Annex 1: Table 2: Reporting table on national Europe 2020 targets

Table 2: Description of the measures taken and information on their qualitative impact		
Progress on implementation	List of measures and their state of play that were	The estimated impacts of the measures
	implemented in response to the commitment	(qualitative and/or quantitative) <sup>1</sup>
	National 2020 headline targets	
National 2020 employment target [77-78%]	<ul> <li>For older workers (for more details see table 1, CSR 2)</li> <li>"fit2work" programme, nation-wide roll-out completed in 2013, on-going evaluation and further development;</li> <li>pilot project to overcome supply gaps in psychological and psychotherapeutic treatment (launched in spring 2014)</li> <li>Skilled Labour Package 2013 (entered into force on 1<sup>st</sup> July 2013</li> <li>Skilled Labour Grant (2014: Evaluation; 16 shortage occupations according Skilled Labour Regulation)</li> <li>Part-time-leave grant (Evaluation of the effects and usage of mid-2014)</li> <li>Educational grant (reformed)</li> <li>PES-programme "Come back plus" ("Reife Leistung") as from 1<sup>st</sup> May 2013 (Target group: unemployed and health impaired persons 50+ years; planned participants 2014: 5000 PES-programme "Aufstieg"; Target group: unskilled and semi-skilled workers with health impairments; support offers for unemployed and employees;</li> <li>Pilot projects in the field of labour market policy for persons with health impairments, targeted projects with step by step re-integration; background: reform of the disability pension "IP NEW", evaluation of the pilot projects in 2014</li> </ul>	Increase of employment rate of older workers, rise in effective retirement age.
	<u>For women</u> (for more details see table 1, CSR 3) Special programmes (examples):	Increase of participation rate and full-time employment, reduction of gender pay gap.
	<ul> <li>"Women in crafts and engineering" ("FIT") – on-</li> </ul>	

<sup>&</sup>lt;sup>1</sup> Cross reference with column 9 of Table 1

going;

- "Return to a working life with a future" is expected to be expanded;
- "Systematic skills" ("Kompetenz mit System")
   national-wide roll-out in 2012 and is constantly
   extended by new apprenticeship trades on-going
- Vocational centres for women, meanwhile national-wide roll-out on-going
- implementation of the National Action Plan for Gender Equality in the Labour Market
- obligation imposed on companies to draw up staff income reports. 2013 obligatory for companies with more than 250 employees; 2014 obligatory for companies with more than 150 employees"
- further extension of child care facilities

<u>For persons with a migration background</u> (for more details see table 1, CSR 2)

- Project for recognition of foreign qualifications, implementation as from 2013; since April 2013 contact points are fully operational; during the further development phase (January 2013 – December 2014);
- Demand-oriented higher qualifications and provision of German language courses – increased provision of promotion by the PES for upskilling:
- FIT, "Systematic skills" (also for Migrants), youth coaching, production schools and supracompany apprenticeships (youth with a migrant background benefitted over-proportionally), ongoing;
- Intensification of cooperation with external consulting and assistance services for migrants with individual difficulties (e.g. job search, family, etc.)
- Project "Mentoring for Migrants", on-going;

Improved labour market situation of migrants.

National 2020 R&D target [3.76 %] Following the objectives of the Austrian RTDI strategy, Austria continues to aim at the overall target of an R&D intensity of 3,76% of GDP until 2020, of which at least two thirds shall come from the private sector. In 2013 Austria had an R&D intensity of 2.84%. The efforts to reach this goal have to be considered within the context of the general economic situation and the need for fiscal consolidation. Emphasis shall therefore be laid on measures with a strong leverage effect on R&D investments by the private sector	2013 several of these working groups issued interim/progress reports, in which they highlighted the most topical issues in their respective field and made recommendations for further steps to address these challenges.  Major change in the governance of the RTI-System in	
	Transport, Innovation and Technology.  Strengthening Vienna Biocenter – Vision 2020 (2011 – 2015) and Campus Support Facility (CSF): Strengthening Research Infrastructure – Increase post gradual life science.	Enhancement and improvement of research infrastructure and its use - addressing big societal challenges and continuing the successful cluster policy in the area of life sciences in Austria
	Development of a Competence Centre for Disease Modelling within the IMBA – in the Austrian Academy of Sciences (ÖAW)	Strengthen the already existing know-how of the institute and broaden the functional genome research in Austria- addressing big societal challenges and continuing the successful cluster policy in the area of life sciences
	Enhancement of the Institute of Science and Technology Austria (2007 – 2016): Fostering Basic Research - Increasing Excellence.  NEW §15a Commitment established between Lower Austria and Federal Government till 2026	Institutional augmentation and the enhancement of research excellence in the field of interdisciplinary research activities at the interface of computer sciences, neurology, as well as molecular biology and cell biology

