 100 million was pledged, on top of the EUR 375 million for 2014–2018.

Through the Erasmus+ programme, the EU continued to help partner countries facilitate mobility of individuals, and reinforce intercultural dialogue and understanding. Between 2015 and 2019, under Erasmus+ mobility in higher education, more than 130 000 students and university staff moved between partner countries and Europe and vice versa.

The EU also contributes to the Building Resilience in Crises through Education (BRiCE) and Education Cannot Wait (ECW) initiatives. BRiCE supports access to quality education at preschool, primary and lower secondary levels for children in fragile and crisis-affected environments in several African countries, with EUR 24 million contributed for 2018–2021. ECW has enabled the provision of: (i) education to 1.5 million children and youth, half of whom are girls, in 19 crisis-affected countries; and (ii) training to more than 21 000 teachers. In addition, a specific mental health and psychosocial support for children in conflict has been incorporated into ECW-supported actions. The EU financial contribution for the period 2018-2021 amounts to EUR 21 million.

Education (SDG 4) is central in the cooperation with the Neighbourhood South. A 2021 programme in Algeria will support international cooperation for research and innovation while the EU contribution to United Nations Relief and Works Agency for Palestine Refugees addresses education as its main SDG target. EU also contributes in Lebanon to a more inclusive and equitable quality education for all vulnerable children, including refugees from Syria.

SDG 5 Gender equality

Gender equality and empowerment of women and girls are EU core values and principles embedded in its development and international partnerships policy.

Through the implementation of the Global Europe-NDICI regulation and the Gender Action Plan III (2021-2025) at least 85% of all programmes should be gender responsive and at least 5% of these programmes gender transformative. Each country and region should design, formulate and implement one project which has gender equality and women empowerment as principal objective

The continuing implementation of the Spotlight Initiative, a transformative EU–UN partnership aiming to eliminate all forms of violence against women and girls worldwide, greatly contributed to the SDG 5 target, even more so during the COVID-19 crisis which sadly enough saw increasing levels of domestic violence at global level. The partnership was launched in September 2017 with an initial investment of EUR 500 million, in 2020 the Commission saw solid results and innovative approaches.

The EUR 9,7 million 'EU4 Gender Equality' programme 2020-2023 aims to strengthen equal rights and opportunities for women and men in the Eastern Neighbourhood by challenging gender stereotypes, work on violence prevention and championing men's participation in care work. The programme also includes a Reform Helpdesk that supports Eastern partnership governments' reform work towards equal opportunities for women and men.

The Regional Campaign to Prevent and Combat Violence against Women and Girls in the Southern Mediterranean Region has continued offering support to victims of violence against women during the COVID-19 crisis. The constant work of women's CSOs under this action has been strategic in developing partnerships with national governments to raise social awareness and political commitment to approach violence against women from the pandemic lens, supporting victims more effectively. They also published an on-line directory of available services for victims and survivors of violence against women, a first in the region.

SDG 6 Clean water and sanitation

The EU continues to support access to water and sanitation, and sustainable and integrated water management as an important contributing pillar to all other SDGs, i.e. biodiversity, climate, nutrition, gender, health, education and partnerships. The European Green Deal generates further impetus to maximise the impact of actions linked to water in EU external actions.

In the area of Water, Sanitation and Hygiene (WASH), the Council Conclusions on Water in EU external action were adopted in November 2021. Transboundary water cooperation is vital to prevent conflicts and ensure effective and sustainable use and management of shared resources. However, cooperation in many water basins is inadequate to tackle the existing problems and challenges, including weak legal and/or institutional frameworks, insufficient implementation of joint policies and low capacity.

Team Europe Initiatives on transboundary water management for Africa and on Water, Energy and Climate in Central Asia were developed in this context. In parallel to this dynamic, a continued support to the globalization of the UNECE water Convention was put in place. 2021 was also the first implementation year of Climate Investor 2, a programme that actively developed its pipeline with the private sector in the areas of water access in rural areas, innovative sanitation solutions and non-revenue water.

Chemical, Biological, Radiological and Nuclear risk mitigation (CBRN) actions contribute to the attainment of SDG 6 “Ensure availability and sustainable management of water and sanitation for all”. Through the EU CBRN Centres of Excellence initiative, partners are assisted in developing measures that can directly or indirectly help improve water quality and quantity. For instance, in 2021 Jordan benefitted from support for protection and surveillance of risks to its main water supply network.

In the Eastern Neighbourhood, the EU Water Initiative Plus (completed in mid-2021) delivered hundreds of knowledge products and modernised 9 water laboratories. Some 40 surveys were carried out in rivers, ground and coastal waters, covering more than 1000 sites. Due to this support, the water monitoring in the EaP region is now closer to EU standards. The implementation of national policies and strategies at local level progressed through the development of management plans for 11 pilot river basins. Such plans identify targeted measures to improve water quality and efficient water use, estimate the costs of the measures, and provide indicators to monitor their implementation in the mid-term. More than 10,000 people have been directly involved in project activities through national policy dialogues, public consultations, numerous outreach events, and capacity-building activities.

SDG 7 Affordable and clean energy

Sustainable energy is key to achieving the 2030 Agenda and Paris Agreement targets and has a pivotal role in the European Consensus on Development and in the external dimension of the European Green Deal. The EU continues to support access to sustainable energy across the world as well as actions towards energy efficiency and decarbonisation of energy, while pursuing the Green Deal’s objective of fostering clean energy technology, to facilitate global energy transition and attract further investments in this sector.

Regarding access to electricity and clean cooking fuels, African countries are the most concerned and remain one of the geographic priorities of EU international energy engagement. In addition, Africa’s huge potential for different sources of renewable energy could allow for the deployment of renewable hydrogen solutions in view of creating a market for green hydrogen that connects the two shores of the Mediterranean, as declared in the SOTEU 2021. The Climate and Energy Diplomacy, the Africa EU Green Energy Initiative and the Global Gateway are the main channels to develop actions with partner countries.

In the Southern Neighbourhood, in line with the external dimension of the “Green Deal” and the priorities of energy efficiency in the framework of the Union for the Mediterranean (UfM), the programme contributes to energy security, transition towards clean energy, promotion of energy efficiency in key sectors, and massive deployment of renewables in order to “green” the production mix and diversify energy sources.

In the Eastern Neighbourhood, the programme contributes to develop energy resilience, focusing in parallel to energy and climate policies. NDICI-Global Europe aims at reducing energy dependency through green finance, diversifying energy sources and routes, and securing supply by promoting energy efficiency and renewable energy. Investments in infrastructure for energy and transport interconnectivity between EaP countries and the EU also address infrastructure vulnerability to the impact of climate change, environmental challenges and hybrid threats. As part of its efforts to promote clean energy, the EU is working with Ukraine and Moldova to achieve integration between the Ukrainian and Moldovan electricity grids and the EU. In Ukraine, a EUR 53.4 million project (EU contribution EUR 9 million) will develop good governance in the Ukrainian energy sector, support the restructuring of the utility provider Ukrenergo, and rehabilitate nine sub-stations in the South-Western Power Grid of Ukraine. In Moldova, a EUR 270.8 million project (EU contribution EUR 40.8 million) will finance an electricity substation and transmission line, as well as upgrading existing infrastructure, to strengthen the connection with Romania. This will contribute to the stability and efficiency of the Ukrainian and Moldovan electricity grids, contributing to diversification of supply and increased energy security.

SDG 8 Decent work and economic growth

The EU supports SDG 8 by implementing ongoing actions and adopting several new actions funded by various financing instruments. The ‘Sustainable investment climate and value chains programme II’ (EUR 13.5 million) supports a number of global and European partnerships, platforms and programmes promoting key aspects of investment climate, trade and private sector development in the context of the 2030 Agenda, its SDGs and the EU’s EIP third pillar.

In 2019, a large-scale sector reform contract for employment and skills in Albania (EUR 29 million) was completed that initiated institutional and structural changes in the financing and governance of the labour market and VET systems, developed and implemented the Albanian Qualification Framework, modernised the legislative framework for initial VET and adult training, and supported turning EU occupational health and safety directives into national law. Albania established a National Agency for Employment and Skills and three multifunctional training centres. The National Employment Service was modernised and 36 labour offices were reorganised improving compliance with international labour standards and providing a broader range of employment promotion services.

In the Southern Neighbourhood, EU support aims at enhancing cooperation on youth, education, research and innovation; sharing EU experience in accompanying innovation efforts and supporting the development of Smart Specialisation Strategies; promoting cooperation on digital education; and developing skills strategies and labour market policies, as well as skills and capacity development.

Economic growth and decent work are addressed in 2021 programmes for economic recovery of Libya and in Tunisia to support competitiveness of Tunisian companies.

In the Eastern Neighbourhood, the programme aims at achieving two key long-term EaP policy objectives beyond 2020: resilient, sustainable and integrated economies; and resilient, fair and inclusive societies. This entails increased trade and further regional and bilateral integration of the economies of EU and partner countries, together with cooperation for progressive decarbonisation towards climate neutrality, embracing the opportunities from the twin ecological and digital transformation. The programme supports structural reforms, access to finance, SME growth, investing in people - particularly the youth - and better connecting education, research and innovation with private sector needs.

SDG 9 Industry, innovation and infrastructure

Connectivity plays a fundamental role in achieving the SDG targets. The Action ‘Knowledge Hub Jobs & Growth (Part I) – Global Gateway Support Mechanism’ adopted in December 2021 will primarily contribute to achieve SDG 9, as well as SDG 5, 6, 7, 11, 13 and 17. The expected output of the action will be to support the EU international agenda on quality infrastructure and connectivity (both “hard” and “soft”) with third countries that delivers environmental, economic, social and financial sustainability.

Digitalisation, a key part of connectivity, is essential in addressing inequalities and achieving sustainable development and is mentioned in several SDGs. However, digital transformation has the potential for positive impacts across the entire 2030 Agenda. To boost the implementation of the transport-related parts of SDG 9, the EU continues to support strategic multimodal corridor development that builds on economic, social and environmental sustainability.

Mainstreaming the digital revolution throughout the energy industry will also contribute to a more efficient energy sector and therefore to socioeconomic development and climate change mitigation. The overall objective of the Digital Energy Facility is to support the modernisation and digitalisation of the energy sector, innovative business models and the long-term sustainability of energy systems. This can establish the necessary preconditions for increased access to energy and renewable energy development worldwide, with a specific focus on Africa.

Digital transformation is at the heart of the Commission’s agenda. The Commission has identified the digital sector as a target area for support under the External Investment Plan, focusing on innovation that addresses local social needs, financial inclusion and job creation. Three guarantees have been approved under the digital window (EUR 220 million), aiming to (i) increase the use of digital technologies, (ii) widen rural access to broadband and (iii) boost investment in innovative start-ups using digital solutions.

In the Southern Neighbourhood, NDICI-Global Europe interventions still aim at improving the investment environment, and promoting coordination with International Financial Institutions - namely European FIs - which have signalled important additional outreach in the South. The programmes co-finance investments funded in the context of the EFSD+; supports initiatives to assist partners in attracting and retaining opportunities in selected sectors; steps-up support to the green, blue and social economies through innovative financial vehicles, including impact finance; supports the implementation of SME policies; and assists the development of sustainable transport and tourism.

In the Eastern Neighbourhood, in line with the EaP policy objective beyond 2020 of a resilient digital transformation, the programme contributes to the achievement of strong interconnections between the EU and partner countries, and among partner countries themselves. This is an important driver for economic development, and encompasses regional integration, secure connectivity, trade and mobility. On transport, the programme supports the investments outlined in the Trans-European Transport Network (TEN-T) indicative investment action plan. This includes upgrading key physical infrastructure in road, rail, port, inland waterway and airport facilities, as well as logistics centres, primarily through blending and guarantees under the Neighbourhood Investment Platform. The EU4DigitalUA technical assistance project and Ukrainian authorities was created and thanks to its efforts, the European Commission Equivalence Decision of the EU Digital COVID certificate for Ukraine was announced on August 20, 2021. With this decision, Ukraine’s international digital COVID-19 certificate is fully recognised by the European Union: holders of this certificate are able to use this certificate under the same conditions as holders of an EU Digital COVID-19 Certificate.

SDG 10 Reduced inequalities

SDG 10 calls for reducing inequalities within and between countries. The objective of addressing inequalities is also at the heart of EU development cooperation, as emphasised in the European Consensus on Development, and will help build more sustainable societies. In the past few years, the EU has increased efforts in ensuring that migration leads to inclusive growth and sustainable development, as set out in the Consensus document.

EU funding instruments have established a more structured way to cooperate with partner countries on migration, through the EU Emergency Trust Fund for Africa (EUTF), the EU Facility for Refugees in Turkey and the EU Trust Fund in Response to the Syrian Crisis. The EUTF further consolidated its achievements in partnership with EU Member States development cooperation agencies, UN organisations, NGOs and partner countries with the approval of an additional 36 programmes and 16 ‘top-ups’ across its three regions for a total of EUR 851 million. This brings the total number of approved programmes to 223 with a total budget of EUR 4.4 billion since 2015.

“Bridging the gap” is a joint initiative of the EU and several Member States to increase the inclusion of people with disabilities. It delivers support to the Office of the United Nations High Commissioner for Human Rights to develop tools such as indicators, guidelines and data, to promote the rights, participation and inclusion of people with disabilities in implementing the 2030 Agenda.

It also supports the governments and relevant organisations in five countries (Burkina Faso, Ecuador, Ethiopia, Paraguay and Sudan) to implement and monitor disability-inclusive policies in areas such as education, health, employment and social protection. 892 people in Sudan (60% women) have increased their access to the job market and are now employed, self-employed or in technical and vocational education and training. Over 1 500 people with disabilities in different districts in Ethiopia have access to basic services and 115 have been granted small loans to sustain their incomes.

In the Southern Neighbourhood, the programme enhances cooperation on migration on the basis of a comprehensive, balanced and mutually beneficial approach. NDICI-Global Europe interventions address the challenges of forced displacement and irregular migration; support partners' capacity to effectively manage their asylum systems and their capabilities to perform return operations; and support assisted voluntary return and reintegration.

Reduced inequality (SDG 10) is the main target of the 2021 EU response to the multiple crises and support to a people centred recovery in Lebanon and a significant objective in the framework of the EU's support to the rule of law and justice in Jordan.

In the Eastern Neighbourhood, the programme also addresses migration as a comprehensive and joint priority, continuing to support mobility in a secure and well-managed environment, and to ensure support to vulnerable migrants and refugees. Labour migration initiatives aim at establishing partnerships to foster legal migration and mobility, and enhancing cooperation and cross fertilisation of skills and competencies.

SDG 11 Sustainable cities and communities

Urbanisation and the role of cities in the economy are increasingly shaping development challenges and opportunities in developing countries, so much that local authorities are increasingly recognised as key actors in achieving most of the SDGs. With cities globally contributing 80% of GDP, 70% of global energy consumption and 70% of global carbon emissions and nearly one billion people living in slums, achieving the SDG 11 targets represents a major challenge. The EU supports urban development through various channels, including through blending and guarantees, where investments in urban infrastructure have been supported.

One billion people all over the world face the challenges of being excluded from modern society. Numbers of slum dwellers continue to grow and challenges faced by informal settlements remain a critical factor for persisting poverty and exclusion in the world. The Participatory Slum Upgrading programme (PSUP) is a joint effort of the ACP countries, the Commission and UN-Habitat to address the informal settlements challenge. So far, the programme has reached out to 40 ACP countries and 160 cities.

Following a call for proposals 'Local authorities: partnerships for sustainable cities,' 16 partnerships between local authorities from EU Member States and partner countries for a total of EUR 53 million have been signed in 2019 to strengthen urban governance, ensure social inclusiveness, improve resilience and greening and foster prosperity and innovation in cities.

Risk mitigation efforts developed through the Centres of Excellence Initiative under IcSP Article 5, alongside disaster management planning, are actions which contribute directly to reducing the number of deaths and the number of people affected by disasters, including water-related disasters. Developing institutional capabilities and resilience to disasters, alongside integrated policies and plans related to CBRN management is of great importance in this area.

Support to neighbourhood South will be provided through enhancing disaster risk management and civil protection in the region. The project will build sustainable capacities of Partner Countries' respective civil protection institutions for disaster risk prevention, preparedness and response based on a multi-hazard approach, and enhance regional co-ordination, institutional and operational co-operation between the Union Civil Protection Mechanism (UCPM) and the Southern neighbourhood countries and among Southern neighbourhood countries.

In the Eastern Partnership, the number of Covenant of Mayors (CoM) East signatories almost doubled from 257 to 493 within 5 years since 2016. As a result, the network now covers more than 45% of the population. Moreover, close to 75% of these municipalities (360) have committed to the ambitious target of 30% reduction of CO₂ emissions by 2030. In addition, within the framework of the Regional Programme for Sustainable Urban Demonstration Projects complementing the East initiative, 392 projects have undergone energy efficiency measures or moved to renewable energy, including schools, kindergartens, district heating systems and street lighting systems, benefitting directly over 520,000 users. This resulted in savings of almost EUR 2.19 million per year.

SDG 12 Responsible consumption and production

The EU is committed to pursuing its international cooperation on sustainable consumption and production and the circular economy as an essential contribution to SDG 12. EU international cooperation on sustainable consumption and production and the circular economy focuses mainly on developing policy and institutional frameworks in this area, promoting green business development in key value chains, and mobilising finance for the global circular economy transition.

Relevant indicative initiatives include engagement at multilateral level to encourage the use of standards and ensure a level-playing field for the private sector, financial and technical assistance and the circular economy missions to foster links between EU business and partner countries. The SWITCH to Green initiatives (SWITCH Africa, SWITCH-Asia, SWITCH to Value Chain projects and SWITCH to Green and Water Facility) are the EU flagship on sustainable consumption and production and circular economy practices.

SDG 13 Climate action

Climate change is one of the main priorities of the EU's external action and a central theme of the European Green Deal, together with the European Consensus, the 2030 Agenda and the Paris Agreement. DG INTPA is mainstreaming climate action into all policy areas. The Commission supports the upgrade and implementation of Nationally Determined Contributions (NDCs) as well as the Sendai Framework for Disaster Risk Reduction. Reflecting this ambition, the EU has set the ambitious spending target of 30% of Global Europe financial envelope in the period 2021-2027 contributing to climate objectives, to which President von der Leyen added EUR 4 billion in her 2021 SOTEU speech.

In 2021, an EU-UNEP partnership on climate change, environmental degradation and security was reinforced with EUR 6 million under the Global Threats component of the NDICI-Global Europe Thematic Programme on Peace, Stability and Conflict Prevention to enable the partnership to expand its work to address emerging environment-related risks, with a focus on transboundary dimensions.

In the Southern Neighbourhood, climate change resilience is a top priority, to mitigate risks to human lives and livelihoods and to promote sustainable development. Considering urbanisation trends, the loss of biodiversity, the increasing marine and land pollution and the impact of climate change on resources, focus is placed on sustainable water management, including wastewater treatment, water re-use and efficient use of water, as well as measures to protect and restore biodiversity, both marine and terrestrial, animal and vegetal. Addressing climate issues, EU supports Green Economy in Jordan, including in response to the Syrian crisis.

In the Eastern Neighbourhood, the programme aims at achieving the key long-term EaP policy objective beyond 2020 of environmental and climate resilience. The EU supports partner countries to transform the region towards modern, resource-efficient, clean, circular and competitive economies, while increasing their environmental and climate resilience, including through more sustainable use of natural resources. The programmes supports the EaP challenges to increase the resource-efficiency of economies; develop new green jobs and economic opportunities linked to the green transition; develop local and renewable sources of energy; and manage natural assets to maximise sustainability. In the area of climate action the Eastern Europe Energy Efficiency and Environment Partnership (E5P) supports municipal investments in energy efficiency and environmental projects. Within the framework of this Fund, the EBRD has extended a EUR 20 million sovereign loan to Armenia for the benefit of the Yerevan Bus Company to acquire 100 smart energy-efficient buses to reduce congestion and air pollution.

SDG 14 Life below water

Global progress in addressing major threats, including pollution and eutrophication, overfishing and destruction of habitats, as well as the impacts of climate change, has been slow and most SDG 14 targets may not be reached by 2030. The EU continues to work on capacity-building and spur local and regional actions on effective governance, and the protection and sustainable use of marine resources. The role of the EU external action in support of SDG 14 is growing. The EU promotes an integrated approach to effectively address the drivers of ocean degradation while linking livelihoods with natural resources preservation.

The lagoons and waterfalls of Oyster Lagoon park in Belle-Anse, Haiti, were designated a protected area in 2017. However, with 7 000 families living within the park and dependent on fishing and charcoal production, this project (Strengthening participatory governance in Oyster Lagoon National Natural Park, Haiti) was set up to identify income-generating activities that would reduce pressure on the biodiversity hotspot's natural resources. 30% of the 2 000 fishermen now earn three times more than before thanks to providing training, motorboats and a cold storage facility. Mangrove cutting and lizard hunting have been largely eradicated thanks to increased public awareness of the endangered species. The local authority has also defined new rules on coastal fishing, hunting, protection of water sources and the sale of charcoal.

SDG 15 Life on land

SDG 15 received particular attention ahead of 2021 via the EU Biodiversity Strategy 2030 and the Farm-to-Fork Strategy. In 2021, important international summits took place, highlighting the importance of nature and biodiversity for a wide range of connected global issues (e.g. COP26 of the UNFCCC, UN Food Systems Summit). The EU furthermore participated in the CBD COP15.1 and will be a key player in the CBD COP15.2 due to take place in 2022.

Through its Partnership Instrument, the EU uses its influence to halt biodiversity loss by shaping an ambitious post-2020 global biodiversity framework and by advancing its environmental priorities with G7 and G20 partners. By engaging actively with partners to amplify efforts to switch to a circular and resource-efficient economy, the EU ensured that the 2019 G7 environmental meeting Declaration integrated EU priorities on circular value chains. The PI action on protecting biodiversity mobilises experts, policymakers, young leaders, and scientists from the EU's key partner countries to design an ambitious follow-up framework to the Strategic Plan for Biodiversity (2011-2020).

The Commission signed a EUR 13 million convention with Agence Française du Développement to renew its funding of Critical Ecosystem Partnership Fund (CEPF) from 2020 onwards. CEPF is a multi-donor fund which has successfully positioned itself as the leading donor in CSO financing for key biodiversity areas around the globe. The Fund is efficiently linking conservation of hotspots providing multiple ecosystem services with empowering private sector stakeholders and vulnerable population groups, and providing sustainable livelihoods.

SDG 16 Peace, justice and strong institutions

EU supports the implementation of SDG 16 worldwide through a variety of actions funded under thematic and geographic EU external financing instruments, particularly focusing on promoting democracy and human rights.

In all three NEAR regions as well as Russia, the EU has been, and will continue to work on promotion and protection of human rights, including gender equality, and fundamental freedoms, democracy and the rule of law. The NDICI-Global Europe Thematic Programme on Human Rights and Democracy builds upon the key features of the European Instrument for Democracy and Human Rights (EIDHR). The action will achieve this by supporting and strengthening civil society organisations (CSOs), democracy activists and human-rights defenders working on critical human rights and democracy in non-EU countries. In order to avoid a funding gap in 2021, an individual measure was adopted, including country allocations amounting to EUR 27.8 million for NEAR (+Russia). The action will, in particular, contribute to SDG 16 by: (i) promoting peaceful and inclusive societies for sustainable development and access to justice for all; and (ii) building effective, accountable and inclusive institutions. It is also expected to contribute to SDG 5 (achieve gender equality and empower all women and girls) and SDG 10 (reduce inequality within and among countries).

In the Neighbourhood East and South, the EU has been, and will continue, supporting Public Administration Reform (PAR) notably through the EU-OECD initiative 'Support for Improvement in Governance and Management (SIGMA)'. PAR remains a key priority in strengthening states' capacity to govern in a context of fragility and is a cross-cutting issue of fundamental importance for success in political and economic reforms and building a basis for implementing good governance standards. The SIGMA programme (EUR 10 million) will continue working with state institutions responsible for reforms of public administration, as well as the state structures in charge of co-ordination among institutions, independent bodies and the Parliament within the scope of their scrutiny and oversight powers, with the overall objective to enhance economic well-being and political freedom and facilitate closer economic integration and political co-operation between the EU and its neighbours.

In neighbourhood South a regional project will contribute to mainstreaming Gender in Law Enforcement. In line with EU strategic engagement on Women, Peace and Security, a specific action will be launched with INTERPOL on a gender responsive approach and practice to law enforcement. The project will capitalise on INTERPOL's experience in building related gender capacities in other regions and on its unique position as a global law enforcement organisation

The CT Travel project (Advanced Passenger Information and Passenger Name records (API/PNR)) will be extended to Neighbourhood South. This project will provide support to border security at regional level with a targeted action in threat analysis and intelligence-led approaches to detect terrorist and criminals, through the establishment of passenger information units, passenger name records (PNR) and advanced passenger information (API).

In the areas of peace and personal security, access to justice and trust in institutions, the EU has been providing in Jordan a support to the rule of law and justice is contributing to the national reform process, improving access to justice for all and promoting effective and accountable judiciary institutions. In Libya, the EU is committed to support inclusive governance and rule of law, aiming at improving the accountability of democratic institutions and the functioning of the justice system. The EU made also contribution to SDG 16 through its support to Algeria's sustainable and integrated territorial development, governance and participative democracy, and decentralisation.

The Instrument contributing to Stability and Peace and the new NDICI-Global Europe thematic programme on Peace, Stability and Conflict Prevention are specifically designed to promote the achievement of SDG.16 with a focus on crisis response, conflict prevention, peacebuilding, crisis prevention, and longer-term actions to enhance security and stability in partner countries around the world. Activities mainly contribute to the promotion of peaceful and inclusive societies for sustainable development, providing access to justice for all and building effective, accountable and inclusive institutions at all levels in line with SDG 16. In 2021, support was provided for peace processes (e.g. in the Middle East and Africa, including Syria, Yemen, Libya, Senegal and Central African Republic); for transitional justice institutions in Colombia, Somalia, Benin, Nigeria, Democratic Republic of Congo, Chad and Chile; for risk reduction for vulnerable communities including refugees and migrants in Latin America, the Western Balkans and South Asia; for promoting the protection of civilians in Ukraine, Afghanistan, Nigeria, Sudan and Mozambique. Other support focused on building capacity to prevent, counter and respond to security threats linked to terrorism and violent extremism and transnational organised crime in many partner countries.

SDG 17 Partnerships for the goals

The European Commissioner for International Partnerships took office in December 2019, sending out a strong message on the central role of partnerships in EU's external action. Successful sustainable development requires partnerships, particularly with our partner governments, but also with the private sector, civil society, multilateral organisations and financial institutions.

The EU continues to be actively engaged in UN processes such as the annual High-level Political Forum (HLPF), the Financing for Development (FFD) Forum, the special high-level meetings of the UN General Assembly such as the Climate Summit, the SDG Summit, the FFD High-level Dialogue and the Small Islands Developing States Summit.

The Commission continues to play an influential role in major OECD Development Assistance Committee (DAC) policies, acts and events. The EU's views were reflected in decisions taken on a revised Peer Review Instrument and the adoption of several key OECD DAC recommendations.

The EU and its Member States maintained their position as the biggest provider of official development assistance (ODA), accounting for about half of global ODA to developing countries (0.46% of gross national income (GNI) in 2019). Latest available figures also show an increase of ODA to least developed countries, reaching 0.125% in 2018.

The EU helped generate political momentum on integrated national financing frameworks (INFFs) to map the different financial sources available for sustainable development at country level and to support country-led financing strategies. The purpose of INFFs is to help countries have a better understanding of all the different financial resources at their disposal and to develop a financing strategy to reach the SDGs. The EU has actively been supporting the Indonesian government who volunteered to be an INFF pioneer country. A joint EU-UNDP scoping mission took place to kick-start the INFF process.

The EU is committed to support the UN peace and security architecture. Through IcSP, the EU works closely with different UN entities¹⁶. The cooperation also includes assisting Resident Coordinators in their policy and programming responsibilities for the deployment of dedicated Peace and Development Advisers to their offices. This comes in addition to funding of particular UN political and peacekeeping missions *inter alia* in Central African Republic, Libya, Mali, Somalia, Sudan, Syria, Yemen. In addition, regular policy level dialogues with UN partners supports a mutually beneficial partnership for peace.

The Partnership Instrument enables the EU to build partnerships across the world on priorities ranging from climate and biodiversity to trade and security. These alliances influence decision making processes by partners in policy areas of EU and of mutual interest, widely promote EU interests and values in partner countries and in multilateral fora, increase the alignment of the EU and its partners' policy positions and approaches, as well as the harmonisation of legal and policy frameworks, and support the rules-based multilateral system.

In the Neighbourhood East and South (and Russia), the EU has been, and will continue to support the work of Civil Society Organisations. This support is channelled notably through the Thematic Programme for Civil Society Organisations. The CSO programme preserves the key features of its predecessor in its actor-based nature; its comprehensiveness and worldwide coverage; and its ability to act independently from the consent of government and other public authorities. The first overarching priority of the programme, at both global and partner country level, is an inclusive, participatory, empowered, and independent civil society and democratic space in partner countries and an inclusive and open dialogue with and between civil society organisations. The Programme includes a component for Support to Civil Society in Partner Countries with country allocations amounting to EUR 23 million for 2021. This Action will be implemented by EU Delegations in the two neighbourhood regions and Russia through grants to Civil Society organisations. This Programme will contribute primarily to the Commission priorities on Governance, Peace and Security, and Human Development and to supporting the vital role of Civil Society with regard to SDG 17, and will further contribute to SDGs 16 and 5.

¹⁶ The UN Department of Political and Peacebuilding Affairs (UN-DPPA), the UN Peacebuilding Fund (UN-PBF), the UN Standby Team of Senior Mediators and the UN Special Political Missions.

HEADING 6: Neighbourhood and the World**European Instrument for International Nuclear Safety Cooperation****Lead DG:INTPA**

2. Where are we in the implementation ?	1059
2.1. Programme 2021-2027	1059
2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations	1060
3. How is the programme performing ?	1061
3.1. Performance	1061
3.2. Key achievements	1062
3.3. Evaluations, studies and reports	1062
4. Programme 2021-2027 - Key monitoring indicators	1063
Specific Objective 1 :The promotion of an effective nuclear safety and radiation protection culture and implementation of the highest nuclear safety and radiation protection standards, and continuous improvement of nuclear safety, including the promotion of transparency of authorities in third countries in decision making processes relating to the safety of nuclear installations (Art 2.2.a)	1063
Specific Objective 2 :Responsible and safe management of spent fuel and radioactive waste and the decommissioning and remediation of former nuclear sites and installations, including the promotion of transparency of authorities in third countries in decision making processes (Art 2.2.b)	1063
Specific Objective 3 :Establishing efficient and effective safeguards for nuclear material in third countries (Art 2.2.c)	1064
5. Programme 2014-2020 - Key monitoring indicators	1064
Previous Program 1 : Instrument for Nuclear Safety Cooperation (INSC)	1064
General Objective 1 :The Union shall finance measures to support the promotion of a high level of nuclear safety, radiation protection, and the application of efficient and effective safeguards of nuclear material in third countries	1064
Specific Objective 1 :The promotion of an effective nuclear safety culture and implementation of the highest nuclear safety and radiation protection standards, and continuous improvement of nuclear safety.	1065
Specific Objective 2 :Responsible and safe management of spent fuel and radioactive waste, namely transport, pre-treatment, treatment, processing, storage and disposal, and the decommissioning and remediation of former nuclear sites and installations	1066
Specific Objective 3 :The establishment of frameworks and methodologies for the application of efficient and effective safeguards for nuclear material in third countries.	1066
6. The programme contribution to horizontal policies	1067
6.4. Contribution to gender equality	1067
6.5. Contribution to the sustainable development goals	1067

1. Overview**1.1. Challenges**

The operation of nuclear power plants is a sovereign decision of any State that choose to include nuclear in its energy mix. Nevertheless, as history showed with the accidents of Chernobyl in 1986 and more recently Fukushima in 2011, any accident has transboundary consequences and affects the population and the environment of neighbouring countries and regions.

The European Union must ensure the safety and security of its citizens and protect the environment. The best way to tackle this challenge when considering the use of nuclear energy is to guarantee that the nuclear reactors are operated safely and according to the best international standards.

1.2. Mission (General objectives)

The objective of the European Instrument for International Nuclear Safety Cooperation (INSC) is to support the promotion of nuclear safety culture and radiation protection, the safe management of spent nuclear fuels and radioactive wastes and the application of effective and efficient safeguards of nuclear materials in third countries.

This is achieved by cooperating with key stakeholders and in particular with the nuclear regulatory authorities in charge, with the aim of transferring the EU expertise. In particular, the regulation will support the promotion of transparency in nuclear related decision-making by authorities of third countries.

1.3. Specific objectives

The objectives of the INSC are:

- a) the promotion of an effective nuclear safety and radiation protection culture and implementation of the highest nuclear safety and radiation protection standards, and continuous improvement of nuclear safety, including the promotion of transparency of authorities in third countries in decision making processes relating to the safety of nuclear installations;
- b) responsible and safe management of spent fuel and radioactive waste and the decommissioning and remediation of former nuclear sites and installations, including the promotion of transparency of authorities in third countries in decision making processes;
- c) establishing efficient and effective safeguards for nuclear material in third countries.

1.4. Public intervention context

The promotion of nuclear safety is a key priority for the EU since the early days of the EEC and EURATOM. The European Instrument for Nuclear Safety contributes to the promotion of the implementation of international treaties and conventions as well as the adoption of the highest safety standards complementing work inside the EU. The INSC is a specific tool complementing the Neighbourhood Development and International Cooperation Instrument (NDICI). It covers cooperation in nuclear safeguards which is essential to the global non-proliferation policy.

1.5. Actions

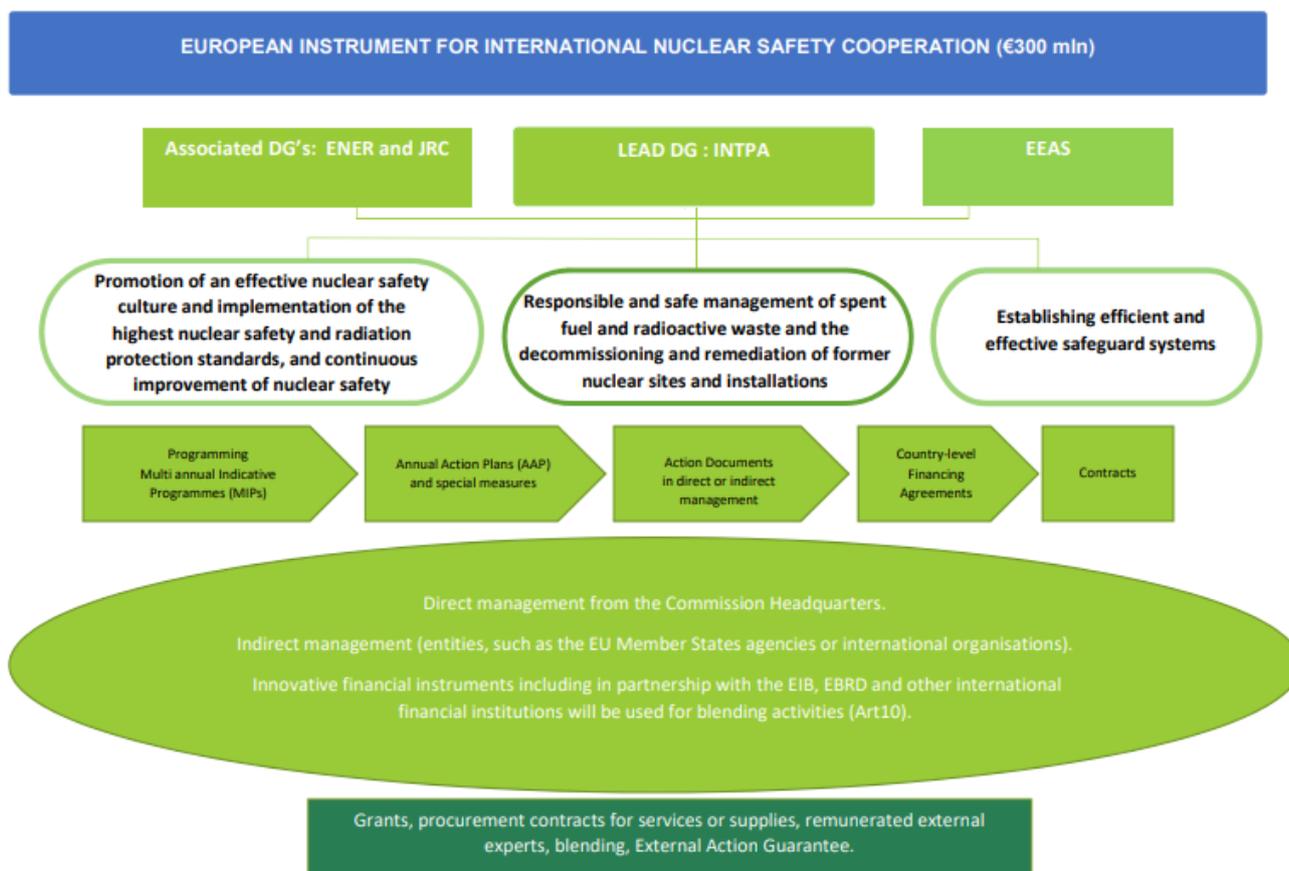

The INSC will achieve its objectives by using a combination of implementing methods to establish cooperation and deliver assistance to the beneficiary countries.

The action financed by the INSC will be implemented by the means of technical assistance, capacity building, training and education, transfer of the EU acquis and best international practices as well as twinning programmes promoting nuclear safety culture in third countries.

1.6. Delivery mode

Direct management by the Commission from Headquarters and under indirect management by entities, such as the EU Member States agencies or international organisations, that ensure a level of protection of the EU's financial interests equivalent to that under direct management. Indirect management may also be entrusted to partner countries or the bodies they designate. Innovative financial instruments including in partnership with the European Bank for Reconstruction and Development and other international financial institutions will be used for blending activities.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Council Regulation (Euratom) 2021/948 of 27 May 2021 establishing a European Instrument for International Nuclear Safety Cooperation complementing the Neighbourhood, Development and International Cooperation Instrument – Global Europe on the basis of the Treaty establishing the European Atomic Energy Community, and repealing Regulation (Euratom) No 237/2014 (OJ L 209, 14.6.2021, p. 79).	2021 - 2027	300.00

1.8.2. Budget programming table

	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	37.6	38.6	39.9	41.8	44.1	47.2	50.9	300.0
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities								

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

The lessons learned from the 2014-2020 MFF show that the EU external action instruments are relevant and delivering results. For the following MFF, it was therefore proposed to build on the activities formerly covered under the 2014-2020 Instrument for Nuclear Safety Cooperation, continuing the assistance in nuclear safety and adapting the new Instrument to emerging challenges and needs.

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitment	37.6	300	13%
Payments	0.9		0%

The commitment appropriation (CA) for the year 2021 (EUR 36.1 million) will finance 10 projects in 9 countries in the area of nuclear safety (42.5%) and management of radioactive waste (42.5%). In addition, the CA will cover the support measures for the management and implementation of the Instrument for Nuclear Safety Cooperation.

With the 2022 commitment appropriation (EUR 35.9 million) we expect to finance¹ 9 projects in 8 countries and regions as well as the support measures for the programme implementation. These projects are supporting the promotion on the nuclear safety culture (support to regulatory authorities) in Armenia, Jordan, Nigeria, Turkey and the South East Asia (ASEAN); the safe management of radioactive wastes in Iran and Central Asia and worldwide through our cooperation with the International Atomic Energy Agency; strengthening the non-proliferation regime in Africa by supporting the African Commission on Nuclear Energy (AFCON) created by the Pelindaba Treaty on African nuclear-weapon-free zone.

As the programme is demand-driven and needs are permanently evolving (as e.g. raising decommissioning needs, emerging new nuclear technologies that will be deployed in embarking countries), the EU support to nuclear safety benefit from the flexibility of the INSC that adapts the programming on an annual basis.

The 2023 commitment appropriation, in line with the multiannual indicative programme, will finance projects related to the promotion of an effective nuclear safety culture (objective 1 of the programme), to radioactive waste management (objective 2 of the programme) (41.9% each) and to establishing nuclear safeguards for nuclear material (objective 3) (12.3%) as well as support measures (3.9%).

STATE OF PLAY REGARDING RUSSIAN INVASION OF UKRAINE

Ukraine has been the main beneficiary of this activity with 45M€ of the 225 M€ regular INSC budget in MFF 2014-2020, plus 75M€ extra for the completion of the Chornobyl shelter.

Background INSC

Because of the specific legal basis of nuclear safety in the Euratom treaty and the relatively small financial scope (30-40M€ per year), the INSC functions as the only instrument covering international cooperation in this area. Ukraine has been the main beneficiary over the years (around 1 billion euros since 1991), with the safe confinement over the exploded Reactor 4 in Chornobyl having represented the largest financial contribution (managed by the EBRD).

Immediate Actions taken

On the day of the invasion, all ongoing INSC activities in Ukraine were suspended, see below, except one, the running of the so-called Joint Support Office (JSO), set up to assist INTPA.F1 with the management of the INSC in Ukraine. Two weeks later, all above-mentioned suspensions were lifted, and developments on the ground are being followed continuously. INTPA.F1 is in continuous close interaction with Commission services, DG ENER, DG JRC, DG NEAR, DG ECHO, the member States (WENRA, ENSREG) and the IAEA.

Ongoing and planned activities

¹ Due to the invasion of Ukraine by the Russian Federation and the impact to nuclear facilities, the current proposal is being reviewed and may be amended as needed with an increased provision of contingencies for Ukraine

The JSO provides technical support to the project management cycle in Ukraine and includes local and international experts. These experts have remained active in supporting INSC contractors and beneficiaries. Thanks to its ample network, the JSO has been able to provide continued reliable information on the status of nuclear installations and organisations in Ukraine. This information is being shared with INTPA.F1, and other DG's (ENER, ECHO, JRC) daily. This is the most important and most reliable source of information on the Ukrainian nuclear installation in the European Commission according to the different services.

Ongoing activities are mainly focused on improving the radioactive waste management in Ukraine, supporting the management of the Chernobyl Exclusion Zone, strengthening emergency preparedness and enhancing the capabilities of the nuclear safety regulator (see attached list).

Another 14 M€ worth of INSC projects, which are mainly continuations of ongoing projects, are in the pipeline. The purpose of INSC activities in Ukraine has been to align the country to the *acquis communautaire*/ international best practice. However, considering the Russian aggression on Ukrainian territory, including areas where nuclear facilities are located as well as the Chernobyl Exclusion Zone (CEZ), some of these past or ongoing activities may have to be re-started or re-focused, in line with changing needs. We have started with a contribution agreement which will allow for fast purchasing of monitoring equipment in the CEZ and support to the regulator.

There may be a need to adapt past Commission Decisions on the INSC.

Future INSC activities in Ukraine

AAP 2022

It is planned to present soon an adapted proposal for AAP2022 following events in Ukraine to the SSC., assigning more than half of the budget for contingencies for Ukraine. This description will be vague to allow for the maximum flexibility, will focus on the regulator and the waste management organisations. Supporting Energoatom, the national operator of nuclear power plants in Ukraine will not be excluded.

2023 and beyond

The evolution of the situation in the coming weeks and months will guide us as to the potential needs for Ukraine and their impact on the AAP provisions (currently 37.2M€):

Depending on the circumstances and the evolution of the war, two main scenarios seem possible:

1. If engaging with Ukraine remains difficult or impossible, the line will remain the one of AAP 2022, i.e. maximum flexibility to allow support for the continuation of nuclear safety and radiation protection.
2. If the aggression ends and safe access to the country, or a large part of it is granted, the need for recovery activities will be assessed and prioritised within the INSC. Ukraine will remain the priority for INSC for at least the period of this MFF. Based on past experience and the need to restore the damaged and looted facilities, the necessary budget is expected to exceed the foreseen budget of the INSC for the remainder of the MFF.

Potential immediate needs are already identified:

- Restoration of the national automated radiation monitoring system
- Restoration of safety systems of waste storage facilities.
- Supporting the regulatory authority to regain control over all nuclear facilities.

A more systematic study on possible scenarios has been launched.

Conclusion

INTPA is involved in the assessment and mitigation of the effects of the Russian invasion in Ukraine in the area of nuclear safety and expects to be involved closely in the reconstruction and recovery aspects in the coming years. INTPA F1 coordinates with Commission services, member states and the IAEA.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitment	314.4	314.4	100%
Payments	216.6		68.9%

The nuclear safety programme is implemented through projects that are contracted after international calls for tenders, restricted and negotiated procedures managed in the Commission based on specific technical expertise. . Moreover, some of the projects need a prior signature of a financing agreement with the beneficiary country. Financing agreements allow to contract in the three years after its signature. . This explains the incomplete budget consumption at the end of the MFF exercise, i.e. part of the allocated budget of the 2014 – 2020 INSC will be contracted still in 2021 – 2023. As such, the balance is not indicating any particular delay and is consistent with previous exercises of INSC and TACIS (Technical Assistance to the Commonwealth of Independent States) programmes.

The payment appropriation of the year 2021 covered the costs of projects contracted in previous years and the 8 projects contracted in 2021 addressing e.g. Emergency, Preparedness and Response to nuclear accident in Western Balkans, support to the Belarussian and the Iranian regulatory authorities, safe management of radioactive waste in Moldova and Ukraine.

The payment appropriation of the year 2022 (EUR 30 million) will cover the expenditures related to the 71 on-going projects, the 21 projects from previous Annual Action Plans (2018 – 2020) still to be contracted and part of the 2021 programme.

The 2022 payment appropriation will cover the costs related to past and on-going projects, new projects that will start in 2022 and support measures for the implementation of the European Instrument for International Nuclear Safety Cooperation. The COVID-19 crisis has significantly slowed down the implementation of the projects in the beneficiary countries during 2020 and 2021 as the nuclear safety cooperation instrument is a fully centralised managed instrument. The very specific and technical nature of the instrument implies a technical expertise that is not available in the EU Delegation to the partner countries. Therefore, all programming activities from definition and adoption of the annual action plan to the contracting, management and implementation on the projects and reporting are managed by the dedicated sector in DG INTPA, Unit F1 Climate change and sustainable energy, nuclear safety.

Travel restrictions due to the sanitary situation impacted the ability to deploy activities on-site. Remote cooperation has been used as often as practically feasible, in particular for training activities but did not allow a 100% effective recovery plan. Only 8 contracts were signed in 2021, compared to an average of yearly 12 previously. As a result, the end-year payment forecast was lowered as the original payment forecast was not met.

Despite this difficult circumstances, the EU flagship programme for the remediation of the legacy sites is now being implemented. This programme was set up to help the Central Asian states which have inherited 1 billion tonnes of hazardous processing waste, which are highly toxic chemical and radioactive residues left behind and unsafely stored in uranium legacy sites. Upon the Commission request, the European Bank for Reconstruction and Development has set-up an international multi-donors fund (the Environmental Remediation Account – ERA) to finance the implementation of the remediation programme based on the EU funded feasibility studies according to the highest international nuclear safety standards. The first two remediation projects in Kyrgyzstan began in 2020 and are about to be completed and activities have started in Uzbekistan in 2021.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

Performance assessment of the INSC 2014 – 2020 by independent external experts has been completed in October 2021.

3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

3.1.3. Previous Programme Performance

Instrument for Nuclear Safety Cooperation (INSC)

Performance assessment of the INSC 2014 – 2020 by independent external experts has been completed in October 2021. Confirming the findings of the Mid-Term Review, the assessment noted the high relevance and unique added value with tangible outcomes and achievements. Main findings can be found in section 3.3. The assessment clearly indicates that the implementation and efficiency of the instrument suffers from a lack of resources that introduces undue delays in contracting. These delays in turn question the adequacy of the project regarding the evolving situation related to nuclear safety in the beneficiary country between the project proposal and the beginning of its implementation.

Resources nevertheless did decrease by 25% for the sector in charge of programming, contracting, implementation and monitoring (the instrument if fully centralised due to its very specific technical nature) for the next Multiannual Financial Framework (2021 – 2027).

As the instrument is based on a separate legal basis (EURATOM Treaty), the transfer to a better Directorate General should be considered.

Nevertheless, the report noted the need for improvement in cooperating with international organisations such as the International Atomic Energy Agency (IAEA). While recognising that international arrangements in place should be maintained, the report recommends to limit the implementation of projects by the IAEA to activities where the IAEA has unique expertise or capabilities and where it brings added value or is more cost-effective. The unit in charge established a renewed dialogue with the IAEA to cope with this recommendation.

During previous programmes (Technical Assistance to the Commonwealth of Independent States from 1991 to 2006 and INSC from 2007 to 2020), cooperation with the regulatory authorities was primarily aimed at improving the governmental, legal and regulatory frameworks, based on the experience in the EU. This involved the transfer of regulatory practices used in the EU Member States.

The competence of staff working in the nuclear area is of utmost importance to ensure that the use of nuclear technology is safe. The training and tutoring actions, which transfer EU knowledge to students and young professionals, trained around 2500 staff in the beneficiary countries between 2014 and 2020. Some 34% of these were women, which contributes to the gender equality goal in a highly specialised scientific area. This confirms the success of the programme.

A major milestone to make the Chernobyl site environmentally stable and safe was met on 29 November 2016 by sliding the New Safe Confinement over the nuclear reactor destroyed in April 1986. The New Safe Confinement is a giant arch-shaped structure that covers the damaged Chernobyl Unit 4 in order to prevent any further radioactive release. The total project cost is in the order of EUR 1.5 billion, to which the EU contributed more than 430 million (under the TACIS (EUR 210 million) and INSC (EUR 220 million) programmes). In July 2019, the facility was officially handed-over to the Ukrainian government. In 2020, the last facility to safely store the spent nuclear fuel has been completed and transferred to Ukraine, terminating the long lasting international engagement for Chernobyl. However, it has been found out in the performance assessment by external experts finalised in October 2021 that self-sufficiency of Ukraine must be under question after more than 30 years of large support, investment and assistance, raising questions about a possible dependency culture;

The first project supporting the Iranian Nuclear Regulatory Authority started in July 2017, and is running smoothly in a very cooperative atmosphere. Two follow-up projects are ongoing to establish the Nuclear Safety Centre in Tehran, in compliance with the EU commitment to the implementation of the joint comprehensive plan of action, and to perform stress tests at the Bushehr nuclear power plant. A sixth project has been adopted under the 2021 annual action programme. Although under difficult conditions with the US withdrawal and the COVID-19 pandemic, the EU continues to fulfil its commitments under the Joint Comprehensive Plan of Action with the Islamic Republic of Iran, supporting the Iranian Nuclear Regulatory Authority and the Bushehr nuclear power plant.

3.2. Key achievements

2500	26 countries and 4 regions	36	18
<i>Participants to the training and tutoring programme in the period 2014-2020</i>	<i>Having benefitted from EU assistance in nuclear safety in 2014-2020</i>	<i>Number of regulatory documents drafted and adopted in 2014-2020 with the support of the INSC</i>	<i>Nuclear waste management and strategy documents produced in 2014-2020</i>

3.3. Evaluations, studies and reports

The Instrument for Nuclear Safety Cooperation has undergone the following evaluation/studies during its period of implementation. The mid-term evaluation (please refer to the Programme Statements of the DB 2022 for more information)

An independent assessment of the INSC 2014 – 2020 took place between April and October 2021, complementing the Mid-Term Review and applying the same review methodology confirmed the findings of the MTR. Additionally, the review noted that:

- The time to contract is long on average, indicating insufficient human and financial resources to implement the Instrument;
- Self-sufficiency of Ukraine must be assessed after more than 30 years of large support, investment and assistance, raising questions about a possible dependency culture;
- The cooperation with international organisations and in particular the International Atomic Energy Agency should be driven by the added value and cost effectiveness;
- The MTR finding concerning the insufficient resources for the implementation of the Instrument are confirmed. Situation has even deteriorated since the last evaluation, limiting the activities to only core functions.

The European Commission presented this report to the INSC committee in November 2021 and to the European Council Working

Party for Atomic Questions in January 2022.

The European Commission presented to the Member States in 2017 the assessment of the EU Assistance to the regulatory authority of Ukraine.

The European Commission presented to the Member States in 2019, three additional independent review of the EU assistance for:

- Training and Tutoring projects;
- Nuclear waste projects in Ukraine;
- Nuclear safety cooperation with Armenia.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: The promotion of an effective nuclear safety and radiation protection culture and implementation of the highest nuclear safety and radiation protection standards, and continuous improvement of nuclear safety, including the promotion of transparency of authorities in third countries in decision making processes relating to the safety of nuclear installations (Art 2.2.a)

Indicator 1: Number of countries benefiting from EU support in developing of a culture of safety for nuclear energy

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
0	5	10	12	12	15	17	20			20
	Actual Progress									Final
9										
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number (of countries)
Cut-Off Date	31/12/2021
Data source	Project documentation
Link to the objective	By providing the number of third countries/regions benefitting from the transfer of the EU expertise, the indicator gives an important information on the relevance of the programme to enhance the nuclear safety and security of the EU citizens as a nuclear accident has consequences worldwide.
Link MFF 14-20 / MFF 21-27	This indicator was used to monitor the 2014-2020 MFF, using the same name and methodology.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The 9 countries reported for 2021 are: Armenia, Georgia, Iraq, Iran, Kyrgyzstan, Morocco, South Africa, Ukraine and Uzbekistan.

Specific Objective 2: Responsible and safe management of spent fuel and radioactive waste and the decommissioning and remediation of former nuclear sites and installations, including the promotion of transparency of authorities in third countries in decision making processes (Art 2.2.b)

Indicator 1: Number of regulatory documents produced in the beneficiary countries with the support of EU expertise

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027

	Actual Progress									Final
5										
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number (of documents)
Cut-Off Date	31/12/2021
Data source	Project documentation
Link to the objective	Nuclear safety depends upon a strong regulatory framework that includes law, regulations, guidelines and other documents. The transfer of the EU knowledge and in particular the EU Acquis that is recognised as the best international standard of nuclear safety is key to enhance nuclear safety in the beneficiary country. The volume and number of regulatory documents produced with the EU support

	and adopted/used in the beneficiary country indicates the level of improvement of nuclear safety in that country.
Link MFF 14-20 / MFF 21-27	This indicator was used to monitor the 2014-2020 MFF, using the same name and methodology.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The 5 regulatory documents reported for 2021 are: 1. Law of Ukraine on introducing amendments to certain legislative acts of Ukraine regarding the improvement of management and deregulation system in the field of land matters; 2. State Nuclear Regulatory Inspection of Ukraine Order № 411 on approval of the Regulations on the procedure for investigation and accounting of operational events in the operation of nuclear power plants; 3. State Nuclear Regulatory Inspection of Ukraine Order № 263 on approval of Requirements for safety assessment of nuclear power plants in respect of external effects of natural origin; 4. State Nuclear Regulatory Inspection of Ukraine Order № 535 on approval of General provisions of radiation safety during the activities related to uranium ore mining, processing; 5. Decree of the Supreme Rada of Ukraine on taking the Draft Law of Ukraine on introducing amendments to the Code of Ukraine on administrative infractions and to the Criminal Code of Ukraine in respect of strengthening the responsibility for violation of radiation safety requirements in the areas affected by radioactive contamination.

Specific Objective 3: Establishing efficient and effective safeguards for nuclear material in third countries (Art 2.2.c)

Indicator 1: Number of nuclear safeguards authorities benefitting from EC funded projects

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
0	0	1	1	2	2	3	3			3
	Actual Progress									Final
0	0									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number (of documents)
Cut-Off Date	31/12/2021
Data source	Project documentation
Link to the objective	Safe management of radioactive wastes needs a clear and detailed series of documents that will ensure that any related activity is performed according to best international standards. The transfer of the EU knowledge and in particular the EU Acquis is key to establish/improve the safe management of radioactive wastes and spent nuclear fuel, decommissioning of nuclear facilities and environmental remediation of former nuclear sites. The volume and number of corresponding documents produced with the EU support and adopted/used in the beneficiary country indicates the level of improvement of radioactive waste management in that country.
Link MFF 14-20 / MFF 21-27	This indicator was used to monitor the 2014-2020 MFF, using the same name and methodology.
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Following the adoption of an MFF, projects need to be designed and implemented, which takes time. Furthermore, it also takes time for projects to generate and report results. Consequently, it is to be expected that there are no results to report in the first year of an MFF.

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Instrument for Nuclear Safety Cooperation (INSC)

General Objective 1: The Union shall finance measures to support the promotion of a high level of nuclear safety, radiation protection, and the application of efficient and effective safeguards of nuclear material in third countries

Indicator 1: Number of countries benefitting from EU support in developing of a culture of safety for nuclear energy

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Countries										
2014	Milestones									2021
6			10	11	12	12	12	12		12
	Actual Progress									Final

Indicator type	Output
Unit of measurement	Number (of countries) NB: the figures are cumulative.
Cut-Off Date	31/12/2021
Data source	project documentation
Narrative	3 target regions are Central Asia, Africa, South East Asia
Methodology	The figures are cumulative.
Link MFF 14-20 / MFF 21-27	This indicator will be used to monitor the 2021-2027 MFF, using the same name.
Other methodological comments	Armenia, Belarus, Indonesia, Singapore, Jordan, Thailand, Vietnam, Iraq, Morocco, Tanzania, Ukraine, Kyrgyzstan, Tajikistan, Uzbekistan, Egypt, Iran, Mongolia, the Philippines, Georgia, Moldova, Serbia, Bosna and Herzegovina, North Macedonia, Kosovo, Montenegro and Ghana. Regional project in Central Asia, Southern Africa, the Balkans and Gulf countries. The countries embarking on nuclear energy are: Armenia, Bangladesh, Belarus, Egypt, Indonesia, Jordan, Malaysia, Mongolia, Morocco, Nigeria, the Philippines, Thailand, Turkey and Vietnam. The countries with radioprotection issues are Ukraine, Kyrgyzstan, Tajikistan and Uzbekistan.
Full metadata available at this address	
Justification of the trend	The countries and regions benefitting from the nuclear safety cooperation has grown up during the period, demonstrating the recognition of the value added of the programme for the countries dealing with radioactive legacy and/or engaging in nuclear energy.

Specific Objective 1: The promotion of an effective nuclear safety culture and implementation of the highest nuclear safety and radiation protection standards, and continuous improvement of nuclear safety.

Indicator 1: Number of regulatory documents produced in the beneficiary countries with the support of EU expertise

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones								2021	
4	2	3	4	5	6	7	8	8		8
	Actual Progress								Final	
	5	8	13	18	30	36	36	36		36
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number (of documents) NB: the figures are cumulative.
Cut-Off Date	31/12/2021
Data source	project documentation
Narrative	
Methodology	This indicator describes the implementation of EU projects: • At the preparation phase of the projects, a number of issues are identified through several Cooperation Forums with the IAEA. Subsequently during the implementation phase these issues are addressed through actions (e.g. training, reports, draft regulations). This indicator measures the number of nuclear safety regulatory documents (and actions such as laws, regulations, guidelines) that are produced with the support of the EU project and which proposes solution to the issues identified. • At the final stage, those documents are adopted by the Beneficiary country and applied by the concerned stakeholders (operators, regulatory authorities, nuclear facilities). This indicator is amongst the programme implementation indicators in the MIP 2014-2017. The figures are cumulative.
Link MFF 14-20 / MFF 21-27	This indicator will be used to monitor the 2021-27 MFF, using the same name.
Other methodological comments	The number of deliverables in 2018 reached a peak corresponding to the reported increase with the completion of major projects. These document are; i) the feasibility study for the Nuclear Safety Center in Iran foreseen in the annex 3 of the Joint Comprehensive Plan of Action presented in June 2018 to the representatives of France, Germany, the United Kingdom, China and Russia; ii) the pre-construction safety assessment report for the radioactive waste disposal facility in Iraq; iii) 6 regulation and guidelines for Jordan; iv) 4 reference regulatory documents for Iran. Commission Implementing Decision of 13.06.2014 on the Instrument for Nuclear Safety cooperation Multiannual

Full metadata available at this address	Indicative Programme (2014 - 2017) COM(2014)3764 Final.
Justification of the trend	No new document has been released officially in the beneficiary countries in 2020 due to the COVID-19 pandemics. Nevertheless, the programme already achieved the objectives at the inception of the period.

Specific Objective 2: Responsible and safe management of spent fuel and radioactive waste, namely transport, pre-treatment, treatment, processing, storage and disposal, and the decommissioning and remediation of former nuclear sites and installations

Indicator 1: Number of waste management and remediation documents developed with EU support

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2012	Milestones									2021

Narrative	
Methodology	The figures are cumulative.
Link MFF 14-20 / MFF 21-27	This indicator will be used to monitor the 2021-2027 MFF, using the same name.
Other methodological comments	Infrastructure improvement for radioactive waste management remediation of contaminated sites and decommissioning in Ukraine including the following document: ‘Analysis of investigation priorities for 32 DWSF facilities with uncertain site conditions and radioactivity inventory data’; ii) Development and final approval of 2 remediation plans including feasibility studies for sustainable environmental remediation of uranium legacy sites of Degmay and Taboshar in Tajikistan; iii) National Strategy for Radioactive Waste and Spent Nuclear Fuel Management complemented by Action Plan for the Strategy Implementation and Feasibility Study of radioactive waste management at Sewaqa site in Jordan’. The increase of the target from 8 to 9 is reflecting the newly identified need in Moldova . We are engaging jointly with Sweden in supporting the country under the current instrument taking into account the framework now fully in place to allow implementation of projects.
Full metadata available at this address	
Justification of the trend	No new document has been released officially in the beneficiary countries in 2020 due to the COVID-19 pandemics. Nevertheless, the programme already achieved the objectives at the inception of the period.

Specific Objective 3: The establishment of frameworks and methodologies for the application of efficient and effective safeguards for nuclear material in third countries.

Indicator 1: Number of nuclear safeguards authorities benefitting from EC funded projects

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Justification of the trend	The AAP 2020 in line with the MIP did not include a safeguards project.
----------------------------	---

6. The programme contribution to horizontal policies

6.1. Contribution to gender equality

6.1.1. Key achievements and performance

2021 estimates	2022-2027 programming			Total		
2021	2022	2023	2024	2025	2026	2027
Score 1: 34.6						
Score 0: 3						

(*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significantly impacted**, score 0*: **impact on gender equality to be determined ex post**, score 0: **no significant impact on gender equality**.

As we are at the beginning of the programming exercise with the late adoption of the first Annual Action Programme (December 2021), the estimated amounts for the INSC Contribution to gender equality are based on the spending from the previous MFF under INSC. We may revise the yearly profile, once we will advance with the programming process. The assessment of the performance contributing to the gender equality will be derived from the annual action programmes when contracting and implementation will start.

The contribution of the programme to gender equality is mainly achieved through all activities related to training and tutoring for which the European Commission strongly encourages the enrolment of women that in turn will provide additional opportunity for career development. This programme started under INSC 2014 – 2020 has a proven incentive for the participation of women in nuclear training and education (34% women participation over the reference period).

Under score 0, there are actions which relate to support measures, administrative costs action such as for example the deployment of digital health tools.

6.2. Contribution to the sustainable development goals

6.2.1. Goals

SDG 3 Ensure healthy lives and promote well-being for all at all ages

Environmental remediation programme for Central Asia.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Training and tutoring programme, education projects.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

Environmental remediation programme for Central Asia; remediation of the Pridniproviskyi chemical plant in Ukraine.

SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Environmental remediation programme for Central Asia; remediation of the Pridniproviskyi chemical plant in Ukraine.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

All nuclear safety projects are contributing to the establishment of a competent and independent regulatory authority and strengthening the non-proliferation regime.

6.2.2. Key achievements and performance

SDG 3 Ensure healthy lives and promote well-being for all at all ages

The Pridniproviskyi Chemical Plant (PChP) is a former Soviet Union uranium processing plant, located in the city of Kamyanske in Ukraine. Commissioned in 1947, the 240-ha site has received little to no attention in regard to clean-up, safe storage and/or disposal of the many radiological hazards that were simply left at the site when it was shut down in 1992. Around 40% of the 90-ha south area of the site is radiologically contaminated.

The radiological hazards are mainly restricted to the 20 or so buildings utilised formerly for the purpose of Uranium-Ore Processing. However, due mainly to the uncontrolled removal of materials for their scrap value, vandalism and lack of maintenance over the past 26 years, many buildings are in extremely bad condition. This has contributed to a greater distribution of contaminated materials both inside and outside of the buildings.

Many buildings have been repurposed and are in use by different State Enterprises under the Ministry of Energy and Coal Industry of Ukraine (MECI). In some cases, the buildings, including a number of the contaminated ones, have been sold to Private Companies.

One recent project, which began toward the end of 2017, is aimed at improving the safety to the public from the former Pridniproviskyi Chemical Plant (PChP). The INSC Project will implement urgent measures aimed at making the site safer for members of the public (i.e. non-radiological workers) that work at the site and improve security in order to prevent further vandalism and theft, but specifically to prevent further unauthorised removal of materials from the site.

The remediation programme of the Pridniproviskyi Chemical Plant in Ukraine therefore contributes to the Sustainable Development Goals 3 (Good Health and Well-Being) by protecting people and the environment from radiological hazards.

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

The safe use of nuclear energy cannot be achieved without competent staff with a strong safety culture. The European Commission has developed a recognised and successful training, tutoring and education programme started under the former INSC and that will continue. It provides students and young professionals with courses and hands-on training benefitting from the best EU nuclear safety expertise. The programme also promotes the participation of women. Two Masters and one Bachelor diplomas are being established with the French University Nice Côte d'Azur and the Politecnico di Milano.

The training, tutoring and education programme provides education opportunities in the beneficiary countries contributing to SDG 4 (Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all).

SDG 6 Ensure availability and sustainable management of water and sanitation for all

High volume of toxic and radioactive waste from former Soviet Union uranium mining activities is impacting on the environment and the population's health of Central Asia States. In December 2013, the United Nations General Assembly highlighted the issue by adopting Resolution no 68/218 on "The Role of the International Community in Averting the Radiation Threat in Central Asia" which recognises the role of the international community in averting the radiation threat in Central Asia.

Through the Instrument for Nuclear Safety and Cooperation (INSC), the EU has allocated a total funding of EUR 31.1 million to implement a two-phased approach for seven priority uranium legacy sites in Kyrgyzstan, Tajikistan and Uzbekistan. The European Commission has organised in 2017 and 2018 a very successful side event during the 72nd and 73rd United Nations General Assembly in New York, the latter with the participation of former Commissioner Neven Mimica, to invite Countries to contribute to the multi-donor Environmental Remediation Account established in 2015 by the EBRD upon the European Commission request.

Another contribution of EUR 30 million is foreseen under the INSC and the first EUR 10 million have been adopted in 2021 and will be transferred to the EBRD in 2022.

The remediation programme of uranium legacy sites will clear water and land for a sustainable agriculture in a region known as the breadbasket of Central Asia (Ferghana Valley). This EU programme therefore contributes to the Sustainable Development Goals 6 (Clean Water and Sanitation).

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

The EU contributes to the G7 decision to render the Chernobyl nuclear site environmentally safe again. The radioactive hazard was entirely secured, making the site safe for the next 100 years. The facility was subsequently handed over to Ukraine in July 2019, 33 years after the Chernobyl accident in 1986. The handover also represented the completion of the largest ever example of international cooperation in nuclear safety, with the establishment in 1997 of the Chernobyl Shelter Fund. The Fund was managed by the European Bank for Reconstruction and Development (EBRD) and funded by contributions from 45 countries, the Commission and the EBRD. The EU contributed EUR 431.6 million through its Instrument for Nuclear Safety Cooperation, making it the largest donor after the EBRD.

Most nuclear safety projects are managed directly by Commission departments. The European Commission has contributed significantly to the implementation of the Joint Comprehensive Plan of Action (JCPoA) with Iran.

Although there is no SDG target specific on nuclear safety, the EU actions contribute to progress on the commitments on SDG16 on governance.

1. Overview**1.1. Challenges**

The scale, frequency and duration of crises that demand international humanitarian response is increasing, aggravated by long-term trends such as climate change, economic shocks, population growth, rapid and unsustainable urbanisation, resource scarcities as well as increasingly protracted armed conflicts. These are, and will continue to be, the main drivers of humanitarian crises, which in turn generate growing humanitarian needs globally. In 2020-2021, the situation was further exacerbated globally by the COVID-19 pandemic and in a number of crises by new or escalated conflicts (Nagorno Karabakh, Tigray and Afghanistan). The Global Humanitarian Overview 2022 published in December 2021 announced funding requirements of USD 41 billion to assist 183 million of the 274 million people in need in 63 countries. This represents 1 in 29 people worldwide - a significant increase from 1 in 33 in 2020 and 1 in 45 at the launch of the Global Humanitarian Overview 2019, which were already the highest figures in decades. However, funding is not increasing at the same speed as humanitarian needs. In 2021, global humanitarian needs were almost USD 38 billion, with a funding gap of USD 19 billion¹. This overall gap between available resources and humanitarian needs is expected to continue to grow. Against this background, there will be an ever greater need for front-line life-saving

¹ FTS : [Appeals and response plans 2021 | Financial Tracking Service \(unocha.org\)](#)

humanitarian assistance. Given the protracted nature of several crises, a nexus approach, with enhanced cooperation between humanitarian and development assistance is necessary. Where applicable, the peace element of the triple nexus remains paramount.

Actual delivery of aid is becoming more difficult and dangerous in view of the shrinking humanitarian space and often deliberate attacks against humanitarian and health care workers as well as against civilian infrastructure, in blatant violation of international humanitarian law.

1.2. Mission (General objectives)

The EU humanitarian aid programme provides emergency, life-saving assistance to people, particularly the most vulnerable, hit by human-induced or natural disasters. Humanitarian aid is a key pillar of the EU's external action. It is also an important element of the EU's ability to project its values globally.

The EU is a leading player in humanitarian assistance on the international stage, both in terms of its ability to provide rapid and flexible assistance across a wide range of crises, and in virtue of its influence in shaping the global humanitarian policy agenda. Because of the financial weight (EU and its Member States together are among the world's leading humanitarian donors) and world-wide scope of its humanitarian actions, the EU is also able to encourage other humanitarian donors to implement effective and principled humanitarian aid strategies. Humanitarian aid is often the only EU instrument able to concretely intervene in acute conflict situations.

In a context of insufficient funding to address ever-growing needs, the EU is trying to fill gaps in global humanitarian aid by addressing needs in areas which are difficult to access and by providing a response not only to the biggest and most visible humanitarian crises, but also to forgotten crises (i.e. crises receiving no or insufficient international aid, political and media attention). Moreover, Member States often look to the EU as a donor to provide assistance in crises where they have only limited means to intervene in a national capacity.

Member States also benefit from the EU's "humanitarian diplomacy", which aims to increase humanitarian space and lead to more effective provision of humanitarian aid. Another key element of EU added value for Member States lies in the strong operational knowledge and technical expertise of the EU's unique network of humanitarian field offices spread over almost 40 countries.

1.3. Specific objectives

Together with the Humanitarian Aid Regulation (1257/96), the European Consensus on Humanitarian Aid sets out the specific nature and mandate of humanitarian aid. In line with the Humanitarian Aid Regulation (1257/96), the EU's humanitarian assistance goes directly to people affected by disaster or conflict, irrespective of their race, ethnic group, religion, sex, age, nationality or political affiliation and must not be guided by, or subject to, political considerations. The EU acts on the basis of the international humanitarian principles of humanity, neutrality, impartiality and independence. The main objectives are to:

- provide needs-based delivery of EU assistance to save and preserve life, prevent and alleviate human suffering and safeguard the integrity and dignity of populations affected by disasters or human-induced crises, including protracted crises;
- build the resilience and recovery capacity of vulnerable or disaster-affected communities, in complementarity with other EU instruments.

These objectives contribute to the overall objectives, principles and actions of the Union's external action as defined in Article 21 of the Treaty on European Union.

Effective multilateralism and UN-led coordination are central to the EU's humanitarian action. Promoting compliance with International Humanitarian Law and ensuring the protection of civilians, and of humanitarian and health care workers remains an essential objective.

On 10 March 2021, the European Commission adopted a Communication on the EU's humanitarian action "New challenges, same principles", which confirmed the main principles and priorities for the EU's humanitarian action. The main objectives focus on more effectively addressing growing humanitarian needs as well as on supporting a better enabling environment for the delivery of principled humanitarian aid, including respect of international humanitarian law. At the same time, the Communication emphasises the need to work closely with development and peace building actors to promote long-term solutions.

While maintaining constant efforts in areas such as food, nutrition, water and shelter, a number of objectives have been strengthened in response to the global context. The EU will continue to devote 15% of its initial humanitarian budget to 'forgotten crises', and 10% to education in emergencies to promote access for children in crisis settings to safe and quality education. A stronger focus is placed on health as well as climate impacts, with disaster preparedness and risk reduction measures increasingly integrated into the EU's humanitarian response, and with climate mainstreaming to be enhanced across humanitarian action. Through the humanitarian-development-peace nexus, the EU addresses short-term needs and provides long-term solutions and, in conflicts, contributes to building lasting peace.

A meaningful participation of aid beneficiaries in decisions that affect them is key for the EU. In line with its equality agenda, the EU is committed to meeting the specific needs, rights and risks of groups of beneficiaries including women, children, the elderly and people with disabilities. The continued integration of protection for people caught in crisis situations is key in the EU's humanitarian aid.

1.4. Public intervention context

The goals, principles and procedures for implementing EU humanitarian aid operations are set in the Humanitarian Aid regulation (1257/96). The EU's humanitarian aid enjoys strong public support as one of the most visible facets of the EU external action. Under the EU Treaties (article 214 TFEU) both Member States and the EU have important and distinct roles in humanitarian aid. Coordination of efforts, ensuring complementarity and promoting a nexus approach can increase synergies and impact, in areas such as humanitarian diplomacy, consolidated EU pledges and sharing of analysis or pooling of resources.

1.5. Actions

Humanitarian interventions mainly consist of funding projects carried out by humanitarian organisations, most of the time in complex, risky contexts. The Commission (DG ECHO) does not intervene directly on the ground (with some exceptions, e.g. on transport where the Commission aims to enable work of partners). As a rule, DG ECHO manages the EU's humanitarian aid financing through individual agreements with partner organisations (NGOs, United Nations agencies, and other international organisations). Direct management is applied for NGOs, and indirect management for UN and International Organisations.

1.6. Delivery mode

The Commission (DG ECHO) implements EU humanitarian aid operations by funding humanitarian projects of around 140 partner organisations, including United Nations agencies, other International Organisations (including the Red Cross and Red Crescent movement) and non-governmental organisations (NGOs). The Commission has a permanent network of international and local humanitarian field experts working in crisis zones around the globe. The EU has been playing a leading role in establishing new policy approaches (e.g. education in emergencies) and innovative funding modalities (e.g. cash-based assistance).

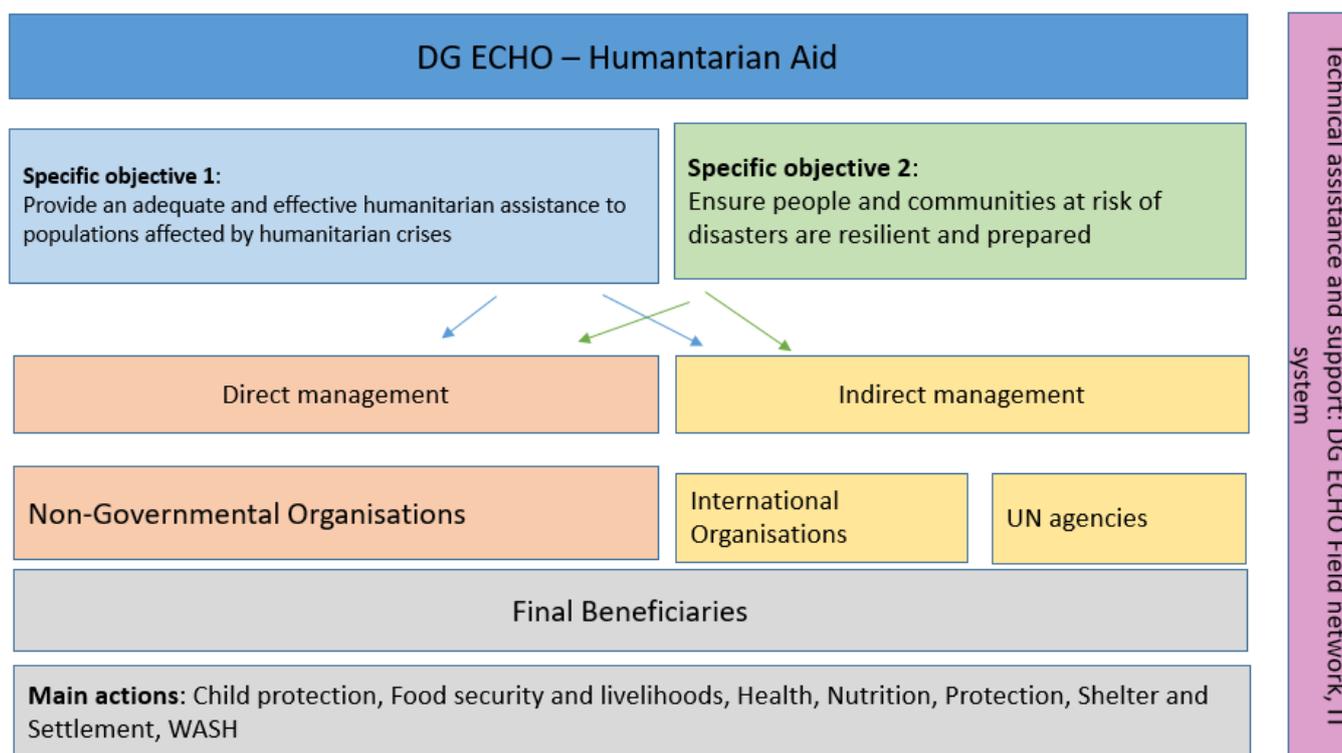

At the World Humanitarian Summit in 2016, the main donors and humanitarian aid organisations agreed on the 'Grand Bargain' to adapt working practices to maximise efficiency and impact². They agreed on the need for flexibility on the donor side (enabling partners to deliver a timely and adapted response, while harmonising reporting requirements). Aid organisations on their side renewed a commitment to coordinated needs assessments, accountability to beneficiaries and taxpayers, transparency and visibility of donors' assistance, making sure that the highest possible proportion of funds reaches people in need. The Grand Bargain also included a strong commitment from donors and aid agencies to channel more resources directly to local responders. In line with these commitments, as also reaffirmed in the March 2021 Communication on Humanitarian Action, the Commission strives to modernise its funding mechanisms while further stepping up EU support for localisation of aid delivery.

The EU is further promoting innovative solutions that deliver more efficient, cost-effective and climate-proof aid³. This also includes promoting private sector engagement in delivering services and exploring innovative financing options.

1.9. Link with the 2014-2020 MFF

The Humanitarian Aid Regulation is not time-limited; it contains no clause linking its legal validity to a specific Multi-Annual Financial Framework, nor does it have a clause specifying the financial means allocated to humanitarian aid under a given MFF. Therefore, the policy and legal framework for the EU's humanitarian aid can remain unchanged under the 2021-2027 MFF, which is supported by the conclusions of the last comprehensive evaluation on humanitarian aid (2017), where the relevance of the current framework was confirmed.

On 10 March 2021, the Commission adopted the Communication to the European Parliament and the Council on the EU's humanitarian action: new challenges, same principles (COM(2021)110).

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

As regards Commitment Appropriations, the budget amounts adopted in 2021 and requested for 2022 are in line with the financial programming. The payment appropriations are established on the basis of estimated payment needs triggered by old and new commitments. Considering the increasing humanitarian needs, it is foreseen that implementation will follow the same trend as in 2014-20 programme with limited or any difficulties, i.e. 100%.

In 2021, the Commission funded operations of humanitarian organisations in a wide range of crisis-affected countries and regions, such as Afghanistan, Syria, Turkey, Yemen, South Sudan, Venezuela, the Sahel region and Ukraine (pre-aggression). The larger part of the EU humanitarian funding was dedicated to addressing needs arising from protracted crises, including forgotten crises (such as the Burundi refugee crisis, droughts in Madagascar, the Rohingya regional crisis or the Sahrawi Crisis in Algeria), mainly driven by conflict and compounded by the COVID-19 pandemic. At the start of 2021, it was estimated that more than 235 million people across the world – the highest figure in decades – were in need of humanitarian assistance and protection, and more funding than ever was required to help them. The Commission deployed operations in more than 80 countries, covering 98% of the countries for which the UN had launched an appeal.

For 2022 and following years, the Commission will continue responding to new and protracted crises. This objective will remain very challenging as humanitarian needs will continue the past growing pace, a trend that is already observed in early 2022 with the Russian war of aggression against Ukraine. In a context of limited resources, it will be of paramount importance that the increase of humanitarian needs triggered by Russia's military aggression on Ukraine is followed by adequate budgetary resources in order not to limit the response capacity for protracted and new crises. However, it remains to be seen whether there may be any medium to long term consequences of Russia's unjustified invasion of Ukraine on other humanitarian crises. This will depend to a large extent from the duration, and severity of the crisis in Ukraine as well as the evolution of the other crises.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

Despite difficulties derived from the urgent respond to onset crises and disasters and the high need for relief to populations affected by the COVID-19 pandemic, the Commission remained a global leader in the provision of humanitarian aid. With over 590 million interventions, the Commission responded to 98% of UN's humanitarian appeals and allocated an important part of its budget to respond to main and forgotten humanitarian crises. Furthermore, progress was made towards reaching objectives on thematic policies such as education in emergencies, gender mainstreaming, and climate mainstreaming.

3.1.2. Active programme performance

In 2021, the EU continued providing emergency assistance worldwide to people in need, particularly to the most vulnerable hit by human-induced or natural disasters, with the COVID-19 pandemic compounding the needs and in many cases complicating the

response. In 2021, the EU and the 27 Member States' humanitarian aid contributions amounted to more than USD 8.4 billion, representing 33.4% of the global share⁴. As the world's largest humanitarian aid donor, the EU and its Member States retained a central role in tackling humanitarian challenges worldwide, notably thanks to a close cooperation with the United Nations Office for the Coordination of Humanitarian Affairs (OCHA), United Nations agencies and other donors. This responded to the overall objectives and principles of the Union's external action as defined in Article 21 of the Treaty on European Union, including by respecting the principles of the United Nations Charter and international law. EU's humanitarian advocacy at international level also benefited the humanitarian community worldwide and indirectly people in need of humanitarian assistance, which resulted eventually in a more effective provision of humanitarian aid.

A key element explaining the achievements of EU humanitarian aid lies in the strong operational knowledge and technical expertise of the EU's unique network of humanitarian field offices spread over 40 third countries. With a budget of EUR 2.4 billion, the EU could fund more than 126⁵ million interventions, reaching people in need in the most fragile contexts worldwide and providing assistance in 98% of the countries for which the UN launched an appeal. The EU can moreover take advantage of the comprehensive range of humanitarian partners (around 140 partner organisations, including United Nations agencies, the international segment of the Red Cross and Red Crescent movement, and non-governmental organisations) through which people in need can receive assistance even in the areas of the world most difficult to reach. The EU also continued to play a leading role in the development of ambitious policy approaches; 'Education in Emergencies' is to be particularly highlighted in this respect as, since 2019, the EU has dedicated 10% of its humanitarian aid budget to support actions in this field and is continuing to do so. In 2021, the EU investment in education in emergencies amounted to over EUR 146 million and supported more than 2.3 million girls and boys affected by humanitarian crises to have access to safe and quality education at primary and secondary levels.

EU-funded humanitarian actions were fully needs-based as EU humanitarian assistance went directly to people affected by disaster or conflict, irrespective of their origin, ethnic group, religion, sex, age, nationality or political affiliation, and was not guided by, or subject to, political considerations. As a result, the EU remained firm on acting on the sole basis of the international humanitarian principles of humanity, neutrality, impartiality and independence.

EU-funded humanitarian aid actions made an important contribution to the objectives of (i) providing needs-based delivery of EU assistance to people faced with natural disasters and human induced threats and protracted crises, and (ii) building the capacity and resilience of vulnerable or disaster affected communities. On the first objective, in 2021 approximately 126⁶million people benefitted from EU intervention worldwide, 68% of the budget was spent in countries ranked 'very high risk to disaster' according to INFORM Risk index and more than 30% of the initial budget was spent in forgotten crisis. On the second objective, in 2021, approximately 49 million persons worldwide benefitted from targeted disaster preparedness actions in disaster prone countries. In addition, preparedness and risk reduction measures were mainstreamed into response actions. Around 49% of all EU humanitarian projects funded in 2021 included thus preparedness activities

Moreover, the EU ensured a rapid response to crises as they developed (e.g. the EU mobilised EUR 164 million from the Emergency Aid Reserve, to help address the immediate needs of those affected by food insecurity in several regions) and to the response to the COVID-19 exacerbating effects on humanitarian needs (e.g. EUR 100 million in humanitarian funding from the Solidarity and Emergency Aid Reserve were mobilised to support COVID-19 vaccination rollout in Africa). EU humanitarian aid was delivered while ensuring the necessary flexibility, adequate expertise, relevance, efficiency and cost-effectiveness. The scale of funding dedicated to humanitarian aid actions allowed the EU to have a meaningful impact on the ground, addressing the needs of approximately 126 million people in 82 countries. The EU alone (i.e. without its Member States) contributed to 11% of global humanitarian funding in 2021 (corresponding to USD 2.9 billion)⁷. Positive impacts were also found in regions where funding allocations were more limited, thanks to the selection of projects with high leverage or multiplier effect potential. This was particularly true for 'forgotten crises', to which the Commission continues to pay a particular attention in line with its long-standing commitment.

Despite the drop of the proportion of total humanitarian projects including disaster preparedness considerations (from 58% to 49% between 2019 and 2022), due to the sharp increase of projects derived from the pandemic and from onset crisis; the EU continued to support capacity and resilience building of vulnerable or disaster-affected communities in a targeted manner, through dedicated funding to strengthening preparedness capacities for response and anticipatory action. For instance, it signed a multi-year "Programmatic Partnership" with FAO to implement anticipatory actions and reinforce governments' capacity to do so in five countries in Asia. This initiative builds upon on-going Disaster preparedness Budget Line the Commission is financing in South-East Asia through FAO, which was evaluated in 2021 as having significantly influenced the Association for Southeast Asian Nations' (ASEAN) policy framework which resulted in several ASEAN Member States to successfully deliver shock responsive COVID-19 assistance within own fiscal space and social protection systems.

⁴ Source OCHA FTS, data retrieved on February 2021.

⁵ Provisional beneficiary estimation calculated through a methodology still to be approved. This result shall be considered as a rough indicative information and does not extrapolate directly from the more than 590 million humanitarian interventions performed by the Commission in 2021.

⁶ Provisional beneficiary estimation calculated through a methodology still to be approved. This result shall be considered as a rough indicative information and does not extrapolate directly from the more than 590 million humanitarian interventions performed by the Commission in 2021.

⁷ Source OCHA FTS, data retrieved on February 2021.

Thanks to the EU's disaster preparedness targeted actions, local communities were able to react fast and efficiently when disasters occurred, thus helping to save many lives and assets in regions exposed to natural hazards, particularly climate related ones. For example, in Bangladesh, beneficiary households were able to save an average of USD 570 in avoided losses to their assets and livelihoods through taking early actions against floods. To complement this and reinforce its contribution to resilience through humanitarian action, the EU also promoted the integration of disaster preparedness and risk reduction measures in regular humanitarian response actions so that communities could be better prepared to respond to aftershocks and to reduce imminent risk to which they were exposed.

In 2021, the EU provided **over EUR 2.2 billion in aid to the most vulnerable** (including EDF and externally assigned revenues) across **more than 82 countries**.

The EU's principled and needs-based approach to humanitarian aid includes addressing 'forgotten crises' (crises with little media attention and poor coverage⁸; with a pledge of at least 15% of the budget). The EU was thus present in every significant humanitarian crisis in 2021 with a variety of adapted funding tools. In larger crises, the EU consistently responded to situations where other donors were not present and often played the role of coordinator and catalyst. 79.7% of the contracts were issued within a very short timeframe (11 days).

Education in Emergencies remained a flagship policy, 10% of the budget was dedicated to it, and more than **2.3 million boys and girls in the most vulnerable situations** benefited from this support. The EU continued to mainstream gender considerations across humanitarian sectors of action, and advanced in the implementation of the approach to gender and gender-based violence in humanitarian crises outlined in the Staff Working Document 'Gender: Different Needs, Adapted Assistance'⁹. In addition, the EU took specific measures in order to mainstream the needs of persons with disabilities across all EU-funded humanitarian actions. In this respect, in 2021 the Commission funded some 30 humanitarian aid projects specifically targeting persons with disabilities. This comes on top of some 232 assistance projects that addressed the needs of persons with disabilities, among other vulnerable beneficiaries. As of 2021, the EU has also strengthened disaggregated data requirements on persons with disabilities in the funding proposals of humanitarian actions. In January 2021, the ECA published its Special Report 02/2021: *EU humanitarian aid for education: helps children in need, but should be longer-term and reach more girls*. The Commission is in the process of implementing the actions addressing the recommendations by end-June 2022.

The EU continued to invest in disaster preparedness as an essential means to strengthen national and local response systems in order to reduce humanitarian needs caused by disasters, natural hazards and those related to other types of risks (biological, industrial, etc.) and threats (violence and conflicts). A total of EUR 75 million financed 25 countries¹⁰ and 5 regional interventions across the globe in 2021.

In the framework of its co-chairmanship with Switzerland of the Good Humanitarian Donorship (GHD) initiative (June 2018 – June 2021), the EU continued in 2021 to promote principled donor behaviour, while taking into account the new challenges and needs emerging from the COVID-19 pandemic (e.g. access restrictions, vaccines). The overall priorities of the GHD co-chairmanship included: reconciling counter-terrorism measures and principled humanitarian aid, promoting respect for international humanitarian law (IHL), innovative financing, as well as assessing the impact of the UN Development System reform rollout on the international humanitarian response in the field.

Besides being co-convenor of the Grand Bargain's work stream 5 on coordinated needs assessments, the EU joined the Facilitation Group (FG) of the Grand Bargain, where it has been playing an active role since October 2019. In December 2020 and January 2021, the EU chaired the Facilitation Group, and again in October and November 2021.

Gravely concerned by the continued widespread violations of International Humanitarian Law and the adverse consequences of armed conflicts for civilians and humanitarian action, the EU continued to strongly advocate for compliance with IHL. The Commission has also worked towards further strengthening IHL and the monitoring of violations, in line with the newly adopted Communication on the EU's humanitarian action. In 2021, the EU organised a high level side event on IHL in the margin of the UN General Assembly Ministerial Week. The EU has also promoted the protection of education from attack and the protection of children in armed conflict, among others as part of a high-level side event, jointly organized with Belgium, in the margin of the 2021 UN General Assembly. The EU has also organised a discussion series on the safety and security of humanitarian and medical personnel in armed conflicts, which produced an Outcome Document with over 40 recommendations.

In 2021, the EU continued guaranteeing fast and safe access to the field; ECHO Flights continued supporting Humanitarian Aid Transport Services. To allow Member States and humanitarian partners to transport humanitarian staff and supplies to fight the COVID-19 pandemic and to maintain the flow of humanitarian assistance, the EU temporarily put in place the **EU Humanitarian**

⁽⁸⁾ As example: Algeria, Burkina Faso, Cameroon, Central America, Chad, Colombia, Mali, Mauritania, Niger, Pakistan, Philippines, Senegal, Sudan, Ukraine

Air Bridge, offering air transport to and from various destinations worldwide. In 2021 the HAB implemented **21 flights and covered until now 23 hard-to-reach countries** to transport humanitarian and medical staff and supplies.

Some concrete examples of EU support in humanitarian crisis are:

- Following the takeover of Afghanistan by the Taliban in August 2021, the political and institutional context in the country has completely changed, along with the challenges and objectives for the years to come. In 2021, the EU provided EUR 222 million to humanitarian assistance programmes covering the needs of displaced populations, in particular on food security, nutrition, health, wash, mine decontamination to protect humanitarian workers, protection and education, with a specific focus on the specific needs of women and girls. Of the total funding, 26% is allocated to health and nutrition, 23% to food security and livelihoods, 14% to education, 12% to mine action and logistics and 11% winterisation and multi sector support. A minimum of 5 million beneficiaries in extreme need are planned to be reached in the immediate term. As of 12 December 2021, around 280 tons of life-saving medication, COVID-19 and nutritional items have been delivered to Kabul through the EU Humanitarian Air Bridge, in close co-operation with humanitarian partners
- The EU continued to deliver life-saving assistance and support to millions of people affected by the crisis in Syria. The EU allocated EUR 220 million to support the most vulnerable impacted by this crisis (including refugees in Lebanon and Jordan) and continued to deliver life-saving assistance and to support millions of people throughout Syria, focusing on the vital delivery of food, medicine, water, and shelter items. In Turkey, the EU continued providing support to the largest refugee population in the world (close to 4 million, of which 3.6 million Syrians). Under the EU Facility for Refugees in Turkey, the EU contracted about EUR 2.4 billion of humanitarian projects. In addition, it has allocated EUR 531.7 million in humanitarian funding for 2020, which allowed us to support the two flagship humanitarian projects Emergency Social Safety Net (ESSN) and the Conditional Cash Transfer for Education. In early 2021, the Commission also allocated additional EUR 50 million to continue with some of our key protection, health and education projects. In December 2021, the EU budgetary authorities approved a request for additional funding (so called Draft Amending Budget or DAB 5), which will allow the ESSN to continue until early 2023 with an additional allocation of EUR 325 million. This will ensure continuity in the support to over 1.5 million beneficiaries until it is handed over to DG NEAR. The Emergency Social Safety Net (which provides monthly cash payments directly to refugees through a debit card to help meet their basic needs. It supported over 1.5 million refugees by the end of 2021) and the Conditional Cash Transfer for Education which (provides cash transfers to vulnerable families to promote school enrolment and attendance for refugee children). By the end of 2021, it reached nearly 695 000 children.
- In response to the complex crisis in the Sahel, in 2021, the Commission covered emergency humanitarian needs in seven countries of the wider Sahel region (Burkina Faso, Mauritania, Mali, Chad, Niger, Nigeria and Cameroon). The Commission responded to emergency humanitarian needs of most vulnerable populations in these countries, mobilising EUR 222.7 million to support multisectoral humanitarian interventions to the benefit of the over 10 million forcibly displaced persons across the region. The emergency response in conflict areas included support to rapid reaction mechanisms (a three-month multi sectorial emergency aid package) and to existing national structures to maintain access to basic services. Moreover, EU aid supported humanitarian access to hard-to-reach areas through humanitarian air services, humanitarian civil-military coordination and security management. In addition, as a response to the food and nutrition crisis induced by climate conditions, poverty and insecurity, compounded by the socio-economic effects of the COVID-19 pandemic, the EU provided food during the lean season and nutrition treatment for children suffering from severe acute malnutrition and in need of life-saving treatment.
- In response to the Venezuela crisis, the EU allocated a total of EUR 70 million in 2021 to support the affected population in Venezuela and in the wider Latin America region, mainly for the provision of health and nutrition, water and sanitation, protection, education in emergencies, as well as support to host communities. The EU remained the leading donor in the response to the humanitarian crisis inside Venezuela, not only in terms of volume of funding, but also in terms of humanitarian diplomacy, including through the Humanitarian Assistance working group of the ICG for Venezuela.
- After more than 7 years of conflict, the security situation in eastern Ukraine remained volatile. Since the July 2020 ceasefire, there were fewer hostilities and civilian casualties. However, in 2021, daily incidents continued to cause damage to housing, water and electricity supply, schools, and health facilities, which left about 3.4 million people in need of humanitarian assistance, of which one third were older persons. At the end of 2021, the Russian military build-up at the border with Ukraine led to an escalation of tensions and increasing concerns over humanitarian consequences in Ukraine and neighbouring countries. Since the beginning of these new developments, the EU has been preparing for all scenarios, working together with donors and partners to prepare the humanitarian response to be implemented in 2022. The EU is one of the largest humanitarian donors to the crisis in eastern Ukraine, with an allocation of EUR 28.9 million in 2021. The EU humanitarian funding, delivered through UN agencies, non-governmental organisations and the International Committee of the Red Cross, helped people access healthcare, including better preparation and response to the COVID-19 pandemic. The funding also supports the rehabilitation of damaged houses, schools, and hospitals. It provides affected people with the means to meet their basic needs and access safe water, education in

emergencies, and protection services including legal support. In 2021, EU funded humanitarian assistance reached more than 750 000 people in Ukraine’s government-controlled areas and in the non-government-controlled areas

Criticalities

The above should however not hide the fact that delivering principled humanitarian assistance is at times utterly difficult, such as in situations of armed conflict, where warring parties may disregard International Humanitarian Law and interfere with or obstruct the delivery of principled humanitarian assistance in the field. Humanitarian and health care personnel, as well as medical facilities and schools have been exposed to armed attacks. While the EU has repeatedly reaffirmed its firm commitment to upholding international humanitarian law, improved compliance in this area implies political support and other means beyond the remit of humanitarian aid assistance as such. According to the Aid Worker Security Database (AWSDB), violence against aid workers in 2020 claimed 484 individual victims, 117 of whom died, making 2020 the worst year on record for the second year in a row. South Sudan, Syria and Democratic Republic of Congo had the highest numbers of attacks.

Tribute should also be paid to the versatility and adaptability of many of the EU humanitarian partners, who may have to face difficult logistical challenges when delivering assistance in hard-to-reach areas, and other types of unexpected developments in the field that may hinder aid delivery. It is particularly in such situations that the in-house expertise available to the Commission, when managing EU humanitarian aid funding and interacting with the humanitarian partners in the field, proves to be invaluable. In close liaison with its partners, this expertise enables the Commission to adjust actions in the field and adapt to evolving circumstances. While being able to meet acute humanitarian needs in an effective manner, EU humanitarian aid – in particular in protracted crises – needs to be linked to development actors who are best positioned to act to address structural issues. Such situations vindicate the need for strengthening further the humanitarian-development-peace nexus. This would allow humanitarian aid actors to focus on responding to acute emergencies, while development actors would support strengthening of national systems allowing inclusion of persons affected by emergencies into national service delivery. An initiative in this sense is the Global Network against Food Crises, created in 2016, which brings together development and humanitarian actors with the aim to coordinate analysis and interventions, with a focus on food crises.

Impact of COVID-19

In 2021, Europe and the world continued to be strongly impacted by the COVID-19 pandemic. The European Union and the Member States, acting together as ‘Team Europe’, have mobilised almost EUR 46 billion so far. Of this, the EU humanitarian response to needs resulting from the pandemic amounted to a total of approximately EUR 656 million. As expected, the direct and indirect consequences of the COVID-19 pandemic were most acutely felt by populations already affected by humanitarian crises: refugees, internally displaced persons, and people living in conflict zones and/or in areas devastated by climate change.

The EU immediately responded to increase the emergency response and preparedness to the pandemic in particular in countries where healthcare systems are weak or at risk of being rapidly overwhelmed in case of epidemic outbreak.

In addition, to allow Member States and partners to transport humanitarian staff and supplies to fight the COVID-19 pandemic and to maintain the flow of humanitarian assistance hampered by the pandemic, the EU put in place the EU Humanitarian Air Bridge.

In the efforts to prevent the spread of COVID-19, many governments took measures limiting internal and cross-border movements, unintentionally also impeding humanitarian operations.

All ongoing and planned actions across all sectors were analysed with partners, in order to factor in the COVID-19 situation and needs. Support was provided to COVID-19 vaccination. To this end, funding was provided to the COVAX Humanitarian Buffer, a last resort tool to ensure access by vulnerable populations who could not be included in national vaccine deployment plans. Furthermore, strong support to vaccine rollout in Africa was implemented, through a EUR 100 million package that had been announced by President Von der Leyen.

To allow Member States and humanitarian partners to transport humanitarian staff and supplies to fight the COVID-19 pandemic and to maintain the flow of humanitarian assistance, the EU temporarily put in place the EU Humanitarian Air Bridge, offering air transport to and from various destinations world-wide. The Humanitarian Air Bridge (HAB) continued to operate in 2021 with 21 flights providing essential medical supplies and humanitarian cargo. With three new countries added in 2021, the HAB has now covered a total of 23 countries.

3.2. Key achievements

EUR 2.2 billion	82	2.3 million	21

---	---	---	---

3.3. Evaluations, studies and reports

The time scope of the Humanitarian Aid Regulation (Council Regulation (EC) No 1257/96) is not limited to the duration of one Multiannual Financial Framework. Evaluations could thus cover parts of two different MFF cycles. In addition, because of the ‘continuous’ nature of humanitarian operations, it is deemed that evaluation results have a validity for the medium term (3-5 years) unless actions have been substantially modified, which also provides a basis for the Commission (DG ECHO)’s evaluation approach, by which basically all humanitarian interventions are evaluated over a five-year period. The comprehensive evaluation of European Union Humanitarian Aid (2012-2016) was finalised in 2017. The evaluation considered that EU funded actions were found to be overall cost-effective and positively contributing to saving lives, reducing morbidity and suffering as well as improving dignity of life of populations affected by disasters, and presented some areas of improvement that have been subsequently evaluated in evaluations of concrete actions.