Service innovation is an important competitive factor. Given the potential in domestic companies is the <b>Services Innovations</b> (DLI) the promotion of innovative service projects, also with non-technological character.  Direct research funding (examples): With the Program <b>Research Capacity in Industry</b> the Federal Ministry of Economy, Family and Youth (BMWFJ) supports companies (primarily SMEs) in the systematic development and upgrading the skills of their existing research and innovation staff. A second focus is to promote the anchoring of business-relevant research areas at Austrian universities and colleges as well as the impetus for	
a higher sectorial mobility.  "Technology Push 2014": Investments in thematically focusses programs in the field of applied research are further increased in 2014. These investments are focussed on four technology areas: mobility, energy, production, and information and communication technologies.  In addition to that the Austrian investments in space technologies have substantially been increased over the past ten years. In 2014 these investments sum up to 60 Mio. €, including the contribution to ESA and EUMETSAT as well as the national space programme ASAP.	Increasing the R&D-intensity of the Austrian corporate sector; development of technologies for a modern, efficient and secure infrastructure to cope with the grand challenges; increasing the number of researchers especially of female researchers
The new "Frontrunner Initiative" was launched in 2013 and focusses on companies with significant R&D activities in a leading market position worldwide. Being utmost successful in a competitive international environment is associated with the special challenges and high development and market risks. The programme comprises the special grants of up to € 3 million within a soft loan financing package of up to € 7.5 million. It also comprises a special "investment bonus" for the investments in transferring the R&D-results into the production lines and into the market.	Strengthening Austrian high tech firms in top positions internationally.
The national research-, development- and demonstration program "Austrian Electric Mobility Flagship Projects programme" also contributes to this ambitious target, by proving between 2009 and 2013 more than € 30 million. In 2013 the programme was supplemented by an	The main objective of the program is to integrate user-, infrastructure and vehicle-related components, systems and services into a comprehensive electric mobility system. The technologies to be developed must be able to

	implementation programme on urban electromobility "E-Mobility- Available for everyone: Urban Electric Mobility" The overall funding for these programs covered an amount of €10 million.	demonstrate their practical viability both in Austria and abroad, thereby strengthening the Austrian automotive supply industry and, in doing so, securing and creating jobs. The main difference to other programs lies in addressing the whole electric mobility system and not only supporting single technologies.
		In 2012/13 an external evaluation of the "Austrian Electric Mobility Flagship Projects" technology programme was commissioned. The results of the analysis are excellent, testifying that the programme has been highly effective and plays a key role in bringing electric mobility as a whole closer to the market. The ministry will therefore continue its successful "Austrian Electric Mobility Flagship Projects" programme for 2014.
		During 2013 the programme "E-Mobility-Available for everyone: Urban Electric Mobility" was launched, which builds on the concept and approach of the "Austrian Electric Mobility Flagship Projects". Its thematic focus is the demonstration and testing of user-friendly, systemic solutions for new e-mobility offerings in the fields of para-public transport and electric car sharing models, both in an urban context.
GHG emission reduction target [- 16 %]	Continuation of the Subsidies program for thermal renovation of buildings (residential and business) started in 2009;; program to start in March 2014. This program pushes at the same time investments, jobs and saving energy. Continuation until 2016 is intended. (Contributes also to energy efficiency target see below).	-3,5 million t CO <sub>2</sub>
	Climate Policy Package pursuant to the Austrian Climate Change Act ("KSG-Maßnahmenprogramm"). This package comprises a full set of measures in the following sectors:	Approx1.7 million t CO <sub>2</sub>