Areas for improvement encompass developing, when appropriate, a more programmatic approach to the partnership between the EU as a donor and its humanitarian partners; increasing the involvement of local implementing partners in the delivery of EU-funded actions; scaling up successful innovative approaches and improved reporting; more systematic coherence and synergies between the EU humanitarian aid and civil protection activities; better communication of the rationale of the EU’s strategic directions; as well as continued emphasis on Linking Relief, Rehabilitation and Development (LRRD) and defining exit strategies.

As a response to the above findings, the Commission is, among other actions, 1) looking at ways of further facilitating a longer-term approach to the funding of operations where appropriate; 2) putting in place a framework that would allow for a more strategic or more programmatic relationship with key NGO partner organisations; 3) working on the elaboration of guidance on localisation; 4) improving its communication of the underlying rationale for allocations internally and externally; and 5) working to establish a distinct longer-term reflection process on data collection needs, in the context notably of the Commission’s push for building further its evidence-based policy-making capacity.

The following humanitarian aid evaluations were finalised in 2021:

- Evaluation of European Union’s humanitarian assistance in Syria (2016-2018). The evaluation concludes that the Commission has made a unique contribution to strengthening the humanitarian footprint across the country and improving coverage of response in hard-to-reach and besieged areas. The response was in strong alignment with the humanitarian principles, and well-coordinated with other humanitarian actors. The Commission’s assistance has played a significant part in the delivery of food, non-food items, water and shelter to the population in need. Its cash-based interventions have enabled communities to prioritise their own essential needs. Its support has also enabled primary healthcare providers to continue to function and deliver healthcare. Overall, the Commission played a lead role in donor coordination on the Syria response, acting as a bridge between partners and donors, and individual EU member states rely heavily on the Commission’s presence on the ground.
- Evaluation of the European Union’s humanitarian response to the Rohingya refugee crisis in Myanmar and Bangladesh (2017-2019). The evaluation concludes that the Commission has, despite a budget that was not proportionate to the needs, contributed to meeting objectives of preventing and alleviating human suffering, maintaining human dignity and upholding humanitarian principles. This also encompassed a key role in terms of coordination and advocacy. As a large-scale dignified return for the Rohingya is unlikely in the foreseeable future, further development of a joint strategic approach has become even more pressing. Strategic recommendations targeted at the Commission Myanmar and Bangladesh are to 1) develop a multi-year strategy aligned with the Nexus joint response plan, 2) continue innovative approaches at both a country and global level to promote localisation, 3) refine advocacy strategies to promote changes in policy environments and 4) promote consistent attention to cost effectiveness by partners. A recommendation for the Commission is to ensure timely and adequate funding to maintain the Commission’s position as a key facilitator and influencer in the response.
- Evaluation of the EU’s implementation of the DG ECHO Thematic Policy Document “Gender: Different Needs, Adapted Assistance” of July 2013, (2014-2018). The evaluation finds appropriate coherence with relevant policies at EU and global levels, significant added value to the Call to Action on Protection from Gender-Based Violence in Emergencies, and

coordination with Member States. Gender integration has improved in operations. Targeted actions have significantly increased but overlooked some vulnerabilities. Funding of global capacity building by Enhanced Response Capacity was effective. Dialogue with partners about gender is appreciated but not systematic; dialogue is not always linked to the Gender-Age Marker, whose rating process is still often a ‘box ticking’ process. Implementation is supported by DG ECHO experts but knowledge of e-training opportunities is limited. Connectedness is poor, as gender issues are still not among Nexus priorities. Recommendations include more training on the Marker, adaptation of targeted actions, and advocacy within Nexus.

Evaluations are published on: http://ec.europa.eu/echo/funding-evaluations/evaluations_en

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Provide an adequate and effective humanitarian assistance to populations affected by humanitarian crises

Indicator 1: Geographical coverage of the EU Humanitarian Aid: Number of countries with EU supported operations as a percentage of countries in need of humanitarian assistance according to UN Humanitarian Appeals.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
96%	98%	100%	100%	100%	100%	100%	100%			100%
	Actual Progress									Final
	98%									
Are we on track :	On track									

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	UN FTS
Link to the objective	A Stronger Europe in the World
Link MFF 14-20 / MFF 21-27	New indicator, linked to the Strategic Plan 2020-2024
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Milestone achieved, therefore the indicator is on track.

Indicator 2: Percentage humanitarian aid funding targeting actions in forgotten crisis

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
0	15%	15%	15%	15%	15%	15%	15%			15%
	Actual Progress									Final
	30%									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	EVA Actions
Link to the objective	A Stronger Europe in the World
Link MFF 14-20 / MFF 21-27	New indicator, linked to the Strategic Plan 2020-2024
Other methodological comments	The target for this indicator is to stay above the commitment assumed by the Commission to allocate at least 15% of the budget committed for humanitarian aid to humanitarian crises identified as forgotten crises.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Milestone achieved, therefore the indicator is on track.

Indicator 3: Percentage of Humanitarian Aid initial budget allocated to Education in Emergencies

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027

0	10%	10%	10%	10%	10%	10%	10%			10%
	Actual Progress									Final
	10%									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	Initial allocations based on the Draft humanitarian aid budget
Link to the objective	A Stronger Europe in the World
Link MFF 14-20 / MFF 21-27	New indicator, linked to the Strategic Plan 2020-2024
Other methodological comments	The target of this indicator is to sustain the level of 10% of humanitarian aid budget allocated to Education in Emergencies according to political commitments assumed by the Commission.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Milestone achieved, therefore the indicator is on track.

Indicator 4: Number of children reached with EU Education in Emergencies assistance

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
1.86	1.86	1.86	1.86	1.86	1.86	1.86	1.86			1.86
	Actual Progress									Final
	2.3

Indicator type	Output
Unit of measurement	Number of projects per sector
Cut-Off Date	31/12/2021
Data source	EVA Action - EU Database
Link to the objective	A Stronger Europe in the World

Link MFF 14-20 / MFF 21-27	New indicator, linked to the Management Plan 2020
Other methodological comments	This indicator has no targets or milestones. It its only intends intended to track the repartition of projects by sector rather than reaching a specific threshold for descriptive purposes.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	

Indicator 6: Number of interventions of ECHO funded humanitarian aid operations (beneficiaries)

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2019	Milestones									2027
177	177	177	177	177	177	177	177			177
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Million people
Cut-Off Date	31/12/2021
Data source	Number of beneficiaries declared by the partners implementing humanitarian projects funded by DG ECHO.
Link to the objective	A stronger Europe in the world
Link MFF 14-20 / MFF 21-27	This indicator is a continuation of the 2014-2020 indicator "Total number of beneficiaries of Commission's interventions"
Other methodological comments	The target and milestones aim to remain over the number of interventions funded in humanitarian aid operations from 2019. Such figure was calculated on the basis of the aggregation of the estimated number of 'action beneficiaries' as declared by the partners implementing humanitarian projects funded by DG ECHO. One single individual beneficiary in need of humanitarian assistance can benefit from more than one humanitarian action and from more than one project.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	According to a new methodology that is being developed by the Commission and that will be adopted throughout the year, this number of interventions reached over 126 million beneficiaries. The number of beneficiaries cannot be compared with the baseline value as their methodologies do not extrapolate. New baselines and milestones will be set for this indicator in 2023 on the basis of such new methodology.

Specific Objective 2 : Ensure people and communities at risk of disasters are resilient and prepared

Indicator 1: Percentage of humanitarian assistance grants including elements of disaster preparedness, resilience and disaster risk reduction

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2027
0	61%	65%	70%	75%	75%	75%	75%			75%
	Actual Progress									Final
Are we on track :	Deserves attention**									

Indicator type	Output
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	HOPE database
Link to the objective	A Stronger Europe in the World
Link MFF 14-20 / MFF 21-27	New indicator, linked to the Strategic Plan 2020-2024
Other methodological comments	The Commission made a political commitment to mainstream preparedness and disaster resilience overall in EU humanitarian programmes. The aim is to go beyond the baseline and reach 75% by 2024. Intermediate milestones have been set in order to frame progressive progress towards the 2024 target. Target and milestones shall then stabilize at 75% or more after 2024. This indicator counts all projects having Disaster Preparedness (DP) and Disaster Risk Reduction results in their project logical framework .
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	While the baseline of 58% was set in 2020, it was calculated according to 2019 results. As a consequence of COVID-19, projects to address needs from the pandemic increased importantly in 2020, reducing drastically the proportion between DP and humanitarian response projects if compared

	to 2019 (the level of this indicator at the closure of 2020 amounts to 46%) Progress in 2021 was positive in comparison to final figures for 2020 despite the general resulting from the pandemic.
--	--

5. The programme contribution to horizontal policies

5.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	831.71							831.71	7%

(*)These amounts include NextGenerationEU top-ups if any

5.1.2. Explanation on the financial contribution

The figure for 2021 (EUR 831.80 million) is the result of the application of a new methodology that allows a more precise analysis of climate spending. For 2021, 40% of EUR 1.846 million and 100% of EUR 56.869 of total payments under the HUMA budget, were marked as contributing to climate mainstreaming.

The Commission is implementing the central tracking at commitment level, to improve the accuracy and reliability of the data on climate action. The tracking is based on EU climate markers methodology, made of three scores (0/40/100).

5.1.3. Key achievements

Building on positive results achieved during the response to cyclones Kenneth and Idai in 2020 in Mozambique, in 2021, DG ECHO continued to support WFP in strengthening national and local government’s capacity in the use of drone and satellite technology both for disaster preparedness, and post-disaster response. Both actions ultimately contribute to saving lives since they allow mapping of at-risk areas and collecting data on the whereabouts and number of potentially affected people in the fastest possible manner - thus allowing to plan needed response in advance or triggering search and rescue operations in the aftermath of an event. This intervention (ongoing) has been coupled with expanding support to flood mapping in order to feed in into existing early warning systems and improve preparedness plans.

5.1.4. Performance

Over the course of the past multi-annual financial framework 2014-2020, DG ECHO has successfully integrated climate action into its activities, primarily in terms of adaptation to climate change - both through the civil protection and humanitarian programmes.

On the humanitarian side, DG ECHO started the implementation of its renewed approach to disaster preparedness and risk informed humanitarian action (developed in 2021), which promotes the integration of climate risk considerations into all funded actions and establishes climate resilience as one priority for the Disaster Preparedness Budget Line (75 million Euros for 2021). Increased emphasis on anticipatory action as part of the renewed disaster preparedness approach is also a direct contribution to being better prepared for climate impacts. For instance, it signed two multi-year and multi-country programmatic partnerships with specific Anticipatory Action (AA) components with Food and Agriculture Organizations (FAO) and the International Federation of the Red Cross and Red Crescent Societies (IFRC). This is in line with the priorities of the Communication on the EU’s Humanitarian Action (2021), which confirms a stronger focus on climate impacts and environmental factors - in particular to scaling up anticipatory action as a response to addressing climate shocks. DG ECHO continues tracking progress through tools such as the revised Resilience Marker. In 2021, the guidelines for the use of the Resilience Marker were updated to facilitate partners in the use of the tool as to embed considerations of climate risks in all projects. In 2021, DG ECHO also identified further possibilities to support the scaling up of AA within existing financing tools. The groundwork started in 2021 will continue in 2022 to more clearly define the feasibility and possible structure of new financing mechanisms.

5.2. Contribution to biodiversity mainstreaming

5.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution		0.00	0.00					0.00
Share compared to total envelope		0.00 %	0.00 %					0.00 %

(*)These amounts include NextGenerationEU top-ups if any

5.2.2. Explanation On the financial contribution

In line with the ambitious approach to reducing the environmental footprint of humanitarian aid put forward in 2020, DG ECHO has continued with the implementation of such approach and in 2021, it developed minimum environmental requirements for all its funded actions to comply with. The application of these requirements will start in 2022 although 2022 will be a transition year during which partners will start to apply them to the extent feasible. The implementation of the requirements will ultimately contribute to the protection of biodiversity in humanitarian contexts by reducing deforestation, supporting natural regeneration of ecosystems around camps and settlements and generally reducing pressures on the natural environment. This is also reflected in the funding allocation for disaster preparedness - i.e. the Disaster Preparedness Budget Line – where environmental (and climate) resilience is identified as a priority for funding for the next 4 years (2021-2024). In order to better support its partners and staff in this area of work, DG ECHO developed in 2021 two knowledge tools including: i. a Compendium of good practices for a greener humanitarian response; and ii. an online self-led training on Greening Humanitarian aid. Additionally, as part of its commitment to advocate globally for compliance with international humanitarian law, DG ECHO also promotes the respect of the rules on the protection of the environment in armed conflict.

5.2.3. Key Achievements

Building on positive results achieved during the response to cyclones Kenneth and Idai in 2020 in Mozambique, in 2021, the Commission continued to support WFP in strengthening national and local government’s capacity in the use of drone and satellite technology both for disaster preparedness, and post-disaster response. Both actions ultimately contribute to saving lives since they allow mapping of at-risk areas and collecting data on the whereabouts and number of potentially affected people in the fastest possible manner - thus allowing to plan needed response in advance or triggering search and rescue operations in the aftermath of an event. This intervention (ongoing) has been coupled with expanding support to flood mapping in order to feed in into existing early warning systems and improve preparedness plans.

5.2.4. Performance

Over the course of the past multi-annual financial framework 2014-2020, the Commission has successfully integrated climate action into its activities, primarily in terms of adaptation to climate change - both through the civil protection and humanitarian programmes.

On the humanitarian side, the Commission started the implementation of its renewed approach to disaster preparedness and risk informed humanitarian action (developed in 2021), which promotes the integration of climate risk considerations into all funded actions and establishes climate resilience as one priority for the Disaster Preparedness Budget Line (EUR 75 million for 2021). Increased emphasis on anticipatory action as part of the renewed disaster preparedness approach is also a direct contribution to being better prepared for climate impacts. For instance, it signed two multi-year and multi-country programmatic partnerships with specific Anticipatory Action (AA) components with Food and Agriculture Organizations (FAO) and the International Federation of the Red Cross and Red Crescent Societies (IFRC). This is in line with the priorities of the Communication on the EU’s Humanitarian Action (2021), which confirms a stronger focus on climate impacts and environmental factors - in particular to scaling up anticipatory action as a response to addressing climate shocks. The Commission continues tracking progress through tools such as the revised Resilience Marker. In 2021, the guidelines for the use of the Resilience Marker were updated to facilitate partners in the use of the tool as to embed considerations of climate risks in all projects. In 2021, the Commission also identified further possibilities to support the scaling up of AA within existing financing tools. The groundwork started in 2021 will continue in 2022 to more clearly define the feasibility and possible structure of new financing mechanisms.

5.3. Contribution to gender equality

5.3.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 1: 2 168.1							

(*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significantly impacted**, score 0*: **impact on gender equality to be determined ex post**, score 0: **no significant impact on gender equality**.

The Commission is committed to ensuring that EU humanitarian aid takes into account the different needs and capacities of women and men of all ages. The Commission is working on a methodology on Gender expenditure tracking and has provisionally assigned score 1 to the total Humanitarian Aid budget for 2021 (EUR 1.503 billion). This methodology is Commission-wide and differs from other assessment methods used to track humanitarian funding, e.g. the Commission’s humanitarian gender-age marker and the OECD DAC Gender Equality Marker. It is clear that Humanitarian Aid has some impact on gender equality (therefore, scores 0 and 0* could not be assigned), but gender equality is also not the principal objective of the programme (and score 2 could not be assigned).

Considering that humanitarian projects often have multiple objectives rather than one, it is more appropriate to measure gender mainstreaming rather than targeting. The Gender-Age Marker is the tool that assesses to what extent humanitarian actions integrate

gender and age considerations. The Gender-Age Marker uses a set of four criteria to assess how strongly humanitarian actions are adapted to and integrate gender and age considerations. The Gender-Age Marker represents a new generation of assessment tools and strengthening the integration of gender and age concerns is an organizational change process for partners that can take time. In the coming years, the EU will continue the targeted training of implementing partners, as well as the dissemination and further development of guidance and toolkits on the gender-age cross-cutting issues. The development of operational best practices will continue to be based on operational experience. Systematic monitoring of operational guidance implementation via feedback loops will be ensured taking into account the results of the assessment of the first three years of implementation.

Several assessment parameters have been developed to ensure quality programming, one of them being the Gender-Age Marker.

In June 2020, the EU published its second assessment report on its Gender-Age Marker, showcasing that for projects starting in 2016 and 2017, 89% of all EU humanitarian aid integrated gender and age considerations 'strongly' or 'to a certain extent'.

Furthermore, the EU continued to operationalise its approach to gender and gender-based violence in humanitarian crises outlined in the Staff Working Document 'Gender: Different Needs, Adapted Assistance', supporting prevention and responding to gender-based violence, including through targeted actions and capacity-building of humanitarian actors in this area. An evaluation of the policy along with the Gender-Age Marker and other gender-related activities in the period 2014-2018 was published in June 2021. The evaluation pointed out progress both in terms of mainstreaming, integrated and targeted actions, and in terms of global capacity development.

The EU continues to be an active member of the global initiative Call to Action on Protection from Gender-Based Violence in Emergencies (having previously led the initiative between June 2017 and December 2018). In January 2021, the EU sent its commitments to the Call to Action Road Map covering the period 2021-2025¹¹. The EU will report on these commitments on an annual basis, starting in April 2022.

During 2021, the Commission allocated approximately EUR 33.1 million to prevent and respond to sexual- and gender-based violence. Furthermore, over the same year, it is estimated that the EU allocated approximately EUR 29.7 million to reproductive health from its humanitarian health programming. In the framework of the implementation of the European Union Gender Action Plan III (2021-2025), progress has been made towards the aim of transforming the lives of girls and women through ensuring their physical and psychological integrity, promoting their economic and social rights and strengthening girls' and women's voice and participation. Also to be mentioned that since 2021, the Commission gives clear priority to education in emergencies projects that target at least 50% girls.

5.5. Contribution to the sustainable development goals

5.5.1. Goals

SDG 1 End poverty in all its forms everywhere

The COVID-19 crisis has demonstrated more clearly than ever the importance of disaster preparedness and that increased efforts are needed to ensure that the most vulnerable are protected. Humanitarian protection aims to prevent, reduce and respond to the risks and consequences of violence, deprivation and abuse in humanitarian settings. Every year, DG ECHO assesses humanitarian needs and allocates between 7% and 20% of its civil protection and humanitarian aid annual funding for shelter and settlements related humanitarian assistance. Building back safer is essential for resilience, especially in disaster-prone countries: shelter plays an essential role in reducing vulnerability and building resilience. The EU allocated over €1 billion for targeted protection actions from 2015-2019.

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

The COVID-19 is expected to exacerbate all forms of malnutrition, particularly in children, due to a loss of household income, a lack of available and affordable nutritious food, reduced physical activity and disruptions in essential nutrition services. DG ECHO works to reduce undernutrition of children under 5 years old, especially in the most critical crises requiring humanitarian nutrition support were Chad, Ethiopia, South Sudan, and Niger. Food and nutrition assistance accounts for almost 20% of the EU's total humanitarian budget in 2020 it counted for around €500 million.

SDG 3 Ensure healthy lives and promote well-being for all at all ages

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

The EU aims to help children affected by humanitarian crises to have access to safe, quality and accredited primary and secondary education. Education is crucial to give every child a better future and develop its full potential. In 2021 the EU continued its strong leadership in education in emergencies, dedicating 10% of EU humanitarian aid to restore and maintain access to safe, quality and inclusive primary and secondary education during humanitarian crises. The EU supported over 2.3 million children to quickly enter or return to learning opportunities.

SDG 5 Achieve gender equality and empower all women and girls

¹¹ [Gender- and age-sensitive aid \(europa.eu\)](https://european-council.europa.eu/media/en/press-room/data/2021/06/P11222_en.pdf)

Natural hazards and human-induced crises are not gender neutral: they have a different impact on women, girls, boys, and men. To respond effectively to different needs, EU humanitarian assistance must take gender and age into account. To ensure the effective implementation of this policy, DG ECHO introduced a Gender-Age Marker in 2014. This tool measures how EU-funded humanitarian actions integrate gender and age considerations. In 2020, the second assessment report highlighted that in 2016 and 2017, 89% of all EU humanitarian aid integrated gender and age considerations ‘strongly’ or ‘to a certain extent’.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

In emergencies and humanitarian crises, providing access to safe drinking water, basic sanitation and hygiene education is important for a healthy living environment. Water, sanitation and hygiene (also known as WASH) are closely connected sectors and essential for good public health. The European Union, as one of the largest humanitarian donors of WASH assistance, contributes around €200 million each year. This funding ensures timely and dignified access to sufficient and safe water services for populations threatened by humanitarian crises.

SDG 13 Take urgent action to combat climate change and its impacts

6.5.2. Key achievements and performance

SDG 1 End poverty in all its forms everywhere

The provision of humanitarian aid to the most vulnerable, sometimes in the form of cash transfers for their basic needs, contributes to paving the way for national social safety nets and more structural poverty reduction national programmes.

The Commission works to reduce undernutrition of children under 5 years old, especially in the most critical crises requiring humanitarian nutrition support.

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Humanitarian food and nutrition aid will continue to contribute to improved nutrition outcomes and food security by applying an integrated and multisectoral approach.

The fight against acute hunger and acute malnutrition (severe and moderate) is at the centre of humanitarian interventions aiming at reducing the excess mortality and morbidity caused by hunger and malnutrition. Nutrition interventions in emergencies respond to specific needs of targeted vulnerable groups (infants, young children and pregnant and lactating women), by addressing the immediate and underlying causes of malnutrition. Immediate access to food and free access to lifesaving healthcare respond to acute food and nutrition crises; water, sanitation and hygiene measures together with the provision of accessible health services (disease control measures) and safe environments play a dominant role in individual nutritional status.

The Commission funding for nutrition aims at providing lifesaving interventions to the most vulnerable populations. For example, severely malnourished children in Sudan are given therapeutic food in treatment centres; in Ethiopia, recurrent droughts make children much more at risk of acute malnutrition in the Somali region. Humanitarian support responds to the nutritional needs of these children in remote areas with no access to basic services. In Syria, children under 5 years of age and pregnant and lactating women disproportionately affected by the conflict are included in nutrition programmes and provided with treatment to severe acute malnutrition and comprehensive healthcare services.

Climate change, conflicts and economic shocks increasingly influence food security and nutrition in fragile settings. The COVID-19 is expected to exacerbate all forms of malnutrition, particularly in children, due to a loss of household income, lack of available and affordable nutritious food, reduced physical activity and disruptions in essential nutrition services. In a context of unprecedented food insecurity, the EU stepped up humanitarian interventions on several fronts. Humanitarian funding was significantly increased to the 42 countries most affected by food insecurity: initial allocations were 20% higher compared to 2020 and, additionally, more than EUR 250 million were mobilised from reserves throughout the year. Advocacy was intensified in key countries such as Yemen, Ethiopia, Madagascar or Nigeria. Actions were also taken with a longer-term perspective, including a further enforcement of the humanitarian-development-peace nexus in food crises scenarios, or the promotion of anticipatory action approaches (e.g. a high-level event was co-organised with FFP in October).

SDG 3 Ensure healthy lives and promote well-being for all at all ages

The health humanitarian assistance aims at limiting excess preventable mortality, permanent disability and diseases associated with humanitarian crises. Lifesaving healthcare services are essential for the most vulnerable populations (children under 5 years old, women, displaced populations) affected by natural or manmade humanitarian crises. In fragile and heavily disrupted systems, humanitarian health funding contributes to the provision of primary healthcare (e.g. in cyclone-affected areas of Mozambique), vaccinations (e.g. during the Ebola outbreaks and the COVID-19 pandemic), access to medicines and medical devices. Emergency health response to outbreaks and building national capacities for preparedness is important to cope with increased relapse of epidemics.

Mental health and psychosocial support is an integral part of the humanitarian health assistance in case of sexual violence, mental disorders, trauma and high distress (e.g. for conflict-affected people in Ukraine, refugees in Uganda, internally displaced persons in South Sudan). Digitalisation and innovation in the health sector has prominently influenced also humanitarian interventions (e.g. electronic medical records, mobile apps for contract tracing).

SDG 5 Achieve gender equality and empower all women and girls

Natural hazards and human-induced crises are not gender neutral: they have a different impact on women, girls, boys, and men. To respond effectively to different needs, EU humanitarian assistance must take gender and age into account. To ensure the effective implementation of this policy, DG ECHO introduced a Gender-Age Marker in 2014. This tool measures how EU-funded humanitarian actions integrate gender and age considerations. In 2021, estimates show that the EU allocated approximately EUR 33.1 million in humanitarian aid to prevent and respond to gender-based violence under its protection and health programming. Furthermore, in 2021, it is estimated that the EU allocated approximately EUR 29.7 million to sexual and reproductive health from its humanitarian health programming.

The EU ensures that gender and age considerations are taken into account in all its humanitarian aid operations. To ensure an effective, quality response, humanitarian action should cater for the differentiated needs and capacities of women, girls, men and boys; and should contribute to the active participation of women and girls in humanitarian aid. Supporting the prevention and response to gender-based violence is considered as a life-saving humanitarian intervention and a priority.

The European Union continued to engage as an active member of the new Call to Action on Gender-Based Violence, a global initiative which brings almost 100 partners representing UN Agencies, INGOs, national/local NGOs as well as states and donors with the aim of driving structural change in the humanitarian system to address gender-based violence. As a practical example of its continued commitment to the Call to Action, the EU sent its commitment to the new Call to Action roadmap 2021-2025 in January 2021.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

In emergencies and humanitarian crises, providing access to safe drinking water, basic sanitation and hygiene education is important for a healthy living environment. Water, sanitation and hygiene (also known as WASH) are closely connected sectors and essential for good public health. The European Union, as one of the largest humanitarian donors of WASH assistance, contributes around EUR 200 million each year. This funding ensures timely and dignified access to sufficient and safe water services for populations threatened by humanitarian crises.

The EU provides safe drinking water, sanitation and hygiene (WASH) support through its humanitarian aid operations to those in need during humanitarian crises and ensures that the most vulnerable have access to WASH. In 2021, significant progress has been made regarding the Humanitarian-Development-Peace (HDP) nexus, increasing coherence across the WASH sectors and all stakeholder groups, based on a joint understanding, solid evidence, and mutual learning on all levels.

The promotion of basic WASH services ('minimal WASH package') and multisector outcomes, as part of other 'stand-alone' sector service deliveries, such as health, nutrition, education in emergencies, and shelter and settlements, remained the primary objective of the EU's WASH policy, especially in the framework of acute and chronic crises (e.g. WASH operations in South Sudan and in the Sahel zone). 2021 was also the first implementation year of Climate Investor 2, a programme that actively developed its pipeline with the private sector in the areas of water access in rural areas, innovative sanitation solutions and non-revenue water.

SDG 13 Take urgent action to combat climate change and its impacts

The EU contributes to this goal through its targeted disaster preparedness actions aiming at strengthening national and local capacities to respond to climate-related disasters and thus be more resilient to such shocks. Actions span from conducting risk assessments, to support strengthening early warning systems, developing contingency plans, stockpiling equipment and supplies or reinforcing skills of first responders in conducting emergency operations. Through its dedicated budget line for Disaster Preparedness, the Commission also supports third countries in reinforcing their capacity for emergency response to disasters and thus, strengthens their resilience and capability to adapt to changes in climate impacts. In 2021, the Commission allocated EUR 75 million for preparedness interventions in third countries. Through the emergency toolbox, additional funding is provided to respond to unexpected emergencies.

Furthermore, the inclusion of climate risk analysis in the design of all humanitarian actions helps ensure that the interventions take into consideration and respond to the risks posed by climate change and to its possible impacts. The EU supports the implementation of a greener humanitarian response by reducing the environmental and climate footprint of its funded humanitarian actions. To this end, in 2021, it developed a set of minimum environmental requirements for its partners to comply with when implementing humanitarian operations. 2022 will be a transition year during which partners will start to apply these standards to the extent feasible.

6. The programme contribution to horizontal policies	1095
6.4. Contribution to gender equality	1095
6.5. Contribution to the sustainable development goals	1096

1. Overview**1.1. Challenges**

The EU, under its Common Security and Defence Policy, will continue working towards addressing challenges in international security and stability. Key challenges include organized crime, terrorism, people smuggling, migration, the proliferation of conventional weapons and weapons of mass destruction, and the rule of law in third countries that may directly affect the EU's own security.

It is therefore essential for the EU to support third countries in security sector reform and help them establish efficient civilian security services, thereby increasing their capacities to tackle internal and external security challenges.

1.2. Mission (General objectives)

The credibility of the EU as a peace actor on the international scene is linked among other things to its capacity to act and intervene quickly to address civilian crises through Common Security and Defence Policy Missions and to promote nuclear non-proliferation and disarmament through support for multi-lateral action. Interventions in both areas help the EU to assume its role as a global player as envisaged under Article 21 of the Treaty on European Union "to preserve peace, prevent conflict and strengthen international security" thereby contributing to a 'Stronger Europe in the World'

1.3. Specific objectives

CFSP pursues the following two specific objectives:

- **Fast action to enable resource-effective CFSP intervention as part of the Integrated Approach**

CFSP supports the deployment of civilian Common Security and Defence Policy Missions to preserve peace and to strengthen international security in accordance with the principles of the UN Charter, of promoting international cooperation and developing and consolidating democracy and rule of law as well as of respecting human rights and fundamental freedoms in line with Article 21 and 42 of the Treaty on European Union and Part Five of the Treaty on the Functioning of the European Union;

- **Support the implementation and promotion of: 1) strategy on non-proliferation of weapons of mass destruction in order to increase security in this area; 2) strategy on combating illicit accumulation and trafficking of Small Arms and Light Weapons as well as measures against illicit spread and trafficking of other conventional weapons; 3) EU's policies in the field of conventional arms exports whilst ensuring complementarity with the Stability and Peace actions under NDICI-Global Europe**

The purpose of CFSP action on nuclear non-proliferation and disarmament is to preserve peace and to strengthen international security in accordance with the principles of the UN Charter, and to promote strategic cooperation with international partners on non-proliferation of weapons of mass destruction, on combatting the illicit accumulation of small arms and light weapons and other conventional weapons and support EU policy on conventional arms exports in line with Article 21 of the Treaty on the European Union.

1.4. Public intervention context

Under CFSP, the European External Action Service (EEAS), in consultation with FPI, is responsible for programming CFSP actions that are decided and adopted by Member States as per the provision of the Treaties. The Commission is responsible for providing the funding for CFSP actions.

The Commission monitors the execution of the CFSP budget according to the principles of sound financial management as well as the performance of beneficiaries of CFSP funding as regards budget implementation rates. The Commission regularly reports to Member States in the relevant Council Working Party settings on these CFSP budget execution rates.

1.5. Actions

All CFSP activities must be consistent with other areas of the EU's external action and must ensure coordination with international organisations. CFSP pursues its objectives by the following means:

- Different types of civilian Common Security and Defence Policy Missions, depending on the Council's mandate, for example, Advisory Missions counselling host countries on drafting legislation in the security sector or capacity-building Missions providing hands-on operational activities;
- Different types of mandates of EU Special Representatives promoting EU policies all around the world;

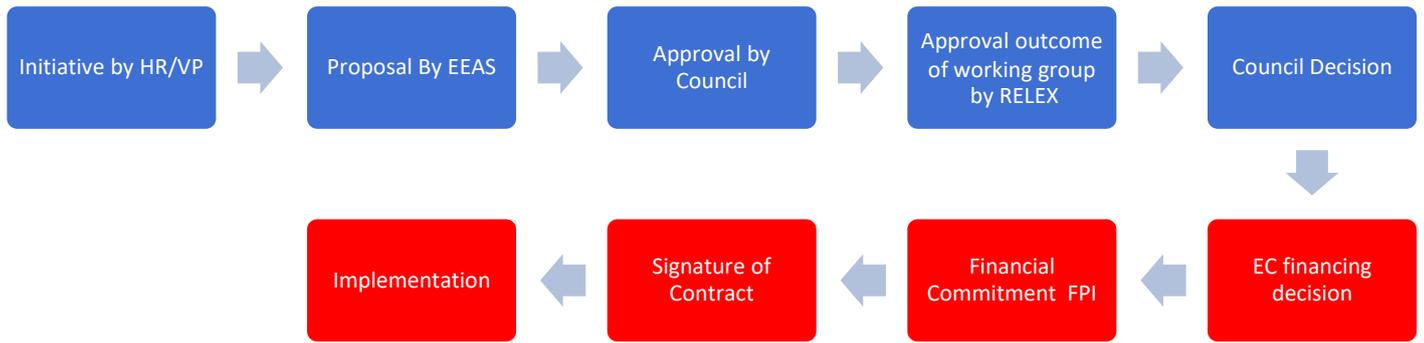

Actions related to non-proliferation and disarmament (NPD). These are implemented through agreements with international organisations, notably within the United Nations family, as well as for specific purposes with other selected organisations in the field of non-proliferation and disarmament.

1.6. Delivery mode

The management mode is primarily in indirect management (for civilian Common Security and Defence Policy (CSDP) Missions and EU Special Representatives, as well as Non-Proliferation and Disarmament actions), and to a lesser extent in direct management. The lead service for the programming of CFSP actions is the EEAS, in consultation with FPI, while FPI is responsible for ensuring the funding under the CFSP and the sound financial management of the funds.

1.7. Graphic overview of the programme structure

The CFSP budget is managed by FPI. The main beneficiaries of CFSP budget funding are civilian CSDP Missions in the area of security sector reform, accounting for an estimated 80% of the CFSP budget. The remaining approximate 20% of the CFSP budget are used to fund beneficiaries in the field of non-proliferation and disarmament, such as UN agencies and NGOs, and EU Special Representatives.

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU, Euratom) 2018/1046 of the European Parliament and of the Council of 18 July 2018 on the financial rules applicable to the general budget of the Union, amending Regulations (EU) No 1296/2013, (EU) No 1301/2013, (EU) No 1303/2013, (EU) No 1304/2013, (EU) No 1309/2013, (EU) No 1316/2013, (EU) No 223/2014, (EU) No 283/2014, and Decision No 541/2014/EU and repealing Regulation (EU, Euratom) No 966/2012 (OJ L 193, 30.7.2018, p. 1), and in particular Article 52(1), point (g), thereof. Interinstitutional Agreement of 16 December 2020 between the European Parliament, the Council of the European Union and the European Commission on budgetary discipline, on cooperation in budgetary matters and on sound financial management, as well as on new own resources, including a roadmap towards the introduction of new own resources (OJ L 433I, 22.12.2020, p. 28).	2021 - 2027	2 678.72

1.8.2. Legal basis explanation

CFSP is implemented on the basis of individual Decisions adopted by the Council. Under Articles 42(4) and 43(2) TEU, the Councils adopts the legal framework for civilian CSDP Missions. On the basis of Art. 28 TEU, Member States may decide to launch operational actions, for example stabilisation actions. As regards actions in the field of non-proliferation and disarmament, the Council adopts Decision on the basis of Art. 28(1) and 31(1) TEU.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	352.2	361.7	371.8	382.1	392.7	403.6	414.7	2 679.0
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities	0.7	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	0.7
Total	352.9	361.7	371.8	382.1	392.7	403.6	414.7	2 679.7

(*) Only Article 15(3) of the financial regulation.

1.9. Link with the 2014-2020 MFF

Under the 2014-2020 MFF, the CFSP budget was EUR 2 340 billion under Heading 4 “Global Europe” as a separate instrument.

During the 2021-2027 MFF, too, CFSP will remain a separate tool, but complimentary with other conflict and crisis response instruments, e.g. the rapid response pillar of the Neighbourhood, Development and International Cooperation Instrument (NDICI) during the period. Continued strong support for non-proliferation of weapons of mass destruction and disarmament, with increased levels of support to match the level of ambition of Member States, is expected.

1.10. Relevant websites providing more information

Dedicated webpages on civilian CSDP Missions and non-proliferation and disarmament can be found on the EEAS Internet site:

https://ec.europa.eu/fpi/what-we-do/common-foreign-and-security-policy-preserving-peace-and-security_en

https://eeas.europa.eu/topics/military-and-civilian-missions-and-operations_en

https://eeas.europa.eu/headquarters/headquarters-homepage_en/427/Disarmament.%20Non-Proliferation%20and%20Arms%20Export%20Control

2. Where are we in the implementation ?

2.1. Programme 2021-2027

The level of commitment and payment appropriations requested for 2021, 2022 and 2023 are as follows:

- In 2021, the implemented commitment appropriations stand at EUR 407 Million (composed of EUR 352 million voted budget, EUR 23 million carry-over from 2020 and EUR 32 million from recoveries). Implemented payment appropriations in 2021 stand at EUR 386 million (EUR 329 million voted budget, EUR 8 million carry-over from 2020, EUR 32 million from 2021 recoveries and EUR 17 million transfer from other budget lines).-
- For 2022, requested commitment appropriations stand at EUR 361 million and payment appropriations at EUR 333 million.
- For 2023, requested commitment appropriations stand at EUR 371 million and payment appropriations at EUR 380 million.

FPI committed EUR 407 million for CFSP actions, i.e. 100% of the available commitment appropriations to cover CFSP entities mainly operating in indirect management, as nominated by Member States in the corresponding Council Decisions . The COVID-19 pandemic has, however, been an exceptional situation that has affected planning, decision-making and implementation of the mandates of civilian CSDP Missions. In 2020, four Missions (EULEX Kosovo, EUBAM Libya EUPOL COPPS and EUBAM Rafah) could not undergo the Strategic Reviews and their respective mandates were renewed for one year with essentially the same budget. At operational level, a number of mitigating measures were designed and implemented in cooperation with the EEAS to ensure the safety of staff (e.g. through the relocation of staff).

Despite the significant challenges, all Missions have remained operational throughout the pandemic. The Missions successfully balanced duty of care concerns with operational continuity and visibility on the ground. In this regard, FPI contributed by issuing a number of clarifications and instructions to Missions in the field, including on the use of flexible and ad hoc procurement procedures, the management of the budget, relocation of staff and the application of allowances in a crisis situation.

The systematic trend of budget under-consumption by the civilian CSDP Missions continues, and can be expected to increase further as the pandemic continues. In 2020 for instance, civilian Missions returned unused funds totalling EUR 42 million, pointing to a lack of absorption capacity and realistic budget planning. In 2021, EUR 33 million were returned (of which EUR 32 million were implemented in 2021 and the remaining is a carry-over to 2022).

The implementation of the NPD actions has been heavily affected and delayed by the COVID-19 crisis, given their reliance on travel, meetings and workshops. As a result, the Commission put in place a number of no-cost extensions of ongoing NPD actions in 2021, in order to foresee sufficient time to carry out all the envisaged activities.

On overall, with a flexible handling of the CFSP budget, the Commission ensured that CFSP actions decided by the Council could be implemented swiftly, thus committing a total of EUR 407 million. However, FPI had to revert to mitigating measures due to the mismatch of political ambitions of Member States and the availability of CFSP funds. This involved splitting commitments for the first year of mandates of the Missions in Kosovo and Libya and the Kosovo Chambers between the budget years 2021 and 2022.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

CSDP Missions contribute to enhancing stability and promoting peace and the rule of law. Since the launch of the first Mission in 2003 in the Western Balkans, the EU CSDP civilian Missions have acted as key players of the EU's response to international crisis, working hand in hand with the EU's diplomatic and mediation efforts, development cooperation and humanitarian aid. This constitutes the EU's Integrated Approach, which makes it a significant contributor to peace and security and a security provider.

The establishment of the Civilian CSDP Compact by the EU Member States in December 2018 aimed at strengthening the capacity of civilian CSDP. The Council welcomed the progress in implementing the Civilian CSDP Compact¹, which aims to make Missions more capable, more effective, flexible, responsive and more joined up with other EU actors.

The non-proliferation and disarmament actions contributed to international peace and security by strengthening the norms against the proliferation of weapons of mass destruction through advancements in universalisation, institutional strength and effective implementation of the relevant treaties and mechanisms. Preventing and combatting the illicit accumulation and trafficking of small arms and light weapons and their ammunition and by supporting the implementation of the Arms Trade Treaty and the adoption of policies in line with Common Position 2008/944/CFSP on exports of military technology and equipment also contributed to this objective.

3.1.2. Active programme performance

The Common Foreign and Security Policy (CFSP) operations contributed to the preservation of peace, the prevention of conflicts and to strengthening international security. On 10 May 2021, the Council stated that the EU has significantly enhanced its operational capacity and footprint in recent years and underlined the key contribution of the 11 civilian CSDP Missions and Operations to global peace and security in the framework of the EU's Integrated Approach to external conflicts and crises and hence to the security of the Union and its citizens. The Commission provided the necessary funds in a timely manner through Contribution Agreements, which ensured the Missions' operational capacity. The funds were used for staff recruiting and training by the Missions, for providing the logistical support for carrying out the operations.

CSDP Missions

The Commission has made considerable progress in the area of finance and procurement that are under its competence. This notably included the streamlining of administrative and operating procedures in CSDP Missions, through the staff embedded in the Mission Support Platform (MSP). Having in place those procedures allowed for the Missions, inter alia, procuring and managing the necessary assets for performing their objectives. Furthermore, since its creation, the MSP acted as a knowledge centre on procurement and finance and developed specific tools for the use by the Missions to achieve a higher level of harmonisation of procedures and thus enhance the civilian Missions' responsiveness.

The geographical areas covered by the CFSP budget are the South-Caucasus region (EUMM Georgia, EUSR for the South Caucasus and the crisis in Georgia), the Middle East (EUBAM Rafah, EUPOL COPPS, EUSR for the Middle Peace Process, EUAM Iraq), the Western Balkans (EULEX Kosovo, the Kosovo Special Chambers, the EUSRs for Bosnia-Herzegovina and for the Belgrade-Pristina Dialogue and other Western Balkans regional issues), Africa (EUCAP Mali, Niger and Somalia, EUSR for the Sahel, EUAM RCA), as well as Eastern Europe (EUAM Ukraine).

The EU Advisory Mission in the Central African Republic (CAR) was launched in August 2020 (and reached its full operational capacity in August 2021). The Mission provides advice to the Ministry of the Interior and the Directors General of Police and Gendarmerie, in order to support the transformation of CAR Internal Security Forces into a coherent, rule-based and accountable security provider under national ownership and democratic control.

EU stabilisation actions undertaken on the basis of Article 28 TEU, combine the high political visibility offered by the Council Decision launching them, a large span of domains in which the Member States can engage, together with a flexibility in their planning and implementation. These actions serve to apply the Integrated Approach to conflicts and crises. The EU action in support of the United Nations Verification and Inspection Mechanism in Yemen (UNVIM), approved initially by the Council in 2018, supports the delivery of commercial supplies of vital importance for the Yemeni population (the EU action was extended until September 2021 and then until February 2022). However, UNVIM has displayed so far a sub-optimal budget implementation performance.

There are a number of challenges that impact on the performance of civilian CSDP:

Civilian Missions operating in sometimes insecure environments have faced continuous difficulties in recruiting the required number of staff with the necessary skills to carry out the relevant job functions. Although Member States have committed to increase the number of seconded staff under the Civilian Compact, progress is slow. This has a direct impact on the performance of Missions. Furthermore, Missions also face numerous challenges for example regarding public local tendering in difficult theatres of operation. When procurement procedures fail, this also has negative impact on mandate performance, including on budget absorption.

Non-proliferation and disarmament actions

¹ Council conclusions of 10 May 2021.

Support to non-proliferation and disarmament in partnership with the UN and other international organisations contributed to enhancing the Union's security, as well as to stabilising fragile regions, notably through actions against the proliferation of weapons of mass destruction and illicit trade in small arms and light weapons.

In 2021, the Commission continued to support the combat against the proliferation of weapons of mass destruction and the illicit accumulation and trafficking of small arms and light weapons (SALW) and other conventional weapons by launching eight new non-proliferation and disarmament actions.

The implementation of these eight new 2021 actions started in most cases in the fourth quarter of 2021 and in some cases only in December 2021. The main challenge was therefore the launching in time of the projects, including the setting up of the project teams.

Furthermore, the implementation of 29 non-proliferation and disarmament actions launched in the period 2016-2020 continued throughout 2021. The main challenge for these 29 actions continued to be the COVID-19 pandemics and the related travel restrictions. The implementing organisations and beneficiaries had to replace in person workshops, expert missions, trainings and conferences supporting the universalisation and effective implementation of various non-proliferation legal instruments by virtual or hybrid events. Several activities requiring physical presence had to be postponed. In consequence, the implementing organisations and beneficiaries requested no-cost extensions of the actions. In response, the Commission approved the extension of 13 actions related COVID-19 extensions in 2021, thus providing additional time to complete all activities.

3.2. Key achievements

1 172

1 972

staff of the Palestinian Authority trained by the EU Border Assistance Mission in Rafah from 2015 to 2021

pieces of small arms and light weapons (SALW) and pieces of ammunition destroyed in the Western Balkans in 2021

3.3. Evaluations, studies and reports

As regards civilian CSDP Missions:

CFSP actions are currently not subject to classical evaluations through external experts, although this had been recommended by the Court of Auditors in its 2017 report on the Sahel Missions. So far, Member States have not put in place an external evaluation system, but rely on their own strategic assessments conducted on the basis of input provided by the EEAS. The Commission has regularly drawn the EEAS' attention to the fact that evaluations should be conducted by external experts as a more appropriate tool to assess the work of the civilian Missions.

Civilian Missions are subject to Strategic Reviews, which are conducted by the internal services of the EEAS for assessment by Member States. These Reviews aim at analysing the achievements and efficiency of a Mission, form the basis for the operational plans and provide orientations for the operational mandate in the different areas of security sector reform.

In addition, the EEAS issues an Annual Lessons Learnt Report based on contributions from its services and from the Missions on operational planning, conduct of operations and support tasks. Ad-hoc reports are also prepared such as the report on "Cultural Heritage in Conflicts and Crises". Furthermore, the Joint Action Plan implementing the 'civilian Compact' draws lessons learnt for various work strands of the Missions, the Institutions and Member States. For example, one of the lessons learnt for Member States is to increase the number of national staff deployed in CSDP Missions.

As regards non-proliferation and disarmament actions:

As regards the evaluation of the non-proliferation and disarmament actions, the Council adopts an Annual progress report on the implementation of the strategy against the proliferation of weapons of mass destruction ⁽²⁾. In addition, the Commission and EEAS receive six-monthly and annual reports on the implementation from the implementing organisations and beneficiaries (e.g. from IAEA and U.N.). Regular financial audits are conducted too.

4. Programme 2021-2027 - Key monitoring indicators

⁽²⁾ Please see: [Annual Progress Report on the implementation of the European Union Strategy against the Proliferation of Weapons of Mass Destruction \(2020\) \(europa.eu\)](#)

Specific Objective 1: Fast action to enable resource-effective CFSP intervention as part of the Integrated Approach

Indicator 1: Percentage of contribution Agreements with EUSRs and CSDP Missions signed within 4 weeks after Council Decision adoption

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									2028
0	88	90	92	95	95	95	95	95		95
	Actual Progress									Final
	81.3									
Are we on track :	Moderate progress									

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	FPI
Link to the objective	This indicator measures the time elapsed between the adoption of relevant Council Decisions and the signature of the Contribution Agreements signed by FPI.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The target for this indicator (the time required to sign a Contribution Agreement) has been set higher in comparison with previous measurements in order to monitor the capacity to further shorten the time span, by 2024, between the adoption dates of Council Decisions and the signature of Agreements.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The result in 2021 is slightly below the milestone. The target is still expected to be reached annually as of 2024.

Indicator 2: Percentage of civilian CSDP Missions coordinating with interventions financed under other EU instruments

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2021
0	100	100	100	100	100	100	100			100
	Actual Progress									Final
	100									
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	FPI
Link to the objective	The indicator measures the number of EU interventions that are subject to coordination between different instruments.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The indicator measures the number of CSDP Missions that have effectively demonstrated the coordination of interventions with other EU instruments, against the total number of CSDP Missions whose mandates have been renewed during that calendar year.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The target is to be reached annually as of 2021.

Indicator 3: Percentage of positively pillar assessed CSDP Missions not requiring supervisory measures as for article 154.5 of the Financial Regulation.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2024
0	90	90	95	100	100	100	100			100
	Actual Progress									Final
	91									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number
Cut-Off Date	31/12/2021
Data source	FPI

Link to the objective	The indicator measures the compliance of CSDP Missions with the Financial Regulation
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The percentage of positively pillar assessed CSDP Missions reflects the capacity to achieve the end result of a fully compliant CSDP Mission. As the number of Missions deployed on the ground can vary between 2020-2024, depending on political decisions by Member States to open or close CSDP Missions, the population underlying the measurement may change during the period of reporting
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The trend depends on the number of CSDP Missions operating on the ground. This number can vary from year to year, depending on Member States' decisions to open or close a CSDP Mission. The trend also depends on the progress that Missions make in terms of consolidating their internal set up to reach a positive pillar assessment. The target is expected to be reached annually.

Specific Objective 2: Support the implementation and promotion of: 1) strategy on non-proliferation of weapons of mass destruction in order to increase security in this area; 2) strategy on combating illicit accumulation and trafficking of Small Arms and Light Weapons as well as measures against illicit spread and trafficking of other conventional weapons; 3) EU’s policies in the field of conventional arms exports whilst ensuring complementarity with the Stability and Peace actions under NDICI

Indicator 1: Percentage of relevant non-proliferation and disarmament actions that are complementary with actions funded under the Instrument contributing to Stability and Peace / Stability and Peace under NDICI

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									2021
0	100	100	100	100	100	100	100			100
	Actual Progress									Final
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	FPI
Link to the objective	The indicator measures the complementarity of EU instruments. The complementarity corresponds to the notion of the integrated approach, referred to in the specific objective 1.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	The target has been set at 100%, as all non-proliferation and disarmament actions funded from the CFSP actions have to be complementary to NDICI actions in the same area. The baseline has been set on the basis of the new CFSP funded non-proliferation and disarmament actions launched in 2020 which have been all assessed as complementary or not overlapping with the IcSP actions. CFSP funded NPD actions are complementary or do not overlap with actions funded under the IcSP and NDICI.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The target is to be reached annually as of 2021.

5. The programme contribution to horizontal policies

5.1. Contribution to gender equality

5.1.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 2: 15							
Score 1: 284							
Score 0: 53							

(*)Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)
 The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

Civilian CSDP Missions and EURs

CSDP Missions report to the EEAS, including on gender-related issues. The Commission is not the addressee of these reports and can therefore only refer in a limited way to achievements by Missions in relation to gender promotion.