	Climate Protection Initiative klima:aktiv	Objective: Extension, awareness-raising, training offers and quality assurance in the priority areas energy (saving), construction and renovation, renewable energy and mobility, one priority is at the local level (municipalities and regions).
		The annual business report presents the progress made in the research on and the establishment and launching on the market of climate friendly technologies and measures and informs which important priorities are just being implemented.
		In the year 2012 the years 2004 to 2012 has been evaluated by the Wuppertal Institute in Germany: The innovative character has been attested and klima:aktiv was complimented for its exemplary comprehensive approach and unique design.
		Apart from the proved extension, information and educational offers the "klima:aktiv pakt 2020" where large companies commit themselves voluntarily to the compliance with the Austrian climate and energy goals until 2020

	has been introduced as a new instrument. By the end of 2012 9 companies have joined the "klima:aktiv pakt 2020".  The running time of klima:aktiv has been extended until 2020.
Climate Protection Initiative klima:aktiv mobil – start 2nd stage klima:aktiv mobil 2013-2020 to promote mobility management, alternative fuels and vehicles, e-mobility, ecodriving and cycling.	klima:aktiv mobil provides a national supportive framework to motivate and support companies, cities, municipalities and regions, leisure and tourism operators, schools and youth groups to develop and implement measures to reduce CO <sub>2</sub> emissions from transport related activities. klima:aktiv mobil offers five pillars of support: consulting, financial support, education & certification, information & motivation and awareness raising as well as awarding of partners committed to CO <sub>2</sub> reduction projects.
	klima:aktiv mobil contributes to EU and Austrian environmental objectives, particularly to the national "climate protection law".
	objective 2020:
	continuation k:a mobil: -0.5 million t CO <sub>2</sub> in 2020
	extension k:a mobil: -0.7 million t CO <sub>2</sub> in 2020
Climate and Energy Fund (Klima- und Energiefonds KLIEN)	The tasks of the fund are the support of research and development in the field of sustainable energy technologies and climate research, the promotion of projects in the fields of public short distance and regional transport, environmentally-friendly freight transport, as well as mobility management projects, and the promotion of projects supporting the market penetration of climate-relevant and sustainable energy technologies.

	In the period 2007-2012 the climate and energy fund awarded research contracts and made subsidy commitments to the amount of almost € 725 million (approx. Mio. € 125 of which in the year 2012). The success of these measures is to be presented and published annually in the annual business report. The annual business reports presents the progress made in the research on and the establishment and launching on the market of climate friendly technologies and measures and informs, which important priorities are just being implemented.
Federal Environment Fund (Umweltförderung im Inland)	The Federal Environment Fund supports GHG emission reduction measures (including renewable energy or energy efficiency) in the industrial sector with a total annual budget of more than EUR 90 million,
	In 2012 the leveraged climate-related investments in the private sector amounted approximately 600 Million EUR, and in corresponding CO2- emission reductions totalling at about 400.000 t annually or 6,8 million tons over the lifetime resp.
Electromobility	
Implementation of the first set of measures in order to foster the introduction of e-mobility in Austria, as set-out in the national "Implementation plan for E-Mobility in and from Austria" adopted by the federal government in July 2012, such as:  • Integration of electromobility options in the transport system,  • Creating more attractive traffic framework conditions for low-emission vehicles  • Continuation of Austrian Electric Mobility Flagship Projects" R&D programme  • Development of an intelligent incentive system	In the sense of a common road, the federal ministries BMLFUW, BMVIT, and BMWFW have worked out, at the request of the Federal Government, the present implementation plan for electromobility IN and FROM Austria, with measures to be initiated short-term on the basis of a broad consultation process. The activities, to be harmonised interactively, aim at establishing optimum conditions paving the way for electromobility in everyday performance quickly, on the one hand, and on the other, to use the opportunities entailed for Austria as best

	regarding new vehicle categories, charging infrastructure and use of renewable energy  Correlation of implementation projects such as the consolidation and further development of the eight pilot regions for e-mobility and correlation with the technology demonstration and lighthouse projects  catalogue specifying the requirements for the charging infrastructure  expanding information packages and awareness raising campaigns on e-mobility in particular the provision of enhanced information, on e-vehicles available, e.g. by using existing structures such as the internet platform ( <a href="https://www.autoverbrauch.at">www.autoverbrauch.at</a> )  environmental impacts and monitoring, compilation of data for assessing the environmental, climate and energy impacts from e-mobility and development of eco-balances that compare different alternative propulsion systems  Raising awareness within the framework of traffic education of children	as possible.  So as to implement electromobility in the transport and energy systems in Austria, steps have to be consistently taken to launch and establish an intelligent incentives system on the market, raise awareness for new mobility solutions, and maximise positive impacts on the environment. Most of the 65 measures, which are defined in the implementation plan are already initiated and will be continued in the future.
	Masterplan Cycling Ongoing implementation of the national cycling strategy (Masterplan Cycling)	Contribution to the EU 2020 target of greenhouse gas emission reduction in transport by increasing of every-day cycling. The national cycling goal is a modal share of 10% until 2015.
	CO2 emission target in the Austrian Fuel Act 2012 (Kraftstoffverordnung 2012)	According to the Austrian fuel act (Kraftstoffverordnung 2012) as the national transposition of the Fuel Quality Directive 2009/30/EC suppliers have to reduce life cycle greenhouse gas emissions per unit of energy from fuel and energy supplied 2020 by 6 %.
Renewable energy target [34 %]	Green Electricity Act 2012: Notification by the EC on 8 February 2012; in force since 1 July 2012	Increasing the amount of renewables in electricity production by 10,5 TWh till 2020, with quantitative targets for each technology.  A new renewable energy law (Green Electricity Act) came into power in July 2012.  The main changes were:  a) the system how the money to support the