While gender activities are not the main core task of the civilian CSDP Missions, they do, to a certain extent, cover topics related to gender in their work. Following the launch in December 2020 of the Gender Action Plan 2021-2025 (GAP III), the Civilian Operations Commander issued an instruction to the civilian CSDP Missions on the implementation of GAP III. The Missions were strongly encouraged to contribute to the development of the country-level implementation plan (CLIP) foreseen by the GAP III to be led by EU Delegations.

In this context, nine of the eleven Missions have put in place a Gender Focal Points (GFP) network. The new EUAM RCA prioritised the development a Gender Action Plan in 2021 and will appoint GFPs in 2022. Currently, 122 staff serve as gender focal points as catalysts for gender mainstreaming.

Furthermore, nine Missions have adopted or are in the process of adopting a Mission Gender Action Plan, which provide a good tool for monitoring. Thanks to these action plans, most missions have put in place systems for collecting sex-disaggregated data, for example when implementing actions or when delivering training courses. In addition, several missions have developed gender analyses of various kinds, such as sector analyses.

Non-proliferation and disarmament actions

As described below under SDG 5, U.N. Office for Disarmament Affairs implements an action in support of gender mainstreamed policies, programmes and actions in the area fight against small arms trafficking and misuse.

5.2. Contribution to the sustainable development goals

5.2.1. Goals

SDG 5 Achieve gender equality and empower all women and girls

Since 1 April 2019 and in line with the Women, Peace and Security agenda, the U.N. Office for Disarmament Affairs implements an action in support of gender mainstreamed policies, programmes and actions in the area fight against small arms trafficking and misuse. The action's objective is to enhance the effectiveness of small arms control measures through gender analysis and integration of gender perspectives. Activities include training of national officials in 18 countries on gender-mainstreaming and small arms control; promoting gender mainstreaming and women's empowerment in regional initiatives; strengthening the small arms control component in the Women Peace and Security framework, and awareness-raising and partnerships. The EU contribution amounts to EUR 4.4 million.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

CSDP Missions work in the field of security sector reform, while EUSRs are promoting EU policies in different parts of the world. None of them directly report on their activities against the SDGs, but their work may indirectly help achieve SDG 16 (Peace, justice and strong institutions). CFSP reporting on the substance of the operations conducted by the Missions and the EUSRs is addressed to the EEAS and Member States and not the Commission. The Commission receives the reporting on budget, procurement and finance management.

Non-proliferation and disarmament actions contribute to SDG 16, as they contribute to international peace and security and to the reduction of violence globally by preventing and combatting the proliferation of weapons of mass destruction and the illicit accumulation and trafficking of small arms and light weapons and their ammunition, as well as by promoting the effective implementation of the Arms Trade Treaty and EU's policies in the field of conventional arms exports, in particular on the basis of Common Position 2008/944/CFSP.

5.2.2. Key achievements and performance

The Common Foreign and Security Policy (CFSP) contributes directly to the achievement of priority 5 '*A Stronger Europe in the world*' of the von der Leyen Commission in the area of Security and Defence. Taking into account the shared responsibilities of the Council, the European External Action Service (EEAS) and the Commission in relation to CFSP, the actions contribute to :

- the preservation of stability through CSDP Missions and EUSR Mandates;
- international peace and security and to the reduction of violence globally by preventing and combatting the proliferation of weapons of mass destruction and the illicit accumulation and trafficking of small arms and light weapons and their ammunition, as well as by promoting the effective implementation of the Arms Trade Treaty and EU's policies in the field of conventional arms exports, in particular on the basis of Common Position 2008/944/CFSP

The CSDP Missions work in the area of civilian security sector reform, including police and rule of law, the fight against terrorism and organised crime, maritime capacity building and border management. There are three types of Missions: capacity building

Missions, monitoring Missions and advisory Missions, and some of their work does indirectly contribute into building accountable institutions.

As neither Missions nor EU Special Representatives are subject to external evaluation, the Commission cannot assess their direct or indirect impact towards these goals' achievement.

6.1. Contribution to climate mainstreaming	1106
6.2. Contribution to biodiversity mainstreaming.....	1106
6.4. Contribution to gender equality	1107
6.5. Contribution to the sustainable development goals	1108

1. Overview**1.1. Challenges**

Rising vulnerability, inequalities, climate change and environmental degradation are all part of a new global reality that has been compounded by pandemics. The 13 Overseas Countries and Territories (OCTs) are especially vulnerable to climate change and environmental degradation due to their geographical locations (all are islands in the Caribbean, Arctic, Antarctic, Pacific and Indian Oceans, accounting for a large part of EU biodiversity). Economic diversification, competitiveness, digital transformation and connectivity are further major challenges faced by the OCTs. The OCTs' economies often rely on tourism, making them heavily dependent on external factors and therefore very fragile.

The new Decision on the Overseas Association including Greenland (DOAG) provides an updated legal framework for supporting OCTs' actions in tackling these challenges and ensuring their economic and social development. For the first time, the DOAG incorporates the formerly additional Greenland Decision, placing all OCTs firmly within the same instrument and under the same source of funding, the EU Budget (OCTs other than Greenland previously benefitted from the European Development Fund).

The OCTs have been associated with the EU since the Treaty of Rome. They are not sovereign countries, but maintain special constitutional links with three Member States: Denmark, France and the Netherlands. Partnership with the OCTs is based on EU values and shared policy priorities, and OCTs are considered important EU 'outposts' in their respective regions.

1.2. Mission (General objectives)

The general objective of the DOAG is to promote the economic and social development of all the OCTs and to establish close economic relations between them and the Union as a whole.

Furthermore, the aim of this Decision is to preserve the existing ties between the Union and the OCTs acknowledging the geostrategic positions of the latter in the Arctic, the Caribbean, the Indian Ocean, the Atlantic, the Antarctic and the Pacific.

The OCT association shall pursue this general objective by enhancing the OCTs' competitiveness, strengthening the OCTs' resilience, reducing their economic and environmental vulnerability and promoting cooperation between them and with other regional partners including Outermost Regions and third countries.

The new DOAG delivers:

- unity of management having all the OCTs under the same source of financing, thus creating synergies in programming and implementation;
- consolidation of shared objectives;
- simplification and coherence in the legal framework;
- higher profile for the OCTs as a group.

The Union financial assistance allocated through the partnership should bring a European perspective to the development of OCTs and should contribute to strengthening the close and long-lasting mutual ties, while also consolidating the position of OCTs as advanced outposts of the Union.

The partnership between the EU and OCTs will facilitate consultations and policy dialogue on the objectives and areas of cooperation established through the DOAG. In particular, it will define the framework providing the basis for cooperation and dialogue in areas of mutual interest.

1.3. Specific objectives

The association between the EU and the OCTs continues to be based on the political, trade and cooperation pillars. The specific objectives of the DOAG are:

- to foster and support cooperation with OCTs, including in addressing their major challenges and reaching the Sustainable Development Goals;
- to support and to cooperate with Greenland in addressing its major challenges, such as raising the education level, and to contribute to the capacity of its administration to formulate and implement national policies.

Given the OCTs' geographical locations, cooperation between them and their neighbours should be pursued in the interests of all sides, with a particular focus on areas of common interest and the promotion of the Union's values and standards. The new DOAG reinforces the provisions on strengthening cooperation with non-OCT neighbours and for the first time sets aside an earmarked envelope for this purpose.

Under the DOAG, EU policy priorities linked to the Green Deal will be strengthened through: i) the horizontal spending target of 25% for climate change objectives, ii) its contribution to mainstreaming biodiversity action in the Union policies, and iii) the achievement of the overall ambition of providing 7.5% of annual spending under the MFF to biodiversity objectives in the year 2024 and 10% of annual spending under the MFF to biodiversity objectives in 2026 and 2027. The DOAG does not include horizontal spending targets for other cooperation areas. However, the DOAG explicitly states that gender equality should be mainstreamed into all actions as a key contribution to the successful achievement of the SDGs.

Through the DOAG, the EU will enhance support to the OCTs in addressing green and digital sustainable development. Given their economic vulnerability and in the context of the COVID-19 pandemic, the EU will endeavour to support OCTs' economic diversification.

1.4. Public intervention context

The DOAG is based on Articles 198 to 204 of the Treaty on the Functioning of the European Union (TFEU). Pursuant to Article 204 TFEU, these provisions apply to Greenland, subject to the specific provisions set out in Protocol No 34 to the TFEU.

The detailed rules and procedures of the association are laid down in Council decisions based on Article 203 of the TFEU, under which such acts are adopted through a special legislative procedure.

The detailed arrangements of the provisions in Part Four of the TFEU have to be made at Union level, as the purpose of the association — social and economic development and close economic ties between the OCTs and the Union as a whole — cannot be achieved via action at Member State level alone. Moreover, Member States would not be able to take action with regard to the OCT trade regime, as the EU alone is responsible for common trade policy (Part Five, Title II of the TFEU).

The approach towards cooperation with the OCTs contained in the Commission's legislative proposal respects the principles of partnership, complementarity and subsidiarity. It proposes that the EU financial assistance to OCTs be based on programming documents, which define the cooperation strategies and priority areas between the Union and the OCTs.

Under Articles 198 and 199 of the TFEU, the association will continue to provide a comprehensive partnership comprising an institutional framework and trade arrangements and covering many areas of cooperation, as well as the basic principles governing Union financial assistance to OCTs.

Considering the specificities of the OCTs and their special relationship with the EU, the new legislative act for all OCTs covers the political and legal framework and how cooperation should be implemented and will ensure effectiveness, consolidation of shared objectives and coherence, as well as more visibility for the OCTs as a group. The DOAG puts forward an approach that is flexible and tailored to the situation of each OCT.

In line with the principle of proportionality, the DOAG does not go beyond what is necessary to achieve its objectives.

1.5. Actions

The OCT instrument covers three pillars of actions: political, trade and cooperation between the Union and the OCTs. It includes specific provisions guiding the partnership with Greenland, where required.

At the level of cooperation with OCTs:

- Unless otherwise specified, the DOAG follows implementation provisions from the Neighbourhood, Development and International Cooperation Instrument (NDICI), via a referral clause.
- OCTs remain eligible for other Union programmes (such as the humanitarian aid instrument, Horizon Europe and Erasmus+) as a matter of principle, unless the rules of a specific programme preclude their participation.
- OCTs are eligible for the thematic part and rapid response actions of the NDICI.
- The OCTs are eligible for InvestEU as a vehicle for investment financing.

Cooperation through the DOAG takes place via four main types of actions:

- geographic/bilateral cooperation with individual OCTs;
- regional programmes benefitting OCTs in the same geographical region (Caribbean, Pacific, Indian Ocean), based on shared needs;
- intra-regional programmes for cooperation between one or a group of OCTs with one or more non-OCT neighbours, who would participate with their own funds;
- technical assistance.

Additionally, the DOAG sets aside a reserve/non-allocated fund for unforeseen circumstances such as natural disasters, emerging challenges such as migratory pressures, and new international priorities.

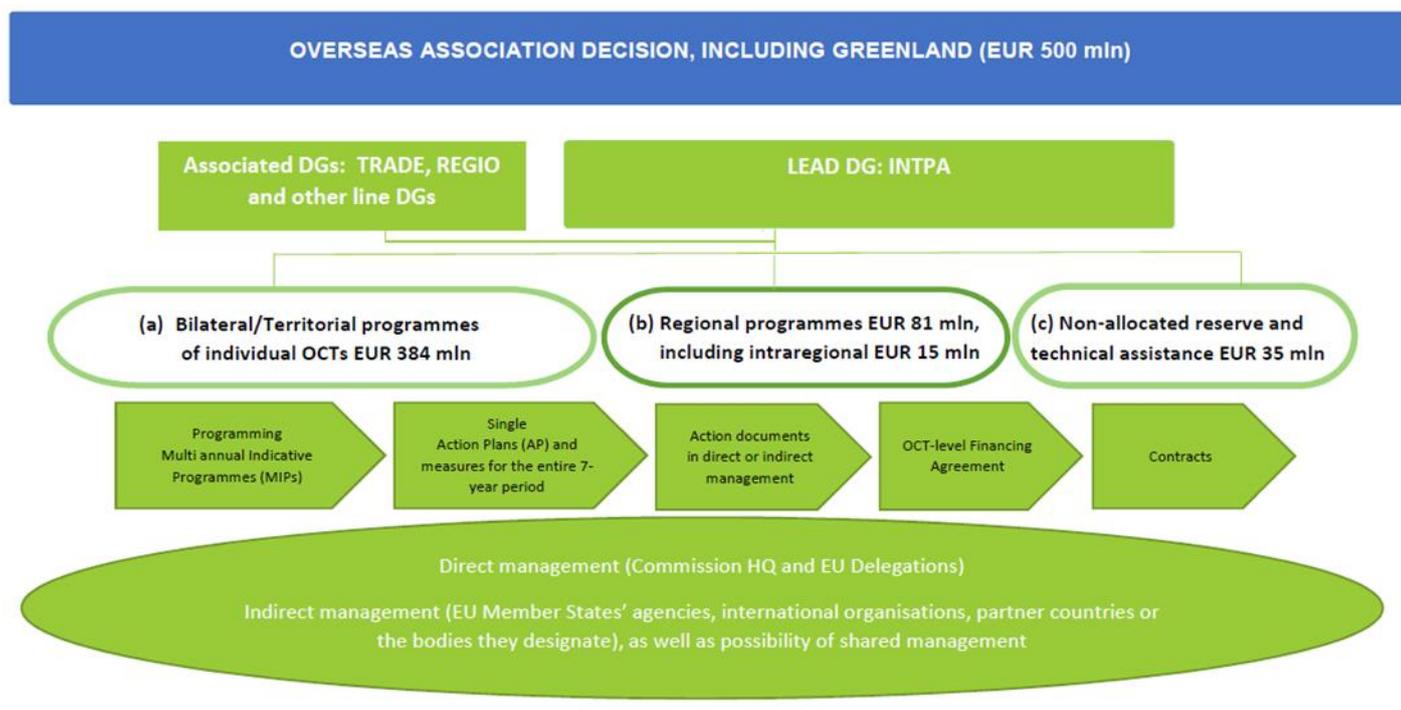

1.6. Delivery mode

The Delivery mode shall be direct management by the Commission from Headquarters and/or through the Union Delegations and offices, as well as indirect management by entities such as the EU Member States' agencies or international organisations that ensure a level of protection of the EU's financial interests equivalent to that under direct management. Indirect management may also be entrusted to partner countries or the bodies they designate. In case of contribution from other Union programmes, different set of rules can be applicable.

The lead service involved in implementing the DOAG is DG INTPA, in cooperation with DG TRADE, DG REGIO and other line DGs, especially on external dimensions of internal policies like climate, environment, energy and digital, as well as the EEAS.

For the sake of consistency and effectiveness, and unless otherwise specified, the DOAG will apply the implementation, evaluation and monitoring provisions of the NDICI.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Council Decision (EU) 2021/1764 of 5 October 2021 on the association of the Overseas Countries and Territories with the European Union including relations between the European Union on the one hand, and Greenland and the Kingdom of Denmark on the other (Decision on the Overseas Association, including Greenland) (OJ L 355, 7.10.2021, p. 6).	2021 - 2027	500.00

1.8.2. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	67.0	69.0	70.0	71.4	72.9	74.3	75.4	500.0
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities	0.0	p.m.	p.m.	p.m.	p.m.	p.m.	p.m.	0.0

(*) Only Article 15(3) of the financial regulation.

The OCT programming exercise conducted during 2021 (Multiannual Indicative Programmes) revealed that more commitment appropriations are needed than available in the financial programming to ensure a seamless starting up of the implementation of the 2021-2027 cooperation. Operational planning for 2022 requires EUR 98.5 million instead of EUR 68.96 million; and for 2023 EUR 96.2 million instead of EUR 70.03 million. The gap in commitment appropriations can only be closed by partially relying on funds available only in the year following the annual action plan (AAP) decision year with reference to the NDICI provision allowing automatic carry-over (Art.30). This means, for the 2022 AAPs, EUR 26.37 million will rely on 2023 appropriations (EUR

98.5 million minus available appropriations 2022 (EUR 68.96 million) minus carry over 2021 (EUR 3.17 million). For the 2023 AAPs, EUR 52.54 million out of the total for AAPs of EUR 96.2 million will rely on the 2024 appropriations (for the AAP 2023 still available from the EUR 70.03 million for 2023 after multiannual decisions 2022: EUR 43,66 million).

The financial programming therefore relies on the concept of “multiannual decisions” due to the required frontloading for implementing decisions. This reflects the use of the 2021 funds (EUR 62.5 million of which EUR 60 million for Greenland and EUR 2.5 million for support measures) and the planned use in 2022 (EUR 98.5 million in Commission decisions) for the up to six OCTs that will have their territorial AAPs adopted in 2022 for which formulation work is ongoing. Moreover, the planning for 2023 foresees EUR 96.2 million in AAP decisions (of which EUR 32 million for three regional programmes, EUR 22.5 million for a Greenland programme, EUR 93.2 million for other territorial programmes and EUR 2.5 million for support measures). Therefore, the 2022 commitment appropriations are put on the ‘Territorial’ budget line. For 2023, most commitments are foreseen for the Territorial programmes with the exception of EUR 6.6 million for regional programmes; EUR 22,5 million for Greenland and EUR 2,5 million for support measures.. The needed additional EUR 25.4 million for regional programmes AAPs 2023 should come from the 2024 budget to cover the multiannual decisions.

This internal re-allocation of funds made in the years 2021 to 2023 will be fully compensated in the years 2023-2027 by corresponding linear yearly increases on the lines ‘Intra-regional programmes’, ‘Technical Assistance’, ‘Non-allocated funds’, ‘Regional’ and ‘Greenland’ and by yearly linear decreases on the ‘Territorial’ budget line, so that the total funds on each of these budget lines, at the end of 2027, remains the same as foreseen by the legislative proposal and the MFF agreement.

Due to the above mentioned challenges, it is explored how to review the profile of the instrument and transfer (frontload) appropriations between the years in order to best manage the programming exercise and the subsequent implementation of the funds.

1.9. Link with the 2014-2020 MFF

The mid-term review report (December 2017) on 10 external financing instruments, including the Greenland Decision and the 11th EDF for the other OCTs, concluded that the external financing instruments were ‘fit for purpose’. However, both the report and the consultations conducted highlighted the need for increased flexibility, simplification, coherence and performance. These lessons learned have helped to streamline the Union’s external action architecture. There is now only one dedicated financing instrument for OCTs in place, i.e. the DOAG.

The DOAG could not be included in the new NDICI or in any other legal act subject to the ordinary legislative procedure. This is because they both have a specific adoption procedure: a Council Decision by unanimity, following consultation of the European Parliament.

The guiding principle for the DOAG was to preserve what works well, while improving the partners’ ability to deliver effectively on their policies and priorities. On the other hand, the Member States concerned have firmly insisted on retaining the structure and acquis of the old Overseas Association Decision.

With the budgetisation of the European Development Fund in the 2021-2027 MFF, the EU budget is the unified source of EU financing for all OCTs.

The EU can continue to provide value to OCTs where it is often the sole cooperation partner besides the Member State to which the OCT is linked. Through budget support as the primary implementation modality, it can ensure predictability of resources.

Moreover, the EU has significant expertise and a recognised international reputation as a lead player in sustainable development in general, and in areas of cooperation most relevant to OCTs in particular

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	63.3	500.0	13%
Payments	0.7		0%

In 2021, 11 out of 15 programming documents for OCT cooperation (Multiannual Indicative Programmes) were adopted after late adoption of the DOAG in October 2021. The remaining 4 MIPs (Bonaire, Curacao, Wallis et Futuna and Caribbean OCT regional MIP) are scheduled for 2022.

Implementation of the financial assistance under the DOAG started in 2021 with three AAPs. This led to the adoption of three Commission Decisions in December 2021 for Greenland (EUR 60 million, education); support measures (Technical Cooperation Facility, EUR 1.5 million) and support to the OCT association (EUR 1 million). In addition, EUR 756 421 were committed for administrative expenditure.

In 2022, work on six AAPs for OCTs is ongoing with a total amount of EUR 98.5 million in commitments in view of Commission decisions in 2022. This preparatory work consists of six bilateral programmes (St Pierre et Miquelon, sustainable tourism (EUR 27 million); Saba, renewable energy (EUR 4.1 million); St Eustatius, sustainable agriculture (EUR 2.9 million); St Barthélemy, disaster risk management (EUR 2.5 million); French Polynesia, water and sanitation (EUR 31.1 million); New Caledonia, renewable energy (EUR 30.9 million).

For 2023, indicatively nine AAPs are envisaged with a total amount of up to EUR of 96.2 million in commitments with four for bilateral programmes in OCTs (including one for Greenland), three for regional cooperation and two for support measures. Out of these nine AAPs one regional programme for the French Southern and Antarctic Lands; biodiversity (EUR 4 million) and a programme for support measures (EUR 1.5 million) are already under formulation in 2022 in view of early adoption in 2023.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

With the adoption of three AAPs in December 2021, implementation started. However, at time of writing (February 2022) it is still too early to report on the performance assessment of these programmes

3.1.2. Active programme performance

See introductory remark under 3.1.1.

3.2. Key achievements

Regarding the DOAG the key achievement so far is the timely adoption of 11 MIPs and 3 AAPs in December 2021.

Concerning the previous cooperation period 2021-2027 (Greenland decision and EDF) the following is highlighted:

The Pacific OCTs regional programme (PROTEGE, EUR 36 million) contributes to protecting biodiversity and enhancing renewable natural resources, focusing on four priority areas: Agriculture and forestry; coastal fisheries and aquaculture; water, and; invasive species. Over the past year, the Pacific regional programme advanced notably very hands-on with the sharing of best agricultural practices among the OCTs. In particular, the second PROTEGE agro-ecology demonstration farm meeting was held in Moorea and Tahiti in November 2021 with the objective of training in crop bio-protection.

The Caribbean OCTs regional programme (RESEMBID, EUR 42.7 million) contributes to strengthen the sustainable development of Caribbean OCTs by focusing on resilience, sustainable energy and marine biodiversity. Regarding resilience and disaster risk preparedness, significant achievements were made with the finalisation of diagnostic reports on emergency preparedness and disaster response in 12 OCTs and the design of a certificate course on disaster risk financing and analytics.

In Bonaire, the EU support on youth contributed to three key milestones. Firstly, the adoption of childcare regulation and secondly, the operationalisation of two comprehensive child development centres. These centres offer a stimulating space to the youngest members of society to enhance their social, physical and intellectual potential. Strong attention is given to improve the quality of educational programmes within these centres. Thirdly, in 2021, a pilot initiative of inclusive childcare for children with special needs was introduced by six childcare organizations together with one centre's multi-disciplinary care team ensuring no kid is left behind. The pilot project is mostly aimed at children aged 1 to 12 years who have special needs.

In Saint-Pierre et Miquelon, the EU supported the implementation of the government's Strategic Development Plan, favouring economic diversification and demographic stability. The support contributed to an increase of the number of tourists (+39%) and registered companies (+27%) and a decrease of the unemployment rate from 10.1% in 2009 to 4.7% in 2019. More recently, the COVID-19 pandemic has put important socio-economic pressures on the tourism sector, but measures were undertaken to mitigate the impacts of this crisis.

The EU budget support to the education sector in Greenland (around EUR 30 million each year) contributed to making the Greenland education system more inclusive and to continue the government's reform agenda. The number of children being involved in education and receiving support from an early age continued to increase, with 75% attending pre-school in 2020 (up from 69% in 2013). While still too many students do not finish their education, the completion rates have seen a positive trajectory (up by four percentage points in 2020) and more 16-18-year-olds stay in education. Being impacted through the fishing and tourism

sector by the COVID-19 pandemic, Greenland was swiftly supported in its reaction to the crisis when variable tranches of the budget support were transformed to fixed tranches in 2020.

3.3. Evaluations, studies and reports

No evaluations under the new DOAG have yet been carried out. The mid-term review required by the legal basis is foreseen in 2024.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: To foster and support cooperation with OCTs, including in addressing their major challenges and reaching the Sustainable Development Goals.

Indicator 1: For OCTs, except Greenland, exports of goods and services as % of GDP

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									
19,2%	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	To be updated at a later date with the different data sources for each of the OCTs.
Link to the objective	This indicator can serve to assess the evolution of the competitiveness of the OCT economies, which is intimately related to the economic vulnerability of the OCT economies, and its diversification. However, this aggregate indicator covering all 12 inhabited OCTs would hardly demonstrate any clear trend specific to each OCT individually.
Link MFF 14-20 / MFF 21-27	This indicator was not used to monitor the OCTs in the 2014-2020 MFF, but it was used to monitor Greenland in the 2014-2020 MFF, as economic diversification through education was the main objective of the programme (and it covered one single OCT).
Other methodological comments	A direct contribution of the envisaged cooperation under the DOAG to the achievement of this indicator cannot be established as it does not directly support sectors generating exports of goods and services. Therefore, it is not conducive to monitor this indicator to assess the performance of the programme’s contribution nor to set milestones for this indicator that are dependent on Government’s exports related policies. Moreover, comparable and timely data are not available for all OCTs concerned and it is not expected that they will be in the future, due to the small size of some OCTs economies, their specific status (not always reflected in a separated way in statistics) and sometimes low capacity. The baseline established is a proxy calculated as an average on the basis of the data available. For 2021 no data are yet available. Regarding monitoring, DG INTPA intends to propose other indicators to measure the performance of the DOAG cooperation.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	See methodological comment. Furthermore, the baseline is mainly based on 2020 data but also includes latest available GDP data from 2019 for Sint Eustatius, 2018 for Sint Maarten and 2005 for Wallis-et-Futuna.

Indicator 2: For OCTs, except Greenland, total Government revenue as % of GDP.

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									
26,9%	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	To be updated at a later date with the different data sources for each of the OCTs.
Link to the objective	This indicator can be used to assess the evolution of the sustainability of the economies and resilience of the OCTs. However, this indicator as aggregate average of all 12 inhabited OCTs would hardly

	demonstrate any clear trend specific to each OCT individually.
Link MFF 14-20 / MFF 21-27	This indicator was not used to monitor the 2014-2020 MFF.
Other methodological comments	Comparable and timely statistical data on Government revenue and GDP are not available for all OCTs concerned. The baseline established is a proxy calculated as an average on the basis of the data available. For 2021 no data are yet available. A direct contribution of the envisaged cooperation under the DOAG to the achievement of this indicator cannot be established as the cooperation does not directly support fiscal policies (revenue generation) based on economic growth and diversification. Therefore, it is not conducive to monitor this indicator to assess the performance of the programme's contribution nor to set milestones for this indicator that are dependent on Government's policies. Regarding monitoring, DG INTPA intends to propose other indicators to measure the performance of the DOAG cooperation.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	See methodological comment. Additionally, regarding the baseline, no government revenue data was found for Bonaire, Saba and Sint Eustatius at this stage; they were therefore excluded from the calculation.

Specific Objective 2: To support and to cooperate with Greenland in addressing its major challenges such as the raising of education level and to contribute to the capacity of the administration of Greenland to formulate and implement national policies.

Indicator 1: For Greenland, exports of goods and services as % of GDP

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									
26,4%	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	Statistics Greenland: www.stat.gl
Link to the objective	This indicator can serve to assess the evolution of the competitiveness of Greenland, which is intimately related to the economic vulnerability of Greenland and its diversification beyond the fisheries sector.
Link MFF 14-20 / MFF 21-27	This indicator was not used to monitor the 2014-2020 MFF.
Other methodological comments	A direct contribution of the envisaged cooperation under the DOAG to the achievement of this indicator cannot be established as it does not directly support productive sectors but indirectly support the work force through education. Therefore, it is not conducive to set milestones for this indicator. For 2021 no data are yet available. Regarding monitoring, DG INTPA intends to propose other indicators to measure the performance of the DOAG cooperation.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	See methodological comment.

Indicator 2: For Greenland, percentage of the fisheries sector in total exports

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
2020	Milestones									
91,4%	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	Statistics Greenland: www.stat.gl
Link to the objective	The Government of Greenland wants to diversify its economy by developing other economic sectors, such as extractive industries and tourism. This to reduce its reliance on fisheries and fish processing.
Link MFF 14-20 / MFF 21-27	This indicator was used to monitor the 2014-2020 MFF, using the same name and methodology.
Other methodological comments	A direct contribution of the envisaged cooperation under the DOAG to the achievement of this

	indicator cannot be established as it does not directly support diversification. Therefore, it is not conducive to set milestones for this indicator. Regarding monitoring, DG INTPA intends to propose other indicators to measure the performance of the DOAG cooperation.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	See methodological comment.

5. The programme contribution to horizontal policies

5.1. Contribution to climate mainstreaming

5.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution		17.20	17.50	17.90	18.20	18.60	18.90	108.30	22%

(*)These amounts include NextGenerationEU top-ups if any

5.1.2. Explanation on the financial contribution

The OCTs are especially vulnerable to climate change and environmental degradation due to their geographical locations and characteristics. Environment and energy are therefore crucial areas of EU-OCT cooperation.

The DOAG sets a (non-binding) target aiming to dedicate 25 % of its envelope (EUR 500 million) for the 2021-2027 period to climate-related actions.

Through the MIPs and the formulation of programmes the Commission together with the partner OCTs will aim to achieve the climate target to the best extent possible.

9 of the 11 adopted MIPS will directly contribute to the climate action. With the adoption of the further four MIPs still pending (total amount of EUR 64.4 million) and also in view of the contribution of the intraregional envelope (up to EUR 15 million), the 25% goal will possibly even surpassed. We estimate that the implementing programmes will contribute with around 28% to the climate target. A more precise estimate will require formulation work on the implementing programmes.

The AAPs of 2021, however, only indirectly contribute to the climate target. For example, the government of Greenland is working to provide 1069 additional dormitory places across Greenland until 2027 in new or renovated buildings who are up to 50% more energy efficient. The EU supports this work, with 90% of Greenland’s MIP foreseen for the education sector. For 2020, over EUR 1 million went into more sustainable school buildings.

5.1.3. Key achievements

The ongoing 11th EDF all-OCT Thematic Programme (Green Overseas) and the Caribbean, Indian Ocean and Pacific regional programmes (EUR 97.8 million) are all dedicated to a mix of action on climate change, environment, resilience and sustainable energy, showing the vital importance of these areas to all OCTs. In its consultation and design phase Green Overseas has already allowed for an exchange on best practices and priorities on climate change adaption and resilience between OCTs, UK territories and experts. The programme will soon launch a number of pilot projects to allow the beneficiaries, who are particularly exposed to climate change, better manage the risks it poses and to move to clean energy solutions.

At bilateral level, several OCTs selected climate change/environment as the priority sectors under the 11th EDF to promote their long-term sustainable development and welfare. The most recent adopted territorial programmes under the 11th EDF are on water sanitation (Sint Maarten – EUR 7 million) and on resilient infrastructures (Curaçao – EUR 16.95 million). In Saba, the EU support under the 11th EDF substantially improved the energy mix in favour of renewable energies (with a 40% share). This development of renewables helped the island to mitigate the impacts of climate change by cutting carbons emissions and to also accelerate its low carbon transition.

5.1.4. Performance

The DOAG defines a wide range of priority areas for cooperation with the OCTs, in pursuit of their economic and human development and achievement of the Sustainable Development Goals. In the 2014-2020 period, from this array of possible cooperation priorities, climate action emerged as the common denominator in all 3 OCT regional programmes (Caribbean, Indian Ocean, and Pacific) and in the single all-OCT thematic programme. Moreover, 4 (of then 25) OCTs additionally opted for climate-related action in their bilateral cooperation programmes.

5.2. Contribution to biodiversity mainstreaming

5.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution	5.00	5.20	5.20	5.40	5.50	5.60	5.70	37.60
Share compared to total envelope	7.46 %	7.54 %	7.43 %	7.56 %	7.55 %	7.54 %	7.56 %	7.52 %

(*)These amounts include NextGenerationEU top-ups if any

5.2.2. Explanation On the financial contribution

Almost all OCTs are located in global biodiversity hotspots and account for a major part of EU biodiversity. The importance for the EU of contributing to biodiversity preservation is reflected in the (non-binding) target of 7.5% of annual spending in 2024 and 10% as of 2026 from the DOAG budget (EUR 500 million) for biodiversity actions.

Through the MIPs and the formulation and implementation of programmes the Commission together with the partner OCTs will aim to achieve these biodiversity targets to the best extent possible. Nature-based solutions and eco-tourism as well as reforms in the agriculture, water and sanitation or energy sectors are ways to contribute to biodiversity conservation in OCTs. First estimates based on the MIPs (including those four which still need to be adopted) suggest that around 10% of the total DOAG financial allocation will contribute to biodiversity during the period 2021-2027

5.2.3. Key Achievements

It is too early to report on achievements for the 2021-2027 period. However, formulation work for a dedicated follow up biodiversity programme for the TAAF under its MIP 2021-2027 (EUR 4 million) is under way.

The on-going 11th EDF Caribbean, Indian Ocean and Pacific regional programmes as well as the BEST initiative have helped OCTs to improve protection and sustainable management of biodiversity and ecosystems as well as to reinforce cooperation on environmental actions.

The Indian Ocean Regional Programme (EUR 4 million- 11th EDF) is a good example that places the protection of biodiversity in the French Southern and Antarctic Lands (TAAF) at the core of its action. This programme, called "RECI" (Restoration of Indian Ocean Island Ecosystems), aims, over the period 2019-2023, to strengthen regional skills in ecosystem monitoring, eradication of introduced species, and implementation of biosecurity measures. As of today, technical operations are in progress and important activities have already been carried out. In particular, this concerns environmental monitoring and the preparation of biodiversity protection operations. Several actions were undertaken in parallel regarding biosecurity measures, notably for the Australes islands.

5.2.4. Performance

It is too early to report on achievements for the 2021-2027 period.

In the 2014-2020 period, biodiversity emerged as one of the priorities in all 3 OCT regional programmes (Caribbean, Indian, Pacific). In particular, the Indian Ocean regional programme covering the French Southern and Antarctic Lands, will continue and broaden the work of the RECI programme presented above, in islands that are home to exceptional biodiversity, highly diverse and complex ecosystems, with a high rate of endemism among flora and fauna.

5.3. Contribution to gender equality

5.3.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 1: 60 Score 0: 3.2	Score 0*: 98.5	Score 0: 2.5 Score 0*: 93.7	Score 1: 71.25 Score 0: 1.5	Score 0: 2.5 Score 0*: 63.3	Score 1: 71.25 Score 0: 1	Score 0: 2.3 Score 0*: 7	Score 1: 202.5 Score 0: 16.3 Score 0*: 262.5

(*)Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significantly impacted**, score 0*: **impact on gender equality to be determined ex post**, score 0: **no significant impact on gender equality**.

While there was no specific target set in the 2014-2020 OAD concerning gender equality, care will continue to be taken to ensuring that all cooperation programmes include a focus on gender equality. Indeed, the DOAG explicitly states that gender equality should be mainstreamed into all actions as a key contribution to the successful achievement of the SDGs.

For instance in the case of Greenland, educational attainment and participation of girls and women has been consistently high, with 65% and 64% of enrolments and completions in upper secondary education. Women outperform men even more in higher education (72% of completions for all diplomas, all numbers for 2020). Enrolment and completion of vocational education are more equally distributed between genders (49% and 50% respectively in 2020). Factors contributing to women’s overrepresentation

in (academic and pre-academic) education is a cultural bias for men to work in traditionally male professions like fishing and hunting as well as the growing fisheries sector attracting young men without requiring formal education.

Moreover, support measures are demand-driven therefore do not specifically target gender issues and are scored 0 in the above table. The latter does not include administrative expenses. Under scores 0, there are actions which relate to support measures, administrative costs action such as for example the deployment of digital health tools.

5.4. Contribution to the sustainable development goals

Introduction

The United Nations (UN) 2030 Agenda is a compass, aiming at achieving integrated policy-making and action to sustainable development. The objective of the association between the Union and the OCTs is, as defined in the DOAG, to support the OCT's sustainable development as well as to promote the values of the UE in the wider world. The priority sectors of ongoing EU cooperation with OCTs focuses on education, environment, climate change and sustainable energy, connectivity, sustainable growth, tourism and social development/youth. This promote long-term sustainable economic development and welfare in the OCTs. In the coming years, the Green Deal could emerge as a pivotal priority given the vulnerabilities of the OCTs as islands. This could include climate action, environment, biodiversity and energy transition, as well as digital technologies, circular economy and investments for sustainable growth and jobs, which are all very relevant areas for OCTs. In addition, support to education (primary, secondary and tertiary as well as vocational training) will continue to contribute to OCT's sustainable development.

EU support to OCTs contribute to many areas of the 2030 Agenda, often interlinked, which can be illustrated by:

SDG 2 End hunger, achieve food security and improved nutrition and promote sustainable agriculture

OCTs share particular vulnerabilities, resulting in a complex set of food security and nutrition challenges. For 2021-2027, the EU will support sustainable agriculture, food security and nutrition in the Pacific region (Regional MIP, EUR 36 million) and in Sint Eustatius (EUR 2.9 million). Complementary work with other SDGs (SDG 3 on health, SDG 4 on education and SDG5 on gender equality and women's empowerment) is essential to strengthen the human development of the OCTs.

SDG 4 Quality education

Access to quality education fosters equality and is an essential pre-condition for achieving sustainable growth and jobs. This is the rationale of one of the two priority areas of EU cooperation with Greenland 2021-2027. EUR 202.5 million are earmarked for education cooperation in Greenland.

Through the Erasmus+ programme, the EU also supports OCTs in facilitating mobility of individuals, and reinforcing intercultural dialogue and understanding. OCT participation has more than doubled since 2018, in the number of both projects and beneficiaries. From 87 projects with 41 beneficiaries (total EUR 3.2 million) in 2018, participation grew to 177 projects and 95 beneficiaries (EUR 5.5 million) in 2020.

SDG 6 Clean water and sanitation

As part of the broader EU support to access to water and sanitation, interventions related to the construction of waste water collection systems and also of treatment facilities contribute to delivery on SDG 6. The Multiannual Indicative Programme 2021-2027 for French Polynesia will invest up to EUR 31.1 million in the priority area of water and sanitation.

SDG 7 Affordable and clean energy

Sustainable energy is key to achieving the 2030 Agenda and Paris Agreement targets and meeting the long-term objectives of the clean energy transition and decarbonisation process. The Multiannual Indicative Programmes 2021-2027 for New Caledonia (EUR 30.9 million), Sint Maarten (EUR 7.7 million) and Saba (EUR 4.1 million) will support the sustainable energy transition through the development of the necessary policy, legal framework and infrastructure in the energy sector, providing further impetus to ensure access to sustainable energy.

SDG 8 Decent work and economic growth

The EU envisaged support 2021-2027 to sustainable tourism (Saint Pierre et Miquelon, EUR 27 million), green growth (Greenland, EUR 22.5 million), sustainable agriculture (Sint Eustatius, EUR 2.9 million) and e-government (Aruba, EUR 14.2 million) will drive progress in ensuring sustained economic growth, full employment and decent work.

SDG 13 Climate action, SDG 14 Life below water and SDG 15 Life on land

The OCTs are especially vulnerable to climate change and environmental degradation due to their geographical locations and characteristics. The ongoing all-OCT Thematic Programme Green Overseas and the Caribbean, Indian Ocean and Pacific regional programmes (for a total of EUR 97.8 million) from the 11th EDF are all dedicated to ensuring the sustainable use of natural resources, protecting biodiversity and supporting climate actions and resilience, showing the vital importance of these areas to all OCTs.

EU support to protect biodiversity will continue to be the priority area for cooperation with the French Southern and Antarctic Lands in 2021-2027 (EUR 4 million). This will build on the ongoing Indian Ocean Regional Programme (EUR 4 million) which aims at improving the surveillance and observation of terrestrial and marine ecosystems in the French Southern and Antarctic Lands, restoring ecosystems and reinforcing impact prevention mechanisms. The Multiannual Indicative Programmes 2021-2027 for Saint-Barthélemy (EUR 2.5 million) will also support disaster risk management and climate adaptation.

In addition, the on-going BEST Initiative has helped OCTs to promote EU's environmental standards and provided an incentive for local actors to engage in environmental actions. The new LIFE programme 2021-2027 will continue to scale up the actions in OCTs on biodiversity and nature conservation. All these programmes focus therefore on translating SDG 13, 14 and 15 into effective results on the ground and will prepare the work for the future.

The European Green Deal will provide further impetus to reinforce EU-OCT cooperation on environment and climate change as well as to incentivize solutions to these global challenges.

SDG 17 Partnerships for the goals

Successful sustainable development requires partnerships. The 2019-2024 Commission took office with the mandate to ensure a stronger Europe in the World. The geopolitical Commission strives to advance through partnerships EU strategic interests and objectives abroad and defends a rules- and values-based international order in an increasingly polarised world. The special relationship between the Union and the OCTs is based on the association of the OCTs with the Union, which constitutes a partnership. This principle of partnership is embedded in the DOAG, which is the framework for political and policy dialogue and cooperation on issues of common interest. The progress achieved so far shall be consolidated and reinforced in the coming period.

HEADING 6: Neighbourhood and the World

Macro-Financial Assistance

Lead DG: ECFIN

6.5. Contribution to the sustainable development goals	1118

1. Overview

1.1. Challenges

The economic stability and prosperity of its neighbourhood are of key geo-strategic importance for the EU. In particular, all Member States of the EU have a strong interest to support neighbouring countries experiencing a balance-of-payments crisis or an unprecedented economic shock (such as the COVID-19 pandemic), in order to minimize adverse macroeconomic and social spill overs. EU-level action is thereby justified as the benefits of prosperity, stability and security in the EU's neighbourhood flow to all EU Member States.

In its neighbourhood, the EU will make an important contribution to improved economic stability and resilience through the provision of Macro-Financial Assistance (MFA).

1.2. Mission (General objectives)

[MFA](#) is an EU financial instrument extended to partner countries in the enlargement and European Neighbourhood Policy regions that are experiencing a balance-of-payments crisis. Its primary objective is to help countries overcome acute economic crises and restore their economy on a sustainable growth path, which is to be achieved through economic adjustments and structural reforms that are included in the policy conditionality of the instrument. MFA is provided in conjunction to International Monetary Fund (IMF) financing.

MFA is part of the EU's toolkit for macroeconomic stabilisation, which includes also the Balance-of-Payments assistance mechanism for Member States outside the euro area, and the rescue mechanisms for the euro area created in response to the global financial crisis.

MFA contributes to both short-term stabilisation and medium- to long-term economic stability of countries around the EU's borders. This dual impact, is derived from the instrument's two-pronged approach. **Its primary and most immediate objective** is to help countries overcome an acute economic crises by contributing to an external financing gap and thereby restoring confidence and an adequate international reserve position. **The second objective** is to spur lasting change through structural reforms; this

contribution to medium- and long-term stabilisation is achieved through policy conditionality. The combination of a set of agreed policy reforms that all need to be fulfilled in a context of an acute need of beneficiary countries for emergency funding tends to increase the traction of MFA conditionality compared with non-emergency, programmable support instruments. Thus, MFA endows the EU with significant policy leverage in beneficiary countries. Importantly, through its stabilisation and reform impetus in favour of a sound macroeconomic environment, MFA also complements and supports the efficiency of other EU external action instruments.

Primarily in the form of loans, extended at concessional terms, MFA operations increase the effectiveness of the EU budget through the leverage effect.

In the current COVID-19 crisis, MFA to neighbourhood and candidate countries supports external stabilisation and thereby provides authorities with policy space to implement measures to counter the economic fallout from the pandemic, while also encouraging the implementation of reforms.

1.3. Specific objectives

- **MFA fulfils a fundamental macroeconomic stabilisation function**, by addressing exceptional external financing needs faced by neighbouring countries and restoring their economy back to a sustainable path.
- **MFA provides a strong incentive for macroeconomic adjustment and policy reform** by means of strict conditionality, and supports the EU's accession, pre-accession and association agendas in the beneficiary countries.
- **MFA complements the other EU external instruments as well as resources made available by International Financial Institutions (IFIs) and other donors**, by helping to ensure that appropriate macroeconomic frameworks and sound economic policies are put in place in the beneficiary countries – which are preconditions for the success of other projects aiming at sustainable socio-economic development by the EU and the donors' community.

1.4. Public intervention context

Shared competences (Article 4 of the TFEU): the EU and EU countries are able to legislate and adopt legally binding decisions on MFA. Throughout the MFF 2021-2027, MFA will continue to be granted on the basis of case-by-case Decisions adopted by Ordinary Legislative Procedure (OLP) under Article 209, 212 or 213 TFEU. In turn, the Union's operations and those of the Member States complement and reinforce each other. The MFA decision-making process will remain separate from the new Neighbourhood, Development and International Cooperation Instrument (NDICI), proposed by the Commission in June 2018 in the context of the MFF 2021-2027 package.

MFA complements EU assistance under the 'programmed' instruments (e.g. Instrument for Pre-Accession Assistance-II (2014-2020), now IPA-III (2021-2027)) and maximises its effectiveness by alleviating the risks of disruption of the regular EU cooperation framework whilst at the same time laying the basis for structural change and sustainable economic and social development of the beneficiary countries. MFA is also complementary to the other EU crisis response mechanisms (e.g. the Instrument contributing to Stability and Peace and humanitarian aid) and EIB lending. Furthermore, by complementing the resources made available by the International Financial Institutions (particularly the International Monetary Fund) and other donors, EU MFA contributes to the overall impact and effectiveness of the financial support agreed by the international donor community.

1.5. Actions

MFA provides financial support to partner countries facing a balance of payments crisis. The amount of MFA provided is calculated on the basis of the residual financing needs under an International Monetary Fund (IMF) programme, as assessed by DG ECFIN. MFA is predominantly provided in loans, or a mix of loans and grants (the precise mix in any specific assistance depends on criteria such as the receiving country's level of development and its debt sustainability/creditworthiness). For the loans, the EU passes on to the beneficiary country its own funding costs (namely, the interest rate it has to pay to raise funds by issuing bonds). This allows the countries receiving assistance to benefit from the low rates available to the EU as a top-rated borrower.

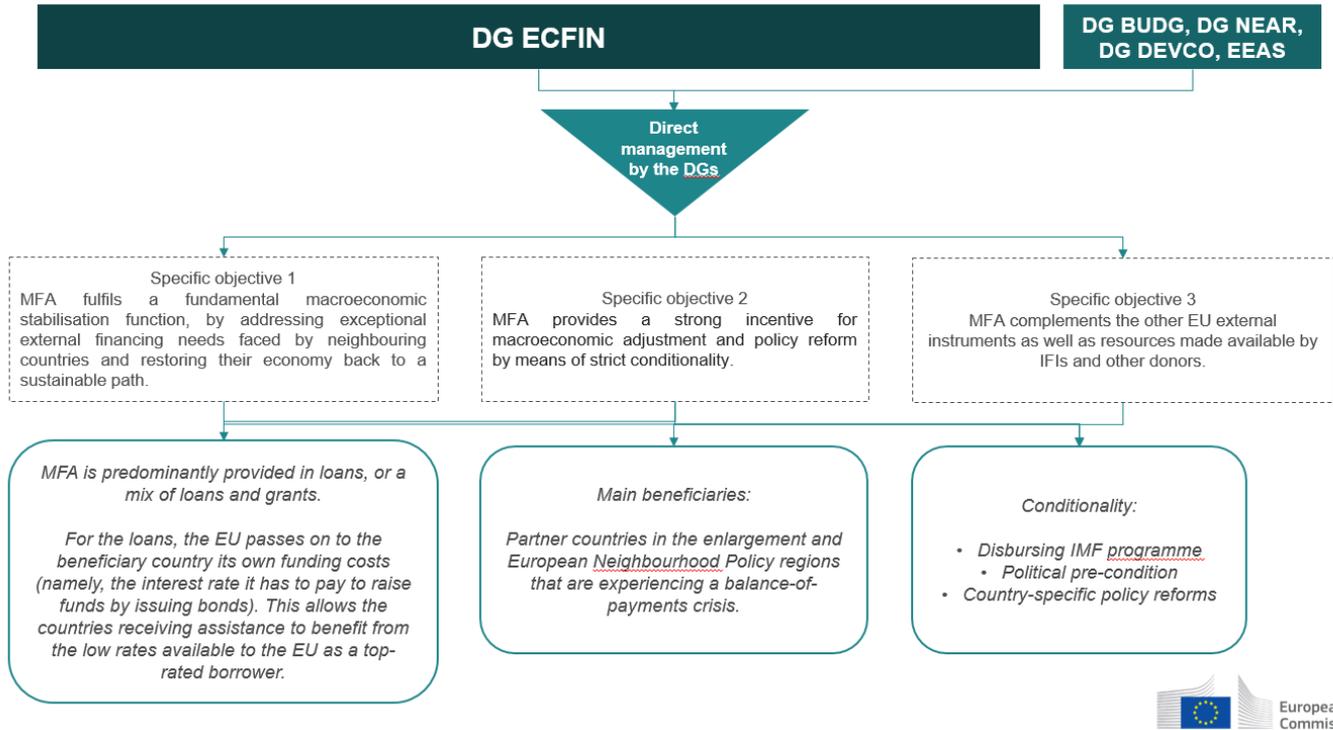

The Commission typically disburses MFA assistance in instalments strictly tied to the beneficiary country's progress with respect to:

- macroeconomic and financial stabilisation and economic recovery;
- implementation of the agreed policy reforms, as outlined in the Memorandum of Understanding.
- sound progress with the IMF programme, and adherence to the respect for human rights, rule of law and effective democratic mechanisms (the so called 'political pre-condition').

1.6. Delivery mode

MFA is implemented in direct management, under the lead of DG ECFIN and with the participation of other Commission services and the EEAS.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

MFA is exceptional in nature and is mobilised on the basis of case-by-case Decisions adopted by Ordinary Legislative Procedure (OLP) under Article 209, 212 or 213 TFEU¹.

In addition to the legal base mentioned above, the MFA loans are provisioned at a rate of 9% by the new External Action Guarantee (EAG) within the Regulation of the European Parliament and of the Council establishing the Neighbourhood, Development and International Cooperation Instrument (NDICI) – Global Europe (Regulation (EU) 2021/947 final). The EAG is backed by the new Common Provisioning Fund.

1.8.2. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total

[Decision \(EU\) 2020/701 of the European Parliament and of the Council of 25 May 2020 on providing macro-financial assistance to enlargement and neighbourhood partners in the context of the COVID-19 pandemic;](#)
[Decision \(EU\) 2020/33 of the European Parliament and of the Council of 15 January 2020 providing further macro-financial assistance to the Hashemite Kingdom of Jordan.](#)

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Contributions from other countries and entities								

(*) Only Article 15(3) of the financial regulation.

The provisioning for MFA loans (EAG) will have to cover for an indicative pipeline of new MFA operations for both 2022 and 2023 that has increased significantly in size. In addition to new MFA loan operations in 2022 for Ukraine and Moldova², respectively for EUR 1.2 billion and EUR 150 million, other new MFAs for Ukraine, Lebanon and Tunisia would potentially amount to an additional EUR 3.5 billion of MFA loans. In this respect, provisioning for MFA loans is subject to an increase to EUR 162.6 million in 2023, in order to reach EUR 433.8 million in commitments for 2021-2023, which would cover for the possible new MFAs for a total amount of up to EUR 4.82 billion until the end of 2023. The increase is compensated in 2024, keeping the overall MFA provisioning unchanged over the MFF period.

With respect to commitment appropriations for MFA grants, the amount committed for 2023 is EUR 56.8 million. This amount intends to cover possible new requests for MFA that could materialise in 2023, and that could lead to grant disbursements in 2024. More specifically, a new MFA to Lebanon and a new regular MFA to Ukraine could both entail a grant component.

Moreover, the commitments under this Budget line would cover the ex post evaluation for the COVID-19 MFA package, which is also envisaged for 2024.

1.9. Link with the 2014-2020 MFF

In the 2021-2027 MFF, MFA will maintain its current legal status, with assistance being granted on the basis of case-by-case Decisions adopted by Legislative Procedure under Article 209, 212 or 213 TFEU. MFA will remain separate from the new Neighbourhood, Development and International Cooperation Instrument (NDICI).

Under the 2014-2020 MFF, the provisioning for the guarantee for MFA loans was covered under the Guarantee Fund for External Action, to the extent that disbursement of MFA loans in year n were budgeted in n+2. Under the 2021-2027 MFF, the provisioning rules under the External Action Guarantee established under NDICI-Global Europe, backed by the Common Provisioning Fund were changed.

To cover for ongoing MFA operations that entered into force during the 2014-2020 MFF (disbursements in 2021, 2022 and 2023), specific “legacy operations” budget lines have been created.

The website on Macro-Financial Assistance is available at: https://ec.europa.eu/info/business-economy-euro/economic-and-fiscal-policy-coordination/international-economic-relations/macro-financial-assistance-mfa-non-eu-partner-countries_en

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments ⁽¹⁾	0.2	349.6	0%
Payments ⁽¹⁾	0.4		0%

As part of the EU's global response to the COVID-19 pandemic, in 2020 the EU approved³ EUR 3 billion of Macro-Financial Assistance to 10 enlargement and neighbourhood partners to help them cope with the economic fallout. MFA operations under Decision (EU) 2020/701 were further implemented in 2021. Seven of the programmes launched between 2020 and 2021 were successfully completed in full, while the MFA operation to Georgia was only partially disbursed due to not meeting the policy

² The COM proposal for a new MFA operation to Moldova is currently awaiting endorsement by the European Parliament and the Council.

³ Decision (EU) 2020/701 of the European Parliament and of the Council of 25 May 2020 on providing macro-financial assistance to enlargement and neighbourhood partners in the context of the COVID-19 pandemic.

conditions. Two remaining programmes are currently under implementation, with the disbursement of the final tranche foreseen for 2022.

In addition, in 2022 the third regular MFA to Jordan is also expected to be finalised. The provisioning for the guarantee for these operations are covered under budget lines 15.020203.03 MFA – IPA III - provisioning MFA-loans legacy and 14.020170.07 NDICI - provisioning for MFA-loans legacy.

At the end of 2021, the Commission also received two official requests for MFA from Moldova and Ukraine. The Commission's proposal for an additional MFA to Moldova of EUR 150 million is currently awaiting endorsement by the European Parliament and the Council, with a view to have a first disbursement by June 2022. In light of Russia's current invasion of Ukraine, on 24 February 2022 the European Parliament and the Council adopted a Decision to provide an emergency Macro-Financial Assistance to Ukraine, in the form of EUR 1.2 billion of loans. The release of the first instalment of EUR 600 million took place in March 2022.

The provisioning for MFA loans (EAG - budget line 14.020170.06) will have to cover for an indicative pipeline of new MFA operations in the neighbourhood for both 2022 and 2023 that has increased significantly in size. In this respect, provisioning for MFA loans is subject to an increase to EUR 162.6 million in 2023, in order to reach EUR 433.8 million in commitments for 2021-2023 (see 1.8.4 above).

With respect to Budget line 14.200301, in 2021 the joint ex post evaluation of MFA-II interventions to Tunisia and Jordan was completed, together with a meta-evaluation of MFA operations concerning the period 2010-2020. Payments appropriations for 2022 allow for the disbursement of EUR 20 million in grants, envisaged for the first two tranches of the ongoing MFA to Moldova.

The amount committed for Budget line 14.200301 in 2023 refers to EUR 56.8 million. This amount intends to cover possible new requests for MFA that could materialise in 2023, and that could lead to grant disbursements in 2024. More specifically, a new MFA to Lebanon and a new regular MFA to Ukraine could both entail a grant component. Moreover, the commitments under this Budget line would cover the ex post evaluation for the COVID-19 MFA package, which is also envisaged for 2024. With respect to 2023 payments appropriations concerning MFA grants, the EUR 40 million would allow to pay the remaining tranche of the new MFA to Moldova, together with the combined ex post evaluation of MFA operations to Ukraine, Moldova and Georgia implemented between 2017 and 2020. The amount would also account for the possibility to grant an MFA to Lebanon already in the coming months.

3. How is the programme performing ?

3.1. Performance

3.1.1. Active programme performance

In 2021, MFA operations under Decision (EU) 2020/701, to provide assistance in the context of the COVID-19 pandemic, were further implemented. By the end of 2021, eight of the planned operations have been concluded, with a total disbursement of EUR 2.5 billion in loans between 2020 and 2021. The MFA-package came on top of the 'Team Europe' package, the EU's robust and targeted response to support enlargement and neighbourhood partner countries' in tackling the pandemic, reaching almost EUR 40 billion.

Seven of the eight programmes initiated in 2020-2021 were successfully completed in full, with the disbursement of the second and final tranche for the following countries: North Macedonia (for a total disbursement of EUR 160 million), Kosovo (EUR 100 million in total), Montenegro (EUR 60 million in total), Jordan (EUR 200 million in total), Moldova (EUR 100 million in total), Ukraine (EUR 1200 million in total) and Albania (EUR 180 million in total).

The MFA operation to Georgia agreed under the above mentioned Decision, on the other hand, was only partially completed. While the first disbursement of EUR 75 million took place in November 2020, the second instalment was cancelled by the Commission following the decision of Georgia to refrain from requesting it, and in view of the non-fulfilment of an important policy condition related to the judicial system.

The two remaining programmes for Bosnia and Herzegovina (EUR 250 million in total, to be disbursed in two tranches) and Tunisia (EUR 600 million, two tranches) were also started in 2021. Implementation is progressing, with both countries having already received the first disbursement. The Commission is ready to release the second tranche in 2022, upon completion of the policy conditions envisaged in the MoU.

Besides the financial assistance foreseen in context of the COVID-19 pandemic, the implementation of a third regular MFA programme for Jordan (EUR 500 million, in three tranches) was also taken forward, with the release of the second tranche (EUR 200 million in loans) on 20 July 2021.

As an overview, in 2021 alone a total amount of EUR 1.665 billion in loans was disbursed to support the financial stability of EU partner countries and help them limit the economic fallout of the COVID-19 pandemic⁴.

In 2021, the Commission also received two other official requests for MFA that materialised in 2022:

Moldova

In light of the on-going post-pandemic economic recovery as well as facing a gas crisis that began in October 2021, Moldova made a request for a new MFA operation in November. The request came following Article IV consultations by the IMF and the signing of a new staff level agreement of Extended Credit Facility/Extended Fund Facility USD 558.3 million, adopted by the Executive Board on 20 December. Based on this, and following a careful assessment of Moldova's external financing needs, the Commission made a proposal for a new MFA operation of up to EUR 150 million, including EUR 120 million in loans and EUR 30 million grant component. The Decision to provide additional Macro-Financial Assistance to Moldova was adopted by the European Parliament and the Council on 6 April 2022. A first disbursement is foreseen by June 2022.

Ukraine

In light of Russia's unjustified and unprovoked invasion on Ukraine, and against the backdrop of the loss of access to international capital markets, on 24 February 2022 the European Council and the Parliament adopted a Decision to provide an emergency Macro-Financial Assistance to Ukraine, in the form of EUR 1.2 billion in loans. The release of the first instalment of EUR 600 million, in two tranches, took place in March 2022.

MFA has gained increasing prominence in the EU's external toolbox, aiming to address exceptional financing needs of countries that are geographically, economically and politically close to the EU. Since 1990, the EU has made available a number of MFA operations in candidate, potential candidate and neighbourhood countries, for a total amount of over EUR 16 billion. Since 2014, around EUR 6.3 billion have been disbursed and an additional EUR 1.665 billion have been disbursed in 2021 (predominantly related to the COVID-19 MFA package adopted in May 2020, with the exception of the first tranche of MFA-III to Jordan).

Throughout 2014-2020, MFA has been instrumental in supporting partners in the eastern and southern neighbourhood faced with conflict and political transitions and, in turn, a deterioration of their economies and financial situation.

In the eastern neighbourhood, MFA was particularly instrumental in helping Ukraine to stabilise the macroeconomic situation and undertake the necessary reforms to bring the economy on a sustainable growth path. Indeed, since 2014, a total of EUR 3.8 billion was disbursed to Ukraine under three regular MFA operations. Under the COVID-19 MFA operation adopted in 2020, another EUR 1.2 billion were disbursed to Ukraine. In effect, MFA has proven to be an important tool to address an acute balance of payments crisis and support reforms in public finance management, anti-corruption, financial sector restructuring, trade and taxation and energy.

More recently, an emergency MFA operation of EUR 1.2 billion has been adopted, to provide financial support to Ukraine, in light of the ongoing conflict with Russia.

In the southern neighbourhood, MFA was also instrumental in helping Tunisia respond to the economic downturn it has faced following the 2011 revolution and the economic and political transition process that ensued. Indeed, since 2014, a total of EUR 2.0 billion have been made available to Tunisia under two regular MFA operations and a COVID-19 MFA. The MFA programmes helped redress Tunisia's fiscal and external balances, whilst having a considerable focus on policies to foster employment and provide financial support to the poorer sections of society. Additionally, in Jordan, a total of EUR 900 million have been made available under two regular MFA programmes since 2014, and the COVID-19 operation. The assistance has helped the country to deal with pressing economic and social issues arising from regional conflicts and the refugee flows from Syria and Iraq. More generally, the assistance helped Jordan to address immediate external and fiscal financing needs, whilst encouraging structural reforms and contributing to macroeconomic stability in a very challenging economic and regional context.

The independent *ex-post* evaluations carried out so far conclude that MFA operations do contribute, albeit sometimes modestly and indirectly, to the improvement of external sustainability, the macroeconomic stability and the achievement of structural reforms in the recipient country. In most cases, MFA operations had a positive effect on the balance of payments of the beneficiary country and contributed to relax their budgetary constraints. They also led to a slightly higher economic growth.

Hard data in the individual *ex-post* evaluations show that, despite a challenging external environment at the inception of the respective MFA operations, market access could be maintained or regained in all the operations implemented between 2010 and 2020⁵. With reference to the same time period, reserve adequacy and current accounts mostly improved during the MFA operations, while inflation subsided. Larger support and the complementarity of expertise and policy conditions between the Commission and the IMF in synchronised operations made the overall assistance more impactful. Also, the cooperation increased the Union's leverage to push for reforms.

⁴ The amount includes the final tranche for the seven COVID-19 MFA operations started in 2020 and not yet concluded (excluding Georgia), the full amount for the COVID-19 MFA to Albania, and the first tranche for Bosnia and Herzegovina and Tunisia. The second tranche of the regular MFA III to Jordan is also counted.

⁵ Analysis carried out in the Meta-evaluation of Macro-Financial Assistance operations (2010 – 2020).

In general terms, the decision-making process of MFA operations implemented between 2010 and 2020 was considered lengthy for a crisis instrument. However, the experience with the COVID-19 MFA package and the new emergency MFA to Ukraine shows that the current setup of MFA can allow for the flexibility necessary for a swift adoption. The Commission worked with the Parliament and the Council to agree on the use of existing urgency procedures which allowed for the assistance to be adopted within one month of the Commission's proposal and by both co-legislators (whereas using Article 213 TFEU, in a situation where the assistance was urgently required, would have implied an adoption by the Council only). The European Parliament invoked a specific clause (Rule 163) in their Rules of Procedure, which permitted to immediately adopt the Decision in Plenary, without having to go through the INTA Committee, as is regular practice.

MFA operations proved to be effective in supporting the implementation of key structural reforms in beneficiary countries.

The case of MFA-III to Ukraine provides a relevant example. The magnitude and favorable terms of the intervention allowed for fiscal savings, necessary for the implementation of structural reforms, and increased confidence in the Ukrainian economy. MFA conditionality created a politically reinforcing effect that contributed to the mobilisation of Ukrainian authorities around crucial reforms in the area of: public-finance management; energy sector; business environment; governance and transparency; social-safety net; and financial sector. Anti-corruption conditions under MFA-III were subsequently taken forward as part of MFA-IV, underlining the shared intention by the EU and the Ukrainian Government to concentrate efforts on pushing for steady progress in this critical reform area.

All evaluations highlight that an important attribute of the EU MFA versus alternative sources of financing is its highly concessional terms, i.e. relatively low interest rates, long maturity and long grace period. This generates fiscal space and contributes to public debt sustainability in the beneficiary countries.

The ex-post evaluations also confirm that previous MFAs were implemented efficiently, and were well coordinated with other EU programmes and with programmes of other donors (notably, the IMF and World Bank). Indeed, the EU's MFA complements and is conditional on the existence of an adjustment and reform IMF programme in the beneficiary country. MFA policy conditionality is separate from the IMF conditionality, but complementary and/or reinforcing. Recent experiences show that the presence of two independent but coordinated programmes reinforces the capacity of delivering results, through complementary conditionality and combined financial resources.

The evaluations also note the shortcomings of each MFA operation, with the most common ones being the lack of visibility of the MFA operation, and in certain cases, the speed of the legislative approval process.

As mentioned, disbursement under the proposed MFA programmes is conditional on the fulfilment of political pre-conditions, good progress by the beneficiary country with the IMF programme and on the implementation of the policy measures agreed in the MoU. In turn, each disbursement of MFA reflects good progress by the beneficiary country in implementing the country-specific measures agreed with the EU.

MFA disbursements are sometimes delayed compared to initial expectations. External factors that might be impacting programme timelines include:

- The beneficiary country does not fulfil the political pre-conditions.
- The IMF Programme in the beneficiary country is off-track or expired.
- The implementation of agreed reforms are affected by capacity constraints and institutional weaknesses.
- Changes of government result in shifting policy priorities.

More details on past MFA operations, including under the current MFF, can be found in the Annual Report from the Commission to the European Parliament and the Council on the implementation of Macro-Financial Assistance to third countries, and related Staff Working Document.⁶

3.2. Key achievements

EUR 1.7 billion	10 MFAs	EUR 6.2 billion	EUR 1.04 billion	EUR 1.08 billion
was disbursed in 2021 to support the financial stability of EU partner countries, also in the context of the COVID-19 crisis.	MFA operations received disbursements in 2021.	in loans was disbursed to Ukraine under three regular MFA operations since 2014, and two emergency operations in 2020 and 2022.	in loans have been made available to Tunisia between 2014 and 2021, to support the country in responding to the economic downturn following the 2011 revolution, the economic and political transition process, and the economic recovery post COVID-19.	in loans was made available to Jordan between 2013 and 2021, to support the country after pressing regional conflicts and the COVID-19 pandemic.

⁶ Available at : https://ec.europa.eu/info/business-economy-euro/economic-and-fiscal-policy-coordination/international-economic-relations/macro-financial-assistance-mfa-non-eu-partner-countries_en#documents

3.3. Evaluations, studies and reports

In line with the EU Financial Regulation and the corresponding MFA decisions, the Commission conducts ex post evaluations after completion of MFA programmes to assess their impact. This is normally carried out within two years from the end of the availability period defined in the legislative decision granting assistance. The objective is twofold: (i) to analyse the impact of MFA on the economy of the beneficiary country and in particular on the sustainability of its external position; (ii) to assess the added value of the EU intervention.

In 2021, the following evaluations were undertaken, which are expected to be finalised by mid-2022:

- The joint evaluation on MFA II to Tunisia and Jordan: the external study concludes that the size, form and timing of the operations were relevant and appropriate to the countries' financing needs, providing EU added value. In both countries, the MFA had a positive impact on debt sustainability and played a positive role in promoting macroeconomic stabilisation. Conditionality was relevant, focused on key reform areas. The operations were coherent with the policy framework. They supported positive change in some reform areas, despite mixed progress in some other specific reforms. From a regional perspective, it can be reasonably assumed that the impact and spill-overs on the MENA region of the two MFAs were relatively limited and mostly associated with less measurable channels (confidence effect).
- The meta-evaluation of MFA operations assessed between 2010 and 2020: the overall assessment of the MFA instrument over the meta-evaluation period by external evaluators is very positive. MFA was overall effective in stabilising the beneficiary's (external) macroeconomic environment, especially in the short and medium-term. Notably, hard data in the individual ex-post evaluations show that:
 - o Despite a challenging external environment at the inception of the respective MFA operations, market access could be maintained or regained in all cases⁷.
 - o Reserve adequacy and current accounts mostly improved during MFA operations, while inflation subsided.

Larger support and the complementarity of expertise and policy conditions between the Commission and the IMF in synchronised operations made the overall assistance more impactful. Also, the cooperation increased the Union's leverage to push for reforms.

In April 2021, the European Commission published the Staff Working Document on the ex post evaluation of MFA-III to Ukraine⁸.

The evaluation found that MFA-III was highly relevant in terms of its objectives, financial envelope and policy conditions. MFA conditionality addressed the main reform challenges in Ukraine, namely: public-finance management; energy sector; business environment; governance and transparency; social-safety net; and financial sector. Although the number of conditions in MFA-III reflects the exceptional size of the assistance (more money for more reforms), a smaller number may have helped the authorities focus on key priorities and keep ownership high. In line with this insight, the Commission chose a more focused approach to the conditionality in the subsequent MFA-IV operation.

Nonetheless, MFA-III proved to be effective in supporting fiscal consolidation and helping Ukraine to improve its balance-of-payments position. The magnitude and favourable terms of the intervention allowed for fiscal savings, necessary for the implementation of structural reforms, and increased confidence in the Ukrainian economy. The MFA intervention had both direct and indirect positive social impacts on Ukrainian population, strengthening the social safety net and protecting low-income households against higher prices resulting from energy reforms, through compensation schemes. Overall, the majority of social indicators has improved in the concerned period. Finally, MFA-III had a crucial role in the sustainability of Ukraine's public debt through a variety of channels, including a signalling effect that acted as a catalyst for additional financial support and investor confidence. The programme allowed for fiscal savings, stemming from the highly favourable loan terms, helping Ukraine to smooth its adjustment path and create fiscal space for reforms and sustained social spending.

All final reports of completed ex-post evaluations of MFA operations are published on https://ec.europa.eu/info/evaluation-reports-economic-and-financial-affairs-policies-and-spending-activities_en

General note: Given the specificities of MFA, a precise assessment of its impact is difficult to make, as effects on macroeconomic variables over time cannot be uniquely attributed to MFA operations. In addition, as MFA is by nature a short-term crisis related instrument spanning over 2 to 3 years maximum, it is not possible to quantify its objectives in terms of indicators/milestones beyond the horizon of the MFA operations themselves or, at most, of the beneficiary countries' programmes agreed (or to be agreed) with the IMF.

4. The programme contribution to horizontal policies

4.1. Contribution to gender equality

⁷ The meta-evaluation covered fifteen macro-financial assistance operations, implemented and evaluated between 20120 and 2020.

⁸ [Staff Working Document \(SWD\(2021\) 74 final\)](#)

4.1.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*: 0.2							

(*Consolidated and updated comparable information for the annual expenditures adopted, estimated or programmed for the 2021-2027 programming period (totals by programme **in EUR Million**)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significantly impacted**, score 0*: **impact on gender equality to be determined ex post**, score 0: **no significant impact on gender equality**.

MFA is exceptional in nature and is mobilised on a case-by-case basis to help countries dealing with serious balance-of-payments difficulties. Its objective is to restore a sustainable external financial situation, while encouraging economic adjustments and structural reforms. There is a wide range of areas that the 2020 structural reforms in different countries targeted, including business environment, labour market, energy and transport. The pre-conditions for a country to benefit from MFA include, inter alia, the requirement to respect human rights and effective democratic mechanisms, and the rule of law.

While gender equality was not directly targeted in the context of macro- financial assistance provided in 2021, given the structural and far-reaching character of the reforms supported it is likely that the programme has an impact on gender equality. For the remainder of the MFF 2021-2027, the programme will explore to which extent the gender dimension can be strengthened

4.2. Contribution to the sustainable development goals

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

MFA related activities pertain to:

- (a) Supporting macro-financial stability and promoting growth-enhancing reforms outside the EU, including through regular economic dialogues with key partners and by providing macro-financial assistance; and
- (b) Supporting the enlargement process and the implementation of the EU enlargement and neighbourhood policies and other EU priorities in partners by conducting economic analysis and providing policy assessments and advice.

In 2021, a total of EUR 1 665 billion in loans was disbursed to support the financial stability of EU partner countries and help them limit the economic fallout of the COVID-19 pandemic.

1. Overview

1.1. Challenges

For candidate countries and potential candidates, the path towards accession to the EU is a process of gradual and steady convergence with membership criteria and the values and principles of the European Union. This process has been enhanced by the revised methodology adopted in 2020, which strengthens the role of the fundamentals (rule of law, fundamental rights, the functioning democratic institutions and a market economy) and puts them even more at the centre of the progress to be achieved to move forward on the EU path. Ensuring progress on the fundamentals remains a key challenge that the Instrument for Pre-Accession Assistance (IPA) will continue to pursue. The climate of disillusionment over the pace of enlargement is visible in the region and risks to hamper the political will for reforms. The overall worsened political context and the lack of progress on the political dialogue between Pristina and Belgrade represent a challenge for enhanced regional cooperation.

On the same line, it will be of utmost importance to address the socio-economic divide between the IPA beneficiaries and the EU. The Western Balkans economies, in particular, face structural problems linked to weak competitiveness, high unemployment and significant brain drain, all challenges that have been further compounded by the COVID-19 pandemic and its negative long-lasting effects on the social and economic tissue of the countries. These challenges will have to be addressed in a wider context where transition to a sustainable, socially just, resilient and climate neutral economy needs to be achieved as a global imperative and where digital transformation will continue to shape economies and societies, including those of the IPA beneficiaries.

Given the backsliding by Turkey in reforms linked to the fundamental pillars of the enlargement strategy, IPA support has been significantly reduced in recent years. Within the framework of the 2016 EU-Turkey Statement, the European Union has delivered on its pledge to support Turkey in its refugee hosting efforts. During 2016-2019, the EU mobilised a total of EUR 6 billion in EU budget and Member State contributions for this particular purpose and implemented via existing financing instruments, including IPA II. Following the European Council conclusions of June 2021, the Commission put forward a proposal for additional EUR 3 billion funded exclusively from the EU budget to continue support to refugees and host communities, and with EUR 1 billion commitment per year as of 2021. Funding from IPA III will be made available in this framework. Due to the protracted nature of the refugee crisis, the assistance will continue the shift from humanitarian to development aid, already started in the framework of the second tranche of the Facility for Refugees in Turkey, with the double objective of ensuring continuity of support while transitioning to the national structures. In light of the evolution of bilateral relations, IPA III assistance will further strengthen the links between the political framework of our relations with Turkey. Hence, EU financial support will prioritise key areas, notably civil society, people to people contact, climate change and proper functioning of the Customs Union. Overall, strong political steer and well-defined conditionality will be crucial elements of programming IPA III assistance.

1.2. Mission (General objectives)

The general objective of IPA III is to support the beneficiaries in adopting and implementing the political, institutional, legal, administrative, social and economic reforms required by those beneficiaries to comply with Union values and to progressively align to Union rules, standards, policies and practices with a view to future Union membership, thereby contributing to mutual stability, security, peace and prosperity.

Current beneficiaries, listed in Annex I to the Regulation (EU) No 2021/1529 of the European Parliament and of the Council establishing the Instrument for Pre-Accession Assistance (IPA) III, are: Albania, Bosnia and Herzegovina, North Macedonia, Kosovo¹, Montenegro, Serbia, and Turkey.

In line with the Commission's objectives, IPA III aims to support beneficiaries in spurring the long-term recovery underpinned by the twin green and digital transitions.

Reflecting the importance of tackling climate change and promoting sustainable development in line with the Union's commitments to implement the Paris Agreement and the Sustainable Development Goals (SDGs), IPA III contributes to mainstreaming climate action in the Union's policies and to the achievement of an overall target of 30 % of Union budget expenditure supporting climate objectives and the ambition of 7,5 % of the budget reflecting biodiversity expenditures in 2024 and 10 % in 2026 and 2027, while taking into account the existing overlaps between climate and biodiversity goals. Actions under IPA III are expected to contribute 18 % of the overall financial envelope of the Programme to climate objectives, with the objective of increasing this percentage to 20% by 2027.

The implementation of the IPA III Regulation should be guided by the principles of gender equality and the empowerment of women and girls, and should seek to protect and promote women and girls' rights in line with the EU Gender Action Plans and relevant Council conclusions and international conventions, including the Council conclusions on women, peace and security of 10

¹ This designation here and throughout the Programme Statements is without prejudice to positions on status, and is in line with UNSCR 1244 and the ICJ Opinion on the Kosovo Declaration of Independence.

December 2018. Strengthening gender equality and the empowerment of women and girls in Union external action and increasing efforts to reach the minimum standards of performance indicated by the EU Gender Action Plans should lead to a gender-sensitive and transformative approach in the cooperation between the Union and the beneficiaries listed in Annex I. Gender equality should be reflected and mainstreamed throughout the implementation of this Regulation.

1.3. Specific objectives

The specific objectives of IPA III are:

1. To strengthen the rule of law, democracy, the respect of human rights and fundamental freedoms, including through promoting an independent judiciary, reinforced security and the fight against corruption and organised crime, compliance with international law, freedom of media and academic freedom and an enabling environment for civil society, to promote non-discrimination and tolerance, to ensure respect for the rights of persons belonging to minorities and the promotion of gender equality and to improve migration management, including border management and tackling irregular migration, as well as addressing forced displacement;
2. To reinforce the effectiveness of public administration and to support transparency, structural reforms and good governance at all levels, including in the areas of public procurement and State aid;
3. To shape the rules, standards, policies and practices of the IPA III beneficiaries in alignment with those of the Union and to reinforce regional cooperation, reconciliation and good neighbourly relations, as well as people-to-people contacts and communication;
4. To strengthen economic and social development and cohesion, with particular attention to youth, including through quality education and employment policies, through supporting investment and private sector development, with a focus on small and medium-sized enterprises (SMEs), as well as on agriculture and rural development;
5. To reinforce environmental protection, to increase resilience to climate change, to accelerate the shift towards a low-carbon economy, to develop the digital economy and society and to strengthen sustainable connectivity in all its dimensions;
6. To support territorial cohesion and cross-border cooperation across land and maritime borders, including transnational and interregional cooperation.

1.4. Public intervention context

The IPA III supports implementation of the Enlargement policy based on the Article 49 of the Treaty on European Union, which provides that any European state which respects the values of respect for human dignity, freedom, democracy, equality, the rule of law and respect for human rights, including the rights of persons belonging to minorities, and that commits to promoting these values, may apply to become a member of the Union. A European state which has applied to join the Union can become a member only when it has been confirmed that it meets the membership criteria established at the Copenhagen European Council in June 1993 (the ‘Copenhagen criteria’), and provided that the Union has the capacity to integrate the new member. The accession process is based on the principle of unanimity amongst the member states. The role of DG NEAR, on behalf of the Commission, is to support the preparation of the enlargement countries for accession to the European Union. As recalled in the Communication from the Commission ‘Enhancing the accession process – A credible EU perspective for the Western Balkans’ COM(2020) 57 final, the core objective of the European Union’s engagement with the Western Balkans is to prepare them to meet all the requirements of membership. The revised enlargement methodology, endorsed by the Council in March 2020, builds on the four key principles of making the enlargement process more credible, subject to stronger political steer, more dynamic and predictable. The changes introduced in the programming process for IPA III are part and parcel of this revised enlargement methodology, which aim to increase the performance-based approach of the instrument and increase its efficiency in terms of delivery.

Turkey is a candidate country and a key partner for the EU in essential areas of joint interest, such as migration, counter-terrorism, economy, trade, energy and transport. In 2018 the Council stated that Turkey had been moving away from the European Union and therefore accession negotiations are at a standstill. This position was reiterated in 2019 and 2021.

The specific instruments of the enlargement process form the basis for identifying and guiding the fundamental reforms. These include the negotiating frameworks, the recommendations of the Enlargement Package, and the subsequent Council Conclusions, the Economic and Investment Plan for the Western Balkans, the IPA III Programming Framework, the Economic Reform Programmes (ERPs) and the policy guidance agreed annually in the joint conclusions, the conclusions of the meetings organised in the context of the (Stabilisation and) Association Agreements, and the national plan for the adoption of the *acquis*.

The IPA III is also implemented based on the Article 212 of the Treaty on the Functioning of the European Union, which stipulates that ‘the Union shall carry out economic, financial and technical cooperation measures, including assistance, in particular financial assistance, with third countries other than developing countries’.

1.5. Actions

Assistance under IPA III is based on the IPA III Programming Framework² (Article 7 of the Regulation (EU) No 2021/1529 of the European Parliament and of the Council establishing the Instrument for Pre-accession Assistance (IPA) III; C(2021) 8914 final). It

² C(2021) 8914 final

is an overarching European Commission strategic document for the use of IPA III funds for the duration of the 2021-2027 MFF. The IPA III Programming Framework reflects the specific objectives of the IPA III Regulation and is focused on the priorities of the enlargement process, articulated in five thematic windows which broadly correspond to the specific objectives of the Regulation and are all facets of the EU policy for enlargement and are linked with one another in a complementary manner:

- Window 1: Rule of law, fundamental rights and democracy;
- Window 2: Good governance, EU acquis alignment, good neighbourly relations and strategic communication;
- Window 3: Green agenda and sustainable connectivity;
- Window 4: Competitiveness and inclusive growth;
- Window 5: Territorial and cross border cooperation.

Actions are deployed, to the benefit of the IPA III beneficiaries, through annual or multi-annual action plans at national or regional level or through horizontal initiatives targeting specific types of partners (e.g. civil society) or cross-cutting issues. In addition, a number of cross cutting themes, such as climate change, environmental protection, civil society, gender equality, rights based approach, is mainstreamed and therefore can be implemented under the five windows.

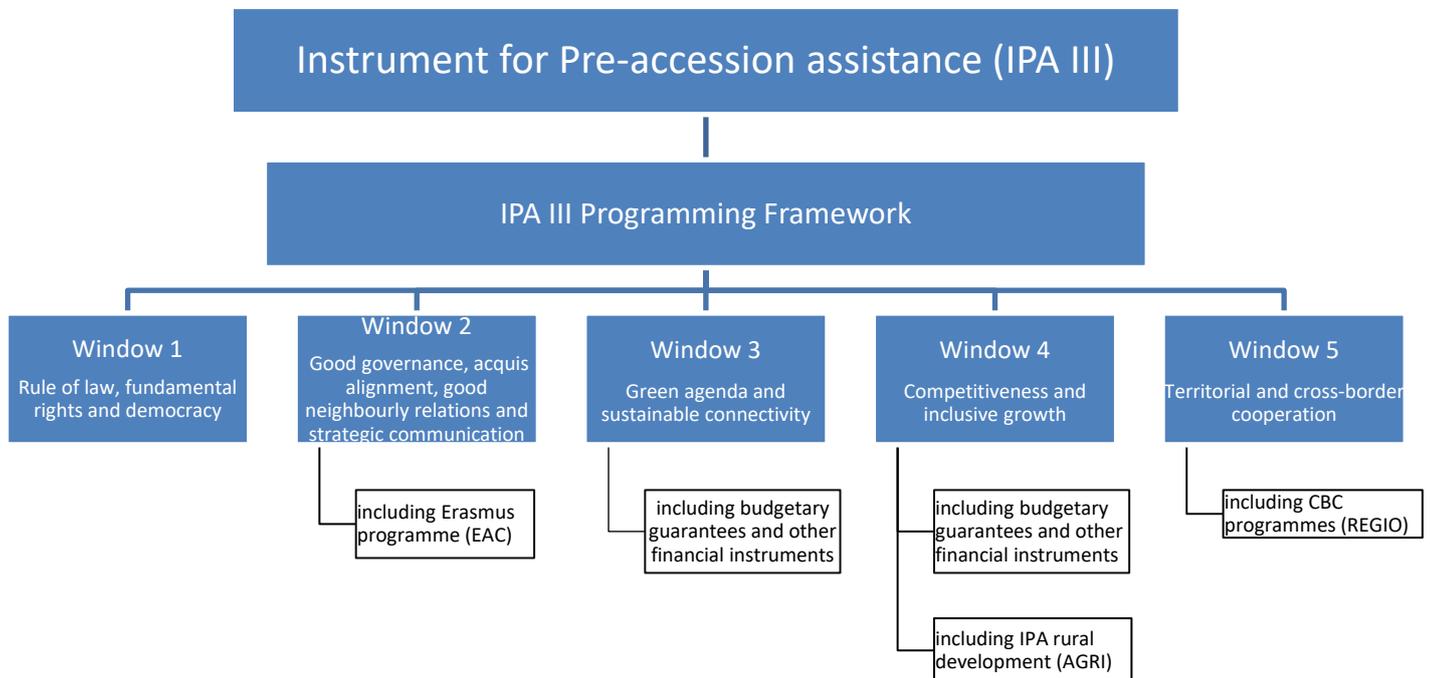

1.6. Delivery mode

In terms of instruments and Delivery modes, all types of financing foreseen in the Regulation are possible: from grants, procurement, budget support, contributions to EU Trust funds if relevant, to financial instruments and budgetary guarantees, as well as Team Europe Initiatives.

Assistance under IPA III is implemented mainly by DG NEAR with the full range of management modes in accordance with the Regulation (EU, Euratom) 2018/1046 on the financial rules applicable to the general budget of the Union. The management mode is defined during the formulation of the action. Cross-Border Cooperation programmes between IPA III beneficiaries and the Member States as well as other Interreg-IPA cooperation are implemented with shared management with DG REGIO lead, while IPA Rural Development programmes are implemented under indirect management by DG AGRI.

The selection of the management modes and of instruments and Delivery modes is not linked to the content of a window and will be decided on a case by case basis.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/1529 of the European Parliament and of the Council of 15 September 2021 establishing the Instrument for Pre-Accession assistance (IPA III) (OJ L 330, 20.9.2021, p. 1).	2021 - 2027	14 161.54

1.8.2. Legal basis explanation

Regulation (EU) 2021/947 of the European Parliament and of the Council establishing the Neighbourhood, Development and International Cooperation Instrument

Regulation (EU) 2021/817 of the European Parliament and of the Council establishing 'Erasmus+'

Regulation (EU) 2021/1058 of the European Parliament and of the Council on the European Regional Development Fund and on the Cohesion Fund

Regulation (EU) 2021/1057 of the European Parliament and of the Council on the European Social Fund Plus (ESF+)

Regulation (EU) 2021/2115 of the European Parliament and of the Council establishing rules on support for strategic plans to be drawn up by Member States under the Common agricultural policy (CAP Strategic Plans) and financed by the European Agricultural Guarantee Fund (EAGF) and by the European Agricultural Fund for Rural Development (EAFRD)

Regulation (EU) 2021/1059 of the European Parliament and of the Council on specific provisions for the European territorial cooperation goal (Interreg) supported by the European Regional Development Fund and external financing instruments

In implementing the IPA III Regulation, consistency, synergies and complementarities with other areas of Union external action, with other relevant Union policies and programmes, as well as policy coherence for development will be ensured. In particular, IPA III will support the implementation of the external dimension of the European Green Deal. The new Gender Action Plan III (2021-2025) will guide our external action to pursue the EU's commitment to gender equality and women's empowerment in all EU external relations. IPA III will also promote, when relevant, beneficiaries' participation in the areas of relevance in appropriate Agencies, Facilities and Union Programmes. Assistance under IPA III will contribute to actions established under the Erasmus Regulation. It may be provided to the type of actions provided for under the European Regional Development Fund and the Cohesion Fund, the European Social Fund Plus and the European Agricultural Fund for Rural Development. IPA III may also contribute to transnational and interregional cooperation programmes or measures that are established and implemented under the ETC Regulation and in which the beneficiaries listed in Annex I to this Regulation participate.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total

1.9. Link with the 2014-2020 MFF

IPA II has been the catalyst for important reforms. IPA III builds on these achievements and ensures continuation in terms of objectives and priorities. It further improves alignment of assistance with the enlargement strategy.

Programming of IPA III will ensure a stronger performance-based approach while at the same time guaranteeing the principle of fair share. There will also be more focus on relevance and maturity at the Commission selection stage, with the aim of ensuring stronger linkages with the reform agenda as well as accelerating implementation and reducing backlog.

EU Enlargement policy: https://ec.europa.eu/info/policies/eu-enlargement_en

Instrument for Pre-Accession Assistance: https://ec.europa.eu/neighbourhood-enlargement/instruments/overview_en

EU Aid Explorer: <https://euaidexplorer.ec.europa.eu/> - allows you to find comprehensive aggregate data as well as detailed information on international development projects funded by the EU and its Member States.

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	1 571.5	14 780.0	11%
Payments	40.1		0%

2021 was the first year of the IPA III implementation under the Multiannual Financial Framework 2021-2027. Despite the late adoption of the legal basis³, the Commission implemented 84% of the available 2021 IPA III commitment appropriations by 31 December.

In 2021, the programming of IPA III assistance followed the key criteria of the IPA III programming framework: the policy driven approach, the relevance of proposed IPA interventions, the maturity of the proposals, and the progress of the beneficiaries on their enlargement agenda. The programming took into account the performance of each beneficiary and the fair share principle, by targeting and adjusting assistance to the specific situation of each beneficiary.

For the Western Balkans, the assistance reflects the priorities of the Economic and Investment Plan and the Green Agenda for the Western Balkans.

For Turkey, the assistance reflects developments in EU's relations with the country and the European Council's offer of a possible positive agenda and Turkey's desire to adopt to the European Green Deal.

However, programming of financial assistance has been a challenging task for a variety of reasons, including the pervasiveness of a volatile political context, the relatively low absorption capacity of the national administrations and the uneven pace of reforms especially in the key fundamental sectors. The COVID-19 pandemic has also had an impact as explained later under the section 2.2.

How the 2021 commitment appropriations have been used?

In 2021, EUR 1.5 billion was committed, including EUR 446.9 million through bilateral actions for Western Balkans, EUR 165.3 million for Turkey and EUR 919 million through multi-country actions and other measures:

- annual action plan in favour of Albania;
- annual action plan in favour of Bosnia and Herzegovina;
- annual action plan in favour of Kosovo*;
- annual action plan in favour of Montenegro;
- annual action plan in favour of North Macedonia;
- annual action plan in favour of Serbia;
- annual action plan in favour of Turkey;
- individual measure to support migration and border management in Turkey;
- multi-country multiannual action plan in favour of the Western Balkans and Turkey for 2021-2022;
- multi-country multiannual action plan in support of the Western Balkans Investment Framework 2021-2027 and the provisioning of the ELM legacy portfolio for past EIB operations for IPA beneficiaries;
- multi-country multiannual action plan on an EU Civil Society Facility and Media Programme in favour of the Western Balkans and Turkey for 2021-2023;
- multiannual support measure for audit⁴ in favour of the IPA region for years 2021, 2022 and 2023;

³ IPA III Regulation (EU) 2021/1529 was adopted on 15 September 2021, the Commission Delegated Regulation (EU) 2021/2128 setting out certain specific objectives and thematic priorities for assistance under the IPA III was adopted on 1 October 2021, the Commission Implementing Decision C(2021)8914 final adopting the IPA III Programming Framework 2021-2027 was adopted on 10 December 2021, the Commission Implementing Regulation (EU) 2021/2236 on the specific rules for implementing the IPA III was adopted on 15 December 2021.

* This designation is without prejudice to positions on status, and is in line with UNSCR 1244/1999 and the ICJ Opinion on the Kosovo declaration of independence

- multiannual support measure for communication in favour of the IPA III beneficiaries for 2021-2023.

EUR 315.7 million have been carried-over to 2022 based on the Article 9 (1) of the IPA III Regulation and the Article 30 of the NDICI Regulation, namely:

- the individual measure to strengthen the response capacity to manage migration flows in the Western Balkans for 2021;
- individual measure on annual contribution in favour of the Office of The High Representative (OHR) in Bosnia and Herzegovina;
- individual/special measures dedicated to additional support to refugees and host communities in Turkey;
- IPA rural development III programmes in favour of Albania, Montenegro, North Macedonia, Serbia and Turkey;
- Interreg IPA III Cross-Border Cooperation programmes.

How the 2022 commitment appropriations will be used?

It is estimated that EUR 2 billion would be committed under the 2022 budget, including:

- EUR 1,346.7 million for Western Balkans, including EUR 25 million financed with appropriations made available after recoveries from the beneficiaries ;
- EUR 168.8 million through annual action plan in favour of Turkey, including EUR 18 million financed with appropriations made available after recoveries from the beneficiaries;
- EUR 191 million for the support to refugees and host communities in Turkey;
- EUR 120.7 million for the provisioning of the External Action Guarantee;
- EUR 60.2 million for the Erasmus+ programme;
- EUR 99 million for the IPA rural development III programmes;
- EUR 20.6 million for the Interreg IPA III Cross-Border Cooperation programmes.

Out of the available 2022 budget, EUR 846 million has been programmed through multi-country multiannual action plans and support measures taken in 2021, including:

- in support of the Western Balkans Investment Framework 2021-2027 and the provisioning of the ELM legacy portfolio for past EIB operations for IPA beneficiaries;
- on an EU Civil Society Facility and Media Programme in favour of the Western Balkans and Turkey for 2021-2023;
- in favour of the Western Balkans and Turkey for 2021-2022;
- for communication in favour of the IPA III beneficiaries for 2021-2023;
- for audit in favour of the IPA region for years 2021, 2022 and 2023.

For the **Western Balkans** most of commitment appropriations will be allocated to the country annual action plans and will address all thematic Windows of the IPA III Programming Framework, with emphasis on justice and border management (Window 1), public administration reform and public finance management (Window 2) and environment (Window 3).

The annual action plan in favour of **Turkey** is expected to include support to cover the entry tickets to the Union's internal programmes, the Jean Monnet scholarships and actions in line with the European Commission priorities for the Green Deal, connectivity and human resources development. IPA III will contribute to the **Union's support package to refugees and host communities in Turkey** of EUR 3 billion in line with the European Council conclusions of June 2021. It will focus on migration and border management operations, and on support to the most vulnerable refugees in meeting their basic needs.

Due to the late adoption of the IPA III Regulation and delayed adoption of other sectoral legal basis, the Commission has carried over EUR 47 million of 2021 appropriations and reprogrammed the IPA III contribution to the **Cross-Border Cooperation programmes**⁵, which are expected to be adopted in 2022. In order to cover the expected pre-financing needs of these programmes, the IPA III contribution under the 2022 budget has been set at EUR 20.6 million.

The **IPARD III programmes** in favour of Albania, Montenegro, North Macedonia, Serbia and Turkey are expected to focus in 2022 in particular on investments in physical assets of agriculture holdings, investments in physical assets concerning processing and marketing of agriculture and fishery products and farm diversification and business development. Technical assistance would also be envisaged.

Justification of the level of commitment appropriation requested for 2023.

⁴ For details please see C(2021)9655. The overall objective of the support measure for Audit Programme is to provide reasonable assurance on the correct implementation of EU funds in the beneficiary countries as to the regularity and legality of the underlying transactions and the effectiveness of the control systems. Assurance also relates to sound financial management comprising the principles of economy, efficiency and effectiveness.

⁵ Bulgaria-North Macedonia, Bulgaria-Serbia, Bulgaria-Turkey, Croatia-Bosnia and Herzegovina, Greece-Albania, Greece-North Macedonia, Hungary-Serbia, Italy-Albania-Montenegro, Romania-Serbia, Adriatic-Ionian, Danube, Euro Mediterranean, Next Mediterranean Sea Basin, Next Black Sea Basin, Urbact IV

EUR 1.9 billion in commitment appropriations is requested for 2023:

- EUR 1,228.9 million for Western Balkans;
- EUR 116.9 million through annual action plan in favour of Turkey;
- EUR 100 million for the support to refugees and host communities in Turkey;
- EUR 241.1 million for the provisioning of the External Action Guarantee;
- EUR 62.4 million for the Erasmus+ programme;
- EUR 113 million for the IPARD III programmes;
- EUR 69 million for the Interreg IPA III Cross-Border Cooperation programmes.

Out of the available 2023 budget, EUR 880 million has been programmed through multi-country multiannual action plans and support measures taken in 2021, including:

- in support of the Western Balkans Investment Framework 2021-2027 and the provisioning of the ELM legacy portfolio for past EIB operations for IPA beneficiaries;
- on an EU Civil Society Facility and Media Programme in favour of the Western Balkans and Turkey for 2021-2023;
- for communication in favour of the IPA III beneficiaries for 2021-2023;
- for audit in favour of the IPA region for years 2021, 2022 and 2023.

For **Western Balkans**, the Commission would develop multiannual plans for several countries, which are expected to address the implementation of the Green Agenda (Window 3) and the social sectors, including the Youth Guarantee (Window 4).

For **Turkey**, the Commission intends to maintain the same level of EU support as in 2022, in line with the Council's approach of a phased, proportionate and reversible approach and given continued tensions with some Member States. The IPA III resources with reinforcements from the Heading 6 and the special instrument should be made available to **continue EU support to refugees and host communities in Turkey**, in line with the request of the European Council to mobilise substantial resources from the EU budget to continue EU support. The Commission intends to focus on health care and basic needs, as well as migration and socio-economic support.

In 2023, the Commission expects a steep increase of commitment execution for the **Interreg IPA III Cross-Border Cooperation programmes** than in the period 2014-2020, because of:

- the Interreg IPA technical assistance is paid on a flat rate basis under the 2021-2027 MFF, in a proportion of expenses declared to the Commission. This will be a strong incentive for programmes to frontload their expenses; the programmes have been designed accordingly (e.g. operations of strategic importance, capitalisation, massive use of Simplified Cost Options, etc).
- under the 2014-2020 MFF, the launch of the programmes and their first phases of implementation were long due to a lengthy designation processes. This has been abolished in the new period; the management and control systems are in place and ready to implement.

The **IPARD III programmes** in favour of Albania, Montenegro, North Macedonia, Serbia and Turkey are expected to focus in 2023 in particular on investments in physical assets of agriculture holdings, investments in physical assets concerning processing and marketing of agriculture and fishery products and farm diversification and business development. Technical assistance would also be envisaged.

2.2. Programme(s) 2014-2020 : Cumulative implementation rate and explanations

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2014-2020 Budget	Implementation rate
Commitments	12 813.1	12 893.6	99%
Payments	7 527.6		58%

As of 31 December 2021, the Commission implemented 99% of the IPA II commitment appropriations and 59% of the payment appropriations. The payment rate is the result of pre-accession assistance being first and foremost an investment programme budget that finances projects that run over a long period of time. The financing agreements with the beneficiary countries must be signed by the end of the year following the year in which the budgetary commitment was made, while contracts implementing these agreements must be signed within the following three years with varying implementation periods. Also, under IPA II, part of the funds are implemented through multi-annual programmes with split commitments, meaning that a decision taken a given year

includes also commitments in the years following that decision. Moreover, there are actions implemented with International Financial Institutions such as blending and guarantees, which have long implementation period (in average 7-8 and 10 years). Furthermore, the Commission entrusts the management of certain actions to the IPA II beneficiaries or other development partners (indirect management), while still retaining overall final responsibility for the budget execution. Therefore, while the EU provides the funding for a specific programme or project, it is not always directly involved in the day-to-day management. In average 3.6 years⁶ were needed to pay the total costs of legal commitments, less than the internal Commission target of 4 years.

In recent years, the Commission accelerated the implementation of the pre-accession assistance in line with the programmes lifecycle under the MFF 2014-2020. The payment implementation increased from EUR 1.6 billion in 2019 to EUR 1.7 billion in 2021. In 2021 payments related to the legal commitments taken under the MFF 2014-2020 represented all executed payments, as the IPA III Regulation was adopted only on 15 September 2021.

47% of IPA II payments were dedicated in 2021 to actions in social infrastructure and services, 24% in multisector actions, 17% in economic infrastructure and services and 12% in production sectors. 63.7% were implemented through indirect management, while 33.2% through direct management and 3% through shared management.

While the implementation of IPA II payment appropriations will decrease to EUR 1.4 billion in 2022 and slightly increase to EUR 1.5 billion in 2023, the implementation of IPA III payments is expected to accelerate as of 2022 (EUR 268 million) and continue to do so in 2023 (EUR 837 million) in line with the progress in implementation of newly taken commitments. This should bring the implementation of IPA payment appropriations up to 72% at the end of 2022 and 84% at the end of 2023.

Moreover, the implementation of the Facility for Refugees in Turkey, a coordination mechanism covering several financing instruments, including IPA II, continued, with more than EUR 275 million disbursed within the year, out of NEAR-managed funds. Specifically, in 2021 a direct grant to the Turkish authorities of EUR 245 million started its full implementation providing cash support to the most vulnerable refugees, including families with disabled persons, single parents and elderly-led households. Activities to support the integration of children in the education system, access to health services and projects to create jobs and support livelihoods opportunities continued.

Concerning the IPA Interreg Cross-Border Cooperation programmes, the budgetary execution at the end of 2021 showed 100% consumption of 2021 voted budget. Furthermore, none of them faced decommitment for not having reached their payments target at end 2021.

How external factors (e.g. COVID crisis) impacted the IPA II implementation in 2021?