	Biofuel target in Austrian Fuel Act 2012 (Kraftstoffverordnung 2012)	technologies is raised and b) how much money is spent each year and how this is distributed over various technologies.  The overall additional yearly support payments for Feed in Tariffs in the year 2013 were € 49 Mio. This money will be distributed over Wind, Hydro and Photovoltaics and will reduce itself over the following 10 years € 1 Mio. per year.  The law set the following targets for additional electricity production from supported renewables for the year 2020 (compared to 2010):  • Hydropower: 1.000 MW • Windpower: 2.000 MW • Biomass and Biogas: 200 MW • Photovoltaics: 1.200 MW  The use of biofuels counts towards the 10% renewable energy target in transport of the Renewable Energy Directive 2009/28/EC. According to the Austrian Fuel Act (Kraftstoff-verordnung 2012) in the year 2020 8.45% of all diesel and petrol fuels have to be Substituted by using biofuels. Due to the different calculation base these 8.45% count towards the 10% target as about 7.3%.
	Federal Environment Fund (Umweltförderung im Inland)	The Federal Environment Fund supports renewable energy in the industrial sector with a total annual budget of more than EUR 37 million,
		In 2012 the leveraged renewable energy investments in the private sector amounted approximately 247 Million EUR, and in corresponding CO2- emission reductions totalling at about 300.000 t annually or 5,6 million tons over the lifetime resp.
National energy efficiency target []	A bundle of measures which can be divided into the categories industrial buildings, production and services as	According to the Energy Efficiency Directive (EED) Austria has set an indicative national

	well as trade and small-scale consumption, mobility, energy provision, security of energy supply and general measures have already started (for further details see also Second National Energy Efficiency Action  Plan of the Republic of Austria 2011 and the AustrianCommunication to the European Commission according to Art. 7 Energy Efficiency Directive, December 2013).	energy efficiency target by April 2013. The Austrian final energy consumption must not exceed 1.100 PJ and the gross domestic energy consumption must not exceed 1.320 PJ in 2020.
	A new energy efficiency law to implement the Energy Efficiency Directive is under creation. A draft was submitted already in 2013 but could not pass. In 2014 a new draft will be submitted.	
	For public buildings a cumulated energy savings target of 48,145 GWh should be reached till 2020. This is in line with the provisions of the Energy Efficiency Directive.	
	Continuation of the Subsidies program for thermal renovation of buildings (residential and business) started in 2009; € 100 million funding for the year 2014; program to start in March 2014. This program pushes at the same time investments, jobs and saving energy. Continuation until 2016 is intended. (Contributes also to GHG emission reduction target target; see above).	-3,5 million t CO <sub>2</sub>
Flagship Initiative Digital Agenda	Digital Agenda of the EU: Status of Implementation:	
	- Increasing the levels of supply and reducing the "digital divide" by encouraging broadband expansion (esp. NGA) in rural areas	
	- investment promotion program "Broadband Austria Twenty Thirteen" (fund approximately EUR 30 million within the Austrian program for rural development policy 2007-2013):	
	2012: calls in all Bundesländer completed, a lot of projects operative	

2013: further calls with still free financial resources will follow implementation until mid of April 2015; payment of 40% of the funds	
- Increasing the use of the Internet by promoting intelligent Internet applications	
- Application development program "austrian electronic network - AT: net" (funds in 2012 and 2013: about 3 million Euros per year)	
2012 and 2013: two calls per year launched by FFG	
Broadband Strategy 2020:	
- Alignment of the Austrian measures to the 2020-target = 100 Mbit / s for all (e.g. through improved coordination of planning and implementation of development projects):	
2012: Draft and publication of the strategy	
2013: Launch of the broadband bureau (Breitbandbüro) as an information agency of the federal government for businesses, public administration and citizens.	
- Pooling of BMVIT-initiatives by participating in the Competence Center Internet Society (Kompetenzzentrum Internetgesellschaft- KIG), milestones:	
2012: the Council of Ministers adopted the second catalogue of priorities, ICT strategy drafted	
2013: Projects from priority catalogues I and II finalized, ICT strategy aligned to priorities.	
- Design of appropriate broadband incentives 2014ff using the EU funds:	
2012: Participation in preparation of CEF implementation, participation in STRAT.AT (partnership agreement relating to ESF, ERDF, EAFRD and EFF)	
2013: interim or final evaluation of the programs,	