With the COVID-19 pandemic entering into its second year in 2021 it has continued to have some impact on implementation. However, the limitations to mobilisation of experts and resources, and the capacities to fully monitor activities on the ground, were still very much felt during the implementation of programmes. Due to this, forecasting and procurement continued to be made in a rather prudent and conservative way. The late adoption of the IPA III Regulation was not too conducive in allowing adoption of related commitments.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The main principles from Instrument for Pre-accession Assistance (IPA II) will not change under IPA III. However, IPA III programming will be also built on a stronger performance-based approach, to be assessed on a yearly basis and closely linked to the revised enlargement methodology.

IPA III programming will also accelerate the projects' implementation by reducing the time gap between their selection and effective contracting. The actions will be selected based on their policy relevance, namely on their alignment with the Programming Framework and with the specific recommendations of the enlargement package for the countries. The second selection will then focus on technical maturity assessed against the actions documents and supporting documents. Only actions that are sufficiently technically mature (meaning, when most preparatory activities have been finalised) will be considered ready for adoption.

3.1.2. Active programme performance

Performance assessment will be provided once the implementation of the programme 2021-2027 will have started

3.1.3. Previous Programme Performance

Candidate countries and potential candidates need to implement difficult and time-intensive structural reforms to make progress in the fundamental areas of the political accession criteria, including sustainable and far-reaching political and societal transformation. Advancing in the fundamental area of the economic criteria, which are interlinked with the political criteria, is also challenging.

⁶ The RAL absorption period is estimated by the key performance indicator K04 as the number of years needed to pay the total costs of legal commitments.

The Instrument for Pre-accession Assistance is a unique programme that supports IPA beneficiaries to advance with ambitious political and economic reforms and to progressively align to the European Union's rules, standards, policies and practices on their path towards EU membership. It fosters reforms in candidate countries and potential candidates through a combination of financial assistance and policy dialogue, preparing them for the rights and obligations that come with EU membership.

The programme is making progress towards achieving its overall objectives and some IPA indicators included below are on track to be achieved. For other indicators more work is needed. For instance, while there have been some improvements in the fulfilment of fundamental areas of the political criteria in the Western Balkans, these good results are counterbalanced by the backsliding in Turkey (see below).

However, it should be underlined that the implementation of IPA II is reaching its peak (as explained in more detail section 2.2) and more results will be achieved in the coming years.

At the same time, there is a large influence of external factors when it comes to the achievement of the IPA II overall objectives. For enlargement to become a reality, a firm commitment, including political will, to the principle of 'fundamentals first' remains essential.

The main principles of IPA II will not change under IPA III. However, IPA III programming will be also built on a stronger performance-based approach, to be assessed on a yearly basis and closely linked to the revised enlargement methodology.

In line with the commitment to a merit-based enlargement process outlined in the revised enlargement methodology, the final selection of actions will also take into account the assessment of the performance of the IPA III beneficiaries in the enlargement agenda, their commitment to and progress in implementing reforms, with particular attention to key areas of the political accession criteria.

Specific Objective 1: Support for political reforms.

Indicator 1 is particularly relevant since it shows the results of the enlargement policy, including financial assistance through the Instrument for Pre-accession Assistance, as regards two main fundamentals of the enlargement policy (i.e. the rule of law and fundamental rights and public administration reform). The fund supports the candidate countries and potential candidates to address the core issues measured by these indicators. These indicators provide also greater transparency in the enlargement process and should facilitate greater scrutiny of reforms by all stakeholders.

There are some example of good progress. For instance, in Albania, good progress has been made in justice reform with help of the EU assistance. Support to the 'vetting' of judges and prosecutors continued to be conducted under the thorough supervision of the EU-funded International Monitoring Operation (IMO), and support to the specialised structures against corruption and organised crime (SPAK and SPAK courts). Thanks to the additional human resources/legal officers provided for in the 2021 state budget to the Albanian vetting bodies, vetting has picked up pace and to date the Independent Qualification Commission (IQC) has issued more than 490 decisions out of 805. Overall, the EU trained over 4000 judges, prosecutors and lawyers in the enlargement region on European standards and EU *acquis*.⁷ Furthermore, to reinforce the effectiveness of public administration, structural reforms and good governance at all levels almost 100 public policies were developed and or revised with EU support⁸.

In terms of progress recorded in the 2021 enlargement reports, candidate countries and potential candidates made 'some progress' (9 cases) and 'good progress' (2 cases) in areas linked to the political criteria. In Turkey there was backsliding in functioning of the judiciary and freedom of expression, and no progress in public administration reform and the fight against corruption. In terms of readiness, there were five cases of 'early stage of preparation' in these areas of functioning of judiciary (Kosovo*, Turkey), fight against organised crime (Kosovo), fight against corruption (Turkey) and freedom of expression (Turkey), and three cases of 'early stage/some level of preparation'. Turkey's continued backsliding in areas linked to political criteria, combined with low absorption capacity, led to a significant cut in pre-accession support following Council Decision in 2017. The 2021 reports noted improvements in the functioning of the judiciary in Albania, reaching the level 'moderately prepared'.

Specific Objective 2: Support for economic, social and territorial development, with a view to smart, sustainable and inclusive growth.

Candidate countries and potential candidates made limited progress on meeting the economic criteria, according to the 2021 enlargement reports.

Serbia remained at the level of moderately prepared/good level of preparation, Albania and Montenegro remained at a moderately prepared level, and North Macedonia at a good level of preparation. Turkey is considered to be well advanced and the cut of pre-accession support did not have a negative impact.

We can therefore conclude that the role of IPA support for this objective has been limited during the period 2014-2020..

⁷ See EU Results Framework indicators in the 2020 Annual Report on the implementation of the European Union's instruments for financing external actions in 2019.

⁸ See EU Results Framework indicators in the 2020 Annual Report on the implementation of the European Union's instruments for financing external actions in 2019.

* This designation here and throughout the Programme Statements is without prejudice to positions on status, and is in line with UNSCR 1244 and the ICJ Opinion on the Kosovo Declaration of Independence.

On competitiveness, North Macedonia, Montenegro and Serbia remained moderately prepared, while Albania remained at some level of preparation. In terms of cases of early stages of preparation, this indicator remained stable in 2021 compared to the baseline, with four cases, on functioning market economy and competitiveness in Bosnia and Herzegovina and Kosovo.

The EU directly supported or sustained over 7 500 jobs across the enlargement region, providing support for economic development. Furthermore there were 27 public policies developed or under implementation with EU support strengthening investment climate, revenue mobilisation, public financial management and/or budget transparency.

Specific Objective 3: Strengthening of the ability of the beneficiary countries at all levels to fulfil the obligations stemming from Union membership by supporting progressive alignment with, and adoption, implementation and enforcement of, the Union *acquis*.

The Commission assesses in the annual enlargement reports how well the countries are prepared to align to the EU *acquis* in each of its 33 chapters. The lowest assessment level is “early stage of preparation”. The indicator shows in how many chapters the 7 candidate countries and potential candidates were considered to be at this lowest level. The decreasing trend means that the countries have overall progressed to a higher level of preparation.

There have been differences between the countries. While the Western Balkans partners have generally improved their preparation since 2015 (the first year the assessment scale was introduced), Turkey has been backsliding. The number of cases of early preparedness decreased from 32 cases in 2020 to 27 in 2021 and include the following: 14 cases in Bosnia and Herzegovina, 7 cases in Kosovo, 3 cases in Turkey, 2 in North Macedonia, 1 in Albania, and none in Montenegro and Serbia. For a more detailed analysis and the summaries of the findings on readiness and progress of enlargement countries towards the alignment to the 33 *acquis* chapters, please refer to the 2021 country reports.

In Montenegro EU assistance continued to help the country address a range of reforms required in the efforts focused on EU accession. This includes significant on-going projects and programmes in the Rule of Law and Fundamental Rights, Competiveness, Transport, as well as in Education, Employment and the Social sector – and health. Montenegro also made considerable use of the Technical Assistance and Information Exchange instrument of the European Commission (TAIEX) in order to share EU best practice and support alignment of legislation, for instance in the agriculture/food, veterinary/fisheries sectors (chapters 11-13), providing assistance in a range of topics focused on justice and home affairs (chapters 23 and 24), transport (chapter 20), and not least in the sector of environment (chapter 27). Around EUR 63.2 million were committed in the period 2014-2020 for TAIEX in the whole IPA region, of which from 2016 until today, at least, EUR 4.1 million have been devoted to TAIEX activities in Montenegro.

In North Macedonia, in the veterinary and food safety areas, EU funds supported the alignment of the national legislation with the newly adopted EU legal acts in Animal Health and Official Control as well as the development of a new Animal Health Strategy. The staff of the Food and Veterinary Agency benefited from numerous EU-funded capacity-building measures. In the phytosanitary sector, the EU aid supported the update of the plant health status, the analysis of the risks and the development of preventive measures for priority pests. A new Phyto-sanitary Information System was completed in 2021 along with a new Law on Phyto-pharmacy that was adopted in December 2020.

IPA II rural development programmes (IPARD) have exceeded the target for Turkey already last year (2020) and now also for the Western Balkans in relation to ‘Number of economic entities progressively upgrading towards EU standards in agri-food sector’ (second indicator under this objective). Progressively upgrading economic entities towards EU standards is both a political and an economic priority in the agri-food sector. For example, more modern milk cooling tanks, newer machinery in farming, more environmentally friendly manure storage and handling facilities, new (or newer) primary food processing lines. This results in mobilisation of efforts both in public and in private sectors. Intensive publicity campaigns follow each call for applications. Furthermore, the implementation of the programmes is in some countries accompanied with technical assistance measures. Finally, the demand for investment support to upgrade towards EU standards in the agri-food sector is high. All five countries will also continue implementation of IPARD III programme. The rural development programme is working well mostly because projects are many and relatively small, hence – attractive to rural inhabitants and entrepreneurs. IPARD is implemented under indirect management modality. There is a relatively large investment on the side of beneficiary countries in setting up and maintaining administrations for IPARD implementation. Building up this capacity is time consuming and requires our continuous guidance. However, this is part of the learning exercise to manage EU funds in the future, or at least, to manage now in line with EU public administration principles. Once in place, these structures are quite effective and very helpful in implementing EU funds. It would not be possible to finance so many small projects through direct management modality.

Specific Objective 4: Strengthening regional integration and territorial cooperation involving the beneficiary countries, Member States and, where appropriate, non-EU countries.

Regional cooperation continues to grow in prominence, as evidenced by 52% of the respondents in the Western Balkans ‘tend to agree’ that regional cooperation can contribute to the political, economic or security situation of their society. When coupled with those who ‘totally agree’, there is an overwhelming majority of respondents supportive of the role of regional cooperation. (77% in 2020, up from 74% in 2018)⁹.

⁹ Regional Cooperation Council, Balkan Barometer, Attitudes on Regional Cooperation and EU Integration, Regional Cooperation indicator: <https://www.rcc.int/balkanbarometer/results/2/public>

Following the Team Europe approach, IPA support the cooperation between the EU and its member states and our IPA partners. In particular recently, IPA supported several packages to tackle the challenges posed by the COVID-19 crisis in the Western Balkans. In 2021, both the Economic Reactivation Package, and the package of support to vulnerable groups and to the health sector, including access to vaccines, which were reoriented and reprogrammed from IPA 2019 and 2020 as the regional response to the COVID-19 pandemic for an amount of EUR 478.5 million, have smoothly started implementation. A new project was signed with the World Health Organisation, focussing on promoting COVID-19 vaccination roll-out, building health hazard preparedness and taking steps towards ensuring financing for universal health care, which enabled WHO to help each of the partners to draft their vaccine plan and to monitor its implementation. By the end of 2021 respectively 89% and 61% of the IPA-related COVID-19 financial assistance package had been achieved. In particular, EUR 70 million in grants for COVID-19 vaccines, paid for almost a million doses for the region, as well as covered delivery costs of other vaccine deliveries, and of vaccine-related equipment and supplies. Additionally, the funding provided access to huge quantities of COVID-19-related medical equipment, which included 13 million PPE items, 560,000 COVID test calibration tests, 10,000 bedsheets and almost 300 beds, almost 350 ventilators, 250 ICU monitors, 160 triage containers, 81 ambulances, 30 echographs, 25 X-ray machines, 70 ultrasounds, 70 ECGs, 80 defibrillators, and almost 230,000 other items.

During 2014-2020, regional cooperation continued to be a cornerstone of our approach to the region and an essential element of the European perspective of the Western Balkans, with substantial support dedicated for connecting infrastructure, economies and people. While implementation was affected by the pandemic in most of the interventions and required actions to be adapted, some progress could be reported.

In the area of rule of law, the regional cooperation element was present particularly in the area of the fight against organised crime, where cross-border cooperation including with the EU is key. At the end of 2021, significant progress was achieved in setting the groundwork for increased regional cooperation among law enforcement agencies. The inter-operability of law enforcement systems was assessed and progress achieved in identifying the operational training needs of law enforcement in line with EU practice. 86 complex cross-border investigations were supported with IPA II funding. The monitoring of organised crime and corruption trials started which will support in the medium-term a stronger judicial response to these crimes.

In the area of reconciliation, IPA assistance supported the domestic prosecution of war crimes and progress in the identification of remaining 10,000 cases of missing persons. With EU funding, the International Residual Mechanism of Criminal Tribunals provided direct case assistance in 12 instances linked to domestic prosecutions. Outreach activities through social media reached over 1.5 million people, raising awareness of past crimes committed during the conflicts in the 1990s on the territory of ex-Yugoslavia. In terms of the cooperation on missing persons, support and facilitation for the reconnaissance of possible clandestine graves in Bosnia and Herzegovina, Kosovo and Serbia and observational and “hands-on” training to DNA scientists was provided.

The Regional Housing Programme, created in 2012, continued to provide homes to refugees and persons displaced by conflicts in the region in the 1990s, via a contribution agreements with the Council of Europe Development Bank (CEB). At the end of 2021 a total of 8 826 homes have been provided for a total amount disbursed by the EU budget of some EUR 235 million.

In consideration of the strategic role played by Civil Society Organisations (CSOs) in fostering regional cooperation and integration, the IPA strategy is also to focus on engaging with these organisations and supporting their actions at regional and local level. During the period 2014-2021, EUR 345 million in total were channelled through the Civil Society Facility and Media Programme for Western Balkans and Turkey (CSF) – the main instrument to support the sector in the area - supporting in the order of 1000 CSOs from the region, and a further 100 from the EU. In 2021 still, three new projects were signed focussing on regional cooperation between civil society organisations (via the Western Balkans Fund); support to diversity, effectiveness, and sustainability of civic actors and media (via the European Endowment for Democracy) and a programme in support of the economic sustainability of media business in the region. Substantial exchanges were held with civil society and other stakeholders on the revision of the guidelines for EU support to civil society in the enlargement region. Since its start in December 2018, the regional Technical Assistance for Civil Society Organisations (TACSO) programme organised more than 100 trainings, consultations and people-to-people events during 2021 for around 5000 participants of which 60 events for more than 2000 participants only in 2021.

Erasmus+ has helped reinforcing cooperation between education institutions and provided exchange opportunities for students, by fostering international credit recognition, mobility programmes for young people, scholarships, capacity building activities, and by promoting European studies as well as intercultural and policy dialogue. North Macedonia and Serbia are associated to Erasmus+ and have access to all actions on an equal footing as EU Member States. Albania, Bosnia and Herzegovina, Kosovo and Montenegro are non-associated and while some of the actions for the non-associated partners are funded by the core budget of Erasmus+, IPA has enabled them to participate in certain actions that would typically be closed for their participation. Over 120.000 students, researchers, staff, youth workers, young people and others participated in the Erasmus+ activities involving Western Balkans partners for the period 2014-2020.

During 2021, CBC programmes (between IPA-IPA beneficiaries) under IPA II with their projects, aiming at supporting reconciliation and good neighbourly relations, have triggered real change for local communities. Some projects have contributed to the development of some economically important sectors, such as tourism, creating a sustainable tourist offer in the region based on cultural heritage and local cuisine. Examples of these projects are the rehabilitation of the Medieval Fortresses and Austro-Hungarian Fortresses in Bosnia and Herzegovina and Montenegro, the Cultural Route “On the Trail of Mother Teresa” and Local cuisine as tourism offer. Other projects that have also had a positive impact on tourism have supported at the same time the

preservation of the wildlife, and the promotion of natural values, while increasing at the same time the safety of tourist in the mountains and make visible tourism services to international and domestic visitors. Other projects in the CBC programmes have contributed to the implementation of the green agenda-improving resource efficiency in the water and waste management sectors. Some of the projects implemented under the CBC programmes contribute to the creation of a stimulant and innovative environment in youth educational institutions to bring the concept of social entrepreneurship closer to young people and enable greater involvement through employment and social start-ups.

European Territorial Cooperation IPA (Interreg IPA) are also considered very effective tools to foster greater cooperation and integration between IPA countries and surrounding Member States as highlighted in the Commission Impact Assessment accompanying the new ETC Regulation Proposal. Moreover, as the ex-post evaluation noted, "Interreg is the only policy instrument in its field. It is therefore crucial for ensuring continuity and linkages of common projects". This is why the concerned Member States have maintained and even increased their ERDF financial envelope to these programmes since its inception in 1990 and the matching principle has automatically increased the IPA allocation.

As a very flexible instrument, allowing to finance various numbers of actions and objectives, Interreg could also be used to facilitate exchanges and tolerance between people, and this via the financing of local social services in key cross-border regions. For instance, the 2014-2020 Interreg IPA CBC Croatia – Serbia programme funded the project ‘Inclusive Community project’ which has helped to enhance the dialogue between two countries previously at war and has reinforced the social cohesion in the concerned territories. Indeed, this project aimed at improving social services in Osijek and Novi Sad for social welfare users and people in risk of poverty and exclusion. Partners created a social integration programme that has ensured learning assistance for children and in-house care for elderly. In addition, the programme encouraged elderlies to volunteer, facilitate education and exchanges between volunteers to contribute to intergenerational solidarity and tolerance in the cross border region. Project outputs included an e-card system that has allowed better management of social assistance and reconstruction of a storehouse to allow distribution of humanitarian aid and medical equipment for social welfare. The project was nominated for Regiostars 2021¹⁰. In the 2021-2027 programme, the selection of the specific objectives ‘Enhancing equal access to health care and fostering resilience of health system’ and ‘Enhancing the role of culture and sustainable tourism in economic development, social inclusion and social innovation’ well proves that the 2014-2020 results have been very good and the national authorities want to capitalized on them.

3.2. Key achievements

3.2.2. Corresponding 2014-2020 programme

100 000	8826	75	413 105
students, researchers, staff and others participated in the Erasmus+ activities involving Western Balkans partners for the period 2014-2020	housing units built under the Regional Housing Programme up to the end of 2021	monitoring stations for water and underground water levels, quantity and quality monitoring were established in line with the EU Water Framework Directive in Montenegro in the period 2019-2020	people reached by the Council of Europe “Block the hatred. Share the love “ campaign against hate speech in the Western Balkans during 2021 supported by IPA

75 000	400	7 800	80
citizens connected to district heating in Pristina and Gjakova in the period 2014-2020, reducing air pollution and increasing energy efficiency in Kosovo*	organisations working on preventing violence against women in the Western Balkans and Turkey reached with the regional support under the Civil Society Facility from 2014 to 2020	young people benefited from support under the Youth Guarantee in North Macedonia from 2014 to 2021	Turkish municipalities supported under energy projects that promote Renewable Energy and Energy Efficiency in Turkey

¹⁰ The REGIOSTARS Awards are a yearly competition, organised by the European Commission’s Directorate General for Regional and Urban Policy. It aims at identifying good practices in regional development and highlighting innovative, EU-funded projects, which could be attractive and inspiring to other regions and project managers.

* This designation is without prejudice to positions on status, and is in line with UNSCR 1244/1999 and the ICJ Opinion on the Kosovo declaration of independence

5 500 000	12 000	155	6 030
vaccination doses provided to refugee infants in Turkey by 2021 under the Facility for Refugees in Turkey	educational facilities in Turkey upgraded, as part of the development strand of the Facility for Refugees in Turkey by 2021	km fast-track railway being constructed as part of TEN-T corridor within the Construction of the Halkalı-Kapıkule Railway Line project in Turkey by 2024	economic entities performed modernisation projects in agri-food sector by end of 2021 with support of the IPA rural development II

3.3. Evaluations, studies and reports

During 2021 four evaluations¹¹ were completed.

The Evaluation of the EU's external action support in the area of migration assessed EU's external action contribution in the policy area of migration in the period 2008-2018, in particular in the areas of labour legal migration, smuggling of migrants and trafficking in human beings, in Enlargement, Neighbourhood, Sub-Saharan Africa and Asia (Central and South) regions. DG NEAR was in the lead, in close collaboration with DG INTPA.

Strategic, country-level evaluation of the EU's cooperation with Serbia provides an assessment of Serbia's path to EU accession, over the period 2012-2018. It assessed national-level EU cooperation including both policy dialogue and financial assistance through the IPA, with in-depth analysis of: public administration reform, judicial reform, environment, and education.

The evaluation of EU cooperation with Montenegro provided an independent assessment of EU's assistance to the country over the period 2012-2019. It identified key lessons learned as well as a set of recommendations to improve current, and inform future choices on programming of EU financial assistance and relevant policy dialogue. The focus of the evaluation was on the planning and programming under the IPA III.

The mid-term evaluation of the IPA Cross Border Cooperation (CBC) Programme between IPA II beneficiaries provides an assessment of the performance of the nine 2014-2020 programmes, identification of good practices and lessons learned and recommendations to guide the design of IPA CBC programmes between IPA II beneficiaries for the following financing period.

Three strategic evaluations covering enlargement region were under implementation during the reporting period (namely evaluations on Environment and climate change, TAIEX Instrument and EU cooperation with the United Nations and the country evaluation of North Macedonia). In addition, two new evaluations were launched in 2021 (evaluation of DG NEAR Blending Instruments, and country evaluation of Albania).

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: To strengthen the rule of law, democracy, the respect of human rights, fundamental rights and international law, civil society and security as well as improve migration management including border management

Indicator 1: Composite indicator on political criteria

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Western Balkans										
2018	Milestones									2027

¹¹ These are strategic and independent evaluation studies, carried out following Better Regulation and OECD DAC criteria, however they did not lead to a stand-alone staff working document as per Better Regulation Guidelines.

Indicator type	Impact
Unit of measurement	Extent of readiness
Cut-Off Date	31/10/2021
Data source	European Commission
Link to the objective	The general objective of IPA III shall be to support the beneficiaries in adopting and implementing the political, institutional, legal, administrative, social and economic reforms required by those beneficiaries to comply with Union values and to progressively align to Union rules, standards, policies and practices with a view to Union membership, thereby contributing to their stability, security and prosperity. This indicator will allow measuring the state of play of where the enlargement beneficiaries stand in terms of their preparation for meeting one of the three accession criteria, the political one: stability of institutions guaranteeing democracy, the rule of law, human rights and respect for and protection of minorities.
Link MFF 14-20 / MFF 21-27	Under MFF 14-20 the same indicator drawn from the enlargement report was used i.e. Composite indicator on the readiness of enlargement countries on fundamental areas of the political accession criteria.
Other methodological comments	This composite indicator is based on a careful analysis performed by the Commission of the situation under the core five areas of the political criteria. Particular emphasis is given to the importance of implementation and track records of concrete results in each area, in addition to legal alignment and institutional framework in . The indicators, including the one on the political criteria, have been introduced in the 2015 enlargement reports . The upcoming enlargement reports will continue to provide an assessment of the areas used for the preparation of this composite indicator. For further details, please see the Communication on the EU Enlargement Strategy.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The Commission expects a gradual improvement as the candidate countries and potential candidates proceed in their EU path. In 2021 The value for this indicator increased slightly thanks to improvements in Albania, North Macedonia and Montenegro.

Specific Objective 2: To reinforce the effectiveness of public administration and support structural reforms and good governance

Indicator 1: Readiness of enlargement countries on public administration reform

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

Link to the objective	Important for several aspects of the specific objectives and particularly related to the third objective (i.e. To shape the rules, standards, policies and practices of the beneficiaries listed in Annex I in alignment to those of the Union and to reinforce reconciliation and good neighbourly relations, as well as people to people contacts and communication).
Link MFF 14-20 / MFF 21-27	This composite indicator was used in previous MFF 14-20
Other methodological comments	This indicator is based on a careful analysis of the developments in the candidate countries and potential candidates by the Commission. Particular emphasis is given to the importance of implementation and track records of concrete results, in addition to legal alignment and institutional framework in the overall assessment. This indicator assesses the level of alignment of the candidate countries and potential candidates with the EU acquis across all negotiating chapters and EU related reform. For further details, please see the Communication on the EU Enlargement Strategy.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The Commission expects a gradual improvement as the candidate countries and potential candidates proceed in their EU path. Progress needs to be sustained over time to be recorded. The value for this indicator increased thanks to improvements regarding one acquis chapter in Serbia (Competition policy), three acquis chapters in Kosovo (Public procurement, Competition policy, Financial control), four in Montenegro (Fisheries, Enterprise and Industrial Policy, Trans-European Networks, Financial and Budgetary provisions) and five acquis chapters in Albania (Public procurement, Fisheries, Science and Research, Judiciary and Fundamental rights, External Relations). It should be noted that alignment with EU acquis is a demanding exercise that requires substantial reforms from the candidate countries and potential candidates over a long period of time, hence the relatively slow increase of this composite indicator for the whole region.

Indicator 2: Attitude towards the EU: Percentage of population with a positive general attitude towards the EU

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Western Balkans										
2020	Milestones									2027

Are we on track :	On track
-------------------	----------

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2021
Data source	Opinion polls run by EUD/EUO in the Western Balkans an Turkey
Link to the objective	The objective of the action is to raise public awareness of and contribute to public support for the European Union and its actions and the EU accession process. The expected results are a public informed about: - EU values, policies and programmes and their impact on their everyday life; - the EU accession process with the accompanying socio-economic transformation and its long term benefits and opportunities for citizens and economies; - EU funding in the enlargement region and its correlation with EU values and policy objectives, with a focus on the tangible positive impact of EU-funded projects on citizens and economies.
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	Opinion polls are reliable polls and follow similar methodology. They are run twice a year from EUDs/EUO in the region, through IPA funding.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Continuous increase of positive opinion despite the COVID 19 crisis. Based on the results from Autumn 2021, the average of positive attitude towards the EU in the Western Balkans is 71.1%. On track, above our target for 2023 of 66.7%. The average of positive attitude towards the EU in the Turkey: 64% (+11 percentage points since 2020) above our target of 50% 2023.

Indicator 3: Percentage of intra-regional trade to GDP

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Western Balkans										
2017	Milestones									2027
4.97			5.29							5.92
	Actual Progress									Final
Are we on track :										

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	31/12/2020
Data source	World Bank Database (for the GDP); UNCTAD and Kosovo statistical office for the trade stats.
Link to the objective	Important for several aspects of the specific objectives and particularly related to the third objective (i.e. To shape the rules, standards, policies and practices of the beneficiaries in alignment to those of the EU and to reinforce reconciliation and good neighbourly relations, as well as people to people contacts and communication)
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Most recent data are for 2020 in 8,41%.

Indicator 4: Number of goods transporting vehicles crossing the border every day

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Western Balkans										
	Milestones									
	Actual Progress									Final

Are we on track :	No data									
Turkey										
2018	Milestones								2027	
11.8	12								12.5	
	Actual Progress								Final	
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	In percentage of GDP
Cut-Off Date	
Data source	Eurostat (Social protection benefits in % of the GDP)
Link to the objective	Important for several aspects of the specific objectives and particularly related to the fourth objective (To enhance accessibility to community bases services, improved education, health and social protection services)
Link MFF 14-20 / MFF 21-27	
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The trend of the social protection expenditure as % of GDP was decreasing for the several preceding years in the region. While a higher social expenditure level ensures more coverage of the population (% of population covered by social protection measures could be another good indicator to consider), it is nevertheless important to note that social benefits spending is also often counter-cyclical. In the region, both an increase in the social spending is needed to reach population which is not covered by social protection yet, on the other hand boosting private sector development is crucial to secure employment and reduce the number of people that depend on the social benefits. Most recent trend is unknown due to lack of recent data (most recent is 2018). Social benefits as % of GDP could have increased due to the COVID-19 pandemic, as many governments introduced new social support measures for persons and families impacted by the pandemic.

Indicator 3: Employment rate of persons aged 20 to 64

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Western Balkans										
2018	Milestones								2027

Cut-Off Date	
Data source	Eurostat
Link to the objective	Important for several aspects of the specific objectives and particularly related to the fourth objective (To enhance employment opportunities, improve labour markets and employability)
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The trend in the employment rate was increasing for a number of years, which meant the indicator was on track. However, the COVID-19 pandemic certainly disrupted labour markets, for which the most recent numbers are not yet available. Without new data it is hard to estimate the current situation, but the target should be to achieve pre-pandemic levels at least by 2023, and increase from then onwards. The latest available data is for 2020 with an average of 55,2% for the Western Balkans indicating that the trend in the employment rate was still increasing in the beginning of the pandemic. In Turkey the employment rate in 2020 was 51% indicating a decrease in the employment trend and

that the labour market has been rapidly affected by the crisis.

Indicator 4: Digital skills

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Western Balkans

	Actual Progress									Final
Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Kilograms of oil equivalent per thousand euro
Cut-Off Date	31/01/2022
Data source	Eurostat: Energy intensity measured in terms of energy per GDP https://ec.europa.eu/eurostat/databrowser/view/nrg_ind_ei/default/table?lang=en
Link to the objective	Important for several aspects of the specific objectives and particularly related to the fourth objective (i.e. To strengthen economic and social development including through increased connectivity and regional development, agriculture and rural development and social and employment policies, to reinforce environmental protection, increase resilience to climate change, accelerate the shift towards a low-carbon economy and develop the digital economy and society.)
Link MFF 14-20 / MFF 21-27	
Other methodological comments	In the Western Balkans baseline, no data is available for Albania, therefore Albania is excluded from the average.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Latest available data is for 2020. Energy intensity measured in terms of GDP increased to 393 KGOE/thousand euros of GDP for WB and for Turkey it decreased to 153.7 KGOE/thousand euros of GDP. Continued dependence on fossil fuels, in particular coal, in most of the Western Balkans. Significant share of carbon-intensive industries remain, which are slow to innovate. New support provided for energy efficiency, renewable energy, and gas as transition fuel expected to facilitate the phasing down/out of coal and polluting fossil fuels in energy.

Indicator 7: Greenhouse gas emissions reduced or avoided (Ktons CO2eq) with EU support

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target

Are we on track :	No data									

Indicator type	Impact
Unit of measurement	Percentage
Cut-Off Date	10/03/2022
Data source	Eurostat: Share of energy from renewable sources (NRG_IND_REN)
Link to the objective	Important for several aspects of the specific objectives and particularly related to the fourth objective (i.e. To strengthen economic and social development including through increased connectivity and regional development, agriculture and rural development and social and employment policies, to reinforce environmental protection, increase resilience to climate change, accelerate the shift towards a low-carbon economy and develop the digital economy and society.)
Link MFF 14-20 / MFF 21-27	New indicator
Other methodological comments	Data for Turkey is not available.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	Latest information available for 2020. The average share of renewable energy was 31.68% in 2020 for the Western Balkans. Increased support for the deployment of renewable energy and advancement on the regions' commitment to climate neutrality (including through the adoption of the Sofia Declaration on the Green Agenda for the Western Balkans and associated workplan) shows progress in the deployment of renewable energy sources, despite a worsening of energy intensity of the economy.

Indicator 9: Pollution: PM10 concentrations compared to the EU daily limit value (50 µg/m3)

Justification of the trend	The baseline is cumulative up to March 2021

5. Programme 2014-2020 - Key monitoring indicators

Previous Program 1: Instrument for Pre-accession Assistance (IPA II)

Specific Objective 1: Support for political reforms.

Indicator 1: Composite indicator on the readiness of enlargement countries on fundamental areas of the political accession criteria. These areas are: Judiciary, Fighting organised crime, Freedom of expression, Fight against corruption and Public administration reform

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2015	Milestones									2020
5					Reduced number of cases					A majority of countries are moderately prepared in these areas
	Actual Progress									Final
		5	4	5	6	6	6	6		
Are we on track :	Deserves attention**									

Indicator type	Impact
Unit of measurement	
Cut-Off Date	31/10/2021
Data source	Annual enlargement country reports – European Commission
Narrative	Baseline: Five cases of early stage of preparation in these areas (i.e Albania on the Judiciary, Bosnia and Herzegovina on Public Administration Reform and Kosovo on the Judiciary, Fight against organised crime, and Fight against corruption).

Methodology	This composite indicator aims at showing how candidate countries and potential candidates progress in meeting the political accession criteria in five key areas (namely the functioning of the judiciary, fight against corruption, fight against organised crime, freedom of expression and public administration reform. In each of these areas, the state of play (i.e. the readiness) in the candidate countries and potential candidates is assessed according to the following five-tier standard assessment scale: 1. Early stage, 2. Some level of preparation 3. Moderately prepared 4. Good level of preparation 5. Well advanced. The indicator shows how many countries are assessed at an ‘early stage’ of preparedness in any of the mentioned sub-categories – the number should be decreasing with time.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	For more information: https://ec.europa.eu/neighbourhood-enlargement/countries/package_en
Full metadata available at this address	
Justification of the trend	The Commission expected a gradual improvement as the candidate countries and potential candidates proceed in their EU path. After an initial decline in the number of cumulated number of countries in the category ‘early stage’ of preparedness the indicator unravelled – primarily due to Turkey’s regression. According to the 2021 enlargement reports Bosnia and Herzegovina remained at the early level of preparedness on Public Administration Reform. Kosovo stayed on the same level on the Judiciary and at the level of early stage of preparation / some level of preparedness regarding the Fight against organised crime and the Fight against corruption. Turkey maintained early level of preparedness in the area of Judiciary, the Fight against organised crime and the Freedom of expression (Turkey was at some level of preparedness in all these areas in 2015). The Commission put a particular emphasis on these areas in its Western Balkans Strategy of February 2018 and in its communication of February 2020 on a revised EU accession methodology, which put an even stronger focus on these fundamental reforms.

Specific Objective 2: Support for economic, social and territorial development, with a view to a smart, sustainable and inclusive growth.

Indicator 1: Composite indicator on the readiness of candidate countries and potential candidates on fundamental areas of the economic criteria These areas are: functioning market economy and competitiveness in the EU

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
2015	Milestones									2020
4					Reduced number of cases					A majority of candidate countries
	Actual Progress									Final
		4	4	4	4	4	4	4	4	
Are we on track :	Deserves attention**									

Indicator type	Impact
Unit of measurement	Number of candidate countries and potential candidates
Cut-Off Date	31/10/2021
Data source	Annual enlargement reports – European Commission.
Narrative	Baseline: Four cases of early stage of preparation in these areas (i.e. Bosnia and Herzegovina on functioning market economy and competitive pressures; Kosovo on functioning market economy and competitive pressures).
Methodology	This composite indicator aims at showing where candidate countries and potential candidates stand in terms of their preparations for meeting key areas of the two economic criteria, namely the existence of a functioning market economy and the capacity to cope with competitive pressures and market forces within the Union. In each of these areas, the state of play (i.e. the readiness) is assessed according to the following five-tier standard assessment scale: Early stage – Some level of preparation - Moderately prepared - Good level of preparation – Well Advanced. The indicator shows how many countries are assessed at an ‘early stage’ of preparedness in any of the mentioned sub-categories – the number should be decreasing with time.
Link MFF 14-20 / MFF 21-27	The same indicator continues under the next MFF, but the score there will represent the average score across different countries.

Justification of the trend	Candidate countries and the potential candidates made limited progress towards meeting the economic criteria, according to the 2021 enlargement reports. In the area of functioning market economy, Serbia maintained the level of moderately prepared/good level of preparation. Albania and Montenegro remained at a moderately prepared level, North Macedonia at a good level of preparation and Turkey is considered to be well advanced. On competitiveness, North Macedonia, Montenegro and Serbia remained moderately prepared, while Albania remained at some level of preparation. In terms of cases of early stages of preparation, this indicator remained stable in 2021 compared to the baseline, with

	four cases, on functioning market economy and competitiveness in Bosnia and Herzegovina and Kosovo. Overall, there was limited progress towards meeting the 2021 target for this indicator. The IPA II beneficiaries face challenges in advancing on the fundamental areas of economic criteria, which are interlinked with the political criteria, not least due to the fall out of the COVID pandemic in 2020/2021. The Commission put a particular emphasis on these areas in its Western Balkans Strategy of February 2018 and in its communication of February 2020 on a revised EU accession methodology, which put an even stronger focus on these fundamental reforms.
--	--

Indicator 5: Number of economic entities benefitting from IPA II assistance performing modernisation projects in agri-food sector

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target
Western Balkans										
	Milestones									2023
				520						5 250
	Actual Progress									Final
					118	1 812	2 726	3 428		
Are we on track :	On track									
Turkey										
	Milestones									2023
				120						1 200
	Actual Progress									Final
					335	1 086	1 460	2 602		
Are we on track :	On track									

Indicator type	Result
Unit of measurement	Number of economic entities
Cut-Off Date	
Data source	Directorate-General for Agriculture and Rural Development
Narrative	Under IPARD, EU requires both national and private co-financing. EU funds equal to 75% of public financing. Each country adds 25% of own public funds. This is, roughly, matched by private funds. However, the actual rate of public reimbursement of private investments depends on accepted eligible expenditure at the end of investment. The share varies, but in practice probably never reaches 50%. IPA resources for modernisation and upgrading of farms and food companies are very limited compared to the sector size in respective candidate countries and potential candidates and therefore targets are set only for the supported projects financed from the budget and not for the sector.
Methodology	
Link MFF 14-20 / MFF 21-27	
Other methodological comments	The target for budget year 2020 is actually implemented by the end of 2023. The last calls under some programmes may still take place next year, while project implementation may take another year or more, until the final payment may be made. IPA resources for modernisations and upgrading of farms and food companies are very limited compared to the sector size in respective candidate countries and potential candidates and therefore targets are set only for the supported projects financed from the budget and not for the sector.
Full metadata available at this address	
Justification of the trend	The specific contracts in IPA II agriculture and rural development assistance are implemented in accordance with the N+3 rule, which means that a given budget allocation in this programme may actually be implemented (contracted and paid within a period of 3 years, following year N). The initial estimate of 5.250 will be implemented during the years 2018 - 2023. Targets are based on the information provided in country programmes, approved by the Commission decision for 7 years. Calculations of targets in the programmes are based on indicative financial allocations for the entire programming period. Should these allocations be revised, targets will have to be revised as well. This will be the case for Turkey, for which allocations have been significantly cut. Targets will be revised after the next programme modification, once reduced budget has been reflected in the programme. For Turkey, the initial estimate of 1.200 will be implemented during the years 2018 - 2023. This explains deviations in other relevant indicators, namely specific objective 2 - indicator 6 and specific objective 3 - indicator 2. In 2014-2017 no effective expenditure was made/projects implemented. Contracting and payments so far made only in North Macedonia and Turkey, forthcoming in Albania, Montenegro, and Serbia. These are cumulative values for the entire programming period. The target for budget year 2020 will be fully implemented as an output by the end of 2023 (N+3).

Indicator 6: Overall investment in physical capital in agri-food and rural development implemented by beneficiaries of IPA II assistance

Baseline	2014	2015	2016	2017	2018	2019	2020	2021	2022	Target

Indicator type	Impact
Unit of measurement	Number of cases of early stage of preparation in the 33 chapters in the enlargement region
Cut-Off Date	31/10/2021
Data source	Annual enlargement country reports – European Commission
Narrative	This composite indicator aims at showing where the candidate countries and potential candidates countries stand in terms of their preparations for fulfilling the obligations stemming from EU membership, including the alignment to the 33 acquis chapters. This composite indicator is based on a careful analysis of the situation under each of the 33 acquis chapters. Particular emphasis is given to the importance of implementation and track records of concrete results in each chapter. Annual enlargement reports provide a detailed assessment of these acquis chapters, used for the preparation of this composite indicator. For further details, please see the latest Communication on the EU Enlargement Strategy. These result indicators are particularly relevant for DG NEAR since they show the results of its enlargement policy including financial assistance through the Instrument for Pre-accession Assistance as regards the third criteria.
Methodology	The composite indicator measures how many countries have the assessment at early stage of preparedness in any given chapter. The number should be decreasing over time, indicating that the candidate countries and potential candidates move to a higher level of preparedness.
Link MFF 14-20 / MFF 21-27	
Other methodological comments	This composite indicator aims at showing where the candidate countries and potential candidates countries stand in terms of their preparations for fulfilling the obligations stemming from EU membership, including the alignment to the 33 acquis chapters.

Full metadata available at this address	
Justification of the trend	According to the 2021 annual enlargement country reports, some progress has been recorded for the indicator linked to alignment with, and adoption, implementation and enforcement of, the Union acquis. The decreasing trend means that the countries have overall progressed to a higher level of preparation. However, there have been differences between the countries. The number of cases of early preparedness decreased to 27 in 2021 and include the following: 14 cases in Bosnia and Herzegovina, 7 cases in Kosovo, 3 cases in Turkey, 2 in North Macedonia, 1 in Albania, and none in Montenegro and Serbia. For a more detailed analysis and the summaries of the findings on readiness and progress of enlargement countries towards the alignment to the 33 acquis chapters, please refer to the 2021 country reports.

Indicator 2: Number of economic entities progressively upgrading towards EU standards in agri-food sector

6. The programme contribution to horizontal policies

6.1. Contribution to climate mainstreaming

6.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total	Share compared to total envelope
	2021	2022	2023	2024	2025	2026	2027		
Climate contribution	509.30	527.00	549.00	560.00	566.00	568.00	569.00	3848.30	26%

(*)These amounts include NextGenerationEU top-ups if any

6.1.2. Explanation on the financial contribution

Reflecting the importance of tackling climate change and promoting sustainable development in line with the Union's commitments to implement the Paris Agreement and the Sustainable Development Goals (SDGs), IPA III contributes to mainstreaming climate action in the Union's policies and to the achievement of an overall target of 30 % of Union budget expenditure supporting climate objectives. Actions under IPA III are expected to contribute 18 % of the overall financial envelope of the Programme to climate objectives, with the objective of increasing this percentage to 20% by 2027.

It is estimated that the IPA III would contribute EUR 3.8 billion to climate mainstreaming in 2021-2027.

Figures for 2021 are provided by the Quality Control of the Rio Markers for commitments approved in 2021, done by the NEAR greening facility. Estimates for 2022 until 2027 have been established through a similar methodology used for NDICI: applying historical trends of contribution of various sectors to climate mainstreaming, combined with an analysis of Strategic Responses, key reference programming documents. They should be considered as indicative. These estimates will be updated each year, taking into account that Strategic responses cover the 2021-2024 period only, which will also be regularly updated.

Estimates reflect the OECD/DAC reporting methodology for the Rio-markers on climate change mitigation and climate change adaptation. The budget of interventions contributing to climate change is weighted 100 % if mitigation and/or adaptation are the 'principal objective' of the action and 40 % if mitigation and/or adaptation are a 'significant objective'.

Rio-markers apply to actions funded in all sectors, however past trends indicate that actions that aim to directly tackle climate change tend to concentrate in the sectors of rural development, environment, energy and management of natural resources.

These actions would primarily contribute to main Objectives of IPA III Regulation, especially objective to reinforce environmental protection, increase resilience to climate change, accelerate the shift towards a low-carbon economy, develop the digital economy and society, and strengthen sustainable connectivity in all its dimensions as well as objective to strengthen economic and social development and cohesion (with a particular attention to private sector development, agriculture and rural development). Also, climate-related expenditure might contribute also to achieving objective to shape the rules, standards, policies and practices of the IPA III beneficiaries in alignment to those of the Union and to reinforce reconciliation and good neighbourly relations, as well as people to people contacts and communication and objective to support territorial and cross-border cooperation.

IPA III supports the beneficiaries in their efforts to align to the climate change and energy package and in the implementation of the external dimension of the European Green Deal. In particular, the actions will support the implementation of several priorities of the Economic and Investment Plan for the Western Balkans (clean energy, environment, transport) as well as the Green Agenda for the Western Balkans, especially under the thematic Window 3 (Green Agenda and sustainable connectivity) of the IPA III Programming Framework. Support in the area of clean energy and smart transport is channelled to the beneficiaries in particular via the Western Balkan Investment Framework (WBIF), EFSD+ and the Green for Growth Fund (GGF). Further investment and capacity-building actions under Window 4 (Competitiveness and inclusive growth) and Window 5 (Territorial and cross border cooperation) and Window 2 (Good governance, EU acquis alignment, good neighbourly relations and strategic communication) can also target climate change. This is in line with the “do no harm” principle and the alignment of EU external actions to the Green Deal and the Paris Agreement.

In 2021, actions with a climate adaptation and/or mitigation principal objective were adopted as part of:

- the annual action plan in favour of Kosovo* (EU for environment),
- the annual action plan in favour of Montenegro (EU acquis related activities for Environment and Climate Action policies in Montenegro),
- the annual action plan in favour of North Macedonia (EU for Environmental Standards and Clean Air, EU for Green Economy),
- the annual action plan in favour of Serbia (EU for Connectivity and Green Agenda)
- and the annual action plan in favour of Turkey (Environment and Climate Change, Sustainable Green Energy and Transport).

For example, in Serbia, the EU for Connectivity and Green Agenda action is focused among others on promoting the Green Agenda by:

- a) reinforcing environmental protection (e.g. supporting the construction of the regional sanitary landfill in Novi Sad by 2025),
- b) contributing to energy efficiency (e.g. increasing the financial potential of the National Energy Efficiency Fund up to EUR 10 million in 2025),
- c) accelerating the shift towards a low-carbon and circular economy
- d) and improving the transport sector (e.g. supporting modernisation of 120 km of railway corridor Belgrade-Nis by 2025)¹²

In North Macedonia, the EU for Environmental Standards and Clean Air is focused among others on:

- a) decreasing the pollution-related risks to environment and human health aiming at supporting a decrease in the targeted locations of:
 - the produced particulate PM2.5 from 2 181 kg in 2020 to 27 kg or less in 2027 and
 - the produced particulate PM10 from 2 617 kg in 2010 to 71 kg in 2027
- b) as well as a decrease in the variation of CO2 production in the targeted investment from 6 700 tons in 2020 to 2 700 tons in 2027.¹³

Moreover in Turkey, under the Environment and Climate Change action, IPA support aims at improving the climate change mitigation and increasing the resilience to climate change and disasters by inter alia supporting the reduction of Greenhouse Gas Emissions of Turkey by 246 Mt of Co2 eq by 2030,

as well as supporting the alignment of Turkey legislation, policies and systems with the EU. For example 5 pilot cities are expected to adopt and implement local climate change action plans (including mitigation and adaptation) by 2030.

6.1.3. Key achievements

IPA II supported the beneficiaries in their efforts on both climate adaptation and mitigation. Most efforts were focussed on climate mitigation, notably to align to the EU2020 Strategy, which included increasing energy efficiency in the industry, in transport and housing and increasing the share of renewable energy sources. Support in this area was channelled to the beneficiaries in particular through financial instruments; in the first instance the Western Balkan Investment Framework (WBIF) and the Green for Growth Fund (GGF). Since 2010, through WBIF, investments grants were allocated to IPA beneficiaries and contributed to ensure 123 MW

* This designation is without prejudice to positions on status, and is in line with UNSCR 1244/1999 and the ICJ Opinion on the Kosovo declaration of independence

¹² C(2021)9653, Annex 2, pages 21-24

¹³ C(2021)9732, Annex 4, pages 16-19

of electricity produced from renewable energy sources, 62 public buildings renovated and over 590,000 CO₂ t/year avoided as well as district heating systems upgraded in 22 cities and towns.

6.1.4. Performance

The European Commission has supported climate change mitigation and adaptation both at the bilateral and regional level through dedicated actions. These include support to policy development and implementation, approximation¹⁴ to the EU energy and climate acquis, as well as technical assistance and investments for the clean energy transition and low carbon technologies in general. In addition to dedicated actions, environment and climate change considerations are mainstreamed in different areas of cooperation.

At the regional level, co-operation in the environment and climate area has been supported by the European Commission for more than a decade.

A very effective tool is notably TRATALOW, a regional multi-annual project that has supported since 2020 IPA II beneficiaries in their transition towards the low emissions and climate-resilient economy. With a total budget of EUR 2 million, the action provides support to implementation of climate activities in line with the Beneficiaries' commitments or "Nationally Determined Contributions" (NDCs) and the provisions under the 2015 Paris Climate Agreement. This is done through a series of activities covering mitigation and adaptation actions that will enable keeping the momentum created under the previous projects.

At bilateral level, several projects contribute to decarbonisation and enhancing resilience to the impacts of climate change, across a variety of sectors. The most important sector supporting mitigation is the energy sector, where energy efficiency and renewable energy projects contribute to enhancing access to energy and reducing energy poverty, while at the same time combating climate change.

Under the IPARD programmes, the production and use of renewable energy sources in rural areas have been supported through investments. In 2021-27 they also contribute to the implementation of actions aimed at mitigation and adaptation through forestry measures.

When it comes to enhancing resilience to climate change, actions in the area of disaster risk reduction, environmental protection, and boosting nature based solutions all play an important role. In this regard, approximating the EU environment acquis is a significant contribution.

6.2. Contribution to biodiversity mainstreaming

6.2.1. Contribution

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Biodiversity contribution	33.00	84.00	94.00	96.00	96.00	97.00	102.00	602.00
Share compared to total envelope	1.75 %	4.18 %	3.71 %	4.76 %	4.66 %	4.62 %	4.76 %	4.08 %

(*)These amounts include NextGenerationEU top-ups if any

6.2.2. Explanation On the financial contribution

Estimates reflect the OECD/DAC reporting methodology for the Rio-marker on bio-diversity. The budget of interventions contributing to climate change is weighted 100 % if biodiversity is the 'principal objective' of the action and 40 % if biodiversity is a 'significant objective'.

It is estimated that the IPA III actions would contribute EUR 602 million to biodiversity mainstreaming in 2021-2027.

Figures for 2021 are provided by the Quality Control of the Rio Markers for commitments approved in 2021, done by the NEAR greening facility. Estimates for 2022 until 2027 have been established through a similar methodology used for NDICI: applying historical trends of contribution of various sectors to biodiversity mainstreaming, combined with an analysis of Strategic Responses, key reference programming documents. They should be considered as indicative. These estimates will be updated each year, taking into account that Strategic responses cover the 2021-2024 period only, which will also be regularly updated.

Biodiversity and ecosystem protection and restoration are key pillars of the Green Agenda for the Western Balkans. The thematic window "Green Agenda and sustainable connectivity" will be the primary entry point for supporting action in the area of ecosystems and biodiversity. However, actions under other thematic windows of the IPA III programming framework, such as window "competitiveness and inclusive growth", including the agriculture and rural development priority, will also contribute to biodiversity protection and the management of natural resources, in line with the goals of the European Green Deal.