	development of concrete measures	
Flagship Initiative Resource Efficiency	National Resource Efficiency Action Plan (REAP): Implementation of measures in order to foster the REAP goals were set and have started. The implementation of REAP is assessed by the periodical monitoring (quantitative and qualitative indicators). For the year 2014 a progress report is planned.	REAP defines medium- and long-term national goals to increase the efficiency in the utilisation of national resources. By doing so, it identifies important fields of actions and proposes instruments and measures for a concrete increase in the resource-efficiency in Austria. (Fields: Resource-efficient production, public procurement, circular-flow economy and awareness-raising).  The long-term goal is an absolute decoupling of economic development and resource
		consumption and the environmental effects going hand in hand with it.  REAP is oriented until the year 2050 according to an increase in resource-efficiency (resource productivity) by a factor 4 to 10.
		For this purpose it is required to raise the resource-efficiency in Austria on medium term, thus until the year 2020, by at least 50 % compared to the year 2008.
	Action Plan Sustainable Public Procurement  The Action Plan on Sustainable Public Procurement, which was adopted by the Council of Ministers in 2010, pursues the long-term goal that the public sector buys more and more sustainable products and services. Given the major purchasing power of the public sector, the Action Plan contributes to the development of a green and sustainable economy. It addresses all public authorities in Austria and is compulsory for the federal level. The Public Procurement Agency is consequently implementing the requirements of the Action Plan. Currently, there are criteria sets for 15 product groups available which are revised on a regular	In 2013 the actionplan was evaluated to get data how the implementation works on a regular basis and which steps should be taken for further improvements. Quantitative and qualitative analysis will contribute to the progress report, which will be finalised by 1 Q/2014.

basis. Social criteria were developed by an expert group and are currently coordinated at political level. The process of implementation, evaluation and improvement of the Action Plan is coordinated by the Federal Ministry of the Environment and supervised by a group where all relevant stakeholders (Ministries, provinces and municipalities, social partners and business representatives) are represented. The Procurement Service Austria (BeschaffungsService Austria) is the central think tank for sustainable procurement in Austria and offers a free counselling service for sustainable public procurement (www.nachhaltigebeschaffung.at).

## **Master Plan Environmental Technology**

The Austrian environmental and energy technology industry makes a considerable contribution to sustainable growth and an improvement of the environmental situation in Austria and abroad. With the Master Plan Environmental Technology a tool providing orientation has been created in order to be able to use the existing opportunities for the economy and the environment even more efficiently. The vision of the Master Plan is "Within the European Union Austria has the leading position in the fields of environmental technology and environmental services."

By means of strengthening the Austrian environmental and energy technology an important contribution will be made to reaching economic and environmental policy goals such as doubling the number of persons employed in the environmental and energy technology industries and reaching the climate protection goals and complying with other environmental protection goals at the same time. In the course of the next few years the enterprises in the environmental and energy technology sectors will be confronted with major challenges and opportunities. Whereas above-average growth opportunities can be expected on the environmental and technology markets, the competition on the one hand by new suppliers from lowwage countries and on the other hand by suppliers of high-

tech products is rising. The high competitiveness and the good technological position of Austrian enterprises of the environmental and energy technology sectors as well as the fact that they are excellently embedded in the European markets are the major strong points, whereas the weaknesses are the small-scaled supplier structure and the low presence on dynamic markets such as Asia. New thematic challenges, such as in particular in the fields of energy and climate protection lead in the medium-term to a further shift of the shares within this branch of industry.

In the course of a comprehensive discussion process representatives of domestic enterprises and research institutions as well as of the administration have defined four strategic fields of action, which make a considerable contribution to the goals of the Master Plan.

- Promotion of exports
- Research and qualification
- Financing

Making the domestic market more dynamic

## **Master Plan Green Jobs**

Green jobs are jobs in the environment sector. The EU definition describes green jobs as work in the manufacturing of products, technologies and service activities by means of which environmental damage is avoided and natural resources are preserved. Green jobs exist in different branches, for example in renewable energies, sustainable construction and renovation as well as in water and waste water management. They include jobs requiring a high level of qualification just as much as apprenticeships vocations or simple, unskilled labour.

The main purpose of green jobs is to make a contribution to environmental protection. This is why there are green jobs in all economic and social areas and why also existing job The objective of the "Masterplan green jobs" is to create additional 30.000 green jobs within the next 4 years and additional 100.000 green jobs until 2020. The Austrian Green Jobs Masterplan defines 6 key areas of action to increase employment in the environmental goods and service sector:

- Fostering the export of environmental goods and services, focusing on environmental technologies
- Strengthening sustainable tourism in Austria
- Increasing the material use of biomass
- Thermal retrofitting and optimizing

types	hacama	aroon	iohe	onoray systems of buildings
types can	become	green	jobs.	energy systems of buildings
In 2010 the Aus	trian Ministry fo	r Agriculture	Forestry	<ul> <li>Fostering public transport</li> </ul>
In 2010, the Austrian Ministry for Agriculture, Forestry, Environment and Water Management developed a "masterplan green jobs" in order to establish a strategy to	<ul> <li>Increasing the share of renewable energy</li> </ul>			
increase employm Services Sector" (i.		ironmental Go	ods and	There are currently about 170.000 green jobs in Austria with rising tendency. This means that every 20th job (4.8%) is a green job; 10.8 percent of the GDP are yielded in this sector.
Measures to redu	ce environmenta	lly harmful sul	bsidies	By 2011: reimbursement of energy taxes restricted to the industry sector (no reimbursement for companies in the services sector)
				By the end of 2012: Phasing-out of the following tax exemptions
				<ul> <li>Reimbursement of the mineral oil tax on so called "Agro-Diesel" (diesel fuel used in agriculture and forestry)</li> </ul>
				<ul> <li>Tax exemption of local public transport from the tax on liquid gas</li> </ul>
				Reimbursement of the mineral oil tax on diesel fuel used by trains of the Austrian Federal Railways
				By the beginning of 2012: Reduction of thetax- bonus for cars given as a payment in kind to employees
Federal Environm	ent Fund (Umwe	ltförderung im	Inland)	The Federal Environment Fund supports energy efficiency in the industrial sector with a total annual budget of more than EUR 26 million,
				In 2012 the leveraged energy efficiency investments in the private sector amounted approximately 257 Million EUR, and in corresponding $\mathrm{CO}_2$ - emission reductions totaling at about 88.000 t annually or 1.1 million

		tons over the lifetime resp.
	Adjustment of taxes with environmental impact	New tariff of car registration tax with higher taxes on purchases of cars and motorcycles with high CO <sub>2</sub> -emission
		Raise of the tax on the holding of cars and motorcycles: higher tax burden on the holding of cars with higher engine-power (kW)
National early school leaving target [9.5 %]	Youth coaching nation-wide implementation in 2013;	
ESL rate of currently 7.6 % (2012)	Target group: pupils in the last year of compulsory schooling, NEETs, young people with migrant background and with impairment; further expansion/adjustment is planned to reach all young people, e.g. contact with prisons; 30,000 young people were advised in 2013;  • Ready for education and training ("AusbildungsFit"): "Ausbildungsfit" aims at (re-)integrating young people into the education system or the labour market by offering individual promotion. Elements of "AusbildungsFit" are offers like traineeships in companies, coaching for those who need socio-pedagogical support, provision of basic knowledge and qualification in teaching through creativity or like sports and pedagogical offers. In 2014 there will be a pilot of 17 projects in seven federal provinces and in 2015 a nation-wide implementation is planned.  • "Training guarantee" (since 2008); new measure: introduction of a bonus for companies that take on an apprentice from a supra-company apprenticeship scheme (ÜBA): in September 2013, a lump-sum subsidy of Euro 1000,- was introduced that is paid to every employer taking on an apprentice of a supra-company training entity. This shall increase the possibility to change from supra-company apprenticeship to a regular apprenticeship position.	
	The following measures are in accord with the Austrian	Further decrease of ESL rate; see the Austrian
	Youth Guarantee Implementation Plan (YGIP):  1. Further development of the quality-focused subsidies and supporting-instruments within apprenticeship system	Youth Guarantee Implementation Plan

<ul> <li>(aiming: providing a broad and standardised quality-management structure within the dual VET-system, aiming at avoiding drop outs and ensuring successfully completed vocational trainings)</li> <li>2.