In 2021, actions with a biodiversity as principal objective were adopted as part of:

- the annual action plan in favour of Albania (EU for Nature),

¹⁴ The approximation of law is a unique obligation of membership in the European Union. It means that countries aspiring to join the European Union must align their national laws, rules and procedures in order to give effect to the entire body of EU law contained in the acquis communautaire

- the annual action plan in favour of Montenegro (EU acquis related activities for Environment and Climate Action policies in Montenegro),
- the annual action plan in favour of North Macedonia (EU for Prespa).

For example, the EU for Nature action in Albania is focused in particular on:

- a) strengthening capacities of the National Agency for Protection Areas and its Regional Administrations to effectively manage protected areas according to the EU acquis and best practices,
- b) supporting revision and drafting of new protected areas management plans through assessment of biodiversity values and threats following Natura 2020 requirements;
- c) as well as on implementation of conservation and restoration measures on 10 000 ha. by 2026.

In Montenegro the environment related EU acquis chapter was opened in December 2018, and there is a number of ongoing projects contributing for instance to the implementation of the EU’s Water Framework Directive, and establishment of water management plans and monitoring systems. The outcomes of this project are expected to have a positive impact that will benefit both Montenegro’s environment and its citizens. The action adopted in 2021 is focused in particular on supporting the full alignment of Montenegro with the EU acquis under Chapter 27 of the accession negotiations by 2025.

In North Macedonia, the EU for Prespa action is focused in particular on promoting the Green Agenda for the Western Balkans in the transboundary Prespa lake by improving the ecological and chemical status of water in the Prespa Lakes by 2025 to the good level as well as increasing the number of full-time equivalent green jobs in Rasen municipality by 15%.

6.2.3. Key Achievements

For example, in North Macedonia the programme “Improving the management of protected areas” promoted the sustainable use of natural resources, and allocated EUR 4 million EU funding for improving the management of the protected areas in an inclusive, professional and sustainable way. The programme was implemented in partnership with UNDP, the management authorities of protected areas, municipalities and local civil society organisations. It mobilized the local communities and the local resources in 24 locations in protected areas, some of which will be future NATURA 2000 site. In total, 241,755.42 ha of protected areas benefit today of improved management. The Programme involved the establishment of two wastewater treatment facilities in support of the Monument of Nature - Vevchani Springs and the National Park Pelister, and a competitive grant scheme, which resulted in the award of 25 grants for nature protection.

6.2.4. Performance

The EU’s immediate neighbourhood is of strategic importance for the EU. There can be no effective green transition without similar action in our immediate neighbourhood - with whom we share rivers, forests, seas and air. The EU Biodiversity Strategy for 2030 requires that all EU neighbourhood countries are on board, particularly those aspiring to EU membership.

Biodiversity and ecosystem conservation and restoration enjoy high-level political support in the Western Balkans and Turkey. For instance, three partners have joined the high ambition coalition on biodiversity: Albania, Bosnia and Herzegovina, and Montenegro.

In Western Balkans and Turkey – biodiversity hotspots – specific support is provided to further approximation of legislation with the EU’s acquis, notably the EU Birds and Habitats Directive, as well as to prepare for the designation of Natura 2000 sites. Technical assistance is targeted, among others, to support management of protected areas and forestry management. Considerable progress has been made in terms of acquis alignment, but challenges remain to ensure its effective implementation, for instance with respect to illegal logging and the use of environmental impact assessment.

Moreover, under the IPARD III programmes, the beneficiaries are supported with agri-environment-climate operations aimed at improving the status of biodiversity, extensively managed ecosystems and genetic resources which are at risk of being lost.

6.4. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 2: 42.8 Score 1: 498.4 Score 0: 1025.1							

The financing is split among four categories: score 2: gender equality is principal objective, score 1: gender equality is significantly impacted, score 0*: impact on gender equality to be determined ex post, score 0: no significant impact on gender equality.

The attribution of the above scores is also in line with the OECD DAC Gender equality policy marker and methodology. The score 2 equals G2 and implies that gender equality is principal objective, the score 1 equals G1 and implies that gender equality is a significant objective, score 0 equals G 0 and means that gender equality is not targeted. This is also aligned with the Gender Action Plan III 2021-2025 for external relations adopted in November 2020. The score 0* is not used.

The Commission is committed to the implementation of the EU Gender Action Plan 2021-2025 (GAP III), as well as the promotion of gender equality and women's empowerment in international fora and agendas. 2021 was the first year of implementation of the new Gender Action Plan III.

Preventing gender-based discrimination and violence against women and girls continued to be one of the EU's main priorities. A regional programme "Ending violence against women in the Western Balkans and Turkey: Implementing Norms, Changing Minds" continued to be implemented on Phase II (1 February 2020 – 31 July 2023). It addresses the challenges brought by the COVID-19 pandemic to women and girls, with the budget of EUR 6.26 million of EU contribution (initial EUR 2.5 million + additional EUR 3.76 million). Some of the main achievements of the programme are the following:

- a total of 350 CSOs received technical assistance to increase their capacities to independently monitor and report on the implementation of CEDAW Concluding Observations, the Istanbul Convention and other human rights legal tools available in the region;
- 20 changes were introduced to the legislative frameworks to prevent violence and protect victims of violence against women;
- two effective regional cooperation mechanisms were established between governments, women's organisations and other concerned stakeholders for policy development and joint monitoring of the implementation of recommendations of CEDAW and the Istanbul Convention monitoring body GREVIO.

In 2021, actions with a gender equality as principal objective were adopted as part of:

- the annual action plan in favour of Bosnia and Herzegovina (EU4 Mitigating Socio-Economic Consequences of COVID-19 pandemic),
- the annual action plan in favour of Turkey (Civil Society as well as Employment, Education and Social Policies actions).

For example, the activity entitled 'Women Friendly Cities (WFC)-III' implemented under the Civil Society action of the annual action plan in favour of Turkey aims to improve the institutional capacity of municipalities to advance to becoming 'women-friendly'. It also aims to improve CSOs' capacity to ensure inclusiveness and better cooperation with municipalities regarding a rights-based approach, gender equality in local policies, and service delivery, all of which are of primary importance for a democratic society.

6.5. Contribution to the sustainable development goals

6.5.1. Goals

SDG 5 Achieve gender equality and empower all women and girls

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

SDG 13 Take urgent action to combat climate change and its impacts

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

6.5.2. Key achievements and performance

The Enlargement policy under the Multi-Annual Financial Framework 2021-2027 continues supporting the progress of candidate countries and potential candidates towards meeting the political and economic criteria for accession as well as their ability to align with, implement and enforce EU rules and regulations. As in 2014-2020, the new MFF has a strong focus on the fundamentals of the rule of law, human rights, public administration reform and economic governance. In addition, as a consequence of the COVID-19 and its disruptive effect on the socio-economic landscape of the enlargement countries, the new MFF strengthens its focus on economic recovery and social cohesion, namely supporting the implementation of the Economic and Investment Plan for the Western Balkans. The Plan aims at spurring the long-term recovery of the region, supporting a green and digital transition, boosting economic growth and supporting reforms to move forward on the EU path, including bringing the Western Balkans closer to the EU Single Market and the latest EU policy developments such as the European Green Deal. And in this context, cooperation shall be seen as well as against global challenges and backdrops – as promoting those projects that contribute to the common European values by joining forces across the borders and focusing on the themes that are important to all candidate countries', potential candidates' and European citizens. Window V (territorial cooperation) of the IPA III Programming Framework will enhance territorial cohesion as well as links, exchanges and collaboration between territories and citizens across land and maritime borders with surrounding member states

SDG 5 Achieve equality and empower all women and girls

Partners in the enlargement region have taken steps to advance women's rights in recent years. A majority have adopted or amended relevant legislation, bringing legal frameworks to be broadly in line with EU acquis and international standards. Special gender equality bodies have been set up, national strategies and action plans adopted, and gender equality has been included in the national

European integration plans. This process has been supported by the European Institute for Gender Equality (EIGE), through the implementation of the regional programme “Increased capacity of EU candidate countries and potential candidates to measure and monitor impact of gender equality policies (2018-2022)” with a total cost of EUR 1 million. The programme has produced good quality outputs, including the production of the Gender Equality Index. A regional platform was established that contributes to efficiency and makes full use of existing synergies. The beneficiaries were the national competent authorities in the Western Balkan partners, notably Ministries and gender equality coordination bodies where those exist.

A total of 340 IPA participants have participated in both Action-dedicated events in IPA beneficiaries or in EIGE’s events, both physical or virtual, including a regional coordination meeting and a regional thematic workshop. EIGE supported the development and publication of National Gender Equality Indices in four IPA beneficiaries. In 2020, the Gender equality indices for Albania and Montenegro were published and the development of two new Indices was launched: Kosovo* calculated three domains and Serbia released its third Index in 2021.

Additionally, data on Women and Men in Decision Making was collected into a database, updated and published on EIGE’s website. The Regional Platform for Coordination of Gender Equality Action of the Western Balkans and Turkey has continued its work and a total of three regional coordination meetings were organised, gathering 129 participants. IPA beneficiaries have been able to use this regionally comparable data to improve evidence-based policy-making on gender equality and for the development of their national Gender Equality Indices. Through the programme, EIGE’s Glossary and Thesaurus was translated into the languages of IPA beneficiaries Albanian, Macedonian, Serbian and Bosnian.

Supporting reforms to remove the legal obstacles and gender stereotypes, strengthening institutions is also the objective of other projects that are supporting gender machineries in charge of the gender coordination and implementation of their Gender strategies and which often remain underfunded.

Concerning women’s political participation, women remain underrepresented in the Western Balkan and Turkey in all decision-making bodies. This situation reflects the gender discrimination, gender roles and the limitation to women in political parties and their limited access to funding in the different partners. The exception is Albania, with 35.71% of MPs women. Gender quotas are key for achieving gender equality in terms of women’s participation in politics. A regional programme includes a component on addressing electoral recommendations from a gender perspective. The programme identifies solutions to overcome the barriers to the participation of women in electoral and other decision-making bodies. In addition, the programme addresses the equitable media coverage during campaigns and parity for electoral candidacy.

Regarding gender-based violence (GBV) in the IPA region, some progress have been achieved. Most partners’ legal frameworks are largely aligned with international law, however, there is a need to ensure full implementation and expand its extent in addressing all aspects of GBV beyond the scope of domestic violence. In this regard, several programmes are focusing on preventing and responding to GBV and have produced positive results such as the establishment of comprehensive services to support GBV survivors and the promotion of positive masculinities. The regional programme “Ending violence against women in the Western Balkan and Turkey: Implementing Norms, Changing Minds, Phase II”, implemented by UN Women started in 2020 and will finish in 2023. The total EU contribution is EUR 6.25 million, after a top up of EUR 3.75 million as part of the EU COVID-19 response in the region. A total of 64 CSOs and five networks have been directly supported by the programme during phase II, and are already engaged in monitoring and reporting on the Istanbul Convention and CEDAW.

SDG 7 Ensure access to affordable, reliable, sustainable and modern energy for all

In the period 2014-2020, the clean energy transition was supported through actions on energy efficiency, promotion of renewable energy, and support to investment in infrastructure part of Trans-European Networks for Energy. At the policy level, decarbonisation of the energy is a core pillar of the Green Agenda for the Western Balkans. In addition, support to partners in aligning with the climate and energy *acquis* was provided, and negotiations with Serbia were successfully open including on the energy chapter. Thanks to EU support, 921 042 tonnes of CO_{2eq} were avoided in 2020 only.

Through the Western Balkans Investment Framework, between 2009 and 2021 the EU will channelled a total of EUR 249 millions in grants, mobilising an estimated EUR 5 billion of project value, in investments in clean energy, leading to an additional 123MW electricity installed capacity from renewable energy, the renovation of 62 public buildings, and the upgrading of 22 heating systems in cities and towns (source: <https://www.wbif.eu/sectors/energy>).

Furthermore, the Coal Regions in Transition in Ukraine and the Western Balkans has become operational.

Cooperation with Turkey in the energy sector continued, including at the local level. In 2021, thanks to a EUR 4.5 million project, implemented by a consortium led by Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH - International Services along with the Ministry of Energy and Natural Resources in Turkey, 80 needs assessment were conducted, as well as 40 renewable energy feasibility studies and 40 energy efficiency audits.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

In the period 2014-2020, the 2018 strategy for the Western Balkans supported SDG 8 through the ‘flagship initiative to enhance support for socioeconomic development’. An example of support in this area is the implementation of the “Western Balkans Youth

* This designation is without prejudice to positions on status, and is in line with UNSCR 1244/1999 and the ICJ Opinion on the Kosovo declaration of independence

Lab” - a regional programme aiming to provide opportunities for youth to participate in decision making. The youth lab offers a forum for continuous policy dialogue between governments, parliaments, young people and other stakeholders – aiming to co-create and monitor the implementation of youth-relevant policies. The first youth lab was implemented over 2021, focussing on youth employment.

In the area of socio and economic development, in Albania, the EU has supported the programme Social Inclusion (2020-2024) and topped up with EUR 20.65 million to respond to the emergency measures targeting economic aid and support to employees of small and large businesses affected by COVID-19 taking into account gender and disabilities as a cross cutting issue. 75 615 families were supported through measures related to economic aid financial assistance, 173,091 employees benefited from measures related to support to businesses affected by COVID-19. In addition, 65 574 individuals received the minimum salary for a period of 3 months as a targeted measure to small enterprises temporary closed as a result of the COVID-19 crisis.

SDG 9 Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

IPA II has contributed to supporting sustainable infrastructure, inclusive industrialisation, and innovation. As an example, after the strong earthquake that affected Albania on 26 November 2019, the EU and other international partners supported the Albania to recover from the damages. One year later, the EU translated its EUR 115 million pledge into two programmes to help Albania recover from the shock and increase resilience to natural disasters. The EU4Schools programme has supported reconstructing and repairing education facilities damaged by the earthquake. Two years after the earthquake, 19 schools are already completed and around 6000 children are studying in new and modern facilities. Also, the EU4Culture programme has supported the rehabilitation of the cultural heritage sites gravely damaged by the earthquake, as well as economic activities to support tourism on these sites.

Equally, the EU4Schools programme has supported the rehabilitation of over 58 educational facilities, including primary and secondary schools, kindergartens, dormitories and VET schools in the 11 municipalities affected by the quake. The programme integrates accessibility with environmental protection, disaster risk reduction, and sustainability.

SDG 13 Take urgent action to combat climate change and its impacts

Under IPA II, support to the environment and fighting climate change have been priorities in the Western Balkans and Turkey, with specific focus on climate-neutrality, climate mitigation and adaptation, biodiversity, circular economy and waste management, disaster risk reduction and innovative measures to fight against pollution. Interventions have contributed to improved institutional capacity, local empowerment and strengthened international collaboration, and legislative and regulatory alignment with the EU acquis.

For example, in Montenegro the environment related EU acquis chapter was opened in December 2018, and there is a number of ongoing projects contributing for instance to the implementation of the EU’s Water Framework Directive, and establishment of water management plans and monitoring systems. The outcomes of this project are expected to have a positive impact that will benefit both Montenegro’s environment and its citizens.

In North Macedonia the programme “Improving the management of protected areas” promoted the sustainable use of natural resources, and allocated EUR 4 million EU funding for improving the management of the protected areas in an inclusive, professional and sustainable way. The programme was implemented in partnership with UNDP, the management authorities of protected areas, municipalities and local civil society organisations. It mobilized the local communities and the local resources in 24 locations in protected areas, some of which will be future NATURA 2000 site. In total, 241,755.42 ha of protected areas benefit today of improved management. The Programme involved the establishment of two wastewater treatment facilities in support of the Monument of Nature - Vevchani Springs and the National Park Pelister, and a competitive grant scheme, which resulted in the award of 25 grants for nature protection.

SDG 16 Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Under the MFF 2014-2020, the 2018 strategy for the Western Balkans provided a significant contribution to the achievement of SDG 16 through the ‘flagship initiative to strengthen the rule of law; the ‘flagship initiative to reinforce engagement on security and migration’ and the ‘flagship initiative to support reconciliation and good neighbourly relations’.

To illustrate support in this area during the previous MFF, one example is the EU assistance to Albania, which has contributed to ensuring ability of the country to continue delivering on key reforms necessary to advance on the European path. This includes budget support in the field of justice reform (amounting to 34 mln EUR), technical assistance to the justice institutions and the Ministry of Justice, support to the 'vetting' of judges and prosecutors, which continued to be conducted under the thorough supervision of the EU-funded International Monitoring Operation (IMO), and support to the specialised structures against corruption and organised crime (SPAK and SPAK courts). Thanks to the additional human resources/legal officers provided for in the 2020 and 2021 state budgets to the Albanian vetting bodies, the vetting process has picked up pace, particularly at first instance level. To date, the Independent Qualification Commission (IQC) has issued more than 509 decisions out of a total of 805 magistrates undergoing vetting. Outside the scheme for budget support the judiciary, additional 40 mln EUR have been allocated to the sector under IPA II.

1. Overview**1.1. Challenges**

Globalisation and technological change are likely to increase further the interconnectedness and interdependence of world economies. Labour reallocation is an integral and inevitable part of such economic change.

As the current benefits of globalisation are already unequally distributed among people and regions, causing a significant impact on those adversely affected, there is a danger that the ever faster evolving technological advances will further fuel these effects.

If the benefits of change are to be distributed fairly, offering assistance to displaced workers is of utmost importance. The Union continues to provide specific, one-off support to facilitate the re-integration into employment of displaced workers in areas, sectors, territories or labour markets suffering a shock of serious economic disruption.

1.2. Mission (General objectives)

The European Globalisation Adjustment Fund for Displaced Workers (EGF) aims at supporting socioeconomic transformations that are the result of globalisation and of technological and environmental changes by helping displaced workers and self-employed adapt to structural change. The EGF is an emergency fund that operates reactively. It contributes to the implementation of the principles defined under the European Pillar of Social Rights ⁽¹⁾ and enhances social and economic cohesion among regions and the Member States.

1.3. Specific objectives

(¹) [European Pillar of Social Rights Action Plan](#)

The European Pillar of Social Rights consists of 20 principles structured around 3 categories: equal opportunities and access to the labour market, fair working conditions, and social protection and inclusion. It acts as an overarching guiding framework of the EGF, which can help set the relevant principles into practice in the case of major restructuring events, and contribute to a greener, more digital and resilient Union.

The EGF's objective of improving participants' education/training and labour market situation has two dimensions: solidarity and promotion of decent and sustainable employment. Particular emphasis is to be placed on measures that help the most disadvantaged groups.

1.4. Public intervention context

The employment policies are a shared competence between the Union and the Member States ⁽²⁾. The two parties shall work towards developing a coordinated strategy for employment and particularly for promoting a skilled, trained and adaptable workforce, and labour markets' responsiveness to economic change with a view to achieving economic, social and territorial cohesion in the EU. The Union shall contribute to a high level of employment by supporting and, if necessary, complementing Member State's action ⁽³⁾.

In compliance with the principles of subsidiarity and proportionality ⁽⁴⁾, funding from the Union budget concentrates on activities whose objectives cannot be sufficiently achieved by the Member States alone and where the Union intervention can bring additional value compared to action of Member States alone.

Therefore, the mobilisation of the EGF to co-finance measures to support redundant workers can be justified in case of major restructuring events that, by their scale and effects, cause a significant impact and can test the limits of what regular national labour market programmes are able to provide to assist displaced workers. Assistance from the EGF is always offered in addition to the efforts of the Member States at a national, regional and local level. The EGF generates European added value by increasing the number, variety and intensity of services offered to even more dismissed workers and for a longer period of time than would be possible without EGF funding ⁽⁵⁾.

The Multiannual Financial Framework 2021-2027 ⁽⁶⁾ and the Interinstitutional Agreements on Better Law-Making ⁽⁷⁾ between the European Parliament, Council and the European Commission determine the budgetary framework of the EGF. The objective, scope and conditions for the mobilisation are set out in the EGF Regulation ⁽⁸⁾. For each eligible case, the EGF is mobilised jointly by the European Parliament and Council through a decision adopted in accordance with the provisions of the EGF Regulation and a transfer from the reserve budget line to the EGF operational budget line.

EGF's design shows a clear complementarity with the more preventive assistance offered by the European Social Fund+ (ESF+) which consists of multiannual programmes that support long-term goals such as the anticipation and management of changes and restructuring. Unlike ESF+, EGF is established to provide support in exceptional circumstances and outside a multiannual programming scheme. EGF and ESF+ measures are sometimes used by Member States to complement each other to provide both short and long-term solutions ⁽⁹⁾.

1.5. Actions

The EGF co-finances coordinated packages of personalised services designed to facilitate the re-integration of the targeted beneficiaries, in particular, the most disadvantaged among them, into employment or self-employment. The main focus is on active labour market measures (e.g. training and retraining, job-search assistance, outplacement assistance, aid for self-employment or business start-ups). Assistance is granted for a limited period (the regular implementation period is always 24 months calculated from the day the financing decision enters into force ⁽¹⁰⁾). The EGF adds to existing mainstream restructuring assistance programmes and services of labour market actors without replacing existing resources.

The main actions provided through EGF include personalised job-search assistance and guidance, vocational training and up-skilling, support to entrepreneurship and business creation, and temporary financial incentives and allowances.

1.6. Delivery mode

⁽¹⁰⁾ At their own risk, Member States may start to offer assistance before the financing decision enters into force. This time period is also retroactively eligible once the decision enters into force and extends the implementation period.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/691 of the European Parliament and of the Council of 28 April 2021 on the European Globalisation Adjustment Fund for Displaced Workers (EGF) and repealing Regulation (EU) No 1309/2013.	2021 - 2027	

1.8.2. Legal basis explanation

If specific actions prove necessary outside the Structural and Investment Funds and without prejudice to the measures decided upon within the framework of the other policies of the Union, Article 175(3) of the Treaty on the Functioning of the European Union allows the European Parliament and the Council to take action in accordance with the ordinary legislative procedure and after consulting the European Economic and Social Committee and the European Committee of the Regions.

In addition to the legal basis mentioned above, the Regulation of the European Parliament and of the Council on the European Globalisation Adjustment Fund for Displaced Workers (EGF) for 2021-2027 provides provisions on eligibility criteria, management, financial contribution, reporting, evaluation and auditing rules.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	181.3	201.3	205.4	209.5	213.7	217.9	222.3	1 451.4
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities								

NB: The EGF uses annual ceilings instead of financial programming. The annual ceiling does not include the transfer of EUR 16.05 million from the reserve to the completion line of the 2014-2020 EGF programme in 2021.

(*) Only Article 15(3) of the financial regulation.

The multiannual financial framework (MFF) 2021-2027 underlines the EGF's special character as an emergency relief instrument and maintains it as one of the special instruments outside the budgetary ceilings of the MFF. As such, the EGF is not programmed, but only mobilised upon specific request submitted by a Member State, within the annual maximum amount. The MFF Regulation adopted on 17 December 2020 sets an average annual ceiling of EUR 209.6 million (current prices) for the EGF for the 2021-2027 period.

1.9. Link with the 2014-2020 MFF

On 2 May 2018, the Commission adopted a proposal for the 2021-2027 multiannual financial framework, amended in June 2020. The proposal reflects the current social and economic context and provides a concrete response to the call from the European public for a more social Europe and for greater investment in people in the European Union.

The agreement reached by the co-legislators in December 2020 on the EGF Regulation 2021-2027 enables DG EMPL to continue providing timely assistance to displaced workers. The new Regulation entered into force on 3 May 2021.

Given that the purpose of the EGF is to rapidly provide financial support in situations of urgency, it remains outside the budgetary ceilings of the MFF. The EGF, if needed, can mobilise a maximum amount of EUR 1 467 million (in current prices) for the 2021-2027 period. To ensure that the EGF intervenes more effectively, is more inclusive and flexible to respond to current and future economic challenges (such as automation and digitalisation, the transition to low carbon economy etc.), the scope of the EGF has been extended to cover any type of major restructuring event (regardless the cause) and the threshold has been lowered from 500 in the 2014-2020 programming period to 200 displaced workers in the 2021-2027 period. Moreover, the EGF co-financing rate has been aligned with the highest ESF+ co-financing rate in the respective Member State.

1.10. Relevant websites providing more information

<https://ec.europa.eu/social/main.jsp?catId=326&langId=en>

The website provides information on the objectives, measures and potential beneficiaries of the EGF. Users can also find the EGF Regulation, FAQ, contact persons in the EU countries and detailed information on all EGF applications. Furthermore, the website includes links to publications, news and events related to EGF.

2. Where are we in the implementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Total financial programming	Implementation rate
Commitments	8.0	1 451.4	1%
Payments	6.6		0%

The remaining five applications (submitted by Belgium, Germany, Estonia, Netherlands and Finland) of the 2014-2020 period received at the end of 2020 were adopted in 2021 and were thus paid out partly of assigned revenues from the 2014-2020 period and partly of the budget allocated for the period 2021-2027. Four of these applications related to the economic crisis stemming from the pandemic, whereas the fifth application was linked to a trade-related restructuring event.

The year 2021 was marked by the transition to the new Regulation. This enables more workers to benefit from the EGF due to lower thresholds and a broader scope. It also enables a higher rate of cost co-financing to support services in many Member States. Under the new rules, all reasons for restructuring, including the economic effects of the COVID-19 crisis, as well as larger economic trends like decarbonisation and automation, are eligible for support. This comes on top of other reasons like changing trade patterns or consequences of the financial and economic crisis for which workers could receive support from the EGF under the provisions of the previous Regulation 2014-2020.

Even though the new Regulation only entered into force on 3 May 2021, it applies as of 1 January. A derogation clause ensured that funding gaps could be avoided. In 2021, eight applications were submitted by four Member States ⁽¹⁾, requesting a total of EUR 20.5 million in order to assist 3 500 dismissed workers. In five cases, the COVID-19 pandemic was the main factor that led to the dismissals. The remaining three cases had a trade-related background. The EGF was mobilised in 2021 in four cases. As it takes about five months to mobilise the EGF, the remaining four applications, received in the second half of 2021, are expected to be mobilised in the first half of 2022.

Despite the economic recovery, uncertainty remains, in particular in relation to (i) potential further mutations of the Coronavirus that could hamper economic recovery, (ii) rising inflation, (iii) the persistence of supply chain bottlenecks and (iv) a possible economic shock due to the Russian invasion of Ukraine as well as (v) the economic consequences of the EU sanctions against

⁽¹⁾ In 2021, Greece submitted one application (for electrical equipment manufacturing), Spain submitted three application (one for metalworking industry and two manufacture of motor vehicles), France submitted two applications (one for manufacture of transport equipment and one for wholesale trade) and Italy submitted two application (one for air transport and one for warehousing).

Russia over Ukraine. As an emergency response tool, the EGF will be ready to react to these challenges and to offer assistance in possible further major restructuring events in 2022 and 2023, if needed.

As concerns the implementation of ongoing cases, but also possible future applications, the development of the pandemic situation will have an impact on the implementation of measures ⁽¹²⁾. This might also hinder Member States from applying for support, if it is unclear whether measures could be implemented at all ⁽¹³⁾.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The EGF contributes to smart, inclusive and sustainable economic growth and promotes sustainable employment in the Union by enabling it to demonstrate solidarity and support workers made redundant and self-employed persons whose activity has ceased as a result of major restructuring. The fund contributes also to the implementation of the principles defined under the European Pillar of Social Rights and enhanced social and economic cohesion among regions and Member States.

3.1.2. Active programme performance

The overall aim of the EGF is to ensure that the largest possible number of beneficiaries find sustainable employment as soon as possible. The main sources of information on the results achieved by the EGF are the final reports submitted by the Member States, seven months after the end of the implementation, as well as beneficiary surveys, which are conducted six months after the implementation of the case.

Considering the delayed start of the programming period and taking into account that a case implementation takes 24 months, the first final reports and beneficiary surveys are due by mid-2024 only. Information relating to performance assessment can thus only be provided once sufficient data on the implementation of the 2021-2027 EGF is available.

The beneficiary survey is a new tool introduced in the 2021-2027 period. Even though sustainable reintegration into quality employment is the main aim of the EGF, it is hard to measure the performance of the EGF by simply comparing re-integration rates. This is due to differences in the characteristics of the targeted beneficiaries and in the socioeconomic situation of the region affected, etc. Beneficiary surveys will thus help to assess the extent to which the assistance offered had an impact on the perceived change in the employability of beneficiaries, or, for those who have already found employment, on the quality of the employment found, such as (i) changes in working hours, (ii) the type of employment contract or relationship (full time or part time; fixed term or open-ended), (iii) the level of responsibility or change of salary level in comparison to previous employment and (iv) the sector in which the person found employment. Such information will be broken down by gender, age group, education level and level of professional experience. The results of the surveys will feed into the evaluations of the EGF.

3.2. Key achievements

55	55 168	4 099	EUR 175 220 016	60%
applications were received, excluding those withdrawn or rejected, between 2014 and 2020. This includes six applications received in 2020.	workers were targeted between 2014 and 2020, including 9 205 in mobilised applications received in 2020.	young people not in employment, education or training were targeted between 2014 and 2020.	of EGF contribution was requested by 12 Member States between 2014 and 2020, including EUR 18 101 389 requested by six Member States that submitted applications in 2020.	is the average rate of beneficiaries who found employment following an EGF intervention between 2014 and 2020.

⁽¹²⁾ The pandemic had a direct influence as many ‘classroom-style’ training courses etc. had to be cancelled due to government restrictions. This concerned, in particular, vocational training courses for which physical presence is needed.

⁽¹³⁾ Not all training courses can be offered online, so it fully depends on the national restrictions, the background of the dismissed workers, their future career aspirations and related training needs.

Furthermore, the general design of the EGF does not in any way hamper its performance. It allows ample flexibility to design a broad suite of measures and also flexibility to adapt to unforeseen circumstances. However, problems could appear in the institutional capacity of the implementing bodies to adapt to the circumstances or the willingness of possible beneficiaries to participate in measures during a severe sanitary crisis.

3.3. Evaluations, studies and reports

On 13 December 2021, the Commission published the ex post evaluation of the EGF 2014-2020 ⁽¹⁴⁾. This evaluation was primarily based on an external study ⁽¹⁵⁾, which the Commission had contracted out in 2020. The aim of the evaluation was to scrutinise the effectiveness, sustainability, efficiency, coherence, relevance and EU added value of the fund.

The evidence base consisted of desk-based research, targeted surveys and in-depth interviews with EU and national level stakeholders and end beneficiaries of the fund, and a public consultation.

According to the findings, the EGF has been successful in providing support to and showing solidarity with workers, self-employed persons, and (in some cases) young people not in employment, education or training affected by major restructuring events. The EGF allows Member States to provide better quality measures for more targeted beneficiaries and for longer than would be possible without EGF funding. The average re-integration rate across all EGF cases from the 2014-2020 is around 60%, but ranges from a low of 18% to a high of 94% for different cases ⁽¹⁶⁾. The fund remains relevant and useful, although there is room to reconsider its scope in terms of whom it targets and under what circumstances; to simplify or shorten administrative procedures; and to better monitor the results of the interventions.

The redesign of the EGF 2021-2027 was based on the findings of the mid-term evaluation ⁽¹⁷⁾. In general, the ex post evaluation re-confirmed the findings of the EGF mid-term evaluation and concluded that the redesigned EGF 2021-2027 addresses the main shortcomings identified. The main changes are set out above in section 1.9. By broadening the scope of the EGF and by making the application procedure easier and faster, the fund is expected to be more inclusive in the future and reach more displaced workers in need of assistance. In order to improve monitoring of the EGF, a beneficiary survey will be conducted at the end of each intervention. By means of the survey, the broader impacts of the EGF on beneficiaries’ general employability, such as the acquisition of new skills, gain of self-confidence, increased motivation, etc. will be measured.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: EGF common indicators: change in the participants education/training and labour market situation

Indicator 1: Total EGF beneficiaries in a given case

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Milestones										
										Final
Actual Progress										
Are we on track :										

Indicator type	Output
Unit of measurement	Number of beneficiaries (cumulative)
Cut-Off Date	31/12/2021
Data source	Competent authority of the Member State, for a given case.
Link to the objective	Assistance in case of major restructuring events of unexpected nature, such as the economic crisis resulting from the COVID-19 pandemic.
Link MFF 14-20 / MFF 21-27	New indicator.
Other methodological comments	The actions covered by the EGF are, by definition, not programmable because restructuring events giving rise to the redundancies are unexpected. Therefore, defining in advance how many mass redundancy events will take place in any given year and what would be the profile of beneficiaries is not possible for the EGF. The baseline can be set after all final reports from 2014-2020 programming period have been submitted to the Commission by the Member States (i.e. mid-2023). The historical success rate will not be adjusted in case the expected macroeconomic environment turns to be less favourable in the EU labour market and job-placements become more difficult, due to current or future crises. The indicator will not have milestones.

Justification of the trend	

Indicator 2: Beneficiaries by employment status (unemployed/inactive/employed (dependent)/self-employed)

⁽¹⁴⁾ [SWD/2021/381 final](#)

⁽¹⁵⁾ [Study KE-02-20-968-EN-N](#)

⁽¹⁶⁾ Re-integration rates are primarily influenced by absorption capacities of local and regional labour markets. Hence, the reintegration rate may differ considerably depending on the economic sector and the geographic area concerned. Member States’ institutional capacity and experience to provide assistance in restructuring events is also key to furthering the success of the EGF.

⁽¹⁷⁾ [Mid-term evaluation of EGF](#)

Justification of the trend	

5. The programme contribution to horizontal policies

5.1. Contribution to gender equality

5.1.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*: 8.0							

(*Consolidated information about the annual commitments implemented (total per score by programme in EUR Million)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

The EGF Regulation provides for the Commission and the Member States to ensure that equality between men and women and the integration of the gender perspective are integral parts of and promoted during all stages of the implementation of the financial contribution from the EGF. To that end, the Member States formally confirm the respect of this principle at the time of application where they provide gender-disaggregated information of the workers targeted for assistance. In case of doubt, the Commission requests Member States to provide further information on the gender aspect in the course of its assessment of an application. This is, however, a general principle applied across the implementation and final reporting of the EGF cases and it is not relevant to estimate budget contributions. Evaluations of the EGF always include a gender analysis.

Between 2014 and 2016, the greatest number of redundant workers benefiting from EGF support came from sectors, which traditionally employ more men than women (motor vehicles, computer, electronic, machinery and construction of buildings). As a consequence, most workers made redundant and then targeted by the EGF applications were male (75% men vs. 25% women). However, since 2017, a significant number of redundancies took place in sectors with high numbers of employed women (retail trade, call centre, wearing apparel, financial services and tourism related activities) hence 57% of men and 43% of women were targeted by the EGF between 2017-2020. In 31% of all EGF cases women represent at least 40% of the dismissed/targeted workers and in 20% of cases they are representing more than 50%.

5.2. Contribution to the sustainable development goals

5.2..1. Goals

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

SDG 5 Achieve gender equality and empower all women and girls

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

SDG 10 Reduce inequality within and among countries

6.5.2. Key achievements and performance

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

The EGF contributes to ensuring inclusive and equitable quality education and promoting lifelong learning opportunities for all through tailor-made trainings that aim at upgrading and updating skills and which are among the core measures offered by EGF assistance. Long-term educational programmes are also eligible for EGF funding. For example, in the 2017 ‘Ericsson’ case in Sweden 80 EGF beneficiaries have increased portfolio of education to choose from, ranging from one-off training to full university degrees. EGF funding enabled the provisions that would not have been procured via the Public Employment Services.

In the 2019 ‘Goodyear’ EGF case in Germany, 60% of the targeted workers had no suitable qualification and used to hold elementary occupations (including a high number of people with migrant background). Backed by EGF with EUR 2 165 231, one third of 622 beneficiaries upskilled and improved their employment level. Overall, 58% of the workers had found a new job while the other 5% were participating in upskilling measures for a longer duration (e.g. getting a vocational qualification), by the reporting date.

SDG 5 Achieve gender equality and empower all women and girls

The EGF is helping to achieve gender equality by providing support to all dismissed workers. Since 2017, a significant number of redundancies took place in sectors with high numbers of employed women (retail trade, call centre, wearing apparel, financial services and tourism-related activities). For example, in the 2017 ‘Retail’ case in Finland 1 173 women (representing 80% of total beneficiaries) were helped by EGF. EUR 2.5 million were mobilised from the EGF to support the ICT and language training, job and career coaching and job-seeking training. Overall, 84% of the beneficiaries had found a new job at the end of the implementation period.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

As stipulated by the EGF Regulation, the fund aims to contribute to smart, inclusive and sustainable economic growth and to promote sustainable employment in the EU by enabling the Union to demonstrate solidarity towards, and to support workers made redundant. Thus, sustainability and inclusiveness are among the core values of the EGF and the Member States when drawing their application and should favour measures aiming at reintegration into sustainable employment. They are invited to show how the measures are compatible with the shift towards a resource-efficient and sustainable economy.

Furthermore, EGF measures aim particularly at disadvantaged people, helping them to return to the labour market and obtain decent work. Job creation and fostering entrepreneurship are the focus of many EGF cases. The goal to achieve higher levels of economic productivity through diversification, technological upgrading and innovation is indirectly supported by improving and updating the skills of workers made redundant due to restructuring events, and by making them ready for future job market needs.

In NUTS 2 level regions where youth unemployment rates are at least 20%, the EGF may provide personalised services to young people not in employment, education or training. For example, in cases implemented between 2017 and 2019 in Belgium ('Caterpillar' case, 1 931 beneficiaries and EUR 1.6 million of EGF funding mobilised), and in Spain (Castilla y León mining of coal case, 396 beneficiaries and EUR 1 million of EGF funding mobilised), the support offered to the young people targeted provided them with the assistance that they would not have received through national mainstream services.

SDG 10 Reduce inequality within and among countries

The EGF is an emergency fund and is only mobilised in redundancy events that have a significant impact on the regional economy. By offering upskilling measures to workers made redundant, the EGF helps regions to offer measures to make their workers ready for future labour market needs, thereby fostering economic growth.

Some EGF cases also include measures that improve labour mobility of displaced workers. For instance, in the 'Microsoft 2' case in Finland (883 beneficiaries and EUR 3.5 million of EGF funding mobilised) implemented between 2017 and 2019 the measures offered to the dismissed workers supported labour mobility in cooperation with the European Job Mobility Portal (EURES) services (i.e. foreign job advertisements and the exchange of experiences in online meetings).

6.4. Contribution to gender equality	1171
6.5. Contribution to the sustainable development goals	1171

1. Overview**1.1. Challenges**

The European Union Solidarity Fund (EUSF), created in 2002, is activated upon request of an eligible State when major or regional natural disasters occur, such as earthquakes, floods, droughts, forest fires, storms, etc.

Eligibility is determined by total direct damage, which must exceed a threshold specific to each Member State or country negotiating their accession to the EU. The threshold serves as a proxy to justify the activation of solidarity of all Member States. It is set at national level (“major disasters”) or at NUTS 2 regional level (“regional disasters”). The number and size of eligible disasters determine the amount of spending in a given year. The total annual budgetary allocation to the Fund laid down in the multiannual financial framework is a ceiling, rather than a spending target. The Fund is therefore **not programmable** as it entirely depends on the unpredictable occurrence, nature and magnitude of these disasters.

In the context of the EU response to the coronavirus outbreak, the scope of the EUSF has been extended as of 1 April 2020 to encompass major public health emergencies. The eligibility for the latter is determined at national level and based on specific thresholds. In the context of the EUSF, it should be mentioned that extreme weather events and natural disasters have become more frequent with significant damage caused over the past years. This, together with a reduced budget and a new structure of the EUSF (i.e. part of the Solidarity and Emergency Aid Reserve) under the 2021-2027 MFF puts a strain on this instrument making it difficult to fully satisfy demands (cf. also section 1.8.2).

1.2. Mission (General objectives)

Solidarity is one of the core values of the European Union and a guiding principle of the European integration process. The EUSF is a budgetary instrument designed to provide financial means expressing EU solidarity by contributing to post-disaster relief in Member States and accession countries confronted with devastating natural disasters and major public health emergencies.

1.3. Specific objectives

To grant financial assistance to Member States or countries negotiating their accession to the EU in the event of a major natural disaster or a major public health emergency with serious repercussions on living conditions, the natural environment or the economy for the financing of emergency operations undertaken by the public authorities in support of the affected population.

1.4. Public intervention context

The EUSF is a targeted, **flexible instrument** aimed at assisting Member States affected by major natural disasters and health emergencies. As such Union-wide solidarity cannot be achieved by Member States on an ad-hoc basis, a systemic, regular and equitable method of granting assistance was developed at Union level. **Financial assistance from the EUSF is mobilised from appropriations raised by the Council and the European Parliament over and above the normal EU budget appropriations.**

1.5. Actions

The Fund can be used to (re-)finance public emergency and recovery operations from day one of the disaster or of the health emergency. In case of natural disasters, it can finance restoring basic infrastructure to working order, providing temporary accommodation and funding rescue services to help the population affected, securing of preventive infrastructure (e.g. dams/dykes) and cleaning-up operations. In case of health emergencies, it can finance rapid assistance, including medical, to the affected population; protecting the population from the risk of being affected, including prevention, monitoring or control of the spread of diseases, combating severe risks to public health or mitigating their impact on public health.

The EUSF was set up with the aim of partly contributing to the expenditure linked to natural disasters or health emergencies. The Fund is limited in principle to non-insurable damage and does not compensate for private losses. Long-term action (such as economic redevelopment and prevention), as well as, support to businesses and labour market or compensation of losses are not eligible for EUSF aid.

1.6. Delivery mode

The EUSF assistance is implemented through shared management (indirect management for countries negotiating their accession to the EU). However, in order to minimise the administrative burden on countries struggling with a serious disaster and to maximise the budgetary effect, there are no programming and no national co-financing requirements.

Financial assistance from the EUSF is mobilised from appropriations raised by the Council and the European Parliament over and above the normal EU budget appropriations. This ensures that in each case the aid comes as an expression of solidarity with the full backing of Member States and the Parliament, not just as an administrative act of the Commission. The Commission cannot activate the EUSF upon its own initiative.

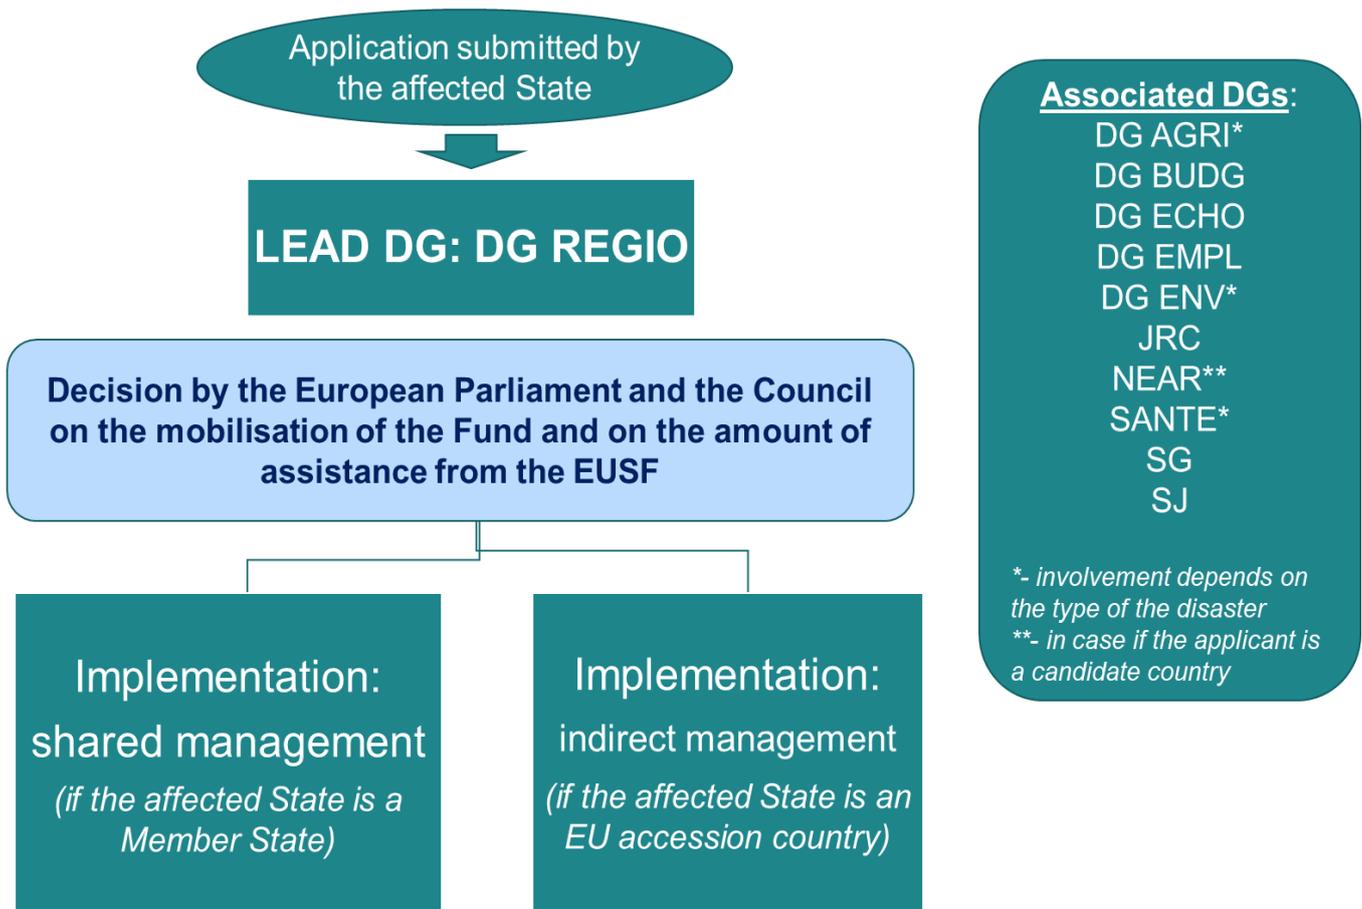

Once the appropriations become available in the EU budget, the Commission adopts a decision awarding the aid to the affected State, which receives it immediately and in a single instalment. Once the aid is paid out, the affected State is responsible for the implementation including the selection of operations and their audit and control. Emergency measures may be financed retroactively from day one of the disaster.

1.7. Graphic overview of the programme structure

Figure 1. Concise EUSF process

Figure 2. Graphic overview of the EUSF implementation structure and actors

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Council Regulation (EC) No 2012/2002 of 11 November 2002 establishing the European Union Solidarity Fund (OJ L 311, 14.11.2002, p. 3).	2021 - 2027	

1.8.2. Legal basis explanation

As part of the Coronavirus Response Investment Initiative (CRII), the Regulation (EU) 2020/461 of the European Parliament and of the Council of 30 March 2020 amended the EUSF Regulation by including major public health emergencies within the scope of the EUSF. Since 1 April 2020, EU Member States and accession countries can apply for support from the EUSF also for public health emergency reasons to alleviate the burden from the first response measures.

The Regulation (EU) 2020/461 increased the percentage of the advance payments from 10% to maximum 25% of the anticipated financial contribution from the EUSF, limited to a maximum amount of EUR 100 million (increased from the previous EUR 30 million).

In the period 2021-2027, in accordance with Article 9 of the multiannual financial framework (MFF) Regulation¹, the European Union Solidarity Fund (EUSF) and the Emergency Aid Reserve (EAR) are both put under a joint budgetary heading, the Solidarity and Emergency Aid Reserve (SEAR). The maximum annual amount for the SEAR is EUR 1.2 billion in 2018 prices (EUR 1.3 billion in 2021 prices).

The MFF Regulation defines **3 periods for the mobilisation of the SEAR** during the year:

- 1) 1 January - 31 August: **75% of the annual SEAR allocation may be mobilised** – of which 50% for the EUSF and 50% for the EAR; the remaining 25% is retained as a reserve until 1 October;
- 2) 1 September - 30 September: **the unspent amounts from the first period can be used by any of the SEAR components;**

¹ Council Regulation (EU, Euratom) 2020/2093 of 17 December 2020 laying down the multiannual financial framework for the years 2021 to 2027 (OJ L 4331, 22.12.2020, p. 11).

- 3) 1 October - 31 December: the unspent amounts from the first and second period plus the **reserved 25% can be used by any of the SEAR components**.

In accordance with Article 9(3) of the MFF Regulation, the appropriations from the SEAR are entered in the general budget of the Union as a provision. Therefore, whenever there is a need to mobilise the EUSF, a transfer from the SEAR reserve line to the EUSF operational line is to be proposed to the budgetary authority (Article 31 of the Financial Regulation).

In addition, Article 4a (4) of the EUSF Regulation requires an amount of EUR 50 million out of the total available amount to inscribe in the General Budget of a given financial year (in commitments and payments) for the payment of advances.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	803.4	487.1	496.8	506.8	516.9	527.2	537.8	3 876.0
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities								

(*) Only Article 15(3) of the financial regulation.

Financial assistance from the EUSF is mobilised from appropriations raised by the Council and the European Parliament over and above the normal EU budget appropriations.

Once the appropriations become available in the EU budget, the Commission adopts a decision awarding the aid to the affected State, which receives it immediately and in a single instalment. Once the aid is paid out, the affected State is responsible for the implementation including the selection of operations and their audit and control. Emergency measures may be financed retroactively from day one of the disaster.

1.9. Link with the 2014-2020 MFF

The EUSF is part of the special instruments in the MFF, outside of the EU budget. The maximum annual amount available under MFF 2014-2020 is EUR 500 million in 2011 prices.

1.10. Relevant websites providing more information

https://ec.europa.eu/regional_policy/en/funding/solidarity-fund/
https://ec.europa.eu/regional_policy/en/funding/solidarity-fund/covid-19

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

The maximum annual amount for the SEAR in 2021 was EUR 1.3 billion.

The EUSF implementation status

In 2021, the Commission completed its assessment and mobilised assistance for **three** regional natural disaster applications received at the end of 2020. In addition, in 2021, the Commission received **ten** new natural disaster applications. Out of these, the assessment of **five** floods related applications and the applications from Spain and Greece was commenced in 2021, however the decisions and mobilisation of the EUSF assistance will be taken in 2022.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

Applications for natural disasters - implementation status (2020- 2021)

In March 2021, the Commission adopted the Communication on the applications for a financial contribution from the EUSF in relation to regional natural disasters presented by the applications from Greece and by France. In May 2021, the budget authority approved mobilisation of the EUSF² to provide assistance to Greece and France in relation to natural disasters and to 20 countries in relation to the major public health emergency caused by the COVID-19 pandemic.

In 2021, the Commission completed its assessment and mobilised assistance for the **natural disaster applications** received at the end of **2020**:

- **Greece** regarding the floods in the region of Sterea Ellada of August 2020 and the damages caused by the Mediterranean Cyclone Ianos in September 2020.
- **France** relating to the damages caused by the storm Alex in October 2020.

In **2021**, the Commission received **ten new natural disaster applications**:

- **Greece** regarding the earthquake in islands of Samos, Ikaria and Chios in October. Greece received the advance payment in March 2021 and the balance payment in July 2021.
- **Croatia** regarding the series of earthquakes starting from December 2020. Croatia received the advance payment in August 2021 and the balance payment in December 2021.
- **Cyprus** relating to the damages caused by the drought and wild fires in June 2021. However, the application failed to reach the major disaster threshold for Cyprus, therefore it was **rejected**.
- **Germany, Belgium, Austria, Luxemburg and the Netherlands** regarding the floods in July 2021.
- **Spain** in relation to the volcanic eruption in La Palma, Canary Islands.
- **Greece** in relation to the earthquake in Crete of 27 September 2021.

The Commission has started assessment of the five floods applications and the applications from Spain and Greece (both received in December 2021) but the decisions and mobilisation of the EUSF assistance will be taken in 2022.

The EUSF applications in relation to the major public health emergency caused by the COVID-19 pandemic

Since April 2020, Member States and accession countries can apply for support from the EU Solidarity Fund also for public health emergency reasons.

In the case of major public health emergencies, the Commission applies a similar method for determining aid amounts as for natural disasters: a country receives 2.5% of the total amount of eligible public expenditure up to the country specific threshold for major health emergencies, plus 6% of the part of the public expenditure exceeding the threshold. As this calculation led to a total amount for eligible applications from 20 countries exceeding the available budget resources, **the EUSF aid amounts per country were reduced on a pro rata basis**. This was the first time since the establishment of the EUSF that, due to the limitation of the available budgetary allocation for the Fund, the determined aid amounts were not paid in full.

The assistance from the EUSF in relation to health emergencies can be used to alleviate the burden from the first response measures, such as provision of medical assistance and purchase of medical equipment, support to vulnerable groups, measures to contain the spreading of the disease, strengthening preparedness and others.

By June 2020 the Commission received 22 applications for a financial contribution from the EUSF. Overall, 19 Member States (Austria, Belgium, Croatia, Czechia, Estonia, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Poland, Portugal, Romania, Slovenia and Spain) and three accession countries (Albania, Montenegro and Serbia) requested assistance in response to the major public health emergency caused by COVID-19. All applications were assessed in a single package to ensure consistent and equitable treatment. In 2020, based on its preliminary assessment, the Commission paid in total EUR 133 million in advance payments to Germany, Ireland, Greece, Spain, Croatia, Hungary, and Portugal. The seven Member States were the only ones making specific request and entitled to receive advance payments³.

In March 2021, the Commission adopted the Communication on the application for a financial contribution from the EUSF presented by twenty applicant countries (Albania, Austria, Belgium, Croatia, Czechia, Estonia, France, Germany, Greece, Hungary,

² Decision (EU) 2021/885 of the European Parliament and of the Council of 20 May 2021 on the mobilisation of the European Union Solidarity Fund to provide assistance to Greece and France in relation to natural disasters and to Albania, Austria, Belgium, Croatia, Czechia, Estonia, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Montenegro, Portugal, Romania, Serbia, Spain in relation to a public health emergency.

³ Council Regulation (EC) No 2012/2002 of 11 November 2002 establishing the European Union Solidarity Fund (OJ L 311, 14.11.2002, p. 3) as amended by Regulation (EU) No 661/2014 of the European Parliament and the Council of 15 May 2014 (OJ L 189, 27.6.2014, p. 143) and by Regulation (EU) No 461/2020 of the European Parliament and the Council of 30 March 2020 (OJ L 99, 31.3.2020, p. 9).

Ireland, Italy, Latvia, Lithuania, Luxembourg, Montenegro, Portugal, Romania, Serbia, Spain) in response to the major public health emergency caused by the COVID-19 pandemic in early 2020. The Communication was followed by the submission to the European Parliament and the Council the Commission’s proposal for mobilisation of the financial contribution from the EUSF.

After the adoption of the EUSF assistance, by the end of 2021 all relevant Commission Implementing Decisions were adopted in order to ensure disbursement assistance. By the end of 2021, the Commission completed the disbursement to all 17 Member States (Austria, Belgium, Croatia, Czechia, Estonia, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Portugal, Romania, Spain) and to two candidate countries (Albania and Montenegro). In total, in the period from September to the end of December 2021, the Commission made **18 payments** for the total amount of **EUR 385 million**.

3.1.2. Active programme performance

The only remaining payment left to execute is the payment to Serbia. The respective payment credit has been carried over to 2022. The signature of the Delegation Agreement with Serbia is ongoing and the assistance is expected to be paid out after the completion of the Agreement.

3.2. Key achievements

In 2021, the Commission awarded and paid out the EUSF contribution amounting to **EUR 406 million** for **affected applicant States** relating to the **natural disasters** that occurred in 2020 and 2021. Namely, the floods in the region of Sterea Ellada in Greece (regional disaster), the Mediterranean Cyclone Ianos in Greece (regional disaster), the storm Alex in France (regional disaster), the earthquake in the islands of Samos, Ikaria and Chios in Greece (regional disaster) and the series of earthquakes starting from December 2020 in Croatia (major disaster).

EUR 791 million	10	28
<ul style="list-style-type: none"> the amount of EUR 406 million of the EUSF assistance awarded and the contribution paid out to affected applicant States related to the five natural disasters occurred in 2020 and 2021 the amount of EUR 385 million of the EUSF assistance awarded and the contribution paid out to 18 applicant States related to major public health emergency in 2020 	New EUSF application received in 2021: - 10 natural disaster applications	Assessment of the EUSF applications completed : - 6 natural disaster applications; - 22 health emergency applications.

NOTE: The established **indicators (including financial data)** are reported the year when the awarded EUSF amount has **been paid**. Therefore, the information on the advance payments for the COVID-19 health emergency has not been included in the table regarding the key achievements.

The overall impact of the EUSF is targeted on the affected population. However as, by its nature, the EUSF cannot follow the programme approach, it is usually not possible to identify the specific part of the population or areas covered by the EUSF intervention alone as most emergency and recovery operations are substantially covered by the beneficiary State’s own budget.

3.3. Evaluations, studies and reports

An in-depth ex-post evaluation to assess the financial assistance provided by EUSF over the period 2002-2016 was completed in 2019. The purpose was to assess the implementation and performance of the financial assistance provided by the EUSF for that period. The evaluation confirmed the effectiveness of the Fund and the positive effects of synergies between the EUSF and other EU policy instruments for disaster risk management. It further concluded that the EUSF brings clear EU added value as a toolkit for disaster intervention and that consideration should be given to policy actions that increase the potential for the Fund.

https://ec.europa.eu/regional_policy/sources/docgener/evaluation/pdf/eusf_2002_2016/eusf_2002_2016_swd_en.pdf

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Grant financial assistance to Member States or countries negotiating their accession to the EU in the event of a major natural disaster or a major public health emergency

Indicator 1: Population of the EUSF supported countries and regions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
	Milestones									

SDG 3 Ensure healthy lives and promote well-being for all at all ages

As part of the Coronavirus Response Investment Initiative (CRII), the Regulation (EU) 2020/461 of the European Parliament and of the Council of 30 March 2020 amended the EUSF Regulation by including major public health emergencies within the scope of the EUSF. Since 1 April 2020, EU Member States and accession countries can apply for support from the EUSF also for public health emergency reasons to alleviate the burden from the first response measures. In 2021, the Commission mobilised and paid out the EUSF assistance to twenty applicant countries (Albania, Austria, Belgium, Croatia, Czechia, Estonia, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Montenegro, Portugal, Romania, Serbia, Spain) in response to the major public health emergency caused by the COVID-19 pandemic in early 2020.

SDG 10 Reduce inequality within and among countries

Solidarity is one of the core values of the European Union and a guiding principle of the European integration process. The EUSF is an instrument designed to provide financial means expressing EU solidarity by contributing to post-disaster relief in Member States and accession countries confronted with devastating natural disasters and major public health emergencies.

SDG 13 Take urgent action to combat climate change and its impacts

While the EU Solidarity Fund is not designed for combating climate change, it does contribute to post-disaster emergency relief in Member States and accession countries confronted with devastating natural disasters, which often can be seen as manifestations of the climate change.

1. Overview**1.1. Challenges**

To meet the objective of a climate-neutral EU by 2050, and the EU target of a net domestic reduction in greenhouse gas emissions of at least 55% by 2030 compared to 1990, there is a need to support and incentivize innovative and low-carbon technologies.

The challenge is to enable EU companies to get in pole position for developing, deploying and commercialising low-carbon solutions.

Low-carbon technology demonstration projects are inherently high-risk endeavours and struggle to attract the required capital. Yet they have potentially vast positive beneficial effects, well beyond the individual company or Member State where they are carried out, and thus warrant public support at the EU level. In addition, the *Innovation Fund (IF)* is funded from revenues arising directly from EU policies, i.e. from the auctioning of EU Emission Trading System (EU ETS) allowances.

1.2. Mission (General objectives)

IF aims at catalysing funding for highly innovative technologies and flagship projects in all Member States that can yield significant emission reductions by:

- Creating the right financial incentives to invest now in the next generation of technologies needed for the EU's low-carbon transition; and
- Boosting growth and competitiveness by empowering EU companies with a first-mover advantage to become global technology leaders.

The ultimate goal is to help businesses and industry invest in clean technologies, thus boosting economic growth, creating local future-proof jobs and reinforcing Europe's technological leadership on a global scale.

1.3. Specific objectives

IF's objectives are to:

1. support projects with highly innovative technologies, processes or products, that are sufficiently mature and have a significant potential to reduce greenhouse gas emissions;
2. offer financial support tailored to market needs and risk profiles of eligible projects, while attracting additional public and private resources;
3. ensuring that *IF*'s revenues are managed in accordance with the objectives of the EU Emission Trading System.

1.4. Public intervention context

Under the Treaty of Lisbon, environmental policy is a shared competence between the Union and the Member States (Article 4 TFEU). Article 191 of the Treaty on the Functioning of the European Union (TFEU) makes combating climate change an explicit objective of EU environmental policy. The Innovation Fund is established by the EU Emission Trading System (EU ETS) Directive (Directive 2003/87/EC) and the Commission Delegated Regulation 2019/856 (see section 1.8 below).

Member States actively participate in the implementation of the Innovation Fund. They are consulted on key decisions (e.g. decisions to launch call for proposals, maximum amount for the project development assistance, list of pre-selected projects, etc.). If requested by the Commission, Member States will also advise and assist the Commission in setting general orientations for the Innovation Fund, as well as in addressing problems in the implementation of a project.

1.5. Actions

The Innovation Fund supports highly innovative technologies by sharing their risk with project promoters via:

(a) Grants through calls for large and small-scale projects focusing on:

- innovative low-carbon technologies and processes in energy-intensive industries, including products substituting carbon-intensive ones;
- carbon capture and utilisation;
- construction and operation of carbon capture and storage;
- innovative renewable energy generation;
- energy storage.

(b) Contributions to blending operations under the Union investment support instrument; and

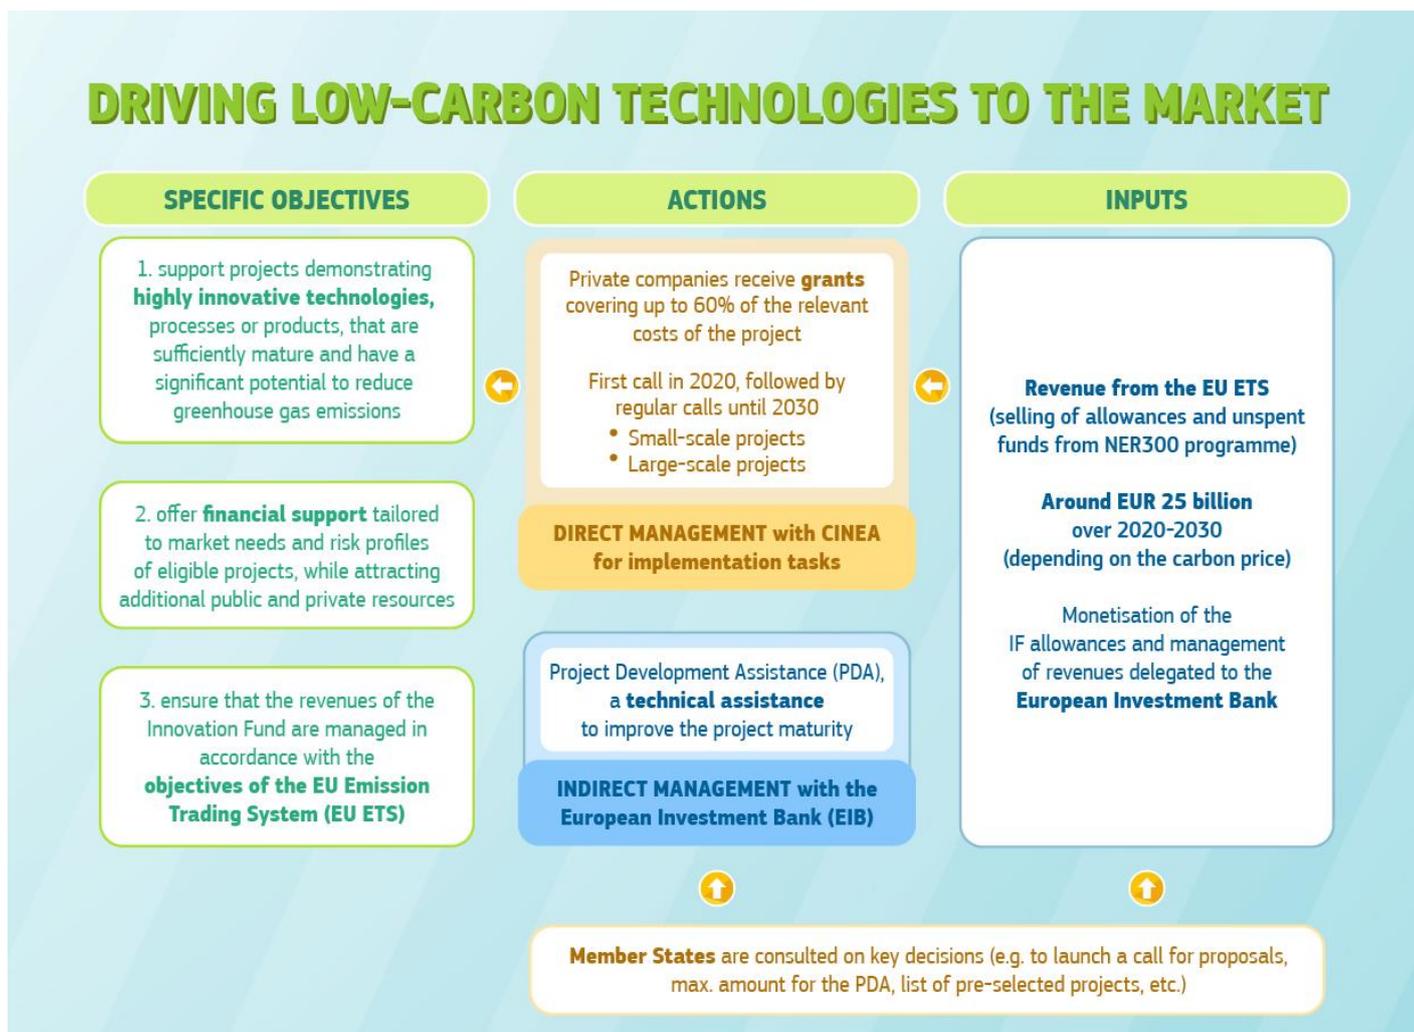

(c) Prizes and procurement.

IF resources may contribute to InvestEU Financial Instruments, to provide debt or equity financing to clean-tech innovative projects.

1.6. Delivery mode

The Innovation Fund is implemented in direct management by the Directorate-General for Climate Action (DG CLIMA), with the assistance of the European Climate, Infrastructure and Environment Executive Agency (CINEA) to whom the implementation of the grant component of the programme is delegated. Some activities are implemented in indirect management, through the European Investment Bank, for the management of the Project Development Assistance support and the channelling of *IF* resources via financial instruments. The monetisation of the Innovation Fund allowances and the management of the Innovation Fund revenues have also been delegated to the European Investment Bank.

1.7. Graphic overview of the programme structure

1.8. Legal basis and budget programming

1.8.1. Legal basis

Legal Basis	Period of application	Reference Amount (EUR million)
Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003 establishing a system for greenhouse gas emissions allowance trading within the Union and amending Council Directive 96/61/EC (OJ L 275, 25.10.2003, p. 32). Commission Delegated Regulation (EU) 2019/856 of 26 February 2019 supplementing Directive 2003/87/EC of the European Parliament and of the Council with regard to the operation of the Innovation Fund (OJ L 140, 28.5.2019, p. 6). Commission Decision C(2020) 1892 of 25 March 2020 delegating the management of the revenues of the Innovation Fund to the European Investment Bank.	2020 - 2027	

1.8.2. Legal basis explanation

Legal basis	Period of application	Reference amount (EUR million)
Directive (EU) 2018/410 amending Directive 2003/87/EC to enhance cost-effective emission reductions and low-carbon investments	2020-2030	N/A
Commission Delegated Regulation 2019/856 of 26 February 2019 supplementing Directive 2003/87/EC of the European Parliament and of the Council with regard to the operation of the Innovation Fund	2020-2030	N/A

The revised EU Emissions Trading System (Directive (EU) 2018/410) is providing the revenues for the Innovation Fund from the auctioning of 450 million allowances from 2020 to 2030, as well as any unspent funds from the NER300 programme.

The revised EU ETS Directive defines the basic elements of the Innovation Fund, such as its size, scope, maximum funding rate (i.e. the maximum support that can be given to a project), and disbursement rules. It stipulates that the Innovation Fund will be endowed with the revenues from the auctioning of at least 450 million allowances from 2020 to 2030, and any unspent revenues from the second call of the predecessor programme, the NER 300, which translates into around EUR 25 billion (at carbon price of €50/tCO₂)

The rules on the operation of the Innovation Fund are set out in Commission delegated regulation 2019/856, with the definition of relevant costs and funding rate, disbursement of grants, project selection procedure, monetisation of allowances, and governance arrangements.

1.8.3. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Revenues from auctions	3 816.2							3 816.2

1.9. Link with the 2014-2020 MFF

The *Innovation Fund* builds on its predecessor, the off-budget fund NER 300 programme, and has been improved considerably by being open to projects from energy-intensive industries, having a larger grant coverage, providing support in more flexible ways, and—following recommendations from the Court of Auditors—having a streamlined governance and simplified decision-making.

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	146.6	3 816.2	4%
Payments	11.2		0%

- **First call for large scale projects**

A first call for proposals was launched in July 2020, amounting to €1 billion and addressing large-scale projects. It registered very high interest, with a high number of proposals received (i.e. 311 project proposals received). Following the first stage evaluation, on 23 March 2021 CINEA invited 70 proposals to submit a full application in a the second stage of the call for large-scale projects. 66 proposals were received by the deadline of 23 June 2021 and the evaluation was carried out in the second half of 2021. The result of the call was seven projects invited for grant agreement, requesting in total EUR 1,145.59 million in grants. The grant agreement signatures are expected to take place in the first quarter of 2022.

- **First call for small-scale projects**

The call for proposals launched in December 2020, amounting to €100 million and addressing small-scale projects, had the deadline of 10 March 2021. The results were published in mid-July and at the end of the evaluation process, the 32 top-ranked proposals within the available budget were invited for grant preparation. By 10 December 2021, 30 of the pre-selected proposals for funding signed a grant agreement with CINEA, representing an assigned budget of EUR 109.16 million.

- **Project development assistance**

Project Development Assistance (PDA) under the Innovation Fund aims to accelerate the bankability and general maturity of projects so that they are then ready to re-apply to the Fund.

A Contribution Agreement on PDA was signed with the European Investment Bank in April 2021 and already started to be implemented. From those proposals not invited to the second stage of the first large-scale call, 15 proposals were invited¹ to access important PDA, delivered by the EIB², worth EUR 4.4 million. Additionally, 10 small-scale projects were also awarded PDA worth EUR 1.7 million.

- **InvestEU Financial Instruments**

In 2021, EUR 100,000,000.00 from the Innovation Fund were allocated to InvestEU through the [Commission Decision C\(2021\) 7404](#) of 19.10.2021 on the activities related to the Innovation Fund, serving as the financing decision for 2021 and as a decision launching the second calls for proposals and its [Annex](#). The Guarantee Agreement(s) (GA) with the Implementing Partner(s) are not yet finalised so the operations have not started (GA with the European Investment Bank is the first to be signed – planned for 2022).

- **Monetisation and asset management**

On the revenue side, the implementation is progressing well. A Contribution Agreement was signed in January 2021 between the EU and the EIB ensuring that the monetisation of the allowances set aside for the Innovation Fund is carried out in accordance with the Auctioning Regulation and the revenues of the Innovation Fund are managed in accordance with the objectives of the EU ETS Directive.

3. How is the programme performing ?

3.1. Performance

3.1.1. Introduction

The Innovation Fund is the successor to the funding programme for innovative low-carbon energy demonstration projects from EU ETS revenues – the so-called NER 300 programme.

The first two Innovation Fund calls launched in 2020 were closed in the reporting period, the proposals were evaluated and the results communicated. The significant oversubscription in the first two calls shows that the Innovation Fund was needed and expected by the market, that it fulfills its main objective of addressing a gap in available funding for clean-tech technologies. The lessons learned from the application process led to amending the Delegated Regulation 2019/856 to allow for a one-step application process also for large-scale projects, which in turn should lead to shortening the time to grant. The evaluation results also showed a very good project pipeline among the projects rejected due to insufficient budget available.

In this context, a second call for large-scale projects was launched in October 2021 with a budgetary increase of 50% (total of EUR 1.5 billion) and one-step application procedure. The call will be concluded and the results communicated in 2022.

Multiple events were successfully organised to support all types of stakeholders to better understand current and potential developments of clean tech solutions in the EU. Those events included knowledge sharing events, clean-tech conferences and webinars related to application support / lessons learned.

Seven events were organised in 2021:

- One specific knowledge-sharing event for innovative clean-tech projects, the webinar “From NER300 to the Innovation Fund” organised in February 2021. The event attracted 670 online attendees;
- Two clean tech financing conferences, one during the EU Sustainable Energy Week in October 2021 and one during COP26 in November 2021. The events attracted 235 online attendees each on average;
- Four webinars concerning the application process for the Fund and the lessons learned, attracting 1090 online attendees each on average.

In addition, DG CLIMA and/or CINEA participated in 17 events organised in 2021 by third parties to increase the knowledge and visibility of the Fund.

3.1.2. Active programme performance

¹ At the time of finalising this report, only 14 Large-Scale proposals signed a PDA support agreement with the EIB, as one project withdrew from the process.

² EIB also offers NER 300 Financial Advisory Support – see 6.7.21 presentation to the 8th Meeting of the IFEG. Available at: https://ec.europa.eu/clima/system/files/2021-07/20210706_ifeg_2_en.pdf

The analysis below focuses only on the first call for small-scale projects and the projects awarded under it. The seven projects invited for grant agreement preparation under the large-scale call have not yet been awarded a grant on 31 December 2021 which is the cut-off date for this report, so they will be presented next year.

- **First specific objective:** supporting projects demonstrating highly innovative technologies, processes or products, that are sufficiently mature and have a significant potential to reduce greenhouse gas emissions

The 30 small-scale projects awarded grants, altogether, have the potential to avoid 4.5 Mt CO₂e over the first ten years of operation³. This represents ~0.34% of the 2020 GHG emissions from stationary installations (power plants and manufacturing installations) covered by the EU ETS⁴ and is proportionate given that the call focuses on small-scale projects with CAPEX between 2.5 and 7.5 million EUR. The awarded projects will achieve this potential by advancing and demonstrating breakthrough low-carbon innovations either in new sectors that contribute to a low-carbon economy or in existing sectors that need to be decarbonised to meet their emissions reduction targets.

The awarded projects will also bring other environmental benefits to the European economy in line with the framework of the European Green Deal, as well as EU strategies covering e.g. hydrogen, electrification, and circular economy. For example, awarded projects will:

- support the replacement of fossil-fuels and the deployment of additional innovative renewable energy capacity such as wind energy, solar energy, and geothermal power;
- bring solutions to overcome some of the challenges of having high share of renewable resources for the production of electricity, such offering the provision of renewable electricity in peak hours through the use for second-life car batteries; and,
- support the application of solutions in line with circular economy principles at various levels, through for example the valorisation of waste, heat or material waste that would otherwise be lost, and the cooperation of different industries.

Social and economic benefits are also foreseen by the implementation of the awarded projects, which will enhance the growth of new sectors (e.g. production of green hydrogen), support local economies and cooperation between different industries in line with environmental principles. Additionally, they will lead to specific economic benefits, for example by lowering prices of new technologies and products and creating new markets.

Furthermore, awarded projects have the potential for scalability at the level of the project and the regional economy, showing the possibility of transferring the technology or its application to other sites and entailing the cooperation of different actors in the regional economy. Projects also have a high potential of scalability at the level of both the sector and the economy, since they are likely to be replicable in other industrial sites and in other sectors.

- **Second specific objective:** offer financial support tailored to market needs and risk profiles of eligible projects, while attracting additional public and private resources

When selecting the list of projects to invite for grant agreement preparation, both for the large-scale and the small-scale calls, DG CLIMA has maximised the available amount by using the 20% flexibility allowed by the Financing Decision.

In addition, the budget for the second call for large-scale projects launched in December 2021 was increased by 50% compared to the first call.

Through the grants awarded to the 30 small-scale projects that signed a grant agreement in 2021, the Innovation Fund managed to mobilise investments of EUR 192 million (including the grants).

Since attracting additional public and private resources is a fundamental objective of the Fund, it is important that there are synergies with InvestEU, which provides loans and other financial support in support of economic growth. For example, a new **Green Transition Investment Facility**⁵(GTIF) under InvestEU, supported with EUR 100 million of initial funding from the Innovation Fund, is also currently being finalised. The Facility will work in concert with the Innovation Fund, aiming to enhance the project pipeline of potential applications into the Fund.

- **Third specific objective:** ensure that the revenues of the Innovation Fund are managed in accordance with the objectives of the EU Emission Trading System (EU ETS)

A Contribution Agreement with the European Investment Bank was signed in January 2021. The EU ETS allowances monetisation is carried out in accordance with the Auctioning Regulation and the revenues of the Innovation Fund are managed in accordance

³ One project which expects to avoid 36,9 Mt CO₂e over 10 years of operation (as calculated based on the Methodology for calculating GHG emission avoidance for the specific call for proposals) is to be considered an outlier for statistical purposes and is thus excluded from results presented in this report.

⁴ https://ec.europa.eu/clima/news-your-voice/news/emissions-trading-greenhouse-gas-emissions-reduced-133-2020-2021-04-15_en

⁵ EIB, Relevance of Thematic Impact Finance for Innovation Fund eligible projects (6.7.21 presentation to the 8th Meeting of the IFEG). Available at: https://ec.europa.eu/clima/system/files/2021-07/20210706_ifeg_4_en.pdf

with the objectives of the ETS Directive. During 2021, EUR 3.8b were available, of which EUR146.5m were contracted in the year and another EUR 1.145b were awarded, but the grant agreement preparation was still to be finalised.

3.2. Key achievements

These are some key achievements of the Innovation Fund which show the response of the market to the first calls under the Fund, as well as efforts of DG CLIMA and CINEA to increase the visibility of the Fund and assist potential applicants in the preparation of their projects:

543	39	30	25	6	4800
<i>Proposals received in the first two IF calls</i>	<i>Proposals invited for grant agreement preparation, subsequently 2 small-scale projects withdrew</i>	<i>Projects signed the grant agreement. 7 more projects expected to sign in Q1 2022</i>	<i>Proposals awarded project development assistance by the EIB</i>	<i>Events/webinars/info days/clean-tech conferences organised to present the fund, lessons learned, statistics, etc.</i>	<i>Approximate number of participants/viewers of the events organised</i>

3.3. Evaluations, studies and reports

- Evaluations**

In line with Article 24 of the Innovation Fund Delegated Regulation, in 2025 and every five years thereafter, the Commission shall carry out an evaluation on the operation of the Innovation Fund. The evaluation shall focus on, but shall not be limited to, the assessment of synergies between the Innovation Fund and other relevant Union programmes, as well as the procedure of disbursement of the Innovation Fund support.

- Reports**

Article 22 of the Innovation Fund Delegated Regulation refers to Commission’s obligation to report annually to the Council and to the European Parliament on the progress of the implementation of the Innovation Fund. As in 2020 the programme was just launched and there was very limited progress to report upon, the annual reporting was included in the existing reports prepared by DG Climate Action, namely:

-  [Carbon Market Report – see section 3.1.6. on the Innovation Fund](#)
-  [Climate Action Progress Report – see page 19](#)

In 2022, the Commission will prepare a report to the Council and the European Parliament on the first 2 Innovation Fund calls for proposals launched and closed. Similar reporting exercises will be done in the following years.

4. Programme 2021-2027 - Key monitoring indicators

Specific Objective 1: Support projects demonstrating highly innovative technologies, processes or products that are sufficiently mature and have a significant potential to reduce greenhouse gas emissions

Indicator 1: Absolute GHG emissions avoidance planned/achieved

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									Not possible to define
	Actual Progress									Final
	Planned=4.5 MtCO2e/Achieved=0									
Are we on	No Data									

track :	
Indicator type	Result
Unit of measurement	Reduction of GHG emissions (in tons of CO2 eq.) [cummulative]
Cut-Off Date	31/12/2021
Data source	CINEA database
Link to the objective	The IF aims at supporting projects with a significant potential to reduce greenhouse gas emissions
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	Planned: Expected GHG emissions avoided by the projects once in operation. Data based on the 30 projects that signed a grant agreement by 31 December 2021: 4.5 Mt CO2e over 10 years of operation. One project which expects to avoid 36,9 Mt CO2e over 10 years of operation (as calculated based on the Methodology for calculating GHG emission avoidance for the specific call for proposals) is to be considered an outlier for statistical purposes and is thus excluded from the main indicator. Achieved: GHG emissions avoided once the projects enter into operation. No project entered into operation in 2021.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The trend can be assessed once we have more entries

Indicator 2: Level of financial maturity of supported projects

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
22%	Milestones									40%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	% of projects reaching financial close within 4 years from the grant agreement [cumulative]
Cut-Off Date	31/12/2021
Data source	CINEA database
Link to the objective	The IF aims at supporting highly innovative technologies, processes or products that are sufficiently mature
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	As grant agreements were signed in November-December 2021, no project has reached financial close. 100% of the projects are expected to reach financial close within 4 years from the grant agreement.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The trend can be assessed once we have more entries

Indicator 3: Level of operational maturity of supported projects

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
22%	Milestones									40%
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Result
Unit of measurement	% of projects entering into operation [cumulative]
Cut-Off Date	31/12/2021

Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	As grant agreements were signed in November-December 2021, no project has entered into operation in 2021.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The trend can be assessed once we have more entries

Indicator 4: Events to increase knowledge on the cleantech solutions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
----------	------	------	------	------	------	------	------	------	------	--------

0	Milestones									1
	Actual Progress									Final
	1									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of knowledge sharing events per year [annual]
Cut-Off Date	31/12/2021
Data source	CINEA database
Link to the objective	The IF aims at supporting highly innovative technologies, processes or products that are sufficiently mature. Apart from knowledge sharing events, the Commission and CINEA have also organised 2 clean tech conferences.
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	The IF aims at supporting highly innovative technologies, processes or products that are sufficiently mature
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The trend can be assessed once we have more entries

Indicator 5: Participants to knowledge events on the cleantech solutions

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									150
	Actual Progress									Final
	670									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of participants [annual]
Cut-Off Date	31/12/2021
Data source	CINEA database
Link to the objective	The IF aims at supporting highly innovative technologies, processes or products that are sufficiently mature
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	The IF aims at supporting highly innovative technologies, processes or products that are sufficiently mature
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The trend can be assessed once we have more entries

Specific Objective 2: To offer financial support tailored to market needs and risk profiles of eligible projects, while attracting additional public and private resources

Indicator 1: Sufficient support provided for grants

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Number of projects supported										
0	Milestones									Not possible to define
	Actual Progress									Final
	30									
Are we on track :	No Data									
Funding committed to projects										
0	Milestones									Not possible to define
	Actual Progress									Final
	EUR109,163,733.00									
Are we on track :	No Data									

Indicator type	Output
Unit of measurement	Number of projects supported [cumulative]; funding committed to projects [cumulative]
Cut-Off Date	31/12/2021
Data source	CINEA database
Link to the objective	Offer financial support tailored to market needs and risk profiles of eligible projects, while attracting additional public and private resources
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	By 31 December 2021 the grant agreements were signed only with the projects awarded following the first call for small-scale proposals.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The trend can be assessed once we have more entries

Indicator 2: Investments mobilised

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
Investments mobilised by the IF grants										
0	Milestones									
	Actual Progress									Final
	Planned:EU R191,825,38 3.00									
Are we on track :	No data									
Investments mobilised via Financial Instruments										
0	Milestones									Not possible to define
	Actual Progress									Final
Are we on track :	No data									

Indicator type	Output
Unit of measurement	Total volume of clean-tech investments mobilised by the IF grants [cumulative]; Total volume of clean-tech investments, induced by support channelled via Financial Instruments [cumulative]
Cut-Off Date	31/12/2021
Data source	CINEA database (IF); InvestEU database (Financial Instruments)
Link to the objective	Offer financial support tailored to market needs and risk profiles of eligible projects, while attracting additional public and private resources
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	The total volume of clean-tech investments mobilised by the IF grants is calculated as the total expected/planned capital expenditures (total CAPEX), as calculated and communicated by applicants in their applications, is used as a proxy measure for total expected investment volumes mobilised by the Fund grants. Once the projects will reach the financial close, more accurate data on actual investments mobilised will be available for reporting purposes. The total volume of clean-tech investments induced by support channelled via Financial Instruments is not yet available, as the Guarantee Agreement with the Implementing Partner is not yet signed so the operations have not started. The indicator will be based on total project costs.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The trend can be assessed once we have more entries

Specific Objective 3: To ensure that the revenues of the Innovation Fund are managed in accordance with the objectives of the EU Emission Trading System (EU ETS) in terms of technology pathways and geographical coverage

Indicator 1: Technology sectors covered

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									18
	Actual Progress									Final
	14									
Are we on track :	On track									

track :	
Indicator type	Output
Unit of measurement	Number of sectors covered [cumulative]
Cut-Off Date	31/12/2021
Data source	CINEA database
Link to the objective	Ensuring that the revenues of the Innovation Fund are managed in accordance with the objectives of the EU Emission Trading System (EU ETS)
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	The 1st call for smallscale projects defined 19 possible technology sectors. Out of these, the awarded projects covered 14 technology sectors in energy intensive industries, renewable energy or energy storage: hydrogen (4 projects), intra-day electricity storage (4 projects), other energy storage (4 projects), renewable heating/cooling (3), biofuels and bio refineries (2 projects), solar energy (2 projects), wind energy (2 projects), glass, ceramics and construction materials (2 projects), pulp and paper (2 projects), iron and steel (1 project), non-ferrous metals (1 project), chemicals (1 project), refineries (1 project), CO2 transport and storage (1 project).
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	The trend can be assessed once we have more entries

Indicator 2: Geographically balanced locations

Baseline	2021	2022	2023	2024	2025	2026	2027	2028	2029	Target
0	Milestones									
										29
	Actual Progress									Final
	13									
Are we on track :	On track									

Indicator type	Output
Unit of measurement	Number of Member States covered [cumulative]. Member States refers to ETS Member States
Cut-Off Date	31/12/2021
Data source	CINEA database
Link to the objective	Ensuring that the revenues of the Innovation Fund are managed in accordance with the objectives of the EU Emission Trading System (EU ETS)
Link MFF 14-20 / MFF 21-27	No link to MFF 14-20
Other methodological comments	Projects are located in: Spain, France, Italy, Sweden, Germany, Poland, Croatia, Austria, Iceland, Norway, Netherlands, Portugal, Ireland.
Full metadata available at this address	https://ec.europa.eu/info/files/2021-2027-indicator-metadata-set_en
Justification of the trend	N/A

5. The programme contribution to horizontal policies

5.1. Contribution to climate mainstreaming

5.1.1. Key achievements

The Innovation Fund is a key funding instrument for delivering the EU’s economy-wide commitments under the Paris Agreement and its objective to be climate neutral by 2050, as recognised in the European Green Deal Investment Plan. The Innovation Fund focuses on highly innovative technologies and big flagship projects within Europe that can bring on significant emission reductions. As such, the IF’s contribution towards climate objectives is considered substantial and marked as 100% according to the EU methodology.

The fund is not part of the MFF and will not be tracked for the scope of the 30% climate target.

5.3. Contribution to gender equality

6.4.1. Key achievements and performance

2021 estimates	2022-2027 programming						Total
2021	2022	2023	2024	2025	2026	2027	

Score 0*: 146.6							
-----------------	--	--	--	--	--	--	--

(*)Consolidated information about the annual commitments implemented (total per score by programme **in EUR Million**)

The financing is split among four categories: score 2: **gender equality is principal objective**, score 1: **gender equality is significant objective**, score 0*: **likely but yet unclear impact on gender equality**, score 0: **no significant impact on gender equality**.

6.1. Contribution to climate mainstreaming	1188
6.4. Contribution to gender equality	1188
6.5. Contribution to the sustainable development goals	1188

1. Overview**1.1. Challenges**

Since 1 February 2020, the United Kingdom (UK) is no longer a Member State of the EU. To counter unforeseen and adverse consequences of Brexit in Member States and worst affected sectors, the European Council in July 2020 agreed to establish a new special Brexit Adjustment Reserve (BAR) with an allocation of EUR 5.47 billion (in current prices). On 25 December 2020 the Commission presented its proposal for a Regulation establishing a Brexit Adjustment Reserve which was adopted on 6 October 2021. The BAR is a temporary instrument to provide swift support to Member States to react flexibly to their specific situation with least administrative burden.

1.2. Mission (General objectives)

The withdrawal of a Member State from the EU is an unprecedented situation both for the EU as a whole and for its Member States. The overarching logic behind the BAR instrument is to provide support to the economies of Member States to master the transition of the UK being a third country.

In that regard the Reserve should support regions, areas and, where relevant, local communities most adversely affected by the withdrawal (e.g. loss of market share, employment, trade volumes, turn-over,), in particular those that are worst affected by the UK's withdrawal, and thus mitigate the related negative impact on economic, social and territorial cohesion.

1.3. Specific objectives

The design of the BAR acknowledges these particular circumstances: it does not ask for advance programming or planning of measures and provides for flexibility in the implementation and in line with the subsidiarity principle. However, each Member State needs to demonstrate: (i) the adverse consequences of Brexit, (ii) the direct link between the measures carried out and the negative consequences of Brexit; (iii) fulfil the eligibility criteria set out by the Regulation.

1.4. Public intervention context

The BAR instrument is a targeted, temporary instrument; there is no advance programming or planning of measures involved to minimise the administrative burden. Member States will have to react quickly and in a targeted way in view of the specific impact. The support from the Reserve can be used for national measures specifically taken between 1 January 2020 and 31 December 2023.

1.5. Actions

Given its shared management mode, it is up to Member States to decide which sectors, regions or communities are worst affected and require support. The Regulation provides for a list of indicative measures to counter the adverse consequences of the UK withdrawal. This list is non-exhaustive to allow a flexible use of funds as needed for the specific situation of their sectors, regions and local communities.

1.6. Delivery mode

The BAR is implemented through shared management. However, in order to minimise the administrative burden, there are neither programming, nor national co-financing requirements.

80% of the total BAR allocation will be paid in three tranches of pre-financing in 2021, 2022 and 2023, subject to having received complete notification¹ by the Commission on the designated body or bodies² to which the pre-financing shall be paid, and confirmation of the Management and Control Systems' descriptions. The remaining amount will be paid in 2025 against the assessment of sufficient eligible expenditure. The Union contribution shall take the form of reimbursement of eligible costs actually incurred and paid by public authorities in Member States, including payments to public or private entities, for measures carried out.

Each Member State shall submit to the Commission an application for a financial contribution from the Reserve by 30 September 2024 in which the Member States shall provide justification and details on the measures carried out with BAR support.

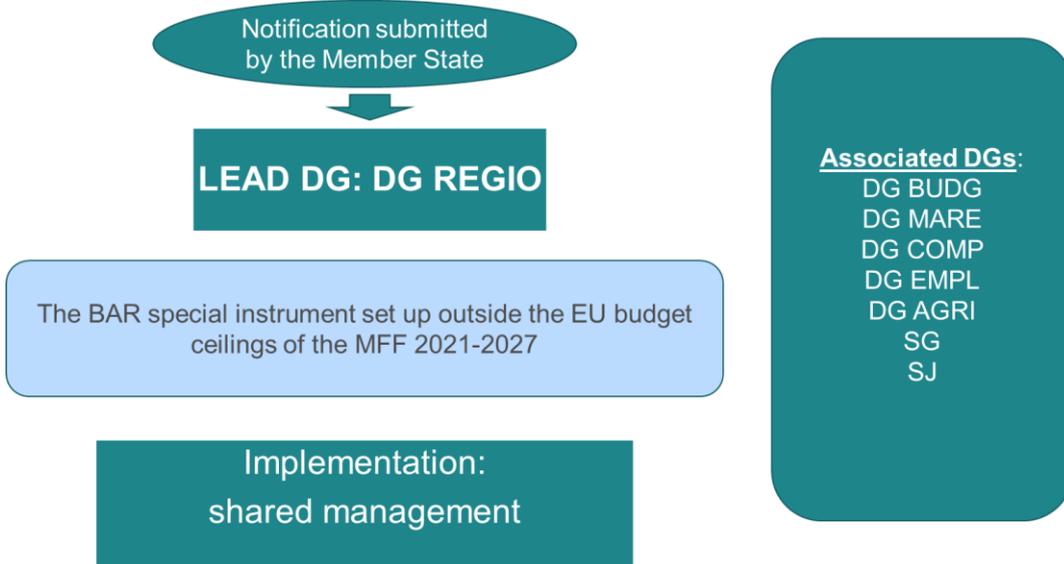

The Directorate-General for Regional and Urban Policy (REGIO) is the lead DG for the BAR implementation.

1.7. Graphic overview of the programme structure

Figure 1. Concise BAR process

Figure 2. Graphic overview of the BAR implementation structure and actors

1.8. Legal basis and budget programming

1.8.1. Legal basis

¹ pursuant to Article 14(1) of the [BAR Regulation](#)

Legal Basis	Period of application	Reference Amount (EUR million)
Regulation (EU) 2021/1755 of the European Parliament and of the Council of 6 October 2021 establishing the Brexit Adjustment Reserve (OJ L 357, 8.10.2021, p. 1).	2021 - 2027	

1.8.2. Budget programming table

(million EUR)	2021	2022	2023	2024	2025	2026	2027	Total
Financial programming	1 697.9	1 298.9	1 324.9	0.0	1 148.7			5 470.4
NextGenerationEU								
Decommitments made available again (*)	N/A							N/A
Contributions from other countries and entities								

(*) Only Article 15(3) of the financial regulation.

Please refer to section 1.6 for further details.

2stage process:

- Pre-financing phase 2021, 2022, 2023 (80%)
- Final payment (20%) against the assessment of sufficient eligible expenditure.
- 2024 year stands for submission of the application by MS for the financial contribution from the Reserve
- 2026 and 2027 are blank just in case of delays in payments and financial corrections

1.10. Relevant websites providing more information

[Brexit Adjustment Reserve - Regional Policy - European Commission \(europa.eu\)](https://europa.eu)

2. Where are we in the mplementation ?

2.1. Programme 2021-2027

REGIO has received notifications from 16 Member States and is paying the first instalment of the pre-financing for 2021. Two Member States received the corresponding payments in December and the rest will be paid from February onwards (provided notifications are complete).

As regards the **2nd instalment of pre-financing**, REGIO will launch the payment procedure end of March to safely pay before end of April.

Cumulative implementation rate at the end of 2021 (million EUR):

	Implementation	2021-2027 Budget	Implementation rate
Commitments	407.2	5 470.4	7%
Payments	407.2		7%

The two Member States (IE and IT) that have notified **the Commission** in a **timely fashion received the first instalment of the pre-financing in 2021 (EUR 407 million)**. This represents 24% of the total allocation for the 1st instalment. At end-January 2022, 12 more Member States have notified. At that date, the second instalment (2022) represents EUR 938 million, but this will still increase given that Member States can still notify until March/April.

3. How is the programme performing ?

3.1. Performance

3.1.1. Active programme performance

The BAR performance will be assessed on the basis of the data and information collected from the implementation reports of the Member States (to be submitted by September 30, 2024). These reports will include the description of the overall impact of the withdrawal and the identification of the regions, areas and sectors most affected, the description of the measures and the way in which those measures have contributed to alleviating this impact. The Commission will then carry out evaluation of the Reserve in 2027 and will submit a report to the Parliament and the Council in 2028.

3.2. Key achievements

The Commission has been and continues to provide support to Member State authorities through bilateral meetings, written replies, an information website and a seminar (July 2021) on the clarification of practicalities behind the BAR Regulation and preparation of their potential measures. In line with shared management rules, the Commission does not provide written ex-ante confirmation on the eligibility of measures considered by Member State for support under the BAR.

4. The programme contribution to horizontal policies

4.1. Contribution to climate mainstreaming

4.1.1. Tracking and estimates

	Implementation	2022-2027 Estimates (EUR million)						Total
	2021	2022	2023	2024	2025	2026	2027	
Climate contribution								
Share compared to total envelope								

(*)These amounts include NextGenerationEU top-ups if any

4.1.2. Explanation on the financial contribution

The Reserve is expected to contribute to climate objectives according to the specific needs and priorities of each Member State. This means that there is no pre-established requirement for Member States regarding the level of contributions to achieve climate objectives given the very specific and targeted purpose of BAR, i.e. to mitigate the impact of Brexit on Member States. The Commission, will assess the contribution of the measures carried out to climate change, based on the information available in the final report on the implementation of the Reserve.

4.2. Contribution to gender equality

4.2.1. Contribution

2021-2022 Estimates		2023-2027 programming (EUR million)					Total
2021	2022	2023	2024	2025	2026	2027	
0.00	0.00	0.00					0.00

(*)These amounts include NextGenerationEU top-ups if any

4.2.2.1. Key achievements and performance

2021-2022 Estimates		2023-2027 programming (EUR million)					Total
2021	2022	2023	2024	2025	2026	2027	
Score 0*	407.2	0.00	0.00				0.00

(*)These amounts include NextGenerationEU top-ups if any

The objectives of the Reserve should be pursued in line with the principles set out in the European Pillar of Social Rights, including the inherent contribution of the Reserve to the elimination of inequalities, and to the promotion of gender equality and gender mainstreaming, while ensuring respect for fundamental rights.

4.3. Contribution to the sustainable development goals

SDG 1 End poverty in all its forms everywhere

The objectives of the Reserve will be pursued in line with the objective of promoting sustainable development as set out in Article 11 TFEU, taking into account the United Nations Sustainable Development Goals, the Paris Agreement and the ‘do no significant harm’ principle.”

As there is no programming involved for this particular temporary instrument, it is up to MS to carry out specific measures and report on these by September 30, 2024. There is no intermediate reporting from MS foreseen before this date.

Therefore, the Commission will assess the contribution of the measures carried out to the sustainable development goals, based on the information available in the final report on the implementation of the Reserve.

SDG 6 Ensure availability and sustainable management of water and sanitation for all

The objectives of the Reserve will be pursued in line with the objective of promoting sustainable development as set out in Article 11 TFEU, taking into account the United Nations Sustainable Development Goals, the Paris Agreement and the ‘do no significant harm’ principle.”

As there is no programming involved for this particular temporary instrument, it is up to MS to carry out specific measures and report on these by September 30, 2024. There is no intermediate reporting from MS foreseen before this date.

Therefore, the Commission will assess the contribution of the measures carried out to the sustainable development goals, based on the information available in the final report on the implementation of the Reserve.

The BAR will probably contribute to this SDG. However, as there is no programming involved for this particular temporary instrument, it is up to MS to carry out specific measures and report on these by September 30, 2024. There is no intermediate reporting from MS foreseen before this date.

SDG 8 Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

The BAR will probably contribute to this SDG. However, as there is no programming involved for this particular temporary instrument, it is up to MS to carry out specific measures and report on these by September 30, 2024. There is no intermediate reporting from MS foreseen before this date.

SDG 11 Make cities and human settlements inclusive, safe, resilient and sustainable

The BAR will probably contribute to this SDG. However, as there is no programming involved for this particular temporary instrument, it is up to MS to carry out specific measures and report on these by September 30, 2024. There is no intermediate reporting from MS foreseen before this date.

SDG 12 Ensure sustainable consumption and production patterns

The BAR will probably contribute to this SDG. However, as there is no programming involved for this particular temporary instrument, it is up to MS to carry out specific measures and report on these by September 30, 2024. There is no intermediate reporting from MS foreseen before this date.

SDG 14 Conserve and sustainably use the oceans, seas and marine resources for sustainable development

The BAR will probably contribute to this SDG. However, as there is no programming involved for this particular temporary instrument, it is up to MS to carry out specific measures and report on these by September 30, 2024. There is no intermediate reporting from MS foreseen before this date.

Getting in touch with the EU

In person

All over the European Union there are hundreds of Europe Direct information centres. You can find the address of the centre nearest you at: https://europa.eu/european-union/contact_en

On the phone or by email

Europe Direct is a service that answers your questions about the European Union. You can contact this service:

- by freephone: 00 800 6 7 8 9 10 11 (certain operators may charge for these calls),
- at the following standard number: +32 22999696 or
- by email via: https://europa.eu/european-union/contact_en

Finding information about the EU

Online

Information about the European Union in all the official languages of the EU is available on the Europa website at: https://europa.eu/european-union/index_en

EU publications

You can download or order free and priced EU publications at: <https://publications.europa.eu/en/publications>.

Multiple copies of free publications may be obtained by contacting Europe Direct or your local information centre (see https://europa.eu/european-union/contact_en).

EU law and related documents

For access to legal information from the EU, including all EU law since 1952 in all the official language versions, go to EUR-Lex at: <http://eur-lex.europa.eu>

Open data from the EU

The EU Open Data Portal (<http://data.europa.eu/euodp/en>) provides access to datasets from the EU. Data can be downloaded and reused for free, for both commercial and non-commercial purposes.
